EXTRACTS FROM THE VOTES AND PROCEEDINGS OF
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 5. TUESDAY, 3 JUNE, 1862.

6. Field of Mars Common :—Mr. Shepherd moved, pursuant to notice,—
- (1.) That a Select Committee be appointed, with a view of resuming the inquiry into the subject matter of various Petitions and other matters relating to the Field of Mars and Eastern Farms Common, together with bridging over the Parramatta River and Iron Cove Bay; and that the Committee be empowered to send for persons and papers, and to inspect the Common if considered desirable.
 - (2.) That the Evidence taken before, and the Progress Report made by, the Select Committee of last Session, be referred to such Committee.
 - (3.) That such Committee consist of the following Members :—Dr. Lang, Mr. Cowper, Mr. Piddington, Mr. Smart, Mr. Laycock, Mr. Lackey, Mr. Sutherland, Mr. Stewart, Mr. Lucas, and the Mover.
- Question put and passed.

VOTES, No. 72. FRIDAY, 26 SEPTEMBER, 1862.

2. Field of Mars Common :—Mr. Shepherd, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee appointed on the 3rd June last, with a view of resuming the inquiry into the subject matter of various Petitions, and other matters relating to the Field of Mars and Eastern Farms Common, together with bridging over the Parramatta River and Iron Cove Bay.
- Ordered to be printed.

FIELD OF MARS COMMON.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 3rd June last, "*with a view of resuming the inquiry into the subject matter of various Petitions and other matters relating to the Field of Mars and Eastern Farms Common, together with bridging over the Parramatta River and Iron Cove Bay; and empowered to send for persons and papers, and to inspect the Common if considered desirable;*" and to whom were referred at the same time, "*the Evidence taken before, and the Progress Report made by, the Select Committee of last Session,*"—beg to report to your Honorable House,—

That they have carefully considered the matters referred to them, and have examined the witnesses named in the margin, whose evidence will be found appended hereto.

Your Committee have ascertained that the Field of Mars Common was granted by the Crown to certain Trustees, by a Deed of Grant, bearing date the 10th November, 1849, issued in conformity with the Act of Council, 11 Victoria, No. 31, intituled, "*An Act to enable Trustees of Commons in New South Wales to have perpetual succession and to empower them to regulate the use of such lands as may be granted as Commons within the said Colony and for other purposes relating thereto.*"

That the evidence adduced does not prove that the Trustees have applied the land to uses foreign to those authorized under the Act of Council.

The project of the resumption and sale of the Common by the Government, for the purpose of meeting the expense of bridging the Parramatta River and Iron Cove Bay, which appears to have originated with one section of the Commoners, has been strongly opposed by another.

The evidence given as to the capabilities and probable value of the Common, together with whatever benefit might accrue from the proposed bridges, varies so much, that your Committee abstain from giving an opinion on the subject.

- Mr. J. S. Farnell,
- Mr. W. Tunks,
- Mr. G. de Milhau,
- Mr. J. Ross,
- Mr. J. Folkhard,
- Mr. J. K. Heydon,
- Mr. C. Abercrombie,
- Mr. W. Forster, M.P.,
- Mr. C. Langley,
- Mr. R. Wicks,
- Dr. F. Campbell,
- Mr. E. Drinkwater,
- Mr. W. Small,
- Mr. E. G. Ellis,
- Mr. H. Small,
- Mr. J. Small,
- Mr. J. Bellemy,
- Mr. I. Shepherd, M.P.,
- Mr. G. Oakes,
- Mr. G. Spurway,
- Mr. J. Stephenson,
- Mr. T. K. Bowden,
- Mr. T. W. Bowden,
- Mr. G. M. Pope,
- Mr. J. Pye,
- Mr. Harvey,
- Mr. J. Byrnes,
- Mr. E. O. Moriarty,
- Mr. F. W. Birmingham.

The

The Engineer for Harbours and Rivers, in his evidence, estimates the cost of constructing two bridges, one over the Parramatta River, and the other over Iron Cove Bay, at £65,000, independently of the cost of making roads and cuttings, which, in all probability, would amount to about £15,000, making a total of £80,000.

There is nothing in the evidence to justify your Committee in recommending the expenditure of so large a sum of money out of the public revenue. They are of opinion that the Common, if resumed, would prove greatly insufficient to cover the necessary outlay, and such resumption being strongly opposed by a large section of the Commoners, your Committee do not feel at liberty to recommend it; but recommend, in the hope of settling this question, that the Common be subdivided, in proportion to the rights of the Commoners residing at Hunter's Hill, at the Field of Mars, and at Pennant Hills.

ISAAC SHEPHERD,

Chairman.

*Legislative Assembly Chamber,
Sydney, 26 September, 1862.*

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 10 JUNE, 1862.

MEMBERS PRESENT :—

| | | |
|---------------|--|-----------------|
| Dr. Lang, | | Mr. Piddington, |
| Mr. Shepherd, | | Mr. Sutherland, |

Mr. Shepherd called to the Chair.

Order of the House appointing the Committee,—*read*.

The following Papers on the Table :—

Progress Report from the Select Committee of last Session, on the "Field of Mars Common ;"

Return to Address in reference to the Field of Mars Common, laid upon the Table of the House on 29th October, 1861 ; together with the various Petitions, for and against the resumption and sale of the Common, received by the House during the last Session.

The Chairman laid before the Committee,—

- (1.) A letter he had received from the Rev. George E. Turner, dated Ryde Parsonage, June 7th, 1862, declining to accept an invitation to give evidence in the matter of the Common, on the ground of his holding no landed property in the District, and from the fact that his neighbours are much divided on the subject.
- (2.) Letter from Dr. F. Campbell to Isaac Shepherd, dated Lunatic Asylum, 9 June, 1862, in answer to a note inviting him to give evidence relating to the resumption of the Common, &c., stating that if it be left to his own option, he has no desire to attend, but if required by the Committee he will be at their service as early after their summons as possible.

Committee deliberated.

Mr. Farnell (on motion of Mr. Piddington) called in and examined.

Mr. W. Tunks and Mr. G. de Milhau then examined.

Strangers having withdrawn,—

Committee deliberated, and

The Chairman was requested to move in the House,—

That there be laid upon the Table a return of the probable cost of the bridges and road across the Parramatta River and Long Cove, as laid down in Mr. Langley's plan, the same to be estimated by the Engineer for Docks and Harbours ;

Also, the following Resolution, viz. :—

That the recommendation contained in the Report of the Acting Surveyor General, dated 23 March, 1861, having reference to the appointment of Messrs. Gorman and Wrench as valuers of the Field of Mars Common, ought to be adopted by the Government.

[Adjourned to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 17 JUNE, 1862.

MEMBERS PRESENT :—

Mr. Shepherd in the Chair.

| | | |
|-----------|--|-----------------|
| Dr. Lang, | | Mr. Piddington. |
|-----------|--|-----------------|

Mr. John Ross called in and examined.

And, in the course of examination, notice being taken that there was not a Quorum of Members present—

[Committee adjourned to Thursday next, at *Eleven o'clock*.]

THURSDAY, 19 JUNE, 1862.

MEMBERS PRESENT :—

Mr. Shepherd in the Chair.

| | | |
|-----------------|--|-----------------|
| Dr. Lang, | | Mr. Piddington, |
| Mr. Smart, | | Mr. Lucas, |
| Mr. Sutherland. | | |

The Chairman stated that, in accordance with the request of the Committee at their first meeting, he had moved in the House for "a Return of the probable cost of bridges and road across the Parramatta River and Long Cove, as laid down in Mr. Langley's plan, the same to be estimated by the Engineer for Docks and Harbours;"—that the motion

motion had been rejected, and that he had, in consequence, withdrawn the second motion, with reference to the appointment of Messrs. Gorman and Wrench as valuers of the Field of Mars Common.

Committee deliberated.

Mr. John Folkard called in and examined.

[Adjourned to Wednesday next, at *Eleven o'clock.*]

WEDNESDAY, 25 JUNE, 1862.

MEMBERS PRESENT:—

Mr. Shepherd in the Chair.

| | | |
|-----------------|--|-----------------|
| Mr. Piddington, | | Mr. Smart, |
| Mr. Lackey, | | Dr. Lang, |
| Mr. Lucas, | | Mr. Sutherland, |

Mr. J. K. Heydon examined.

Witness handed in—

Abstract of the Estimates of bridging Parramatta River and Iron Cove; also, Copy of a letter, dated 58 Pall Mall, London, 10th July, 1861, from the "Iron Bridge Association" to the Secretary to the Parramatta River Roads and Bridges. (*Vide List of Appendix.*)

Witness withdrew.

Mr. C. Abercrombie examined.

Witness withdrew.

Committee deliberated.

[Adjourned to Wednesday next, at *half-past Ten o'clock.*]

WEDNESDAY, 2 JULY, 1862.

MEMBERS PRESENT:—

Mr. Shepherd in the Chair.

| | | |
|-----------------|--|------------|
| Mr. Sutherland, | | Dr. Lang, |
| Mr. Piddington, | | Mr. Smart. |

The Chairman, at the instance of the Clerk, having drawn the attention of the Committee to the circumstance of Mr. Heydon having, on revision of his evidence, appended a long statement expressive of his views on the subject of the Field of Mars Common,—

Committee deliberated upon the expediency of printing the same.

To be further considered.

Mr. W. Forster, M.P., and Mr. C. Langley, examined.

Strangers withdrew, and

Committee further deliberated.

Motion made (*Mr. Sutherland*) and *Question*,—That it is not expedient that the addendum to Mr. Heydon's evidence be printed,—*agreed to.*

Mr. R. Wicks called in and examined.

[Adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY, 8 JULY, 1862.

MEMBERS PRESENT:—

Mr. Shepherd in the Chair.

| | | |
|------------|--|-----------------|
| Mr. Lucas, | | Mr. Piddington, |
| | | Dr. Lang. |

Dr. F. Campbell, *Superintendent, Lunatic Asylum, Tarban*, called in and examined.

Witness withdrew.

Mr. E. Drinkwater called in and examined.

Witness *produced* a copy of Deed of Grant to "Trustees of Field of Mars Common" and By-Laws.

Certain papers handed in by witness. (*Vide List of Appendix.*)

[Adjourned to Friday next, at *Eleven o'clock.*]

FRIDAY, 11 JULY, 1862.

MEMBERS PRESENT:—

Mr. Shepherd in the Chair.

| | | |
|-----------------|--|-----------------|
| Mr. Piddington, | | Mr. Sutherland, |
| Mr. Stewart, | | Dr. Lang, |
| Mr. Lackey, | | Mr. Cowper. |

Mr. W. Small and Mr. E. G. Ellis examined.

[Adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY,

TUESDAY, 15 JULY, 1862.

MEMBERS PRESENT :—

Mr. Shepherd in the Chair.

| | | |
|-------------|--|--------------|
| Mr. Lackey, | | Mr. Lucas, |
| Dr. Lang, | | Mr. Stewart. |

Committee deliberated, and decided that it is expedient to employ professional witnesses.

Mr. Henry Small and Mr. John Small called in and examined.

Last witness handed in a list of names of parties obtaining wood from the Lane Cove side of Parramatta River. (*Vide List of Appendix*)

Mr. James Bellemy examined.

In the course of examination the Chairman produced the original Deed of Grant.

And the Committee being desirous to take evidence thereon,—

Chair vacated by Mr. Shepherd, and taken by Dr. Lang.

Mr. Isaac Shepherd, M.P., a Member of the Committee, examined in his place.

Witness handed in copy of the original Deed of Grant, also copy of the By-laws under which the Common is now regulated. (*Vide List of Appendix*)

Chair resumed by Mr. Shepherd.

Examination of Mr. J. Bellemy concluded.

Committee deliberated, and

[Adjourned to Friday next, at *Eleven* o'clock.]

FRIDAY, 18 JULY, 1862.

MEMBERS PRESENT :—

Mr. Shepherd in the Chair.

| | | |
|-------------|--|-----------------|
| Mr. Cowper, | | Mr. Lackey, |
| Dr. Lang, | | Mr. Piddington, |
| | | Mr. Lucas. |

Mr. George Oakes examined.

Witness handed in a protest of certain Commoners against the surrender of the the Common. (*Vide List of Appendix*.)

Mr. George Spurway and Mr. John Stephenson examined.

[Adjourned to Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 23 JULY, 1862.

MEMBERS PRESENT :—

Mr. Shepherd in the Chair.

| | | |
|-----------------|--|------------|
| Mr. Piddington, | | Mr. Smart, |
| | | Dr. Lang. |

Mr. T. K. Bowden, Mr. T. W. Bowden, and Mr. G. M. Pope, examined.
Committee deliberated, and

[Adjourned to Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 30 JULY, 1862.

MEMBERS PRESENT :—

Mr. Shepherd in the Chair.

| | | |
|-----------------|--|-------------|
| Mr. Piddington, | | Mr. Lackey, |
| Mr. Lucas, | | Dr. Lang, |
| Mr. Sutherland, | | Mr. Smart. |

The Chairman having stated that Mr. James Devlin, senior, had, without his cognizance, been served with a summons to attend as a witness, this day, before the Committee,—
Committee deliberated.

And the Clerk, being called upon, explained the circumstances under which the summons was issued.

Whereupon, objection being taken to receiving the evidence of Mr. Devlin this day,—

Motion made (*Mr. Piddington*) and *Question*,—That Mr. J. Devlin, senior, be summoned to attend and give evidence at the next meeting of the Committee,—*agreed to*.

The Chairman then brought under the consideration of the Committee the propriety of employing professional auctioneers and surveyors, to survey and report upon the value of the Common land and the cost of erecting the proposed bridges.

Committee

Committee deliberated.

Motion made (*Mr. Lucas*) and *Question put*,—That a professional engineer be obtained to give an opinion as to the probable cost of the proposed Bridges, and that Messrs. Richardson and Gorman be employed to estimate the value of the Common land. Committee divided.

Ayes, 3.

Mr. Lucas,
Mr. Lackey,
Dr. Lang.

No, 1.

Mr. Piddington.

Motion then made (*Mr. Piddington*), and *Question*,—That the Engineer for Harbours and Rivers (*Mr. Moriarty*) be requested to examine the sites of the proposed bridges and to favour the Committee with the estimates of the cost of an iron girder bridge over the Parramatta River, and a wooden pile bridge over Iron Cove Bay; and, in the event of his not being able to comply with the wish of the Committee, that the Chairman submit the names of two or three other Civil Engineers to the Committee,—*agreed to*.

Mr. J. Pye and Mr. H. Harvey called in and severally examined.

Witnesses requested to withdraw.

Committee deliberated, and decided upon not taking any further evidence this day.

Witnesses recalled, and having been informed accordingly, again withdrew.

Committee deliberated, and decided that it is desirable to obtain an approximate estimate of the expense to be incurred in carrying out the Resolutions this day agreed to.

Chairman requested to make the necessary inquiry, and report to the Committee.

[Adjourned to Tuesday next, at *half-past Ten o'clock*.]

TUESDAY, 5 AUGUST, 1862.

MEMBERS PRESENT :—

None.

In the absence of a Quorum of the Committee, the meeting called for this day, lapsed.

FRIDAY, 5 SEPTEMBER, 1862.

MEMBERS PRESENT :—

Mr. Shepherd in the Chair.

Mr. Piddington,
Dr. Lang,
Mr. Lackey,

Mr. Lucas,
Mr. Stewart,
Mr. Sutherland,

Mr. Cowper.

Committee met pursuant to summons.

The Chairman stated to the Committee that, in accordance with the Resolution of last meeting, he communicated with Messrs. Richardson and Gorman, and had received the following letter in reply.

Letter, by direction of the Chairman, read by the Clerk, as follows :—

“ 142, *Pitt-street*,
“ *Sydney*, 30 *July*, 1862.

“ DEAR SIR,

“ Mr. Gorman and myself will inspect and value the Field of Mars Common, for the sum of 60 guineas, if our time is not taken up in inspection for more than two days; if it should take another day, we should require 100 guineas. Horses and expenses to be allowed us.

“ We consider two days will enable us to inspect the whole of the land thoroughly.

“ Yours, faithfully,

“ R. P. RICHARDSON.”

“ J. SHEPHERD, Esq.”

Committee deliberated.

And the proceedings of the Committee at their former meeting having by direction of the Chairman been read at length by the Clerk,—

It was Resolved,—

That in consequence of the great expense that would necessarily be incurred in obtaining a valuation of the Field of Mars Common, the Committee do not feel justified in accepting the terms offered by Messrs. Richardson and Gorman.

Messrs. Richardson and Gorman to be informed accordingly.

Mr. James Byrnes, Mr. E. O. Moriarty, and Mr. F. W. Birmingham, severally examined.

Mr. James Byrnes further examined.

Room cleared.

Committee

Committee deliberated, and decided that sufficient evidence has now been taken for the purpose of their inquiry.

Ordered,—

- (1.) That the map or sketch, prepared by the Surveyor General in accordance with the request of the Committee of last Session, shewing the boundaries of the Districts of Eastern Farms and Field of Mars, and the Field of Mars Common, Parishes of Hunter's Hill and Field of Mars, be appended to the Report.
- (2.) That the Chairman prepare a Draft Report, and that printed copies be circulated amongst the Members prior to their next meeting.

Re-assembling of the Committee to be arranged by Chairman.

[Adjourned.]

THURSDAY, 25 SEPTEMBER, 1862.

MEMBERS PRESENT :—

Mr. Shepherd in the Chair.

| | |
|-----------------|--------------|
| Mr. Piddington, | Mr. Lucas, |
| Mr. Smart, | Dr. Lang, |
| Mr. Lackey, | Mr. Stewart, |
| Mr. Sutherland. | |

The Committee met pursuant to summons.
 Printed copies of Draft Report *circulated* prior to meeting.
 Copies of printed Evidence (complete)—before the Committee.
 Draft Report read 1^o.
 The same then read 2^o, paragraph by paragraph.
 Paragraph 1 read, amended, and agreed to.
 Paragraph 2 read and agreed to.
 Paragraph 3 read.
 Committee deliberated.
Question put,—That the paragraph, as read, stand part of the proposed Report.
 Committee divided.

| | |
|-----------------|-----------------|
| Ayes, 6. | No, 1. |
| Mr. Lackey, | Mr. Piddington. |
| Mr. Smart, | |
| Dr. Lang, | |
| Mr. Sutherland, | |
| Mr. Lucas, | |
| Mr. Stewart. | |

Paragraph 4 read, considered, and amended.
Question put,—That the paragraph, as amended, stand part of the proposed Report.
 Committee divided.

| | |
|-----------------|-----------------|
| Ayes, 6. | No, 1. |
| Mr. Lackey, | Mr. Piddington. |
| Mr. Smart, | |
| Dr. Lang, | |
| Mr. Sutherland, | |
| Mr. Lucas, | |
| Mr. Stewart. | |

Paragraph 5 read, considered, and amended.
Question put,—That the paragraph, as amended, stand part of the proposed Report.
 Committee divided.

| | |
|-----------------|-----------------|
| Ayes, 6. | No, 1. |
| Mr. Lackey, | Mr. Piddington. |
| Mr. Smart, | |
| Dr. Lang, | |
| Mr. Sutherland, | |
| Mr. Lucas, | |
| Mr. Stewart. | |

Paragraph 6 read, viz.,—

6. Your Committee obtained the opinion of the Engineer for Harbours and Rivers as to the cost of constructing two bridges, one over the Parramatta River, the other over Long Cove Bay, and he estimated the cost of construction at the sum of £65,000, independent of the cost of making roads and cuttings, which, in all probability, would amount to about £15,000, making a total of £80,000.

Motion made (*Mr Smart*) and *Question put*,—That the paragraph be amended so as to read as follows :—

“The Engineer for Harbours and Rivers, in his evidence, estimates the cost of constructing two bridges, one over the Parramatta River, and the other over Iron Cove Bay, at £65,000, independently of the cost of making roads
 117—b “ and

“ and cuttings, which, in all probability, would amount to about £15,000,
“ making a total of £80,000.”

Committee divided.

Ayes, 6.
Mr. Lackey,
Mr. Smart,
Dr. Lang,
Mr. Sutherland,
Mr. Lucas,
Mr. Stewart.

No, 1.
Mr. Piddington.

Question then,—That the paragraph, as amended, stand part of the proposed Report,—*put*.

Committee divided.

Ayes, 6.
Mr. Lackey,
Mr. Smart,
Dr. Lang,
Mr. Sutherland,
Mr. Lucas,
Mr. Stewart.

No, 1.
Mr. Piddington.

Paragraph 7 read, viz. :—

7. There is nothing in the evidence to justify your Committee in recommending the expenditure of so large a sum of money out of the public revenue. They are of opinion that the Common, if resumed, would prove greatly insufficient to cover the necessary outlay, and such resumption being strongly opposed by a large section of the Commoners, your Committee do not feel at liberty to recommend “ any ” Legislative interference with existing rights.

Committee deliberated.

Motion made (*Mr. Smart*) and *Question proposed*,—That all the words from “ any,” in the last line but one, to the end of the paragraph, be omitted, with the view of adding the following words :—“ it ; but recommend, in the hope of settling this question, that the “ Common be subdivided in proportion to the rights of the Commoners residing at Hunter’s “ Hill, at the Field of Mars, and at Pennant Hills.”

Committee deliberated.

Question put,—That the words proposed to be omitted stand part of the proposed Report.

Committee divided.

Aye, 1.
Mr. Piddington.

Noes, 5.
Mr. Lackey,
Mr. Smart,
Dr. Lang,
Mr. Sutherland,
Mr. Lucas.

Words omitted.

Question,—That the words proposed to be added be so added,—*put*.
Committee divided.

Ayes, 5.
Mr. Lackey,
Mr. Smart,
Dr. Lang,
Mr. Sutherland,
Mr. Lucas.

No, 1.
Mr. Piddington.

Question then,—That the paragraph, as amended, stand part of the proposed Report,—*put*.

Committee divided.

Ayes, 5.
Mr. Lackey,
Mr. Smart,
Dr. Lang,
Mr. Sutherland,
Mr. Lucas.

No, 1.
Mr. Piddington.

Paragraph 8 read and *negatived*.

Motion made and *Question*,—That the Report, as amended, be the Report of this Committee,—*put*.

Committee divided.

Ayes, 5.
Mr. Lackey,
Mr. Smart,
Dr. Lang,
Mr. Sutherland,
Mr. Lucas.

No, 1.
Mr. Piddington.

Chairman to report.

LIST OF WITNESSES.

| | PAGE. |
|---|----------|
| Abercrombie, Mr. Charles | 26 |
| Bellemy, Mr. James | 64 |
| Birmingham, Frederick William, Esq. | 112 |
| Bowden, Thomas Kendall, Esq. | 82 |

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

FIELD OF MARS COMMON.

TUESDAY, 10 JUNE, 1862.

Present:—

| | | |
|------------------------------|--|----------------------------------|
| DR. LANG, MR. PIDDINGTON, | | MR. SHEPHERD, MR. SUTHERLAND. |
|------------------------------|--|----------------------------------|

ISAAC SHEPHERD, Esq., IN THE CHAIR.

J. S. Farnell, Esq., called in and examined:—

1. *By Mr. Piddington:* What amount of revenue is derived from the Common? The J. S. Farnell, Esq. revenue is very trifling.
2. Do you know the amount? Yes, I know the amount, from the report of the Auditors who were appointed to audit the accounts of the Trustees, and from those accounts it appears that from the 1st January, 1858, to 31st December, 1861, the Trustees have received the sum of £188 10s. 10 June, 1862.
3. That is four years, is it not? Yes. They, during that period, paid away £114 4s. 10d., leaving a balance in the hands of the Trustees of £74 5s. 2d.; but I believe there are liabilities now against the Common amounting to some £120 for law expenses, the cost of an equity suit, so that the Common would be in debt to the amount of £45 14s. 10d. Previous to these dates I believe there was little or no revenue raised from the Common. During the old Trustees' time I believe some fifty shillings was the only amount received.
4. Then I understand from you that the revenue actually derived from the Common is really nothing? Nothing.
5. Or next to nothing? Next to nothing. When we consider that so large a quantity of land (6,235 acres) in four years yielded a revenue of only £188 10s., I think it may be said to be next to nothing. And at the same time, this very revenue that is raised out of the Common is raised to the injury of the commoners generally, that is, by the issue of licenses to cut timber and of leases to persons who choose either to cultivate or to cut wood upon it.
6. Then that revenue, small as it may be, derived from this Common, is obtained from persons who cut the timber that is to be found there? From those who cut the timber and who lease the land.
7. Are these parties in the habit of cutting nearly all the timber they find? Those persons who lease the land cut all the timber that is of any value for firewood, &c., on the portions they lease, and also cut that upon the Common adjacent to the portions they lease.*
8. Then if there be any timber of any value whatever upon the Common, the parties who lease the Common are in the habit of removing it? Yes; if there is any valuable timber on the part they lease they cut the timber off. There is also this objection to the present state of things—the leases these persons hold are only for a term of seven years, and the lessees would not be repaid within so short a period for any outlay or permanent improvement they might make upon the land, consequently it is not improved. From what I have seen, I can state that many persons who have leased the land have cut off the timber, and done nothing more upon it. In some instances they have not even put up fencing.

9.

* *Added (on revision):*—In some instances they have held licenses to cut, and in others not.

J. S. Farnell, 9. Do the lessees of these portions of the Common derive their profit from cultivating the land, or from selling the timber? Those persons who have occupied the Common for a long period, perhaps for the last forty years, have improved it by the planting of orchards, but the portions of the Common recently leased have been leased to parties who have got their living by cutting wood.

Esq.
10 June, 1862.

10. For what purpose—for ship-building? No, for firewood. I may remark that there is now on the Common none fit for ship-building; in fact, there is none fit for fencing or sawn-stuff, excepting at the north-western portion, and that is of no advantage to the people at the eastern end, as it would be cheaper to import from Sydney than to bring it down from the north-western portions of the Common.

11. Then as they cut the timber for firewood they sweep away everything in the shape of timber from the Common? Yes.

12. Are the commoners liable to be assessed for the maintenance of the Common? They are, under the 5th clause of the Trustees' By-laws, which provides that a meeting of the commoners shall be called, and that not less than five commoners shall constitute a meeting in conjunction with the Trustees, and shall have power to assess a rate on all the commoners, whether present or not.

13. *By the Chairman:* Have you the Act? This is the 5th clause of the By-laws I refer to. (*The witness read the clause.*)

14. Is that the By-law? This is a copy of the By-laws.

15. Who is it signed by? This is not signed by anybody; it is an exact copy of the By-laws now before the Committee. That clause empowers the Trustees to assess a rate; and there is a provision that five commoners shall constitute a meeting, and that any assessment they may fix shall be binding on the rest of the commoners.

16. *By Mr. Piddington:* Do you know whether that rule has been carried out? No, it has not.

17. Are you aware of any reason why it has not been carried out? No, I am not. I heard one of the Trustees, at the last annual meeting, say that there was a sufficient revenue for paying the expenses of the Common, and that therefore it was not necessary to assess a rate at present.

18. As far then as that information goes, it is because the Trustees have plenty of money there is no reason to assess a rate? Yes.

19. You have stated in your former examination, that the Common if sold would realize a large amount? Yes.

20. Is that an opinion founded upon the fertility of the land within the limits of the Common? Not exactly upon the fertility, but on its proximity to a large population—namely, the City of Sydney. Portions of the land, although perhaps not very well fitted for agricultural purposes, is, from its proximity to Sydney, of greater value than land more suitable for agricultural purposes. I will illustrate my meaning in this way:—The City of Sydney, if it were agricultural land, would be of no greater value for building upon than it is at present, perhaps not so great.

21. Agricultural land of the best description is generally found in levels or flats, is it not? There is an exception to that rule in this Colony. Hills in this Colony are generally the best forest lands. We have an example of this in Prospect Hill, which is the best land in the Colony. About Ryde the hilly land is good; but as you come to the low land, about Lane Cove for instance, it is rocky.

22. Does the Common contain much inferior soil? There is a good deal of inferior soil.

23. Is there any land in the district of a similar character to the land to be found in the Common, and yet under cultivation? Yes, there are portions of land in the district under cultivation equally inferior with some of the worst land on the Common; in fact, it is of the same description as the sterile land of the Common.

24. Have you any knowledge with regard to the practice in England as to Commons and Enclosures—do you know whether there is any general law by which Commons are enclosed in England? Yes; I stated when I was examined upon the previous occasion, that there were a great many Enclosure Acts passed in a certain period. Since then I have procured reliable information, and I find that in England there have been upwards of 3,700 Enclosure Acts passed up to the year 1845; and in the year 1845 the British Parliament passed a general law for enclosing Commons, 8 and 9 Victoria, chapter 118. That Act contains 169 clauses, and it gives the Government general powers for enclosing all the Commons in England and Wales, with this exception, that within fifteen miles of the City of London, and within a certain distance of several towns, if the Government should wish to enclose Commons coming within these exceptions, a special Act must be passed for that purpose.

25. According to your description that was a kind of enabling Act, the object of which was to enable the parties authorized to enclose Commons without coming to Parliament for special authority, except in particular cases? Yes; before the passing of this Act it was necessary to bring in Bills, in the same way as the Bill now before the Committee has been introduced, and to refer it to a Select Committee; but at the time to which I refer, the matter was referred to a Select Committee of the House of Commons, who reported that there should be a Bill brought in for the general purpose of authorizing the enclosing of Commons, and in accordance with the recommendation of that Committee, the Act 8 and 9 Victoria was passed.

26. The Act you refer to is one of a general nature? Yes, with the exceptions I have mentioned. In those cases the Government would have to bring in a special Bill.

27. Do you yourself derive any advantage from the Field of Mars Common? I do not, and never did. I believe on one occasion I got some little fencing stuff off it, but it was very trifling.

28. Are you aware whether the commoners generally derive any great advantage from the Common? As far as my experience goes I believe they do not. The instances are very rare in which they derive any advantage from the Common. I know that all those persons who live to the eastward of the Common, such as those at Hunter's Hill and those who are situated upon the banks of the river, are not at an accessible distance from it for the purpose of turning their stock upon it. Those only are benefited who live near, and turn out an odd horse or cow, or cut timber.
29. To leave out of consideration the proposed project of building bridges, do you think it would be beneficial to the district if the Common were sold? Yes, I believe it would be a great advantage to the district, because a large block of waste land, situated as that is in that district, is injurious to the progress of the neighbourhood. All political economists have come to the conclusion that large blocks of waste land are an injury to the neighbourhood in which they are situated.
30. How many acres are there in the Parish of Hunter's Hill, exclusive of the Common? 7,140.
31. How many acres are there in the Common? 6,235.
32. Then the Common contains nearly as much land as the Parish? Yes, nearly as much; but I might mention, for the information of the Committee, that this Common is so peculiarly circumstanced that it is more injurious than it would be if it were in a more central position. It runs nearly parallel with the Parramatta River, and at the eastern end is about three-quarters of a mile from the nearest source of that river, and at the western end of the district is about two and a quarter miles from the Parramatta River, so that the alienated or occupied lands in the district are laterally compressed, between the Parramatta River on the south, and the Common on the north.
33. How many head of stock would the Common maintain throughout the year? I do not suppose it would more than keep the life and soul in about fifty head throughout the year.
34. Do you think the grasses are of such a nature as to be suitable for fattening bullocks? No, I am sure it would not fatten them, it might keep the life and soul in them, but it would not fatten fifty. The grass would grow on the land if the timber were not constantly cut down, or if the land was properly cleared.
35. That is a very low estimate of the capability of 6,000 acres of land, is it not? Yes; I account for it in this way—The original timber having been cut away entirely, a kind of scrub or underwood has sprung up with the saplings, the saplings have been cut down, the scrub has become denser, and the pasturage has been destroyed.
36. Is the land on this Common equal in fertility to the land on the south side of the Parramatta River? It is equal, and superior in many instances; in fact, generally speaking, it is superior.
37. Has the population in the district you allude to increased in the same proportion as the population on the other side of the river? It has not.
38. Are you aware of any petition having been presented to the Assembly against the alienation of the Common? Yes.
39. Do you know of your own knowledge whether the petitioners who have signed it had in all cases any common right? I looked over the petition, and among the names I can detect a large number who are not entitled to Common rights; in fact, I believe not one, perhaps, out of every five, are entitled to Common rights according to my idea of the boundaries of the district of the Field of Mars, that is, within the parish of the Field of Mars. I have always contended that many of the parties who have opposed the alienation are not entitled to commonage rights.
40. *By the Chairman:* Are you aware whether there are any petitions besides those from parties opposed to the alienation of the Common? I know there are a great many, some for and some against.
41. Do you know whether those parties who have signed the petition in favour of the resumption of the Common have commonage rights? I believe that in the majority of cases they have commonage rights. In fact, having taken a great interest in the matter, I can speak somewhat positively, as I was very particular upon that point. In the first instance, in conjunction with others, we ascertained who were entitled to the use of the Common by the construction of law, and having ascertained that, we knew all the persons who resided within the Parish of Hunter's Hill.
42. Are you speaking from facts, or from mere supposition on your part? That is not supposition; that is fact.
43. Perhaps you will give us these facts? In which way?
44. You say you have examined the papers, and have ascertained who were the persons entitled to commonage—where is the list? I have no list here now; it is at home. It is precisely similar to those that were before the Committee last Session.
45. There has been no list of commoners before the Committee? No list of commoners, but of those who signed the petitions.
46. I am asking you about those who have a commonage right? I could not tell from memory.
47. *By Mr. Sutherland:* Can you send a list of those who have commonage right; you say you know them? I could tell from the printed list of names of those who signed the petition whether they were commoners; to ascertain the names of all the commoners I should have to go all round the districts and take the names of those who reside there. I could in the majority of cases tell whether the names of those who signed the petition were those of commoners.
48. *By the Chairman:* Do you wish to infer that all those persons having commonage right have signed either the petition for or that against? No, I do not believe all the commoners have signed either petition.

- J. S. Farnell, Esq.
10 June, 1862.
49. Then are we to understand that you are speaking from mere surmise, or have you something definite to go upon as to who are commoners and who are not? The only definite mode would be to go round Kissing Point, the Field of Mars, and Eastern Farms districts, and take down the names of all who reside there.
50. Have no persons commonage rights but those who reside there? Yes, those persons who reside in the district of the Field of Mars.
51. I suppose all landholders, whether residents or not, have commonage rights? Yes, "landholders, residents, and cultivators."
52. Can you give us any definite account of the commoners? I cannot from memory, but if I had the lists before me I could point out many persons who I believe are not within the districts, and who are therefore not entitled to commonage rights.
53. You have no list? I have, at home.
54. A list of all those entitled to the use of the Common? I have not.
55. *By Mr. Piddington*: Is there any official list published by the Trustees, of persons who are entitled to Common rights? There is not, that I am aware of. I was once doubtful whether widows in possession of land had any right to commonage, but I find they have.
56. *By the Chairman*: What you have stated is mere opinion; you do not derive it from any positive source; there is no list of persons who are entitled to commonage? I have seen the petitions.
57. I am not speaking of petitions —? There is no list, but there are certain persons who have signed petitions with reference to this matter. I have seen their names, and there are many among them of persons who do not live in the district, or hold land, and who have no commonage rights.
58. I am speaking of those who positively have a Common right? I am aware that many are persons who have, but there may be some who reside in the neighbourhood, and who presume they are commoners. I might ascertain that by going over the district.
59. So that, in point of fact, it is mere presumption all you have said? No, it is no presumption.
60. You told us in the first part of your evidence, that there were no funds derived from the Common before 1858? I believe there were not; fifty shillings, I believe, was all.
61. In giving this statement, have you any document to confirm you? I have no document, but we appointed Auditors to audit the accounts, and that was the report they gave us; of course, every one could not have the original documents.
62. Previously to 1858, no revenue was derived from the Common? Very trifling in the former Trustees' time,—some fifty shillings. I believe that was found on the books.
63. What has been the annual income; has it increased or decreased? That I cannot say, for the Auditors, in their report to us, stated that they could not make head or tail of the books.
64. How did they arrive at the amount, if they could not make head or tail of the books? They arrived at it in the gross, and they found that the whole amount received was £188 10s.
65. I wish to ascertain from you, as you pretend to know these things, whether the revenue from the Common is increasing or decreasing? I am not aware whether it is increasing or decreasing. I should surmise —
66. Oh! surmise. I would suggest that you should not give, as an answer to the question, your surmises? It appears to me very probable that the revenue of the Common is decreasing, as the commoners I believe have decided that no more land should be leased; therefore, if the land is not leased, and no licenses are issued for cutting timber, where is the revenue to be derived from? It must, therefore, be decreasing.
67. These leases that have already been given, do they expire? They will expire.
68. I want to know how the revenue can be decreasing if these leases still exist? During the existence of these leases it will not decrease.
69. Then it will not decrease? It will decrease if the Trustees carry out the policy of issuing no more leases, and of granting no more licenses to cut timber.
70. When will it decrease? When the leases expire there will be a decrease in the revenue derivable from leases as they expire, and from the time the Trustees cease to issue licenses for cutting timber the revenue derivable from that source will cease.*
71. What amount of revenue is derived from licenses to cut wood? I cannot give the Committee that information, for I have not had access to the books of the Trustees.
72. What portion of the revenue is derived from the leases? I do not know the exact amount; it is not likely that I could be acquainted with these things; in fact, I do not know how I could get the information, as the Trustees would not allow me to see the books.
73. Then what you say about the decrease of the revenue is mere surmise? I do not know that it is decreasing, except from the fact that the revenue is derived from certain sources, those sources being the leases and licenses, and if the Trustees do not issue these leases and licenses the revenue must decrease.
74. Have they ceased to issue licenses? I have been told so.
75. When do their leases terminate? I do not know; I have not seen any of the leases, but I believe those which were issued some three or four years ago were for seven years.
76. So that they have several years to run? Three or four, some of them.
77. Do you know upon what conditions they are let? Yes, I believe —
78. Believe! Do you know it? Well, I do not know exactly, but I have been informed, and I suppose the leases are made in accordance with the law, that the land is to be in an improved state when the lessees give it up.

* *Added (on revision)*:—And the revenue will be decreased by that amount.

79. Have you the law? Yes, this (*referring to a printed paper*) is the Act of Parliament by which Commons are regulated in this Colony. J. S. Farnell,
Esq.
80. Then the Trustees have acted according to law? I believe they have. The Trustees have the power, under the law, to lease this land with the consent of the commoners. 10 June, 1862.
81. Do you know to whom the Trustees have leased portions of the Common, whether to parties previously in occupation, or to others? In some instances, to those previously in occupation; some who have been there for forty years, cultivated the land, and made improvements; in other instances, to other persons who have applied for it. For instance, I know a lease was given to a person who occupied the land adjoining mine.
82. Does he still hold it? He abandoned it long ago; he ran away.
83. Did he ever have a lease of it? I believe so; he occupied it a considerable time.
84. Then you cannot tell the amount of revenue derived from the leases, or from the licenses for the cutting of timber? No; I do not know how I could give the information, unless the Trustees would give me access to the books.
85. And you cannot tell how many persons are entitled to the use of the Common? I could, but I should not like to undertake the task of going all over the district to collect the names, unless the Committee particularly desired it.
86. *By Mr. Sutherland*: Could you, at any future day, lay before us a list of the commoners? I could do it, but it would be an expensive affair for me; I should have to go over the district, and to visit every resident. If the labours of the Committee would not be closed very soon, I would be willing to undertake the task. If the map ordered by the Committee were prepared, it would enable me to go over the whole district of the Field of Mars; for I am certain, from an old map in the possession of Mr. Tunks, and from the evidence of the Surveyor General, that the opinion I formed, that many of the persons now claiming a Common right have no right, as those only who are within the district of the Field of Mars and the Parish of Hunter's Hill have that right.
87. *By Dr. Lang*: You have mentioned that a very large number of particular Acts, as well as a general Act of Parliament, have been passed for the purpose of enclosing Commons, or discommoning, as it is called, existing Commons in England? Yes.
88. Do you infer from such Acts that the policy of establishing Commons is now obsolete, or going out of date, in England? Yes, and that the principle of granting Commons is wrong.
89. Are you still of opinion that about two-thirds of the land forming the Common is capable of improvement? Yes. I believe that two-thirds of the land, either from its proximity to Sydney, or from its quality, is valuable. I do not mean that two-thirds of the land is fit for agriculture, for in the whole of the district the land is not equal to that on the Hunter or the Hawkesbury; but there is a great deal of the Common land which, though it would not perhaps grow a crop without manure, might, in consequence of its proximity to Sydney, be made productive.
90. *By Mr. Sutherland*: Can you, on a future day, by having a list of names placed before you, point out the parties having a right and those having no right? I can, with the assistance of a map of the parish and the map ordered by the Committee, point out nearly every person who has a commoner's right, from the names on the petitions.

Mr. William Tunks called in and examined:—

91. *By the Chairman*: Are you aware of the object of the present Committee? Yes. Mr. W. Tunks.
92. What is the object? To report upon a Bill to enable the Government to sell the Field of Mars and Eastern Farms Common, with a view to make roads and bridges, in order to facilitate the means of communication between the north side of the Parramatta River and the City of Sydney. I believe that is, shortly, the object of the Committee. 10 June, 1862.
93. The object of the present Committee is to "inquire into the subject matter of various petitions and other matters relating to the Field of Mars and Eastern Farms Common, together with bridging over the Parramatta Rivers and Iron Cove Bay." That was the object of the first Committee, and the object of the present is the same? That is what I intend by what I have said.
94. *By Dr. Lang*: Are you a commoner? I believe I am; however, it is a disputable matter with me.
95. Where do you reside? At present at St. Leonards, North Shore.
96. Have you property within the district? I think I have; that is to say, the district is not exactly defined now-a-day; but I have some property, which I think constitutes me a commoner.
97. Are you aware of the general character of the land that forms the Common? Yes, although I have not been all over it.
98. Do you think the existence of that Common beneficial to the inhabitants of the district? I think it is not beneficial; but, upon the contrary, I think it an incubus upon the district.
99. Do you think it would be desirable to divert the Common from the purpose to which it has originally been applied to that proposed for the construction of roads and bridges? Yes, I do; I am decidedly of opinion that it would be most advantageous, not only to the district but to this part of the country generally.
100. Have you any idea how the available portion of the land could be disposed of, supposing the Government were to resume it? Yes; I apprehend it would be the policy of Government, if they were to resume it, to make a roadway to the land, and afterwards to alienate it in small portions, to industrious families, with a view to opening up the land. By that process it would attain a greater value than it now possesses.

Mr. W. Tunks. 101. Are there portions of it that would be eligible for villas for persons residing in the city? A large portion of it would be eligible for that purpose, and for horticultural pursuits, especially as the southern and eastern sides of Sydney are locked in by a large landed proprietary—I may mention, without offence, Sir Daniel Cooper and other possessors of land to a large extent to the eastward and southward of Sydney. This would make an opening for persons desirous of obtaining country residences, and the locality would be very suitable for those who are in a state of health which renders them unable to stand the cold air near the sea coast. I am satisfied that the district would have a great impetus given to it if there were a good road to it.

10 June, 1862.

102. Is there a road from the western portion of the Common to Hunter's Hill at present? There is a series of roads; they are hardly to be called roads—they are mere tracks; but there is a way of getting from the western part to Kissing Point, and thence to Hunter's Hill. The Great North Road runs through that part of the country, but it is not frequently traversed, I believe.

103. Would a road from the western extremity of the Common, along the north bank of the river as far as Hunter's Hill, be a great benefit to that part of the country? Not to Hunter's Hill—that is, if I understand what is Hunter's Hill. Hunter's Hill is said to be the parish of Hunter's Hill; Hunter's Hill, the district, is on the other side of Lane Cove River. I suppose you mean the parish, occupied by the little municipality there. It would not be an advantage to come so far as Hunter's Hill; it would be an advantage to come by the road, the nearest route to Sydney, by the Lunatic Asylum. There was a project that if there were a road made to Woolwich Point, opposite Cockatoo Island, a steamer could run from it to Miller's Point half-hourly. It was thought that would be an advantage to the public; but that would be an uncertain benefit.

104. You think it would be a great benefit to the inhabitants of that part of the country and to those of Sydney, to have such an approach to Sydney as that proposed by bridges across Parramatta River? I do not think there can be two opinions about that; and if I were not travelling out of the line of examination of the Committee, I would say this—that I have been for many years connected with that district, and have lately, up to the end of last year, been living there; I have a large number of relatives there, and I believe I was the largest employer of labour there; therefore, I think I know something of the district, and I put the case in this way:—There are a number of men struggling for a living, who individually produce, say twenty boxes of fruit at a time, for Sydney or Melbourne market. Taking Kissing Point Church as the centre, a number of these live at a maximum distance of four miles from that point. These people have to come down to the boat at the wharf, and in doing so lose half a day; then there is the damage sustained by the knocking about of the boxes on board the steamer or other boat, the landing of these things at the Sydney wharf, and again carting to market; the selling them by an agent; and then again there is another half day lost in going for, and returning with, the empties. So that, besides the cost of carriage and commission, &c., which is one shilling per box, and the loss of two half days, more time is lost by such a man than would be lost by him if he had the means of going by the route proposed, as the distance would be but nine miles. Besides, he would be able to get a load of manure at the Abattoir;* and in the winter, when clearing his land, he could take a load of timber into Sydney, whereas now he has to burn it to get rid of it. There were in these districts poor people, before the gold diggings were discovered, that were next to savages, from the want of intercourse with the towns and a market. They were unable to do the best with their produce, and therefore their land was left, to a large extent, uncultivated,† while the large landowners did nothing, and hundreds of acres were lying waste. I conclude, therefore, that a great advantage would be given to those small farmers who choose to labour, while those who hold eligible villa sites, unfit for producing fruit or vegetables, would be enabled to turn them to profitable account. With regard to producing fruit or vegetables, at present these people cannot bring vegetables to Sydney, for I have seen cabbages which in Sydney would be worth a shilling each, and these, when put into a bag, thrown into a boat, and perhaps lain down upon by the men in the boat, have not brought more in the market than a shilling a dozen.

105. Do you think the existence of the Common a public advantage to the district? No, it is not an advantage, unless in this way, that we may be enabled to get a road to the district by getting rid of it. It is so far fortunate that the Common still remains. The land was at first alienated in order to induce population, but although it is one of the oldest districts in the Colony, it is one that has made the least progress; and I find many young fellows who were reared on it, are forced to go to other districts to seek a livelihood.

106. Have you derived any personal benefit from it, as a proprietor in the district? No, I have never received any benefit.

107. What class of the population does derive any benefit from it? There are a few persons either on it, or residing in the near neighbourhood, who, it is probable, do derive benefit from running a few cows or taking wood off it, or soil to improve their lands.

108. *By Mr. Sutherland:* Taking soil off it? Yes, I have not seen it, but I have heard that it is a common thing.

109. *By Dr. Lang:* Is there any valuable timber remaining on the Common? No, I have seen none. There is a great deal of scrub or underwood, from the repeated cutting of the saplings, and this prevents the grass from growing.

110. Does this repeated cutting of the wood benefit the Common, or the reverse? In my opinion it has injured the Common. Many of the leaseholders have injured the Common;

they

* *Inserted (on revision):*—And have saved 20s., the amount paid for boating and commission.

† *Inserted (on revision):*—And the country thereabouts presented a poverty-stricken appearance, and was, I believe, as poor as it looked.

they have taken leases for no other purpose than to have the run of the Common, and then they have abandoned the place. They give no securities, as I understand, and they then abandon the place and go off to the diggings when it suits them.

Mr. W. Tunks.

10 June, 1862.

111. Does the existence of the Common render the cost of fuel less to the humbler classes? When I was living at Kissing Point it did not reduce the cost to me. My brother in Parramatta supplied public establishments with firewood at four-pence a hundredweight, and I could not get it supplied to me at Kissing Point at that rate.

112. *By the Chairman:* You say you live at the North Shore? Yes.

113. Do you know the Common of your own knowledge? A large portion I do.

114. You have not been through the Common? I have not been the whole circuit.

115. You have been round it? No, I say I have not been. I have been in various directions over the Common. I may say that for some months I went once a week in various directions, but I never made it my business to go the whole circuit—I have been to "Buffalo" once or twice.

116. What means of communication is there now between Sydney and the Common? The first means is by the steamer, for which we have to pay a shilling more —

117. I am not speaking about the price? One of the sore places is the steamer. We have to pay a shilling more for return ticket than to go from Sydney to Parramatta, which is double the distance. The next way is by passage boats. We have no public wharf, and it is said by the steamer people we have to get permission from Mr. Small to land, and that he is paid sixpence—that is to justify the shilling extra. Then the other way is to go by Bedlam—some people call it Gladesville—by the punt; that is a distance of some miles further than the way we propose.*

118. Are there many passage boats—sailing boats—on the river? There are Bateman, Woodcock, and Nick Martin. I do not mean the stone boats, they do not come into competition with the business. These are the only three owners of boats from Mr. Heydon's wharf to Sydney that I remember.

119. Are you aware whether the Common extends beyond Mr. Heydon's wharf? Do you mean in a westerly direction?

120. Up the river? I could not say. I think if I were to go up Pennant Hills Wharf Road, and cut across by Mr. Forster's, I should reach the Common.

121. Are you aware whether the commoners' right extends to land beyond Mr. Heydon's wharf? The commoners' right is very difficult to decide; there might be rights of minors, and rights of persons like myself, that are not so easily got at; but I am under this impression, that a number of persons who have no right have signed the petition, thinking they had a right. But it is difficult to say who has a right of commonage, for if a freeholder has a right, and he lets it to a tenant who also has a right, it must go on for ever —

122. Excuse me, but I was only asking you the question whether the commoners' right extended beyond Pennant Hills? I am not prepared to say who are commoners.

123. You are quite satisfied that you are a commoner? I claim the right; but it might be disputed.

124. Is there a large population in the neighbourhood? Large and small are relative terms—not so large as Sydney.

125. I ask you if there is a large population in the neighbourhood? In the neighbourhood of what?

126. In the neighbourhood of Hunter's Hill? I do not think, in proportion to the land occupied, there is. There are 2,300 people in the district, I am told, if you call that large.

127. How do you propose to give them facility of transit? By making a bridge across the river.

128. How many bridges do you propose to make? One would hardly be called a bridge, for it will be over a mere bay, and there will be no traffic under it. Of course it would be a bridge; but anything above high water mark would answer the purpose. There would be two principal bridges.

129. Have you made out an estimate of the probable expense? No, for if a thing is not properly defined, an estimate cannot be made. I am a contractor, and should like to see the plans and specifications before I gave an estimate.

130. How do you propose to defray the necessary expenses? In the first instance, I think the people of that part of the country have as good a right to Government assistance in building a bridge or bridges as any similar number in any other part of the country; but I am aware that the parties in power say, "We have no land to sell, or not much, in that district, and it is useless for you to apply for so large a sum as £20,000 or £30,000 for that purpose," and we say it would be well for us to surrender the Common to raise the funds, and that should there be any deficiency, the Government should make it good; that it would be a public benefit to bring that part of the country, which as the crow flies is but three miles from Sydney, into more direct communication with the city.

131. As you have not made any estimate of the probable cost, I presume you have not made any estimate as to the probable value of the Common? No; I am not so intimately acquainted with it as to give an estimate, but I may mention, that not long since I purchased a small piece of land adjoining the Common at £20 an acre.

132. I would like to know your opinion definitely, as to how you propose to meet the cost of the erection of these bridges in the first instance? In the first instance, I would refer to the plan, in which I concurred, proposed by Mr. D. N. Joubert. We proposed that the Government should resume the Common and issue so many debentures, say for £20,000

or

* *Added (on revision):*—And the punt is dangerous, and the approaches to it difficult to horses drawing carts loaded.

Mr. W. Tunks. or £30,000, what would be the precise cost would depend upon the plans, to be matured by the engineer; but I suppose that, in the rough, it would cost about £40,000. In order to sell the Common, it would be necessary to make a road to it, and it might then be brought into the market in small farms of twenty or thirty acres, to encourage population, for I hold that the district is valuable only in proportion to its population; without population it is useless.

10 June, 1862.

133. You propose that the whole expense of making these bridges should be borne by Government? I do not propose so; what I say is, that in the first instance I would relinquish the interest in the Common, and then, if after the sale of the land there were any deficiency, we should have a fair claim upon the Government, inasmuch as there is a population of two or three thousand, who have an equal claim with any similar number in any other part of the country for Government aid.

134. I understood you to say, that you proposed to make these bridges, and then to cut up the land and sell it? Yes, for I think it would realize a much larger amount if the bridges were first erected and the roads made. I do not say that if the land were put up in one block it would bring that sum, but if it were husbanded, in the same way as it would be by you or I, it would bring a good sum of money.

135. What is the traffic from this district to town—can you form any idea? I am not able to say what the traffic is in a beneficial point of view, but I know there are three boats plying from Kissing Point as lighters. The steamers do not seem to answer to any great extent, inasmuch as conveyance is dear, and the steamer people are not very obliging. For instance, if a number of people put fruit upon the steamer for shipment, although the Melbourne steamer may be only thirty or forty yards from the wharf, they will not back the steamer to tranship the cargo, and the result is, that the shipper has to land his goods, cart them, and re-ship them, which involves a cost of 4s. a load, and additional damage by bruising the fruit.

136. My object is, to ascertain from you the probable traffic, if you would limit your replies to my questions, and make them as short as possible? I have no data to go upon.

137. You cannot form an idea? I cannot form any correct idea. There are now two or three thousand people there, and I contemplate a large additional population if this plan be carried out.

138. *By Mr. Sutherland:* You say you gave £20 an acre for land adjoining the Common? Yes, within these six months.

139. Would the Common land be worth anything like that amount? Some portions of it; it would not be worth that amount as a whole.

140. What do you think the Common would bring, per acre, if sold as you suggest? I could only give an opinion.

141. Do you think the district is healthy? Yes.

142. *By Dr. Lang:* Your estimate of the probable value of the Common is founded upon the previous postulate of the construction of bridges and roads? Yes, largely on that, for what is the use of land unless you can get to it; besides, it is an annoying thing to have to pay a shilling more for a passage than you would have to pay to another place double the distance.

143. Do you think the Government would supply any deficiency in the way you propose, if a bridge were constructed and the Common were made over to them? I think they ought; that they would be only doing their duty to the public to encourage the making of roads to land which is now lying waste within five miles of Sydney.

144. Is there any Government land beyond the Common? I believe there is a large portion between that and Wiseman's Ferry.

145. Which would be rendered comparatively valuable by the road proposed? Yes, if a road were opened it would open a large extent of country to the Hawkesbury, Maitland, and the Macdonald. Not long ago I started from Wiseman's Ferry in a dog-cart, and two other persons in it, and as much iron as would equal the weight of another person, at nine o'clock in the morning, and we arrived at Parramatta in time for the four o'clock train; so that the road is not so bad as people imagine. There is a fertile track of country, called Dural and Castlehill, and North and South Colah, that would be opened up if there were a road by which the people could come without going to Parramatta.

146. *By the Chairman:* Are you aware whether these people from Pennant Hills and Dural convey their produce to Sydney from Parramatta by railway? Yes, a large number.

147. That is the means of transit? Yes.

148. How many times do the steamers ply up and down the Parramatta River? Is there one, or are there two boats plying?

149. I ask you the question; of course, if you do not know, you cannot answer it? I have not been up lately.

150. *By Dr. Lang:* Was it the insufficient means of communication that induced you to leave the district of Kissing Point? Yes, one of the principal reasons. While the people of Parramatta were paying 30s. a month for conveyance to Sydney, we were paying 30s. for half the distance, and I have often had to walk into Sydney because I have lost the boat, or to hire a boat to Hunter's Hill; and in the winter have had regularly to walk through the bush in the wet, from Hunter's Hill to Kissing Point. If I came up to town to give an order to the grocer, and for a small package, I had to pay a shilling for registering, or else to take the risk of the transit. I could not have even a loaf of bread sent to me without the payment of a shilling for entering in the wharf office book.

151. *By the Chairman:* Then it is not the insufficiency of the transit, but the expense of travelling you object to? And general incivility—

152. Not the insufficiency? Not the number of times the boats go up and down.

153. Then there was sufficient means of transit? If I had a dog-cart and a good road I might have brought the steamers' price down to a proper rate; and if they had not come to my terms I could have been independent of the steamers.*

Mr.W. Tunks.
10 June, 1862.

154. *By Dr. Lang:* Suppose there were such a road and bridge as you contemplate, would the people of Dural and Pennant Hills be likely to avail themselves of it? Yes; as a landholder at Castle Hill, I should like to see the road made.

155. Would it be cheaper for the inhabitants of those districts—Dural, Castle Hill, and Pennant Hills—to bring their produce direct to Sydney by such a road as you propose, than to bring it to Parramatta to be forwarded by the rail? It would be a great gain to the people in these districts, because there is generally a day lost to take things to the train; then they have either to leave their horses at Parramatta or to send them back by a second person, while the people go on to Sydney; and then again there is as much time lost in going backward and forward for their empties. If there were a road to Sydney they might go on with their goods direct in the same time, and have this further advantage, that they could sell them and purchase their supplies in the best market, viz., Sydney. I have known a man to send his fruit down by a boat; on arriving at Sydney, the boatman, after haggling a little with a dealer, has let him have the whole of the fruit in his boat at so much a basket all round, so that the man who has sent down good fruit has had to take the same price for it as one who had the veriest rubbish. It thus becomes an obstacle in the way of competing for the production of good fruit.

156. *By Mr. Sutherland:* From your answer I infer that a man loses as much time in coming to Parramatta and forwarding his fruit by the railway to Sydney, as he would do if he had a good road and went direct to Sydney, besides losing the advantage of being able to sell it himself? Yes.

157. And it is much more expensive for him? Yes.

158. Do you think there would be more fruit grown in the district if there were means of bringing it to Sydney? Yes; large quantities are now destroyed for want of the means of cheap carriage. Grapes are largely grown in the district; now if a man could in the summer gather his grapes early in the morning while the bloom is on them, and convey them in that state direct to Sydney, he would get more for a hundred-weight than he can now for a cart-load, when they are thrown into a boat and brought into market comparatively stale looking, in many instances only fit for food for pigs. The same remark will also apply to vegetables, as well as what is called summer fruit. Then, again, with respect to hay, this is not grown in the district, because there is no market for it; it cannot be taken across the punt without danger of going over into the river, and it would be, say twenty miles on an average round to take it by Parramatta. It is owing to this that oranges are so largely grown in the district, because they may remain on the trees three or four months, and may be packed when they are a little green. If there were a good road to a market, many descriptions of produce might be grown which are now neglected.

159. *By Dr. Lang:* Do the people of Kissing Point avail themselves of the punt in bringing their fruit to market? Very few. It is a very dangerous place to get at; and I have been at the point bawling for an hour to the man who, if it is a blowing night, is particularly deaf; you may bawl till you are hoarse and then have to go round by Parramatta. Some time ago Mr. Moore, Botanical Gardens, and his wife, were going over in their dog-cart, when, by some mismanagement at the punt, they got into the river. Mr. Moore managed somehow to get his wife and himself on shore, but the horse and dog-cart were no more seen.

160. *By the Chairman:* The general mode of transit is by water? I do not know which way the balance is—a good deal goes by water and a good deal goes by land.

161. It goes by punt? It is of no use trying to catch me—you need not try to pick me up before I am down—and I am not down yet.

The Chairman appealed to the Committee whether the witness had given a proper answer. The witness withdrew the expression, and said he had previously answered the question.

162. *By Mr. Sutherland:* You believe the whole of the produce of the district would come by the road, in preference to the steamer, if the road proposed were formed and the bridges were erected? Yes. I would beg to add that it would be a great advantage to have a direct communication by road with the Lunatic Asylum, in order that the unfortunate people who are taken there might be conveyed in a van. There are now often painful scenes on board the steamers, as, without charging those who have to convey them with unnecessary violence, it is necessary to use force to restrain them on board.

Gabriel de Milhau, Esq., called in and examined:—

163. *By the Chairman:* You reside at Hunter's Hill? Yes.

164. You are a landholder? Yes, I am.

G. de Milhau, Esq.

165. You are aware that a number of persons are anxious to have certain bridges erected, so as to connect that side of the country with Sydney? Yes.

10 June, 1862.

166. What would be the cost of those bridges? I never made an exact calculation, but I think about £60,000 would pay for the bridges.

167. How do you propose that the money should be raised? I think the best way would be to put up first the bridges, then raise money by debentures, and sell the land by degrees.

168.

* *Revised:*—Could have visited Sydney independent of the steamers, and not been tied to time and competition by 'bus or other conveyance.

- G. de Milhau, Esq.
10 June, 1862.
168. Do you know the Common? I know a great part of it; I have been often over it.
169. Can you form any opinion as to the probable value of the Common? I do not know exactly now what would be the value of one acre of land upon the Common, but I hear very often of land having been sold just adjoining the Common at £25 an acre.
170. Supposing any large quantity of the land of the Common were placed in the market, what, in your opinion, would it realize? I think good villa sites ought to bring from £25 to £40 an acre.
171. Supposing these bridges were to be erected, would it tend to increase the value of that portion of the district at Hunter's Hill? Yes, I have no doubt it would.
172. Very considerably? Yes.
173. Are you aware whether there are sufficient churches and chapels for the requirements of the place? At Hunter's Hill, where I reside, there is a church belonging to the Church of England, but I hear it is too small for the population.
174. I suppose you have roads from Hunter's Hill to the district of Ryde? We have a Municipality who are making roads.
175. You have a road then? Yes, from Hunter's Hill to the Great North Road there will be a road, but it is not yet finished.
176. *By Dr. Lang*: Does the road you have spoken of lead to Sydney? We applied lately to the Government to be allowed to go on the Asylum Reserve, and this new road will go to the bridges when they will be formed, and to the Great North Road.
177. Are there many sites on the Common that would be eligible for building villas? Yes, there are a good many splendid villa sites.
178. Particularly, I presume, along Lane Cove? Along the Lane Cove River.
179. How do you come to Sydney? I am obliged to come by steamer, and I lose a great deal of time in waiting for them, as they are never very exact. I would prefer to go by land, but at present the only way is by the punt, and that is nine miles round, and we are obliged sometimes to wait an hour for the punt.
180. The distance by the proposed bridge is how much? About four miles.
181. *By the Chairman*: Is the land of good quality on the banks of the Lane Cove River? Not on the banks of the river; it is generally bad there, but when you go back on the Common some of it is pretty good soil.
182. You are not aware what proportion of it is of good quality? Near Kissing Point some is of good quality, but I cannot say what is the quantity.

TUESDAY, 17 JUNE, 1862.

Present:—

DR. LANG, | MR. PIDDINGTON.
ISAAC SHEPHERD, ESQ., IN THE CHAIR.

Mr. John Ross called in and examined:—

- Mr. J. Ross.
17 June, 1862.
183. *By the Chairman*: You reside at Kissing Point? Yes.
184. You are a landholder? Yes.
185. You are an advocate for bridging the Parramatta River and Iron Cove? Yes.
186. How do you propose to do it? By selling the Common we would get the means of doing it. We want some way of getting to Sydney conveniently. As we are situated now the communication is very difficult. If I have to send a load of hay to Sydney I must send it round by Parramatta. The Common is quite useless to me, and I do not think there is a single one in the district has so much money invested in the district as I have.
187. Are you aware what the expense of the bridges would be? I was not informed what the expense would come to.
188. You propose to sell the Common, and so raise the necessary funds to build these bridges? Yes, that is what I should vote for.
189. But you have no idea what the cost of the bridges would be? No, I have neither any idea of the cost of the bridges nor of the exact value of the Common, but I know that I have got land adjoining it that I paid £30 an acre for. The Common is useless to me, and in fact, it is a nuisance, because there are people who have a lot of cattle running there, which, having nothing to live on there, are continually breaking through my fences and coming on my corn.
190. Are there a great number of cattle running on the Common? Yes; I cannot tell you the number.
191. And they trespass on you? Yes.
192. What is your mode of transit now from Ryde to Sydney—by what means do you come to and from Sydney? Sometimes I go by Parramatta, and take the train, sometimes by Kissing Point by the steamer.
193. The steamer plies regularly? Yes. Some other times I may send a horse and cart to Sydney by crossing with the punt at the ferry, but it is dangerous, and it takes two days to go and come; whereas if we had a bridge we could do it in four or five hours each way—in one day instead of two.
194. Are there sailing boats that convey produce to and fro? Yes; but my horse and cart have four or five miles to go to get to a sailing boat; and if there was a bridge, three or four miles farther would do the whole distance, and we could go and come as we liked.

195. You can give us no idea as to the probable cost of these bridges? No; but I should like to receive that information from such as the Chairman. Mr. J. Ross.

196. *By Dr. Lang*: Is your property situated near the Common? Some of it is just joining the Common. 17 June, 1862.

197. Did you say you had leased any portion of the Common? I have leased twenty-five acres of it. About twelve acres of it had been cultivated. It was a piece that had been taken up by a party who improved it, thinking it was his own property, but instead of that it was found to belong to the Common. There are about ninety fruit trees on the part of it that I have got.

198. It is partly improved? Yes, twelve or thirteen acres of the part I have got.

199. It was originally an encroachment on the Common? Yes.

200. That accounts for its being improved? Yes.

201. What is the term of lease that you have for that portion? I believe it is seven years; there are three or four years to run.

202. What rent do you pay? Five shillings an acre—£5 a year.

203. Do persons who lease the Common in its wild state improve it, or merely cut the timber off? They just cut the timber off, and do a little. It is not to be supposed that people who have only got a lease for seven years will make much improvement. They only just put up a shelter for themselves, and they neither improve the property nor do much good for themselves. They only just manage to live in their miserable places. If it was their own of course there would be a difference.

204. Have you any idea of the value of the Common, per acre? I have mentioned already that I could not say. I have paid as high as £50 an acre for some land adjoining it.* There are some parts of it, no doubt, worth a great deal more than others.

205. Is there any considerable part of it fit for agriculture? I have not been above four years in this part, and I cannot tell what there is of it, because I do not know the boundaries of it, only just where it is joining myself. I know there is very good land adjoining me.

206. Do you conceive that the Common is of any advantage to you? Not the least advantage. It would be far better if it was sold, and there were some people occupying the Common who would improve it. Any land not improved is valueless.

207. Is it not valuable to you for grazing purposes? No, there is no grass to speak of, on it; it is grown over with underwood; the timber was cut off, and now it is so overgrown with brushwood that no grass or anything else can grow on it.

208. You think that cutting down the original timber has deteriorated the grass run? Yes. I do not see that it is much good for grazing purposes; and the cattle on it are continually trying to get through the neighbours' fences, and breaking in. They are more of a nuisance than anything else.

209. You think it would be an advantage to the district to have the Common sold? Yes, I believe it would be an advantage to the district, because if the Common were sold, and the bridges built, we could send a load of hay or any other produce in to Sydney, without having to go round by Parramatta. I have I suppose about twenty miles to go to get to Sydney, and it is the same with everybody else.

210. What would the distance be, supposing these bridges were erected, from your place to Sydney? It is about five miles and a half from the town of Ryde to Sydney, and I am just about three miles further away from Ryde; that would be about eight and a half miles between my place and Sydney.

211. And round by Parramatta what is the distance? I am five miles from Parramatta, and from Parramatta to Sydney is about fifteen miles—nearly twenty altogether.

212. Do you make use of the Bedlam Ferry punt? No; there is the chance of getting the horses drowned or lost, and it is not a regular thing you can depend upon to get across.

213. Does that punt afford a convenience to the district? I conceive it is no convenience at all; going and coming costs three shillings; that is a good deal, and would pay all the tolls and other expenses.

214. Is the cost of conveying produce to market under the present system considerable? Yes, because if we send by a sailing boat we have to go three or four miles to the boat, and if we send fruit we have to send again for the cases. If we had a bridge we could start off and everything could go direct to market, and the horses could come back the same way. I consider we have a claim to get something, whether the Common is sold or not, because other people get railways which are of no use to us—Windsor, and Maitland, and other places—and here we are just close to Sydney, and have to go such a distance round. I have spent about £10,000 on my property since I have been there.

215. *By Mr. Piddington*: Would any persons in the district be injured by the construction of the bridges? I cannot see who would be injured.

216. Is the land that you say you have paid £50 an acre for, in the neighbourhood of the Common, very superior to other land in the vicinity—is there any land on the Common nearly equal in value to the land that you have paid £50 an acre for? Some I have got myself, with the improvements on it, is equally good with that I paid £50 an acre for.

217. *By the Chairman*: Is the land you speak of as having paid £50 an acre for, the land that was purchased from Dr. Sherwin, highly improved? It is not so highly improved as the twelve acres on the Common that I have on lease.

218. Was it built upon? Yes.

219. When you say you paid £50 an acre for it, you mean that the land cost you at the rate of £50 an acre, including improvements? Yes, altogether it cost me more.

THURSDAY,

* NOTE (on revision):—There were improvements on this land, but the average price of land in the neighbourhood is from £5 to £10 per acre.

THURSDAY, 19 JUNE, 1862.

Present:—

| Mr. LUCAS, | | Mr. SMART, |
| | Mr. SUTHERLAND. | |

ISAAC SHEPHERD, Esq., IN THE CHAIR.

Mr. John Folkard called in and examined:—

- Mr. J. Folkard.
19 June, 1862.
220. *By the Chairman*: You reside at Kissing Point, or rather at Bedlam Point? On the Bedlam Road.
221. You are a tenant of Mr. Farnell's? Yes.
222. And a landholder in that neighbourhood? Yes, I have land of my own.
223. You are one of those who advocate the bridging of Parramatta River? Yes, I think it would be a great benefit to the neighbourhood.
224. You, as a landholder, have a title to the Common? Yes.
225. You propose to surrender that as a consideration for these bridges? Yes.
226. What do you suppose these bridges will cost? I am not aware; it is not in my line to know anything about them.
227. What do you suppose the Common would realize, if sold? That would depend upon the communication we had with Sydney; if we had better communication the Common would be valuable, now it is valueless. There is valuable land upon the Common.
228. In point of fact, it would realize nothing now? I do not think that; as a Common, I say it is valueless to the commoners.
229. My question to you is, what do you suppose the Common to be worth in its present state? I am not a valuer of land; but I know what I paid for mine in the same neighbourhood, and I can find more land on the Common as good as that.
230. *By Mr. Lucas*: You say you have purchased land in the neighbourhood? Yes.
231. What did you pay for it? Rough as it was, I paid £230 for twenty-four acres, to Mr. George Allen.
232. Is it in the same locality as the Common? Yes.
233. How far from the Common? One corner of mine is within thirty rods of the Common.
234. Does it lie between the Common and Parramatta River? No, part of the Common runs between my land and the Parramatta River.
235. Do you consider your land equal to the average of the Common land? There is some of the Common not so good as that; but some is a great deal better.
236. Do you think that if the Common were to be sold—I do not speak of selling it in the market at once, but if it were sold within the next five years—it would average £10 an acre? I do not know whether it would, if it were sold in so short a time; there is a good deal of land to bring into the market.
237. There is 6,000 acres? I think about that. I think in time it would realize £10 an acre. There is a good deal I have seen that I think would fetch more, and there is a great deal I have not seen. I have not seen some of the best.
238. How do you get to Sydney now? By punt.
239. With horse and cart, what does it cost? Is. 6d. each way.
240. Do you know what the punt lets for? I think it is sold for £30 a year, at present.
241. Are there steamers passing there regularly? Yes.
242. How often? I think three times up and three times down.
243. What is the fare by steamer from Bedlam Point? Is. 6d. steerage, and 2s., I think, cabin.
244. Is. 6d. up and Is. 6d. down? Yes.
245. Then if you left Bedlam Point for Sydney and returned by steamer it would cost you 3s.? Yes.
246. What do they charge for goods? I generally sell mine on the ground, for it is so precarious to get to Sydney. The last time I sent, my wife had her leg broken, and was lamed for life.
247. You do not know what they charge per ton for goods by the steamer? No.
248. At what times during the day do they run? Eight and ten, twelve and one, and four and six o'clock, I think.
249. How far is it by water from Bedlam Point to the steamer's wharf in Sydney? I was told by Mr. Isaacs that it was called six miles.
250. How far from the river do you live? About a mile and a half.
251. *By Mr. Smart*: In what year was it that you purchased the land for which you gave £10 an acre? 1855.
252. Do you think land of the same quality would fetch the same price within the next year or two? I think it would.
253. What quantity of land on the Common do you think is equal to yours? That I cannot say, for I have not been a great way about the Common.
254. A great portion of the Common you have not seen? Yes; in fact it has not been surveyed till within the last few years, and we did not know where the boundaries were.
255. You cannot inform the Committee what quantity of good land there is on the Common? No; I think close by where I live we have all the worst of it, or nearly so.
256. *By Dr. Lang*: Do you imagine the construction of the proposed bridges, and the formation of a road direct to Sydney, across the river, by Iron Cove, would be a great convenience to the public on the north side of the river generally? Certainly, there can be no doubt of that.

257. It would greatly facilitate your means of conveyance? Yes, and would add greatly to the value of land in the neighbourhood, and of property generally.
258. Supposing there were such an improvement effected, do you think persons residing in Sydney would be likely to purchase villa allotments on the Common? I think so.
259. You do not suppose there is any inducement to do so now? There is not any convenience to get there.
260. Do not the steamers afford the requisite convenience? Yes, to a small extent, for passengers, and when you land you must foot it. If there were a road and bridges a person could go in and out of Sydney by horse and gig; but there is no inducement to anyone to come to Kissing Point as it is.
261. Are you sufficiently acquainted with the physical character of the Common to know that along Lane Cove there are various localities that would be in great request as sites for villa residences? Yes, there cannot be a more pleasant part of the Country than many of the localities near Kissing Point to settle on; but I am almost tired of stopping there, from the way I am hemmed in by the Common.
262. *By Mr. Piddington:* What is the cabin fare from Ryde to Sydney? I think it is 2s.; I always go the cheapest way myself.
263. Do you know Eastwood, where Mr. Ross resides? Yes.
264. Do you recollect the sale of some property at the back of Mr. Ross's, called Summer-vale? Yes, there was a sale some time ago.
265. Do you recollect the price that that land which was uncleared brought? I did not attend the sale, and I cannot say now what it did fetch, but I believe it went pretty high.
266. Do you think the land I speak of is superior in quality to the Common? No, I do not think it is; I think plenty on the Common is superior to that. I have been there two or three times where Mr. Ford's ground was.
267. Mr. Ford's ground I speak of—if that were sold for £9 an acre, do you think the Common would be likely to bring as much if sold? I think a great deal in that neighbourhood would bring more.
268. How long have you resided at Kissing Point? Twenty-one years.
269. Have you kept many cattle since you have resided there? A good many. I had a contract for the supply of milk to the Lunatic Asylum, and I had a good many cows, and had to replace those which went dry.
270. Can you tell the Committee whether the Common was of much advantage to you for the grazing of stock? Very little.
271. Are cattle safe when you turn them out on the Common? I have not found it so. I have lost eleven head in fourteen years.
272. Then, as a means of grazing to parties who have an interest in it, the Common is not a safe place for persons to turn their cattle upon? It is not. I rent a paddock of twenty acres, for which I pay £10 a year, because I will not turn my cows on the Common. About two years ago I lost a couple of calves, and my boys some time after found them branded by another person.
273. Do you think you are the only person who has suffered losses from turning cattle on the Common? No, I know several. Mr. Kearn, who is living on Mr. Byrne's farm on the Parramatta Road, has lost a number of horses and cattle on the Common.
274. Do you think the Common is capable of sustaining a large number of cattle? No, there is too much brush and scrub upon it; the grass cannot grow.
275. How many cattle do you think are usually to be found grazing upon it? I cannot form an idea.
276. Cannot you give an opinion as to whether there are 50 or 500? There are a good many; but I should say not so many as 500.*
277. As far as your observation goes, do the cattle generally appear to be in good condition? Not lately.
278. Is there any good timber upon the Common? I believe there is, from what I hear. I do not know of my own knowledge, for in our part the timber is cleared off; but I see people fetching timber for fencing. Near where I live there is no timber worth anything—it has all been cut down and carried away by wood-cutters. That is the reason that the scrub and brush are so thick, and that there is no grass.
279. Then the Common has been plundered, by the people who live in the neighbourhood, of the wood upon it? It has been carried away.
280. Have you ever observed, during your long residence in the neighbourhood, the character of the persons who have squatted or resided on the Common? Yes.
281. Are they desirable neighbours—good neighbours? I have had some very undesirable ones close to me—they have been a great nuisance.
282. Is not the Common a kind of refuge to bad characters? It always has been since I knew it. There is a place called Buffalo, where there are a number of wood-cutters who bring down women from Sydney, and there is great rioting and debauchery carried on there.
283. Is that a desirable state of things to be carried on within five or six miles of Sydney? I think not.
284. If the Common were sold, do you think it likely that it would continue to be the refuge of this undesirable class of people? I think they have removed now; I think the Trustees interfered.
285. Is there any security, while the Common is unsold, that they will remain away? That will remain with the Trustees.
286. If the Trustees do their duty they have the means of removing them? I think so.

Mr. J.
Folkard.

19 June, 1862.

* On revision:—A fourth of that number.

Mr. J.
Folkard.

19 June, 1862.

287. The question all depends upon whether the Trustees discharge their duty or not? If the Trustees relax they will come back again.
288. If the land were absolutely sold to private persons—? They would be ejected. I have known, on a Sunday, a number of boys, and men with them, have assembled on the wharf to inquire where the women were. Mr. Drinkwater, one of the Trustees, came to me and complained. I said it was the case, and that I had sent my boys back.
289. I suppose the cause of the facility for the congregating of these bad characters is, that this is a large tract of land owned by no person in particular? Yes; there are a large number of wood-cutters who settle on this land, and bring down these women with them.
290. Do you think the Common a great advantage to the commoners, generally speaking? I know, for my own part, that it is no advantage to me; I would freely give up my share.
291. Taking a more general view, apart from your own advantage, do you think the commoners derive much advantage from it? I do not think they do.
292. Have you any conception of the value of the Common? No, for I have not been over it.
293. So far as you have observed, do you think the Common is suited for horticulture? A great part of it is—a part will never be of any use for horticulture; it abounds with rock near the creeks.
294. How do the inhabitants of the Common transmit their produce to market at the present time? By boats, and some by the punt.
295. Are some obliged to go round by Parramatta? Some in the farthest part of the district go that way.
296. If these projected bridges were constructed, would it not shorten the distance to Sydney? Yes.
297. Do you not think the expense of transmitting produce to market, if these bridges were constructed, would be lessened? Yes, even if we had to pay the same toll for crossing the bridges that we now have to pay for the punt, because we could then go to Sydney and return the same day; now we have to go to Sydney one day and return the next, or else start in the middle of the night, and go over a bad road in the dark, in order to get in to market in the morning, which was the case when my wife met with her accident.
298. Then I understand you to attribute this unfortunate accident to your wife to the unsafe character of the road? Yes, by having to cross the punt by night.
299. Can very heavy loads be taken by way of the punt at Bedlam Ferry? No.
300. Could a load of hay? No; it would require a good many horses to take a load of hay by way of the punt, and you could not work them; in fact, hay would not pay the cost of transport. Supposing you could get any fair price for it at market, you could not get enough to pay you for taking it by way of the punt.
301. Do you think the commoners are in general in favour of the alienation of the Common, and of spending the money in the construction of roads and bridges? I think the greater part of them are, but I have heard some object.
302. Where do those commoners reside who you think are not in favour of it? I think some of those nearest Parramatta are opposed to it.
303. The objectors are a small minority of the commoners who live in that part of the district near Parramatta? Yes.
304. And who are, therefore, comparatively speaking, not interested in the construction of these bridges? I think they would be benefited by the bridges, for it would bring them nearer to Sydney than the present road round by Parramatta.
305. Their interest is evidently not so great as that of those who live nearer Sydney? I think they are interested also.
306. You think all the commoners, whether they live near Sydney or at the remotest part of the Common, are interested in the bridges? Yes, and the people a great deal beyond the Common.
307. To a considerable extent the inhabitants of the district beyond the Common would be benefited? Yes.
308. Are you of opinion that a considerable portion of land, not sold by the Government, would be benefited if bridges were constructed? If Government have land at the back it would enhance the value of that.
309. *By Mr. Lucas:* Do you know the situation of the Government lands there? No.
310. You do not know whether it is fit for agricultural purposes? No; I have been told there is good land at the back, but I do not know of my own knowledge.
311. I understood you to say that hay grown in your neighbourhood would scarcely pay to bring to market? They could not bring enough to pay them.
312. Do you mean they could not grow enough? They could not convey enough over the punt at one time.
313. You spoke about getting early to market; is it not the fact that the whole of the market gardeners, whether they live a few miles from Sydney or at a greater distance from it, are up all night engaged in bringing their produce to market? I do not know.
314. I presume you visit the market occasionally? I have not done so of late years—I generally sell my produce on the ground.
315. I understood you to say you had lost eleven head of cattle—in how many years? Twelve or fourteen years.
316. How many head of cattle have you in that neighbourhood? I have only three now.
317. How many have you had during the last fourteen years? I have bought, sold, and lost a good many.
318. Could you say within twenty, thirty, or forty? I do not know that I could without making a calculation; two years ago I sold thirty in one lot.

319. Did you lose them by their being stolen? I believe so; when I turned them on the Common I could not find them again.
320. Did you give any information to the police about your loss? No; from time to time they went away, and I never saw them again.
321. Did you advertise them? No.
322. It may be that they are in the back land now? I think not; I think I should have found them if they had been upon the Common.
323. How much of the Common have you been over? I cannot say how much; I have been to the back of Mr. William Forster's, at the back of Mr. Devlin's, and at Lane Cove.
324. Have you been over a third of it? I have been to the head of Lane Cove and crossed from thence to Parramatta.
325. You say bad characters collect there occasionally—lots of boys? Not of boys; but boys used to frequent there because of the women who were brought up.
326. Have you ever visited Balmain or other suburbs of the city of Sydney on Sunday—if you have, you must have found plenty of bad boys collected together? I am not speaking of boys, but of men.
327. You would have found plenty of characters as bad as those you say collect on the Field of Mars Common? These boys used to go on Sunday afternoon to secluded places after the women.
328. How much would it shorten the distance from your place to Sydney if these bridges were constructed? I should think half the distance.
329. What would that be? It is, I think, about ten miles now.
330. It would bring it within five miles? About that.
331. The Honorable Member for the Hawkesbury, Mr. Piddington, asked you about some land that was sold—Mr. Ford's—is that near the Common? Yes, I believe it adjoins the Common.
332. What part—the further or nearer end of the Common? Near Ryde.
333. Do you know the land—is it good land? I have been on it, and I think it is pretty good land.
334. Is it of similar quality to the average of the land you have been over? I have not been on it for some time now.
335. *By Mr. Smart:* You stated just now, that if the bridges were constructed it would benefit very much the residents beyond the Common? I think it would.
336. What residents are there beyond the Common—are there any? I have heard that there are a great many at the back—I do not know of my own knowledge.
337. You do not know the number? No.
338. You do not know as a fact whether there are any there or not? No.
339. You do not know of your own knowledge whether there is Government land at the back of the Common, which would be increased in value by these roads and bridges? No, I do not, but I have heard so. If there is any land fit for cultivation it must be benefited.
340. The persons you have spoken of who were at Buffalo Corner—had they leases, or houses, or were they trespassers? They had not leases—they lived under the rocks.
341. On the beach—on the margin of the river? A little way from the head of the creek. It is a secluded place in a blind creek that runs up the bush.
342. What steps could the Trustees take to keep these people off the Common? I heard Mr. Drinkwater say that he ordered them to leave the place, and pulled down the house.
343. Then there was a house? There was a place under the rock which was patched up in front.
344. They had no lease from the Trustees for any portion of the land? No; one of them applied to me to sign a petition to the Trustees to grant him a lease. I said no, I would not, as I had never been in his company before.
345. *By Mr. Piddington:* If the Common were sold to private individuals, would the same facility exist for the assemblage of these bad characters as does now? Not unless they took leases from the purchasers.
346. You say you have known bad characters to assemble on the Common—do you think those bad characters assemble there because the Common is unsold? The reason they assemble there is that the persons who cut wood take it to Sydney for sale, and bring these women down with them.
347. They were trespassers on the Common? Yes.
348. If the Common were sold would there be trespassers? No.
349. If there were no trespassers, would there be the same facility for the congregation of bad characters as at present? There is not at present—I believe the Trustees have removed them.
350. *By Mr. Lucas:* Would there not be greater facility for persons going over there if the bridges were built? Yes.
351. Could not these bad characters get there with more ease if these bridges were built? Yes, but they could be sent away more easily. I do not think they would be allowed to stop.
352. *By the Chairman:* If I understand you rightly, you say that these bad characters you complain of have been removed; if so, there are no bad characters there? They are in the neighbourhood, not far away; I have seen them going down the river.
353. *By Mr. Lucas:* Are they on the Common? Somewhere in the neighbourhood, whether on the Common or not I do not know.
354. You do not know that they are not on land that has been sold? I do not know where they reside.
355. *By the Chairman:* Have you heard of bad characters being about the church door? I do not know.

Mr. J.
Folkard.

19 June, 1862.

- Mr. J. Folkard.
19 June, 1862.
356. *By Mr. Fiddington*: Do you think the church door is the most likely place at which to find bad characters? No.
357. Do you not think the Common a more likely place to find them than at the church door? Yes.
358. *By the Chairman*: Are you aware whether the Trustees use means to disperse these bad characters on the Common? I have understood so.
359. Are you aware whether those persons who take their produce by Parramatta go from the eastern or western extremity of the Common? From the western, nearer Parramatta.
360. Then, in point of fact, those who come from the eastern extremity cross the water by the punt? I do not think many come by that way.
361. Then they come by water? At the western end they go by Parramatta; at the eastern end, some by water and others by the punt.
362. *By Mr. Lucas*: The producers? Yes.
363. Is the district of Ryde an agricultural district? It might be if the people had any encouragement.
364. Do you grow hay and agricultural produce for sale? It is of no use; we cannot get it to market. I grow what I want for my own consumption, but not for sale.
365. Do you import hay from Sydney for the consumption of the district? Sometimes I buy a few bales of lucerne hay, when I am short.
366. Are you aware whether it is the practice of the inhabitants to take hay and other produce, for the consumption of the district? Some do.
367. Are you not aware that it is very generally done? I am.
368. What is the reason of that, if the land will produce it? It would produce it.
369. How then do you account for the large importation? I do not think there is a large importation. I think Mr. Devlin is the largest importer.
370. How do you account for the small importation? Many people have not land, or do not cultivate their land except for orchards, and if they have horses they must have hay and corn.
371. Then they do not require facilities for conveying their produce to Sydney? Yes, they do.
372. Not when they do not produce anything? They have the produce of their orchards to send to market.
373. How do they convey that to market? Some take it by the punt; some send it by boatmen. I have known many cases where people have sent their fruit by the boat, and have had to pay a shilling for each case; the fruit has been sold for nine-pence a case, and they have been brought three-pence in debt. Two or three years ago I took some fruit down to the wharf, and sold it for £3. The next market day I sent down a similar quantity to the market, and was five shillings in debt.
374. Then it does not pay to grow fruit and produce? Not that way.
375. You spoke of that portion of the Common adjoining Lane Cove River—do you consider that adapted for agriculture? No.
376. Is it for horticulture? It might do for building.
377. What would be the inducement to persons to build there—is the situation so good? Some of it is.
378. For building purposes? Yes, I think it is.
379. *By Mr. Sutherland*: You have stated that you sent down fruit for which you had to pay a shilling a box carriage, and that you received only nine-pence for it? I know parties who did.
380. Do you think that would be the case if the producers could go to market and sell the fruit themselves? No, I do not. I think a man can always make more of his produce by selling it himself than he can by employing another person to sell it for him.
381. Do you think there would be hay enough grown in the district to sell, if there were a road to bring it to market? There would be enough grown for all the requirements of the district, and also for sale.
382. The district is now principally occupied by orchards? Yes; if there were roads I would not allow my land to lie idle, as it does at present.

WEDNESDAY, 25 JUNE, 1862.

Present:—

| MR. SUTHERLAND. | |

ISAAC SHEPHERD, Esq., IN THE CHAIR.

J. K. Heydon, Esq., called in and examined:—

- J. K. Heydon, Esq.
25 June, 1862.
383. *By the Chairman*: I presume you are aware of the object of this Committee? Yes.
384. You reside on the Parramatta River? Yes, close to the Pennant Hills Wharf*.
385. What is the usual means of access to the wharf? From Sydney and Parramatta?
386. Yes? By the steamer.
387. What is the fare of the steamer? The fare from my place to Sydney is, in the cabin, half-a-crown.

388.

* Added (on revision):—I am the owner of 180 acres of land at Ermington.

388. Does the steamer ply regularly? Yes, every day.
389. How many times in the day? Three times up, and three times down.
390. Do you know if there are many sailing boats plying on the river? I do not know what may be called "many"; there are stone boats employed in carrying down the metal for the repair of the Sydney streets, from Pennant Hills Wharf, and there are some boats that go up to Parramatta with supplies to the storekeepers.
391. There are many plying to the immediate neighbourhood of Kissing Point Wharf? I forgot to mention that there are also fruit boats, from both Kissing Point and Pennant Hills Wharf; they are employed in carrying fruit to market, and in bringing back the empty packages.
392. Are there many of these boats? I know of about half a dozen; I think half a dozen would be the outside.
393. You do not grow grain yourself? Not for sale; I have grown hay.
394. I believe you are one of those who advocate the bridging over Iron Cove Bay and Parramatta River, and the forming of a road by the Abattoir, and over Pymont to Sydney? I am; I joined that movement from the first.
395. How far north do you propose to carry the road? My idea is, that the road should be carried into the North Road and left to take its regular course.
396. What they call —? What they used to call the Great North Road, upon which, in olden time, there was a great traffic; it branches from Parramatta Road to the punt, across the river, and then goes up by the Lunatic Asylum, away to the north. How far it goes in that direction I do not know.
397. Are you aware whether it is practicable? I am not aware myself, but I have talked with persons who have come from distant parts of the district, and they tell me it is practicable.
398. You do not know it of your own knowledge? No.
399. Do you know what the cost of these bridges and roads would be? I have an approximate estimate, in consequence of inquiries made —
400. *By Mr. Smart*: Have you a plan of the bridges? I have a proposed plan. When the first movement was made in this matter, several persons interested met together, and the first thing they thought necessary to be done was, to obtain some tangible information; they therefore instructed the Secretary to write to a trading association in England, called the Iron Bridge Association, of 58, Pall Mall, London. The Secretary did as he was bid, and sent sections, shewing the width and depth of the river, copied from Mr. Langley's plan for the Government, and all the other information they thought necessary for the guidance of the Company. The result was, that they sent us back the plan I now produce, accompanied by a letter. (*The witness produced a plan.*)
401. *By Mr. Piddington*: Are the piers shewn on this plan the number you believe to be necessary to carry out this plan? It is only what the engineer or man of business of the Company proposed, from the information we sent him. We do not look upon it as a perfect thing, but simply as an approximation,—as something that may guide us in pursuing further inquiries.
402. Supposing an iron bridge of this description were decided upon as the most convenient to be constructed, how many piers do you think would be necessary from one side of Parramatta River to the other? I am not an engineer, and do not consider myself sufficiently well informed to give an opinion, but the plan proposes ten piers.
403. According to this plan, with so many as ten piers, what is the estimated cost of this bridge? I should correct myself as to the ten piers; the ten piers apply to the two bridges. I have here an abstract of the estimates for bridging Parramatta River and Long Cove. (*The witness read the same. Vide Appendix A.*) I may state, that in this estimate every item is put down at as high a rate as we conceive it could possibly cost under any circumstances; thus the freight of the iron-work is put down at 60s. per ton, although we believe it could be brought out as dead weight at a much lower rate. I may also add, that the gentleman who furnished the information as to the cost of erecting the piers and abutments is the contractor who built the Pymont Bridge;* and we believe that, under good management, in private hands, a saving of one-third of the estimated cost might be made.
404. In what particular portion of the estimate? For instance, in the putting up of the bridges, we are led to believe, from an engineer residing here, that if men were brought out from the establishment at Home, with the materials, the expense would be reduced fully one-half.
405. That is from ten thousand to five thousand pounds? Yes. The casual expenses are also put down very liberally, and we think might be materially reduced; and the gentleman who furnished the estimate for the piers has since told us, he thinks it might be done for considerably less. It has also been suggested by a contractor in Sydney, that the bridge across Long Cove should be a pile bridge, like that from Glebe Island to Pymont, which again would reduce the estimate. He thinks such a bridge might be built across Long Cove for £10,000, while the iron material alone would cost in England £14,598. Then again, in thinking it best to have a suspension bridge across the river, we have, of course, concluded that the navigation should be preserved quite perfect, and that there should be no obstruction in the way of the steamers and other boats passing up and down the river; but if the Parliament in its wisdom should think it desirable to have a less expensive bridge,—a bridge with a swing opening, or some other contrivance to allow of the passage of vessels at certain times, might be constructed at a less expense. It is thought by persons conversant with these matters, that the cost of the whole could be reduced to £32,000.

J. K. Heydon,
Esq.

25 June, 1862.

406.

* *Inserted (on revision)*:—He thinks that the masonry may be done for much less.

- J. K. Heydon, Esq.
25 June, 1862.
406. That is, by substituting a wooden bridge for the iron suspension bridge, and making allowance for a reasonable deduction of expenses on the other estimates? Yes, and still preserving an iron suspension bridge across Parramatta River.
407. *By the Chairman*: I think the paper you just read was your own calculation or note? Yes, my own abstract of the contents of this letter, with local information added. (*The witness read a letter. Vide Appendix B.*)
408. *By Mr. Piddington*: Have you any reason to doubt the ability of this particular Bridge Company to carry out their proposal? We were recommended to them as the persons most likely to carry out the matter cheaply and efficiently.
409. You have no doubt of their ability to carry out this proposal? No, I have no reason to doubt.
410. *By the Chairman*: When you sent Home this application, did you send any plan of the intended bridges? No; we sent them a plan of the ground only.
411. Leaving it with the parties in England——? To suggest what they thought best and cheapest.
412. *By Mr. Smart*: You sent a plan of the river, shewing the width at each place; showing also the soundings at various parts? Yes; we made a copy of Mr. Langley's report to the Government upon the proposed crossing-places.
413. *By the Chairman*: How do you propose to raise the necessary means to carry out the work? Ultimately, by selling the Common; in the meantime, I should think the Government might lend their assistance in forwarding the object, although I imagine the Common would amply repay them for advancing the funds.
414. Do you mean that you would apply to the Government for funds at the first onset? I would apply to the Government to carry out the work altogether; I would tender to them the Common, and ask them to give us bridges and roads in lieu; and we think we offer them what is at least of equal value to the work to be done.
415. When you say "we," whom do you mean? The commoners—the inhabitants of the district.
416. Are you aware who the commoners are? Do you mean, do I know personally all of them?
417. I ask you, when you say the commoners propose to surrender the Common as an equivalent, if you know who the commoners are? Yes, I may say, speaking generally, I know the commoners, having met a number of them at various meetings connected with the Common, and having also met them in going up and down in the steamers.
418. And they consent to the surrender of the Common? I have met with only two dissentients since this matter was first mooted.
419. How many persons are there entitled to the use of this Common? I cannot say. The grant devotes the Common to the use of "settlers, cultivators, and other inhabitants" of the two districts mentioned; and I take it, from the language of the grant, that all persons resident in the district are commoners.
420. You consider that they are commoners, and that you have got their consent? Yes; all I have met with, with the exception of two, have been in favour of the project.
421. But you have no idea of how many commoners there are? I have some idea, but I could not speak with precision.
422. Then you cannot say whether all the commoners are in favour of surrendering the Common? I know that two are not, and I dare say there are more whom I have not met.
423. How many you do not know? As far as I have met them, I think I may say I have met hundreds of them at meetings and elsewhere, and they are all in favour of it, with the exceptions I mention.
424. Have you attended any meetings in the Field of Mars having reference to the Common? I think I have attended four—three or four.
425. Four in the Field of Mars? Well, I cannot say exactly where the Field of Mars district touches upon that of Eastern Farms; but speaking of the two districts as one whole, I have attended four meetings—some at one end of the district, some at the other.
426. Have you attended any at the western end? Yes, one in particular.
427. Were the commoners there all in favour of surrendering the Common? There was a motion put to the meeting and carried in favour of this project, at that end, which is looked upon as the adverse end.
428. By a large majority? By a large majority it was carried. I think, now you remind me of that meeting, that there were more than two dissentients at it; but when I spoke of two, I referred to those whom I had met and conversed with on the steamer.
429. I suppose your means of information is principally on board the steamers? No; because I have made a point of attending all the meetings I conveniently could, and I have met a great many more commoners at these meetings than I have on board the steamer.
430. Then, if I understand you, the Government should advance the necessary funds to build these bridges? Yes, and then resume the Common and sell the land.
431. Do what they please with the land? I would make it a condition that the land be sold; for I think the sale of the land is almost of greater importance to the inhabitants than the building of bridges, if it be possible to draw a line of comparison between the two objects. The Common, as a Common, is an incubus upon the district; it prevents its going ahead. We want population, and there is no land to sell but the Common; without land we cannot attract a population, and without population the district cannot progress at all.
432. Is the Common land adapted for the settlement of a population? I do not know much of the Common, excepting by hearsay; I question whether I have ever seen it; for living on the banks of the river, and my business lying in Sydney, it does not take me to the Common.
433. Then supposing the Common is not adapted for the settlement of a population, your views would not apply? Certainly not; but from all I hear it is admirably adapted for population.

population. I have conversed with persons living in all parts of the district, and from all I gather, I think the land on the Common would sell as readily as any of the alienated land.

434. You have been led to believe that the Common lands are equal to those lands already alienated? I have been led to believe that the lands of the Common consist of good and bad, as do also the lands in the two districts; and I think, as a whole, the lands of the Common are as good as those already alienated.

435. Who do you consider would be benefited by these improvements? Everybody living on the north shore of the Parramatta River, from Lane Cove up to Parramatta, and whatever people may be living towards Dural and towards Wiseman's Ferry. The proprietors of land especially would be benefited; I think it would increase the value of land in the neighbourhood materially.

436. Do you consider that those on the south side of the river would be benefited? Yes, I think the benefit would extend wherever the road went. Any road used by people confers a benefit upon the neighbouring lands. I even think the Sydney people would be benefited, for I think if there were easy communication with our district there would be produce grown there which is absolutely wanted in Sydney. I know there are some things grown in that district which cannot be so well grown anywhere else in the neighbourhood of Sydney; for instance, there are Kissing Point turnips, which have quite a name for their excellence, but people do not now grow them to any extent, because, being a bulky article, they cannot easily be taken to market.

437. They have boats? Some people have boats, but the farmers do not keep boats, they have to hire boatmen, and if they use a cart and horse they cannot get across the river with a heavy load, because the road to the punt is so steep; besides, they have to pay three shillings for going across, which, as they say, takes the gilt off the gingerbread.*

438. You think this project would confer a benefit upon the people of Sydney, and upon those who reside on the south side of Parramatta River? I do.

439. Do you not think all those who derive a benefit from them should bear a share of the expense in carrying out these improvements? Well, speaking of public matters generally, that should be the rule; but here is an easy case, as we have a means of paying for the improvement without hurting anybody, and benefiting everybody.

440. Supposing the parties who have the means are not willing to surrender them, should not all these persons who will derive benefit contribute an equal portion of the expense? I do not exactly understand your question—do you mean those on the south side of the river?

441. Yes? I should not object to receive contributions if I were in the position of the Government, but I think the Government should not ask more than a return of the money they lay out, and if we commoners are willing to give up the Common —

442. I am speaking on the supposition that the commoners are not willing? That would be a pure supposition; but supposing they were not willing, every person who would be benefited should pay a proportion towards the expense. But I take it these bridges will not be built unless the Common be sold to raise the money, because £30,000 is a good sum of money, and I dare say the Government would hesitate about laying it out unless they could hope to see some of it back again.

443. But your proposition, so far as I understand it, is that the Government should advance the money on the first onset? Yes, and that simultaneously they should resume the Common, with a view to its sale, and then set about building the bridges. Already there has been —

444. When would you propose that the sale of the Common should take place? I was going on to say that already there has been an offer made by a private Company to give £30,000 for the Common, and to undertake to build these bridges as a speculation. I know some of these gentlemen. They proposed in the first place to build the bridges, and afterwards to sell the ground, simply for the reason that they would make more money in that way. I presume the Government would follow the same line of policy if they were to resume the Common.

445. I presume you are aware, or that these persons who made the offer were aware, that their offer could not be accepted at the time they made it? I do not know how you could presume it.

446. Are you not aware that this Common is held under a grant? Yes, the offer was made contingently. If the Government would allow these bridges to be made, this offer was made to smooth the way.

447. This offer might have been made with a view to induce the Government to acquiesce, and not as a *bonâ fide* offer? Perhaps so, but I have reason to believe that it was *bonâ fide*.

448. You must be aware that the Government was not in a position to accept such an offer? I am aware that they could not without the consent of Parliament.

449. Then the offer was a nullity? It was not a nullity, for the Government could have come to Parliament to ask for an Act to enable them to accept the offer.

450. *By Mr. Smart:* Do you think there would be any difficulty in getting up a Joint Stock Company to carry out this work, in the event of Government agreeing to give up this Common? I think there would be no difficulty at all.

451. Do you not think that would be a readier plan of carrying out the work than that to which you have referred? I myself was not one who moved in the project for the formation of

* NOTE (on revision):—I wish to add here, that the great objection to sending produce to market in boats is, that the producers have first to bring it from their farms in their own carts to the boats; then, when the boats reach Sydney, they have to re-load it into drays hired at Sydney prices, to take it to the market-place; whereas, if they had some means of going by land, they could take their own carts all the way, and bring back manure. And they would also save their own fare as passengers by the steamer, when they follow their produce to sell it.

J. K. Heydon,
Esq.
25 June, 1862.

J. K. Heydon,
Esq.
25 June, 1862.

of a Company; I only know the gentlemen who did so. The most prominent was Mr. Huntley of the Gas Works, who is well up in that sort of thing, and understands the formation of Companies—it was his and Dr. Brereton's proposition. For my part, so long as the bridge is built and the Common sold, I do not care how it is done, whether by the Government or by a private Company.

452. *By Dr. Lang*: Do you not think that it would be safer for the public that it should be in the hands of the Government than in those of a private Company? I do, for a Company would naturally make the most both of the bridges and of the land.

453. A Company, perhaps, would not be very anxious as to the sufficiency of the construction of the bridges? There are always differences between public methods of carrying out undertakings of this sort and those of commercial speculators. I think it would be the safest for the public to have to do with the Government.

454. *By the Chairman*: Supposing the Common were to be surrendered, and these bridges were to be constructed, would those persons now entitled to the use of the Common be at liberty to pass over the bridges toll free? My own idea of the matter is, that the Common will sell for so much more than it will cost to build the bridges, that Government ought never to impose a toll upon passengers at all; I think the bridges should be free. I believe a sufficient fund will be left, after paying the cost of erecting the bridges, to pay for all repairs for many years to come, and if good roads are once constructed on each side of the river, the whole of the land from Hunter's Hill to Parramatta Hill, shortly after the erection of the bridges, be divided into Corporations, whose care it would be to keep them in repair; but we dare not venture upon Municipalities now, because there is so small a population, and as is always the case in small communities, there are parties always at variance, and every man looks after his own interest. A Municipality will not work without a population large enough to create a public opinion.

455. Is any portion of the district incorporated? Yes, Hunter's Hill.

456. What is the population there? I have heard the numbers, but they have escaped my memory. The number is small, but it is a small district that is incorporated.

457. How is your theory borne out with reference to that? I do not see that my theory is affected at all by it. My theory applies to the concentration of population, but certainly without a large number of people you could not expect to work a Corporation; that is my notion of the matter. I may be wrong, but I think it is a correct notion.

458. *By Mr. Piddington*: Are you of opinion that the Field of Mars Common would yield a larger sum, if it were sold by auction, than the cost of the construction of these two bridges? Yes, decidedly; but I would advise under any circumstances, whether sold by auction or otherwise, that it should be sold after the bridges are built.

459. What do you think would be the cost of a wooden pile bridge at Iron Cove, and of an iron suspension bridge, according to the plan you have produced, over Parramatta River, and of all the works necessary to build those two bridges? Answering from information I have obtained, £32,000.

460. If the Government advance the money on the security of the proposed equivalent, they could raise the £32,000 in the ordinary way, upon debentures at five per cent.? I should imagine so. I think there would be no difficulty in issuing debentures upon the security of the Common, without giving the security of the general Revenue.

461. But supposing the Government were to accept the proposition you put forward, they could raise the money by simply pledging the credit of the country? Yes.

462. At an interest of five per cent.? Yes.

463. That upon £32,000 would amount to how much? £1,600 a year.

464. Then, according to your opinion, all the liability the Government would incur would be to the extent of £1,600 a year for interest? Certainly it could be no greater.

465. What do you think the Common would realize, if sold gradually, after the construction of these bridges? I believe myself, if the bridges be constructed and the Common be sold, that the prices that will be realized in many cases will astonish us. I believe it would readily be bought up at £20 an acre on the average, and I speak from my own knowledge of the price at which land is sold for now, without these bridges, in the neighbourhood of the Common.

466. Do I understand you to say that you are of opinion that if the land were sold gradually, it would bring an average of £20 an acre? I believe it would.

467. There are 6,000 acres, are there not? Yes, and I believe if it were sold gradually, that is within a period of ten years, I am quite safe in saying it would average £20 an acre.

468. Which I presume would be a total of £120,000? Yes.

469. Then I take it you are of opinion that the Common would afford a commercial guarantee to the Government of nearly four times the cost of the two bridges? I think so.

470. Then there could be no risk whatever to the Government in accepting such a valuable consideration as the Common would afford? On the contrary, I think they would make a good bargain, and have a large amount after paying for the bridges.

471. You are of opinion that there would be a large balance to the credit of the Common after these bridges were erected? Yes.

472. A balance sufficiently large to defray all future expenses in connection with the maintenance of these bridges in repair? I would with permission suggest, that on the passing of the Act for carrying out this project, in justice to the commoners (and the Chairman has alluded to the same idea, that the commoners are giving up a great deal more than they are getting), any balance that might be left after the building of the bridges ought to be divided among the Municipalities of the district; for though there is but one at this time, I confidently anticipate that there will be others within a short period from the completion of these bridges.

473. If your calculation of the value of this Common at all approaches accuracy, there would be no reason to charge a toll to the public upon passing over these bridges? None. J. K. Heydon,
Esq.

474. Are you of opinion that the exchange of the Common for the construction of these bridges would be an unmixed advantage to the landholders and the residents in the district of the Field of Mars? I believe it would benefit every resident: it would increase the value of property; it would enlarge the field of labour for those residents in the district who depend upon their labour for their support; it would enable us to have Schools of Arts and similar institutions; in fact, it would altogether brighten us up. We have gone to sleep. Although we are so close to Sydney we are absolutely lost for want of communication with the metropolis. If we grow anything we have the greatest difficulty to sell it. I grew some hay myself last year, and loaded two teams to send it to Sydney; after the carts were loaded the man told me he could not go across the punt, and he had to go round by way of Parramatta. The result was, that after paying all expenses, I received only about £2 for a ton and a half of hay. 25 June, 1862.

475. Are you a proprietor of land in the district of the Field of Mars? I am, close to the river, at the Pennant Hills Road.

476. Would your property be much increased in value by the construction of the proposed bridges? My property is so situated that it is quite away from the road. I look upon it that all the property in the district would be benefited, but I think mine would be as little benefited as any. I am still farther away than Mr. Shepherd, and he does not think his will be benefited.

477. Your property is on the border of the Parramatta River? Yes.

478. The line of road does not come near your property; your property is at the extreme end of the district that would be benefited by these bridges? I think my property is as far beyond where these bridges will cross as the bridges themselves will be from Sydney.

479. Is the Common of any use to you? Not any.

480. Or to anyone in your neighbourhood? Nor to anyone in my neighbourhood.

481. It has been stated that the Common is a nuisance: have you any knowledge or experience as to the correctness of that statement? I do not live near the Common, and therefore, in the sense in which the word nuisance has been used, I could not say that it has been so to me. I have heard persons speak of bad characters living there; but though not in the grossest sense of the word a nuisance to me, it is so in other ways. I am liable to assessment for a property in which I have no interest; I see things going on wrong, and am called upon to attend meetings ostensibly for the improvement of the Common, and when I attend them I find there is not the slightest attempt to improve it. Then, again, we have no means of causing the Trustees to carry out our wishes in reference to the management: the Trustees leave the land as they please; and at the election of Trustees, the Trustees themselves have the power of saying who have and who have not the right of voting, and when once elected the Trustees are elected for life. In that way I say the Common is a nuisance to me; and I see there is a tendency to the same state of things which has so often existed at Home with reference to Commons—an abuse of trust, and jobbery.

482. Is it a usual thing to leave to Trustees to say who have and who have not the right of voting at their elections? I never heard of such a thing before.

483. You are not aware of any precedent for the exercise by them of such an extraordinary power? No; it is utterly repugnant to my notions of British liberty.

484. Do you think if the Trustees were more frequently elected, and made responsible, some means might be discovered of improving the Common? To improve the Common means, I take it, to clear and stump it. I arrive at that conclusion from the terms of the grant. The grant gives the power "to lease portions of the Common, for the improvement of the same"; and it is generally understood that the improvement of land for Common purposes is to clear and stump it, and so make pasture land of it; but that has not been the practice. Leases have been granted for very short periods, and people have taken leases for the purpose of cutting and selling the timber, and have left the stumps in the ground. This of course only deteriorates the Common, and I do not see how any fresh election of Trustees can alter the matter.* In fact, I can see no way out of the difficulty but by getting rid of the Common.

485. Supposing steam punts were fixed at the places proposed for bridges, do you think it would be a cheaper mode of effecting the object of bringing the people of the district into communication with Sydney? Steam punts would have only this advantage over the present punt, that they would go across the river more quickly; but the objection to the punt, besides that it is slow, is that we cannot get our loaded carts down to the river, and this objection would not be removed by steam punts. Again—another object with persons who live up there at villa residences is, that they are principally people who have business in town, and their object is to have communication with Sydney at all hours. Steam punts, I take it, would hardly keep the steam up all night, and therefore would be open to the present objection that the people cannot get up and down when they want. The particular class I refer to desire the means to go to or from Sydney at any hour, in order that they may attend concerts, the theatre, or public meetings. Now, when we go to Sydney we are obliged to leave at 5 o'clock, or to remain all night.

486. You think the inhabitants of the district would not be satisfied with steam punts? No. Besides, they would be a constant expense, whereas I believe the present punt does let for a trifle.

* *Inserted (on revision):*—To stump the land money is required, and that money could only be raised by assessment; and if that were done, the land even then would not, for "Common" purposes be worth the expense. It would only pay an individual proprietor to go to so much expense.

- J. K. Heydon, Esq.
25 June, 1862.
487. Are you aware whether the people of Parramatta, or of the Ponds, have any right to the use of the Common? The people of Parramatta certainly have not. The Common is granted to persons only residing in the Field of Mars and Eastern Farms districts. I cannot speak positively. In fact, we cannot get the information from the Trustees; but I believe the Trustees have allotted rights as commoners to persons who live in the Ponds district. The Ponds district is a district extending from Parramatta towards the Field of Mars; in fact, it eats into the district in shape. I think the people of the Ponds are the people who are making the most opposition to the project, and yet they really have no interest in the Common.
488. Then the people of the Ponds are, in your opinion, beyond the limits of the district for which the Common was granted? They are decidedly beyond, for the terms of the grant are express.
489. You are aware that some petitions were presented in favour of the construction of these bridges? Yes, I heard of them and saw them, but I do not notice them in the list of petitions for the purposes of this Committee, and I believe they have been left out in some way.
490. Do you know who presented these petitions to the House? Mr. Cowper.
491. Those petitions have not been printed? No, they are not before the Committee in this printed paper.
492. *By the Chairman*: Have you on any occasion received any advantage from the Common—have you applied to the Trustees for any privileges? I applied to the Trustees on one occasion, for the exercise of my right to cut timber, when I wanted some fencing done. Of course it was granted me, and I got some of the fencing stuff from the Common, but I may say I would not do so again, for I found it cost me more to get the timber from the Common than it would to have brought it from Sydney. According to the report of my man he could only get timber from out-of-the-way places, whence people would not bring it in former times; he could only get it from gullies, where it was next to impossible to draw it out.
493. As a landholder are you entitled to run cattle on the Common? I presume so.
494. Have you ever sought that privilege? Never.
495. You did not require it? I should be afraid to put my cattle on the Common.
496. You did not require it? I should be glad to put my dry cattle there instead of keeping them at home, if I could do so safely.
497. You never attempted to do so? I never attempted to do so, because I was led to believe that I should very likely not see them again if I did.
498. You would not think of sending them without a man to look after them? It would be cheaper to pay for their agistment. I could not send anyone to mind them at a less cost than 15s. a week.
499. You say that on the portion of the Common under lease improvements have not been carried out—is there an instance where a lease has expired? When I made that answer I made it generally. The object is to improve the Common, and to improve it in the way I have said, for Common purposes; not to grant leases for ninety-nine years, in order that the lessee may plant an orchard on it. No doubt in such a case the land would be improved, but it would then be better that the land should be the man's freehold, because the trifling rent derived from it is trifled away, and does none of the commoners any good.
500. In speaking of orchards, are you aware, of your own knowledge, that the conditions of the leases have been infringed upon? No, not of my own knowledge.
501. Then, in point of fact, you cannot say that they have not been carried out? If everything I say here is to be understood as spoken entirely of my own knowledge, I could say very little, but I am certain of the truth of the statements I make, because I hear them from everybody's mouth in talking over these matters with my neighbours.
502. I am induced to ask you this question because you say the conditions on which leases of the Common are granted are that the land should be cleared and stumped? You misunderstand me—I say the legitimate object in leasing the ground is to make the Common more useful for Common purposes; but I do not say that the leases granted by the Trustees have stipulated for that. They may have granted leases—as I have heard they have done—contrary to the intention of the grant.
503. Have you seen any of the leases? No.
504. You say that the banks of the Parramatta River, where the road leads to the punt, are so steep that it is impossible for carts to go over? Yes.
505. Have you travelled that way? I have been over on foot.
506. The banks are so precipitous, you say, that a cart and horse cannot cross? I should be sorry that horses of mine should go there with any thing like loads. I believe Mr. Moore, of the Botanic Gardens, some time ago, lost his horse and gig, and that he has been unable to fish his gig up since, the place is so steep.
507. *By Mr. Piddington*: He lost both horse and gig? Yes.
508. *By Mr. Smart*: Was that in consequence of the steep descent to, or ascent from, the river? Yes; I do not mean that it was in crossing the punt.
509. Was it not in consequence of the punt not being at its proper place on the side of the river? No; I believe the accident occurred in this way—that he went into the river to wash his horse's feet, and was not aware that the river deepened so suddenly; but the banks there are very steep.
510. *By Mr. Lackey*: The punt has been used by horses and carts for many years? Yes, but many will not go by it.
511. *By Mr. Smart*: You say these two bridges—the iron suspension bridge, and a wooden bridge similar to that erected from Glebe Island to Pyrmont—would cost £32,000? Yes.
512. How are you justified in making that statement, when from the estimate you have read it appears that one of those bridges by itself would cost £31,000. The larger one would be across Parramatta River, I take it? No, the other one is the larger. If you refer to the items you will see that £13,500 is put down for the iron-work for the one across the river.

513. The two bridges come altogether to £59,000? But you must remember that we have J. K. Heydon, Esq. taken the outside calculations; for instance, in the item of freight, you, as a merchant, must know that 60s. a ton is an extreme rate.

514. But these are the estimates you have given the Committee, by which we must be guided in our determination, and if these bridges are to cost so much—one of them alone would cost £29,000, or, taking off £2,000, that would be £27,000? The plan I would adopt would be this—to take the £59,000, and deduct from it the difference between the cost of constructing a wooden and iron bridge. 25 June, 1862.

515. You have never been on the Common, and do not know the character of the land? No, except from report, I know nothing of it; I may have been upon it.

516. Do you know whether a large or a small portion of it is alluvial land? I am told there is a good bit of very good land there.

517. What proportion of the 6,000 acres? I have been told by persons on whom I can rely that, comparing the land of the Common with that of the alienated district, the one is as good as the other.

518. Cannot you inform the Committee what proportion of good land there is in this 6,000 acres? As I could only guess, my evidence would be valueless.

519. I suppose the alluvial land would fetch a higher price than the bush or scrubby land? Of course, when people who buy a bit of land for agricultural purposes—and this land, I presume, will be sold in bits—they will give more for good land than for bad; but people who want residences not far from the metropolis do not look at the agricultural qualities of the soil as persons do who purchase farms. I take it that the Common will be sold to gentlemen who have made or who are making their fortunes, and who want to make their homes in suburban residences.

520. You think the greater part of the Common will be sold for suburban residences for the citizens of Sydney? Yes.

521. Then you think you are justified in saying that the land, if sold, would average £20 an acre? Yes.

522. Do you know of any sales of land similar to the Common land within the last few years? I attended the sale of some land belonging to the Marsden family—Mrs. Bobart's. There were a hundred acres sold, and it was very poor land, on the opposite side of the Pennant Hills Road to my estate; some of it goes into the river; indeed it is not land at all, for it is covered by the tide, and even it was sold; that land realized from £25 to £40 an acre.

523. How long ago was that—within the last two years? I think about three years ago.

524. Were those the general or exceptional prices—do you know the average? The average was over £30.

525. Was that land, upon the whole, inferior to the Common, or was it of a better character? I believe, from what I have heard of the Common, that it is of a patchy character, either stony or sandy, like Hunter's Hill, or pretty good in spots. The land to which I have referred was poor stuff; you could not do anything with it without manure. From what I hear of the Common I believe there is a great deal of it much better land than that.

526. As you do not know the position of the Common, you cannot speak of the back country? I know it from a map.

527. But not from your own knowledge, or from information received from a number of the residents? There are very few residents there, for though the land is alienated they are mostly unoccupied. I believe if the Common were populated, these lands would also become so. There are some beautiful places up Lane Cove, which are at present unimproved and useless, in the hands of the proprietors, because of the difficulty of access.

528. Can you inform the Committee what is the population in the immediate neighbourhood of those places where the bridges are proposed to be built? I think there is about the densest population there; there is the Asylum in the neighbourhood; the village of Ryde is about a mile and a half distant; before you get to that there is the Catholic Church, and a small collection of houses, and the Hunter's Hill Municipality. It is, I think, the part of the river most densely populated.

529. You cannot speak of the numbers from your own knowledge? No; but it is the most densely-populated part of that side of the river.

530. *By the Chairman:* In speaking of the alienated land on the Lane Cove side of the river, are you not aware that the people resident there have access to Sydney by the way of the North Shore—St. Leonard's? Yes, in the same way as the people of Dural have by the North Road, that is to say, there is a road, but so little used and never cared for, that it is almost like going through the bush.

531. Have you ever travelled by that road? No, not myself.

532. Then you do not know? I know from the statements of others.

533. *By Dr. Lang:* Does your estimate of £20 an acre refer to the whole of the Common, or to portions of it that are of better character than the rest? I said that I thought it would average £20 an acre, if sold gradually; it was in that way the question was put to me, and I firmly believe it will. Speaking as a business man, and as one who observes what is going on in the neighbourhood, I believe that immediately the bridge is built there is land in the vicinity that will realize £100 an acre. There is a piece of land of thirty acres—the Asylum reserve—which is just being served as the Common has been, by vagabonds who come to cut the timber, nobody hindering them—and that land, I think, would fetch £100 an acre, if put into the hands of a person who knows how to sell it. I know that land similarly situated to the Asylum reserve is held, and will not be sold for £50 an acre.

534. *By the Chairman:* You are speaking of Bland's property? Yes.

J. K. Heydon, Esq. 535. *By Mr. Lackey*: Do you not think the high prices these lands have brought have been caused by their situation, they being close to the river—the lands you have spoken of as having been sold at from £30 to £40 an acre? I could not say, of course, what entered into the minds of people when they bought them, but I can speak of facts that have occurred since. I find that many persons bought five acres of land—very poor people—and are growing garden produce for Sydney, and that others were mere speculators who hold the land over, but who are, at the same time, speculators who know what they are about. I may mention Mr. Harvey, of Parramatta, as one of the purchasers; also Mr. Spurway, a man who has made his money by orchards and farming in the district. These bought largely. Another was the surveyor who surveyed the land; he bought the corner allotment, at over £40 an acre.

25 June, 1862.

536. I think you said some of this land abutted on the banks of the river, consequently it has an increased value from its water frontage? It derives no advantage from the water frontage, because the water is so shallow. The portion of the land which comes down to the river is at the elbow near the Pennant Hills wharf.

537. Still it is on the banks of the Parramatta River? Yes, but only the smaller end of the property faced the river; it was a narrow piece of land extending in length inland.

538. I suppose none of it extends back more than three-quarters of a mile? One mile exactly.

539. How far in a direct route, as a crow flies, is the Common from the Parramatta River? From this property?

540. Yes? I should think about a mile and a half, judging from the map.

541. Do you know how far the extreme part of the Common is from Sydney—the north-western portion? Do you mean as the crow flies?

542. Yes? I should think twelve or thirteen miles.

543. Do you think that, if sold judiciously, would fetch £20 an acre? Yes, I do. I noticed in the *Herald* a letter inserted by an opponent of this project—if the letter be genuine—and he complains that he had given a high price for land at that end of the Common—I think he said £25 an acre—but stated that he did so in consequence of having Common rights, and therefore was averse to have them taken away.

544. He bought the land which was in the vicinity of the Common? Yes.

545. That will shew there is a right in the Common? Yes, no doubt there is such a thing as a Common right—the question is, is it of any value? But I would like to take the opportunity of stating this before the Committee:—There are two ways, it appears to me, in which the people think of Common rights. The one view is that which the Trustees have adopted of reckoning Common rights in proportion to the holdings; the other is the popular notion on the matter—that which would seem to be borne out in some way by the words of the grant—that “every settler, cultivator, or other inhabitant,” is entitled to the use of the Common. Now if the Common is to be held for the use of the commoners, in proportion to their holdings, then the Common would really belong to a very small number of persons in the district, but they will be large proprietors. On the other hand, if every one has an equal right—a sort of universal suffrage—then everybody has *only* an equal right. Now I wish to put before the Committee how this would operate; if it belongs to the proprietors according to their holdings poor people are very little benefited; and I call attention to the fact that it is the large proprietors who want to dispose of the Common, and who complained of it as a nuisance. Again, if it be shared out to each individual—one man to have no more than another—the right dwindles down to something so small for each as to be scarcely appreciable; it would not feed a sheep or a goat for each.

546. Various persons about the Common use it for turning cattle upon, do they not? Yes, I believe some do.

547. For instance, orchard growers? I do not know one person in my district who uses the Common for that purpose.

548. You were speaking just now of some persons at Parramatta exercising an influence in the disposal of the Common, and stated that they had no right to do so; I presume these persons have property there? Then I do not speak of them as Parramatta people. Then again, there are three different people who claim a Common right out of the same piece of ground, the landlord, the tenant, and the people working for both.

549. The tenant for the time exercises the landlord's rights? Yes, but the landlords are moving in the matter, and claiming rights equal with the tenants.

550. *By the Chairman*: You say Mr. Harvey purchased a piece of land at a high price? Yes.

551. Is he a proprietor of land adjoining the land of Marsden that was sold at a high price? I do not know whether he is the owner of Peyton's orchard, but I am told he is.

552. Are you aware whether Mr. Spurway is owner of the land adjoining this which he purchased at a high price? He is the owner of land in the neighbourhood, but I do not know that either of these gentlemen have land immediately adjoining.

553. You do not know of your own knowledge whether they have or not? I know they have not bought these lands to extend previous holdings.

554. You know they are holders of land in the neighbourhood? Yes.

555. *By Mr. Sutherland*: The land lately purchased by them does not abut on any portion of the land they had previously? No.

556. *By the Chairman*: You are sure of that? Yes.

557. Mr. Harvie's, for instance? Mr. Williams is between him and Peyton's.

APPENDIX.

J. K. Heydon,
Esq.

25 June, 1862.

A.

The following is an Abstract of the Estimates for bridging Parramatta River and Long Cove:—

| | |
|--|---------|
| Tender received from the London Suspension Bridge Association | £14,598 |
| Freight, 2,500 tons, at 60s. | 13,435 |
| 10 piers, averaged by a Sydney contractor at £500 each | 7,500 |
| 4 abutments, &c. | 5,000 |
| Casual expenses | 2,000 |
| Expenses of putting up bridges, and making roads to and from them .. | 6,000 |
| | 10,000 |
| | £58,533 |

JULES JOUBERT,

Hon. Sec.

June 23, 1862.

A suggestion made by a contractor in Sydney, that the bridge across Long Cove should be built like that from Pyrmont to Glebe Island, at a cost of £10,000, thereby saving £14,000, as far as the bridge across Parramatta River is concerned. The suspension principle is adopted on account of the navigation of the river, and to enable steamboats and other craft to pass under it. Should, however, a wooden bridge be erected, with a flap similar to the Glebe Island, or a swing like Pyrmont Bridge, the cost of the whole would be reduced to £32,000. The offer made by Messrs. H. J. & Co., of £30,000 for the Field of Mars Common, would therefore nearly cover expenses.

June 23, 1863.

J. J.

B.

Jules Joubert, Esq.,
Secretary to the Parramatta River, Roads, and Bridges.The Iron Bridge Association,
58, Pall Mall, London, S. W.,
10 July, 1861.

Sir,

We have to acknowledge the receipt of your letter bearing date 15 March, 1861, and in reply we now forward you a design for the proposed bridges, in accordance with the two sections sent. The two elevations are shown in the same sheet, and the construction is similar in both cases.

We had not time enough to prepare the designs and send them by last mail. We have been unable to assign any depth for the foundations of the piers, as you have not informed us what the strata is in the two sections; we have therefore left this for you to fill in.

Section No 1, Elevation No. 1, represents a radiating tension bridge—(which we consider stronger and a better principle than the "Taper Chain Bridge," and we have therefore made the design accordingly)—and consists of five spans, of 195 feet each between the piers. There are two cast-iron towers to each pier, which are connected together at their tops by means of a transverse girder, as shown in transverse section. Each tower consists of four hollow cylindrical columns of cast-iron, their bases being held down by holding-down bolts, connected to holding-down plates built into the masonry of piers. The columns are strengthened diagonally with wrought-iron ties, and at certain intervals in their height by cast-iron girders. The upper portion of column is formed with a strong bed-plate or saddle of cast-iron, upon which the curved links rest to connect the front and back tension bars.

The tension bars radiate, in pairs, from each tower to different points of the longitudinal beams, and are connected therewith by means of tension pins passing under the longitudinal beams. These tension pins work in wrought-iron boxes, rivetted to the lower tables of the longitudinal beams, having two square ends. The ends of the tension rods are formed with screw threads at their ends, which pass through holes in the square ends of the tension pins, and are fixed by means of strong nuts. By these means the tension rods can be adjusted at any time. The longitudinal and transverse girders are of wrought-iron. The back tension bars are carried back to the anchoring points, and there anchored, behind solid blocks of masonry.

All the front and back tension bars are connected together at their joints by vertical bars, capable of adjustment by right and left-handed screws. The bridge is calculated to bear $1\frac{1}{2}$ cwt. per square foot of roadway (including its own weight), and with this weight to be strained to 6 tons per square inch of section. We should be willing to deliver the iron-work for bridge, Elevation No. 1, or five spans of 195 feet each, free on board at London, Liverpool, or Hull, for the sum of fourteen thousand one hundred and thirty-seven pounds ten shillings,—say £14,137 10s.

And for Elevation No. 2, or five spans of 200 feet and two spans of 75 feet, each, for the sum of fifteen thousand three hundred pounds,—say £15,300.

The above sums are exclusive of freight, insurance, or timber.

Payment to be made by a merchant or banker in London, on whom we may draw during the progress, and on the shipment of the iron-work, as may be arranged.

Pro the Iron Bridge Association,

I am, &c.,

ROBERT KING.

269, George-street, Sydney,
New South Wales.

P.S.—In going more closely into the matter, we find we have made an error in the cost of the iron-work. The following, therefore, will be the cost of the two bridges:—

Elevation No. 1, five spans of 195 feet each, the cost of the iron-work, free on board at London, Liverpool, or Hull (exclusive of freight, insurance, timber, erection, or masonry), fourteen thousand five hundred and ninety-eight pounds,—say £14,598.

Elevation No. 2, five spans of 200 feet and two spans of 75 feet each, thirteen thousand four hundred and thirty-five pounds ten shillings,—say £13,435 10s.

Charles Abercrombie, Esq., called in and examined:—

- Charles Abercrombie, Esq.
25 June, 1862.
558. *By the Chairman:* You reside on the south side of the Parramatta River, on part of the Five Dock Estate? Yes.
559. And are a proprietor of land in that neighbourhood? Yes.
560. Do you advocate the bridging over of Iron Cove Bay, and forming a road by the Abattoirs and over Pyrmont Bridge? Yes.
561. Do you advocate the bridging over the Parramatta River at Five Dock? I do.
562. Has the proposed line of road been surveyed and the site of the bridges fixed? Yes, by Mr. Langley, principally under my own direction, as far as the bridges at Iron Cove and Five Dock were concerned.
563. Who employed him? The Government.
564. Have you any estimate of the cost of the bridges and of the road? I have no estimate, but I have spoken to Mr. ———, who constructed the bridge between Pyrmont and Glebe Island, and on telling him the depth of the water across Iron Cove, he stated that he would build a bridge similar to that which goes across from Pyrmont to Glebe Island, but with a swing, that is, a wooden bridge of the same construction, but without copping the piles, for the sum of £10,000; the piles to be charred and covered with coal tar. The bridge to be three feet wider, and the foot-path sufficiently wide to allow a lady and gentleman to walk together, which they cannot do on the foot-path at the Glebe Island Bridge.
565. In your opinion, would a similar bridge be adapted for crossing the Parramatta River? I would not recommend it for crossing Parramatta River, because the depth of water there is thirty-four feet, and the depth at Iron Cove is only eight feet, on the Balmain side, up to twenty-four feet on the Five Dock side.
566. Have you Mr. Langley's plan—are you speaking correctly? I am speaking correctly, you will see that by reference to Mr. Langley's plan.
567. I think it is forty-four feet? No, but I have seen it eighty feet at Bedlam Ferry.
568. I am now speaking of Mr. Langley's plan? I was with Mr. Langley when he sounded, and I think the depth was thirty-four feet; it runs into twelve feet on the north side of the river. (*Referring to the plan.*)
569. I see it is forty feet? That makes it thirty-four feet, allowing six feet for the rise of the tide.
570. How far north of the Parramatta River do you propose to carry the intended road? Shall I begin to describe the road ———
571. Have the goodness to answer the question as concisely as possible? Do you mean this road surveyed by Mr. Langley?
572. You pray for the erection of bridges and the formation of roads, so as to connect the northern country with Sydney; now, I wish to know, in estimating your expenses, how far north you propose to carry the road? Do you mean when we have crossed the Parramatta River?
573. Yes? To the line of road a little beyond the Lunatic Asylum.
574. Then, in fact, you would not make a road to the Common? No, certainly not, we never thought of making a road to the Common; we construct it to the present road to Kissing Point, and that road takes you on to the Common. There is no other road, as you have to head gullies, and the road is already made to it when you get that length.
575. Would the building of these bridges and making these roads add materially to the value of the property on Five Dock Estate? No doubt, particularly one part of it; for the part where the road would run through the Five Dock Estate is farthest from Sydney, and therefore it would be brought nearer. For instance, my house is nine miles and a-half from the Post Office by the present road, and by the proposed road I should be within two miles and a half; and when I say mine of course I include my neighbours, Mr. Wright and others. Half of my neighbours would be benefited to the extent of six miles, and the other half to the extent of five miles.
576. How do you propose that this work should be paid for? The proposition is that the Government should resume the Field of Mars Common and do these works, and pay for them by issuing debentures for twenty years. There would be no necessity for them to force the sale of the Common, but I have no doubt they could sell so much as would pay the interest, and thus the Government need not advance a single penny of cash to carry out the work.
577. If I understand you rightly, you propose that the Government should advance the money at the first onset? Simply by the issue of debentures; they would not pay any cash.
578. Would you issue these debentures upon the Territorial Revenue or upon the Common? No doubt the Government would issue the debentures upon the Consolidated Revenue, but if you refer to the letter from Mr. Secretary Robertson ———
579. I see no letter from Mr. Robertson? It is before you—there is a letter from Mr. Secretary Robertson ———
580. Do you not think that all those who are benefited should bear some portion of the cost? I do not think all should, because I think the public ought to go free. The Common is for the public good, and if it is resumed by the Government, I think the Government ought to make these roads and bridges free to every one. If your question applied to myself individually, I would say my quota is given. I have given permission to the Government to make a road through my land without any charge.
581. Are you a landholder on the north side of the Parramatta River? Yes.
582. In the district of the Field of Mars and Eastern Farms? I have land facing the Field of Mars on Lane Cove.
583. On the north side of Lane Cove River? I have some fronting the head of Lane Cove River, and I believe fronting the Common; but not knowing the boundaries of the Common exactly,

exactly, I cannot say positively that it is within them; I believe it is close to the Common, but I cannot speak exactly, for I do not know the boundaries, and I never saw any one who could tell me.

Charles
Abercrombie,
Esq.

25 June, 1862.

584. Am I to understand that you are the proprietor of land in the neighbourhood which gives you a commonage right? I am a proprietor of land, but as to its giving me a commonage right, that is a question which you Trustees may dispute—I consider that I am entitled to commonage, but I do not say I am—perhaps you may say I am not.

585. Do you not consider that those parties who will derive so large a proportion of the benefit from the increase in the value of their land, should bear a portion of the expense of these improvements? Not if the Common be given up to the Government, as I am satisfied the sale of the land would produce more than the improvements would cost.

586. Do you think it would be just on the part of the Government to take forcibly the Common from those parties who object to surrender their interest? I do not suppose the Government will take it forcibly, but if the majority of those interested ask the Government to do so, the minority must give way. The majority can give up the Common by petition.

587. Is that in accordance with the Common Grant? I do not know what the Common Grant is here; but it is in accordance with English law, and I presume we have pretty much the same laws here as in England.

588. Do you consider the residents of Pymont, Balmain, and Five Dock, would all be benefited by the building of these bridges? Yes, and I consider also that the town of Sydney would be benefited to a very great extent; for if the bridges were erected the good land at Kissing Point and about the Common would be the means of raising a great deal of produce, fruit and vegetables, and the vegetables and fruit so raised would be sent in to Balmain and Sydney. The increased supply would of course tend to cheapen the prices, and thus the people of those places would be benefited. Even as a fashionable drive for the people of Sydney it would be a great advantage. At present there is but one outlet, that towards Waverley and South Head. If these bridges were erected there would be such a drive as I believe could hardly be equalled in the whole world, within six miles of Sydney. There would be four bridges, and the drive by the road and over them would command the most splendid views; and I believe that, during the fruit season, tens of thousands of people would flock from Sydney to the orchards on the north bank of Parramatta River by this road.

589. Do you not think that it would be equally just for the Government to resume Sydney Common, or a portion of it, in order to carry out this scheme? Certainly not; for there are few enough reserves in the neighbourhood of Sydney, and the Sydney Common is required as a safety valve; but the Field of Mars Common is a nuisance, being a place for the congregation of riff raff and disorderly people.

590. You do not reside there, I presume? Not on the Common, thank God.

591. Nor in the neighbourhood of the Common? I live on this side of the river; but I know something of the bad practices carried on there.

592. How are you aware of the disreputable practices and pursuits carried on there? I could give you one instance, if this gentleman (*referring to the Shorthand Writer*) will not put it down.

593. I wish to know on what ground you make these assertions? I did not wish to have it taken down, because it relates to a family matter. Mrs. Abercrombie was robbed, and the people who robbed her remained carousing in the house from ten o'clock at night until three o'clock in the morning. The people who were engaged in the robbery all resided on the Common; two were convicted and sentenced to fifteen years imprisonment, three or four others were never touched, and are still residing on the Common; among them is a celebrated character—Black Charlie.

594. When did this robbery occur? About fifteen years ago.

595. And these parties who committed the robbery —? Were resident on the Common, and some are there to this day.

596. Do you know that of your own knowledge? Yes.

597. Have you seen them there? Many a time, and you may see them there every day.

598. *By Mr. Sutherland*: Do you believe it would enhance the value of the Government land on the other side of the Common if these bridges and this road were made? I do, because the roads would be made in a direct line as near as possible. It would be a great advantage to the people at Lane Cove, as for instance, Mr. Hill, who has an orchard there, which was in the market the other day. There is an extent of some 2,000 acres of good land there, which belonged to Sheriff Young, which might be brought into direct communication with Sydney if a small bridge were made across the head of Lane Cove, where the fresh water joins the salt; and this would be a great advantage to the people there, who are, many of them, fruit growers, as it is necessary, in order to get to market, that they should leave home either late at night or early in the morning, and now when they come down to the North Shore they cannot get across because the steamer is not plying. I am persuaded that a bridge might be erected there for about £200, and that fruit would thus be brought into Sydney market which is now wasted, because of the expense and delay of coming by the North Shore ferry.

599. Then this would shorten the distance from those places? The distance would be no greater from Mr. Hill's orchard into Sydney Market, if the bridges were built, than it is now by St. Leonard's.

600. At what do you value the Common per acre? I suppose my value of the land would not be entitled to much consideration, as I do not know the Common altogether; I have been across only a part of it—that part which lies between Kissing Point and the head of Lane Cove; I have ridden over very often, but at that time I did not know the boundaries;

Charles
Abercrombie,
Esq.
25 June, 1862.

I believe that is the worst part of it, the best is towards Pennant Hills; I could value it only prospectively upon the erection of the bridges, and I should say it would be worth from £10 to £20 an acre, if it were not forced into the market. I think the amount that might be realized from it, if it were laid out in small farms and small allotments, and sold by degrees, would be near £100,000.

601. *By Mr. Smart*: What do you think is its present value? I should doubt very much whether it could be sold at the present moment; I dare say the good land would not be worth more than £15 or £20 an acre.

602. What would the inferior land be worth? It would fetch nothing, unless it were good building allotments, and a good price would be obtained for them.

603. You do not think buyers will be found till the bridges are erected? I do not think they would, unless bridges were built, or it was known that they would be built.

604. Do you know whether the Government have any land beyond the Common unsold? Yes; I have seen some of it.

605. Any quantity? They have a considerable quantity.

606. Do you know the quality of it? No, but I have been told at the Survey Office that there are some 200,000 acres unsold, between that and the Hawkesbury River. I have seen good land about Dural, and a little beyond that I was told was unsold, but there is no road to it, and the Lane Cove Road has always been in bad order.

607. *By Dr. Lang*: You think the construction of these roads and bridges would be a general benefit to the inhabitants of the northern side of the Parramatta River? I think it would be a general benefit both to those on the north and to those on the south side of the river.

608. And to the public of Sydney generally, as an outlet? Yes, and as being the means of bringing a great deal more produce into the market, for people would purchase the land for the purpose of growing something upon it; the land would not lie waste as it does at present.

609. Are you aware whether the Common at present is any material benefit to the different commoners? I should think, from what I have heard, that it is no earthly benefit to any commoner.

610. Is it in any way a nuisance to the public? I know it is so far that no improvements can be made, no roads can be made, so that any person having land adjoining it, northerly, can get nothing from it while the Common remains as it is.

611. Are you aware whether there is any valuable timber on the Common? I am not; I have seen no timber of any value on the part I have been over.

612. Has the removal of the timber that originally stood upon the Common improved or deteriorated the quality of the land? I should say it has deteriorated the value of the land, because the stumps are left in and the scrub grows up; where there is heavy timber there is sometimes good grass for cattle.

613. *By the Chairman*: Do you know whether the Common land is adapted for agricultural purposes? I have seen both good and bad land; I have seen a good deal adapted, and a good deal not adapted.

614. Which is the larger portion? Of the land I have travelled over, I should say it is about equally divided, but I have seen only a portion.

615. You do not speak of your own knowledge? Yes, I do; I speak of what I have seen.

616. As regards the nuisance, you do not speak of your own knowledge? I have spoken of a circumstance within my own knowledge.

617. That was fifteen years ago? Yes, but I was there ten or twelve months ago, and I found a number of people engaged in a drunken row and fighting.

618. Did you give information, or interfere? I did not go near them; I was in my boat; if I had interfered I should most likely have got my head broken; there were fifteen or twenty of them fighting.

WEDNESDAY, 2 JULY, 1862.

Present:—

DR. LANG,
MR. PIDDINGTON,

MR. SMART,
MR. SUTHERLAND.

ISAAC SHEPHERD, Esq., IN THE CHAIR.

William Forster, Esq., M.P., examined:—

Wm. Forster,
Esq., M.P.
2 July, 1862.

619. *By the Chairman*: You have been requested to appear here to give any information you can, in reference to the promoters of bridging over the Parramatta River: I believe you are a landowner in the district of the Field of Mars? Perhaps I may be allowed to observe that I thought I was summoned to give information about the Common; I understood so from the notice I received.

620. The present inquiry is instituted in consequence of a Resolution of the House, "That a Select Committee be appointed with a view of resuming the inquiry into the subject-matter of various petitions and other matters relating to the Field of Mars and Eastern Farms Common, together with bridging over the Parramatta River and Iron Cove Bay; and that the Committee be empowered to send for persons and papers, and to inspect the Common if considered desirable?" Then am I to understand that I am to be examined with regard to these petitions?

Wm. Forster,
Esq., M.P.

2 July, 1862.

621. You are to be questioned in reference to any subject upon which the Committee may think proper to examine you? Certainly; your first remark seemed to imply that I was to give evidence about bridges; now I know very little about bridges.

622. I believe you are a landholder in the district of the Field of Mars? I am; I am in possession of land, and I have a remainder in the land I hold—about 500 acres.

623. Are you a promoter of bridging over the Parramatta River and Iron Cove Bay? I can hardly understand the meaning of that question—how I can be a promoter of bridging over the Parramatta River —

624. Do you conceive it to be desirable that Parramatta River and Iron Cove Bay should be bridged over? I should be very glad as a landholder, and as having an interest in common with the whole Colony, to have bridges over every river, so that they did not interfere with the interests of those who navigated the rivers; and therefore, of course, having a more direct interest in the river to which you make reference, I should be glad to see Parramatta River bridged over with as many bridges as practicable, if they did not interfere with other rights.

625. With reference to these two bridges in which you are more immediately interested, how do you propose to raise the means? Will you state what bridges you refer to in which I am more immediately interested? I should like to know at what point the bridges you refer to cross the river, for I do not for myself wish to advocate particular bridges, or any particular spot as a place where a bridge shall be erected. Any bridge that will connect our district with Sydney I should be glad to see carried out if practicable, if the money is to be got, and it does not interfere with other rights.

626. Here is a plan (*referring to a plan appended to a Return laid upon the Table of the House in 1861*)? I have been looking at that plan, but it simply shows certain points.

627. One is at Five Dock? Five Dock, I know very well where the bridge would cross. If you mean would a bridge built over the river at Five Dock —

628. My question refers to that bridge? May I ask what opinion you wish from me on that subject?

629. I ask you if you are a promoter of the construction of a bridge across the Parramatta River? I cannot say that I am a promoter in any other sense than that I should be glad to see bridges across the river. It does not come within my province to promote the construction of bridges in any way.

630. Then I shall go back to my question—As you would like to see these bridges carried out, how would you propose to raise the necessary money to build them? That is not a question that has ever come within my province to determine; I have never seen the project to which you refer in such a state as would impel me to consider the question of funds.

631. You have not considered the question of funds? Not in such a way as to entitle me to give an opinion to the Committee.

632. You cannot form any estimate as to the cost to be incurred? My opinion on that point would be worth very little. It strikes me it would cost a great deal of money, I might say in a rough way £100,000, but I do not think my opinion is worth anything; nor is it possible for any one to express more than an opinion without the necessary survey and calculations.

633. Perhaps I may say that all the evidence we have heard has been merely matter of opinion, and you as a resident are as capable of forming an opinion as another? I do not of course wish to undervalue my opinion, but I consider my opinion upon that point as worth nothing; it is not even an opinion—it is mere guess. I have not engineering knowledge, I do not know the sort of bridge that would be required, and it seems to me that none but an engineer can give an opinion upon that point.

634. Are you opposed to the existence of Commons? I do not quite understand that question, what you mean by "opposed to the existence of Commons."

635. Are you opposed to Commons in general? Do you mean am I opposed to persons possessing Commons anywhere?

636. I mean to say, are you opposed upon principle to the setting apart of portions of land as Commons? With the permission of the Committee, I will explain my views a little at length. I think there are times in the early stages of the settlement of a country when Commons may be desirable, but I think it follows as a matter of course, that a time arrives when the existence of Commons to any large extent is prejudicial to the settlement of a country. That is the general opinion I hold as to Commons, and I think that in this Colony, where freehold settlement is so easy, and where there is a disposition to extend the facility of freehold settlement, the granting of Common rights is less desirable than in any other part of the world. I can understand that, in countries where there is a feudal tenure and a landed aristocracy, the object of giving people who are not landholders something out of the large property which has been in a manner "usurped" by such an aristocracy; but here, where we do not recognize a feudal aristocracy, where there is a disposition to increase the settlement of freeholds, and where the freeholds are likely to be small properties, I see less reason for the granting of Common rights. Still, I think that in the early period of settlement Commons may be beneficial to people who are settled in small numbers in a place; but as settlement increases, the time comes when Commons are not required, but are prejudicial even to the people they had previously benefited. I think the Common respecting which I am asked to give an opinion is a good example in support of the remarks I make.

637. Where Common land is held under an absolute grant, would you, if you took away a Common, compensate those people who object to surrender their commonage right? This is a question which does not appear to me to be a matter of much consequence. In general, I would say that, where a private right is proved, I am disposed to respect it, and to give compensation where it is awarded; but then, of course, the compensation must be measured by

Wm. Forster,
Esq., M.P.
2 July, 1862.

by the amount of injury—the amount of benefit taken away. It seems to me a matter between the individual and the Government. If it be shown that a Common, or anything else, is prejudicial to the public generally, the public have the right to take it away; and where, as in the case of land taken away for railway purposes, individual rights are injured, the Government is bound to compensate to the amount of the injury done, and I should never set myself against that principle in any way.

638. Do you not consider it an advantage to persons who are large landholders to have the opportunity of turning out cattle on a Common, and also of cutting firewood or timber for fencing? Your question takes a very general shape, but I would answer it by this general remark, that if you give any landholder an additional piece of land it is a benefit to him; if you give him a sum of money it is a benefit to him; anything added to his property is a benefit in a general way; but if you allude to the Field of Mars Common, I have no hesitation in saying that I am an instance among many others of a landholder holding a very considerable portion of land for whose benefit the Common was originally intended, and, as far as my judgment goes, the Common has never been any advantage to me, or to my father, who held the land before me, but an absolute injury; and I believe it is so in the case of almost every landholder in the neighbourhood who is a possessor of land above a small amount, or who lives at any distance from the Common. It may be a benefit to some few who are close to its borders, in a certain sense, but it is counterbalanced by the general injury done, and to these very proprietors themselves, if they could only see their own interests. In all these cases there must be a balance of evils; it might be shown that although the Common has been an evil to me it might be a benefit, because I might sell it. If I could sell it, it would benefit me by putting so much money in my pocket, but if it has been an injury to me and to almost every proprietor in the neighbourhood, as I could show if I were allowed to go into detail —

639. In what way do you consider it an injury to proprietors? I will endeavour to explain myself more in detail; I must first point out the way in which this Common has been managed hitherto. I am not meaning any reflection upon the Trustees, but I refer to the way in which it has been inevitably managed. This Common was intended as a benefit to landholders; it is therefore perfectly clear that it was not intended there should be a mere individual benefit, that is, that the landholder of an acre should have the same benefit from the Common as the landholder of 500 or of 1,000 acres. If the Common was given as a benefit to landholders it was intended that it should be proportionate; I do not say whether that was right or wrong, but clearly the intention in granting the Common to landholders was that there should be a proportionate benefit. Now the fact is, that a small landholder close to the Common, having no timber on his own land, may be benefited to a certain extent by having a place from which he can get wood, and also from being able to run his cattle upon it; but to the large landholder, who is at some distance, the wood is of no consequence. I would let people take wood off my land if they would not cut down my trees. But the direct benefit to the small landholder is counterbalanced in some other way—in this way—all the landholders, if it could be proportioned among them, have a certain right; but as it is, the Common is taken up by wrongful possessors, and these men who were originally wrongful possessors have benefited more from the Common than the landholders themselves to whom the Common was granted.

640. *By Mr. Piddington:* Are you speaking of leaseholders? They were squatters on the land originally, and the Legislature—whether it was from contemplating the difficulty of turning these men off, or whether it was assumed that they had some right, or that it was better to encourage a rightful than a wrongful occupation of the land—the Legislature passed an Act to give the Trustees power to lease a portion of this land. Now I say this Act of the Legislature was *pro tanto* in defeasance of the right of proprietors of land to the Common; it might be a public advantage, but it was a defeasance of our right. In consequence of the passing of this Act, these wrongful people are becoming the actual possessors of the Common; the Common has actually passed out of the possession of the landed proprietors into the possession of these people altogether; so much so, that it is utterly useless to any one to turn cattle upon it. The grazing right is utterly useless, except to those people who live close by and can look after their cows, and even to them it is of very little use, for it is overrun by cattle, so that nothing is to be got by that. The right of taking wood still remains to the small proprietors in the neighbourhood, but these leaseholders get the best of that, as they are on the spot, and get the pick. Of course all my remarks are open to some exception, but as a general rule, I say the Common has passed out of the possession of the landholders, for whom it was intended, into the possession of a number of leaseholders, who originally were wrongfully possessed, some other people who have come in since the Act was passed, and the few landholders who live close by. It is for their advantage, and for that of no one else; it does not benefit the district generally, still less the landholders in the district as a general rule, and certainly not in proportion to property; if you look at the proportion to property the advantage is worth nothing. There is also this direct injury done—many of these small proprietors, many of whom were originally wrongfully possessed, and who have now a certain undefined interest, an interest not equal to freehold, holding by an uncertain tenure, have no interest in improving the roads, and therefore we cannot get them to join with us in any common object for the benefit of the district. In many instances, where the formation of roads would be a great benefit to a particular neighbourhood, the landed proprietors, by subscribing money, are enabled to employ a number of men upon them; and it is a well-known fact, that it is useless to apply to any of these small proprietors, as they will not join in any thing of the kind, and they often have greater use of our roads than any other people in the district, owing to their particular business being to cart wood to the wharf to send to Sydney; a few have also a little fruit, which they send to market. These people cut up

up the roads more than any of the landed proprietors in the neighbourhood, and at the same time do nothing to improve them. I say therefore that the Common, as at present managed, is a direct injury to the landed proprietors in general. But besides those I have mentioned, there are other evils. From the large extent of ground, to which no person in particular has any absolute right, the settlement upon it of people who are not a benefit to the district, people who are of bad character, is encouraged. I do not wish to say much about that, but I have heard it said that such people do settle, and it is natural that it should be so, as so large an extent of country so circumstanced cannot be looked after in any way. If you add to this also the general principle, which I am sure the Members of the Committee will accede to, that freehold occupation must be superior in benefit to the community to any other occupation, and if you consider that this large tract of country is shut out from freehold occupation, from those principles of free selection which are applied to other parts of the country—all these things taken together, the special grievances and the general rule as to freehold occupation being so much superior to other occupation—I think I have made out a case that the Common is no benefit to the neighbourhood, but absolutely an injury.

Wm. Forster,
Esq., M.P.

2 July, 1862.

641. Are you aware that the Trustees have made by-laws regulating the rights of commonage? I am told the Trustees have passed laws, which I am told are illegal. For instance, the Trustees are in the habit of exacting a rent for the land they lease; now, as I read the fifth clause of the Act to which I have referred, they have no power to exact a rent. Whether they have the power to enforce it, the tenant having accepted a lease, I cannot determine, but I am clear that from the clause it is an illegal exaction.

642. If I understand you rightly, you state that the Legislature have passed a law enabling the Trustees to convert the Common to purposes contrary to the intention for which it was originally granted? I did not say contrary to the original intention, at least I did not intend to say that there was any expressed intention. I say it is so far in defeasance of the Common right. If the land was granted as a Common, that is clearly inconsistent with granting leases; because the leases are given to a number of individuals who had no right originally, and who now have almost an exclusive right.

643. *By Mr. Piddington*: They would have an exclusive right as against the commoners? No doubt, in regard to the portion leased, and it is perfectly clear that by their settlement on the Common, by their being on the spot—as I believe it is capable of being maintained—they have also a Common right with the proprietors. It is clear that being upon the spot, whatever use they have of the Common is more beneficial to them, than ours is to us.

644. *By the Chairman*: Is there any limitation in the Commonage Act to the amount of land that may be leased? Yes, I believe they cannot lease more than a fourth.

645. In the aggregate? In the aggregate.

646. Supposing that permission given under the Commonage Act were taken away, would not that be a violation of our rights as commoners? The Legislature have a paramount right to deal with these lands for the public benefit, but —

647. I am not speaking of that; I ask whether it would not be a violation of the principle upon which the Common was granted? Unquestionably. I say the argument against the defeasance of the Common right which is set up by the opponents to the alienation of the Common is *pro tanto* taken away by the Legislature having taken away a fourth of our Common, and for which none of us ever got any compensation.

648. *By Mr. Smart*: Was that right reserved under the original grant? I do not think so; my impression is that it was not; that is a question to be decided by inspection of the grant, and by the interpretation of lawyers. I have no copy of the grant, and it is difficult to get a copy, but my impression is that there was no reservation.

649. *By the Chairman*: Are you aware whether the deed was issued previously or subsequently to the passing of the Act you speak of? I am not sufficiently informed upon that question to give evidence; very likely it was issued afterwards. Whether it was the case or not does not much touch the question.

650. Are you aware whether the deed was issued in accordance with that Act? That may be the case; I am not prepared to say, but it does not much touch the question, for there was an original deed intended to convey certain rights, which for some reason or other was resumed, and another deed was then issued with the intention of carrying out the original deed, and it did not do so. Therefore, if you want to know the rights conferred on the commoners in the first instance, you must look at the original deed that was granted before the Common Act was passed.

651. Are you aware whether the Common is held under the original deed or the actual deed? I am in doubt whether there was any power to grant the actual deed, although I know that that is the impression, because I am not quite sure that the resumption of the original deed was a legal one.

652. You are not aware whether the original deed was annulled or not? I am not aware whether it was legally annulled; I believe the general presumption is that it was annulled; I believe that is matter of law.

653. Then, according to your view, it is not the Trustees who have made the misconversion, but the Legislature? I throw no blame on the Trustees; I think they take a wrong view of the interests they manage or look after, but I have no wish to say anything to their discredit; I dare say they all act honestly; but it is clear they have a personal interest in keeping up the present state of things. I do not say they are consciously biassed by personal motives, but we often act from motives of which we are not conscious, and I think the gentlemen who are the Trustees have an interest in keeping up the present state of things; for this power of granting leases gives them a little authority, it creates a small circle of dependents upon them, and so far they have a personal interest in maintaining it; at the same time I give them credit for being honest men, and for thinking that what they do is the best for the district.

654.

Wm. Forster,
Esq., M.P.

2 July, 1862.

654. Do you know how many persons at present occupy the Common as leaseholders? No; I know it is utterly useless to landholders who are not close to it; it is taken up in all directions—all the land that will grow grass.
655. Perhaps, as you say it is taken up in all directions, you have some idea of the probable number? No, I have not, but I know a great many of the cattle do not belong to any proprietor or leaseholder; wild cattle get there from different parts.
656. You do not know that of your own knowledge? Yes, I do, because I have seen them.
657. Do you know the number of acres held by persons under lease? No.
658. Are you aware whether any person having a lease of a portion of the Common has obtained that lease subsequently to the present Trustees coming into power? I cannot say; I have heard there has been a good deal of litigation—that the Trustees cannot maintain their authority; I have heard that said, but I do not know much about it. I do not trouble myself about the Common, as for a long time past it has been not of much use, but a nuisance; and I know that any interference of mine would be of no benefit. I want to see the Common alienated, and indeed I would have no objection whatever to see it given away in small farms to people in the neighbourhood, provided it were open to freehold occupation. My principal object is to get rid of the Common as a Common, and that has been the object of all the movements I have made in the matter.
659. Supposing it were given as free grants? I do not say that would be the best way of disposing of it, but I say that any mode of opening this Common to freehold occupation would be better than to allow it to remain as it is. Still I could imagine many ways of doing it, some of which would be far better than others I could suggest. If the Common were sold and the proceeds devoted to any beneficial purpose for the district generally, that I think would be the most equitable way of dealing with the matter.
660. You have stated that the Trustees have come into collision with parties in carrying out their trust? I have heard so; I do not know much of the matter.
661. Then they must have some difficulty in carrying out the trusts? Very possibly; I suppose no man can do his duty without some difficulty.
662. Then you think they have done their duty? I am not prepared to say that; I only say I should be sorry to say anything which might seem to imply any reflection against their motives, which I believe are honest.
663. In shutting up Commons, and diverting the land from its original purpose, in thickly populated countries, is not the object generally to supply the population with land for improvement? I think population acts and re-acts upon itself; I have already said, that there is a time when there is no harm done, and when there may be a benefit to a district by applying a commonage right, but I believe it to be inevitable at a certain stage in the settlement of a country, that population will require every encouragement to settle upon the land, and the time always comes when the existence of a large Common is a bar to the settlement of a country; the population gets checked more or less at a certain point.
664. Upon that principle you would do away with the Common? I would wish it, both for public and private reasons: in my private capacity it is a direct injury to me, and on public grounds I object to its existence because it operates very largely as a check to the advancement of the district. On both grounds I would take every means in my power to have the land alienated—I do not say all at once; but rather than allow it to remain as at present, I would give it away.
665. I should like to hear more definitely what direct injury you have sustained? I have already stated my opinions in detail.
666. Cutting up the roads? I say the right is taken away from me altogether. My property is within half a mile of the Common: surely it was intended I should get some benefit from it, and I tell the Committee I get no benefit—that it is an injury to me. I dare not turn out a cow upon it; if I did I should never see her again. Then, again (and that is a matter of my own), the cattle of the settlers on the Common having no grass on the Common, are constantly on my land. The fences not being very good, the cattle of these commoners and of others are perpetually on my land.
667. *By Mr. Smart*: The cattle of the occupiers of the Common under lease? Principally of people who originally had no right.
668. What right have they now? They are now under lease: once they were squatters in wrongful occupation. I wish they had been acknowledged freeholders from the beginning; we should then have had the Common improved.
669. *By the Chairman*: Have you ever sought to obtain any benefit from the Common by depasturing cattle? I am sure no benefit is derivable from depasturing cattle upon the Common.
670. Have you ever sought it? People do not seek things which they know are unattainable.
671. Have you ever sent in your claim as a commoner? No; for I am quite satisfied upon that point.
672. Have you ever demanded commonage right? What is the use of demanding a right which is no benefit to me?
673. In fact, you have not required to exercise the right of common? Whether I required it or not, it would have been of no use.
674. You have not required it? No; the only benefit I would have derived would have been in getting wood, and I have already stated that the small settlers derive the chief benefit from that source.
675. You have sufficient wood on your own land, and therefore have no necessity to go on the Common for it? I have sufficient wood on my own land. I may mention that there is a little timber left on the Common fit for fencing and splitting; but it will not last long, therefore it is not an element in the question.
- 676.

676. You have sufficient land of your own without turning your cattle on the Common? I have, but that question barely states the case, for I say if I had only a single acre I should not derive benefit from the Common. Wm. Forster,
Esq., M.P.

677. My question was whether you had ever sought to exercise the commonage right? I have not sought it. 2 July, 1862.

678. You have not done so because you have sufficient land for firewood? There is one right I have exercised very frequently, that of walking about the Common, and I am not a trespasser—that is the only right I have ever exercised.

679. *By Mr. Sutherland*: You say there will not long be timber for anyone? In a very short time that will all be gone, therefore I think that is scarcely worth taking into consideration.

680. That, you say, is one of the main benefits of the Common? No, I say small settlers who have not much land may benefit by getting wood off it; but that is a small benefit, for anyone in the neighbourhood almost will allow wood to be taken off his land if the people do not cut the timber. I admit, however, that to the small settler it is something, but I say that the Common was not originally intended only for the benefit of the small settler.

681. *By the Chairman*: Are you aware whether persons residing in the village of Ryde do not obtain their wood from the Common? They obtain it from the people who split it, but they pay for the labour—not for the mere right of getting it.

682. Am I to understand that these people residing at Ryde buy their wood from the Trustees? Not that they buy their wood from the Trustees.

683. Or that they pay for the cartage? I take it that the greater part of the wood that comes into Ryde is bought by the people who sell it to those who buy in the village, and that they pay for the labour. The men who get it off the Common have very little advantage, because they could get it from other land close by; it is the labour that makes it valuable.

684. Are you aware that the residents of the village of Ryde have applied to the Trustees for permission to cut wood on the Common? No, that is not my business.

685. Then the wood you refer to may have been procured by permission of the Trustees? It may have been, and I dare say that wood comes from the Common to Sydney by the steamer.

686. You do not know that of your own knowledge? I do not.

687. *By Mr. Smart*: Are you aware what quantity of land on the Common is fit for agricultural purposes? I would speak with great diffidence upon that point. I have been over the Common a good deal, but I do not exactly know the boundaries. As a general rule, I am satisfied of this, that the quantity of good and bad land averages much about what the rest of the district does.

688. Do you think the residents in the upper or north-western portion of the Common would be willing to give up their rights of commonage, on condition that these bridges and roads were made to the district? I do not think they are so willing as the people in other parts of the district; in fact, I am aware that the opposition is chiefly with them.

689. Do you think the majority of the residents are in favour of the alienation of the Common? I am of opinion that the majority are in favour, but I do not wish to imply that I am a good authority. It is a difficult question to settle, for it is hard to say who are commoners, and I think that is a reason for the alienation proposed; for the terms on which the right in the Common is maintained are so doubtful, that it is difficult to say who within an immense area around are not commoners; and if it is to be divided among all these, the right is worth nothing.

690. Are you of opinion that the formation of bridges would be a benefit to the whole district? Yes, to everyone.

691. To the people of the Field of Mars district, and to those beyond? The benefit to myself would be very small in a direct point of view; at the same time I would join those who wish bridges to be erected over the river. I think it would be a very proper way of expending the funds derived from the alienation of the Common, because it would be a benefit to the whole district, although the direct benefit to myself would not be great, because I am as near Parramatta as I should be to any bridge that would be made over the river; I should be eight or nine miles away by the nearest and most direct road to Sydney; so that the advantage to myself is not such as to induce me to move in the matter, except from public motives.

692. Can you speak as to the value of the Common? I should say the land is worth from £5 to £10 an acre, without improvements. I look upon the land on my farm as worth some £10 an acre, and I am about half a mile from the Common. Perhaps my land on the average is better than the land of the Common, though there is some very good land there.

693. Do you know the character of the land near Buffalo Creek? I do not know much about it; but it strikes me that it is all bad land; because, as a general rule, the land upon large watercourses is rocky and sandy, and as you get into the interior you come to where the influence of the trap dykes that run through the whole district is felt upon the soil. There is a slight mixture of the volcanic detritus with the sandstone detritus, and that forms generally upon the ridges and hills a better character of soil than is found generally close to the edges of the water. I know some parts of the Common where the land is as good as any in the neighbourhood.

694. Which is it, the upper portion of the Common—the western and north-western? Some of the best is near the Old Camp.

695. *By the Chairman*: It is very limited? That is limited, but there is tolerably good land towards Dural.

Wm. Forster,
Esq., M.P.

2 July, 1862.

696. As regards improvements—you are referring to Small's? At the back of Eastwood. I believe there is some very good land towards Dural; in fact, all the Dural and Castle Hill country is a hilly country, formed of the sort of soil I spoke of before.

697. *By Mr. Piddington*: Do you recollect the sale of any land within the last few years in the neighbourhood of the Common—do you recollect a sale of land that took place two or three years ago at the back of Eastwood? Yes, Mr. Ford's; I do not recollect enough to speak to the price the land brought.

698. Have you any knowledge of the sale of Eastwood to the present owner? Yes, I know the circumstances of that sale pretty well.

699. Do you know the price per acre given for that land? There are scarcely a hundred acres of land; the land is tolerably well improved; it has been greatly improved since the present owner has had it; but at that time there were some improvements, and it sold for £5,000.

700. That was at the rate of £50 an acre? Yes.

701. Was the whole of the land good land? No, I do not think there is any land in the district good land, in the sense in which I should call land good land in the interior; for instance, there is none like the land on the Clarence, or Darling Downs.

702. From your knowledge of this particular farm known as Eastwood, you are of opinion that it is superior, on the average, to an equal quantity of land to be found on the Field of Mars Common? I should say it is superior rather.

703. Not very much superior? Not very much.

704. Are you aware whether there were any improvements besides a cottage upon this farm at Eastwood? There is a cottage and an orchard. The orchard consisted of orange trees, which were doing well, but they have all died since.

705. Do you recollect the extent of the orchard? Two acres, with vineyard and orchard.

706. Have you any knowledge of the extent of land under cultivation? There was no land properly under cultivation.

707. Then, as I understand you, the improvements consisted of a cottage, two acres employed in the produce of vines and oranges, and scarcely more than that? A few paddocks.

708. Grass paddocks? Only grass paddocks. At that time there was no cultivation worth speaking of.

709. For this farm, as you have described it, the sum of £50 an acre was paid? Yes.

710. Is this farm close to the Common? It is quite close to it.

711. *By Mr. Smart*: Do you know the property Dr. Brereton bought a short time ago, at Hunter's Hill? No; I know very little of the Hunter's Hill country, as a general rule.

712. It was formerly Isaacs'? Yes, I know that.

713. Do you know the extent of that? No. I should say that the Common generally is superior in quality to the general run of the land about Gladesville or Hunter's Hill; it is not so much a rocky and barren country.

714. *By the Chairman*: I should like to ask, with reference to the Eastwood property, are you aware what the improvements cost the original proprietor? I am not.

715. Are you not aware that a very large sum of money was expended upon it? A great deal upon the house and premises, not much else; there was some trenching done in the vineyard.

716. Was it not all enclosed? There is a fence all round the land.

717. And paddocks too? Yes; but at the time it was sold it could not be called well enclosed land; it had been enclosed, but the fences were in a state of disrepair.

718. A considerable portion of it was cleared? I think not quite half.

719. Has any been cleared since? No, I think not.

720. The land now cleared was cleared at the time of the sale? I think there has been very little change.

721. *By Dr. Lang*: In the event of bridges being constructed over Parramatta River and Iron Cove Bay, do you think the outlet would be taken advantage of by people in Sydney to purchase villa sites—small allotments for houses? I am quite sure it would enhance the value of land in the neighbourhood, and would enhance the value of the Common, particularly if the Common itself were open to alienation. I am quite sure the two things together would increase the value of the land, and at the same time would induce people in Sydney, who are expending their purchases in different directions, but who are stopped by the river, to buy.

722. Do you think such an improvement would afford an important additional outlet to the people of Sydney? I think it would be a great benefit to the people of Sydney, in many respects.

723. Are you aware of the character of the land beyond the Common, towards the Hawkesbury River, as to whether it is available or not? I have ridden across in former days along the road to Wiseman's Ferry, but it is generally a very barren country along that road; I do not know much of the country to the right of the road; at the head of the streams that run into Middle Harbour and Pittwater it may be better.

724. *By the Chairman*: It may be worse? It may be worse, though it cannot be much worse than some parts of the land on the Parramatta River, between the Common and the river.

725. *By Dr. Lang*: Have you any idea of the proportion of the land on the Common available for agriculture or horticulture? I think it is quite equal to the proportion of the land in the district generally. I say it with some diffidence, but I think there would be about half available, that is about the case in the district generally; in using that word I mean immediately available without any great expense, for we have an instance of what may be done in the case of a gentleman on the other side of the river, Mr. Wright, who has bought a piece of rock and made it available.

726. *By the Chairman*: He is trying to do it? He is showing what money can do, and no doubt in that way almost any land may be made available, but I refer to land immediately available without any large outlay.
727. *By Dr. Lang*: You think if the Common were resumed by Government, for the purpose of progressive sale, its value would be much enhanced? I am certain it would, particularly in connection with the project of a bridge.
728. *By the Chairman*: When you mention the circumstance of coupling it with the erection of bridges, how would you propose these bridges to be erected? I have not considered that question; I am not an engineer.
729. As a Member of the Assembly, would you, with your present views, consent to a vote for the erection of these bridges? I do not consider that I am here to give an account of myself as a Member of Parliament.
730. As a matter of opinion? I never make up my mind to anything till I come to vote, or very seldom.

Wm. Forster,
Esq., M.P.

2 July, 1862.

Charles Langley, Esq., called in and examined:—

731. *By the Chairman*: You are a surveyor, I believe? I am.
732. Were you empowered by the Government to survey and mark out a road with bridges crossing Iron Cove Bay and Parramatta River to Five Dock? I was to pick out the best site for roads, and where bridges ought to be placed.
733. And you decided upon the line of road as marked out on a plan appended to a return printed by order of the House last Session? Yes.
734. Is that the plan of the road and bridges marked out by you (*handing the plan referred to to the witness*)? That is a copy of it, I believe.
735. Were you instructed also to survey the Field of Mars Common, and to determine the relative extent, generally, of three qualities of land,—first and second qualities, and inferior land? I was, I believe. If you have my report you will see.
736. To give a valuation of the three qualities, at the then market rates of land similar in character and situation? No.
737. You say you were not appointed to do that? I cannot exactly remember the tenor of my instructions, but if you read the letter of Captain McLean you will see.
738. I will read the letter, dated 5th April, 1861. (*The Chairman read the letter, No. 8.*) “You will supply a valuation of each of the three qualities, at the present market rates of “lands similar in character and situation”? I forgot that.
739. I believe those are the instructions you received? Yes, a copy of them. If you read my answer, you will see what I said in reply.
740. I merely asked the question;—you did not then make a survey of the land according to your directions? I did not; I traversed the Common backwards and forwards, in every place, all over it. (*The Chairman read the report signed Chas. E. Langley, dated May, 1861, “Sub-enclosure in No. 9,” in the return above referred to.*)
741. I believe that is your report? Yes.
742. I would now ask you, what you consider the present value of the land without improvement? It is impossible to say—there are some parts worth nothing, and other parts of it that some persons who have orchards say they would willingly give £25 or £30 an acre for. There are other parts that are good for agriculture, and some suitable for vineyards, and at rocky places, by Lane Cove, there are many magnificent building sites. It is impossible to give any idea of the value while there is no communication; you cannot get out of it.
743. Am I to understand that you can put no value upon the land—that it is worth nothing? Quite the contrary; there is land in the neighbourhood of Lane Cove that has been sold at from £5 to £7, or £10 an acre.
744. My question to you is, as you have given your opinion of the value of the land in the event of these improvements being carried out, what you consider the land worth in its present state? I consider that the land on the Common, or any other land in the Colony, under similar circumstances, would not fetch more than £2 or £3 an acre.
745. Can you form no opinion of its value? I would value it at £3 an acre.
746. These improvements would increase its value only £1 an acre? £2. I say the land would be worth from £4 to £5 an acre.
747. *By Mr. Smart*: What was the date of the valuation you allude to? May, 1861, when property was at its very lowest ebb.
748. *By the Chairman*: Have you made any estimate or any calculation of the cost of laying out the Common according to your view? I did make a rough estimate for Captain McLean, I think.
749. And also for making a road? No, I made no estimate of the cost of making a road.
750. Have you made any estimate of the cost of constructing the bridges? No, but I have spoken to some parties about the cost of building the bridges.
751. You can give no information of your own knowledge? I can give this information.
752. Have you made any calculations? I have made calculations as to both bridges. I calculate a pile bridge across Long Cove would cost £15,000.
753. What do you calculate would be the cost of the bridge across Parramatta River? I calculate the bridge across the Parramatta River, with abutments, from a plan I saw in Sydney, would cost from £18,000 to £20,000, complete. It would have to be built at the flood line, so that steamers could pass without lowering their funnels.

C. Langley,
Esq.

2 July, 1862.

- C. Langley, Esq.
2 July, 1862.
754. *By Mr. Smart*: Do you know the depth of the water where you propose to build the bridge? Yes, the deepest part is 40 feet, or 34 feet at low water.
755. The plan you allude to, is it a plan obtained from London, from the Iron Bridge Company? Yes, I believe so.
756. *By the Chairman*: Do you consider that the construction of these bridges, one across the Parramatta River, and the other across Iron Cove Bay, and the formation of the proposed road, would considerably enhance the value of property on the south side of Parramatta River? Most undoubtedly it would. Bourke Town, Battersea, and the various places around, would be enhanced in various ways.
757. Would it more especially enhance the value of the land abutting on or contiguous to the line of road? No doubt of that, and for miles back. The value of any place must be enhanced by having access to a road or bridge.
758. Do you not consider that where there is a great benefit conferred, all those who are benefited should bear a share of the cost incurred in carrying out the proposed benefit? I think if the people give their property it is as much as can be expected, in order to carry out any public work.
759. Do you not consider that the circumstance of enhancing the value of their property would be of more importance to them than the relinquishment of a portion of their property for the formation of a road through it? I think it would be very unfair to them to call upon them to contribute anything farther, because other persons, whose property was not directly on the road, might be nearly as much benefited as those through whose land the line passed. I think it would be unfair that they should have to pay for benefiting others, unless you taxed the whole country to do it.
760. May you not say the same with respect to those on the other side of the river,—if they gave up certain property, that it would be unjust to call upon them to give it up for the benefit of others? It would. But if they gave up their property for the sake of a road it would benefit others as well as themselves.
761. You consider that the giving of land for the road to pass through is a sufficient sacrifice for them to make, in consideration of the enhancement of the value of their property? Quite sufficient.
762. Supposing these bridges you contemplate were erected over the river, do you consider it desirable that a toll should be placed on them? No, I do not think there ought to be a toll.
763. Why? I will explain. These proposed works will occupy ten years, perhaps, in their construction and carrying out; in the next ten years property in that neighbourhood and the circumstances of the Colony will be very different from what they are now—at least it may be expected that they will be better. There will be a greater stream of immigration, population will have increased, and I contemplate that the Field of Mars Common, which it is intended to give up for the construction of these bridges and roads, will fetch £100,000 within that period.
764. That is your opinion? That is my opinion.
765. *By Mr. Smart*: I thought you said just now, that in the event of these bridges being erected and these roads formed, not more than £2 or £3 an acre additional value would be given to the land? Not at that time, looking to the prices at which land was then selling.
766. I understood you to say that you estimate the present value of the land at £2 or £3 an acre? Yes.
767. And that if these bridges were formed, it would not add more than £2 or £3 an acre to their value? If sold at once.
768. In the event of these bridges being erected and roads formed, what do you suppose the land would realize, if sold judiciously and at proper periods? In ten years' time?
769. Upon the completion of the roads and bridges, whatever time they may take? It would add at least £10 an acre.
770. You think the erection of these bridges and the formation of these roads would give an additional value to the land of £10 an acre? Yes; that would make £15 an acre all round, bad and good; for there is some there which though it looks bad, is really good, and could be applied to vineyards and purposes of that kind.
771. What is the length of the proposed road from Sydney to Tarban Creek? About three miles and a half.
772. What is the present distance by land to Tarban Creek, through Five Dock? About nine miles.
773. It would shorten the distance to Sydney four miles? From four to five miles.
774. *By the Chairman*: How do you reconcile the assertions you have now made with the report you gave to the Acting Surveyor General;—you say, “should the Common be judiciously laid out with roads giving means of access to various points on the Kissing Point and North Roads, and the property subdivided so as to combine good and bad land together, it would realize a very considerable sum.” Then you go on:—“Should the new line of road proposed to be opened from Gladesville through the Asylum Reserve, across the Parramatta River, through the Five Dock Estate, over Iron Cove and the Balmain Estate, in connection with the Pyrmont Bridges be carried out, it will enhance the value of this property to a very great extent. I have no hesitation in giving it as my opinion, that taking the property altogether, if judiciously laid out in connection with the line of road above mentioned, it will sell on an average from £4 to £5 per acre, the great desideratum being the opening of lines of communication so as to render the whole property available”;—are we to understand, that in giving your opinion you did not base it upon these things being carried out? It was upon the supposition that the road and bridges were then completed, looking to the prices at that time.

775. But you say they could not be carried out in less than ten years? Yes, but I say in ^{C. Langley,} ten years the land will be worth £15 an acre. _{Esq.}
776. I ask you how you can reconcile the assertion you now make with the report you made to the Acting Surveyor General? I made the report upon his directing me to give the value of the land at that time, and I said if these things were carried out at that time the land would fetch that sum—I was not looking into futurity. ^{2 July, 1862.}
777. Then you based your report upon what you knew was an impossibility—you knew the roads were not then formed, that the bridges were not carried out? I said if they were carried out the land would fetch that amount.
778. Had you any idea that they could be carried out at that time? No, but the Acting Surveyor General asked me to give a valuation, at the present market rates of lands similar in character and situation. (*The witness read the letter No. 8 in printed return.*)
779. *By Mr. Sutherland:* What is the length of the road through Balmain from Glebe Island Road to Long Cove, and what are the general features of the land? The length of the road from the Abattoir road is two or three chains less than a mile, and about half of it is at present used as a road. People come that road in preference to going by the Government road. It is in use now, and has been cleared and made by the people themselves. The breadth of the road is a chain—sixty-six feet.
780. What would be the expense of making that road ready for metalling, without the metal? It would not cost more than £200 or £250 a mile there, for there are no engineering difficulties in the way at all. I would put it down at £250, clearing, stumping, and forming. It is a kind of ironstone gravel there, so that the cost of forming would be very little.
781. What sort of bridge do you propose to put across Long Cove? A pile bridge—the same as at Glebe Island.
782. What do you estimate would be the expense of the bridge complete? If the piles were not coppered, but merely charred and tarred over—which I think would be sufficient—I think it could be done at from £12,000 to £15,000 at the outside; that is, supposing there were not an expensive swing bridge like that to Glebe Island, which alone cost £4,000.
783. What sort of bridge would you propose in lieu of a swing bridge? Not a swing at all; I would make it a slide, which should open and be pulled back on rollers.
784. *By Dr. Lang:* Is there any navigation there which requires a swing bridge? I never saw any in my life, except it may be a wood boat or two.
785. Would such a boat not be able to make its way under the bridge in ordinary circumstances? It would, except at very high water.
786. There is not sufficient navigation on Long Cove to require accommodation for the passage of vessels? Not at all.
787. *By Mr. Sutherland:* Does that sum include the slide bridge you refer to? Yes.
788. Will you state the length of the road that will be required from that bridge across Five Dock to the Parramatta River? About a mile and a quarter.
789. What would be the expense of making that road ready for metal? There is some cutting there and another small bridge to be built—that would cost £1,000.
790. The mile and a quarter complete for metalling? Yes.
791. What sort of bridge do you propose to put across the Parramatta River? I propose a suspension bridge.
792. What would be the expense of such a bridge? It is impossible to give an idea of the expense; I would not venture to give it. From the plans I saw that were sent out here of specimen bridges, I should say that the expense of a bridge that would fit this would be about £14,000, and then there would be the expense of freight and of building piers.
793. Can you, within a short time, in order that it may be appended to your evidence, give an estimate of such a bridge as you propose? I will do so. (*Vide Appendix.*)
794. What is the length and general character of the road from the north side of the bridge to the North Road at Gladesville? About three-quarters of a mile.
795. What would be the expense of putting that road into a fit state for the reception of metal? It would cost £500, at a rough guess—I should say it could be done for that.
796. *By Dr. Lang:* From what you saw of the Common, do you think it is likely to be a great advantage to the commoners in its present state? No, I should think not. If they turn their cattle on it they cannot find them again without great difficulty.
797. Is there much grass upon it in its present state? In some parts there is.
798. Is there much valuable timber on it? Not at this end; there is at the further end.
799. On the whole, you do not consider the existence of the Common, in its present state, a general benefit to the district? It is not; in fact, it is the very reverse. From what I saw of the characters on it, I should not like to travel through it at night if I had anything worth losing.
800. *By Mr. Sutherland:* Did you see many of the people who are settled on the Common? Yes.
801. What was their general character? They were going to put me in the creek; they thought I was come to turn them off.
802. Had you any conversation with any of these people who were settled on the Common, as to what they would give for any portion of it if it were sold? Yes, one party told me she would be willing to give £25 or £30 an acre for what she held if she could get a freehold of it. There is some excellent land in the bays of Lane Cove, and some that is frightfully rough. Perhaps, if these roads and bridges were formed, this would become more valuable than agricultural land, for building sites, as there are beautiful views from some of these places.

- C. Langley, Esq.
2 July, 1862.
803. *By the Chairman:* May I ask the name of the party you refer to as having stated she would give £25 or £30 an acre for the land she occupied? I do not know; she is a widow, and has an orchard of twelve or thirteen acres.
804. The land you refer to was highly improved? It was improved.
805. And had a house on it? A hut.
806. It had an orchard on it? Yes. The woman had been living there five or six years.
807. Not more? That is what she told me; I never saw her before, nor have I seen her since.

APPENDIX.

MEMO. :—

Sydney, 15 July, 1862.

In compliance with the wish of the Committee, I beg to state that, on an examination of the plan for an Iron Suspension Bridge across the Parramatta River, produced by Mr. Joubert, I find its estimated cost, free on board ship in England, is £13,500

The freight on 1,250 tons, at 40s. 2,500

Abutments, four stone piers, and cost of erection, I estimate at 10,000

Total cost £26,000

But I think an Iron Bridge, with *cast-iron cylinders for piers* in place of *stone-work*, would be more suitable.

Its cost in England, free on board ship, would be £19,000

Freight of 1,500 tons, at 40s. 3,000

Cost of erection 5,000

Total cost £27,000

CHA. E. LANGLEY, C.E. & Surveyor.

Mr. Robert Wicks called in and examined :—

- Mr. Robert Wicks.
2 July, 1862.
808. *By the Chairman:* Are you a promoter of bridging over the Iron Cove Bay and Parramatta River? Yes.
809. Do you know what the cost would be? No.
810. Have you any idea of it? No.
811. How would you propose that these bridges should be constructed? I have no way of proposing them; I am no great judge of the like.
812. *By Mr. Smart:* Are you a commoner? Yes.
813. At what part of the Common do you reside? I reside at the Village of Ryde, not upon the Common.
814. And have a right to the use of the Common? Yes.
815. Are you willing to surrender that right to the Government, upon condition that the proposed roads and bridges are constructed? Yes.
816. Do you think it would be a benefit to the neighbourhood generally to have these roads and bridges constructed? I am sure it would, as far as my opinion goes, and I am an old resident in the district.
817. How many years have you resided in the district? I was born in the district, and I am 42 years of age.
818. Have you derived any benefit from the Common since you resided there? I cannot say that I have not; but I think I have been more injured through the Common than benefited by it. When I commenced butchering I turned my cattle there, and lost several head; and I have never seen them since.
819. Then, in your opinion, the Common is no benefit to the residents in the neighbourhood? I do not think it is.
820. You think the construction of these bridges and the promotion of these roads would be a great benefit to the district? Yes.
821. *By the Chairman:* In speaking of the loss of these cattle, do you wish the Committee to infer that they were stolen, or that they strayed? I cannot say. I know I lost them, and that I have never seen them since.
822. You turned them out, and have not seen them since;—you could not say whether they were stolen or not? No.
823. Supposing the Common were sold, where would the people of Ryde obtain their firewood? I think they can get it cheaper off private land than they can get it off the Common, at the present time.
824. Supposing the Common were disposed of, would it not enhance the value of timber on private land? I do not think it would.
825. Where would you get your fencing stuff from? I think we should have to get it where we mostly get it from now, from Sydney, or from private land.
826. Are you aware that people get it off the Common now, in many instances? Very few.
827. You are aware that some get it? Yes, such as it is.
828. You have been a producer of fruit in the neighbourhood? Yes.
829. How have you sent it to market? Mostly by water. Last season I sent it all by way of the Bedlam Ferry.
830. What is the general mode by which people in that neighbourhood convey their produce to Sydney? I think more comes across the ferry than is sent by water.
831. How is the crossing at the ferry? Very bad.

832. On which side of the river? On both sides.
833. Do you mean that it is very bad immediately contiguous to the water—that the approaches are bad? Yes.
834. On both sides of the water? On both sides of the water the approaches are very steep.
835. Is the land in the district suitable for cultivation? Yes, for many things. It is good land, except as you go into the interior, to the low lands.
836. Do you consider the Common fit for cultivation? A great part of it.
837. *By Dr. Lang*: What portion of the Common do you think would be fit for cultivation, speaking generally? I think better than half would be good for cultivation, but there are some parts of the Common, though not fit for cultivation, which is of more value than those portions that are.
838. You mean as building sites? Yes, adjoining Mr. Joubert's, near Lane Cove.
839. Do you think if the bridges were constructed, and the Common were resumed and sold progressively in small farms, that its value would be much enhanced? Yes, I am quite aware it would.
840. Do you think many people from Sydney would be disposed to purchase allotments for building purposes? It is quite likely.
841. Would that improve the circumstances of the actual population of the different villages, such as Kissing Point? Yes, we want some way of getting out; we are fast; we are on an island.
842. You do not consider the present mode of communication a desirable one, either by water or by the ferry? No.
843. The construction of these roads would bring you nearer Sydney? Yes.
844. And give you corresponding advantages? Yes, we should consider ourselves adjoining.
845. *By the Chairman*: When you say you are fast, you have no way of getting out, have you not a steamer plying on Parramatta River? Yes, which we have to pay for.
846. Do you know how many times a day she passes? I could not say for certain—three or four times.
847. Are there not also sailing boats plying up and down the river? Yes.
848. Is it not by sailing boats that the produce is generally carried to Sydney? Yes, partly by boats and partly by way of the ferry.
849. Is there not a ferry across Parramatta River? Yes.
850. You say that has been your mode of transit the last twelve months? Yes.
851. How do you reconcile that with your statement that you have no outlet? You cannot take half a ton across the ferry; it would be a good horse that would take half a ton up the approaches to the ferry.
852. *By Dr. Lang*: Do you consider the present modes of conveyance expensive? Yes.
853. More than they ought to be? Yes.
854. Than they would be if you had a road? More than they are from Parramatta, which is double the distance.

Mr. Robert
Wicks.
2 July, 1862.

TUESDAY, 8 JULY, 1862.

Present:—

DR. LANG, | MR. LUCAS,
MR. PIDDINGTON,

ISAAC SHEPHERD, ESQ., IN THE CHAIR.

Francis Campbell, Esq., M.D., called in and examined:—

855. *By the Chairman*: You are placed over the Lunatic Asylum at Tarban Creek? Yes, as Superintendent.
856. You are a landholder in the district? Yes.
857. Are you aware that the question of bridging over the Parramatta River and Iron Cove has been agitated? I am.
858. Can you give the Committee any reliable information as to the practicability of doing so? I will answer any question the Committee may put to me, but I cannot enter into a dissertation on the subject.
859. Are you aware of the probable expense of these two bridges? I presume the two bridges would cost perhaps £40,000 or £46,000—between £40,000 and £50,000; I do not think it will exceed that.
860. Would you, as one interested in the Common, be agreeable for the Common to be divided—partitioned off among those parties really entitled to the privileges of commoners? Certainly I would have no objections to that, provided you make me a commoner.
861. I presume, as a landholder within the district, you consider yourself a commoner? Yes.
862. Are you aware what is the general quality of the Common land? Yes; I have been a good deal on the Common at one time and another, and, with the exception of that portion which skirts Lane Cove and Buffalo Creek, I consider it good land.
863. Have you been on the northern portion of the Common? I have not been very far round it—I judge from what I have seen; I have been on it a good way, but not knowing the boundaries of the Common, I have never been able to say whether I have been round it or not.

F. Campbell,
Esq., M.D.
8 July, 1862.

- F. Campbell, Esq., M.D.
864. Then, in point of fact, you do not know the quality of the land? I know a great part of it.
865. Do you know the northern portion of the Common? Yes, I have seen a great deal of the northern portion; it is all very good land. I refer to that portion which lies in a northern direction from my own ground.
866. Have you been over the Common as far as Pennant Hills? No, I have not been so far as that on it.
867. Then, in fact, you only know that portion of the Common contiguous to your own land? I know more than that—a great deal more than that; I do not know all of the Common, but I have been over a great deal of it.
868. *By Mr. Piddington*: The Common is very extensive? Yes, some 6,000 acres.
869. *By the Chairman*: Are you aware of its extent in distance? Merely from hearsay; I have traced it on the map, and I believe it goes as far as what they call the Ponds.
870. *By Mr. Piddington*: I believe you are a landholder in the neighbourhood of the Field of Mars Common? I am.
871. Do you possess any land in the neighbourhood of the Gladesville Road? Yes; that is the Great North Road.
872. The road from Gladesville to Ryde? Yes.
873. What part of that road does your land approximate to or abut upon? One piece of my land commences at the commencement of the Onion's Point Road, above Dr. Brereton's land.
874. Does the piece of land you now allude to abut on the Gladesville Road? Yes.
875. It has a frontage to that road? Yes; from the Onions Point Road it has a frontage of 100 chains towards the ferry.
876. Is there any portion of the Field of Mars Common in the immediate neighbourhood of your freehold land? Yes, my ground joins the Common in two places.
877. How far is the Field of Mars Common from the Gladesville Road, at the nearest point adjacent to your land? There are about four acres of land between the road and the Common, and these four acres are mine, therefore they join.
878. How many yards do you think there are between the Gladesville Road and the Field of Mars Common? I should imagine a couple of chains;* I do not think there is more; it is a very short distance indeed.
879. From the Great North Road? Yes.
880. Is not a considerable portion of the Common on the other side between the Great North Road and the Lane Cove River? Yes.
881. Have you any idea how extensive that portion of the Common may be? No, I have no idea of the extent of it, but there is a considerable extent.
882. You have been over it? Yes, I have been over all that part.
883. What do you think would be the value of that land in the neighbourhood I speak of, if sold within the next five years after the erection of the proposed bridges? I imagine it would sell very high; it is almost impossible to say what the price would be, it would be so high. I think if the bridges were erected, population would flow in so rapidly as to give land in the neighbourhood a very high value indeed. I paid £25 an acre for what I possess close upon the Common, in its wild state.
884. Without a bridge? Without a bridge, and I imagine it would be worth three times that amount if we had a bridge.
885. Then, as I understand you, you consider that that portion of the Common near your estate would bring, after the erection of the bridges, three times as much as you have already given for the land? Yes, I imagine so.
886. £75 an acre. Yes.
887. Have you ever heard of any proposition among the commoners to partition the Common among them? Only as a mere idea, within the last two or three days.
888. You have not heard it in any other way than as the gossip of the neighbourhood? Nothing more.
889. From your knowledge of the Common, can you say what use the Common is now to the commoners? I cannot; I really do not know what use it is.
890. Is there any quantity of cleared land, so that cattle and horses could be turned out to graze upon it? No.
891. It is not cleared, like Commons in England are? No; it is full of small trees and underwood where the larger timber has been removed.
892. You have seen Commons in England? Yes.
893. This Common does not partake of a similar character with the English Commons? No, not at all. There used to be a great similarity in some of the Commons in the old times, as far back as Richard III. and Henry VII., and so on, but all those are done away with now.
894. So far as you know anything of English Commons, they are well cleared of timber and grassed? Yes, any that I ever knew were all grassed.
895. Is that the character of the Field of Mars Common? No, it is in its wild state.
896. Covered with timber? Covered with timber, old stumps and young saplings.
897. From your possession of land in the immediate neighbourhood, I suppose you consider yourself entitled to rank as a commoner? Yes, I think so.
898. Would you take advantage of your right as a commoner, to turn out any description of cattle upon the Common? No, I would not venture anything there.
899. Do you not think they would be safe? I should hardly expect to get them again; they might wander away or be stolen; I have heard many complaints of that sort, but I have never suffered any loss, and therefore I could not say personally; I only say I would not venture any living thing there.

- 900. I speak, of course, of cattle turned out without any person to look after them? Just so.
- 901. Is there not open bush land for miles and miles beyond the Common, unenclosed, on the north? I have been along the road leading from Parramatta to Wiseman's Ferry, and I found the majority of it bush land.
- 902. There is nothing to prevent cattle straying for many many miles beyond the Common, towards the Hawkesbury River? Nothing, to my knowledge—the Common is not fenced.
- 903. Do you know whether the commoners generally take advantage of the Common to turn cattle out? I do not know. I have seen cattle and horses on it, but very few.
- 904. If the Common were sold, and the proceeds devoted to the construction of two bridges, as proposed, do you think it would benefit the commoners? I think it would be a very great advantage to every individual within ten miles of the place, and even further than that, but I limit myself to ten miles.
- 905. You think the commoners would be more benefited by the construction of the proposed bridges than by retaining the Common? Yes, I think most of them would, except those who deal in the timber, and they, I believe, make small fortunes out of it.
- 906. The original intention of the Common was not confined to cutting off the timber? No, I believe not; I do not think that was one of the intentions at all, that men should cut off the timber and sell it; I think the intention was, that the commoners should use it themselves if they wanted it, but not that they should sell it.
- 907. Is it not very inconvenient to the inhabitants to be obliged to pass over the punt, or go round by Parramatta, if they want to get to Sydney? Yes, I found it so; and I gave up my horse on that account.
- 908. Do not the inhabitants depend almost entirely on the Parramatta steamers to send down their fruit and other produce? Yes, the chief traffic is carried on by the steamers.
- 909. How often do these steamers run per day? Up and down four times a day.
- 910. If any resident in the district of the Field of Mars required to come to Sydney on particular business, he would be compelled to wait until the steamer passed? Yes, unless he took advantage of the small facility the punt affords.
- 911. Have you any opinion as to the advantages the proposed bridges would confer on the inhabitants of Sydney? They would be a very great advantage in this way. The district of the Field of Mars, and half way to Parramatta, is one of the most fertile pieces of ground in the country, and it would become a perfect garden if the people of Sydney had access to it; each one, I think, would choose small locations there, as they do in the neighbourhood of London, and they would be glad to get out of the smoke of Sydney. I think the land would sell very rapidly there on that account.
- 912. Do you recollect the land on the Gladesville Estate being sold? I do.
- 913. Have you any recollection of the price per acre? I believe some of it rose as high as £90 an acre very near the Common.
- 914. How long is it since land in that neighbourhood realized so high a price per acre? It must be about five years, I think.
- 915. Within how far of the Common is the nearest point of the Gladesville Estate? There are two little farms of thirty acres each between them, or about 700 yards.
- 916. Within a quarter of a mile? Within a quarter of a mile.
- 917. Within the last five years, you know land within a quarter of a mile of the Common to have been sold for how much per acre? I was told £90 an acre. I was told it was proposed not to sell any for less than £100, but I believe the highest they got was £90.
- 918. From your knowledge of the Field of Mars Common, do you think that the general average of the land within the bounds of the Common is equal to the general average of the land outside the bounds? I think so, taking off the stony part, which is not of very great extent; I think the generality of it is as good as any land round it.
- 919. Is the mixture of good and bad land inside the area of the Common equal to the mixture of good and bad land outside the area of the Common? I believe it is.
- 920. You have no doubt as to the practicability of building the proposed bridges? I have not the least doubt they could be built with great ease; I have seen bridges built in worse places.
- 921. *By the Chairman:* Have you examined the sites? Yes.
- 922. Have you been on them? Yes.
- 923. In speaking of the land sold at £90 an acre, was not that the land nearly abutting on the Parramatta River, on the road leading to the ferry? Yes, Mr. Crotty's piece; it fronts the road. The rest sold very high, even the rocky ground, but Crotty (I had it from himself) paid £90 an acre.
- 924. Do you know how much Crotty bought? Eight or ten acres—a good square block.
- 925. Do you not consider land on the high road more valuable than that away far back? Yes, of course the frontage makes it valuable.
- 926. Then Crotty's land must of course be considered more valuable than the land on the Common away from any roads? Not the least doubt of it; but then there are roads running into and through the Common—the Onions Point Road and others.
- 927. Do you consider that if the Common was cut up, the whole of it would realize as large a price as you gave for your land? I think after the bridges are built, it would bring a higher price.
- 928. When do you calculate upon the bridge being built? That I do not calculate upon at all; but when it is built, I will undertake to say the land will sell twice or three times as high as I gave.
- 929. Have you ever derived any benefit from the Common? No, and never will, likely, while it lies in its present state.
- 930. Have you not applied to the trustees for an order to cut timber? Yes.

R. Campbell,
Esq., M.D.
8 July, 1862.

- R. Campbell, Esq., M.D.
8 July, 1862.
931. Is not that a benefit? Not the least; because I could have got it just as cheap from Sydney.
932. Then I should like to know for what reason you applied? Because it was more convenient for the fencers.
933. Did the trustees give it for nothing? I do not know who charges for it, but the fencers charged me 7s. 3d. a rod for the fencing.
934. I ask if the trustees made any charge? I do not know what the trustees do—they do not tell us what they do; but the fencers charged me just as high for the fencing as if I had got it from Sydney. I saw the men putting up a fence, and I asked them to do the same for me; and when they came to do it, they asked me if I would give them an order to cut the timber on the Common.
935. Did you consider that in giving that order, you were exercising your right as a commoner? No, I really never thought it had anything to do with it.
936. *By Mr. Piddington*: Did that supposed privilege make any difference in the cost of the fence? No, I would have got it just as cheap from Sydney.
937. How far distant is Crotty's farm, for which he gave £90 an acre, from the nearest part of the Common? There are two small oblong farms between, each of 30 acres, or 700 yards.
938. *By the Chairman*: In reference to turning cattle out, is it usual to turn cattle out in the bush to let them go where they please—is it usual to turn them out without some one to mind them? I cannot tell.
939. *By Mr. Lucas*: You said you thought these bridges could be constructed for £46,000? Between £40,000 and £50,000.
940. Are you aware of the lengths of the bridges? Not exactly.
941. Over Long Cove, according to this plan, it appears to be 2,060 feet, and over the Parramatta River 1,730, and in the latter case there are to be six piers of an average depth of 31 feet—what description of bridges could be constructed for £46,000? Iron bridges with piers.
942. Stone piers, of course? Yes. Some years ago I had a book of plans and prices sent out from London, purposely to examine on that point, and I remember causing the breadth of the water to be measured, to see what rate per foot a bridge would cost. I calculated the cost of a bridge across the river would be about £20,000, without taking into consideration the work under the water.
943. Do you think that would make £12,000 difference in each bridge? No, I do not think so much as that; perhaps not half of it. I recollect that some years ago Mr. Shepherd and myself talked about building a bridge that would cost about £3,000.
944. Do you think it would be possible to take a bridge of any description over the river for £3,000? Yes, a pontoon bridge; but it would be very inconvenient, no doubt.
945. *By Mr. Piddington*: Where was it proposed to place that bridge that you and Mr. Shepherd proposed? At the usual crossing place.
946. What description of bridge did you propose? A pontoon bridge.
947. *By the Chairman*: You proposed the bridge, and I said I would be very happy to join in it? Yes, and in fact you said you would give £1,000 towards it.
948. That shows that I am not unfavourable to a bridge? You were not at that time, at least.

Mr. Edward Drinkwater called in and examined:—

- Mr. Edward Drinkwater.
8 July, 1862.
949. *By the Chairman*: You are a landholder in the district of Ryde? I am.
950. How many acres do you possess? I possess now 75 acres.
951. You are also a trustee of the Field of Mars Common? I am.
952. From whom did you derive your appointment? From the Government.
953. Do you hold a grant from the Crown? I do.
954. Are you aware that that grant is made in accordance with the Act of Council, 11 Victoria, No. 31, entitled "*An Act to enable Trustees of Commons in New South Wales to have perpetual succession*"? I am.
955. Does that Act enable trustees to make rules and regulations, and apportion to persons claiming right of Common their various privileges, subject to the approval of the Governor? It does.
956. Have you, in connection with the other trustees, made regulations accordingly? We have.
957. Perhaps, before we go further, you would have the goodness to lay on the table of the Committee the grant under which you hold? I will, a copy of it. (*Produced.*)
958. *By Mr. Piddington*: This is not the grant itself? No, it is a copy of it. I had the grant in my hand this morning, but I thought the copy would do as well.
959. *By Mr. Lucas*: You of your own knowledge know this is a true copy? Yes.
960. Have you compared it with the grant? I have.
961. *By the Chairman*: Is this the Act of Council under which the grant is made? It is.
962. Have you a copy of the rules and regulations made under it? Yes, it is stitched up with the copy of the grant I have just handed in.
963. You have apportioned the privileges of the commoners in accordance with the Act of Council? We have.
964. Have you anything to show the Committee as to what you have done? I have.
965. Will you have the goodness to produce it? This is a statement of the number of persons entitled to claim Common rights, with the number of cattle and horses allotted to them. (*The witness handed in the same. Vide Appendix A.*)

966. You have a book in which you keep the various entries, I imagine? I have.
967. Have you that book with you? I have; there it is. (*Produced.*)
968. Is Dr. Campbell's name down. It is.
969. Did Dr. Campbell send any notice to you, claiming a right of Common? He did; and he sent a written order for some fencing stuff.
970. He has exercised his right by sending for some timber? He did;—on the 4th June last he sent an order for 200 posts and 600 rails; I gave the order, and two months to cut it in.
971. Is this a list of the number of persons who have sent in their claim as commoners? At present it is.
972. 139? Yes; I advertise frequently for them to send their claims in, but they do not do so, half of them.
973. Do you reckon anyone as a commoner excepting those who send in their claims? I do not, not for cutting timber or anything of that kind; but the inhabitants in the neighbourhood send their carts for dead wood for burning, and I do not object to that.
974. Is this a correct list of the number of cattle apportioned to the various parties? It is.
975. 486 head? Yes.
976. And 105 horses? Yes.
977. Have you got a list of the parties to whom you have given permission to get timber off the Common? I have.
978. Will you produce that? I will. (*The witness handed in the same. Vide Appendix B.*)
979. Have any objections been lodged against the apportionment by the trustees as authorized under the Act of Council? I have never heard of any; none have ever come to me.
980. Are they not at liberty to do so by the Act of Council? They are.
981. Have the trustees been called to account by anyone interested in the Common for the manner in which they have carried out their trust? No, never.
982. Are you aware that the former trustees made by-laws? I am.
983. Are you aware whether those by-laws gave additional privileges to those made by the present trustees? I am aware of that.
984. What additional privileges? The former by-laws gave permission for everybody to cut wood whenever they liked, and there was no account of it kept.
985. Have you, as trustee, received any demonstration of approval of your conduct in carrying out your duty? The trustees have. There was a meeting called by the commoners at Pennant Hills, which was very largely attended. I dare say there were 80 people there, and amongst them Mr. Blaxland, of Ryde, Mr. Forster, and Mr. Oakes; and after they had had an argument among themselves, they proposed a vote of confidence in the trustees, and thanked them for standing their ground.
986. And that was carried? Yes, unanimously; not a hand was held up against it.
987. Have the trustees had the Common surveyed and the boundaries fixed? They have.
988. By whom? By Mr. Birmingham, a licensed surveyor.
989. Do you know the Common land? I do.
990. What description of country is the greater portion of it? The north part of it is nothing but rocks, down the Lane Cove River a considerable way, but when you get to the west, the Pennant Hills side, some of it is very good.
991. Is it adapted for agricultural purposes? Part of it is; I dare say you could pick out from 500 to 550 acres fit for agricultural or horticultural purposes, but not in one lump; it must be in different places, because it is so intermixed with rocks.
992. I should like to know from you your opinion as to what proportion could be made available—you think only 500 acres? Not more than 500 or 550 acres. The land is very shallow, and soon comes to the ironstone. If put into cultivation for wheat, I do not think it would turn out more than 10 bushels to the acre; I am satisfied it would not.
993. How many years have you been residing at Ryde? About twenty-three years.
994. What has been your occupation principally since that time? I have been laying my money out in the rearing of orchards; I have planted about 60 acres of orchards since I have been there.
995. Then we may consider that you have a tolerable good knowledge of what land is adapted for orchards? Yes, I think I have.
996. How many persons are residing on the Common, holding under lease? About eighteen; they were on when the trustees were appointed.
997. What number of acres are leased, and at what rental? About 200 acres, at 5s. per acre.
998. Are there any persons residing on the Common without a lease? None. There were a few, but I heard they were drunken people and I roused them off. I gave them notice, and they would not go; and then I applied to the Bench at Parramatta for the use of a constable, so that if they were not gone by a certain day I took their furniture out and pulled down the house.
999. It has been stated by a number of persons professing to have commonage rights, that the more inaccessible parts of the Common are the haunts of vagrants, runaway sailors, and persons of bad character, whose drunken and obscene conduct is a nuisance to the inhabitants of the neighbourhood—is that true or not? It is entirely false.
1000. How frequently are you, as a trustee, over the Common? I think there is never a week but I have been twice, and sometimes three times riding over the Common. I used to do it three times a week, but I found it was too much, and I complained to my brother trustees, and we appointed a ranger; but I have continued to go over the Common twice a week.
1001. *By Mr. Piddington:* Over the whole of it? Yes, I take one way one day, and another another.

Mr. Edward
Drinkwater.

8 July, 1862.

Mr. Edward
Drinkwater.

8 July, 1862.

1002. *By the Chairman*: So that had there been these disreputable characters you would have known it? I am satisfied there is no such thing now.

1003. As an old resident of the district, are you aware of any instance where persons have been brought up for cattle stealing off the Common? I have never heard of any. I have heard of persons turning their cattle out and not having seen them again, and I have told them I had no doubt their cattle were astray, and if they would go out Colo way, where there is a great mob of cattle, no doubt they would find them.

1004. Have any persons being permitted to lease land without first obtaining the sanction of the commoners, at a meeting convened for the purpose? None whatever.

1005. Then those persons who hold leases of Common land, are permitted to do so by the consent of the commoners themselves? When the trustees were elected by the landholders and other inhabitants, there was another meeting, largely attended, and then it was mooted by one of the trustees whether the Common should be leased by public auction or whether they should fix a price, and it was unanimously agreed to fix a price; it was then moved by one of them that 5s. an acre should be the price set upon the land, and all persons in possession were to hold it at 5s. an acre per year. All the parties on it now were squatting at that time.

1006. Then, in fact, these parties at present leasing portions of the Common were constantly in the occupation of it? Yes, and some of them had got nice little orchards on it—a bit here, and a bit there.

1007. And they have been allowed to do so with the sanction of the commoners given at a meeting? They have; some of them had built good stone houses.

1008. And the rental was fixed by the commoners themselves assembled at that meeting? It was, at 5s. an acre.

1009. Have the trustees been able to raise sufficient funds to protect the Common without levying a rate? They have.

1010. Do you know Mr. Ross's land, that was originally Mr. Rutledge's? I do, well. About eleven years ago Mr. Rutledge came up, and he and Mr. Blaxland called upon me, and asked me if I would purchase that property; I said, no, that I had been buying other property, and had no cash to spare; and he said I should have it a sacrifice for £700, though the house cost him £2,500, and he paid £500 more for the buildings.

1011. So that, in fact, the buildings upon it cost, according to Mr. Rutledge's account, £3,000? Yes.

1012. *By Mr. Lucas*: And he offered you land, buildings, and all, for £700? Yes. Then he sold it to his brother Thomas, and Thomas sold it to Dr. Sherwin. I think Dr. Sherwin told me he gave £2,000 for it; and he made a large orchard, and laid out a great deal of money on it. Then Mr. Ross, when he had been up there about six weeks or two months, did not fancy it, and he came to me to try and make a deal with me, but I told him that, as he had given £5,000 for that, if he bought mine he must give me £7,000 for it. He said he wished he had not bought it, and I told him he had been picked up with it.

1013. *By the Chairman*: Do you think Mr. Ross's land is fair average Common land? No, I do not.

1014. Is it good land? No; some part of it is.

1015. Do you consider the Common land not equal to it? It is not so good as part of it.

1016. Do you know the land Folkard bought from Mr. Allen? I do.

1017. Can that land be considered the average quality of Common land? No; because when the land was granted along there, the persons that got the order for selection of course selected the best of it, and when you come a little below Folkard's there are only rocks, so that he has all the best land.

1018. What price would you consider the Common would bring, supposing it to be sold—what is it worth now? If brought into the market now, it would not fetch above £1 an acre, I am satisfied of it.

1019. You consider that the 6,000 and odd acres of Common land would not realize more than £1 an acre? I am satisfied it would not.

1020. As a commoner, and also in your capacity as trustee, are you willing to give up the Common? No, I am not.

1021. As a trustee you will not abandon your trust? As a trustee I will not abandon my trust.

1022. Neither as a commoner are you willing to give up the Common? No.

1023. Do you consider that bridging the Parramatta River and Iron Cove, near Hunter's Hill, will in any way benefit those holding land to the north and west of the Common? No, it would be much nearer for them to go into Parramatta, and send their fruit down by the steamers and sailing vessels that come down the river. Some of them are within two or three miles of Parramatta.

1024. What would be the difference in distance between going to Parramatta and coming down by Hunter's Hill way? There is a great deal of difference.

1025. Do you consider that bridging over the Parramatta River and Iron Cove would be the means of drawing the traffic from the north-west end of the Common that way? No, it would do no good at all up there.

1026. Have you heard from any persons in that neighbourhood, entitled to use the Common, whether they were willing to vacate their claims as commoners? There are a few about Ryde who would do so, but not in the other part.

1027. The greater portion of those residing at the north-western end are opposed to surrendering their right to the Common? They are. The last petition that was signed against it, they all signed as landholders and where they lived; it was signed very largely by landholders and residents; but Mr. Ross when he had a petition there, went and got four men in the hut at his place to sign it.

1028. That was the counter petition? Yes; I was told that by one of the men who signed it; but when the other petition went round none but landholders signed it. Mr. Edward Drinkwater.
1029. Are you aware whether there is a good road from Hunter's Hill to Ryde? Yes, there is. 8 July, 1842.
1030. Then the traffic from Hunter's Hill is not prevented? Not at all; there is as good a road there as the Parramatta Road, or better.
1031. Is the land by the river side from Bedlam Ferry to Parramatta generally under cultivation or not? I should think about one quarter of it is under cultivation.
1032. Then if it was said that it is under cultivation and thickly studded with orchards, that is not according to the fact? No, not above a quarter of it is cultivated.
1033. *By Mr. Piddington*: You say you are of opinion that the Common land, if sold, would not bring more than £1 an acre? Not now.
1034. How much land is there in the farm you hold yourself? 75 acres.
1035. How far is it from the nearest point of the Common? About half a mile.
1036. How much did you ask Mr. Ross for these 75 acres within half a mile of the Common? I did not ask him to buy it at all.
1037. How much did you state you would take for it? I told him that if I swapped farms with him, he must give me £2,000 to boot.
1038. What is the value of your 75 acres now? With all the improvements, I would be glad to take £3,000 for it; and there are 40 acres of orchards, besides buildings.
1039. Do you know of any land having been sold recently, within a few chains of the Common, to Dr. Campbell, on the Gladesville Road? Not lately. I have heard of such, but I do not know it positively. I know that some years ago Dr. Campbell bought some.
1040. Do you know that portion of the Common land rented by Mr. Face near the Gladesville Road? I do.
1041. How far is that from the Gladesville Road? Within two chains of it. That is all cleared land.
1042. What is your opinion of the value of that land? It is all cleared and stumped, and would answer well for orchards or anything of that sort, by trenching. It grows a little oats too.
1043. I am asking you your opinion of the money value of that land? I should say it would fetch 50s. or £3 an acre, because there is so much land for sale now up there. It would not be worth more, except to any person whose land it joins. If I joined it I would give double.
1044. You are aware that Dr. Campbell bought some land adjoining the land I now speak of? If he has he has bought it lately of the Archbishop.
1045. That is the land to which I allude? I am not aware that he has bought it. Of course if he has, it would be worth more to him than to any one else.
1046. You do not know the price Dr. Campbell gave to Archbishop Polding for that land? I do not.
1047. If Dr. Campbell gave £25 an acre for it, do you think it a very extravagant price? I should think he was mad.
1048. Supposing he did give £25 an acre for that land, you think he is a fit subject for the Asylum of which he is Superintendent? I should say so.
1049. How far is the nearest point of the Gladesville Estate from the Common, as the crow flies—you know Crotty's land? I do. Crotty had two allotments there; I do not know whether the allotment where he built the public house —
1050. I allude to certain allotments Mr. Crotty bought of the Gladesville Estate—do you know the position of those allotments? Yes.
1051. How far are they from the Common? Half a mile.
1052. Do you know how much Crotty gave for that land? I do not.
1053. You do not know whether he gave £90 an acre? I do not.
1054. If he did give £90 an acre for that land, what is your opinion of the state of his mind? I do not know, I am sure.
1055. You think he would be insane, I presume? I think so, and if you were to see it you would think so yourself.
1056. Have you ever sold any land in the neighbourhood of Kissing Point? I have, some years ago.
1057. Did you ever sell any to a person named Best? I did.
1058. How much did he give you per acre? £25; that was good land.
1059. How much was there of it? Twenty acres.
1060. Were there any houses on it? No; but that is a good while ago.
1061. How many years? About twelve years ago.
1062. Twelve years ago you sold land in that neighbourhood, without improvements, at £25 an acre? I did.
1063. Where is that land situated? Below me, in the hollow.
1064. How far is it from Smith's farm? About three-quarters of a mile.
1065. How far is it from the road at Smith's farm to the nearest point of the Common? The Common joins Smith's farm, the back of it.
1066. From the farm you sold to Best, to the part of the Common near Smith's farm, is how great a distance? About a mile, if you take the back part of Smith's farm.
1067. Then within a mile of the land you sold to Best, the Common abuts upon the Northern Road at the back of Smith's farm? It does.
1068. And you sold that for £25 an acre? Yes; but at the back of Smith's farm you come upon the rocks again.
1069. Do you know the Common at the back of Smith's farm? I do, well.
1070. Is that full of rocks? Part of it is, and part is not.

- Mr. Edward Drinkwater.
8 July, 1862.
1071. Is there not land at the back of Smith's farm that is equal, upon the average, to the land abutting upon the Northern Road? There is.
1072. What has been the selling price of land on the Northern Road, in the neighbourhood of Smith's farm, per acre? I do not know; I have not heard of any being sold lately.
1073. Within the last five or six years? The only place I know that was sold belonged to a man named York; he had a good bit of cultivation ground, an orchard, and a slabbed house, and he sold it for £280.
1074. *By Mr. Lucas:* How many acres? Sixteen or eighteen acres, I think, but I cannot say exactly.
1075. *By Mr. Piddington:* Do you know how much he gave for the land when he bought it? I do not.
1076. Do you think it would be worth £5 an acre without improvements? I cannot say.
1077. You know the road from Onion's Point or Hunter's Hill towards Ryde? Yes.
1078. The Common adjoins that road for a certain distance? Yes; that is all rocks.
1079. All rocks? All rocks; the rocks commence at the end of Mr. Joubert's property.
1080. Is the whole of that land fronting the east from Mr. Joubert's land, all rocks? It is; except there is a patch or two at the end of Mr. Farnell's and Dr. Campbell's. There is a nice patch of ground there, but it is of no extent; you could not pick a farm out of it.
1081. The patch you allude to is not all rocks, is it? No, but all beyond that is rocks.
1082. You mean, on the edge of the Buffalo Creek it is rocks? Yes.
1083. Do you assert that the whole of the land on the right hand of the road from Hunter's Hill till you get to Buffalo Creek is all rocks? Yes.
1084. Has your attention been drawn to the clause of the deed of grant which recites the purposes for which the Common was granted.—(*Clause read.*)—Do you conceive that, under that clause, the trustees have a right to prevent any settler, cultivator, or inhabitant of the district from taking wood if he chooses? I should prevent any one from cutting down the standing timber without an order.
1085. Do you think that clause enables the trustees to restrict any one? That does not, but our by-laws prohibit persons from cutting the green saplings or stripping bark without an order.
1086. Do you consider that you have a right to make such by-laws? Yes, or else all the wood would be cut down and taken away.
1087. Can you point out to me, in this grant, where you are authorized to impose these restrictions? There is the Act of Council under which we are authorized to make by-laws.
1088. Do you know the date of the Act of Council—whether it was previous or subsequent to the date of the grant? The Act of Council was made in 1847, and the deed of grant in 1850.
1089. Practically the trustees have full authority over the Common? Yes.
1090. And in virtue of that authority they have made an apportionment of the grazing rights of the commoners? Yes.
1091. And the total amount of grazing rights they have apportioned is in favour of 486 head of cattle and 105 horses? Yes.
1092. How many cattle do you think, practically, under that authority, are turned out on the Common? I cannot say; there are a good many—sometimes more and sometimes less.
1093. Have you ever known 486 head of cattle to be out? No, but they are allotted to them.
1094. Did you ever know 286 head to be out? I cannot say I did.
1095. Did you ever see 100 head out? I dare say I have.
1096. Would you be positive you have seen 100 head? The only way to get to see the cattle is in bad weather, and then you see them collected on the ridges.
1097. Are you positive 100 head of cattle have been turned out there at one time under your apportionment of grazing rights? I could not say.
1098. How many horses have you seen out, in virtue of that right? I have seen a good many out with bells on and that.
1099. Have you ever seen 100 head? No.
1100. Have you seen 50? At a time, I have seen 10, 12, and 15.
1101. Then the commoners do not take advantage of their grazing rights to any extent? No, because they do not want it; most of them have got farms of their own.
1102. Did I understand you to say that if cattle were turned out on the Common they could stray away to Colo? Yes, there is nothing to prevent it.
1103. How far is Colo, say from Face's land, which is part of the Common? Five miles, or perhaps six miles.
1104. Would there be any difficulty, if cattle were turned out from Face's land, which he has rented on the Common, in their straying away to the Hawkesbury River if they liked? There is nothing to prevent it.
1105. No fences? No.
1106. The Common is not fenced in? No.
1107. Then for dry cattle the grazing right on the Common is not of much advantage? Yes, they turn their dry cattle out, and tail them for a day or two, and then go and look after them now and then.
1108. I am speaking of those that are turned out without being tailed? They only tail them for a day or two, and then the cattle get used to the run.
1109. Are you in the habit of turning out dry cattle on the Common? Yes, I have three out now.
1110. Do you know where to find them? Yes, I see them once or twice a week, as I am riding over the Common,

1111. As a matter of fact, there are not a great many cattle turned out on the Common? Mr. Edward Drinkwater.
Not a great many.
1112. Is not a great proportion of the Common land suited for building houses upon—villas? 8 July, 1862.
Away down to the east of Mr. Joubert's and Mr. Farnell's ground it would answer very well; it is all rocky and would do for nothing else.
1113. Could not houses be as easily built on the land at the back of Smith's farm as on the land in the immediate neighbourhood of Mr. Joubert's property? Yes, it is just the same.
1114. Is there any part of the land on the Field of Mars Common unsuited for building houses upon? No, but nobody would buy some parts for such a purpose.
1115. Do you know where Mr. Jules Joubert lives at Hunter's Hill? Yes.
1116. Is not that a very rocky situation for a house? Yes, but he has got a good view there, and that is a great inducement.
1117. Are there not many rocky spots on the Common equal in fertility to the land on which Mr. Joubert's house is built? There are parts of it.
1118. Is not the northern side of Hunter's Hill very rocky? It is.
1119. Is not the average of the land on the Common superior to the land on the northern side of Hunter's Hill? Certainly it is.
1120. What reason have you to suppose that individuals would not build houses on the Common if they build them in such positions as the northern side of Hunter's Hill? Those who have built at Hunter's Hill are gentlemen of property, who have done so for the sake of the views they get there, and if gentlemen who can afford it choose to buy a spot a long way off and bury themselves, of course they can do it.
1121. Are there not good prospects to be found on the Common? Yes, but there is no living to be got out of it.
1122. If these bridges were built, would they facilitate communication with Sydney? Yes, they would be a great benefit for the northern side of the Common, but no benefit for the other part.
1123. Would not the construction of these bridges bring Sydney into closer communication with Ryde and that district than at present? It would, certainly—I will allow that.
1124. Would not that facility of communication tend to bring population to Ryde and its neighbourhood? Yes, I should say so.
1125. If population is brought to Ryde, would they not require houses to live in? Yes, certainly.
1126. How do you account for houses being built at Hunter's Hill, except from the influx of population? Most of them are mercantile gentlemen who live there because it is so handy to Sydney by the steamers.
1127. If bridges were built across the river, are you of opinion that mercantile gentlemen would go further up the river to live? They might.
1128. There is nothing to prevent them going higher up if they like? Nothing.
1129. You say the commoners who live on the west side of the Common are opposed to this exchange of the Common for bridges? I do; I do not know one but what is opposed to it.
1130. How many live on the west side? It is impossible to say, because they have not sent in their claims, all of them. I should say there are 1,800 or 2,000 people who are entitled to commonage.
1131. How many live on the west side? I cannot say.
1132. Then, I presume, you cannot say how many reside on the Hunter's Hill side? No.
1133. Can you not form an opinion where the bulk of the commoners reside? On the west side.
1134. More than on the Hunter's Hill side? Yes.
1135. You are well acquainted with the Common? Yes.
1136. Taking the whole 6,000 acres of land within the Common, is the land better or worse than an equal quantity of land outside the Common? I should say it was worse. All the best land was chosen under the orders for selecting grants, and about '35 years ago the Government had a great number of sawyers there, and they took all the best timber away. Those who had the orders for farms of course chose all the best land. I recollect a Mr. Thorne had two sections of land granted to him, and a Mr. Horne about twenty years ago, and it was offered for sale to me at £2 an acre, and I would not give it. Mr. Bellamy afterwards bought it, I think, for £1 9s. an acre, and some of Mr. Horne's is not sold yet.
1137. Do you know the piece of land granted to Captain Kent, and called Somervale, afterwards transferred from Mr. Small to Mr. Ford? Yes, out by the Common.
1138. Do you recollect that a portion of that land was sold some few years ago? Yes.
1139. Have you any recollection of the price that land brought per acre? At that time land was up, and it fetched a good price.
1140. What is your idea of a good price for the land I speak of? I think some of it fetched £15 an acre.
1141. How far is that land from the Common? It is joining it.
1142. Would the people who gave £15 an acre for that land be fit inmates for Tarban Creek Asylum? I think, with all their improvements, they would be glad to get their money back again.
1143. Is there any difference in quality between that land and the land on the Common? There is some good land, but it does not go far.
1144. For this good land that does not go far, what would be the price? Two to one you would not get a buyer for it.
1145. Notwithstanding that land adjoining it sold for £15 an acre? I do not think you would get a buyer now.

- Mr. Edward Drinkwater. 1146. How many years ago is that? Perhaps five years.
1147. You still adhere to your opinion that if the Common land were sold it would not bring more than £3 an acre? I do not think it would.
- 8 July, 1862. 1148. Even the cleared land adjoining the Gladesville Road? No, it would not, because there is no selling land just now.
1149. *By Mr. Lucas*: What description of land is there between the Common and Wiseman's Ferry? I do not know.
1150. Do you know anything of the back land? I do not.
1151. You say you would take £3,000 for your 70 acres, 40 of which are improved? Yes, I have 40 acres of a good orchard.
1152. That is an average of £43 an acre? Yes.
1153. How much would it take to bring the Common land into such a state of cultivation as your own—how much per acre? It would cost £100 an acre.
1154. So that by that means, if a person should buy 70 acres of Common land and bring it into such a state of cultivation as yours he would lose nearly £60 an acre? Yes. Mine is all trenched. In the first place you have to pay £10 an acre for stumping and clearing.
1155. Do you believe there is any land on the Common equal to yours? Yes.
1156. How much land do you believe there is on the Common fit for cultivation? From 500 to 550 acres.
1157. Mr. Folkard bought a piece of land there? Yes, from Mr. Allen.
1158. That is equal to the best of the Common land? Yes.
1159. Do you know what state that land of Folkard's was in when he bought it—in its natural state? There was a good deal cleared.
1160. What do you think it would cost to clear the Common land into the same state as Folkard's was when he bought it—how much per acre? £10 an acre; that is what I pay myself.
1161. How much of Folkard's was cleared when he bought it? I cannot say.
1162. You spoke of a person who had sold 16 or 18 acres for £280—that land was cleared and part of it in cultivation, was it not? Yes, and there was a little orchard on it.
1163. Supposing a person purchased 18 acres of Common land, how much would it cost to bring it into the same state? I cannot exactly tell. When you have cleared, stumped, and planted it, it takes a good many years before the planting comes into use.
1164. You say you have known persons who have given £15 an acre for land in that neighbourhood? Some years ago.
1165. Was it cleared or in its natural state? Cleared and planted.
1166. Did you ever know land in that neighbourhood, in its natural state, with the scrub and trees upon it, the same as the Common, to bring as high as £15 an acre? I have not, except what I sold myself, and that was a choice piece.
1167. Was that bush land? It was.
1168. Was it better than the Common land? Some of the Common land is as good, but the whole of my 20 acres that I sold, there was not a stone in it—it was all good land.
1169. You were with us the other day when we were over the Common;—is the land up at the western end of the Common superior to that, or is that the general character of the land? A little of it is better than that, in the gullies.
1170. You say Mr. Horne has been selling land there which he offered you for £2 an acre? That was Dr. Thorne.
1171. How long is that ago? Five or six years.
1172. How long is it since Mr. Bellamy bought it, as you say, for £1 9s. an acre? Directly after I had done with it.
1173. Did you not say he has some of it for sale now? Mr. Horne has, adjoining it.
1174. How far from the Common? Joining it.
1175. Is it of the same character as the good land on the Common? Yes; Mr. Bellamy thinks it is first-rate land.
1176. How much is Mr. Horne asking for his land? He would take the same price as he sold the other for.
1177. £1 9s. an acre? Or £1 10s.
1178. And that is in the immediate neighbourhood of the Common, and equal to any land on the Common? It is.
1179. We have heard of some land being sold for £90 an acre;—in what quantity was that sold? I should think land bought at £90 an acre must have been only a small spot—a fancy bit; it must have had some buildings upon it—it could not have been the land.
1180. How do you bring your fruit to market—your produce? By boat, what I send down; but I have rented my orchard, and they generally take it by boat.
1181. Do you find that very inconvenient? No; when the fruit is ripe, to take it by land bruises it, and you do not get so much for it in the market; but when it is taken by boats it is not affected in that way, and it fetches a better price.
1182. Then you prefer the present mode of taking fruit to market? Yes, by boats.
1183. Do you mean to say that, if bridges were constructed across the river as proposed, you would still send your fruit by boat? I should, because it can be taken down to the boat a little at a time until there is a load, so that it is not damaged; grapes, particularly, ripen pretty nearly all at once, and they get bruised so as to be much damaged if taken by land.
1184. Do your tenants send the fruit by water still? They do.
1185. From what I could see from your place, I believe your orchard is as far from the Parramatta River as any in the neighbourhood? About a mile, or a little better.
1186. Are there many orchards further from the river than yours? Yes, several.
1187. How do those persons send their fruit to market generally? By water mostly, except when they want supplies. They prefer sending it by water.
- 1188.

1188. Is the transit by water generally considered cheaper than by land? I do not know that there is much difference that way. Mr. Edward Drinkwater.

1189. Do you find any inconvenience in the steamers going backwards and forwards—having to wait? No, because if you are not there with your load on the wharf they will not wait for you. 8 July, 1862.

1190. The same as the railway, I presume—they have fixed hours? Yes; sailing boats are better in that respect; they will wait till you have got your load ready.

1191. You have lots of sailing boats to take your produce to market—you are not confined to the steamers? No.

1192. I suppose it is not much use asking you what would be the probable cost of these bridges, not being a professional man? I do not know anything about that.

1193. But you are decidedly of opinion that the Common would not bring £12,000? Decidedly; you could not sell it now.

1194. Do you know that there is land for private sale in your neighbourhood now? A good deal, I have heard.

APPENDIX.

A.

B.

List of Persons who have received permission to cut wood from off the Common,—

1859. Mr. Heydon,—100 posts, 200 rails, 2,000 palings.

1860. Major Darvall,—3,000 palings.

The Rev. G. E. Turner,—15 posts, 30 rails, 200 palings.

1861. Mr. Sheather,—400 posts.

The Rev. G. E. Turner,—50 dray-loads firewood.

Dr. Breaton,—195 posts, 265 rails, 4,600 palings.

William Jackson,—200 posts, 600 rails, 30 rafters.

William Martin,—200 posts, 600 rails.

George Spurraway,—250 posts, 300 rails.

1862. William Martin,—200 posts, 600 rails.

Dr. Breaton,—2,000 posts.

Dr. Campbell,—200 posts, 600 rails.

William Baker,—60 posts, 150 rails.

Mr. Benson,—250 posts, 600 rails.

Jas. Richardson,—150 posts, 300 rails, 150 rafters.

Alfred Wells,—300 rails.

William Cowell,—150 posts, 600 rails.

James Smith,—600 posts, 1,120 rails.

Mr. Baker,—1,000 palings.

Mrs. Hay,—10,000 shingles, 250 posts, 500 rails.

Mr. Tutt,—300 rails, 150 posts.

FRIDAY, 11 JULY, 1862.

Present:—

MR. COWPER,
MR. LACKEY,
DR. LANG,MR. PIDDINGTON,
MR. STEWART,
MR. SUTHERLAND.

ISAAC SHEPHERD, Esq., IN THE CHAIR.

Mr. William Small called in and examined:—

- Mr. William Small.
11 July, 1862.
1195. *By the Chairman*: You are a landowner in the district of Kissing Point? I am.
1196. What number of acres do you possess? About twenty-six.
1197. I believe you are a native of the district, and one of the oldest? I am.
1198. Do you know the district well? I do.
1199. You therefore know the Field of Mars Common? I do.
1200. Are you in the habit of frequently passing over it? Yes, I herded my father's sheep there half a century ago.
1201. Since that time have you been in the habit of frequently passing over it? I have.
1202. What is the general character of the Common land? The generality of it is very bad; it is rocky and scrubby land.
1203. Is there much young timber growing on it? There is.
1204. What portion of the Common is, in your opinion, suited to agricultural purposes? For growing grain I do not think there is any that would pay—there is very little in the district that would pay for growing grain.
1205. Is it adapted for growing fruit? Yes, some portion of it; from 500 to 600 acres.
1206. I believe you have a large family growing up in the district? I have the largest in it.
1207. Are they producers of fruit? Some part of them.
1208. Having a large family in the district, you must have a considerable interest in its prosperity? I have.
1209. Do you consider the Common lands of any or what advantage? I consider the Common a great advantage; I think a great many will not know the loss of it till it is gone.
1210. *By Mr. Piddington*: You were asked what advantage? I will tell you:—A great portion of my family, as well as others, are small freeholders; and these freeholds are planted with vineyards, and they have not a stick of wood to burn; and if they want a bit of fencing stuff or building materials, they would have nowhere to get it if the Common were gone, unless they sent to Sydney or some other place to purchase it.
1211. *By the Chairman*: You consider that the Common is of importance to the district generally, for the purpose of supplying the residents with firewood and also with building materials? Yes, I do.
1212. Is it of any importance for turning out cattle upon it? It is.
1213. Do you individually derive benefit from it? I do.
1214. In what way? I have milking cattle running on it continually.
1215. Having resided so long in the place, and having been so frequently on the Common, are you aware of any cattle having been stolen off it? Not any; I have had upwards of forty head there at a time, and I never lost any that I thought anyone had stolen from me—perhaps some may have died on it in a bad winter.
1216. Are you aware of its being notorious as the rendezvous of the most abandoned prostitutes of Sydney, and of its being infested by cattle stealers? Some short time ago there was a rumour that some bad women were there, and one of the trustees went and drove them off.
1217. That is one instance, but is it notoriously the rendezvous of such characters? I never heard tell of it before or since.
1218. Then you consider such an assertion, if made, is without foundation? I should say so.
1219. You say there is timber growing on the Common;—if that timber is protected, will it become an advantage to the district? Yes, I should say so, a great advantage. If it were protected, I think the district would scarcely ever be without a supply.
1220. Are you aware whether the present trustees have adopted any plan for protecting timber growing on the Common, and to prevent persons trespassing? I am.
1221. Have you been present at any public meeting where a resolution approving of the conduct of the trustees was adopted by the meeting? I have.
1222. Was it a large meeting? Pretty numerously attended.
1223. Was such a resolution adopted by a large majority of the meeting? It was.
1224. How do the inhabitants of the district of Ryde convey their produce to market? The principal part by water.
1225. Is water carriage considered the best means of conveyance? It is the best for the safety of fruit—it does not knock it about so much.
1226. You grow a considerable quantity of fruit, I believe? I do.
1227. How do you send your fruit to market? Principally by water.
1228. You have no difficulty in finding means of transit? Not at all.
1229. I believe there is a steamer, and that there are also sailing boats plying by which you can send your produce to market? Yes.
1230. These means are perfectly convenient? They are.
1231. Do you think that if there were a bridge built over the river at Five Dock, those persons who are residing to the northward and westward of the Common would take advantage of it and send their produce by that way to Sydney? I think it would be a roundabout way for them to do it. Besides, it would amount to a great expense to make a road for them to come that way.

1232. You think that independently of the expense of making these bridges, the expense of making the road would be considerable? I think it would be enormous. I am certain if they followed the track of the North Road that was laid out, it would be almost half the cost of the bridge. Mr. William Small.
1233. I suppose you consider that the building of the bridge would be attended with great expense? That is what I look at chiefly; it is not the road altogether, but at the expensive bridges that would have to be built.
1234. Of course you cannot give any information as to the probable cost? I could not say. I know it would be immense—it would require to be of such a length.
1235. You say you think there are from 500 to 600 acres of Common land altogether fit for planting orchards upon? Yes.
1236. Do you consider the portion of the land not adapted for cultivation adapted for building sites? There may be a difference of opinion, but I should be sorry to set myself down in a desert like it.
1237. Do you consider the back land of the district altogether away from Parramatta River, situated beyond all the farms on the banks of the river, as a desert? I do.
1238. You consider that the Common is a desert in point of situation? I should think so.
1239. What, in your opinion, is the Common land worth per acre, on the average? If I had as much money as the Mint would hold, I should not like to give £1 an acre for it.
1240. There are some select spots worth considerably more? There is some nearly as good as any land in the district, but to take it all I would not give £1 an acre for it.
1241. That portion which you consider good land is only small as compared with the greater portion? Yes, about 600 acres out of 6,000.
1242. Do you know Mr. Ross's land? I do.
1243. Is that of a fair average quality with the Common land? Not at all. I could scarcely say it was with the best of it.
1244. Was that improved when Mr. Ross bought it? It was.
1245. Are you aware of the description and value of the improvements at the time he bought it? I was given to understand that the buildings cost £3,000, in addition to the fencing, clearing, and planting.
1246. Then at the time Mr. Ross bought that land, there was a building erected upon it, it was enclosed, and a large portion of it cleared? Yes, and it was the great wonder of the district, the price Dr. Sherwin got for it, for he offered it to me for £1,000.
1247. *By Mr. Piddington*: Were the buildings on it then worth £3,000? I do not say they were worth it, but I believe they cost Mr. Rutledge £3,000.
1248. *By the Chairman*: Do you know some land that Mr. Folkard bought? I do.
1249. Is that land such as should be quoted as of an average quality with the Common land? No, it may be quoted as similar to the best, but not to the best.
1250. Do you know Gladesville? I do.
1251. Is that situated on the Parramatta River? It is.
1252. Is there a wharf there for landing from the steamer? Yes.
1253. Is it also on the high road? It is.
1254. Divided by the high road leading from Ryde to the ferry? It is.
1255. Do you consider that the price that land sold for, when divided into small blocks, can be taken as anything like a criterion of what the Common land would sell for if it were brought into the market? I do not.
1256. Do you think that the situation of that land, it being on the Parramatta River, having a landing place from the steamer, and being divided into small allotments, would considerably enhance its value? I do.
1257. That land possesses advantages the Common would not possess? It does.
1258. Consequently it would not be fair to take that as a guide to the average value of the Common land? Not at all.
1259. *By Mr. Piddington*: Where is your ground situated? About where Mr. Drinkwater lives.
1260. In the immediate neighbourhood of the village of Ryde? No, about a mile and a half from it, at the back of Mr. Drinkwater's.
1261. You say you attended your father's sheep on the Common half a century since? Yes.
1262. What change is there in the character of the Common, in regard to its capability for grazing sheep, since that time? The only change is that at that time there were very few sheep or stock upon it.
1263. I am not asking you as to the number of sheep upon it, but as to the change in the Common? The pasturage is all the change in it. The pasture then was so much better than it is now, in consequence of there not being so much stock upon it.
1264. Were there any greater number of forest trees on the Common then than there are now? There were.
1265. Was it better suited to grazing sheep then, when there were more trees upon it, than it is now? Perhaps it is less suited then than now—the clearer the ground the better it is for grazing sheep.
1266. Do you think the general character of the Common now is suited to grazing sheep? Not the general character of it, but it was the only place we had to run them upon then.
1267. If it did very well for the grazing of sheep some time ago, why not now? Because it is overstocked, for one thing.
1268. You say that a certain portion of the Common is suited even for agricultural purposes, do you not? No, I do not. I say it would not pay anyone to grow grain upon it. I have been in the habit of growing grain since I knew what grain was.
1269. Where? In that district.

- Mr. William Small.
11 July, 1862.
1270. I am speaking of the Common? It would not average ten bushels to the acre, the best land in it.
1271. Is there as fair an average of good land in that Common as there is in the district? Perhaps there might be some fit, but not the average. I do not mean to say that the best of it is not nearly as good as the average; but it is not so good as the best.
1272. Have you not stated that there is very little land in the district adapted for growing grain? I do. I say I have tried it as much as anyone in the district, and that it will not pay for growing grain.
1273. Do you mean to say that there is very little land in the district suitable for agricultural purposes? I do.
1274. Then the Common is no bet'er and no worse situated than the rest of the land in the district? Some small patches might be suitable, but there is very little of it.
1275. Are you of opinion that there is very little land in the district of Kissing Point fit for growing grain? I am; I am satisfied of it, for I have tried it—I have tried the best of it.
1276. Have you ever purchased land in that district during your long residence there? I have.
1277. What have you given per acre for it? I have bought it for about £1 an acre, and I have given £6 an acre for it—some of the best land in the district. Near where Mr. Smith lives, along the North Road, there were about 200 acres of land there cut up in blocks to suit purchasers.
1278. And you never gave more than £6 an acre? No.
1279. You turn out milking cattle upon the Common? Yes.
1280. Do you turn them out without tethering them? I do.
1281. Do you feed them? Occasionally, not a great deal; when we get them into milk we give them a trifle, not much.
1282. Is the Common fenced in? No.
1283. Might not the cattle you turn out wander away to Colo, or even to the Hawkesbury River? They might, but they never do.
1284. Your cattle are a milking herd? Some of them. There is one cow I had not seen for six months, and the other day I saw her with a calf on the Common.
1285. Your cattle consist chiefly of a milking herd? Yes.
1286. Is not a milking herd much more likely to stay in the neighbourhood of a farm than dry cattle? I keep dry cattle with them.
1287. Do not the dry cattle stay because they associate with the milking herd? Because they were bred there.
1288. What do you think the Common land would bring per acre after the proposed bridges were built, if it were sold gradually? I could not say, because there is a portion you might sell and another portion that you would never sell at all. Lands and orchards have been put up lately for which I believe there has not been a *bonâ fide* bid.
1289. Do you assert that the buildings on Mr. Ross's farm are worth £3,000? No; I say I was given to understand they cost that.
1290. How do you know they cost that? I understood so from Mr. Blaxland.
1291. What is the value of the buildings on Mr. Ross's land? I could not say; there is a fine large brick house, a stable and so forth, but it is a considerable time since they were built, and they are the worse for wear.
1292. How long is it since Mr. Ross bought this farm, with these old buildings on it? Four or five years.
1293. Do you know what he gave for it? I understand that he gave for the farm as it stood, the furniture and farming utensils, £5,000.
1294. How many acres are there on it? 100 acres, Mr. Rutledge told me.
1295. What is that per acre for the land, including the buildings? £50.
1296. How far is this farm of Mr. Ross from the nearest part of the Common? It almost joins it.
1297. Then £50 an acre was given for this land with the buildings upon it, five years ago? Not only the buildings, for it was stumped and fenced.
1298. Do you know the land that was formerly land that belonged to Mr. Small of Kissing Point? Yes.
1299. And which was transferred to his son-in-law, Mr. Ford? Yes.
1300. Are you aware that that land has been sold? Yes.
1301. Is not that immediately adjoining the Common? Yes.
1302. And unimproved? No, it was improved; there was a vineyard upon it, and a stone building.
1303. Was it not sold in allotments? Yes.
1304. Were not some of the allotments unimproved land, without a fence, and without any improvements? I could not say; I think it was fenced all round.
1305. Does not some portion of it unimproved adjoin Mr. Ross, at the back of his house? Yes, but it is fenced.
1306. Do you say it is all fenced? Yes, unless the fence is broken down; it was all fenced.
1307. Do you know how much that unimproved land brought per acre? I cannot say; but I know that it will all come into Mr. Ford's hands again.
1308. You do not know how much it brought per acre? No, but I was told by my brother that it would all come into his hands again.
1309. Whether it was paid for or not? The purchasers paid the deposit, but they will never pay more, I believe.
1310. You know that it will come into Mr. Ford's hands again only from hearsay? I am pretty certain of it; there is a certain portion of it returned back already.

Mr. William Small.

11 July, 1862.

- 1311. You do not know the price it realized per acre? I do not.
- 1312. If it realized £10 an acre and upwards, would you think that a very unreasonable price to give? I know it fetched more than I would give for it; it showed the people did not know much about the land when they are going to throw it up again. It very often happens that customers may be got for land at a high price, but when they are called upon to pay they fail to do so. I think Mr. Ross would be very glad if anyone would give him the price he paid for his place.
- 1313. How far is Gladesville from the nearest point of the Field of Mars Common? There is a small portion of it, I should say within half a mile.
- 1314. Do you know that portion of the Common rented by Face? Yes.
- 1315. How far is that portion of the Common from the Gladesville Estate? I do not suppose it is half a mile.
- 1316. The Common, then, is within half a mile of Gladesville? A very small portion of it; some of it is not within four miles.
- 1317. Do you know how much per acre the land brought when sold at the Gladesville Estate? I could not say; I believe it fetched an immense price.
- 1318. Do you know that some of it brought £90 an acre? I heard so; I think a good many people like those who bought Mr. Ford's land would be very glad to give it up again.
- 1319. You heard that land within half a mile of the Common sold a few years ago for £90 an acre? Yes; it was in small allotments, and was not sold by the acre.
- 1320. What is to prevent the Common being sold in small allotments as well as the Gladesville Estate? Because nobody would have it.
- 1321. Why should people not give a higher price than £1 an acre for land on the Common, when they gave £90 an acre for land half a mile from the Common? Because it is rubbish, and because it has not the situation.
- 1322. Do you mean to say that Face's land is not as good as any part of Gladesville? You may pick out a bit here and there.
- 1323. One moment you say that no part is to be compared with the Gladesville Estate, and another moment you say you can pick out a bit here and there? I say the situation of the Common is not to be compared with the Gladesville Estate; half a mile makes a great difference in a place, especially on the banks of a river.
- 1324. What will be the cost of making a road from the nearest point of the Common to the Parramatta River? I cannot say.
- 1325. I understood you to say that it would cost a great deal to make a road to the proposed site of the bridges—what do you mean by that? You misunderstood me altogether; this is the road leading to Castle Hill I am talking of.
- 1326. Is there any part of the Common unfit for the sites of houses and cottages? There are places there where you could hardly see daylight.
- 1327. What portions do you allude to? I could take you to places on the Common that you could hardly get out of.
- 1328. How many acres are comprised in the Common? About 6,000.
- 1329. What portion of that 6,000 acres would not be available as sites for houses or cottages? You may build houses where you like, but if I were a gentleman going to sit down, I should be sorry to sit down on a sixteenth part of it.
- 1330. Then you arrive at the conclusion that one-sixteenth part is available for building houses or cottages? Of course people may build anywhere.
- 1331. Can you give an answer to the question whether there is any portion of the Common available for building houses or cottages? There is.
- 1332. How large a portion? I could not say.
- 1333. Do you think there is half? People may build there, but I would be very sorry to sit down there myself.
- 1334. How far from Sydney is your farm at the present moment? I think about nine miles.
- 1335. What direction do you take when you come to Sydney by the road? When I get across the river, do you mean?
- 1336. Do you go across the river? Yes.
- 1337. How far would your farm be from Sydney if these two bridges were erected? I could not say.
- 1338. Do you think it would be nine miles? I should not say it would. I do not mean to say for a moment that the bridge would not be an addition, but it would be overbalanced by the loss.
- 1339. You think the bridges would be a benefit if they could be constructed by the Government without your giving up the Common? I think so.
- 1340. Would it be a great benefit if the bridges were built? Yes, but I know it would be overbalanced if we gave up the Common.
- 1341. I am not asking you as to giving up the Common, but I ask whether if the Government constructed these bridges it would be a benefit to the district? It would be a benefit to the district, but I do not think it would be so much benefit as many suppose.
- 1342. Do you think it would be any benefit to the inhabitants of Sydney, to bring that delightful district into connection with Sydney, by the building of bridges? I cannot see it.
- 1343. You do not think it would be any advantage to the people of Sydney to have a road with bridges to Kissing Point? Perhaps it might. It would be an advantage to them, but I do not think it is proper that the people who are entitled to the Common should give up their right for the benefit of the people in Sydney.
- 1344. Supposing they were not asked to give it up, would it be a benefit then? Yes, of course; I say it would be a benefit any way, but that it would be overbalanced by giving up the Common.

Mr. William
Small.
11 July, 1862.

1345. *By Mr. Cowper*: What do you consider to be the benefit derived from the Common, which you describe as on the whole so barren and inaccessible—when you speak of the benefit you derive from it, what do you mean? The people there are small freeholders, and the lands of many are cleared and planted with vineyards and orchards, and they have not a stick of firewood or timber for fencing or repairing but what they get from the Common, unless they come to Sydney for it.

1346. It is not so much, then, on account of its grazing capabilities? Yes, it is used for grazing purposes too; they could not keep milking cows if the Common were taken away.

1347. What proportion of it do you think is fit for grazing purposes? On the worst part of it the cattle live in the winter time principally on the leaves of the bushes.

1348. *By Mr. Piddington*: Have not the trustees of this Common made an apportionment among the commoners of the right of grazing? Yes.

1349. What is the total number of cattle the trustees have permitted the commoners to graze on the Common? I cannot tell.

1350. Can you tell how many, on an average, you have found grazing on the Common? No.

1351. Do you know the number of horses the commoners have a right to graze? No.

1352. Have you ever seen many horses grazing on the Common? Yes.

1353. How many at a time? Perhaps six or seven together; I could not tell what are about the Common.

1354. *By the Chairman*: The land at Gladesville is situated on the banks of the Parramatta River? Yes.

1355. And immediately adjoining to where the steamers land their passengers? Yes.

1356. It has besides a high road which divides the land? Yes, it divides it from the Common.

1357. Do you consider that its contiguity to the river and its situation altogether gives it an advantage over the Common land? Yes.

1358. *By Mr. Sutherland*: You stated that those persons who have bought Mr. Ford's land would be glad to give it up? I am satisfied that it will all come into Mr. Ford's hands again.

1359. Do you think they would be likely to give it up if there were a road formed which would enable them to go to Sydney by a distance of four miles and a half? I think they would; but it would be impossible to get a road which would take them to Sydney by a distance of four miles and a half.

1360. *By Mr. Cowper*: Do you think the distance to your farm from Sydney, which you say is nine miles, could be shortened by two miles, two miles and a half, or three miles? It might take two miles off.

1361. It might take three? Yes.

1362. Do you think it would not take more than three? Yes.

1363. *By the Chairman*: It might take only one? It might.

1364. *By Mr. Sutherland*: If the distance were shortened to half what it is now, whatever that is, and the river were no impediment, do you think the land would be improved in value? Perhaps it might be an improvement; but I do not think the people would be able to make a living off the land. If these people who bought the land I have spoken of could have made a living they would have paid for the land; as it is, they paid the deposit, and finding they were wasting their means they threw it up.

1365. Do you know Mr. Wright's place on the Parramatta River? Yes.

1366. Do you think the Common land is as good as that? I should say it is; that is a pack of rocks.

1367. Do you think Mr. Wright went there to make money of it? No, I should think not; but there is a view of the river from that point, and that is very different from going back into the desert where you would never see the sun.

1368. Do you think there are no good sites on Lane Cove River? There may be.

1369. The Common land abuts on the Lane Cove River for a great distance, does it not? For some considerable distance.

1370. Is it not known to you that many people have left the district because they have no direct way of getting out of it except by steamers at certain hours of the day? No.

1371. You state that the water is the best means of carriage for your fruit, and that you have no trouble in getting your fruit to Sydney? Not at all; there are people who get their living by taking fruit down.

1372. Supposing persons have stated here that they have had great trouble in getting their fruit to market, and that when they have sent it to market they have not received sufficient to pay the freight and charges upon it, have they stated what is not true? I never had any trouble, and I never knew anyone who had. There is the steamer, and there are people who have boats, who get their living by taking fruit down.

1373. How often does the steamer put in? She comes twice or three times a day.

1374. You do not, then, think that it would be an advantage to people to have a road by which they could go with their carts by day or night? It would be an advantage, but I say the disadvantage of selling the Common would overbalance it.

1375. Does it not now take a man as long to bring down his fruit to the ferry, and to come the next day for his empty boxes, as it would, if there were a road direct to Sydney, to come to Sydney and back? I can put up a load of fruit and take it into the market now in four hours by the present road, and I live on one of the back farms.

1376. Have you no stoppages on the road—can you get to Sydney at any time by the present road? Yes.

1377. You have no trouble from wind or weather at all? Sometimes we have such a thing as a broken rope at the punt, but that is not very often.

1378. *By the Chairman*: Are there any new houses springing up in the neighbourhood of Ryde? Yes, there is building going on there.

1379. Then, in fact, population is rather increasing than decreasing there? Yes.
1380. *By Dr. Lang:* If the Common is of so little value intrinsically, how does it become a valuable possession to the commoners? It is valuable so far, that it affords grazing for our cattle and timber for our use, but for agricultural purposes it is of little or no value, for it would not pay anyone to grow grain there.
1381. Would it be of any value for agriculture unless it were cleared? No, nor yet if it were cleared, the principal part of it. I have had pretty good experience of it from a boy; I was born there in 1796, and I know that, on an average, it would not yield above ten bushels an acre.
1382. Has the pasturage improved or deteriorated since you recollect? It has deteriorated in this way, that there is too much stock on it.
1383. Does not the cutting down of old forest trees affect the pasturage? It does good; the less the land is shaded the better. The stock will get more from one acre that is cleared than from ten acres uncleared, and it does them more good. The grass that grows under the trees is sour, and not fit for cattle.
1384. Do you think the formation of a road, and the construction of the proposed bridges, would not be a general advantage to the inhabitants of the district? It would, but we should be put to more disadvantage by the loss of the Common.
1385. Do you think that would be a serious loss to the commoners generally? I think it would to a great many little freeholders, for they cannot say where they would get their timber from.
1386. Is it the fact that those who live in the neighbourhood of the Common get their timber from it at present? They do, except those who have got timber of their own, and perhaps some of them do. The business lies here; you may now go and buy timber from those who have got it, but if the Common were gone, what would they then charge for it? You cannot get a tree now from any man without paying 20s. or 30s. for it; and if the Common were gone, you would have to pay pretty dearly for any timber you might want.
1387. *By Mr. Stewart:* Do you know the nature of the land past the Common;—is there likely to be any land opened up there suitable for agriculture? There is none but what is taken up. I had a grant from Government there at one time, and I travelled there for days and days and could not get a bit of good land, and the surveyor told me I would not get a bit fit for anything, as it was all taken up.
1388. You are not of opinion that any useful land would be opened up? Not at all; the land of any value has been taken up long ago. When you get at the back of Castle Hill you come upon the North Rocks.
1389. Any advantage that might be derived from the proposed bridges would be confined to the district now settled? Principally, for I think the people at Castle Hill would find it more convenient to go through Parramatta to Sydney by the railway, or even by the steamer, than by this way.
1390. *By the Chairman:* Are you aware whether any persons residing in the district, having land with timber on it, have sold timber? I am.
1391. Can you name any parties who have sold timber? Mr. Forster sold some to Mr. Blaxland, for the roofing of his house.
1392. Are you aware what he sold it for? About 30s. a tree.
1393. Then, having a right of commonage, would you approve of the trustees abandoning their trusteeship, and giving up the Common? I would not.
1394. *By Mr. Piddington:* Are there many trees on the Common worth 30s.? I should say not now, but if the Common were taken care of there soon would be; there is a lot of as fine young trees now springing up as you would find in any place.
1395. You are not aware that there are many trees now on the Common worth 30s.? No; but they are cutting timber now for building purposes.
1396. *By the Chairman:* There are a number of young trees now coming on which will be fit for building purposes in a few years? Yes.
1397. *By Mr. Piddington:* How long will it be before these young trees will be fit for building purposes? Four or five years. Forest trees grow very fast in this country.
1398. *By Mr. Lackey:* You said, in reply to Mr. Piddington, to show the value of property in that locality, that the estate of Eastwood, bought by Mr. Ross, realized £5,000;—was that property sold since the gold discovery? Yes.
1399. Do you know what Dr. Sherwin gave for it, when he bought it previously? I do not know, but it was offered to me for £1,000.
1400. Was that since the gold discovery? Yes; since property has increased in value.
1401. Then Dr. Sherwin bought it since property has increased in value? —
1402. You do not know the price the doctor gave for it, when he purchased it? No.
1403. You have stated that you bought some property in the neighbourhood—the sub-division of some estate? Yes.
1404. What price did you give for that? £6 an acre.
1405. What quantity did you buy? I bought for myself, my son, and others; four lots of I think from thirteen to fifteen acres.
1406. In each lot? Yes.
1407. How far is this from the Common? It is nearly adjoining the Common; it does join the Common, but there is a public road on the other side, that makes it more valuable than the Common; the Common is at the back of that.
1408. Has there been any other property sold in the same locality, or in the immediate neighbourhood, since you bought these lots? I do not know of any.
1409. You are aware that the general impression about the neighbourhood, among persons who heard of the sale of this property to Mr. Ross, was that he had given considerably more than it was worth? Yes.

Mr. William Small.
 11 July, 1862.

- Mr. William Small.
 11 July, 1862.
1410. Was it not generally supposed that he had given £2,000 or £3,000 more for it than it was worth? It was a great wonder in the district; they thought he had picked up a flat.
1411. I suppose you have heard, among other circumstances in connection with that property, that Dr. Sherwin refused to take it as security for half the purchase money? I do not know that.
1412. What do you think is its annual value? I do not think Mr. Ross derives a great deal from it.
1413. You think he will not, after paying the expenses of working it, derive £500 a year from it, which might be looked upon as an adequate return for his outlay? No, I think not.
1414. Something was said about the expense of sending fruit to market, in consequence of the puntage and bad roads, by the steamers;—are you not aware of farmers, at Pennant Hills, who have taken their fruit to market, and have not repaid their expenses, even where there have not been these hindrances? Yes.
1415. *By the Chairman:* I suppose you are aware of cases where persons have sent their fruit to market, and have scarcely realized their expenses? Yes; in fact I have known them to come back in debt.
1416. In consequence of the reduced price of fruit? Yes.
1417. Not because of the difficulty of taking it to market? Not at all.

Eyre Goulburn Ellis, Esq., called in and examined:—

- E. G. Ellis, Esq.
 11 July, 1862.
1418. *By the Chairman:* Are you a landholder in the district of Hunter's Hill? No.
1419. Are you a landholder in the district of Ryde? No.
1420. Are you acquainted with some property that formerly belonged to Mr. Billyard, on the banks of the Parramatta River? Yes.
1421. Were you acting as his attorney at that time? I was in Mr. Billyard's office at that time.
1422. Were you privy to the purchase of that property? I was, to a good deal of it.
1423. To whom did it belong formerly? I think it was what they called Glade's property; I cannot speak positively as to the title—Mr. Billyard bought it of Dr. —
1424. Do you know how many acres there were? About 150 acres.
1425. How long is it since Mr. Billyard bought it? It must be some six or seven years ago—it might be more; I cannot speak confidently as to the date.
1426. Do you know what he gave for it? I think it must have cost him some £1,200; that was not the actual purchase money, because there were a great many expenses incurred in perfecting the title. There were also arrangements made with Mr. Manning in connection with the steamer, and other expenses.
1427. The arrangements with Mr. Manning had nothing to do with the purchase of the land? I do not think he gave more than about £300, in the first instance, for the whole block, because it was considered that the title was defective.
1428. The property for which he gave £300 was situated on the banks of the Parramatta River, and known as Gladesville? It extended back some distance from the river—as far as the flagstaff.
1429. Abutting on the road that leads to Ryde? Yes.
1430. Does not that road divide it? I think it does, a portion of it.
1431. And it has a large frontage to the Parramatta River? Yes, an extensive frontage.
1432. Are you aware that Mr. Billyard, after he had purchased this land, incurred any expense in the way of building wharfs? Yes, and of making a road.
1433. He built a wharf for the accommodation of the steamer? Yes, and made a road up through the property.
1434. To connect it with the road leading to Ryde? Yes, he cleared some portions of it, I think.
1435. And built upon it? He built a couple of cottages on it, in the first instance.
1436. I believe that some time after, Mr. Billyard determined to divide it into allotments and to sell it? It was divided into allotments and sold by auction.
1437. Who sold the property? Mr. Bowden.
1438. Are you aware whether the usual practice of giving a luncheon on the ground was adopted on this occasion? I believe it was.
1439. There was a good spread? I was not there.
1440. A champagne lunch? I believe so; I did not go there on the occasion.
1441. You cannot say whether the people, at the time of sale, were in good humour or otherwise? I suppose they were in a good humour—it was a fine day.
1442. A good spread, and good champagne? They are not the means, generally speaking, of putting people in bad humour.
1443. Although you were not there, I presume you have heard as to whether the auctioneer was able to effect a sale of the whole or not? He did not sell the whole of it.
1444. Notwithstanding the champagne lunch? Notwithstanding the champagne lunch.
1445. And having a steamer's wharf, and a road leading to it? I am not quite sure whether these roads and this wharf were completed at this time.
1446. Are you aware whether Mr. Billyard made any arrangement with Mr. Manning for the steamer to land there? He did, which contributed very materially to the value of the property.
1447. Would you consider that land, at a distance from the Parramatta River, away back, having no facilities of landing from the steamer or of a road from a wharf, would be likely to bring anything like such a price as the average of this land? Within what distance of the river?

1448. Away back from the river a mile, two miles, or nine miles? Land nine miles back would be scarcely likely to realize the same price as land having a river frontage.

1449. In any case do you consider that land having a river frontage is more valuable than land having no river frontage? Decidedly.

1450. Then, in fact, the circumstance of that land being on the banks of the Parramatta River gives a very considerable additional value to it? It is not all on the banks of the river—it extends to the flagstaff. I may mention that that is the part which realized the highest price.

1451. Abutting on to the road? Abutting on to the road.

1452. And the road leading to the ferry? Yes.

1453. You say you believe that, notwithstanding the champagne lunch, the whole could not be disposed of? No, but it was all subsequently sold, I think. The demand for that land continued all along, till Mr. Billyard sold the whole of it.

1454. Are you aware who the late purchaser was? There were a number of purchasers by private contract, after the auction sale. I purchased some myself for a client a considerable time after, by private contract, and we paid the same price that was given for it at the original sale.

1455. Are you aware what proportion was sold after the first sale? No, I am not.

1456. You are aware that the whole was subsequently sold? Yes, I think Mr. Edey Manning bought the residue.

1457. With the wharf? He would only have the right of using the wharf; that would be the property of the purchasers at large, I take it.

1458. He would have the absolute right of running there, and of the use of the roads leading to it? He could use both the one and the other.

1459. Not knowing the quantity of land that was left, I suppose you can form no idea of the price that was given for it? No, it was sold subsequently to my leaving Mr. Billyard's office.

1460. *By Mr. Piddington:* Are you acquainted with the average price that the Gladesville Estate realized? It varied from £50 to £75, or £80. I think you might set it down fairly at an average of about £50 an acre, good and bad.

1461. The Gladesville Estate consisted of about 150 acres? Yes.

1462. The estate realized various prices, as it was sold in allotments? Yes.

1463. On the average, you think the whole was sold at nearly £50 an acre? I think it was.

1464. How long ago is it since the last was sold? It must be within the last three or four years. I am speaking merely from what I have heard; I do not know it of my own knowledge.

1465. When the land was purchased by Mr. Billyard the title was supposed to be defective? There was some defect which Mr. Billyard got removed.

1466. There was an actual defect? What was considered a defect by the then vendor, Dr. Wilt.

1467. Do you know how far that portion of the Gladesville Estate situated at the flagstaff is from the nearest portion of the Field of Mars Common? I should think it would be scarcely half a mile in a direct line. I am supposing the line to be from the flagstaff to Dr. Campbell's place, across Mr. Joubert's corner.

1468. How much would it be if you went up the road? I do not think it would be much more than half a mile.

1469. Do you know the land that Dr. Campbell purchased from the Archbishop of Sydney, on the Gladesville Road? Yes.

1470. A portion of the land abuts on a side road, and on the Gladesville Road? It does.

1471. Do you know a paddock at the back of that piece of land? Yes.

1472. Are you aware that the paddock is part of the Field of Mars Common? I believe it is.

1473. How far is that paddock from the flagstaff at the Gladesville Estate, by the road? About the distance I say; I could not say exactly.

1474. Can you tell the Committee what price the land in the immediate vicinity of the flagstaff at the Gladesville Estate realized at auction per acre? I think it varied from about £60 to £80.

1475. Have you any knowledge of the price that Dr. Campbell gave for that land near the paddock I have alluded to, to the Archbishop of Sydney? I think £1,000, something more or less; I forget the exact price.

1476. Have you any idea of the sum per acre? No; we sold it in a block.

1477. You do not know how many acres the block consisted of? It must have been about 30 or 40 acres.

1478. Do you know any reason why the land in the immediate neighbourhood of Dr. Campbell's property, but forming a portion of the Common, should not realize a price approximating to that? I apprehend it would realize quite that sum.

1479. Is not that portion of the Common to which you allude very fair forest land, at the back of Face's, towards Lane Cove River? I cannot say that I have been much over the Common; but it strikes me that it is much like the bush in general about there.

1480. *By the Chairman:* Very barren? Some rocky and some average good land.

1481. *By Mr. Piddington:* So far as you have observed the Common, there is nothing that strikes you as worse than the average of the land outside the boundaries of the Common? I should think not. Some of it is necessarily inferior, rugged and stony, and perhaps unfit for agriculture.

1482. So far as you have observed, the average quality of the land on the Common is about equal to the average quality of the land outside the Common? I should hardly like to say that, for I fancy that the land about Mr. Shepherd's and about the banks of the river is better, as there are a number of orchards there; but perhaps it is because it is cultivated that it has a better appearance.

E. G. Ellis,
Esq.
11 July, 1862.

- E. G. Ellis,
Esq.
11 July, 1862.
1483. Are you acquainted with sales of other people's land? I have been solicitor for a good many people up there, and I have known land to be sold at about £150 an acre at Hunter's Hill. I think Mr. Foss asks about that price for some of his even now.
1484. Within how great a distance of that portion of the Field of Mars which is nearest Hunter's Hill is Mr. Foss' property? I dare say within a mile of the Common; it is separated only by Mr. Joubert's property that intervenes between it and the Common.
1485. What is the price asked per acre for land that is within a mile of the Common? I do not think you could get any land for much less than £50 an acre, and I know I have tried to get some for some clients, but have found it difficult to get any land up there for what may be called a moderate price.
1486. Are there not many sites on the Lane Cove River, forming portions of the Field of Mars Common, equal to those outside the Common boundaries? I think so; some persons prefer the frontage to the Parramatta River, others prefer the frontage to the Lane Cove River. I know that when the French Consul built his house at Hunter's Hill, he built it with an aspect to the Lane Cove River, preferring that position.
1487. There is a portion of the Field of Mars Common that presents a frontage to the Lane Cove River? Yes.
1488. Have you been able to form any idea of the probable value of the Field of Mars Common as a whole, if it were sold gradually after the construction of the intended bridges? It would be very valuable—I should scarcely like to fix a price. I know as a fact that most of the landholders up there are unwilling to sell at present, in the anticipation of something being done in the way of erecting bridges. They calculate that if bridges were erected they would increase the value of the property there nearly a hundred per cent., and I am satisfied it would; because people who now live at Randwick and Coogee, and find that place rather too cold, would be glad to live in this locality if there were the means of easy access to it. I would have lived there myself if there had been better means of communication.
1489. Do you think the construction of the proposed bridges would confer a great benefit upon the inhabitants of Sydney? Yes, it would open a large tract of country that at present is almost inaccessible.
1490. Are you of opinion that if bridges were constructed it would confer a great benefit upon the residents in the Field of Mars and Kissing Point districts? I should think it would be a great benefit to the landholders about there, for it would increase the value of their property, and induce a great many persons to go to reside there. At present people who are engaged in business find it inconvenient to reside there, as they cannot regulate their time according to the steamer and leave Sydney precisely at five o'clock; they may have business which will detain them until six, and in that case they lose the steamer.
1491. *By the Chairman:* You spoke of Mr. Foss's land,—does that abut on the Hunter's Hill wharf? It starts from just above the Hunter's Hill wharf, and then runs behind Dr. Plumley's across to M. de Milbau's.
1492. Immediately contiguous to Hunter's Hill wharf? Yes.
1493. Do you consider that its contiguity to Hunter's Hill wharf and its being in the immediate vicinity of Hunter's Hill gives it extra value? Undoubtedly it is the facility of communication that gives value to land there, because for agricultural purposes I apprehend that the greater portion of the land there is comparatively valueless, but it is admirably adapted for persons who desire to live at a short distance in the country, and to have small gardens.
1494. *By Dr. Lang:* Is it not always the case that, in large cities like this, there are numerous parties who would purchase a proper site for a villa without any reference to its intrinsic value at all? Yes, I should be glad to do it myself up there. If I could rely upon having the means of coming into and of going out of town, I should prefer it to any locality I know.
1495. Everything depends upon the facility of communication? Yes; I know a number of persons who are anxious to get private residences up there.
1496. *By the Chairman:* You say that many of the proprietors of land in that neighbourhood hold back their land from sale, anticipating that improved facilities of communication will increase its value? Yes.
1497. They are anxious to sell? Yes, some people wish to remove, but they do not like to sell at present, because they say when the road is formed and the bridge built it will increase the value of their property.
1498. Then they do intend to remove, notwithstanding the additional facilities that would be given to them? Yes; for instance, Mr. ——— has 100 acres that he wishes to cut up into allotments, but he is unwilling to do so at present, because he believes if the bridge were erected he would get a higher price for it.
1499. These people wish to leave the place, but they are unwilling to do so because they believe that they will get a higher price by remaining;—can you mention any instances? I could not mention any specifically who intend to leave the place, but there are many who wish to sell their land.
1500. I suppose they are almost compelled;—I suppose you, as a lawyer, if I may ask the question, know whether the land there is not generally encumbered? I do not know that it is more encumbered than in other places.
1501. You consider that most of the property is encumbered? There is a great deal of property encumbered everywhere.
1502. And Hunter's Hill is not exempt? It is not exempt, but I may say there are comparatively few encumbrances within my knowledge.
1503. To go back to Gladesville;—Can you state what the land realized per acre at the first sale, at the time of the champagne lunch? I think I stated about £50 on the average, more or less; I am speaking from memory.

1504. Can you give us any information as to what the land subsequently brought? I bought some for a client at the same price that was given for it at the sale. E. G. Ellis,
Esq.
1505. Can you give us any information as to what the residue sold for, when it was sold in a lump to Mr. Manning? That was sold after I ceased to have anything to do with it. 11 July, 1862.
1506. Are you not aware that Dr. Brereton bought some property there? Yes.
1507. Do you know how many acres he bought? I think a house and five acres in the first instance, and he then bought some twenty acres adjoining Mr. Farnell's.
1508. Do you know what was the description of the house he bought? The house was in disrepair when he bought it.
1509. Was it a stone house? Yes.
1510. Was there a garden and orchard attached to it? Yes, but it was in a very neglected state.
1511. Can you give the Committee any information as to what he gave for it? I think about £800 for the house and four acres of land.
1512. Are you aware what he gave for the twenty acres? I heard he got that cheap—I think that was £20 an acre. I am speaking now only from rumour.
1513. You know the situation of the land? I do.
1514. It is situated on the high road, and cleared and improved? The greater portion of it.
1515. In speaking of the relative value of land, do you consider that land situated at from two to five miles from the river is of equal value with land at Gladesville? Certainly not. I should be willing to live within a mile or perhaps two miles of Gladesville, but I should hesitate before going to such a distance as nine miles; that would take me nearly to Parramatta, or if it were in a northerly direction would take me to the North Shore.
1516. You are not aware how far back the Common extends? No, I never followed the boundaries of the Common, except on the Kissing Point side.
1517. You have not been through the Common? No.
1518. You know nothing of the real value of the Common—of the quality of the land? My estimate of the value of the land is based upon the opinions of persons who go there—that it is a very agreeable suburb.
1519. Nine miles from the ferry? No, I confine myself to land near the ferry.
1520. If the Common extends back nine miles, do you think people would go to live there? Not at the extreme parts of it, unless people from Parramatta would like to live there.
1521. They would not be likely to take advantage of any bridges that might be built over Parramatta River at Hunter's Hill? I should imagine that if any bridges were made across Parramatta River, where the punt is would be the shortest route, as it would take in the whole country between Kissing Point and Hunter's Hill and the Great Northern Road.
1522. Have you been frequently over the ferry? Yes, I have been up and down for many years, and I can speak of the inconvenience of it.
1523. Are you acquainted with the approaches to the ferry? Yes.
1524. How is the road leading to the ferry? On the north side the road is fair for a country road—a bush road.
1525. There is nothing particularly dangerous in the approaches? I do not think so—there is a rather steep descent. I do not know whether you call it dangerous; it is a smart pull up.
1526. What is the state of the south side? It is rather rugged there within a couple of hundred yards of the punt.
1527. There is nothing particularly dangerous there? It depends upon the way you drive over it.
1528. *By Mr. Stewart:* You state the land about Hunter's Hill and Gladesville is worth about £60 an acre? I would have no hesitation in giving that estimate.
1529. Are you aware that land on the Balmain Estate, not far from the Dock, has been sold lately for £80 an acre? Yes, and I know some sold for £150.
1530. Any from the original estate? I am not aware.
1531. Do you know that there is still a large quantity of unsold land there? Yes.
1532. Do you think land five miles farther off will be of more value than that? I can only account for it by the fancy that people take for that particular locality.
1533. They would have to go through this estate to reach the locality you speak of? Yes; portions of the Balmain Estate are not so desirable; for instance, the west side, looking towards Cockatoo Island is very undesirable, as you have the evening sun upon your house, which people wish to avoid.
1534. You think people would pass that estate over, go farther, and give a higher price for land? The persons to whom I refer are such as at present would go to live at Randwick and Coogee, to whom a short additional distance would not be much object.
1535. Is not Balmain a favourite suburb? I believe Balmain property will go up in the market; in fact, some land was offered to me as a speculation, on the faith of this bridge being erected.
1536. The portions of the Common upon which you put this value are those that come near the main road? Yes, and people would be induced to live on the remoter parts of the Common, by the prospect of supplying those who come to live in the district with the produce of their gardens.
1537. *By the Chairman:* Are you aware of the upset price of the Domain in Parramatta? No.
1538. Do you know anything of the price? I have heard £10 and £15 an acre mentioned as the price of land out there.
1539. You are not aware that £2 an acre is the upset price? No, but I believe many people would rather give £20 an acre for land at Hunter's Hill than even £2 for land at Parramatta Domain.

- E. G. Ellis, Esq.
11 July, 1862.
1540. *By Mr. Piddington*: Is the upset price of land sold by Government any criterion of the price the land will bring? Very much depends upon the persons who attend the sale.
1541. The upset price is no criterion? Not generally. The moment the land is cut up by private individuals into small allotments the price increases; I have known land to be sold four times over before the original conveyance has been completed.
1542. The greater portion of the Field of Mars is within a less distance than nine miles from Sydney? Yes, I should say so. I may mention that all this land has obtained this increased value in the last ten years. When the French Consul bought his place he gave £10 an acre for the land, in the neighbourhood of which Mr. Foss now wants about £100 or £150.
1543. You have no reason to believe that if these bridges were built the land would decrease in value? Certainly not.
1544. *By Mr. Lackey*: You have been living in that district some time? I have been up and down pretty constantly, nearly every week. I have been interested, as attorney, for a number of persons who have property there.
1545. Who are interested in the district? Yes.
1546. And you have got most of your information from those persons? Yes.
1547. And you have a predilection for that part? My idea of the place is formed from communication with persons there; I have no personal interest in it.
1548. The great demand for property in this part has arisen among these people—you do not think it exists among the public generally? Many persons, knowing I was attorney for parties up there, have come to me for the purpose of buying land, and the holders have objected to sell, in anticipation of these bridges being built.
1549. Do you think the property would fetch very remunerative prices at the present time? The proprietors do not think they would be remunerative, as they are holding on for more.
1550. Probably from an expectation that these bridges would enhance the value of the property, rather than from a belief in the intrinsic value of the property? They rely more upon improved means of communication.
1551. Do you think there is a greater desire to buy this property than to purchase land at Newtown, Petersham, and Burwood? I could not offer an opinion, as people have different inclinations; some prefer Randwick, others Burwood, and others the Parramatta River.
1552. The demand you speak of is from people you are acquainted with, and who have friends and relations in Hunter's Hill district? Yes.
1553. *By Mr. Piddington*: Are you of opinion that the demand would be limited to persons you are acquainted with at Hunter's Hill? By no means. If the proposed bridges were likely to be constructed I would not hesitate to buy land freely as a speculation.
1554. Do you think the desire to purchase land in that district is confined to yourself? I do not think so; I think it is much more extensive, seeing that I have not purchased any.
1555. If the bridges were built, do you think there would be a general desire among the people of Sydney to buy land in that district? I think there would be a general desire among those who wish for suburban residences away from the sea air, and in an agreeable locality.
1556. Your opinion of the natural beauties of the district is so high that you think people generally would entertain similar views to yourself upon the subject? I think any person seeking a suburban residence would not hesitate to go and live there.

TUESDAY, 15 JULY, 1862.

Present:—

| | | |
|-------------|--|--------------|
| MR. LACKEY, | | MR. LUCAS, |
| DR. LANG, | | MR. STEWART. |

ISAAC SHEPHERD, ESQ., IN THE CHAIR.

Mr. Henry Small called in and examined:—

- Mr. Henry Small.
15 July, 1862.
1557. *By the Chairman*: You reside at Ryde, I believe? Yes.
1558. Are you a landholder in that district? Yes.
1559. As a commoner and a landholder, are you willing to give up the Common? No.
1560. You are engaged as a Common Ranger, are you not? Yes.
1561. You therefore know the Common pretty well? Yes.
1562. Of what description is the Common land generally? The general part of it is bad land.
1563. A portion of it is good, I presume? Yes, a small piece.
1564. What number of acres do you imagine might be got out of the Common fit for agricultural purposes? I should think about a tenth part of it is good.
1565. That would be about 600 acres? Yes.
1566. It is said that the Common is infested by cattle stealers and the most abandoned prostitutes from Sydney—is that the fact—I presume, as Common Ranger, you would know if it were so. I have never known anything of that.
1567. Have you ever known of cattle having been stolen off the Common? No.
1568. Have you ever heard of bad characters being taken from off the Common? No.
1569. During the time you have been Common Ranger, have you had an opportunity of seeing whether that was the case or not? I have never known it to be the case.

1570.

1570. Are there any wood boats engaged in taking wood from off the Common? No. Mr. Henry Small.
1571. Are there any boats plying up the Lane Cove River that get wood from the Lane Cove side of the river? Yes, there are about twenty, I believe.
1572. Do you know the names of any of these parties? Yes. 15 July, 1862.
1573. Have you a list of their names? Yes.
1574. Will you have the goodness to hand it in? Yes. (*The witness handed in the same. Vide Appendix.*)
1575. If anyone has said that there is only one wood boat getting wood off the Lane Cove side, is that in accordance with truth. No.
1576. Have you or your family ever turned cattle out on the Common? Yes.
1577. Have they been stolen? No.
1578. *By Mr. Lucas*: How long have you been a Ranger? About nine months.
1579. Do you know the value of land about Ryde? It is of different prices.
1580. Have you any idea of the value of land abutting on the Common? I have a piece myself adjoining the Common that brought £10 an acre.
1581. What description of land is that? That is adjoining about the best part of the Common—very good land.
1582. Is there any land on the Common better than yours? No, I do not think there is.
1583. You say about a tenth part of the Common is good land? Somewhere about that.
1584. Do you think the remainder would pay for cultivation? No.
1585. What do you think the remaining nine-tenths would fetch per acre? I could not say. I should think hundreds of acres would not be worth fencing at all.
1586. It would not be worth having? No.
1587. Could you give an idea of the average value of the remaining nine-tenths? To take the whole of the Common through, I do not think it would realize £1 an acre.
1588. Are you now speaking of what it would bring at the present time, or what it would be likely to bring after the proposed bridges were erected—if these were erected what do you think it would bring per acre? I could not say what alteration the bridges would make, but I do not think it would go over £1 an acre then.
1589. You have resided about Ryde for many years? Yes, I was born there, and have been there ever since I was born.
1590. Where, taking the convenience of the greater portion of the population about Ryde into consideration, do you think would be the most convenient place to put a bridge across the Parramatta River;—do you think the proposed site would be a suitable one? Yes, I believe it to be, below the punt.
1591. Do you think, taking the convenience of all parties into consideration, about Five Dock would be the best place? I do not know much about that place.
1592. You are not in a position to give an opinion? No.
1593. *By Mr. Stewart*: Do you know anything of the character of the country at the back of the Common generally—towards Wiseman's Ferry? I do not know much of it towards Wiseman's Ferry; but at the back of the Common there is some good land, and a good deal bad.
1594. Is the general character of the country suitable for occupation? No, there is plenty of the back land that is of no use for anything.
1595. A large proportion of it? Yes, there is a good deal of it.
1596. If this means of communication were carried out it would not open up the country to any extent for occupation, because it is not fit to be occupied? No.
1597. *By Mr. Lucas*: Are you paid for your services as Ranger to the Common? Yes.
1598. What do you get per annum? I get 9s. a day.
1599. That is for every day you are engaged? Yes.
1600. Are you constantly engaged? No.
1601. How often do you go over the Common? One day a week.
1602. Then you get 9s. per week? Yes.
1603. Have you any idea of the receipts from the Common in the shape of revenue? No.
1604. Do you know any person who pays for the right of grazing cattle, of cutting wood, or as rent for occupancy? I believe nothing is paid for grazing cattle, or for cutting wood, but there are parties who rent pieces of the Common.
1605. Are you aware what rent they pay? Yes, I believe they pay 5s. per acre per annum.
1606. I suppose that is the best part of the Common—is that good land? Yes, I think some of these people have the best parts of the Common.
1607. *By the Chairman*: These persons who rent portions of the Common have been a long time residing on the Common? Yes.
1608. And they have little houses and orchards in many cases? Yes, for which they pay rent.

Mr. John Small, junior, called in and examined:—

- Mr. John Small, junior.
15 July, 1862.
1609. *By the Chairman*: You reside at Kissing Point? Yes.
1610. How many acres do you possess? About seven acres, and a house.
1611. Is it near the Common? Yes.
1612. What is the general description of the land there? The general description of the land is very poor indeed; some is very good land, some very inferior.
1613. Have you ever known cattle to have been stolen off the Common? No.
1614. I believe you were born in the neighbourhood? No, I was born in Sydney; but I have lived there five or six and twenty years.
1615. Have you ever known any bad character to have been taken off the Common? No, I cannot say so.
1616. Do you derive any advantage from the Common? Yes.
1617. What benefit? I get all my wood off the Common. The land I possess is all cleared, cultivated, and planted out as an orchard; all the wood I make use of I get from the Common, and I run my cattle there.
1618. Where do you get your fencing materials from? The Common.
1619. Suppose the Common were alienated, would that entail considerable loss upon you? Very considerable indeed.
1620. In fact you require the Common, for the purpose of depasturing your cattle and of getting firewood and fencing materials? Yes.
1621. You grow a considerable quantity of fruit, I believe? Yes.
1622. How do you convey your fruit to market? Sometimes by water, sometimes by land.
1623. Which mode of transit do you prefer? I prefer the steamer—I find it more convenient.
1624. You consider that water conveyance is better than land carriage for fruit? It is much better.
1625. Is there any difficulty in sending your produce to market? No, I find none whatever. It takes me about two hours from the time I leave my place to get to Sydney with a load of fruit; I am about an hour going from my orchard to the wharf, and about an hour from Kissing Point to Sydney.
1626. You suffer no inconvenience from want of facilities of transit? Not the least.
1627. You have sailing boats as well as steamers? Yes.
1628. In case of wishing to go by land you can go by the ferry? Yes.
1629. How is the access to the ferry—is it very steep or dangerous? The hill is rather steep.
1630. Not dangerous? I do not think it is dangerous.
1631. The hill is rather steep? It is rather a hard pull for a heavy load.
1632. Have you signed any petition against giving up the Common? No.
1633. You are opposed to the surrender of the Common? I am opposed.
1634. And wish the Common to be retained? I do.
1635. Should the Common be sold, where would you get firewood or fencing stuff, or where would you depasture your cattle? I should have no place to put my cattle, and should have to sell them; and must purchase my firewood and fencing stuff.
1636. You would consider it a very great hardship to be deprived of the Common? Very great indeed.
1637. Do you consider the Common to be of more advantage to you than it is possible the bridge could be? I do.
1638. *By Dr. Lang*: What quantity of stock do you think the Common in its present state could support—what number of cattle? I really could not say—perhaps 200 head.
1639. Do you think that that amount of pasturage is a great benefit to the whole number of commoners? Yes.
1640. Do they individually derive much benefit from the pasturage? Yes, of course.
1641. Has the pasturage been improved or deteriorated by the cutting down of the larger timber? I should rather think it would be improved.
1642. Is there not an undergrowth of young wood? Yes, a good deal.
1643. Does not that interfere with the pasturage? Of course it does hurt it.
1644. It tends to deteriorate it for the time? Yes.
1645. *By Mr. Stewart*: If a bridge were erected across Parramatta River, would it interfere with the traffic on the river to any extent? I should think it would in some measure—to what extent of course it would be hard to say.
1646. Would not that be a very serious objection? I cannot say what effect a bridge would have in that respect—no doubt it would interfere to some extent; I could not tell unless the bridge were erected.
1647. It is a matter to which you have not given your attention? No.
1648. *By Mr. Lucas*: It would depend upon the description of bridge built, I presume—upon whether it were built high enough to allow sailing boats and steamers to pass under? Yes.
1649. You say it takes you about two hours to go from your place to Sydney, by taking the steamer;—supposing these bridges were built and this road were made, how long would it take you to go by them? I could not tell exactly what the distance would be.
1650. Supposing the distance from Five Dock to be four miles to Sydney, how long would it take you to go from your place to Sydney then? That would make it about ten miles altogether to my place. Instead of two hours I think it would take me three to go to Sydney by that road, with a load.
1651. Then you could get to Sydney in an hour less by the present mode of transit than you could, if the bridges were built, by that road? By the steamer I could.
1652. How much land have you? About seven acres.

1653. That is all in cultivation as an orchard? Yes.
1654. If the Common were taken from you, you would have no means of obtaining firewood, or fencing stuff, or timber for building purposes? No.
1655. It is not only the pasturage that is a benefit to the commoners—there are other advantages derived from the Common? Yes, they get fencing stuff, building materials, and so forth.
1656. You decidedly object to give up the Common for the purpose of building bridges? I do.
1657. Do you think you would derive much benefit if these bridges were built? They might be a benefit, but I think the Common is a much greater one; if I had not thought so I should of course have signed in favour of the sale of the Common.
1658. Do you find any difficulty in getting your produce to market? Not the least. All I have to do is to make up my load, take it down to the steamer, and put it on board. I find it very convenient, and indeed very pleasant.
1659. You are not compelled to take the steamer—there are sailing boats? Yes; when I have a large quantity to send down I send it by the steamer, and go to Sydney with it, and return the following morning at nine o'clock.
1660. Is that mode of conveyance as convenient as it would be by the proposed road and bridges? It could not be more so.
1661. *By the Chairman*: In speaking of the number of cattle depasturing upon the Common, I suppose you are aware that a number of landholders keep their cattle within their own enclosures? Yes.
1662. Therefore they do not require to turn cattle on the Common? No.
1663. Therefore it is that there are not a greater number of cattle on the Common than you have mentioned? I could not say the number of cattle there are on the Common.
1664. *By Mr. Lackey*: Do you find it a very expensive mode of bringing fruit to market by the steamers? I find very little difference; there is a little difference, but not much, between coming by the steamer and coming by the road. I pay so much a case for bringing the fruit by the steamer, but if I take my horse into Sydney, the expense of tolls, and of putting up my horse amounts to nearly the same.
1665. You say you use the Common now for grazing purposes, and for getting timber for fencing? Yes.
1666. What do you usually fence with about Kissing Point—ironbark, box —? Black butt; anything that will split.
1667. Is that timber to be got on the Common now? It is not very plentiful.
1668. Can you always get what you require for repairing or putting up new fences? Yes; the Common is in a better state now that trustees are appointed—there is more order.
1669. The timber is preserved? Yes.
1670. Have you the use of the Common for grazing purposes? Yes.
1671. What stock have you upon it? About six.
1672. How far are you from the Common? Just adjoining the Common; the Government road is between me and the Common; I am within three hundred yards of the Common.
1673. Do you think if these bridges were erected across Parramatta River and Iron Cove, you would always go with your horse and cart to market, or would you continue to go by the steamer? It would depend upon the distance. I think the bridge would do good, but it would be a greater disadvantage to me to lose the Common than it would be an advantage to have the bridge. I should like to have both the bridge and the Common.
1674. *By the Chairman*: Do you know much of the Common? I know it perfectly well; I have been about the Common for the last five or six and twenty years.
1675. Could you form any idea of the proportion of good land there? I could not tell exactly; I should think 500 or 600 acres would include all.
1676. Could you form an idea of the value of that land? I gave £6 10s. an acre for my land, which is next to the Common.
1677. How long was that ago? Seven or eight years ago.
1678. Is that as good as any land on the Common? I should think so.
1679. What do you think the remaining portion of the Common is worth per acre? It appears to me to be almost useless; it is barren, rocky ground, gullies, and so on, which could not be cultivated at all. What is good is fit for growing fruit trees.
1680. You could not form any idea of the probable value of it? Of course it could not be cultivated, and as to going to build upon it, it seems to me a barren, wilderness-like place for anyone to go to live in, for it is by no means pleasant in those gullies.
1681. You could not put any value upon it? Not upon some of it—I do not see that it has any value at all—no doubt the good land would sell.
1682. Do you think it would average £2 an acre after you had taken these 500 or 600 acres of good land out of it? No, I really do not.
1683. Do you think it would bring £1 an acre? What effect a bridge would have upon it it is hard to tell, but I do not think that in the present state of things there would be a demand for it, as the times are rather dull.
1684. I suppose you would not give £1 an acre for some of it? I would not have it at all, that is to say upon condition that I should try to cultivate it.
1685. This land you bought at £6.10s. an acre, was it cleared? No, it was bush.
1686. In its natural state, the same as the Common? Yes.
1687. *By Dr. Lang*: You do not know what would be the effect of constructing bridges across the river, in the way of enhancing the value of land there? No, I do not.
1688. *By the Chairman*: You cannot see sufficiently far into futurity to form an opinion? No, I cannot.

Mr. James Bellemly called in and examined :—

- Mr. James Bellemly.
15 July, 1862.
1689. *By the Chairman*: You are a landholder in the Field of Mars district? I believe I am.
1690. What number of acres do you hold? 860 acres.
1691. I believe you have purchased a large quantity of land of late years? Yes.
1692. When? About six years ago.
1693. If it is a fair question, how much may you have given an acre for it? I gave Mr. Thorne £900 for 640 acres. A small portion of the Common, which was cut off, was sold some time since by the Government, and I bought a piece of it at £10 an acre; but it was very valuable land, and there was great opposition, and we ran one another at the sale.
1694. Where is this land? It is bounded by the Common on the north side.
1695. Is it good land? Very fair land; a good portion of it is good land. Mr. Thorne had an opportunity of picking his land anywhere where he could get it; it was surveyed for him.
1696. You are one of the trustees of the Field of Mars? I am.
1697. Were you appointed by the Government, or chosen by the people? Chosen by the people, and afterwards confirmed by the Government.

On motion of Mr. Lucas, the Chairman vacated the Chair, and Dr. Lang having taken it,—

Isaac Shepherd, Esq., M.P., was examined :—

- I. Shepherd, Esq., M.P.
1698. *By the Chairman*: Have you a copy of the original grant? I have.
1699. Will you produce it? (*The witness produced the same. Vide Appendix.*)
1700. Have you also the grant of which this copy is a transcript? Yes; this is the original grant. (*The witness produced the same.*)
1701. Of which that just handed in by you is a true copy? Yes.
1702. *By Mr. Lucas*: It is a grant from the Crown? Yes, "To the Reverend George Edward Turner, Duncan Mackellar, and James Devlin, and their successors, of the same lands, to hold the same for the benefit of the said settlers, cultivators, and other inhabitants, to the end that the said lands may be vested and held according to the intent and meaning thereof."
1703. You are one of the trustees of the Common? Yes.
1704. The trustees are chosen by the people? They are elected by the people.
1705. Then, in virtue of your office, the trustees hold the grant of the Common? I hold the grant of the Common, a copy of which I have handed in, by virtue of my trusteeship.
1706. There is a clause in the Act by which the people have the right of electing trustees of the Common? Yes. (*The witness read the first clause, 11 Victoria, No. 31.*)
1707. Have the trustees made by-laws? Yes.
1708. Do you hand in a copy of those by-laws? Yes. (*The witness handed in the same.*)

Dr. Lang having vacated the Chair, it was resumed by I. Shepherd, Esq.

Mr. James Bellemly further examined :—

- Mr. James Bellemly.
1709. *By the Chairman*: Are you aware whether any persons have filed objections against the apportionment made by the trustees? No.
1710. They have not? No.
1711. Are you aware whether many persons take advantage of their right of commonage? They do.
1712. In what way? In coming and getting orders to cut timber for fences and for building houses, and also for pasturage for their cattle.
1713. And cutting firewood, I suppose? Yes, for their own use.
1714. Then you consider that the Common is a very considerable benefit to the people in that way? I do; I do not know what a great many would do without it—those who have nothing but cleared land.
1715. Do you know the Common? I do, well; I was born in the vicinity of the Common.
1716. I believe the trustees have had the Common surveyed? They have, and I was with the surveyor at the time he made the survey.
1717. You went round with the surveyor? I did, when he was measuring it, and I went afterwards in company with yourself and Mr. Drinkwater.
1718. You have been through the Common in various ways? Yes, times and times.
1719. What description of land is the greater portion of it? Very inferior.
1720. What number of acres, in your opinion, is fit for cultivation? Well, I believe if it were all collected together, every spot of it, it would not exceed 500 or 600 acres that would be fit for any kind of cultivation. There are barriers of rocks, gullies, and scrubby land.
1721. Is the average quality of the Common land similar to the average quality of the land outside the Common in the adjoining district? It is not.
1722. Is it superior or inferior? Inferior—much so. I believe that the greater portion of the land that was good having been given away, this land was granted as a Common because it was no good. That is my impression of the matter.
1723. What do you consider the Common land worth an acre? I do not think anyone would purchase the whole of it.
1724. You say you bought 640 acres of land adjoining the Common for £900? Yes.
1725. Do you consider that that portion of the Common that could be made available for Common purposes would realize as high a price? I do not think it would, for the value of land has altered much since then. A great deal of land at Parramatta has been thrown into the market, and that has reduced the price a good deal.

1726. Are you aware what is the upset price of Crown land in the Domain, Parramatta? The last advertisement was £2 an acre.
1727. How near is that to Parramatta? Within a mile.
1728. Do you not consider that that portion of the Common not adapted for agriculture could be made available for building purposes? A great part of it is mere scrub or rock, and there is no view from it; it is all back land, except a little bit on the Lane Cove River.
1729. You consider that the Common is so situated as not to be desirable for building sites? I do. There is a small portion of the Lane Cove River where a person who had plenty of money might buy an allotment to live upon, but the greater part is not fit for that.
1730. As a trustee, are you willing to give up your trusteeship? I am not.
1731. You will not consent to abandon the Common? I will not.
1732. Nor as a commoner? No, nor as a commoner.
1733. Are you aware whether there are many commoners who are not willing to give up the Common? I think the whole of those who are on our side object to give up their rights—they all signed a petition against it, with the exception of one or two.
1734. Are those persons large producers? They are generally very large fruit growers; they nearly all live on the produce of their orchards.
1735. Would not the bridging of the Parramatta River at Five Dock and Iron Cove be a great advantage to the people in your neighbourhood? Not at all.
1736. Would they not take advantage of the bridges, and bring their produce by that road to Sydney? I do not think they would; I have heard a great many say they would not.
1737. How do they generally convey their produce to market? Some take it to Parramatta and send it by the steamboat, others by train, whichever mode suits them best, and when fruit is not very plentiful they sometimes take it by the road; but they do not like taking it by the road, on account of the expense of tolls and horse keep in Sydney; they find it cheaper to send by train or by steamer.
1738. Are there sailing boats for the conveyance of fruit, as well as the steamer? Yes, there are sailing boats which take oranges and fruit, packed, to be sent to Melbourne.
1739. Do you find any difficulty in the conveyance of your produce to Sydney? Not at all.
1740. Do you consider that the bridging of the Parramatta River would tend to open up the country beyond your neighbourhood? I do not see how it would. There is a barrier of rocks between our district and the back country that I consider would stop the communication.
1741. Supposing it were a more direct way to Sydney, would that induce the people to go that way? I should say for myself, I do not think it would.
1742. Then you consider that the bridging over the Parramatta River would not tend to open up the country beyond your neighbourhood? I think it would not.
1743. Is there any Crown land lying in that neighbourhood between the Common and the Hawkesbury that could be made available for agriculture? None whatever—it is only rocks. Some allotments were surveyed some years ago for some sawyers, but they only wanted to get the timber off it, and when they had done so they gave it up. All the land worth anything has been taken up in farms; all the rest is nothing but scrub and rocks.
1744. Do you know the country there? I know the country well between the river and Pennant Hills; I was the first man who marked out the road to Peal's punt.
1745. From your own knowledge, can you say there is no land in that locality of any value that would be opened up by these bridges? I am quite sure that from Pennant Hills to Dural and South Colo there is no vacant land to be sold fit for cultivation.
1746. Therefore, if these bridges were to be erected they would open up no Crown land? No Crown land except rocks. In fact, the greater portion of the land between Wiseman's Ferry and Windsor is rock.
1747. Do you know the district of Colo? I do, well.
1748. From there down to Pittwater? I do.
1749. And to the Hawkesbury River? I do, all round; I know it well.
1750. Is there a direct road from Colo to Sydney by St. Leonards? There is.
1751. Do you imagine, in the event of these bridges being built, any of the inhabitants of that part of the country would take advantage of the road by the bridges? I think not, because there is a barrier of rocks between them, and they have a direct road now in progress, being made by the Government, to St. Leonards; and when they want to go round by Parramatta there is a direct road to Parramatta.
1752. Then you think even if this proposed road were made, that the residents at Pennant Hills, Castle Hill, and Dural, would not be disposed to take this road to Sydney? I should think not.
1753. Are you aware that Mr. Langley visited the Common? I am; I was with him.
1754. Did you pilot him over any part of the Common? I did. He requested me, one day when I was in Sydney, to show him my boundary line along the side of the Common. I said if he would come up I would do so. He came up next morning, on horseback, and I walked with him to the west end of the Common boundary line, and took him along my boundary line to where the ground got rough. He said he would not go farther, the ground was too rough, and I then directed him to the road that goes direct to Kissing Point.
1755. Then he made no survey? He made no survey whatever.
1756. Could he from his visit ascertain the character of the Common? He did not go backwards and forwards over the Common; he just went along the boundary line, as I have said, and then returned by the North Road.
1757. It is your opinion that from merely casually riding along the boundary in that way he could not ascertain what the land of the Common was? It was impossible for him to ascertain it without riding backwards and forwards over it.

Mr. James
Bellemey.

15 July, 1862.

- Mr. James Bellew. 1758. *By Mr. Lackey*: You say you live near the Common? Not far from it.
1759. How far? About a mile, but I have land adjoining the Common.
1760. How far from the Common is the 640 acres you purchased? A mile and some chains is bounded by the Common.
1761. Do you consider that that part of your land which adjoins the Common is of a similar average quality to the Common land, or is it inferior or superior? It is better than the average of the Common.
1762. How long is it since you purchased that? Six years.
1763. That is the 640 acres for which you gave £900? Yes, and Mr. Thorne paid for the conveyance.
1764. You purchased that since the rise in the value of land—since the gold discovery? Yes.
1765. Has property increased in value in that neighbourhood since that time? No, it is much reduced.
1766. You bought a small portion at a higher figure? Yes.
1767. Is that near the Common? Not far from the Common; there is one small farm between it and the Common.
1768. Is it improved? No, it is a piece of the Common that was cut up and sold in small lots. A good many wanted it, as it was a very choice spot, and we ran very much one against the other, and as they ran me with that piece I ran others for the rest, and that made the whole bring a good price.
1769. How much was sold that day altogether? Nearly 500 acres; none brought so much as mine; there was some sold at the upset price.
1770. What was that? £2 an acre, but there were only two lots sold at the upset price.
1771. Have there been any land sales there since that time? Yes, there have been Government land sales and sales of private property too.
1772. What prices has land generally realized? The Government land not more than £1 an acre; it was inferior land, and was bought for the sake of the timber.
1773. Was that near the Common? Some of it was not very far from the Common; it was mere rock, but had some pretty good timber upon it.
1774. Do you use the Common? I have not used the Common much, for I have plenty of land of my own, as much as I require for my stock; and I cut timber off my own land.
1775. Still the Common is a convenience for poor people who have not land? Yes, for if that were taken away, many of the people would have no place to put a beast upon, or where to get a bit of timber. At present some people come from Kissing Point round by Mr. Forster's to the Common, to get timber for their use.
1776. Do you live on the farther side of the Common? Yes.
1777. What do you believe to be the character of the Common land all through? The character, to take it all through, is inferior; there is a little good land.
1778. About what quantity of good land? I think if you were to put it all together, it would not be more than 500 or 600 acres.
1779. And the remaining 5,500 acres—do you think that is likely to be purchased by persons residing in Sydney, for country residences? There might be a small portion, towards Hunter's Hill, but the remaining portion would not sell; in short, I should say there is half the Common that is rocky and mountainous, and could not be converted to any purpose but stone quarries.
1780. If these bridges were constructed, would it add considerably to the value of land in your neighbourhood? Not in our neighbourhood; it would be an advantage to Ryde, but Pennant Hills is so near to Parramatta by a direct road, and we would have a very bad road to go to Hunter's Hill.
1781. Are you aware that Mr. Langley sent in an estimate of what he considered to be the value of the Common? I think Mr. Langley told me himself that he estimated it at £6 an acre all through.
1782. Do you know whether Mr. Langley ever inspected it at any time besides that you have mentioned? Mr. Langley told me he had been inspecting it with Mr. Farnell on the Kissing Point side, and had given in a return, and that Captain McLean told him he must come back to inspect the Pennant Hills side, and then he called upon me.
1783. If these bridges were built, do you think it would be a convenience to yourself? I think it would not.
1784. You would prefer the old road, and come the other way? Yes.
1785. *By Dr. Lang*: If so much of the land as you state forming the Common is so bad, I am at a loss to see how it can be of value to the public in its present state? Its value is to those who have no place to turn a beast out but that. It is barren, brushy or rocky land. Bad land will grow the very best of timber, and it has been covered with capital timber, but the young timber is now growing up again. It is the only place where people can get wood from at present.
1786. Is there much good timber remaining? There is at our end of the Common. Mr. Langley saw some timber that my brother was splitting for posts and rails, and he got off his horse and examined it, and said he should have quite a different report to make as to the timber on our side from that he had made with respect to the timber on the Kissing Point side.
1787. Do you think the construction of the proposed bridges would enhance the value of the Common, in the event of its being sold? It might enhance the value of it at the lower end, but I do not see that it would increase the value in the upper part of it; for I believe, speaking within bounds, there is fully two-thirds of the Common that could not be made available for any purpose; it is so rocky, so mountainous, that when cattle go down to the creeks they can scarcely get up again.

1788. Is there any other improvement you could suggest, besides the construction of bridges, by which you think the inhabitants of the district would be benefited? I do not think they would be benefited by bridges, because we have very good communication by the roads now from Pennant Hills to Parramatta, and they are metalling the Great Northern Road at Castle Hill, and making a new road to St. Leonards. The road from the cross at the Pennant Hills Road, near the National School, to the water's edge at St. Leonards is only 17 miles wanting three chains, and it goes along a level ridge all the way.

Mr. James
Bellemey.

15 July, 1862.

1789. Are you of opinion that the construction of a steam punt at Kissing Point would much benefit the district? I think a steam punt where the present Bedlam Ferry is might benefit the district.

1790. Do you think it would do so more than the erection of the proposed bridges? Yes, I think it would be more beneficial in one way, because I do not think that the outlay on the bridge would be guaranteed by the population there—I think only the people about Kissing Point would be benefited by the bridges—those about Mr. Forster's would get no benefit at all.

1791. *By Mr. Stewart:* According to your belief, the people residing about the western portion of the Common would derive no benefit at all? Not at all; they would receive no benefit.

1792. The present commoners in the western portion of the district would receive no benefit at all, as they are nearer to Parramatta than they would be to the bridge? Yes.

1793. Then they would lose their rights, without gaining any benefit from the proposed bridges? Yes.

1794. You say you have been down to Peat's Ferry;—would the road from Peat's Ferry to Sydney be shortened by coming by the proposed bridges? Not at all.

1795. The road would not be shorter than the present road by St. Leonards? No; there is a barrier between Pennant Hills, South Colo and Kissing Point.

1796. Then the proposed bridges would not benefit that portion of the country lying near the Hawkesbury? Not at all.

1797. *By the Chairman:* I think you said there is no vacant Crown land that could be made available? Not one bit. I have been with the surveyors there for months measuring the ridges; they got me to go with them lest they should be lost. I got a grant of land for marking the road to Peat's; indeed I received two grants of land from the Government, for assisting the surveyors in that part of the country.

1798. Supposing a road were made leading up by Mr. Forster's, how near to Parramatta would you have to come in passing on that road? Within about four miles, to get on it by Mr. Forster's, from the train or steamer.

1799. And how far would you be from where they propose building this bridge over Parramatta River? I think it would be ten miles at the least.

1800. So that you have no doubt in your own mind as to the traffic going through Parramatta in preference to going that way? I have none.

1801. Then the out districts would have the advantage of going by St. Leonards? Yes, the people from South Colo and the upper part of our district would go that way when they had light loads; in fact many go that way now.

1802. There is no want of the means of transit at present? No.

1803. All that is necessary is a little additional outlay, for the purpose of metalling the roads? Yes; we have some metalled.

1804. You are not incorporated? No, our road is under the Parish Roads Act.

APPENDIX.

GRANT AND BY-LAWS, FIELD OF MARS COMMON.

COPY GRANT.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth.

To all to whom these presents shall come,—

Greeting:—

WHEREAS by a certain instrument bearing date on the eleventh day of August, in the year of our Lord one thousand eight hundred and four, under the Seal of the Territory of New South Wales, and under the hand of His Excellency Philip Gidley King, Esquire, then Captain General and Governor-in-Chief of the said Territory, the lands hereinafter particularly described were allotted as Common lands for the use of the settlers, cultivators, and other inhabitants of the district of the Field of Mars and Eastern Farms, in the County of Cumberland, in the Colony of New South Wales, being the lands hereinafter more particularly described and intended to be hereby granted, but such instrument is deemed insufficient in law for the purposes of securing and regulating the rights of Common intended to be thereby granted:

And whereas by a certain Act of the Governor and Legislative Council of New South Wales, passed in the eleventh year of the Reign of Her present Majesty, intituled "An Act to enable Trustees of Commons in New South Wales to have perpetual succession, and to empower them to regulate the use of such Lands as may be granted as Commons within the said Colony, and for other purposes relating thereto," certain provisions were made for the purposes in the Title to the said Act mentioned, and it is proposed and intended that a Grant of the hereinbefore-mentioned lands should be issued to the Reverend George Edward Turner, Duncan Mackellar, and James Devlin, and their successors, of the same lands, to hold the same for the benefit of the said settlers, cultivators, and other inhabitants, to the end that the said lands may be vested and held according to the intent and meaning thereof:

Now know ye, that in order to promote the interest and convenience of the settlers, cultivators, and other inhabitants holding lands within the said districts, and for the purpose of better securing and regulating the rights of Common intended to be granted hereby and by the hereinbefore recited instrument, we do give and grant unto the said Reverend George Edward Turner, Duncan Mackellar, and James Devlin, as Trustees of the Field of Mars Common, situated in the districts formerly known as the Field

Field of Mars and Eastern Farms, and their successors to be appointed as in and by the said Act is provided,—

All that piece or parcel of land situate in the County of Cumberland, parishes of South Colah, the Field of Mars, and Hunter's Hill, containing six thousand two hundred and thirty-five acres; bounded first by the north side line of Haynes thirty acres, in the parish of Hunter's Hill, commencing at a marked rock on Lane Cove River, being the north-east corner of the said thirty acres, and bearing south seventy-four degrees forty-five minutes west; then by the north side line of Everard's thirty acres, bearing west nineteen degrees forty-five minutes north; then by part of the east side line of Sarah Fields sixty acres, bearing north nineteen degrees forty-five minutes east; then by the north side line of the said sixty acres, bearing west nineteen degrees forty-five minutes north; then by part of the west side line of the said sixty acres, bearing south nineteen degrees forty-five minutes west; then by the north side line of Tyrrell's thirty acres, bearing west thirty-one degrees forty-five minutes north; then by part of the east side line of Raven's two hundred and eighty-five acres, bearing north thirty-one degrees forty-five minutes east; then by the north side lines of the grants to Raven, Morrison, Hatton, and by a part of the north side line of Lawrel's thirty acres, bearing west thirty-one degrees forty-five minutes north; then by the east side line of Small's thirty acres, bearing north thirty-one degrees forty-five minutes east; then by a part of the south side line of Brown's one hundred and fifty acres, bearing east thirty-one degrees forty-five minutes south; then by the east side line of Brown's one hundred and fifty acres, bearing north thirty-one degrees forty-five minutes east; then by a part of the south side line of Connor's one hundred and forty acres, bearing east thirty-one degrees forty-five minutes south; then by the east side line of Connor's one hundred and forty acres, bearing north thirty-one degrees forty-five minutes east; then by the north side lines of the grants to Connor's and Weaver's, bearing west thirty-one degrees forty-five minutes north; then by a part of the east side line of Kent's five hundred and seventy acres, bearing north thirty-one degrees forty-five minutes east; then by the north side line of the said five hundred and seventy acres, bearing west thirty-one degrees forty-five minutes north; then by the west side line of the said five hundred and seventy acres, bearing south thirty-one degrees forty-five minutes west; then by the north-east side line of Moore's grant, bearing north thirty-two degrees twenty minutes west; then by the north-west side line of Brabyn's two hundred acres, bearing west thirty-eight degrees ten minutes south; then by the north-west side line of Harding's twenty-five acres, bearing west twenty-four degrees ten minutes south; then by a reserved road of one chain's width, dividing it from the grants of Kent's one hundred and seventy acres and four hundred and sixty acres, bearing north twenty-four degrees ten minutes west to a creek; then by that creek bearing north and westerly (being the northern boundary of Kent's four hundred and sixty acres and some Crown land) to Rowland Hassall's one hundred acres; then by a part of the north-east side line of the said one hundred acres, bearing north twenty-one degrees west; then by a part of the south-east side line of Savage's two hundred and ninety acres, bearing east twenty-one degrees north; then by the north-east side lines of the grants to Savage Russell, and by a part of the north-east side line of Pincham's fifty acres, bearing north twenty-one degrees west; then by a line bearing east twenty-five degrees forty-five minutes south to the Lane Cove River; and then by that river bearing easterly and southerly to the aforesaid marked rock (advertised as number four in the Government Notice, dated the twenty-ninth day of August, one thousand eight hundred and forty-eight):

To have and to hold unto and to the use of the said Reverend George Edward Turner, Duncan Mackellar, and James Devlin, as such Trustees as aforesaid, and their successors as aforesaid, for ever, as a Common, to permit the use and benefit of the same to the settlers, cultivators, and other inhabitants for the time being of the said districts formerly known as the Field of Mars and Eastern Farms, under and subject to such regulations as may from time to time be made by the said Reverend George Edward Turner, Duncan Mackellar, and James Devlin, and their successors, by virtue of the provisions in the said recited Act contained, or of any other law or authority in that behalf enabling them:

Provided nevertheless, and we do hereby except and reserve unto us, our heirs, and successors, all such parts and so much of the said land as may hereafter be required for a public way or public ways, canals, or railroads in over and through the same, to be set out by our Governor for the time being of our said Territory, or some person by him authorized in that respect; and also all sand, clay, stone, gravel, indigenous timber, and all other materials, the natural produce of the said land, which may be required at any time or times hereafter by the Government of the Colony, for the construction and repair of any public ways, public works, bridges or canals, or for naval purposes or railroads, or any fences, embankments, dams, sewers, or drains necessary for the same, together with the right of taking and removing all such materials; and also all land within one hundred feet of high water mark on the sea coast, and on every creek, harbour, and inlet of the sea; and also all mines of gold and of silver, with full and free liberty and power to search for, dig, and take away the same, and also the right of full and free ingress, egress, and regress into, out of, and upon the said land, for the several purposes aforesaid:

And we do further reserve unto us, our heirs and successors, full power for us or them, or for the Governor for the time being of our said Territory, to resume and take possession of all or any part of the said land not hereinbefore reserved which may be required at any time or times for any public roads or works whatsoever:

And we also reserve unto us, our heirs and successors, and to the Governor for the time being of our said Territory, by such person or persons as shall be by them or him authorized in that behalf, full power to make and conduct through the said land all common or public drains and sewers which may be deemed expedient:

Provided always that if the trusts, conditions, reservations, and provisos herein contained, or any part thereof, be not duly observed and performed by the said Trustees and their successors, then the said land shall be forfeited and revert unto us, our heirs and successors; and these presents, and every matter and thing herein contained, shall cease and determine, and become absolutely void to all intents and purposes; and it shall be lawful for us, our heirs and successors, by our Governor for the time being of our said Territory, or some person by them or him authorized in that behalf, to re-enter upon and take possession of the said land or any part thereof, and the said Trustee or Trustees and their successors, and all occupiers thereof, therefrom wholly to remove.

In testimony whereof, we have caused this our Grant to be sealed with the Seal of our said Territory.

Witness our trusty and well-beloved Sir Charles Augustus Fitz Roy, Knight Companion of the Royal Hanoverian Guelphic Order, our Captain General and Governor-in-Chief of our said Territory and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this tenth day of November, in the thirteenth year of our Reign, and in the year of Our Lord one thousand eight hundred and forty-nine.

CHS. A. FITZ ROY. (L.S.)

Entered on record by me in Register of Grants, No. 105, pages 69 to 79, both inclusive, this fourteenth day of November, one thousand eight hundred and forty-nine.

E. DEAS THOMSON,
Colonial Secretary and Registrar.

Enrolled in the Registrar General's Office, Sydney, in Register of Grants, G. 2, pages 403 to 407 inclusive, this twenty-ninth day of December, 1849.

WILLM. CARTER,
Registrar General.

Entered in Register No. 6, of the County of Cumberland, No. 155, pages 88 to 91 inclusive, in the Surveyor General's Office, Sydney, 9th February, 1850.

HENRY HALLORAN.

In Equity.—Shepherd and others v. Turner and others.—8 November, 1852.

His Honor Mr. Justice Therry, in pronouncing judgment, declared the first, third, and fourth of the following Rules to be not in accordance with the Act of Council, and therefore void.

REGULATIONS for granting Leases and Licenses of the Field of Mars Common, under the Act of Council, 11th Victoria, No. 31 :—

1st. ~~A public meeting of the commoners having been held, in accordance with the 5th section of the above Act, at the School house, Ryde, on the 22nd day of October, 1850, it was assented to by a majority of the commoners assembled, that a portion of the Common not exceeding one fourth of the whole may be divided into lots of not more than fifty acres each; and further, that these lots may be leased for periods not exceeding seven (7) years in any case, on condition of clearing or otherwise improving the land as Common. For each of these lots an annual rental of five shillings will be charged, payable in advance to the Trustees of the said Common for the time being.~~

2nd. All persons having a right of commonage to the said Common will be allowed to cut timber for their own private uses, such as firewood, building materials, or fencing stuff. This timber is to be used only on lands and tenements conferring a commonage right, under a penalty of £5, payable to the Trustees as aforesaid.

3rd. ~~Licenses to cut timber for sale will be granted, for which the sum of £2 per annum will be charged, payable to the Trustees as aforesaid. These licenses are to be strictly personal, and will entitle no person but the actual holder to cut timber, neither will they be transferable.~~

4th. ~~Persons holding timber licenses will be restricted from cutting and removing any except dead standing timber and such as may have already fallen, under a penalty of £5, payable to the Trustees as aforesaid.~~

5th. All persons having a commonage right will be permitted to take bark for their own uses, on condition that the trees from which the bark is taken shall be removed from off the Common within fourteen days from the time of stripping. Any person infringing this Rule will be subject to a penalty of £10, payable to the Trustees as aforesaid.

6th. Persons having the privilege, or who hold licenses to cut timber, will be allowed to do so only on the lands in their own possession, or on such parts of the Common as may be unoccupied.

7th. All leases and licenses to commence at as early a period as possible after having received the approval of His Excellency the Governor to the foregoing Regulations, and the sums chargeable for the same must in every instance be paid in advance to the Trustees as aforesaid.

Trustees— { GEORGE E. TURNER,
 { JAMES DEVLIN.

Ryde, February, 1851.

RULES and REGULATIONS made this twenty-eighth day of July, 1857, by the Trustees for the time being of the Field of Mars and Hunter's Hill Common, under and by virtue of the Act of Council, Eleventh Victoria, No. 31.

WHEREAS by the said Act of Council the said Trustees are empowered to ascertain, determine, and declare by writing, under their hands and seals, from time to time, the number and description of cattle and other stock which the respective settlers, cultivators and other inhabitants, for whose use the said Common was granted by Her Majesty, by a Grant bearing date the tenth day of November, 1849, shall be entitled to depasture upon the said Common in right of their respective farms, lands, and houses: And whereas the said Trustees are by the same Act empowered to make Rules and Regulations for the better and more equal use and enjoyment of the said Common, and of the timber growing or being thereon, and of all other rights, and privileges, and easements incident thereto, by the persons having right of Common thereon: And whereas no such writing as is authorized by the said Act has yet been made: Now, therefore, with a view to properly making such writing, and also effectually carrying out the object of equal use and enjoyment referred to in the said Act, the following Rules and Regulations, seeming necessary and expedient to the said Trustees, are accordingly made by them, this twenty-eighth day of July, 1857 :—

1. Every person being entitled to and desirous of claiming any right of Common under the said grant, whether as settler, cultivator, or inhabitant, and being in possession of such right or claim at the time when these Rules and Regulations shall come into force by virtue of the said Act, shall, in or before the first week in November next, send a claim in writing to the said Trustees or any one of them, specifying therein the character in which such person so claims, the nature, extent, and locality of the land or other property in respect of which he or she claims any right of Common, and the number and description of cattle or other stock desired to be depastured by him or her on the said Common.

2. The Trustees for the time being shall, in the first week of January, April, July, and October in each and every year, ascertain, determine, and declare, by writing under their hands and seals, the number and description of cattle and other stock which the respective settlers, cultivators, and other inhabitants for whose use the said Common was so granted shall be entitled to depasture upon the said Common in right of their respective farms, lands, and houses: Provided that the first of such writings shall be made and declared in the first week of January, 1858.

3. Every person, not being a commoner, who shall in any manner whatsoever attempt to use or enjoy any right, privilege, or easement upon or from, or out of the said Common, shall be deemed a trespasser, and shall be liable for every such offence to a fine of (£10) ten pounds; and every commoner who shall in any respect, except his or her right as declared by any such duly deposited writing as aforesaid, or as otherwise possessed by him by virtue of the said Act, shall to the extent of any such excess be also deemed a trespasser, and shall be liable for every such offence to a fine of (£3) three pounds.

4. Towards enabling the Trustees to raise funds to defray costs incurred in the management and protection of the said Common, they shall be at liberty, from time to time, to sell and dispose of such dead or fallen timber as may be on the said Common, and which may not be required by persons entitled to the use and privilege of the said Common.

5. A General Meeting of the said Commoners shall be convened by the Trustees in every year, in the first week in January in every year, and at every such meeting the Trustees for the time being shall lay before the commoners present a full and correct debtor and creditor account in writing of all moneys respectively received and paid by them during the half year then past, and of all debts then due to or from them on account of the said Common, showing the balance, if any, in their hands, or the deficiency, if any, then existing; and also an estimate of the amount required for clearing off and discharging any such then existing deficiency or debt, if any, and for defraying the costs, charges, and expenses to which the said Trustees may be exposed during the then next ensuing year, in or about the maintaining or improving the said Common, or in protection of the rights of the said Common, over and above the amount received by the said Trustees, being the proceeds of sale of wood and rent for land leased, or any other proceeds of the said Common authorized by the said Act: And the commoners present at any such meeting, or at any adjournment thereof, or the majority of them, shall thereupon assess and fix a sufficient sum of money for such purposes, to be raised

raised and paid by way of rate by and amongst all the commoners proportionately to their respective rights of commonage: And all the said commoners, whether present or not at such meeting, shall be bound by such decision, and be liable and compellable to pay their respective proportions of the said rate: Provided that if no rate or no sufficient rate shall be resolved upon at any such meeting or some adjournment thereof duly convened by the said Trustees, by notice once published in the *Government Gazette* and twice advertised in some Sydney newspaper, the last such advertisement being not less than two nor more than four days previously to such meeting or adjourned meeting, the said Trustees shall have power to fix and declare a sufficient rate, for the purposes aforesaid, and to apportion, raise, and levy the same in like manner as aforesaid.

6. The Trustees, at any other time, either of their own accord may, or, upon requisition signed by five commoners at the least, shall convene, by like publication and advertisement, a Special General Meeting, for the purpose of discussing and resolving upon any question or the adoption of any measure, whether for raising any further necessary funds for any of the purposes aforesaid, or otherwise arising upon the said Act or any provision thereof, and the determination of the majority of any such General or Special General Meeting as aforesaid, if not inconsistent with or repugnant to any provision of the said Act, nor in violation of anything contained in the said Grant, shall be sufficient authority for the said Trustees: Provided that five commoners at the least be present thereat.

7. The commoners present at every such meeting shall choose their own Chairman, who shall not vote in the first instance, but in case of an equality of votes shall have a casting vote.

Trustees— { EDWD. DRINKWATER,
ISAAC SHEPHERD,
JAMES BELLEMY.

| MR. PIDDINGTON. | | |

ISAAC SHEPHERD, ESQ., IN THE CHAIR.

George Oakes, Esq., called in and examined:—

Geo. Oakes,
Esq.
18 July, 1862.

1805. *By the Chairman*: You are a landholder in the Field of Mars? I am.
1806. Your father was a trustee of the Field of Mars Common under the first grant, I believe? Yes, he was appointed in 1804, I believe.
1807. Your father having been one of the first trustees, you must naturally feel interested, I presume, in the Field of Mars Common? Yes, I feel a deep interest in the good of the district.
1808. Have you any knowledge of the character of the Common land? Generally speaking, it is very bad; some few portions of it are good.
1809. *By Mr. Cowper*: When you say bad, do you mean bad for agricultural purposes, or bad for any purpose? I mean bad for almost any purpose, but there are some patches of good.
1810. *By the Chairman*: It is not fit for building? I think any land is fit for building.
1811. But is its situation such as would induce people to build upon it? No.
1812. Then its situation is not such as to induce population to settle on it? I think not.
1813. *By Mr. Cowper*: It is not near enough to Sydney to have become of importance yet? No, there is so much land available nearer to Sydney.
1814. *By the Chairman*: You do not consider the soil suited to agriculture? No, except portions of it; there are a few patches, but generally speaking it is not.
1815. Do you think it desirable that the land should be alienated, and the proceeds derived from its sale appropriated to other purposes? I think not. There are two classes of persons interested in the Common—those in the upper part, who are generally speaking opposed to the alienation of the Common, and the others in the lower portion, who are, generally speaking, in favour of it.
1816. In point of fact, the persons interested in the Common are divided? Yes.
1817. One portion—that portion nearest to Sydney, I imagine—are in favour of bridging over Parramatta River, in order to give additional facilities of transit to Sydney; and the others, at the western end, who are opposed to it? They are opposed to it, generally speaking.
1818. Do you think it would be justifiable in the Legislature to pass a law to resume the Common? I think if the Legislature, in its wisdom, thought fit to take Hyde Park from the people it might be justifiable; but I think it has no more right to take the Common from the inhabitants of that district than it has to take Hyde Park from the citizens of Sydney.
1819. Would you consider, if a law were passed to that effect, that any portion of the proceeds of the sale of the Common should be appropriated to any other district than that to which the Common was set apart? Certainly not.
1820. For instance, supposing the Common were sold and a portion of the proceeds were devoted to building a bridge over Iron Cove, would that be desirable? I think not; I think it would be indirect opposition to the desire of a large portion—I believe a majority—of the commoners.
1821. Supposing the Common were sold, do you consider that the proceeds would amount to a sufficient sum to pay for the erection of bridges over Parramatta River and Iron Cove? No, nor a tenth part.
1822. Are you aware that a large number of commoners are opposed to the surrender of the Common? I am.

1823. Have you attended any meeting where they have expressed an opinion to that effect? Yes, I was present at a meeting called expressly to consider the question some few months back, and they passed this protest. (*Producing the same. Vide Appendix.*) At the time this protest was passed, it was understood by the commoners that the Government thought of bringing in a Bill for the purpose of taking the Common from them. They passed this protest, and wished me to hand it to the trustees to forward to the Government. It is signed by about ninety persons, but a great many more signatures could have been obtained. Geo. Oakes,
Esq.
18 July, 1862.
1824. *By Mr. Cooper:* What proportion of the commoners is included in that 90;—is it the larger portion, or are there many besides? A great many more; but I think nearly the whole of the commoners about the Pennant Hills district, the upper part of the district, are opposed to selling the Common—they think the bridge would be of no service to them.
1825. As I understood you, the sale of the Common would realize only a small proportion of the cost of bridges? I do not believe, to take the most favourable view, that the Common would realize £10,000; my own opinion is £6,000, if sold within the next year or two.
1826. *By the Chairman:* Have you any idea what the cost of these bridges would be? No, I cannot form any idea; I should think a very large sum of money; I am not competent to give an opinion upon that point.
1827. It has been alleged that the trustees have not carried out their trust;—have you heard any opinion given as to the way in which the trustees have carried out their trust? At the meeting where this protest was carried—I may say unanimously, except two who live on the other side of the district, Mr. Forster and Mr. Blaxland—there was a resolution passed stating that they were perfectly satisfied with the trustees, and with the way they had performed the duties entrusted to them.
1828. You do not consider that these bridges would materially benefit the inhabitants of the western portion of the Field of Mars Common? I think not, for this reason:—It is stated that the people in that district wish to bring their produce to Sydney, but that is not the case. The parties at Baulkham Hills and Pennant Hills, who grow fruit and oranges, take them to Parramatta, and they do not pack them until they arrive there. Buyers go up from Sydney to Parramatta, buy the fruit, and then pack it on the wharf; it is then put on board the steamer or sailing boats, and brought down to Sydney to be shipped to Melbourne. So that the growers never come into Sydney at all—they have no business in Sydney.
1829. You consider that it is more convenient for the grower to bring his fruit into Parramatta and to pack it there, than to bring it on to Sydney? Yes, they all state that they would sooner come to Parramatta than to Sydney, even if the bridges were made—it is so expensive to do anything in Sydney; besides, Parramatta is nearer home to them.
1830. Do you consider that the bridging of Parramatta River would materially benefit those persons residing between the Common and the northern district—for instance, the Hawkesbury River and the Hunter? I think not; I heard it stated that it would, but I cannot see how it would, for the Windsor people will have a tramway directly, and surely they will avail themselves of that.
1831. Is it likely that those resident in the Hunter River district would take advantage of it, and come across by Wiseman's? I think not; it is a wretched country to come through, and is a very bad road. I travelled over it some years ago, and it must be in a fearful state now.
1832. As a commoner, would you consent to surrender the Common? No, certainly not.
1833. Have you lately purchased land near Parramatta? I have, during this week.
1834. What might you have given an acre for it? £2 an acre—the upset price.
1835. Is £2 an acre the upset price for Crown lands there? Yes. I have purchased it as high as £10 an acre, but at this last sale I gave £2 an acre for it—it is quite as good land as the Common land.
1836. Has railway communication with Parramatta tended to benefit the town? It is a very great convenience to the people, but I do not think it has raised the value of land at all; it has tended rather otherwise, I think.
1837. Then you do not think that in every case facilities of communication tend to benefit land very materially? I think that where you have railway communication going farther into the interior beyond a township like Parramatta it rather injures it than otherwise.
1838. You consider that were these bridges to be erected it would not benefit materially the northern district so as to justify the outlay? I think not. It would be a great benefit to the people living about Hunter's Hill, but not to the commoners on the other side. I have thought carefully over it, and I believe that one portion of the commoners would derive a great benefit from it, but the others would derive none.
1839. I suppose you are aware that there are steamers and sailing boats which afford the means of passage to Sydney? Yes, they have one of the best highways in the world, the river, and water carriage if they like to avail themselves of it.
1840. *By Mr. Lackey:* You say you bought some land recently at Parramatta, at the upset price? Yes.
1841. That I imagine is not the average value? No. I stated that I had bought some at £10 an acre.
1842. Have you had any experience of sales of property in the vicinity of the Common lately? Yes; within the last twelve months my brother sold two farms, I think within half a mile of the Common, cleared and improved, to Mr. Smith.
1843. Do you recollect what was about the price? I think £8 or £8 10s.
1844. That is cleared land with improvements? Yes; the improvements were not much—I think a small house; the land is all cleared.

- Geo. Oakes, Esq.
18 July, 1862.
1845. *By the Chairman*: And enclosed? Yes, it is enclosed by a fence; it is not of much value, still it is enclosed.
1846. *By Mr. Lackey*: At what do you value an acre for the clearing of such land as the Common land? From £8 to £10—that is what I have paid.
1847. You have had a good deal of experience in agriculture, orange growing, working orchards, and matters of that kind? Yes.
1848. Would your experience lead you to form a favourable opinion of the Field of Mars Common for purposes such as those? Speaking generally, I think it is unsuited, but there are some portions of it good. I have not been over the whole; indeed, I believe there are some portions you could scarcely go over. From what I have seen of it, I should say there are small patches here and there that would suit for orchards.
1849. You think even for those, purchasers would not be induced to give more than what, in your estimation, is about the value of it? I think not.
1850. Have you any idea of the demand there would be for the Common land for building purposes, if these bridges were constructed, to give persons the opportunity of building villa residences, from the fact of its being contiguous to Sydney;—do you think the land would be in demand to any great extent? I think not; there is so much land available on the railway line for these purposes.
1851. I suppose suitable sites such as the land at Hunter's Hill are limited? Very much so—sites that parties would be likely to take up for residences.
1852. There would not be many of them? Very few; they would be found only about that part of the Common round Hunter's Hill.
1853. Do you think the commoners of the north-eastern and western side would avail themselves of these bridges if they were constructed? I think not. I have stated before that they now bring their produce into Parramatta, and pack it there and send it down by boats to Sydney.
1854. From your own knowledge of the two roads, do you think it likely, if you were living in a place like that, that you would use the new road in preference to the present mode of transit? I think not, as the people are most of them within five or six miles of the railway or steamers at Parramatta.
1855. *By Dr. Lang*: What quantity of stock could the Common sustain, do you think? Not a very large number. It is not fit for pasturage, speaking generally; some portions of it are good; it is not fit for the use for which it was given, that is, for grazing.
1856. It has not answered the purposes of its original destination? It has been of great service to the people, in supplying timber for fencing their farms, and for building purposes, and for firewood.
1857. Does it contain much valuable timber? Not much now; but there is a lot of very fine young timber that is now growing up, and I believe that if it were left for a few years it would be available.
1858. Do you think the timber will ever be allowed to come to maturity while that remains a Common? It depends upon the trustees; if the commoners have their fling it will not.
1859. Do you as a commoner personally derive any material benefit from the Common? I do not.
1860. Do you think there are any others who do? Yes; I have been among the commoners, and they state that they run their cattle on the Common, and get their timber for fencing and their firewood from it.
1861. I cannot reconcile—perhaps you can assist me in doing so—the fact that the Common is acknowledged by those who are unfavourable to the proposal for the erection of these bridges to be comparatively worthless, with their attaching a great value to it? I would state at once, that I for one am not opposed to the erection of bridges if the Legislature in its wisdom likes to pay the money for it, but I am opposed to the Common being taken for any such purposes. The people look upon the Common as being likely to be of more value hereafter; they think they have a right to the Common, and that their children after them ought to have the same right.
1862. Are not the interests of the inhabitants to the eastward very different from those of the people who reside on the north-western portion? Very different. I have stated already that I think the commoners are divided; the people on the eastern portion of the Common are generally in favour of selling the Common and of erecting the bridges, but the others, while they do not object to the bridges, are opposed to the sale of the Common.
1863. Could not the Common itself be divided? I have thought of that, but I doubt whether we could get the commoners to agree to it.
1864. *By the Chairman*: You are aware that there are a number of commoners at Kissing Point who are opposed to giving up the Common? Yes, there are several who signed this protest who reside in that neighbourhood, several of the Smalls, and others who reside in that immediate neighbourhood.
1865. Therefore, although the parties who have a Common right are divided, there are a large number of those residing in the district of Kissing Point who are opposed to parting with the Common? Yes, and I think you might find a few in the other district who might be favourable to the giving it up, but I do not know of any.
1866. Although the Common land does not answer all the purposes for which it was granted, that is for pasturage, still it is useful as enabling people to turn their cattle upon it? Yes, the people at Pennant Hills avail themselves. It is better as a winter run, for there is plenty of scrub, and the cattle will eat that in winter.
1867. It is useful as enabling them to obtain timber for building purposes and firewood? Yes.
1868. If the Common were alienated or disposed of, there might be some difficulty felt by the people in obtaining timber and building materials? There would be great difficulty—there is no other place where they could obtain it.

APPENDIX.

The following protest was adopted at a public meeting of commoners, at Mr. J. Smith's, Pennant Hills:—

We, the undersigned commoners of the Field of Mars Common, do most solemnly protest against the alienation of our rights to the said Common now so long enjoyed by us, and hereby request the trustees to forward this our protest to the Government, believing as we do that no Responsible Government would repudiate grants made to us and our children.

Mr. George Spurway called in and examined:—

1869. *By the Chairman*: I believe you are a landholder on the Field of Mars? Yes. Mr. George Spurway.
1870. You have a large orchard there? Yes. 18 July, 1862.
1871. I believe your orchard is considered one of the largest in the district? Yes, I believe it is.
1872. How do you convey your fruit to market? By water.
1873. Do you consider that water carriage is the best for fruit? Yes, by a great deal; you cannot carry ripe fruit to market in carts without injury to it.
1874. You send your fruit to market by sailing boats generally? I send by my own boat.
1875. How many cart-loads would a boat carry? It would depend upon whether you mean dray-loads or cart-loads, and also upon the tonnage of the boats—we can carry about eight cart-loads.
1876. What would be the difference of expense in carrying your goods to market by land and by water? More than half the difference.
1877. You consider that it is about half the expense to convey goods to market by water that it would be by land? No, it is not.
1878. *By Dr. Lang*: Where do you embark your goods? Pennant Hills; I live about a mile from that.
1879. *By the Chairman*: Supposing a bridge were built on the Parramatta River at Five Dock, could you send your goods by that way to market? No, not without there was a very good road.
1880. Do you think it is probable your neighbours would send by that means? I think not, for most of the people on the other side of me towards Pennant Hills go by the steamer.
1881. Where do they take their fruit to? Parramatta.
1882. Supposing you were not conveying your goods to market, but were shipping them, how would you send them? By boat, and send it alongside the vessel, that is the way we do. We send most of our fruit to Melbourne or Launceston, and have done for years.
1883. Do you consider that bridging over Parramatta River would at all benefit your part of the district? Not in the least. I do not mean to say that it would not be an advantage to the people about Ryde and Hunter's Hill.
1884. Are you aware whether the district of Hunter's Hill is a productive district, adapted to the growth of fruit? I have been there several times, and I never saw anything growing there but rocks. It might do very well for building purposes—it will not do for anything else.
1885. Your portion of the district is the producing portion? I think it is, if anyone will take the trouble to go and see it.
1886. Whereas about Hunter's Hill it is not productive? I do not see any production—there are a few fine cottages there.
1887. What quantity of land do you hold in the district? About 200 acres.
1888. Would you as a commoner be willing to give up your right of commonage? No.
1889. Do you consider it important to retain the Common, to supply the wants of the people of the district with timber, and the turning out of cattle? Timber is the only advantage to them; I think nothing of the grazing. The timber we want for fencing and making our little improvements.
1890. Having so large a plot of land of your own, you do not require the Common for the purpose of turning out your cattle? No, I do not consider the Common as anything for grazing; it is for the purpose of getting timber, stone, loam, or anything of that sort, I think it of value.
1891. Do you know the Common land? Very well; I have known it the last thirty years or more.
1892. Is the land on the Common of an average quality with the land of the district round? No, there is some very good land on the Common in patches, but where there is one good acre there are twenty that are no good at all.
1893. *By Dr. Lang*: What proportion may there be of good land? I should say from 1,000 to 1,500 acres that might be picked in patches, some of it very good land, not anything equal to the common average—1,500 acres would be the outside.
1894. *By the Chairman*: What is your opinion of the value of the Common? I should consider it worth not above £5,000.
1895. Do you think it would be possible to sell any large portion of it within a period of a few years? I do not think it would. There are certainly blocks of it that would sell readily enough, but the other nobody would buy.
1896. I believe you bought some land a few years ago—a portion of Mrs. Bobart's estate? Yes.
1897. That land was situated near Parramatta River? Close to the river.
1898. Do you consider that that is land similar to the Common land? Not at all.
- 117—L
- 1899.

- Mr. George Spurway. 1899. Is it inferior or superior? Quite superior to any of it.
1900. Is the situation of the Common at all to be compared with the land you purchased? No.
- 18 July, 1862. 1901. The Common, generally speaking, I believe, is back land? The highest land of any value at all is that by William Small's, close against Kissing Point.
1902. That is a considerable distance from the Parramatta River? Yes.
1903. Consequently there is no comparison between the land you bought and the Common land? Not the least, and my land is the dearest land that has been sold in that quarter—it fetched the highest price.
1904. That price was obtained in consequence of its situation—of its contiguity to Parramatta River? Yes, it was close to the river, and was cut up in small portions.
1905. Do you know the land that formerly belonged to Mr. Rutledge, that was purchased by Mr. Ross from Dr. Sherwin? Yes, I knew it when Mr. Rutledge bought it; it was some of Captain Kent's land.
1906. Can that land be considered as a fair criterion of Common land? No; there are no rocks on Mr. Ross' land, there is not a bit as bad as the Common, the other is quite barren.
1907. Are you aware whether any great improvements were made at the time Mr. Ross bought it? The biggest part of it was cleared, a house was built on it and stable, the ground was trenched, there was an orchard, and the land was fenced.
1908. Consequently the price given for that land could not be considered as any criterion of the value of the Common land? Not at all, and he bought it at a very high price too.
1909. You consider the retention of the Common as a very great benefit to the district around, inasmuch as it will supply the people with timber? Not at the present time, but what will their children do when they have not a bit of ground from which to get a stick of timber to build a hut, or a bit of firewood?—In a very short time all the wood in the district will be gone.
1910. In the event of their not having any other place for pasturage, it will do to turn their cattle upon? Yes; in fact I have given more for the property I have bought, on account of the Common right, than I should otherwise have given.
1911. You consider that the Common right induces people to give a higher price for land in the neighbourhood? Yes.
1912. You would not under any circumstances consent to relinquish your right to the Common? No.
1913. Have you attended any meetings where there has been any expression of opinion upon this matter? This is the first place I have been in about it. I have signed petitions.
1914. In favour of the resumption, or against the resumption? For keeping it.
1915. Are the Committee to understand that you consider water carriage for your fruit very superior to any land carriage you can have? I do; if there were a bridge there to-morrow I should not use it.
1916. It is better in an economical point of view, and it also conveys your fruit in a better state to market? Yes.
1917. *By Mr. Piddington*: Where is your land situated? In the Field of Mars.
1918. What portion of it? Attached to the post office—between that and Mr. Forster's.
1919. Are you disposed to think that a bridge built over the Parramatta River, and another over Iron Cove, would not be beneficial to the district of the Field of Mars? I do not think it would to people on the other side.
1920. Are you disposed to think that if the bridges were built, the people in the Field of Mars would not use them? I do not think they would.
1921. How far is it from where you live, by the road, to Sydney? To come over by the punt, or to go round by Parramatta?
1922. To come over by the punt? About 14 miles.
1923. How far would it be if the proposed bridge were constructed over Parramatta River and another over Iron Cove? It would cut off something between the punt and Sydney, but I do not know where it would come to.
1924. Supposing a bridge were built over the Parramatta River at Five Dock, and another over Iron Cove, how near would those proposed bridges bring Sydney, as compared with the road by which you now travel? I think it would cut three miles off; for it is rather farther from my place to Five Dock than it is to the punt; all the saving would be on this side, from Five Dock to Sydney.
1925. What would be the entire saving of distance? I do not think it would be above three miles from where I live—we are just three miles from Parramatta.
1926. Then from where Mr. Forster lives to Sydney, there would be a saving of not more than three miles? I think not, but I do not know the distance.
1927. Then you do not know whether the saving would be three or five miles? I could not say, but I do not believe it would be five.
1928. You do not know? I could not say.
1929. *By the Chairman*: The only saving would be between the bridge and Sydney? That is what I say, because it is farther to Five Dock than it is to the punt.
1930. *By Mr. Piddington*: You have no reason to doubt that there would be a saving of distance? I believe there would be a saving of distance.
1931. Are you of opinion that the present system of crossing the river by the punt is to be compared, in point of convenience, with the advantage these bridges would afford the public? I think bridges would be more advantage, but I think the toll would be higher.
1932. Supposing the tolls were light, or that there were no tolls whatever? There must be four tolls.

1933. How do you know there must be? By what I have heard. There will be four bridges—
one across the Parramatta River, one across Iron Cove, and the Glebe Island and Pyrmont
Bridges. Mr. George
Spurway.
1934. I want to know how you are acquainted with the circumstance that there must be
tolls over the four bridges? I suppose there must be. 18 July, 1862.
1935. *By the Chairman:* You take it for granted that there must be tolls over the two
bridges? Yes.
1936. *By Mr. Piddington:* But you know nothing about whether there would be or not?
I cannot say.
1937. Suppose there were to be no tolls, would the bridges then confer any advantage on
the people of the district? I do not consider that they would confer any advantage upon
me, for I have got the river to convey my goods to market, and that is the best and cheapest
way.
1938. Have you no communication with Sydney except when you send your goods there?
If we do we come by our drays.
1939. Do you consider that it would be no advantage to save three miles in coming to Sydney?
It would be an advantage if it were not for the tolls.
1940. Then you are alarmed at the prospect of having to pay tolls? Yes.
1941. But supposing there are no tolls to pay? I should say then that it would be a benefit.
1942. Are the people of the Field of Mars enabled to obtain medical aid with ease whenever
they want it? Yes, from Parramatta—that is three miles off.
1943. Is it not the fact, as a general rule, that the best medical aid is to be obtained in
Sydney? No, I do not think it is; people have generally got their family doctor, and they
think him the best.
1944. Do you think if these bridges were built there would not be a considerable influx of
population into the district? I do not think there would.
1945. Are you of opinion that facility of communication is likely to discourage population?
No, I should say not.
1946. Should you think it likely to encourage it? I should think it likely to encourage it.
1947. Then what leads you to suppose there would not be an increase of population if
these bridges were built? I do not see what there is to lead people to come into that quarter
for.
1948. Is it not a very delightful district, in point of situation? The most delightful parts
are in private hands already, and people cannot come unless they can get places to live upon.
1949. Do you think the district of the Field of Mars is so peculiar that, as it is in the hands
of private persons, people would not be disposed to sell portions? Very little.
1950. Is there a plentiful supply of fencing timber upon the Common? There is some very
good yet.
1951. What other use is the Common? If we want firewood, or a load of loam, or stone,
we can get it.
1952. Of what other use is it to you? I cannot say.
1953. Do you use it for grazing purposes? I never do; I do not turn a head of cattle on it.
1954. How much fencing stuff have you got off it during the last twelve months? None
within the last twelve months, but I have got a great deal off it before.
1955. Extend the time back to the last two or three years? I dare say I have got £100
worth off it, say within the last five years.
1956. How do you estimate the value of the fencing? By the fencing I got.
1957. Do you pay nothing for labour—does the fencing come to you without any assistance
from yourself? No, I draw it myself.
1958. Do you find it already split? No, I pay for that, as I would have to do if I got it
anywhere else.
1959. Was the £100 the total value of the fencing you allude to? No, I consider that it
was a saving to me of £100, by not having a great distance to draw it and not having to
pay for the timber.
1960. Do you mean that it was a clear advantage of £100 to you? I should think it was.
1961. Is that the reason why you think the Common ought not to be sold? I think it ought
not to be sold; I do not see what right —
1962. I ask you whether the advantages you derive is the reason you think the Common
ought not to be sold? Yes, that is my reason.
1963. Do you not think if these bridges were built, that a great portion of the Common
might be sold as sites for houses and villas? I do not think it a right thing to sell the
Common at all—no doubt it might be sold.
1964. I said before, I do not ask you what you think is right—I ask you whether if these
bridges were built you are of opinion that the Common would not be sold as sites for
houses? Yes, what is good would be, but what are you going to do with the rest of the
land?
1965. Of what value do you think the land would be for building sites after these bridges
were built? I do not consider the Common worth more than £5,000.
1966. You do not think it would bring more than £1 an acre, if sold in small allotments
after the bridges were built? You may sell a thousand acres for that, but what would
you do with the other?
1967. After the bridges were built you do not think it would realize more than £1 an acre
if sold in small lots? I cannot say; I dare say it might fetch more, but there are hundreds
of acres no one would buy.
1968. I am asking you whether, if bridges were built and the land were sold in small
allotments, it would not realize more than £1 an acre? It might.

- Mr. George Spurway.
18 July, 1862.
1969. Do you think it would bring £5? No.
1970. *By Mr. Lucas*: Do you think it would bring £2? No, I do not.
1971. *By Mr. Fiddington*: How far is your land from the Common? I have some very close—within half a mile.
1972. Is that purchased land? Yes.
1973. When did you purchase it? Some not above eighteen months ago.
1974. How much did you give an acre for that? £6.
1975. Do you know Dr. Campbell's land? At Bedlam Point?—Yes.
1976. Do you know that portion that abuts on the Gladesville Road, in front of Face's paddock, nearly opposite Dr. Brereton's—I allude to that portion recently purchased from the Archbishop of Sydney? I have known that land for years.
1977. How far is that from the Common? No great distance.
1978. Does not the Common immediately adjoin it at the back? I think it does.
1979. Is that land that Dr. Campbell bought very superior to the land that immediately adjoins it? No, I do not see that it is.
1980. Are you aware what Dr. Campbell gave an acre for that land? No, I am not.
1981. If he gave £25 an acre for it —? If he did he gave three times the value of it.
1982. If he gave £25 an acre for this land immediately adjoining the Common, what reason have you for supposing that that Common land would not bring as much? Because there is nothing but rocks for hundreds of acres in spots.
1983. Do you know the paddock rented by Face, which is part of the Common, at the back of Dr. Campbell's? I know most of the ground there. That was Mr. Farnell's.
1984. You do not know this land rented by Face, which is part of the Common? No.
1985. Do you know the Gladesville Estate? Yes.
1986. Do you know that part of it which was called the Flagstaff? Yes.
1987. How far is that part of the Gladesville Estate from the nearest part of the Common, in a direct line? I should think it is not more than from half a mile to a mile; I cannot exactly say.
1988. I am only asking you as far as you can? I cannot tell where the boundary line is. I think it comes near the Parramatta River.
1989. As far as you can recollect, the Gladesville Estate is within half a mile of the Common? From half a mile to a mile.
1990. Do you know what that portion of the Gladesville Estate brought at that particular spot? Not exactly. I know it sold at a high price; but it was never the value of it; it would not fetch it now. I should say it was not half the value.
1991. What is the test of value, in your opinion, except what land will bring at auction? If it were sold now it would not fetch it.
1992. I ask you what is your idea of value? Spots near the river will always fetch more than what lies back.
1993. Notwithstanding this land being near the river, you say it was within half a mile of the Common? From half a mile to a mile.
1994. Within this short distance of from half a mile to a mile —? There is a great deal of difference between land on the river and land lying back.
1995. Do you mean to say that the land at the Flagstaff possesses a water frontage? I do not know.
1996. Does the back part of the Gladesville Estate possess a frontage to the Parramatta River? It cannot.
1997. Do you know what that land realized at public auction per acre? No.
1998. If it realized £60 an acre, do you think land within half a mile of that spot will not bring more than £1 an acre? It is no matter what it fetched. It might fetch £60 an acre, but it is not worth £10. People are not so easily sold now.
1999. You think they were more easily sold two or three years ago? Yes.
2000. What could you get for it now? You might get £10 an acre.
2001. Do you know whether any part of the Gladesville Estate could be purchased at £10 an acre? No, I do not know that there is any for sale; it is out of my way altogether.
2002. You do not know that any of it could be purchased for £50 an acre? I do not know that it is in the market.
2003. You do not know that it brought £60 an acre a few years ago? No; I know there were spots sold there very high.
2004. Do you know land in the immediate neighbourhood of the Common, belonging at one time to Mr. Ford? Very well.
2005. Do you recollect that land being sold a few years ago? Yes, I rented it for several years.
2006. You recollect it being sold by auction? Yes.
2007. What price did that land bring by auction? Some brought £20 an acre; but then it has never been paid for yet, and people are quite willing to give it up, after all the interest they have paid.
2008. Did it all bring £20 an acre? No, not half.
2009. What was the lowest price that any part brought at auction? After part was sold Mr. Ford offered the rest to myself at £7 per acre.
2010. What was the lowest price paid for any that was sold at auction? I do not recollect. I know some went very high in spots that were cut up in lots of five acres; but the greater part is not sold yet.
2011. Is there any portion of it sold? Some part was sold, but it has got back into his own hands, I believe. It has changed hands several times; it was sold on long credit.
2012. *By Mr. Lucas*: And the purchasers have forfeited their deposits? Yes, after building upon it.
- 2013.

2013. *By Mr. Piddington*: Are you sure that none was bought and paid for? I would not say.

Mr. George
Spurway.

2014. Was not a portion of it sold for £30 an acre? I believe five acres fetched that price, but that was with the improvements.

18 July, 1862

2015. All the land that belonged to Mr. Ford was not improved? No, but most of what was sold was.

2016. Was all that was sold improved? No, and it has not been touched since.

2017. What did that portion that was not improved bring? I think it brought £12 an acre. He wanted me to buy the whole of the land, and I offered £1,000 for it. After a part of it was sold he offered the rest to me for £7 an acre.

2018. That was the refuse of the estate? There was some of the best land in it.

2019. After selling some of it for £30 an acre, he offered you the rest for £7 an acre? Yes, he sold some for £30 an acre, but that was improved, and there was a large stone barn on it.

2020. You acknowledge that a portion of it that was unimproved brought £12 an acre? Yes.

2021. How far is that portion of unimproved land from the Common? Adjoining it.

2022. What reason, then, have you to suppose that the Common land adjoining would not realize £5 an acre? Because you cannot get a piece of any size for a farm.

2023. I am not talking of making farms, but of sites for houses? I ask you what you are to do with the rest of it?

2024. *By the Chairman*: Although this land of Mr. Ford's was knocked down at £12 an acre, the purchasers did not complete their bargains? No, they got eight years' credit, at eight per cent., and they never paid the interest.

2025. The interest was not paid, and the land has gone back to the original owner? Yes.

2026. Consequently there was no sale? No.

2027. *By Mr. Piddington*: I think you are mistaken? I do not say the whole.

2028. Your statement does not apply to the whole? I think O'Brien holds a portion of it that was improved, and had an orange orchard upon it. He sold it to some doctor in Sydney, and he gave O'Brien three or four hundred pounds to get out of it.

2029. Have you bought any other land in the neighbourhood of the Common besides that for which you gave £6 an acre? I have some about half a mile from the Common.

2030. What might you have given for that land about a mile and a half from the Common? £10 an acre.

2031. Was it cleared land? It had been cleared, a deal of it, but not stumped.

2032. Was it such land as you could at once have put the plough into to plough it? No.

2033. It was bush land? Yes.

2034. The same as the Common land? Yes.

2035. Then you gave £10 an acre for land the same as the Common land, within a mile and a half of the Common? Yes, but in general it was better land than the Common.

2036. Is there any portion of the Common land as good as that for which you gave £10 an acre? Yes, that adjoining Mr. Ford's land is very good land—what is called the Five Hills; it is about the best land on the Common.

2037. Do you know that portion of the Common that adjoins the Hunter's Hill district? Yes, I have been round there; I could not go and point out exactly the spot.

2038. Do you know the new road that leads from Hunter's Hill to Ryde? I have never been along it since it has been opened.

2039. A portion of that road runs through the Common, does it not? I think it goes through Mr. Farnell's land.

2040. It also runs through the Common? It must be only a small portion then.

2041. Do you know that small portion? Yes.

2042. Is there no land suitable for gardens and villas in that neighbourhood? I say there may be small patches of five acres or so, but that is at the back part of the Common, where there is nothing to see.

2043. Do you know the value of land in the neighbourhood of Hunter's Hill for building purposes? No, I do not; I know some sold pretty high there.

2044. Is there any reason to suppose that people would not give as much for land in the neighbourhood of Hunter's Hill as they have given for other land? Yes, for they have bought all the frontage to the river.

2045. Is there no land that fronts the river? Very little.

2046. There is some? I think there is some by the Fig Tree.

2047. What reason have you to suppose that land fronting Laue Cove River would not bring as much as other land? I do not say that there are not little spots that would sell, but I am speaking of the average of the Common.

2048. You think that many lots of the Common would sell for more than £1 an acre? Some might, much more.

2049. You are quite sure that it would not bring more than £2? I am not sure that it would not.

2050. *By the Chairman*: I suppose you cannot look sufficiently far into futurity to say what it may bring twenty years hence? It would have brought more seven or eight years ago than it would now.

2051. *By Mr. Luckey*: You say you bring your fruit to market by water? Yes, by my own boat.

2052. Under any circumstances, if these bridges were erected next week, you would not avail yourself of them? No, for I bring my fruit by water.

2053. Do you think any of the inhabitants of the north-western portion of the Common, on the other side of you, would use these proposed bridges and road? No, I do not think they would.

2054.

- Mr. George Spurway.
18 July, 1862.
2054. You think they would still come by Parramatta in preference? They prefer the train and steamers; at present most of the oranges go to Parramatta to be packed, and they are then brought down by the steamers.
2055. You know the north-western extremity of the Common? I have been all over it.
2056. Do you know whether there is any land there fit for orange orchards or for cultivation as farms? There might be a little there, at the back of a person named Smith, but it is very stony, and is chiefly composed of gullies, and fit for nothing but building.
2057. Do you think, from its situation, it is such as would be sought for by persons desiring to build residences? Not at all, but there is stone in plenty.
2058. You do not use the Common for grazing purposes? No.
2059. Do you keep any stock? Yes, cattle and horses.
2060. Is the Common used by your neighbours for grazing purposes? Yes, I have seen plenty of cattle and horses there.
2061. Do cattle thrive well upon it? No; the only place where I have seen any feed upon it is adjoining Mr. Ford's, and I have seen very fine feed there—I should say for fifty or sixty acres.
2062. The cattle get enough to live on there? There is plenty of good water, and that is all. Certainly they do live off the scrub.
2063. You say you have got timber off the Common for fencing purposes? Yes.
2064. Is there any timber on the Common now for fencing purposes? There is very good timber, but it is hard to get it.
2065. Supposing you want timber for repairing your orchard or farm fencing, where do you get it? From the Common.
2066. And your neighbours do the same? Yes, we are compelled to do so; those who have got a little timber now take care of it.
2067. You say you get loam from the Common;—do you get it for the purpose of putting it round your trees, or for building purposes? For building purposes.
2068. I thought that on orange orchards light loam was applied instead of manure? I have known people who carted it off the Common to their orangeries, but I do not think it is now allowed by the trustees.
2069. Have you taken notice of any sales of property lately in the vicinity of the Common? Yes, I was offered land in the vicinity of the Common for less than £2 an acre.
2070. Unimproved land? Yes.
2071. Any fencing timber on it? Yes. It was Orme's land, and Curtis bought it at £1 17s. an acre.
2072. Do you think persons round there generally—those who have not boats—would not use this line of road if bridges were constructed? Round where I am they would not.
2073. *By Mr. Lucas:* You say some land was bought lately there for £1 17s. an acre? That is what I was told; it was offered to me at £2.
2074. And you refused to purchase it at that price? Yes.
2075. Is there much land on the Common better than that? There is some better.
2076. And some worse? Yes, plenty.
2077. How much good land do you think there is on the Common fit for cultivation? I should say from 1,000 to 1,500 acres—that would be the outside, but you would not get that in a piece.
2078. You say that you have lately given £6 an acre for land in the neighbourhood of the Common? Yes.
2079. Is there any in the Common superior to that? No.
2080. How much of the Common land should you say is equal to that? I should say 1,000 acres, but then it is not so near to the river.
2081. Then you think the 1,000 acres of land, which you say is equal to that for which you gave £5 an acre, would not bring so much because it is not so near to the river? No.
2082. What do you think this 1,000 acres would realize, supposing bridges were built and the land were sold in small lots six years hence? I have no doubt bridges would enhance the value of some parts of the Common.
2083. Do you think eight years hence, after the bridges are built, the land would bring £5 an acre? I do not think it would.
2084. I believe the whole of the land fronting Lane Cove River is very bad? I would speak as to that close to the river, but there is some there not so bad. There is a place called Buffalo Creek where there is some middling land.
2085. Supposing there were no tolls on the proposed bridges, you would still have to pay two tolls—a toll on Pyrmont and a toll on Glebe Island bridge? Yes.
2086. The land about the Flagstaff—is not that in a nice situation? It is one of the prime spots.
2087. That place was selected for the flagstaff because it is the highest land in the neighbourhood? Yes, and there is another spot just where I am that was used for the same purpose.
2088. To telegraph from Sydney to Parramatta? Yes.
2089. I believe you can see the Heads and the shipping come in from that spot? From our church we can see the Botany Heads very plainly.
2090. *By the Chairman:* Is there not a high road there leading to Bedlam Ferry? Yes.
2091. Do you consider that land abutting on a high road is worth more than back land? Yes, twice as much.
2092. It has been stated that the Common is the haunt of vagrants, runaway sailors, and the most abandoned prostitutes of Sydney? I never saw them there.
2093. Did you ever hear of anything of the kind? No.
2094. Do you believe it is the case? No, I do not.

Mr. James Stephenson called in and examined :—

2095. *By the Chairman*: Do you reside in the Field of Mars? I live on the Kissing Point Road.
2096. You have a large orchard? Yes.
2097. And produce a considerable quantity of fruit? Yes.
2098. How do you, generally speaking, convey your fruit to market? I mostly drive it to Pennant Hills wharf, and from there it is brought in boats to market; sometimes I sell it for shipping, and at other times I send it to the market in George-street.
2099. Do you prefer water carriage or land carriage for fruit? I prefer water carriage, as the cheapest and best; it is not a great way from my place to the wharf.
2100. Do you consider water conveyance the best for fruit? Yes, we always reckon that when we send down ripe fruit, it reaches the market in a more marketable condition when we send it by water than when we take it by land.
2101. Supposing bridges were built over Parramatta River and Iron Cove, do you think it likely you would take advantage of those bridges for the purpose of taking your produce to market? I do not think it would benefit me for that purpose, because it is a great drawback to a person coming to Sydney that there is no convenience for his horse and cart; I should always prefer going by water myself, for I can get my fruit drawn to the market from the wharf, and have no trouble with it.
2102. You can convey more by a boat than you can by a cart? Yes, I can go to market cheaper by that way.
2103. Do you think it is at all probable that these bridges would tend to improve your portion of the district? I do not think it would—the part I reside in.
2104. Do you think it will improve any portion of the district? Not that part, because the people can go either to Parramatta or to Pennant Hills wharf, or by the punt if they please; so that I do not see how it would benefit them.
2105. Is your part of the country the most productive portion of the district? It is a great part for growing fruit.
2106. Do you know the neighbourhood about Hunter's Hill? Yes.
2107. Is that a fruit-producing part? No, I should say not; I never saw any land that would produce it; it might answer for vineyards, but I do not think it would suit for fruit trees.
2108. How many acres of land do you hold? About seventy.
2109. As a commoner would you be willing to give up the Common? I do not think I have any right; I consider that I have only a life interest in the matter. I do not see that I have any right to debar those that come after me from the benefit; that is the reason I object to its being sold.
2110. You have a large family? Yes.
2111. You consider that the Common is given for them as well as for yourself? Yes, and I do not think it would be right to deprive the rising generation of the benefit of the Common.
2112. Do you know the Common land? I do, a good deal of it.
2113. What is the average quality of the land? Some is very good, and a deal is very bad, which I think could not be put to any purpose but for grazing and for timber.
2114. Have you been residing in the district a great many years? I have.
2115. How many years? Nearly forty.
2116. What do you consider to be the value of the Common, supposing the Common were sold now? It would be a very hard thing to put a value upon the Common; indeed I believe a great deal of the land, if it were brought into the market now, would not sell at all.
2117. You cannot form any idea of the probable value of the land, supposing it were sold either as a whole or in lots? If sold in allotments it would be likely to fetch more money, but as the Common stands now I do not see how, if people bought it, they could get out of it—there are no roads to it, and it is a road that makes land valuable.
2118. Is the Committee to understand you that you consider the Common to be back land having no frontage? I do not say that. I know there is some land there where there is a frontage to a road, but people would not buy the land as it is now.
2119. I imagine you do not profess to be able to look so far into futurity as to be able to say what the land may be worth ten or fifteen years hence? No, I would not form an idea, because it would be impossible.
2120. Do you know the land that formerly belonged to Mr. Rutledge, that was bought by Mr. Ross from Dr. Sherwin? Yes, I have been on the land when Dr. Sherwin was there.
2121. Was that land improved? Yes; there was a fine house, a coach-house, stabling, a large apple orchard that will one day be one of the finest in the district, and other improvements.
2122. The building, fencing, and clearing must have cost a large sum of money? Yes.
2123. Do you know what Mr. Ross gave for it? No, I do not know that I heard it; it must have cost a good sum, though it was put up in the cheap times. Certainly if a person had to put up such a house now it would cost him a good sum.
2124. Do you consider that the price that land brought is any criterion of the probable value of the Common? Of course not; that was cleared, there was a road frontage, and the roads made. It was quite a different situation altogether, and nearer to the township.
2125. Do you know Gladesville? I do.
2126. I believe there is a landing from the steamer there? Yes.
2127. It is also divided by a main road running past the Flagstaff to Bedlam Ferry and Ryde? Yes.
2128. Do you consider the circumstance of its abutting on Parramatta River and having a frontage to the road enhances the value of that land? Yes, it is so handy to the water-side.

Mr. James
Stephenson.

18 July, 1862.

- Mr. James Stephenson.
18 July, 1862.
2129. Then the price which that land might realize could be taken as no criterion of the value of Common land? No, I should say not. I know at the time that was sold people looked at the situation and the main road to the ferry; I think too it was cleared—some of it. I know that near the Flagstaff was cleared land.
2130. And the situation was adapted for building sites? Yes.
2131. Having resided in the district so long you should know if it is true, as has been stated, that the Common is a receptacle for bad characters, cattle stealers, disorderly people, and the most abandoned prostitutes of Sydney? I never heard of anything of the kind taking place.
2132. And you have been residing there forty years? Yes, at Parramatta and where I now reside.
2133. If it had been the case would you not have heard of it? Yes.
2134. *By Mr. Piddington*: When you send your fruit to Sydney do you always come yourself? No, I used to come when I was younger, but I do not now.
2135. Do you never come to Sydney yourself? I do sometimes.
2136. How do you come? Sometimes by steamer, sometimes across the punt.
2137. How far is it from your place of residence to Sydney, across the punt? I think somewhere about fourteen miles.
2138. If bridges were built, what would be the saving of distance to come from your place to Sydney by horse and cart? I should think two or three miles; I guess by the lay of the country; I used to go up and down by the boat, and I know the lay of the country, that we should save perhaps three or four miles.
2139. Do you not think the saving of three or four miles out of fourteen would be a considerable advantage? Well, it would if people would avail themselves of it and go by land, but it would not answer me, for there is the drawback that there is no convenience for a horse and cart in Sydney.
2140. I am not speaking of sending produce to Sydney, but of when you come to Sydney yourself? Yes, it would be an advantage for people to come to Sydney that way.
2141. Would not these bridges that would enable such a saving of distance to be made be a benefit to the children who may come after you? I dare say it would; if they wanted to come to Sydney they would be likely to come the nearest road.
2142. Then the bridges would benefit the rising generation if they were built? I dare say they would.
2143. Do you use the Common for grazing purposes? No, I have land of my own, and I get no benefit myself from the Common.
2144. Then the benefit you expect your children to derive from the Common is contingent upon whether they are in a different position from yourself? The view I take of it is this, that after all the people round about have cleared off their land, how are our children to get a bit of wood if they are deprived of the benefit of the Common?—I see nowhere but the Common for the rising generation to get a bit of fencing from.
2145. Do you know what the Common was granted for? I always understood it was for people to turn their cattle upon, and to get timber from for building and other purposes—not to be made a property of by anyone.
2146. Are not Commons usually set apart for the purpose of grazing? Not alone.
2147. Is not that the chief object of a Common? If a person had cattle he would naturally turn them on a Common if he had no land.
2148. Were you ever in England? Yes.
2149. Do you know anything of Commons in England? Yes.
2150. Were they not used for the purpose of grazing there? Yes.
2151. Is not that the chief purpose, to enable the inhabitants of a district who have not land to turn out their cattle? Yes.
2152. You do not use this Common for anything of the kind? No.
2153. Is the Common much used by the commoners for grazing? Yes.
2154. How many have you seen in one mob at a time? I cannot say.
2155. Have you seen a hundred? No, not in one drove.
2156. Have you seen twenty? I cannot say I have; they do not go in droves, as the feed is so scanty.
2157. How many horses have you seen in one mob on the Common? I have not seen more than four or five.
2158. Do you know how many cattle the commoners have a right to graze on the Common? No, I have no occasion to use it, so I have not looked into the law about that.
2159. You do not know how many cattle they are allowed by the trustees to graze, whether five hundred or five thousand? No, I never heard any account of that at all.
2160. You have never seen twenty head of cattle in a mob grazing upon the Common? I cannot say I have, for the feed is scanty.
2161. Is not the Common chiefly covered by young growth of timber? There is a good deal of old timber upon it.
2162. It is bush? It is bush, scrubby land, with a good deal of underwood.
2163. Not specially fitted for grazing? Not the way it is now, for the grass cannot grow for the bush.
2164. As grass will not grow on the Common, it is not of great advantage for grazing? I would not say that, for it is a great advantage for grazing, for I do not know what the people would do without it. There are little patches where they find something to pick; if that part were cleared it would make grazing land.
2165. I am speaking of the Common as it is now? There is very scanty feed there now.
2166. Do you believe that there are a great number of cattle there now? I think there are a good many.

217. What is the number you call a good many? I should say two or three hundred, from the little lots I have seen at different times. Mr. James Stephenson.
2168. How many horses? I could not tell—that is impossible.
2169. Do you know how many acres of land there are in the Common? I believe somewhere about 6,000. 18 July, 1862.
2170. How many of that 6,000 do you think could be sold for building houses? I could not say.
2171. Do you think three thousand of it, of the six, is such land as houses could be built upon? Some people like land where it is all rocks and stones.
2172. Do you think it likely half could be sold to build houses upon? I do not think it could.
2173. You do not think houses could be built upon it? They could be built, but I do not see that there is anything in the situation to attract people; they could not live on it—that is my meaning.
2174. They could not make a living out of the land? That is what I mean.
2175. Supposing people went there who did not want to make a living out of the land, what is to prevent their building houses there? They could build houses on half of it or more.
2176. Might not nearly all the land be used for building purposes? No, there are some rocks and gullies where they could not build.
2177. Out of the 6,000 acres do you think there are more than 1,000 that could not be built upon? I could not say, for I have seen people at Hunter's Hill build on the sides of rocks, and such places. A gentleman might like to build on the side of a rock perhaps.
2178. Are there not some very rocky places in the neighbourhood of Hunter's Hill built upon? Yes.
2179. Are there not some beautiful houses built upon these places? Yes.
2180. Why should not a similar class of persons build upon similar places on the Common? They might.
2181. How much of this do you think might be sold to that class gradually after the bridges were built? If it were cut up in allotments it would fetch a great deal more.
2182. I am speaking of its being cut up into allotments after these bridges were built? That would make a great deal of difference.
2183. Do you not think the class of persons who now build houses at Hunter's Hill would be likely to come on the Common and build there, if this land were for sale and the bridges were built? They might near Hunter's Hill, but I do not think they would like to go into the interior among the gullies.
2184. Some people are fond of seclusion, are they not? Yes, but I do not think they would like it among the gullies—it is so dismal there.
2185. It is a question of taste as to what is dismal, is it not? Yes.
2186. Some people live in the bush fifty miles from a neighbour? Yes, but that is from necessity, but a person selecting a place to live upon would have a little more taste.
2187. Is it not a healthy neighbourhood? Yes.
2188. Do you suffer from ill health? No; I have always said it is as healthy a part as any in the Colony.
2189. Do you not think it would be a great advantage to Sydney to be brought into easy communication with such a healthy part of the country? Yes, it would be an advantage to them if they could drive to it—if they had a bridge.
2190. Could they not build houses there? Yes, there would be no hindrance to that.
2191. Is it not the fact that a great many Sydney merchants have built houses in Burwood since the railway has been made? I dare say it may be; I do not know much of that part of the country.
2192. Have you ever been on the railway? I have been, once or twice.
2193. Do you think it improbable, if the bridges were built, that the people of Sydney would like to purchase land for building houses in the neighbourhood of Hunter's Hill or of the Flagstaff? It would induce them to buy land, for it would not be very distant from Sydney.
2194. If the population of the district were increased by bridges being built, would not that benefit the district generally? I think it would benefit the districts of Ryde and Kissing Point.
2195. You live some distance from Ryde? Yes.
2196. How far? Four miles.
2197. You would not be benefited so much as you would be if you lived at Ryde? No, for I have three advantages—I can go by Parramatta, by Pennant Hills wharf, or by the punt.
2198. From your farm, by Parramatta, what distance is it to Sydney? I should think eighteen miles.
2199. And what distance would it be, if these bridges were built, to go along the new road? I suppose I could go to Sydney then in eleven or twelve miles—eleven miles.
2200. Would not that be a saving, as compared with going round by Parramatta, of seven or eight miles? Yes, but I have no need to go round by Parramatta; supposing there were no other way than by Parramatta I would prefer going round by the bridges, and would save time and distance.
2201. *By the Chairman:* You have now steamers and sailing boats? Yes.
2202. *By Mr. Piddington:* I am speaking of roads, not of the steamer? If I were compelled to go round by Parramatta or to come by the bridges, I would come by the bridges.
2203. Do you think if these bridges were built it would tend to injure Parramatta? It would depend upon where the road opened to—if it opened out to the northern part of the country it might draw people that way.
2204. Where do you buy your supplies? At Parramatta.

- Mr. James Stephenson. 2205. If these bridges were built would you continue to buy your supplies in Parramatta? Yes, it answers for me best.
- 18 July, 1862. 2206. Then if these bridges were built it would not prevent your buying supplies from Parramatta? It would not make any difference to me.
2207. Would it make any difference to your neighbours? No.
2208. Then you acknowledge that the bridges would be an advantage to you if you wanted to come to Sydney by land? That it would be a saving of distance and time.
2209. You do not send your produce to Sydney because water conveyance is considered to be safer for fruit? It reaches the market in better condition, and I do not think it costs me so much.
2210. If the roads were made and the bridges constructed, would you come by the steamer yourself if you could come by the road? With regard to myself I could not say about that—it is so handy for me to come by the steamer—it is no distance from my farm to the wharf.
2211. If you wanted to call in a doctor from Sydney, would not the saving of distance be an advantage? Yes, but our people generally get a doctor from Parramatta.
2212. If you wanted to call in the assistance of a Sydney doctor, would not the saving of distance be an advantage? Yes, in case of life and death.
2213. People, I suppose, sometimes die in your district? Yes, but I think people out our way would not trouble their heads to go to Sydney when they could get a doctor at Parramatta.
2214. *By the Chairman*: Supposing these bridges were built, would you prefer to come to Sydney by this proposed road or by the steamer? That would depend upon whether it was more convenient; the steamer suits me better because I have no trouble with a horse.
2215. How long does it take you to come by the steamer to Sydney? About an hour and a quarter from the time I leave the wharf till I reach Sydney.
2216. How long would it take you to come by land? Two hours.

WEDNESDAY, 23 JULY, 1862.

Present:—

DR. LANG,

MR. SMART.

MR. PIDDINGTON,

ISAAC SHEPHERD, Esq., IN THE CHAIR.

Thomas Kendall Bowden, Esq., called in and examined:—

- T. K. Bowden, Esq. 2217. *By the Chairman*: You reside at Ryde, I believe? I do.
2218. You are a landholder there? I am.
2219. How much land do you possess? About 40 acres.
- 23 July, 1862. 2220. I believe you are in the habit of coming to Sydney frequently? I come to Sydney every day.
2221. By what means do you usually travel? By the steamer.
2222. Supposing Parramatta River and Iron Cove were bridged over, so as to shorten the distance to Sydney, would you still continue to travel by water instead of by land? The distance would not be so sufficiently shortened as to make the land road preferable. It is now about twelve miles, and I think, from my measurement of the plans I have had access to, that it would not be reduced to less than eight.
2223. Do you consider that travelling by water would be far more convenient to you than travelling by the proposed road? To persons coming up and down every day, as I do, there can be no comparison between the two modes. Travelling by water is much the cheapest and the most agreeable.
2224. Do you know the Field of Mars Common? I know some portions of it.
2225. What is your opinion of the character of the land, as far as you are acquainted with it? What I have seen is very inferior.
2226. Have you seen any considerable portion of it? I took a day's ride through it.
2227. Do you consider the situation of the Common to be such as to make it desirable for villa residences, as a place of resort for gentlemen from Sydney? In my opinion it is not; I think there is not any view from it that would induce people to build there, and I think its inaccessibility, whether we have a bridge or not, would render it undesirable for villa residences for persons who have to come into Sydney every day.
2228. What do you mean by its inaccessibility? If you took the road, supposing the approach to be by bridges, the distance would be about seven or eight miles.
2229. How far is the Common from the river—do you think it sufficiently contiguous to make it desirable as a place of residence? I do not know what the distance is from Gladesville or Hunter's Hill, but I think it is not less than a mile and a half or two miles, perhaps more.
2230. Are you aware that a portion of the Common is at a considerably greater distance than two miles? I believe it is nine miles in extent.
2231. Do you think if there were additional facilities for visiting the district by land it would induce a large population to settle down on the land? No doubt it would, but I do not think the Common would be preferred as the place on which they would settle.
2232. Is the land of the Common adapted for the settling down of a population, as regards its capability for agriculture? From what I have seen, I do not think the land could be made available, that is for a man to get his living from it; a portion of it might be used as building sites, but then comes the question of distance again.

2233. As a landholder there, are you willing to give up your right to the Common? No, I T.K. Bowden, am not. Esq.

2234. Are you not aware that in England, of late years, Parliament has passed several enclosure Acts doing away with Commons? I have looked through almost all that I could get at. ^{23 July, 1862.} The private enclosure Acts are not printed in the Statutes at large; but by the general enclosure Act and the private enclosure Acts, so far as I have seen them, the lands are enclosed for the purpose of allotment amongst the commoners. I have a short extract here which I think will show my meaning sufficiently. In the 3rd volume of Cruise's Digest there is this passage—"Commons have frequently in modern times been entirely enclosed and allotted to persons having rights of Common, in proportion to the number of cattle they have been entitled to put upon the Common, but this is usually effected by a private Act of Parliament." In the 5th volume of the same work, page 5, there is the following passage:—"Where parishes or Commons are agreed to be enclosed, a private Act is usually obtained for that purpose called an inclosure Act, of which there are a vast number. By these Acts commissioners are appointed to carry the intentions of the parties into execution, who are directed to allot and award to the parties in severalty such portions of land as are equivalent to their former portions of common fields or to their rights of Common"; and in all cases I find that has been the principle upon which Commons have been enclosed. The enclosure has never taken place without the consent of the lord of the manor or the person entitled to possession by purchase or otherwise, and the consent of two-thirds of the commoners, and then the enclosure has always been for the purpose of putting the land under cultivation. The Common has never been sold and the money appropriated to any public purposes, but the land has always been divided among the commoners in proportion to their rights.

2235. *By Mr. Piddington*: Do you know any cases in England where land has been granted by the Crown as it has been in the case of the Field of Mars Common? I believe there is no case in England similar. There is a difference between the Commons in England and here; but I take it to be this, that the rights to Commons in England have grown up in the course of ages, and are legal rights which have been acquired by certain persons over the lands of others.

2236. The quotation from Cruise's Digest does not affect the Field of Mars Common, inasmuch as the common lands in England never have been granted from the Crown? I take it it does, because by the 8th clause of the Commons Act here, it is enacted as follows:—"Persons entitled for the time being to the use of the Common as commoners thereon shall have all the same rights and remedies between themselves and against strangers as by the law of England are possessed and enjoyed by commoners on the waste lands of any manor." All persons whatsoever shall be subject to the same liabilities in relation to Commons in the Colony as if the same respectively were commoners in England." So that although Commons have not grown up slowly here as in England, the Legislature here, by this Act, has placed the Commons with reference to the commoners in exactly the same position.

2237. That is as between one commoner and another? Yes.

2238. That does not affect the right of the Parliament to legislate on the subject? In all the enclosure Acts I have seen, the rights of the commoners have been most strictly guarded.

2239. That is in cases where Commons have not been granted by the Crown but have grown up by prescription? There are no other.

2240. There is no case like this here? I take it that it is a stronger case here; the commoners have a more extensive interest in the Common here than commoners have in England, for there the right is acquired by time over the land of another, the fee simple remaining in the owner as formerly; here the land itself is vested in trustees upon trust for the commoner, so that the right here is much more full and comprehensive than in England.

2241. Whatever right the commoners here have by Act they possess in trust? No, they have the same right to the Common as you possess to your house.

2242. I do not possess my house in trust—do I possess my private property in trust? They possess the Common under a grant to trustees in trust for them, as property is frequently vested in trustees under a will.

2243. *By the Chairman*: You consider that the Field of Mars Common being held under a grant from the Crown, the commoners have a stronger case than the commoners of any Common in England? I do; I consider that the Crown having granted it, the Legislature would not resume it unless with the consent of the commoners themselves, for some such purpose as has been done in England. Any enclosure Act here must be analogous to an enclosure Act in England; if two-thirds of the commoners desired the Common to be enclosed for the purpose of agriculture, then an enclosure Act might be obtained, and the land divided and allotted among the commoners according to their interests; but there is no precedent for the alienation of a Common for the purpose of building a bridge or anything of that kind.

2244. In your opinion, there is no case on record of a Common having been diverted from its purpose but in order to be divided and brought into cultivation? I believe there is no such case.

2245. You consider that to sell the Field of Mars Common, and to appropriate the proceeds to the building of bridges, would be a violation of the grant? I believe the Legislature would not deal with it at all, except by a private Act, and then they would do it in a different capacity. They would not take it up in their legislative capacity only, but by a private Act, when the whole matter would be referred to a Select Committee. Their proceedings would be different in dealing with a case of this kind from what it would be in legislating upon a question affecting the public generally.

2246. Are you aware what amount the Pymont Bridge cost? I believe the first contract was £29,000; I drew the draft of it, but I am not quite sure whether I remember the figures correctly.

- T.K. Bowden, Esq. 2247. Was it completed for that sum? The Pyrmont Bridge alone was completed for something less, but the Pyrmont and Blackwattle Bridges and the approaches as they exist cost upwards of £70,000.
- 23 July, 1862. 2248. Are you aware whether the traffic over those bridges is sufficient to pay the interest upon the outlay? The traffic pays, I think, about three or four per cent. upon the whole outlay.
2249. It has been proposed to the Government that £40,000 should be raised for the purpose of bridging over the Parramatta River and Iron Cove, that to meet this expenditure they should issue debentures payable in ten, twenty, or thirty years, and that as security for the payment of these debentures the Field of Mars Common should be given up;—as you have some considerable business in the way of lending money, would you feel at liberty to take up these debentures on these conditions, taking the Field of Mars Common as security for the payment? That is a question I cannot well answer—it depends altogether upon what value would be attached to the Common. I have no doubt that if, upon proper inquiry, it appeared that it was sufficient security there would be no difficulty in obtaining a loan. If the Government were to issue the debentures upon their own security, I suppose they would be as readily saleable as any other debentures, but I am not aware of the value of the Common.
2250. From what you know of the Common, its situation, and the quality of the land upon it, would you consider it to be worth £40,000? Certainly not; I think parts might fetch £5, and the upper parts might fetch £1, £2, or £3 an acre. Some superior portions might bring more than £5.
2251. Therefore you would not consider the Common a good security to invest so large an amount of money in? I think the Common might bring £15,000 or £16,000.
2252. *By Mr. Piddington*: How long do you say the road from Ryde to Sydney is now, over the punt? Twelve miles.
2253. What would be the saving from Ryde to Sydney, in point of distance, if the two contemplated bridges were constructed? I do not think the saving would be more than four miles.
2254. That would be upwards of a third of the distance people have to travel now? Yes.
2255. What fare do you pay from Ryde to Sydney? 30s. a month—that is as cheap as from the Glebe.
2256. Do the steamers run every half or quarter of an hour? They make six trips a day, three up and three down.
2257. Then if you are at Ryde you can avail yourself of the steamer to Sydney only three times a day? Yes.
2258. Do you not think that a great source of inconvenience to people who might require to come to Sydney oftener than the steamers would afford them an opportunity of doing? I think it is quite sufficient for the requirements of the district; people can leave there at eight and get into Sydney by nine; they can leave at twelve and get into Sydney by one; they can leave at four and be in Sydney by five.
2259. Your opinion that the means of conveyance are sufficient for the public does not alter the fact that people are restricted to three times a day as to the means of travelling? Unless they go by land.
2260. I am speaking of steamers? Quite so.
2261. If these bridges were built they would not be so restricted? They could go when they liked, but the question would be whether they would not then go by steamers.
2262. That is a speculative opinion? My opinion is that they would not go by bridges—I think the bridges would be very little used.
2263. They might if they chose go by the bridges at any time they pleased? Yes.
2264. You have not now the opportunity of coming when you choose by the steamers? No, they leave at appointed hours.
2265. You are restricted to three times a day? Yes.
2266. Would it not be a great advantage to the district to be brought into such communication with Sydney as that the inhabitants could come into town whenever they pleased, by day or night? They can come now by the punt. I do not think four miles at the end of eight miles would make much difference.
2267. As you think the difference of four miles out of twelve miles is not much, is that the reason upon which you found the opinion that the people of Ryde would not take advantage of the bridges? I form that opinion from my acquaintance with the Ryde people, and from my knowledge of their business avocations, and I believe that those who come into Sydney every day would still come by the steamer.
2268. Are you of opinion that the people of Ryde as a body conceive that the saving of four miles out of twelve is of no consequence? I do not state that they think it of no consequence, but I say that, in my opinion, the bridges will be little used, and that for an occasional trip to Sydney the difference of distance between eight miles and twelve is of little importance.
2269. Have you ever known an instance where a road has been shortened one-third that it has had no effect upon the mode of travelling, as between the old road where people had to travel twelve miles, and the new where they had to travel but eight? I know of no road situated as this is, where there is water communication, and steamers running three times a day at a very cheap rate. You could not come to Sydney by the road, even when shortened, in less time than you can by the steamer.
2270. Do you think when two roads are open to people to travel by, one twelve and the other eight miles long, the great majority of people in this country will not prefer the shorter one? I think the water line is the shorter one.

2271. I am speaking of two roads? If you have two roads, one twelve and the other eight miles long, and equal in other respects, there can be no question that everybody would go by the eight mile road. T. K. Bowden,
Esq.
2272. You think people would prefer the road that was four miles shorter? Yes, or even a mile shorter. 23 July, 1862.
2273. Do you not think it likely to be inconvenient to the people of Ryde if they, in any emergency, wish to communicate with Sydney, and cannot do it except by steamer three times a day unless they take a long line of road? I do not think in such a case the saving of four miles would be much.
2274. I am speaking of an emergency? I will take the case of an emergency. Supposing you want a medical man, Ryde is nearer to Parramatta than to Sydney.
2275. Supposing a medical man does not reside in Parramatta and does in Sydney? You are supposing a case that does not exist.
2276. Do you know the distance from Gladesville to the nearest point of the Field of Mars Common? I do not know the nearest point, but I think it is about half a mile.
2277. Do you know that part known as the Flagstaff? Not by that name.
2278. I mean the back part of Gladesville—the high part of the land upon which the flag-staff was once placed? I do not know what distance that is from the wharf; I have travelled it up and down.
2279. I am not speaking of the distance from the wharf, but from the Common to that portion of Gladesville where there was a semaphore? I am speaking very roughly, but, so far as I recollect, it is not very much more than half a mile.
2280. Do you know that part of the Field of Mars Common enclosed as a paddock, and rented by Face? I have seen it.
2281. From that part of the Common to the nearest portion of the Gladesville Estate, how far do you conceive it to be? I do not know the boundary of the Gladesville Estate; from my knowledge of the direction of the Parramatta River, and of the direction of the line of the Common, I should fancy it was from about a mile and a half to two miles.
2282. Do you know the land Dr. Campbell has recently purchased that abuts upon the Gladesville Road, near Face's paddock? I know Face's paddock, but not the distance from the Common.
2283. You are not aware whether a part of the Common is within a hundred yards of the Gladesville Road? I do not know; it is possible a point of it may come out there.
2284. Should you think that portion of the Common within a hundred yards of Gladesville Road would not realize more than £3 an acre, supposing these bridges were first constructed? Very likely it would realize a much higher price—£7 or £8 an acre.
2285. Do you know what Dr. Campbell gave per acre for the land he purchased abutting upon the Gladesville land? I am not aware.
2286. Are you aware what the Gladesville land realized? I believe that some years ago it brought as much as £70 or £80 an acre.
2287. If a part of the Field of Mars Common is situated within half a mile of the Gladesville Estate, upon what grounds do you estimate that that portion of the Common would not bring more than £5 an acre? The Gladesville Estate abuts upon the Parramatta River.
2288. I am speaking of that portion which does not abut upon the Parramatta River? I do not know what the back portions brought at all; I know the best portions of it brought fancy prices, but if it were sold now it would not realize so much.
2289. Do you state that the back part of Gladesville did not bring so much? I am told that Mr. Manning bought all the remaining portion for £900; I do not know how many acres there were.
2290. I am speaking of the back parts that were sold in allotments? I do not know what they brought.
2291. Is not the Commons Act of New South Wales a public Act—11 Victoria, No. 31? I think it is a public Act to regulate all Commons in the Colony.
2292. As the Legislature has by a public Act regulated all the Commons of the Colony, upon what ground do you think any private Act should be introduced with reference to the Field of Mars Common? Because all Acts with reference to the enclosure of Commons are in their nature private Acts. They bring necessarily into play two functions of the Legislature—its legislative and its judicial functions. The Legislature in England, at all events, has been very guarded in any interference with private rights.
2293. Is not this a public Act of the Legislature of New South Wales, passed in 1847, providing for the regulation of Commons? The Act may be public, but the rights are those of individuals—certain rights have been conferred upon individuals.
2294. Do you use the term individual rights in the same sense in which you would apply the term to private property? Yes, exactly. The land is granted to trustees, upon trust for particular individuals forming a certain class, and the Legislature has said that these people shall have the same rights as the holders of Commons in England, and there the greatest care has been taken to protect the individual rights of commoners, so much so that there has never been an enclosure Act without the consent of two-thirds of the commoners.
2295. Are you quite positive that the consent of two-thirds of the commoners has been held to be absolutely necessary before an enclosure Act could be passed? I think the general enclosure Act—
2296. I am speaking of special enclosure Acts? I am not aware upon that point; but they have always been private Acts, and the enclosure has always been for the purpose of allotting the land among those who had Common rights. Anciently the lord of the manor got one-twentieth in consideration of his seigniorial rights, and the rector in proportion to the value of his tithes, and the commoners according to their several interests.

- T. K. Bowden, Esq.
23 July, 1862.
2297. Is not the right of the lord of the manor in England an individual right? The manor was private property, and the right of Common arose from the lord having sold or leased to tenants small portions of it which were under culture, and as they required beasts to plough and cultivate the land, they had no other place to put them except upon this waste lands, and in course of time, the rights of these tenants to place their cattle there was recognized to such an extent as to seriously interfere with the landed proprietors of Great Britain, and an Act was passed to this effect, that where the commoners had enough the lord should take the rest, but if he took too much they might knock down the whole enclosure.
2298. Do you know whether there was any insufficiency in point of law in respect to the original grants of land in this Colony that led to the Commons Regulation Act being passed in 1847? I believe that many tracts of land were appropriated in the early days of the Colony for the purpose of Commons; that in some few instances only grants were issued, but that in others no grants were issued, as I believe was the case with what is known as Sydney Common.
2299. There was an old grant in favour of the Field of Mars Common? There was an old grant issued many years ago—I forget the date.
2300. 1804? I believe it was 1804. That grant was to three individuals and their successors, not their heirs. They could have no successors, not being a corporation. When they all died the deed of grant lapsed, and the Common went back to the Crown, but subject to a *quasi* trust as the Church and School Lands—having been once granted it was a trust property, and the Crown recognized it by issuing a new grant.
2301. If Government issued debentures for the purpose of constructing these bridges, would they not be as good security as debentures issued for any other purpose? If they are Government debentures, I imagine it does not matter for what purpose they are issued.
2302. They would be no more difficult to sell than any other debentures? Unless there were some attempt to shake off the responsibility on the part of the Government, and to make the Common the security to the debenture holder for the payment of the debenture; if the credit of Government were pledged there would be no difficulty.
2303. Do you know whether there are to be any charges for passage over the contemplated bridges? I do not know what is contemplated.
2304. There are two bridges proposed to be built by the Government, one over Parramatta River and the other over Iron Cove,—do you know what charges there would be to the public? I am not aware what is contemplated. I regard any attempt to deal with this Common by the Government or Legislature as in opposition to the grant, and as an unwarrantable and unconstitutional proceeding.
2305. I am speaking of the proposed charges? I know nothing about them.
2306. How then do you arrive at the conclusion that the present mode of communicating with Sydney will be cheaper by steamer than by land? If a man had eight miles to travel he must keep a horse, and if he had no tolls to pay on these two bridges he would have to pay for crossing Pyrmont and Glebe Island Bridges and also the turnpikes; then he would have to keep his horse in Sydney, and various expenses attendant upon land travelling in that way, but if he went by the steamer he would pay his 30s. a month and there would be an end of it.
2307. I understood you to state that the Field of Mars Common does not present any advantageous sites for houses and villas? I have been upon it, and it seems to me a gloomy and dreary place. It is very rocky, and unless you go to the banks of the Lane Cove River, from most portions of it there is no water view.
2308. Do you know Hunter's Hill? Yes, well.
2309. Do you know whether houses are built there on rocky situations? Yes, but that is a very choice locality; there is the Parramatta River on one side and Lane Cove on the other. Not more than a few hundred yards across from Parramatta River is the Lane Cove River, a beautiful stream within five minutes walk of Hunter's Hill.
2310. A house built with a prospect of Lane Cove River cannot also have a prospect of Parramatta River? Certainly not, but there is a beautiful water view either way.
2311. Are you aware whether part of the Field of Mars Common does not join the Lane Cove River on the side of Hunter's Hill? I do not know what you call Hunter's Hill.
2312. I would define it rather by mentioning Mr. D. N. Joubert's house? I believe Mr. Joubert's property almost adjoins the Common—the upper portion of Mr. D. N. Joubert's.
2313. Is not Mr. D. N. Joubert's property similar in its general aspect to the part of the Common adjoining it? I do not think there is much difference in that portion.
2314. What do you think would be the value per acre of Mr. D. N. Joubert's property? I could not say; he gave about £600 for it, but I forget how many acres there were.
2315. Do you think it would bring £25 an acre if it were sold in small allotments? I do not think it would be possible to sell at that price all round.
2316. Do you think it would bring £20 an acre? I could scarcely say; I do not think so.
2317. If these bridges were built do you think it would bring £20 an acre? What it might ultimately bring if there were bridges must be a mere speculative matter; for some time I do not think it would improve much; ultimately, as population increased, it would become more valuable.
2318. Do you know that a surveyor has stated it as his opinion, that if the Field of Mars were sold it would bring from £4 to £5 an acre? It is very possible, I think, that it might bring that, if care were taken in selling it.
2319. If the Field of Mars were sold in allotments after the bridges were built, you think it would bring £4 or £5 an acre? I think it would.
2320. Do you think it would not average more than that? It might; it would depend upon the demand for land at the time. If some wealthy gentleman chose to speculate, it might do so,

2321. Do you think, taking this contingency into consideration, that if these two bridges were built and the land were sold in small allotments, that the Field of Mars would not bring £10 an acre? If a long time were taken to sell it.
2322. Say ten years? It might, but it is impossible to say what it would bring.
2323. Do you not think it would be a great inducement to the citizens of Sydney to buy small allotments of land, there if these bridges were built? I do not think so. If you suppose that the citizens of Sydney have to come to town daily to attend to their business many portions of the Common would be too remote. There may be some portions about Gladesville and Hunter's Hill tolerably near, but if they have to drive some four, five, or six miles further I do not think it would be at all suitable.
2324. *By the Chairman*: Are you aware that the surveyor who gave his opinion as to the value of the Common has not made an actual survey of the Common? I am not aware who the surveyor is.
2325. In giving his opinion that the land was worth £4 or £5 an acre, he did so without having made an actual survey of the Common? It might be just as valuable as an opinion—it could be only a speculative opinion. I do not think there is anything extravagant in supposing that ten years hence the land may bring £5 an acre.
2326. It may not bring £2? I think there is no doubt of its bringing £3, £4, or £5.
2327. *By Dr. Lang*: In what do you consider the value of the Common to the commoners to consist? The value of the Common to the commoners depends upon the value of the property itself; the whole Common is their property for certain purposes, and whatever is the value of that property, to that extent is the value of their interests.
2328. Do you consider that the Common is of any considerable value to any of the commoners at present? It is said to be worth a good many thousand pounds.
2329. *By Mr. Piddington*: For the purposes of a Common? I do not think it is used just now very much, except for the purpose of procuring timber, fencing stuff, and firewood.
2330. *By Dr. Lang*: You do not consider that it is of value to the commoners in the way of pasture? Not much at present.
2331. Is it really valuable to them in supplying them with available timber? The district is pretty thickly wooded, and many who have the right of going to it are not yet obliged to go to it; but as time rolls on, it will become more valuable and people will be obliged to go there for fuel. A gentleman told me this morning that it had cost him ten shillings a week for wood, and that he had made arrangements for getting it from the Common, when it would cost him nothing, as the man whom he kept for general purposes would go and fetch it.
2332. May it not cost him indirectly as much one way as another? It may do so.
2333. Is there much valuable timber on the Common? There is a great deal coming on. The valuable timber has been cut down. I believe what is there is being preserved in order that it may be available.
2334. Do you think if the Common remains in its present state as a Common that the young timber will be allowed to come to maturity? I think so; the extent of the Common is so great and the number of those entitled to the use of it is so comparatively limited; the whole Common is somewhere about 6,500 acres in extent, and the district entitled to its use is not more than 7,000 or 7,500.
2335. Is it the fact that some of the commoners sell the timber from the Common to Sydney woodmen? I am not aware that they do, but if they do, it is contrary to law; they have no right to do so; they steal it if they do.
2336. Supposing the bridges contemplated by certain parties in the district were to be erected, do you not think that the communication with Sydney would be very much increased and facilitated by the establishment of land conveyances—of omnibuses to run to the district? I think the distance from Ryde is too great; we should not have omnibuses travelling eight miles of road per day so frequently; in fact I do not think land conveyance, from the expense of it, could compete with water communication; I think if we want more means of communication we shall have more steamers.
2337. At all events, you consider the value of the Common to its present proprietors, the commoners, rather prospective than actual? It is a certain value to them now; but the value I put upon it is prospective rather than actual.
2338. Do you think the value of the Common to the State at present is at all to be compared with what it would be if it were subdivided and sold? I do not think the State has anything to do with it. There is a distinct grant from the Crown to trustees upon trust for certain individuals, for particular purposes, and I think the Government or the Legislature have no right to deal with the land in opposition to the terms of that grant.
2339. Therefore, whether the commoners have any real benefit from it or not, it is entirely their property? It is their property, and if it is of value of course it is a benefit to them.

T.K. Bowden,
Esq.

23 July, 1862.

Mr. Thomas Wheaton Bowden called in and examined:—

2340. *By the Chairman*: You are a land and commission agent, I believe? Yes.
2341. Some years ago you resided at Kissing Point? I did.
2342. Do you know the Field of Mars Common? Yes.
2343. Had you at that time an opportunity of becoming well acquainted with the land and its capabilities? For about seven years I was upon it, perhaps once a week, sometimes every day in the week.
2344. Then at that time you had an opportunity of knowing the Common well? Yes.
2345. Have you been over the Common lately, with the view of giving an opinion as to its value? With a view of attending this inquiry.

Mr. T. W.
Bowden.

23 July, 1862.

- Mr. T. W. Bowde.
23 July, 1862.
2346. Application has been made to the Government having reference to the construction of certain bridges across Parramatta River and Iron Cove Bay; it has been estimated that these bridges will cost £40,000, and it is proposed by the parties who promote this object that Government should take the Common as an equivalent to that expenditure;—would you, as a land agent, consider that the Common land would be equivalent to that amount? Or, in other words, do I think it would be a good bargain to the Government?
2347. Either a good or bad bargain? Were I a trustee of the Common I should certainly dissent from it.
2348. As a land agent, what is your opinion? I think the bridges would be cheaply bought at that price. If the bridges could be constructed for the present value of the Common they would be cheaply constructed, but whether the Common should be sold to pay for them is a different question.
2349. What do you consider to be the present value of the Common? The 6,000 acres and upwards, in the present state of the market, would not realize more than 30s. an acre—that would be £9,000 for the whole. If bridges worth £40,000 could be got for £9,000 they would be cheaply constructed.
2350. I do not imagine you profess to be able to look sufficiently far into futurity to say what would be the probable value in the event of these bridges being constructed? It would be enhanced in value very considerably by the erection of bridges.
2351. You estimate the Common land at present at 30s. an acre? The value, if sold now, would not exceed 30s. an acre.
2352. *By Mr. Piddington*: Do you mean in one lot? No.
2353. *By the Chairman*: If these bridges were erected, what increased value would they give the Common, do you imagine? I think it ought to enhance the value of the Common at least fifty per cent. immediately on the completion of the bridges.
2354. Do you consider much of the Common land fit for agricultural purposes? For the production of cereals, I think none of it.
2355. From its proximity to Sydney, might not persons be induced to purchase portions of it as places of residence? Very small portions indeed.
2356. I believe you are aware that at the present time steamers ply up and down the Parramatta River? Yes.
2357. Do you consider that if these bridges were made over the Parramatta River and Iron Cove Bay, so as to shorten the distance to Sydney by land, many persons would be induced to visit the district by that means, in preference to travelling by water? I can hardly say to what extent.
2358. Do you consider that water conveyance is preferable to land, or land preferable to water? I think water conveyance is the cheapest, and in fine weather the most agreeable—perhaps at all times.
2359. In your opinion, travelling by steamer is more agreeable than travelling by muddy or dusty roads? Unquestionably.
2360. Do you think the Common as a whole is adapted to the settling down of a population? That is a very general question, and I would answer it by saying that I believe portions of it might be made into orchards and portions into gardens.
2361. But from its situation and the general character of the soil, is it so situated that it could advantageously be laid out? I have said that it is not fit for the production of cereals or for agriculture strictly speaking, but that portions might be made into orchards and gardens.
2362. Having resided in the neighbourhood several years, you know the neighbourhood round the Common? I know Ryde and its neighbourhood.
2363. Is the Common land of average quality with the land in the neighbourhood of Ryde? It is inferior, very much so, speaking of it as a whole.
2364. That is, as regards the quality of the land? Yes.
2365. As regards its situation, is that equal? It is also very much inferior in point of situation, for building sites.
2366. Then you think, to take the Common as a whole, it is not to be compared with the immediate district of Ryde? Doubtless the early settlers chose the best of the land in the neighbourhood, and very little good land has been left, and the residue has become a Common, fitted only for the depasturing of stock and the production of timber.
2367. It would be no fair criterion of the value of the Common to take cases where land has brought high prices in the district? Any more than the price realized for land in George-street would be a fair criterion of the value of land in some back lane in Sydney.
2368. You have heard of Gladesville? I know Gladesville well. I have sold a large portion of the land at Gladesville.
2369. Do you consider the Common equal in point of situation to Gladesville? It cannot be compared to it for building sites. Gladesville has water frontage, and very beautiful sites for the erection of cottages on the banks of the river, in immediate proximity to the steamer wharf, while by far the greater portion of the Common is back in the bush, without views or anything that could induce people to go there.
2370. I believe there are high roads passing through the Gladesville property? There is a main road; it commences where the steamers stop, and runs through in connection with the Great Northern Road.
2371. The fact of having a high road running through the property tends to enhance its value? Yes. I have brought with me a plan of Gladesville, and also a small sketch of the Common. I sold a large portion of Gladesville on two occasions, and lately I had a portion of it through my hands.
2372. Were you able to effect a sale of the whole of the Gladesville property? It was subdivided into lots and sold on two separate days. I think there were some sixty or eighty lots to be sold the first day.

2373. I believe the proprietor of the Gladesville Estate, previous to the sale, erected a landing place for the steamers? Yes, roads were marked out, and the steamer's wharf built.
2374. On the day of sale was there not an invitation to a large party to attend, and a lunch given on the occasion? It is quite usual to give people something to eat on such an occasion; there was nothing extraordinary.
2375. Champagne? There was some refreshment, but it was not abused.
2376. At the time of this sale, notwithstanding the luncheon and champagne, you could not sell the whole? I did not expect to sell the whole at once.
2377. As that cannot be taken as a criterion of the value of the Common, I will not ask as to the price it obtained? While on the subject of prices, I may say that I lately had ten acres adjoining this estate, that belonged to Miss Glade, reserved under the name of Blanchard upon this plan (*referring to a plan produced*), that was sold in August last, with improvements, consisting of the old residence of Commodore Glade, for £200. I mention this in order that the Committee may be furnished with correct data for forming an opinion.
2378. That is part of the Gladesville Estate? Yes.
2379. And bounded by the Parramatta River? It is bounded by the Great Northern Road.
2380. *By Mr. Piddington*: Does this portion you allude to front the Parramatta River? No; but you will see from the plan that it is but a short distance from it.
2381. *By the Chairman*: It fronts the high road? Yes. That is the last sale of land I know of in the neighbourhood.
2382. *By Mr. Piddington*: What is your opinion of the probable price per acre the Field of Mars Common would produce, if the land were cut up into small allotments and were sold gradually, after the two contemplated bridges were constructed? That is looking forward some five years hence.
2383. Or ten years? I would rather decline answering the question; it is too remote.
2384. Do you think if these two bridges were constructed it would not considerably enhance the value of the Common land? I have answered that by saying that it would enhance it fifty per cent.
2385. Do you not think it would enhance the value of the land to a greater extent than fifty per cent.? No; the land for the most part lies buried in the bush, where there are no building sites. The portions near Gladesville, to which allusion has been made, fronting Lane Cove River, fronts the narrowest part, where it is very narrow and rocky, and are not very choice sites.
2386. What, in your opinion, would be the probable value per acre of that portion nearest to Hunter's Hill and Gladesville Road, if sold after these bridges were constructed? The portion is small that comes there; by far the greater portion extends away seven or eight miles off—but a very limited portion comes down there.
2387. 500 acres? I should not think so.
2388. How much would be included in that portion (*referring to the plan*)? I think about 300 acres. That I think is the best for building sites, and would fetch about £5 an acre.
2389. Does that price refer to bridges being constructed? No; if bridges were constructed it would bring fifty per cent. more.
2390. Are there not a large number of persons who prefer inland sites for houses to marine sites? I should not.
2391. Do you judge other people by your own taste? Decidedly.
2392. I ask you whether there are not a number of people who prefer inland to marine sites for their houses? If they are like myself I say there are not.
2393. Do you think the great majority of people have the same taste as yourself with regard to site? I do not say that.
2394. Are you aware whether a great number of people differ from you with regard to sites for houses? No.
2395. Do you think no one prefers an inland to a marine site? On the contrary, I know there are some people who cannot bear a salt atmosphere, from disease of the lungs or other causes, and they go back into the bush.
2396. Are there not a number of persons, whether arising from taste or from peculiar constitution, who prefer inland to marine sites? I cannot say there are; I think it is always a great advantage to have a water view.
2397. The suburbs of Sydney extend themselves very much in the neighbourhood of Newtown, do they not? Perhaps not more than they do towards Paddington and Waverley.
2398. Are there not a great many more persons living in Newtown than in Waverley? I think not, taking Paddington with Waverley; and the land is twice as valuable in one as in the other.
2399. What sort of advantage does the Common afford to the commoners? As a commoner I found it of great advantage. During my residence of seven years I kept working cattle, and they were out on the Common on all spare occasions; tired oxen were kept there, and I have known flocks of sheep to be kept there in my day.
2400. How recently are you speaking of? The seven years I am speaking of was from 1825 to 1832.
2401. Is there much cleared land on the Common now suitable to the pasturage of sheep? I think there is less now than there was then; I think there is more timber now than there was then, but the timber then was of a larger class; trees are now ten times as numerous, though much smaller.
2402. Then to the extent of the growth of the underwood and young trees, the Common is less adapted for the purposes of a Common than it was thirty-five years ago? Yes, it produces less grass.
2403. Is not that one of the principal advantages of a Common? Yes, for grazing.

Mr. T. W.
Bowden.

23 July, 1862.

Mr. T. W.
Bowden.

23 July, 1862.

2404. Was not this granted, under the original grant, for grazing purposes? And timber rights.
2405. Are not grazing advantages the chief advantages commoners are supposed to secure? Yes, one of the chief.
2406. The Field of Mars Common does not present much advantage to the commoner for grazing purposes? Not so much as it did formerly.
2407. Do you know any extent of land that would be suitable for feeding a flock of sheep on the Field of Mars? I think a flock of sheep could be managed there—I do not mean a flock of 800 or 900, but one of 200 or 300.
2408. What proportion of the Field of Mars is suitable for a flock of sheep? I should think it is not suitable.
2409. With regard to cattle, do you know how many cattle the trustees of the Field of Mars Common authorize to graze upon the Common? I am not aware.
2410. If the entire grazing rights are limited to 400 or 500 head of cattle, do you think the grazing right is of much advantage to the commoners? I think it is not nearly now what it was formerly, but that it might be quite as good as it ever was by the underwood being kept down. If the trustees allow the underwood to grow up to the destruction of the grass, they ought to be called to account for it—that is not the fault of the Common.
2411. In order to make the Common as valuable as it was thirty-five years ago the young trees must be cut down? Yes.
2412. Would not that entail considerable expense for clearing? The longer the period it is allowed to remain the worse it will be.
2413. Taking the present condition of the Common, would it not take a considerable sum of money to clear off the underwood? It is most important for the sake of the grazing that it should be kept down.
2414. How are the trustees to find funds? I understand that the trustees have the right of leasing portions of the Common—and they do lease some of it—and have a small income of £50 or £60 a year. Now if they were to lease five times as much, they would have such an income as would enable them to keep the Common in order.
2415. To the extent that the trustees lease the Common, do they not destroy the Common for Common purposes? For the pasturage of cattle. At present a tenant occupies a small portion for a garden or orchard, and as far as his place is enclosed grass cannot grow for the commoner; but an income is derived from him which, if applied in the way I suggest, would greatly improve the Common.
2416. Then if the trustees grant leases, to that extent they destroy the Common for the purpose for which the Common was granted? To that extent they prevent the growth of grass; but—
2417. To the extent of five times as much as at present, if your suggestion were carried out, would not the Common be destroyed for Common purposes? Only to the extent of the land enclosed; but the money obtained would improve the remainder.
2418. During the time this land was enclosed under the authority of the trustees by lease, that portion of the Common would be unavailable for the purposes of grazing? Certainly.
2419. Taking 6,000 acres in one block outside of the Common, on the north, south, east, or west, would such block be much inferior or superior to the land within the bounds of the Common? On the right hand side, which I should call the north, I think the land is inferior to that of the Common to a limited extent; but on the south side, meaning towards Parramatta River, it is far superior.
2420. Then, excluding the land on the banks of the Parramatta River from consideration, a bulk equal in quantity with the bulk of the land within the boundaries of the Common on the north side would be inferior to the Common? A portion of the Common is bounded by the Lane Cove River; it terminates in a ravine broad at the commencement and then it goes up into a rocky ravine; on the Common side of the ravine the land is very bad, so it is on the opposite side till you get on to the high land known as Lane Cove. As you ascend from this ravine to the north falling upon the Lane Cove Road the land is bad, but on the main ridge of Lane Cove the land is very good again.
2421. Is the Common fenced in? Only in part by private parties abutting upon it—not one half.
2422. The north-western boundary is not fenced? No.
2423. If any person turned their cattle on the Common would they not stray away? They must be tailed.
2424. It would not be safe to turn cattle out without someone to attend upon them? Not at all.
2425. Might they not wander away to the Hawkesbury River if they chose? It is possible, but most probably they would be arrested by the residents at Lane Cove.
2426. In what way? The people would intercept them. There is a portion of barren land between the boundary of the Common and the good land at Lane Cove, and when the cattle came on to the good land they would probably be stopped.
2427. Is there no means of cattle straying away? I think they might get along the main road; it is just possible, but I think not very probable.
2428. If they could wander away for many miles I presume the pasturage of the Common is not of much value for cattle that are not tailed? It would never do to turn cattle out on the Common without someone to attend them; they must be herded at night.
2429. What is the chief advantage of the Common? That the cattle may ruminant upon it; they are not always working.
2430. Are you speaking of working cattle or of cows? Of working cattle, or it might be cows.

2431. Upon these 6,000 acres how many cattle have you seen in a mob? I have not seen many lately; when I kept cattle there I have had twenty or thirty at a time.
2432. Have you seen many horses grazing on the Common lately? No.
2433. You have not seen anything grazing on the Common lately? No.
2434. I understand you then to say, that the character of this Common is that it is unsuited for grazing purposes, but is much more suitable for building purposes? It is not the fault of the Common that it does not produce grass—that these trees are allowed to destroy the grass.
2435. Grass might grow if a certain amount of labour were bestowed upon the Common, but I am speaking of the present position of the Common;—is it now suitable for grazing purposes? It is suitable for a Common—as a place to turn out cattle to rest and to feed.
2436. Are you aware how many cattle are turned out to feed upon it? No.
2437. You do not know to what extent it is used for grazing purposes? No.
2438. You do not know how many cattle the trustees authorize the commoners to keep on the Common? No.
2439. If the trustees have not authorized 500 head of cattle to graze on the Common, is not that a small proportion of cattle to 6,000 acres? It is quite enough.
2440. Why do you think it is quite enough? Because I think 500 head of cattle could not be wholly supported by what they could find upon the Common.
2441. You do not think 500 head of cattle could be wholly supported on the Common? No, and I do not think it was ever intended that milking cows should be wholly supported by the Common.
2442. Your idea is that the whole of this Common should be limited to the grazing of 500 head of cattle? Certainly.
2443. What do you think the agistment of 500 head of cattle is worth per annum to the commoners—what is the money value? It is invaluable to any man who has half a dozen cows, as there are many who could not keep their cows unless they had permission to put them upon the Common, therefore it is invaluable to them.
2444. As a matter of fact, I believe the trustees have allowed the Common right to commoners to graze something under 500 head of cattle;—what, in your opinion, is the money value of that right? It is not easy to estimate the value to a small settler who has half a dozen cows upon which he depends in part for the comfort and support of his family, as he could not obtain food for those cows unless he had the advantage of putting them upon the Common.
2445. Do you know how many small settlers possess half a dozen cows? I do not know.
2446. You do not know whether there are ten commoners who have half a dozen cows on the Common? I have very little doubt that they have cows.
2447. You do not know? I know that some have cows.
2448. You do not know how many? No, I should think all ought to have, and without such an advantage they could not keep them.
2449. Are you of opinion that if the Common were resumed by the Legislature, and the proceeds of its sale were appropriated to the construction of these two bridges, that the commoners would not derive as great a benefit as they do at present from the Common? I cannot think so; I think their daily comforts would be infringed upon, as I have hinted already.
2450. You allude to those persons who you presume take advantage of the grazing capabilities of the Common? I allude to all persons who keep cattle for labour, or cows for milk, upon the Common; and to deprive them of the means of keeping them would be to inflict upon them a great injury, for which nothing in the shape of bridges would compensate them.
2451. You think the Common, notwithstanding its unfitness for grazing purposes, is still of such utility to the people of that part, that if bridges were constructed and roads were made to the district it would not compensate them for its loss? If the Common is not kept in the state it should be it is not the fault of the Common.
2452. What would be the expense of clearing this 6,000 acres, and of putting the Common into an improved state for grazing purposes? I could not tell. One portion would cost much more than another. One ten acres might cost so much, and another ten acres as much again, or double.
2453. You are of opinion that the Common is not in the state it ought to be? It is not.
2454. Whose fault is that? I think the money derived from the leases ought to be expended in keeping down this underwood and scrub.
2455. Who has the authority to place the Common in an improved condition—the trustees? Yes.
2456. Then it is the fault of the trustees? I do not wish to censure the trustees.
2457. Is it the fault of the commoners? I do not know —
2458. It is the fault of someone? I do not think it is the fault of the commoners; I do not think they would have the right to cut down young trees unless they had the authority of the trustees.
2459. The Common is a great advantage to the commoners? Unquestionably.
2460. And it might be greater? It might be greater.
2461. Someone is in fault? I take it to be so.
2462. But you do not know who? I do not know who.
2463. *By the Chairman:* Do you not know that ten acres is generally allowed as the run of a beast? In what locality?
2464. Upon the average, is not ten acres allowed for the pasture of a beast? I am sure that twenty acres would not depasture a beast on that Common as it is now.
2465. Mr. Piddington has commented upon portions of the Common having been leased;—are you not aware that the Act of Council empowers the trustees to lease portions of the Common? I am not aware of the power of the trustees; I have never seen the deed, and I know nothing of their powers.

Mr. T. W.
Bowden.

23 July, 1862.

- Mr. T. W. Bowden. 2466. If the trustees have power under the Act of Council, of course they are not to be censured for having exercised it? I have no wish to censure them.
2467. You do not think it an evil to lease portions of the Common? I think if the portion I have suggested were leased, and the proceeds were applied to the improvement of the Common, it would be the means of obtaining five times as much grass as there is at present on it.
- 23 July, 1862.

Mr. George Miller Pope called in and examined:—

- Mr. G. M. Pope. 2468. *By the Chairman*: You reside at Ryde? Yes.
2469. How long have you been a resident in the district? The last fifteen years.
2470. You are clerk and registrar there? Yes.
- 23 July, 1862. 2471. You have also been employed to take the census and make out the electoral list? Yes.
2472. During what period did you perform that duty? In April, 1861, I took the census.
2473. What is the population within the parish of Hunter's Hill? 1801, exclusive of the inmates of the Lunatic Asylum.
2474. That includes the Municipality of Hunter's Hill? Yes.
2475. What is the population of the Municipality of Hunter's Hill? 443.
2476. Has the population increased since you came to the district of Ryde? Yes.
2477. Can you give us any information as to what the population was at the time you came? No, I cannot.
2478. I believe Hunter's Hill is formed into a Municipality? Yes.
2479. 443 are included in that Municipality? Yes.
2480. Can you state the number of male adults in that Municipality? 109.
2481. How many houses are there in the Municipality of Hunter's Hill? 95.
2482. Are there good roads leading from Ryde to Hunter's Hill? There is one now being made by the Municipality.
2483. There is no difficulty of communication between the two places? No.
2484. Can you give us any information as to the annual number of births in the District of Ryde? Yes. I began in June, 1856, and for the half-year ending 31st December of that year, there were 21; for the year 1857, 75; for 1858, 95; for 1859, 95; for 1860, 83; for 1861, 84; and for the last half-year ending 30th June, 50.
2485. So that, in point of fact, the population is increasing annually? Yes.
2486. It has been stated to the Committee that the population is decreasing;—if such a representation has been made, is that in accordance with fact? On the whole number of the population it has decreased this last year.
2487. What was the population of last year? This was the population of last year, 1,801, but several have since gone away; the number of electors is not so many.
2488. What was the number of the year before? I cannot say; I have only the population for 1861, when the census was taken, but I have the electors —
2489. I am not speaking of the electors, but of the population;—it has been stated that the population of the district is decreasing, and I wish to learn from you, as registrar, whether the population is increasing or decreasing? The number of births in 1858 and '59 were more than in 1860 and '61.
2490. But during the last half-year? There has been an increase.
2491. Has Bishop Barker ever held a confirmation in the district? Three.
2492. How many confirmations have been held in the district altogether? Four that I can recollect.
2493. It has been stated to this Committee that the Bishop visited the district for the purpose of holding a confirmation, and that he could not do so; and that the reason he could not do so was that the children had left the district? That is not the fact.
2494. Can you give the Committee any information as to the number of children who have been confirmed? In 1849, by Bishop Broughton, 62. In 1855 the first confirmation was held by the present Bishop, and 71 were then confirmed.
2495. Was there any confirmation between 1849 and 1855? No; the Bishop had gone to England and died there, and there was no Bishop in the Colony for some time. In 1859 there were 54 confirmed, and in the present year 40.
2496. Can you give the Committee any information as to how many churches and chapels there are in that district? Two Roman Catholic, two Church of England, a Wesleyan, and a Baptist Chapel now being erected.
2497. Are churches and chapels on the increase or decrease? On the increase.
2498. Are you aware whether houses are on the increase or decrease in the district? Since the year 1856 there have been 70 houses erected—25 at Hunter's Hill and 45 in the other portions of the district.
2499. So that since 1856 there has been an increase of 70 houses? Yes.
2500. I presume you know very little of the Common? I do not know much; I have been on it a few times.
2501. Would you take upon yourself to give an opinion as to the value and capabilities of the Common? No.
2502. *By Mr. Piddington*: You say since 1856, including Hunter's Hill, some 70 houses have been built in the district? Yes.
2503. Do you know that there is a project for the construction of two bridges to connect Ryde with Sydney by land? Yes.
2504. If these bridges were built, do you not think eight years from the time of their construction there would be more than 70 houses built? A great many more, I think.
2505. *By the Chairman*: That is your opinion? Yes.
2506. The other is a fact—that there have been 70 houses built? Yes.

2507. *By Mr. Piddington*: If bridges were built, do you not think the number of people in the district would increase in a greater proportion than they have done during the last seven or eight years, as well as houses? No doubt.
2508. Would it not be an advantage to the people of Ryde to be able to visit Sydney at any time of the day they might think proper? I think it would be a very great advantage.
2509. Is it not inconvenient to them to be compelled to be governed by the time the steamer runs from the wharf? It runs at very awkward hours.
2510. The steamers run only three times a day from Ryde to Sydney? Yes.
2511. Have you any idea of the saving of distance it would be from Ryde Church to Sydney by the proposed road and bridges, instead of crossing by the punt? I should say between three and four miles.
2512. What distance do you suppose it is now from Ryde Church, crossing the punt? Between 11 and 12 miles.
2513. Then the saving would be about one-third of the whole distance? About that.
2514. Are you aware of the sale of any land in the vicinity of Ryde of late years? Yes, I have known several portions of land that have been sold.
2515. Can you mention the portions, or the prices per acre of the land you recollect? Some that was sold by Mr. Farnell brought £20 or £25, I think. Some that my brother-in-law bought adjoining the Common he gave £20 an acre for.
2516. Adjoining the Common? Yes.
2517. Do you recollect any other cases? Not at present.
2518. If the Common were sold, do you think it might not be expected to bring as much or more per acre after the bridges were constructed as adjoining land has brought at the present moment? The portions of it nearest the enclosed land no doubt would—that is, where the land is good.
2519. You know the extent of the Common by report? Yes; I have not been all over it; I have been over certain portions of it.
2520. Supposing these bridges were built and the Common were gradually sold in small allotments for building, what in your idea is the price the Common would bring? I can hardly give an opinion upon that—it would depend upon the population that came to live there; the larger the population that came there the more valuable would the land become.
2521. Then you are not able, from your avocation, to form an opinion of what the land might bring? I could not say.
2522. Have you any doubt that the accommodation these bridges would afford to the inhabitants of Sydney would be considerable? It would be a great inducement to them to come that way.
2523. Do you know whether many persons take advantage of the Common at the present time for the grazing of cattle? I am not aware.
2524. Have you ever in your visits to the Common seen many cattle grazing? I do not recollect having seen them.
2525. Is there much cleared land on the portion you are acquainted with suitable for the grazing of sheep or cattle? There is no cleared land.
2526. Then for the purpose for which Commons are usually employed this does not seem to be suitable? There is no grass fit for grazing purposes.
2527. As it is not fit for grazing purposes, what benefit is it to the commoners? I cannot see that it is a benefit—it may be a benefit to a few who get wood from it.
2528. It is not a general benefit to the inhabitants of the district? No, I do not know any one who is running cattle upon it.
2529. If the land were sold and the proceeds were appropriated to the building of bridges, do you think the inhabitants would be injured in any way? No, I do not think so.
2530. Would they be benefited? I think so.
2531. *By the Chairman*: Are you aware that persons residing at the village of Ryde get their wood from the Common? I do not know that they do.
2532. Are you aware that Mr. Turner, your immediate neighbour, gets his wood there? I am not aware.
2533. In point of fact, you do not know where he gets his wood? I know who brings his wood, but I do not think it is brought from the Common.
2534. The other villagers, I suppose you do not know where they get their wood from? I know a great many people bring their wood in, and they do not say they get it from the Common.
2535. The land you refer to as having been sold by Mr. Farnell, is on the high road to Hunter's Hill? Yes, and is bounded by the Common on the back portion, I think.
2536. Do you not think the fact of land abutting on a high road tends to increase its value? Certainly.
2537. *By Mr. Piddington*: At the time the confirmation took place at Ryde, was any remark made by the Bishop with regard to the number of persons who were confirmed bearing a fair proportion to the number supposed to have been baptized? Yes; the Bishop looked at the Register, and picked out forty or fifty names of those who had been baptized so many years before, and as he found they were not present he wished to know the reason. The consequence was that Mr. Devlin and Mr. Turner went through the names and found there were only six of the number present—all the others had either died or left the district.
2538. *By the Chairman*: It does not follow that all who are baptized are confirmed? Of course not.
2539. That may have been the case in this district? Mr. Devlin went through the names, and was satisfied they had all either died or left the district.
2540. Still there is not an instance on record where the Bishop could not hold a confirmation for want of a number of children? No.

Mr. G. M.
Poppe.

23 July, 1862.

WEDNESDAY, 30 JULY, 1862.

Present:—

| | |
|-------------|-----------------|
| MR. LACKEY, | MR. PIDDINGTON, |
| DR. LANG, | MR. SMART. |
| MR. LUCAS, | MR. SUTHERLAND. |

ISAAC SHEPHERD, ESQ., IN THE CHAIR.

James Pye, Esq., called in and examined:—

- James Pye,
Esq.
30 July, 1862.
2541. *By the Chairman:* I believe you are a proprietor of large orchards in the Field of Mars District, and also of several orchards in the Pennant Hills District? Yes, in the Field of Mars District and also in the Seven Hills District.
2542. Having raised several orchards of your own, you can form a pretty correct opinion as to the soil and situation best adapted to that purpose? I think I can.
2543. You have also had considerable experience in agriculture? Yes.
2544. Do you know the Field of Mars Common? I do.
2545. Do you know a gentleman of the name of Birmingham? I do.
2546. Is he a surveyor? Yes.
2547. Has he been employed by the Government as a licensed district surveyor? Yes, as a licensed surveyor, in the county of Cumberland, for some years.
2548. Are you aware whether he made a survey of the Common? I am aware he did.
2549. Have you seen the plan made by him? Yes.
2550. Have you sufficient experience of Mr. Birmingham's ability to give you confidence in his work? I have every confidence. (*The Chairman produced a plan.*)
2551. Is that the plan prepared by Mr. Birmingham? Yes, that is the plan he left at my place the other day till you sent for it.
2552. Are you aware of the number of acres marked off by Mr Birmingham as good land? Yes, I have been over the Common lately; I have ridden over it twice.
2553. I do not ask you with reference to your own knowledge, but I ask you if you have confidence in Mr. Birmingham's opinion? I have every confidence.
2554. Are you aware of the number of acres pricked off by him as good land? Yes.
2555. What is the number? About a thousand acres, I believe, of fair land.
2556. That thousand acres is not in one block, but in different portions of the Common, as pointed out in the chart? Yes.
2557. Do you consider the general character of the Common to be such as to make it a desirable place for a population to settle down upon? I do not.
2558. Could it, in your opinion, be made productive as a grain-producing district? It could not.
2559. Could a large portion of the land be made available for the formation of orchards, except at great expense? It could not.
2560. Do you consider its situation desirable for building sites? There may be some portions of it that might be made so, but at great expense.
2561. Did you see that portion of it at Lane Cove bounded by Lane Cove River? Yes.
2562. Do you consider that portion suitable for villa residences? Not without great expense.
2563. What in your opinion is the value per acre of the Common? At the present time I imagine, if it were sold, it would fetch about 15s. an acre. I form that opinion from the prices realized from the sale of land at Parramatta Domain lately.
2564. Supposing the Common were cut up in lots, do you not consider that it might realize more than that? I do not think it would, for I think there is a great portion that would not be sold at all.
2565. Do you consider that bridging the Parramatta River at or near Hunter's Hill would be the means of benefiting the people of the Field of Mars? Not generally.
2566. Do you not think the inhabitants of that district might prefer conveying their produce to Sydney by that route, in preference to taking it to Parramatta and sending it by boats or railway to Sydney? I should prefer sending it by steamer or by railway; and from conversations I have had with many persons in the district, I believe the large majority in our part of the district are of the same opinion.
2567. Have you seen the land formerly belonging to Dr. Sherwin? Yes.
2568. And sold by him to Mr. Ross? Yes.
2569. Can that be considered as anything like the average quality of the Common land? No.
2570. Can the price that land sold for, including all the improvements upon it, be taken as a guide as to what the Common would bring supposing it were sold in lots? No.
2571. Do you consider the Common, as a whole, to be equal to the land in the district of Ryde adjoining the district of the Field of Mars? Certainly not.
2572. Is it inferior or superior? The Common is inferior.
2573. Do you consider that there is any comparison between the two? Not the slightest.
2574. It has been alleged that two-thirds of the Common land is as good forest land as any in the county of Cumberland;—from your knowledge and experience of what good land is, should you say that that is the fact? Certainly not.
2575. From your observation when you were travelling over the Common land, do you consider that any portion of it can be called good forest land? Not any—not good forest land.
2576. *By Mr. Piddington:* You do not live in the Field of Mars district? I live at Parramatta.

2577. How far do you reside from the church at Ryde? Three or four miles, I think.
2578. Is it not six miles? I really do not know.
2579. You know the district—do you not know the distance from your residence to the church? I do not attend that church; I attend the church at Parramatta.
2580. From the town of Ryde, then, I will say? Eight or nine miles.
2581. Do you know the distance of the Field of Mars Common from Gladesville? I do not know it by that name.
2582. Do you know the flagstaff, where the semaphore used to be—how near to the Common is that? I really do not.
2583. From the plan before you, can you form any idea how near the Gladesville Road—that is the road to the steam wharf—is to the nearest part of the Common? It is very near to that.
2584. You have before you a plan of the Common marked out by Mr. Birmingham, the surveyor? Yes.
2585. You have every reliance upon Mr. Birmingham's opinion as a surveyor? Yes.
2586. What proportion of the Common as marked out by the surveyor on that plan is tolerably good land? The portions marked red.
2587. In the aggregate how much does that amount to? About 1,100 acres.
2588. With reference to that 1,100 acres marked by Mr. Birmingham as tolerably good land—what do you think would be the value of that land after bridges were built, if the land were sold in small allotments? I could not form an opinion as to a future time—the country alters so.
2589. Can you give an opinion to the Committee as to the price this land would produce after the erection of bridges? I could not.
2590. Have you ever heard anyone propose to sell the Common land before the erection of the bridges? I have not.
2591. Then any opinion you have given to the Committee, as to the present value of the land, has no reference to any proposal that you are aware of? No, it has not.
2592. Do you know that portion of the Gladesville Estate where the semaphore was formerly erected? I have passed it.
2593. Have you any recollection of that estate being sold by auction a few years ago? Yes.
2594. Did you ever hear the price per acre that land realized? No.
2595. Do you know anything of the sale of land in the vicinity of the Common of late years? No.
2596. You never heard anything of a sale of land belonging to Mr. Ford, the son-in-law of Mr. Small, near the Common? No.
2597. If part of the Gladesville Estate within half a mile of the Common has sold for £60 an acre within the last two or three years, unimproved, what ground have you for supposing that a portion of the Common would not realize more than 15s. an acre? The land is inferior and times are altered; people were mad then after land speculations, and many people who have put little houses and made improvements upon the land they then bought would be glad to give it up for the price of the improvements.
2598. There has been a great fluctuation in the value of land? Yes; besides the land in the county of Cumberland is naturally bad, and scores of people are now getting their eyes open, and are going off to Queensland and other places where the land is good. I believe land sales in New South Wales are done for, for many years to come.
2599. That opinion is given in reference to the agricultural or horticultural value of this land? Yes.
2600. But as sites for villas and houses—do you mean that this land is not suitable for building houses upon? I think there are many places in the county of Cumberland more suitable, of which, if they were to be sold, the people would avail themselves in preference.
2601. Were you ever at Hunter's Hill? Yes.
2602. Have you ever noticed very pretty villas there? That is a very different situation from the Common land.
2603. Do you know that a portion of Hunter's Hill joins the Common? Yes.
2604. Are you aware that a portion fronts the Lane Cove River? Yes.
2605. Do not many of these houses front the Lane Cove River? I think they front the other way.
2606. Are you aware whether the houses built front the Lane Cove River? Very few I believe, as the afternoon sun comes upon them there and makes the place like an oven.
2607. You are not aware that no houses front the Lane Cove River? No, I am not.
2608. Do you know the value of the land fronting the river—the Lane Cove River side? I do not.
2609. You know Mr. Ross's land? Yes.
2610. Is that land very superior land for agricultural purposes? It is far superior to the Common for almost any purpose, agriculture, horticulture, or any other.
2611. Is there no portion of the Common marked by Mr. Birmingham as tolerably good equal to Mr. Ross's? Not any.
2612. Will Mr. Ross's land grow maize or tobacco? Not without manure.
2613. In what respect is it then superior? There is a greater depth of soil.
2614. Is it alluvial soil? Yes, the greater part of it.
2615. Is it equal to land on the Hawkesbury or Hunter? No.
2616. Not such alluvial land as that? No.
2617. Will not alluvial land grow maize? There are two kinds of alluvial land, one is a great deal poorer than the other.
2618. Is not Mr. Ross's land situated very high? Yes.
2619. Have you any idea how many hundred feet it is above the level of the sea? No.
- 2620.

James Pye,
Esq.
30 July, 1862.

- James Pye, Esq.
 30 July, 1862.
2620. If it is 250 feet above the level of the sea, would you call it alluvial land? I call part of it alluvial land.
2621. Do you know what it brought per acre? I do not.
2622. If it is a fact that part of the land that once belonged to Mr. Ford, unimproved, sold for £10 an acre adjoining the Common, have you reason to doubt that land similar in character would bring the same price? Not to-day. That land would not bring more than £2 an acre if it were put up for sale now.
2623. Your valuation of the land is without reference to the proposed construction of bridges? Certainly.
2624. You could not give the Committee an opinion as to the value of the land after bridges were constructed? I could not.
2625. Do you know what Commons are usually granted for? For grazing and timber.
2626. Is this particular Common of much advantage for grazing? Not a great advantage—it is an advantage to a commoner to be able to turn out a cow or a horse.
2627. Have you ever seen sheep grazing on it? No, never.
2628. How many acres at the present time do you think would be necessary to graze a sheep? I cannot answer.
2629. How many acres do you think would be necessary to graze a head of horned stock? In portions of it ten would not graze one, and in others five would not.
2630. Have you visited the Common lately? I have.
2631. Is there a great deal of the Common free from underwood and small timber? A great deal is bush.
2632. If it is not cleared land can it be of great advantage for grazing purposes? Not much, but it is an advantage to people who have not land to turn out stock upon.
2633. Have you heard of many cattle grazing in one mob on the Common? No, I have not.
2634. Would you not be surprised to see a hundred head of cattle in one mob grazing upon the Common? I should.
2635. If it is unfit for grazing purposes it is of no use to the commoners? Yes, for timber, I believe, it is a great advantage.
2636. It is some advantage for timber? Yes, for firewood and fencing stuff.
2637. Then, seeing that the Common is an advantage chiefly for firewood and fencing, do you not think if bridges were substituted for the Common, the commoners would obtain an advantage in lieu of the timber? I believe that a great portion of the people would not take advantage of the bridges.
2638. Do you know how far from Ryde Church, across the punt by the main road, it is to Sydney? I do not.
2639. Do you think, if the proposed bridges were constructed—one across the Parramatta River and the other across Iron Cove—it would not shorten the distance to Sydney by land? It would.
2640. Do you think that would be an advantage to the people who reside at Ryde and to the people of Sydney? It would be an advantage to a portion of the people who live at Ryde, no doubt, and to the people of Sydney.
2641. Do you not think it would tend to encourage the inhabitants of Sydney to reside in the district, and to buy land for building purposes? I do not think it would. I think there are spots nearer Sydney more available for building.
2642. Are you aware that a great many houses have been built at Hunter's Hill within the last few years? I am not.
2643. If you happened to live at Ryde would you not be compelled to reach Sydney either by the road or by the steamer? Yes.
2644. How often do the steamers ply each day? Twice a day, I believe.
2645. Supposing the steamer plied three times a day, do you not think the bridges would afford infinitely more convenience to the public than the steamers? I think not.
2646. Would it not be an advantage to the people of Ryde to be able to come into Sydney by means of the bridges at any time they might think proper? It would be a convenience, no doubt.
2647. Where do the commoners reside who you think are opposed to the construction of these bridges? In the upper part of the Common, near Bellemy's.
2648. Then you admit that the proportion of the commoners who reside near Ryde are likely to be in favour of the bridges? Yes, they are near the spot.
2649. And a portion of those who reside in the other part are opposed to it? I think the large majority are opposed to it.
2650. A large majority of the total number of the commoners? I think so.
2651. Do you think it would at all tend to the injury of the town of Parramatta if these bridges were constructed? I do not think it would in the least; I think those who now go by the train or by the boat would continue to do so.
2652. In case the residents of Ryde or of those in the neighbourhood of the Common required medical assistance, or were compelled by urgent necessity to come to Sydney, would it not be an advantage to have a bridge that could be traversed at any hour, by night or by day? It would, no doubt.
2653. Would not the commoners have all the advantages they have at present, as well as the additional advantages that would be afforded by the proposed bridges? They would.*
2654. *By Mr. Lackey:* You have been for many years engaged in the cultivation of land, and that would enable you to form an accurate knowledge of what land is and its capabilities? Yes.

2655.

* Revised:—They would be no longer commoners.

2655. You say that you have visited the Common? Yes.
2656. And have made yourself acquainted with the particulars of Mr. Birmingham's plan of it? Yes.
2657. You say about a thousand acres might be made available? For agriculture?
2658. Yes? Not without manure; perhaps two or three hundred acres might be made available without, but the remainder would require manure.
2659. Do you think it would pay any person to undertake the purchase of that land, to clear it and manure it for the purpose of agriculture? It would not pay.
2660. Do you think any great quantity of this land is suitable for orange orchards? Very little.
2661. You are pretty well acquainted with the position and situation of various parts of this Common? Yes.
2662. Do you think it is a locality that would be sought for by persons desiring to build villa residences—I mean the Common taken in the aggregate? I think not.
2663. It is possible that near Hunter's Hill, where they have a salt water view, they might be induced to purchase? Yes, some persons might.
2664. Something has been said about the high prices land brought in this district some time back—£10, £20, and £50 an acre;—do you think any part of the Common would bring that? I do not think it would bring £5 an acre at the present time.
2665. What quantity of the Common do you think would sell altogether, if submitted to competition within two years or more? I do not think more than 2,000 acres could be sold at any price; I believe the rest will be valueless for a hundred years to come.
2666. You know Parramatta Domain? Yes.
2667. Government land was sold there recently? Yes.
2668. What has this been sold at per acre? Some for £2, some for £6, some for £5, and some for £4.
2669. Is there any Common land equal to the land of the Parramatta Domain that was sold? There were some portions of Parramatta Domain that were poor.
2670. How far is this land from railway communication? Two miles, or two miles and a half.
2671. And also from the steamer? Yes.
2672. So that the purchasers of that land have every facility for going backwards and forwards to Sydney? Yes.
2673. The situation of this land is good? Yes.
2674. It is a fine undulating, open country? Yes.
2675. Is the land suited for villa residences? Yes.
2676. Do you think it as attractive as the Field of Mars Common near Hunter's Hill? Yes.
2677. Do you think the demand for land by the general public would be greater at the Parramatta Domain than on the Field of Mars Common? Yes.
2678. Are you acquainted with a great many of the Field of Mars commoners? Yes.
2679. You are a commoner yourself? —
2680. Do you think the commoners residing on the north-western portion, about Pennant Hills and Castle Hill, are desirous for the sale of this Common? No, they are quite opposed to it.
2681. Is it your opinion, if this Common were sold and these bridges were constructed, that the commoners in this locality would avail themselves of the new route in preference to the present one? I am sure they would not.
2682. Do you think the majority, or anything like the majority, would avail themselves of it? Nothing like the majority.
2683. Do you concur in the sale of this Common? I do not.
2684. Have you had an opportunity of knowing the opinion of the commoners generally in your part of the country? Of the greater part of them.
2685. Are they opposed to it? They are opposed to it.
2686. What are the principal uses of the Common? For firewood, fencing, and to turn stock upon.
2687. That part of the country is very bare of firewood now—about Ryde and Pennant Hills? Yes, very bare.
2688. In the event of the Common being sold, I suppose it would be an inconvenience to the residents to get firewood? The greater part would have to pay for their firewood.
2689. Fencing stuff is also scarce? Yes, very scarce.
2690. That the commoners at present get from the Common? That is what it is given for.
2691. It is also a convenience for turning dry cows on? Yes, I have seen a good many grazing there at times.
2692. Are you aware whether the fact of this Common being situated as it is has been an inducement to persons to purchase land in the district? I have heard it is.
2693. Do you think it would be fair to take this Common away, for the purpose of constructing bridges across Parramatta River? I think it would be unfair.
2694. Is it your opinion that if the people of Pennant Hills, or the Government, thought it necessary that there should be bridges across Parramatta River, the proper way would be to place a sum upon the Estimates to meet such an expenditure? I think so.
2695. You are opposed to the sale of this Common for such purposes? I am.
2696. *By Mr. Piddington:* You have spoken of land having been sold in the Parramatta Domain at £2 an acre? Yes.
2697. How many miles is that land sold at £2 an acre from Hunter's Hill, by the road? I suppose ten or twelve miles.

James Pye,
Esq.
30 July, 1862.

- James Pyc, Esq.
30 July, 1862.
2698. Then the £2 an acre is given for land situated from ten to twelve miles from that portion of the Common nearest Sydney? Yes.
2699. *By Mr. Sutherland*: Did you say ten or twelve miles from the portion nearest Sydney? Yes.
2700. The portion of the Common nearest Parramatta is some six or seven miles from Parramatta? Five or six miles from Parramatta.
2701. Where does the land lie that was sold? On the north side of Parramatta, near the Windsor Road.
2702. How many miles is that from the north-western corner of the Common? I suppose six or seven miles.
2703. How long is the Common altogether? I do not know.
2704. Then how could you tell it was ten miles? I said ten or twelve.
2705. I believe the Common is nine miles long, and six or seven put to nine would be fifteen or sixteen? It may be fifteen.
2706. You state that land was sold there at £2 an acre? As low as £2.
2707. What was the highest price obtained? Over £6.
2708. Are you not aware that there was land sold at Hen and Chickens Bay the same week for £15 an acre? Yes.
2709. That is not half the distance from Sydney, and right opposite this portion of the Common at Hunter's Hill;—suppose this land on the Common were equal in situation to that on the opposite side, would it not bring the same price? If the land and situation were as good, it is to be supposed that it would bring the same price.
2710. Then it does not follow because land at Parramatta Domain sold for £2 an acre that this land would not bring £20—quality, situation, and other things, would vary the price? Yes.
2711. You state that you are a commoner—is that for the property you hold near the water-works? Yes, at the North Rocks.
2712. Is that in the parish of the Field of Mars? Yes, the grant is in the Field of Mars.
2713. Is there no land on the Field of Mars equal to that of yours at the North Rocks? Not any.
2714. You state that the parties residing on this portion of the Common would not take advantage of this road, supposing it were made? I am sure they would not; I have conversed with a great many of them, and they say they would not.
2715. Taking the centre of the Common, would not the residents have to drive six or seven miles to Parramatta? Yes.
2716. Would they not have seven or eight miles on the average to drive to Parramatta, and then to go to Sydney by the railway? Yes.
2717. Supposing they could go direct to Sydney in seven or eight miles, do you not think they would go that direct way rather than drive seven or eight miles to Parramatta and then have to go fourteen miles by railway? Yes, if the road were as good as the other to travel on.
2718. Do you not think if there were a direct road to Sydney it would be a great advantage to small settlers and fruit-growers, who would bring their produce into Sydney instead of taking it down to the boat? They prefer water conveyance or the rail, and they take their fruit as short a distance as possible by the road. Water conveyance does not knock the fruit about so much.
2719. I think you have stated that there is no good land upon the Common at all? I do not say there is no good land; I say some could be made available.
2720. Is not the average of the land on the Common similar to the average of the land in the district around it? No, it is nothing like equal to it. I do not suppose you could choose the same quantity of land out of the county of Cumberland so poor as the 6,000 acres that form the Common.
2721. Are there not orchards at Kissing Point, and round there, on ground worse than that of the Common? There are orchards on worse ground than portions of the Common.
2722. I suppose you know Mr. Shepherd's orchard there? Yes.
2723. Is there not on the Common land as good as that of Mr. Shepherd's? A very small portion; there is a little near Bellemy's, at the west end of it.
2724. I think you have stated before, that you cannot give any idea of the expense of making these roads and bridges? No, but I have found from past experience that they mostly cost double what they are estimated at.
2725. You know this portion of the Common fronting the Lane Cove River? I have seen it, but I have not noticed it particularly; I have ridden that way.
2726. Are there not some nice spots there for villa residences? Yes, there are some parts that might be made very pretty places.
2727. Are there not some portions where there are as good sites and as pleasant views as at Hunter's Hill? I think not.
2728. Have you seen these parts round the river where it is taken up by parties? Yes.
2729. Is there no good land there? There was one place we came across, and I remarked that it was surprising to me how a man got his living off it at all; he pays a little rent.
2730. Still he makes a living, and pays a little rent? He does, but I do not know how he does it.
2731. Are there not some good orchards upon portions of the Common now? I would not say that there are any good orchards.
2732. If the land were a man's freehold property, do you not think he might make a good orchard there? It would require a good deal of money; it would be of no use for a poor man or a man of limited means to attempt it.

2733. *By the Chairman*: You have been asked the question, whether you considered that parties living equidistant from Parramatta and Sydney would not prefer going direct to Sydney rather than to Parramatta;—I would now ask you whether, if those persons had water carriage at a convenient distance, they would prefer going by these bridges to sending their produce by water? I am satisfied everyone who could avail himself of water carriage with fruit would do so.
2734. A question has also been asked you with reference to the advantage of sending to Sydney for medical assistance;—are you aware that the principal portion of the residents at Kissing Point go to Parramatta for medical assistance? I am.
2735. You stated that you consider those persons who live in the north-western portion of the district are opposed to the surrender of the Common, but that those living near Hunter's Hill were in favour of it;—are you aware whether all are in favour of it, or only some? No.
2736. Are you aware what proportion are in favour and what against? No; I am aware that those at the western end are opposed to it.
2737. As to the eastern district, Ryde, you know very little? Very little.
2738. *By Mr. Sutherland*: You state that the residents at Kissing Point go now to Parramatta for a doctor? Yes.
2739. Is it possible for them to come to Sydney for a doctor, except at those times when the steamers come twice or thrice a day? I should say not.
2740. *By the Chairman*: Are you aware that there is a ferry crossing the river at Bedlam Point? Yes.
2741. Could they not go by that ferry? Yes.

James Pye,
Esq.

30 July, 1862.

Mr. Henry Harvey called in and examined:—

2742. *By the Chairman*: I believe you are a landed proprietor in the Field of Mars? Yes.
2743. How much land do you hold? Near 300 acres.
2744. You have also a large orchard? Yes.
2745. How is your produce forwarded to Sydney? By water.
2746. Do you consider that the best mode of sending your fruit to market? Yes, it is convenient, but if it were more inconvenient it would be sent by water if possible.
2747. Do you consider it more economical as well as convenient? Decidedly.
2748. Supposing Parramatta River and Iron Cove Bay were to be bridged over, do you think people residing in your neighbourhood would take advantage of that road and bring their produce by that way to Sydney? No, they would not.
2749. Do you consider that these bridges would tend in any way to benefit that portion of the district? Not that portion.
2750. Then you consider that the bridging over of the Parramatta River at or near Hunter's Hill would give only to the people of that portion of the district any advantage that might accrue from the bridge? Yes.
2751. Have you been over the Field of Mars Common? Yes.
2752. Do you think if the Common were sold it would realize sufficient money to pay for the erection of these bridges? It must be a very cheap bridge if it did. I do not know what a bridge would cost.
2753. You cannot form any idea as to what the cost of these bridges would be? No, I have no idea.
2754. At what do you estimate the value of the Common? At the present moment?
2755. Yes? It is a difficult matter to say; I do not suppose a third of it would sell at any price.
2756. Supposing the land were cut up in lots, do you consider that a large portion of it might be sold? There are portions I have no doubt would sell.
2757. You have seen a plan of the Common? Yes. (*The witness referred to the plan produced by the Chairman.*)
2758. Supposing those portions marked there as good land were sold, what do you imagine they would bring? It is very difficult to say, because perhaps if I had land adjoining I might be disposed to buy a few acres at twice what it was worth; but if it were all brought into the market perhaps half would not sell at once.
2759. You do not think the good land could be disposed of? I do not believe it could—the whole of it.
2760. Have you seen that map before? Yes.
2761. Do you know Mr. Birmingham, the surveyor, who drew it? Yes.
2762. Do you know that he is a regularly licensed surveyor? Yes.
2763. Do you believe he is a man you could place confidence in? I do. I do not know much of surveying myself, but I believe the Surveyor General, in his evidence before a Committee of this House, gave him great credit, and said he was a clever man and capable of performing his duty well.
2764. Then you would take the description as laid down there as a correct description? I have no reason to doubt it; he has surveyed for me, and I have reason to be satisfied with him.
2765. Are you aware that the quantity of land he has marked as good land amounts to 1,100 acres? I am not aware of the quantity; in riding over the Common as we did we could not judge of the quantity.

Mr. Henry
Harvey.

30 July, 1862.

- Mr. Henry Harvey.
 20 July, 1862.
2766. Are you, as a commoner entitled to the use of the Common, willing to give up your right to the Common, for the purpose of bridging over the Parramatta River? No.
2767. Do you know the land of Dr. Sherwin recently sold to Mr. Ross? Yes.
2768. Is that similar land to the Common land? Some of the Common land is I think equal to that.
2769. Is the price that was given for that any guide as to the probable value of the Common land? No; there were improvements upon this land—a good house, and everything of that sort.
2770. Are you aware what the house cost? I did hear that Mr. Ross gave £5,000 for the property.
2771. Are you aware what the improvements cost? I think the improvements cost £3,000 of the money; the house cost about £2,000.
2772. A considerable portion of the land is cleared? Yes, and there is an orchard.
2773. All of which tended to increase the value of the place? Of course it was the improvement that gave value to the place. I forget what that land sold for when it was bought by Mr. Rutledge—I think it was 25s. an acre.
2774. You bought some land contiguous to it? Yes.
2775. How much? I think 300 acres.
2776. What did you give per acre for that land? 7s. or 7s. 3d.
2777. And that land was sold to Dr. Sherwin? I think it was; it belonged to the estate of Captain Kent, I think.
2778. Did you at any time buy any portion of Mrs. Bobart's land? Yes.
2779. Where was that land situated? About 400 yards off the Pennant Hills wharf.
2780. Near Mr. Heydon's property? Yes, opposite Mr. Heydon's.
2781. Is that land at all similar to the Common? A large portion of the land I bought was very good land—I think equal to the best of the land on the Common.
2782. As regards its situation, do you consider it desirable? It was that caused it to fetch the price it did.
2783. What price did you give for it? I think, on the average, about £22 or £23 an acre; I only bought twenty odd acres.
2784. Do you consider that the price that land brought could be taken as any criterion of the value of the Common? Not at all; I am very sorry I bought it at that price, I assure you.
2785. You would be very glad to get the same price for it? Indeed I should, after it has been fenced in.
2786. From your knowledge of the Common land, do you consider the situation adapted to villa residences? Not the portion I saw. What I have heard represented as such beautiful sites for villa residences is facing Lane Cove River, and according to my idea no one would think of buying much of that land to expend much money upon it, for they would be roasted in summer time; the face of it is all rock.
2787. Have you been over that way? I have been over that way twice.
2788. Do you not consider that persons residing in Sydney and Parramatta would be disposed to purchase portions? They might. I have seen extraordinary things in the way of people giving large sums of money for pieces of land they have fancied, but as a general thing I do not think it would be very taking for villa sites; it would not be my choice.
2789. Do you consider that the bridging over the Parramatta River would lead to the general improvement of that portion of the district where you have property? Not where I hold property; I do not think it would be any advantage about there. That portion of the district is where the greater portion of fruit and produce comes from—Mobb's and Bellemy's, the best part of the Field of Mars, and the people there would not be benefited by it.
2790. You think they would not take advantage of the bridges if they were built? No, the land carriage is against it; they do not like taking their fruit to market in a cart.
2791. How do they generally convey their produce to market? A great deal goes by steamer, a great deal by rail, and some goes by the road.
2792. They have the facility of the Parramatta River running immediately alongside? Yes.
2793. Would you, as one entitled to the use of the Common, consent to give up that right? No.
2794. Are you aware whether any considerable portion of the residents around you are averse to the surrender of the Common? I know a large portion of the people that I have spoken to about it are; in fact, they have called upon me at Parramatta, where I live, and have stated that they are averse.
2795. From what you have heard, you believe that those persons who reside in the north-western portion of the district are opposed to the surrender? Yes, all those who are opposed live in that quarter.
2796. Do you consider that in the event of these bridges being erected, they would not give the preference to that road? No, in fact it would be a disadvantage to go that way, as they would have to go farther.
2797. How far is your property from Parramatta? About three miles by water, and not much more by land; it is just opposite Blaxland's.
2798. The portion of the district around where your property lies is the productive portion of the district? It is a great deal like all the other land in the Field of Mars—it takes a great deal of labour to make it productive; in fact there is no land there to be called good. The Field of Mars land has been brought into cultivation with manure and that sort of thing, and may be made into orchards, but it is far from good.

2799. As a large landed proprietor, and a large producer of fruit, is there any additional mode you could recommend by which to benefit your district? I do not see where the road is to open to; there is no good land about Colah. I do not see how you could benefit us unless you put a bridge across the river at Blaxland's, so that we might get to the railway by a nearer road. Mr. Henry Harvey.
2800. Are you aware that land has been lately sold in the Parramatta Domain? Yes, I was at the sale. 30 July, 1862.
2801. What did it bring? £5 and £6 odd; some only fetched £2, and some £4 an acre.
2802. What was the Government minimum price? There was a portion of it sold at £2 an acre.
2803. How far was that from Parramatta? That which fetched £6 an acre from two to three miles from Parramatta, at the outside three miles with a good road to it.
2804. Would the price that land realized be a fair estimate of the probable value of the Common? That was very superior land that sold at £6 an acre; and there was some that faced the Windsor Road that fetched only £4 an acre, and one lot even less than that.
2805. Do you consider that that ought to be taken as any criterion of the probable value of the Common? No.
2806. *By Mr. Piddington:* The land you speak of that was sold at the Parramatta Domain is distant from Sydney how many miles by the road? About sixteen or seventeen miles by the road.
2807. And if bridges were constructed over the Parramatta River as proposed, what would the distance be from the Field of Mars Common to Sydney, taking the bridges and the proposed line of road? I am not sufficiently acquainted with the plan to know where the bridges are to be.
2808. One bridge is proposed to be over Parramatta River and the other over Iron Cove? That would be from the Common, as nearly as I can judge, about six or seven miles.
2809. Then what criterion can you derive from the sale of land seventeen miles from Sydney, as to the value of land but six miles from Sydney? That may be, but I am speaking of the Common generally. A portion of the land within a mile or so of the bridge may sell, but I do not believe, taking it as a whole, that a fourth would sell.
2810. You know Mr. Birmingham, who has prepared the plan before the Committee? Yes.
2811. You have a high opinion of his qualifications as a surveyor? Yes, from what I have heard of him.
2812. You are aware that Mr. Birmingham has pointed out on the Field of Mars nearly 1,100 acres of available land? Yes.
2813. With reference to that choice portion, what in your opinion would that land produce, if it were sold gradually after the bridges were constructed, as villa sites, per acre? It is almost impossible to give an opinion upon such a matter. A good deal of the land marked by Mr. Birmingham is not fit for villa sites. A good deal of it is facing to the north-east, a long ridge at the back of Mr. Ross's, which is anything but a good site.
2814. I am now alluding to the land marked out by Mr. Birmingham? I could not say from seeing it on the plan.
2815. You have no idea of the probable value the land would bring if it were sold after the bridges were constructed? Things must alter very much if half would sell at all; we have had such outrageous things in land sales that it is impossible to say what land may bring.
2816. You have done something extraordinary in land, I believe? I have lost a little money.
2817. How much did you give for the land you bought at Mrs. Bobart's sale? I think £22 or £23 an acre.
2818. You have been long resident in the Colony? Forty years.
2819. Seeing that after forty years' residence in the Colony you have given as much as £23 an acre for land not far from the Common, do you not think many people would follow your example? There is a great deal in the locality; the land I bought was near the water, level, and of comparatively good quality.
2820. How far is the land for which you gave £23 an acre from the nearest part of the Common? I dare say, as the bird flies, it would not be above two miles or two miles and a half.
2821. How long is it since you gave £23 an acre for land within two miles of the Common? I think two years last June.
2822. If these bridges were constructed, are you of opinion that none of the land of the Common within two miles of the place you mention would bring £22 an acre for any purpose? Certainly not, unless the people were mad; they could not be right in their heads to give such a price.
2823. Are you aware of any other land in the Field of Mars besides Mrs. Bobart's that has been sold of late years? No, I do not recollect at the moment.
2824. You have not a very high opinion of the Field of Mars district for wheat-growing? I do not suppose there are two thousand bushels grown in the whole district, taking in Castle Hill.
2825. The general character of the entire country is not favourable for growing wheat? By no means.
2826. Then the Field of Mars Common is not particularly worse than the rest of the country? There is some very passably good land on the Common—a small portion; how much I cannot say.
2827. The Field of Mars Common partakes of the general character of the land in the district—some good and some bad? There is a great deal of bad, and some very little good; I had no idea there was so much good.
2828. You had no idea there was so much good as Mr. Birmingham points out? No.

- Mr. Henry Harvey.
30 July, 1862.
2829. You have no doubt of Mr. Birmingham's competency to form an opinion? I have no reason to doubt it.
2830. You are a commoner? Yes, I suppose I am entitled to the right.
2831. You never applied to be acknowledged as a commoner? No, I was once appointed a trustee with Mr. Pye.
2832. What advantage is the Common to you for grazing purposes? It is no advantage to me as an individual.
2833. Do you turn out any stock upon it? No.
2834. Supposing you did, would you ever expect to find them? I was going to say, if I did I should be afraid that I should not see them again.
2835. The Common is not fenced in? Only by various persons' fences.
2836. But the Common as a whole is not fenced in? Not that I am aware.
2837. If you turn out stock without tailing them, there is nothing to prevent their going many miles? There is this one thing, that they could not get over one part of the Common without breaking their legs.
2838. There are no fences? No.
2839. Nothing to prevent cattle from straying if they are not tailed? No.
2840. Have you been on the Common of late? About a fortnight since.
2841. Is there much land free from trees suitable for the grazing of sheep? None at all.
2842. Then for grazing purposes is this land of much value to the commoners? No, only I think the people who live near it have the advantage —
2843. For grazing purposes? No.
2844. You are aware that the Common was granted for grazing purposes among other objects? Yes.
2845. Have you seen sheep or cattle grazing there? I have seen a few cattle, but I have not seen sheep.
2846. Have you seen a hundred in a mob? No; perhaps fourteen, fifteen, or twenty.
2847. Are you aware of the entire number of cattle the trustees permit to graze on the Common? No.
2848. If the trustees have not given permission for more than 500 head of cattle to graze on the Common, is not that a small number to graze on 6,000 acres? They would not live long, for it would not support them.
2849. If it is your opinion that it would not support them, of what use is it for grazing purposes? It is of no great use for grazing purposes.
2850. Then the commoners would lose little or nothing if the Common were taken away from them, in respect to the right of grazing? That would not be the most serious point.
2851. Are you acquainted with Commons in England? I know very little about them; there was one near where I lived, that they turned their geese and jackasses upon.
2852. Your recollection is sufficient to satisfy you that they were free from underwood and timber? Yes.
2853. And that they are really used for grazing purposes? Yes.
2854. For grazing purposes the Field of Mars Common is not like a Common in England? No; the inhabitants here lie wide, and many who are at a distance would not bother their heads to send their cattle to the Common.
2855. Is not the greater part of the Common covered with standing timber? There is a great deal, not to say timber, but saplings and stuff; there is no great deal of large timber.
2856. Is there much of it cleared—much green sward? No, there are a few spots let for cultivation.
2857. I understood you to say that the chief advantage of the Common to the commoners is its affording firewood? That is the chief advantage.
2858. Is that a very great advantage to the inhabitants? It is, because wood is not particularly plentiful; it is also useful for fencing.
2859. Do you know whether any parties sell wood from this Common, for the consumption of Sydney, without the knowledge of the trustees? I do not know anything of that.
2860. Do you not think they might send boats up Lane Cove River and get firewood for Sydney without paying the trustees? The wood they want in Sydney is larger wood that they can split; saplings they will hardly take as a gift; I have some that I should like to dispose of, but I cannot get anyone to take it.
2861. Do you know as a matter of fact that wood boats ply at Lane Cove River to obtain wood from the Common? They may.
2862. What particular advantage is that to the commoners? I do not know that it is any, unless they take toll.
2863. Do you know that any toll is taken? No, I do not know whether they receive any revenue from it.
2864. Do you get much fencing or use much firewood from the Common? I do not.
2865. Then the Common is no great advantage to you? None whatever.
2866. Then it is upon grounds of equity you give the opinion you have expressed? Yes, I think the principle is wrong—that it ought not to be given up. If it opened to any good country, any agricultural country, by which the general inhabitants would be benefited, then I think the people would be foolish not to give it up; but it can be no advantage, as the road would go to Bellemys and there stop; there is only the portion of land marked red that is good, all the rest consists of rocks, and you cannot get farther.
2867. Do you not think the public the best judges of what is beneficial to them? Yes, I am speaking only my own ideas.
2868. Do you know of any land in the immediate neighbourhood of the Field of Mars that has sold for upwards of £25 an acre within the last few years? No.

- 2869. Have you heard the price land brought on the Gladesville Estate? Yes, I know that when that was first in the market it was bought very cheap; it was afterwards cut up and sold at very high prices.
- 2870. If it has been given in evidence that part of the land on the Gladesville Estate within half a mile of the Common sold for £60 an acre within the last two or three years, have you reason to suppose that land in the neighbourhood of the Gladesville Estate would bring considerably less if bridges were constructed? There might be a little sold; but take it as a whole I do not think it would fetch 40s. an acre, taking the average within four miles of Gladesville.
- 2871. Are you now speaking of the land being sold before or after the building of the bridges? After the bridges are built.
- 2872. Do you know that portion of the Common rented or leased to a person of the name of Face, near Gladesville Road? I do not know whether that was pointed out to me.
- 2873. Do you know the land that Dr. Campbell purchased? Yes, I know that well.
- 2874. Do you know the portion that abuts on Gladesville Road, near Dr. Brereton's. Yes.
- 2875. Are you aware that there is some portion of the Common land within two chains of that road? Yes.
- 2876. If Dr. Campbell has given £25 an acre for land in that exact locality, what reason have you to suppose that land adjoining which is Common land would not realize nearly as much? How long is it since he bought it?
- 2877. Two or three years? That is no criterion to guide us in the present day, for I believe that half the people lost their reason in purchasing land three or four years ago; I should not be surprised if it then fetched £25 an acre, for there was a perfect rage for land at that time.
- 2878. If these bridges are built do you not think it possible another rage for land may be expected? It may burst out to a small extent, but I am afraid I shall not live to see the time—I wish I could. People find now that orange orchards are not so profitable as they thought, in consequence of the disease, and of the labour connected with them being so great, and they cannot afford to pay the enormous price for land they have done.
- 2879. Do you doubt if these bridges were built that they would increase the facility of communication with Sydney? No doubt it would be a great facility to people around Kissing Point and Gladesville.
- 2880. Are you of opinion that it would not tend to increase the number of purchasers of land in the neighbourhood of Ryde if bridges were constructed? It might, because I expect they would get it very cheap, and many persons would like to live out of town.
- 2881. Since the steamers have called at Hunter's Hill, have not the people of Sydney built houses and lived there? Yes.
- 2882. Do you not attribute that increase of population to the facility of communication afforded by the steamers? Yes.
- 2883. If the same facilities were afforded, would not the people of Sydney be likely to build upon the Common? They might upon a portion, but I do not believe they would, taking it as a whole.
- 2884. *By Mr. Lackey:* You say you have bought some land at various times in the district? Yes.
- 2885. When did you purchase that land for which you gave 7s. 3d. an acre? I think it must be about twenty years ago.
- 2886. You have bought land recently? Yes, two or three years ago.
- 2887. You gave for that about £23 an acre? Yes.
- 2888. This land for which you gave £23 an acre is near the river side? About 400 yards from Pennant Hills wharf, facing the road; it is a square block, and in a good situation.
- 2889. If the land you purchased were in the market now, what do you imagine it would fetch per acre? I do not think an offer could be got.
- 2890. You are of opinion that your land is in a much more eligible situation than the land of the Common? Yes, some of it was considered the best that was sold there.
- 2891. There was, at the time you bought this, a great desire to buy land in all parts of the country? Yes.
- 2892. You know the land that was sold in the Parramatta Domain? Yes.
- 2893. Do you think there is any of the Common land equal to that? There may be a small portion, but there was only a small portion of the land in the Domain that was good land.
- 2894. Do you think, as a matter of investment for working men of small means, the Common land would be desirable—do you think it would be purchased with a view of being cultivated? Small portions might.
- 2895. Do you think it would realize the anticipations of the persons who might buy it;—if they were to clear and bring it into cultivation is the land good enough to repay them? There is not much call for land in that way by poor people; in fact I do not see how they could get a living off this land. A poor man has no business with land.
- 2896. A man with only a small capital might, you think, employ his means with greater advantage in some other channel? I think so.
- 2897. You know of no way by which he could occupy this land so as to repay him for the necessary outlay? He must have some means to commence with, as it would cost him £8 an acre to clear it.
- 2898. Do you know anything of cotton growing? I grew a little that was shown; that did very little —
- 2899. Was it affected by the frost? Yes, the cold weather set in and prevented it from podding. If it had been put in before September it would have done very well.

Mr. Henry
Harvey.
20 July, 1862.

- Mr. Henry Harvey.
30 July, 1862.
2900. You believe the climate and soil of that part suited to cotton? No; this was a piece of land that was prepared on purpose.
2901. Was this a piece of land you bought near the Common? No, the land I bought near the Common I sold to Mr. Devlin for £25 profit on the same day.
2902. The land on which you grew the cotton, how far was it from the Common? Not more than two miles straight over.
2903. Is there any land on the Common equal to this on which you grew the cotton? Yes. This was a few rods that was dug up and manured on purpose.
2904. You have had an orange orchard for some time? Yes.
2905. Has it been very productive? Yes, till the trees have gone dead.
2906. You think the land on the Common is as good as that? Yes, about the same quality.
2907. What quantity is there of that? I was not aware that there was so much as is marked here; from riding over it I came to the conclusion that there were five or six hundred acres passable land.
2908. You rode over it? Yes.
2909. Have you been over to Lane Cove? Yes, I went over to Lane Cove River twice.
2910. What is your opinion of that portion of the Common generally, as a site for villa residences? Of course the trees obstruct the view, but I did not see anything that if it were cleared land would, I think, induce many people to build.
2911. You have been to the northern portions of the Common? Yes, but not much of late years.
2912. That would not recommend itself to you as a particularly eligible situation? That is no good at all—the northern portion of the Common.
2913. You say the Common is used for grazing stock upon it by the commoners and small farmers in the vicinity;—are you not of opinion that it is very convenient for them to run dry cows upon it where they have no paddocks of their own? Yes.
2914. Is it generally used for that by a great many of the commoners? So I am told.
2915. Have you ever used your right of cutting timber on the Common? I have had timber from the Common repeatedly.
2916. Is there much good timber on the Common now? Not a great deal—here and there is a tree; higher up, towards Bellemy's, the timber is better.
2917. Timber for farm buildings and fencing is very scarce? Yes.
2918. If the Common were held and this timber were protected, in a few years the timber would be very valuable for fencing purposes? Yes; the other day I wanted to have some fencing and the man said he could not get any.
2919. You think if the ironbark and oak saplings were preserved, in the course of years it would be very valuable when fencing stuff became scarce? Yes, if it could be preserved.
2920. You say the commoners object to the Common being taken away for the erection of these bridges? Yes, because they think the principle is wrong.
2921. Do you know how far the Homebush station is from Ryde, across by Bray's? I should suppose about three miles—it may be three miles and a half.
2922. Do you not think the convenience of the inhabitants of the northern side of the river would be consulted as much by the construction of a bridge over this part of the river, to communicate with the station at Homebush, as the convenience of the people at the southern end would be by the construction of a bridge at Five Dock? That would suit the people at Kissing Point, and I think the larger portion of the population; and the other would suit those at Gladesville.
2923. Do you think it would be more convenient to the larger portion of the residents on the northern side of the river? Yes.
2924. You have come into communication with a great many of the commoners, and believe that is the prevalent opinion? Yes; and people who are not interested in the Common have come to me and said, "You are not going to sanction the Common being taken away." They have come to the same conclusion that I have—that the principle is wrong.
2925. *By Mr. Sutherland:* You state that Homebush station is from three to three and a half miles from Ryde? I am not positive.
2926. In measuring the distance, do you take the north side of the river or Ryde Church as the starting point—I suppose the chief portion of the population is there? Yes.
2927. What is the distance from the river to Ryde Church? I suppose about half a mile; the distance to Homebush station would be about three miles and a half, or not more than four miles.
2928. What do you suppose would be the expense of making a road from there to Homebush? I have not the least idea; there would not be any great expense after you got across the river to Homebush, for it is comparatively level land.
2929. That is supposing you had to purchase no land, but it is all private property there? Yes.
2930. What is the width of the river there at the punt? It is a pretty good width, but there is not much deep water.
2931. What is the distance from Homebush station to Sydney? I think it is called six or seven miles.
2932. It is eight? It may be eight.
2933. Do you not think if there were a direct road from Sydney to Ryde Church, six miles long, that the people would prefer going by that road to going four miles to Homebush and then eight miles by rail? Yes.
2934. You think it would be a greater advantage to have a road direct to Sydney? It would suit some people, others it would not.

2935. Ryde Church is the centre of population in that district, is it not? I have no doubt it would be better for Ryde if there were a bridge where it is spoken of, at Gladesville, to go that way to Sydney, than to go the other way, for the distance from Ryde to Gladesville is not perhaps more than three miles.

Mr. Henry
Harvey.

30 July, 1862.

2936. It is six miles by the proposed road from Ryde Church into Sydney? It must be a great deal more than that if they go over Iron Cove, for after they get over that they have more than four miles to go.

2937. Take it at eight miles, but I have been informed by a surveyor that the road is only six;—do you think, if there were a road from Sydney to the centre of population, only eight miles, the people would take advantage of that road rather than go by any other? There is no question of that, if there were a good road and a good bridge to go over—if they could go that way the nearest and most comfortably.

2938. Do you not think if the road and bridge were made it would increase the population of that district very much? The facility of getting there might do that, but I do not see much inducement to draw a large population there, for the land is poor and very badly watered all round that quarter.

2939. Are there not persons getting a living and paying rent for property adjoining the Common land now? There may be, but I am not aware; I believe there are parties renting the Common land.

2940. I allude to persons renting private land? That I do not know; I know very few of the inhabitants round about that quarter. All I say is, that people could not come there to get a living; it is an elevated situation, and they might get their health.

2941. You think it is a healthy locality? It has always been considered so.

2942. And being only six or seven miles from Sydney, people would build villa residences and reside there? Yes, they might eventually, when the land is taken up nearer Sydney; but at present there are so many places nearer in the market that I think they would be chosen first. I wish there were a greater call for land, for at present we have hundreds of houses in Parramatta shut up and cannot get tenants for them.

2943. Parties buying land three miles out of Parramatta—such as you say was sold the other day—would have to travel by road some nineteen or twenty miles? If they went by the road; from the farthest part of the Domain it is about eighteen miles by railway.

2944. I am alluding to the road? The distance from Parramatta by the road is fifteen, and by the railway thirteen and a half miles.

2945. *By the Chairman:* Do you consider that the population at Ryde prefer going to Sydney by water to going by land? Some would, no doubt; some would not. If people were coming to Sydney for pleasure they would take the steamer, if for business they would take the shorter road.

2946. Do you think they would be a shorter time coming by the road than by steamer? I do not think it would be much shorter.

2947. Is not water travelling considered far preferable to land? It depends upon the facility of getting to the water.

2948. Do you know Mr. Birmingham? Yes.

2949. Are you aware that at the present moment he is unwell and unable to attend this Committee? Yes, I saw him at Parramatta.

2950. He is dangerously ill? He is unable to come here at the present time; but he says the doctor informs him that he thinks he may come next week if you should require him.

2951. *By Mr. Sutherland:* At what time can you leave Sydney to get home to-night? I am living at Parramatta.

2952. Supposing any person were living at Ryde, and were here as a witness, at what time could he get home? If he were here till a quarter past one he could not get home till the next steamer leaves, at five o'clock.

2953. He would be unable to get home until dark, whereas if there were a bridge he could go home immediately after leaving the Committee? The people of Ryde are no doubt very badly off.

2954. *By Mr. Lackey:* There would be nothing to prevent his riding home at once? If he had a horse.

2955. He could go at once and cross by the punt? Yes.

2956. *By Mr. Sutherland:* How many miles is it to go by the punt? I think it is seven miles to the punt; I think to the church ten miles.

2957. You cannot cross the punt after dark? I think not.

2958. Is there not a regulation that the man shall not loose the punt after dark? I do not know—I have been over it seldom.

FRIDAY, 5 SEPTEMBER, 1862.

Present:—

MR. COWPER,
DR. LANG,
MR. LACKEY,

MR. LUCAS,
MR. PIDDINGTON,
MR. STEWART,

MR. SUTHERLAND.

ISAAC SHEPHERD, Esq., IN THE CHAIR.

James Byrnes, Esq., called in and examined:—

2959. *By the Chairman:* I believe you are a landholder in the Parish of the Field of Mars? Yes.

2960. What number of acres do you possess? Thirty or thirty-five acres.

Jas. Byrnes,
Esq.

5 Sept., 1862.

- Jas. Byrnes,
Esq.
5 Sept., 1862.
2961. Do you claim a right of commonage over the Field of Mars Common? Yes.
2962. Have you heard of any proposition to surrender the Common to the Crown? I have.
2963. Are you aware with whom that proposition originated? No.
2964. Are you aware that there is a feeling adverse to the surrender of the Common? I am aware of that fully.
2965. Have you attended any public meetings when the subject has been canvassed? I have.
2966. What, in your opinion, is the wish of the greater portion of the producing part of the population of the district as regards giving up the Common? They are decidedly opposed to it.
2967. Have you any knowledge of the Common, as to its fitness for agricultural purposes? Some portions of it might be available for agriculture.
2968. Do you consider that a large portion might? I think not; that is, if you mean for the production of cereals and so on.
2969. Do you consider it desirable as sites for building? For business places, do you mean?
2970. Either business places or villa residences? Decidedly not for business places; as to residences, it is hard to say what people's tastes may lead them to do in a matter of that kind; but no doubt if the Common could be cut up in blocks of ten, twenty, or a hundred acres, they would be purchased by some parties as places for residence, and by others for making small orchards.
2971. Do you think it probable a large portion or the whole might be disposed of in that way? I think there is a large proportion of the Common that would hardly be taken at a gift, if persons were obliged to build upon it.
2972. What is your opinion of the value of the Common as a whole? There are some portions that I think would sell for £10 an acre, and other portions for £3 or £4 an acre, and other portions that would not sell at all.
2973. Can you give the Committee any idea what, in your opinion, the Common, of which there are about 6,000 acres, would realize as a whole? Really I could hardly say; £18,000 or £20,000 perhaps; that is, if it was cut up in small blocks and sold; but it could not be sold as a whole—no one would buy it in its present state as a whole, and if cut up into blocks only the better portions would sell just now.
2974. Have you heard the subject of bridging the Parramatta River and Long Cove Bay mooted? Yes.
2975. Is there, in your opinion, any lack of means of transit from the Field of Mars and Hunter's Hill districts to Sydney? Being a proprietor of the Parramatta steamers, I am always ready to afford them every accommodation between that part of the country and Sydney.
2976. How frequently do the steamers ply? We are only running one boat on the river now—twice in the day from Parramatta, and twice in the day from Sydney.
2977. Do you find the traffic from these districts sufficient to fully employ these boats? We have taken off two boats—they would not pay their expenses. It pays one boat, but that is all.
2978. Are there other means of transit, such as sailing boats? Yes, there has always been a number of sailing boats from the earliest period almost of the history of the country.
2979. Then you do not conceive that it is necessary for the well-being of the district that these bridges should be built, in order to give additional facilities of transit? I am not a resident in the neighbourhood, and therefore I can scarcely say what other people desire; but I do not believe that it is absolutely necessary at the present time to afford any greater facilities than the people enjoy, unless by affording greater facilities you increase the population; and that will answer my purpose very well, because it will enable us to put on another boat.
2980. Have you any idea what would be the cost of erecting these bridges? Not the slightest.
2981. Are you aware whether any great extent of country would be opened up beyond the Common, supposing greater facilities of transit were afforded? Certainly not; none of any importance or of any value.
2982. What means of transit is usually considered most desirable—land or water carriage? Water carriage I should say, unless you can get railways, which are a more rapid means of transit.
2983. Are you aware whether the residents of the northern portion of the district have any other means of transit to Sydney than by water;—have they additional facilities of transit by railroad by Parramatta? Yes, they have.
2984. Do you know whether that means of transit is taken advantage of largely by the producers of the northern portion of the Field of Mars district? Yes, very largely.
2985. Then, independent of the means of transit by water, they have steam traffic? They have the locomotive on the Parramatta railway.
2986. You can give us no idea whether in the event of the Common lands being sold they would realize sufficient to build these bridges or more? No; my own judgment is, without going into the thing, that they would fall very far short of it; in fact I am certain of that.
2987. As a commoner, having an interest in the Common, are you willing to give up your right of commonage for the purpose of building these bridges? Certainly not.
2988. What portion of the district do you imagine would be more particularly benefited by these bridges? From Gladesville down to Hunter's Hill.
2989. Do the inhabitants there produce largely, or cultivate the land to any extent? I should think not.
2990. *By Mr. Piddington:* As part proprietor of steamers touching at Kissing Point, are you an interested party in this question? Certainly not; I do not care three straws about it.
- 2991.

2991. If the proposed bridges were constructed, would they tend to diminish the number of passengers who came by the Parramatta steamers? I think not. If the bridges produced any effect at all it would be to increase the population, and therefore they would be decidedly advantageous to me, because families would prefer going up and down by the steamer to travelling either by carts or carriages on the roads. Jas. Byrnes,
Esq.
5 Sept., 1862.
2992. Have you any idea what families would prefer if they could come at any time of the day by means of the bridges to Sydney? I have never gone into the question.
2993. Have you any objection to the proposed building of these two bridges, independent of the question of the surrender of the Field of Mars Common? Not at all; if you proposed a dozen bridges I should be very glad to see them constructed.
2994. In virtue of your proprietorship of land in the district of the Field of Mars, have you acquired any grazing right upon the Common? I have always felt satisfied I had a right which I have never exercised; my tenant I believe exercises it.
2995. Do you know whether your tenant has applied to the trustees for a share of the rights of commonage? I do not know that he has.
2996. You have not applied? I think I applied, on one occasion, to Mr. Shepherd, in consequence of an advertisement I saw.
2997. Do you know to what proportion of stock you are entitled, in virtue of that application, to run on the Common? I have not the slightest idea.
2998. Then the right you possess has not been of much advantage to you? No, it goes with the land; the holder of the land exercises it.
2999. You have not concerned yourself much about it? No.
3000. You do not know whether you are entitled to run ten head of cattle or thirty? I do not know.
3001. Do you know whether you have the right to graze three head of cattle? I do not know whether I have a right to graze a calf or a cow, or a dozen.
3002. Then the value of this right to you has not been of such importance as to induce you to make much inquiry about it? Not to me as an individual.
3003. You know the Field of Mars Common? Yes, I have travelled over it hither and thither on business, but not for some years past.
3004. Do you consider the Common of much advantage to the people of the district for grazing purposes? I believe it has been of immense advantage to a number of the commoners, for grazing purposes and for other purposes.
3005. Is there much cleared land on this Common? I believe there is some that was cleared by a few squatters.
3006. Out of the 6,000 acres is there much open land fit for grazing purposes? There is a difference of opinion at all times on that point whether clear land or timbered land is the best for grazing purposes in this country. In dry seasons land pretty well shaded is decidedly better for grazing purposes in the county of Cumberland than land thoroughly cleared.
3007. I am not speaking of land thoroughly cleared, but I ask whether there is much land upon the Common sufficiently open to be of use for grazing purposes? I cannot say; I have not travelled over it recently.
3008. You do not know whether it is covered chiefly by underwood? No, I have not been over it during the last five or six years.
3009. If the Common be covered with standing timber, young or old, to a great extent, can it be available for grazing purposes? Do you mean underwood or forest timber?—If it is only forest timber I say it is decidedly better to leave it standing, but if it is covered with underwood it is perfectly useless, unless the parties interested take the trouble to destroy the underwood.
3010. Do you know how many head of stock of every description have been permitted by the trustees, on the application of the commoners, to be grazed over these 6,000 acres? I do not.
3011. Have you ever seen many head of cattle lately grazing on the Common? I have said I have not been on the Common for five years past.
3012. Have you at any time seen as many as one or two hundred cattle grazing there? I have seen a great many cattle spread over the Common at different periods in years gone by.
3013. Have you seen any large number in one place? Milch cows and cattle belonging to various parties do not collect in large mobs. Each person's cattle would keep to themselves.
3014. Have you seen many horses grazing on the Common? I have not been on the Common for five years.
3015. What is the use of the Common—what is it intended for? I have not gone into the legal question.
3016. I speak of the practical question;—do you believe this Common is of much use for grazing purposes? I think it is of much use to the small farmers; particularly to those whose properties are bordering upon the Common.
3017. For grazing purposes? Yes. Not that it will fatten cattle, of course.
3018. You do not know to what extent these small commoners do really avail themselves of the Common for grazing purposes? I do not.
3019. Is it your opinion that this Common, if cut up and sold in small blocks, might bring eighteen or twenty thousand pounds, founded upon its present condition, without the bridges? I do not think the bridges would increase its value one iota.
3020. Do you not think that building the bridges would tend to increase the population of the district? I think not. There must be greater facilities afforded to persons to induce them to go and live in places of that kind than those derived from running over bridges.

- Jas. Byrnes,
Esq.
5 Sept., 1862.
3021. What better facilities do you allude to? In the first place there must be consumers for their produce.
3022. I am not speaking of producers, but simply of population—residents, persons who inhabit houses? The population would be very little indeed increased, if any, by the construction of these bridges—that is my opinion.
3023. I understood you to say that the population might be increased if other facilities were afforded;—I wish to ask what other facilities you allude to? They must find the money to enable them to turn over the soil to some effect and form orchards.
3024. Do you think these bridges would tend to benefit the inhabitants of Sydney, by bringing that district into easy communication with Sydney? I do not think so. I do not think the people of Sydney care three straws about the Field of Mars Common.
3025. Supposing the steamers were taken off, and did not touch at Kissing Point at all, would that tend to diminish the population of the district, or would it remain as it is now? There are a vast number of persons resident in the neighbourhood of Kissing Point who could not possibly leave it—their living is there—they have spent twenty, thirty, or sixty years there, and have provided their means of subsistence by their long residence and culture of the soil.
3026. My question is rather more general than your answer;—my question is, supposing the Parramatta steamers ceased to touch at Kissing Point, would that tend to diminish the population of the district? I do not think it would.
3027. Are you of opinion that increased facility of communication with a suburb in no way tends to increase the population? I do not think it does in all instances.
3028. Is not that opinion in direct contradiction to the fact in regard to the suburbs in the neighbourhood of Sydney? There is no analogy between the two cases.
3029. Do you know that the Field of Mars Common adjoins the Hunter's Hill district? Yes.
3030. Are you aware that a very great number of houses have been built within the last few years at Hunter's Hill? Yes. It is a very convenient distance from Sydney, just in the same way as Newtown is, for instance, where the omnibuses run every hour; the steamers run to and fro to Hunter's Hill, and gentlemen can reside there and get home from business early in the afternoon, and leave at a convenient hour in the morning.
3031. When the steamers cease to run to Kissing Point do they cease to produce the same effect as when touching at Hunter's Hill? Yes.
3032. How do you account for that? Simply from what I have stated. They arrive at Hunter's Hill at an early hour in the evening, and leave at a reasonable hour in the morning.
3033. What is the difference in time between the arrival and departure of the steamer at Hunter's Hill and at Kissing Point? The hours in the summer make very little difference, but in the winter season all the difference. By the time the steamer arrives at Kissing Point in the evening in winter it is dark, whereas at Hunter's Hill they arrive by daylight. During the whole winter it is exceedingly inconvenient for persons who have daily business in Sydney to reside at Kissing Point.
3034. Do you think railways tend to increase the population of a district when constructed? They have tended to decrease the population of Parramatta.
3035. I am speaking of the immediate neighbourhood of the line of railway? I give you an instance in my experience, that they have reduced the value of property in Parramatta nearly one half.
3036. *By Mr. Lucas:* And what in Liverpool? And ruined Liverpool altogether.
3037. *By Mr. Piddington:* Is not that invariably the case, that they tend to injure one part of a given line and benefit another? Yes, railways will benefit the great *termini* in the interior, and benefit Sydney, but not the towns through which they pass.
3038. Do you think the railway has not benefited Ashfield, Burwood, Kingston, and other suburbs? I think it has.
3039. Has it not benefited those suburbs in consequence of the increased facilities of communication? Solely because the persons who reside there are all business people who travel backwards and forwards to Sydney.
3040. Have business people made a vow not to live at Kissing Point? If you ran a railway to Kissing Point I believe it would increase the population.
3041. But you are satisfied the erection of these bridges would not? Yes.
3042. How do you account for that difference? By the difference in the mode of travelling, of course.
3043. The one being a more imperfect means of communication than the other? Yes.
3044. Have you ever heard of any sale of land in the immediate neighbourhood of the Field of Mars Common? Yes.
3045. Lately? Not very lately. I have known many sales there.
3046. Within what period? The only land I recollect being sold in the immediate neighbourhood was Mr. Billyard's speculation.
3047. Do you recollect how much that or any portion of it brought per acre? No.
3048. Do you remember Mrs. Bobart's land being sold? Yes.
3049. Do you recollect how much per acre that brought? No, I really forget. I suppose you know the land has remained a dead letter ever since.
3050. Do you know the land purchased by Dr. Campbell in the immediate vicinity of the Field of Mars Common? No. I have a quantity of land for sale now in the immediate neighbourhood of Mrs. Bobart's, and I cannot sell it at any price.
3051. Have you ever seen a plan of the Field of Mars Common that has been compiled by Mr. Birmingham, a surveyor? I cannot say I have.

3052. You are not aware that on that plan Mr. Birmingham has marked upwards of 1,100 acres on this Common as being tolerably good land? No.
3053. Do you think any part of the land on the Field of Mars Common would be suitable for orchards? I think a considerable portion of the land would be as suitable for orchards as that now under orchards in the immediate neighbourhood.
3054. What do you think is now the value per acre of land in the immediate neighbourhood of the Common that would be suitable for orchards and is not yet sold? I do not think there is any land suitable for orchards in the immediate neighbourhood that is not in the hands of small holders, except Mr. Forster's.
3055. Do you recollect Dr. Sherwin's farm? Yes, well.
3056. Do you know what that brought? I cannot remember—some unaccountable price.
3057. Some high price? Yes, the farm.
3058. Is that land of a similar character to the land within the Field of Mars Common? I think some portions of the Field of Mars Common are very similar to it.
3059. Are you aware that that land—one hundred acres—sold for £5,000? No, I am not; I am aware that the land, with all the improvements on it, sold for something like that amount. But I think Mr. Rutledge laid out £4,000 or £5,000 upon the buildings; I know he paid a very high price for his buildings there, and he also laid out an orchard.
3060. Do you know the piece of land adjoining the Common—I think it was a part of Kent's grant, sold to Mr. Ford a few years ago? I cannot say I recollect the land; I recollect the sale.
3061. Do you know what price it fetched? No. You must bear in mind that anything that was done in the purchase of land a few years ago was done when people were perfectly mad with reference to land; I have myself been as great a fool as anybody in buying land at that time.
3062. I think you said that the steamers calling at Kissing Point exercised no influence upon the population of the district? I do not think they do. I may tell you as a fact, that I have known persons go to reside in the neighbourhood of Ryde, believing that the Parramatta steamer would enable them to get backwards and forwards to their business at a proper hour to and from Sydney, and they have discovered very soon afterwards that it was inconvenient to them, and have left it.
3063. Was that mistake to be attributed to the inconvenient hours at which the steamer touches at Ryde? Perhaps a steamer running direct to and from Ryde at different hours might afford them greater facilities than they have at present.
3064. A steamer running every half-hour would afford sufficient facilities? It might, but it would not to a very great extent increase the population even then.
3065. If bridges were built so that people could travel backwards and forwards as they pleased at any hours of the day or night, do you not think that would tend to increase the number of people residing in the district? I do not think it would.
3066. *By Mr. Stewart*: Do you know anything of the country between the Common and the Hawkesbury? I have travelled over some portions of it.
3067. Do you think there is any extent of country there that would be opened up if this communication was afforded? There is a large extent of rocky, miserable country, full of deep ravines.
3068. Not likely to be brought into cultivation? Certainly not. I believe all the land available for cultivation between the Common and the Hawkesbury has been already taken up, or nearly so.
3069. It is stated by some of the parties petitioning, that there are 960,000 acres of land between the Common and the Hawkesbury that would be opened up by the means of communication afforded by these bridges;—from your knowledge of the country you do not think any considerable proportion of that land would be available? I am sure it would not—quite certain.
3070. Then you think the advantage of these bridges would be confined to the immediate neighbourhood of Hunter's Hill and the Common? I am perfectly satisfied about that.
3071. Would the residents of Pennant Hills and Dural, who now use the communication by way of Parramatta, still continue to do so, in preference to that by way of Hunter's Hill, if the bridges were constructed? They have always used that by Parramatta even when there was no locomotive between Parramatta and Sydney; they invariably took their produce down by carts and drays to Sydney.
3072. You think a considerable number of them would still continue to use that road? I am pretty certain they would.
3073. Even to those who would be nearer the bridges, would boats afford better facilities for conveying their produce to market? I think for conveying fruit to Sydney boats are decidedly better than carts.
3074. And they would be used even if this road was opened up? I think so. They are used now to some extent in preference to the steamers, although we have taken fruit at about the same price.
3075. *By Dr. Lang*: Supposing it should be found impracticable to obtain the surrender of the Common for the purpose of constructing bridges, do you think it would materially promote the interests of the inhabitants in the neighbourhood of Hunter's Hill and that side of the river, if a bridge were erected across Iron Cove and the punt placed where Mr. Langley, on his map, recommended its being placed? I think it would be a great accommodation to the Hunter's Hill people who wish to be in Sydney to a later hour in the evening than the departure of the steamer will admit of.
3076. Do you think the erection of a bridge across Iron Cove would be an important improvement for the inhabitants of both sides of the river? I do not know anything at all of the country between Five Dock (where Mr. Langley suggested placing the punt) and Sydney.

Jas. Byrnes,
Esq.
5 Sept., 1862.

- Jas. Byrnes, Esq.
5 Sept., 1862.
3077. They are both desirable improvements, whether they can be effected in the way contemplated or not? I should have no objection to the improvements, as far as I am concerned, but I do not think that if the tolls were to be taken on the bridges, they would for the next fifty years pay the expenses of the man engaged to receive them, unless the population increases very much.
3078. You do not appear to think any of these improvements would tend to increase the population? I think just about Hunter's Hill—which seems to be a fashionable spot for gentlemen to reside in who have business in Sydney—it might increase the population.
3079. *By Mr. Lucas*: Do not the commoners get firewood on the Common? I believe they do.
3080. They also get timber for building and fencing purposes? They do.
3081. Those are even greater privileges than their grazing rights? Yes, I think they are of very great importance.
3082. If the Common were sold it would cost these people a considerable amount for firewood and timber? I do not know where a number of the little farmers would get their firewood except from the Common.
3083. Business people do not like to go beyond a certain distance from Sydney? No.
3084. Is it not found that notwithstanding the railway few business people go to live in Parramatta? No business people from Sydney go to live in Parramatta; I believe I am the only person in the habit of leaving Parramatta every morning for business.
3085. That is because you have been resident in Parramatta for many years? And do not think proper to give it up.
3086. Is it not a fact that business people will not go further than Burwood? Yes, I think they have pretty nearly all left the train by the time it arrives at Burwood.
3087. You said you were aware of Mrs. Bobart's property being sold;—are you also aware of the purchasers in many cases having forfeited their deposits? I have heard of it.
3088. Has any of the property been improved since? No, I am not aware of it.
3089. Speaking of the property of Dr. Sherwin, which was said to have been sold for £5,000, there are about one hundred acres of it? About one hundred acres.
3090. I think you said the buildings on it cost £4,000 or £5,000? If my memory serves me right, Mr. Rutledge told me so.
3091. At what time were these buildings erected—when labour and materials were cheap, or when they were high? I think the materials were in great measure obtained on the spot.
3092. At the time Dr. Sherwin sold this place for £5,000, could the buildings and improvements have been put upon it for £5,000? No, I am sure they could not.
3093. In that case the ground and the improvements were sold for less than the improvements alone would have cost? Yes, at that time.
3094. Of course you know nothing of the line of road from the proposed bridges to Sydney? I saw a sketch of it.
3095. You signed a petition against surrendering the Field of Mars Common? Yes.
3096. Have you the same objection to surrendering it as when you signed that petition, and for the same reasons as set forth there? I have the strongest possible objection to surrendering the Common for the purpose of constructing bridges that will be of very little or no advantage to the great majority of the commoners.
3097. Is it not a fact that by sailing boats and other ways the producers round the Field of Mars Common can get their produce to Sydney cheaper than any other persons within the same distance of Sydney either by rail or otherwise? Yes, I am sure they can.

Edward Orpen Moriarty, Esq., Engineer-in-Chief for Harbours and River Navigation, called in and examined:—

- E. O. Moriarty, Esq.
5 Sept., 1862.
3098. *By the Chairman*: Have you seen any plans of the bridges proposed to be erected over the Parramatta River and Long Cove? I saw some plans of iron bridges that were left at my office.
3099. Are those (*handing plans to witness*) the plans of the bridges you have seen? Yes.
3100. Have you made or caused to be made any estimate of the cost of those bridges? No.
3101. Have you considered as to the cost of any other bridges that might be erected over the Parramatta River? I have made a rough estimate; of course without having a design before me it could only be an approximation.
3102. Have you caused soundings and borings to be taken on the Parramatta River? Yes.
3103. Do you consider the bridges you have made an estimate of more desirable than those shown on the plan I have put before you? I think they are. I do not think either of these at all suitable; they show stone piers, but in the places where it is proposed to build these bridges the borings show from 30 to 40 feet of mud in some parts, so that it would be almost impossible to found these piers.
3104. *By Mr. Lucas*: Thirty or forty feet of mud below the present bottom of the river? Yes; the depth of mud varies, of course. (*The witness produced a plan.*) This shows 25 feet of mud in one place and 26 feet in another; that is on the Parramatta River.
3105. *By Mr. Piddington*: What is the most shallow depth of mud below the bottom of the river before you come to the rock? About 10 feet.
3106. It varies from 10 feet to 26? Yes, on the river; in Long Cove it is still deeper, there being as much as 38 feet of mud.

E. O.
Moriarty,
Esq.
5 Sept. 1862.

3107. *By the Chairman*: Will you have the goodness to give the Committee the benefit of the estimate you have made of the bridges that you considered more desirable than these on stone piers? I estimate the cost of an iron bridge, on iron piles, across the Parramatta River, at about £40,000, and of a bridge across Long Cove Creek at about £22,000; the latter would be a timber bridge. I think the bridge over the river should be an iron bridge, because it would be necessary to keep open the navigation, by making it sufficiently high to let the steamers pass under it without inconvenience.

3108. Are you aware that sailing vessels also ply to and fro? I propose in the estimate of £40,000 to put a swivel to enable occasional sailing vessels to pass up; but on ordinary occasions the steamers, by lowering their funnels, could pass under it.

3109. Are their funnels so formed that that could be done? Not now, but they can easily be made so.

3110. Have you included the cost of the approaches to these bridges? Merely the stone abutments.

3111. Your estimate has nothing whatever to do with the approaches on the roads leading to the bridges? No.

3112. *By Mr. Lucas*: What would be the lowest sum per mile for which such a road as the Pymont road could be made? Without including any cutting, about £2,000 a mile, merely for forming and metalling.

3113. *By the Chairman*: So that independently of the road these bridges would cost upwards of £60,000? £65,000, putting the bridge over Iron Cove down at £25,000, which would be a liberal estimate.

3114. And you consider that these are the cheapest bridges that could be constructed at these places? Of course you could construct cheaper bridges, but I do not think it would be advisable to construct bridges on the Parramatta River that the steamers could not go under at all times, or without a swivel to enable occasional sailing vessels to pass.

3115. Can you give any idea of the probable cost of these iron bridges as shown on the plan I have laid before you? I should say the stone piers alone would cost some £50,000 or £60,000, on such a bottom as that. They are not suitable for the purpose at all.

3116. *By Mr. Piddington*: You have no doubt an iron pile bridge might be constructed over the Parramatta River for £40,000 that would turn out a tolerably durable construction? Yes.

3117. And you think the estimate you have made of the cost of a timber bridge at Iron Cove is a liberal one? Yes.

3118. *By Mr. Stewart*: You allude to the steamers lowering their funnels;—are you aware that the Parramatta steamers are usually sea-going steamers capable of running on the coast? Yes; there is no reason why they should not do so though they might be able to lower their funnels.

3119. Do you know of any instance of the steamers plying on the Thames being sea-going steamers? As a general rule they are not; but there are steamers there capable of lowering their funnels which are very much more important vessels than the Parramatta boats.

3120. They cannot keep up fixed masts or sails? No.

3121. The bridge you propose would not admit the passage of the present steamers with their masts fixed? No, they would have to take their masts out. I propose giving a headway of eighteen feet from high water mark on the Parramatta River to the under side of the bridge.

3122. Would that be quite equal to the height of the bridges in London? I think the London bridges are higher.

3123. This bridge would interfere with sea-going steamers? They could not pass under it with their masts fixed; but I have explained that I have made provision to enable larger vessels to pass through a swivel arch.

3124. *By Mr. Piddington*: The swivel arch would enable all steamers to pass that are likely to go up the Parramatta River? Yes.

3125. *By the Chairman*: That would involve the necessity of having men constantly in attendance to open the swivel? The toll collector, I should suppose, could do that. I think in any case a bridge of that kind would require a man to look after it.

3126. *By Mr. Stewart*: Do you know the description of vessels that carry the blue metal for the streets? The stone ballast boats, yes.

3127. They have masts considerably higher than eighteen feet? I should think they would be higher.

3128. They would require to alter their rig or to have the bridge opened? Yes. We might possibly keep the bridge higher by lengthening the piles.

3129. That would increase the expense? Yes.

3130. Would the bridge be equally firm? Yes, I think so.

3131. *By Mr. Lucas*: Making the bridge higher would merely involve the expense of lengthening the piles—the superstructure would cost no more? No.

3132. *By the Chairman*: Would not the approaches in that case be attended with extra expense? No, they would probably be cheaper, because on looking at the section they seem very high.

3133. Then it would cost £65,000 to erect these bridges, independently of roads and approaches? I do not think it would be safe to estimate them at less. These are liberal estimates; I think they can be put up for the money, but I should not like to limit myself to less.

Frederick William Birmingham, Esq., called in and examined:—

F. W.
Birmingham,
Esq.

5 Sept., 1862.

3134. *By the Chairman*: You are a surveyor by profession? Yes.
3135. Are you a Government surveyor? No.
3136. Have you been employed by the Government? I have.
3137. Do you hold a license now as a licensed surveyor? No, I resigned some three years ago. I left the Colony and returned.
3138. Were you employed by the trustees of the Field of Mars Common to survey the Common lands? Yes.
3139. Did you do it? I did.
3140. Did you make a plan of it? Yes.
3141. Will you have the goodness to produce the plan you made? (*Plan produced.*)
3142. In surveying the Common, did you ascertain the general character of the soil? Yes, I know the Common well.
3143. Will you have the goodness to give the Committee the advantage of anything you know in reference to the Common? The Common contains a total of 6,235 acres, out of which about 5,127 acres, more or less, are very poor land—miserable land—jeebungs, rocks, and scrub, and some parts forest land; that is, land covered with wood, generally scrub; and 1,108 acres are what I term medium land, that is, land fit for agriculture by using manure and going to considerable expense.
3144. *By Mr. Lucas*: Is there any good agricultural land? No.
3145. *By the Chairman*: When was this survey made? In 1857.
3146. Are you aware whether the Government surveyor, at the time he surveyed the Common, made any estimate as to the quantity of good land in it? I am not aware that he did. Mr. Galloway, about fifteen years ago, was sent to adjust all the farms round the Common, and mark out the boundaries. There were at that time considerable discrepancies and complaints, and Sir Thomas Mitchell sent Mr. Galloway for the purpose of adjusting the boundaries. Mr. Galloway then showed that several encroachments had been made by little settlers or squatters as they might be termed—a few small portions here and there, generally along the waterside, because they were more convenient for boating purposes.
3147. What is the description of timber growing on the Common? The same as the general run of timber in the county of Cumberland—gum, ironbark, blackbutt, &c.
3148. At the time you made the survey, was there any considerable quantity of good timber on the Common? It was principally young timber. I remarked in several places that it has been picked over. No doubt there will be excellent timber there in some fifty or sixty years time, if it is allowed to grow.
3149. I see upon your map some portions coloured—what is intended by that? These portions (*pointing to the map*) are what I consider medium agricultural land—useful land for subsisting on.
3150. The other portions of the Common you do not consider adapted for agriculture? They are merely fit for cattle to run on.
3151. What is your opinion as regards the situation of the Common for building purposes? You can of course build anywhere, but it would be a very expensive matter on some parts of it along Lane Cove, some two or three miles up from the Parramatta River. It seems to me to be a very inconvenient place; it is very rocky, and you would have to go to a very great expense to make a place anything like comfortable.
3152. From your knowledge of the Common, do you imagine it could be cut up into allotments and sold to advantage? I think it could be cut up, but I do not think people would buy it to cultivate.
3153. Is it capable of being cut up advantageously? It could be cut up and a certain amount of money got for it.
3154. What do you consider the Common is worth in the present state of things? I consider that the larger portion I spoke of, 5,127 acres, is not worth more than 5s. an acre. I myself would not fence it in if I got it.
3155. What do you consider the portions you have marked off as medium land would be worth? Near the Parramatta River about £6 an acre, and the upper part £4 an acre—say a medium value of £5 an acre on 1,108 acres, and 5s. an acre on 5,127 acres; that is to say,—poor land, 5,127 acres at 5s., £1,281 15s.; medium land, 1,108 acres at a medium value of £5 per acre, £5,540; giving the total value of the Common as £6,821 15s.; and this amount would not cover more than one-fourteenth of the money that must be expended to build the contemplated bridges and make the road. It is not honestly worth a farthing more I think.
3156. Do you know anything of the value of land in the county of Cumberland? Yes, I have known a piece of land some two miles and three-quarters out of Parramatta, sold for £6 an acre.
3157. What is the upset price now of Government land in the Parramatta Domain? I think some of it is as low as £2 an acre within two miles of Parramatta.
3158. Do you consider that the contiguity of land to a town tends to increase its value? Yes, the nearer to the centres of population the more valuable the land. The land I speak of is more convenient to Sydney in point of time than this Common land, because they have the railway; it is within seventeen miles of Sydney, and is as good as the best land on the Common.
3159. From your knowledge of the Common, having surveyed it, do you think there would be any difficulty in laying it out in small lots? No, not more than having to clamber up and down some places in running the lines. I have had to catch hold of a tree and slide down some places near Lane Cove.
3160. It would be necessary to form roads through the Common? Yes, I have been considering

sidering the roads. To do justice to the allotments on the Common, it would take more money to make the roads so as to take carts from them to the roads already in use, than could be got for the land at the present day.

3161. Do you mean as regards the making or laying out of the roads? I mean if the allotments were laid out by a surveyor, then some of the parties could not get to market unless you spent more money on the roads than you would get from the sale of the land; the gullies are too deep and the country too wild and rugged.

3162. Do you know the land abutting on the Common in the neighbourhood round it? I know some of it.

3163. The district of Ryde, for instance? I am not particularly acquainted with the land about Ryde.

3164. Do you know the district of the Field of Mars about Mr. Forster's? Yes.

3165. What is the description of the land there? Some of it is of a medium class. I marked out for the Government one time what was considered for some years to be part of the Common, some five hundred acres, on the Field of Mars; and at a very dear time, when people were going mad about land, some of it fetched as high as £7 an acre, but some of it only £4 10s.; and that land was as good as the medium land on the Common, and joins the Common near Mr. Mobbs. I cut it up into ten or eleven portions six or seven years ago, when people were running wild for land.

3166. *By Mr. Lucas:* Two persons were opposing each other? Yes.

3167. *By the Chairman:* You know the country beyond the Common? Yes, I have been encamped in it, and have picked ten or twelve acres here and there from amongst the rocks for parties that wanted it from the Government.

3168. What is the general description of the land between the Common and the Hawkesbury River? Horrid bad—miserably wretched country.

3169. Not a country adapted for agriculture? It will never be an agricultural country unless you import the soil to make it so.

3170. If there were additional facilities of communication, would it ever become so? The money might as well be thrown into the river; it will never be a good country.

3171. It has been stated by parties who presume to know the country, that in the event of these bridges being erected, "an immense tract of country between the Parramatta River and the Hunter, containing about 1,500 square miles, or 960,000 acres of Crown Lands, now totally useless and unavailable, because they are inaccessible either by land or by water, would then be brought within reach of Sydney by a few hours' drive." From your knowledge as a surveyor, is there that quantity of land that could be made available? No doubt there is that quantity of land, but it is miserable land; you could not pick out in the northern and eastern part of the country five thousand acres of even medium land all the way to the Hawkesbury.

3172. Out of nearly a million of acres? No. It is the worst land I have seen, except the south side of Port Hacking.

3173. *By Mr. Lucas:* Is it of the same character as the south side of Port Hacking? It is not so bad.

3174. Is the land between the Common and the Hawkesbury of the same character as the barren parts of the Common itself? Yes.

3175. *By the Chairman:* Is not the land between the Common and the Hawkesbury exceedingly mountainous? Yes, wild barren gullies.

3176. Do you know by what means the producers in the district to the north of the Common convey their produce to market? Generally by the road to Parramatta, where they either take the steamer or the railway, or continue on by the road.

3177. Is there not a road from the Northern Districts by St. Leonard's? There is a road, but it passes through the Common, and there it is very bad.

3178. Have you ever heard the question of bridging the Parramatta River mooted? I have.

3179. From your knowledge of the lay of the country, do you consider that that would be highly advantageous to the people? It might be advantageous to the people who reside very near the bridges within a radius of say half a mile, or perhaps less—a quarter of a mile; it would increase the value of their property a little.

3180. Are these parties the producing portion of the community? There are not many on the Parramatta River that may be considered producers; the producers are more inland, and their way is generally by Parramatta.

3181. You consider that the producing portion of the community lay in the northern portion of the district? Yes, from three to seven or even nine miles from the river.

3182. They convey their produce by Parramatta? Yes, to it and through it.

3183. You do not consider that the bridging of the river would tend to benefit them? Not the northern people; it would benefit some just close round where you make the bridge.

3184. *By Mr. Piddington:* How far from the site of the bridge, on the northern side of the Parramatta River, do you think its influence would extend in benefiting the inhabitants of the district? Half a mile. Of course there would be an influence for some distance further, but it would be very slight.

3185. Do you not think it likely that persons might live a mile from the bridge and yet find it of very great advantage to them? No, I do not. The majority of the people who live on the Parramatta River are on the south side,* and they do not want a bridge.†

3186. Are you of opinion that if the bridge was constructed it would not tend to encourage the settlement of population on the north side? There is nothing to settle upon; nearly every acre of good land is in occupation, and getting poorer every year. Some parties do not consider their holdings worth having, I believe.

3187.

* Revised:—Are beyond the western side of the Common.

† INSERTED (on revision):—The Bedlam ferry ought to be sufficient, and if not so, could be made so by having a steam punt.

F. W.
Birmingham,
Esq.

5 Sept., 1862.

3187. I am not speaking of the productive quality of the soil for growing wheat, but for villa residences;—do you think the Field of Mars Common is not suitable for villa residences? No, it is not.
3188. Do you know that portion of the Common that nearly adjoins the Gladesville Road, near Dr. Campbell's? I have not been east of the boundary of the Common—not Bedlam way.
3189. You know part of the Common that is fenced in, near the Gladesville Road—I believe some one of the name of Face rents it? Yes.
3190. What do you think is the value of that land per acre? I do not know what value others may set upon it. I know there is a small portion of land very near the Common here (*pointing to the map*) which is considered worth about £10 an acre.
3191. Do you know the property called Gladesville? No, I have not gone further south than the boundary of the Common.
3192. Were you ever at Hunter's Hill? No.
3193. Then you are a stranger to that part of the district? I am a stranger to the south-east end.
3194. Where are the places situated that you have marked on this plan as tolerably good land? Some at the north end of the Common, some at the western end; the eastern end of the Common is all miserable land with the exception of one or two small patches.
3195. How many spots of tolerably good land have you marked on this plan of yours? Eight, of any importance.
3196. Are these spots distributed through the whole area of the Common in different places? Yes.
3197. There is one portion here marked "393"—what does that mean? 393 acres.
3198. On what part of the Common is that situated? The northern part.
3199. There is another of 75 acres—how far distant is that from the 393 acres? About 108 chains.
3200. There is a third portion of 333 acres—how far is that from the second? About three-quarters of a mile.
3201. There is a fourth portion of 138 acres—that is some distance from the last mentioned? About seven-eighths of a mile.
3202. There is a fifth portion marked 99 acres—how far is that from the last? About three-quarters of a mile.
3203. Altogether there are eight different portions of tolerably good land? Yes.*
3204. What is the distance from the extreme end of this plan, where you have marked a certain amount of good land, to the other end, where you have also marked a certain amount of good land? Eight miles.
3205. You find good land both at one end of the Common and the other? You find pieces of good land.
3206. Do not these pieces exist at one end as well as the other? Yes.
3207. And in the middle of the Common? Well, it is the side verging towards the middle—the western side.
3208. In all parts of the Common you have marked good land? I do not know what you term all parts; there are pieces of medium land here and there.
3209. How much do these eight different portions of land in all parts of the Common amount to in the aggregate? 1,108 acres.
3210. Do you think the land suitable for orchards? Yes, but you can hardly make the whole country into orchards; people cannot live by oranges alone.
3211. Would these portions of land on the Common that you have marked as tolerably good land be fit for the growth of orange trees? Part of it would, if cleared and properly worked.
3212. What other purposes would it be fit for? It might grow peas or beans sometimes, potatoes, corn, and many other things, no doubt. It is medium agricultural land.
3213. Is not that the quality of land in most other situations—medium agricultural land? Not at all. There is land in other parts of the Colony of which 100 acres is worth 5,000 of this land.
3214. We are now speaking of medium agricultural land? That is a sort of land I would not like to cultivate, because I would be a loser by it, and so would any other man. Such land soon becomes impoverished.
3215. Do you not think this land might be cultivated for orchards or gardens by gentlemen who might purchase it for villa residences? It could be done, no doubt; it could be turned to any purpose if you can find the gentlemen with money who would do it.
3216. Have you any reason to doubt that a certain portion of this Common would be purchased for villa residences if the bridges were built? I do not think it would; it would cost quite a fortune to make some of these places into comfortable residences.
3217. Do you apply that opinion to what you call medium agricultural land? If a man built down there (*pointing to the plan*), he would build in a hole.
3218. Do you know a place called the Glebe, near Sydney? Yes.
3219. Have you never seen houses there built in holes? I have seen houses built there, but I did not take particular notice of them. I dare say some of the holes have been partly filled up.
3220. *By Mr. Stewart:* Does your allusion to medium land mean general agricultural land, or in comparison with other land in this district? It is as to general agricultural land.
3221. Not comparing it with the immediate neighbourhood? No.
3222. I think you said that if roads were cut to communicate with the various parts of the Common, it would cost as much as the estate would realize? Yes; to do justice to the parties

* ADDED (on revision):—And all these forming the 1,108 acres of medium land before mentioned.

parties to whom it might be sold, there ought to be fully £6,000 expended for roads, if not more.

3223. *By Dr. Lang:* Do you think the interests of the commoners at the one extremity of the Common are identical with those at the other extremity—those near Hunter's Hill as compared with those near Pennant Hills? I do not know the rules and regulations, but I believe each commoner has an equal interest in the Common.

F. W.
Birmingham,
Esq.

5 Sept., 1862.

3224. That is not what I mean. Supposing the inhabitants of one extremity of the Common were favourable to the alienation of it for the purpose of securing the construction of these bridges, while those at the other extremity were opposed to any such surrender, do you think it would be practicable to make a subdivision of the Common between the different parishes interested in it? It would be practicable, but I do not know whether it would be advisable or not. It would be like robbing Peter to pay Paul, or worse than selling the Common to build a bridge.*

3225. Do you see any difficulty in subdividing the Common so as to give the different parishes their proportions? It can be subdivided, no doubt.

3226. *By Mr. Sutherland:* You stated that the commoners went by Parramatta mostly with their produce? The northern portion of them do. They are within a few miles of Parramatta. The centre of the Common is within about five miles of Parramatta.

3227. Is not the centre of the Common about the same distance from the Parramatta River at Parramatta and at the spot where it is proposed to erect the bridge? Yes, the northern end of the Common is about nine miles from the bridge.

3228. And from the bridge to Sydney, how far is it? About five miles.

3229. Then one half of the Common, from the centre of the Common, would be within about nine miles from Sydney? Yes.

3230. What would be the distance from the centre of the Common to Sydney, by way of Parramatta? About nineteen miles by the road.

3231. Do you think the people would use the nineteen mile road in preference to the nine mile road? I do not know; it would depend upon their produce. I know they take the river generally.

3232. Supposing they want to take fruit by the river, are they not at the river in four and a half miles from the centre of the Common? They can go in four and a half or five miles.

3233. And they are then within four miles of Sydney, by water? Less than five miles.

3234. It would be less than five miles from Sydney by taking the bridge road? No, not from the centre of the Common.

3235. From the water I mean? Yes.

3236. Whereas going from the centre of the Common by way of Parramatta, they would have to go five miles to Parramatta, and then they would be fifteen miles from Sydney in place of five? About fifteen.

3237. And they would either have to come those fifteen miles by water or railway or road? Yes.

3238. Then do you not think that whether coming by road or by water they would take the line to the bridge as a general rule, having only four or five miles to go from this point to Sydney, either by road or water, whereas they would have the same distance to go to Parramatta as to the bridge, and then fifteen miles by road or by water? I do not think they would. They have a very good road into Parramatta, and they get their goods nice and easy by the railway, which saves them the time that it would take to go into Sydney by the other line.

3239. Then you believe they would rather go fifteen miles than five? They do it at present, and I believe they would continue to do it from what conversation I have had with them.

3240. They must be old-fashioned people, that cannot get out of the old track? Some of them are; and there is a great interest in Parramatta that I think ought not to be broken down.

3241. Do you think the parties who are opposing this proposal have an interest in Parramatta? A great deal of labour and an immense sum of money have been expended in Parramatta, and if it were possible to induce people to go this new way, no doubt it would injure all that district.

3242. You think it would injure Parramatta materially if these people came the nearest road to Sydney? To some extent I think it would if you could induce the people from the northern part of the Common to go your road, but not materially, because there is not interest enough about there to injure it materially.

3243. Do you not think this portion of the Common (*pointing to the map*) might be laid off in villa sites? It is not fit for villa sites.

3244. Are there not many nice houses there close to the Common now? When you go back from that there are no sites. All this eastern side is a barren ridge, and it would cost too much money to make a comfortable place there.

3245. You do not think it likely ever to be taken up for villa sites, not being suitable? It is not suitable for villa sites—that is my firm opinion.

3246. *By the Chairman:* I presume you know the distance from the Common to the Parramatta River? I believe it is only from the very southernmost part of the Common somewhere about a mile.

3247. The Parramatta River runs parallel with the Common? Nearly parallel to the southern end of the Common; the Common lies north-west and south-east; the river easterly and westerly.

3248.

* INSERTED (on revision):—That is to say—robbing Peter to give Paul one fourteenth of a sum which is requisite to build him bridges, &c., &c.

- F. W. Birmingham, Esq.
5 Sept., 1862.
3248. Are you aware whether there are roads leading out in that direction? There is a road to Bedlam Ferry.
3249. So that persons living near the Common are under no necessity of going to Sydney from the Common by way of Parramatta, when they can go by Bedlam Ferry? No; and I think from the centre of the Common they would take the way by Parramatta at the present time, because there is a good road into Parramatta and a railway to Sydney.

James Byrnes, Esq., re-examined:—

- Jas. Byrnes, Esq.
5 Sept., 1862.
3250. *By Dr. Lang:* As it is pretty evident that the interests of the commoners at the two extremities of the Common are different from each other, do you think they would be opposed to a subdivision of the Common among the different parishes that have a right to the commonage; one portion to Hunter's Hill, another to Ryde, and another to Pennant Hills? I do not think there would be any objection to that.
3251. And then leave the different parishes to do with their portions as they please? I can hardly say about that, but I think there would be no objection to a division of it. For my part I should have no objection, and I do not think the people on the extreme north of the Common would have any objection; nor do I think the Ryde people would, at least I fancy not. I would approve of a plan of that kind very much indeed, because all these country places will establish municipalities sooner or later, and in that case I think it would be a great advantage to the three different localities to divide this Common.
3252. You do not think they have any interests in common that would be affected by such a division? I do not think they have.
3253. You think it would be positively advantageous to the different parishes to have each its own portion of the Common? I think so, and set at rest at once this question.
3254. *By the Chairman:* Are you aware in what way the Common is granted? I can hardly say I am aware of the manner in which the new grant is issued, but I remember something of the old grant. I believe it was granted to the proprietors of the farms in the Field of Mars and Eastern Farms District—something of that kind.
3255. The new grant is not a copy of the old one, inasmuch as it grants a larger portion of land, and to certain persons in trust for certain purposes;—would you advocate the surrender of the grant? No; I think those having commonage rights would serve their own purposes if they would agree amongst themselves to allow the Government, in conjunction with the trustees, to make a division of the Common in the way suggested by Dr. Lang.
3256. Supposing the trustees themselves were adverse to such a surrender? That I have nothing to do with. I think a plan of that kind would be a benefit to the whole district. In the event of this division taking place, I would suggest that the three districts should establish their municipal institutions, and let their respective portions of the Common be placed in the hands of their Municipal Council for municipal purposes, keeping in mind, of course, the purpose for which it was originally granted.
3257. *By Mr. Piddington:* Do you not think the village of Ryde and its neighbourhood would be susceptible of considerable improvement if a municipality were established? I do.

Surveyor General's Office,
 Sydney, June, 1862.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ABATTOIRS, GLEBE ISLAND.
(RETURN IN REFERENCE TO.)

Ordered by the Legislative Assembly to be Printed, 10 June, 1862.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 10th June, 1862, That there be laid upon the Table of this House, a Return shewing,—

- “ (1.) The Revenue derived from the Abattoirs on Glebe
“ Island, during the year 1861, and the first five months
“ of 1862.
- “ (2.) The number of Slaughter-houses required for Beef, the
“ number of Slaughter-houses required for Mutton, let in
“ each year, specifying the names of the Tenants, and the
“ rent paid by each, also the number unlet of each.
- “ (3.) The expense incurred by the Government, during the
“ year 1861, on account of the Abattoirs.”

(*Mr. Raper.*)

ABATTOIRS, GLEBE ISLAND.

No. 1.

RETURN of Revenue derived from the Abattoirs, Glebe Island, 1861.

PUBLIC ABATTOIRS AT GLEBE ISLAND.

(AMENDED ORDERS AND REGULATIONS.)

Ordered by the Legislative Assembly to be Printed, 27 May, 1862.

AMENDED Orders and Regulations concerning the Public Abattoirs at Glebe Island, made by His Excellency the Governor-in-Chief, with the advice of the Executive Council, under the Act of Council, 14 Victoria, No. 36.

*Department of Public Works,
Sydney, 31 October, 1861.*

1. The lease of each slaughter-house shall be put up for sale by public auction, annually, at an upset price of £150 per annum for each beef slaughter-house, and £75 per annum for each mutton slaughter-house.

2. Leases of two slaughter-houses, one beef and one mutton, shall not be sold by public auction; but the said slaughter-houses shall be retained in the hands of the Government, for the use of persons desirous of slaughtering therein.

3. Parties desirous of using the slaughter-houses referred to in paragraph 2, shall be permitted to do so in order of priority of application to the Inspector of Abattoirs, or to the Assistant Inspector of Abattoirs, and on payment of the following fees:—

| | s. | d. |
|--|----|----|
| For every ox, cow, bull, heifer, steer, or calf, (in addition to an inspecting fee of 3d.) | 1 | 6 |
| For every sheep or lamb | 0 | 3 |
| For every head of swine | 0 | 6 |

4. No person or persons shall slaughter or attempt to slaughter in the houses referred to in paragraphs 2 and 3 without the sanction of the Inspector or Assistant Inspector of Abattoirs.

5. No fees whatever shall be paid by parties holding leases of slaughter-houses, except an inspecting fee of 3d. for each head of horned cattle slaughtered.

6. All fees shall be paid to the Inspector or Assistant Inspector of Abattoirs on demand, who shall pay the same into the Colonial Treasury, under such directions as he or they shall from time to time receive from the Secretary for Public Works.

7. Printed receipts shall be demanded by, and given to, all parties paying any fees.

8. The Secretary for Public Works may in his discretion allot to any person or persons holding the lease of a slaughter-house, the use during such lease of an allotment of ground upon Glebe Island, for the purposes of a piggery and stable, with or without rent as he may determine.

9. All horned cattle shall be driven in and yarded before 8 A.M.

10. No person shall take into any slaughter-house animals which have died of disease, or shall refuse or neglect, when ordered by the Inspector of Abattoirs, to remove and destroy at once diseased cattle, or shall slaughter for food diseased cattle, or expose for sale diseased meat.

11. No hide of horned cattle if slaughtered without previous inspection by the Inspector or Assistant Inspector of Abattoirs, or spleen of horned cattle or carcase of any animal whether inspected before slaughtered or not, shall be removed from any slaughter-house until after inspection by the Inspector or Assistant Inspector of Abattoirs.

12. All blood, filth, and offal shall be removed; and each slaughter-house shall be thoroughly cleansed to the satisfaction of the Inspector of Abattoirs, daily, before 8 P.M.

13. The premises attached to, and the roadways in front and rear of each slaughter-house must be kept clean by the lessee of each slaughter-house, to the satisfaction of the Inspector of Abattoirs.

14. No meat shall be blown in any slaughter-house; and if any meat be found blown in any slaughter-house, the lessee of such house, or the owner of such meat, if the house be not leased, shall be held to be the person liable.

15. No wines, malt, or spirituous liquors shall be brought upon Glebe Island.

16. No cattle, sheep, or pig, or other animal shall be slaughtered, nor shall any meat be exposed for sale, between midnight of any Saturday and midnight of any Sunday, between the 1st of May and the 31st of October in any year; nor shall any cattle, sheep, or pig, or other animal be slaughtered, nor shall any meat be exposed for sale, between the hours of 10 A.M. and 5 P.M. upon any Sunday, between the 1st of November and the 30th of April in any year.

17. The lease of the tank to contain the blood of the slaughtered animals and the washings of the slaughter-houses, shall also be sold annually by public auction; if not so disposed of, the contents shall be removed in such other manner as may be deemed expedient.

18. The lessee shall remove the contents of the tank once in every twenty-four hours, and, if taken off the Island, the contents must be removed in covered carts or covered casks.

19. The lessee shall also keep clean the roadway in front of, over, and immediately around the tank, to the satisfaction of the Inspector of Abattoirs.

20. The Inspector or Assistant Inspector of Abattoirs may enter the slaughter-houses or premises attached thereto, and may examine the tank, whenever either he or they may think fit, and no person shall obstruct, delay, or hinder his or their so doing, or shall otherwise obstruct, delay, or hinder him or them in the execution of their duty.

21. Any person or persons offending against any of the Orders and Regulations contained in paragraphs, 4, 6, 7, 9, 10, 11, 12, 13, 14, 15, 16, 18, 19, and 20, shall for each and every offence forfeit and pay a sum not exceeding five pounds.

W. M. ARNOLD.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CATTLE DISEASE PREVENTION ACT.
(STATEMENT RESPECTING PAYMENTS UNDER.)

Ordered by the Legislative Assembly to be Printed, 26 June, 1862.

A STATEMENT of the mode pursued in determining the payments which have been made under the "Cattle Disease Prevention Act."

On the 30th September, 1861, in a Letter of Instructions to Mr. Bruce, it was decided that cattle destroyed under the "Cattle Disease Prevention Act" should be classed as under and over twelve months old, and paid for at the rate of 10s. for all under, and 30s. for all over that age. This rate was accordingly observed in the calculations up to the 2nd November last, when, in accordance with a suggestion from Mr. Bruce, leave was given that from that date all cattle should be classed as under or over two years old; but the compensation to be made remained the same, taking the alteration of their ages into consideration. Mr. Bruce proposed, in order to arrive at a fair average of how many of the cattle were over twelve months, of the cattle classed as under two years, that the number be divided by 2, adding $2\frac{1}{2}$ per cent. to the quotient for those under twelve months, and deducting the same percentage for those over twelve months. This rule was observed with regard to cattle slaughtered between that date and 22nd November.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PROCLAMATIONS RESPECTING.)

Ordered by the Legislative Assembly to be Printed, 27 May, 1862.

PROCLAMATION.

By His Excellency the Right Honorable SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

In pursuance of the power vested in the Governor, with the advice of the Executive Council, by the "*Cattle Disease Prevention Act of 1861*," and in furtherance of the Regulations issued under the said Act, and bearing date the twenty-fourth day of December, 1861, I, the Right Honorable SIR JOHN YOUNG, Baronet, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, declare the following Lands or Runs to be in Quarantine, within the meaning and for the purposes of the said Act, viz. :—

| | |
|-----------------------|-------------------|
| Pomegoland, | Uranah Reserve, |
| Berry Jerry, | Bathena, |
| Bullenbong, | Cockigiedong, and |
| Uranah Creek Station, | Coonong. |

Given under my Hand and Seal, at Government House, Sydney, this fourteenth day of January, in the year of Our Lord one thousand eight hundred and sixty-two, and in the twenty-fifth year of Her Majesty's Reign.

(L.S.) JOHN YOUNG.

By His Excellency's Command,
JOHN ROBERTSON.

GOD SAVE THE QUEEN !

PROCLAMATION.

By His Excellency the Right Honorable SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

In pursuance of the power vested in the Governor, with the advice of the Executive Council, by the "*Cattle Disease Prevention Act of 1861*," I, the Right Honorable SIR JOHN YOUNG, Baronet, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, declare that all Lands or Runs placed in Quarantine, for the purposes of the said Act, are hereby released from such Quarantine.

Given under my Hand and Seal, at Government House, Sydney, this twentieth day of March, in the year of Our Lord one thousand eight hundred and sixty-two, and in the twenty-fifth year of Her Majesty's Reign.

(L.S.) JOHN YOUNG.

By His Excellency's Command,
JOHN ROBERTSON.

GOD SAVE THE QUEEN !

PROCLAMATION.

By His Excellency the Right Honorable SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

WHEREAS by an Act passed in the twenty-fourth year of Her Majesty's Reign, intituled, "*An Act to regulate the importation of Cattle, for the purpose of preventing the introduction of contagious or infectious disorders, and to prevent the propagation thereof in the Colony,*" it is amongst other things enacted, that it shall be lawful for the Governor, with the advice of the Executive Council, by Proclamation, to make such Regulations respecting any horned cattle as may be deemed necessary for preventing the introduction or propagation of any contagious or infectious disorders, whether by submitting such cattle to any specified system of Quarantine, or by the destruction of any such cattle found or suspected to be infected; and whereas by my Proclamation of the twenty-fourth December, one thousand eight hundred and sixty-one, I made and issued certain Regulations for the purpose aforesaid: Now, therefore, I, the Right Honorable SIR JOHN YOUNG, Baronet, the Governor aforesaid, with the advice of the Executive Council, do, by this Proclamation, make the following Regulations, in substitution of the Regulations contained in such Proclamation, preserving nevertheless all things done, or commenced to be done thereunder, viz. :—

1. The Minister for Lands shall have authority to appoint such and so many persons as to him shall seem fit, to be Cattle Inspectors, or Assistants to such Inspectors; and all Inspectors so appointed, and their Assistants, and all Inspectors and Assistants already appointed under the Proclamation last quoted, shall have power to enter upon any land or any run for the purpose of examining the horned cattle thereon, and, subject to the instruction of the Minister for Lands, to slaughter and destroy any cattle found to be, or suspected to be infected with the disease known as Pleuro-pneumonia.

2. In cases, however, where it may be considered necessary to slaughter cattle for inspection, without the delay necessary for reference to the Minister for Lands, they may be so slaughtered by the Inspector or his Assistants without such authority: Provided that not more than five head of cattle shall be so slaughtered at one time out of the same herd or on the same run or farm, but in the case of cattle travelling, including draught oxen, any number found to be infected may be so slaughtered.

3. Any District or portion of land found or believed to be infected may, if thought desirable, have its boundaries defined in a Proclamation in the *Government Gazette*, to be issued by the Governor, with the advice of the Executive Council, and shall, by such Proclamation, be declared to be under Quarantine; and after such Proclamation, no horned cattle shall be removed therefrom until such District or portion of land shall have been again released from Quarantine.

4. Stock within any lands so under Quarantine may be removed from one part of such proclaimed land to another, provided there be first obtained from an Inspector, or his Assistant, a certificate that the stock so intended to be removed does not then present symptoms of the existence of the disease.

5. All stock removed from one part of such proclaimed land to another, without such certificate, may be destroyed by the owner, occupier, or licensee of any land or run on to which they may be driven, either by himself or his servants or assistants.

6. The owner or occupier of any land, or the licensee of any runs not proclaimed under Quarantine, shall be at liberty, by himself or his servants or assistants, to slay and destroy any horned cattle found or suspected to be infected with Pleuro-pneumonia which may stray or be driven on to his land or run, from any land or run placed under Quarantine as aforesaid during the continuance of such Quarantine, and the like powers may be exercised by any Inspector or his Assistant.

7. In any case where cattle are being driven or removed from any one place to any other place in this Colony, and it shall be found that some or any of such cattle are infected, or suspected to be infected with Pleuro-pneumonia, it shall be lawful for any Inspector or his Assistant to issue an order in writing, to arrest the further progress of the entire herd, and again to repeal such order: And it shall be lawful for any person whomsoever to destroy as suspected to be infected the whole or any portion of such herd which may be found at a greater distance than three miles from the place where they were so arrested, so long as such order remains unrepealed.

8. Neither the owner nor occupier of any land, nor the licensee of any run, shall be at liberty to impound horned cattle from land proclaimed under Quarantine, nor from any lands or runs within ten miles of such proclaimed land.

Given under my Hand and Seal, at Government House, Sydney, this twentieth day of March, in the year of Our Lord one thousand eight hundred and sixty-two, and in the twenty-fifth year of Her Majesty's Reign.

(L.S.) JOHN YOUNG.

By His Excellency's Command,

JOHN ROBERTSON.

GOD SAVE THE QUEEN!

PROCLAMATION.

PROCLAMATION.

By His Excellency the Right Honorable SIR JOHN YOUNG, Baronet, Knight Commander of the Most Honorable Order of the Bath, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Captain General and Governor-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same.

WHEREAS by an Act passed in the twenty-fourth year of Her Majesty's Reign, intituled "*An Act to regulate the importation of Cattle for the purpose of preventing the introduction of contagious or infectious disorders, and to prevent the propagation thereof in the Colony,*" it is amongst other things enacted, that it shall be lawful for the Governor, with the advice of the Executive Council, by Proclamation, to prohibit the importation or introduction into the Colony or into any Port thereof, from any specified place, and for any specified time, of any horned cattle, and to authorize the destruction of any such cattle as may be introduced contrary to such prohibition: And whereas the disease known or described as Pleuro-pneumonia has appeared amongst horned cattle in certain parts of the neighbouring Colony of Victoria, and it is necessary to take measures to prevent the introduction into this Colony of the said disease: Now, therefore, I, SIR JOHN YOUNG, Baronet, the Governor aforesaid, with the advice of the Executive Council, do, by this my Proclamation, prohibit the importation or introduction into this Colony, or into any Port thereof, of any horned cattle whatsoever from the Colony of Victoria, or from any part thereof, for and during the full term of six calendar months, to be computed from the date of this Proclamation, except only such horned cattle as may cross the River Murray at one or other of the undermentioned places, and shall have been there examined by an Inspector or officer duly appointed in that behalf by the Government of New South Wales, and certified by such officer to be free from such disease: That is to say, at Albury, at Moama, at Swan Hill, and at Euston respectively: And I do further notify and proclaim that, in pursuance of the provisions of the said Act, all horned cattle imported into the Colony contrary to this Proclamation, may be seized, and shall be forfeited in like manner as any contraband goods liable to be seized and forfeited under any law relating to the Customs; and every person concerned in importing or introducing, or in attempting to import or introduce any cattle in violation of this Proclamation, will for every such offence, upon conviction thereof, be liable to a fine not exceeding fifty pounds, and not less than ten pounds, to be recovered as in the said Act is provided.

Given under my Hand and Seal, at Government House, Sydney, this ninth day of May, in the year of Our Lord one thousand eight hundred and sixty-two, and in the twenty-fifth year of Her Majesty's Reign.

—
REPORT by the Inspector, on the Inoculation of 830 head of Cattle, in the Southern Districts of the Colony, between the 17th May and 8th June, 1862.

1. *State of the cattle before inoculation.*

The cattle belonged to two different stations, which, for the sake of brevity, may be called herd No. 1 and herd No. 2.

About 300 of those operated upon belonged to herd No. 1, which was a breeding and fattening one, and were in the habit, with some 250 head of other cattle, of depasturing on a piece of ground about three miles square; and during the three weeks previous to the date of this experiment, about 20 cattle running on this beat had died of Pleuro-pneumonia, while a good many of those that were inoculated showed symptoms of being diseased, and a few were unmistakably so.

The remaining 530 head, belonging to herd No. 2, which is also a breeding and fattening station, were made up of about 400 weaners from all parts of the run, and 130 head of mixed cattle from one side of it. Although several of the weaners appeared diseased, no deaths were reported as having occurred amongst them, while among the mixed cattle, six head had died within three weeks of the time when the inoculation was commenced.

The cattle inoculated in herd No. 1 were mostly milkers or their increase, which ran near the station, and those of herd No. 2 were principally kept in a large paddock till the effects of inoculation left them.

2. *Pen or crush used in inoculating.*

In inoculating the cattle of herd No. 1, a forcing yard and pen were used very similar to the yards and spaying bails common throughout the country, and in such a yard and bail five hands could, in the spring or summer season, inoculate 200 head of mixed cattle in a day, by inserting a portion of diseased lung in the tail, and nearly a hundred more by using a thread saturated with virus.

When, however, a whole herd, or even as many as a thousand head had to be inoculated, it would save time and expense to erect a small forcing yard, with a five-railed, six feet high pen, of eight or ten pannels in length, and two feet six inches wide inside. The posts to be round, and to be morticed through and through, with the mortices worked close to the inner side of the post, so as that when put up the sides of the post may not project further into the pen than the rails. The posts to be three feet in and eight feet out of the ground, with caps on each pair across the pen. A pen made of round rails will be found much more convenient and safe to work at than if they were split, is less liable to injure the cattle, and would cost less for the erection. The pen should of course be logged, and have the proper gates and fastenings at each end. This is similar to the place used at station No. 2, and was found to answer well, the number got through in a day being considerably greater than at No. 1.

3. *The sort of lung used.*

The cattle belonging to both herds were, in this instance, inoculated with portions of the same lungs; and in every case the lung used was that of a beast which had either died of Pleuro-pneumonia, or was so badly affected as to be unable to rise.

As it had been said that it was more dangerous to use the hepatized or marbled portion of the same lung than the congested, experiments were made to test the correctness of this statement, by inoculating some with the hepatized portion—part of which was even partially putrid or decomposed—and some with the congested and sound portion; but the result would, in this case at least, go to show that there are no grounds for such an opinion, as nearly all the cattle operated upon were similarly affected, and some inoculated with the inflamed or sound portion of the lung swelled up in the hind quarters, and died in the same way as those which had been inoculated with the hepatized or marbled portion of the lung. As, however, further trials might establish the correctness of such an opinion, and as inoculation with the congested portion seems sufficiently powerful in its effects, it would be well in the meantime to use that, in preference to hepatized lung.

The owner of herd No. 2, again, in inoculating, either mashed up the diseased lung, part of which was hepatized and part sound and congested, and with the liquid saturated the thread he inserted in the tail, or made an incision in it, into which he dropped a little of this liquid. He thus used both sorts together.

The lungs were those of three full-grown cattle, from four to seven years old, and of a steer about twenty months old; but although it was carefully looked for—from it having been said that such would be the case—no difference was observable in the effects produced by using the lungs of the young steer from those resulting from inoculation with the lungs of the grown cattle. It was probably the case, however, that the steer was, at that age, too old to cause any perceptible difference in the effects; and that inoculation with the lungs of a calf under twelve months of age would show a different and milder result.

It would also be useful to test, by experiment, whether the sort of disease under which the animal was labouring when killed (whether mild or virulent), or the stage of it at which the lung was when used, had the most influence on the effects of the inoculation.

4. *Mode of inoculation.*

On the cattle of herd No. 1 the operation was performed, as recommended by Mr. Brown, by inserting a thin piece of lung in the tails of the cattle, in the following manner:—Thin slices about the thickness of a sixpence were clipped with a sharp round-pointed scissors from the congested, sound, and hepatized portions of a diseased lung, and put on a board and cut with a knife into bits of about $\frac{3}{8}$ to $\frac{5}{8}$ of an inch in length, and $\frac{1}{8}$ of an inch in width. These bits, again, and a small wooden pointer, were placed ready for use on a plate or piece of tin.

Then, the hair having been closely clipped all round the tail from the portion of it commencing at about two inches from the point or tip, and extending upwards for about two or three inches more, the tip of the tail was firmly held in the left hand, with the upper or outer side upwards, and the point of the knife (which was in the right hand, with the flat side upwards and the edge towards the body of the beast) was then inserted in the tail, between the skin and the flesh, about three inches from the tip or point, and passed horizontally through it; the wound made by the point of the knife protruding being, in an ordinary sized animal, about half an inch apart from that made by its insertion. The blade of the knife used was about five inches in length, and broader for about three inches from the point than nearer the handle, where it was purposely blunted. Having made the incision by pushing the knife through the tail as described, the knife, instead of being withdrawn, was turned in the wound so as that the back rested on the body of the tail, while the blunted face was turned up against the portion of skin thus separated from the rest, and an opening made in this manner for the insertion, by means of the wooden pointer, of the bit of lung which had been prepared as stated. On the lung being thus placed in the wound, the thumb of the left hand was placed against the edge of the incision next the operator, to prevent the lung from coming out, and the knife withdrawn with the right.

This is not exactly as recommended by Mr. Brown. He advised that two longitudinal slits should be made in the skin of the tail, a little apart from each other, and that the portion of the skin between them should be detached, and the bit of lung placed under the detached skin. It was found, however, after inoculating about fifty head, that this mode was not only tedious but dangerous; for in making the slits, as recommended—even when the back of the knife was turned downwards and the skin ripped up—the moving of the animal frequently caused the point of the knife to penetrate too deeply, and to wound the tail in a dangerous manner, whereby it is now evident that several deaths have occurred.

About

About 400 head of herd No. 2, again, were inoculated with a thread of twine saturated with virus, drawn, by means of a spaying needle, through the tail, at the proper spot, a portion of the twine being cut off and left like a seton in the tail; while about 130 head were done by dropping a little of the virus into an incision made in the tail near its tip.

5. *Effects of the inoculation.*

On a few of the cattle of herd No. 1 the swelling in the tail began to be observable about the fifth day, and in the majority of them about the tenth. On some, again, the swelling was not perceptible till the fifteenth or eighteenth days, while about 20 head were scarcely perceptibly swollen at all.

The extent of swelling in those cattle on which no dangerous or fatal effects followed, ranged from an apparent stiffness in the tail, with a barely perceptible increase in its thickness, to an enlargement of half its natural girth. This swelling, however, most frequently amounted to an increase of barely a fourth of its ordinary thickness; and the seat was generally immediately above the inoculation wound, for two, three, and sometimes four inches upwards, growing gradually less as it ascended.

Shortly after these swellings were observable, scabs began to be formed around the inoculation wounds; where the swelling was at all considerable the scabs sometimes quite encircled the tail, while in other cases they only covered half its circumference, and in such cases they were some two or three inches in length.

Under these scabs there were collections of matter, greater or less according to the size of the scab; where the swelling had been barely perceptible the scab was small, and little or no matter to be seen under it.

A considerable number of these cattle have lost a portion of their tails, generally from the first joint above the inoculation wound; and it is probable that a fourth in all will lose a portion of this appendage.

Where no dangerous or fatal effects followed the swelling, its subsiding, like its rising, took place at irregular intervals of from twenty to thirty-five days from the date of inoculation.

In the case of those, again, that were dangerously or fatally affected—eight head of the former and fifteen head of the latter—the swelling first appeared at the root or but of the tail, and very quickly afterwards—generally in the course of the following day—began to extend to the hind quarters of the animal, under and around the root of the tail, and in some few cases up on to the rump. This swelling was very considerable, making the but or root of the tail double its ordinary thickness, and raising the affected portions of the hind quarters at least two inches over their ordinary level.

So long as this swelling was confined to the but of the tail and the portions of the rump above the mouth of the rectum no fatal effects followed; and the animals, though apparently very sick for five or six days, kept feeding a little, and were relieved so soon as the swelling broke and suppuration took place.

In those, again, in which the swelling spread from the root of the tail downwards till it apparently quite choked the rectum, and in some even the urethra, extending, as it did in a few cases, down between the hips and the thighs to the belly, the effects were always fatal.

This swelling was very considerable all over the parts indicated, but especially at the points of the rump near the fundament, and between the hips. It completely blocked up the external openings of the fæcal and also of the urinary passages, in the case of heifers.

When cut into, the protuberance was found to form a callous cartilaginous coating over the healthy flesh, varying in thickness from half an inch between the hips—where there were also gatherings of blood and matter—to that of three inches around the but of the tail and beneath it. This callous coating evidently increased in hardness the longer it existed; and in appearance, and consistency under the knife, it exactly resembled that part of the brisket of a bullock that is cut open when he is slaughtered, its extent being clearly defined throughout from that of the healthy flesh.

The inoculated cattle of herd No. 1 that died were opened. With the exception of those of a calf which died of the disease, their lungs were of the natural size, without any symptoms of Pleuro-pneumonia, and full of blood, as is usual in the case of animals that die without being bled. The only noticeable features were the very dark colour of the blood, and the rapidity with which decomposition set in; as before stated, the rectum and urethra were visibly choked up.

Except in the case of those cattle that were dangerously or fatally affected, the inoculation while running its course was comparatively easy on them, and will throw them back very little, if any, in condition. A good many appeared dull and crawling for a week or ten days during the height of the inoculation, but they continued to feed nearly as hearty as ever. Several working bullocks, too, which were inoculated on the 30th of May last, among cattle No. 1, and on which the operation took a most decided effect, have been regularly at work ever since, without showing the least sign of weakness or ailing.

Out of 300 head of cattle belonging to herd No. 1, 15 in all have died from the effects of inoculation, and all from excessive swelling. The following tabulated form will give full particulars as to the classes and ages, the sort of lung used in each case, and the number of days between the date of the inoculation and death:—

No.

PLEURO-PNEUMONIA.

| No. | Description. | Age in Months. | Date of Inoculation. | No. inoculated at that date. | Description of Lung used. | Date of Death. | No. of Days between inoculation and death. | Percentage of Deaths in each lot. |
|-----|----------------------------------|----------------|----------------------|------------------------------|---|----------------|--|-----------------------------------|
| | | | 1862. | | | 1862. | | |
| 1 | Spotted cow | 30 | } May 17 | } 29 | } That of a full-grown beast; one half done with congested and the other with hepatized portions | June 15 | 29 | } 13½ |
| 1 | Spotted heifer | 16 | | | | " 21 | 35 | |
| 1 | Ditto | 14 | | | | " 23 | 37 | |
| 1 | Light strawberry steer | 13 | | | | " 27 | 41 | |
| 1 | Red and white poley heifer | 18 | } " 28 | } 68 | } Also with lung of full-grown beast, part of which was hepatized; most of the congested portion used | " 27 | 30 | } 7½ |
| 1 | Brindle steer calf..... | 12 | | | | " 29 | 32 | |
| 1 | Brown ox | 36 | | | | " 30 | 33 | |
| 1 | Red bald steer | 28 | | | | " 30 | 33 | |
| 1 | Red-sided poley heifer | 22 | } " 30 | } 83 | } Lung of the same description as above of a 20 months steer; used congested portion.... | " 27 | 28 | } 3½ |
| 1 | White heifer calf..... | 11 | | | | " 28 | 29 | |
| 1 | Red and white steer .. | 15 | | | | July 3 | 34 | |
| 1 | Strawberry heifer | 18 | | | | July 3 | 34 | |
| 1 | Light ditto | 14 | June 1 | 43 | } The same lung as last . The same as in the second lot | June 30 | 29 | } 2 |
| 1 | White heifer calf..... | 10 | } " 8 | } 77 | | July 3 | 27 | |
| 1 | Light strawberry steer | 15 | | | | " 5 | 29 | |
| 15 | | | | | | | | |

The effects of the inoculation on the cattle of herd No. 2, again, have been very mild indeed. Only some eight or ten head of them have been perceptibly swollen at the root of the tail, and none of them dangerously so. About a fourth of them showed little or no symptoms of swelling beyond an apparent stiffness or curl in the tail, and a very small scab over the inoculation wound, while the tails of about one-half of them were decidedly, though slightly swollen, with a larger scab over the wound; and in the remaining fourth, the tail for several inches in length was increased by the swelling from a fourth to a half of its ordinary thickness. About a hundred head are likely to lose a portion of their tails. These cattle in their general appearance and habits seemed still less affected than those of herd No. 1 by the inoculation. It was considered that those inoculated with the thread showed more decided symptoms of being effectually inoculated than without it.

6. Inoculation with lung and with virus contrasted.

From the facts now stated it will be seen that the contrast between the effects produced by the same lung, used on the same day, and on the same class of cattle at station No. 1, compared with those that followed at station No. 2, is very great, and that the inoculation was either overdone at No. 1 or underdone at No. 2.

That it was overdone in the case of herd No. 1 there can be little doubt; but, as will afterwards be pointed out, the deaths that took place among these cattle are not solely or even chiefly attributable to the use of lung instead of virus, or to the overdose of virus thus carried into the system of the animal, but to the wounding of the tail.

It is still, therefore, to some extent a matter for consideration, especially as a larger proportion of the inoculated cattle of herd No. 2 continue to exhibit symptoms of the disease, whether, in the present state of our knowledge of the proper height of inoculation in all cases, it is the safer course, when cattle are dying on a run, to inoculate the herd with the virus as at No. 2, and be uncertain whether or not the operation has taken the proper effect on them all, or to employ a smaller quantity of lung than was used in this case, and taking care not to wound the tail, to inoculate as in herd No. 1, in which the operation took so decided and general effect.

As, however, the results of the inoculation performed in this neighbourhood in January last, with the thread saturated with virus, still continue favourable to that mode of inoculation—none of the cattle then inoculated having died, although running among those which were lately carried off by the disease—it seems advisable to inoculate as in the case of herd No. 2, with the thread and virus.

7. Cause of dangerous swelling.

This dangerous, and sometimes fatal swelling in the case of herd No. 1, might arise from any of the following different causes, viz. :—

1. Injuring the arteries, muscles, or bones of the tail, when making the incision for the insertion of the lung.

This might happen through adopting a system of inoculation which brought the knife too close to the bone, by using too large a knife, by the carelessness of the operator, or through the unsteadiness of the animal while being operated on.

2. Inoculating with improper lung.

As before stated, some hold putrid or decomposed hepatized lung to be dangerous; others forbid the use of even sound hepatization; some object, again, to the sound or slightly congested portion of a lung in any part of which there was hepatization; and some assert that the lung of an old or full-grown beast is dangerous and not to be used.

3. Inoculating with lung instead of virus.

It seems not improbable that the bit of lung thus placed in the tail, while undergoing the decomposition which must necessarily set in, would be liable in some cases to engender mortification.

4. Inserting too large a quantity of virus.

There is no doubt but that the quantity of virus conveyed into the system of the animal by this mode of inoculation, was many times greater than by using the saturated thread.

5. The cold, wet, frosty weather.

During the time the inoculation has been running its course there has been a succession of cold, wet days, and frosty nights.

As the very same lung was used in both herds, the same class of cattle operated upon, and the inoculation, in several instances, performed on the very same day, the cause must lie either in (No. 1) the injuring of the tail, (No. 3) the using lung instead of virus, or (No. 4) the employing too large a quantity of virus; and it seems most probable that in this instance Nos. 3 and 4 aided, but that No. 1 was the chief cause of these dangerous swellings, as the following facts go to show:—

A much larger number of the lot of cattle first inoculated was injured in the tail by the knife than in any of the others; and the per centage of deaths in this lot was very much the greatest—being $13\frac{1}{4}$ per cent., the next about $7\frac{1}{4}$ per cent., the next about $3\frac{1}{2}$ per cent., the next about $2\frac{1}{2}$ per cent., and the next about 2 per cent. Those injuries chiefly arose from the mode in which the operation was performed, in the first lot, and part of the second. It was done as recommended by Mr. Brown, and as sufficient care was not taken by some of the parties operating, the point of the knife frequently penetrated deeply into the tail, when making the longitudinal slits in the skin, in large cattle in some instances to the bone, and in small beasts frequently so.

The greater portion, again, of the cattle that died from excessive swelling were calves or young beasts under twenty months of age; and it can be easily seen that their tails, from their smallness, would be much more liable to be injured internally in this way than those of grown cattle, especially as there was generally considerable difficulty in keeping small beasts steady in the pen.

And further, the tails of those cattle which were affected with dangerous swelling, always appeared dried and shrivelled up around the inoculation wound, showing no signs of the discharge that was so evident in those cattle which did not suffer; and when examined it was found that in a portion of the tail, from the inoculation wound upwards, the muscles and arteries were quite black and dead, and that portion of the tail quite stiff. It would seem, therefore, that a very violent inflammation had destroyed that part of the tail; and it is to be presumed that such an inflammation would not have taken place there, in exceptional cases, unless that portion of the tail had received injuries from the knife, which in the rest of the cattle not suffering in this way it escaped.

This withering up of the tail, from whatever cause it may arise, evidently destroys its circulation, and stops the discharge from the inoculation wound; and it is to the stoppage of this discharge that we have to look for the immediate cause of the excessive swelling.

8. *Remedy for excessive swelling.*

As the effects of the most mild and careful inoculation are sometimes dangerous, it is necessary to consider how these effects may be best counteracted.

The first dangerous symptom that can, in such a case, be noticed, is this withering or shrivelling up of the tail near the inoculation wound; and this is easily noticeable, to a close observer, before the swelling sets in at the but or root of the tail. On its taking place the animal should be brought in and examined; and if a portion of the tail is found to be dead, and no discharge coming from it, it would be advisable, commencing immediately above the inoculation wound, to cut off piece by piece of this withered portion (which would drop off even if the animal recovered) till the blood flowed freely from the stump. This would not only allay the inflammation, but might also create an opening for the discharge.

Should this blood-letting not prove effectual, there is little doubt but a strong supuration at the affected parts would, as in any other case of local inflammation, prove so, provided the swelling had not been of so long standing as would kill the animal before the remedy could take effect.

Where the cattle were worth the trouble, they might be cured even after the swelling had reached a dangerous extent, by ripping open the skin and cutting away the callous flesh, when the proper dressing could be applied and the skin sewed up.

9. *General results of experiment.*

The general results in these two herds continue to show that inoculation is, at any rate, the means of lessening the number of deaths from Pleuro-pneumonia in a herd where that disease exists; for during the time that it has in these two instances been running its course, out of perhaps 250 head belonging to the beat on which the cattle of herd No. 1 were in the habit of depasturing before being inoculated, some fifteen beasts have died from Pleuro-pneumonia, and in herd No. 2 several deaths have also been reported.

On the other hand, one inoculated beast has died of the disease in herd No. 1, and two in herd No. 2. In these three cases the animals were known to be diseased when inoculated; and, from the appearance of their lungs after death, it would seem that the disease must have had too strong a hold on them to be arrested by inoculation, as they were almost wholly hepatized. The beast in herd No. 1 died on the tenth day after its inoculation, and those in herd No. 2, on the thirty-fifth and thirty-seventh days.

Besides this comparative absence of fresh cases of disease and deaths among the cattle which have been inoculated, the appearance of those animals which were evidently diseased when operated upon is, up to this time, completely in favour of the efficacy of inoculation in their case also, for they seem improving in appearance and condition. But although this part of the subject is to be further tested, by killing and examining a few head of those that were decidedly affected and now seem recovering, it has been deemed advisable to allow a few weeks longer to elapse from the date of the inoculation before making the experiment.

10. *Modes of inoculation recommended.*

Although the per centage of deaths has, in the case of No. 1, been much greater among the young cattle than the old or grown beasts, this difference was never before observable; and there is no doubt but that the cause of the deaths of the young cattle can in future be avoided, and that it will be found even safer, as well as more convenient, to inoculate the calves.

In whichever way the operation is performed, or whatever sort of pen is used in inoculating, the tail ought to be kept steady; and where cattle (especially small beasts and calves) do not pack so closely in the pen that they cannot move, their heads should be roped to a rail of the pen; and the operation should, like spaying, be steadily and carefully performed, and not bustled and hurried over as cutting and branding generally is.

Till further information and experience be obtained on the subject, it would be surest and safest to use the virus from a mixture of the sound and congested portions with that from the hepatized or marbled parts of the lung of a calf from six to ten months old; and if such a choice were practicable, that of an animal which had been lingeringly or mildly affected should be preferred. It would seem, however, from all the experience of this district, that a mixture of these portions of the lung of a full-grown beast may also be safely used, and should be so without scruple, where the disease begins to show itself and the other description of lung cannot be at once procured.

The operation should be performed by drawing a thick soft thread of twine, well saturated with virus, through the tail, between two and three inches from the tip or point, by means of a spaying needle, or what would be better, with a needle made of the same shape and material, but twice the length and broader in the blade, to make a larger opening for encouraging the discharge that ought to come from the wound. The tail should be closely clipped around the proper spot; and the string may be saturated either by drawing it repeatedly through a piece of lung containing a mixture of the proper sorts, or by mashing the lung up and steeping the twine in the liquid. In operating, the needle should be carefully inserted between the skin and the flesh, quite away from the muscles and arteries; and the wound made by its insertion and that where it protrudes should be very little more than a quarter of an inch apart.

Making a slight incision in the tail, and placing a drop of virus in the wound, is a somewhat more expeditious mode than using the needle and saturated thread; but it is not nearly so certain, as the blood from the wound is apt to carry off the virus before it has done its work.

If, again, it should be resolved to inoculate with lung, young cattle or calves ought not to be practised upon. The smallest possible bit of lung should be used, and the greatest care should be taken not to wound the tail, when making the incision with the knife for the insertion of the lung. A narrow thin-bladed knife, with the point turned up like a spaying needle should be used.

It would not be advisable to inoculate a whole herd at once; and unless the disease was making rapid progress on a station, no more cattle than could be afterwards seen daily till the effects of the inoculation have begun to subside, should be operated upon at one time. In this way any cattle dangerously affected with swelling, or showing symptoms of the inoculation having missed, could be seen and cared for.

In inoculating it is not safe to operate on some, and leave others in the same mob or running on the same ground uninoculated; for cattle have frequently been observed to lick the tails of those that were inoculated; and there are also other ways in which the virus from the tails of those that were inoculated might be conveyed to the lungs of uninoculated cattle mixing with them, whereby those that were sound would run very great risk of being infected.

Vaccination, also, with the matter from the tails of some of those that were inoculated, has been tried on fifteen head, and with decided effect, so far as the usual symptoms attending effective inoculation is concerned; but the operation was too lately performed for the results to be yet obtainable.

ALEX. BRUCE,
Inspector of Cattle.

Ten Mile Creek,
17th July, 1862.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. SAMUEL BOWLER.
(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 29 May, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales,
in Parliament assembled.

The Petition of Samuel Bowler, of the Ten Mile Creek Run, in the Murrumbidgee
District and Colony of New South Wales,—

HUMBLY SHEWETH:—

That your Petitioner is the occupant of the Ten Mile Creek Run, in the Murrumbidgee District.

That the said run is a small one, used by your Petitioner for fattening purposes only. That the disease called pleuro-pneumonia having been prevalent in the Murrumbidgee District, the Inspector appointed by the Government ordered that all the cattle on the run should be destroyed, and they have been destroyed accordingly.

That the number of cattle destroyed was one thousand one hundred and ninety-eight, consisting of speyed cows and bullocks, two-thirds and upwards being male stock, and fifty-four head under two years old. Very few of these cattle were really diseased, though many were reported to have been so by the sub-inspector employed by Mr. Bruce.

Eight months since your Petitioner purchased cattle for the station, at two pounds five shillings per head.

The lowest price for which your Petitioner sold cattle was five pounds per head, whilst he has sold a considerable number at eight pounds. Five hundred of the cattle destroyed were fit for the market, and, ere this, would have been sold, and prices averaging from four pounds to five pounds would have easily been obtained for them.

Your Petitioner will be a great loser if the Government only allows him at the rate of thirty shillings per head for cattle over two years; such a sum will not enable him to put on the run a sufficient number of sheep to be of any benefit to him.

Your Petitioner therefore humbly prays your Honorable House to take the circumstances detailed by your Petitioner into your favourable consideration, and to grant such relief to your Petitioner as your Honorable House will consider fit.

And your Petitioner will ever pray, &c.

SAMUEL BOWLER.

Dated this 20th day of January, 1862.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF GEORGE BARDWELL.)

Received by the Legislative Assembly, 5 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of George Bardwell, of Ten Mile Creek, in the Colony of New South Wales, Squatter,—

HUMBLY SHEWETH:—

That your Petitioner is the occupant of a Run at the Ten Mile Creek, Little Billabong, in the Murrumbidgee District.

That your Petitioner's Run was, on or about the twenty-second day of October, one thousand eight hundred and sixty-one, placed in quarantine, by virtue of the Proclamation relating to the Pleuro-pneumonia disease, and was continued thus for several months.

That at the time of your Petitioner's Run being placed in quarantine, your Petitioner had sold sixty head of fat cattle, at four pounds ten shillings per head, fifteen of which only had been delivered; your Petitioner, by reason of his Run being so placed, being then unable to deliver the remainder.

That your Petitioner was also prevented from selling thirty other head of fat cattle, all of which he might have at the time sold for four pounds ten shillings per head.

That when the Run was released from quarantine, the market price for fat cattle had been reduced, and your Petitioner was unable to obtain more than two pounds five shillings per head for his cattle; in fact, he sold these seventy-five head of cattle for that price.

Your Petitioner is in a position to show that none of his cattle were affected with the disease Pleuro-pneumonia, they having been examined by the Pleuro-pneumonia Commissioner stationed on the Murray by the Victorian Government, and pronounced by him to be quite free from that disease.

Your Petitioner has been a considerable loser by his Run having been thus placed in quarantine.

Your Petitioner, therefore, humbly prays that your Honorable House will make inquiry into the loss your Petitioner has sustained, and grant to him such relief as to your Honorable House may seem meet.

And your Petitioner will ever pray, &c.

GEORGE BARDWELL.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF JOHN PURTELL.)

Received by the Legislative Assembly, 5 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of John Purtell, of Ten Mile Creek, in the Murrumbidgee District, and Colony of New South Wales,—

HUMBLY SHEWETH:—

That your Petitioner is the occupant of the Ten Mile Creek and Mountain Creek Runs, in the Murrumbidgee District: That the said Runs are used by your Petitioner for breeding and fattening cattle.

That the disease among cattle called Pleuro-pneumonia having been prevalent in the neighbourhood, the said Runs of Ten Mile Creek and Mountain Creek were, on or about the 26th day of November last, placed under quarantine by the Inspector, and so remained until the 20th day of March, 1862.

That at the time the said Runs were so placed under quarantine, there were on them, belonging to your Petitioner, upwards of two hundred fat cattle fit for the market, and which were under offer to a purchaser, at five pounds per head.

That your Petitioner had besides, one hundred and fifty other cattle fattening in a paddock leased by him from Mrs. Anne Green, Billy Bong, which was also placed under quarantine, on or about the 8th day of October, 1861, until the 20th day of March, 1862.

That your Petitioner was thus, for over five months in the one case, and about four months in the other, unable to remove any of his cattle, although they were fit for market, whereby he was prevented from disposing of them at a much better price than he could afterwards obtain when the interdict was removed.

That as the interdict was not removed until the best of the season was over, the cattle had fallen off in condition, and at the removal of such interdict only 175 were fit for the market.

That your Petitioner will thus be at a loss, through depreciation in the price obtained for his fat cattle, and through the reduction in the number fit for market, of £1,286 5s. and upwards, occasioned by the operation of the quarantine.

Your Petitioner, therefore, humbly prays your Honorable House to take the circumstances now detailed by your Petitioner into your favourable consideration, and to grant to your Petitioner such relief as to your Honorable House may seem fit.

And your Petitioner will ever pray, &c.

JOHN PURTELL.

Dated the 29th day of July, 1862.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF WILLIAM RIAL.)

Received by the Legislative Assembly, 5 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of William Ryall, of Four Mile Creek, in the Murrumbidgee District, and Colony of New South Wales,—

HUMBLY SHEWETH:—

That your Petitioner is the licensed occupant of the Four Mile Creek Run, in the Murrumbidgee District.

That the said Run is used by your Petitioner for breeding and fattening purposes.

That the disease among cattle called Pleuro-pneumonia having been prevalent in the neighbourhood, the said Four Mile Creek Run was, on or about the twenty-sixth day of November, 1861, placed under quarantine by the Inspector, and remained so until the 20th day of March, 1862.

That at the time of the said Run being so placed under quarantine, there were thereon upwards of 125 head of cattle, fat and fit for the market.

That 100 head of the said cattle were sold to Charles Engelhardt, butcher, of Albury, at the rate of four pounds ten shillings for bullocks, and four pounds for cows.

That your Petitioner, in consequence of the said Run being in quarantine, was unable to deliver the said cattle, and that in consequence of such non-delivery, the sale of the said cattle was lost to your Petitioner.

That as the interdiction was not removed until the best of the season had long past, the cattle had so fallen off in condition, that when they could be removed from the said Run there were only forty-eight head fat, and the market price had fallen to two pounds five shillings.

That your Petitioner will thus be at a loss, through depreciation in the market price obtainable for cattle, and through the reduction in the number of cattle fat and fit for the market, of £392 12s. 6d. and upwards, occasioned through the operation of the quarantine.

Your Petitioner, therefore, humbly prays your Honorable House to take the circumstances now detailed by your Petitioner into your favourable consideration, and to grant your Petitioner such relief as your Honorable House may consider fit.

And your Petitioner will ever pray, &c.

WM. RIAL.

Dated the 29th day of July, 1862.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF JOHN COX.)

Received by the Legislative Assembly, 27 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of John Cox, of Pulletop and Mangoplar, in the Murrumbidgee District, and Colony of New S. Wales,—

HUMBLY SHEWETH:—

That your Petitioner is, along with Mr. John Keane, the joint occupant of the Pulletop Run, and along with Mr. Charles Crisp, the joint occupants of the Mangoplar Run, both in the Murrumbidgee District.

That the said Runs were used by your Petitioner and his co-occupants principally for the purpose of breeding and fattening cattle.

That the disease among cattle called Pleuro-pneumonia having been prevalent in the neighbourhood, the said Runs of Pulletop and Mangoplar were, on or about the twenty-sixth day of November and twenty-fourth day of December, 1861, respectively, placed under quarantine by the Inspector, and through Proclamation in the *Government Gazette*, and remained so until the twentieth day of March, 1862.

That at the time the said Runs were so held under quarantine, there were on them belonging to your Petitioner, upwards of four hundred head of fat cattle, fit for the market, which your Petitioner wished to dispose of.

That your Petitioner was thus, for nearly four months in the one case and three months in the other, unable to remove any of his cattle, although they were fit for market; whereby he was prevented from disposing of them at a much better price than he could afterwards obtain, when the interdict was removed.

That as the interdict was not withdrawn until the best of the season was over, the cattle had fallen off in condition, so that when they could be removed, there was scarcely one-third of the cattle fit to be disposed of which could have been mustered two months previously; only one hundred and thirty in all being procurable when the quarantine was removed.

That your Petitioner will thus be at a loss, through depreciation in price obtained for his fat cattle, and through the reduction in numbers fit for market, of one thousand and fifty pounds (£1,050) and upwards, occasioned through the operation of the quarantine.

Your Petitioner, therefore, humbly prays your Honorable House to take the circumstances now detailed by your Petitioner, into your favourable consideration, and to grant such relief to your Petitioner as your Honorable House will consider fit.

And your Petitioner will ever pray, &c., &c.

JOHN COX.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF CHARLES CRISP.)

Received by the Legislative Assembly, 27 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of Charles Crisp, of Mangoplar, in the Murrumbidgee District, and Colony of New South Wales,—

HUMBLY SHEWETH:—

That your Petitioner is, along with Mr. John Cox, the joint occupant of the Mangoplar Run, in the Murrumbidgee District.

That the said Run was used by your Petitioner and his co-occupant, principally for the purpose of breeding and fattening cattle.

That the disease among cattle called Pleuro-pneumonia having been prevalent in the neighbourhood, the said Run of Mangoplar was, on or about the twenty-fourth day of December, 1861, placed under quarantine by the Inspector, and through Proclamation in the *Government Gazette*, and remained so until the twentieth day of March, 1862.

That at the time the said Run was so held under quarantine, there were on it, belonging to your Petitioner, upwards of three hundred head of fat cattle, fit for the market, which your Petitioner wished to dispose of.

That your Petitioner was thus for nearly three months unable to remove any of his cattle, although they were fit for market; whereby he was prevented from disposing of them at a much better price than he could afterwards obtain when the interdict was removed.

That as the interdict was not withdrawn until the best of the season was over, the cattle had fallen off in condition, so that when they could be removed, there were not more than one-third of the cattle fit to be disposed of which could have been mustered two months previously, only one hundred head in all being procurable when the quarantine was removed.

That your Petitioner will thus be at a loss, through depreciation in price obtained for his fat cattle, and through reduction in numbers fit for market, of seven hundred and eighty-seven pounds, ten shillings (£787 10s.) and upwards, occasioned through the operation of the quarantine.

Your Petitioner, therefore, humbly prays your Honorable House to take the circumstances now detailed by your Petitioner into your favourable consideration, and to grant such relief to your Petitioner as your Honorable House will consider fit.

And your Petitioner will ever pray, &c., &c.

CHARLES L. CRISP.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF JOHN KEANE.)

Received by the Legislative Assembly, 27 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of John Keane, of Pulletop, in the Murrumbidgee District, and Colony of New South Wales,—

HUMBLY SHEWETH :—

That your Petitioner is, along with Mr. John Cox, the joint occupant of the Pulletop Run, in the Murrumbidgee District.

That the said Run was used by your Petitioner and his co-occupant principally for the purpose of breeding and fattening cattle.

That the disease among cattle called Pleuro-pneumonia having been prevalent in the neighbourhood, the said Run of Pulletop was, on or about the twenty-sixth day of November, 1861, placed under quarantine by the Inspector, and through Proclamation in the *Government Gazette*, and remained so until the twentieth day of March, 1862.

That at the time the said Run was so held under quarantine, there were on it, belonging to your Petitioner, upwards of two hundred head of fat cattle fit for the market, which your Petitioner wished to dispose of.

That your Petitioner was thus for nearly four months unable to remove any of his cattle, although they were fit for market; whereby he was prevented from disposing of them at a much better price than he could afterwards obtain, when the interdiction was removed.

That as the interdiction was not withdrawn until the best of the season was over, the cattle had fallen off in condition; so that when they could be removed, there was scarcely one-third of the cattle fit to be disposed of which could have been mustered two months previously; only sixty-six head in all being procurable when the quarantine was removed.

That your Petitioner will thus be at a loss, through depreciation in price obtained for his fat cattle, and through the reduction in numbers fit for market, of five hundred and twenty-five pounds (£525) and upwards, occasioned through the operation of the quarantine.

Your Petitioner, therefore, humbly prays your Honorable House to take the circumstances now detailed by your Petitioner into your favourable consideration, and to grant such relief to your Petitioner as your Honorable House will consider fit.

And your Petitioner will ever pray, &c., &c.

JOHN KEANE.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF JAMES M'LAURIN.)

Received by the Legislative Assembly, 2 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of James M'Laurin, of Yarra Yarra, in the Murrumbidgee District, and Colony of New South Wales,—

HUMBLY SHEWETH:—

That your Petitioner is a member of the firm of James M'Laurin and Sons.

That the said James M'Laurin and Sons have been for some time, and are now, the occupants of the Yarra Yarra Run, in the Murrumbidgee District.

That the said James M'Laurin and Sons in March, one thousand eight hundred and sixty, purchased the Yarra Yarra Run, with four thousand head of cattle, for the sum of twenty-two thousand five hundred pounds.

That in August, one thousand eight hundred and sixty-one, the disease Pleuro-pneumonia appeared amongst the cattle, and in October and the following months, six thousand three hundred and five head of cattle of the said firm, were destroyed under the Proclamations relating to the disease and the instructions given to the Inspector.

That the value of the cattle thus destroyed your Petitioner reckons as follows:—

| | | | |
|---|----------------|----------|----------|
| 6 bulls, at 50 guineas each | £315 | 0 | 0 |
| 5 working bullocks, at £5 each..... | 25 | 0 | 0 |
| 1,100 breeding cows, at £3 10s. each | 3,850 | 0 | 0 |
| 450 milking cows, at £5 each | 2,250 | 0 | 0 |
| 1,500 fat cattle, at £4 each | 6,000 | 0 | 0 |
| 1,352 store cattle, over 2 yrs. old, at £2 10s. each | 4,380 | 0 | 0 |
| 946 young cattle, under 2 yrs. old and over one year, at £2 each | 1,892 | 0 | 0 |
| 946 calves, under twelve months, at £1 10s. each | 1,420 | 0 | 0 |
| | <u>£20,132</u> | <u>0</u> | <u>0</u> |

This calculation makes a total loss to your Petitioner and his partners of twenty thousand one hundred and thirty-two pounds.

That your Petitioner's valuation is on a low scale, as the firm to which he belongs have never sold fat cattle on the Yarra Yarra Run, before the destruction of their herd, for less than four pounds, and they have realized as high as seven pounds; and the firm are now selling, at their stations on the Lower Murray, cows of the same breed as the cattle destroyed, at five pounds seven shillings and sixpence, and bullocks at seven pounds seven shillings and sixpence.

That the cattle destroyed were generally of a fine description. The firm had on the run two celebrated imported Durham bulls, purchased at two hundred and fifty pounds each, and a large number of the stock destroyed were by these. Of the cattle destroyed there were five bulls by an imported Hereford bull, and one Van Diemen's Land bred Hereford bull. The working bullocks were of the ordinary kind. The breeding cows were principally picked and collected from several stations belonging to your Petitioner and his partners, specially for breeding purposes. The principal portion of the milking cows were from the celebrated Glenlee herd. The fat cattle were chiefly young four year old bullocks and spayed cows, a large number by imported bulls. The store cattle were spayed cows and young bullocks. The young cattle and calves were by imported bulls and the stock of imported bulls.

That from the time of the destruction of the cattle until July last, a period of about eleven months, the Yarra Yarra Run has almost been useless to your Petitioner and his partners, and they estimate their loss in this respect and the interest of money at about three thousand pounds.

That although the run was thus almost useless, M'Laurin and Sons during the time paid the Yarra Yarra license and assessment, amounting to one hundred and sixty pounds.

That the Messieurs M'Laurin and Sons, although they had repeatedly applied to the Government for compensation, and had represented the great loss they were sustaining in consequence of the delay in payment of the allowance to which they were justly and legally entitled, did not receive any compensation until the latter end of July last.

That the Messieurs M'Laurin and Sons, in June and July last, received from the Government the sum of eight thousand seven hundred and fifty-nine pounds ten shillings, being according to the rule allowed by the Government, but far from being sufficient to compensate your Petitioner's firm for the great loss they had sustained.

Your Petitioner therefore humbly prays that your Honorable House will take his case and that of his partners into consideration, and grant such relief to them as to your Honorable House may seem meet.

And your Petitioner will ever pray, &c.

JAMES M'LAURIN.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF JOHN MORRICE.)

Received by the Legislative Assembly, 2 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of John Morrice, of Berrima, in the Colony of New South Wales, Grazier,—

RESPECTFULLY SHEWETH:—

That your Petitioner is the occupant of the Mullingandra Run, in the Murrumbidgee District, in the Colony of New South Wales.

That the said run was used by your Petitioner for the purpose of breeding and fattening cattle.

That the disease amongst cattle called Pleuro-pneumonia having been prevalent in the neighbourhood, the said run of Mullingandra was, about the month of November, one thousand eight hundred and sixty-one, placed under quarantine by the Inspector and Proclamation in the *Government Gazette*, and remained so until about the month of March, one thousand eight hundred and sixty-two.

That at the time the said run was so held under quarantine, there were on it belonging to your Petitioner, a number of fat cattle and a number of superior bred bulls, some of which your Petitioner had contracted to sell.

That your Petitioner was thus, for nearly four months, unable to remove any of his cattle, whereby he was prevented disposing of them at a much better price than he could afterwards obtain when the interdict was removed. And that by reason of the injury attaching to the stock generally, through having been placed in quarantine, your Petitioner was unable to sell the bulls at any price.

That as the interdict was not withdrawn until the best of the season was over, the cattle had fallen off in condition; so that when they could be removed, few of them were fit to be disposed of.

That your Petitioner will thus be at a loss, through depreciation in price of fat cattle, total depreciation of value of the bulls, and deterioration in value of milch cows, of five hundred pounds and upwards, and all through the operation of the quarantine.

That notwithstanding the serious loss sustained by reason of the quarantine, your Petitioner was compelled to pay rent and assessment to the Government.

Your Petitioner therefore humbly prays that your Honorable House will take the premises into your favourable consideration, and grant to your Petitioner such relief as to your Honorable House shall seem meet.

And your Petitioner will ever pray.

JOHN MORRICE.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PLEURO-PNEUMONIA.

(PETITION OF WILLIAM HENRY WILLIAMS.)

Received by the Legislative Assembly, 18 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of William Henry Williams, of the Little Billabong Station, in the Murrumbidgee District, Squatter,—

HUMBLY SHEWETH:—

That your Petitioner is the occupier of the Little Billabong Run, in the Murrumbidgee District.

That the said Run was put in quarantine by order of the Pleuro-pneumonia Commissioner, it being the District alleged to be affected by the disease of Pleuro-pneumonia.

That it remained in quarantine for several months, during which time the cattle belonging to your Petitioner deteriorated in value, and the prices for stock became much decreased.

That at the time your Petitioner's Run was placed in quarantine he had about eight hundred head of cattle; and not being able to dispose of them, he was necessitated to mortgage his stock and station at a heavy cost and interest.

That your Petitioner had also one hundred and forty head of cattle placed on his Run on fattening terms; he was however obliged to return the cattle to the owner without their being fat, and consequently without his receiving payment.

That your Petitioner has been a loser, he calculates, to the extent of one thousand pounds, by his Run having been placed in quarantine.

Your Petitioner, therefore, humbly prays that your Honorable House will take the circumstances of the hardships of his case into its favourable consideration, and grant to him such relief as to it may seem expedient and just.

And your Petitioner will ever pray, &c.

WILLIAM HENRY WILLIAMS.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 41. TUESDAY, 5 AUGUST, 1862.

10. Slaughter of Cattle under Cattle Disease Prevention Act:—Mr. Rusden moved, pursuant to notice,—
- (1.) That a Select Committee, with power to send for Persons and Papers, be appointed to consider and report upon the circumstances connected with the Slaughter of Cattle, by the authority of the Government, under the Cattle Disease Prevention Act, 24th Victoria, No. 11.
- (2.) That such Committee consist of Mr. Cowper, Mr. Hay, Mr. W. Forster, Mr. Mate, Mr. Raper, Mr. Morrice, Mr. Leary, Mr. Gordon, Mr. Dickson, and the Mover.
- Debate ensued.
- And Mr. Robertson demanding that the said Committee be appointed by Ballot,—
- Question,—(1.) That a Select Committee, with power to send for Persons and Papers, be appointed to consider and Report upon the circumstances connected with the Slaughter of Cattle, by the authority of the Government, under the Cattle Disease Prevention Act, 24th Victoria, No. 11,—put and passed.
- Whereupon the House proceeded to the Ballot, and the Speaker declared the following Members to be the Committee duly appointed:—Mr. Rusden, Mr. Hay, Mr. Mate, Mr. Robertson, Mr. Cowper, Mr. Gordon, Mr. Leary, Mr. W. Forster, Mr. Dickson, and Mr. Raper.

VOTES, No. 54. WEDNESDAY, 27 AUGUST, 1862.

3. Pleuro-pneumonia:—
- (1.) Mr. Mate presented the undermentioned Petitions, representing, respectively, that the Petitioners have sustained considerable loss in consequence of the operation of the Regulations relating to Pleuro-pneumonia, and praying relief:—
- (1.) From Charles Crisp, of Mangoplar, in the Murrumbidgee District.
- (2.) From John Cox, of Pulletop and Mangoplar, in the Murrumbidgee District.
- (3.) From John Keane, of Pulletop, in the Murrumbidgee District.
- Petitions, on motion of Mr. Mate, received, and referred to the Select Committee, now sitting, on Slaughter of Cattle, under the Cattle Disease Prevention Act.
- (2.) Mr. Mate then, *with the concurrence of the House*, moved (without Notice), That that the Petition of Mrs. Anne Greene, of Billy Bong, ordered by this House to be printed on 20th January last, and the Petitions of William Rial, George Bardwell, and John Purtell, presented by him on the 5th August, be referred to the Select Committee appointed to consider and report upon the Slaughter of Cattle by authority of the Government, under the Cattle Disease Prevention Act.
- Question put and passed.

VOTES, No. 57. TUESDAY, 2 SEPTEMBER, 1862.

11. Pleuro-pneumonia:—
- (1.) Mr. Mate presented the undermentioned Petitions, representing, respectively, that the Petitioners have sustained considerable loss in consequence of the operation of the Regulations relating to Pleuro-pneumonia:—
- (1.) From John Morrice, of Berrima.
- (2.) From James M'Laurin, of Yarra Yarra, in the Murrumbidgee District.
- Petitions, on motion of Mr. Mate, received, and referred to the Select Committee, now sitting, on Slaughter of Cattle under Cattle Disease Prevention Act.
- (2.) Mr. Mate then, *with the concurrence of the House*, moved (without notice), That the Petition of Samuel Bowler, on the same subject, presented to this House on 28th May, and ordered to be printed on the 29th May last, be also referred to the said Committee.
- Question put and passed.

VOTES,

VOTES, No. 67. THURSDAY, 18 SEPTEMBER, 1862.

4. Pleuro-pneumonia :—

(1.) Mr. Mate presented a Petition from William Henry Williams, of Little Billabong Station, in the Murrumbidgee District, Squatter, representing that he has sustained considerable loss in consequence of his Run having been placed in Quarantine, under the Regulations respecting Pleuro-pneumonia,—and praying relief.

Petition received.

(2.) Mr. Mate then, *with the concurrence of the House*, moved (without notice), That the Petition of William Henry Williams be referred to the Select Committee appointed to inquire into, and report upon, the Slaughter of Cattle ordered by the Government, under the Cattle Disease Prevention Act.

Question put and passed.

VOTES, No. 109. TUESDAY, 2 DECEMBER, 1862.

2. Slaughter of Cattle under Cattle Disease Prevention Act :—Mr. Gordon, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee, appointed on the 5th August last, to consider and report upon this subject,—together with Appendix.
- Ordered to be printed.
-

1862.

SLAUGHTER OF CATTLE UNDER CATTLE DISEASE
PREVENTION ACT.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 5th August last, "to consider and report upon the circumstances connected with the Slaughter of Cattle, by the authority of the Government, under the Cattle Disease Prevention Act, 24th Victoria, No. 11,"—with power to send for persons and papers," and to whom were referred, on the 27th of the same month, Petitions from Charles Crisp, John Cox, John Keane, Mrs. Anne Greene, William Rial, George Bardwell, and John Purtell; to whom were referred, on the 2nd September last, Petitions from John Morrice, James M'Laurin, and Samuel Bowler; and to whom were also referred, on the 28th of the same month, the "Petition of William Henry Williams,"—have agreed to the following Report:—

Your Committee, to whom several Petitions have been referred by your Honorable House, have carefully considered the merits of each, in every case where the Petitioner or his Agent has appeared before them; and having examined the parties named in the margin,* and a number of documents obtained from the Government, are of opinion that some of the Petitioners are entitled to compensation.

*Mr. M. Fitzpatrick,
Mr. A. Bruce,
Mr. J. Morrice, M.P.,
Mr. G. Bardwell,
Mr. W. Rial,
Mr. J. Purtell,
Mr. G. H. Greene,
Mr. J. M'Laurin,
Mr. H. J. Bowler,
Mr. J. Pottis.

Although the placing of a large area of country under Quarantine may have been very beneficial to the community at large, yet by such restriction individual interests have suffered, and several cases of hardship have occurred, where the owners were prevented from taking mobs of fat cattle to market, some of which had actually been sold and could not be taken away, and before the prohibition was removed the price of fat stock had fallen considerably.

Your Committee recommend that Messrs. Bardwell, Rial, Purtell, and Mrs. Greene, in consequence of the losses which they have sustained, should be exempted from paying rent and assessment for two years.

The

The Petitions of Messrs. M'Laurin and Bowler demand a separate notice, as they are for further compensation for cattle destroyed by order of the Government; and in their case, your Committee are of opinion, that although a certain remuneration has been given to them for the destruction of their cattle, yet there is always a great loss and considerable expense incurred in breaking-in cattle to a run by herding, which prevents their fattening, and consequently the proprietor derives no benefit from the sale of stock for a long period of time.

According to the evidence given, both by Mr. Pottie and Mr. Bruce, with reference to the dissemination of Pleuro-pneumonia by infection and contagion, it would not be judicious to place sound cattle upon diseased runs, until they had remained sufficiently long empty as to prevent the possibility of any chance of infection.

The difficulty of obtaining suitable stock, free from disease, and the great distance which, in all probability, the cattle would be required to travel when procured, would also prolong the time when the stations could not be turned to any account.

Under the circumstances, your Committee recommend that Messrs. M'Laurin and Bowler should not be charged rent or assessment for three years, so as to allow them full time to re-stock their runs, and to derive some advantage from them.

With reference to the course which the Government thought proper to pursue for the purpose of arresting the progress of Pleuro-pneumonia, it appears to your Committee, that in consequence of the great alarm and dread which prevailed, especially among the settlers, when it first made its appearance, the Government was fully justified in taking such steps, with a view not only to check its progress, but also to suppress it, as, from the knowledge they then possessed, were best calculated to effect the purpose; and so anxious were the stockholders that the most active and energetic measures should be adopted, that a meeting was held at Ten Mile Creek, on 19th October, 1861, when a Resolution was proposed and carried unanimously, to the following effect:—"That this meeting, after
" mature deliberation, is convinced that the only effectual means of
" stopping the spread of the disease called Pleuro-pneumonia is to
" destroy the entire portion of the herd amongst which diseased
" cattle have been found, as it has been proved by experience that it
" is impossible to detect the disease in its early stages."

When the disease became general throughout the herds of Messrs. M'Laurin and Bowler's cattle, the Government, finding that any attempt to check the disease by picking out the diseased cattle from the sound would be futile, and that a great deal of time would be lost, determined that the same stringent measures should be adopted with regard to this disease as were followed under the "Scab in Sheep Act," and decided on the total destruction and consumption by fire of all the cattle on these two stations, with a view to eradicate the disease at once; but in consequence of a portion of the cattle in
each

each of these herds having been brought, a short time previously, from other stations at a considerable distance and in different directions, to which some of them returned, the infection was spread by them wherever they went, and (when it was ascertained that the disease was no longer confined to these two runs,) it was deemed necessary to prohibit the passage of horned cattle throughout infected stations, and also the impounding of cattle from all infected lands and those adjoining.

A Special Commission was authorized by your Honorable House, on the 23rd November, 1861, to which a Veterinary Surgeon was attached, to inquire into Pleuro-pneumonia, to report upon the best means of staying the disease, and to consider what land, if any, should be placed under Quarantine.

The Members of the Board, after a minute and careful examination of the District, finding that the disease had extended over a much greater area of country than they anticipated, recommended that the removal of cattle be prevented from a great part of the Murrumbidgee District to any other part of New South Wales; and when traced continuously to Albury, the interdict was extended so as to enable the occupants of runs previously under Quarantine to send their fat stock to the Victorian market.

The Commissioners, after a close inspection of a large tract of country, where they found symptoms of disease in all the herds, expressed their regret, in their letter of the 4th January, that owing to the unexpected wide spread of the disease, they were unable to ascertain its precise limits or to suggest the means of effectually arresting its progress, much less of eradicating it; and they believed it to be highly infectious and contagious, and that in its early stages it was so insidious as to escape the notice of all but practised eyes.

Your Committee, having devoted the most careful attention to the investigation of the subject, are of opinion, that, although the steps adopted by the Government had not the effect of exterminating Pleuro-pneumonia, yet that the destruction of the herds where it first made its appearance, and at the time when it was most virulent (taking into consideration the small number in each which were found to be sound), tended materially to check its progress; but in consequence of the extensive intercourse from Victoria by teams of working bullocks and by stray cattle, the infection was scattered and carried into various parts. When the Government ascertained that the disease was no longer confined to a narrow compass, orders were given for the destruction of such cattle only as were diseased, or supposed to be so.

Your Committee cannot conclude their Report without some reference to Inoculation; and from the evidence which has been given by Messrs. Pottie and Bruce, and several other parties who have tried it, apparently, with great success in both diseased and sound cattle, it appears to your Committee, that if it is judiciously performed

performed at an early stage of the disease, there will be no necessity, in future, to resort to the destruction of infected cattle, unless they are attacked very severely; and they strongly recommend, as a preventive, that the increase should be inoculated while young. But sufficient time has not elapsed since the operations were performed to test their efficacy, so as to warrant your Committee in giving a decided expression of opinion whether Inoculation can be considered as a cure or a preventive, or both.

HUGH GORDON,
Chairman.

*Legislative Assembly Chamber,
Sydney, 2 December, 1862.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 28 AUGUST, 1862.

MEMBERS PRESENT:—

| | | |
|-------------|----------|----------------|
| Mr. Rusden, | | Mr. Robertson, |
| Mr. Gordon, | | Mr. Leary, |
| Mr. Raper, | | Mr. Mate, |
| | Mr. Hay. | |

Mr. Rusden called to the Chair.

The following Papers before the Committee:—

Votes, No. 41 (Entry 10), containing Resolution of the House appointing the Committee.

Copies of the Cattle Disease Prevention Act, 24 Vic., No. 11.

The several Petitions *referred*.

Committee deliberated as to their course of procedure.

It was Resolved,—

- (1.) That Mr. Fitzpatrick, the Under Secretary for Lands, be summoned to attend the Committee, to produce all the Papers and Telegrams relating to the Slaughter of Cattle under the Cattle Disease Prevention Act, relative to Pleuro-pneumonia.
- (2.) That the following gentlemen be requested to attend and give evidence, viz., Messrs. Bruce, Day, Pottie, M'Laurin, Bowler, Morrice, and all the persons who have sent in Petitions for compensation in the case of Pleuro-pneumonia (which have been referred to the Committee); but, that Mr. George Greene be requested to attend instead of his mother, Mrs. Anne Greene.

[Adjourned to Thursday next, at *Eleven* o'clock.]

THURSDAY, 4 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Rusden in the Chair.

| | | |
|----------------|----------|-----------|
| Mr. Robertson, | | Mr. Mate, |
| | Mr. Hay. | |

The Chairman laid before the Committee the following Telegram, from George Day, of Albury, to Clerk of Legislative Assembly, in answer to summons:—

“ I am willing to attend summons of Select Committee on 16th, to inquire into “ slaughter of diseased cattle, provided my expenses are paid and loss of time.”

Mr. M. Fitzpatrick, *Under Secretary for Lands*, examined.

Witness *produced*, for the temporary service of the Committee, the Papers and Telegrams relating to the slaughter of cattle under the Cattle Disease Prevention Act.

Witness withdrew.

Paper, entitled “ Review of Measures adopted by the Government of New South Wales, to eradicate Pleuro-pneumonia, and Inquiry into the causes of their Failure—1862,” read at length by the Chairman.

Committee deliberated.

Re-assembling of Committee to be arranged by Chairman.

[Adjourned.]

TUESDAY, 16 SEPTEMBER, 1862.

MEMBERS PRESENT—

Mr. Rusden in the Chair.

| | | |
|----------------|--|-------------|
| Mr. Mate, | | Mr. Gordon, |
| Mr. Raper, | | Mr. Leary, |
| Mr. Robertson, | | Mr. Hay. |

Committee met pursuant to summons.

Mr. Alexander Bruce, *Inspector of Cattle*, examined.

Several documents handed in. (*Vide List of Separate Appendix.*)

[Adjourned to To-morrow, at *Eleven* o'clock.]

WEDNESDAY, 17 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Rusden in the Chair.

| | | |
|-------------|--|----------------|
| Mr. Gordon, | | Mr. Leary, |
| Mr. Raper, | | Mr. Mate, |
| Mr. Hay, | | Mr. Robertson. |

Committee deliberated.

Mr. Alexander Bruce, called in and further examined.

Several Letters, Telegrams, and other Papers, handed in by witness. (*Vide List of Separate Appendix.*)

[Adjourned to Friday next, at *Eleven o'clock.*]

FRIDAY, 19 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Rusden in the Chair.

| | | |
|------------|--|----------------|
| Mr. Mate, | | Mr. Gordon, |
| Mr. Leary, | | Mr. Raper, |
| Mr. Hay, | | Mr. Robertson. |

Further Papers relative to the subject under inquiry, received from the Under Secretary for Lands, and laid before the Committee.

Mr. Alexander Bruce further examined.

Several Papers handed in. (*Vide List of Separate Appendix.*)

Mr. John Morrice, M.P., and Mr. George Bardwell examined.

Paper handed in by last witness. (*Vide List of Appendix.*)

[Adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY, 23 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Rusden in the Chair.

| | | |
|-------------|------------|------------|
| Mr. Hay, | | Mr. Mate, |
| Mr. Gordon, | | Mr. Leary, |
| | Mr. Raper. | |

Mr. William Rial, Mr. John Purtell, and Mr. George Greene, severally examined.

Mr. George Bardwell further examined.

Mr. Morrice, M.P., further examined.

Several Papers handed in. (*Vide List of Appendix.*)

Mr. Greene suggested his being allowed to supplement his Evidence by appending certain documents in proof of statements made by him before the Committee.

Permission granted.

[Adjourned to To-morrow, at *Eleven o'clock.*]

WEDNESDAY, 24 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Rusden in the Chair.

| | | |
|-------------|--|----------------|
| Mr. Hay, | | Mr. Raper, |
| Mr. Gordon, | | Mr. Leary, |
| Mr. Mate, | | Mr. Robertson. |

Mr. J. M'Laurin examined.

Several Papers handed in. (*Vide List of Appendix.*)

[Adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY, 30 SEPTEMBER, 1862.

MEMBERS PRESENT:—

| | | |
|-------------|----------|------------|
| Mr. Gordon, | | Mr. Leary, |
| Mr. Mate, | | Mr. Raper, |
| | Mr. Hay. | |

Mr. Gordon, in the absence of Mr. Rusden, called to the Chair.

Chairman drew the attention of the Committee to a letter received by the Clerk from Mr. Rusden, dated Legislative Chambers, 24 September, 1862, regretting that most urgent business takes him for a short time into the country, and hoping the Committee will accept his apology for unavoidable absence, and elect a Chairman in his stead;—

Whereupon, Mr. Gordon was duly elected Chairman.

Mr. Henry J. Bowler called in and examined.

[Adjourned to Friday next, at *Eleven o'clock.*]

FRIDAY,

FRIDAY, 3 OCTOBER, 1862.

MEMBERS PRESENT :—

Mr. Gordon in the Chair.

| | | |
|------------|----------|-----------|
| Mr. Leary, | | Mr. Mate, |
| | Mr. Hay. | |

Mr. John Pottie called in and examined.

[Adjourned to Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 8 OCTOBER, 1862.

MEMBERS PRESENT :—

Mr. Gordon in the Chair.

| | | |
|------------|--|------------|
| Mr. Hay, | | Mr. Mate, |
| Mr. Leary, | | Mr. Raper. |

Mr. Alexander Bruce further examined.

Several Papers read and handed in. (*Vide List of Separate Appendix.*)

Ordered, That all the Papers handed in by Mr. Bruce be arranged chronologically in a Separate Appendix.

[Adjourned.]

FRIDAY, 17 OCTOBER, 1862.

MEMBERS PRESENT :—

Mr. Gordon in the Chair.

| | | |
|------------|------------|-----------|
| Mr. Leary, | | Mr. Mate, |
| | Mr. Raper. | |

Chairman laid before the Committee a letter he had received from Mr. Henry Bowler, requesting to be re-examined upon certain portions of evidence given by him before the Committee.

And Mr. Bowler being called in, and submitting a Schedule of alterations and amendments,—

Strangers were requested to withdraw.

Committee considered the several alterations suggested, and decided upon admitting some and rejecting others.

The Clerk instructed to correct the evidence accordingly.

Mr. Bowler called in and informed of the decision of the Committee.

[Adjourned.]

TUESDAY, 25 NOVEMBER, 1862.

MEMBERS PRESENT :—

| | | |
|-------------|--|------------|
| Mr. Gordon, | | Mr. Leary. |
|-------------|--|------------|

In the absence of a Quorum, the Meeting, called for this day, lapsed.

[To be called for Thursday next, at *Eleven* o'clock.]

THURSDAY, 27 NOVEMBER, 1862.

MEMBERS PRESENT :—

Mr. Gordon in the Chair.

| | | |
|------------|----------------|------------|
| Mr. Leary, | | Mr. Raper, |
| | Mr. Robertson. | |

Committee met pursuant to summons.

Chairman laid before the Committee a Letter, from the Under Secretary for Lands to the Chairman of the Committee, dated 22 October, 1862, forwarding copy of a Letter received from Mr. Cattle Inspector Bruce, suggesting certain experiments to be made for testing Inoculation as a remedy for Pleuro-pneumonia.

Committee

Committee deliberated as to the several claims of the Petitioners.
 Certain heads of Report agreed upon.
 Chairman to prepare Draft Report, and printed copies to be *circulated* prior to next meeting.

[Adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY, 2 DECEMBER, 1862.

MEMBERS PRESENT:—

Mr. Gordon in the Chair.

Mr. Robertson, | Mr. Mate,
 Mr. Raper.

Chairman laid before the Committee Draft Report,—printed copies having been previously *circulated*.

Draft Report read 1^o.
 Same read 2^o, paragraph by paragraph.
 Paragraphs 1, 2, and 3 read and agreed to.
 Paragraph 4 read, *verbally* amended, and agreed to.
 Paragraphs 5 to 13 read and agreed to.
 Paragraph 14 read and considered.
 Motion made and *Question*,—That the Paragraph as read stand part of the Report,—

put.

Committee divided.
 Aye, 1. | Noes, 2.
 Mr. Raper. | Mr. Robertson,
 Mr. Mate.

Paragraph struck out.
 Paragraph 15 read and agreed to.
 Motion made and *Question*,—That this Report be the Report of the Committee,—
agreed to.
 Chairman to report.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

SLAUGHTER OF CATTLE UNDER CATTLE DISEASE PREVENTION ACT.

THURSDAY, 4 SEPTEMBER, 1862.

Present :—

MR. MATE, MR. ROBERTSON, MR. RUSDEN.

FRANCIS TOWNSEND RUSDEN, ESQ., IN THE CHAIR.

Michael Fitzpatrick, Esq., called in and examined :—

- 1. By the Chairman: You have been summoned to attend before this Committee, in order that you may produce certain papers and correspondence having reference to the subject of Pleuro-pneumonia, that this Committee has been appointed to inquire into;—do you now produce those papers? I do.
2. These are all the papers connected with the subject? Yes, practically the whole correspondence is complete; everything at all required for giving a history of the case will be found here; though, in a correspondence running over the last eighteen months, it is unavoidable that, in the short time I have had to arrange them, the continuity should be somewhat broken.
3. Is the correspondence very voluminous? In our department we do not consider a box full of papers to be a very voluminous correspondence; I do not mean to imply by this that there is anything excessively voluminous about them; but the remark I made had reference to the short notice I received, which has prevented me from properly arranging the papers in their regular order of date. If these papers had been asked for by the House, under a notice of motion, we should have had a longer time to prepare them in; the matter also is still going on, and even since I came into the room I have received some papers of importance to the case.
4. The Committee had no intention of hurrying you;—if the papers are incomplete, we can put off their receipt for a week if you wish? As far as our department is concerned, the papers I have here are all that will be required to give a complete history of the case.
5. The Committee will have no questions to ask you until after we have read over these documents, and perhaps not then, if we find the statements made to be so clear as to require no elucidation from you? These papers contain the whole of the information possessed by the department. There is one paper from Mr. Bruce, to which I would particularly draw your attention in the first instance, as it contains a very clear and succinct account of the origin and progress of the disease, and of the course adopted by the Government with reference to it.

Michael Fitzpatrick, Esq. 4 Sept., 1862.

TUESDAY, 16 SEPTEMBER, 1862.

Present:—

MR. GORDON,
MR. HAY,
MR. LEARY,MR. MATE,
MR. RAPER,
MR. ROBERTSON.

FRANCIS TOWNSEND RUSDEN, Esq., IN THE CHAIR.

Alexander Bruce, Esq., called in and examined:—

Alexander
Bruce, Esq.

16 Sept., 1862.

6. *By the Chairman:* You were appointed by the Government, Chief Inspector, under the Pleuro-pneumonia Act? Yes.

7. And you are still Chief Inspector? I am.

8. Will you be good enough to favour the Committee with an account of the whole circumstances connected with pleuro-pneumonia since you have held the inspectorship, stating the time you were appointed, and what you have done since? In the end of August, 1861, there was a meeting held at Ten Mile Creek, by the settlers, to take into consideration what steps they would adopt to stop the spread of pleuro-pneumonia, at which meeting Mr. Mate attended. It was a numerous meeting for the district. Mr. Mate, who had been in communication with the Government upon the subject, read a telegram from the Secretary for Lands asking whether he knew any party that he could recommend as inspector, and he mentioned me; but he left it to the meeting to say whether they would endorse his view of that matter or not. The meeting agreed to his suggestion, and recommended me to the Secretary for Lands as inspector. On or about the 5th September (*vide Separate Appendix 2*) I received a telegram from the Secretary for Lands, stating that I had been appointed inspector, and requesting me to report upon the disease. I reported according to instructions. A copy of that Report I beg to hand in. (*The witness handed in the same. Vide Separate Appendix 4.*) From that time till the 30th September I continued to inspect the cattle in the neighbourhood of Ten Mile Creek. On the 18th September I made the following Report. (*The witness handed in the same. Vide Separate Appendix 7.*) After making the suggestions contained in my Report, I received instructions from the Secretary for Lands, dated 30th September, 1861. The instructions were authorizing me to enter upon any lands, to examine cattle; to cause any cattle which I might suppose to be infected with the disease, to be killed and to be consumed with fire; to intimate to the parties who destroyed the cattle that they would be paid for doing so, and directing me and my assistants to keep an account of such cattle destroyed; authorizing me to intimate to the owners of cattle so destroyed, that the Government would pay 30s. per head for all over twelve months old, and 10s. per head for all under that age; no proprietor to receive compensation who did not give notice of the existence of disease on his run; authorizing me to employ two stockmen to assist in carrying out my instructions, at the rate stated, 10s. a day; authorizing me to stop cattle and bullock teams from travelling; to prohibit impounding of cattle from infected runs; to prohibit the dairying of cattle on infected runs; instructing me to give notice, by placards and through the local press, of the runs, or parts of runs that I might consider it desirable to place under quarantine; requesting me to prepare draft regulations under the Cattle Disease Prevention Act; stating that the Government were deeply anxious that every possible means should be tried to eradicate the disease, and that the sum of £200 was placed at my disposal, to be expended in carrying out this object, in cases where I would be unable to apply for direct authority to the Secretary for Lands. I was also informed that the Inspectors under the Scab Act for Deniliquin and Albury would be appointed sub-inspectors of cattle, to assist me in carrying out these instructions, and that they would receive £100 per annum, irrespective of the salary they received as scab inspectors. It was also stated that the Chief Constables at Albury, Deniliquin, Hay, Wentworth, and Gundagai would be authorized to act under the 4th clause of the Act 24th Victoria, No. 11. These instructions were to be published in the local newspapers by the Government.

9. *By Mr. Hay:* Can you furnish the Committee with a copy of those instructions? Yes. (*Vide Separate Appendix 9.*) On receiving these instructions I made a systematic inspection of the cattle on the Yarra Yarra Run, and during the course of that inspection I found the disease increasing on the run. I made a report to the Government, on classification, on the 11th October, 1861. (*The witness handed in the same. Vide Separate Appendix 10.*) On the 21st October I made a further report to the Government. (*The witness handed in the same. Vide Separate Appendix 11.*) From that date till the 26th October I continued to pick out and kill diseased cattle on the Yarra Yarra Run, when I again reported to the Government. (*The witness handed in the report. Vide Separate Appendix 13.*)

10. With reference to your letter of 21st October,—what instructions did you receive? I received a telegram dated the 31st October, and a letter following on it, dated the 2nd November. (*The witness handed in the same. Vide Separate Appendices 14 and 15.*) I had some communication with the Secretary for Lands regarding the appointment of parties who would assist me in drawing this boundary line, and I suggested that one of the parties should be appointed by the settlers and one be named by me. This suggestion was approved, and Mr. Meyer was appointed by the Government, and Mr. George Day by the settlers, at a meeting held at Ten Mile Creek, on the 14th November.

11. Did you commence slaughtering the cattle, both diseased and sound, on the Yarra Yarra Run, upon the instructions of the Secretary for Lands? Yes.

12. That would come in about this date? Before this meeting; I believe I commenced killing indiscriminately about the 8th November. Alexander Bruce, Esq.
13. *By Mr. Hay*: Were you present at that meeting? I was.
14. Was that the first meeting of the settlers held in connection with the subject? No, 16 Sept., 1862. about the fourth meeting, I think.
15. Have you been present at all those meetings? Up to that time.
16. How was Mr. Day appointed by that meeting? He was nominated by one settler and seconded by another, and he was unanimously, or almost unanimously appointed.
17. Do you recollect who nominated him? I do not.
18. Did you announce at that meeting the appointment of Mr. Meyer, the other Commissioner? I did—Mr. Meyer was present.
19. It was understood that Mr. Meyer was the Commissioner appointed by the Government to act along with Mr. Day and yourself? Yes.
20. Was there any expression of disapproval at the appointment of Mr. Meyer, or did it meet with the concurrence of those who were present? With their entire concurrence; they expressed themselves to that effect. It was said by some of them, that if Mr. Meyer had not been appointed by the Government they would have proposed that he should act for them. I then proceeded, in conjunction with Mr. Meyer and Mr. Day, to fix an imaginary line round the infected country, and with that view we examined Mr. Bowler's Ten-mile Creek Run, and came to the conclusion that the entire run was to come within the infected boundary.
21. *By the Chairman*: Mr. Bowler's adjoins the Yarra Yarra Run? It does.
22. *By Mr. Raper*: You recommended to the Government the expediency of killing all the cattle on the Yarra Yarra Run? I recommended to the Government the expediency of killing every mob of cattle in which a diseased beast was found.
23. That was the case in the Yarra Yarra Run? Yes.
24. You also recommended to the Government that all the cattle within this boundary should be killed? It came to that.
25. And the Government gave you instructions to carry out your views? Yes.
26. *By the Chairman*: Did you, on the 8th September, address a letter to the Secretary for Lands, enclosing a rough sketch of the district? I did. (*The witness handed in the same. Vide Separate Appendix 3.*)
27. What shows the positions of the different runs? Yes.
28. This (*pointing to the sketch*) is Samuel Bowler's run of which you are now speaking? Yes. We came to the conclusion that that would come within the infected boundary, and Mr. Bowler received an intimation accordingly. With reference to the proceedings of Messrs. Day, Meyer, and myself, I beg to hand in a letter addressed by us to the Secretary for Lands, dated 26th November, 1861. (*The witness handed in the same. Vide Separate Appendix 30.*)
29. *By Mr. Hay*: Previous to writing that letter of the 26th November, had you sent telegrams to the Secretary for Lands? Yes, which I now hand in. (*The witness handed in the same. Vide Separate Appendices 24 and 25.*)
30. Did you receive any reply? Yes. (*The witness handed in the same. Vide Separate Appendices 26, 27, 28, 29.*)
31. *By the Chairman*: In your telegram marked (25) you ask, "Shall the cattle which are being destroyed at Yarra Yarra and Mr. Bowler's still continue to be killed?" Did you receive an answer to that telegram? Yes, I sent a telegram, dated 28th November, which I beg to hand in. (*The witness handed in the same. Vide Separate Appendix 31.*) To which I received this reply. (*The witness handed in the same. Vide Separate Appendix 32.*) Any further steps that were taken by me were in conjunction with the Commissioners.
32. You consider the telegram which has just been read to authorize the continued destruction of Mr. M'Laurin's cattle? Yes; on the arrival of Mr. Garland and Mr. Pottie we proceeded to Yarra Yarra, when Mr. Pottie examined a number of cattle which were being killed, and pronounced them all more or less diseased. We then went to Messrs. Purtell and Dalton's Ten Mile Creek Run, where we found several cases of the disease. Thence we proceeded to Mullangandra, and in three instances found the disease there. From Mullangandra we went to Mr. Hore's, Cumberoona, and there also found the disease.
33. *By Mr. Leary*: What was the date of the arrival of these gentlemen? On or about the 29th November.
34. What was the day on which they inspected the cattle at Yarra Yarra, when the cattle were being killed? I think it was on the subsequent day, which was Saturday, they went to Yarra Yarra.
35. Were these cattle being killed in consequence of an order you had previously given? Yes, in consequence of an order given by me about the 8th November.
36. Which you had never countermanded? Which I had never countermanded.
37. *By Mr. Hay*: When was the first communication sent by the Commission? The 30th November.
38. That was the day after the arrival of Messrs. Garland and Pottie? Yes.
39. Is that letter signed by you? By Messrs. Garland, Day, Meyer, and myself. (*The witness handed in the same. Vide Separate Appendix 33.*)
40. *By the Chairman*: You state that quarantine would not prevent fat stock going to Victoria? No.
41. And that it would prevent them going to the Lachlan Gold Fields? Yes.
42. I thought quarantine did prevent fat stock going to Victoria? Previously, when a run not on the border was put under quarantine, and the country between that run and the border was still free from the disease.
43. Your letter seemed to imply that quarantine would not prevent fat stock going to Victoria? Not from the Murrumbidgee district, because that district adjoined Victoria. 44.

Alexander
Bruce, Esq.

16 Sept., 1862.

44. *By Mr. Hay*: You returned to Ten Mile Creek on the 30th? Yes.
45. And wrote this communication? Yes.
46. You had received a telegram, you say, on the previous day from the Secretary for Lands?
Yes.
47. Did you show that telegram to the rest of the Commissioners? I cannot say that I did; I have no recollection of having done so, but I believe I did, because I was in the habit of showing them everything I got.
48. You are not quite certain? I am certain in this way—that I showed them all my correspondence, and I am certain also that if I had got a letter that day I would have showed it them, but I do not recollect having done so.
49. Did you consider it to be your duty particularly to give directions with regard to the killing of stock and carrying out of the regulations? Yes.
50. Do you recollect whether it was the subject of discussion in the Commission, either before or after Messrs. Garland and Pottie's arrival, whether the remainder of Messrs. M'Laurin's and of Mr. Bowler's cattle should be killed? I know I discussed it with Mr. Day. I could not positively say that the thing was brought before the board.*
51. As a matter of business? As a matter of business.
52. You discussed it with Mr. Day? Yes.
53. Was that on the day you received the telegram from the Secretary for Lands, the 29th? We were discussing it before.
54. Before the receipt of the telegram? We had information to that effect, before the telegram arrived, in the *Sydney Morning Herald*, where it was reported that Mr. Cowper had stated in the House that parties would in future be paid for their cattle only what the House would allow. That paper arrived at Ten Mile Creek on the Wednesday.
55. You observed that it had been the subject of discussion, but you, in conjunction with Messrs. Day and Meyer, sent a telegram to the Secretary for Lands, in which you expressly desire instructions upon that point? You will see that that was before the arrival of Mr. Garland and Mr. Pottie.
56. Having sent that telegram, did you get another in reply to that, upon the 29th of the month? Yes.
57. What I want to know is, whether you discussed this subject in connection with the telegram you received in reply to the telegram forwarded by you, Mr. Day, and Mr. Meyer;—you had sent a direct query to the Secretary for Lands by telegraph, and had got an answer to that;—I want to know whether you discussed that subject in connection with the answer you got to that question?† I believe I did, but I have no recollection of the matter having been brought before the Board.
58. Did you discuss it with Mr. Meyer or Mr. Day, or with both? With Mr. Day.
59. Did you come to any conclusion as to the import of the answer you got to this question? Yes.
60. What was the conclusion you came to? That the destruction of these herds was to be continued. I understood, and it was so understood by Mr. Day, that it was an answer in the affirmative to my question.
61. But it was not referred by you, as a matter of business, to the new Commission? I believe not. I think in one or two instances matters of that sort were laid by me before them for advice, but there was a sort of line drawn between what was the duty of the Commission and what was my duty as inspector.
62. Then you took the responsibility, not having defended yourself by any positive recommendation from the Commission? No.
63. *By Mr. Leary*: Had you received instructions a very long time before that from the Government to destroy these two herds? Yes.
64. Did that influence you in the determination to continue the destruction, even after that telegram? If I were to give my own opinion, it would be, that I understood there was a sort of bargain between the Government and these parties, and that if the parties wished to go on killing after my order had been given, the Government could not stay the killing.
65. *By Mr. Hay*: You have said you considered that there was a sort of compact entered into with the Government by these parties the destruction of whose cattle had been commenced, and that in virtue of that it was necessary to complete the destruction of the herds;—is that what I understood you to say? Unless the parties assented on both sides.
66. Did you put it to Messrs. M'Laurin, or to Mr. Bowler, whether they would assent? I put it to Mr. Bowler.
67. Did you put it to Messrs. M'Laurin and to Mr. Bowler, whether they would consent to stay the slaughter of their cattle? I did not put it to Mr. M'Laurin, but I asked Mr. Bowler whether he wished to make any communication to the Government to that effect—whether he wished an endeavour to be made to stop the killing of the cattle.
68. How long had you been killing Mr. Bowler's cattle at this time? About 300 head were killed.
69. On the 29th November? It was before that time—it was on our return from Kyeamba.
70. Did you put it to Mr. Bowler, whether he would consent to the destruction of his cattle at that particular stage? Yes; it was on the Sunday following our being at Kyeamba, about the 23rd or 24th.

71.

* ADDED (on revision):—Although it must have been, because the Board, on or about the 5th of December, instructed me to send notices (which I did) to the settlers in the Ten Mile Creek district, requesting them to meet on a certain day at Yarra Yarra and assist in completing the destruction of the cattle there.

† NOTE (on revision):—Certainly I recollect having a long discussion with Messrs. Meyer and Day at Kyeamba, and the telegram without date was sent in after that discussion. These gentlemen both considered the Yarra Yarra and Mr. Bowler's herds thoroughly diseased.

71. What question did you put to him? Whether, under the circumstances, he would approve of my telegraphing to Government to see whether the killing of the cattle would be stopped; and he said the best of the cattle were killed, and that I ought to kill the bad ones.

72. But after that did you telegraph in these words, "Shall the cattle which are being destroyed at Yarra Yarra, and at Mr. Bowler's, still continue to be killed"? Yes, after that.*

73. And did you then receive an answer from the Secretary for Lands? Yes.

74. Now, if you considered that a compact had been entered into such as you have described, what was the good of asking the question? That was only my own private opinion that I stated in reply to Mr. Leary; I was acting according to instructions.

75. Having asked the question, in conjunction with Mr. Day and Mr. Meyer, "Shall the cattle which are being destroyed at Yarra Yarra and Mr. Bowler's still continue to be killed?" and having received an answer on the 29th, that the cattle diseased, or supposed to be diseased, were those only that were to be destroyed—did you give any intimation of that answer to Mr. M'Laurin or to Mr. Bowler? No.

76. You did not refer the question, in any way, directly and positively for the advice of the Commissioners newly appointed, as to whether the cattle should continue to be destroyed? I believe, as I have said, that I consulted them on it, but I have no recollection.

77. You say you consulted Mr. Day? I talked the subject over with Mr. Day.

78. Did he agree with you that Messrs. Bowler's and M'Laurin's cattle should continue to be destroyed, notwithstanding the telegram? He thought Mr. Bowler's should not be killed, and spoke to him on the subject; and I believe Mr. Bowler stated in reply the same as he did to me.

79. *By Mr. Gordon:* How many cattle of Mr. Bowler's were destroyed altogether? About 1,300 head.

80. *By the Chairman:* With regard to this compact with the Government, what led you to suppose that there was such a thing as a compact between these gentlemen and the Government, with reference to the slaughter of their cattle? Because in Mr. Bowler's case, according to his statement, the best of his cattle were destroyed, and the rest of the herd would be rendered almost valueless.

81. That hardly applies to the word "compact"? Perhaps I am not right in giving such an opinion, but that was my private opinion.

82. You have no reason to suppose that there was any written document in the nature of an agreement? No, it was merely my opinion. From Mr. Hore's we proceeded to Table-top all together, and found the disease on Mr. Mitchell's run; and then to the neighbourhood of Albury, where we found a case of the disease. Then we were a few days in Albury communicating with the Secretary for Lands, and came to the conclusion of proceeding in the direction of Wagga Wagga, as we considered it important to try if the disease had extended towards the Murrumbidgee. From Albury we went to Mangobola, and there also found the disease; then to Mr. Burke's, Sandy Creek, and there also found the disease; from that to Wagga Wagga, where several cases of the disease were found amongst the pound cattle. We then separated; Mr. Garland, Mr. Pottie, and the inspector going to Mr. White's, on the Levels, north of the Murrumbidgee, and Messrs. Day and Meyer towards the Columba and Billybong Creeks. A case of the disease was found at Mr. White's, and Messrs. Day and Meyer also traced it from Wagga Wagga to the Columba and the Uraua Creeks. The Commissioners then met in Albury, and telegraphed the result to the Secretary for Lands. I now beg to hand in the several reports made by the Commission, dated respectively 4th, 12th, and 20th December. (*The witness handed in the same. Vide Separate Appendices 34, 37, 39.*)

WEDNESDAY, 17 SEPTEMBER, 1862.

Present:—

| | |
|-------------|----------------|
| MR. GORDON, | MR. MATE, |
| MR. HAY, | MR. RAPER, |
| MR. LEARY, | MR. ROBERTSON. |

FRANCIS TOWNSEND RUSDEN, Esq., IN THE CHAIR.

Alexander Bruce, Esq., again called in and further examined:—

83. *By the Chairman:* Will you now resume your statement at the point at which you left off yesterday? In my statement yesterday I omitted to lay before the Committee several telegrams and letters which I found among my papers, and which I now beg to produce. (*The witness handed in several letters and telegrams. Vide Separate Appendices 5, 16, 17, 18, 19, 20, 21, 22, 23.*) I now beg to hand in the final report of the Commission, also a return of cattle killed on account of pleuro-pneumonia, a return of cattle slaughtered by order of the Commission, for the purpose of investigations, and the report of Mr. Pottie. (*The witness handed in the same. Vide Separate Appendices 43, 44, 45, 46.*)

84. *By Mr. Hay:* When you were appointed Inspector under the Act, was there no proclamation in force? There was no proclamation beyond the prohibition against cattle coming from Victoria.

85.

* Revised:—No, before. We telegraphed at Kyeamba on 21st November, and I saw Mr. Bowler on 24th.

Alexander
Bruce, Esq.
16 Sept., 1862.

Alexander
Bruce, Esq.
17 Sept., 1862.

- Alexander Bruce, Esq.
17 Sept., 1862.
85. No proclamation with reference to the treatment of disease within the Colony? No; I believe the first proclamation was that in December, with regard to the treatment of the disease.
86. When was the first notice of your appointment as Inspector published in the *Government Gazette*? It must have been then, I think.
87. Is that the date (*handing to the witness a Government Gazette, dated 24th December, 1861*)? Yes.
88. Your appointment, I suppose, was by letter from the Secretary for Lands? By telegram of the 5th September. I may mention, that my appointment was published in the local papers after the 30th of September, although not in the *Gazette*.
89. Then when was the first proclamation of the country included within the quarantine boundaries? That is the first you hold in your hand. (*The 24th December.*)
90. Previous to that were those lines placed in quarantine practically? Yes, and published in the local papers and by placard.
91. But not by proclamation in the *Gazette*? Not in the *Gazette*.
92. *By the Chairman*: Will you state, if you please, what you did after the 4th January? After the breaking up of the Commission, and until the 20th of that month, I was employed in making up an account of the cattle destroyed; and on the 20th I rendered an account to the Secretary for Lands, which I beg to hand in. (*The witness handed in the same. Vide Separate Appendix 47.*) There were no cattle killed after the 18th January. This is a complete return, with the exception of a few killed for inspection in different parts of the country since.
93. Did you slaughter the whole of Messrs. M'Laurin's and Mr. Bowler's cattle by the 18th January? The whole of Mr. Bowler's cattle, with the exception of some in a paddock that were inspected and found sound, and some few head of Mr. M'Laurin's cattle that he had as a tailing mob getting in the wild cattle that were being destroyed. These were not slaughtered.
94. Finally, then, in consequence of what did you refrain from slaughtering these two remnants of Messrs. M'Laurin's and Bowler's cattle? Because it was getting tedious; it was a job that could not be completed.
95. Was it in consequence of any instructions from the Secretary for Lands? No.
96. In consequence of any representations from the owners? No.
97. *By Mr. Leary*: Could you have got them in? We could not have got them all in.
98. *By the Chairman*: I suppose the tailing mob could have been got in, and might have been destroyed? They might have been slaughtered.
99. Was there any reason for not destroying them? No reason whatever.
100. Surely these must have been badly infected indeed if they were mixed with those that were got in and slaughtered? One reason why they were not was, that there was a paddock into which they could be put.
101. Do you know the state of those cattle now? These were the cattle which were inoculated.
102. All of them? Yes; there were only 150 or 170 head.
103. How have they done since? They nearly all got well; some have been killed, and some have been sold fat.
104. *By Mr. Hay*: Was it in accordance with the recommendation of the Commission that you refrained from killing the remainder of Messrs. M'Laurin's and Bowler's cattle? Those of Mr. Bowler's that were in the paddock was in accordance with the opinion of the Commission, because they knew of the cattle being there. We considered the subject, and decided that it was not necessary to kill them.
105. *By Mr. Gordon*: What number might there be—100, 200, or 300? Not 200, but above 100. There was a recommendation by the Commissioners that a few cattle should be left for meat for station use, both at Yarra Yarra and at Mr. Bowler's.
106. *By the Chairman*: You are still inspector, and do I understand that all diseased cattle are not now slaughtered? They are not slaughtered.
107. You do not slaughter any? I have no authority to slaughter above five head without getting authority from the Secretary for Lands.
108. When was that regulation published? On the 20th March.
109. Did you send a note to Mr. M'Laurin, to the effect that you had received a letter from Sydney, instructing you not to kill any more cattle, and that that was the reason you stayed the further killing? I got no note from Sydney. I might have sent a note to that effect.
110. Do you remember whether you did or not? I believe I worded it to that effect.
111. With reference to the cattle of Mr. Bowler, was not the reason of your not killing the remnant, that they were not mixing with the general herd? Yes; they had been in the paddock a considerable time.
112. *By Mr. Hay*: Did not the Commissioners, in their report, state that it was inexpedient to slaughter whole herds or mobs of cattle? Yes.
113. And the recommendation of the Commissioners contemplated the killing only of cattle that were either diseased or suspected to be diseased? Yes.
114. Were you acting with that view at the time you allowed the fag end of these herds to remain unslaughtered—was it on that principle you spared them? It was understood by the Commissioners that that herd was to be killed.
115. Then although it does not say anything about these herds in the report, you think it was understood that those two herds were not to come under the scope of that? I am quite sure that was the opinion of the Commission.
116. Why did you not carry out their view? Because I could not kill the whole, and the expenses were going on, while only a few head of wild cattle were being got in every day.

Alexander
Bruce, Esq.
17 Sept., 1862.

117. That reason, it appears to me, does not apply to those that were in the paddock, as they, I presume, could have been easily got at? It was the opinion of the Commissioners that those in the paddock ought not to be killed; and as to the others, I considered that there were so few got in every day, when the men were out collecting them, that it was desirable to stop the killing of them. The cattle they were tailing with I brought under the head of the few that were to be left for the use of the station, for meat, and to be put in the paddock.
118. Then did you get no alteration of your instructions, in consequence of the report of the Commissioners, until the 20th March? Yes, the proclamation of December was in consequence of the report of the Commissioners. There was a further proclamation issued between the 24th December and the 20th of March, authorizing settlers to destroy straggling cattle coming on their runs from the diseased country.
119. Did that contain any instructions to you, or had you any other fresh instructions except what were contained in the proclamation you alluded to just now, up to the 20th March? It gave me no instructions beyond those contained in the proclamation of the 24th December.
120. *By the Chairman:* You have just stated that the cattle ceased to be slaughtered after the 18th January, and that you had instructions;—when did you receive instructions not to continue slaughtering? I did not receive instructions.
121. I thought you said you were told by the Secretary for Lands not to destroy more than five head without letting him know? That was in the 2nd clause of the proclamation in the *Gazette* of the 20th March.
122. Did you cease slaughtering of your own motion—without instructions from the Government? Yes.
123. What was the reason of the cattle in the paddocks not being killed? It was put as a general question before the Commission, whether cattle so situated were to be treated as cattle on open runs.
124. Had you that in black and white? No, but it was before the Commission on more than one occasion.
125. *By Mr. Leary:* Did the Commission inform either of these parties, Messrs. M'Laurin or Mr. Bowler, to the effect you now state? I believe they did, because, if I recollect right, it was brought forward by either of those parties who had their cattle in the paddock.
126. *By Mr. Hay:* The Commission then informed them *vis à voce*? The party who owned the cattle in the paddock applied to the Commission to see if they would exempt these cattle.
127. The Commissioners were not inspectors—they had nothing to do with it? No, they were not inspectors, but it was brought before the Commission.
128. Did the Commissioners, as a Commission, give such authority? I do not think I could say that exactly, as it is not on record; there is no note of it in writing.
129. Was it not through you, as inspector, that the Government dealt with individuals? Yes.
130. *By Mr. Leary:* The matter was brought before the Commission, and you were guided by what the Commission said? Yes.
131. *By Mr. Hay:* In so far as these cattle of Mr. Bowler's were concerned? Yes.
132. Not in regard to Mr. M'Laurin's cattle? No. I beg to hand in a copy of a letter sent by me to the Secretary for Lands, dated 27th January, 1862. (*The witness handed in the same. Vide Separate Appendix 48.*)
133. *By the Chairman:* What have been your duties since the 20th March;—have you been making up your books, and attending to the inoculation of cattle? Yes; I have also been in Sydney, Goulburn, and Deniliquin.
134. Still acting as inspector in cases of pleuro-pneumonia? Yes.
135. Has that inoculation answered very successfully? Yes.
136. You have still continued it? Yes.
137. Did you not send a report to the Government, stating the particulars of the inoculation, and how it had succeeded? Yes.
138. Has that report been published as a parliamentary paper? I have heard that it has.
139. *By Mr. Hay:* Does that contain a complete account of your experiments in inoculation? Yes.
140. Your opinion of inoculation, as to its effects in cases of pleuro-pneumonia, is very favourable? Yes; I may mention that the practice is becoming very prevalent in the Murray district, for the prevention of the disease.
141. *By the Chairman:* What is the present state of the country in your district with regard to pleuro-pneumonia? There are comparatively few cattle dying.
142. Has not the virulence of the disease passed away? Certainly the virulence of the disease is passing away.
143. Is it spreading over a greater extent of country than that you put under quarantine? I cannot say of my own personal knowledge that it is.
144. Have you recently been inspecting cattle suffering under it in other districts? Yes, in and near Goulburn, in the neighbourhood of Mutbilly, near Yass.
145. Also at Liverpool? Not at Liverpool.
146. Can you state whether persons generally inoculate if they see cattle suffering under this disease, or apparently suffering? Yes, they generally do; it is becoming the practice.
147. *By Mr. Hay:* Then, with the exception of these cases near Goulburn and at other parts of the Sydney road, are you aware of pleuro-pneumonia having extended beyond that portion of the country which was included within the boundaries of the quarantine proclaimed by Government? The inspector of Gundagai reported to me, verbally, as I passed, that he had found a great many cases in the district, and down towards Wagga Wagga from Gundagai.
148. Is that lately? Lately, as I came through.

- Alexander Bruce, Esq.
17 Sept., 1862.
149. Were they bad cases? He said they were.
150. Who is the inspector there? Mr. Centauri.
151. Has he been long inspector? Not long—a few months.
152. Is he a veterinary surgeon? He is.
153. Where does he come from? He was some years in Melbourne or Geelong, as a veterinary surgeon, and afterwards in Hobart Town.
154. He is now appointed as inspector at Gundagai? Yes.
155. Have you received any other reports from inspectors, of cattle being infected beyond the limits of the proclamation? Yes; I also saw the inspector at Goulburn, Mr. Kennett, who tells me that the disease is all round Goulburn at different parts.
156. Did you see the disease yourself in the neighbourhood of Goulburn? I did; very bad cases.
157. How long ago is that? In the month of February.
158. Have you heard from the inspector that it still exists there? Yes, and in other parts of that district.
159. Does the inspector report that many deaths have taken place there? Not many deaths.
160. Does the inspector at Gundagai? Not many deaths.
161. What is the state of the disease adjoining Yarra Yarra, and the district included in that quarantine? A few beasts were dying upon the runs; lately, within the last month or six weeks, there have been fewer deaths than there were in the middle of winter.
162. Then do I understand that it has not been very fatal in that district? It has not been very fatal; it was most fatal at Ten Mile Creek.
163. Have they inoculated to any extent in that particular part of the country? Mr. Green has inoculated about 1,000, and Mr. Bardwell has inoculated about 200.
164. Are we to understand that recently, where they have not been inoculated, a considerable proportion of the cattle affected by pleuro-pneumonia have not died—that the cases have not been fatal? They have not been fatal.
165. The cattle have recovered? The cattle have recovered in a great many instances.
166. The disease, as it now exists, is not so virulent as when it first appeared? No, unless the cattle are driven about, or suffer from any cause; if they are allowed plenty of food, and are kept quiet, it does not seem in the first instance to be so very fatal.
167. You think hardship of any kind, severe weather, yarding, or knocking about in any way, is calculated to increase the virulence of the disease when it appears? Decidedly, in the first season it comes among them.
168. You think the more the cattle are allowed to remain at rest, the less they are disturbed, so much the better? So much the better.
169. Do you know anything about the state of the disease on the other side of the border? I do. I happen to have a letter now from a party who has been all through the district between Goulburn and the Ovens, and he tells me that in every open run in that part the disease has been pretty severe, but that the fenced runs are generally safe from it.

FRIDAY, 19 SEPTEMBER, 1862.

Present:—

| | |
|----------------|------------|
| MR. GORDON, | MR. HAY, |
| MR. MATE, | MR. RAPER, |
| MR. ROBERTSON, | MR. LEARY. |

FRANCIS TOWNSEND RUSDEN, ESQ., IN THE CHAIR.

Alexander Bruce, Esq., called in and again examined:—

- Alexander Bruce, Esq.
19 Sept., 1862.
170. *By the Chairman:* Were there not certain public meetings held with regard to Pleuro-pneumonia? Yes, at Ten Mile Creek.
171. And accounts of these meetings were forwarded to the Government? Yes.
172. The document I now show you is an account of one of these meetings, held on the 21st August, 1861? It is. (*Vide Separate Appendix 1.*)
173. You wish to hand this in, as an account of the second meeting? Yes. (*Vide Separate Appendix 6.*)
174. Were you present at that meeting? I was. That account is in my handwriting.
175. There was a third meeting on the 25th September? Yes.
176. Who was in the chair? Mr. William Green.
177. This document is an account of that meeting? Yes. (*Vide Separate Appendix 8.*)
178. The other document is an account of the fourth meeting? Yes. I think it was held on the 19th October. (*Vide Separate Appendix 12.*)

J. Morrice, Esq., M.L.A., called in and examined:—

- J. Morrice, Esq., M.L.A.
19 Sept., 1862.
179. *By the Chairman:* This is your petition, is it not? It is.
180. I dare say it is a correct copy? No doubt.
181. Was not this part of the country (referred to in the petition) placed under quarantine at the request of the stockholders in that neighbourhood? At the request, I believe, of some of them.
182.

182. You were not one? No.
183. Did you make any remonstrance at the time? I did.
184. To whom? To the Minister for Lands—not in writing, but verbally.
185. Were any diseased cattle found upon your run? Well, all the information I have upon the matter is from my son (who was there at the time) and my own overseer. They told me that several cattle on my station belonging to Mr. M'Laurin were killed.
186. These were amongst your own cattle? Yes. But that there was only one in which they could see symptoms of the disease, and this was killed at a sheep station between my station and the station of Mr. John Hore.
187. Diseased cattle were never found on your run then? No.
188. Why then were cattle killed on your run, if none were found to be diseased—whose were they? They killed some of mine and some of Mr. M'Laurin's—Mr. M'Laurin's first, I believe.
189. Had these cattle been long on your run? Some of them had, I believe.
190. Can you say for a fact how long? Some of them for upwards of two years.
191. They were strangers, or what are called stragglers? Yes.
192. And amongst these of Mr. M'Laurin's were any found to be diseased? From information afforded me by my son and my overseer, I believe there was no disease but in this one which was killed on the boundary, among cattle of Mr. John Hore.
193. Were those cattle belonging to you that were killed found to be diseased? I believe not—my people say not.
194. What does the inspector say? The inspector said they were diseased.
195. Was it not on your own run that a spayed cow, supposed to be diseased, was killed? No, on Mr. Hore's. I believe he told me that the inspectors came to inspect his cattle, and he went with them himself. They came to a cow that he had spayed about a fortnight before, and they pronounced her to be diseased, and he declared she was not diseased. They showed him their authority to kill diseased cattle, and he then said, "This cow I have only spayed a fortnight ago." The cow was opened, and he says she was not diseased. He says that then they promised they would not kill any more, that they were satisfied, and that they would leave his place. He was, however, under the impression that they would not, and he said if he knew that they would not, he would accompany them. But he found out, I do not know how exactly, that they had killed a fine fat cow—one of the best on the run. He went and saw the cow, and said she was a very fine one, without any disease in her at all.
196. What inspectors did this? I think he said Mr. Bruce was one. I cannot say exactly, but I know he said inspectors, and that if they had told him they were going to kill this cow he would have driven her into a stockyard near the inn, so as either to have sold the carcass or given it away.
197. Did the quarantine apply merely to New South Wales, or apply also to cattle going to Melbourne? I received a written notice from Mr. Bruce, previous to being gazetted, forbidding me from removing a beast at all off the run without his permission.
198. To any place? Anywhere. That document I have not here, but I can find it. This notice was served on the station, and forwarded to me by my superintendent.
199. But I find, on perusing these papers, that it was the intention of the Government to allow cattle to go to Victoria as long as the runs reached the Victorian boundary, because it was contemplated at one time to let the cattle cross at Albury;—when the inspectors found the disease had extended there, you say you received a formal notice not to remove them anywhere? Yes.
200. Would your market be New South Wales or Melbourne? Melbourne.
201. *By Mr. Robertson*: Did you remove any? No, not until lately.
202. *By the Chairman*: Not until the quarantine was taken off in March? No.
203. You did not remove any until lately, you say? No.
204. *By Mr. Robertson*: Were they fat? They were.
205. *By Mr. Hay*: In that account you heard from Mr. Hore, did the circumstances occur before or after the appointment of the Commissioners? It was after.
206. I do not mean the inspectors? No.
207. Were the four Commissioners present at the time? I cannot say.
208. Was Mr. Paulding present? I think so; I am not sure.
209. Were you about to remove cattle at the time you received this notice from Mr. Bruce? Well, I had sold some to a Melbourne butcher.
210. Who was he? Mr. Dumfries. He had taken away one lot just a few days before Mr. Bruce served this notice. He told my son, some short time before, that he would take all that we had fat, any more that we may have.
211. But did he positively purchase them? He did not positively purchase any more than he took away, but he told my son he would take all we had, or may have, that would be fat. The price of the lot that he took away then was £5 a head for the cows, and £6 for the bullocks.
212. Did he take cows from the whole of the herd? He did.
213. There was no contract then for the delivery of more? No, except that he told my son that he would take all that we had fat, or may have. He always took our cattle.
214. And he took what he could then? Just at that time all that were fat.
215. Then what evidence have you to show what fat cattle you had on the run in the interval between that time and the removal of the quarantine? I cannot say now, exactly.
216. Have you not been there yourself? No.
217. Have you sold any of the bulls? No. I had sold twenty to Mr. Shepherd here, and in consequence of the run being placed in quarantine he afterwards refused to take them; and, indeed, I would not wish him to take them under the circumstances.

J. Morrice,
Esq., M.L.A.
19 Sept., 1862.

J. Morrice,
Esq., M.L.A.

19 Sept., 1862.

218. Do you know for certain that it was on account of the quarantine that he refused to take them, or was it on account of the reputation that part of the country had obtained of being infected with the disease;—do you know that Mr. Shepherd was induced to refuse to take them on account of the quarantine, or on account of the disease having broken out so violently in that quarter? He said he would not take them after that. I cannot say whether it was on account of the quarantine, or the disease being there.

219. You did not attempt to remove them? No.

220. Mr. Shepherd did not demand the bulls from you? No.

221. You did not fail to complete the contract, then, on account of the quarantine? No; Mr. Shepherd said he could not take them.

222. Then it was not on account of the quarantine? I do not know whether it was or was not.

223. It was not on account of the quarantine that he did not ask you to deliver the bulls? I took it to be on account of the Commissioners reporting that the disease was on my run; I do not believe there was any disease there, or has been until this day, for there have been none dead or sick, and no disease has been found among them.

224. Have you any evidence to bring to show that? I have no witnesses just here, but I could bring them; I can bring my son and my overseer.

225. You can say nothing to that effect of your own knowledge? Only from what my son and my overseers told me. I was very anxious to find out whether any disease had been found among my cattle.

226. How many were slaughtered? I was under the impression that it was nine, but Mr. Bruce says only six or seven. My overseer says, the first that was killed he intended to have taken to his own house for use, thinking it was a fine beast, when to his astonishment he found it shot.

227. Do you know anything about the price of cattle between the months of November and March? I did not sell any; but for what I sold now I got £4 5s. per head.

228. Did you not happen to hear that cattle were remarkably low in price in Victoria last year? Yes.

229. Are you not aware that the prices are much better now? I think the prices are something higher.

230. Is it not the general impression that they are a great deal better? I cannot say, except that the last price I heard about the Murray was £3.

231. Are you not aware that many whose runs were not placed in quarantine found it impossible to sell cattle at any price at that time, and who have since sold cattle that they could not sell then? I am aware that at that time cattle were not very saleable.

232. At what time was it that you first made these representations to the Secretary for Lands that you speak of, protesting against the quarantine? From the commencement; for I was constantly receiving letters from my superintendent there, and disease being in that quarter, I was anxious to know whether it was among my cattle, or likely to be among them, so that I might as soon as possible try to remedy the evil. The letters I kept receiving from them told me not to put myself to the slightest trouble, as there was nothing the matter with the cattle, that they were thriving and fattening every day; I was at no trouble myself, but receiving these letters I was annoyed that my station was put under quarantine without any necessity for it.

233. Then you first protested when your station was put in quarantine? Long before. Before I had heard of quarantine, Mr. Morris said that my station would be put in quarantine.

234. And you protested in anticipation? Yes, from that time I protested.

235. You say you did not send any written protest or communication to the Secretary for Lands? No, I think not, but I do not remember any.

236. Do you not think, in a matter of this kind, it would be exceedingly desirable to do so? I may have done so, but I cannot say positively that I did write to him; I think I did.

237. You did write? Yes.

238. Have you a copy of that communication? No.

239. What was the nature of the communication—was it protesting against the measures taken as to quarantine generally, or protesting against quarantine as far as your own particular run was concerned? I cannot remember exactly, but I think I recommended what plan I thought would be the best to take.

240. You have not got a copy of your communication? No.

241. *By the Chairman*: Was yours a breeding or a fattening area? Both. I had a large paddock for fattening, the other part for breeding.

242. You did not buy store cattle for fattening? No.

243. How many did your herd consist of? About 2,000 head.

244. How many fat cattle did Mr. Dumfries take away previous to the run being put in quarantine? About 300, or close upon it.

245. *By Mr. Robertson*: He took all that were fat? He took all that he could get at that time.

246. *By the Chairman*: What would be the average number of fat cattle that the herd would yield (these 300 having been taken away) for the next three months? It ought to yield that many more.

247. A herd of 2,000? I think so. It depends upon the time of the year. If it is in the spring months, they will get fat more quickly than they would in the winter months.

248. Can you say how many he has taken now? I cannot say; he has taken them in different lots. I had sold, at the same time, twenty cows and twenty heifers. The heifers were sold at £4 per head, and the cows at £6.

249. As springers? Yes. The party refused to take them, and of course I did not wish to force him. The station having been put in quarantine, I thought it was no use doing so.
250. *By Mr. Robertson:* With regard to these fat bullocks you sold, you say, about 300, being all you had fat at that time;—when would there be a probability of any more being ready? That was just about the end of winter when he took the last lot, and the fattening season was coming on.
251. What time would that be? He took the last lot some time in October.
252. When would the next lot be ready? From one to six months after.
253. But within six months the quarantine was taken off? But in the meantime different lots had got fat.
254. In three months after, how many were ready? 50 or 100.
255. Was the price better three months after that, when the quarantine was released? No, I think not; it was about the same, I think. When the quarantine was released, they were at the lowest.
256. Now what was the depreciation in price between the time when they would be fat and the time when they could be sent to market? I think they sold at £3 a head at that time.
257. And what did they sell for when the quarantine was over? I say I sell them now at £4.
258. What would have been the price at two months after? I cannot say exactly.
259. What you would lose is the difference in the price of the cattle? Yes.
260. Then as the price increased in the meantime, your loss does not seem to have been much upon the fat bullocks? Yes; but since the quarantine has been taken off, I was compelled to keep them, in order to get a fair price.
261. You say you sold some bulls? Yes.
262. And that the quarantine had some effect in preventing their delivery? It had that effect.
263. But you cut the bulls? Yes.
264. Why? Because the character of my stock was injured, and I could not sell them after.
265. Was it not desirable to keep the bulls until the quarantine was taken off? I did not know when it would be taken off. Cutting them reduced their value, of course.
266. But that was your own action? But I knew that the quarantine being on would lead to a report that the cattle were diseased, and that I should not be able to sell them.
267. Then it was the expectation of a report that the cattle were diseased, rather than the quarantine, that caused you to cut the bullocks? Yes. Many of them were six and eight months old, others older, some two years.
268. What would be the depreciation in value between the bull at six months and the bull at twelve months, because the quarantine only lasted six months? They would not be worth anything to me after, because no person would buy after the report of the disease being among them.
269. Then it would be the report of the disease being among them, and not the quarantine, that would cause the loss? Both.
270. The report of the cattle being diseased would render the bulls less saleable, and the quarantine would only delay the taking of them away;—what is your loss? I cannot say.
271. Would not the six months during which you had to keep them increase the value to as great an extent as the quarantine would depreciate it? Of course, in consequence of the station being put under quarantine as diseased, no person would buy them.
272. Then, with regard to the cows, to whom did you sell the cows? To a person of the name of Burns.
273. When were you to deliver them? About that time.
274. How many? Twenty cows and twenty heifers.
275. What price? I sold the cows at £6 per head, and the heifers at £4.
276. At the end of the quarantine what was the increase? I cannot say.
277. Had you got some good choice for dairy purposes? No person would buy them only to put them into a paddock to fatten.
278. Were they worth £4 10s.? No, no one would give more than £3 10s.
279. And you lost that? Yes.
280. That is the extreme it could possibly be? Between £3 and £5 for the cows, and between £4 5s. and £6 for the bullocks.
281. Now we have ascertained what you lost, be kind enough to tell us what you gained;—is it not a fact that at the time when this action on the part of the Government was taken, the pastoral proprietors of that part of the country were in a great state of anxiety and alarm for the safety of their cattle property? I think they were.
282. Would not that anxiety and alarm depreciate the value of the property there in the market? I cannot say. I do not think it would, unless disease was actually amongst the herd.
283. Is it not possible that some people might be unreasonable enough to say, whilst desirous of buying cattle, "We cannot give you so much for your cattle, because they are diseased"? They might.
284. Then, in that way, the property was depreciated in value? It would in that way.
285. You are aware that the alarm exhibited was so great that a law for checking this disease was passed through the Legislative Assembly in one night, and also through the other branch of the Legislature in one night? Yes.
286. Were you there? Yes.
287. Did you take exception to it in the House? Yes, I protested against the manner of slaughtering cattle.

J. Morrice,
Esq., M.L.A.
19 Sept., 1862.

J. Morrice,
Esq., M.L.A.

19 Sept., 1862.

288. You are aware that we were not slaughtering them, and therefore you could not protest against it;—when this Bill, authorizing the destruction of the cattle, passed the Assembly, did not you, like other proprietors of stock, consent to its passing? Oh, yes.
289. When the Bill was passing, you had it in your own hands to prevent its passing? Yes.
290. You are aware that if you had objected to the suspension of the Standing Orders the Bill could not have passed as it did? Yes, I am aware of that.
291. You did not object? I did not, but I did not agree to the passing of a law for placing a person's station in quarantine, and killing his cattle without them being diseased.
292. Was there not a power given in that Bill to place stations in quarantine and to destroy cattle? Not unless diseased.
293. Was there not a power to appoint inspectors to determine whether cattle were diseased or not? Yes.
294. Is it at all likely that this extraordinary, this tremendous power would have been given to the Government, unless there was some great occasion for alarm on the minds of the owners of this property—would this have been done in ordinary times? I think not.
295. It was done, then, with the consent of yourself, as a general benefit, for the protection of property? Yes, but it was to kill only diseased cattle.
296. I want to know how much you benefited by it? I have benefited nothing, but lost by it.
297. I want to know whether that alarm still exists in the minds of the proprietors of that property? I do not think the same alarm exists, because they are more accustomed to the disease than before.
298. What more do they know about it? They know there is no great harm in it.
299. Have they learned how to deal with it? They know better how to deal with it.
300. They have learned to deal with the stock when they take this disease? I think they do.
301. What do they know? I believe a few individuals inoculate.
302. Are you of opinion that the appointment of inspectors by the Government has had a beneficial effect in supplying a means of treating this disease? Well, I do not think their action has been very beneficial.
303. Are you not aware that the chief of these gentlemen is a man of very great experience in these matters? I dare say Mr. Bruce has gained experience at other people's expense.
304. Are you aware how he was appointed? I was not aware until now.
305. Did you ever object to his appointment, or have you been able to show his inefficiency in any regard? I have always complained that he placed my station wrongly under quarantine.
306. Have you seen anything to show his inefficiency or inability? No, I do not know anything but that.
307. Was Mr. Pottie, the veterinary surgeon, present when your own and Mr. Hore's cattle were destroyed? I do not know. Some of mine were killed at different times.
308. You know that Mr. Pottie was there? Yes, from information I have received.
309. Was £6 for bullocks, and £5 for cows, the price you obtained for the first cattle you sold at that particular sale? Yes.
310. Were not some of the bullocks sold at a lower price? Not to my knowledge.
311. Do you say that they were not? No.
312. Can you say that they were not; because, unless you can say that such was not the case, your evidence will not be of importance in favour of the £6;—were not some of these cattle sold at a lower price? Not that I am aware of.
313. Is the gentleman to whom you sold them here to give evidence in your behalf? No.
314. What knowledge have you of the price that was obtained for them? I heard it from my son.
315. Were not some of the cows sold at a lower price? I cannot recollect that they were. They might have been at the sale.
316. Is it not a practice in the sale of cattle to say, here are 150 at such and such a price, 100 at another price, say £6, and another 50, say at £5? He was to take everything fat—cows at £5, bullocks at £6.
317. Are you sure that that was the arrangement? Yes. My son might throw in half a dozen.
318. Not ten? I do not know. It was part of my written instructions not to take less, and they were sold at that price.
319. I am informed that you did get less, and very considerably less, for some of these cattle, both bullocks and cows? Well, it may be, I will not say positively.
320. *By Mr. Leary:* How long was it before your station was put in quarantine that you sold these cattle to Dumfries, that you speak of—was it a month? I scarcely think it was so long.
321. You have just stated that you made a contract with Mr. Dumfries, that he was to take all the fat cattle you had at the price you name—that is, £6 for bullocks and £5 for cows? Yes.
322. Was that a fair price? Yes, it was a good price at the time.
323. Was it not the highest price given? What he was accustomed to give us was £6 for cows and £7 for bullocks.
324. Was it not the highest price given for cattle at that time? It may have been.
325. Do you not know that it was? At that time it was.
326. For cattle of that description? Yes.
327. If, then, that was the highest price given at that time, and was a good price, I presume you would take care to get rid of every fat beast you had at the time? At that time he got every beast I had that was fit for the butcher, but some more would be ready in a month from that time.

328. Do not cattle vary much in price in different seasons? The price I always got before was £6 for cows and £7 for bullocks. I have got as high as £10 a head.

J. Morrice,
Esq., M.L.A.

329. Would you not have been glad to sell all that you had fat at that price? I did sell all I could.

19 Sept., 1862.

330. You did sell every fat beast on the run? All that were fit for the butcher; but in one month, two months, and three months, other lots would be fat.

331. Were not cattle afterwards reduced in price? Yes.

332. Very considerably? Yes.

333. If you had had fat cattle, would you have sold them at the reduced price obtaining after that? When the quarantine was taken off they were at the lowest price, and I would not sell until the prices got better.

334. You say prices were considerably reduced after this sale of fat cattle;—now, would you have sold at the reduced price, or would you have waited with a prospect of the price getting up? It was a short time after the quarantine was taken off.

335. But when you had some other cattle for sale were not the prices lower? I cannot say for that.

336. Can you say positively, that, independent of the quarantine, and during that six months, they sold some fat cattle? I did not attempt to sell, because of the quarantine.

337. Could you or would you have sold at the prices then going? Certainly, at some of the prices; not at the prices when the quarantine was taken off, because they were then at the very lowest.

338. You stated that some cattle on your run, bearing Mr. M'Laurin's brand, were killed? So I am informed.

339. These cattle of Mr. M'Laurin's had been stragglers for some time? Some of them.

340. Had any of them come recently on your run? Some of them came on to my run as I came through; they had only been there an hour or so. I afterwards received a letter from Mr. James Osborne, who happened to be at the station when the cattle were put in the yard; he wrote down to say, knowing that I was interested in the matter, that these beasts were as sound and healthy as any he had seen in his life.

341. *By Mr. Hay*: Mr. M'Laurin's cattle? Yes.

342. *By Mr. Gordon*: What distance is your station from Mr. M'Laurin's? I suppose about twenty-five or thirty miles.

343. Does one station join the other? No, there are two or three between.

344. Do you purchase cattle for the purpose of fattening? Sometimes.

345. Did you last season? No, it has been some time ago.

346. How many fat cattle out of the 2,000 do you expect to sell in the year? I have a fattening paddock, and at the time of the quarantine I had some 600 head fattening.

347. Of what size is the paddock? About twenty-five square miles.

348. *By Mr. Hay*: You did not answer the question of Mr. Gordon? My son says, that after Mr. Dumfries had taken what he could, then he expected, within the next six months, to have 300 head off it.

349. As a general piece of management, how many fat cattle per annum, out of a breeding herd of 2,000, would you expect? Well, I can scarcely answer you that; I should say, somewhere between 300 and 400 head annually. But on my station the Government is constantly making reserves, and I try to fatten off the cattle to get rid of them; and therefore I ought to get a larger quantity on that account.

350. *By the Chairman*: Did you spay many cows? I did.

351. *By Mr. Hay*: How many calves did you brand last year? I do not know.

352. You do not know what your increase is? No, my son has that management.

353. *By Mr. Gordon*: You say you had 2,000 before the run was placed in quarantine—how many have you now? About the same number; at a rough calculation that is about the number.

354. How many fat cattle did you sell the year previous? I generally sell from 200 to 400 head; it depends altogether on the season.

355. *By Mr. Robertson*: You sold 300 just before the station was put in quarantine? About that.

356. How many are now fat? I have sold all that are fat now.

357. How many have you sold since? I cannot tell.

358. A hundred head, do you think? More.

359. A hundred and fifty head? I should say so.

360. And so you get 450 in the year of the quarantine? How is that?

361. You say you sold 300 before the quarantine and 150 after? That is the case.

362. *By Mr. Leary*: In what months do you generally sell your cattle? When I can.

363. What is the season when the cattle are generally fat? I sell them whenever I can meet with a market; I have no particular time. Generally you will have more fat cattle from Christmas downwards, and I generally sell them about that time, or whenever, in fact, that I can.

364. Would not a herd like yours, of different ages, have lots getting fat together at various periods? I have been in the habit of buying up all the steers I can, two or three years of age, with a great many male cattle amongst them, and they remain there and grow up to bullocks; so that I have a large increase.

Mr. George Bardwell called in and examined:—

- Mr. George Bardwell.
19 Sept., 1862.
365. *By the Chairman:* Your run was placed under quarantine? Yes.
366. On the 22nd October? Yes.
367. And when was the quarantine taken off? I think about four or five months afterwards.
368. You believe it was about the 20th of March? Yes.
369. Was your run adjoining Mr. McLaurin's? No, it was adjoining Mr. Bowler's.
370. Were any diseased cattle found on your run? Well, I believe only one. This beast was killed by Mr. Bruce on a portion of my run, a mile and a half from where my cattle run (the township dividing it), and I heard it was diseased.
371. Were any of these killed? Not at that time.
372. At any time? Afterwards Mr. Bruce, Mr. Day, and Mr. Meyer came and killed three of mine on the run, and three or four belonging to other parties.
373. Were they diseased? It is said they were, but I pronounced them not.
374. You do not think they were? No.
375. Was your market the Melbourne market? No; Beechworth and the Ovens.
376. The Victorian market? Yes.
377. Did you make any attempt to remove any of your cattle after your run was placed in quarantine? No.
378. What was the amount of the loss you suppose you sustained? About £170 or £180.
379. You say in your petition, that you are in a position to show, from an examination in Victoria, that none of the animals were diseased with pleuro-pneumonia? Those were fat cattle that were sold previously.
380. It refers to fat cattle that were sent away; but do you mean to say that one of the Victorian Commissioners examined the whole herd? No; the fat cattle that were taken away.
381. But that would not apply to the herd on your run? No.
382. And you consider that your loss is about £180? Yes.
383. Had you sold any of these cattle? Sixty head. I had delivered fifteen head, and the rest were to be taken when the party had killed those.
384. What did you sell the fifteen head for? £4 10s. per head.
385. And were you to be paid the same price for the rest? Yes.
386. And what did you get for them? I scarcely realized £2 5s. a head for them.
387. That would make the loss something over £100? Yes.
388. *By Mr. Raper:* Do you say that none of the cattle killed on your run by the Commissioners were diseased? Yes.
389. Did you see them examine the cattle they killed? Yes.
390. And did they say they were diseased? Yes.
391. Were any cattle killed on your run by Mr. Pottie, the veterinary surgeon? Not that I am aware of.
392. Did you see any cattle killed and examined by Mr. Pottie? No.
393. Did you hear that there was a difference of opinion between Mr. Pottie and the Commissioners, as to the nature of the disease? No.
394. *By Mr. Hay:* When did you sell these other thirty head of cattle? Well, I cannot guess now, but it was about March when I sold the next.
395. Did you sell them at the same time that you sold the remaining portion of the sixt? No, some time after.
396. When did you take the forty-five head away? I do not recollect; I have not the date with me. I received a certificate from Mr. Smith, the party I sold them to.
397. Do you not recollect the month? No.
398. *By the Chairman:* It was after the quarantine was taken off? Yes.
399. *By Mr. Hay:* Do you think you could get the certificate of Mr. Smith with reference to the forty-five head? I think so.
400. That would be important, to show the result of Mr. Smith's examination of the cattle, and the date of the sale? I sent it to Mr. —, and he may have mislaid it.
401. Mr. Smith only examined the cattle, I presume, as they passed—he did not kill any of them? No; I think I have the certificate from Mr. Smith at the present time.
402. Where did Mr. Smith examine the cattle? At the River Murray.
403. How did they happen to be there then? I was crossing with them, and had to get a certificate, to satisfy the Victorian Government that they were sound when they crossed.
404. And you put in this certificate? Yes. (*Vide Appendix.*)
405. Is it signed? No, but it is a certificate.
406. You observed the date—the 4th of February? Yes, the 4th February.
407. Was not that in the time of the quarantine? The quarantine was taken off at that time.
408. What, in February? It must have been; I was allowed to remove the cattle, and I did not do so before.
409. You cannot explain it any further? No, but I am fully satisfied that the quarantine was off before I attempted to remove them. The quarantine was taken off to the Murray at that time, but not from the other parts of New South Wales.
410. Do you know at what time it was extended to the Murray? I do not; it must have been a short time before.
411. Then, in point of fact, you were not prevented from removing your fat cattle on the 4th February? No.
412. That reduces the period during which you were prevented from removing these cattle? Yes.

413. *By Mr. Mate*: Did you receive this document from Mr. Smith? Yes, from Mr. Smith himself. Mr. George
Bardwell.
414. You are certain that it is his handwriting? Yes.
415. *By Mr. Hay*: I see that on the 24th December there was issued a proclamation which proclaimed a quarantine including the whole country between your station and the River Murray at Albury? Yes. 19 Sept., 1862.
416. From the date of that proclamation your road would be open to take cattle to Victoria? Yes.
417. Then you state in your petition that on the 22nd of October your run was placed under quarantine? Yes.
418. How did you learn this? Mr. Bruce came to the yard whilst I was collecting cattle to take away, and intimated it to me verbally, and in three days afterwards I saw it in the Albury papers.
419. He intimated it to you verbally? Yes, he said I could not take away the cattle.
420. Had you any mustered at that time? I had a part of them mustered.
421. And he intimated to you that you could not take them away? Yes, and the next time I heard of the quarantine was from the subsequent publication of the Albury papers.
422. In what form was the notice in the paper—who did it purport to be signed by? I have no recollection, but I fancy it was by Mr. Bruce.
423. You never saw any proclamation? No; I think there was a proclamation in the paper, but I will not be positive.
424. How did you learn that the quarantine was extended to Albury, so as to admit of your cattle being taken across the River Murray? The first I heard of it was from Mr. Rial, who had a letter from Mr. Bruce stating that he might remove his cattle.
425. Did you have any notice? No.
426. Did you see the notice in the Albury paper? I will not be sure that I did.
427. In point of fact, it appears that the quarantine was extended by proclamation of the 24th of December, and shortly after that you would learn that you were at liberty to take your cattle to Albury? I believe I did.
428. In fact, the time during which you were prevented from removing your cattle was reduced to two months—that is, from the 22nd of October to some date not later than the 24th of December? Yes.
429. The loss you consider you suffered was through being prevented by Mr. Bruce from taking away these cattle at the time when he spoke to you? Yes, to this party of whom I have spoken.
430. Were the other thirty fat at the time? They were marketable at that time.
431. But you think you could have obtained the same price (£4 10s.) for them? I think so, without difficulty; good cattle, I believe, were fetching about £5 at that time.
432. Would you have taken them away at that time? I certainly should, some time before the quarantine was taken off.
433. But at the time it was put on? I was then collecting all the cattle I could get to take away.
434. And did not the price of cattle fall after the 1st of October? The prices came down to about £3.
435. *By Mr. Gordon*: Why did you not collect the thirty head then? I cannot say; perhaps he was not prepared to take them away, or something of that sort.
436. *By Mr. Hay*: As a fact, were any strange cattle on your run? There were none killed, I believe. Mr. Bruce, Mr. Meyer, and Mr. Day came round and killed three of mine, pronouncing them diseased; but I should say they were not diseased. There were two taken to the water-hole to wash the lungs before any symptoms could be seen, and then only as described; Mr. H. Bowler saw these.
437. What month was that in? When Mr. Day and Mr. Meyer were appointed.
438. These were your own cattle? Yes; but there were three strange cattle, belonging to the township, killed on my run at the same time.
439. And what about them? I believe they were not diseased; and there was one of Mr. Bowler's also killed, which I consider was not diseased.
440. Do you think there were any strange cattle infected with pleuro-pneumonia upon your run? No one killed any that were diseased whilst I was present; what Mr. Bruce did by himself I do not know; he never called on me to kill any previous to that time.
441. Do you know the appearance infected cattle present? Yes, the general symptoms; I have some slight knowledge of the disease.
442. Can you make a good guess? Not in the first stage; in the second and third I can form a good idea.
443. At the same time, did you see any strange cattle on your run? None but those that had been there for some time.
444. Did you see any affected with pleuro-pneumonia? No.
445. Were there any of Mr. M'Laurin's there? None of his diseased herd.
446. Is your station upon the main road? Part of it.
447. The main road passes through your station? Yes.
448. There is, I suppose, a considerable traffic by working bullocks along the road? There was some, but to what extent I do not know, as I live some distance from the road.
449. Was there any particular reason for your not availing yourself of the extension of the quarantine to Albury to remove your cattle as soon as it took place, as you do not seem to have removed them for some months after? The prices of cattle were low at that time, and there was a chance of their getting better; that is the reason I did not remove them before.
450. Suppose it was in the beginning of December that the extension of the reserve to the Murray

- Mr. George
Bardwell.
19 Sept., 1862.
- Murray was proclaimed, do you mean to say that the prices of cattle at that time were very low? Very low at that time.
451. And therefore, there was only little more than a month between the time of the extension and the time when the quarantine was first established? Yes.
452. In fact, it was just "touch and go" as to the sale of cattle, at the time the quarantine was established? Yes.
453. The principal thing you rely upon is this, the sale of the cattle you had in the yard when Mr. Bruce came? Yes.
454. You did not think of inquiring, I suppose, whether Mr. Bruce had the power of inspecting them? I believe he said he had the power; I heard a person remark that Mr. Bruce had said, if he refused to allow his cattle to be destroyed he would go to the police and give them in charge; I heard that myself, I believe.
455. You took it for granted that he had the power to place your run in quarantine at that time? I did.
456. You did not inquire into the necessity of a proclamation? I went to Albury to get a lawyer's advice, and he thought it was best not to remove the cattle.
457. You took the advice of a solicitor, and he advised you not to remove your cattle? Yes.
458. You did not know the grounds he had for giving that advice? No.
459. You did not know whether he had ascertained that a proclamation had been issued? No.
460. You stated what Mr. Bruce had communicated to you, and asked his advice upon it? Yes.
461. That must have been even before you saw the notice in the Albury paper? About the same day.
462. Then the solicitor was aware of the notice in the paper at the time he gave you this advice? I think he was.
463. Did you see much of the pleuro-pneumonia up there in that neighbourhood—did you see any cattle killed at the Yarra Yarra? I saw some killed in the lock-up on Mr. M'Laurin's run, but not on the other side of the range where his residence is.
464. You saw them on the southern side of the range? Yes; I considered them bad; they were part of the tailing mob.
465. Were they diseased? Some of them were, but some not quite so bad; I only saw two or three of them killed.
466. Did you see many of them about, either Mr. M'Laurin's or Mr. Bowler's? There were some stragglers there from Mr. Bowler's herd, and one or two of mine afterwards came there.
467. Did you think there was much cause for great alarm at that time? I cannot exactly say.
468. You were much frightened, were you not? I cannot say I was; I did not wish my cattle to be killed.
469. Did you wish the cattle of others to be killed? No.
470. Were you not at some of the meetings of settlers that took place? Yes.
471. Were you at any meeting of settlers where any resolution was come to recommending that diseased cattle should be slaughtered? I think I was.
472. I suppose you were a consenting party to that resolution? I think I was a consenting party to Mr. M'Laurin's being killed.
473. Do you recollect a meeting which took place at Ten Mile Creek on the 19th October, when a resolution was passed unfavourable to the establishment of a quarantine? I think I was.
474. I think that resolution was adopted unanimously? I think I was present at that meeting.
475. Do you recollect that at that meeting a resolution was proposed to this effect: "That this meeting, after mature deliberation, is convinced that the only effectual means of stopping the spread of the disease known as pleuro-pneumonia is to destroy the entire portion of the herd in which diseased cattle have been found, as it is proved by experience that it is impossible to stay the disease in its early stages?" I was present, but I almost forget the resolution.
476. I presume you must have been in a considerable state of alarm with regard to this disease, before a resolution of that kind would be carried amongst the settlers? I must confess they were in a considerable state of alarm in the district.
477. Did you conceive that Mr. M'Laurin, having had a large number of cattle destroyed for which he was about to receive a compensation, that you admit was not very high, was likely to suffer by the carrying out of a resolution of that kind? I cannot exactly say.
478. Supposing that some diseased cattle were in your herd, would you have cared to have had them all destroyed at the same rate of compensation that Mr. M'Laurin was to receive? I must confess I should not, because many of mine were store cattle, and I consider them to be worth considerably more than 30s. a head.
479. Under these circumstances, would you have been willing to have sacrificed your cattle for the good of the country? I cannot answer that.
480. Would you have been satisfied with the compensation? It is a difficult question to answer at the present time.
481. Supposing diseased cattle had been found in your herd, would you have been satisfied if the whole herd had been destroyed in accordance with the terms of that resolution? No, I do not think I should have been satisfied.
482. Would you not have been a much greater sufferer for the purpose of preventing the spread of the disease than you actually have been, and would you rather have lost the sale of these forty-five head of fat cattle than have had all your cattle destroyed, subject to the same compensation as was allowed to Mr. M'Laurin? I certainly should not have liked to have had my cattle destroyed; I believe I should have been a very considerable loser by it.
- 483.

483. There seems to have been a wonderful unanimity among the settlers as to the destruction of Mr. M'Laurin's cattle—did you hear anyone protest against that? I do not think I did—not at that time.
484. It was considered as on the whole advisable to prevent injury to the neighbours? I believe it was at that time. Mr. George
Bardwell.
485. *By Mr. Leary*: Do you know the character of Mr. Bowler's and Mr. M'Laurin's cattle? Well, I cannot say that I know Mr. M'Laurin's; I have not been there for several years; but I know the character of Mr. Bowler's cattle much better.
486. What is the character of Mr. Bowler's fattening or breeding herd? His fattening herd is from the Mitta Mitta.
487. It is a good herd? Generally.
488. What was about the value at the time they were slaughtered? Considerably over the 30s. per head, I should imagine.
489. Were there some of his cattle worth £5 a head? It would depend upon the market price at the time.
490. Were Mr. Bowler's as good cattle as yours? I think the general herd was nearly as good as mine, or quite.
491. You said that most of yours were store cattle, and that if the herd were destroyed you would be a considerable loser at a compensation of 30s. a head? Yes.
492. The inference is, that if there were a great number of fat cattle you would be a still greater loser? Yes, just so.
493. If the disease had been found forty miles from your run, would it be harsh to the neighbouring squatters to prevent the diseased cattle from passing through your run? I think not.
494. It would not have been harsh to place certain runs under quarantine to prevent the spread of the disease? I should think it a good arrangement if the cattle were proved to be diseased.
495. But diseased cattle were found near your run? Yes.
496. And you think it would be a proper precaution to put runs in quarantine in the neighbourhood of the disease, lest the disease might spread? Yes. Runs only upon which diseased cattle are found should be placed under quarantine.
497. Was not your run close to Mr. M'Laurin's and Mr. Bowler's? Yes, but there is an almost impassable range between us, and the cattle never go over there.
498. But you say Mr. Bruce declared some of your cattle to be diseased? This was nearly a month after the run was placed in quarantine.
499. *By Mr. Raper*: You say there were some cattle on or close to your run that were infected with the disease;—do you say you saw some cattle killed near your run that were infected with the disease? Four miles from my place; that is, four miles beyond the boundaries of my run.
500. The only cattle that you saw diseased were those you saw washed at the waterhole? Yes, but I think one was not diseased. There were two washed at the waterhole to endeavour to discover symptoms, but I consider they were not diseased.
501. When the lungs were washed at the waterhole, I suppose the spots were very small? A trifle larger than pins' heads.
502. Who killed these cattle? Mr. Bruce, Mr. Meyer, and Mr. Day.
503. Mr. Pottie was not there? No, it was previous to his coming up.
504. You never heard any difference of opinion as to the appearance of the disease, between Mr. Pottie and the Commissioners? I cannot say; I never attended with the Commissioners.
505. *By Mr. Hay*: What is your opinion with regard to the state of that part of the country as to pleuro-pneumonia at the present time—do you think the disease is now in existence there? I think there is now pleuro-pneumonia in the district, but not to any great extent.
506. During this winter has it been at all bad at any particular time? I think not; I do not remember seeing it violent.
507. Have you seen anything of the practice of inoculation? Yes, I have inoculated 200 head myself.
508. And what was your opinion of its effect? That it is a prevention.
509. You think it is? Yes.
510. Did you lose many cattle in the process? Only one out of about 130. The others I have more recently done.
511. Does it disfigure the cattle much? Some of them; some few lose their tails.
512. How do you operate? By making an incision in the lower part of the tail, about an inch from the end, endeavouring not to cut the bone, then taking a string dipped in the diseased matter from the lung, and drawing it through the incision, then tying it. Sometimes I scrape a little from the lung and put it in the incision. I did some that seemed to be affected on Mr. Bowler's run. They had got up to his swamp and could not walk home. After I had done them they seemed to be better.
513. *By Mr. Raper*: Does it affect their tails? Some of them lose their tails, which drop off; but many of them are not at all disfigured by inoculation.
514. You do not think this loss of the tail would reduce the price of a fat bullock? No, I think not.
515. *By the Chairman*: On the day you were collecting the cattle for market did you see any diseased beast on your run? None, I think, whatever.
516. Did you not on that day bring to pound a beast diseased, which was running among your cattle, and say you believed it to be diseased? I have no recollection of it.
517. Are you aware that two heifers taken from your cattle were killed and found to be diseased? If they were it was unknown to me.

- Mr. George
Bardwell.
19 Sept., 1862.
518. What might be the number of your herd? About 300 at that time.
519. You said you had no cattle that died from the disease? Not at that time, none whatever.
520. Did you receive a notice in December that you could send cattle to Victoria? No.
521. From any inspector whatever? From none whatever. At least I have no recollection of having had one.
522. Had you sold these cattle to the person you were dealing with, or were you collecting for a chance market? I was collecting for a chance market, as the time had nearly expired. It would have been up in a few days when Mr. Bruce stopped me. I was collecting afterwards for a chance market.
523. *By Mr. Hay*: At the time you were stopped? The person I was dealing with would take part of the cattle, but I was obliged to take away all I could get.
524. *By the Chairman*: How many did you sell to him, and how many would you have for the chance market if he would not take all? He was to take forty-five head, but he could not take them all at once.
525. He was to kill so many in the month? Yes.
526. And you were collecting for a chance market, with a view to getting them away before the quarantine was established? Yes.
527. He took away what he could, and you retained the others for a chance market? Yes.
528. *By Mr. Gordon*: How many head did he require in the month? About fifteen head a month.
529. And you had forty-five head still left? Yes.
530. That would extend over three months? Yes; in some weeks he would kill more, in some less, but the average was fifteen head a month.
531. *By Mr. Leary*: I think I understood from you that you had sold these cattle to this party? Yes, I had to deliver them.
532. *By Mr. Gordon*: You did not offer him these cattle, or any portion of them, after the quarantine was taken off? No.
533. Do you not think he was entitled to a portion of them? Cattle were then much lower, and he did not wish to purchase at the original price, and the contract was then broken.

APPENDIX.

Albury, 4 February, 1862.

I certify that I have examined a mob of fat cattle, numbering fifty-two head, the property of Mr. Geo. Bardwell, and can find no symptoms of pleuro-pneumonia amongst them.

TUESDAY, 23 SEPTEMBER, 1862.

Present:—

| | | |
|-------------------------|--|-------------------------|
| MR. GORDON, MR. HAY, | | MR. LEARY, MR. MATE, |
| MR. RAPER. | | |

FRANCIS TOWNSEND RUSDEN, ESQ., IN THE CHAIR.

Mr. William Rial called in and examined:—

- Mr. W. Rial.
23 Sept., 1862.
534. *By the Chairman*: You sent in a petition for compensation for cattle put under quarantine? Yes.
535. How far was your run from Mr. M'Laurin's? Adjoining.
536. When did you receive notice that your station was under quarantine? I did not receive any notice; I only saw it in the *Border Post*.
537. Are you aware that notices were sent in some instances? No, I am not.
538. The injury you complain of is, that you could not sell 100 head of fat cattle that you had previously agreed to sell? Yes; I have a memorandum of the agreement with me. (*The witness handed in the same. Vide Appendix A.*)
539. Was that the only injury you sustained? I had 400 head of store cattle, which I wanted to make sale of, and I was prevented by the quarantine.
540. Your petition does not state that? No, it was not put in. After the quarantine was removed I sold twenty head, of which I have a memorandum, and that shows that they were not diseased. (*The witness handed in the same. Vide Appendix B.*)
541. What is the extent of your run? It is only a small run—a licensed run.
542. How many head of cattle have you? A good many of my cattle are on my brother-in-law's run, Mr. Williams'—about 800.
543. How many were on your own run? From 500 to 600 on my own run.
544. Is it a good run? Yes, a very good run.
545. A good fattening run? Yes, it fattens very well. It is mostly a dairy run; I keep a dairy.
546. How many fat cattle do you usually sell off a year? This is now the third year since I sold any. The year before last I sold only thirteen.
547. You had, then, more at this time for sale than you usually have? Yes.

548.

548. Were you at any of the meetings of the settlers and squatters? Yes.
549. You were one of those parties? Yes.
550. Do your cattle mix much with the Yarra Yarra cattle? Yes; they could not be off 23 Sept., 1862. Mr. W. Rial.
551. Did you lose many by pleuro-pneumonia? Not one.
552. Is it not strange that you should not have lost one, when all these cattle were said to be so diseased? I have not lost one, nor have any shown any symptoms.
553. Were any of yours slaughtered? Yes.
554. By whom? By Mr. M'Laurin; some that were running along with his cattle, and I did not wish to have them taken home.
555. How many were there? I believe there were nine head altogether.
556. As I understand you, your cattle run through and through a good deal with Mr. M'Laurin's? Yes.
557. Do you not know the exact date when your run was put under quarantine? No, I do not.*
558. You say in your petition, that your run was placed under quarantine on or about the 26th of November, and you say also that it remained so until the 20th of March, but we find, from previous evidence, that the restriction was taken off, so far as cattle going to Albury or across to Victoria were concerned, on the 24th December? After all the stations were put in quarantine to Albury, I received a note from Mr. Bruce that I could take my cattle to Albury or to Victoria.
559. Do you know the date of that letter? No. I have left it at home. I am no scholar.
560. Was it not early in December? I think it was some time in the beginning of December.
561. So that your run appears to have been under quarantine only four days in November, and about the 5th December you received notice that you could take them to Albury, so that there were not more than nine days during which you were prevented taking your cattle to Albury;—is that the case? Yes.†
562. By Mr. Hay: Do you know when you did take them to Albury? No, directly I received Mr. Bruce's letter; but I could not say to a day or two.
563. Could you say to a week? No.
564. Could you say whether it was early in December? I received the letter on Saturday—I could not say the date.
565. By the Chairman: Your market was usually Albury? Albury or Beechworth.
566. The latter being across the Victoria boundary? Yes.
567. You say you did not lose any by the disease? I did not; but when I took them to Albury I could not get half the price for them I had previously sold them for, there were so many cattle going to market.
568. By Mr. Hay: Did you deliver any of the cattle that were sold to Mr. Engelhardt? I did, but not at the same price that he had engaged to give me at first.
569. They were sold, as I see by the paper you have handed in, on the 31st October? Yes.
570. You did not deliver, in the interval between the 31st October and the 26th November? No; when I was going Mr. Bruce came on the run and stopped me from taking them away; this was on the 4th November. He said they were not allowed to be removed.
571. At what time was that? Four or five days after I sold them.
572. That was before you received this notice of the 26th November? Yes.
573. He came on the run personally? I sent for him to come and inspect the cattle before I took them away; he came, and could see no disease, but he would not allow me to take them away.
574. Did he give you any written notice? No, a verbal notice. There were three or four witnesses; Mr. Williams was there.
575. Were the cattle collected? No, I was on the run, and my two boys were going to collect them.
576. At what time should the cattle have been delivered to Mr. Engelhardt according to the agreement? They ought to have been delivered to Mr. Engelhardt about six days after that agreement.
577. Then what you complain of is—not what you have stated in your petition, that you were prevented by the quarantine which was placed on your stock on the 26th November, from delivering them, but by Mr. Bruce's interference previous to that date—it was that lost you the sale of your cattle? Yes.
578. It was not in consequence of your run being placed under quarantine, as stated in the petition? If they had not been put in quarantine I could have delivered them. I considered my run placed under quarantine from the time Mr. Bruce gave me notice on the 4th November not to remove my cattle.
579. You say they must have been delivered within five or six days of the date of sale? Yes.
580. But this was before the 26th November, when the run was put under quarantine by written notice;—what you now complain of is, that you were prevented from removing them by the direction of Mr. Bruce? Yes.
581. Were the cattle really fat at this time? Yes, they were very good then.

582.

* NOTE (on revision):—Mr. Bruce came to my residence on the 4th November, 1861, and gave me verbal notice that I was not to remove any cattle from my run.

† ADDED (on revision):—From the 4th November, the time of Mr. Bruce giving me notice, to the 24th December, when the restrictions were taken off, is a period of fifty days, during which I was prevented from taking my cattle to Albury.

Mr. W. Rial. 582. You did not think it necessary then that Mr. Bruce should give you any written notice of quarantine on the part of the Government? I did not know how he was instructed to act.

23 Sept., 1862.

583. Did you not think of requiring some formal notice from a man who came upon your run, and pretended to prevent you from taking your cattle wherever you liked? I asked him if he could see any disease amongst them; he said he could not; but that they must be infected with the disease, from running with Mr. M'Laurin's cattle.

584. Did he positively enjoin you not to take them away? Yes; I said I would take them away, and he said if I did I would put myself in the power of the law; and I was persuaded by Mr. Williams not to take them away, but to leave them.

585. *By the Chairman*: Were you aware of the power of the law? No.

586. Were you not aware that two or three parties crossed with cattle, and that the law was powerless to prevent them? No.

587. *By Mr. Hay*: Did you consult any lawyers about it? No.

588. I suppose at that time you hardly expected the price of cattle would fall so rapidly? They were falling every day, for everyone who was out of quarantine was taking his cattle away, and selling at any price he could get for them.

589. You have not sold any store cattle, have you? No.

590. These store cattle you wished to sell were not store cattle running on your own run? They were cattle running on my own run, as well as on my brother-in-law's, and Mr. M'Laurin's.

591. You would not have wished to have taken away cattle that were on Mr. M'Laurin's run? I wanted to take them away.

592. You would not have taken them away after it was evident there was so much pleuro-pneumonia on his run? That was why I could not.

593. Suppose the law had not interfered, or Mr. Bruce had not interfered, and you had sold cattle which had been running on Mr. M'Laurin's run, and had delivered them, if pleuro-pneumonia had afterwards broken out on the run to which they were taken, you would have been liable for damages? There were very few on Mr. M'Laurin's run, and those that were, were not fit for store cattle.

594. Were Mr. M'Laurin's cattle, in your opinion, infected with pleuro-pneumonia at that time to any extent? I was there only once, at the time of the burning of the cattle.

595. I am asking you your opinion of Mr. M'Laurin's cattle from what you did see? What I saw were very bad.

596. From pleuro-pneumonia? What they term pleuro-pneumonia—it was a disease I never saw before in my life.

597. Did it seem to be a very virulent disease? Yes.

598. Would you have thought it safe to take away cattle from a run where such a disease was prevailing? This was before it broke out that I wanted to sell them; I never offered any for sale afterwards, till the last three months.

599. Do you mean to say that it had not broken out on Mr. M'Laurin's run in November, when Mr. Bruce spoke to you? It had then, viz., 4th November.

600. You were not prevented from taking them away before that time? No.

601. The disease was among Mr. M'Laurin's cattle in November? Yes.

602. Was there any disease on your brother-in-law's run? I believe some have been killed there—some few.

603. In November? No; I think it was after November they were killed.

604. Do you remember when the Commissioners came up—Messrs. Garland and Pottie? Yes.

605. Was it before that? I am not certain whether there was not one beast killed before that, or just after; I saw one killed.

606. Has there been any pleuro-pneumonia on your run at all? I never saw any of it, either on my own or anyone else's.

607. How many of these 400 head of store cattle had there been upon your own run? I suppose about 200 head on my own run, and the remainder chiefly on my brother-in-law's run.

608. I think you said the cattle on your own run did not number above 500 head? Yes.

609. And about 200 store cattle were on your own run? Yes.

610. And the rest were on your brother-in-law's and the surrounding runs? Very few were on anyone else's, except Mr. Robertson's run, where Mr. Dean lived at one time, between me and Mr. Robertson's.

611. Did you get paid for those nine head that were slaughtered on Mr. M'Laurin's run? I believe Mr. Mate has got it for me.

612. Were any of your cattle killed by the Pleuro-pneumonia Inspectors or Commissioners at any time? No, they never came to examine them.

613. *By the Chairman*: You say you attended the meetings? Yes, the first two meetings; there were two meetings, I believe, at which I was not present.

614. At one of those meetings, was there any proposition to put these runs under quarantine? I believe there was; but I believe it was spoken against, on account of its preventing their fat cattle from being taken away.

615. *By Mr. Leary*: Do you know how many days there were between the time when you got notice from Mr. Bruce not to deliver your cattle and the day on which you received notice that your run was put in quarantine? Fifty days from the 4th November to 24th December.

616. Were there any cattle slaughtered on your run that had the disease? Not one, to my knowledge.

617. You say that the Commissioners did not come on your station? No; I told Mr. Bruce, at the second meeting, to come and inspect them, but he never came. It was advertised in the *Border Post* that no verbal application would be received, that applications must be made by letter; and then my brother-in-law wrote to him to inspect the cattle; but he did not come. Mr. W. Bial.
23 Sept., 1862.
618. Although he did not come to inspect the cattle, still he sent notice that the run was put in quarantine? He did not send me notice. I saw that in the *Border Post*, and had verbal notice from Mr. Bruce on the 4th November.
619. Have you never had notice that your cattle were in quarantine? No, except as above.
620. Then your only knowledge of the run being in quarantine was through the paper? Yes, except as above.
621. The inspector never went on your run to see whether your cattle were diseased, and that it was necessary to put the run in quarantine? No.
622. *By Mr. Gordon*: How do you make up your loss to be £392 12s. 6d.? By subtracting the price I obtained for the cattle from what I originally sold them for.
623. You sold the cattle to be delivered at a certain time—some at £4, and some at £4 10s.? Yes.
624. How many head at £4? Twenty, and eighty at £4 10s.
625. Have you sold any of these cattle since? Yes, forty-eight head, and the most I got for them was £2 7s. 6d. and £2 5s.
626. What have you done with the remainder? They are on the run still.
627. What do you value them at, according to the present price of cattle? I do not know what they are worth now.
628. *By Mr. Hay*: Do you think you could get £2 10s. a head for those that were fat at that time? I think I could.
629. *By Mr. Gordon*: Could you get £3? No, you could not get more than that for fat cattle at Albury.
630. *By Mr. Mate*: Are they fat now? No; we had a very bad summer and a bad winter.
631. *By Mr. Gordon*: Is that all the loss you have sustained? Yes; that, and not being allowed to remove my store cattle.
632. During the period of how many days? We could not sell store cattle then at any price.
633. How long were you prevented by the interdict from removing them? When we were put in quarantine we could not sell at any price—people would not buy them.
634. For the 100 head of cattle, according to your own statement, you would have received about £440; you have sold forty-eight for £108, you value the rest at £130, making £238; so that that would leave a sum of £202, instead of £392 12s. 6d.;—what do you suppose is the real value of the cattle remaining at the present moment? They are not worth above £2 5s., if I could get even that.
635. Fat cattle ought to be worth £2 10s.? Fat cattle at Albury are not worth above £3.
636. *By Mr. Raper*: If you had sold those cattle, and received the money, do you think you would have got other cattle in the place of them—could you have turned your money to account? There would have been more if it had not been for the season.
637. *By Mr. Leary*: You say fat cattle are valued at only £3? That was what the butchers offered me a few days before I came away.
638. Had you any fat cattle? A few.
639. Have you not heard of fat cattle being recently sold at £5 a head? Yes.
640. You mean, then, that you could get but £3 a head for your cattle? Yes.
641. When you had sold these cattle to Mr. Engelhardt on the 31st October, you had to deliver them in six days? Yes.
642. You did not deliver them within six days? I could not, because Mr. Bruce stopped me, viz., on the 4th November.
643. *By Mr. Gordon*: Was £4 10s. the highest price for fat cattle when you sold? No.
644. Was it a fair price? Cattle were going at £5 and £6 at the time, but I sold mine in order that I might get rid of them, for fear they should catch the disease.
645. *By Mr. Hay*: Cattle run a good deal through one another on the different runs in that quarter? Yes.
646. It is impossible to keep cattle on their own run anywhere about that part of the country? You cannot.
647. The natural boundaries are not favourable? The cattle must come to certain places to water, and there they mix.
648. All herds of cattle up the river do mix more or less? Yes.
649. For instance, Mr. M'Laurin's cattle would mix to a considerable extent with all the surrounding herds? Yes, there is scarcely a herd but the cattle are mixed.
650. Mr. M'Laurin's used to mix a good deal with the whole of the surrounding cattle? Yes.
651. Yarra Yarra is a very large run? Yes.
652. Surrounded by a considerable number of runs? ———
653. Have Mr. Bowler's cattle mixed more or less with the cattle on all the runs round about? I do not know about Mr. Bowler's; they are away from me altogether.
654. Mr. Bowler's run lies on the other side of Mr. M'Laurin's? Yes, near Albury.
655. Were there many of Mr. M'Laurin's on your run? A good many down the creek; they had to come there to water at the Four Mile Creek—there was no other water.
656. Did you ever know any of these cattle of Mr. M'Laurin's that went through your run, and watered at Four Mile Creek, to exhibit symptoms of pleuro-pneumonia? I never did.
657. Were some of them slaughtered? All they could get were slaughtered.

- Mr. W. Rial. 658. Those that were upon your run? Yes.
659. *By Mr. Leary*: Would you have considered it wise of the Government to have allowed
 23 Sept., 1862. Mr. M'Laurin's cattle to have been sold to have passed through your run, on their way to
 Albury? I should not.
660. You would have feared that your cattle might catch the disease? Yes. I do not think
 Mr. M'Laurin would have attempted such a thing.
661. Do you know the herd of Mr. Bowler? I never was among Mr. Bowler's.
662. You know Mr. M'Laurin's cattle? Yes.
663. What kind of cattle are they? Very good cattle.
664. What do you think their value was, about? I could not say, for I have never been in
 the habit of selling cattle in any quantity.

APPENDIX.

A.

Albury, 2 September, 1862.

I HEREBY certify that I was present at the agreement (a verbal one) made between Rial and Engelhardt,
 and that the notes on the back of this slip were taken by me at the time of agreement, and that the
 terms of the agreement were in accordance with those notes.

JAMES T. FALLON.

AGREEMENT between Engelhardt and Rial.—Cows, £4 per head; bullocks, £4 10s. To be paid by
 bills at one month.

| | |
|--------------------------|-------------|
| 20 cows..... | 80 |
| 60 bullocks, £4 10s..... | 270 |
| | <u>£350</u> |

31 October, 1861.

B.

Albury, 20 March, 1862.

I PURCHASED twenty head of cattle from Mr. William Rial, on the 11th day of December, 1861, and
 slaughtered them at Albury. I hereby certify that I made a minute examination after slaughter, and
 could not discover the slightest trace of disease of any kind in them.

CHARLES ENGELHARDT.

Mr. John Purtell called in and examined:—

- Mr. John
 Purtell.
 23 Sept., 1862. 665. *By the Chairman*: Your run is close to Mr. M'Laurin's, is it not? No, it is about
 eight miles further on.
666. Did your cattle mix with his? Not that I am aware of.
667. Is there any natural boundary that prevents their coming on, such as a range? Yes,
 there is a steep range.
668. So that your cattle would not be likely to mix? No.
669. You say you had about 200 head of fat cattle fit for market? 300; 200 in one
 place, and 100 in a paddock for fattening. I was not by when the petition was drawn out.
670. You had about 300 head of fat cattle fit for market? Yes.
671. Were these sold to any party? They were.
672. And he did not take them? No.
673. Who was he? A man named Dunphy; he bought cattle from Mr. Morrice, of
 Mullangandra.
674. Where does he live? At the Buckland, beyond Beechworth, on the Victorian side.
675. You had an agreement with him? Yes, a verbal agreement; he deals pretty often
 with me.
676. What was the date on which you sold them to him? Either on the 16th or the 18th
 November, I would not be sure which.
677. When was your run placed in quarantine? In November; but the paddock where
 100 head of my cattle were was put under restriction early in October.
678. Do you know the date? (*The witness handed in a letter. Vide Appendix A.*)
679. The notice you have now handed in would have prevented your delivering these
 cattle? Yes.
680. You would have had to collect them after the date you mention? I was preparing for
 collecting them when I got the notice. I met Mr. Bruce as I was returning from Albury,
 after seeing Mr. Dunphy, and he told me to hold back for a few days—that he was going to
 open a road to Dora Dora.
681. What was the price at which you agreed to sell these cattle? £5, and £4 10s. for
 cows.
682. Was that the usual price? That was the price going at the time.
683. Were any of your cattle found diseased? I left them; I resigned them to Mr. Bruce.
 I was out one day when they shot nine.
684. Was that the number slaughtered? No.
685. How many were killed? I never kept an account. I left it all to Mr. Bruce, the
 inspector; I did not trouble my head about them when once I had given the cattle over
 to him. 686.

686. About what time did you get notice that the quarantine was taken off your run? Mr. Bruce was only about a mile or a mile and a half off, and if I wanted any information I used to go to him. Mr. John Purcell.
687. Do you know when the quarantine was taken off? I do not rightly know. 23 Sept., 1862.
688. Have you sold any of these cattle since? 185 head of cattle, at £2 12s. 6d.
689. At what time? I think about the 10th May.
690. You had not sold any previously, from the time of making the agreement with Mr. Dunphy up to this date? No; in fact I never troubled my head with the cattle after I had resigned them to their charge.
691. Did any of your cattle die of pleuro-pneumonia? Yes, there were some killed.
692. Without reference to those that were killed, had you any deaths among the cattle? The inspector killed all, with the exception of one I killed myself; this was after their being taken out of quarantine.
693. You do not understand my question;—did you find any cattle on your run dying of the disease? No, I did not.
694. They were killed, they did not die themselves of the disease? No, they were killed.
695. You say there was a beast killed recently? Yes.
696. Was there disease among them lately? Yes, five or six died—we inoculated 260, and about twenty head of them died; I think it was from inoculation most of them; died I do not think above two or three died of the disease; we did it very severely; we tried it to obtain experience.
697. Do you think it answers? I have great faith in it; I think it is a very good system. I see the cattle thrive remarkably well after it—better than they did before.
698. Do they not lose their tails? We do not mind that; it saves the trouble of branding them.
699. *By Mr. Hay:* You do not say anything in your petition about having sold 300 head of cattle—you mentioned that some of these fat cattle were under offer? I was not by at the writing out of the petition; I left the matter in the hands of my solicitor, and I went off to see the butcher who had bought the cattle, and to get an affidavit from him.
700. The cattle were then actually sold? Yes; I could make an affidavit of that. I had sold the man cattle before, and he could take my word; he had not seen the cattle, but agreed to take them at what I say.
701. Was a time fixed for the delivery of the cattle? He did not fix a particular day; but he said he would take them out in six or seven days. As I expected to be put in quarantine, I said, "Do not mind till I return and see Mr. Bruce, and when I see Mr. Bruce I will write back;" and I then wrote back to him not to come out.
702. When did you learn from Mr. Bruce that he had opened a road for you? I do not rightly know, the cattle were getting so low that I was not very particular.
703. Was it early in December when Mr. Bruce mentioned to you that he had opened a road? I do not remember.
704. You do not remember when Mr Bruce told you that you might deliver your cattle? No.
705. It might have been in December? It might.
706. It might have been early in December? It might.
707. It might have been shortly after Mr. Bruce sent this notice? It might; I would not like to say what I could not make an affidavit of.
708. You say that very few of your cattle died of pleuro-pneumonia? Yes, I left it to the inspectors themselves; I went out only one day with them.
709. I am not speaking of their slaughtering, but I suppose you frequently looked through your cattle and saw whether they were alive or dead; you think very few of them died? I do; there might have been a dozen—I do not think there were.
710. How many do you think died of the effects of inoculation? About fifteen or sixteen. I would have been satisfied to have lost five per cent.; but we did them the wrong way; we did it to have experience.
711. You afterwards had a better system? Yes, we made a slit in the tail, and took the worst of the lung and put it under the skin.
712. If so few cattle died of pleuro-pneumonia, what makes you take so much trouble to kill them by inoculation? To prevent them from getting it again.
713. If so few die, what is the use of running the risk? I wanted to get experience of it. I saw from the papers that it was a first-rate thing to do it.
714. Did you think it a first-rate thing when you lost about a dozen from pleuro-pneumonia, and in order to get rid of it you resorted to inoculation, by which you killed sixteen? Mr. Bruce is there, and he will give his opinion.
715. You must think this a very bad disease, to have slaughtered so many in order to prevent its spread? I never was frightened of it in the least. I was satisfied that I must lose a few. I was not frightened of it; I was more annoyed at not being able to get the rest to market.
716. Did you not inoculate 260 at the risk of killing them? Yes, and I intend to do the rest when I go home, to prevent the cattle taking it.
717. You do not think inoculation is worse than the disease? No, it was our own fault; we need not have lost one in every hundred if it had been done as it ought to have been.
718. Are you not, in point of fact, aware that you could have removed any of your cattle, so as to have delivered them in Victoria, from a period very early in December? Yes. I am aware I could, when they opened the quarantine to the Murray.
719. Therefore, if you were prevented from moving cattle only between the 24th November and the date of this communication from Mr. Bruce, you could have been prevented only for a very few days? There must be a mistake on some side or other.

Mr. John
Partell.
23 Sept., 1862.

720. If, then, the prohibition commenced on the 24th November, and you were allowed to remove them, so that they could be delivered across the Murray early in December, that could not have been a long time? That could not have been a long time; perhaps a week makes a great difference in the sale of fat cattle.

721. In point of fact, you say you were waiting until Mr. Bruce should open a road? Yes.

722. And he did open a road early in December? Yes.

723. Is there any run between yours and Mr. M'Laurin's? Yes; Mr. Bowler's, Mr. Bardwell's, and part of Mrs. Greene's.

724. That is to say, you do not bound Mr. M'Laurin's? No.

725. You bound Mrs. Greene's? Yes.

726. Was pleuro-pneumonia on Mrs. Greene's run? I cannot say, only from what I hear; I was not by at the killing.

727. You cannot say, from your own knowledge, whether there was upon Mr. Bowler's run? Yes, I was up and down there killing cattle.

728. You think there was pleuro-pneumonia upon that run? Yes.

729. Was there any upon Mr. Bardwell's? The cattle looked very healthy on Mr. Bardwell's. They were very good—nice cattle. I did not see any disease there; but I believe I heard of one being killed.

730. *By Mr. Gordon*: Did you attend the meetings held by the squatters? Yes.

731. Did you approve of the proceedings? I did in one respect; in another I did not.

732. In what respect? I did not hold with them in having the cattle slaughtered. I was the only one opposed to that.

733. Did you approve of their being kept in quarantine? There was no meeting held for that; they were all opposed to that.

734. You state in your petition, that you were prevented for five months from the removal of cattle? I was not by, as I have stated, when the petition was drawn up by the solicitor.

735. You say you had 150 other cattle fattening on a paddock leased to you by Mrs. Greene? Yes.

736. How long did they remain in that paddock? I had the paddock for twelve months.

737. Did the same cattle remain there twelve months? If I liked they could; I was not bound to take them out.

738. Did you take any out? I took some that I sold—forty-five head.

739. How many were there left after you took out forty-five—did any die in that paddock? Not one.

740. Did the price of fat cattle fall within six weeks, or five weeks, from £5 to £2 10s.? The prices were falling every week. I might meet a person as I was going to market who had got a high price for his cattle, and I might get a low price.

741. The time I am alluding to is that between the latter end of November and the first week in December? I could not say; I was not there.

742. How do you make out the sum of £1,286 5s., stated in your petition? I did not make it out at all; I was not there; I did not mention any sum at all; I only gave a rough sketch of the petition to be drawn out; I left the amount to be awarded, to the House.

743. *By Mr. Raper*: You say you went but once on your land with the Commissioners to inspect the cattle? Only once with the three inspectors.

744. What took place then? As soon as they saw a beast that they thought diseased, the orders were to shoot it.

745. What symptoms did it display—did it appear to you to be diseased? It did not.

746. Was it lean or fat? Some that were killed were lean, some were fat.

747. How many did you kill during the time you were out? Nine were shot, I believe.

748. Do you know what pleuro-pneumonia is now when you see it? Yes.

749. Were there any symptoms of pleuro-pneumonia in any bullock of yours that was opened? Not that I saw.

750. You do not think that the nine that were killed while you were out with the inspectors were diseased? I do not think there was one.

751. *By Mr. Gordon*: Could you not see anything the matter with them when they were alive? Not a bit; if I had seen anything the matter with them I would send word to Mr. Bruce.

752. At the time these nine were killed, you did not observe anything the matter with them when they were alive? No.

753. *By Mr. Leary*: They might as well have killed 900 as nine? They might have killed the herd—I would not have prevented them.

754. Do you think, from the symptoms shown by those that were killed, they were equally entitled to have killed any others? Just the same.

755. Do you know Mr. Morrice's cattle? Yes, I do; they are adjoining mine.

756. What description of cattle are they? Very good cattle.

757. Is there any disease on his run? Not that ever I heard of.

758. You have never seen any? No.

759. *By Mr. Gordon*: Where did you see the disease at all? At Mr. M'Laurin's place; that was the first I saw of it.

760. There was no mistake in those cattle? No, it was enough to frighten a man to look at them.

761. I thought you said you were not afraid? I was not afraid, but that is no reason why plenty more would not be.

762. *By Mr. Leary*: You have stated that at the end of November you had an offer for 200 fat cattle from Mr. Dunphy? Yes.

763. Is he a butcher at Albury? No, at the Buckland.

764. Did you accept his offer? Yes.

765.

765. When were you to have delivered the cattle? About six days after, one part of them, not the whole.
766. Was there a special agreement? No.
767. Why then do you say six days? It was five or six days.
768. Tell us about this offer—how did he make this offer—did he ask you how many fat cattle you had, and did you say you had 200? I said I had 300.
769. Did he then offer you a certain price for them? He said he would take 200 of them at a certain price, and he said according to my description he would take them.
770. When did he say he would take them? As soon as I went home.
771. Did he not mention any particular time? No.
772. A few days after that the station was put in quarantine? I met Mr. Bruce the same day coming out, as I have already stated.
773. A few days after—some ten or eleven days—you got information from Mr. Bruce that you could send cattle across the border? No, I did not receive any notice from Mr. Bruce.
774. Are you not aware that in the early part of December you were permitted to send cattle across the border? No.
775. Are you not now aware that, if you had liked, you could have sent cattle across the border early in December? I am aware that they could be sent, but I do not think it was within such a short time.
776. Are you aware now, of your own knowledge, or from what you have heard from reliable authority, that in the early part of December you could have sent your cattle across the border? I am aware that they could be sent, but I am not certain of the date.
777. Are you aware whether it was in December at all? No. I knew there was a road open.
778. You knew generally things that transpired about these matters—you knew what took place about these meetings, and you frequently saw Mr. Bruce? Generally almost every other day.
779. Can you state that you never received information from Mr. Bruce or any other source, that you could send your cattle across the border in December? He was quite close to me, and he might have left a notice with my sons.
780. Were you not aware of it yourself? No.
781. You have spoken about some cattle that were killed by Mr. Bruce? Yes.
782. Were they opened—dissected? Part of them.
783. Did you see the lungs? Yes.
784. Were both lungs perfectly healthy of all the beasts? Yes, of every one of them.
785. You say you saw some of Mr. Bowler's cattle opened? Yes.
786. Were the lungs of those diseased? Yes, of some of them.
787. Very much? Yes.
788. Did you see any of Mr. M'Laurin's cattle dissected? Yes.
789. Did they all appear diseased? Yes.
790. The whole of them? I was not very much acquainted with it; this was the first time I saw the pleuro-pneumonia. I saw the cattle, but I was no judge at that time.
791. Did many of Mr. Bowler's cattle die? I do not know that any died, except what they brought in and killed; there might have been an odd one.
792. You are quite positive there was not a beast of yours that was killed and opened, that showed symptoms of disease, as far as your knowledge goes? Not of these nine.
793. What kind of cattle are Mr. Bowler's? First-rate.
794. What should you say is about their value? I have seen worse cattle bring £5 and £6 a head.
795. Has he a large number of fat cattle? Yes.
796. And spayed cows? Yes.
797. What kind are Mr. M'Laurin's? First-rate.
798. All good cattle? All good cattle—those I saw killed.
799. You say that this petition was got up by some solicitor, who made a bad case for you? Yes, I was not by at the time.
800. This petition does not state the facts, or the amount of your losses, accurately? No; I told him not to put down the amount of loss, but to leave that to the House; only to state the number of cattle I had sold at such a price.
801. Would you have thought it proper for Government to have allowed Mr. M'Laurin to have sent his cattle through your run, it being known that they were diseased? I would not have stopped Mr. M'Laurin.
802. You would not have thought it wise of the Government to have allowed Mr. M'Laurin to drive his cattle, they being known to be diseased, through your run? No.
803. You would then have thought it a proper thing to have put Mr. M'Laurin's and Mr. Bowler's stations under quarantine? Yes, or any run where the cattle were diseased.
804. I suppose you would not allow any cattle to pass through your run, on account of the disease? No.
805. But you would not think it any harm to drive your cattle through other people's runs? I think no man should be allowed to drive diseased cattle through another person's run. (*The witness handed in a notice from Mr. Bruce; vide Appendix A: also, a memorandum signed G. H. Greene; vide Appendix B.*)
806. *By Mr. Raper:* Were many of the cattle that were in the paddock fat? Yes.
807. *By Mr. Leary:* How many of the 300 that were fat could you muster? I could not say now, but in about six weeks if I get eighty of them I will be satisfied.
808. The remaining portion, if they were fat, you could get £6 a head for? Yes.
809. Then you will get £1 a head more for them than you would have done if you had sold

Mr. John
Partell.

23 Sept., 1862.

- Mr. John
Purtell,
23 Sept., 1862.
- them at the time you have referred to? If I could have taken them down to Melbourne at that time I could have got £8 a head for them.
810. *By the Chairman*: What was the date on which the lease of this paddock expired?
26th of May.
811. Were most of your cattle fat at the time of your run being placed in quarantine? A good many of them.
812. *By Mr. Gordon*: Were they not fat afterwards? No.
813. How was that? We had a very bad summer—the latter end of it.
814. It was not the quarantine that made them poor, but the dry weather? No, it was the quarantine making me keep on so many in the paddock.
815. *By the Chairman*: What is the season of the year at which cattle in that part of the country are generally fit for market—from November up to what time does the season last? Up to the latter end of February.

APPENDIX.

A.

*Ten Mile Creek,
24 November, 1861.*

Sir,

As pleuro-pneumonia has been found among your cattle, I have to inform you that none of them can be removed till permission be given to do so by the Special Commission lately appointed by Government on this disease.

Yours, &c.,
ALEX. BRUCE,
Inspector.

Mr. John Purtell,
Ten Mile Creek.

B.

Billabong.

I HEREBY certify that I have received £150 from Mr. Purtell, of Ten Mile Creek, as payment in full of one year's rent for a fattening paddock for his cattle.

G. H. GREENE.

Mr. George Henry Greene called in and examined:—

- Mr. G. H.
Greene,
23 Sept., 1862.
816. *By the Chairman*: You are the son of the lady who has petitioned the Assembly?
Yes.
817. Were these 500 head of cattle sold to any person? They were sold to Mr. Macartney.
818. Where does he reside? He resides within a few miles of Wangaratta, at Oxley Plains.
819. In Victoria? Yes.
820. Was it a verbal or a written agreement? It was a verbal agreement. The number at the time was not specified, excepting that he was to take all the fat cattle, and, from the appearance of the cattle, we gathered that there were that number, or more. The number was not specified, but he agreed to take all that were fat within three months.
821. You have sold some of those cattle since? Yes; there were none sold at the time this petition was drawn out, but there have been some sold since.
822. When were they sold? In March and April, principally. The price obtained for them is not exactly the same as that stated in the petition, the discrepancy arising from the fact that the petition was drawn out before the cattle were sold. That will make a slight difference in the actual loss.
823. What price did you get? £2 10s. all round.
824. For 500? We could only sell 400, as we had a very bad autumn, and the cattle had fallen off in condition considerably. We sold 425 cows and bullocks, about equal sexes.
825. That was the whole number that you sold off your run? Yes.
826. What is the general season of the year with you when your cattle are fat—when you make sales? Cattle are very good with us—in fact, they are best—about Christmas and the month following. It is always an object to sell early in spring, as prices are much higher. Cattle are now fattening fast.
827. Were your cattle affected with pleuro-pneumonia? I never saw any pleuro-pneumonia at this time—at least none of the cattle ever died of it on the run. I was out constantly on the run, and I never found that any died from the disease.
828. Would the prevalence of the disease in a herd have any effect upon the fat stock in a herd? In some cases, I have seen very fat cattle suffering greatly from the disease, while others that seemed to all outward appearance not to be affected at all, and thrive remarkably well, proved, on examination, to be diseased also.
829. It would not prevent cattle from becoming fat? I think it would not make much difference, from what I saw on the other side of the Murray. Those that were very bad fell off quickly, but it would not make much difference in the number of fat cattle in a large herd.
830. You speak, in your petition, of a mob of cattle that you were prevented from delivering, in consequence of one steer being affected with pleuro-pneumonia;—where was that steer found?

found? I was not present, but I heard the place minutely described. It was some place near Ten Mile Creek, on Mr. Bardwell's run—a narrow strip on the Ten Mile Creek; I believe it was there he was found.

Mr. G. H.
Greene.

831. Do you know upon what camp he was found? Yes, I believe so, from the description.

23 Sept., 1862.

832. What is the name of the camp? I don't know; it may have some name, but I do not know it.

833. This steer, when you were collecting your fat cattle, was driven in with them? No, I believe he was killed when he was found.

834. When you were collecting your fat cattle he was found among them, and was killed on the spot? I believe he was found by the inspector, Mr. Bruce, and some others, and I gathered from what I was told that he was taken away and killed.

835. Do you know where he was taken to? No, I do not; he may have been killed close to the spot.

836. How far was this from your run where this steer was found—your petition states about one mile from the boundary? I should think that was correct,—my brother was there.

837. Are you the Mr. Greene, or was it your brother, who was present at the meetings that were held, and proposed certain resolutions? I was at some, and my brother was at one or two of them, I am not sure which.

838. I think either one or other of you proposed or seconded some of the resolutions passed at the meeting? Yes, the day the steer was killed, a meeting was held at Ten Mile Creek; my brother was there.

839. It was not the wish of the cattle owners in that neighbourhood that the runs should be placed in quarantine? No, they would rather have had the cattle supposed to be infected killed, than that the healthy ones should be prevented being sold as fat cattle.

840. *By Mr. Leary:* Was there not a recommendation sent to Government, at one of those meetings, that where disease was found in a herd, the whole herd should be destroyed—were not you and one of your brothers at that meeting, and did you not join in the resolution? My brother was at the meeting you speak of, but that was not the sense of the resolution you refer to. As far as I recollect, it was this: that if diseased cattle were found in any particular mob, that mob was to be destroyed, without reference to brand. If it were a mixed lot, the whole should be killed, rather than the whole herd should be placed in quarantine.

841. Was this steer, to which you have referred, dissected after it was killed? It was opened.

842. Had it the disease of pleuro-pneumonia? I heard it was diseased; I was not present.

843. Then, according to the resolution, the whole of your herd should have been destroyed? No, the whole of that particular mob in which this steer was found.

844. *By the Chairman:* You have a dairy which you let to some person? Yes.

845. Did any cows die on that dairy of pleuro-pneumonia? I am not aware of it; there was one cow shot which was supposed to have the disease, but when they opened her they found her to be affected by a disease called the rot, a disease perfectly distinct from pleuro-pneumonia.

846. Was that lately? No, that was a year ago.

847. Did the inspector kill any cows at the dairy there? Not that I am aware of.

848. Were any working bullocks belonging to the dairyman killed in consequence of being affected by pleuro-pneumonia? I heard something about it, but I could not say for certain; I heard that some were either infected or killed, but I could not remember the date.

849. Have you made new terms with the dairyman? Yes, I have had to compromise the matter with him.

850. What was the manner in which you compromised? I received notice of action from his solicitor, Mr. Allman, threatening me with an action—£500 damages—for not carrying out my part of the agreement, when, in reality, I did nothing to prevent his going on with the dairy. Things were likely to be unpleasant, and I determined, to get rid of this annoyance and avoid litigation, to do away with the old agreement, and make a fresh one which would satisfy him. By this compromise I am at the loss of the rent that was due when the dairy was stopped, and the difference between the rent I am now paid and that which should have been paid according to the old agreement.

851. In fact, you gave up the rent? I gave up the original agreement, and made such alterations as the lessee of the dairy considered were sufficient to compensate him, on his giving up his claim for £500.

852. *By Mr. Hay:* I think you should state the nature of this fresh agreement, so as to show the actual loss you sustained? According to the first agreement, we were to supply him with 250 cows—there were to be that number on the run; for the first year he was to pay us £50, and for the two following years £100 a year; and he was to be paid for his improvements at the end of the third year, the value of them to be settled by arbitration. As the agreement stands now, I have to supply him with the same number of cattle, and he gives me £50 a year for two years, one year having gone without rent. There is another part of the agreement which should be taken into consideration, namely, that if the disease breaks out among the dairy cows, so as to make it necessary to discontinue the dairy, I have to pay for the utensils, and improvements, &c. I have all the risk, so that the losses are greater than the mere loss of rent.

853. The loss in rent would be £150? £150 in rent alone.

854. *By Mr. Leary:* If there is no disease there will be no further loss? If everything goes on smoothly, and the rent is paid.

855. The only risk is, that the disease may break out? If the disease kills some of the cattle, I shall have to relieve the dairyman from this agreement.

856.

- Mr. G. H. Greene.
23 Sept., 1862.
856. Have you inoculated any of your cattle? I have inoculated a mob of weaners—about 500 head.
857. Were any of those weaners diseased? I do not think they were—I did not observe it when I inoculated them. There were also a few grown cattle which were killed in the paddock.
858. Have you seen any inoculated that were diseased? Yes, some that I imagined were diseased.
859. What has been the result? Sometimes they have been better, sometimes worse. I do not know whether the warmth of the weather has had any effect; I have seen some that were apparently very bad that have afterwards thriven very well in the spring.
860. What is your opinion generally of inoculation—do you think it is a cure for the disease? From my own experience I could not say much. I do not think the disease is so virulent as it was.
861. What is your reason for thinking the disease is dying out? In my position I am working off the cattle. If I were breeding cattle I would certainly continue the inoculation.
862. I presume, then, that you think the risk is not very great of your cattle becoming diseased if you have so much faith in inoculation? I have not a great deal of faith in it, there are so many conflicting opinions. Some say that there is great damage done to the constitution of cattle by inoculation, that cows fall off in their milk, and that there is less chance of rearing the next calf.
863. *By Mr. Hay*: Do you observe that inoculation has any effect in injuring the constitution? No, I have not; on the contrary, I have seen cattle that have been inoculated fatten very quickly after.
864. You have seen that? Yes.
865. So far as your experience goes, if the inoculation is properly performed, it does not do much injury to the beast? No, so far as I can judge from my own experience, it does not.
866. In fact, as far as your experience goes, the beast generally appears to thrive very well? I think so, as a rule.
867. It is possible that it may remove some virus that is operating unfavourably upon the animal? It might act as a counter-irritant.
868. And so get rid of anything that might prevent its thriving if there were any disease? Perhaps so.
869. *By the Chairman*: Do you not think if it had been tried before, that all the slaughter of cattle which has taken place would have been unnecessary—I see that Mr. Bruce recommends to the Government, as early as September, the adoption of inoculation;—if it had been tried then, do you not think that a great deal of the loss which has been incurred might have been avoided? I think so; the slaughter might have been avoided even without inoculation, and things would have been better, as they have been slaughtered in such a wholesale way.†
870. You say the cattle were sold to Mr. Macartney? Yes.
871. Is your brother a partner of Mr. Macartney? Yes.
872. With regard to this steer that was found, you were not collecting fat cattle that day? Not that day.
873. A few days after? The day after.
874. You were not out when that steer was found? No.
875. The steer was found among your cattle? Yes. I do not know whether there were many cattle of ours there—there were some; it was a mixed mob that always ran together.
876. *By Mr. Hay*: Did you say that it was proposed to take any cattle from that particular mob as a portion of the cattle to be delivered to Mr. Macartney? I think the chances are, that if that mob had been noticed it would have been driven to the camp we were cutting out on. I think the fat cattle out of that mob would have gone.
877. Supposing that beast had been diseased,—according to the resolution passed at the meeting, not only would the cattle have been prevented from being taken away from the run, but the whole of that mob would have been destroyed? According to the resolution, the whole of that mob would have been destroyed.
878. Can you tell us exactly the time at which you were first prevented from moving these cattle? We were stopped on the 21st October. We had half the cattle collected, and the others in the camp. We were to start that evening or early the following morning.
879. That was two days after the finding of this beast? Yes, two days after.
880. How long did your herd remain in quarantine? As well as I can recollect, till the end of December.
881. That is, to the time when the proclamation was issued extending the radius of the quarantine to Albury? Yes.
882. Are you sure that you, or some one on the station, did not get notice from the inspector previous to that—in the early part of the month of December? I think not, but I am not certain; Mr. Bruce, I think, did write me word, but I forget the exact date; I think it was the end of December.
883. It might have been early in December? It might.
884. Are you aware that some cattle were taken from the adjoining runs early in December? I do not know of any; they might have been taken without my knowing.
885. You have seen a document referred to in the course of the evidence of Mr. Rial, stating that cattle had been slaughtered at Albury on the 11th? Yes.
886. Do you think this was such an agreement that, supposing your brother had been in

no

* NOTE (on revision) :—I am not aware of this question having been asked.

† NOTE (on revision) :—No good was likely to be the result of such a wholesale slaughter.

no way connected with Mr. Macartney, could, in the face of a falling market, have been enforced? I think it might have been enforced.

887. You are aware that the market for fat cattle fell very rapidly? Yes; we expected that.

888. I suppose 100 head of cattle out of the 500 that you estimate as being fat at that time, which still remained unsold, you expect to get a pretty fair price for them? Yes, the greater number of them ought to be fat.

889. If they are fat now, you will get about as much now for them as you originally sold them for? I could sell fat cattle now at £4 and £5 for cows and bullocks, if I were to deliver them.

890. At that time you do not think there was any pleuro-pneumonia among your cattle? I do not think there was.

891. Has there been pleuro-pneumonia on the run or in the herd since? There is a little now—at least I believe so. I have been away, and have been only once on the run during the last three months.

892. Have you been much upon the run since the period referred to—November last year? Yes, I was on it a great deal in autumn.

893. Do you think that any considerable number of cattle have died from pleuro-pneumonia altogether? I am certain at that time (last autumn) none were dying, for I called the attention of Mr. Burcher (who was taking the fat cattle) to them, who saw every beast on the run mustered.

894. When do you think the disease first began to affect the cattle on your run? I did not see anything of it till the cold weather at the beginning of last winter, about four months ago. I know we had then one or two deaths.

895. Was it that gave you the idea of inoculating? Yes, I should not have thought of inoculating until the disease did show itself.

896. Did you see anything of pleuro-pneumonia upon the adjoining runs—upon Mr. M'Laurin's? Yes; I was there pretty often.

897. Were Mr. M'Laurin's very much diseased? Some few were, but the greater portion of the herd seemed to be very healthy; but even of those that seemed healthy there were some very bad.

898. Did you see many of the mob that had been tailed through the winter? Yes, several times.

899. Were they, as a rule, very bad? A great many were quite different from the rest of the herd.

900. It was among these that the disease was most virulent? Yes.

901. You think the whole of that mob ought to have been killed, at any rate? Yes, they had been kept by themselves.

902. Did you see anything of Mr. Bowler's? Very little; scarcely anything.

903. *By Mr. Leary*: What kind of cattle were Mr. M'Laurin's? The herd generally?

904. Yes? What I saw were very good cattle.

905. And Mr. Bowler's? I believe good cattle, but I have seen very little of them.

906. Was the winter very wet? I was away from the station the greater part of the winter; it was very wet in Victoria.

907. I am speaking of the winter before last? That was decidedly a severe winter; we had a great deal of wet, cold weather.

John Morrice, Esq., M.P., further examined:—

908. *By the Chairman*: You wish to hand in a paper corroborative of some part of your previous evidence? Yes, and I wish to make some little correction in the evidence I previously gave. This is the paper I alluded to; it is a notice from Mr. Bruce, that the cattle were put under quarantine. (*The witness handed in the same. Vide Appendix.*) I did not expect to be examined when the Committee last met, my name not being on the paper, or I should have been better prepared.

909. Will you state what you wish to add, or explain, with reference to your previous evidence? Mr. Robertson asked me, if there were not more cattle sold at a lower price than Mr. Dunphy had agreed to take. On further consideration I have called to memory, that while Mr. Dunphy was taking delivery of the cattle, my son wrote, after Mr. Dunphy had taken all he wished to take, that he thought if I would offer some more at a reduced price he would take them. I wrote back to my son to say he might do as he liked, and I believe there was some slight reduction made, but I do not think a great many head were taken. There is another portion I wish to correct: I think what I stated here was, that the difference of price should be from £3 10s., but at the time the quarantine was taken off, cattle were at about £3, and I think it ought to be from £3 to £5 for cows, and from £3 to £6 for bullocks. That was the calculation I made upon it at the time. With regard to the bulls I allude to in my petition, I had been in the habit of selling them at from £10 to £25 before, and these were cattle that were particularly well bred, principally from Durham bred cattle, imported by Mr. Henry Osborne of Illawarra. The bulls were from pure bred cows by pure bred bulls. I would just like to read a passage or two from a letter I received from my son; he is on his way from Albury, and in about ten days I expect he will be in Berrima. This letter is dated 21st August, 1862. He says, "I know this much, that the inspectors know nothing of the disease; as a proof, they went to Burnt Hut Camp, killed two or three, pronounced them diseased, and said the whole
"camp

Mr. G. H.
Greene.

23 Sept., 1862.

J. Morrice,
Esq., M.L.A.

23 Sept., 1862.

J. Morrice, Esq., M.L.A. "camp of cattle had it very bad, and that they would not live three weeks longer. Now we have never had a beast die with the disease. Well, the cattle look as healthy now as ever they did."

23 Sept., 1862. 910. *By Mr. Hay*: Was your son there at the time when the inspectors went to Burnt Hut Camp? I do not know; but however he will be here himself in a short time, when the Committee can examine him if they please.

911. You do not think he was there at the time he speaks of? No. Here is another letter I received from him, dated 2nd September:—"I have taken particular notice of the cattle since I came up, and I must say that they appear as healthy as ever they did."

912. *By the Chairman*: That is alluding to their health this year? Yes. This is a letter I received this morning; it is dated the 18th:—"I have found out, that although Mr. Bruce put the whole run under interdict, that he or anyone else never inspected the cattle in the paddock; in fact, never went inside the paddock." That is the fattening paddock I alluded to, of some five-and-twenty or thirty square miles, that I had 600 head of cattle feeding in, and these are all put under quarantine. I wish also to state, that from the time I received that notice from Mr. Bruce, I never had any instructions that I could remove the beasts from there, till I saw in the *Government Gazette* that the quarantine was withdrawn.

913. *By Mr. Hay*: Did you not see the proclamation of the 24th December, which stated that a large tract of country, extending from your run to the Murray, was included in the general scope of the quarantine? Yes, that it was all under quarantine.

914. That gave you access to the Murray? No, I was forbidden to remove a beast off my run, and how could I take a beast across the river?

915. You could take them to the river? No, I was directed by that notice not to remove a beast from my run.

916. Did you not see the proclamation of the 24th December? I cannot say I know what that proclamation was.

917. That proclamation included a tract of country the boundary of which was the River Murray—it, in fact, extended the district under quarantine to the River Murray? Yes, but I was directed not to remove a beast off my station until further notice from Mr. Bruce.

918. And you religiously observed that? I did.

919. You have never got any express notice yet, I suppose? No further than that by the proclamation all the stations are relieved from quarantine.

920. Why did you take notice of one proclamation and not of the other? Because one did not relieve the station from quarantine; it only states that the boundary was extended to Victoria, and I had a notice that I was not to remove a beast.

921. You still looked upon yourself as under quarantine? I did. Until the quarantine was removed I never shifted a beast, and I wrote up to my men not to sell a single beast.

922. The price was very low? After that it was.

APPENDIX.

Ten Mile Creek,
24 November, 1861.

Sir,

As Superintendent for Mr. Morrice, I beg to inform you, that as pleuro-pneumonia has been found among his cattle, none of them can be removed till permission be given you to do so by the Special Commission, lately appointed by Government, on this disease.

Mr. Robert Hamilton,
Mullangandra.

Yours, &c.,
ALEX. BRUCE,
Inspector.

Mr. George Bardwell further examined:—

Mr. George Bardwell 923. *By Mr. Raper*: Did you get any notice from the Commissioners that your cattle were intended to be slaughtered? Yes.

23 Sept., 1862. 924. Was it a verbal notice? It was a written notice from Mr. Bruce, and was signed by the other two inspectors. (*The witness handed in the same. Vide Appendix A.*)

925. By that letter it is left optional with you whether you would kill or not? Yes.

926. What took place to prevent that being carried out? Mr. Bruce sent me word that my cattle were to be destroyed, and inquired whether I would destroy them, or whether the Government should; and as I thought it necessary that they should be destroyed, and that I could not prevent it, I sent him word in writing that I was willing, if they were to be destroyed, that Government should do it, and asked for a fortnight to gather them. I received another notice from Mr. Bruce, a few days afterwards, that he would be prepared to take them the following Monday. That was giving me only a week—a week less than I required. (*The witness handed in the note. Vide Appendix B.*) Mr. Bruce, after looking through these 40,000 head of cattle, said he was not going to take any further action in it.

927. Did you collect your cattle? No, and I did not intend to collect them then; I left it to Mr. Bruce.

928. *By Mr. Hay*: In fact, you did not agree to destroy them yourself? No; but when Mr. Bruce sent me notice, I thought if I resisted I should get no compensation whatever.

929. You did not agree to destroy them for Government? No.

930. You allowed them to destroy them as they best could? They did not do so. (*The witness handed in two memoranda. Vide Appendices C and D.*)

APPENDIX.

APPENDIX.

A.

Ten Mile Creek,
18 November, 1861.

Mr. George
Bardwell.

23 Sept., 1862.

Sir,

Having carefully inspected the different mobs of cattle on your run at Ten Mile Creek—five head of which we killed and found more or less diseased—we have hereby to inform you that we consider the said run infected; and accordingly decide that all cattle now depasturing thereon, or that may come on any part of such run within four months from this date, must be at once destroyed, in terms of instructions from Government to the Inspector, of 30th September last, with the exception of six head of milch cows, which you may in the meantime retain for your family's use; and further, we have to request that you will inform the Inspector, in writing, by the bearer, whether or not you agree to destroy such cattle at the prices allowed by Government, in numbers not less than 100 head per day.

Mr. George Bardwell,
Ten Mile Creek.

ALEX. BRUCE, Inspector.
GEORGE DAY, }
S. A. MEYER, } Commissioners.

B.

Ten Mile Creek,
19 November, 1861.

Sir,

I beg to acknowledge the receipt of your letter of yesterday's date, and to inform you, that as you decline to destroy your cattle yourself, a party will be ready to take delivery of them from you at 9 a.m. on Monday next for that purpose.

Your obedient servant,
ALEX. BRUCE,
Inspector.

Mr. Geo. Bardwell,
Ten Mile Creek.

C.

Yabba,
August, 1862.

I HEREBY certify that pleuro-pneumonia first made its appearance on Yabba, Mitta Mitta River, in the Colony of Victoria, in the month of October, 1861, and that the cattle of Messrs. M'Laurin, Brothers, were removed from that station in the month of March, 1861.

And I further declare, that none of my cattle inside my paddocks were ever infected with the disease, but that it was confined to those cattle running outside on the run, through which diseased teams of working bullocks were in the habit of passing, on their way up and down, to and from Snowy Creek Diggings.

A. PATON.

To Norman P. Lockhart, Esq.,
Inspector of Sheep and Cattle, Albury.

Signed in the presence of the undersigned, }
this 8th day of September, 1862. }
JOHN ROPER.

D.

Beechworth,
6 February, 1862.

I HEREBY certify that I have this day bought of Mr. George Bardwell fifty-two head of fat cattle for £115 10s.

WILLIAM F. SMITH.

WEDNESDAY, 24 SEPTEMBER, 1862.

Present:—

MR. GORDON,
MR. LEARY,

MR. HAY,
MR. MATE,

MR. RAPER.

FRANCIS TOWNSEND RUSDEN, ESQ., IN THE CHAIR.

James M'Laurin, Esq., called in and examined:—

931. *By the Chairman*: Did you present a petition to the Legislative Assembly? I did.
932. Is this your petition (*handing the Petition before the Committee to the witness*)? Yes, that is my petition, and that is my signature attached.

J. M'Laurin,
Esq.

24 Sept., 1862.

933. Will you state how you believe pleuro-pneumonia came upon your run? I started from Albury about the latter part of February, 1861, for the cattle in which the disease first made its appearance; they were running upon the Mitta Mitta, in Victoria; I assisted to collect them and to drive them to Yarra Yarra, a distance of about sixty miles or thereabout. These cattle were tailed while at Yarra Yarra, from the month of March, 1861, to the month of August. On or about the 8th August I was about starting the cattle to one of the lower stations.

934. From Yarra Yarra again? From Yarra Yarra again. These cattle were tailing at the head station at Yarra Yarra, for the purpose of being drafted before they were sent away to the lower station, at ———. Two young bullocks out of that number were left out on the run at night. The person who was tailing them told me, when he had put them in the paddock, there were two bullocks sick, and that he had left them out; I went out

next

J. M'Laurin, Esq. next morning to see these two bullocks, and found both of them dead ; I then examined them, and found they were diseased with a disease I had never seen before. I burned these cattle ; I —

24 Sept., 1862. 935. *By Mr. Hay* : Did you examine them internally ? I did. I then had business of importance that called me to Albury, and before leaving I gave instructions to the stock-keepers, if they saw any cattle sick, to put them in the three-rail weaning paddock, and let them remain there till I returned, and to take the tailing cattle back to the lock-up, where they had been tailed some time previous. On my return from Albury, in the course of a few days, I shot, I think, about eight head of these cattle that were left in the paddock ; I found them all diseased ; I opened, examined, and burned them. In the course of a day or two afterwards, my brother Robert and I went out to see these cattle where they were tailing ; we then found some more of these cattle sick, apparently suffering from this disease. I also killed some of these at that time, and examined and burned them. I continued to kill and examine any that I saw bad for some time afterwards, until I went, in company with Mr. Greene, to let Mr. Mate know of it, who was residing at his place at Tarcutta, a distance of about forty miles.

936. At what time was this ? I think the 15th or 16th August.

937. *By the Chairman* : You first saw the disease on the 9th August, and this was the 15th ? Yes, the 8th or 9th. Mr. Mate then telegraphed to Mr. Robertson. There was then a meeting held at Ten Mile Creek, at which Mr. Mate presided. Certain resolutions were come to, which are now in the possession of the Committee. It has been the opinion of a great many, that the yards in which the cattle were tailed were in a very bad state, and small. The cattle were tailed during the day, and paddocked at night in a large paddock of about thirty acres, within a mile or a mile and a half of the home station, up to the month of June.

938. What was the number of cattle herding ? From 600 to 700.

939. Then they were not put into a yard, but into a herding paddock ? They were first put into this paddock, and from March up to June—I cannot say exactly the date when they were taken out of the yard, but in June some time. I do not know when they were taken out of the herding paddock.

940. I understood you that they were not yarded at all at night when they were first brought on to the station ? A week or ten days after they came on to the station they were put there, when they were taken to a yard at a place called Wantagong, about five miles away.

941. *By Mr. Hay* : Which is the Lock-up ? At the head of Ten Mile Creek.

942. Is that the paddock where you spoke of their being put into at night at the Lock-up ? Yes, that is the yard so much has been said about.

943. That is the yard about a mile from the head station ? No, it is about seven miles away ; this Wantagong is another yard.

944. We have not come to the Lock-up yard yet ? No. Wantagong yard is 165 yards by 105, divided into three, situated on a dry stony ridge—a new yard.

945. They were first herded in a paddock of thirty acres, and secondly in this paddock, after June ? Yes. They remained there for some time. I think about the latter end of July, on account of the grass getting a little bare round them, they were shifted to this yard called the Lock-up, the third place. This Lock-up yard is a tailing paddock, a three-railed paddock, forty panel square.

946. *By Mr. Gordon* : At night they were placed there ? Yes. From that they were tailing for about a week or ten days at the head station. They tailed out during the day, and were put into a large weaning paddock at night, and there the disease first made its appearance. I had shifted them in from the Lock-up, with the view of sending them down the river.

947. In the weaning paddock ? Yes.

948. *By the Chairman* : Was that the first herding paddock ? No, another weaning paddock of about 100 acres ; it may be more or less, but I think it is about 100 acres.

949. Will you state what happened after these resolutions were passed ? We continued in the same way, killing any cattle we might see diseased ; but from the first meeting I think Mr. Bruce generally attended—we sent him word, and he generally attended with two or three neighbouring squatters.

950. When you killed any ? When we killed any, unless they were killed on the run. If we saw any bad on the run we killed them without any neighbours being present ; but when any were killed at the Lock-up, where these cattle were tailing, we had two neighbours present.

951. I understood you that none were killed at the Lock-up ? I shifted the cattle back when the disease did break out.

952. *By Mr. Leary* : How was it that Mr. Bruce came to inspect your cattle ? I think it was on account of the resolution passed at that meeting.

953. Before he was appointed by the Government ? When he was recommended by the meeting.

954. Was Mr. Bruce after this appointed inspector by the Government ? Yes.

955. What did Mr. Bruce do in respect to your cattle ? After Mr. Bruce was appointed, either my brother or myself, sometimes one and sometimes the other, accompanied him all over the run, to see if there were any diseased cattle among the herd ; and any diseased cattle that were found among the herd were destroyed.

956. Did you find disease all through your cattle ? There were diseased animals found in almost every part of the run, from the fact that some of the cattle that had been tailing had been dropped and had mixed with the rest. If cattle got poor they were let go on the run.

957. How many cattle were there altogether on your run when the disease broke out? Very near 7,000. J. M'Laurin, Esq.
958. How many were discovered by Mr. Bruce, yourself, and your neighbour squatters, to be diseased? A few in each mob, perhaps one or two. I have gone out and found not more than one, after riding among a great number of cattle. 24 Sept., 1862.
959. *By the Chairman:* It was casually spread through the whole of them? Yes. I may also state that these cattle that were tailing at the Lock-up were put into a large paddock, so that it was impossible for them to get out. We put them in to see if any of them would get better, as we did not know exactly what steps would be taken. We had about 200 horses tailed out, and the cattle then put into this paddock to give them the run of it. It was a large paddock of four or five thousand acres. These cattle remained in this paddock till they were all destroyed.
960. Will you now state when the order came for the destruction of the cattle, and what was done about it—what was done by the Government in regard to the destruction of your herd? This is a copy of the instructions I received from Mr. Bruce. (*The witness handed in the same. Vide Appendix A.*)
961. This letter says, "I hope you will not remain longer in Albury than you find it actually necessary, as I should like to begin killing, and I cannot do so until you are on the ground";—there was something before this; what arrangement was made between you and the Government with regard to the killing? There was nothing before that.
962. Who has inserted the date in pencil? I have—it was not dated; I believe it came about that time. I then received this letter from Mr. Bruce. (*The witness handed in the same. Vide Appendix B.*)
963. What number had been killed up to this time, the 8th November;—this is the very thing I was asking for; here is a direct intimation to you, that the whole herd of cattle were to be destroyed—I suppose merely the diseased had been destroyed before? Yes.
964. How many diseased had been killed up to the 8th November? I think 182 over twelve months old, and three head of cattle under twelve months.
965. That would make the total 185? Yes.
966. Then this intimation to you is, that from this date the whole herd is to be destroyed? Yes. We killed a considerable number—we killed any cattle we saw diseased. My brother and myself were determined, if we could have prevented the spread of the disease by killing the cattle, we would do so.
967. But you found it was growing upon you—that you could not keep it down? Yes. Among these tailing cattle, in some instances, the cattle were taken ill and died, and others were getting better.
968. *By Mr. Raper:* Did you observe many instances of their getting better? Yes, a good many while the cattle were in the paddock.
969. *By Mr. Robertson:* You have put in a paper showing the terms on which the Government intended to carry on the destruction of your cattle;—did you object to that destruction? No.
970. Did you remonstrate against the arrangements being made for the destruction of your property? No.
971. Are you of opinion that the destruction of your herd had any beneficial effect in preventing the spread of pleuro-pneumonia? That is a question I cannot answer very well, but I have very little doubt that it must have prevented the spread of pleuro-pneumonia in that part of the country. I am satisfied of this, that the cattle we killed were killed with the view of stopping the disease.
972. That was the reason you did not object—you looked upon it as a necessity to kill them? Of course I would have been willing to have killed a considerable number to have prevented the risk of disease of that kind spreading, but I should not have been willing to kill my whole herd.
973. *By Mr. Raper:* Would you have killed any you saw recovering? No.
974. *By Mr. Leary:* Would you have killed any but diseased cattle if Government had not made the order they did for the destruction of the whole herd? No.
975. *By Mr. Robertson:* Had many cattle died during that winter in that neighbourhood? No, there was only one bullock that I was informed had died about a fortnight before the cattle came into the head station. Of course, it is not an unusual thing for cattle to die, and I did not therefore examine that bullock—indeed I did not see him.
976. You say you do not think very many would have died, but would not those that remained alive—a great many of them—have been deteriorated in value by having suffered from the disease? If a beast is fat it does not matter whether it is diseased or not; the butchers will give the same for it. I have sold some cattle since that were inoculated for the disease.
977. Would there not have been a much less number of fat cattle on that run than under ordinary circumstances, in consequence of the appearance of the disease? I think the disease has a tendency to fatten them after they get over it.
978. At the time your cattle were killed by authority of the Government, what price do you think was their market value, if they were sold there and then by auction, per head? At auction it is hard to say; I never sold any at auction.
979. What was the market price of the cattle on the ground? It depends upon whether people are obliged to sell their cattle or not. They are generally low at that season of the year.
980. Supposing the run, with the cattle, had been sold, what depreciation would there have been in the value of the cattle? Supposing I had forced the cattle into the market?
981. Supposing you had sold them at Mori's, with their reputation, what would have been the

- J. M'Laurin, Esq.
24 Sept., 1862.
- the depreciation in the value of them, as compared with what the value would have been four months before the discovery of the disease? I cannot say.
982. Would it have been £2 a head? I should not say that. I know, in some cases, cattle have been diseased as badly as ours; they were not killed, and they have since been sold at fair prices.
983. I am asking what the cattle would have sold for at the time? It is impossible to say. I could not say unless I had offered them for sale at the time.
984. Would you not have sold them for fifty per cent. less than you would have sold them three months before the disease broke out? I think I have stated in my petition as nearly what I considered the value of the cattle as possible.
985. What was their value before the disease broke out? How can I tell when I did not offer them? I know I sold fat cattle before the disease broke out for £4 and £5, and I have sold fat cattle since for £3 and £3 10s.*
986. They were not all fat cattle that were killed;—what was the herd worth before the discovery of the disease? It is hard for me to say. I know what squatters considered cattle worth when they recommended that 50s. a head should be paid for those that were killed.
987. Perhaps they wanted their own killed? I do not know. They might have been squatters who had no cattle; they might have had sheep.
988. If you want the Committee to come to some estimation of your loss from the killing of these cattle, you must give us the value of the cattle at the time they were killed? I value my cattle in my petition at what I consider them to be worth. In the first place there were six bulls killed; I value those bulls at fifty guineas each.
989. With the disease? I do not think they were diseased.
990. Though they were among a diseased herd, they were worth fifty guineas? That is not the way to get at the value of cattle. If you go and force it into the market, I do not suppose you will get the value of anything. I consider that if I had the bulls now, I would not take under fifty guineas for each of them.
991. How much do you think you would have had to pay for insuring their lives during the period up till now? I have four now; I have not insured their lives, and I would not take fifty guineas each for them. There is one bull I paid eighty-five guineas for in Melbourne, besides the cost of taking him up.
992. *By Mr. Mate:* Although disease was on your run, you still valued these bulls at fifty guineas? I did.
993. *By Mr. Robertson:* Although the squatters, at this meeting at which you were present, recommended, and you did not object, the payment of 50s. a head, you now claim £20,000 from Government for the destruction of your cattle;—you were present? I was there.
994. You were one of these squatters? Yes.
995. You must have been in rather a different state of mind then, as to the value of these cattle, than your present one, for then you seem to have thought about 50s. a head would have been a sufficient compensation, and now you have some visions of £50? It was proposed that 50s. a head should be given for all cattle over twelve months.
996. How many cattle were there killed? 6,305.
997. At 50s. a head, would that amount to the £20,000 you ask for in your petition? Then there are the young cattle, valued at 30s. a head.
998. You were paid for all? Yes, at 30s. a head.
999. However, you were present at that meeting, and approved of that rate? I thought, like a great many others, that something ought to be done, and certainly, if I could have stopped the disease by killing 400 or 500 head of cattle, I would have done so, even though I did not receive a shilling for them.
1000. Then the steps taken by the Government, and which were fully explained at the meeting, met with your entire concurrence? I thought, of course, if the destruction of the cattle were ordered, we ought to kill them; at the same time I thought the sum named was very low, and that we should suffer a very great loss.
1001. Did you not consider, in the then state of affairs, that the most beneficial course for yourself even was to take 30s. a head and be done with the cattle? It was not left to me to consider.
1002. There was no objection made? It was generally believed that if the cattle were killed, the price recommended by parties in that neighbourhood would be given. That was thought generally to be the value of herds in that part of the country.
1003. They being the owners of the cattle? I do not know that that had anything to do with it. I was at that meeting; but, as I said before, I would rather have killed 400 or 500 head than have allowed the disease to spread, as it was not then a general thing, but confined to one or two herds; but a man cannot be expected entirely to sacrifice himself for the benefit of the whole country.
1004. Is not your father the proprietor of these cattle? Yes; the firm goes by the name of James M'Laurin and Sons. I am a member of the firm; my father is very old, and takes no active part in the business.
1005. Was it not, among those squatters who took an interest in these matters generally, looked upon, at the time the Government destroyed these cattle, that it was beneficial to you and Mr. Bowler to consume and destroy them? I do not think it could have been beneficial to us, but it might be to them. When they found their own herds were saved, they soon petitioned against further steps being taken.
1006. I have had some questions forwarded to me by some one—I do not think they are of much importance, but as it is desirable this should be a full inquiry, I will ask you two or three

* NOTE (on revision):—£5 and £3 5s.

- three of them;—how many cattle of those destroyed formed a portion of those on the old J. McLaurin, run of the Rev. Mr. Therry? About 1,450.
1007. How many years have these cattle been without being mustered? I mean the IJT brand—they were branded. J. McLaurin,
Esq.
24 Sept., 1862.
1008. How many years were they without being mustered? I cannot say.
1009. Were they not so wild that it was almost impossible to put them in the yard? No, they were not.
1010. Were they not very wild indeed? A portion of the cattle on one part of the run were very wild.
1011. What proportion? I cannot say the number there may be there, for you can only get a look at them now and then, if you gallop very fast. These were all quiet cattle, with the exception of about 90, or say 100 head, that were not considered so good as the others.
1012. Had not pretty well all the 1,450, from long neglect, become inferior? No, they were very fine cattle.
1013. *By Mr. Leary:* Are there very many unbranded cattle on the Yarra Yarra—cattle supposed to have belonged to the Rev. Mr. Therry? I do not think there were many; it is impossible to tell.
1014. *By Mr. Hay:* How many of these cattle that were paid for as being over two years old were unbranded cattle? There were very few over two years old that we got unbranded.
1015. Could you say about how many? No, I could not. I do not think there were fifty.
1016. Might there have been fifty? Of all that were got over that age there might be fifty.
1017. These were got in from wild mobs? They were branded IJT; our brand is —
1018. *By Mr. Gordon:* I understood you they were unbranded? They might have been got in; for when we bought the station Mr. Day had not branded them for six or eight months, and we then branded up.
1019. *By Mr. Hay:* You put your own brand upon them? Yes.
1020. How many of these, being over two years, that were mustered and branded by you at the time of taking delivery of the station, were among those that you destroyed? I do not think there were fifty.
1021. How many were slaughtered over two years old, being at that time without any brand? Very, very few.
1022. There were some? There may have been a few at one portion of the run where there were some — cattle joined with them.
1023. How many do you suppose? Perhaps not half a dozen.
1024. *By Mr. Robertson:* How many stags were there? When we got the station at first we shot a number of these cattle.
1025. Then you had previously begun the work of destroying them? Yes, of course. What was the use of a lot of wild cattle? How could you breed good cattle if you had a lot of such wretches coming down at night among the cows? We shot a good many when we first took the station.
1026. How many stags were there on your run among those that were paid for? I suppose in every herd there may be a few stags, but I do not suppose there were any more among my herd than among others in the neighbourhood.
1027. They had not been so neglected in branding? I do not call a twelvemonths old bull a stag.
1028. I should call one of eighteen months? I should not, until it was two years and a half, or three years. If you go to New England to buy cattle, one-half or more are such cattle.
1029. Are not stags of that kind given in, in New England—is not that the practice? I never went to New England to buy cattle, but I have known £3 10s. and £4 to be given for stags.
1030. For working bullocks? For fattening.
1031. Would you like to buy them? Not at the present time.
1032. Was not disease known to exist in the neighbourhood of Yabba station, in Victoria, before you brought your cattle over? No; if I had known that the disease was in any part of that country, or likely to be in it, or if I had thought there would have been the least chance of my cattle having it, I would not have taken them over, for I was offered £3 10s. for the principal part of the cattle upon the run.
1033. Did not some of the neighbouring proprietors of stock near Yarra Yarra entreat of you not to bring these cattle home? Most decidedly not, for the disease was unknown in that part of the country when I was there. I collected the cattle myself, and assisted to bring them home myself, and I knew nothing of the existence of the disease.
1034. *By the Chairman:* That was at Mitta Mitta? Yes. My cattle crossed about two months before I heard of the disease.
1035. *By Mr. Robertson:* You are sure that none of your neighbours in New South Wales pointed out to you the undesirability of bringing these cattle over, in consequence of the disease? I am perfectly certain that I never heard it mooted.
1036. Have you other stations? Yes.
1037. Very extensive, are they not? Not very.
1038. In New South Wales? Yes.
1039. My reason for asking you is this:—Would not the steps taken by the Government here for restraining the spread of the disease be beneficial to you, as regards your other establishments? If the disease had been confined wholly and solely to our establishment it might have been of some benefit to us, but the Commissioners found it spread over the whole country—

- J. M'Laurin, Esq.
24 Sept., 1862.
- country—a hundred miles from our station it was fully as bad. Now all the disease seems to be traced from Yarra Yarra —
1040. You say it seems to be traced from Yarra Yarra? According to a great many people— simply because we took the most active steps to suppress the disease, to let the Government and the squatters know of its existence, and to prevent the spread of it by killing our cattle.
1041. How far are your other stations away from Yarra Yarra? Nearly 200 miles.
1042. Has the disease been seen there? I am not aware that it has; but I know that people about Koolong and the Lower Billabong, after their cattle have been reported diseased, have been allowed to drive them along the Deniliquin Road, where the cattle are all sound, or are supposed to be. I may also remark, that a very smart look-out was kept by squatters on the border after the Prohibition Act was passed, but I am sorry to say that no steps have been taken in the neighbourhood of Albury to prevent cattle or bullock teams from travelling.
1043. I see you state that about 6,300 head of your cattle have been destroyed? Yes.
1044. You got 30s. a head for them, did you not? Yes, for all over twelve months.
1045. You joined in recommending that 50s. a head should be paid to the owners of stock for the cattle destroyed? Yes; because that was the general opinion of the meeting, and I thought if our property were destroyed to save the country, we should get something near its value.
1046. *By Mr. Hay:* £20,000 was the total value of the cattle slaughtered? Yes.
1047. From that has to be deducted the amount received? Yes, £8,759.
1048. The difference between the compensation you received, of 30s. a head, and 50s., would come to about £6,300? Yes. I think anyone who knew anything about cattle would, if he had seen, have said they were very good.
1049. What were you paid for those under twelve months? 10s.
1050. These amounted, as stated here, to 946? Yes.
1051. What was recommended at that meeting for those under twelve months? 30s. I do not know whether the meeting proposed that those under two years or those under one year should be paid for at the rate of 30s.
1052. I see 946 under two years old and over one year old—what did you receive for them? 30s.
1053. You were paid 30s. for all over one year old? Yes.
1054. And 10s. for all under one? Yes.
1055. So that you received for the 6,345 at the rate of 30s., excepting 946, for which you received 10s.? Yes.
1056. Did any of your cattle remain unslaughtered? About 500.*
1057. What were they? A mixed lot, the same as the general herd were.
1058. Have you had them through your hands since—have you done anything to them? Yes, I have inoculated them.
1059. Were they in the paddock? They were for some time.
1060. Have they all been inoculated? They have all been inoculated, with the exception, it may be, of one or two that may have been overlooked.
1061. Are there any mobs of the wild cattle you have alluded to of the old IJT herd still out? Yes.
1062. You are not able to collect the whole of those wild mobs? It would take a very long time to do it.
1063. You were not able to do it at the time they slaughtered the herds? No, we killed some.
1064. But you did not succeed in killing the whole? No, when Mr. Bruce instructed us not to kill any more cattle, I think we were killing them at the time.
1065. You were killing them? Yes, and a good number of quiet cattle came in with them.
1066. There are still a good many that have not been got in? Yes.
1067. These are above the 300 you have mentioned? Yes, there are about 300 head of quiet cattle, — bullocks, and twelve or fourteen broken-in milking cows; the others are a mixed lot.
1068. These outlying cattle that are very wild—do they ever get fat? Yes, there are some of the IJT brand as fat as any in the Colony, but it is almost impossible to get them in. If we want a chase to get some beef, we can go among a mob of these, twelve or fourteen miles from the head station, and kill a bullock.
1069. How do you think the disease originated in the Yarra Yarra herd? I was at a loss for a long time to know how it originated, but having heard that a strange bullock had been killed that was in a very bad state, and on being opened was found to have lost one lung, I made inquiry of the man that was tailing whether he had seen that bullock or not, and he said that it, with others, had frequently been among the cattle—that it was running close to the Wantagong yard.
1070. Were you aware, personally of your own knowledge, that working bullocks crossed at Albury from Victoria after the proclamation prohibiting them? I did not see any cattle cross it, but I have been told by men working for me; in fact, I was told it at Albury, that drays had come across, but no bullocks.
1071. How did the drays cross? By punt. I went down to the river and saw the drays, but there were no bullocks.
1072. These drays disappeared from the road? Yes, and I believe the greater number of them went on to Goulburn.
1073. Then you believe that the prohibition was evaded at the township of Albury? Yes,
I

I have heard several men, upon whom I could rely, state that both teams and cattle have crossed there. J. M. Laurin,
Esq.

1074. You know that disease has appeared on the Yabba Run since you removed these cattle?

Yes. (*The witness handed in a letter. Vide Appendix C.*)

24 Sept., 1862.

1075. Is that from the persons who bought the station from you? Yes.

1076. What did they buy with the station? They bought the station without stock; they had about 300 or 400 head of cattle on the station of their own.

1077. Had these cattle been on the station before when it was your property? Yes.

1078. They had these cattle running with yours before you sold the station? Yes, they were bred on the station.

1079. The same as the cattle you removed? Yes.

1080. Both Messrs. Paton's and your cattle ran together—you took yours away, and sold the station to the Messrs. Paton? Yes; there were a few, about forty head of my cattle, which I could not gather, and I sold them separately afterwards—when I found that I could not take them to Yarra Yarra, in consequence of this Act—at £2 10s. each, to the parties who bought the Yabba station.

1081. *By Mr. Gordon:* Is it not probable that some of the cattle you took to Yarra Yarra found their way back again to Yabba Station? I do not think any of them found their way back; I believe one or two were seen on a person's run at ——— but I do not think they ever got back to Yabba Station, for the cattle were tailed. There were none of that last mob of cattle, with the exception of any that might have got lame or poor.

1082. *By Mr. Hay:* Do you know if there has been any disease, or much disease, broken out subsequently between Yabba Station and the Murray, and along the route you brought your cattle? Before.

1083. Was there any before? None before. I am told there has disease on some of those runs broken out lately; but that may be accounted for by the teams that are continually passing from Melbourne and the Mitta Mitta.

1084. From what you heard and saw of the disease, on its first appearance, you were a good deal alarmed? I was.

1085. You felt that it was likely to be a very disastrous thing if it got fairly ahead, not only to yourself, but to the Colony generally? Yes, I thought it an awful thing for the Colony generally; and with a view of keeping it out of my own herds and of the Colony, I killed the cattle in which I observed any appearance of the disease.

1086. The first two cattle you saw actually died of the disease? Yes; I wondered to see two young fine bullocks die so suddenly, and I had heard of the disease spreading through Victoria.

1087. Did many more of the cattle die without being slaughtered? No, not many; I do not think altogether there were above thirty or forty head died.

1088. Of these 185 you have spoken of as being the proximate number killed previous to the commencement of the wholesale destruction, were most of them very bad? Generally speaking, they were really bad.

1089. You think they would have died, most of them? I cannot say that, for I have seen cattle, so bad that you would think recovery hopeless, get over the disease. There was one cow that I was going to shoot, to show Mr. Bowler and Mr. Henty the disease in a bad form; as I was about to shoot it moved away; another came up that was very bad, and I shot her, and the other escaped. The cow that escaped was one I knew well, and at the time of the wholesale destruction she was quite fat, and upon opening her I found one lung entirely gone, while the other was quite right.

1090. The cow which you knew perfectly well, although so bad to all appearance, recovered from the disease? Yes.

1091. Judging with the light you then had, would you have said that all those 185 would have died? Of course I thought they would have died.

1092. That is to say, that the disease had so virulent an appearance that at that time you would not have expected recovery to take place? Yes; besides I had heard in Victoria that if the really bad were killed, the infection would not spread so rapidly among the others, and for that reason I would kill the cattle to try and stay the disease.

1093. At that time you supposed the disease was much more fatal in its character than you have since ascertained it to be? I began to see, from the fact of some of these cattle getting better when they were put in the paddock, that it was likely they would recover and get fat.

1094. You were not quite so frightened of the disease as you had been? No, for I saw inoculation had been tried at the Cape of Good Hope, and I certainly would have tried that.

1095. You also saw that recoveries were more frequent than you at first thought probable, apart from inoculation? Yes.

1096. Still, even now, would you, in bad cases, if you had the disease appear in a herd of cattle belonging to you, notwithstanding the probability of the individual cattle recovering, rather kill those that were first attacked than run the risk of the disease spreading, by means of those cattle, through your herd? If I saw one or two, or perhaps a dozen, in that way, and thought I could stop the disease, I would kill them; but I have seen so much of the disease now, that I do not think I should be disposed to kill in every case. I have seen cattle, so bad that they have not been able to walk into the yard, afterwards get fat. Some of the worst cases get better, and where the cattle do not appear so bad they sometimes die.

1097. Do you believe the disease to be communicable to other cattle by diseased cattle? I think it would be very hard for a person to tell—I have seen it in so many forms. I have

J. M'Laurin, Esq. have seen cattle along with diseased cattle that have had nothing the matter with them, while others that have been away from diseased cattle I have found very bad.

24 Sept., 1862. 1098. I suppose in any case of contagious disease among stock, except in case of scab, which is communicated by means of animalculæ, disease does not necessarily communicate itself in all instances? No; perhaps the system may not be prepared to receive it.

1099. The animal may not be predisposed to receive the virus, whatever it is? Just so. I was once under the belief that the cattle caught it from feeding on a particular kind of grass.

1100. Do you know the disease of catarrh in sheep? No, I never had anything to do with sheep.

1101. You would now rather kill animals that appeared very bad, than run the risk of the disease being communicated to the whole herd? I would rather try inoculation. I have seen some cattle so bad that they could hardly walk before inoculation, that afterwards have been cured and become fat.

1102. Then, in your opinion, inoculation is not only a preventive, but is an actual curative? In several cases I have seen it act in that way; I have either inoculated the beast myself, or seen it inoculated. It has been killed perhaps a couple of months afterwards, when I have examined it and found it cured.

1103. Then, from what you know now, instead of killing any animals infected by pleuro-pneumonia, you would inoculate them? I would inoculate them, certainly.

1104. Then, would you inoculate all cattle that were likely to come in contact with diseased cattle? Yes; if I had a herd of cattle, and saw disease break out only in two or three, I would kill them to get the lung, and then I would inoculate as many as possible through the herd.

1105. Those you have seen recover after inoculation might have recovered without inoculation? Yes. There was a cow so bad when the cattle were being killed, that she was not able to walk into the yard; she had a calf with her also diseased. The calf was killed; but we had no means of killing the cow at the time, and she was left in the paddock. A short time afterwards she was seen, and in good condition; in fact, in the course of the summer she got pretty fat. When I was inoculating the others I inoculated her, and have since sold her, fat. I knew the cow well, so that there could be no mistake.

1106. Does the disease attack the calves? Yes.

1107. Does it attack them very young? Yes; in fact I have seen some of them bad before they were calved.

1108. Is the disease, as it has appeared lately, as virulent as it was when it first broke out at Yarra Yarra? I have not seen much of it, but I think people, when it appears among their herds, do not care to say much about it.

1109. You think the settlers keep it dark? Yes, I think perhaps that is the best policy, judging from the experience I have gained.

1110. You think, as far as your own interest was concerned, you rather made a mistake when you published the fact that your cattle were diseased? I think it appears so. If I had done the best I could with my stock, and had kept the disease secret, my name would not have been so associated with it, and I should not have suffered as I have done.

1111. *By the Chairman:* Do you think these proceedings of the Government have been perfectly useless? No, I think the steps that were taken at first were perfectly justifiable, for it was believed by every person in our part of the country that it was a very fatal disease.

1112. *By Mr. Hay:* When you said, in answer to my question, that you thought you had made a mistake, you meant as far as regarded your self interest? Yes; perhaps not as far as the public are concerned.

1113. You must consider that you did right, as far as the public are concerned, whatever may have been the upshot, in informing the Government of the appearance of the disease? I thought it my duty to do so. I did not know what steps would be taken.

1114. You thought it right that the public should be aware that the disease was there, whatever steps might be taken? I was not aware that the disease had ever been discovered in New South Wales before, and I thought if that were the first place that it had appeared in, steps should be taken as soon as possible to check it.

1115. You were willing to take any steps in order to prevent the spread of the disease? Yes, it appears so, when my brother and myself killed so many head of cattle in order to check it; but certainly we should not have thought of killing 6,000 head of cattle for the benefit of the country; we did not think the country could expect that, without giving us a fair valuation for them. I would have been perfectly willing to have lost or killed a great number if we could have stopped it.

1116. As things were then, you may be said to have tacitly agreed to the proposal to slaughter cattle, which was adopted at the meeting of settlers, provided a compensation of £2 10s. were paid for all over twelve months old, and £1 10s. for all under twelve months? Yes; that was considered about the fair value, considering the loss and the expense of breaking in fresh cattle; as anyone acquainted with cattle well knows that a return cannot be expected from a run newly stocked, in less than eighteen months.

1117. That was about £1 a head more than you actually got? Yes.

1118. You hardly expected at that time that persons having cattle killed should be reimbursed to the full value of the cattle, calculated at the rate which they might have been worth if no disease had appeared at all? At the time these meetings were held, the deterioration in the value of the cattle was taken into consideration.

1119. The value of cattle must have been deteriorated by the appearance of the disease in the district? Yes, for a short time.

1120. You could not then say how long that deterioration might continue? Not at J. McLaurin, that time. Esq.
1121. Even now do you not think, for store purposes, the value of cattle bred in that district is affected by so much disease having appeared there? Yes; if we wanted to sell store cattle we should not get so much for them. 24 Sept., 1862.
1122. Do the cattle in that part of the country run a good deal together—are the boundaries strictly maintained—do cattle trespass from one run to another? I believe they mix a great deal; but our cattle, I think, considering they were so large a lot, were very well on our own run, for generally we had two or three men after them.
1123. On some sides the boundaries are not very definite? We have marked trees on one side of our run.
1124. Cattle, particularly those a little wild, do not respect those marked trees? Certainly not.
1125. They run together, and camp together, to a certain extent? Yes.
1126. The cattle which have been a considerable time on the Yarra Yarra Run—some of these mobs of which you have spoken—camp about these ridges, and occasionally go on the opposite slopes, and others mix with them? I think those bred on Yarra Yarra are generally well on their own run. The Dora Dora and Mr. Robertson's mixed on those hills; but generally the herd of cattle were well on their own run.
1127. Supposing your run had been put in quarantine, and no other, would that have been effectual, do you think, to have prevented the spread of the contagion, supposing the disease to be contagious? I do not think it possible. What do the cattle care about quarantine? They may go on your run at night.
1128. So that it would not have been effectual to have put the runs, where cattle were badly diseased, simply in quarantine? We did what we could to put our cattle in quarantine, for we put our cattle in paddock up to the time that action was taken by the Government.
1129. So that if cattle were to be prevented from carrying disease out of that portion of the country, would it not have been necessary to include within quarantine something more than your run, even though the disease had not manifested itself in any other cattle than yours? I think it would. I think it would have been impossible to have prevented its spread unless other stations had been put in quarantine.
1130. It could only have been done by taking a wide circle, so as to include the whole tract of country within which the disease was likely to be? Yes. There is another thing I would refer to: It appears from the report that the disease is found nearly everywhere from Wagga Wagga, along Koolong, and Billabong; now I question whether either our cattle or Mr. Bowler's were found within fifty miles of those places.
1131. Are you not aware that some of Mr. Bowler's cattle had been purchased at no distant time back, and brought from the country beyond the Murrumbidgee? Yes.
1132. Is it not likely that some of these might have gone back? I think, generally speaking, cattle make back for the run where they are bred, but it is impossible that these cattle could have made for ——— and Billabong, where there are fenced runs.
1133. Might they have made for Wagga Wagga? Yes, but the disease was found a long way beyond Wagga Wagga, out by Billabong.
1134. As far as Wagga Wagga is concerned, they might have made for that place? That was almost their direct road home.
1135. You have nothing to show how the disease got to Koolong? No.
1136. You do not know how many cattle died at Koolong? No, and I do not suppose any other person does; as I imagine those who had the disease on their stations did not want to let other people know.
1137. *By the Chairman:* Are you aware that the disease has been found at Penrith, Goulburn, and Liverpool? I have been told so.
1138. *By Mr. Hay:* It is very easy to suppose that it may have been communicated to all those places from Victoria? I think it is very likely, if it could have been traced, that it might have been traced to have been brought from Victoria by bullock teams.
1139. There are plenty of teams of working bullocks to Lambing Flat, Goulburn, and in all directions? Yes, there are teams continually going on to Lambing Flat, Forbes, Beechworth, and all those places.
1140. Have you any stock upon this run besides the few hundred cattle that were left? I have a few sheep.
1141. How long is it since you purchased the sheep? About the latter end of May.
1142. How many have you of them? About 4,000.
1143. Is the run, then, very slightly stocked? Yes, there is very little on it, and has been ever since. There were a few ———
1144. Do you consider that it is well adapted for sheep? No; it is not a run I would purchase for sheep if I had to purchase.
1145. It is not a run you could depend upon in all seasons for maintaining sheep in health? I do not think, from what I know, that it is healthy for sheep; it is rather too rank, and, generally speaking, these hills are not so good as low country.
1146. Is it a good cattle station? Yes.
1147. Is it a station on which cattle can be easily broken-in to the run? No, there are so many cattle in the neighbourhood.
1148. I suppose you have not made up your mind what to do with the station? No; I have received so little from the Government that it will not go far to do anything with it.
1149. I suppose it will take some time before you can get a mob of cattle thoroughly broken in to the run? Yes, eighteen months.
1150. During which time you cannot anticipate any great return? No, I could not sell off fat cattle under twelve or eighteen months.

- J. M'Laurin, Esq.
24 Sept., 1862.
1151. Being a cattle run, you would have greater difficulty than you would if it were a sheep run, in consequence of the difficulty of breaking-in new stock to the run? Of course.
1152. There are no portions of your boundaries fenced, are there? No, we have a large paddock fenced, but no portion of our boundary.
1153. If there were any chance of being reimbursed for fencing, would you be disposed to fence it, so as to facilitate your operations in taking steps to stock it? I think I would. A run such as that of Mr. Bowler's, now that the cattle are killed off, is almost valueless. Anyone accustomed to cattle knows the great loss there is in breaking-in cattle; perhaps having to go a hundred miles after cattle. If your run is fenced in, you are not troubled with losses, and get a return much sooner.
1154. In fact, you would have nothing to do but to purchase your cattle and put them on the run? If the run were fenced.
1155. Have the Government made any reduction of rent or assessment? I have applied to them, and I believe they are likely to refund the license and assessment.
1156. For what amount of rent and assessment did you apply? For the rent and assessment of Yarra Yarra—£160.
1157. For last year's? Yes.
1158. Will a year, under the circumstances, cover the period of time during which you will have derived no advantage from it? I do not think it will. I do not think we can derive much advantage from it for two years and a half from last September. We have lost a year; and if we go and purchase cattle, it will be eighteen months before we can depend upon getting much from the station.
1159. Your experience with regard to pleuro-pneumonia, from all the experience you have had, is that we ought to rely on inoculation? I think it is more to be depended upon than anything I know of for this disease. There is another thing I may also state with regard to the disease. When the disease first broke out there were some cattle in the same paddock, that had never been mixed with the diseased ones before, and in two months and a fortnight they were in a very bad state of disease. These cattle were in the most favourable circumstances; they were never yarded or anything of that sort, but were running in an open paddock. There were eight or nine head of Dora Dora cattle, and when these were slaughtered on the 9th of November, they were found to be in a very bad state of disease; one was found dead that had died of the disease.
1160. Do you recollect anything of the price of cattle about the time the disease broke out on your run? About the time the disease broke out, cattle sold very well.
1161. Did the price of cattle fall much in the course of the season? Yes, the price came down in Melbourne and Beechworth.
1162. Was the price very low last summer? Yes, lower than it had been for some time.
1163. About what time, so far as you can recollect, do you think they fell so low? I think about Christmas. Not having cattle to sell, of course I did not take so much notice of the markets, but I know the price fell considerably. The disease being in that part of the country, and people wishing to sell their cattle, might account for the price being so low; but even in Melbourne it was lower than it had been for some time.
1164. Were not the prices almost ruinous to cattle holders in that part of the country where there was no pleuro-pneumonia at all? Yes.
1165. Then last season you are aware that the prices which were received for fat cattle, even from stations not affected by pleuro-pneumonia, were such as to make it extremely difficult for those at all encumbered with debt, as cattle holders frequently are, to escape ruin? Yes, if they were forced to sell. It appears that through the summer cattle were very low indeed.
1166. Did you see many of the cattle that were examined by Mr. Bruce and the other inspectors, from time to time, upon your own station, for instance? Yes, I saw a great many of them; I was present when the principal portion of them were killed and examined.
1167. You consider now that you have a pretty good knowledge of pleuro-pneumonia in all its stages? Yes; at least I have seen a great deal of it.
1168. Have you seen a great many cattle examined? Yes.
1169. What is your opinion with regard to the decision of the inspectors as to the existence of pleuro-pneumonia in those animals that they examined—do you think they were generally right or wrong, in the early period of the disease, in deciding whether an animal was or was not diseased? I am only acquainted with Mr. Bruce, and the sub-inspector, Mr. Gordon. Mr. Gordon latterly was generally at the station when cattle were killed. Mr. Day and Mr. Meyer I do not know.
1170. I will limit the question to Mr. Bruce? Mr. Bruce certainly ought to have known whether a beast was diseased or not, and from what I have seen of him I should say he was competent to form a correct opinion; but it is a disease very hard to detect in the early stages. A beast may be far advanced in pleuro-pneumonia, and it will be hardly observable; while, on the other hand, one may appear very bad and be less affected by the disease.
1171. When it is killed is there much difficulty then? If a beast is really bad there can be no mistake, if a man has once seen the disease, although there may be a difference of opinion in the earlier stages. I am not a veterinary surgeon, or capable of judging of the disease in its earlier stages, but when it is more advanced, the lung presents an appearance different from any I have seen in any other disease.
1172. Do you think, then, that Mr. Bruce was likely to make many mistakes as to the existence of pleuro-pneumonia, after the beast was slaughtered and examined internally? I think if Mr. Bruce had a beast killed and examined him internally he could make no mistake, if the disease were far advanced.
1173. What I want to know is, whether, from all the opportunities you have had of observing Mr. Bruce's proceedings, you think he was a pretty safe authority, after he had slaughtered and examined an animal, as to whether it was diseased or not? Yes, I do.

1174. *By Mr. Raper*: Did you ever hear of any difference of opinion between Mr. Pottie and the Commissioners, as to the symptoms of the disease? No, I do not think I ever heard that. J. M'Laurin,
Esq.
1175. Did Mr. Pottie agree that the symptoms described by Mr. Bruce were symptoms of pleuro-pneumonia? Perhaps I may answer the question in this way: I saw a beast killed that was bad with the disease. I saw Mr. Pottie make a *post-mortem* examination of this animal, and he pronounced that the disease was pleuro-pneumonia. 24 Sept., 1862.
1176. You never heard that there was a difference of opinion—that Mr. Pottie differed from Mr. Bruce as to the symptoms described by him as those of pleuro-pneumonia? No, I never heard it that I am aware.
1177. I think you said that you brought home these cattle that were tailing, put them in the weaning yard, and kept them there till they were destroyed? No; in my evidence I have stated that they were taken out to where they had been tailed some time before—to the Lock-up.
1178. You said that in the weaning paddock you observed some of the cattle recovering? In the large paddock.
1179. These were the cattle that were afterwards destroyed? Yes; the whole of the cattle were destroyed afterwards.
1180. This mob of cattle that you had in this 5,000 acres were diseased, and you say that you saw a portion of them recovering,—would you, seeing that they were recovering, have destroyed your whole herd of cattle if Government had not interfered? Certainly not.
1181. It was the interference of Government and the promise of remuneration that induced you to have them destroyed? Yes.
1182. You destroyed them to comply with the directions of the Commissioners? Yes, with regard to those cattle that were recovering.
1183. You would not have destroyed them, seeing that they were recovering, if you had not been offered remuneration by the Government? Certainly not.
1184. *By Mr. Hay*: Were there many cattle killed that were not diseased? I think there must have been an immense number that were not diseased.
1185. Did you continue to examine them, to see whether they were diseased or not? I did not, but I think Mr. Gordon examined almost every beast.
1186. You did not? At least I did not examine the whole. If I was with Mr. Gordon, and there were anything particular about the beast, I would take notice of it. Perhaps some days I would see every beast that was killed, on other days I would see one here and there. Sometimes I might be away for a few minutes, or perhaps half an hour; but I believe I was present when 5,000 out of the 6,000 were killed.
1187. *By Mr. Raper*: When you bought Yarra Yarra Run were the cattle mustered? They were not. I took the run without a muster. I had gone through the cattle on the run for about a week.
1188. Then you only made a guess as to the number of cattle—had you any positive knowledge? I counted the number there were on the camp before I bought them.
1189. How many were there? About 4,000.
1190. *By Mr. Mate*: After you purchased these cattle, did you remove any of them? Yes.
1191. Do you recollect how many, and of what sort they were? I removed about 2,000.
1192. What description of cattle were they? They were generally large cattle—store cattle.
1193. Good? Yes, we are selling the same cattle fattened, on the lower station, at £7 7s. 6d. for bullocks, and £5 7s. 6d. for cows, delivered in the yard on the station—the IJT and JF.
1194. Were these inferior cattle? There were not fifty inferior cattle among them.
1195. Did you put fresh cattle on the run after that? Yes.
1196. What description of cattle did you put on the run? The cattle that came from the Lower Murray were all young cattle—about 1700 or 1800 young quiet cattle, principally by imported bulls.
1197. The cattle that were left on the run—were they equal to those you sent away? We sent away what we considered the wildest, because we wanted the best of those IJT for breeding purposes; the others went away to fatten.
1198. You sent away the inferior cattle? Yes; the last of the cattle we sold fat on the run the other week.
1199. *By Mr. Leary*: You stated that about six months from the date of your taking a portion of your cattle from Yabba to Yarra Yarra, you discovered the disease of pleuro-pneumonia on your run? Yes; I removed them in March.
1200. What time, from its inception, does it take to develop this disease? If it is infectious I have seen it, under the most favourable circumstances, developed in from two to three months.
1201. When the compensation of £2 10s. per head was recommended by the meeting of squatters at Albury, was it intended that this sum was to be given for cattle in small mobs that were diseased? I believe it was so intended, for I do not think any person in that part of the country, at that time, would have sold a herd for £2 10s., as, generally speaking, the cattle are very good.
1202. How many are there, generally speaking, in mobs on your run? Perhaps from 100 to 500.
1203. So that the meaning of that resolution was, that if a diseased beast was found in a mob, say of 100, the whole of that 100 were to be destroyed, and the owner was to receive £2 10s. each for them? Yes, that, I believe, was the meaning of the recommendation; it was found to be so hard to detect the disease in the early stages.
1204. Your cattle were slaughtered in August, I think you stated? We killed some in August; in September, I think, the general order was given.

- J. M'Laurin, Esq.
24 Sept., 1862.
1205. When did you receive this compensation of 30s. a head? A portion in June, and the remaining portion in July.
1206. That was nearly twelve months after the slaughter of the cattle? Yes.
1207. You had the run unstocked all that time, in consequence of not receiving compensation? Yes, we did not get anything from Government.
1208. You stated that you have seen cattle, equally diseased with any of the 185 that were killed prior to the 8th November, recover, that is to say, get fat? Some of the cattle that were diseased prior to that I have seen, after they were put into the paddock, get almost fat before they were killed.
1209. *By Mr. Raper*: Do you mean almost fat before the general destruction? Before the general destruction.
1210. *By Mr. Leary*: What kind of weather was it when you were tailing these cattle on the Yarra Yarra Run? It was rather a severe winter after the disease had first broken out; the weather was very wet for several weeks. The cattle at the Lock-up were more out of the way than the others; it is a sort of basin among the hills.
1211. *By Mr. Hay*: It is rather a cold place? At the head of Ten Mile Creek it is rather a cold place, but not much colder than any other part of the run; all that side faces the sun all day.
1212. It is the north of the Dora Dora range? To the north of Dora Dora range, about four miles up from Mr. Bowler's station.
1213. Is it not very soft in a season like that? The ground got very soft during the time we kept the cattle there, but during that time we shifted the yard.
1214. *By Mr. Leary*: From whom did you purchase the Yarra Yarra Run? From Messrs. George and James Day.
1215. How long had you had possession of that run? I think we had had it twelve or eighteen months.
1216. Had you sold any portion of those cattle? Yes, we had sold a good number.
1217. *By Mr. Raper*: Did the 4,000 head on the run consist principally of the IJT cattle? Yes.
1218. *By the Chairman*: You purchased the Yarra Yarra Run in March, 1860? Yes.
1219. How many were on the run when you purchased it? About 4,000. We did not consider the wild cattle, of course—we did not count them, but when we came to muster them we found there were not quite 4,000.
1220. How many did you bring on the run? About 3,600 or 3,700.
1221. How many had you taken off up to September, 1861? We had sent about 2,000 down the river to the fattening stations, and we sold a good number of fat cattle.
1222. What was the entire decrease on the run from the sale of fat cattle and the sending them to the fattening station? About 2,500.
1223. That would leave 4,500 on the run? We did not count the unbranded cattle; then we took the Yabba cattle, and about 700 head of store cattle that I purchased.
1224. This basin or Lock-up herding place is at the head of Ten Mile Creek? Pretty near the head of the creek.
1225. Was this a moist, wet place? I do not think it is much wetter than any other part of the run. It was wet at the time the cattle were removed. They were moved to keep them away from the general herd.
1226. Would not cattle herded in a wet yard be likely to catch cold? I have been among cattle for three or four and twenty years, and I never saw such effects follow their being herded.
1227. You know what a wet yard is? Yes.
1228. In wet weather a yard gets into a very bad state if cattle are herded in it for a length of time? Yes.
1229. Do you not think, if cattle are put into wet yards at night, for a week or a couple of weeks, that they would be likely to catch cold, and show symptoms of lung disease? I do not know.
1230. Do you think, from your experience, that this disease is contagious or epidemic—do you think it is like the influenza, that would spread in the air, without cattle affected by it coming in contact with others? I think it is contagious or infectious.
1231. Do you think it is communicated by contact? I think so, but it is very hard to say; there are so many different opinions about it.
1232. Influenza, which affects the lungs in the human being, is supposed to be an epidemic? Yes.
1233. Might not the same kind of disease be among cattle, and spread in the same way? Of course such a thing is possible.
1234. Do you know the prevailing disease among dogs? Yes.
1235. Did it affect your part of the country? ———
1236. That is a lung disease? That is, I think, an epidemic.
1237. Among the dog tribe that is an epidemic? I think so.
1238. Might not this be the same with cattle? There are so many different opinions that it is very hard for me to say; but the general belief in Melbourne, from the way in which it spread from the place where it made its appearance at Merri Creek, is that it is infectious or contagious.
1239. You say there was a certain bullock which was supposed to have caused the disease in your run—he was a straggler;—do you know where he came from? He was a straggler. I was told by Mr. Robertson that he knew this bullock, that he belonged to one of the Albury carriers, and that he thought he had been taken to Melbourne some time before the Prohibition Act was passed.
1240. It did not belong to any brand that you know of there? No.

1241. Was it not singular that this bullock should not have diseased other cattle before he came to your herd? He may have done so. J. M'Laurin, Esq.
1242. You had not account of it? I suppose very few in the country would have found it out. Many people see their cattle dying and take no notice of it. Some of my cattle might have died and I might not have taken notice of the disease. I had not got them in for sending down to the fattening station. 24 Sept., 1862.
1243. You are aware that Government gave 30s. and 10s. for cattle destroyed? Yes, that was the price named in the instructions.
1244. You gave a tacit consent to your cattle being destroyed on those terms? There was no alternative.
1245. After the 23rd December was any proposition made to you by Mr. Bruce, as to whether the slaughter of your herd should continue? No.
1246. He stated in his evidence that such a proposition was made by Mr. Bowler—it was not made to you? No.
1247. What inspector was present at the slaughter of your cattle? Mr. Gordon was present all the time.
1248. He kept the books? Yes, at least he kept an account of all that were killed on the Yarra Yarra Run.
1249. He saw the whole of those slaughtered? The principal part; he was there the whole of the latter part of the time. Mr. Bruce was there at first, and occasionally afterwards.
1250. What was done with the remains of those that were slaughtered? There was little left but ashes; they were all burned.
1251. Were the carcasses wholly burned? Yes.
1252. Were not the remains placed in some creek? In a gully.
1253. Did not a fresh come and take a good many of the remains down the creek? They were all burned to dust; no doubt if a flood of water came it would carry away what was left.
1254. I was told there were half carcasses not burned? I do not think you were correctly informed. Mr. Gordon himself, the sub-inspector, went to the place where the cattle had been burned, some three or four days after, and sent men, directing them if any portions remained to burn them.
1255. They were completely consumed? They were completely consumed.
1256. Was it necessary to hunt up all your branded cattle that were on other runs—stragglers, for instance, that could not have been in communication with your herd for a considerable time? Some of the squatters were awfully afraid of our brand, even after the herd was consumed. If a beast were seen with our brand it was at once concluded that it was diseased.
1257. You stated that you did not succeed in getting all in? No, we did not.
1258. In what state are those you did not get in? They are in very good condition.
1259. There were boundary stockmen appointed to keep cattle within certain boundaries;—how many of these did you, Mr. Gordon, and Mr. Bradley —
1260. The quiet or tailing mob of cattle that you had to get these cattle in must have been in the very centre of this disease? Yes.
1261. Could they not have been placed in this paddock and inoculated, to avoid their destruction? The paddock would not hold one-third of the cattle.
1262. I thought you had large paddocks? 5,000 acres would not keep 6,000 head of cattle for any length of time.
1263. While they were being inoculated? They might have, but the squatters in the neighbourhood, for thirty or forty miles round, wished the Government to slaughter my cattle, and recommended what they considered a fair compensation for their destruction; but it was quite a different thing when it began to touch themselves.
1264. You say 50s. a head was recommended? Yes.
1265. You received 30s. a head? Yes, 30s. and 10s.
1266. In your petition you state much higher rates? I state what I consider to be the value of them.
1267. They are much higher than 50s.? Cattle had fallen.
1268. Would you not have considered yourself compensated if you had got 50s.? I supposed I must consider myself compensated whatever I got.
1269. This was an arrangement among the squatters themselves? It was then proposed that the cattle which were diseased should be killed.
1270. If an individual beast, so diseased, were found in any mob the whole must go? Yes, that was recommended and passed by the squatters. I was there, and I did not object; but when the disease affected their herds they sent to Mr. Robertson, requesting that the slaughter might be stayed.
1271. You have stated that 185 head of cattle were slaughtered on your run before the 9th November? Somewhere about that number.
1272. Were there not more than that killed by the inspector—were there not, up to the 9th November, 262 of your herd killed? The account of the cattle killed will show all that.
1273. Are you aware that in a letter, dated the 30th November, Mr. Bruce recommended inoculation? I am aware of it from the report.
1274. You were not aware of it at the time? No.
1275. *By Mr. Hay*; I am not quite sure whether you understood a question of the Chairman's;—do you know, of your own knowledge, that lung diseases are epidemic? I do not know.
1276. Do you know that the dog disease is a lung disease? No. I believe it is an epidemic—whether it is a lung disease or not I could not say. (*The witness handed in two letters from Mr. Bruce. Vide Appendices C and D.*)

J. M'Laurin,
Esq.

24 Sept., 1862.

APPENDIX.

A.

Ten Mile Creek,
Sunday Evening.

Dear Sir,

I have now got my instructions from Sydney, and will proceed to work so soon as you return from Albury. I may tell you briefly what the heads of these instructions are:—

1. I am authorized to go anywhere to inspect and order the destruction of cattle.
2. The destruction of cattle to be paid for by Government.
3. Cattle to be paid for as follows: For all over twelve months old (30s.) thirty shillings each, and under that age 10s. each.
4. No cattle to be paid for of which the owner has *not* given notice, and which may have been discovered by inspector.
5. *Cattle already destroyed*, to prevent spread of disease, to be paid for on being properly certified to.
6. I am to be allowed to employ two assistants, who will receive, say 10s. a day, and find rations and horses.
7. Traffic through infected runs to be stopped.
8. Impounding within twenty miles of infected runs to be stopped.
9. Dairying to be stopped on infected runs.
10. Inspectors of Scab at Albury and Deniliquin to be sub-inspectors of cattle.

Lastly,—My instructions are to be published in local papers.

I hope you will not remain longer in Albury than you find it actually necessary, as I should like to begin killing, and cannot do so till you are on the ground.

Would you see Mr. Owen Flinn (who I understand is appointed, or to be appointed, scab inspector for Albury), and ask him to come out here to see what the disease is like. He could stop with me for a week, and I would be able to show him plenty of cases at Yarra Yarra. I do not know where to find him or I would write him by post, which makes me give you this trouble.

R. M'Laurin, Esq., Albury.

Yours, &c.,
ALEX. BRUCE.

B.

Ten Mile Creek,
8 November, 1861.

Gentlemen,

In terms of instructions from the Secretary for Lands, Sydney, of 31st October proximo, and 2nd November instant, I beg to inform you, that your whole herd of cattle being infected with pleuro-pneumonia, have been condemned to be killed and consumed by fire. I have, therefore, to request that you will proceed with their destruction in the most expeditious manner possible; and to inform you that you will be paid for them at the rates fixed by Government, in my instructions of 30th September and 26th October last.

Yours, &c.,
ALEX. BRUCE,
Inspector.

Messrs. James M'Laurin and Sons,
Yarra Yarra.

P.S.—The rates for destroying to be the same as heretofore, viz.:—5s. each for all over two years old, and 3s. a head for all under that age.

A. B.

C.

Twelve Mile Creek,
4 December, 1861.

Pleuro-pneumonia having become so virulent at Yarra Yarra and Mr. Bowler's as to render it necessary to destroy both herds, it has been deemed advisable by the Commission—to protect the adjoining herds—that the owners should lend all the assistance in their power to do so promptly and effectually.

May I request, therefore, that you will be good enough as to be prepared to give such assistance at the Yarra Yarra Run, on Monday next, the 9th instant, at 8 a.m., and following days.

Yours, &c.,

| | |
|---|--|
| Messrs. Heriot, J. Post, J. Purtell, W. F. Greene, W. Williams, J. Robinson, A. M'Rae, Jno. Mitchell, C. Osborne, Burns (2), | Messrs. T. Henty, J. Vardy, Cox & Keane, Jno. Smith, W. Rial, Smithick (2), J. Hore, G. Bardwell, Hy. Osborne. |
|---|--|

Dear Sirs,

As recommended by the Board, I have issued circulars as above, and trust that if any of them do make appearance, as invited, you will be prepared to set them at work, either getting stragglers off the adjoining runs, getting the balance of your cattle off the run, or in making a grand sweep in the Wantagong.

Yours, &c.,
ALEX. BRUCE,
Inspector.

Messrs. M'Laurin,
Yarra Yarra.

D.

D.

Ten Mile Creek,
17 January, 1861.

J. M'Laurin,
Esq.

24 Sept., 1862.

Dear Sir,

I last night had a communication from Sydney, and will now be obliged to stop the killing of more cattle at Yarra Yarra.

Please therefore send account of cattle killed since the 11th (of which I had account from Bradley), and we will now close the matter finally.

Robert M'Laurin, Esq.,
Yarra Yarra.

Yours, &c.,
ALEX. BRUCE.

E.

(Appended on revision.)

Yarra Yarra,
4 September, 1862.

I have this day purchased from Messrs. M'Laurin thirty-five head of cattle, at—for twenty head—£5; and fifteen—£3 5s.; and given for them draft at sight, of Messrs. J. H. Gray & Co., Beechworth—£148 15s. stg.

W. INGRAM BROWN.

TUESDAY, 30 SEPTEMBER, 1862.

Present:—

MR. HAY,
MR. LEARY,

MR. MATE.
MR. RAPER,

HUGH GORDON, ESQ., IN THE CHAIR.

Henry Joseph Bowler, Esq., called in and examined:—

1277. *By the Chairman:* Are you the Mr. Bowler who signed the petition now before this H. J. Bowler, Committee? I am not. That petitioner is my father.

1278. Are you acting on his behalf? I am.

1279. What is his name? Samuel Bowler.

1280. And this is his petition (*Petition handed to witness.*)? It is.

1281. Are you the proprietor of the Ten Mile Creek Station? I am not. I have an interest in the stock on that station, but my father is the proprietor.

1282. Do you reside there? No, I only visit there occasionally—some two or three months in each year. I reside at the Mitta Mitta, in the Colony of Victoria.

1283. I suppose you frequently have occasion to travel between the Ten Mile Creek and your station, and from that to Melbourne? Yes, frequently.

1284. Have you seen much pleuro-pneumonia amongst the cattle on that line of country? Yes, a good deal.

1285. Are not the cattle upon many of the stations between Albury and the Mitta Mitta affected with pleuro-pneumonia? All the runs are affected more or less, but none to a very great extent. Between Mitta Mitta and Albury there are only four runs.

1286. And on those runs the cattle are all more or less affected with pleuro-pneumonia? Yes.

1287. Do you know the country lying between Albury and Beechworth and Wangaratta? I do.

1288. Are there any cattle in that part of the country that are not affected with pleuro-pneumonia? That I cannot answer. None of the stations that I am acquainted with are, I think, entirely free from it.

1289. Do you know Mr. Thomas Mitchell's station? I do.

1290. Do you know how many cattle have died there from pleuro-pneumonia? I do not; but I know a considerable number have died there.* Still, he inoculated for the disease, and several of the cattle died from the effects of the inoculation.

1291. Was he the first who tried inoculation for this disease? I think he was.

1292. Do you think it was the case, as he told one of the witnesses examined before this Committee, that he had as many as 300 head die? If Mr. Mitchell has said so, it is no doubt the case.

1293. Has he disposed of all his cattle, and put sheep upon his run in their place, from fear of the disease? No; he sold all his run outside his paddocks with the stock on it. The greater part of his run is fenced in, and he kept the part fenced in and sold all outside. One of the paddocks he devoted to sheep, but this was not from fear of the disease, but because he was carrying on an extensive butchering establishment.

1294. How many cattle at the Mitta Mitta have died of the disease? Do you mean at the river?

1295. No, at your father's place? About twenty or thirty head; certainly not more.

1296. Have you inoculated your cattle on that run? Not all of them; only about 1,200 head.

1297.

* *NOTE (on revision):*—A considerable number have died there, but this arose more from inoculation than from the effects of pleuro-pneumonia.

- H. J. Bowler, Esq.
30 Sept., 1862.
1297. How many had you on the run when you inoculated them? There are three runs altogether at the Mitta Mitta, and I inoculated a portion of the cattle on two out of the three. On those runs there are about 2,500 head. -
1298. How many of your cattle there appeared to be affected? Not many. The symptoms appeared to be confined to one small mob of about 80 or 100 head, that ran together.
1299. On what part of the run were they accustomed to resort? They were almost isolated from the rest of the herd, in a corner of the run nearly enclosed by the river and the paddock fence.
1300. I suppose you know the Yabba station? I do.
1301. Have you heard how many cattle have died there? If I remember rightly, Mr. Paton told me that about fifty head had died there.
1302. Do you know how many cattle were on that run altogether? About 300 head.
1303. Do you know Mr. Warby's run? I do not know much about it, but I have ridden over it.
1304. Do you know how many cattle have died there of pleuro-pneumonia? I have no idea.
1305. Are you the sole proprietor of the Mitta Mitta Run? No, I hold it in partnership with my brother.
1306. Is your father not in partnership with you? No; there are three runs there, two of which are owned by my father, the third is mine. My brothers and I have also an interest in the stock upon the other two runs, "Mitta Mitta No. 1," and "Megora."
1307. Did you put fresh cattle on the Ten Mile Creek Run a few months before the herd there was condemned? Yes, about nine months before—in the March preceding.
1308. How many? About 250, from that to 280 head, from the Mitta Mitta, and about 150 head that we had purchased for that purpose from Mr. White.
1309. How many cattle were there on the run when these two lots were purchased? About 800 head.
1310. At what time did you bring over the cattle from Mitta Mitta? It was a few days before the issue of the proclamation forbidding the introduction of cattle from Victoria into New South Wales.
1311. Was that before Mr. M'Laurin brought his cattle over? No, I think it was after. I heard, after I had been on the road some three days, that the introduction of cattle from Victoria was to be prohibited; and it was so a few days after I got home.
1312. You do not know how long it was after M'Laurin brought his cattle over? No, but it was some months after.
1313. Does your station join the Yabba station? It does.
1314. Did your cattle mix with those on the Yabba Run before they were taken away? I do not think they had mixed much for the five or six months previously; they mix in the winter, but not in the summer.
1315. Is there a defined boundary between the two runs? Yes, there is a steep range that divides us.
1316. You claim the fall of water on one side of the range, and they claim the fall on the other? Yes; the cattle remain steady on the run during the summer and autumn, and do not mix much with those of the Yabba station; in the winter and spring they do intermix occasionally in the ranges.
1317. Did you hear of any cattle having died of pleuro-pneumonia in that range before you brought the cattle away? I saw mention made in the paper that a diseased bullock had been left in the range by a bullock-team that was travelling up the Mitta Mitta. It was reported that they had left a diseased bullock in Bowler's ranges. When I went home, I searched for it in those ranges, but could not find it; after a time we ascertained that it had not been left in our ranges at all, but that it was in M'Laurin's ranges. We further learnt that it had not died from the disease, but that he had jinked his back in the team, and had died from the injury.
1318. No *post-mortem* examination of the animal was made? No.
1319. It was merely reported that that had been the cause of death? Yes, that was all. It was four months after that, that the cattle were removed.
1320. Do you think that the disease was conveyed in that way? Not by that bullock, certainly.
1321. In what way, then, do you imagine it to have been conveyed? If it was conveyed by contagion or infection, I should think it had been brought on by the bullock-teams trading between the Ovens and Melbourne up to the Snowy Creek Diggings, on the Mitta Mitta.
1322. What distance is the Mitta Mitta from the Ovens? About 130 or 140 miles.
1323. And about what time do you suppose the contagion was conveyed—or rather, when did you first hear that pleuro-pneumonia existed in your part of the country? I heard several reports of diseased teams travelling on the road; but I never saw any pleuro-pneumonia on the Mitta Mitta until the February after the cattle had been removed.
1324. You saw no disease there before that? No.
1325. You heard of it before? I had heard of the disease before, not on the Mitta Mitta, but at Yabba.
1326. When did it show itself there? Some time in November or December. I think it was in the early part of December.
1327. When it showed itself at Yabba, were any of the neighbours' cattle affected? No, I think not.
1328. Were the cattle on the stations between Yabba and Albury affected with the disease at that time? From my own knowledge I cannot say that they were; but I heard they were.
1329. What description of cattle did you bring over with you from the Mitta Mitta? About two-thirds

two-thirds of them were steers, from three to five years old, and the remainder were spayed heifers. H. J. Bowler,
Esq.

1330. And what sort of cattle were those you purchased from Mr. White? They were cattle of a similar description, but not quite so good. The cattle I brought from the Mitta Mitta were the pick of three herds. 30 Sept., 1862.

1331. Were any of the cattle you purchased from White wild cattle—scrubbers? They were not what I understand as scrubbers.

1332. Were they wild? When my father purchased them for £2 7s. per head, he considered them a fair description of store cattle. They were then quiet—this may have been owing to the driving they had had on the road. We however were subsequently told, that when on their original run they had been outlying cattle, and had been anything but quiet. Previous, however, to their being slaughtered, they were so far quietened as to admit of a footman going among them.

1333. Previous to yarding them? No, previous to their being killed.

1334. Did they stop steadily on your run? No, we tailed them.

1335. And how many of these were unaccounted for after your cattle had been killed? About the half, or perhaps more. But I do not attach much importance to that, because a good many cattle were killed that were not put down as tailers. We rebranded all the cattle we brought over to the Ten Mile Creek, and when they were killed, only the brand was looked to. The only difference between this mob of tailers and the rest of the herd was, that the tailers all had their tails squared; but in the hurry and confusion of slaughtering, this mark was not paid much attention to.

1336. How many months before was it that their tails were squared? It was done when we turned them out, about three months previous to their slaughter.

1337. There had not been time for the hair of the tail to grow again? No.

1338. Were your cattle inspected by Mr. Bruce at the Ten Mile Creek? Yes, by him and the other Commissioners.

1339. On what date? On the 14th and on the 15th November.

1340. And when were they condemned? On the 15th November.

1341. *By Mr. Raper*: Were you there? Yes.

1342. Because I understood you to say that you saw no disease until December? That was at the Mitta Mitta, in Victoria. I was asked with regard to that station.

1343. *By the Chairman*: Were there any fat cattle taken to market off the Ten Mile Creek Station, just before that run was placed in quarantine? Yes.

1344. How many? I was not at home at the time, but I think 120.

1345. Where were they sold? At Melbourne.

1346. What price did you obtain for them? Either £3 or £3 10s.; I think it was £3 10s.

1347. Were they fat? Yes.

1348. And you got either £3 or £3 10s. a head for them? Yes.

1349. That was the price gross? No, that was the net price, after paying commission, but not after paying the costs on the road.

1350. Were they the pick of your herd at the time? I do not consider that they were so. The reason they were removed was, that we had heard that the Ten Mile Creek Run was to be placed in quarantine, and these cattle were got together hurriedly, and removed, in order to be sent to market.

1351. Then you consider them to have been fat cattle? Yes, they were fat; but in consequence, as I say, of our learning that the run was to be placed in quarantine, they were at once collected, as quick as possible, and sent to market. This was not usual for us, as we never send our cattle for sale until the winter. The market was very low at the time, and we certainly should not have sent our cattle for sale but for the introduction of this quarantine system.

1352. Did you sell any cattle from the Mitta Mitta station during the last season? Yes.

1353. At what time—in what month? I think it was in April or May.

1354. And what did you obtain for them? They were sold very cheap, at £2 7s.

1355. Were they as good as those at the Ten Mile Creek before the quarantine was placed on the run? No, they were not. They were culls from the Billabong. After taking a number of fat cattle from there these were found afterwards, and sent to market. They were in good condition, but were big, bony bullocks.

1356. Were they fat? Yes, they were fat; but they were culls in this way, that I had been selling all through the summer, and am still, out of the Mitta Mitta paddocks, at £5 a head; and these were the beasts left after the others had been selected from them. They were, in fact, the culls of the fat beasts left at the end of the summer.

1357. Then, as I understand you to say, they were fat, but were culls in other respects? Yes, they were fat; but then, when you have 100 head of fat cattle, and allow, say seventy of the choicest to be picked out of them, I regard those that remain as culls.

1358. Then it is not in consequence of their not being fat that you call them culls? No; they were good fat beasts, but they were big, bony animals, and the butchers do not in general approve of that kind of beast.

1359. Did you dispose of any cattle after the quarantine had been removed off the Ten Mile Creek Station? Yes.

1360. At what time? About the latter part of March or beginning of April. They started from the Billabong at the same time as my lot left the Mitta Mitta, and would be just about fit for sale at that time.

1361. What price did you get for them? £3 per head; and we refused £4 a head for them before they started from home.

1362. How was that—had prices fallen in the meantime? No; we were misinformed as to the state of the Braidwood market.

H. J. Bowler, 1363. You sold them there? Yes.

Esq.
 30 Sept., 1862. 1364. It is stated in the petition, that 500 head of the cattle destroyed were fit for market, and would have been sold before the date of the petition, the 20th January—what price could you have obtained for them? I do not attach much importance to that; if they had been fat, and the markets high, they would have been sold; but if the markets were low, they would not have been sold.

1365. Had there not been a good many cases of disease amongst the cattle on the Ten Mile Creek Run, as well as amongst those on the Yarra Yarra Station, before they were condemned? There were some cases, but not a great many; some two or three cases of our own stock, and about half a dozen of M'Laurin's. The latter circumstance was attributable to the fact of M'Laurin's tailing mob being fed on our boundary line.

1366. Only? Only, that I am aware of.

1367. Have you been much at the Ten Mile Creek Station during the last winter? Yes.

1368. Are there any cattle on that run at present—strangers' cattle? Yes.

1369. How have they been affected, in regard to disease? They have only been very slightly affected with pleuro-pneumonia, and there have been a few deaths.

1370. Are you aware that your father has told the inspector, that at least 200 head had died during the last winter on his borders? I am not.

1371. Did you hear that the disease had been raging at the Ten Mile Creek during the last winter? Yes; I was aware that there were a few cases, but nothing to create alarm.

1372. What do you suppose would be the per centage of deaths, in twelve months, in a herd in which the disease had established itself in a virulent form? In a herd of fat cattle, the per centage would be much greater than in a mixed herd. In a mixed herd it would not be greater than about fifteen per cent. during the first twelve months; of course if the disease continued the per centage would be larger afterwards.

1373. But if the mobs in which the disease appeared were killed? In that case, the per centage would be less next year.

1374. When the disease establishes itself in a herd, do you not suppose that considerable injury is done to its sale? No, not if it is a fattening herd; but if you brought them to sale as store cattle, there is so much ignorance prevailing in regard to this disease, that parties would be loth to purchase at any price.

1375. Would there not be a falling off in the fat cattle, independently of the depreciation through those that died? I do not think there would be, to any great extent.

1376. If the disease attacked a fat beast, and he afterwards recovered, would it not be some time before he regained his former condition? I doubt if a beast would recover if he had a violent attack.

1377. The average loss, you say, would be about fifteen per cent.? Yes, in a mixed herd.

1378. You know nothing of the shortcomings in a herd of fat cattle at the end of the season, independent of the deaths, in consequence of the disease being in the herd;—for instance, suppose a herd in which were included 100 head of fat cattle, to be affected with the disease, would there not be some of the fat cattle take the disease and recover, and yet not afterwards be fat and fit for market? Of course if a fat beast did, recover from an attack he would lose condition; but I do not understand keeping fat cattle on the run if disease gets in amongst them.

1379. Could you get a market for them? I should sell them at any price, if they were diseased.

1380. What would be the difference in value of a herd of cattle in which the disease had shown itself, and with the fat cattle taken out, as compared with that of a herd entirely sound and free from disease? You mean what would be the depreciation of value by the disease?

1381. Yes? If the party could save himself by boiling down his herd, the value would not be depreciated; but if he were forced to throw them into the market, the depreciation would be very considerable—thirty or forty per cent., I dare say, because parties would not buy.

1382. Do you think there would be any advantage in boiling down lean cattle—because I suppose the fat cattle to be taken out of the herd—for instance, if you were about to purchase, what difference would you allow between a herd that was sound and one that was diseased? If I were buying, I should be disposed to strike as hard a bargain as I possibly could; on the other hand, if I had the herd to sell, the fact of their being diseased would not in any way influence me in reducing the price beyond fifteen or twenty per cent., unless I was compelled to sell, and then I should of course have to do so at the price I could get.

1383. Did you attend all the meetings that were held by the settlers in that district? Some of them, but I did not attend all of them.

1384. Did your father or your brother attend them? Yes, some of them; some member of our family attended every meeting held.

1385. Did you assent to the resolutions agreed to at the first meeting? No; we differed from them.

1386. Were you present at the meeting at which Mr. Day was proposed to act as a Commissioner? I was.

1387. Before Mr. Day was proposed, were you not nominated to act with Mr. Bruce and Mr. Murray? I was, but I objected to act.

1388. On what grounds? First, because I was interested in the matter that the Commissioners had to deal with, and therefore felt a delicacy about acting; and next, because I did not consider that I knew sufficient of the disease and its nature to have the disposal of large herds of cattle left to my determination.

1389.

* NOTE (on revision):—To this query I would beg to refer to Appendix.

1389. Did the steps then proposed to be taken by the Government meet with the concurrence of the meeting? Do you mean the placing a certain extent of country under quarantine, and permitting them to enter upon runs and slaughter cattle within a certain area?

1390. I mean the proposal of the Government that every mob in which a diseased beast was found should be slaughtered? I suppose the greater part of the meeting was satisfied with that course; there were several persons, however, who did not approve of it.

1391. Did anyone protest against it? No formal protest was made; they expressed their dissent.

1392. *By Mr. Raper:* What was your opinion in reference to the resolution passed at that meeting—were you of opinion that the mob amongst which diseased beasts were seen should be slaughtered, or did you think that the whole herd should be sacrificed? The resolution you refer to was proposed at another meeting.

1393. I refer to the meeting in October? Yes. At that meeting a resolution, referring to the slaughter of particular mobs in which the disease was seen, was agreed to; but the slaughter at the meeting referred to by the honorable Chairman was the slaughter of the whole herd.

1394. *By the Chairman:* The slaughter of the whole herd was recommended at one meeting? No, not recommended; but we were told that instructions had been issued for the slaughter of diseased herds, and we submitted.

1395. That was the meeting of the 13th November? I cannot say the date, but we submitted to the course recommended by the Government; we did not recommend it ourselves.

1396. What was the course recommended by the Government? That the whole herd should be killed.

1397. Do you recollect a letter, dated November 2nd, from the Department of Lands, being read at that meeting? Yes.

1398. Did you approve of the steps that were then being taken by the Government? We were not called upon to approve or disapprove; we were deputed solely to elect a person to act in conjunction with Mr. Bruce and Mr. Murray. We were not required to express dissent or approval, and regarded the matter as settled.

1399. In taking part in that nomination, you did not consider that you were agreeing to the proposal to destroy every mob of cattle in which a diseased beast was found? We knew very well what the object was, but we did not consider that we had any option in the matter. We considered that the Government had virtually taken possession of all the stock within those areas which they had proclaimed to be in quarantine.

1400. When did the slaughter of your cattle commence? Some five or six days after we received notice to destroy them.

1401. About what date was that? About the 22nd or 23rd November.

1402. Have you any idea how many had been slaughtered up to the 23rd November? No, I have not.

1403. There could not have been many? No; but I cannot say how many. We commenced the slaughter as soon after we had received notice as we could get a yard built for the purpose, and I do not know how long a time that occupied. If you refer to the date of the notice we got, I shall be able to give a better idea, for it was some little time after that, that the slaughter commenced.

1404. But I wish to know precisely how many were slaughtered up to the 23rd November? That I cannot say.

1405. Did you request the Commissioners, Mr. Bruce, Mr. Murray, and Mr. Day, to commence the slaughter on your run first, before they went on any other? No; but I remember asking them something about where they were going to begin.

1406. You did not ask them to make a commencement at your place? As a request, no. I asked them where they were going to commence, and they said they thought at M'Laurin's; and then I said it was no use for them to go over there—as our herd was condemned as well as M'Laurin's, they might as well make a beginning at our place as they were there.

1407. Do you consider that your loss was increased by your cattle having been destroyed by the Government at the price named, beyond what it would have been had you allowed them to remain and take their chance of living or dying? Our wish was that the Government should have no interference in any way; but when once they interfered, rather than have our run placed in quarantine for an unlimited period, we thought it better to have them all killed off.

1408. Did you ever protest against their being killed at the price named? We protested against their being killed at all; not formally or by letter, but verbally we did all we could. I asked the Commissioners if we had any choice in the matter, and they told us we had not. Had I known that there would have been any use in protesting I certainly should have done so. I asked the Commissioners what they would do in the event of our refusing to slaughter the cattle, and their reply was, that in that case they would get some one else to do it. I then said, "but suppose I prevent anyone else from coming on our run;" and they told me that in that case they had power to give me into custody. Of course, after that answer, I could take no further step.

1409. You are aware that when the Commissioners returned from Kyeamba, after other instructions had been given from the Government, your father requested them to continue the slaughter of his herd? Yes, I am aware he did.

1410. Preferring that they should go on killing the herd rather than stop the slaughter? Yes; but that was not because we were satisfied with the price, but because we considered that if the Commissioners then desisted from killing, the remainder of the herd would be left in quarantine for an indefinite period. Besides this, the best beasts had been killed, and there were very few fat cattle remaining after the Commissioners returned from Kyeamba.

H. J. Bowler,
Esq.
30 Sept., 1862.

- H. J. Bowler, Esq.
30 Sept., 1862.
- The reason why they had been killed first was, that they happened to be the most convenient to the yard at the time, and as we thought we should have to go through the whole herd, we believed that it made very little difference whether we began with them or not.
- Another reason was, that ours is only a small run, and must be devoted either to cattle or to sheep, as it will not support both. If any cattle had been left unslaughtered a large portion of the run would have remained idle and useless, as we could not bring in other cattle to re-stock it. It was for these reasons that we thought it better to kill the whole herd.
1411. Was it the generally expressed opinion that you and M'Laurin were fortunate in having allowed to you the price paid by the Government? I heard many people say so; but when it came home to themselves they found out the difference.
1412. Did you ever say that M'Laurin was fortunate in having his cattle killed at the price he received from Government? I think I did say so; but I was not then so well acquainted with all the circumstances of the case as I afterwards became.
1413. Was there any record kept by the sub-inspector of the state in which the cattle slaughtered were found to be? Yes, there was a record kept by a party named Bradley, who acted for the Government.
1414. Had you power to inspect the record kept by the sub-inspector? Yes; but we kept one ourselves for a few days, until the work became too heavy on us.
1415. Did you ever challenge the report made by the sub-inspector in any way? Yes; I said the whole thing was a farce from beginning to ending.
1416. On what ground did you consider it to be so? Because the appearance of the inside of the stock after they were killed did not correspond with the appearances known to be shown in cases of pleuro-pneumonia; and yet beasts were put down as in the first and second stages of the disease, although they showed no sign of it.
1417. Did you state that the return was incorrect? I stated that it was all humbug to make notes of that kind.
1418. Did you make any complaint to Mr. Bruce about the inaccuracy of the sub-inspector's report? I did not think that it was of any importance whether I did so or not. My own opinion was that the whole thing was a farce.
1419. As a matter of fact, was the return incorrect? Yes, I thought it so at the time, and from what I know since of the disease I am sure it is.
1420. What object was there in examining the cattle that had been destroyed? I could see no object in it. They had all to be paid for at the one price, whether diseased or healthy, and it was therefore a very unimportant matter to examine them.
1421. What appearance did these cattle present, that led you to believe that they were not suffering from pleuro-pneumonia, and that now that you know the disease better makes you sure of it? There were some cases in which pleuro-pneumonia evidently existed; but there were others marked down as showing the disease in its incipient form that had no trace of it.
1422. Can you tell us the particular appearances that were taken to be symptoms of pleuro-pneumonia, and which you objected to? I objected to seeing a beast, if he had the least discoloration whatever of the lungs, immediately marked down as infected with pleuro-pneumonia; or, if there was what they termed a fringe, some particle of loose skin adhering to the edge of the lung, no matter how minute it might be, it was immediately put down as an evidence of the existence of pleuro-pneumonia.
1423. Did you ever observe similar appearances in cattle slaughtered before you heard of pleuro-pneumonia? No; I paid no attention to these particular appearances at that time; but I have made it my business since to examine every beast we slaughter; and I believe that the same appearances are to be found on the lungs of all beasts slaughtered, even of those slaughtered here in Sydney. I have seen the same appearances in cattle slaughtered in Melbourne, that had come from Gipps Land, which is the cleanest country in the Colony, and has never had disease in it.
1424. Upon how many occasions did you challenge the report of the sub-inspector? I never challenged the report at all; I only objected to the careless way in which the record was kept.
1425. Do you not suppose that this record was kept for the purpose of obtaining information for guidance in other cases—and might it not have been ordered to be kept by the Government for that purpose? If it were ordered for a useful purpose, the Government ought to have sent persons to keep it who were properly qualified.
1426. But you had Mr. Bruce to appeal to when anything was incorrect? Yes, but he was not inspecting there at the time.
1427. Did you not see him afterwards, and consult with him on the subject of these inaccuracies? No, I never consulted with him at all upon the subject. I did not consider it to be a matter of very great importance.
1428. Have you inoculated your herd at the Mitta Mitta? About 1,200 of them.
1429. With regard to the sub-inspector's report;—if there had been an order that only diseased cattle should be destroyed, would you then have protested against that report? Most decidedly I should.
1430. And would you have considered it necessary to have informed Mr. Bruce of the inaccuracies you have mentioned? Certainly; but as the thing was, I thought that the whole herd was to be destroyed, and that therefore it did not much signify whether they were set down as diseased or not.
1431. Are you acquainted with the *post mortem* appearances that are presented by pleuro-pneumonia? I think so. I certainly know as much of it now as those appointed to act knew of it at that time.
1432. How does the disease commence in the first instance? That I do not know.
1433. What part of the body is first affected? I believe the blood to be the first part of the system attacked.

1434. Can you mention the different stages that the lungs pass through in the course of the disease? I am not a veterinary surgeon, and do not feel myself competent to do that.
1435. I ask you because I understood you to say that you were acquainted with the different stages of the disease? I have as much acquaintance with the disease now as the parties employed had when they commenced their work of inspection. The reason why my confidence in their judgment was shaken was, seeing the mode in which they acted. They would ride into the middle of a herd and make an examination, and would decide that a certain mob was affected with pleuro-pneumonia, when they only had external appearances to judge from. Very often a mob was condemned when there really were no external appearances whatever on which to form a judgment.
1436. When you inoculated your herd at the Mitta Mitta, in what way did you operate on them? I tried three different plans. I made an incision in the bottom part of the tail, just above the brush, sufficient to enable me to insert a portion of the diseased lung into the wound. I then tied this in with a bit of string. However, I had more deaths under that plan than I expected; so I tried another. The next lot I inoculated by making an incision in the tail, and simply rubbing in the diseased lung to the wound, and without tying anything round it. I fancy that the string occasioned swelling, irritation, and death. The second plan I found to answer very well, and I had very few deaths.*
1437. Do you think that inoculation in the case of a diseased animal is a cure? I have inoculated cattle that have been very bad with the disease, and they have recovered; but I cannot say whether or not their recovery was owing to the inoculation.
1438. Do you believe it to be a preventive? Yes, I think so.
1439. Has inoculation for the disease become a common practice in Victoria? In the Murray District it has.
1440. *By Mr. Hay:* In inoculating, you make an incision, and rub a portion of the diseased lung into the wound? Yes.
1441. In doing this there is no danger to the individual performing the operation? No; I have often done it after I had scratched my hand, and had an open wound on it, and I never was the least alarmed by it, or suffered any bad effect from it.
1442. It never produced any bad effect? No.
1443. Even though you may have scratched the hand with which you manipulated the diseased lung? No; I have repeatedly done so, and never suffered any bad effect.
1444. The virus does not affect the human system? No.
1445. In inoculating, do you cut quite through the skin of the tail? Yes.
1446. But not in the tenderest part, up near the root of the tail? No, just above the brush; and I make the insertion just deep enough to draw blood, and no more, as it is better that the blood should not flow too freely.
1447. And you avoid wounding the animal too much in the tenderest part of the tail? Yes.
1448. *By Mr. Raper:* Was it decided at a public meeting, that where pleuro-pneumonia was found on a run the whole herd was to be destroyed, or did that proposal originate with the Government? The proposal to slaughter the whole herd originated with the Government.
1449. And not in a resolution passed by a public meeting? No. I believe at one meeting a resolution was adopted recommending the slaughter of a mob of cattle if a diseased beast was found in that mob—that is, they recommended the slaughter of the particular mob, apart from the others.
1450. Was it the opinion of any persons in that district that it was necessary to destroy the whole herd because a part of it was diseased? No; at all events such a thing was never recommended.
1451. The suggestion originated with the Government? Yes.
1452. *By the Chairman:* Is there anything further that you would like to state to the Committee? I wish to give the Committee clearly to understand the amount of loss we have suffered.
1453. *By Mr. Leary:* Perhaps before the witness makes his statement I had better ask a question or two, to elucidate some portions of the evidence. When you first received an intimation from Mr. Bruce that your cattle were to be destroyed, was that intimation conveyed to you by letter or verbally? Verbally.
1454. Did you afterwards receive any written intimation that your cattle were to be destroyed? No, I accompanied the Inspector and the Commissioners through the run, and after they had examined the herd, they seemed to consider that they had seen sufficient to warrant them in ordering the cattle to be killed. In my hearing the question was asked amongst them, whether it was necessary to give me formal notice that my cattle were to be destroyed. They considered it was not necessary, as they were all there present and I was in their company when they came to their determination.
1455. Who were then present? All three of the Commissioners—Mr. Day, Mr. Murray, and Mr. Bruce.
1456. And they gave orders to destroy the whole of your herd? Yes.
1457. Do you remember the date upon which this took place? It was either the 13th or the 14th November.
1458. You state that when you were first informed of the intention of the Commissioners to have your cattle destroyed, you made an objection, and asked them what course they would pursue in the event of your resisting the carrying out of their order? Yes.
1459. And from what they told you, you were under the impression that the Government had

* ADDED (on revision):—The third plan was, by pressing the matter from a diseased lung into a vessel, and saturating a twine therein, then passing it with a needle under the skin of the tail at the brush.

H. J. Bowler,
Esq.
30 Sept., 1863.

- H. J. Bowler, Esq.
30 Sept., 1862.
- had full power to do what was proposed by Mr. Bruce, and to order your whole herd to be destroyed? I asked them what course they proposed to take, in order to ascertain if there was any use in my entering a protest against their interference. I asked them what they would do if I were to refuse to kill the cattle; and Mr. Bruce said that in that case they must get some one else to do it. I then remarked, "But suppose I stop any party from coming on my run;" and his answer was, that he had power to give me in charge if I did so.
1460. When was the last portion of your herd destroyed? The slaughter was continued throughout November, or it may have gone into December.
1461. I believe there was a team of working bullocks used by you in carrying the carcasses of the slaughtered animals down to the creek? Yes; there was a team that we used occasionally to draw out a beast or two, and sometimes to lead the cattle into the slaughtering pen. When there was a good deal of blood scattered about, the bush cattle would refuse to go into the yard, and then we turned the working bullocks in amongst them to lead them into the pen.
1462. Were those working bullocks killed? No, they were not.
1463. They were left to live if they could? Yes.
1464. And are they alive now? They are.
1465. And yet they were constantly mixed with diseased cattle? Yes, both dead and alive.
1466. *By Mr. Hay*: How many of these workers were there? Six.
1467. Were they ever affected with the disease? No. The Commissioners said they were affected, and I thought at one time they were so, but they are all alive now, and fat.
1468. *By Mr. Leary*: Were they inoculated? No, I think not.
1469. Were you at the meeting at the Ten Mile Creek at which it was recommended that a compensation of £2 10s. per head should be paid for all cattle slaughtered? No, I was not.
1470. Were you aware that a recommendation had been made by the squatters of that district, that compensation for cattle slaughtered should be made by arbitration, deducting twenty-five per cent. from the proved value of the herd, on account of the disease? Yes, I heard of that being recommended, but I was not present when the recommendation was agreed to.
1471. If that recommendation had been carried into effect, would it not have increased the amount you would have had to receive from the Government very considerably? Yes; and it would have satisfied all parties, because then they would have received something like a fair valuation for their herd, instead of being paid at a fixed rate, no matter what was the value of the beasts destroyed.
1472. At what time were the 300 head that you brought from the Mitta Mitta destroyed? They were the first lot slaughtered.*
1473. About the 23rd November? Yes, the first lot of 300 were killed.
1474. What were the duties of the Commissioners appointed by the Government? I do not know. They never came to our yard whilst the cattle were being slaughtered, or to our house, though I was informed that they rode across our run.
1475. When were you paid the price promised by Government for the cattle destroyed? I think it was in July last.
1476. Eight or nine months after the destruction of the cattle? The cattle were killed in November, and the Government paid us in July. A short time before they were killed I had bought a lot of store cattle at £2 7s. per head, on a bill at six months. That bill was due some three months after the cattle were killed, but the Government did not enable us to meet it, by paying their part of the price of the cattle they had slaughtered, nor did they pay until some six months afterwards.
1477. If your cattle had not been killed or placed in quarantine, you would probably have sold sufficient from the herd to enable you to pay this bill? I do not know that.
1478. Did your run remain unstocked from the time of the destruction of your cattle up to the time when payment was made by the Government? There were some cattle left on the run, but I may say that it was unstocked.
1479. Have you had to pay the assessment on your run during that time? Yes.
1480. What price have you been in the habit of getting for your fat cattle during the last five or six years? Never less than £5 a head, until the last mob which started just before the run was placed in quarantine.
1481. You have got £7 a head? Yes, we have got as high as £7.
1482. Are you aware whether Mr. Bruce ever saw this disease of pleuro-pneumonia before he saw it at the Billybong? I understood from him that he had not.
1483. You have stated, I believe, that you have seen cattle suffering from the disease of pleuro-pneumonia, which, not having been killed, had recovered, and had lived to get fat afterwards? Yes.
1484. Have you seen cattle badly diseased, that have recovered and got fat? I have seen one or two instances of the kind; but I have seen very many that have recovered, though they have not yet had time to get fat.
1485. Have you any of your original cattle on your run now? Yes, we have one lot alive now in which the Commissioners said there was not one sound beast.
1486. How many in that lot have died? None.
1487. How many are there in the lot? About thirty or forty head; they were the milking herd, running about the house.
1488. *By the Chairman*: Why were they not destroyed? We considered that the only object in slaughtering the cattle was to prevent the disease from extending to our neighbours or others, and this was a lot that was always hanging about home, and therefore not likely to

* NOTE (on revision):—I entirely misunderstood this question. I could not possibly say so, as they were mixed through the entire herd.

to carry the contagion. As we required beef and milk for the use of the place, we determined upon keeping this lot. They never strayed away from home, and therefore no risk was run. H. J. Bowler,
Esq.

1489. *By Mr. Leary*: You have said that in casual conversation you stated that Mr. M'Laurin would do well to get the price the Government had offered for his cattle—was that owing to the disease being in his herd, or to some other circumstances? I was not a valuator of his herd, and from what I had seen of it I thought it a good price. I had then only seen his tailing mob, and I considered he had done well in getting the price for them. I may say, however, that I do not actually remember having said so, though I admit that I may have done so. 30 Sept., 1862.

1490. *By the Chairman*: How many were there in this tailing mob of Mr. M'Laurin's? I should say 400 or 500 head.

1491. *By Mr. Leary*: Even if you did say so, people very often say things in casual conversation that they would not say if called upon to give a definite opinion? Yes; like many other people I may have spoken without knowing rightly the matter I was speaking about. From what I know now of the sort of cattle he put on his run, I should not feel inclined to make the same assertion.

1492. *By Mr. Raper*: Do you know why the Commissioners gave you the privilege of discontinuing the slaughter of your cattle if you liked? They considered that pleuro-pneumonia had extended over such a vast space that the Government would not be in a position to pay for all the cattle slaughtered to prevent its extension. I believe, though I am not certain as to this point, that they recommended that the slaughtering should be discontinued. Having done this, they thought that we might as well have the same privilege as others, and keep our cattle alive if we thought proper.

1493. Was it because the remainder of your herd was not so badly diseased, or had only a small appearance of disease, or was it because the Government were not in a position to pay, that they were induced to make you the proposal to discontinue slaughtering? I know of no other reason they had than the fear of entailing such a heavy expense on the country.

1494. *By Mr. Leary*: Your father's petition is dated the 20th January, 1862? Yes.

1495. What is the reason that it was not sooner presented to the House than it has been? I do not recollect the cause of delay.

1496. Was it not forwarded to Sydney for presentation to the Assembly, and were you not informed that Parliament had closed before it reached town? Yes, I remember now that such was the case.

1497. This petition was written just after the cattle were slaughtered? Yes, according to the date it bears, it must have been so.

1498. *By Mr. Raper*: You say that Mr. Bruce had no knowledge of the disease before he saw it there—did he tell you so? I did not say that he had no knowledge of the disease, but that I inferred from what he said, that he had never actually seen a case of pleuro-pneumonia till he saw it there.

1499. Did you ever see Mr. Pottie on your station? No.

1500. Did you ever see him and the Commissioners examining cattle after they had been killed? No, I never saw him whilst he was up the country at all.

1501. Did you hear whether he agreed or disagreed with the Commissioners as to what were to be regarded as symptoms of the disease? I heard Mr. Smith, of Gamba, state, that Mr. Pottie differed from the rest of the Commissioners upon one case. He differed with them upon one occasion, but I do not know whether he differed in opinion with them generally.

1502. *By the Chairman*: I think you stated that you did not receive the compensation awarded by the Government until July? I did.

1503. Did you consider it necessary to render an account to the Government of the number of cattle destroyed, before you could receive payment—would not that be necessary before your claim to compensation could be taken into consideration? Yes.

1504. How long after rendering your account was it that your compensation was paid? I am not positive as to the date when our account was sent in; but I know that very little time was lost in doing so, after the cattle had been slaughtered. Mr. Bruce will perhaps be able to give you the exact date, as he will be better informed on the matter than I am, since the accounts passed through his hands.

1505. *By Mr. Hay*: Had you sent it in at the time when your petition was signed—on the 20th January? Yes, I think it was sent in before that.

1506. *By the Chairman*: If it was necessary to send in an account, you think that one was sent in, and sent in early? Yes; my impression is, that it was sent in directly after the slaughter of our cattle; that is, as soon as possible after our books had been balanced.

1507. Do you think it was sent in before the month of June? I should think that it was.

1508. *By Mr. Leary*: Was there one of the inspectors at your place during the whole time that the cattle were being slaughtered? Yes, a sub-inspector.

1509. And did he keep an account of the cattle destroyed? Yes.

1510. And that account was kept on behalf of the Government? Yes.

1511. Did you consider it necessary to furnish the Government with an account, or did you think that the Government ought to pay you without such an account, seeing that they must have been aware, from the records of their own inspector, of the number of cattle destroyed? I should think it necessary to send in an account, notwithstanding the record kept by the sub-inspector.

1512. *By Mr. Hay*: You think it was necessary that you should make a demand of payment in the first instance? Yes, I think it was.

1513. Do you know whether your father was at any of the meetings held in the district upon the subject of this disease? He was.

- H. J. Bowler, 1514. He is the Mr. S. Bowler whose name I see mentioned as taking part in some of them?
Esq. Yes; I have already stated that some member of our family was present at every meeting held.
- 30 Sept., 1902. 1515. Was he present at the meeting of the 19th October, when a resolution was agreed to recommending the destruction of the entire portion of the herd in which the disease was found to exist? I am not sure whether he was or not.
1516. You were not there? No.
1517. Were you at the Ten Mile Creek station at the time? No, I was at the Mitta Mitta station.
1518. Were you present at the Ten Mile Creek when they commenced killing? Yes.
1519. What time was that? In the early part of November.
1520. You did receive payment, in the month of July, at the rates authorized by Government, for the cattle of yours that had been destroyed? We were paid for all the cattle that had been killed up to a certain date; I think it was for the 300 head that were first slaughtered.
1521. And since then you have been paid for the remainder? Yes.
1522. When was that? Either in July or August.
1523. July was the time when you say you were paid for the 300 head? I am not sure as to the date, because my father received the money; I only know that it has been paid.
1524. You did not receive interest on the amount that remained so long unpaid? No, we did not.
1525. You did not consult the inspector before you made up your mind not to kill those quiet cattle about the place, to which you have alluded? To know if we might keep them?
1526. Yes? No. After we had killed the 300 head, the inspector informed us that we might discontinue killing if we liked. We did not discontinue killing, for the reasons I have already given, and slaughtered the whole of the herd, with the exception of this little lot that were accustomed to stay about the house, and that we required to furnish us with milk and beef.
1527. You did not intimate to the inspector, when you told him that in spite of his permission to discontinue, you should go on killing, that you intended to keep this little lot? I do not remember doing so.
1528. Did you look upon the condemnation of your herd as a sort of bargain on the part of the Government with you, so that when they commenced killing your cattle, and had killed so many as 300 head, they were bound to complete that bargain by killing the remainder, and giving you compensation for the whole? Yes, I considered that when once the Government condemned the herd they virtually took possession of the whole of the cattle.
1529. Were you employed by the Government to kill the cattle? Yes.
1530. Did it strike you that this being, as it were, a matter of bargain between you and the Government, there should be some sort of reciprocity in the matter? Yes, I considered that it was a bargain between us and the Government, and that one party was equally bound with the other to carry it out.
1531. *By Mr. Raper*: Was this small lot of forty included in the herd condemned by the Commissioners? I suppose so, since the whole herd was condemned. I did not know, however, that the fact of our keeping this little lot for our own use could be construed into a breach of agreement with the Government.
1532. Were these forty head included in the number that the inspector ordered to be killed, and that you got paid for? Yes, they were included in the number of those that were condemned.
1533. And were they included in the number for which you sent in returns and got paid? No, no claim of payment was made for them.
1534. *By Mr. Leary*: If the Government had stated to you, in the first instance, that they would not destroy your cattle unless you liked, leaving it optional to you to slaughter or not, as you thought proper, but giving you 30s. a head for all that were killed, would you have destroyed your herd? Our wish always was, that there should be no Government interference in the matter, but that we should be left to manage it for ourselves; but when they came to put the whole district under quarantine, rather than have our cattle under quarantine for an unlimited period, we let the Government take the whole herd, because the cattle were completely valueless to us whilst they were shut up on the run and could not be taken to market. Then, again, the settlers up there never recommended this 30s. a head compensation.
1535. Did you take legal advice in the matter? No.
1536. And you were under the impression that the Government could take what they liked and could do what they liked? Yes; and I rested my opinion upon what had taken place between the inspector and myself, as I have detailed to the Committee. They seemed to do entirely as they liked. They took possession of the herd, ordered it to be slaughtered, and then fixed a price as compensation to suit themselves.
1537. From your experience of the effects of pleuro-pneumonia, would you have been a loser by the slaughter of your cattle, even though the compensation paid had been £2 10s. per head? Yes. The worst cattle on our run were those that my father bought from Mr. White, and he paid £2 7s. 6d. per head for them three or four months before. The others were all quiet cattle, broken-in to the run.
1538. *By the Chairman*: Do you wish to make any further statement to the Committee? I would wish to say this: That there seems to be a general impression that the settlers were consulted before this course of proceeding was determined on; in fact, that they recommended the destruction of their herds. This is not the case at all. During the month of October last a meeting of settlers was held, at which were adopted resolutions recommending the slaughter

of small mobs of cattle in which the disease might be found to exist. In November following, however, the Government appointed Commissioners to define the areas in which disease existed. This was done, not with reference to small mobs, as recommended by the settlers, but to areas of country the whole of which was to be regarded as infected, and the cattle on it liable to slaughter. Thus, if a diseased beast were found at the extreme end of a run, the whole run would be put in quarantine, and the whole herd slaughtered. Such a thing as that was never recommended by the settlers, nor did they, as a body, ever approve of the fixing a uniform rate of payment for all herds slaughtered. It is true that a meeting was held once, at which the Government were recommended to pay compensation at the rate of £2 10s. per head; but afterwards, when I heard the matter talked over, I found that the uniform rate of payment was always objected to.

H. J. Bowler,
Esq.

30 Sept., 1862.

1539. *By Mr. Leary*: What was suggested in place of this uniform payment? There was no distinct resolution regularly agreed to.

1540. But what was the impression of the squatters as to what would be fair towards all parties? The impression was that there should be a difference made in the value of sound and of unsound cattle; that the state of health of the herd should be determined by a Commission; and that the value of the cattle should be determined by arbitration, 25 per cent. of that value to be struck off for diseased cattle.

1541. *By the Chairman*: Would there not be some difficulty experienced in ascertaining what cattle were sound and what were diseased, seeing how much difference of opinion exists on this question? I fancy there would be; but it seems the inspectors found none, when they directed the slaughter of whole herds.

1542. *By Mr. Leary*: Then a recommendation was made by the squatters that compensation should be awarded by arbitration, twenty-five per cent. being deducted from the value of such beasts as were diseased? That was proposed at one meeting, but I do not know whether it was adopted or not.

1543. Can you state positively that such a proposition was made? No, I cannot; I have only heard that it was.

1544. *By Mr. Hay*: Was it a distinct proposition or was it only talked of—was it a resolution? I am not positive on the point, but to the best of my belief it was a resolution.

1545. Do you believe that this would be a fair means of determining the value of a herd? Yes. I have heard several plans proposed, but I think this would have proved the fairest.

1546. It has been stated that this plan of compensation was recommended to the Government by the Commissioners? Yes, I heard that it was so.

1547. You have received no compensation beyond that which was first paid to you? No. The plan that appeared to meet the views of the stockholders generally was, that the price of sound cattle should be fixed by arbitration. If a herd was condemned, the arbitrators should say what the sound cattle were worth; then after the cattle had been slaughtered, and it had been ascertained how many were diseased, a low rate of payment should be fixed for the diseased beasts, whilst value according to the rate decided by the arbitrators should be given for the sound ones. I have already stated in evidence, that a short time previous to our herd being condemned we sold cattle in Melbourne at £3 or £3 10s. per head; and that when we started these cattle for the Melbourne market we were aware that the prices were low, but one reason for availing ourselves of it was, our knowing that our run would be placed in quarantine in the course of a few days, and that it was better to sell them at a less rate than to have them locked up in quarantine. This was a thing we had never done before, because we do not sell our fat cattle until the winter months, and not under £5 a head; nor should we have done it then but for this quarantine system. If we had kept on this year as we had done last, we should have got £5 a head easily this winter, because Mitchell's and Heriot's cattle brought that price readily in the Melbourne market.

1548. *By Mr. Hay*: As it happened, then, you were unfortunate in taking the resolution to kill the remainder of your herd? Yes.

1549. Because you would have received a higher price from them than you will get from the Government? Yes; but I have explained that we took that resolution because we did not know when the quarantine would be removed, and when we should be allowed to take cattle off it or to bring on it fresh cattle from the Mitta Mitta. The run is idle at present, but we are about stocking it again now, although we shall have no returns from it until after next winter.

1550. *By the Chairman*: Are you now putting cattle again on the Ten Mile Creek Station? Yes.

1551. Is it not adapted for sheep? I do not understand much about the nature of a good sheep country, for my attention has been chiefly given to cattle. I have seen them tried on the Upper Billabong, but they are subject to foot rot there.

1552. *By Mr. Hay*: It is not generally considered to be a good sheep country? It is not.

1553. However, it is a good cattle country? Yes.

1554. Cattle going from this Colony into Victoria have to be subjected to inspection? Yes.

1555. At particular places along the river at which it is customary to cross? Yes; but there is no place higher up than Albury at which they are examined. Cattle that are brought over from Victoria into New South Wales have also to be examined and to be subjected to inspection.

1556. *By the Chairman*: Did Mr. Smith, of Kyeamba, state, at the meeting you have referred to as having been held in December, that there was no disease on his run? Yes.

1557. *By Mr. Hay*: Did that gentleman take an active part in that meeting? Yes, I believe he proposed one or two of the resolutions.

1558. At the meeting held in December? Yes.

- H. J. Bowler, Esq.
30 Sept., 1862.
1559. *By the Chairman*: Have you anything further to add? Only as regards our loss. We generally sell off the Ten Mile Creek Station, every winter, from 400 to 500 head of fat cattle, and of course this winter there have been none sold. All that have been taken off the run have been the 120 that were sold in the spring, and these would not have been sold until our usual time in the winter, if it had not been that we knew our run was to be placed in quarantine.
1560. You say the spring;—do you mean the spring of this year? No, the spring of 1861. We made a sale then of 120 head; and there were also some sixty head that we sold some few months previous to that, making 180 head. These, with ninety head that we sent to Braidwood, have been all the return we have had from the herd during this year; whereas the usual return, under ordinary circumstances, was about 500 head; and these were always ready for market when the prices were high.
1561. What amount have you received from the Government? Altogether?
1562. Yes? I really do not know the precise amount. I know that the total number destroyed was 1,198, for which we were to receive 30s. per head; and then there were some fifty odd under two years old. But besides the loss on the value of the herd, we have also lost our usual annual return from it for the next two years.
1563. *By Mr. Leary*: The return from the annual sale of fat stock? Yes.
1564. *By Mr. Hay*: How long would it have taken you, judging from the experience of former years, to have sold off all these cattle you put on the run, as fat cattle? We should have sold 500 head last winter, and the same number next winter, leaving a remainder of 200 head on hand. We generally put fresh cattle on the run in the autumn, tail them during the winter, and then these are saleable during the following winter.
1565. In the course of about eighteen months after being put on the run? Yes.
1566. *By the Chairman*: But out of that number you would have had a heavy decrease from deaths, supposing the herd had not been slaughtered? From the experience I have since had of the effects of pleuro-pneumonia, I am not inclined to think that the decrease from deaths would have been very heavy.
1567. But the decrease from deaths is greater in a herd of fat cattle than in a herd of store cattle? Yes, that I believe, if the cattle are kept on the run, and not at once sent to market.
1568. *By Mr. Hay*: However, I suppose that as you have taken the trouble of inoculating your herd, and the risk of loss thereby, you do not consider pleuro-pneumonia to be a thing altogether to be contemned? No; but on the other hand, it is not a thing to be so alarmed at as we were at first.
1569. But it looked very frightful and alarming in the first instance—was not that your impression from what you saw at M'Laurin's? Yes, it certainly looked very serious; but I do not think that if his herd had been left alone, the bulk of the herd would have been affected to any extent.
1570. *By Mr. Leary*: Was this period when the disease was raging so frightfully a very wet season? It was wet, but not unusually so. The spring months are generally wet months in that part.
1571. There are usually deaths on a cattle run in wet seasons? Yes, there are frequently deaths at all times; but just then people were in such a panic, that every death that occurred was at once put down to pleuro-pneumonia.
1572. *By Mr. Hay*: It is not usual to have many deaths in a herd of cattle kept for fattening purposes? No, the per centage of deaths is very small.
1573. The principal deaths on a run occur amongst old cattle, or amongst female cattle when calving? Yes; the greater part of the runs in that part of the country are used for breeding and for fattening purposes conjointly. There are very few that are kept for fattening purposes only. I believe that the Ten Mile Creek and Henty's Station are the only two that are kept as fattening runs solely—at least I know of no others. A herd on such a run as that must of course be much more valuable than an ordinary mixed herd; and that was the main reason why I objected to having a uniform rate of compensation fixed upon.

FRIDAY, 3 OCTOBER, 1862.

Present:—

MR. HAY, | MR. LEARY,
MR. MATE.

HUGH GORDON, ESQ., IN THE CHAIR.

John Pottie, Esq., called in and examined:—

- J. Pottie, Esq.
3 Oct., 1862.
1574. *By the Chairman*: You are a veterinary surgeon, I believe? I am.
1575. Did you receive an appointment from the Government to report upon pleuro-pneumonia? I did.
1576. When were you appointed? On the 26th or 27th November.
1577. Did you receive any instructions before you left Sydney? I received papers with my instructions on the day we started.
1578. What were your instructions? That I was to accompany the Commissioners—Messrs. Garland, Bruce, Day, and Meyer, and to examine the cattle pointed out by them, and to report on the condition of those cattle, and the condition of the disease. That was the amount of my instructions; I had no instructions to go further.

1579.

1579. No particular locality was mentioned? No, I do not think any particular locality was mentioned. J. Pottie, Esq.

1580. You were merely to accompany the Commissioners, and to report? Yes.

3 Oct., 1862.

1581. Will you describe what took place? We started—that is, Mr. Garland and I—for Ten Mile Creek. We stopped on the way at the station of Mr. Smith, of Kyeamba, and he said that Messrs. Bruce, Day, and Meyer, had been there examining his cattle, and had found the disease on his run. He showed me a lung, or part of a lung, and requested me to state whether I considered it diseased or not. It had been kept for some time—I am not prepared to say how long—and it was somewhat difficult to say in what state it was, for it had been mangled, not cut but mangled, and I think had been kept in salt. I looked at it, examined it, and said I did not consider that part of it diseased. I was afterwards informed by Mr. Day, that the part of the lung which Smith showed me was a lung taken from a healthy animal, which he himself had killed the day the Commissioners were there, so that the lung which the Commissioners examined previously to my arrival was not the lung shown me. The next morning we proceeded to Yarra Yarra—Mr. Garland, Mr. Bruce, and myself—there were also some other parties. I saw some hundred or perhaps more cattle yarded. I looked at them and said, “The disease is here,” and pointed out some of them that were diseased. They were in the act of killing these cattle, and I told them to kill two and take them out to me; I did not pick them out, but they took them as they came to hand. I examined them, and did not find any disease in these two cattle. Then I picked out twenty myself, and these were knocked down,—there were a hundred knocked down, but I picked out these twenty, and they were all diseased more or less. I was then taken to another yard nearer the house, and one cow was shown me that they said was diseased. She was killed, and I found her in the last stage of pleuro-pneumonia. That finished, I think, the day’s work. I made inquiries of others with respect to the herd—how long that herd had been on the station—and I found that part of it had been on the station for some time, and that part of it had been brought from Mitta Mitta, and I was informed that those cattle I now saw were the worst of the herd of cattle—what they call the scrubbers.

1582. When you say the worst, you do not mean the worst as regards disease? No, the worst cattle on the run. Of course a good deal of conversation took place as to getting the cattle in. He stated that he was not assisted by the squatters in bringing the cattle in, and that owing to that many of his cattle had strayed away to other runs.

1583. A complaint was made? Yes.

1584. By whom? By both the brothers, Messrs. James and Robert M’Laurin. I looked at the book which was kept by Gordon, the sub-inspector, in which was entered the number of cattle killed, the state of the lungs when examined, the number that were diseased, and the various stages in which they were found to be diseased. I stood beside the sub-inspector for some time, to see what sort of examination he made, and to judge of the conclusions he came to as to the state of the cattle, and I was satisfied that he was able to detect the disease in many of the stages. The next day we started from Ten Mile Creek, and went on to Purtell’s run. I was informed that some Yarra Yarra cattle had strayed on to this run, and we picked out some cattle and had them killed; I forget exactly the number, but all of these showed symptoms of the disease. These were cattle with Purtell’s brand, at least some of them had his brand. Then we went from Purtell’s to Mullengandra, that was the next run, Mr. Morrice’s, and we examined several cattle there. These cattle were not so bad with the disease, but they had symptoms of it, in what we call the first and second stages. Then we went to Hore’s, I think—I am not quite positive—but we took the runs in the regular line to Albury, Hore’s and Mitchell’s, and so on, and on all these runs we found the disease. Mr. Hore’s run was certainly freer from the disease than any of the others, neither did the lungs nor the cattle appear to be so bad as those upon other stations. We next visited Albury Common, and found the disease there. The slaughter-houses I next visited; I found no disease the first time, but I did the second.

1585. What slaughter-houses do you allude to? The slaughter-houses round Albury; I forget the names of the proprietors, but one of them belonged to Hore’s nephew. We found diseased cattle there; one of these cattle (I forget the brand) must have come from the salt-bush country—at least it was so settled by the Commissioners, who understood the country better than I did. We then started from Albury to Wagga Wagga, examining several runs in our way, and finding disease in all the runs we examined. At Wagga Wagga we examined the cattle in the pounds, and we found disease there also. I was unwell at Wagga Wagga, and could not go out for two or three days; but there were various places examined by the Commissioners, and the pieces of lung which they brought to me were diseased. Then we examined a run across the Murrumbidgee, Robey and Jones’; there was no disease on that run. We then went to White’s run, and we found disease there. I was informed that many of Mr. Bowler’s cattle had been purchased here and brought from this run; I was also informed that many of Mr. Bowler’s cattle had been seen making their way back to Mr. White’s run. We saw one animal at Crisp’s, but failed in shooting her. We then returned to Wagga Wagga, and I went back to Ten Mile Creek, and thence to Yarra Yarra again.

1586. About what time did you come back? About the latter end of December. They were still continuing to kill cattle, and I attended the killing yards for two days at that time, along with the sub-inspector, and found what I had found before—a great deal of disease. I started from Yarra Yarra yards with Inspector Bradley, for Mr. Bowler’s, intending to get in some wild cattle for the purpose of examining them, but we could not get them in, as we had no hands to assist us. I was then requested by the Commissioners to come on to Albury to draw up a final report, which I did. That was the last report I sent from that place. Two or three days after that, Mr. Garland and I were ordered by telegram to come on to Sydney.

J. Pottie, Esq. 1587. About what time was that? We started about the 4th of January, I think, to come to Sydney. I gave the substance of my report, a short rehearsal of it, to Mr. Robertson, described the state of the cattle, the state of the disease, and explained some points in my report.

3 Oct., 1862.

1588. Did you send a distinct report to the Secretary for Lands respecting pleuro-pneumonia? Yes, I did.

1589. Did that report contain a full account of the symptoms of the disease in all its stages? Yes, it contained what I call a full popular account. I did not think it necessary to enter into all the scientific detail.

1590. Did you, in that report, state where you visited, and in what state you found the cattle where you went? I sent several reports descriptive of the state of the disease at the various places I have here mentioned. The last report I sent in was especially devoted to a description of the disease itself. I have sent in some six or eight reports altogether.

1591. Have you them with you? No, they will no doubt be found in the office of the Secretary for Lands.

1592. Will you state what you have been doing since you came back from the part of the Colony of which you have been speaking? Since then I have been inspecting the County of Cumberland and part of Camden, and have found the disease in various localities. In all those localities I have found the disease brought there by working bullocks. All the working bullocks that have taken the disease have died. I have found these working bullocks with the disease travelling and dying up as far as Mudgee. That, of course, is from the testimony of the owners of those bullocks. I found that one party near Rooty Hill had a sale, and was disposing of diseased cattle; I immediately went and saw him, and told him he had better keep such cattle as were not taken away, on his farm; I also sent information to the various purchasers that the cattle they had purchased at Rooty Hill had been mixing with a diseased mob, and that fifteen of that mob had died. I have given information to various bullock owners on the road, and also to those who have called upon me, with respect to the symptoms of the disease and the best steps to take for the benefit of themselves and the country. In all cases I have advised them to kill the animals that are bad, and to inoculate all the other cattle that have any chance of coming in contact with a diseased mob. The results of inoculation, in such cases as I have had opportunity of closely observing, have been satisfactory; that is to say, only a few cattle have died from the effect of the disease since inoculation—that is, from the natural disease. Some have died from inoculation; that I call the artificial disease—the other I call the natural. I have also made it a point to inspect the various teams which enter Sydney, and have given parties on the Parramatta Road instructions to give me the earliest notice of any diseased bullocks they may see on that road.

1593. *By Mr. Leary:* Are you now acting as inspector? As inspector for the County of Cumberland.

1594. *By the Chairman:* Have you anything further to add to your statement? There are certain recommendations made in the reports I have handed in to the Secretary for Lands. I cannot recollect all the recommendations, but the principal one is that contained in the last report—to have all working bullocks inoculated.

1595. Are you a duly qualified veterinary surgeon? Yes.

1596. Where did you study? In Edinburgh.

1597. Had you any experience in pleuro-pneumonia among cattle there? Yes, a very great deal among dairy stock, in the farms about. In fact it was very virulent while I was there.

1598. In what year was that? I have had experience of it in the years 1855, 6, 7, and 8. I also saw something of it in 1859.

1599. Were the symptoms in the cattle there similar to those which have exhibited themselves in the cattle here? The external symptoms are very much alike, that is to say, such of the symptoms as can be noticed in the bush cattle here are the same as those seen in dairy stock; but among dairy stock generally the digestive organs are early deranged, and from the *post mortem* examinations of the digestive organs of bush cattle it does not appear that there is such derangement.

1600. Did the disease show itself in a more virulent form in Scotland than it appears to have done, so far as it is known, in this Colony? It has been more virulent among dairy stock at home.

1601. And cattle in general? Yes, I believe it has been more virulent, more fatal among dairy stock at home than it has been among bush cattle here; such as I have seen.

1602. Do you consider it either infectious or contagious? My opinion is that it is both infectious and contagious.

1603. How do you suppose the disease was propagated in the first instance? I believe it may be propagated by the air—the diseased animal contaminating the air. This may take place in a variety of ways. The air may be contaminated by the breath, or by the discharge from the nose or mouth dropping and becoming dry, like dust floating in the air, becoming, in fact, part of the air. In this way it may be communicated through the air. I believe, from observations made upon dairy stock, which can be more easily noticed than bush cattle, that they are extremely liable to be affected through the organ of smell, and I believe this disease is communicated to a great extent through that organ. Then I believe it is contagious, and this, I think, is proved by the fact, that by inoculation we can produce an artificial disease by means of virus taken from a diseased animal. We cannot, so far as our experiments have been made, produce lung disease by inoculating another part of the animal, but we can produce a disease similar in its character, in another part of the animal, to that which we find produced naturally in the lungs.

1604. After the disease attacks an animal, is the period of incubation long or short, in your opinion? There are a great many cases which I have seen, which go to prove that between the

the period of incubation and the first visible symptom to the eye, there may be a long J. Pottis, Esq. period—perhaps months. The cow which came from England to Mr. Boadle's farm, at Victoria, did not show symptoms of disease for six weeks after she was landed, and she was, 3 Oct., 1862. I suppose, three or four months on her voyage.

1605. Were there any other cattle on board the ship besides herself? Of that I am not positive. There was nothing of that mentioned at the first meeting, for I was at the first meeting at Melbourne. I have seen other cases at Home which would confirm that idea. I may mention one which, I think, is a clear case; it is the case of a cow belonging to my father, who was a veterinary surgeon. He was attending some cattle affected by the disease on a farm three miles off. This was the first appearance of the disease in the west of Scotland; and the disease on this farm was attributed by him and by other veterinary surgeons who visited the place, to have taken its origin from some hides which were imported from the Continent, and passed up the canal which ran through the paddock where the cattle were grazing.

1606. What part of the Continent did they come from? I think from Holland. The next animal that was seized was my father's cow, which was three miles distant from the place where the disease first appeared, and there was no way of communicating the virus but through him. I am not prepared to state the length of time, but I know it was a considerable period before our cow showed external symptoms of the disease. It would be difficult to state the period between the incubation and the appearance of the first symptoms. In the artificial disease it is generally a question of only five or six days; but when the virus is taken in by the breath in small quantities, and enters into the blood, as it is believed to do, and is then deposited in the lungs, which is the natural process, it is of long duration in many cases. Of course, in all cases the duration is not the same—it would depend upon certain circumstances; but there are numerous cases on record to prove that a period of long duration often elapses between a diseased animal being introduced into a herd, and the first appearance of disease in that healthy herd.

1607. Has the first symptom of the disease been ascertained? The first external symptom noticed in dairy stock, among milkers, is the giving of less milk.

1608. But among store cattle, or fat cattle, what, in your opinion, is the first symptom? The swollen eye is generally recognized as the first symptom—as a single symptom.

1609. How long, in ordinary cases, would it be before the next or second symptom would appear? The second we recognize is the dull, heavy, languid appearance, and an effusion of purulent matter from the nose, with heaving sides, arched back, and staring coat.

1610. Do you think the second symptoms would be sufficiently marked to enable any stockholder to know that a beast was attacked by some virulent disease? Yes, I think they would.

1611. How long, from the time of contracting the disease, would it be before these second symptoms would make their appearance in ordinary cases? I may say it has never been positively settled, and there is difficulty in settling the question positively; but the cases I have given, and others which you will find mentioned by writers on the subject, go to show that, if the animal be under favourable circumstances—that is to say, if the animal keeps on feeding—the secondary symptoms may be a month or two before they make their appearance.

1612. What is the first *post mortem* symptom of the disease? The first *post mortem* symptom of the disease is, that part of the lung appears like a bladder; you press on it and it will not collapse, and you see here and there little red fleshy patches. These patches may be distinguished from congestion by the fact that the blood in congestion may be squeezed out of the congested part, but you cannot by the same means squeeze the red colour from this fleshy diseased part.

1613. Would this appearance present itself in a sound beast? No, it would not—you would have something near it; but you observe the test I have stated, you may press out the blood in cases of congestion but you cannot in cases of pleuro-pneumonia.

1614. Might not a somewhat similar appearance be presented in the case of a beast being driven or run hard? No; congestion might be produced in the case of a beast hard driven, but the distinction will be as I have stated.

1615. Would there be any difficulty in an inexperienced person coming to a proper conclusion—will there not be a similarity of symptoms in the case of a diseased beast and of a beast run hard? If a person merely looked at it he would be deceived, but if he took the lung in his hand and tried to squeeze it, the blood would flow out of the lung that was congested, but it would not flow from the diseased lung.

1616. How long, in ordinary cases, would it be before the secondary symptoms would make their appearance internally—how long a time has elapsed between the first and second periods in cases that have proved fatal? It is difficult to fix the time; the question is something tantamount to the question put before. If the animal were placed under favourable circumstances it would take a long time, if under unfavourable circumstances, it would not be long; that is to say, in one case it would be a question of months, in the other it would be a question of weeks.

1617. *By Mr. Leary:* Do you mean, by unfavourable circumstances, cattle running out on a station? Yes. Suppose it is the winter time the animal has the disease, feed is bare, the weather is cold, it takes an animal of good health and strength to withstand the season; but if an animal is allowed, when under disease, to live as it used to live, I would look upon those circumstances as unfavourable.

1618. Favourable circumstances, I presume, are when the animal is put in a stable and has good feed? When put under shelter and taken care of.

1619. *By the Chairman:* How long, under ordinary and favourable circumstances, is it before hepatization sets in on the lungs, in the case of a beast affected by pleuro-pneumonia? Hepatization may take place in two, three, four, or it may be five months.

- J. Pottie, Esq. 1620. You sent in a report on the cattle killed at Yarra Yarra? Yes.
- 3 Oct., 1862. 1621. You said they were all more or less affected by pleuro-pneumonia? Yes.
1622. You have stated that you took about twenty out of the yard and examined them? Yes.
1623. How many were there in the yard? I should say about 100; and in the other adjacent yards from 200 to 300.
1624. You suppose they were all more or less diseased? Yes.
1625. I think you stated that two were killed that were not diseased—that showed no symptoms? Yes, they were the first two that were taken.
1626. Do you not think it extraordinary that these two should not be affected, being among a number of others that were all diseased? These two were bad with tuberculosis, or tubercles of the lungs.
1627. What is the ordinary name of that disease? I think it is called rot of the lungs.
1628. Have you ever seen that disease in this country? Yes, in the slaughter-houses.
1629. Is there any similarity between that disease and pleuro-pneumonia? No, I have never seen any similarity.
1630. Would an inexperienced person be likely to mistake one disease for the other? If he had never seen the two diseases he would be apt to confound the suppurative stage of pleuro-pneumonia, which is a stage that pleuro-pneumonia seldom runs into, with tuberculosis. This is the only stage in which the one disease could be confounded with the other.
1631. I think you said that you saw Sub-inspector Gordon taking account of the cattle that were destroyed? Yes.
1632. Did he take an account of all the cattle that were destroyed at Yarra Yarra during the whole time? While I was there he stood at the gateway where the dead cattle were taken out, and none were opened without his orders; he noted down the age of the cattle, the brand, and the appearance of the lungs.
1633. Did you see these cattle and hear his report? I was standing beside him, and saw what he wrote down.
1634. Do you think he was able to give a correct opinion? He was when I was there.
1635. There was another inspector, named Bradley? Yes.
1636. Did you see anything of him? I was with him two or three days; he was along with me at Yarra Yarra, looking at the cattle; he opened one or two, showed me the lungs, and told me to what stage they had advanced in the disease. I had various conversations with him upon the subject, and I considered him to be, at any rate, as well versed as Mr. Gordon in the disease.
1637. You do not think either one or the other could make a mistake about the disease? Not when I saw them.
1638. When you say, not when you saw them, do you think there was any difficulty previous to this? There might be a difficulty—that is to say, if they had commenced to take the state of the cattle previously to having seen any disease; but Bradley, I believe, was the man who first killed at Yarra Yarra, before the Government interfered at all—at least, he told me so. He said they had killed 200 head of cattle on Yarra Yarra previous to the Government interfering in any way. I think having seen those 200 he must have had a knowledge of the disease.
1639. Do you know, of your own knowledge, whether Mr. Bruce is acquainted with the disease? I never saw Mr. Bruce till I went there, and certainly, from the report he sent down —
1640. I am speaking of your own knowledge? He picked out a great many cattle for me; they were shot down and opened, and I found the whole of them diseased.
1641. Had you any opportunities of knowing whether Messrs. Day, Meyer, and Bruce were anyway acquainted with the pleuro-pneumonia? Yes; when I went there I found that they had killed and examined some cattle, and afterwards they picked out cattle for me from the various mobs which were shot down, and they were right in all cases.
1642. Your opinion is, that these gentlemen's reports are to be relied upon, as far as the appearance of the disease in *post mortem* examinations is concerned? Decidedly.
1643. What is your opinion of inoculation as a preventive—do you think it is effective? Yes.
1644. Both as a preventive and curative? Yes; but used as a curative, if the cases are bad, inoculation must be performed severely, and in vital parts.
1645. I think you said you recommended the destruction of cattle that were badly attacked by pleuro-pneumonia, in preference to inoculation? All cattle that I considered irrecoverably bad; of course the way to know that, is to auscultate them, by applying the ear to the chest; you then know the state of the lungs. In the worst stage I would destroy and burn them.
1646. How many have you operated upon? I have operated upon seventy-seven that I can speak positively upon; these I have seen several times.
1647. Do you know the result in those cases? Yes; the result has been two deaths or three, I will not say positively. We inoculated the greater number in the tail; we made a slit in the tail, put in a small piece of diseased lung, and rolled a worsted thread about it. In the course of five days the majority of these showed febrile symptoms—saliva flowing from the mouth, dull, hanging head, and so on. In the course of four days the tail was perceptibly swollen; this swelling would sometimes continue in the majority of cases till the seventeenth day, and, in those that went on favourably, after that time the swelling would begin to abate. Those that did not get on favourably would be longer, some would be six weeks or two months before they got better. In the latter cases the tail was more swollen, and the swelling extended up the tail. Others we inoculated in the fore-arm; we took a piece of tow, and saturated it in the matter obtained from the diseased lung.

1648. In what part did you insert it? In the muscle of the fore-arm, in the anterior part; I inserted the tow deep in the muscle. I had a conversation with Mr. McLaurin about this mode of inoculation, and he told me the result in the case of some cattle he had experimented upon; and I reasoned in my own mind that the tail was not the most suitable place, for there was no muscle to form a suppurating cyst, so as to throw off any excess of virus, or any quantity of deleterious matter that might collect there—that part of the tail, near the point, being composed principally of skin, blood-vessels, nerves, and bones. The lung was put into a dish, and squeezed from above until the fluid was obtained from it; into this the tow was dipped, and the tow was then inserted deep into the muscle. All those cases where inoculation was performed in the fore-arm went on favourably; the wound suppurated, and cast off the tow and the excess of virus, and ended favourably. Those that were inoculated in the tail were weak in the lumbar region, and had to be assisted to rise; none that were inoculated in the forearm suffered in that way. In three of those cases that were inoculated in the tail, the tail swelled, and the swelling extended up the tail to the buttock, and as far forward as the hip joint; and the tail became stiff, and stood out horizontally. In two instances, the rectum was closed up, and the urethra stopped, and no urine or fæces passed. One of these I killed, and I have a piece of the lung here with me. I attribute the rising of the inoculation up the tail to the want of a healthy suppurating cyst, because inoculation proves this to be a disease of the aureolar tissue of the body; and it is a law, with respect to this tissue, that suppuration never takes place in it unless there is great exposure to the air. Unless the air gets into the part, induration follows, and the cells being stored with lymph and cellular fluid, these become indurated as hard as this table, and very thick.

J. Pottie, Esq.
3 Oct., 1862.

1649. You would prefer inoculating the fore-arm to the tail? Yes; Mr. Richard Cox, who assisted me principally in the inoculation of some cattle which belonged to one of these farmers, said that any cattle he might inoculate in future he would inoculate in that way.

1650. Were the cattle all wild that you inoculated in the tail? No, they were principally dairy stock.

1651. You had an opportunity of inoculating them without injuring the bones of the tail? Yes, they were all quiet cattle, and were inoculated with great care. One reason why I used the pledget of tow was, to ascertain if it was possible to inoculate with an instrument which Mr. Francis invented, and showed to me. According to the old plan, one or two men could hardly do more than 200 a day, but with this instrument one man could inoculate 1,000 a day.

1652. Is this Mr. Francis of the wharf? Yes, he is employed at Messrs. Manning's wharf. He showed the instrument to Mr. Robertson, Mr. Cowper, and Mr. Weekes, and they advised him to patent it, and he placed it in my hands.

1653. *By Mr. Leary:* You experimented with this instrument? No; I had first to sign a paper to the effect that I would show it to no one, but I tried it on some hides; it is very simple.

1654. *By the Chairman:* Is it necessary that inoculation should be severe to be effective? It is necessary to be severe to be effective, so that that effect may last for some time. It is found, in experimenting both upon the human subject and upon cattle, that unless the inoculation takes well, it does not last long, and they will be likely to take the disease again.

1655. I think you said if it were slight it would be necessary that the same cattle should be inoculated two or three times? If the cattle were bad with the disease, to use inoculation as a curative it would be necessary, where disease had set in violently into the animal's system, to inoculate violently, and to inoculate in several places, and in vital parts where there was plenty of muscle.

1656. Do you not suppose that the fever that would be caused by inoculation would kill the cattle, if it were so violently performed as you describe? No; if you have one great fever, and create another great fever, the one fever kills the other. You find that demonstrated in the use of medicines upon the human subject. For instance, there is a well authenticated case that occurred in a lying-in hospital, and which was published in the *Lancet* by Professor Simms, of Edinburgh, where a patient who was subject to fits had chloroform applied every twenty minutes, and consumed a pint in the course of a night with beneficial results, while a few drops would have destroyed life in a healthy subject.

1657. Do you mean to say that this quantity of chloroform was taken internally? No, it was put on a handkerchief and inhaled.

1658. *By Mr. Hay:* The operation of inoculation as a curative depends, I suppose, upon its influence in relieving the most vital parts from the disease, determining the disease to those portions of the body where the inoculation takes place? Yes.

1659. There is a certain portion in the system which must be relieved somehow? Yes; and it is a law in the animal economy that two diseases cannot co-exist. Thus, where there is inflammation internally, blisters are applied to produce an external inflammation, which is a disease we can manage. Just so in the case of inoculation, the outer disease kills the internal one, and we can manage the external one.

1660. In effect, you relieve the body by this external suppuration? Yes. I have not seen in the papers published by the Belgian or French Commission anything with reference to inoculation in the fore-arm, because it is generally practised in the tail on the Continent, and also in London; but the experiments I have made have been favourable; but they will require to be further tested.

1661. Near the point of the shoulder has the advantage of supplying plenty of muscle for the purposes you have described, and forms also a good depending sore? Yes, and it is not put into motion as the tail is; it is not aggravated by motion, or by the same sort of motion.

- J. Pottic, Esq. 1662. One operation would, I suppose, be sufficient as a preventive in most cases? In most cases it would be sufficient, when the virus was good. The plan I have adopted is this :
 3 Oct., 1862. Having soaked the tow, to dry it in the sun preserves the virus, and you may use the tow as you use vaccine matter, on the point of a lancet. By inserting this tow through the cellular tissue of the muscle, you are certain of inoculation. The principle is the same as that which operates in the case of the human subject.
1663. This virus does not appear to affect the human subject? No, it does not affect the human subject, taken internally, but it will affect the human subject if applied to any cut or wound, as diseased matter of any sort will do; it will poison the place, and of course if the poison is very virulent it may cause inflammatory fever; but generally it will burst and go off.
1664. Its operation in the human subject is simply like that of any other putrid animal matter? It has just the same result.
1665. It does not produce any disease analogous to pleuro-pneumonia? No, it has never been noticed.
1666. There is not much danger in handling this diseased lung? I have never found any danger in handling it, and have never known of any cases, where people were careful.
1667. Does the disease affect the quality of the meat? It affects the quality of the meat after the second stage. I do not think, with fat cattle, the quality of the meat is affected until after what you recognize as the second stage. I was never so forcibly convinced on this point as when at Albury, because many of the cattle which were killed there were rolling fat, and yet they were in the second stage of the disease. These cattle, of course, had been fat when they were attacked by the disease; they were under the most favourable circumstances all along—had had plenty of feed, plenty of water, good weather, and had not been disturbed. Poor cattle are much more seriously affected by the disease, for there is a drain on the system, that is to say, if the digestive organs are affected, and the animal is not feeding, or is suffering from diarrhœa. The only thing perceptible in the flesh is the loss of iron—the flesh loses its red hue, and when you eat it, it has less tonic power, is less easy of digestion, and, as a matter of course, does less good in the way of nourishment; but as to its poisonous effects, that has never been demonstrated; on the contrary, it has been given to pigs and to dogs without any injurious results.
1668. You have said you consider pleuro-pneumonia to be contagious or infectious, or both—at what stages of the disease do you consider it to be so, or most so? I consider it may be communicated whenever the internal destruction of the lung has advanced so far that the breath may be contaminated. The reason why I say so is, because you sometimes find a deposit has taken place in the aureolar cells of the lungs, but as these have no communication with the air while confined there, it is impossible there can be any infection from it; but when these cells are broken up, the deleterious matter escapes and contaminates the breath.
1669. At what stage does this breaking up generally occur? About the latter part of the first, and at the entrance on the second stage.
1670. I suppose it will depend generally upon the peculiar state of the body or constitution of the animal, whether it is likely to be affected or not; all animals, I presume, are not equally susceptible to the disease? There is a law, whereby certain animals come in contact with those affected by disease, yet do not take it.
1671. As to inoculation, does the effect follow in all cases;—does the animal, after inoculation, always exhibit symptoms of the disease in a modified form? In all cases that I have seen where the inoculating matter was introduced, the effects followed, in some more, in some less, and in some very slightly. I attributed these differences to various causes, but chiefly to the strength of constitution of the animal. Not one, however, entirely escaped—all showed less or more of the symptoms—and pieces of lung were put in, in every case, of nearly the same size.
1672. In some cases the symptoms would be very severe, in others only slight? Yes.
1673. And probably those animals affected so slightly by inoculation would not, in ordinary cases, have been affected by the infection at all? I consider that those which had only slight symptoms of the artificial disease, would not have had power in the system to withstand the contagious or infectious nature of any animal having the disease coming in contact with them. Of course it would be impossible to mention a time, but I do not think they could hold the power long.
1674. I suppose, during the short time you have had opportunities of observing the disease here, you have been able to obtain greater experience than one who had been for a much longer period in the practice of his profession at home? Yes, having had an opportunity of seeing so many killed in one herd at the same time—some hundreds. I had never seen so many cattle affected by the disease opened before.
1675. To a professional man it was a glorious opportunity of studying the subject? Yes, I think such an opportunity never occurred before.
1676. *By Mr. Leary*: What course of treatment was generally pursued in Edinburgh with reference to diseased cattle? Those cases that I attended we were treating experimentally, that is to say, we were trying what could be done—in what way the best cure could be effected —
1677. You misunderstand my question—I ask what course of treatment was pursued with reference to those cattle you had knowledge of that had the disease? Parties were advised to separate all animals that had the disease; they were put by themselves, and were fed in small quantities at a time with nourishing food; they were kept as warm as possible in the body, and were allowed to breathe the fresh air. Their medicinal treatment consisted principally in administering tonics, in keeping up the tone of the system, and in the application of boiling water to the sides opposite the lungs, and in the use of aconite daily.

1678. Used you to kill any of the cattle that were diseased? Yes, many of the cattle were killed. In the early stages of the disease we advised the owners to keep them in good condition and to sell them to the butchers; and the students then followed them to the slaughter-houses, examined them, and reported the result to the professors. J. Pottie, Esq.
3 Oct., 1862.
1679. Did you ever know cattle that were diseased to recover, without the application of any treatment—leaving them to nature? No, I never knew any.
1680. Did you make any personal examination of Mr. Bowler's cattle? No, I did not see any of Mr. Bowler's cattle.
1681. The information you gave about Mr. Bowler's cattle you derived merely from hearsay? I did not examine any of Mr. Bowler's cattle on his run. I think my report says we examined one at Wagga Wagga. I am not positive whether I examined any more.
1682. Do you think lung disease, arising from inflammation or rot, might, in the first stages, be easily mistaken by anyone other than a veterinary surgeon, or an experienced person, for pleuro-pneumonia? I have said there would be a possibility, merely looking at the thing, because congestion produces a similar appearance in the lungs.
1683. From your knowledge of the disease, as it has come under your observation in the Murrumbidgee district, would you have recommended the wholesale destruction of herds of cattle? I would not, after having discovered that the disease existed in various runs; but if I had found the disease on only one run, and was certain that it was not anywhere but on this run, I would most unhesitatingly have recommended, for the benefit of the country, that all these cattle should be killed; but if I had known that the disease was on other runs, or that there was a probability of the disease being on other runs, certainly I would not, because then there would be no limit to the destruction.
1684. You have stated that you found the disease existing in a very large area of country? Yes.
1685. Were there a great many deaths? No. I think I stated in one of my reports that there were very few deaths. I said I did not expect many deaths among the cattle in that part of the country, because of the features of the country and the strength of the digestive organs of the cattle.
1686. Could you form any opinion of the per centage of deaths among diseased herds if they were left alone? That would be rather difficult, for this reason—that at home, in some years, you find the disease very fatal—very few cattle are spared among dairy stock; while in others only a small proportion die. No man understands why this is so, but this is the fact. It would be almost impossible for me to name a per centage, as in some years it appears to be lying dormant, while in other years it breaks out and commits great ravages.
1687. *By Mr. Hay:* It is very eccentric? It is.
1688. *By Mr. Leary:* Have you seen any beasts that were bad with disease that got fat after it without being inoculated? No; we always treated them in some way or other. I have seen them improve after inoculation.
1689. Have you not seen any without being inoculated? No; all bullocks about here have died where the parties took no steps.
1690. Are you aware whether it is a generally acknowledged matter in the scientific world, what the origin of this disease is? It is stated by competent authorities that this is a disease belonging to the eastern part of the world—a disease that has existed there from time immemorial; its origin they trace to what they call the steppes of Asia, whence cholera and many of these diseases have swept across the world; and writers on the subject show that it is by commerce that this disease was transmitted from its native soil to various parts of the Continent, and from the Continent to England, Scotland, and Ireland.
1691. Is it known whether it arose from damp weather or any other cause? Do you mean is it possible to produce the disease spontaneously? The spontaneous production of disease is denied by the majority of writers, but it is taught by many able men, that as in the case of cholera and other epidemics, that it arises from animalculæ, which are produced in vast numbers in the earth, the air, and the water.
1692. Is it generally acknowledged by veterinary surgeons in Scotland, who have a knowledge of the disease, that it is infectious? Yes, it is acknowledged by a good many of the London school. Professor Simmons held that it was a disease of a dropsical nature, and he taught certain notions with respect to it; then again, Professor Dick, who belonged to what was called the Scottish school, of course wrote for the purpose of contradicting him; but the most honest writer was Professor Barlow; none of his works have been published. He made most careful microscopic investigations, and shows conclusively that it is of a contagious nature. Dick does not deny the contagious but the infectious nature of the disease.
1693. *By Mr. Hay:* Where was Barlow professor? Under Dick.
1694. Have any of his papers been published in any scientific periodical? His papers have been read before the Agricultural Society of Scotland.
1695. I should think inoculation itself proved the contagious nature of the disease? Yes.
1696. The only point fairly open to question is whether it is infectious? That is the only point that is not clearly demonstrated.

WEDNESDAY, 8 OCTOBER, 1862.

Present :—

MR. HAY,
MR. MATE,MR. RAPER,
MR. LEARY.

HUGH GORDON, Esq., IN THE CHAIR.

Alexander Bruce, Esq., called in and further examined :—

- A. Bruce, Esq.
8 Oct., 1862.
1697. *By the Chairman* : You wish to hand in some papers? Yes, further reports from the Commissioners.
1698. To complete those documents? Yes. (*Handed in and read. Vide Separate Appendices 35, 36, 38, 40, 41, 42.*) I wish also to hand in this letter from the Colonial Office at the Cape of Good Hope, enclosing the regulations in force there with respect to pleuro-pneumonia. (*Handed in and read. Vide Separate Appendix 49.*) As it has been stated to the Committee that Mr. Smith, of Kyeamba, said there was no disease on his run, at a meeting held at Ten Mile Creek some time in December, I wish to hand in a return made by him of the cattle he destroyed, in which he states that two of them, destroyed in November, were rotten with disease. (*Handed in. Vide Separate Appendix 50.*)
1699. *By Mr. Mate* : Does he say what disease? No.
1700. *By the Chairman* : Has any case of pleuro-pneumonia come under your observation in any other country besides New South Wales? No.
1701. You have never seen it in any other country? No.
1702. Do you know anything about the disease called rot, fluke in the liver, in this country? Yes.
1703. You have seen cases of this disease? Frequently.
1704. Does it resemble pleuro-pneumonia so nearly as to make it possible to confound one with the other? Not if the person had seen both diseases. In the case of rot the liver is always affected.
1705. That is not the case with pleuro-pneumonia? No, very seldom.
1706. Do you think cattle suffering from rot would be more likely to be predisposed to pleuro-pneumonia? I would say they would.
1707. Are you aware that Mr. Green's cattle, which were being collected, and were stopped, were sold to Mr. Macartney, of Oxley? I was not aware.
1708. Will you explain on what grounds you prevented the collection of these cattle? I stopped them because they had collected the mob in which we had killed a diseased beast belonging to Mr. Purtell a few days before.
1709. About what date was this? About the 14th or 15th of October.
1710. Do you think the existence of this disease in a herd would be likely to reduce the number of fat cattle in that herd? I think it would considerably.
1711. Mr. Greene stated that neither when his run was placed in quarantine, nor for some considerable time afterwards, was any disease found on his run—was that the case? This beast of Purtell's that was killed was amongst his cattle—the one I referred to in reply to the former question. It was, properly speaking, a mob of his cattle that this beast was killed among.
1712. Were there any other diseased beasts among his cattle? There were beasts said to be diseased; I did not see them, but there were said to be diseased beasts killed upon his run at the end of August.
1713. Who said they were diseased? Mr. M'Laurin and Mr. Cox. I could not say he allowed it himself, but he went with Mr. Cox and Mr. M'Laurin to see Mr. Mate, who had communicated with the Government about the disease.
1714. Are you aware whether these parties saw the cattle? I am aware that Mr. Cox and Mr. M'Laurin saw the cattle killed.
1715. *By Mr. Hay* : And Mr. Greene? Mr. Greene was there himself. They killed about fourteen or fifteen head.
1716. *By the Chairman* : Are you aware whether any died previous to these fourteen being killed? I am not aware; I heard that a few died; in fact I saw some in a dying state.
1717. Do you suppose that the fact of some having died previously was the reason of these fourteen being slaughtered? I believe those cattle looked as if they would die that they killed. I may also mention, that on the 22nd and 23rd of November, or perhaps a day or two previously, Mr. Day and I, while Mr. Greene was present, killed a beast on his run, in which one-half of the lung was hepatized—that is, it was in the third or last stage of the disease.
1718. You would say, I suppose, that this beast was suffering from pleuro-pneumonia? It was suffering, and must have been suffering from it for some time before.
1719. With reference to the dairy;—do you think it would be prudent for the owner of a station to keep on a dairy of cattle in a diseased state? No.
1720. Why not? Because, in the first place, the cows are brought from all parts of the run, and if they did catch the disease, they would be certain to spread it all over the run when turned out. In the next place, herding and tailing the cows, and yarding them, would, in my opinion, predispose them to the disease.
1721. Do you think it would pay the owner better to stop dairying than to continue it under such circumstances? I think it would be more prudent to stop.
1722. Was Mr. Pottie with you when nine head of cattle belonging to Mr. Purtell were killed for inspection? He was present when, I believe, only two were killed.

1723.

1723. What was his opinion about those cattle? His opinion was that they were affected with pleuro-pneumonia. A. Bruce, Esq.
1724. How many of the cattle died from the disease, do you know? To my own knowledge about thirty head had died within a radius of four miles of Ten Mile Creek, previous to the time he commenced to inoculate. 8 Oct., 1862.
1725. When did he commence to inoculate? In the month of May last.
1726. Are you aware whether many of those that were inoculated were diseased? A good many of them showed decided symptoms of being diseased. He inoculated over 300 head.
1727. What was your reason for stopping Mr. Ryall's cattle? Mr. Ryall has got but a small run, adjoining the Yarra Yarra Run, a narrow run; the boundary is a creek, and the cattle camp, as it were, indiscriminately on both sides of the creek. Mr. Ryall's cattle frequently mix with the Yarra Yarra cattle, and not only feed on the ground, but camp on the Yarra Yarra side of the creek. His cattle also mix with those of his brother-in-law, Mr. Williams, whose run was also under quarantine at the time; and it was on account of the cattle mixing with the cattle on the two runs under quarantine, that I stopped Mr. Ryall from taking his cattle away. He could not take cattle away without taking many of them off the two infected runs.
1728. When did you stop the cattle? About the 11th November.
1729. Did you give him any notice when he might take his cattle away? Yes, about the 5th December.
1730. That would have placed his run under interdict for twenty-three or twenty-four days? Twenty-four days.
1731. Are you aware how many fat cattle were sold after the interdict was taken off? I understood that he had sold seventy head of cattle when I stopped them.
1732. On what grounds did you stop Mr. Bardwell's cattle? On account of two diseased working bullocks, which were in the habit of running amongst Mr. Bardwell's cattle, being killed; and also on account of diseased cattle from Yarra Yarra having been seen that day on Mr. Bardwell's run.
1733. Are you aware whether or not his cattle were sold before he began to collect them? I am aware they were sold; but I am not certain whether he meant to deliver them to the party to whom they were sold or not.
1734. At what time was the interdict placed on Mr. Bardwell's cattle by you? On the 1st of November.
1735. When was the interdict removed? On the 5th of December.
1736. Did you give intimation to the different parties when the interdict was removed? I did; I wrote circulars to all who wished to take away their cattle.
1737. Do you know if any of Mr. Bardwell's cattle died, during last winter, of pleuro-pneumonia? Yes.
1738. How many do you suppose? About forty head, to my own knowledge.
1739. With reference to Messrs. M'Laurin's cattle;—at the time you began to kill every mob of cattle in which a diseased beast was found at Yarra Yarra, did they ever protest against your doing so, at the prices offered by the Government? No.
1740. Had you any conversation with them on the subject? I cannot say I recollect having conversation with them directly on that question.
1741. Was it your impression that they were satisfied, or dissatisfied, with the prices? My impression was that they were satisfied.
1742. Do you know whether any cattle on runs adjoining Yarra Yarra Run died on the border during last winter? Yes, I heard of a good many cattle dying on the borders of the Yarra Yarra Run this last winter; I could not say a great many; I heard of as many as thirty or forty head of cattle dying during the winter on one border.
1743. What would, in your opinion, be the per centage of deaths in a herd diseased like the Yarra Yarra herd, during twelve months? Supposing the cattle had not been inoculated?
1744. That the disease was still among them, and that the cattle had not been inoculated—that inoculation was neither a cure nor a preventive? I think there would have been at least 800 head out of the Yarra Yarra herd.
1745. Out of how many? 6,000.
1746. And what would be the shortcoming in the ordinary number of fat cattle in such a herd, under the same circumstances—the difference in the number of those that would have been fat had they been sound, and those that would have been fat with disease among them? I should say from a third to a half.
1747. What would be the depreciation in the value of the remainder of the herd if they had been sold under similar circumstances? They would be depreciated forty per cent. in value if inoculation was not a cure or a preventive, and the cattle were diseased as the Yarra Yarra herd were.
1748. How many cattle of the Yarra Yarra herd were destroyed previous to the 8th November? About 1,400 head.
1749. How many were destroyed up to the 23rd November? About 4,000 head up to the 22nd November.
1750. I think you stated, in a letter of the 30th November, that 5,000 head had been already destroyed? I believe so.
1751. Did you send a telegram to the Secretary for Lands, dated 21st November, saying that you believed that 40,000 head of cattle were diseased, and requesting to be informed whether the destruction of cattle at Yarra Yarra and Mr. Bowler's station should be continued? Yes.
1752. On the 23rd November did you receive a telegram from the Secretary for Lands, that only diseased cattle should be destroyed? Diseased, or suppose to be diseased.

A. Bruce, Esq. 1753. On the 26th you received a telegram repeating the former message that diseased cattle only were meant to be destroyed, not those appearing healthy, although found with diseased cattle? I believe so. (*Witness referred to telegrams.*) On the 23rd November I received a telegram to this effect:—"You are instructed only to destroy cattle diseased or supposed to be diseased." On the 26th—"You will proceed with the destruction of cattle diseased, or supposed to be diseased, until further instructions."

8 Oct., 1862.

1754. That is all you find there? There is no qualification.

1755. No qualification about those appearing healthy, although found with diseased cattle? No.

1756. Did you continue to destroy the cattle at Yarra Yarra after this telegram? Yes.

1757. Was it not contrary to your instructions? No. The cattle on further inspection appeared to be almost all diseased. My reasons are given here, in a telegram of the 28th:—

"As you could not be aware, from our telegrams, that the killing of all cattle diseased, or supposed to be diseased, might destroy some 8,000 or 10,000 head, my only action up to this time has been, pending inquiry by the Commissioners, to place the country known to be infected under temporary interdict, and to continue the destruction of Messrs. M'Laurin's and Bowler's cattle, as almost all diseased and very liable to stray, and of stragglers from infected runs."

1758. When did the slaughter of the Yarra Yarra herd terminate? On the 18th January.

1759. Then a small number only could have been killed between the 30th November and the 16th of January? Latterly they were attempting to get in their wild cattle, and of course they could only get in a few in a day.

1760. Were they all slaughtered on the Yarra Yarra Run then? All but some scrubbers that it was almost impossible to get in, and some cattle that were left for meat for the station, and milkers.

1761. How many cattle were destroyed at Mr. Bowler's station up to the 23rd November? There were about 300 head of Mr. Bowler's cattle destroyed.

1762. When did the slaughter terminate at that station? I believe on the 16th of December.

1763. After receiving the telegram of the 23rd November, did you consider that Mr. Bowler's cattle were in the same diseased state as Mr. M'Laurin's—that it was necessary to destroy them? Yes.

1764. Were the whole of the cattle at Mr. Bowler's destroyed? With the exception of a few head, and a few in the paddock—a few head of milkers and their increase that were running about the place.

1765. Did you give permission for them to be kept alive? There was no direct application. Mr. Sub-inspector Bradley made a verbal application to me about it, whether they should be destroyed or not, and I told him of the decision of the Commissioners, that a few milkers and cattle for meat were to be left both there and at Yarra Yarra.

1766. *By Mr. Raper:* You had no idea that cattle affected with pleuro-pneumonia were injurious for human food? No, I never heard that they were; on the contrary, there was an inquiry by the Board of Health in London on the subject, and they decided, that although cattle might be labouring under the disease, the meat was not injurious, but that it was not so nutritive.

1767. You were aware of this before? I was.

1768. *By the Chairman:* Was it necessary for parties whose cattle were destroyed to send in an account to the Government of the number before they received compensation? They had to get their accounts certified by me. I understood, from what I learned, that the Government would expect accounts to be sent in.

1769. Do you know when you certified to Mr. Bowler's account? I believe it was some time in June. I am not aware whether application had not been made to the Land Office for payment before that time; but that was the time that the regular account was certified by me.

1770. *By Mr. Leary:* Did you intimate to Mr. Bowler or Mr. M'Laurin that it would be necessary for them to send in an account to the Government, previous to receiving compensation? I did not do it as a matter of business, neither do I think I had any conversation with Mr. Bowler on the subject, but I had with Mr. M'Laurin, because his account was sent in long previously.

1771. When was his account sent in? Some time in February, I believe.

1772. Did not the sub-inspector keep an account of every beast that was slaughtered? Yes.

1773. Then the only reason for which Mr. Bowler or Mr. M'Laurin could keep an account would be merely as a check? Yes; the accounts kept by the sub-inspector were rendered by me to the Government on the 20th January.

1774. You certified in that account that a certain number were destroyed in both cases? Yes, both Messrs. M'Laurin's and Mr. Bowler's. I made up an alphabetical list of all the claimants for cattle destroyed.

1775. Did you expect that the compensation would be awarded after you sent in your account in January? At that time I was not aware in what form the Government would want the vouchers sent in.

1776. What was your impression—did you consider the Government would pay after you sent in your vouchers or certificates? I believe I considered it necessary that an account should be sent in at the time, when I think of it again.

1777. *By Mr. Mate:* Were the blank vouchers sent up—were you supplied with forms? No, not then.

1778. *By the Chairman:* You merely made up your accounts, and sent them in to the Government on the 20th January? Yes; an account of all cattle killed, and the names of the claimants.

1779. *By Mr. Leary*: Are you aware whether Mr. M'Laurin sent a letter, early after the destruction of his cattle, requesting payment? I am aware he did send a letter shortly after the accounts were made up.

A. Bruce, Esq.

8 Oct., 1862.

1780. Are you aware whether he received any reply? I am not.

1781. *By Mr. Hay*: You say the blank vouchers were not sent up to you at that particular time—were they sent up to you afterwards? They were sent on my writing for printed vouchers, and requesting to be informed in what shape the accounts were to be made up.

1782. On your application they were sent up? Yes.

1783. Do you recollect what time it was when you did so make application? It must have been about the month of June.

1784. Was that in consequence of any request made to you by the persons claiming compensation, or any of them? Yes, by several of them.

1785. *By the Chairman*: Did they apply to you before the time you wrote? Some of them applied for a list of the cattle killed, considerably before that.

1786. They did not refer to you to know what course they should adopt in order to receive compensation? No, they did not, generally speaking; some of them might have asked how they were to get the money.

1787. Were you able to satisfy them on that point—did you tell them you would apply to the Government? I gave them a list of the cattle destroyed, and said I would certify to that number having been killed; and I did so, in a good many instances, before that time.

1788. *By Mr. Raper*: Did you certify by the returns you got from the sub-inspectors? Yes, from my books, and the books were made up from the returns I got from the sub-inspectors.

1789. How were the returns made out—the daily slaughter, or in bulk? The daily slaughter, and every individual beast marked down; it was given in detail.

1790. *By Mr. Leary*: Are you aware whether some of the inspectors or sub-inspectors did not complain about not having received payment for their services? Yes, Sub-inspector Bradley complained.

1791. How long had he to wait for his money? He was paid some time in June.

1792. For services ended when? Ended about the 20th of January.

1793. Did he send in an account? Yes, about the beginning of February, a list of all claims connected with the matter was made up by me and sent to the Land Office, and amongst them was this account of Mr. Bradley's.

1794. Why did you consider that these parties, Messrs. Bowler and M'Laurin, had a right to send in an account, as there was no contract between them and the Government? I considered it was only the usual routine of business.

1795. *By the Chairman*: Did you write a letter to the Minister for Lands, in September, recommending that inoculation should be tried? No, hardly. I drew his attention to inoculation having been tried at the Cape, and suggested that he might get all the information possible on that subject from the authorities at the Cape.

1796. Did you receive any answer to that suggestion? No.

1797. You have stated that sixteen head were inoculated on the 27th January, and fourteen more on the 13th February, but you did not receive a telegram to try inoculation till the 8th of April;—why did you commence in the first instance? It was done on a suggestion of the Commissioners that inoculation should be tried, and also through hearing that it was being tried by Mr. Thomas Mitchell, in the neighbourhood of Albury, on the Victorian side.

1798. You tried it of your own accord, without instructions from the Government? Without instructions from the Government, but at the suggestion of the Commission.

1799. Why were the five head that were inoculated at Messrs. M'Laurin's, for which they were paid £7 10s., slaughtered? It was to examine the lungs, and test whether inoculation was a cure for pleuro-pneumonia.

1800. What conclusion did you arrive at? The conclusion we arrived at was that the lungs had undergone a cure, but of course we could not decidedly say it was through inoculation. We were aware that some of the cattle were badly diseased when they were inoculated, and that they had got better; but whether through strength of constitution and natural causes, or from effects of the operation, we could not say decidedly, though we were inclined to put it down to the inoculation.

1801. You have published your opinions on inoculation? Yes.

1802. Do you adhere to those opinions, in regard to its being a cure or a preventive? My opinion is that it is a preventive, and I am still inclined to think it is a cure. I, of course, would not give my opinion as a professional, but I would be inclined to think that the cure, if it is a cure, takes place something in this way: That inoculation acts on the blood the same, as it were, as yeast on malting; that it creates a fermentation, the effects of which would be to change some of the component parts of the blood which are poisonous, into something that is not poisonous—as in malting, sugar is changed into vinegar, or starch into sugar—and the change having once taken place, the substance cannot again resume its original form. The fermentation in this way works off, as it were, the poison that is in the system, and nature is allowed to perform the cure, which, it is said, it is always ready to do, and encloses the diseased portion of the lung in the sac, separating it from the healthy part.

1803. *By Mr. Hay*: Do the results of your experiments confirm you in your opinion that inoculation is to be looked upon as a preventive? The results of my experiments go to prove that it is a preventive, and seemingly a cure.

1804. *By the Chairman*: Do you think that in very bad cases it can be looked upon as a cure, when the animal is in a bad stage of the disease? In very bad stages I would think it would not be a cure, because the disease would kill the animal before the inoculation could have any favourable effect. I have seen several cases where cattle have died after being inoculated, and there has been a covering over the part of the lung about the eighth part of

an

- A. Bruce, Esq. an inch in thickness, of a substance resembling soft beeswax. Supposing the inoculation to be a cure, it would thus seem that the cure had been going on, but still that the disease had overcome the cure, and not allowed this covering to become firm and form the bag that grows over the diseased portion of the lung when the animal recovers.
- 8 Oct., 186 . 1805. Have you seen this appearance in cattle previous to inoculation? No; I have seen flocks of lymph and fatty substance floating about in the cavity of the chest, but not covering the lung.
1806. Have you always seen this in cattle that have died after inoculation? No; plenty of cattle that have died after inoculation have had the lungs apparently quite sound, but these died from the excessive swelling in the hind quarters.
1807. Did you at any time inspect the cattle on Mr. Morrice's run at Mullangandra? Yes, on two occasions.
1808. Did you find any disease there? Yes, on both occasions; once when I was by myself, and again when Mr. Pottje and the Commissioners were with me.
1809. Did you destroy any cattle there? Yes.
1810. How many? On the two occasions, I believe, there were six head destroyed.
1811. Did there appear to be any considerable number diseased, or were those six all that appeared to be diseased at the time they were killed? No, we saw more apparently diseased on the last occasion.
1812. *By Mr. Hay:* There were others whose cattle were placed under quarantine besides those who have petitioned the House of Assembly? Yes.
1813. Were any of them as much affected by the quarantine as those gentlemen who have petitioned? I should say they were—some of them whose market was the Lachlan—those in the neighbourhood of Wagga Wagga.
1814. They would be more affected, and for a longer time by the quarantine? Yes.
1815. The quarantine having been shortly removed, as far as regarded communication with the Victorian border, those who have petitioned, their market being in Victoria, were not so injuriously affected as those more towards the Murrumbidgee? Those towards the Murrumbidgee would be more affected; but some of the parties who have petitioned spoke of sending their cattle to the Lachlan, on account of the low prices then prevailing on the Victorian side.
1816. Was there any other interference with the dairying of cattle besides on Mr. Greene's station? I believe Mr. Ryall dairies a considerable number of cattle.
1817. Was that put a stop to by your interference? No, I did not interfere —
1818. You did not positively enjoin the stoppage of any dairying operations, except in Mr. Greene's case? I did not.
1819. You spoke of forty per cent. as the deterioration in the value of the cattle which would probably have remained out of Mr. M'Laurin's herd if the disease had been allowed to take its course;—do you refer to the value of the cattle to Mr. M'Laurin himself, or their value for sale as store cattle? Their value for sale as store cattle.
1820. From what you know of pleuro-pneumonia now, do you suppose the deterioration would have been as much as forty per cent., looking at the value of the cattle for Mr. M'Laurin's uses—that is if he had kept them and fattened them, as he usually does? Not as things have turned out.
1821. Do you think the cattle that would have remained of the herd, either not affected by pleuro-pneumonia or that would have recovered, after the loss of the 800 that you suppose might have died, would have been very much deteriorated in value to Mr. M'Laurin, supposing he did not choose to sell them as store cattle, but had retained them for the purpose of fattening, as he usually does? No, I do not think they would so much.
1822. Mr. M'Laurin is not in the habit of selling store cattle? No.
1823. So that the loss to him would not have been equivalent to forty per cent.? No.
1824. It is pointed out by the Chairman that a loss of 800 would scarcely amount to fifteen per cent. on a herd of 6,000;—are you still disposed to adhere to the supposition that 800 would have been the probable number which would have died? I speak within bounds when I say 800.
1825. There would have been a loss of that number at least? Yes, if there had been no inoculation.
1826. You are aware that opinions are divided at Home, amongst veterinary surgeons, as to the efficacy and advantage of inoculation? Yes.
1827. You have probably seen this book of Mr. Gamgees, in which he seems rather to discourage inoculation? Yes.
1828. But having read these remarks of Mr. Gamgees, you are disposed, after all your experiments, to think that inoculation is possibly more advantageous than he seems to consider it? Yes, I would be inclined to think that it has at least a temporary good effect; but whether those cattle that have been inoculated would not, in the course of twelve or eighteen months, or perhaps longer, be liable again to take the disease, I could not offer an opinion.
1829. That, of course, you cannot tell, not having had time to test the question? No.
1830. Is there any particular season of the year that you would consider better than another for inoculating a herd of cattle? If a whole herd was to be inoculated, and the thing were to become general, of course it would not matter so much; but if the inoculated cattle had to be tailed and kept separate from the other cattle on the run, it would of course be better to do it when the grass was best.
1831. As a matter of convenience? Yes.
1832. But as regards the effect of the inoculation, and the absence of danger from the operation, is there any season of the year that you think, from what you have seen, better than another—or have you formed any opinion upon the point? I would advise the same as

as in spaying, the autumn and spring as the best, as the cold would be bad for the cattle in winter, and the flies bad in summer. A. Bruce, Esq.

1833. If this disease were becoming very general, would you be disposed to recommend the inoculation of cattle while young—calves, for instance—the same as branding? Yes. 8 Oct., 1862.

1834. At the same time, of course, you express yourself doubtfully as to what may be the ultimate effect of it—whether its effect will continue for years? Yes. I should say that experiments ought to be made, to test in what manner inoculation is a preventive or a cure, and also to test thoroughly the sort of lung that ought to be used, and several other points that require to be settled.

1835. What was Mr. M'Laurin led to expect he would get for his cattle, destroyed in the first instance? 10s. a head for all under twelve months, and 30s. for all over.

1836. He was never led to suppose he would get more—50s. for instance—for all over two years old? Not by the Government.

1837. Not by you? Not by me.

1838. That was the understanding with all those whose cattle were destroyed, as far as the Government, or you acting for the Government, were concerned? Yes.

1839. *By Mr. Raper*: What was the date you gave Mr. M'Laurin directions to have his cattle slaughtered? The whole herd on the 8th November.

1840. Did you give it in writing? Yes.

1841. And you had a return of the cattle as they were killed daily? Yes.

1842. Was that return furnished to the Government? Yes, the total return was furnished, at any rate, by me on the 20th January.

1843. On the 8th November you gave written directions to have the whole herd killed, and on the 30th you telegraphed to say there were 5,000 killed? Yes; but before that we had been killing every beast that we saw diseased on the run—1,400 head altogether. Mr. M'Laurin made a mistake in his evidence. All the cattle that were diseased when it was first discovered were put in a paddock, and they were all killed, 500 head in one lot; and we were going out on the run and killing cattle daily after that.

1844. Then you were right in telling the Government there were 5,000 head killed on the 30th November? Yes.

1845. *By Mr. Hay*: You stated that you twice visited Mr. Morrice's run at Mullangandra, and that you had killed some six head of cattle there, all of which you had found to be diseased? Yes.

1846. Was there any considerable interval between the two periods when you visited Mr. Morrice's run? I was there on the 16th November; and we visited his run again on the 2nd December with the Commissioners.

1847. Do you recollect who were with you on the 16th November? One of the boundary keepers was with me. I sent him to the station to get the overseer to come out, but he was away from home; and as I had agreed to meet Mr. Day and Mr. Meyer at Pullitop next day, I took it upon me to kill two head, and to leave the boundary keeper there till the overseer came home to show him the cattle.

1848. Was there any doubt about their being diseased? There was no doubt about one of them.

1849. What was the brand? Mr. Morrice's own brand.

1850. On the next occasion you visited the run with the Commissioners—do you mean all the Commissioners? Yes.

1851. How many cattle were killed then? Four head.

1852. Were any of Mr. Morrice's people present then? His overseer was there all the time.

1853. What was the appearance of these four head—were they decidedly diseased, or any of them, or how many? Two of them were slightly diseased, one of them in the second stage, and a third was on the borders of the third stage, all but hepatized.

1854. Was Mr. Pottie there? Yes.

1855. What was the opinion of the Commissioners and Mr. Pottie? Their opinion was all throughout the same as I have expressed.

1856. Were any of these four, killed on the second occasion, of Mr. Morrice's brand? I believe they were all four of Mr. Morrice's brand.

1857. What provision is there now for carrying out inspection with regard to cattle under the Pleuro-pneumonia Act—do you still hold office as Chief Inspector? Yes. The inspection is carried out under the regulations of the 20th March.

1858. Are you assisted by any others? There are inspectors at Goulburn, Gundagai, Albury, Moama, Swan Hill, Euston, and Chowalla.

1859. Chowalla is on the South Australian boundary? Yes.

1860. How many of these are also scab inspectors? I understand they are all scab inspectors.

1861. I suppose most of them are more particularly required to act as scab inspectors? Yes, on the Murray—those on the border. There are other inspectors to the north, I believe, besides those at the places I have named.

1862. You do not know about them? No.

1863. *By Mr. Raper*: Did the Commissioners go into Mr. Morrice's paddock, where the principal part of his cattle were? No, we were not inside his paddock. It was agreed amongst the Commissioners that cattle inside the paddocks were not to be classed the same as those outside.

1864. Were they not classed the same? They were not.

1865. These cattle in the paddock were not condemned? No, we did not inspect them.

1866. Had he the privilege of driving them, or shifting them where he pleased? He had not; he could not remove cattle from any part of his run.

- A. Bruce, Esq. 1867. You condemned the run, and not any particular portion of the cattle? Yes.
1868. That was sufficient to prevent them from being driven off? It could not have prevented them long—from the 24th November to the 5th December.
- 8 Oct., 1862. 1869. Nothing could be removed between these dates? No.
1870. *By Mr. Leary*: When you were appointed inspector by the Government, did you receive any instructions? I received instructions dated the 30th September.
1871. What were they? They were those I produced.
1872. Did you read the Cattle Disease Prevention Act after you were appointed? I did.
1873. Did it occur to you that the Government had power only to destroy cattle that were imported and found to be diseased, or were supposed to be diseased, or to make regulations respecting imported cattle? I understood that "to prevent the propagation of the disease" included the treatment of the disease in the Colony.
1874. By one of the reports of the Commissioners it appears they had a doubt, does it not, whether they could destroy any cattle, except imported cattle, that were found diseased, or supposed to be diseased? No, they merely complain that the Act does not give them scope to enforce a penalty for breaking any regulations that might be made for stopping the propagation of the disease in the Colony.
1875. Is not the Act an Act only to prevent persons importing cattle diseased, or supposed to be diseased, and empowering the Government to make regulations respecting imported cattle that arrive here and propagate the disease—is that your reading of the Act? My reading of the Act is, that it covers steps taken for the preventing the spread of the disease throughout the Colony.
1876. By what cattle? By any cattle.
1877. Did you receive instructions from the Government to destroy the entire herds of Messrs. M'Laurin and Bowler? I received instructions from the Government to destroy every mob in which a diseased beast was found, and I had previously examined the cattle on Yarra Yarra, and found disease in every mob; it followed, therefore, that the whole herd was condemned under that authority. With regard to Mr. Bowler's cattle, they were destroyed under the instructions of the 2nd November.
1878. Did you inform Messrs. Bowler and M'Laurin that the whole of their herds were to be destroyed? Yes.
1879. Did Mr. Henry Bowler ask you what course you would take if he opposed the destruction of his father's herd? I heard Mr. Bowler give evidence to that effect, and I believe he might have done so.
1880. You will not say that Mr. Bowler agreed to their destruction, or made any admission that he was desirous of getting his cattle destroyed? I will say he never made any formal protest.
1881. Not as he stated in his evidence? I told you I have no recollection —
1882. You cannot say, then, whether it occurred or not? I cannot say whether it occurred, from my recollection.
1883. *By Mr. Mate*: You can say it was not a formal protest? Yes.
1884. *By Mr. Leary*: Did Mr. M'Laurin ever tell you he would consider himself well compensated at the prices given by the Government? No, he told me that if the Government had paid the money when the last of the cattle were killed, he would not have complained.
1885. You have said in your evidence to-day, that you are under the impression that even if Mr. M'Laurin's herd had not been killed, and inoculation were not made use of amongst them, he would have lost 800 out of 6,000? I believe that 800 out of 6,000 would have died.
1886. What do you think would have been the value of the 5,200 remaining, judging from your experience of the effects of the disease? My experience, as I said before, would lead me to say that I would give forty per cent. less for them than if they were sound.
1887. Now, supposing that these cattle had been inoculated at the time inoculation was discovered, or known here, what would have been the value of the cattle then that were inoculated—would they have been of very much more value than if they had not been inoculated? Yes, they would have been of much more value than if they had not been inoculated, or if inoculation had not been found to be a cure.
1888. From your experience of the effects of inoculation, do you consider that these 5,200 head of cattle of Mr. M'Laurin's would have been of very much more value than the compensation he received from the Government? I think they would have been of more value.
1889. Do you think they would have been of double the value the Government has given? That would be £1 and £3. I do not think they would have been much less, at the present price of cattle.
1890. That is, presuming they were inoculated, as the remaining portion of the cattle that were on his station were;—I suppose you are aware that Mr. M'Laurin has inoculated the cattle that are on his station? Yes.
1891. Did you permit Mr. Bowler to keep his working bullocks for the purpose of dragging the carcasses of those that were slaughtered? Yes.
1892. Were not those bullocks, or some of them, considered diseased by you or by Mr. Bradley? I could not particularly say.
1893. Were these bullocks working among the diseased cattle that were alive, and also those that were dead? Yes.
1894. Are you aware whether these bullocks are alive now? I believe they are; I believe they were inoculated.
1895. Do you know when they were inoculated—how long after the slaughter of the whole herd or the greater portion of the herd? Shortly after the cattle were inoculated at Yarra Yarra.
1896. That was a considerable time after the destruction of the principal portion of the herd? It must have been about the middle of February.

1897. That would have been nearly three months? Between two and three months. A. Bruce, Esq;
1898. Are you aware whether they have been inoculated? I understood from Mr. John Bowler that all the cattle that were about the place were inoculated, and some of them twice. 8 Oct., 1862.
1899. Was the weather very wet some two or three weeks previous to the disease breaking out at Yarra Yarra? Yes.
1900. And for some weeks afterwards? Yes; we had some good weather, and then some very cold, wet weather.
1901. Did Messrs. Day and Meyer, or yourself, find any of the Yarra Yarra herd or Mr. Bowler's cattle on the Lower Billabong—for instance, at Coonong? I believe the last beast that was seen was found, as stated in Messrs. Day and Meyer's report of 21st December, at least sixty or eighty miles from Coonong—the nearest beast.
1902. Of the Yarra Yarra cattle? Of Mr. Bowler's. I am not aware of any of the Yarra Yarra cattle being there; but it was almost impossible, because there is a line of fence from Mullangandra right to the northernmost part of Buckagings.
1903. Whether it was impossible or not, did any of the inspectors find them there? No, the fencing prevented them going in that direction.
1904. How many of the Yarra Yarra cattle were killed on their own run? I cannot at present say exactly.
1905. You cannot remember the total? I have it somewhere.
1906. Were not almost the entire number of Mr. M'Laurin's cattle killed on his own run? They were in the habit of collecting cattle on the neighbouring runs and killing them at their own station, after the disease was found on the neighbouring runs.
1907. *By Mr. Hay:* They were taken from the adjoining runs and killed at Yarra Yarra? Yes.
1908. *By Mr. Leary:* Did you see any of the cattle that died on the Yarra Yarra Run previous to the month of August, 1861? I had seen dead cattle.
1909. Did you know any of them to be diseased of pleuro-pneumonia? No.
1910. Did you not report that cattle might have died of it, prior to this date, at Yarra Yarra? Yes, I stated in my first report that some of the weak cattle which dropped, as they will generally do in tailing, might have been diseased and died.
1911. I presume that "might" could have been mentioned in reference to any other station in the country, because "mights" do not mean very much generally? No; but the question when the disease first came to Yarra Yarra, and how it first broke out, is so doubtful that it is possible these weak cattle might have been attacked.
1912. It is a mere possibility? Yes.
1913. Did you observe the state of the yards in which Mr. M'Laurin's cattle were tailed before the disease was discovered? I saw the cattle at the yards shortly after the disease was discovered.
1914. Are you aware that a working bullock died from the disease on the Mitta Mitta Run before Mr. M'Laurin's cattle were removed? It was reported that a working bullock had died of the disease on Mitta Mitta before the cattle were removed, and Mr. Robert M'Laurin, on hearing the report, left Yarra Yarra to go to Mitta Mitta, to stop Mr. James M'Laurin from bringing them over, and met his brother with the cattle within twenty miles of Yarra Yarra.
1915. Was an examination made of this beast? I am not aware.
1916. This is only a "might" too? Yes, a report.
1917. Have you heard since that time that this bullock chinked his back as he was going down some hill? Yes.
1918. Do you think that is more probable than that he died from pleuro-pneumonia, from all you have heard? From all I have heard of the disease, and the breaking out of the disease at Mitta Mitta, I am led to believe that the disease came to Mitta Mitta after these cattle were taken away.
1919. I want to know about this bullock—whether you are now of opinion that this bullock died from having his back chinked, or whether he died from pleuro-pneumonia? I could not say further than what I have said.
1920. What is your impression? My impression is that he was not diseased.
1921. *By Mr. Hay:* Did you see him? No; but that is my impression from the reports and from all that I heard, about how and when the disease broke out at Mitta Mitta.
1922. *By Mr. Leary:* You have had the opportunity of hearing from many graziers the reports about this bullock? I have heard from two parties the history of the bullock; but Mitta Mitta is a long way from Yarra Yarra.
1923. Were the yards in which Messrs. M'Laurin's cattle were tailed at Yarra Yarra in a worse state than yards usually are in a very wet winter season? I have seen yards as bad.
1924. And no disease the result? No.
1925. In the lot of cattle that were running in Messrs. M'Laurin's paddock, were there not some that were recovering from the disease before they were killed? Yes.
1926. How large was the paddock at the home station—did it contain 5,000 acres, do you think? I should say more than that.
1927. You stated that forty head of Mr. Bardwell's cattle had died this winter? Yes.
1928. Was a *post mortem* examination made of those cattle? Not of many of them; the lungs were taken out of some.
1929. Were they all found to be diseased, those that you examined? Yes.
1930. In a report sent to the Government in December last, it appears the Commissioners applied to be armed with legal authority to act;—what authority did you consider you were acting under previously, for instance, when you ordered the entire destruction of Mr. Bowler's cattle? The instructions of the 30th September.

- A. Bruce, Esq. 1931. Given to you immediately after you were appointed? Yes.
- 8 Oct., 1862. 1932. You are aware that the settlers who met to consider the matter recommended that £2 10s. per head should be given as compensation, and that the Government determined on giving 30s., without in any way consulting the settlers? Yes.
1933. You are aware that this price was to be for stock only over one year old, and 10s. for stock under that age? Yes.
1934. Subsequently to this determination of the Government, did you consult the settlers as to their recommendation about compensation? No; my instructions, containing the offer of 10s. and 30s., were published in the local papers.
1935. Did you after this recommend, without any consultation with the settlers, that the distinction of age should be made in a way that would class a greater number of stock at the low rate of 10s.? I recommended that the classification should be altered from over and under twelve months to over and under twenty-four months.
1936. Did you inform the settlers that they would receive payment at the rate of 35s. for those over two years, and 13s. for those under two years old? No. I was asked, as my correspondence will show, in what manner the Government would fix the prices if they altered the classes; and I said, that if the difference in the price under the fresh classification was to be made on that of cattle over two years old, then the price for them would be higher than was then offered by the Government, but I was not aware how the Government would settle the prices under the new classification.
1937. So that you informed the settlers that they would probably benefit by your classification? Yes; it would in that way have benefited the settlers who had store cattle. You will recollect, from my correspondence, that that was one of my reasons for proposing the change, that it was unfair that people whose cattle were only from twelve to twenty-four months old should be paid at the same rate as those whose cattle were over twenty-four months old.
1938. Would your arrangement have caused a change from 30s. to 35s. as the price of cattle over two years old? No, it would not have been so great an alteration.
1939. An alteration that would have been to the advantage of the settlers? It would have been an advance on 30s., but how much I said I was unable to decide.
1940. When you ordered the destruction of Mr. Bowler's and Messrs. M'Laurin's cattle, were you under the impression that they had any option to keep their cattle? No.
1941. You thought you had full and absolute power to destroy the whole herd, if you thought it advisable? Yes.
1942. You did not think, then, that any contract was to be made between you and these parties, inasmuch as you had full and complete power to do what you liked in the destruction of the cattle? No, not exactly; I thought I had authority to order the destruction, and that they could not prevent me from carrying it out.
1943. You have stated that you think 800 out of Messrs. M'Laurin's 6,000 would have died if nothing had been done with the cattle;—how many do you think Mr. Bowler would have lost out of his 1,200 head, if nothing had been done? I did not consider them so badly diseased.
1944. Can you give any idea? I could not.
1945. Do you think ten per cent. would have died? Yes.
1946. *By Mr. Mate:* Do you know Mr. James Feeney, of Clarendon? Yes.
1947. Are you aware whether he has had any cattle destroyed under this Cattle Disease Prevention Act? I am aware of one beast, bearing his niece's brand or his own brand, having been destroyed, and I am aware he made a claim on some of the Yarra Yarra cattle.
1948. Has he applied to you for compensation in any shape, or to certify to any number of his cattle? He never produced any account for my certificate. He said he had a claim for 2,000 and odd head of cattle, but he said he was unable to make up the account, and asked me to do it.
1949. Do you know whether he applied to the Government for compensation? I understand he has petitioned the Government.
1950. It has not come through you? No.
1951. *By Mr. Leary:* By your sending a letter to the Secretary for Lands, recommending a certain mode of compensation by classification, did you consider that the first arrangement was not final, that is, the paying 30s. and 10s.? I considered that there would be an alteration, but, as I have said, I was unable to say how the prices would be fixed.

SLAUGHTER OF CATTLE UNDER CATTLE DISEASE PREVENTION ACT.

SEPARATE APPENDIX.

(1.)

Albury, 23 August, 1861.

Sir,

I have the honor to enclose, for your information, a report of the proceedings of a public meeting held in consequence of the appearance of pleuro-pneumonia in some of the herds in this district. I regret to say that additional information induces an apprehension that the disease is extending.

Mr. Alexander Bruce, whom the meeting recommend for inspector, is a person I have known for a considerable time, and I believe would act cautiously though energetically.

I confidently endorse the opinion of the meeting, that it would be very desirable to empower the inspector to consult the opinions of two respectable stockholders, before ordering the destruction of supposed diseased cattle.

The Honorable
Minister for Lands.

I have, &c.,
THOMAS H. MATE.

Inform Mr. Mate by telegram that Mr. Bruce has been appointed by the Government and Executive Council.—JOHN R.—5 September.

Telegram to Mr. Mate.—5 September, 1861.

At a meeting held at Ten Mile Creek, on the 21st August, 1861, for taking steps to prevent the spread of Pleuro-pneumonia amongst cattle,

Present:—

Thomas H. Mate, Esq., M.L.A., settler.
E. Heriot, Esq., J.P., Carabobala, settler.
James M'Laurin, Esq., J.P., Yarra Yarra, settler.
Messrs. Robert M'Laurin, Yarra Yarra, settler.
John Cox, Pullitop, settler.
John Keane, Pullitop, settler.
William Williams, Little Billybong, settler.
Samuel Bowler, Ten Mile Creek, settler.
Henry Bowler, Ten Mile Creek, settler.
George Bardwell, Ten Mile Creek, settler.
John Purtell, Ten Mile Creek, settler.
John King, Mangoplar, settler.
Charles Crisp, Mangoplar, settler.
Thomas Keighran, Doodle, settler.

Messrs. Thomas Henty, Roundhill, settler.
John Burns, Jerry Jerry, settler.
Henry Burns, Jerry Jerry, settler.
Charles Osborne, Jerry Jerry, settler.
George H. Greene, Billybong, settler.
Ancrum Heriot, Carabobala, settler.
John Post, Cookendina, settler.
William Real, Four Mile Creek, settler.
Alexr. M'Crae, Dora Dora, superintendent.
Lawrence Garry, Clarendon, farmer.
James Bruce, Ten Mile Creek, farmer.
Edward Gale, Clarendon, farmer.
Patrick Purtell, Ten Mile Creek, farmer.
A. Bruce, Ten Mile Creek, poundkeeper.

Thomas H. Mate, Esq., Chairman.

Mr. Mate, on taking the chair, stated that, on hearing the disease had broken out at Yarra Yarra, he had immediately communicated with the Secretary for Lands and Works, Sydney, by telegraph, and in reply had received the following telegram—"Can you recommend—?"

After reading this telegram to the meeting, the Chairman said that, although he considered Mr. Bruce, poundkeeper, a fit person for the office, he thought it better that the meeting should take the matter into consideration, and recommend some one as inspector. On this a discussion ensued, whether an inspector should be appointed, or a Committee elected to watch the progress of the disease in the district; but it was finally proposed by Mr. James M'Laurin, seconded by Mr. Heriot, and carried—"That an inspector be appointed."

Mr. Thomas Henty then proposed, and Mr. Henry Bowler seconded—"That the inspector, before declaring any cattle diseased, be obliged to call in two of the neighbouring stockholders from different stations, and consult with them as to whether such cattle were diseased or not,"—which was carried *nem. con.*

It was then proposed by Mr. John King, seconded by Mr. George H. Greene, and carried unanimously:—"That the appointment of Mr. A. Bruce, poundkeeper, Ten Mile Creek, as inspector *pro tem.*, be recommended to the Government."

After some further discussion as to the impossibility of arresting the spread of the disease so long as working bullocks are allowed to carry on the roads, and as to the practicability of a proclamation against their being allowed to do so, at any rate in the infected districts, it was thought best to leave such matters as these till the Chairman could personally lay them before the Government on his return to Sydney; and, in the meantime, that he be requested to send a telegram of the resolutions come to at this meeting, to the Government; for the expense of which, and any other outlay he might incur, the meeting agreed to subscribe.

(2.)

Telegram from Under Secretary for Lands, Sydney, to Mr. Alexander Bruce, Ten Mile Creek, Albury.

Sydney, 5 September, 1861.

You have been appointed Inspector of Cattle, and I am to request that you will immediately submit your views as to what steps ought to be taken in dealing with cattle infected with pleuro-pneumonia.

(3.)

Ten Mile Creek,
8 September, 1861.

Sir,

In terms of telegram from Under Secretary of your department, dated 5th instant, received by me late on the evening of the 6th, I have the honor to send herewith Report by me as to what steps ought to be taken in dealing with cattle infected with pleuro-pneumonia; and in order the better to explain my views on that subject, I have taken the liberty of adding a few explanatory remarks on the symptoms, origin, and locality of the disease.

* Appended.

I have also made a rough sketch* of the district, which accompanies the Report.
Trusting that the paper now sent will not be considered too lengthy.

I have &c.,
ALEX. BRUCE,
Inspector of Cattle.

The Honorable the Secretary for Lands,
Sydney.

(4.)

REPORT to the Honorable the Secretary for Lands, Sydney, by the Inspector of Cattle appointed under the Pleuro-pneumonia Act for the Ten Mile Creek District.

8 September, 1861.

SYMPTOMS OF THE DISEASE.

THE symptoms of the disease which has lately broken out among the cattle in this district are exactly the same, in the living animal, as those described in *Blaine's Veterinary Art*, 6th edition, 1854, pages 317 and 318, in treating of the second and third stages of Pleuro-pneumonia. Thus—"In the second or inflammatory stage all excitement vanishes. The strength rapidly fails. The cough is now certain to be constant. * * * Everything becomes characteristic, so that a child or even a blind man could accurately point to the beast having the disease. The cough is short and distressing, evidently painful; but often against the will of the animal emitted four or five times in succession, after which the poor cow is ready to fall. The eyes are protruded and glassy, often suffused with tears. The conjunctiva is red, attesting the state of the other mucous membranes. The nostril looks inflamed. The muzzle is moist, and often water, clear as any drawn from a well, drops from it." This is especially the case when the animal is driven faster than a slow walk. "The appetite is fickle. * * * The breath is short, quick, and catching. The flanks heave, and the appearance is marked by evident signs of acute distress. * * * The duration of this stage is uncertain, but in longer or shorter space the symptoms change. The tears cease; the eye brightens; the visible mucous membranes assume a leaden tinge; the breath is drawn with difficulty; often respiration is stopped for a short period, and then suddenly commenced with energy, but almost immediately subdued into its former quick, but short and comparatively quiet, method. The coat now is very unthrifty. If it be tried along the margin of the neck, or at the end of the tail, it will sometimes come out by handfuls. Food, as before, is taken, but rarely swallowed. Horeen may in this, or the preceding stage, have appeared. * * * From the mouth constantly a thick ropy mucous hangs; the tongue is seldom retained between the lips; and in this state the animal may remain for a week, or only a few days, or for a month."

With regard, again, to the description in that work (page 316) of the symptoms of the first stage of disease, it can be easily seen that it would be but little applicable to the beginning of it in bush cattle, which cannot be handled, and can be neither closely nor frequently observed like cattle that are housed. No one, therefore, except the owner, or some one who, like him, is in the habit of seeing the cattle daily, can with certainty detect the first symptoms of the disease, on a first inspection. A slight cough, a disinclination to feed—while all the rest of the mob are doing so steadily—a slight dullness of the eye, or drooping of the eyelid, a restless, uneasy appearance, or the mark of strong licking behind the shoulder, over the region of the lungs, when the disease is in the neighbourhood, would certainly enable an intelligent person, experienced among cattle, even on a first inspection, to suspect the existence of the disease; but he must see the same cattle oftener than once before he could make up his mind with certainty, should the disease have only reached its first stage of development.

In the cattle which have been killed the symptoms, with very few exceptions, are the same in the right lung as those described in Blaine (page 320), while the left is seldom affected at all; and the animals have been more or less diseased, according as they appeared before being shot. Blaine there says:—"The examination made after death generally displays both sides of the chest, and the heart bag, full of fluid of a bloody tinge. Loose flocks of lymph, about two inches in length, adhere to the inside of the ribs, the outside of the lungs, and the anterior surface of the diaphragm. The lymph is of a dirty straw colour; it likewise lines the heart bag, and sticks to the outside of the heart itself. The blood within the body is darker than usual, and occasionally the cellular tissue is injected, especially upon the surface of the frame. The characteristic appearance which marks the complaint is, however, found within the lungs. These, when cut into, are of various tints, from the palest pink to the darkest modena. Their variegated aspect pleases the surgeon, as well as surprises him, especially when he first cuts into the lungs, for then the colours are very bright, and the distinction between them very marked. Between these hues travel eccentric whitish lines, taking no definite course, or being of no definite thickness, but running here and there, and being of all imaginable breadths. It is this difference of hues, divided by numberless whitish lines, which has gained for the lungs the term of 'marbled,' a word that very well prepares the imaginative spectator for the sight which he will behold. Added to all which we have said, the air tubes and cells are plugged up with a thick frothy mucous, and whoever sees the organs of respiration in such a state requires nothing further to make him comprehend the cause of the death." In a few of the cattle that have been opened, the windpipe was surrounded by a mass of matter along its whole length, while the lungs were but slightly touched; and in these the beast seemed to sink very fast. Several, too, had very little of the "marbled" appearance on the lungs, while portions of them had changed from their natural colour to a sickly yellow, glistening, or blistered look, which when cut into exuded large quantities of thin matter.

ITS ORIGIN.

The disease first showed itself at Yarra Yarra, a station belonging to Messrs. J. McLaurin and Sons, and situated on the south side of the Sydney Road, about forty-five miles from Albury (see sketch of runs annexed), among a mob of about 500 head of mixed cattle, brought by them from Mitta Mitta, in the beginning of April last; and the contagion is supposed to have been caught by these cattle before they left Mitta Mitta, from a diseased working bullock that is said to have died among them there.

Some people, again, say that the treatment these cattle have got since they were brought to Yarra Yarra has originated the disease, as they have been tailed and yarded during the depth of winter in yards little better than bogs, the sludge and mire almost covering them when they lay down, and up

to

to their bellies when they stood. These parties also argue that, if the disease had been brought from Mitta Mitta, it must have shown itself much sooner than it did, about five months having elapsed from the time the cattle were brought to Yarra Yarra before it was known that pleuro-pneumonia was among them. The disease, however, might have been among these cattle for months without its being known; for a good few of them, all along, kept dying (which was attributed to poverty and the cold and wet), and it was only when the deaths became numerous, that the Messrs. M'Laurin thought of opening and examining some of those that died. Besides, the common practice in breaking-in cattle to a run, of dropping and leaving out the weak ones while tailing, was adopted in this case; and it is now probable that not a few of these crawlers were diseased, and have crawled away to die unnoticed.

LOCALITY OF THE DISEASE.

The disease is spread, more or less, over the whole of the Yarra Yarra Run, but the chief seat of it there was that portion of the run at the head of the Ten Mile Creek, where the cattle among which it first broke out were principally tailed. (See map of Yarra Yarra Station, where marked with double red line.) The Messrs. M'Laurin have killed about 120 head, besides those that have died, and a great many are still ailing, but are now in a paddock.

Pleuro-pneumonia has also appeared on a portion of the Billybong Station, owned by Mrs. Greene, among a mob of cattle that sometimes mix with those of Yarra Yarra, at the Sydney Road, immediately after passing the Billybong reserve, going towards Little Billybong. Niné of this mob, belonging to Mrs. Greene, have been killed, and several are still bad.

It is reported that William Williams, Little Billybong, has also killed some cattle that were diseased, and these might have got the contagion from Mrs. Greene's, or Messrs. M'Laurin's, as his cattle mix with both Yarra Yarra and Billybong herds.

The infected ground, so far as the writer is personally aware, extends as marked with red ink on the accompanying sketch.

Having now received the appointment of inspector, the writer will make it his business, while waiting for instructions from Sydney, to visit all the runs in the neighbourhood of Yarra Yarra, and inspect the cattle, so as to be able to act at once on hearing from head quarters.

PREVENTION OF DISEASE.

The writer would beg respectfully to propose the following measures for preventing the spread of the disease:—

1. That it be made compulsory on owners, under penalty of a fine, to report every case of pleuro-pneumonia to the inspector, immediately on noticing it.

Although such a provision would be very far from bringing every case to the knowledge of the inspector, through its being evaded, as it was in Victoria, still it would do good in some instances, and ought to be passed.

2. Authority to be given to the inspector to go on any ground, whether run or private property, to inspect cattle, and to order the destruction of those he considered infected with the disease, or in the same mob as those that were so.

In the meantime, the writer would not recommend the killing of sound cattle found on the same camp as those that were diseased, for the purpose of preventing the spread of the disease; for that, on the Yarra Yarra Station, would entail the necessity of destroying almost the entire herd of over 4,000 head, as diseased beasts have been found in almost every quarter of the run; and if, in the meantime, the endeavour is made to keep the contagion within certain bounds, and every beast that shows the least symptom of disease killed, it would be seen in the course of a month or two whether or not the disease had got such a hold of the herd as to render it advisable to commence killing the apparently sound cattle found along with those that are diseased.

3. The owner to destroy the cattle at his own expense.

4. All cattle destroyed (whether diseased or not) to be paid for by a tax raised from the whole cattle owners of the Colony, at, say, current store prices.

Unless the diseased cattle as well as the sound killed are paid for, the owners will in most cases conceal the fact of the complaint being among their cattle (as they have been doing in Victoria), and either allow the animal, when they see it cannot live long, to wander away and die, or kill it at night, deface the brand, and leave it to lie unburned to spread the disease among others. Even although the owners should report the disease, it is most likely that they would defer doing so till the animal was in the last stage, and might have infected many others. If the owners of cattle had such an inducement held out to them as payment for the diseased animal, its being so would be reported so soon as they were aware, and this measure would do more than anything else to check the spread of the complaint. The price paid would, of course, be less than would lead people to have sound cattle destroyed in order to claim it, even should it be thought by some that the inspector would not guard against such a practice.

5. The inspector to be allowed to employ two trustworthy and experienced stockmen, for a short time, to whom he would assign a certain daily beat round the borders of the infected ground, in which they would carefully observe the appearance of the cattle, and report the least sign of sickness to him. These watchers would also keep back any of the cattle belonging to the infected runs which were leaving them, and would also stop stray cattle from other parts from passing through these infected runs. These watchers to be paid, say, 10s. a day, and find their own rations and two horses each.

The employment of watchers or boundary keepers under the inspector is absolutely necessary to check the disease at once; for it gives so little warning of its advent, that unless the cattle are seen daily it is impossible to catch the disease in its primary stage; and however much the settlers in the neighbourhood may dread it, they will not take the necessary steps to prevent it from spreading among their cattle. These watchers would also be of great use in preventing cattle from leaving or going on the infected runs. In the case of the Yarra Yarra cattle this would be very necessary, as they are yet scarcely broken to their run, and inclined to leave it. It unfortunately happens, too, that there are store cattle, both at Dora Dora and Mr. Bowler's, which have been lately turned out, and some of which have been found making for the Murrumbidgee right through the heart of Yarra Yarra Run.

6. No cattle of any description to be allowed to pass through the infected runs.

This might put the public to some expense and inconvenience, through the stoppage of travelling cattle and bullock teams over that portion of the Sydney Road included by the interdict; but it is considered that, unless such a measure be enforced, all the other steps that might be taken to put down the disease would be rendered completely nugatory; for there cannot be the least doubt but that bullock teams have been the means of spreading the disease all over Victoria,—in several of the districts of which they now despair of ever getting rid of it. This remark is especially applicable to Wangaratta, a resident of which informed the writer that every herd within forty miles of the township was more or less infected. The number of bullock teams that pass along the road proposed to be closed is comparatively small—not more than three or four a week, on an average; and these, unless for Tumberumba, or in that direction—by making a slight circuit, and taking the road from Albury to Wagga Wagga for some distance—might regain the Sydney Road beyond Kyeamba, should it be found impossible to forward the loading by horse teams.

7. The police, as well as the inspector, to be authorized to stop cattle or bullock teams from proceeding on the interdicted ground.

8. All impounding of cattle from the infected runs, or from within _____ miles of them, to be stopped, as well as dairying on these infected runs.

The risk of bringing cattle to pound from these runs is evident enough; and if dairying were allowed to be carried on, on infected stations, the bringing cows from all quarters of the run together at the dairy, and, when dry, allowing them to go back to their old beats, would be certain to spread the disease all over it.

ALEX. BRUCE,
Inspector.

(5.)

Ten Mile Creek,
13 September, 1861.

Sir,

I have the honor to report that I have inspected the cattle on the western, northern, and north-eastern boundaries of the ground marked by me as infected on the sketch forwarded with last report, and I regret to have to inform you that pleuro-pneumonia is spreading in this district; and that if Government intend to place any portion of it under interdict, the line marked by me as infected must be very considerably extended. How far that should be I am as yet unable to inform you, as it is a very tedious matter to inspect every mob of cattle in the neighbourhood, and I have only been able to examine the portion of the ground stated above. I expect, however, to be able to complete the examination by Wednesday next, when I will report at length on the subject.

When I state that the disease is spreading, I would beg to explain, that although I have seen cattle that were apparently badly infected, the owners have killed none of them for my examination, but seem anxious that the discovery of its being amongst their cattle should be delayed as long as possible, in order that they might not be stopped from taking away their fat cattle.

I have, &c.,
ALEX. BRUCE,
Inspector.

The Honorable the Secretary for Lands,
Sydney.

Ten Mile Creek,
26 September, 1861.

Sir,

I have the honor to report that pleuro-pneumonia is still continuing to spread on Yarra Yarra, both among the cattle which were considered infected and placed in a paddock to prevent their mixing with other cattle, and also among the cattle on the run in the general herd.

Since the date of my last report sixteen head of cattle have been killed in the paddock, and the same number on the run; and of the latter the greater proportion of them were cattle which have not been tailed for at least ten or twelve months, and were in very good condition. Considering this circumstance, and also the fact that the disease was caught by cattle of different brands and breeds, which happened to be put into the tailing mob where it first broke out, after the cattle had been some time at Yarra Yarra, it seems to be now fully established that pleuro-pneumonia in this district is either highly contagious or infectious, or perhaps both.

Were the disease in the breed, then cattle of the same brand only would take it; and the fact of cattle of half a dozen different breeds having been killed with the disease destroys that theory. Another equally untenable is, that the disease originates in too close breeding or running out of a herd; for in no herd in this district has there been more frequent changes of blood, nor are there better animals of their age, than among the cattle dying.

Again, were pleuro-pneumonia an epidemic, it would be sure to show itself in several other localities besides Yarra Yarra at the same time, which as yet it has not done. In fact, in every instance, from its first appearance in Victoria till its breaking out in this district, the progress of the disease can be accounted for by contagion or infection.

Believing, therefore, that the disease is either contagious or infectious, I would now recommend that the stringent measures adopted under the Scab Act be followed with regard to pleuro-pneumonia; and would do so the more readily, that this disease works so invisibly and insidiously on the animal in its first stage, when it may nevertheless spread the infection. Cattle that no one could possibly have suspected before being run have been killed at Yarra Yarra, among the general herd, in a bad state, and there might be a very great many more in a less advanced stage of the disease.

As pleuro-pneumonia has been in Cape Colony, where the treatment of the cattle and the climate—more than those of England—resemble our own, I would respectfully suggest that the Government should obtain all the information possible with regard to its features and progress in that Colony, and especially as to the cure by inoculation said to have been adopted there with very great success.

I have, &c.,
ALEX. BRUCE,
Inspector.

The Honorable the Secretary for Lands,
Sydney.

(6.)

At an adjourned meeting of the Settlers, held at Ten Mile Creek, on the 13th September current, to adopt measures for arresting the spread of Pleuro-pneumonia among cattle, it was resolved to submit the following suggestions to Government, viz. :—

1. That a Board be formed by Government, having its head quarters in Sydney, for the purpose of taking the necessary measures for staying the disease, which should, immediately on its being authorized to act, appoint inspectors for the several districts along the New South Wales side of the Murray, and issue the necessary orders and regulations for their guidance. But such inspectors only to act, or to be paid, when the disease had broken out in the district to which they were appointed.
2. That Local Boards be also at once nominated by the several Benches of Magistrates, and approved of by the Government, for these districts, to be prepared to act at once should the disease break out in any new quarter; and such Local Boards to act under the Head Board in Sydney, and to assist the inspector in the execution of his duty.
3. That the inspector be authorized to inspect all cattle in his district, whether on purchased property or Government land; and to order the owner to destroy such of them as he considered diseased.
4. That a tax be levied upon the whole cattle of the Colony, analogous to that raised under the Scab Act, for the purpose of compensating the owners of the cattle thus destroyed, at the rate of 50s. for all cattle over two years old, and 30s. for all under that age and over six months old; and for defraying the other expenses attending the carrying out of the provisions of the Pleuro-pneumonia Act.
5. That a copy of the above resolutions be immediately forwarded to the Honorable the Colonial Secretary, respectfully inviting his early attention thereto; and that Thomas H. Mate, Esq., the Honorable

Honorable John Hay, William Macleay, Esq., and John Morrice, Esq., M.L.A., be requested to give their support in the House to any measures, based on these suggestions, brought forward by Government.

6. That the following gentlemen be appointed a Local Committee to watch the progress of the disease, and to assist in carrying out the foregoing resolutions, viz.:—Elliot Heriot, James M'Laurin, John Purtell, John Vardy, Henry Osborne, George Bardwell, Samuel Bowler, George H. Greene, James Robinson, L. P. Smithick, John Cox, and Henry Burns.

Ten Mile Creek,
13 September, 1861.

JOHN SMITH,
Chairman.

(7.)

Ten Mile Creek,
18 September, 1861.

PLEURO-PNEUMONIA.

Sir,

Referring to my communication of the 13th instant, I have the honor to inform you that I have completed my inspection of the cattle on the runs adjoining Yarra Yarra, and the infected portion of the Billybong Station; and have now to report, that, although this disease is seemingly fast spreading over the latter run, I have seen no decided traces of it on any of the others.

In the course of my search, I found some very decided cases of the disease on the western boundary of the Billybong Run, adjoining Carabobala, and at least ten miles distant from the locality where it first broke out on that run. It would thus be now known to have spread since that time over an area of about ten miles long by six wide, in a westerly direction.

On Yarra Yarra, outside on the run, new cases of the disease are occurring daily; and of the cattle which were put in the paddock, and which were considered the most infected, about sixty have been killed since the date of my first report; and a great many more of them are believed to be ailing. Of these sixty head destroyed, I to-day saw thirty-eight killed and burned.

Waiting instructions,

The Honorable the Secretary for Lands,
Sydney.

I have, &c.,
ALEX. BRUCE,
Inspector.

(8.)

At a meeting of the Sub-committee of Settlers of the Ten Mile Creek District, held at Yarra Yarra, on the 25th September, 1861, Wm. L. Greene, p.

In reference to the progress of the disease, Mr. Robert M'Laurin stated, that it was plainly on the increase on Yarra Yarra, and that since last meeting, on the 13th instant, up to this date, there had been fifty-nine head of diseased cattle destroyed there,—sixteen head of which had been killed on the run among the general herd, and forty-three head from the tailing cattle lately put in the paddock, making in all, up to this date, about 180 head destroyed.

The meeting then took into consideration the different new cases of the disease, which had lately occurred among the cattle on the run that had not been tailed, and which could not have caught it in any other way than by contagion or infection; when it was the unanimous opinion that the disease was either contagious or infectious, or perhaps both; and that in adopting any measures for staying its spread, this fact should be taken as thoroughly established.

With regard to some remarks that had been made as to fixing the price of cattle destroyed so high for all over two years old as 50s. a head, the meeting considered that, as the Murrumbidgee is generally speaking a fattening country, and a great many of the stations stocked with store cattle, the price stated is by no means too high; and, besides, if the price allowed is to be anything like fair compensation to the settlers whose cattle were destroyed, the cost of destroying them,—which cannot be fixed at less than 5s. a head,—ought also to be taken into consideration. Compared, too, with the compensation allowed for sheep under the Scab Act, the meeting was of opinion that the two cases were not analogous in every respect, inasmuch as the owner of a sheep station could re-stock it with fresh sheep, without being at the expense and loss attendant on the breaking in of fresh cattle to a station, which cannot be fixed at less than 15s. a head—counting loss of time, labour, and loss of cattle.

The meeting also resolved, that any Act passed to give owners compensation for cattle destroyed to prevent the extension of the disease, should also provide for the payment of all cattle killed for that purpose previous to the passing of such Act; and the Members of the Legislative Assembly, mentioned in the minutes of last meeting, be respectfully requested to see that this provision be embodied in such Act, as the practice adopted of destroying all cattle showing symptoms of the disease must have very considerably retarded its progress.

The sub-committee would, in conclusion, earnestly request the members mentioned to urge the Government to take immediate steps in this most important matter, as not only every day, but every hour lost now, will greatly increase the difficulty of eradicating the disease.

Yarra Yarra,
25 September, 1861.

(9.)

Department of Lands,
Sydney, 30 September, 1861.

Sir,

Adverting to your report of the 7th instant, respecting cattle affected by the disease known as pleuro-pneumonia, and to the suggestions therein contained, for preventing the spread of that disease, I am directed by the Secretary for Lands to convey to you the following instructions:—

1. The Secretary for Lands does not think that, under the present state of the law, persons can be fined for failing to report the existence in their cattle of the disease known as pleuro-pneumonia.

2. You and your assistants are at liberty to enter upon any land upon which cattle are supposed to be infected, to inspect cattle supposed to be infected, or which have been in the same herd with those which are, or have been, infected, and also to cause cattle supposed to be infected to be consumed by fire.

3. Mr. Secretary Robertson does not think it desirable to insist upon the destruction of cattle by their owners. That, I am to state, should be done by you, and the persons employed by you, after proper notice to the owner or person in charge—the expense thus incurred to be paid by the Government; but, of course, where the owner is willing to undertake the duty it would be well to employ him.

Both you and your assistants, I am to add, must keep books for the purpose of registering the cattle slaughtered, specifying, in each case, whether the animal has or has not been found infected.

4. You will intimate to the owner or person in charge of any cattle so slaughtered, that the Government will pay 30s. per head for all over twelve months of age, and 10s. per head for all under that age.

age, but that no proprietor shall have any compensation whatever for cattle destroyed, unless he shall have given notice to the inspector of his district, or his assistants, of the existence of the disease, before that officer or his assistants shall otherwise have discovered it. You will understand, however, that persons who have already destroyed their cattle will, in the spirit of these instructions, be entitled to the rate of compensation above stated, on the facts being satisfactorily certified.

5. Mr. Secretary Robertson approves of your employing two stockmen to assist you in carrying out the duty entrusted to your care, at the rate of remuneration named by you, viz., 10s. a day, they providing themselves with rations and two horses each.

6. The Secretary for Lands approves of your prohibiting the passage of horned cattle through infected runs.

7. Mr. Secretary Robertson also approves of the same course being pursued with regard to bullock teams, as suggested by you.

8. You will prohibit the impounding of cattle from infected lands, or from any lands within twenty miles of any such infected lands.

9. You will, moreover, prohibit the dairying of cattle on infected runs.

10. You will give notice by placard, and through the local press, of the runs or parts of runs that you may think it desirable to place under the foregoing disabilities.

11. I send you herewith a copy of the Act of Parliament on this subject, and I am to request that you will, without delay, prepare and submit a draft of such regulations under it as you may think necessary to secure its effective working, including, of course, the matters referred to therein.

12. The Government, I am to state, are deeply anxious that every possible means should be resorted to, to effect the eradication of the disease; and as the Secretary for Lands has every confidence in your ability, zeal, and discretion, you are hereby authorized to expend any sum not exceeding £200 in carrying out any measures having this object in view, which may, in your opinion, be of so urgent a character as to require immediate action, without the delay inseparable from a reference to Sydney for special authority. I am also to say, that when this sum is expended the Government will provide more, if necessary, upon your furnishing proper vouchers for the expenditure of the original sum.

13. The inspectors under the Scab in Sheep Act for Deniliquin and Albury, respectively, will be appointed assistant inspectors under the Act herein alluded to, with salary at the rate of £100 per annum, irrespectively of their pay as sheep inspectors.

14. The chief constables at Albury, Deniliquin, Hay, Wentworth, and Gundagai will be authorized to act under the 4th Clause of the Act, 24 Victoria, No. 11.

15. In conclusion, I am directed to state that the Government will cause a copy of this letter to be published in the local newspapers.

Alexander Bruce, Esq.,
Ten Mile Creek, Albury.

I have, &c.,
MICL. FITZPATRICK.

(10.)

Ten Mile Creek,
11 October, 1861.

Sir,

With respect to the classification of cattle destroyed under the "Cattle Disease Prevention Act of 1861," and the prices to be paid for them, according to clause 4 of my instructions, I have the honor to submit for your consideration, whether it would not have been better to class all cattle over and under twenty-four months, instead of over and under twelve months old; and to pay for them at the same rate as that now fixed, taking the alteration of the ages into consideration; and I would respectfully state the following as my reasons for doing so:—

1. The classing cattle over twelve and under twenty-four months with grown cattle, would place it in the power of an unscrupulous person, having an inferior breeding herd, to sell off all his cattle over two years old as store cattle, if he wanted to raise money, and then put an infected beast among the remainder, to get the high rate for his cattle between twelve and twenty-four months old. I do not say that any person in this neighbourhood would be guilty of such an act (though some of them are anxious to sell their cattle, and stock their runs with sheep), but only that such a thing is possible under the present classification.
2. It would scarcely be fair for parties with fattening runs, who have none but grown cattle, that they should only receive the same price for any of their stock that might be destroyed, as was paid to the owners of breeding runs, for unmarketable young cattle between twelve and twenty-four months old: and on breeding runs there would be a great proportion of such cattle.
3. There would be much greater difficulty in deciding whether a beast be over or under twelve months, than over or under twenty-four. In cattle, the changes in the appearance and shape of the teeth (which are, as in horses and sheep, the only sure guide as to age) are so very slightly marked at the time the animal is twelve months old, that none but those who have had great experience, and who have studied the matter thoroughly, can, with certainty, tell its age to within even two or three months; and the consequence would be, that the owners of cattle destroyed would dispute the inspector's decision in every instance where they had the least chance of doing so, especially as the inducement, in three times the price for all that can be made over twelve months old, is very considerable.
4. At two years, again, the change in the appearance and size of the teeth of cattle is so very distinctly marked, that it is impossible for anyone who once sees it not to know it again; and therefore a decision, fairly given by an inspector, on a beast at that age, would not be called in question.
5. In Youatt's "Treatise on Cattle," the plates of the teeth at the different ages show certain changes in the animal's mouth from the time it is eight till it be eighteen months old; but though these changes seem plain and easily discernible on the plates in that work, it is found quite otherwise in practice; and only such changes as those from the milk to the permanent teeth can be noticed by the public, or would be, generally speaking, allowed by them to determine the age of cattle. A change of this description takes place in the teeth of cattle at two years old, when the two first permanent teeth are up.
6. Although, by the classification now proposed, the scale of prices in both classes would be raised, it is believed that the amount which would have to be paid for cattle destroyed would, in the aggregate, be less than under the present classification and prices; for in this district, where there are scarcely any but breeding herds, the number of cattle between twelve and twenty-four months of age bears a very high proportion to the rest, and the withdrawal of them from the high-priced class must keep the total expenditure down.

Since the date of my last report, I have been constantly engaged at Yarra Yarra, going over the run, examining the different mobs, and seeing the infected cattle destroyed. During that time I have destroyed forty-eight head, all of which were diseased; and I have yet a considerable portion of the run to examine. I am carefully noting the different cases that occur among the general herd on the run, and will report at length when my inspection of it is completed.

The Honorable the Secretary for Lands,
Sydney.

I have, &c.,
ALEX. BRUCE,
Inspector.

(11.)

(11.)

Ten Mile Creek,
21 October, 1861.

Sir,

I have the honor to report that I have now completed the inspection of the Yarra Yarra Run; and I regret to have to state, that I do not believe there is a mob of cattle on it in which diseased beasts are not to be found, as I killed them on all parts of the run.

Considering, therefore, from my own experience, as well as from the failure of such a system when followed by duly qualified veterinarians in Victoria, that the attempting to stop the spread of the disease by picking out all diseased, and even infected, cattle from the sound, is only a waste of time and money, I would now respectfully request to be informed whether I am empowered, under clause 2 of my instructions, to order the destruction of every mob in which a diseased beast is found, even to the slaughtering of the whole of the Yarra Yarra herd. I also require to clearly understand this before proceeding to frame the draft regulations, ordered by No. 11 of my instructions.

Although clause No. 2 might be deemed to give me such power, yet I would consider that my acting upon it to that extent would be a stretch of my instructions; and I accordingly now address you for special authority (if I am to be allowed to act to this extent), which I trust will reach me *as soon as possible*, and, if practicable, by telegram from Kyeamba.

Even when every mob in which a diseased beast is found is destroyed, it would still be a matter of very great uncertainty if the disease would even then be stopped; for the best authorities hold that pleuro-pneumonia is readily given to sound cattle through their depasturing on the ground where infected cattle had fed; (and this was the way in which the disease spread, in the first instance, in Victoria); and I would respectfully submit, for your particular consideration, whether the only thoroughly effectual mode of eradicating the disease would not be by drawing imaginary lines round infected districts—keeping, of course, the nature and fall of the country in view in doing so—and destroying all cattle at the time within such lines, and any that might come on the ground for a stated period thereafter.

Single beasts, and even mobs of cattle, so shift from camp to camp, and not unfrequently change their feeding ground, that there can be no positive certainty that the disease is eradicated *unless there is also a certainty* that the ground considered infected was kept entirely clear of cattle; and this, it can easily be seen, could not possibly be done, if the mobs of cattle reckoned clean were left here and there in the neighbourhood of the ground thus cleared of cattle as diseased or infected. And this uncertainty applies with tenfold force to cattle fattening on a run on which they were not bred.

In other words, I would respectfully ask you to consider whether the only possible way of eradicating the disease in this district would not be to make the Yarra Yarra Run (which must now be held as wholly infected) a centre, and to describe imaginary lines around it on every side, till all the infected country and cattle are included; and to have all the cattle within such lines destroyed, and the ground thus cleared kept entirely free of cattle till it was considered clean. This proposal, if adopted, would entail the destruction of about 5,000 head of mixed cattle on Yarra Yarra alone; and if the disease has spread as far as I am afraid it has, we might put down some 8,000 or 9,000 head besides, before there was a certainty of its eradication.

Such a measure must therefore cause great loss to the parties whose cattle were destroyed; but even to them the first loss would be far preferable to being put under interdict, and the risk of the disease breaking out in fresh mobs of their cattle hanging continually over their heads, while all this time they dare not move or sell a beast.

So far as the country at large, again, is concerned, this plan is so plainly the best, even when the heavy outlay that it would entail is taken into consideration, as to require no arguments in its support.

If this suggestion is considered worthy of being entertained, I would further propose that there should be three Commissioners appointed by Government to fix the lines of what was considered infected country, as the doing so is the only difficult part of the proposed scheme.

As cattle are now likely to be killed in considerable numbers, it is a matter for consideration whether it is not possible to save the hides, as I am led to believe, from the information I have gathered on the subject, that it might be possible to get parties to kill the animal and burn the carcass, on being allowed to save the hide for their trouble. If the hides were counted, and marked by me or my assistants on being taken off, and again checked when packed to be sent off to Sydney or Melbourne, I cannot see that there would be any risk of their spreading the disease.

Having ordered the best looking cattle in the paddock at Yarra Yarra (already alluded to in my former reports as the mob of about 450 in which the disease first broke out) to be killed, and having found them diseased, the remainder have been destroyed indiscriminately, and not one of them has as yet proved to be free of the disease. There are now only about 150 head alive, and I expect they will be entirely destroyed in the course of this week.

Waiting your instructions,

I have, &c.,
ALEX. BRUCE,
Inspector.

The Honorable the Secretary for Lands,
Sydney.

After consultation with Colonial Secretary, I approve of the course indicated being carried out. Inform by telegram.—JOHN R. 26 Oct.

Telegram *via* Kyeamba, 28 October, 1861. Letter, October, 1861.

(12.)

Carabobala, 22 October, 1861.

Sir,

In accordance with instructions received by me, as chairman of a public meeting, held at Ten Mile Creek, on the 19th instant, I have the honor to enclose the resolutions passed at that meeting.

The Honorable
The Minister for Lands and Works,
Sydney.

And I have, &c.,
ELLIOT HERIOT,
Chairman.

Ten Mile Creek,
19 October, 1861.

Copy of Resolutions passed at a meeting held this day, at Ten Mile Creek—Elliot Heriot, Esq., J.P., in the chair—to consider the instructions given by the Honorable the Minister for Lands and Works to Mr. Bruce, the Inspector under the Pleuro-pneumonia Act, for the suppression of that disease.

Resolution 1st.—That this meeting considers that that portion of clause 4 which states "that no proprietor shall have any compensation whatever for cattle destroyed unless he shall have given notice to the inspector of his district, or his assistant, of the existence of the disease," if carried out literally, would in many cases inflict gross injustice, as the nature of the disease pleuro-pneumonia is such

such that, in most cases, it is impossible to prove its existence until the lungs have been examined. This meeting is therefore of opinion, that where no attempt has been made to conceal the existence of the disease, the owner should be entitled to compensation.*

Proposed by Henry Osborne, Esq.; seconded by William F. Greene, Esq.

Carried unanimously.

2nd Resolution.—That this meeting considers that, owing to the absence of any sufficient boundaries, it would be utterly impossible to carry out a system of quarantine in such a manner as to stop the spread of the disease pleuro-pneumonia, which, by preventing the removal of fat stock, would entail ruin on the owner. †

Proposed by William F. Greene, Esq.; seconded by Henry Osborne, Esq.

Carried unanimously.

3rd Resolution.—That this meeting, after mature deliberation, is convinced that the only effectual means of stopping the spread of the disease pleuro-pneumonia is to destroy the *entire portion* of the herd amongst which diseased cattle have been found, as it has been proved by experience that it is impossible to detect the disease in its early stages. ‡

Proposed by William F. Greene, Esq.; seconded by Henry Osborne, Esq.

Carried unanimously.

ELLIOT HERIOT,
Chairman.

(13.)

PLEURO-PNEUMONIA.

Ten Mile Creek,
26 October, 1861.

Sir,

Although I had lately the honor of addressing you on this subject, I find the disease spreading so steadily that I deem it necessary to keep you aware of its progress.

Since the 21st instant (the date of my last report) I have seen about sixty head of cattle, taken indiscriminately from a mob on the Yarra Yarra station, slaughtered; and although there were at least six different brands and breeds of cattle in the lot, every beast killed was more or less diseased, while some of them were apparently sound before being killed, and fat enough for market.

Several cases have also since occurred a few miles over the boundary of the Yarra Yarra run, in this immediate neighbourhood, which, with the cases in cattle other than those of Yarra Yarra, already reported on Messrs. Bowler and Bardwell's runs, clearly show that the disease must be very generally disseminated among the cattle belonging to other parties coming in contact with those of Yarra Yarra.

Everything, therefore, goes to show that the disease is highly contagious or infectious; and that, unless decided and energetic measures be at once taken, the disease will soon spread over too wide an extent of country to be eradicated.

I have also to state that I have stopped several dairies in the infected country; but in doing so have allowed the parties who were carrying them on to retain a few broken-in cows for milk for the families' use, and I trust I was right in giving this permission.

The Messrs. M'Laurin having consented to the destruction of all cattle belonging to them presently on other parties' runs, whether they belong to the infected lot or not, I am to employ another boundary keeper, to visit the different stations and see these stragglers destroyed on one side of the country, while one of the hands I had previously engaged in that capacity is out on the same errand on the other, and the third hand is constantly employed at Yarra Yarra.

I have also engaged a fourth party, and dispatched him to follow some store cattle, originally from White's, on "The Levels," which have gone off towards the Murrumbidgee from Mr. Samuel Bowler's run, on the Ten Mile Creek, now declared infected, and to see such cattle destroyed. Both this man, however, and the other extra hand to be sent after the Yarra Yarra cattle will be paid off when they return.

I would explain, with regard to the destroying of these stragglers on the ground where they are found, rather than collecting and bringing them back, that if any of them should turn out to be infected, the driving of them about the country would be sure to bring out the disease more rapidly, and the runs through which they would be thus driven on their way back here would be certain to be infected.

Although my instructions may scarcely warrant my entrusting these men with so great power as the following up and destroying the cattle in this way will give them, still I thought it better (as I could not possibly leave this quarter myself) to run the risk of exceeding my powers, rather than allow these stragglers to carry the seeds of the disease all over the Colony.

Before dispatching them, however, I have taken the precaution to order these boundary keepers to have the destruction of every beast thus destroyed by them certified by the owner of the run where killed; and I have also made them subscribe a declaration before a Justice of the Peace, that they will always give a correct account of all cattle they may thus see slaughtered, and that they will generally carry out any instructions they may receive, for staying the spread of the disease, to the best of their knowledge and abilities.

The best arrangement I could make with the Messrs. M'Laurin for the burning of their cattle was 5s. a head for the grown cattle, and 3s. each for those under twelve months, whether singly on the run, or in mobs in the yard. These rates I consider high, but I could get no other person in the district to undertake the work at less; and I deemed it better to give them their price than to employ hands myself whom I had not the time to overlook, being very frequently called away to different parts of the district to inspect ailing cattle. If the herd is to be destroyed, and my suggestion respecting the saving of the hides not to be entertained, tenders might be called for doing the work.

Waiting anxiously for instructions,

I have, &c.,
ALEX. BRUCE,
Inspector.

The Honorable the Secretary for Lands,
Sydney.

(14.)

Telegram from Under Secretary for Lands to Alexander Bruce, Esq., Ten Mile Creek, Kyeamba.

31 October, 1861.

The Secretary for Lands approves of the course indicated in your letter of the 21st ultimo being carried out. The special authority therein applied for, for the destruction of every mob of cattle in which a diseased beast is found, is hereby conveyed; the hides to be disposed of in the manner suggested by you. Further instructions by letter.

(15.)

* I do not apprehend that any Government would carry out this clause literally, if by doing so injustice would follow. All that would be done would be to carry out the clause in its spirit.

† If the disease is in the cattle, it will be in the fat stock as well as the others, and it is even more necessary to prevent them travelling to market than ordinary stock.

‡ Instructions in accordance with the views stated in this resolution have been given before.

JOHN R.
3 Nov.

(15.)

*Department of Lands,
Sydney, 2 November, 1861.*

Sir,

Referring to my telegram of the 28th ultimo, conveying the special authority applied for in your letter of the 21st instant, for the destruction of every mob of cattle in which a diseased beast is found—the hides to be disposed of in the manner suggested by you, namely to become the property of the parties killing the animal and burning the carcass,—I am directed to inform you, that Mr. Secretary Robertson has since seen reason to alter his views with regard to the disposal of the hides, which he now considers should be destroyed with the cattle.

2. Mr. Secretary Robertson, I am to add, approves of imaginary lines being drawn round infected districts, as recommended by you, with a view to the destruction of all cattle at the time within such line, and any that may come on the ground within a certain period thereafter, which period you will have the goodness to specify for approval.

3. If you are unable to determine these lines yourself, I am to request that you will have the goodness to name two gentlemen, who would be competent and willing to co-operate with you in the matter.

A. Bruce, Esq., Inspector of Cattle,
Ten Mile Creek, Kyeamba, *via* Tarcutta.

I have, &c.,
MICL. FITZPATRICK.

(16.)

Telegram from Alexander Bruce, Inspector of Cattle, Ten Mile Creek, Albury, to the Under Secretary for Lands, Sydney.

6 November, 1861.

As two competent and disinterested parties could not be found in the district, would I call in the assistance of one of the late Victorian Commissioners, under two and three of yours as 346 of 2nd November, and let the settlers in the district choose the third?

(17.)

Telegram from the Under Secretary for Lands, Sydney, to A. Bruce, Esq., Ten Mile Creek, Albury.

6 November, 1861.

Mr. Secretary Robertson sees no objection to your proposal, to call in the assistance of one of the late Victorian Commissioners, for the purposes mentioned in paragraphs two and three of my letters of second instant; the settlers in the district to choose the third.

(18.)

*Ten Mile Creek,
9 November, 1861.*

Sir,

I have the honor again to acknowledge the receipt (having already done so by telegraph) of your communication of 2nd instant (61/3892-346,) and have, in accordance therewith, countermanded my advertisements for parties to destroy the cattle for their hides. I may, however, be allowed to state that, from the applications already made for doing the work on those terms, I believe upwards of 2,000 a week would have been got through.

The Messrs. M'Laurin have been making inquiry as to the time of payment for the destroying of the cattle; and I would, therefore, beg respectfully to be informed how the £200—which by No. 12 of my instructions I would understand is to be expended for this purpose—is to be made available by me. The Messrs. M'Laurin say that they need the cost of destroying the cattle as soon as possible, to meet the heavy weekly outlay they are now at for hands to do the work.*

When, on a former occasion, I stated that I considered 5s. a head for destroying cattle over two years old, and 3s. each for those under that age too high, I was under the impression that the settlers would get them in without looking for payment. I now find that they would not, generally, be willing to do so without a consideration; and as there is nothing in my instructions to compel them to do so, 5s. a head for the getting in and destroying cattle over two years old, and 3s. a head for all under that age, would not be excessive—especially as everyone who undertakes the work will be bound to get in all the herd to the last head of the brand.

As diseased cattle have now been killed on Dora Dora run (which is bounded on one side by the Murray) it has been put under interdict; and I have been applied to by several settlers whose runs are also under interdict, and who wish to take away fat cattle, to allow them to do so through the interdicted ground, and to cross them into Victoria at Dora Dora, with the consent of the owner of that run, and after inspection by me.†

I might explain, that several stations have had cattle belonging to the Messrs. M'Laurin killed upon them, slightly diseased, and were accordingly put under interdict for a time; and it would be from some of these runs that the fat cattle would be taken (if allowed) across the Murray.

So far as Dora Dora, and the other stations through which such cattle would travel, are concerned, there could not be any harm done, as Mrs. Greenc's, Billybong, Mr. Bowler's, Ten Mile Creek, and Dora Dora—all adjoining Yarra Yarra—are, next to that run, the most infected in the district. It would be a matter for your consideration, however, whether the allowing these cattle from interdicted runs on this side the Murray to go into Victoria would not be remonstrated against by that Government, and, perhaps, lead to the passing of a measure to prevent cattle from crossing into Victoria from all parts of the Billybong district.

In

* The cost of destroying will be at once paid on presentation of certificate from Mr. Bruce.—JOHN R.—14 November.
† The Colonial Secretary should be asked to ascertain from the Government of Victoria, whether they would object to the fat stock alluded to passing into their Colony as indicated. It would be proper to give the Colonial Secretary a rough sketch of the runs now under interdict.—JOHN R.

In order to see whether the form meets with your approval, I send you, as under, a transcript of the headings of the book in which the entries of all cattle destroyed are made, and trust that it contains all the particulars that will be required.

| Date. | Description. | Brands. | Age. | | Owner. | How affected. | By whom destroyed. | By whom seen destroyed. | Remarks. |
|-----------------|--------------|--------------|-------------------|--------------------|--------------------|---------------|--------------------|-------------------------|----------|
| | | | Over 2 years old. | Under 2 years old. | | | | | |
| 1861. Nov. 1 | One red ox | AIA off rump | 1 | | J. M'Laurin & Sons | Badly | J. M'Laurin | P. R. Gordon | |

Referring to your communication of 26th October (61/3706-340), regarding the alteration in the classification of cattle destroyed, I would respectfully request to be informed (as many parties are anxious to know) what price in money is now to be paid for each class of cattle. As it would require very considerable experience and knowledge of cattle to fix the price of these classes "at the same rate as that already allowed for cattle over and under twelve months, taking the alteration of ages into consideration," I can scarcely think that the fixing of the money value of the present classes of cattle is meant to be left to me, but will be done by competent parties deputed by you.*

I trust to be at work by the end of the coming week, under the plan approved of in your communication of 2nd November, paragraphs 2 and 3. The settlers meet on Wednesday next, to appoint one of their number to act along with me and Mr. Smith, from whom I hope to hear to-night, stating that he is coming up here at once.

It will be necessary, after such infected country is marked off, to keep the district for some distance round it under interdict for some months, lest by any chance some infected beast might have escaped our notice outside the line.

In the meantime, the destruction of the cattle at Yarra Yarra, and Mr. Bowler's, Ten Mile Creek, is being proceeded with; and when the proposed line is drawn, a commencement will be made on the outside of the proscribed country on every side.

Respectfully requesting an answer to the inquiry as to paying for the destruction of the cattle and the other matters requiring a reply.

I have, &c.,
ALEX. BRUCE,
Inspector.

The Honorable The Secretary for Lands,
Sydney.

(19.)

Telegram from A. Bruce, Esq., Cattle Inspector, Ten Mile Creek, Albury, to Thos. H. Mate, Esq., M.L.A., Sydney.

11 November, 1861.

As I can hear nothing of Mr. Smith, the Victorian Commissioner, could Mr. Weaton, or some qualified person, be got in Sydney to come up and assist in fixing proposed boundary of infected district? If you think so, apply to Government on subject. I wait reply here.

(20.)

Telegram from Under Secretary for Lands, Sydney, to A. Bruce, Esq., Ten Mile Creek, Albury.

12 November, 1861.

Mr. Mate has handed your telegram of yesterday to the Secretary for Lands, who desires me to say that, if you want instructions, you should telegraph to this department; and that as it was you who suggested that the assistance of the Victorian Commissioner should be called in, you should, if you cannot get him, suggest some other person, or else ask for sole power in yourself. It appears to Mr. Robertson likely, from the delay, that the advantage of immediate action will be lost while considering the mode.

(21.)

Telegram from A. Bruce, Esq., Cattle Inspector, Ten Mile Creek, Albury, to Under Secretary for Lands, Sydney.

12 November, 1861.

I would now name for approval Mr. S. A. Meyers, Mungaberoona, Albury, to act along with me and the gentleman appointed by the settlers to fix infected boundary. I wait reply.

(22.)

Telegram from Under Secretary for Lands, Sydney, to A. Bruce, Esq., Cattle Inspector, Ten Mile Creek, Albury.

14 November, 1861.

The Secretary for Lands approves of the appointment of Mr. S. A. Meyers (as recommended in your telegram of to-day), to act with you and the gentleman appointed by the settlers to fix infected boundary.

(23.)

Telegram from Secretary for Lands, Sydney, to A. Bruce, Esq., Inspector of Cattle, Ten Mile Creek, via Albury.

18 November, 1861.

The money for destroying the cattle will be at once paid on the production of the necessary certificate from you. With regard to the driving of the fat cattle referred to by you across the Murray into Victoria, the Chief Secretary of that Colony has been telegraphed to, to ascertain whether there will be any objections on the part of the Victorian Government to its being done.

(24.)

* What was meant was, that 30s. should be paid for all cattle twenty-four months and upwards; and 10s. for all under that age. Mr. Bruce, in his letter of 17th October, points out the ease with which cattle can be classed, as under on the one hand, or over on the other, than twenty-four months. The new arrangement is merely following Mr. Bruce's suggestion, and he will have to provide means for ascertaining the ages.—JOHN R.—14 November.

(24.)

Telegram from Inspector and Commissioners of Pleuro-pneumonia, Kyeamba, to Secretary for Lands, Sydney.
21 November, 1861.

Being alarmed by extent of pleuro-pneumonia on west side of Yarra Yarra, we separated and tried country in other directions. We have traced the disease from the Murray forty-two miles towards the Murrumbidgee, and at least 40,000 cattle would likely now be condemned. Further particulars in an hour.

ALEX. BRUCE.
GEORGE DAY.
S. A. MEYER.

(25.)

Telegram from Inspector and Commissioners of Pleuro-pneumonia, Kyeamba, to Secretary for Lands, Sydney.
21 November, 1861.

The number of cattle in last telegram is made up of those belonging to Yarra Yarra, Dora Dora, Wagra, Mungandra, Mountain Creek, Ten Mile Creek, Carrabots, Billybong, Cookendina, Kerry Kerry, Pullitop, Little Billybong, Four Mile Creek, Copabella, and Jenjemick, and the disease might be beyond these stations. What course will we now adopt, and to what extent would the Government go in compensation? Would it not be best for inspector to visit Sydney and explain? Shall the cattle which are being destroyed at Yarra Yarra and Mr. Bowler's still continue to be killed, and will the cattle on Mr. Bardwell's, which we have condemned, be destroyed. We wait reply here.

ALEX. BRUCE.
GEO. DAY.
S. A. MEYER.

(26.)

Telegram from Secretary for Lands, Sydney, to A. Bruce, Esq., Kyeamba.

22 November, 1861.

The Assembly is still discussing the resolutions. There is no hope of your receiving any further telegram to-night.

(27.)

Telegram from Secretary for Lands, Sydney, to A. Bruce, Esq., Inspector, Kyeamba.

23 November, 1861.

The Assembly has authorized a Special Commission, of which you will be a member. Till further instructions, only destroy cattle diseased, or supposed to be diseased.

(28.)

Telegram from A. Bruce, Esq., to Secretary for Lands.

Lest there should be a misunderstanding in telegraphing, we would explain that we saw diseased beasts in every mob, and also that we believe the disease extends considerably beyond the limits mentioned—we having turned back in order to telegraph at once.

(29.)

Telegram from Secretary for Lands, Sydney, to A. Bruce, Esq., Ten Mile Creek, Kyeamba.

26 November, 1861.

You will proceed with the destruction of cattle diseased, or supposed to be diseased, until further instructions. Your remuneration will be as heretofore. The Commissioners to be appointed by the Government to inquire into pleuro-pneumonia are Messrs. James Garland, S. A. Meyer, and G. Day; Mr. Bruce, a veterinary surgeon, to be attached. £2 10s. (two pounds ten shillings) with travelling expenses, will be allowed official members of Commission. To be considered as urgent questions:—First—What land, if any, within the boundaries thereof, should be placed under quarantine; to consider and report of the best means of staying the disease, whether within or without the boundary; to communicate frequently with me by telegram, as well as by letter, the views of the Commission subjoined; to appoint persons to guard the passes beyond the diseased boundaries of the land under quarantine, with power to destroy any cattle belonging to the last mentioned runs that may overstep the boundaries thereof—the owners to have no compensation for any such cattle.

(30.)

Ten Mile Creek,

26 November, 1861.

Sir,

We have the honor to report, that in terms of Nos. 2 and 3 of your communication to the inspector, of 2nd instant (61/3892-346), we commenced to define the boundaries of the infected country, on Thursday last, the 14th instant, by inspecting Mr. Bowler's cattle, on Ten Mile Creek; and after a careful examination of two days, we found that the disease was in every mob on the run, and had therefore no alternative but to condemn the whole herd, of some 1,000 head, and notice was given to the owner to destroy them.

After a like inspection of Mr. George Bardwell's herd, also on Ten Mile Creek, we found such proof of the existence of the disease all throughout his cattle as to lead us to condemn his run, and we gave him notice to destroy the stock accordingly.

On the afternoon of the 16th instant we commenced the examination of Messrs. Purtell and Dalton's runs, of Ten Mile and Mountain Creeks, and concluded at noon on the 19th, when, being alarmed at the extent of the disease in that direction, we came to the conclusion not to condemn their cattle until we found how far the disease had spread in other directions, and especially towards the Murrumbidgee (a line of fence about forty miles in length running in a northerly direction, from Mungandra to Mangoplar, in some measure protecting the Lower Billybong), and to telegraph the result to Government, from Kyeamba, on Thursday morning.

On

On the morning of the 20th, therefore, we separated—Mr. Meyer taking a north-easterly direction from Careboba to Pullitop; and Messrs. Day and Bruce inspecting the country from Ten Mile Creek to same place, and examining cattle on the runs of Mrs. Greene, Billybong; Heriot, Carabobala; Post, Cookendina; and Messrs. Cox and Keane, Pullitop, along the valley of the Back Creek and Major's Gully, in a northerly direction.

After meeting at Pullitop on the evening of the 20th, we regret to state that the result of our several inspections clearly showed that the disease had spread from the Murray River to Pullitop, and in all probability considerably beyond that run, in the direction of the Murrumbidgee.

Having come to this conclusion, we left early on Thursday morning for Kyeamba, inspecting some of the cattle as we went, and found the disease up to Kyeamba, where we inspected four head, and found three of these very distinctly diseased.

We then telegraphed the result of our inspection to you; and after repeated communications with your department—in the course of which we were given to understand that the Legislative Assembly had sanctioned the appointment of a Special Commission on the subject—we considered that the services of Messrs. Day and Meyer were at an end, and they accordingly left under that impression.

Before doing so, however, notice was sent to Mr. George Bardwell that the destruction of his cattle was to be deferred in the meantime; and we also thought it right respectfully to offer it as our joint opinion, founded on our experience, that any measures which might now be adopted to eradicate the disease this side of the Murrumbidgee would prove ineffectual unless the settlers generally could be roused, through a salutary dread of the disease, to take every possible precaution for protecting their stock from the infection, and some means could be discovered for preventing the owners of bullock teams from breaking interdicts by determinedly pushing through wherever their immediate interest leads them, regardless of the risk to themselves or the country at large.

We have, &c.,

ALEX. BRUCE, Inspector.
GEORGE DAY.
S. A. MEYER.

The Honorable the Secretary for Lands,
Sydney.

(31.)

Telegram from A. Bruce, Kyeamba, to Under Secretary for Lands, Sydney.

28 November, 1861.

Telegram of 26th received. As you could not be aware, from our telegrams, that the killing of all cattle diseased, or supposed to be diseased, might destroy some 8,000 or 10,000 head, my only action up to this time has been—pending inquiry by Commission—to place the country known to be infected under temporary interdict, and to continue the destruction of Messrs. M'Laurin's and Mr. Bowler's cattle, as almost all diseased and very liable to stray, and of stragglers from infected runs—which I hope meets your approval.

(32.)

Telegram from Under Secretary for Lands, Sydney, to A. Bruce, Esq., Ten Mile Creek, Kyeamba.

29 November, 1861.

In reference to your telegram of the 28th instant, I am directed to inform you, that the Secretary for Lands approved of the course mentioned as having been taken by you. Telegrams have been sent to-day, in answer to Messrs. Day and Meyer, that what is intended is, that cattle diseased, or supposed to be diseased, are those only that are to be destroyed. Also, that Mr. Garland and the Veterinary Surgeon left on Tuesday by mail. To prevent misunderstanding, I am to mention, that from Friday last, the allowance for cattle destroyed will be whatever the Parliament may approve.

(33.)

*Ten Mile Creek,
30 November, 1861.*

Sir,

In obedience to your instructions, we have the honor to inform you that Mr. Garland and Mr. Pottie arrived here last night, and, accompanied by Mr. Bruce, visited the Yarra Yarra station this morning.

We regret to state that pleuro-pneumonia has existed there in a virulent form, and that the Messrs. M'Laurin have already slaughtered five thousand head (5,000) of cattle.

Mr. Pottie made a minute inspection of a number of lungs in various states of disease, and his report is herewith enclosed.

In the course of the afternoon Messrs. Day and Meyer arrived, and we proceeded at once to consider the various questions connected with the very important duties we had to discharge. The decisions at which we arrived on the several subjects to which your instructions directed our attention, will be gathered from the three resolutions which we have the honor to enclose, and which were passed and entered on the minutes of our proceedings. We have not had time fully to discuss and decide upon the mode of compensation; but will take the earliest opportunity of coming to a conclusion upon this subject, which we will immediately transmit.

With reference to our recommendation to prevent horned cattle being removed from the Murrumbidgee Pastoral District to any other portion of the Colony of New South Wales, we beg to state that we have been induced to offer this suggestion, in consequence of having reason to believe that the infected district now under quarantine does not include anything approaching to the extent of diseased country; and until, by further inspection, we can ascertain its limits, we think it prudent to take every precaution; at the same time we do not consider that such a restriction will be productive of much hardship to the district, inasmuch as it will apply to a country almost wholly in connection with the Victorian markets, and will in no way interfere with taking fat stock there; while on the other hand, it will not operate against the introduction of sound stock from the Northern Districts. The only injury that can be sustained will arise from the inability to send fat stock from the district to the Lachlan Gold Fields.

The other two resolutions will, of course, be subject to modifications, as our information becomes more complete.

We have forwarded a telegram to-day, embodying the substance of this letter.

So far as we are at present advised, we do not know that the disease has extended further.

To-morrow we are about to proceed on a tour of inspection, and will lose no opportunity of communicating the result to you.

We have, &c.,

JAMES GARLAND.
GEORGE DAY.
S. A. MEYER.
ALEX. BRUCE.

To the Honorable the Secretary for Lands,
Sydney.

Telegraph approval of the resolutions alluded to, and instruct to act under them.—JOHN R.—5 Decr.

Resolutions

Resolutions passed by Board of Commissioners on Pleuro-pneumonia, at Ten Mile Creek, on 30th November, 1861.

Resolved,—That the country comprehended in that portion of the Colony of New South Wales known as the Pastoral District of Murrumbidgee, exclusive of that portion of the said district lying east of the watershed of the Tumut River, be temporarily proclaimed as a district from which no horned cattle of any description shall pass into any other portion of New South Wales.

That the runs already proclaimed by the inspector as infected shall remain under quarantine, and be subject to all the restrictions and disabilities now in force or hereafter to be imposed respecting such runs.

That in the meantime six stockmen be appointed as boundary keepers, to guard the runs immediately beyond the land under quarantine, or such greater number as an extended boundary may require, with power to prevent all cattle from passing such boundary from infected runs, and to destroy such cattle so passing over as the inspector shall indicate, with the approbation of the Board.

*Ten Mile Creek,
30 November, 1861.*

Sir,

In obedience to your instructions, I furnish, as an Appendix to the Board of Commissioners' Report for inquiring into the history, nature, and causes of that disease, said to exist among the cattle of this district, termed pleuro-pneumonia,—I have the honor to transmit a brief notice of such facts as came under my observation.

The history of the introduction of the disease remains as yet a mystery. Various and vague reports are current in this district, and the Messrs. M'Laurin are not prepared to say how it was introduced into their herd.

With regard to the nature of pleuro-pneumonia here prevalent,—it much resembles the same disease which for the last twenty years has ravaged the stock of Great Britain. The symptoms are generally of a typhoid character, and thus the disease escapes notice until it has advanced beyond the reach of cure. Evidently the contagious or spreading nature of the disease is just as virulent here as elsewhere; for on examination I found nearly all of Mr. M'Laurin's herd exhibiting the external symptoms of pleuro-pneumonia.

I at once commenced *post mortem* examinations, and had twenty cattle killed for that purpose. The following is an outline of what appeared:—

A cow six years old:—Abdominal parieties and peritoneum good; but symptoms of diarrhœa present within the intestinal canal, with derangement of fourth stomach.

Chest appearances very bad. Left lung studded with congestive spots, and the bronchial tubes within much inflamed; right lung firmly adhering through its pleura to the diaphragm and pleura costales, with effusion of lymph matter and blood. The lung, after being taken from chest, felt tremendous heavy; and upon cutting into its substance, found it perfectly hepatized and exhibiting the marble appearance so conclusive in this disease. The inflammation had also extended up the trachea, involving the larynx and pharynx.

The others exhibited similar symptoms in a minor degree.

I have, &c.,
JOHN POTTIE,
Veterinary Surgeon.

The Honorable the Secretary for Lands,
Sydney.

(34.)

*Mullangandra,
4 December, 1861.*

Sir,

We have had the honor to acquaint you by telegram that, after much discussion, we have experienced great difficulty in arriving at a conclusion with regard to the mode of awarding compensation for cattle slaughtered under "the Cattle Disease Prevention Act of 1861," till by further inspection we may be able to ascertain to what extent pleuro-pneumonia may have gone, the proportion of cattle affected in the herds, and whether and in what cases it may be desirable to slaughter the whole herd, or only such cattle as are diseased or supposed to be diseased. In the event of the disease being circumscribed within narrow limits, it may be advisable to slaughter, without loss of time, the whole of the herds affected, to prevent its extension, and in that case the propriety of the Colony giving an ample compensation to the owners has been argued.

It has been said also, that the amount ought not to be such as to offer any inducement to cattle owners to be indifferent to the inspection of their herds.

On the other hand, it has been contended, that as the runs of diseased cattle are placed under quarantine, it ought to be an element in the compensation that the owner should be remunerated for the loss he sustains by not being able to take cattle to market, as well as for the other disabilities under which he labours for the benefit of the country. Indeed, we are aware of cases of great hardship, when certain runs were placed under the first interdict, in consequence of diseased cattle from Yarra Yarra having been found thereon, at a time when mobs of fat cattle were just about to be removed for market, some of which had actually been sold and could not be taken away, while cattle were removed from adjoining runs, perhaps a day or two before the quarantine was proclaimed, without let or hindrance. On every extension of the quarantine, similar cases of hardship will occur.

These are, however, matters having reference to the amount of compensation rather than the mode of awarding it; but they are at the same time so intimately connected that we allude to them merely to convey some idea of the difficulties we have to encounter in arriving at an immediate conclusion.

On Monday, the 2nd instant, the Commissioners, accompanied by the Veterinary Surgeon, proceeded to Messrs. Partell and Dalton's run, Ten Mile Creek, where we shot two head of cattle, both of which were diseased. Our operations were much impeded by the heavy rain, which flooded the creeks to such a degree that we could not pass over them to adjoining runs without going to the Albury Road to avail ourselves of the bridges. Yesterday it rained very heavily; but in the afternoon we visited Mr. Morrice's run, Mullangandra, and slaughtered a heifer, which was distinctly diseased; but in order to be more fully assured, three others of the same herd were killed and examined this morning, which put the existence of pleuro-pneumonia there beyond a doubt.

We afterwards proceeded to the station called Cumberoona, and examined two of Mr. Hore's cattle, which were also slightly affected.

Mr. Pottie's report of these examinations we have the honor to enclose.

We beg to acknowledge the telegram communicating Mr. Michie's report on the cases that have occurred near Campbelltown; and

We have, &c.,
JAMES GARLAND.

The Honorable the Secretary for Lands,
Sydney.

Mullangandra

Mullangandra,
5 December, 1861.

Sir,

Since examining the Yarra Yarra cattle, I have examined Purtell's, of Ten Mile Creek, and Mr. Morrice's of Mullangandra, on both of which stations we found cattle diseased with pleuro-pneumonia. These cases exhibited, on *post mortem*, the first and second stages; but stray cattle had formerly been found on these runs, belonging to Yarra Yarra, exhibiting the third stage of the disease.

These runs are pastured by a mixed herd; that is to say, some of the cattle are of very good shape and colour, while others are very indifferent; yet many of the best cattle are found worst with the disease, exhibiting the greatest degree of internal destruction, the lungs being further and more generally disordered.

We find from inquiry, that the disease known as rot existed in a very virulent form some time ago among many of the cattle pasturing on the runs around Ten Mile Creek; and I find this verified by my *post mortem* researches. Properly this disease is termed tuberculosis. It seems to be a disorder of the assimilation of the elementary bodies of the blood. The animal takes into its constitution the embryo of an animalcule. These get deposited in the various tissues of the body, nature forming round them a kind of cyst—this cyst for a time receiving a deposition of phosphates, until the suppurative process is set up, manifesting appearances which we often see in the last stages of this malady, viz.:—The liver, and sometimes the lungs and kidneys, turned into a mass of white purulent matter. An animal labouring under this disease possesses a gross appetite while alive, greedily licking all sorts of rubbish. Though such a state robs the constitution of its full powers to withstand an epidemic, yet it does not necessarily create spontaneous disease, and could not of itself create pleuro-pneumonia. In fact, the cattle which have been impoverished by tuberculosis, and are still so, do not present so strong internal appearances of the present epizootic; but those cattle which have recovered, and are now speedily getting fat, seem to fall the readiest victims to pleuro-pneumonia.

I have, &c.,
JOHN POTTIE.

To the Honorable Secretary for Lands.

(35.)

Bawna, 5 December, 1861.

Sir,

Since writing our letter of yesterday's date, we have had the honor to receive your telegram of that day. In reference to it, we reply by telegram, to the effect, that if the resolutions we forwarded on the 30th ultimo were confirmed and proclaimed by the Executive, we should, in the meantime, be armed with sufficient authority. At the same time we suggested, that after the word "proclaimed," in the second resolution, the words "or to be proclaimed" should be inserted, in order to meet the extension of power necessary to an extended quarantine.

We have, &c.,
JAS. GARLAND.

The Honorable the Secretary for Lands,
Sydney.

(36.)

Albury, 7 December, 1861.

Sir,

In our letter of the 5th instant, we expressed our belief, that if the resolutions forwarded on the 30th ultimo were confirmed and proclaimed by the Government, we should be armed with sufficient authority; but on looking more closely into the Cattle Disease Prevention Act, we are now of opinion that they scarcely are sufficient. In order to proceed more rapidly with the investigation, we consider it desirable to separate into two or more parties, who may take different directions; and in such case the Commissioners will require power to go upon suspected runs, and to kill any suspected cattle, which power we do not think we at present possess. In the meantime, we do not suppose that the settlers will offer any obstacle to the prosecution of our investigations; and we think that, except in very doubtful cases, any of the Commissioners have now acquired sufficient experience to enable them readily to detect the existence of disease. If doubtful cases shall occur during the investigations of Commissioners only, a reference will be made to Mr. Pottie before any action shall be taken.

We are now so strongly impressed with the necessity for proclaiming the regulations to legalize the acts of the Commissioners, as well as of the inspectors, that we have for the last two days given much of our attention to the subject, with a view to the necessary powers being afforded to us as soon as possible. It is evident that the Act was passed mainly to prevent the importation or introduction into the Colony of diseased cattle, and did not anticipate the restrictions necessary to stay its progress when once it had obtained a footing. We at first attempted to draw out a full code of regulations; but finding so many difficulties surrounding the subject, as well as the urgency of prompt action, we have confined our efforts in the meantime to such regulations as are actually requisite to meet the present emergency. We did intend to forward them by telegram, but we find it too late to-day for official hours in Sydney, and the further intervention of Sunday will make the difference of time so short, as hardly, in our estimation, to warrant the expense and the risk of imperfect communication.

We have had some difficulty on the subject of the 7th regulation; but we think that the plan of appointing chief constables *ex officio* inspectors, for the purpose of guarding against any violation of the prohibition with respect to the Murrumbidgee District will, as a temporary measure, meet the case.

We have the honor to forward herewith a short draft of regulations, and Mr. Pottie's report, bringing up our labours of inspection from the date of our last communication.

We have, &c.,
JAS. GARLAND.
GEORGE DAY.
S. A. MEYER.
ALEX. BRUCE, Inspector.

The following Regulations, which have been made by His Excellency the Governor, with the advice of the Executive Council, for carrying into effect the "Cattle Disease Prevention Act of 1861," are hereby published for general information:—

1. The Government shall authorize all or any of the members of the Board appointed by the Government for the purpose of prosecuting the inquiry into the disease among cattle called pleuro-pneumonia, to enter upon any lands upon which cattle are supposed to be infected, to inspect cattle supposed to be infected, or which have been in the same herd with those which are or have been infected, and also to cause cattle supposed to be infected to be slaughtered and consumed by fire.

2. The country comprehended in that portion of the Colony of New South Wales, known as the Pastoral District of Murrumbidgee (exclusive of that portion of the said district east of the watershed of

of the Tumut River) shall be temporarily proclaimed a district from which no horned cattle of any description shall pass into any other part of New South Wales.

3. The Board of Commissioners shall appoint inspectors, to be approved of by the Government. Such inspectors to have the same powers, under the control of the Board, as those conferred on the Commissioners in the first of these regulations, with regard to the inspection and destruction of cattle supposed to be diseased.

4. Any inspector, with the advice of the Board, may from time to time be empowered to proclaim any infected lands under quarantine, or to release the same.

5. Any inspector, with the approval of the Board of Commissioners, may appoint stockmen as boundary keepers, to guard the lands immediately beyond those under quarantine, with power to prevent all cattle from passing such boundary from infected runs, and to destroy such cattle so passing over as an inspector, with the approbation of the Board, shall indicate; such stockmen to be paid at the rate allowed by Government.

6. The impounding of all horned cattle from infected lands, or from any lands within twenty miles thereof, shall be prohibited.

7. The chief constables at Hay, Wentworth, Gundagai, Tumut, and Wagga Wagga, shall be appointed inspectors *ex officio*, and be instructed to see that all quarantines and prohibitions be strictly observed, with power to destroy any cattle violating the same.

Albury, 7 December, 1861.

Sir,

I have the honor to submit a third report of my investigations.

Messrs. Hore's run, of Cumberoona, and Mitchell's, of Table Top, have been thoroughly examined, and diseased cattle found on both; but the majority of cases exhibited only the first stages of pleuro-pneumonia; that is, the lungs exhibited here and there fleshy patches, while the other parts of lungs seemed as if they could not collapse, even though completely emptied of arterial and venous blood. The muscular fibulae of lungs evidently lose their contractile power, and, as a matter of course, congestion to some extent is set up.

In the second stage of this disease black spots are visible beneath the outer membrane (pleura-pulmonalis) of lungs, and on cutting open the lung dark red patches appear, which, on close examination, I find to be made up of four distinct spots; these are the minute cells filled with blood. In this stage of the disorder the membrane pleura-costalis (lining inside of ribs) appears studded here and there with lymph. In due time the lungs, through the agency of this lymph, become adherent to ribs, and the third stage of the malady is set up, constituting in the interior of lungs the marble stage I before spoke of.

The cattle on Hore's run are well-bred, much attention having been paid to the symmetry and constitution of the bull and cow, and hence the progeny have a deep, square, well-built carcass, with fine, thin, broad bone close in its cancellated tissue.

Mitchell's cattle were also in good condition, exhibiting signs of care. Both these parties possess pure bred imported bulls, a fact which evidently tells strongly on the conformation of the progeny. Still melanoses and tuberculosos were present; a fact which must strongly urge the parties to use more salt and more nitrogenous food.

I have, &c.,

JOHN POTTIE.

The Honorable the Secretary for Lands,
Sydney.

(37.)

Wagga Wagga, 12 December, 1861.

Sir,

I have the honor to inform you that, after tracing Cumberoona (Mr. John Hore's) and Table Top (Mr. James Mitchell's), we made our way for Albury, examining those cattle pasturing on the commons round and close to the township.

These cattle are owned by various parties; they possess a more unthrifty appearance than the cattle on the runs, certainly the feed is bare, but from external appearances we could easily notice that pleuro-pneumonia was amongst them: one cow was slaughtered, and her internal organs confirmed our diagnosis.

You will observe that we have only examined those runs bounding the highway between Ten Mile Creek and Albury, because we were under the impression that many of the stray cattle from Yarra Yarra would take this route.

Next we paid sundry visits to the slaughter-yards near Albury, and found, on one of our visits, one animal at each place far advanced with pleuro-pneumonia; these cattle came from Cumberoona and North Gunningbell (on Billybong Creek), but they had been near Albury for three weeks.

It may appear startling to parties at a distance when they hear of the infected area being so large, but when we consider the time that has elapsed since it was first mooted that an animal had died at Yarra Yarra of pleuro-pneumonia, and when we add to that the time the disease must have existed previous to the first deaths, a period of not less than six or eight months has since passed, we cease to be surprised, knowing that the cattle on the several runs freely mix one with the other, and knowing also that bullock teams coming from Victoria (even after the N. S. W. Prevention Act was passed) and camping on the various runs, the wonder is, not that the disease has been so rapid in its progress, but that it has been so tardy.

Leaving Albury we took the road leading to Wagga Wagga, because many of the cattle which Mr. Bowler possessed had been purchased from the Lachlan District, and some of them sought to return.

Visiting the various runs on our way, we have traced the disease to Wagga Wagga; certainly, on the runs near this township, traces of the disease become more faint; but this is just what one would expect if we regard Yarra Yarra and Ten Mile Creek as the centre; here it has appeared most virulent, becoming less and less so as we go from that centre, until we reach the township.

The cattle in the pound of South Wagga Wagga appeared very bad; two head were killed, the lungs of which were far advanced with pleuro-pneumonia. Crossing the Murrumbidgee, we visited Messrs. Robey and Jones' run, found the cattle looking very well, and giving no external symptoms of disease. To prove the veracity of our opinions, one was slaughtered, and every organ found in perfect health, but we have yet others to examine on the commons of North Wagga Wagga.

I have, &c.,

JOHN POTTIE,
Veterinary Surgeon.

To the Honorable the Secretary for Lands,
Sydney.

(38.)

(38.)

Wagga Wagga,
12 December, 1861.

Sir,

When we first set out on a tour of inspection from Ten Mile Creek towards Albury, we had two objects in view,—first, to verify former examinations by Mr. Pottie's reports; and secondly, to ascertain whether the disease could be traced to Albury, and so open a communication to Victoria for the cattle previously placed under quarantine. We were sorry to find earlier reports too fully verified, and no less grieved that we should have so little difficulty in connecting the disease with Albury. Apprehending this latter circumstance, we conceived it to be our duty to declare the fact with as little delay as possible, to enable the occupants of runs previously under quarantine to send their fat stock to market in Victoria, provided the Commissioners of that Colony were satisfied that it would be safe to permit it. We observe the rules on the subject published by the Victorian Government in the *Gazette* of the 6th instant; and we imagine that if the cattle themselves do not exhibit symptoms of disease their ingress into that Colony will not be objected to.

Immediately after forwarding our last communications to your department from Albury, on the 7th instant, we deliberated on the best course to pursue. We had been informed that part of Mr. Bowler's cattle had been brought from the Lachlan District, and had crossed the Murrumbidgee near Wagga Wagga. We considered it important to ascertain whether any of them had been returning in that direction, and whether the disease might not be carried even across the river. We did not think it advisable to separate till we had learned the decision of the Government with regard to the draft of regulations which we had the honor to submit for its approval; particularly as it had been intimated to us by one gentleman (Mr. John Dight), that although he would not wish to throw any unnecessary obstacles in the way of our investigations, he should expect to be satisfied with our power to go into his herd and slaughter his cattle before he would assent to it. Some of the Commissioners have the authority which your instructions confer, but others have not.

We received your telegram of the 10th instant, to which we have replied. We are at a loss to know the particular "unnecessary injuries," which have been suggested as likely to arise from so much of the Murrumbidgee District being placed under temporary prohibition. Until the extent of diseased country was fairly understood, we deemed it the most prudent course to take a line which would be at once well marked and comparatively easily guarded, while at the same time the usual markets would be open to the district. So long as the disease is confined to the Murrumbidgee District no other line could be so effectual. We could not take an imaginary line across the district which would not intersect runs and be totally ineffectual. It is true we might take a continuous line by boundaries of runs, but that could not be done without great loss of time, and the assistance of a survey, or, at all events, of fuller maps than we at present possess. Even then we do not know where it would be safe to draw such a line, and promptitude of action was indispensable in such an emergency. Either from ignorance of the nature of the disease, or from an unwillingness on the part of the owners of runs to admit a belief of its presence, we have not in one instance been informed of its existence till it has been discovered by our own investigations. We are far from imputing wilful neglect in this particular, but it will tend to demonstrate how impossible it is for us, with our present information, to set specific bounds to the disease, which shall not be comprehensive and have the appearance perhaps of being arbitrary. Indeed it may even now be a question whether the Murrumbidgee intercepts it; but this we will shortly determine.

A great deal of misapprehension prevails with respect to the intentions of the Government. It is generally assumed that if one diseased beast is found in a herd, the whole herd will be destroyed. We had hoped that the Honorable Colonial Secretary, in his reply to Mr. Raper's queries in the Assembly, had made this sufficiently plain to be understood by everyone; but there are still many of the stock-owners labouring under this delusion. We have taken every pains to point out the facts, that when the Government understood the disease to be within a narrow compass the prompt and entire destruction of the infected cattle was ordered, with a view to eradicate the distemper at once; but that when it had got beyond those limits, had spread over a great extent of country, and infected a large number of stock, orders were given for the destruction of such cattle only as were diseased, or supposed to be diseased.

Now that the malady extends over so large an area, and may yet be found over a much larger, we cannot recommend that the entire destruction of any more herds shall be had recourse to. Except where the disease may be found isolated in the midst of a sound district, which there might be reasonable hope to save from its further ravages, we think the system of wholesale slaughter both useless and impracticable. We are of opinion that when once the disease has established itself in a district, more good will be effected by the combined action of the settlers themselves, than by Government interference. Attention to the general management of the herd, to prevent such usage as would predispose them to the disease, or so close segregation as would assist contagion, and carefully and diligently to destroy all cattle exhibiting the slightest symptoms of infection, will doubtless yet be the chief antidotes to its virulence.

The settlers around Ten Mile Creek are, we believe, about to call a meeting there, for the purpose of considering the best course of action in the prospect they have before them; and amongst other things, they suggest the expediency of erecting a boiling-down establishment in the vicinity of Albury. This we consider a prudent suggestion, which no doubt the Government will offer every facility to carry out.

With regard to the two herds (Messrs. McLaurin's and Mr. Bowler's), the complete destruction of which was ordered, we understand that nearly the whole have now been destroyed. With a view to accomplish this more effectually, Mr. Inspector Bruce, with our advice, sent circulars to the owners of the surrounding stations, inviting their assistance to collect the whole of these herds on Monday last. No less than twenty-two circulars were sent, but two men only—representing Mr. Smith's station, of Kyeamba, and Mr. Greene's, Billabong Station—made their appearance on the appointed day; and these were too few to make a complete or satisfactory muster. We believed their own interests to be at stake, and were rather surprised to learn there had been so few in attendance.

While at Albury, the Commissioners and Mr. Pottie inspected several cattle, and found pleuro-pneumonia there in its advanced stages. On our way to this place we did not think it necessary to delay our progress by inspecting runs already under quarantine; but we regret to say, that on Mangoplar and Sandy Creek, as well as at this place, we found it in an unmistakable form.

We beg to enclose Mr. Pottie's fourth (4th) report, and a letter from Mr. Bruce.

We have, &c.,

JAS. GARLAND.
GEORGE DAY.
S. A. MEYER.
ALEX. BRUCE.The Honorable the Secretary for Lands,
Sydney.

(39.)

Wagga Wagga, 20 December, 1861.

Sir,

Since we had the honor to address you on the 12th instant, we have visited a portion of Mr. Gordon's cattle, of Berambula, which appeared in good health. We slaughtered one, and found it sound. We then proceeded over Mr. Pearson's Wagga Wagga Station, on which we slaughtered two cattle, and found the disease existing. One animal was also killed at North Wagga Wagga, the lungs of which exhibited no symptoms of pleuro-pneumonia.

It

It having been reported to us that stray cattle, which had originally been purchased from various settlers in the Lachlan District, were returning to their old runs from Mr. Bowler's Ten Mile Creek Station, and might probably be carrying disease along with them, the Board determined, by resolution, that Messrs. Garland, Bruce, and Pottic should proceed in that direction.

In pursuance of this resolution, we went to Messrs. White's run, called Merrybundinyah, on The Levels, in the Lachlan District. We slaughtered one steer, which had never been off the run; he was distinctly infected, and others exhibited very evident symptoms. The country intervening between Wagga Wagga and this run, for a distance of about forty miles, is occupied by sheep.

We have been informed that, about seven or eight months ago, the Messrs. White collected a number of wild straggling cattle from the scrub, belonging to themselves, and purchased others from their neighbours, Messrs. Hurley and Dallas, of the same description, some of which they sold to Mr. Bowler, of Ten Mile Creek; and that nearly one hundred head of these cattle were unaccounted for when Mr. Bowler's cattle were destroyed, many of which must have found their way back to The Levels. And further, that the inspector, having some time ago learned, on inquiry, that several head of these cattle had actually been seen on White's run, had sent a man to destroy them; but that this party when he went there could only hear of one beast bearing Bowler's brand, which he killed and found sound, although we have since learned that eight head in one mob had been seen crossing White's run about three months ago. Mr. White is of opinion that they chiefly belonged to Hurley's and Dallas's stations originally, and that they have returned there; but as, unless when water is scarce, it is almost impossible to drive them from the scrub, we did not think it necessary to visit these runs, although we may fairly assume that they are diseased, after finding a case so decided on Mr. White's run. We have been informed, further, that cattle have been straying back from Mr. Crisp's Mangobla Run to Mr. Stinson's Berry Jerry Station, also on The Levels, and more distant from this place than the runs already alluded to. We consequently came to the conclusion that, for one hundred miles, the Lachlan District is infected, so that the Murrumbidgee can no longer be available as a precautionary boundary. We therefore deemed it advisable, in terms of the resolution come to by the Board here on Saturday last, before separating, in case of the disease being found on The Levels, to return at once to Wagga Wagga, and put you in possession of the fact; and also to state, in that case, that any measures which the Board could think of, in the shape of quarantines, or prohibitions, would prove ineffectual to prevent the further spread of the disease, where no river, fences, or impassable ranges could be made available for that purpose.

It was also resolved that Messrs. Day and Meyer should take the direction of Urana and the Billybong, and reach Albury on the 23rd instant, where, being joined by Mr. Garland, they would negotiate with the Victorian Commissioner, Mr. Smith, the terms on which cattle might be allowed to pass over the River Murray at Albury and Wagunyah, in conformity with regulations published in the Victorian *Gazette* of the 6th instant. Mr. Smith addressed an official letter to us, requesting an interview for that purpose.

On the 12th instant we mentioned by telegram that certain cattle were about to cross the river, and were doubtful of Mr. Bruce's power to stop them. These were some 300 or 400 of Mr. Gordon's cattle, from Berambula. There were also a number of teams of working bullocks, the drivers of which had intimated their determination to take them across. We waited over Saturday, and until after mid-day on Monday, for a reply. We are afraid that the arrival of the mail had so occupied the telegraph wires as to hinder a reply till after we were gone. In the meantime, both the herd of cattle and the working bullocks passed over the river; the former on their way to a station on the Marule Creek, and the latter to Sydney, in drays loaded with wool. These teams, having come from Urana, have passed through country which we now know to be diseased, and may inflict mischief wherever they go.

We enclose Mr. Pottic's report, No. 5.

We have received your telegram this evening, and will proceed to Albury in the morning.

The Honorable the Secretary for Lands,
Sydney.

We have, &c.,
JAS. GARLAND.
ALEX. BRUCE.

Wagga Wagga, 20 December, 1861.

Sir,

I have the honor to submit a further Report of my investigations.

The commons on the banks of the Murrumbidgee, around North Wagga Wagga, are stocked with several lots of inferior cattle. They presented at first sight rather suspicious omens. On examination, however, I found that this arose from a disease vulgarly termed rot, under which many of these cattle now labour; but I found no proofs of pleuro-pneumonia there, nor did I receive any information respecting its importation into or through that neighbourhood, although the place must be liable to the introduction of this disease, on account of the public crossing place being furnished with a good punt, on which bullock teams from all parts cross—some on their way to the various stations, and some to the Lachlan and Lambing Flat Diggings, and to Sydney.

Leaving this we went to the Messrs. White's run, Merrybundinyah, in the Lachlan District, a distance of forty-five miles, where we heard many of Bowler's cattle had returned, having been a few months previously purchased from it and two neighbouring runs.

Many of the cattle we saw on this run appeared heavy, dull, and sickly. We selected one, had it shot, and found the lungs bearing plain and full proofs of pleuro-pneumonia.

I may add that, in general, the internal organs of the cattle I have opened appear very healthy, especially the spleen, with the exception of the lungs and pleura,

The Honorable the Secretary for Lands,
Sydney.

I have, &c.,
JOHN POTTIE,
Veterinary Surgeon.

(40.)

Albury, 23 December, 1861.

Sir,

We have the honor to inform you, that on the 16th instant we left Wagga Wagga at 2 p.m., having waited there until that hour, expecting a telegram from you. Messrs. Garland, Bruce, and Pottic to cross the Murrumbidgee, and proceed to Mr. Stephen White's station, on the road to The Levels. Mr. Bowler, of Ten Mile Creek, having purchased some cattle from Mr. S. White, and from neighbouring stockowners, we had every reason to believe that some of these cattle had returned infected with pleuro-pneumonia.

We were to continue the inspection to Urana, and from there to Albury, and meet Mr. Garland.

At Pomegolana, Messrs. G. and F. Desailly's station on Murrumbidgee (late Church's), we saw only a small number of cattle, which appeared very healthy; but finding a bullock of Mr. Bowler's brand, and knowing him to have come from Ten Mile Creek, we shot him. Upon examination we found him perfectly free from the disease. This is the first animal of Mr. Bowler's that we have found healthy, though we have shot a considerable number between Wagga Wagga and Ten Mile Creek.

Pomegolana, 19th December.—From this station we travelled down the Murrumbidgee River, and entered Beroggeley, Mr. John Letch's station. About two miles inside his boundary, we examined

a mob of about thirty head of cattle, bearing the brands of Mr. Letch and Messrs. G. and F. Desailly, as well as some unknown to us. We shot a cow showing symptoms of disease. Upon examination the disease was distinctly visible. We did not proceed to Beroggeley House, as it was some miles out of our way. Reaching Bullenbong, Mr. Davidson's station, at 1 p.m., we inspected a portion of the herd, which appeared tolerably healthy, except one bullock, which we shot, and found him badly diseased.

Bullenbong, 18th December.—We left this place and travelled to Urana, a distance of forty-five miles, principally occupied by sheep. Mr. Osborne's station, Brookong, is about half way.

Two miles from Urana we inspected about fifty head of cattle on Mr. Chapman's run. We shot a bullock, and found him suffering from tubercular disease, but free from pleuro-pneumonia.

Urana, 19th December.—Proceeded to Messrs. Talbot and Smith's station, Urana Creek. Found there some cattle belonging to the run, in the yard, which showed symptoms of disease. Upon examination found the disease. Suspected some of Mr. Chapman's cattle, among which most decided external symptoms appeared; but as Messrs. Talbot and Smith's cattle and Mr. Chapman's join, we did not consider it necessary to shoot any more.

Urana, 20th December.—Having received from Mr. Broughton, of Broughton and Walker, a message requesting us to visit their station, Cocketgedong, on the Billybong Creek, seventy-five miles from Deniliquin, and sixteen miles west from here, we inspected a portion of their herd, and found the cattle generally looking healthy. Upon a closer inspection shot a calf, and found the disease distinctly.

Urana, 21 December.—Visited Messrs. M'Caughy and Co.'s station, Coonong (late Woodhouse's), on the Columbo Creek, and examined about 100 head, nearly every one of which show marked external symptoms of pleuro-pneumonia. We shot a two-year old steer, which proved to be badly diseased. This run is thickly covered with salt-bush.

At 12 a.m. we had the honor to receive your telegram of yesterday, which we could not fully answer before hearing Messrs. Garland and Bruce's report from the Lachlan District.

We started at once, and arrived here on Sunday evening.

Finding the disease on the Urana and on Columbo Creek in a very advanced stage, and as we could not hear of any cattle having strayed or been driven from the infected country to these places, we are of opinion that pleuro-pneumonia has been introduced from Victoria by the Lower Murray. Its existence at Wagga Wagga can be traced to cattle straying from Ten Mile Creek.

We have, &c.,
GEORGE DAY.
S. A. MEYER.

To the Honorable the Secretary for Lands,
Sydney.

(41.)

Albury, 27 December, 1861.

Sir,

The Commissioners met here on the 23rd instant, and entered at once upon a consideration of the regulations necessary for carrying into effect the law for preventing the propagation of pleuro-pneumonia in the Colony. After a long and careful discussion, we approved of the propositions which we had the honor to forward by telegram on that day. On the following day we were favoured with your telegram, intimating that the propositions indicated in your telegram of the 20th had been embodied in a proclamation. Until the *Gazette* be received, we do not know with what conditions the second paragraph may be qualified; but the Board is of opinion that an unrestricted power, on the part of the owners of uninfected runs, adjoining those that are infected, to slaughter, indiscriminately, the diseased cattle which may pass over the boundary, would be attended with serious disputes, and perhaps collisions. It was to guard against the abuse of such a power that we proposed that the cattle trespassing should not only be diseased, but that they should be negligently permitted to stray; and even then, that the power to slaughter them should come through the inspector, who would be supposed to be an impartial and disinterested person.

With regard to our second proposition, it was suggested, from the idea that the delay necessary for the ordinary mode of proclamation would admit of cattle being removed from runs in the meanwhile, which would encourage the spread of the disease; and we believe that a regulation, proclaimed in the *Gazette*, by the Government, giving the inspectors power to proclaim in the local papers and by placard, would legalize these proceedings, and expedite the power of the restrictions.

As in your telegram of the 24th instant there was no allusion to our draft regulations, and believing that there had been a mistake, we sent a telegram yesterday, to which we to-day received your reply. In a new telegram, received this afternoon, your anxiety for our report is intimated. We are somewhat at a loss to know whether our final report is alluded to, or simply a continuance of those reports which we have had the honor, from time to time, to transmit. If, as we now understand, our investigations are to proceed, and that we are to endeavour to discover what stations are infected, it will probably be some time before that work is accomplished, to enable us to send in a final report. It may be that, in reference to our telegrams from Wagga Wagga, our report on regulations for proclamation is alluded to; but we conceive that our telegram of the 23rd instant, conveying a draft of regulations, embraced as much of that subject as was necessary.

It has often been said that pleuro-pneumonia will not exist in a salt-bush country, and much reliance has been placed on this assumption. Messrs. Day and Meyer have found, however, that there is no immunity from the disease in this circumstance. It was found on the runs of Messrs. Talbot and Smith, on the Urana Creek; of Broughton and Walker, on the Billybong; and Mr. Chapman's, Butheva Station; as well as on Coonong and others, on all of which salt-bush is abundant. On the last-named run, the beast slaughtered for examination exhibited the disease in a very virulent form; and the external appearances of such of the herd as came under their notice manifested unquestionable symptoms of general infection.

We have had the pleasure to meet Mr. Smith, the Victorian Commissioner, at Albury. His instructions, it appears, directed him to see us, and to make amicable arrangements for the crossing of cattle into Victoria. He will, of course, exercise his own judgment as to what cattle may be sound or unsound; and living on this side of the river he can examine them before they cross. It will be people's own fault if they cross over cattle before he examines them, or after he declares them infected. All that he requires of the inspectors on this side of the river is, to furnish him with particulars of the state of the districts cattle may come from, in order that his inspection may be somewhat more minute, if from infected runs; and also, that owners may give him timely notice of their intention to send cattle to Victoria, so that arrangements may be made to facilitate the inspection, as his duties extend along the Murray River, from five miles above Towong, on the east, to ten miles below Wagunyah on the west.

We deem it our duty to mention, that Mr. Smith has kindly afforded us all the information in his power, respecting the course of the disease in Victoria.

Mr. Pottle has been engaged in prosecuting further examinations of the diseased cattle at Yarra Yarra and Mr. Bowler's.

We have, &c.,
JAS. GARLAND.
GEORGE DAY.
S. A. MEYER.
ALEX. BRUCE.

The Honorable the Secretary for Lands,
Sydney.

(42.)

(42.)

Albury, 28 December, 1861.

Sir,

In consequence of not getting the *Government Gazette* containing the Proclamation of the Regulations, to make us aware of the extent of our powers in continuing our investigations, and knowing that in our route we might not readily meet with it, we have deemed it advisable to stop over this day till it reaches us. In the meantime we have seen that the Parliamentary Session is drawing to a close; and as it may be important that you should be put in possession of our views on the subject of compensation, without delay, we have taken that subject under our consideration, and have now the honor to transmit the result of our deliberations.

It is a subject which has more or less occupied our attention at almost every meeting of the Board, and we feel that it is still surrounded with difficulties; but taking everything into account, and more particularly the fact that the further wholesale destruction of herds is both impracticable and inexpedient, we have come to the conclusion that a fixed rate of compensation will, on the whole, be most unobjectionable. We think it would be manifestly unjust that the Messrs. M'Laurin and Mr. Bowler should not get the amount they were led to expect when they commenced the total destruction of their herds, and we further consider the rates fixed by the Executive, viz., thirty shillings (30s.) and ten shillings (10s.), so equitable, that we beg to recommend these rates to be paid for all other cattle already slaughtered, as well as for those to be slaughtered under the direction of the inspectors, for the purpose of their investigations, which will not now be, in all probability, very many.

We have, &c.,

JAS. GARLAND.
GEORGE DAY.
S. A. MEYER.
ALEX. BRUCE

To the Honorable the Secretary for Lands,
Sydney.

(43.)

Albury, 4 January, 1862.

Sir,

Having brought to a close the labours which you did us the honor to impose on us, respecting the disease called pleuro-pneumonia, unhappily prevailing in the country,—we will now attempt to generalize some of the leading facts which have come under our observation, and to lay before you the deductions which present themselves to our minds on the various subjects to which our attention has been directed. In conformity with your instructions, we have communicated frequently and fully, both by letters and by telegrams, our views and the reports of the veterinary surgeon. From these we hope you will have been able to comprehend the difficulties we have had to encounter in dealing with this investigation, which, by reason of the diseased country embracing a much larger area than was anticipated, has been protracted far beyond our expectations.

The highest powers of veterinary skill have been taxed in vain to discover the primary causes of this disease, or to arrest its devastating progress. In its early stages its course is so insidious as to escape the notice of all but practised eyes. As a proof of this we have only to state, that in one case only has the disease been reported to us before discovering it by our own investigations, notwithstanding that our examinations have extended over herds containing on the whole not less than 100,000 head of cattle, amongst all of which, with one or two exceptions, the disease has been found. So far as our investigations enable us to judge, neither age, sex, nor condition seem to resist its inroads; neither food, temperature, nor locality appear to have any influence in arresting its onward course. A disease so malignant, a calamity so appalling, urgently demanded the intervention of the Government; and we sincerely regret that the promptitude that has been displayed should so far have been unsuccessful as to fail in extirpating the maledy.

Although pleuro-pneumonia has but lately made its appearance in the Australian Colonies, it is no new disease to the European farmer or veterinary practitioner. For a couple of centuries epizootic pneumonia has ravaged the herds of various States. An account of a species of pneumonia, mingled with pleurisy, was published in 1833, by M. Leccoq, of the Veterinary School of Lyons, which describes general symptoms precisely similar to those of the disease which at present prevails here. Analogous diseases have occasionally made their appearance in the United Kingdom; but, for upwards of twenty years past, the maledy now known as pleuro-pneumonia has, from time to time, been raging with great intensity, and destroying vast numbers of cattle there.

It was first introduced into the Colony of Victoria about three years ago, by a cow imported from England by Mr. Boodle, and has been traced from her to the borders of New South Wales.

With pleuro-pneumonia in our immediate neighbourhood, prompt and vigorous measures became necessary to prevent its introduction into this Colony; and an Act was passed by the Legislature, in the month of April last, with that object in view. This was, unquestionably, a commendable course to pursue; but, without inspectors to guard the Murray boundary, it was utterly impossible effectually to hinder its violation. Large numbers of store cattle were taken into Victoria from New South Wales; and everyone acquainted with the habits of cattle knows with what pertinacity they seek to return to their old runs. The Murray River would be but a slight obstacle to the gratification of this instinctive desire; and it is now certain that cattle crossed in considerable numbers. At the time the proclamation under the Act was promulgated, there were many bullock teams on their way to New South Wales from Melbourne with goods. It is a well known fact, that many of these teams were left on the other side, and the drays were brought across; but it is also a well known fact, that the bullocks disappeared quickly from the south side of the river, and the drays as quickly vanished from Albury. There cannot be a question but that the law has been evaded, and that bullocks have been brought over, and the drays and loading removed during the night time. It is estimated that some hundreds of bullocks have been brought over in this way, and it is likely enough that they have been instrumental in disseminating the disease in this Colony.

The first appearance of pleuro-pneumonia in New South Wales was in the herd of the Messrs. M'Laurin, of Yarra Yarra, at the head of the Billybong Creek, about the beginning of August last. It was said that this herd was infected by a number of store cattle brought by these gentlemen upon that station in the month of February last, from the Mitta Mitta River, in the vicinity of which the disease had been found. The Messrs. M'Laurin deny any knowledge of the existence of the complaint about the Mitta Mitta when their cattle were removed; and they advance as a reason why they could not have been infected at the time, that 300 or 400 head left behind on the run have not even yet exhibited the slightest symptoms of disease.

We are not at all disposed to doubt the perfect truthfulness of these statements, but still we are of opinion that they are not conclusive against the assumption that the disease might possibly have been introduced into the Yarra Yarra herd in this way:—Pleuro-pneumonia was, about the time of the removal of Messrs. M'Laurin's cattle from the Mitta Mitta Station, discovered very near to it; and it is possible, therefore, that the seeds of the disease may have been sown amongst them before they left, which might have required some time for development. It was not necessary that the whole herd should have been infected in the first instance. It would have been sufficient that one or two infected beasts had been taken to Yarra Yarra. The dissemination of the disease might, no doubt, be accelerated by the usage the cattle sustained by being tailed closely during the day, and pent up together in very wet yards,

yards, and in cold weather, during the night, for a length of time. The cold would pre-dispose to an inflammatory state of the lungs, and the close intercourse would render the disease more easily communicated.

On the other hand, we are free to admit that there are many other ways in which the disease might have been introduced into this herd. The Yarra Yarra Station is bounded by the Great Southern Road for six or eight miles; and before "The Cattle Disease Prevention Act" came into operation, teams of working bullocks from Victoria travelled in that direction in considerable numbers, and probably camped on the run. Some of these might not only have been infected—they might have died of the disease on the very station. The pasture might have become infected with the malignant saliva—the surrounding atmosphere contaminated with the malaria. Stray beasts, too, from the numerous herds of store cattle taken into Victoria from this Colony, might, in their efforts to return to their old runs, have passed over the station, or even remained on it, to communicate the evil.

Besides, we have been informed that a working bullock, which had been brought from Victoria in a team to Albury, just before the Act came into force, had strayed on to Messrs. M'Laurin's run; and that this bullock, when slaughtered with their cattle, was found to be infected with chronic pleuro-pneumonia. We believe that the disease was likely to have been communicated by this beast.

We are, at all events, satisfied that the Messrs. M'Laurin did not know at the time they took their cattle from Mitta Mitta that any disease was amongst them; and that these gentlemen did not neglect any reasonable precaution to prevent its introduction into the Colony.

Although we have not, in this case, been able to trace with certainty the infection from one beast to another, we do not entertain the shadow of a doubt of the disease itself being infectious in the highest degree. Some of the links of the chain may have escaped notice, but they were in existence nevertheless. In other cases the connection throughout has been so manifest as to defy disbelief. Mr. Veterinary Surgeon Pottic is strongly of the same opinion, as well as Mr. Smith, the Victorian Commissioner at Albury, whose experience in the investigation of this disease in the sister Colony has been considerable. However much Professor Dick and some others may have argued against the infectious nature of pleuro-pneumonia, no practical nor sane man will ever think of bringing diseased cattle amongst his herd, and hope to escape with impunity.

With respect to Terry's bullocks, which were found infected near Campbelltown, we have not been able to obtain such information as to connect them with other diseased cattle. We ascertained that, in the month of April last, he brought loading with bullock teams to Mr. Tompson, of Wagga Wagga; and it was thought that, at that time, he went some distance down the Murrumbidgee to his brother's residence; but we could not find that he had gone any further towards Ten Mile Creek or the country known to be first infected.

We shall now consider the steps that have been adopted, and how far they have been successful.

The manner in which the disease first appeared at the Yarra Yarra Station has been already described. Our colleague, Mr. Bruce, was appointed an inspector in the early part of September last, with power to have all the diseased cattle on the station destroyed, so soon as the symptoms made their appearance. From the voluminous reports, letters, and suggestions which he has forwarded to your department, and the information they afford we think it advisable, as they tend to throw considerable light on the early stages of the disease in the Colony, to enclose them in a collected form. We regret, however, that his exertions were not successful. His reports too plainly show the rapid and uncontrollable progress of the disease in the herd, notwithstanding that the work of destruction was going on; and the mingling of the cattle with those on Mr. Bowler's station quickly brought the latter into the same condition. The disease was now general throughout these two herds; and the Government, under the impression that it was still confined to them, and might yet be extirpated, determined on the total destruction and consumption by fire of the whole of the cattle on those stations, promising at the same time a certain compensation. A very large colonial interest was at stake, and the measure, under the circumstances, was perfectly justifiable. Had it been successful—and it was impossible to foresee, with what was then known of the disease, that it would not—the service rendered to the country would have been incalculable. Unfortunately it was a work of greater labour and of more difficulty than was anticipated. It was also an unfortunate circumstance, that the disease should have first appeared in those two herds, as many of the cattle in each had recently been obtained from other runs, to which they would, of course, be disposed to return. A portion of Messrs. M'Laurin's cattle, as we have already mentioned, were brought from the Mitta Mitta River, and some from another station belonging to them on the Edward River. Part of Mr. Bowler's herd had been purchased from Messrs. White and other gentlemen on "The Levels," in the Lacluan District. Towards each of these places it was found that the cattle were straying back, and mixing with other cattle on their way; sometimes one or two remaining in a herd, while others would persevere in their journey towards their old runs. These cattle were followed, and as many of them as could be found were destroyed; but without a doubt the infection was disseminated by them as they went along.

Mr. Bruce, finding that no precautions which he could take—no power which he could exercise—prevented the disease from making its appearance on adjoining runs, sought the assistance of two practical gentlemen in the neighbourhood to aid him, by their experience and advice, in forming a line of demarcation between infected and uninfected lands. Our colleagues, Messrs. Day and Meyer, were nominated, and their appointments confirmed by the Government on the 13th November. These gentlemen, in conjunction with Mr. Bruce, immediately set about examining the herds in the neighbourhood of Ten Mile Creek; and on the 21st of November sent the following telegram to your department:—"Being alarmed by extent of pleuro-pneumonia on the west and south-west side of Yarra Yarra, we separated, and tried the country in other directions. We have traced the disease from the Murray fifty miles towards the Murrumbidgee, and 40,000 cattle would now be condemned." Here was truly an alarming state of things, which the subsequent reports of the Veterinary Surgeon too fully confirmed. The matter was immediately brought before Parliament, and a Commission was appointed to investigate, and report upon the best course to be adopted in such an emergency. We had the honor to receive your commands to carry out, with the assistance of Mr. Veterinary Surgeon Pottic, the objects of this Commission; and we will now endeavour to convey some account of the labours which devolved on us.

On the morning after Mr. Garland and Mr. Pottic arrived at Ten Mile Creek from Sydney, they, accompanied by Mr. Bruce, went to the Yarra Yarra Station, for the purpose of seeing the disease in all its stages, and remarking its symptoms and peculiarities. The living and *post mortem* appearances of the cattle have been fully described by Mr. Pottic. Let it suffice to say, that these appearances were but too indicative of the thorough prevalence of this lamentable scourge.

The way in which the cattle were destroyed was this:—Yards were erected on the banks of a narrow gully, and some hundreds of cattle were driven into them at a time. These were again put in smaller lots in the slaughtering yard, which, being high, was covered over like a network on the top with planks, upon which men walked, and with pointed goads pithed the cattle. So soon as the whole were down, some men set about bleeding and opening them, for the purpose of inspection. The age, brands, and state of disease of each beast were recorded; and the carcasses were then drawn into the gully by a team of bullocks, for consumption by fire.

We append a Return (No. 1) of the cattle slaughtered at Yarra Yarra, and also at Bowler's station. The destruction of property, at first sight, may appear very great; but when we consider the small number of sound cattle in each case, and that probably, with a more careful examination, they would have been found still fewer, we must see that the sacrifice is not so serious after all.

When Messrs. Garland and Bruce returned from Yarra Yarra to Ten Mile Creek, on the 30th November, they were joined by Messrs. Day and Meyer. The Board was then duly constituted, and deliberations

deliberations commenced that night, the results of which we had the honor to communicate to you. Upon that occasion our most important recommendation was, the prohibition against the removal of stock from the greater portion of the Pastoral District of Murrumbidgee to any other part of New South Wales. This was only intended as a temporary measure, and our decision was not rashly or inconsiderately arrived at. Some of the Commissioners, whose experience and information enabled them to form a more accurate estimate of the extent of the disease, were of opinion, that if a comprehensive prohibition was not in the first instance maintained, to keep the infection, if possible, within some certain limits till its actual bounds could be ascertained, the quarantines on infected runs merely, as they were found to be so, would be a sham and a delusion, while every freedom was allowed to the stock on runs not examined, but perhaps more diseased, to go where they pleased. The owners of such runs would send off whatever stock they wished to dispose of before the inspection reached them; and thus the infection would precede the examinations, without any fixed line to arrest it. Besides, we are of opinion that no imaginary boundary over an open country, without some natural obstacle or fence to assist in breaking the intercourse between the herds, could be effectual for such a purpose; and it was for these reasons that we recommended so much of the Murrumbidgee District to be placed under prohibition for the safety of the rest of the Colony. The result has shown that instead of being too comprehensive, the limits have not been sufficiently extended to circumscribe the malady. Besides, we found that working bullocks and herds of cattle, travelling over stations which we afterwards knew to be infected, passed into the Lachlan District, in defiance of any power that the Commissioners or Inspectors possessed to prevent them. But, having since found the disease far into the Lachlan District, of course the prohibition could be no longer of any value. Neither is it necessary that our other recommendations offered at that time be now entertained.

After leaving Ten Mile Creek we proceeded on our tour of inspection, the results of which will be gathered from our various progress reports. We append a tabulated Return, No. 2, of the stations visited, and the state of the disease on each. This, however, may be far from correct, as indicating the intensity of the disease on the several stations. In some instances we saw but a limited number of cattle, and we were satisfied when we found one decided case on each run, although there may have been other cattle more severely affected.

We deemed it a matter of some importance to the owners of runs about the Upper Billyong, whose stations had been placed in quarantine, that they should be able to take their fat stock to the Melbourne markets, provided the Victorian Commissioner should be satisfied of their being sound. If it was found that disease really existed all the way to Albury, then there would be an outlet in that direction for sound cattle from interdicted runs. We prosecuted our examinations towards Albury accordingly, and had little difficulty in tracing the disease continuously to that place. In the meanwhile, we every day saw more and more the necessity for having fuller powers than the law afforded to us, to carry out our examinations satisfactorily. We felt that until regulations were proclaimed twice in the *Gazette*, in accordance with "The Cattle Disease Prevention Act," we had no power to do anything which might be contrary to the wishes of stockowners; and that they were liable to no penalties if they resisted the inspectors or violated the quarantines. We therefore devoted our attention to the framing of regulations, and transmitted a draft for your consideration; but they do not seem to have met with the approbation of the Government.

From Albury we went to Wagga Wagga, and on our way we pursued our inquiries. We traced the disease to that township; and having learned that cattle from Bowler's station had been straying back to Messrs. White's, Hurley's, and Dallas's runs in the Lachlan District, probably carrying the disease along with them, we decided on examining these runs, and discovering whether they were infected or not, and to report at once the result—giving it as a resolution passed by the Board, that if the disease had crossed the Murrumbidgee, any measures which it could think of in the shape of quarantines or prohibitions, would prove ineffectual to prevent the farther spread of the disease, where no rivers, fences, or impassable ranges could be made available for that purpose. Messrs. Garland, Bruce, and Pottie proceeded to the Messrs. White's run, on "The Levels," where they found the disease; they therefore at once returned to Wagga Wagga, and having reported, in conformity with the resolution of the Board, came on to Albury.

In the meantime Messrs. Day and Meyer had continued their inspections down the Murrumbidgee for some distance, and thence by Urana to the Colombo and Billyong Creeks. They examined the stations as they went along, and found disease on them all. They reported particulars to Government by telegram, and hastened to Albury.

Much stress has been laid on the assumption that the salt-bush would be an antidote to pleuro-pneumonia; but Messrs. Day and Meyer have found it prevailing on several stations on the Urana, Colombo, and Billyong Creeks, where this plant is very abundant. On one of these stations (Coonong) the beast slaughtered for examination proved to be highly infected, and the external appearances of such of the herd as came under their notice evinced strong symptoms of general infection.

We may observe, that the settlers generally were unwilling to acknowledge, and certainly very much annoyed to be made aware that their runs were really infected. We were surprised to find that so little concern was manifested by them in a matter of such grave importance, and one so intimately affecting their interests. It was to be supposed that they would have visited the Yarra Yarra Station, to make themselves acquainted with the disease in all its forms, so as to be able to detect and deal with it the moment it made its first appearance in their own herds. We should have expected to see public meetings in all parts of the district, to discuss the matter thoroughly, at which opinions could have been expressed to guide combined action on the subject; but with one or two exceptions, we do not find that anything of the sort has been done.

In compliance with the instructions contained in your telegrams of the 20th December, the Board met at Albury on the 23rd, and on the same day approved of and transmitted suggestions as bases of regulations; but it appears that they were not in conformity with the views of the Government, since they have not been adopted.

Mr. Smith, the Victorian Commissioner at Albury, addressed to us an official letter, requesting an interview, for the purpose of making amicable arrangements for crossing cattle into Victoria. He has to guard against the crossing of diseased cattle over the Murray, from five miles above Towong upwards to ten miles below Wagunyah downwards. After discussing the subject with Mr. Smith, we find that he will remain on this side of the river, so as to be able to examine all cattle before they cross. Should anyone be so foolish as to evade his inspection, or take cattle over after he has declared them unsound, it would subject them to be immediately placed in quarantine. Mr. Smith will exercise his own judgment of the soundness or unsoundness of the cattle which he inspects, and will not object to pass any that he may deem healthy; but he wishes that timely notice may be given to him by persons intending to take cattle over the river, in order to facilitate the inspection, since he has so large a frontier to guard.

When the Commissioners addressed their letter to you of the 23th December, on the subject of compensation, we were under the impression that the proclamation would be similar to the propositions indicated in your telegram of the 20th; but instead of a limited number, as we supposed, of cattle being destroyed for the purpose of examination, and these only, we find by the proclamation of the 24th, since received, that power is given to destroy an indefinite number. Consistently with the opinions which the majority of the Commissioners have entertained on the subject under similar circumstances, we beg now to suggest that a valuation by arbitration will be the fairest mode of dealing with the subject for the future; as, however, the Messrs. M'Laurin and Mr. Bowler were led to expect a certain fixed rate at the time when their cattle were ordered for destruction, we think it would be unjust to those gentlemen to alter the rates, as far as they are concerned. Nor do we think it advisable that

that the few cattle already slaughtered for the purpose of examination should be paid for in any other way. But for all cattle slaughtered subsequent to the date of the proclamation of 24th December, 1861, subject to the instruction of the Minister for Lands, we would recommend that compensation be given according to the amount fixed by an arbitrated value, arrived at in the usual way; but with a deduction of twenty-five per cent. on account of their being diseased. We believe that such a rate will neither tend to the concealment of the disease, nor induce an indifference to its introduction.

The Commissioners have now to express their regret that, owing to the unexpected wide spread of the disease, we have neither been able to ascertain its precise limits, nor to suggest the means of effectually arresting its progress, much less of thoroughly eradicating it; and, in conclusion, we beg to offer the following remarks and suggestions, with a view to its restraint and general treatment:—

We find—

1. That pleuro-pneumonia is a disease of a very highly infectious and contagious character, and cannot be detected with certainty in its early stages.
2. That, from our experience, it is infectious, or contagious, at a very early stage.
3. That it was introduced into Victoria through a cow imported for Mr. Boodle, from which the infection was carried into various parts of that Colony by M'Kennon's working bullocks, and other diseased beasts, until it reached the Murray border of New South Wales.
4. That although the mode in which it has been introduced into this Colony may not be definitely and indisputably ascertained, the extensive intercourse with the south side of the Murray, by herds of cattle, stray store stock, and teams of working bullocks, leaves little doubt of its having been brought by some of those means.
5. That it has been discovered throughout that portion of the Colony extending from the Dora Dora Station, on the Hume River, to Cocketgedong, on the Billybong Creek, in one direction; and from Albury to "The Levels," in the Lachlan District, in another, which includes about 130 miles square, and about 100,000 cattle.
6. That there is every reason to believe that it has extended even much further.
7. That it is impracticable to maintain a strict quarantine effectually.
8. That it is inexpedient to slaughter whole herds or mobs of cattle.

We would recommend—

1. That inspectors should be appointed to ascertain the extent of infected country, with power to carry out the law.
2. That diseased country, as inspected, be proclaimed in *Gazette* and local newspapers.
3. That no cattle should be removed from infected runs, nor from any lands within ten miles thereof, without being first examined by an inspector, who would grant certificate of such inspection, to be produced when required.
4. That cattle from infected runs should not pass through country not declared to be infected.
5. That no impounding should be carried on from, or in, infected country; nor from lands within ten miles thereof.
6. That when small lots of cattle within enclosures become diseased in the midst of a sound country, it may be expedient to destroy them.
7. That as working bullocks have been the chief instruments in spreading the disease, their use should be disallowed in diseased country, or within fifty miles thereof, except on the runs or farms to which they belong.
8. That inspectors should have power to order the destruction of diseased cattle driven over, or negligently allowed to stray on, land not declared infected, as well as the destruction of all cattle moved in contravention of these suggestions.
9. That solemn declaration should be made of number, brands, and state of disease of cattle so destroyed.
10. That stock-owners should make themselves acquainted with the disease, and should, as much as possible, prevent intercourse between infected and sound cattle, by destroying the former, or confining them to a paddock.
11. That stock-owners ought, by frequently assembling together, and by combined action, to devise means to meet every emergency of the disease as it arises, and to give every assistance in carrying out the law.
12. That boiling-down establishments ought to be erected at once at Albury and Wagga Wagga, where they would be within reach of water carriage, and at other places as occasion required. And with a view to the speedy accomplishment of this desirable end, the Government should offer inducement to private enterprise, either by grants or leases of land.
13. That for cattle already slaughtered for the purposes of "The Cattle Disease Prevention Act," compensation should be paid at the rates already fixed by Government; and for all cattle destroyed after 24th December, 1861, by one-fourth less than their value, arrived at by arbitration—provided the latter be killed subject to the instruction of the Minister for Lands.
14. That the Government should, without delay, instruct properly qualified persons to conduct experiments in inoculation, and otherwise to prosecute researches into the nature and peculiarities of this disease.

We would also observe, that the incompleteness of the provisions of "The Cattle Disease Prevention Act of 1861" does not admit of our proposing further measures for restraining the disease, which we would otherwise recommend.

We have, &c.,

JAS. GARLAND.
ALEX. BRUCE.
GEORGE DAY.
S. A. MEYER.

The Honorable the Secretary for Lands,
Sydney.

Albury, 4 January, 1862.
3 p.m.

P.S.—Since closing the above Report, we have been informed, on reliable authority, that on the station on the Mitta Mitta River from which Messrs. M'Laurin brought their cattle, pleuro-pneumonia is now raging with much severity among the cattle that were left behind, and that a good many of them have been slaughtered, and died, in consequence. It is also stated that Mr. Patton, the present occupant of the station, has been contending with the disease for the last two months.

This circumstance does not lead us to assume that the Messrs. M'Laurin knew that their cattle were diseased before they removed them, but it tends to confirm the suspicion that the disease was imported to Yarra Yarra from that quarter, where we learn it now prevails to a considerable extent.

J. G.
G. D.
S. A. M.

Mr.

Mr. Bruce to be instructed to the effect that he and his assistants, Messrs. Stalley and Mr. Lockhart, should carry out the recommendations herein, with regard to the searching for the disease and submitting to me the boundaries of new localities found to be infected, in order that they may be placed under quarantine. He should also ascertain, from time to time, whether or not some of the lands now under quarantine are sufficiently clear of the disease to be released therefrom. He should also be informed of the statement communicated by Mr. Chisholm, to the effect that the disease had visited Goulburn, and he should be requested to examine the cattle there. He should also be informed that the recommendations herein, providing for the mode of removing cattle on infected runs, after inspection, are approved, and to be acted upon. Same with regard to impounding from off such runs. With regard to the destruction of small lots of cattle within enclosures, special authority must be obtained before doing so. The inspectors have, under the regulation of 24 February, the power asked for under 7 and 8 paragraphs, except as regards the permission for acting upon it fifty miles beyond the boundaries of the land under quarantine, and that I do not think ought to be allowed. Thank the Commissioners for their services in the matter. Hand both Reports to the Press, for publication for general information.

JOHN R.—6 Feb.

Albury, 4 January, 1862.

ALEX. BRUCE.

(46.)

Albury, 3 January, 1862.

Sir,

I have the honor to add a further and fuller report of my professional investigations respecting pleuro-pneumonia epizootica, as follows:—

INTRODUCTION OF DISEASE.

Pleuro-pneumonia epizootica was first noticed and first made known in New South Wales, by the Brothers James and Robert M'Laurin, on their Yarra Yarra Station, in the early part of August, 1861. These gentlemen did not seek to cloak the fact, but, on the other hand, ordered their stockmen to pick out every ailing beast, and had it destroyed and burned, until they had in all destroyed nearly 200 head of cattle. During this time they invited the squatters round to come and see the disease in the living and dead subjects. As they were tailing the mob in which the disease was first observed, the best of opportunities were offered for inspection. The herd was made up of cattle bred on the Yarra Yarra Run, on Curnalla and Moroco, Lower Murray, and on the Mitta Mitta, Victoria, the last draft of which came over in the month of February, 1861.

As it became generally known that pleuro-pneumonia epizootica had broken out at Yarra Yarra, the settlers began to speculate regarding its introduction: one class asserting that it must have come from Mitta Mitta with the last draft of cattle, and another, that the severe system of tailing practised during the wet season must have been the means of producing the disease; while the Brothers M'Laurin say, that they believe that it must have been introduced among their cattle by a strange working bullock, which was found among the first that they destroyed, with one lung enclosed in a membranous sack, constituting the chronic stage of pleuro-pneumonia epizootica. Evidently this bullock had been, at some distant period, very bad; and, no doubt, while thus suffering, was turned adrift upon the run. Another fact also adds weight to this supposition. It is this: that 300 head of the same cattle as those last brought from Mitta Mitta were left on that run, and are still free of the disease. Again, if it had been produced by the severe system of tailing there adopted, we have pleuro-pneumonia epizootica produced spontaneously on Yarra Yarra, a fact never before demonstrated, and which, coming as it now does merely as a supposition, must be received with scepticism.

Having made all the inquiry possible, I am bound to state that it is my opinion, judging from the combined history, that the strange working bullock above alluded to introduced the disease, probably before the Mitta Mitta cattle came to Yarra Yarra in February; and that, although the tailing cattle might not have been the first infected, they were the first to show symptoms of the disease, from the manner in which they were kept, and from being immediately under the eye of the person in charge of them.

The next two herds that were noticed were Mrs. Greene's, Billybong, and Mr. Bowler's, Ten Mile Creek. These two stations bound Yarra Yarra on the north and west. Mrs. Greene's cattle had been on her run for a lengthened period, while some of Mr. Bowler's had come from a station on the Mitta Mitta, and some from Mr. White's run of Merrybundinyah, in the Lachlan District. Mr. Bowler's cattle were brought from Mitta Mitta one month later than the Messrs. M'Laurin's; and certainly, though a public road passes through Mr. Bowler's Mitta Mitta Station, and though from the Victorian Commissioners' Report I find that diseased bullocks are said to have passed that way, yet I do not think Bowler's cattle brought it, otherwise those he left would also have given evidence of the same disease. The store cattle he brought from White's do not seem to have been first attacked.

But the disease seems so virulent in some quarters so far distant from either of these runs above mentioned, that we must now look for its introduction not to one point but to many. For instance, we have Messrs. Talbot and Smith's run of Urana Creek, and Messrs. M'Caughy and Co.'s (late Woodhouse's) station of Coonong, both in the salt-bush country, and both very badly infected. How it came there none can tell. We see cattle migrating from one part of the Colony to another, and from one Colony to the other. They are sold, change hands, and though often taken long distances, many of them find their way back to their old runs. All this has been going on while the disease has been raging on the Victorian bank of the Murray. Bullock teams have gone and come from one Colony to the other, crossing and camping just as they liked. Diseased bullocks from some of these teams may have been left on runs, or strayed away on this side of the Murray. Thus the possibility for its introduction here existed in various ways; and we know that it was first taken from Boadle's farm in Victoria by working bullocks; and we know from the Victorian Commissioners' Report that working bullocks have strewed the venom of this disease across the Colony. We know also that working bullocks took it to Campbelltown. All history seems, therefore, to point to these migratory birds, singling them out as the principal actors in the dissemination of the venomous seeds of pleuro-pneumonia epizootica.

SPREAD.

It is a remarkable fact with respect to pleuro-pneumonia epizootica, that it seems to possess the power of spreading by every known and unknown channel. The laws which govern it have never been clearly demonstrated, and hence we are startled at its wondrous and rapid progress; but we become less and less so, the more we know of the country, and of the habits of the cattle depasturing in that country.

Certainly the country is divided into runs, and these are divided from one another in many cases by natural boundaries, such as creeks, ranges, and rivers, and sometimes only by lines of marked trees. But although these lines assist each squatter to know the confines of his runs, yet they do not as a rule prevent cattle from straying off their own runs, and they mostly roam at freedom where they like, sometimes feeding on their own runs, sometimes just over the boundary on their neighbour's, and sometimes many miles away from their regular beats.

It is a law with cattle always to return to the run on which they were bred, no matter how great the distance. Some cattle have been known to return 600 miles, while 300 is no uncommon distance for them to go back.

Cattle thus returning are subjected to a particular examination by the cattle in the various mobs through which they pass on their way back. They are strange, and the cattle on these runs surround them on their first appearance, smelling, licking, and butting them; hence, if an animal straying in this way possesses any contagious or infectious disease, it has a good chance of making rapid progress.

Coming, then, to Yarra Yarra and Ten Mile Creek herds, we find part of them lately brought to these runs from different districts; and we find many of these cattle afterwards leaving both Messrs. M'Laurin's and Mr. Bowler's, and making for their old runs, roaming through all the stations round, and straying here and there, diseased and not diseased.

Hence we come to get a clue to the progress of a disease so subtle, yet so sure, and we have also a clear explanation of its wondrous development among the cattle running on those infected stations specified in the *Gazette* of 24th December, 1861.

NATURE.

NATURE.

Pleuro-pneumonia is a disease of a low typhoid nature, showing but very slight external symptoms at the period of its incubation; in fact, so slight as wholly to exclude all chance of certain notice, especially among bush cattle. Though we do often observe among domesticated cattle that high inflammatory fever sets in when the lungs are first attacked, still we have good reasons to believe that the active element has been doing its deadly work among the component parts of the blood long before symptoms of lung attack set in; and I believe that many of the cases I have dissected go a long way in demonstrating this fact. I am led to this inference from observing that if the blood of many of those animals but slightly attacked in the lungs be collected, a thin, milky-looking fluid gathers on its surface, which I take to be disorganized fibrine; and I believe fibrinous effusions take place very early in the lungs after they are attacked, but what may be the cause of this disintegrated state I cannot say.

Many animals attacked with pleuro-pneumonia epizootica recover; that is to say, the lung, or part of the lung, that has become hepatized gets inclosed in a newly-formed membranous sack, when the communicating powers of the disease cease: but often a suppurative cyst forms in the centre of the hepatized part, and gradually spreading until it comes in contact with healthy tissue, pleuro-pneumonia epizootica starts anew. Or before this time some external cause may start the disease anew, and in both cases it resumes its powers of communication from one animal to another. The dormant period, then, is that between the cessation of the first attack and the commencement of the second.

Looking at the spreading properties of pleuro-pneumonia epizootica, nearly all who have scientifically studied the malady agree in this, that it spreads from one animal to another by ways and means not clearly understood.

But even if we take a glance at those we do know, it will teach us the amount of care needed to arrest its progress.

We know a contagious disease needs to touch, an infectious disease needs but be breathed; and he must either be a bold or an ignorant man who would stand up and assert that pleuro-pneumonia epizootica cannot avail itself of both these channels.

It matters little how the virus is communicated—whether by the food, the drink, the air, the skin of another animal, or the clothes or hands of a man. It matters not how you bring the virus. It may fall on the grass and be dried up by the burning sun. Whatever disturbs that grass sends the poisonous particles afloat on the wings of the wind, to be breathed or licked by some unfortunate beast.

And we can go further, and speak of a healthy member of a diseased family communicating the malady; and why not, if the virus should fall on its skin. And if, as is sometimes the case, that animal's constitution resists the attack, may it not be breathed or licked from his hide? Instances of disease being thus communicated are not wanting in human pathology—especially in the case of measles and small-pox.

It matters little though the virus be imperceptible to the naked eye. The inoculating matter is so on the point of the surgeon's lance.

We know, too, that inoculation will produce pleuro-pneumonia epizootica without even a scratch. The superficial absorbents take it up most keenly, though it would be difficult, without actual experiment, to say with certainty at what stage of the disease it is communicable.

CAUSES.

- 1st.—Primary.
- 2nd.—Predisposing.
- 3rd.—Exciting.

1st.—Primary causes are those which first operate in the production of a new disorder. Of course, pleuro-pneumonia epizootica must have been at first produced—assuming what may be termed spontaneous production.

Now we know that there are some men standing high in scientific circles, who argue that because it was first so introduced, it must, of necessity, be so produced again in every individual case; but there are too many *dead* facts against this theory.

For my own part I cannot entertain the notion, as everything seems dead against it.

What may have been the primary cause or causes of pleuro-pneumonia epizootica I do not know; but this I do know, that the exposing of healthy cattle to the virus from diseased animals in such a way that it becomes absorbed is now the primary cause of production.

2ndly.—Predisposing causes are those which arise out of a peculiar state of the constitution, made so by the inheritance of parental weakness, or from long continued ill-treatment.

The communication of parental points depends much on the temperament of each parent. If the temperament be nearly balanced, the offspring will partake equally of each; but if there be a preponderance on one side, the offspring will take most from the parent with the stronger temperament.

Hence, should there be a chest weakness in any one, that one will communicate the weakness or tendency to disease, if he or she possess the stronger temperament.

Many of the *fetus* found in the wombs of diseased cattle had also the disease.

3rdly.—Exciting causes are such as assist in the speedy development of the disease—such as cold, damp air, hot, burning winds, filthy yards or sheds, hard work, and hard unnatural treatment of any kind. In fact, the subjecting an animal to any new course of treatment diverting or forcing it from its wonted habits, may act as strong exciting causes.

The most common exciting causes in this country will be drafting, tailing, and driving the cattle long journeys.

SYMPTOMS.

The external symptoms common to this disease will not be easily detected amongst bush cattle, first, because their great constitutional strength (as compared with animals more under domestication) prevents the disease at first from making a decided stroke; and even though it does, the animal never suffers nor shows the same amount of pain.

Their habits of life, too, are such that immediately on the approach of man a degree of alarm takes hold of them; and then all symptoms are shrouded, unless of a most aggravated nature.

Still, a practised eye will soon see,—if the coat stares and appears drier than usual, if the animal appear crouched up when standing, or cramped when walking or running—if he be in this state the eye will appear swollen, and watery effusion flowing from inner canthus; nose dry, inferior opening wider than usual, and a thin watery discharge running from it. The disease has just commenced in the lungs.

After the malady has proceeded into the second stage, the discharge from nostril is white and thick, sticking in patches about it.

In the third stage you have, in addition, a short grunt of a cough; and all the above-mentioned symptoms accelerated.

POST MORTEM APPEARANCES.

I have opened and seen opened some hundreds of diseased cattle in all stages of pleuro-pneumonia epizootica. Of course, I had no means of determining exactly the length of time the animals had been ailing.

That which seemed to be the earliest organic destruction of lung consisted of a white dry distended cellular stage. The red corpuscles evidently do not now enter the capillaries for the purpose of being aerated, though the coloured blood may be seen in all the large vessels.

In this stage I believe the air cells to be filled with a kind of steam. They will not collapse even though pressed from without; or else the muscular tissue has gone into a spasmodic state.

However, I found in other parts of the lung watery effusion, which I regarded as this steam condensed. A state of lung which led a professor of pathology to set down the disease as one of a dropsical nature.

I have also, in the same lung, observed congestive stage of pleuro-pneumonia epizootica, differing from common congestion in this, that you cannot press out the blood from the part, and it seems as if turned into muscle.

Taking this in connection with the pale state, one would almost be led to suppose that it was not the want of iron, nor of the red corpuscles carrying that iron, but rather its excessive effusion in some places, and non-effusion in others, from local or general causes.

In the second stage the congestion has gone nearly over the whole of the lungs, and the fleshy spots increased in size and number, while the cells appear filled with dark carbonaceous blood and areolar tissue filled with lymph effusion.

If the congestion be more superficial than deep-seated, the lung appears all mottled outside, and you have extensive pleuretic disease with effusion of lymph; and the blood drawn from the animal appears very black in colour, with a milky looking substance floating on its top.

I am inclined to believe that this dark spotted congestive state is caused, to a great extent, by the improper mode in which the blood has been aerated.

But how to account for the milky matter on the top of the blood I do not know. I have before stated my opinion on that subject.

The third stage is the marble or hepatized stage. The absorbents have been busy at work, clearing out the dark blood from the cells, while lymph has been effused in greater quantity in the areolar tissue.

But in the cells a deposit remains, and that deposit seems principally made up of the fibrinous portion of the blood. The capillaries ramifying between rings of trachea are congested in this stage, and much irritation exists round the vocal chords, and in the region of glottal opening. All this time the adhesive process has been making rapid progress, so that now, when hepatization is complete, the lung has generally become firmly attached to the ribs.

If the animal survives all this, the lymph effusion continues, and a new membrane is formed around the diseased lung. This continues until the envelope is complete, and then this disease ceases; but another commences, termed the suppurative process. This I have explained in another part of my paper.

In all the animals I opened bad with pleuro-pneumonia epizootica, I found all the other organs remarkably healthy, except the lungs and pleura, except the first case given in my first report.

For this reason, I am inclined to think the per centage of deaths among the present generation will not be great.

In the *post mortem* appearances of cattle in this country, there are many remarkable differences compared with the cattle of Great Britain. You have there, accompanying this disease, great effusion of water into the chest, and you have great stench in the last stages; you have also great derangement of digestive organs.

Seeing these appearances are not common among the cattle of the southern portion of the Colony, and seeing the various tissues of their body so healthy and strong, we may safely assert that the per centage of deaths will not be nearly so great here as in Great Britain.

RECOMMENDATIONS.

1st.—All cattle imported by sea or land to be examined by a duly qualified person.

2nd.—Destroy all animals bad with pleuro-pneumonia epizootica.

3rd.—Stop all bullock teams from travelling beyond their own land; horses to be employed instead.

4th.—Erect boiling-down establishments; boil down rather than travel a herd to market known to be diseased. The virus is destroyed by boiling.

5th.—Shift cattle as little as possible.

6th.—Inoculate all cattle while young.

7th.—Do not breed from cattle now diseased, or recovered from disease.

8th.—Burn all grass where diseased cattle have been pasturing.

9th.—No diseased cattle to be sold out of the pound.

As the disease is now in many herds, and as in all likelihood inoculation will be practised as the great preventative, we may expect a per centage of losses, and it will become an important question what mode of treatment can with ease, safety, and success be adopted, so as better to enable the animal suffering, whether from inoculation or otherwise, to withstand the fatal risk it runs. I would suggest that all owners of cattle use the following, where practicable:—

| | |
|---------------------------------------|----------|
| 1 bushel of corn or oats, crushed, | } mixed. |
| 1 lb salt, | |
| ½ lb sulphate of iron, well powdered, | |

This will assist in the assimilation of the elementary parts of the blood, adding, at the same time, tone and vigour to the system.

It will also be necessary to secure for the cattle clear, cold water. Such water will be relished under such a mode of treatment, and it will add much more oxygen to the system than hot, dirty water would.

Many of the runs I have passed through possessed good springs. A very little trouble spent in digging a hole would have secured for the herd the best water, and always plenty of it.

Were my professional services required for the special treatment of valuable or imported stock, I should of course follow the best mode now practised by the profession. It would not do for me to specify that here, as the proper application of it requires the advice and care of a veterinary surgeon.

EXPERIMENTS.

EXPERIMENTS.

A series of experiments might be instituted, for the purpose of ascertaining the degree of time that elapses between the period of incubation and the exhibition of external symptoms.

Also to ascertain at what period of the disease its contagious and infectious nature can act.

Also to ascertain under what conditions the virus loses its power.

Also whether it would be better to expose young cattle to diseased ones, or to inoculate.

Also to test whether inoculation will cure or prevent, or do both.

Also to see whether the catching virus is confined solely to the lungs, or is general to other excretory organs and blood.

GENERAL REMARKS.

Looking over my reports, it will be observed that many diseases exist here besides pleuro-pneumonia epizootica. During my visits I have attempted to explain the difference between these and pleuro-pneumonia epizootica, for the benefit of cattle owners.

I have often been asked, "Is the flesh of animals labouring under pleuro-pneumonia epizootica poisonous to the human subject?" I say, No. But yet it cannot be good for human food, especially if the disorder has reached its second and third stages;—in fact, it must become highly dyspeptic.

I have, &c.,

JOHN POTTIE,

Veterinary Surgeon.

The Honorable the Secretary for Lands,
Sydney.

(47.)

Ten Mile Creek,

20 January, 1861.

Sir,

I have now the honor to forward herewith final and complete return of all cattle destroyed on account of pleuro-pneumonia under my inspection; and I trust it will be found correct, and afford all the information required. Till I hear from you with instructions to do so, I will not forward the books I have kept here; but I may mention, that they may be sent at any time without inconvenience to the people whose cattle have been destroyed, as I have got a complete copy of all the entries in the scroll books kept by the parties seeing the cattle destroyed.

I have also the honor to acknowledge the receipt of your communications of 10th January instant, with enclosures from Feency and Heard, which shall receive my immediate attention.

I have also to inform you, that I have inoculated some fifteen head of cattle, and am carefully noting the result, which I will do myself the honor to communicate to you in due course; and

I have, &c.,

ALEX. BRUCE,

Inspector.

The Honorable the Secretary for Lands,
Sydney.

SEPARATE APPENDIX.

29

RETURN of Cattle Killed and Destroyed on account of Pleuro-Pneumonia; shewing number killed from date of receiving instructions, on 9th October, till classification was changed, on 2nd November; the number from that date till 22nd November—date of debate in Assembly; and number since the latter date.

(48.)

Ten Mile Creek,
27 January, 1862.

Sir,

I have the honor to transmit herewith "Statement of Claims for Killing and Burning Cattle," destroyed under the Cattle Disease Prevention Act, in this District; and I trust that it will be found correct.

With regard to the cattle inoculated, according to Mr. Pottie's instructions, with the virus from the lung of a diseased beast, I have to inform you, that the operation took a visible effect on the whole sixteen head, with one or two exceptions. Although, however, the inoculation created a very visible case of fever (which seemed to be at its height on the morning after the operation), the attack was not so severe as to completely stop the animal from feeding; nor was the swelling in the tail nearly so severe as that stated in the cases at the Cape of Good Hope. I may add, that we performed the operation in two ways: by a lancet or knife, as on the human subject; and by drawing a thread of soft twine, saturated with virus, through the tail by means of a sail needle, and leaving a portion of the thread in the tail like a seton.

As I am now no longer occupied with the books, I shall devote my time, till further instructions, in making continued experiments on this subject, and report to you.

I have, &c.,

ALEX. BRUCE,
Inspector.

The Honorable the Secretary for Lands,
Sydney.

ALEX. BRUCE,
Inspector.

(49.)

Cape of Good Hope,
Colonial Office, 28 February, 1862.

Sir,

I have the honor to acknowledge the receipt of your letter of the 16th of October, 1861, requesting some information regarding the features and progress of the disease pleuro-pneumonia, which you state has made its appearance amongst the cattle in some of the Australian Colonies.

Your letter having only reached me on the 25th instant, I have not been able to procure from the Agricultural Society here a report containing the information you require, but I shall endeavour to forward it by the next opportunity.

As regards the ravages of the disease in this Colony, I may mention that a return presented to Parliament in 1856 states that, up to that time, 92,793 head of cattle had perished. A grant of £1,000 for the discovery of a cure was negatived in the House of Assembly; and no action was taken by the Legislature beyond the passing of Ordinance No. 1 of 1853, a copy of which I enclose for your information.

I have, &c.,

PERCY VIGORS,
Acting for the Colonial Secretary.
(Absent.)

The Honorable the Colonial Secretary,
Sydney, New South Wales.

[V. R.]

[V. R.]

(Signed) GEORGE CATHCART, Governor.

ORDINANCE, enacted by the Governor of the Colony of the Cape of Good Hope, with the advice and consent of the Legislative Council thereof, to prevent the spread of the Cattle Disease, commonly called "Long Ziekte."

- WHEREAS there has recently appeared amongst the horned cattle in some of the Western Districts of this Colony a contagious disease of a fatal nature, called in the Dutch language "Long Ziekte:" And whereas it is expedient to provide against the spread of the said disease: Be it enacted by the Governor of the Cape of Good Hope, with the advice and consent of the Legislative Council thereof, that the owner of every animal which shall have, or be commonly deemed and taken to have, the said disease, called the "Long Ziekte," or the usual symptoms of the said disease, shall cause the same to be shut up in some kraal, or other complete enclosure; and in case any such animal shall, wilfully or by neglect, be permitted and allowed by the owner thereof, or his servants, to be or go from and out of such enclosure as aforesaid, unless in the actual and immediate charge of some person conducting the same by means of a riem, reins, or some such thing, such owner shall incur and become liable to a penalty not exceeding five pounds, and in default of payment thereof, to imprisonment, with or without hard labour, for any period not exceeding one month.
2. And be it enacted, that if any person, whether the owner of any such animal as aforesaid or not, shall ride, lead, drive, or otherwise conduct any such animal upon or along any public road, street, or thoroughfare, or into any common pasture land or any outspan place, such person shall incur and become liable to a penalty not exceeding five pounds, and in default of payment thereof, to imprisonment, with or without hard labour, for any period not exceeding one month,—unless he shall prove to the satisfaction of the Court before which the case shall be prosecuted, that the said animal was not affected by the disease called the "Long Ziekte," or otherwise, that the said animal was at the time and place charged, in the act of being conducted to some particular place for the purpose of being examined or physicked, or otherwise treated for the sickness or disease under which it may be labouring, or in the act of returning from some such place; or otherwise, that the said animal, having first exhibited the symptoms of the said disease when absent from the owner's place or residence, was at the time and place charged in the act of returning or being conducted to the owner's, or some other place, in order to be duly secured and taken care of.
3. And be it enacted, that it shall and may be lawful for any person who shall find any such animal as aforesaid, without being in the charge of any person, in or upon any public road, street, or thoroughfare, or on any common pasture land, or outspan place, or upon the place or ground of the person finding the same, to destroy any such animal: Provided always, that every such person shall be bound, before destroying any such animal, to obtain the approval, after inspection, of some field-cornet or acting field-cornet, or otherwise, of two persons qualified to serve as common jurors; or otherwise, of three males of full age who shall not be the servants of the person so destroying the said animal, or related to him within the second degree of consanguinity. And in case any person shall destroy any such animal, without having obtained some such approval thereof as aforesaid, he shall incur and become liable to a fine not exceeding five pounds, and shall also be bound to make good to the owner of the animal destroyed, whatever damage, if any, he shall have sustained by the destruction of the same.
4. And be it enacted, that if any person shall sell, or expose for sale, for the food of man or beast, or supply to man or beast for food, the flesh of any animal which shall have died of the said disease, or which had, when killed, the said disease, or the usual symptoms thereof, such person shall, for every such offence, forfeit any sum not exceeding five pounds, and in default of payment shall be liable to be imprisoned, with or without hard labour, for any period not exceeding one month: Provided that when and as often as any person might, for any such act as is in this section mentioned, be proceeded against under or by virtue of any municipal regulation, such person may be prosecuted, either under such regulation or under this Ordinance; but any prosecution for any such act under such regulation shall be a bar to any prosecution under this Ordinance, and *vice versa*.
5. And be it enacted, that if any person, in charge of any such animal as aforesaid, so diseased as aforesaid, or supposed so to be, shall leave the same in any place whatever, public or private, except in the care and custody of some person who shall have undertaken to take and keep the charge thereof, such person shall forfeit any sum not exceeding five pounds; and in default of payment, shall be liable to be imprisoned, with or without hard labour, for any period not exceeding one month.
6. And be it enacted, that every person in charge of any animal destroyed for, or dying of, the disease aforesaid, at the time of its destruction or death, shall be bound to bury the carcass thereof, without skinning the same, or removing the horns thereof, at a depth of not less than three feet. And any person contravening this section shall forfeit any sum not exceeding five pounds, and in default of payment shall be liable to be imprisoned, with or without hard labour, for any period not exceeding one month.
7. And be it enacted, that any person or persons who shall give such information as shall lead to the conviction of any such offender as aforesaid, shall be entitled to receive one half of the penalty aforesaid, and that the other half of the said penalty shall be paid to the Colonial Treasury.
8. And be it enacted, that the terms "horned cattle," and "animal," as used in this Ordinance, shall extend to and embrace any bull, ox, cow, heifer, or calf.
9. And be it enacted, that this Ordinance shall commence and take effect from and after the promulgation thereof.

Horned cattle having the disease "Long Ziekte," or its usual symptoms, to be kept closed up.

No such animals to be brought upon public thoroughfares, common pasture lands, or outspan places.—Penalty. Exceptions.

Such animals found by any person in any public thoroughfare, common pasturage, outspan place, or the land of such person, may by such person be destroyed, after inspection, by whom to be made.

Flesh of diseased cattle not to be offered for sale.

Penalty. Offenders may be prosecuted under this ordinance, or under municipal regulations (if any), but not under both.

No person in charge of any diseased animal to turn it loose.

Penalty.

Carcasses of cattle destroyed for, or dying of, "Long Ziekte," to be buried. Penalty.

Fines, how to be applied.

Construction of terms "horned cattle" and "animal."

Ordinance, when to commence.

GOD SAVE THE QUEEN!

Given at the Cape of Good Hope, this 7th day of October, 1853.

By Command of His Excellency the Governor,

(Signed) RICHARD SOUTHEY,
Acting Secretary to Government.

By order of the Legislative Council,

(Signed) PERCY VIGORS,
Acting Clerk of the Council.

(50.)

Kyeamba, 21 January, 1862.

Sir,

I am requested by Mr. Robert M'Laurin to send you an account of diseased cattle killed by me, belonging to Yarra Yarra Run, and as I may not know all their brands, I prefer sending an account of every beast killed by me, whether diseased or not I cannot say.

1861.

| Nov. 23 .. | 1 ditto, TL; ditto. |
| Nov. 26 .. | 1 beast, branded AIA. |

I have not found a strange beast on my run that I suspected to be diseased, since the 26th November last.

I have, &c.,

JO. SMITH.

Alexr. Bruce, Esq.,
Cattle Inspector, Ten Mile Creek.

N.B.—I expect payment for the beast you killed belonging to me.

I hereby certify that the cattle belonging to Mr. S. Bowler, of the classes stated in the above account, were destroyed by my order, as Inspector of Cattle under the "Cattle Disease Prevention Act," at the dates and of the classes therein mentioned.

With reference to the cattle mentioned in the above account, the inspector has to state that he was present when some seventy head of them were destroyed, before he received his appointment, and Mr. M. Bradley, afterwards one of the boundary keepers, saw all of them destroyed, and speaks to the correctness of this account.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

IMPOUNDING BILL.
(COMMITTEE OF YASS DISTRICT HOSPITAL.)

Received by the Legislative Assembly, 29 July, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Members of the Committee of the Yass District Hospital,—

RESPECTFULLY SHEWETH:—

That your Petitioners have seen that it is intended, by the 39th clause of the proposed Impounding Act of 1862, now under consideration of your Honorable House, that the Colonial Treasurer shall carry over all moneys coming into his hands under that Act to the credit and account of the separate fund established by the "Pastoral Relief Contribution Act."

That hitherto, under the provisions of the present Impounding Act of 1855, a portion of the above-mentioned moneys have been paid over to the Treasurer of the Yass District Hospital, in augmentation of the funds of that Charitable Institution, and a large amount of benefit has thereby been secured to the sick and indigent people of the Southern Districts.

That owing to the increased number of persons who have obtained admission into the Yass Hospital, from the Lambing Flat and other Gold Fields, where a great amount of sickness at present exists, the funds of the Yass Hospital have been considerably diminished; and your Petitioners fear that, if some further aid be not soon granted them by the Government, the Institution must soon be closed.

That under such circumstances, the withdrawal of the poundage money must necessarily seriously affect the usefulness of the Institution which, it is humbly submitted, renders a greater amount of good to the public than can reasonably be expected to arise from the destruction of native dogs, or any other object to be gained under the provisions of the "Pastoral Relief Contribution Act."

And your Petitioners therefore humbly pray that, for the reason above mentioned, your Honorable House may not pass the 39th clause of the proposed Impounding Act of 1862.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 12 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

IMPOUNDING BILL.

(COMMITTEE OF BRAIDWOOD HOSPITAL)

Received by the Legislative Assembly, 15 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Members of the Committee of the Braidwood Hospital,—

RESPECTFULLY SHEWETH:—

That by the 39th clause of the New Impounding Act, now under the consideration of your Honorable House, it is proposed that all moneys received by the Honorable the Colonial Treasurer under that Act, shall be placed by him to the credit and account of the fund established by the "Pastoral Relief Contribution Act."

That under the provisions of the present Impounding Act, a portion of such moneys has been payable, and hitherto paid to the Treasurer of the Braidwood District Hospital, in augmentation of the funds of that institution.

That such contributions, forming as they do, a considerable portion of its available funds, have been the means of materially extending the usefulness of the said Institution, and of providing sustenance, relief, and medical and surgical attendance for many unfortunate persons, to whom its doors must have otherwise been closed.

That the demands upon the said Institution must, in a district like Braidwood, be constantly on the increase, and that (the contributions by private subscriptions being even now quite inadequate to the relief of those who seek its assistance), the withdrawal of the moneys hitherto payable under the Impounding Act must necessarily lead to the exclusion of many suffering and distressed persons of the poorer classes from the relief and protection which such an Institution should afford.

Your Petitioners therefore humbly pray, that for the reasons abovementioned, your Honorable House will not pass the 39th clause of the proposed "Impounding Act of 1862" into law.

And your Petitioners will ever pray, &c.

Dated this ninth day of October, in the year of our Lord one thousand eight hundred and sixty-two.

[Here follow 6 Signatures.]

MAITLAND ROAD TRUST.

No. 1.

SECRETARY TO TRUST to UNDER SECRETARY FOR LANDS AND WORKS.

Maitland, 12 October, 1857.

SIR,

By direction of the Auditor General I enclose to you an account of the dis-^{Returned.}bursement, by the Maitland Road Trust, of the Government Road advances from 1855. Attached to this account you will find vouchers, certified by the members of the Trust, which show the various payments made by the Commissioners, and which include as well payments from the Government advances as from the toll receipts.

There being no separate receipts on the Government advance account, the Auditor General declines to pass these accounts unless under your authority.

I have the honor, therefore, to request that you will be pleased to give this authority, and beg to assure you that no irregularity will in future arise, as I am now furnished with the various forms which are required by the Government regulations.

I have, &c.,

JOSEPH CHAMBERS,

Secretary.

Ask the Auditor General whether he is aware of any objection.—B.C., 14 Oct.—S. B. W.

No. 2.

REPORT OF AUDITOR GENERAL.

UNDER all the circumstances of the case, there appears to be no objection to a special authority being given for passing the accounts of advances to the Maitland Road Trust, upon the solemn declaration of the Warden and the certified statements of payments for 1855 and 1856. But should this be sanctioned, the accounts of 1853 and 1854 would still remain undisposed of, and, provided that no more satisfactory vouchers can be furnished for those years, it is suggested that the Commissioners of the Trust be called upon to furnish a declaration and certificate of payments similar to those proposed for 1855 and 1856, to embrace the transactions under advances from 2nd May, 1853, to 31st December, 1854. These documents would require to be submitted and authorized before they could be made use of to adjust the accounts in question.

B. C.—1 November, 1857.

W. C. MAYNE, A.G.

No. 3.

UNDER SECRETARY FOR LANDS AND WORKS to SECRETARY TO TRUST.

*Department of Lands and Public Works,
Sydney, 20 November, 1857.*

SIR,

In acknowledging the receipt of your letter of the 12th ultimo, forwarding attested accounts of the disbursements of the Maitland Road Trust for the years 1855 and 1856, and requesting that an authority may be given to the Auditor General for passing them, I am directed to inform you, that if all is done that can be done to furnish accurate accounts, the Honorable the Secretary for Lands and Public Works will authorize the accounts of the Trust (embracing the transactions under advances from 2nd May, 1853, to 31st December, 1856) being passed by the Auditor General, on the declaration of the Warden and a certified statement of the payments made, similar to those proposed for 1855 and 1856, and on the understanding that no further irregularities will be excused under any circumstances.

2. The accounts for 1855 and 1856 are returned herewith, with a view to your correcting the error pointed out in pencil by the Auditor General.

I have, &c.

MICL. FITZPATRICK.

UNDER SECRETARY FOR LANDS AND WORKS to SECRETARY TO TRUST.

*Department of Lands and Public Works,
Sydney, 1 April, 1858.*

SIR,

With reference to my letter of the 26th February last, and previous communications, respecting certain accounts of the Maitland Road Trust, I am now directed by the Honorable the Secretary for Lands and Public Works to annex a copy of a letter from the Auditor General, and to request that you will have the goodness to furnish the declarations and certificates of payments of the accounts therein alluded to with the least possible delay.

I have, &c.,
MICHL. FITZPATRICK.

[Enclosure in No. 5.]

*Audit Office, Sydney,
30 March, 1858.*

Sir,

Referring to your letter of the 26th February last, No. 14, informing me that Mr. Chambers, the Secretary to the Maitland Road Trust, has been requested to furnish the accounts of the Trust alluded to in my letter to you of the 18th of that month, I have the honor to inform you that the declarations and certificates of payments for the period from 2nd May, 1853, to 31st December, 1854, have not yet been received at this office, and to request that the Chairman of the Trust may be called upon to furnish them without further delay, in order that their advance accounts for these years may at length be finally closed.

I have, &c.,
W. C. MAYNE,
Auditor General.

To the Under Secretary for Lands and
Public Works, Sydney.

UNDER SECRETARY FOR LANDS AND WORKS to COMMISSIONERS OF TRUST.

*Department of Lands and Public Works,
Sydney, 15 May, 1858.*

GENTLEMEN,

With reference to my letters of the 1st April and 26th February last, drawing attention to a previous communication dated the 20th November, 1857, returning certain accounts, furnished by you for the years 1855 and 1856, for correction, and stating at the same time that the Auditor General would be authorized to pass the accounts of the Trust (embracing the transactions under advances from 2nd May, 1853, to 31st December, 1854, on the declaration of the Warden and a certified statement of the payments made, similar to those proposed by you for 1855 and 1856), I am directed by the Honorable the Secretary for Lands and Public Works to point out to you the inconvenience caused by the irregularity and delay in furnishing those accounts, and to request that you will have the goodness to cause them to be furnished without further delay.

I have, &c.,
MICL. FITZPATRICK.

No. 7.

MAITLAND ROAD TRUST.

5

No. 7.

SECRETARY TO TRUST to UNDER SECRETARY FOR LANDS AND WORKS.

Maitland, 22 May, 1858.

SIR,

I am directed by the Commissioners of the Maitland Road Trust to communicate with you as to the manner in which the Trust may be affected by the Main Roads Bill, especially as regards the payment of the debt due by the Trust on the toll account.

I must first ask your consideration of the Act under which the Trust was constituted, viz., the 17th Vic. No. 16, whereby (sec. 22) the Commissioners are empowered to borrow, on credit of the tolls, to three times the amount of the income of a year, and to pledge the tolls as a security for repayment of the loan, and I must then place before you the circumstance under which the present loan was contracted, in order that you may determine the course to be adopted for its repayment.

At the time of the constitution of the Trust—1853—various expenses incidental to the establishment of the Trust, such as for toll and ferry houses, punts, gates, &c., &c., were necessarily incurred, and the Commissioners, having as yet no income, were constrained to raise the required amount under the before-mentioned authority. They therefore entered into a contract with the Bank of New South Wales for a standing credit of £2,000, and pledged the tolls as a security for its repayment.

In the course of the years 1854 and 1855 the Commissioners were enabled to discharge the first loan; and, up to 1857, had the satisfaction of appropriating all their income towards road repairs, and so maintaining the public works under their charge in the best repair their means would admit of; but towards the end of 1857 most disastrous floods swept through the country; bridges, &c., were swept away, and roads left in some places impassable. All the available means of the Commissioners were at once devoted to this emergency, but were found greatly deficient of the amount required. A survey was then held, showing that upwards of £3,000 was required to restore the highways to a safe condition. The result of this survey was communicated to you by letter dated the 19th September, in which a request was made that the Government would grant £2,500 for the purpose of these repairs. The Commissioners do not complain of the response made by the Government, but they beg you to remember that of this sum £1,450 only was contributed by the Government, and the remainder fell on the Commissioners as a sudden and unexpected loss.

To meet this loss and provide for the current expenses of their Board, the Commissioners were again constrained to raise money on their tolls, and have now a loan, for which their tolls are pledged, to the amount of about £2,000, and it is for the payment of this sum they now desire to make provision. The effect of the Main Roads Bill is to transfer from the Road Trust Commissioners to the Commissioners under the Act, the monthly income of £262 derivable from the tolls collected on the main road, leaving with the Trust an income of £88 per month, which is derived from ferries and by-roads; and the Trust Commissioners are of opinion that, as they now hand over the main road in far better condition than that in which it was received, and as that road has always been a tax on the other roads in the district, by reason of its expensive requirements for bridges, causeways, &c., and as the debt was created under careful authority, and in the necessary discharge of their public duty, they ought not now to be left to discharge it from their diminished income, for they can but feel that, if their trust were left a few months longer under their management, the debt would be fully discharged.

The Commissioners are of opinion that the difficulty may be removed by the Government suspending the Main Roads Bill, as respects their district, for a period of six or nine months, when the Commissioners would guarantee to hand over the main road without any charge on it. But if such a course could not be adopted, I doubt not the Commissioners would favourably consider other proposals; and I would suggest that it might be proposed that the Government should, on taking the main roads, pay up the arrears due to the Trust, and also a fair valuation for the toll-houses and gates; by which arrangement the debt would be considerably reduced.

I have, &c.,
JOSEPH CHAMBERS,
Secretary.

No. 8.

UNDER SECRETARY FOR LANDS AND WORKS to SECRETARY TO TRUST.

*Department of Lands and Public Works,
Sydney, 9 June, 1858.*

SIR,

In acknowledging the receipt of your communication of the 22nd ultimo, relative to the manner in which the Maitland Road Trust may be affected by the Main Roads Bill, I am directed by the Secretary for Lands and Public Works to inform you, that the Chief Commissioner of Railways has been requested to furnish a report on the subject; and at the same time I am to state that the Government desires to deal liberally with the Trust in this matter.

I have, &c.,
MICL. FITZPATRICK.

MAITLAND ROAD TRUST.

No. 9.

UNDER SECRETARY FOR LANDS AND WORKS to SECRETARY TO TRUST.

*Department of Lands and Public Works,
Sydney, 23 June, 1858.*

SIR,

Referring to my letter of the 9th instant, on the subject of the effect of the Main Roads Bill upon the Maitland Road Trust, I am now directed to request that you will have the goodness to state whether you have kept such accounts as will enable you to show what portion of the £2,000 (constituting the present debt of the Trust) has been expended on the main road, as well as what portion has been expended in punts and other matters unconnected with that road.

I have, &c.,

MICHL. FITZPATRICK.

No. 10.

SECRETARY TO TRUST to UNDER SECRETARY FOR LANDS AND WORKS.

Maitland, 24 June, 1858.

SIR,

In reply to your letter of the 23rd instant, inquiring as to whether the accounts of the Maitland Road Trust have been kept so as to show the amount expended on the main road, I have the honor to inform you that the accounts will show the amounts received and disbursed on the main road since the creation of the Trust.

I will place your letter before the Trust, at their meeting on Monday next, and shall doubtless receive instructions to transmit the accounts to you.

I have, &c.,

JOSEPH CHAMBERS,
Secretary.

No. 11.

UNDER SECRETARY FOR LANDS AND WORKS to COMMISSIONERS OF TRUST.

*Department of Lands and Public Works,
Sydney, 25 June, 1858.*

GENTLEMEN,

With reference to my letters of the 15th May and previous dates, respecting the unadjusted accounts of the Maitland Road Trust, I am directed by the Secretary for Lands and Public Works to remind you of your neglect in furnishing the declaration suggested by yourselves in lieu of the proper vouchers uniformly required in such cases by the Government; and at the same time I am to point out to you, that no general settlement of your claim on the Government, arising out of the operation of the Main Roads Bill, can be made until you have furnished the accounts alluded to in the letters before mentioned.

I have, &c.,

MICHL. FITZPATRICK.

No. 12.

SECRETARY TO TRUST to UNDER SECRETARY FOR LANDS AND WORKS.

Maitland, 22 July, 1858.

SIR,

I have now the honor to enclose you a Return showing the amounts received and disbursed by the Commissioners of the Maitland Road Trust on the main road in their district, viz., from Morpeth to Black Creek, from the creation of the Trust, 1853, up to the 30th June, 1858.

You will observe that the expenditure exceeds the receipts by the sum of £708 13s. 9d. and that there are outstanding liabilities to the amount of £1,334 2s.

You will also observe that the Government advance for the year 1854—£475—is still payable to the Commissioners, and they trust these circumstances will be taken into account when the adjustment of the existing debt of £2,000 is considered.

In conclusion, I would beg to refer you to former correspondence of the 17th January, 1857, and other dates, that you may see the main road was always found to require a greater expenditure than the sum furnished by tolls collected thereon.

I have, &c.,

JOSEPH CHAMBERS,
Secretary.

Returned.

No. 13.

MAITLAND ROAD TRUST.

No. 13.

SECRETARY TO TRUST to UNDER SECRETARY FOR LANDS AND WORKS.

Maitland, 18 August, 1858.

SIR,

Having been requested by the Commissioners of the Maitland Road Trust to wait upon you on matters connected with the Trust affairs, I have the honor to state that I intend proceeding to Sydney, and attending at your office on Saturday morning next, when I hope to have the honor of an interview.

The chief object of my mission is to endeavour to arrange some settlement of account before the Trust are required to surrender their tolls to the Commissioners under the Main Roads Act.

I have, &c.,

JOSEPH CHAMBERS.

No. 14.

SECRETARY TO TRUST to UNDER SECRETARY FOR LANDS AND WORKS.

Maitland, 24 August, 1858.

SIR,

With reference to the pending arrangements for relieving the Commissioners of the Maitland Road Trust from the liabilities legally incurred by them under the 22nd section of the 17 Vict. No. 16,—

I have the honor to suggest that the property of the Trust, consisting of four punts, &c., remaining in possession of the Trust, as not being connected with the main road, should be valued, such valuation to be ascertained by parties eventually appointed by the Government and the Commissioners, or by their umpire; and that when such value be ascertained, the amount thereof be deducted from the liabilities before referred to, and the balance be paid by the Government to the Commissioners.

Considering, for the purposes of this arrangement, that the entire property of the Trust was of equal value to its liabilities—say £2,400—then the amount of valuation of the punts would represent the value of the property left with the Commissioners, and the amount of the balance payable by the Government would represent the value of the property surrendered by the Commissioners to the Government under the Main Roads Act.

Trusting these proposals will meet with your favourable consideration,—

I have, &c.,

JOSEPH CHAMBERS,

Secretary.

No. 15.

UNDER SECRETARY FOR LANDS AND WORKS to COMMISSIONERS OF TRUST.

*Department of Lands and Public Works,
Sydney, 28 December, 1858.*

GENTLEMEN,

I am directed to draw your attention to my letter of the 15th May last, pointing out the inconvenience occasioned by your delay in furnishing to the Auditor General the accounts of the Maitland Road Trust for the years 1855 and 1856, and the declarations and certificates of payments, from 2nd May to 31st December, 1856, which had been previously repeatedly called for without effect.

2. These accounts, I am to remind you, were returned to you for correction, and for the declaration of the Warden, in my letter of the 20th November, 1857, and I am to state, by direction of the Secretary for Lands and Public Works, that you should not have allowed that communication and my subsequent letters on the same subject to remain unattended to so long.

3. Mr. Secretary Robertson trusts that the accounts, &c., in question will now be furnished to the Auditor General without further delay.

I have, &c.,

MICL. FITZPATRICK.

No. 16.

UNDER SECRETARY FOR LANDS AND WORKS to SECRETARY TO TRUST.

*Department of Lands and Public Works,
Sydney, 31 January, 1859.*

SIR,

In acknowledging the receipt of your letter of the 12th instant, in which it is proposed that the punts belonging to the Maitland Road Trust shall be valued by arbitration, and the amount of such valuation be the share of the debt owing to the Bank of New South

This letter

traced.

South Wales on account of the Trust, to be paid by the Commissioners, and naming Mr. Dodds, of Maitland, as valuator on behalf of the Trust,—I am directed to inform you, that the Secretary for Lands and Public Works thinks that the better course would be, instead of going to the expense of having the matter settled by arbitration, for the Engineer-in-Chief for Harbours and River Navigation to value the punts in question, and to report on the subject to this department.

2. Mr. Moriarty has been instructed accordingly; and Mr. Secretary Robertson, I am to add, relies upon the Commissioners of the Maitland Road Trust being satisfied with this arrangement.

I have, &c.,
MICHL. FITZPATRICK.

No. 17.

UNDER SECRETARY FOR LANDS AND WORKS to SECRETARY TO TRUST.

*Department of Lands and Public Works,
Sydney, 2 April, 1859.*

SIR,

Referring to my letter of the 31st January last, with respect to the proportion of the amount owing to the Bank of New South Wales, on account of the Maitland Road Trust, to be paid by the Commissioners of such Trust, I am now directed to forward herewith, together with its enclosure, a copy of a letter from the Engineer-in-Chief for Harbours and River Navigation, reporting upon the value of the punts belonging to the Maitland Road Trust.

Not with the papers.

2. The Secretary for Lands and Public Works desires me to request, that the Commissioners of the Trust, having before them the above information, will now have the goodness to submit the amount of the debt they are liable for, in order that the balance to be paid by the Government may be handed over to them, to enable them to come to a settlement with the bank.

I have, &c.,
MICHL. FITZPATRICK.

WARDEN OF TRUST to SECRETARY FOR LANDS.

Maitland, 8 March, 1861.

SIR,

I have the honor to enclose you the list of the roads, the funds over which we have the authority, as members of the Maitland Road Trust, to administer; also the list of the roads in the Maitland District, the funds to be expended on which we shall be willing to administer, if it is seen fit to place the same at our disposal.

I have the honor to request that the moneys we are entitled to may be at once given out for expenditure, as the roads have been much injured, and bridges on the Wollombi and Mount Vincent Roads swept away, by the late heavy rains.

I have, &c.,
J. B. R. ROBERTSON,
Warden.

No. 21.

UNDER SECRETARY FOR LANDS to WARDEN OF TRUST.

*Department of Lands,
Sydney, 7 May, 1861.*

SIR,

Referring to your letter of the 8th March last, applying for funds to be placed at your disposal, for the repair of the roads in connection with the Maitland Road Trust, I am directed to apprise you, that a communication was, on the 29th September last, addressed to the Secretary of that Trust, intimating that, as the money advanced at different periods during the last three years to the Maitland Road Trust still remained unaccounted for, and as no replies had been received to the applications made to that officer for the half-yearly accounts required to be furnished under the Act of Council, no more moneys of any kind would be advanced by the Government to the Trust.

I have, &c.,
MICHL. FITZPATRICK.

No. 22.

UNDER SECRETARY FOR LANDS to WARDEN OF TRUST.

*Department of Lands,
Sydney, 20 May, 1861.*

SIR,

In reference to your personal inquiry, whether the accounts of the Clerk to the Maitland Road Trust have been adjusted, I am directed to forward, for your information, a copy of the Report of the Auditor General, shewing what is necessary to render the accounts in question complete.

I have, &c.,
MICHL. FITZPATRICK.

14 May, 1861—
herewith.

[Enclosure in No. 22.]

Mr. Chambers was informed on the 4th May that the accounts, as now completed, were so far satisfactory, but that it was still requisite to furnish the Trust Account for 1858 and 1859, and also for the latter half of 1856. When these shall have been received and examined, the last advances will be adjusted. These are, however, in addition to those drafts against bank credits for which no vouchers have been furnished to be accounted for.—(See statement enclosed in letter from this office, dated 1st August, 1860.)

B.C.—14 May, 1861.

W. C. MAYNE, A. G.

No. 23.

WARDEN OF TRUST to UNDER SECRETARY FOR LANDS.

*Moor Park,
Morpeth, 13 July, 1862.*

SIR,

I have the honor, as Warden, to draw your attention to the dilapidated state of various roads and bridges under the supervision of the Maitland District Council and Road Trust.

The clerk, Mr. J. Chambers, has made application, in due form, for all moneys due from the Government, but no funds have been received.

The bank account of the Trust is now overdrawn some £600, and in addition several persons are complaining that they cannot get paid accounts against the institution over which I preside.

At a meeting of the members held lately, a resolution was passed agreeing to suspend operations until the Government pay all sums for roads in the district in arrear.

As I am placed in a very unsatisfactory and unpleasant situation with the public, and great discontent is expressed on the state of the roads and bridges in the district, I shall feel obliged, in order that I may be enabled to set myself right, if you will inform me the reason why the said sums have not been handed over in due course.

I have, &c.,
J. B. R. ROBERTSON,
Warden, Maitland District.

MAITLAND ROAD TRUST.

11

No. 24.

UNDER SECRETARY FOR LANDS to WARDEN OF TRUST.

*Department of Lands,
Sydney, 15 August, 1861.*

SIR,

With reference to the correspondence that has taken place, and especially to your letter of the 13th ultimo, respecting the non-issue of the moneys for the repair of the roads in connection with the Maitland Road Trust, I am directed to inform you that the reasons why the moneys in question were not placed at the disposal of the Trust were fully stated in my letter to you of the 7th May last, wherein you were apprised that a communication was, on the 29th September last, addressed to the Secretary of that Trust, intimating that as the money advanced at different periods during the last three years to the Maitland Road Trust still remained unaccounted for, and as no replies had been received to the applications made to that officer for the half-yearly accounts required to be furnished under the Act of Council, no more moneys of any kind would be advanced by the Government to the Trust.

2. When recently at Maitland, the Secretary for Lands had a personal communication with Mr. Chambers, who led him to hope that the difficulty would be immediately removed. Since then Mr. Chambers visited Sydney, and after seeing the Auditor General, the following report was furnished:—"The Trust accounts brought by Mr. Chambers were found still to require the Commissioners' signature, and that of 1856 to be prepared anew.—"Mr. Chambers took away with him the accounts wanting completion above referred to."

3. Mr. Secretary Robertson has again, to-day, caused inquiry to be made of the Auditor General, who says that Mr. Chambers has not yet complied with the requirement indicated by him as necessary.

4. The Secretary for Lands has been assured that Mr. Chambers has been informed of what is requisite, and until the Auditor General reports that he is satisfied with the accounts, Mr. Secretary Robertson is unable to authorize any further issue of money to the Trust.

I have, &c.,
MICHL. FITZPATRICK.

No. 25.

AUDITOR GENERAL to PRINCIPAL UNDER SECRETARY.

*Audit Office, Sydney,

SIR,

I do myself the honor to submit, for the information of the Honorable the Principal Secretary, the enclosed correspondence respecting the accounts of the Maitland Road Trust, consisting of five letters from the Warden, and of one letter from the Secretary to the Trust.

One letter from
Warden not
traceable.

Vouchers for the expenditure of moneys allotted to the Maitland Road Trust out of Parliamentary votes having been furnished, the question raised as to the accuracy of the Trust Accounts, that is, of moneys raised and expended under the Maitland Road Trust Act, 17 Vic. No. 16, is one, it appears to me, for the Trust to settle with their own officer, the Secretary, Mr. Chambers, and not one that the Government are called upon to investigate.

The Trust Accounts Current have been rendered according to the Act, signed by the Warden, and after examination in this office have been published in the *Government Gazette* and laid before Parliament.

I have, &c.,

[Enclosures in No. 25.]

*Stony Creek,
9 April, 1862.*

Sir,

I have the honor to enclose to you the Maitland Road Trust Book of Account, as in some way tending to show how the deficiency in the Trust Account is to be explained, and the chief evidence of the accounts, as forwarded this post. By examining the book, you will see that in posting into a ledger now kept, it became necessary to analyze the amount, so as to be able to charge each road with its proper amount; in doing which I discovered that the amounts called wages contained the whole of the amount paid to McDonald, the contractor, viz., £1,169 15s. 3d., and that there was entered in the book £427 15s. 6d., being a part of Nixon's contract, though the whole other portion of Nixon's contract is not entered anywhere; and I saw that, in answer to your letter to the Trust, dated 23 March, 1861, that £1,775 0s. 1d. of these contracts had been appointed to satisfy the Government advances to the Trust, and consequently so much of the amount could no longer form a set-off against Trust receipts, as they appear to have been in the accounts sent in by Mr. Chambers to the Auditor General, as I see by the letter book, about August 6, 1861. And in making out my first set of accounts, and being assured by Mr. Chambers and his clerk that the Government moneys were all accounted for, and not having at any time seen the correspondence, I had no idea that the book had been made wrong by the apportioning of the above amount; nor did the Secretary's clerk, who assisted me to copy out all the items in the book, inform me, though he must, I think, have known,—but, on the contrary, he said all the amounts were as credits to the Trust, as the Government claims had been satisfied.

In

In further explanation of the difference in the accounts now rendered—after I had gone through all the accounts, and after receiving your memo. of the various amounts sent, I discovered a bank book of the Bank of New South Wales, in which the advances were entered. It will be seen by the present account that there is a difference in the Secretary's salary for each year. This arises from two items of salary being found to be paid him. In the bank book alluded to above, and by the items now being placed in their proper year, the overseer's salary is also different, chiefly from the amounts being now placed in their proper year; and some portion was found to have been charged to the Government. The interest also differs, as it is now made up from the bank book, and there was then discovered a charge for £10 11s. 6d. in the bank book. There are various other little discrepancies in the former accounts which appear nearly to balance each other, but which are now set right, having had claims sent in and other papers which has enabled me to do so. I now beg to refer you to my letter of this date, No. 3, and to say I do not see that I can do anything more in this troublesome business.

I have, &c.,

BOURN RUSSELL,

Warden, M. R. T.

W. C. Mayne, Esq.,
Auditor General, &c., &c.

Stony Creek, April 3, 1862.

Returned.

Sir,

I have the honor to enclose to you two Government cheque books of the Maitland Road Trust (and one butt). In these cheque books you will see various cheques signed by two members of the Trust, and some of them endorsed by Mr. Chambers, in all amounting to a considerable sum, and as I discovered that one (a blank one) of them had been removed since my appointment, I caused it to be returned, and cancelled the butt. I send them to you because I consider it dangerous for such things to lay about.

The object in drawing these cheques is said by Mr. Chambers' clerk, in whose keeping they were, was to draw a sum of money supposed to be due to the Trust from the Government, and that the amounts are actually paid and charged.

I have, &c.,

BOURN RUSSELL,

Warden, M. R. T.

W. C. Mayne, Esq.,
Auditor General.

*Stony Creek, West Maitland,
9 April, 1862.*

Sir,

Returned to the
Trustees. See
No. 29.

I have the honor to enclose to you the amended Maitland Road Trust Accounts, from 1st of July, 1856, to 31st December, 1860, as well also the Trust Account for the year 1861, showing a deficiency of £1,674 3s. 2d., which does not include the short credit on the main road tolls, amounting to £604, nor does it include the short credits of the punt tolls, amounting to £673 15s. 9d. (as it appears by the book), as I thought it possible that Mr. Joseph Chambers, the Secretary to the Trust, might explain how these deficiencies occurred. There has been much delay in sending these accounts, owing chiefly to the Secretary being so much from home on his official duties as Crown Prosecutor.

On Monday last the Trust met—having delayed a fortnight from their former meeting, at which the books were produced and balances declared—to give the Secretary an opportunity to explain. No satisfactory explanation however was given; Mr. Chambers denied that he had requested the apportionment of the contracts, amounting to £2,329 9s. 3d., as stated in your memo. of the 21st February last, and said it had been done by the Trust in his absence. You will at once see that this in no way explains the deficiency. He also produced an audited account by the Trust for the year 1858, which I could not see that it in any way affected the matter.

Since my letter of the 30th ultimo, I have endeavoured to find a solution of this vexed question, for which I beg to refer you to my letter, No. 2, of this day, and to apologize for clerical imperfections in the account, as I have to be my own scribe.

I have, &c.,

BOURN RUSSELL,

Warden of the District of Maitland.

W. C. Mayne, Esq.,
Auditor General, &c., &c.

Maitland, 12 April, 1862.

Sir,

I have the honor to inform you, that at a meeting of the Maitland Road Trust, held on the 7th instant, the Warden (Mr. Russell) stated he had caused the returns or accounts required by you to be prepared, and intended forwarding them to you.

The Trust, then, by a majority of three to one, passed a resolution to the effect that such returns and accounts should be prepared by their Secretary, at their place of business, as heretofore.

Mr. Russell, however, declined to abide by the resolution of the Commissioners, and has, I am informed, now forwarded the papers to you. I send you this information to guide your action in the matters, and beg to add, as regards myself, that I have not seen these papers; but from the circumstances under which they are made up, and from what I have heard to be their result, I know them to be full of the greatest inaccuracies.

JOSEPH CHAMBERS,
Secretary, Maitland.

P.S.—On reading this letter I deem it right also to add, that I consider Mr. Russell's conduct towards me to be ungenerous and unkind; and when it is remembered that for twenty years I have acted as Secretary, for twelve of which, though at a salary of £100 per annum, I left that salary to be disbursed for the public interest, because the income of the Council was so low, Mr. Russell's conduct appears to me to merit stronger terms.—J. C.

To the Auditor General,
Sydney.

Stony

MAITLAND ROAD TRUST.

13

Sir,

Stony Creek, 13 April, 1862.

I have the honor to refer you to my letter of the 9th ultimo, enclosing the accounts of the Maitland Road Trust, as I see that I omitted to mention that I had in these accounts entered in its proper year and place the sum of £118 Os. 2d. (a remittance to Messrs. Walker and Co., on 5th September, 1857), which had not been posted, as it was thought to be an error, but which I had afterwards found to be correct, and credited it by taking it off the last balance in the rough copy of ledger accounts sent. Its being now entered in the right year has, of course, altered all the intermediate balances.

W. C. Mayne, Esq.,
Auditor General,
&c., &c.

I have, &c.,
BOURN RUSSELL,
Warden, M.R.T.

No. 26.

UNDER SECRETARY FOR LANDS to WARDEN OF TRUST.

*Department of Lands,
Sydney, 21 May, 1862.*

SIR,

The Auditor General having forwarded to this department your letter of the 9th ultimo, and other correspondence respecting the expenditure of moneys allotted to the Maitland Road Trust, and as to the accuracy of Trust Accounts, that is of money raised and expended under the Maitland Road Trust Act, 17 Vict. No. 16, I am directed to inform you, that Mr. Secretary Robertson concurs in the opinion expressed by the Auditor General, that it is for the Trust to settle with their own officer, the Secretary, Mr. Chambers; and that the Government is not called upon to investigate the Trust Accounts.

2. Mr. Secretary Robertson conceives, however, that with a statement before him, such as that contained in your letter of the 9th ultimo, that the accounts of the Secretary show a large deficiency, and that although the Secretary had had an opportunity of explaining, his attempt to do so proved unsatisfactory to you, with an intimation that the Secretary has been suspended, and that during such suspension the accounts will be carefully examined—certainly the proper course to be pursued in such a case—and with no intimation that any other steps are being taken to clear up the difficulty,—the Secretary for Lands would not feel justified in authorizing any further payments to the Trust.

I have, &c.,

MICL. FITZPATRICK.

No. 27.

AUDITOR GENERAL to UNDER SECRETARY FOR LANDS.

*Audit Office, Sydney,
28 May, 1862.*

SIR,

With reference to my letter, dated 24th ultimo, addressed to the Under Secretary to the Government, enclosing correspondence respecting the Maitland Road Trust Accounts, I have the honor to enclose a letter, received by me this day from Mr. Joseph Chambers, Secretary to the Trust, and, in reference thereto, to forward the book of accounts and butts of cheque books transmitted to me by the Warden, with his letters dated 9th April, Nos. 2 and 3 (and which letters were enclosed in my communication to the Under Secretary of the 24th of the same month), in order that instructions may be given as to the disposal of the book and butts of cheques above referred to.

I have, &c.,

W. C. MAYNE,
Auditor General.

[Enclosure

[Enclosure in No. 27.]

Maitland, 26 May, 1862.

Sir,

I have the honor to inform you that I returned yesterday from my duties on the Western Circuit. I should have prepared the returns and accounts of the Maitland Road Trust before I left, in accordance with the resolution of the Trust (referred to in my letter of the 12th ultimo), had Mr. Russell returned me the necessary books and papers; and I now beg to state, that I am prepared to make such returns and accounts as soon as such books and papers are put before me, as contemplated by the before-mentioned resolution.

To the Auditor General,
Sydney.

I have, &c.,
JOSEPH CHAMBERS,
Secretary to the Trust.

No. 28.

WARDEN OF TRUST to SECRETARY FOR LANDS.

Stony Creek, West Maitland,
7 June, 1862.

SIR,

I have the honor to acknowledge the receipt of your letter of the 21st of May last, in the first paragraph of which it is stated that the Secretary for Lands agrees with the Auditor General that it is for the Trust to settle with its own officers, &c., and that the Government is not called upon to investigate the accounts.

In reply to the above, I beg to refer you to the 23rd clause of 17 Vict. No. 16, wherein it is expressly provided that the Auditor General should examine these accounts. Were it not so, any amount of fraud might be committed under the form in which these accounts are furnished. It is no answer to this, that the Trust are to render true and correct accounts.

I quote the clause in support of my statement, wherein it will be seen that it is as binding on the Auditor General to examine these accounts as it is for the Trust to furnish them:—Clause 23, 17 Vict. No. 16. "The said Commissioners shall keep or cause to be kept true correct and particular accounts of all moneys received as well as of all moneys expended by them in the execution of their trust under this Act and they shall within one month after the expiration of each half-year render such accounts for such half-year to the Auditor General of the Colony who after examination of the same shall cause them to be delivered to the Colonial Secretary to be laid before the Legislative Council of the said Colony and published in the *New South Wales Government Gazette*."

I beg now to call the attention of the Secretary for Lands and the Chief Secretary to the way in which I was induced to accept the appointment of Warden of the Maitland District, viz., under instructions to get the account made out, &c., and promise of support; but I now find that the Auditor General and Minister for Lands refuse to do what the Act requires, but call upon me, the Warden, to comply with the Act, in rendering half-yearly accounts for a period of the Trust accounts over which I have had no control, although yearly accounts have been published for the other period of the Trust account over which I likewise had no control, and which accounts the Government have been informed are erroneous, and that the refusal of the Auditor General and the Government to examine the accounts rendered by me exposes me to an action at law in performing a public duty, and after immense labour in endeavouring to carry out my verbal instructions, in accordance with my duty as Warden of the Maitland District. At all events, such refusal will render it impossible that the accounts of the Trust can ever be properly adjusted, and if it is still insisted that these accounts must be adjusted, the Trust may be considered as virtually defunct.

I have, &c.,
BOURN RUSSELL,
Warden, D.M.

No. 29.

UNDER SECRETARY FOR LANDS to WARDEN OF TRUST.

Department of Lands,
Sydney, 21 June, 1862.

SIR,

Mr. Chambers having represented to the Auditor General that he would have prepared the returns and accounts of the Maitland Road Trust before he left on circuit, in accordance with the resolution of the Trust, had you returned him the necessary books and papers, at the same time stating that he is prepared to make such returns and accounts as soon as such books and papers are put before him, I am directed to forward to you the book of accounts and butts of cheque books transmitted by you to the Auditor General on the 9th April last, in order that Mr. Chambers may be enabled to have access thereto.

One book and
three butts.

I have, &c.,
S. B. WARBURTON.
(For the Under Secretary.)

No. 30.

MAITLAND ROAD TRUST.

17

No. 30.

WARDEN OF TRUST to SECRETARY FOR LANDS.

*Stony Creek,
23 June, 1862.*

SIR,

I have the honor to acknowledge the receipt, this morning, of the Maitland Road Trust day book, together with two cheque books and one butt, also your letter informing me that Mr. Joseph Chambers was prepared to make up the accounts as soon as the books and papers were put before him. I have, immediately on receipt of the books this morning, called a meeting of the Trust for Monday next, the 30th proximo, at which meeting I shall hand over to the Trust all books and papers received from Mr. Joseph Chambers to enable me to make out the account.

From the tenor of your letters it seems these accounts are to ignore, a circumstance that I cannot quietly submit to, as I feel certain that it is the imperative duty of the Auditor General to examine these accounts, and to declare unequivocally whether they are right or wrong. I admit that slight clerical errors may perhaps exist, but substantially I am certain of their correctness.

And the public ought to know whether this is a mere dispute between the Warden and Mr. Chambers, the Secretary, or not, and is the only means of the Government setting itself right in the matter.

I have, &c.,
BOURN RUSSELL,
Warden, D.M.

No. 31.

UNDER SECRETARY FOR LANDS to WARDEN OF TRUST.

*Department of Lands,
Sydney, 4 September, 1862.*

SIR,

In reply to your letter of the 23rd June last, relative to the Maitland Road Trust accounts, I am directed by the Secretary for Lands to refer you to my letter of the 21st May last, and to inform you that he cannot alter the decision arrived at.

I have, &c.,
MICL. FITZPATRICK.

No. 32.

WARDEN OF TRUST to SECRETARY FOR LANDS.

Maitland, 9 October, 1862.

SIR,

Referring to the correspondence relative to the accounts of the Maitland Road Trust, I have the honor to inform you that Mr. Chambers, at a meeting of the Trust held this day, formally resigned his appointment as Secretary of the Maitland Road Trust, handing in a set of papers which he states are the accounts of the Trust, and to which I beg to call your particular attention, and which I herewith transmit for your information.

I have, &c.,
BOURN RUSSELL,
Warden, M. R. T.

With Auditor General for examination.—See No. 36. Examined—W. B.

No. 33.

MR. CHAMBERS to COLONIAL SECRETARY.

Sydney, 20 October, 1862.

SIR,

I have hitherto refrained from addressing you respecting my connection with the Maitland Road Trust, because I had apprised the head of my department (the Attorney General) that I was prepared, whenever required, to give an explanation of my conduct, and because I was of opinion that, however much I might have felt the annoyance under which I was made to suffer, I was not justified, without his authority, in entering into any official correspondence or public disputation; but as the Attorney General has not seen fit to require such explanation, notwithstanding my name is frequently and publicly mentioned, I believe I cannot err in now addressing you. I think it unnecessary to allude to the personal animosity existing between myself and Mr. Russell, the late appointed Chairman of the Trust—my doing so could not greatly affect, though it might tend to account for, the present dispute, which I submit to be, whether or not I am indebted to the Trust.

763—C

But

But as regards the charge of delay in making up the Trust accounts, although I do not wish entirely to excuse myself from blame, yet I would show that delay does not wholly rest with me. And as regards the charge of being indebted to the Trust, I would require the opportunity of showing that such is not the fact.

As to the delay in making up the accounts, I beg to represent to you that in the year 1859 (I write from memory, not having here my papers to refer to) the Commissioners of the Trust arranged with Mr. Robertson, Minister for Lands, for the payment of the claims of the Trust on the Government, on account of the main road from Maitland to Singleton, and that it was then stated by the Minister that the Auditor General was, or would be, satisfied with the arrangements then made as answering all demands to that date. Messrs. Close and Eckford were present at the arrangement, and although I do not mean to say the Auditor General was bound by it, yet I beg to state that the assertion of the Minister made me careless of the applications of the Auditor, which for a long time after I looked on as the mere routine duty of some clerk in the Audit Office.

Mr. Child was Warden at the time, and having had all the accounts of the Trust audited, as required by the charter, and being of opinion that the Municipality Act repealed the Act creating and supporting District Councils, he resigned his office as Warden.

For nearly twelve months, during which the Auditor General frequently applied for a settlement of the Government accounts, no appointment was made. At length Mr. James Portus was appointed, and to him I at once sent all the vouchers and accounts requiring adjustment. They lay with that gentleman for upwards of six months, and some of the members of the Trust can tell how frequently I went with them to Morpeth to endeavour to get those papers attended to.

Mr. Portus at length resigned, and Mr. Robertson was subsequently appointed, but he declined to attend to the papers Mr. Portus ought to have completed.

Mr. Robertson at length resigned, and Mr. Russell was appointed, and he immediately took the papers and accounts to his house, and, as against me, made up an account which he had not knowledge to understand or data to go by. Mr. Russell announced the discovery of a large deficiency, and, notwithstanding the repeated resolution of the Trust, for many months withheld from me the books and papers, without which it was impossible for me to make up the accounts.

At length they were restored to me, and within nine days thereafter all accounts were on the table of the Commissioners.

Thus, then, I partially account for the delay.

The accounts of the Trust have always been kept in two distinct forms, namely, the "Government Account," which was for moneys received from the Government for expenditure, and which moneys were always expended in accordance with official direction, and the "Toll Account," which was for moneys collected from tolls, and which moneys were expended by the Trust irrespective of the Government. In the Government account no great irregularity could arise; the moneys were paid in at Sydney and paid out by the Commissioners in the country, and it will be found correct to a fraction, though it comprises from £8,000 to £10,000.

But the toll account was the Commissioners' current account with their bankers, created by moneys borrowed and tolls collected, and disbursed by orders of the Commissioners or their committees.

The payment by the Government in 1859, before alluded to, nearly relieved the Trust from debt, and when Mr. Child resigned the bank account was not greatly overdrawn; but during Mr. Portus' wardenship the Trust again got into debt, and that so deeply that the bank refused to pay the cheques drawn, and as contracts were still in course of completion, it became necessary to appropriate all moneys collected towards payment of the liabilities of the Trust.

The members of the Trust used then to draw orders on me, which I paid as readily as my private means and the amounts received by tolls enabled me to do so. I paid from my private means about £300 to take up cheques which the bank would not pay, and orders to other persons to a considerable amount.

Bearing in mind the nature of the receipts and disbursements, the latter being monthly labourers' wages, and that I was absent from home nearly nine months in the twelve, it is easily conceivable that inaccuracies in both sides of the account may appear, but by the account made up by me the Trust are in my debt about £300. But whatever the account may be, I am quite prepared for any investigation, which will enable me to prove the foregoing facts, and which will enable me, where vouchers are wanting, to give direct evidence of payment. I am ready to wait on the auditors of the Trust, they being required by their charter to audit, and having for the last twenty years audited their accounts; or I will proceed against the Trust in course of law, leaving the account to arbitration. Any plan which will bring all the particulars before those called on to adjudicate will be consented to by me, as I am not desirous of having the account settled.

I have, &c.,
JOSEPH CHAMBERS.

P.S.—It is right that I should add, that I believe all the Commissioners (whether now in office or who have gone out by rotation) who were acting during the occurrence of the matters referred to in this letter, will coincide with my views as to the manner in which the accounts should be adjusted.—J. C.

MAITLAND ROAD TRUST.

19

No. 34.

MINUTE OF COLONIAL SECRETARY.

THE Secretary for Lands has, I understand, forwarded all the accounts and papers to the Auditor General. This letter may also be referred to that officer, who will, perhaps, report upon it with the other documents now in his possession.

B.C., 21 October.

C. C.

No. 35.

AUDITOR GENERAL'S REPORT.

Audit Office, 24 October, 1862.

MEMORANDUM :—

The accounts and papers referred to in the Minute of the Honorable the Principal Secretary have not yet reached me.

The accounts of expenditure by the Trust of money from the revenue placed at their disposal having been adjusted, I have again to state the opinion which I have repeatedly expressed, that the Government is not called on to interfere with a matter which rests strictly between the Trust and its own officer, and my conviction that any interference on the part of the Executive in a matter in which it is obvious that local and personal feeling is involved will entail the inconvenience of a mischievous precedent and commit them to a vexed question with which they have strictly no call to interfere. Mr. Chambers expresses his desire to have the accounts in dispute subjected to the fullest investigation, and his readiness even to resort to legal proceedings to secure that; and I would, in the circumstances, suggest that, in reply to his letter, he be informed, that while declining interference with the case or with the exercise of his discretion as to the course, legal or other, to adopt for the final settlement of his accounts, it appears to the Executive that there can be no more expeditious, fair, or satisfactory mode of arriving at such settlement than by the whole of the accounts and vouchers being placed in the hands of a professional accountant of high character, selected by the Trust and by Mr. Chambers, for full examination, statement, and report; or if the Trust and Mr. Chambers cannot agree in the selection of one such accountant for the purpose, then in the hands of two, one named by the Trust, and one by Mr. Chambers, for their joint examination, statement, and report.

W. C. MAYNE,

Auditor General.

No. 36.

UNDER SECRETARY FOR LANDS to AUDITOR GENERAL.

*Department of Lands,**Sydney, 29 October, 1862.*

SIR,

In forwarding you the enclosed papers, said to be the accounts of the Maitland Road Trust, which have been handed in by Mr. Chambers, Secretary to the Maitland Road Trust, I am directed by the Secretary for Lands to request that you will have the goodness to have the same examined.

2. Although the Secretary for Lands does not think that it is your duty to investigate these accounts in detail, yet as Mr. Chambers is an officer employed by the Government, Mr. Secretary Robertson is of opinion that such an inquiry should be made as would enable the Government to determine whether or not that gentleman has acted faithfully in the matter.

3. Mr. Chambers, I am to add, resigned his office of Secretary on the 9th instant.

I have, &c.,

MICHL. FITZPATRICK.

No. 37.

UNDER SECRETARY FOR LANDS to COMMISSIONERS OF TRUST.

*Department of Lands,**Sydney, 29 October, 1862.*

GENTLEMEN,

I am directed to inform you that the Secretary for Lands has now approved of your being again entrusted with the expenditure of the money voted by Parliament for the repair of the roads by law, under the superintendence of the Maitland Road Trust; and I am to apprise you that the Under Secretary for Finance and Trade has accordingly been requested to cause to be placed to your credit, in the Bank of New South Wales, the sums noted in the annexed list, which have been voted for the repair of the roads specified in connection therewith.

I have, &c.,

MICHL. FITZPATRICK.

List referred to.

No. 38.

No. 38.

UNDER SECRETARY FOR LANDS to WARDEN OF TRUST.

*Department of Lands,
Sydney, 29 October, 1862.*

SIR,

In acknowledging the receipt of your letter of the 9th instant, enclosing certain papers purporting to be the account of the Maitland Road Trust, and notifying the resignation of Mr. Chambers, Secretary to that Trust, I am directed to inform you that those accounts have been transmitted to the Auditor General.

2. Although the Secretary for Lands does not consider it the duty of the Auditor General to investigate those accounts in detail, yet as Mr. Chambers is an officer of the Government, Mr. Secretary Robertson is of opinion that such an inquiry should be made as will enable the Government to determine whether or not Mr. Chambers has acted faithfully in the matter.

3. I am at the same time to inform you, that the obstacle which formerly existed to the issue to the Trust of the moneys voted for the roads by law under its care, having now been removed, the necessary authority has accordingly been given to the Under Secretary for Finance and Trade to transfer to the Commissioners any such balance as may be available.

I have, &c.,
MICHL. FITZPATRICK.

No. 39.

AUDITOR GENERAL to UNDER SECRETARY FOR LANDS.

*Audit Office, Sydney,
31 October, 1862.*

SIR,

I have the honor to acknowledge the receipt, yesterday, of your letter of the 29th instant, enclosing papers said to be the accounts of the Maitland Road Trust, which have been handed in by Mr. Chambers, formerly Secretary to the Trust, and conveying Mr. Secretary Robertson's request for their examination by this department.

2. Having within the last few days had referred to me for report, a letter addressed by Mr. Chambers to the Honorable the Principal Secretary, on the subject of the Maitland Road Trust accounts, and, having in reply to that reference, submitted the reasons before expressed, which appear to me to render inexpedient, and in principle objectionable, interference on the part of the Executive, and having also suggested a course consistent with arbitration, or ordinary process of law, either of which Mr. Chambers expresses his willingness to resort to, and which if adopted will attain the object sought by Mr. Secretary Robertson, I deem it my duty to suspend examination of the accounts forwarded with your letter until I shall have been further instructed.

3. In addition to what I have before offered as reasons against the interference of the Executive, I would urge on the consideration of the Honorable the Secretary for Lands, that Mr. Chambers asserts, that instead of the Trust having any money claim against him they are indebted to him to the extent of about £300. If this be the case, Mr. Chambers is in a position to pursue his claim at law, even while the accounts are under examination by this office (if that course be finally resolved on), and by so doing at any moment to put a stop to an investigation which Mr. Secretary Robertson himself considers is not a duty attaching to this department.

I have, &c.,
W. C. MAYNE,
A. G.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SUBORDINATE ROADS OF NEW SOUTH WALES.

(CLASSIFICATION AND PROPOSED DISTRIBUTION FOR 1863.)

Ordered by the Legislative Assembly to be Printed, 6 November, 1862.

CLASSIFICATION AND PROPOSED DISTRIBUTION FOR 1863.

| NUMBER. | CLASS. | LENGTH IN MILES. | Sydney or Metropolitan Roads. | | | | Proposed Expenditure out of £70,000 provided in Estimates for Roads other than Main Roads. |

MR. W. R. COLLETT.

No. 1.

UNDER SECRETARY FOR PUBLIC WORKS to MR. COLLETT.

*Department of Public Works,
Sydney, 3 July, 1862.*

SIR,

I am directed by the Secretary for Public Works to inform you that his attention has been called to a letter appearing in the advertising columns of the *Maitland Mercury* of the 1st instant, and purporting to be addressed by Mr. W. R. Collett to the electors of Patrick's Plains.

2. Assuming that the signature referred to is yours, I am to express the surprise of the Minister that the Government should first be informed of such a step through an advertisement in a newspaper.

3. I am to add that it appears to the Minister to be the duty of any officer under the Government, who purposes to seek a political position, in the first place to relieve himself of subordinate duties incompatible with such position, and to inform you that, unless you immediately intimate your desire to resign your present office, Mr. Secretary Arnold will feel it his duty to bring the matter under the consideration of His Excellency the Governor and the Executive Council, with a view to your removal from the office which you now hold.

I have, &c.,

JOHN RAE.

No. 2.

MR. COLLETT to UNDER SECRETARY FOR PUBLIC WORKS.

*Singleton,
4 July, 1862.*

SIR,

I have the honor to acknowledge the receipt of a communication from you, dated July 3, 1862, having reference to my seeking a political position without in the first place informing the Government of my intentions, or relieving myself of my subordinate duties; and stating further, that unless I immediately intimate my desire to resign my present office, Mr. Secretary Arnold will feel it his duty to bring the matter under the consideration of His Excellency the Governor and the Executive Council, &c., &c.

As the Hon. the Minister for Works has invariably treated me with courtesy, I beg leave to submit the following explanation:—

On the reduction of my salary to one shilling per annum by the Legislative Assembly, I stated my intention openly of entering Parliament, and of resigning my Commissionership.

I was not permitted to do the latter, but was forced to make way for Mr. Moriarty, thereby having a most unmerited slur cast upon me.

My only hope of reinstating myself in public opinion was by the acceptance of my previous office of Superintendent, which, from a sense of duty I had quitted with regret after seven years' service. Having done so, I naturally expected to be treated as an officer of some experience and as a *gentleman*. I regret to state that Mr. Moriarty has ever since thought fit to make use of the most personal and insulting language towards me. He thought fit also to initiate and circulate crude and undigested theories, which have already cost the country thousands of pounds.

Except as regards myself I could not object to these novel notions; but having a character to lose in the Northern District and a road to maintain, it was my duty firmly and conscientiously to state my objections.

Mr. Moriarty's determination, however, seems to have been to throw all the odium and responsibility which have arisen from his indecision and delays on my shoulders, and his sending Mr. Beazeley up to Singleton, to teach me how to dig a drain and to prepare a specification for mending a rotten plank, was the climax of the whole.

Having been on the same day informed that Mr. Harpur intended to resign (which report, however, has since been privately contradicted), I issued the address dated June 26, 1862, which bears my name, and which was doubtless premature.

By this means, however, I sought to avoid the impending collision between Mr. Moriarty and myself. Not that I dreaded the result, but I was unwilling to state my case until I was in a position to make myself heard and respected.

If I had communicated to the Minister my intention to enter Parliament it might have been construed into a threat towards *him*, which never entered into my thoughts.

MR. W. R. COLLETT.

3

I was, moreover, not aware that it was my duty to do so. If such be the case, I beg to apologize for my unintentional want of courtesy.

I have no wish to hold my present situation for a day longer than I can fulfil its duties honorably and conscientiously. I only request that before sending in my resignation I may be allowed a personal interview with the Minister for Works, as I should sincerely regret to leave the department without endeavouring to offer some further explanation to Mr. Arnold on the causes which have led to the present correspondence.

I have, &c.,
WILLIAM R. COLLETT.

No. 3.

MR. COLLETT to UNDER SECRETARY FOR PUBLIC WORKS.

Singleton,
10 July, 1862.

SIR,

I beg to tender my resignation of the office of Superintendent of the 1st District of the Great Northern Road, and to request that you will be pleased to inform the Hon. the Minister for Works of my having done so, at your earliest convenience.

I have, &c.,
WILLIAM R. COLLETT.

No. 4.

UNDER SECRETARY FOR PUBLIC WORKS to MR. COLLETT.

Department of Public Works,
Sydney, 14 July, 1862.

SIR,

In acknowledging the receipt of your letter of the 10th instant, I am directed to inform you that the Secretary for Public Works has been pleased to accept your resignation, therein tendered, of your appointment as Superintendent of the 1st District of the Great Northern Road.

2. Mr. Secretary Arnold desires me at the same time to request, that you will have the goodness to continue to perform the duties of your office until your successor be appointed.

I have, &c.,
JOHN RAE.

No. 5.

CHIEF CLERK, ROAD BRANCH, to MR. COLLETT.

Department of Public Works,
Road Branch,
Sydney, 15 July, 1862.

SIR,

I am directed by the Commissioner to inform you, that in consequence of your resignation of the appointment of Superintendent of the 1st District of the Great Northern Road, and pending the appointment of your successor, Mr. Beazeley has been instructed to proceed to Singleton and take charge of the road in question. I am therefore to request that on his arrival you will hand over to him all tools, stores, and documents, the property of the Government, now in your possession.

I am also to request that, until relieved by Mr. Beazeley, who will probably not leave Sydney for a week, you will continue to perform the duties of Superintendent.

I have, &c.,
S. G. SHAIRP,
Chief Clerk.

No. 6.

TELEGRAM, received at 3 p.m., July 17, 1862.

Mr. Collett, } to { Mr. Under Secretary Rae,
Singleton, } Sydney.

Please inform Minister that I am quite agreeable to do duty for present month after two or three days in Sydney. Mr. Beazeley's temporary supervision will only confuse matters until my successor and an overseer for first division are appointed—latter urgent.

No. 7.

No. 7.

UNDER SECRETARY FOR PUBLIC WORKS to MR. COLLETT.

*Department of Public Works,
Sydney, 23 July, 1862.*

SIR,

Referring to my letter of the 14th instant, requesting you to perform the duties of the office of Road Superintendent, 1st District of the Great Northern Road, until your successor was appointed, I am now directed by the Secretary for Public Works to inform you that Mr. Beazeley, Engineer for Roads, has been instructed to proceed to Singleton to relieve you, and to request that you will have the goodness to hand over to him all documents, tools, and stores, the property of the Government, now in your possession.

I have, &c.,
JOHN RAE.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROAD FROM BOWENFELLS TO MUDGEE.
(RETURN SHEWING EXPENDITURE ON.)

Ordered by the Legislative Assembly to be Printed, 16 October, 1862.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6 June, 1862, That there be laid upon the Table of this House,—

- “ (1.) A Return of all moneys appropriated for the making
“ and repairing of the Road from Bowenfells to Mudgee,
“ since the 1st day of January, 1858.
- “ (2.) A Return of all moneys expended on the Road during
“ the same period, specifying on what parts of the Road
“ such money was expended, and the several amounts, the
“ dates of expenditure, and under whose superintendence.
- “ (3.) And particularly, the number of persons employed
“ monthly on the said Road, from the 1st day of January
“ last to the date of Return; the appropriation of money,
“ and expenditure during the said last mentioned period;
“ and the parts of the Road upon which such expenditure
“ has been made, the number of labourers employed, and
“ the number and names of the Superintendents and Over-
“ seers, and the Salaries paid to each.”

(Mr. Hobroyd.)

ROAD FROM BOWENFELLS TO MUDGEE.

RETURN, from the 1st day of JANUARY, 1858, to 31st DECEMBER, 1861.

ROAD FROM SCONE TO MOONAN.

No. 1.

THOMAS DANGAR, ESQ., M.L.A., to SECRETARY FOR LANDS.

43, *Hunter-street,*
Sydney, 8 October, 1861.

SIR,

I have the honor to apply to you for a sum of money for 1862, for the repair of the Road from Scone to the Denison Diggings, say thirty to thirty-five miles, *vid* Moonan, on the Upper Hunter.

I have also been solicited, and request you will be pleased to place on the Estimates for 1862, say £300, for the repair of the Bulgoa Road, from McAlpin's to the crossing-place at the Hawkesbury.

I need not inform you this road is in a very bad state, and fat cattle and sheep are much injured in travelling over this rocky country in coming to the Sydney market.

I have, &c.,
THOMAS DANGAR.

No. 2.

MINUTE OF SURVEYOR GENERAL.

It was proposed to place on the Road Schedule for the current year, the road from Scone to the Denison Diggings, Upper Hunter, in consideration of the increased traffic to that field.

The only provision now is £56, from Scone to Page's River, and the Schedule being made up, nothing can be given beyond this sum from the Schedule allowance.

It may be well to make a special provision in Supplementary Estimate.

A. G. M.
B. C., 4 *November.*

No. 3.

MINUTE OF UNDER SECRETARY FOR LANDS.

ASK the Surveyor General what he deems sufficient.

M. F.
B. C., 21 *November, 1861.*

No. 4.

MINUTE OF SURVEYOR GENERAL.

It is proposed to make a special provision for the road from Scone to the Denison Gold Field, as is usual in regard to roads to new gold fields.

A sum of money has, I believe, been provided for the Bulgoa Road, on the representation of Mr. A. Hodgson and others.

A. G. M.
B. C., 18 *January, 1862.*

No. 5.

MINUTE OF SURVEYOR GENERAL.

THE population as yet being small, and the reefs not yet tested, it will perhaps be well to await the further development of the field.

The pressure of business in connection with the Land Act has prevented my acting in this matter in time for Supplementary Estimates.

A. G. M.
23 *January, 1862.*

No. 6.

ROAD FROM SCONE TO MOONAN.

3

No. 6.

UNDER SECRETARY FOR LANDS to THOMAS DANGAR, ESQ., M.L.A.

*Department of Lands,
Sydney, 19 February, 1862.*

SIR,

In allusion to your letter of the 8th October last, applying for a sum of money for 1862, for the repair of the road from Scone to Denison Diggings, and requesting, at the same time, that £300 be placed on the Estimates for the repair of a portion of the Bulga Road, I am now instructed to inform you that it is proposed to make a special provision for the road from Scone to Denison Gold Field, as in other similar cases; and that a sum of money has already been provided for the Bulga Road, on the representation of Mr. A. Hodgson and others.

I have, &c.,
MICHL. FITZPATRICK.

No. 7.

MINUTE OF SURVEYOR GENERAL.

THIS may then await further development of the field, or other action.

A. G. M.

Approved—

John R. 28 February.

No. 8.

MINUTE OF SECRETARY FOR LANDS.

PRESENTED by Mr. Hoskins. Refer to the Surveyor General. The best mode would be to apportion a sum from the money authorized by Executive Council, in anticipation of vote of Parliament.

JOHN R.
21 July.

No. 9.

PETITION OF RESIDENTS, UPPER HUNTER.

To the Honorable John Robertson, Esquire, Secretary for Lands for the Colony of New South Wales.

The Petition of the undersigned, Miners and others, residing on the Upper Hunter Gold Field,—

RESPECTFULLY SHEWETH:—

That from the number of miners and others residing upon the Hunter Gold Field, and the consequent increase of traffic occasioned thereby in the transit of stores, &c., considerable delay and loss is sustained by your Petitioners by the uncertain line of road between this gold field and the Main Northern Road, as well as by the present dilapidated state of the line, insomuch that teams are occupied from five to six days in performing a journey from here to Scone, when, were the road put in efficient repair, two days would suffice for such journey.

That there are now four crushing machines on this gold field, one in full work and three in course of erection, which when completed our produce of gold will be considerable and our population increase. Your Petitioners are, therefore, induced to solicit that the road between here and the Main Northern Road may be proclaimed, and that a sum of money may be placed upon the Estimates for the purpose of putting such line of road in a state of repair.

And your Petitioners, as in duty bound, will ever pray.

(Here follow 127 Signatures.)

No. 10.

MINUTE OF SURVEYOR GENERAL.

I WOULD suggest that Mr. Johnston, Road Superintendent, should be directed to visit this road, and report on the necessities of it; and, at the same time, to put in hand the most urgent works.

A. G. M.
1 August.

No. 11.

No. 11.

POLICE MAGISTRATE, SCONE, to SECRETARY FOR LANDS.

Scone, 6 August, 1862.

MY DEAR ROBERTSON,

Would it not be as well to take advantage of Debenham being in the neighbourhood, to order him to lay out the road to the gold field? He will have completed the Mudgee and Merriwa Road directly.

It is little use sending a licensed surveyor to do such work; they won't take the time to select the best route. We have the road from Scone to Merriwa as an illustration.

Yours, &c.,

JAMES SMITH.

No. 12.

SURVEYOR GENERAL to SURVEYOR DEBENHAM.

*Surveyor General's Office,
Sydney, 21 August, 1862.*

SIR,

I have the honor to request that, after completing the work upon which you are now engaged, you will proceed with the survey of the road from Scone to the Denison Gold Fields.

2. I forward, for your information, a tracing from Mr. Licensed Surveyor Neill's survey of the road from Scone to the Upper Hunter, which will, I presume, form part of that to the gold fields.

I have, &c.,

A. G. M'LEAN.

No. 13.

MINUTE OF SECRETARY FOR LANDS.

YES; but it should be intimated that the Government would not be disposed to expend a greater sum than £400.

JOHN R.

21 August.

No. 14.

POLICE MAGISTRATE, SCONE, to SECRETARY FOR LANDS.

(Urgent.)

*Police Office, Scone,
26 August, 1862.*

SIR,

As the men are engaged for the purpose of effecting the repairs to the road from Scone to Moonan Brook, Upper Hunter Gold Field, I have the honor to request that you will be good enough to direct the money to be expended on this work to be placed in the Australian Joint Stock Bank, Singleton, with as little delay as possible.

I have, &c.,

JAMES SMITH, P.M.

No. 15.

MINUTE OF SECRETARY FOR LANDS.

I BELIEVE this money has been entrusted to Mr. Johnston, Superintendent of Roads. Is it not so? And if so, had Mr. Smith or any other person authority to expend it in the way stated in this letter?

JOHN R.

20 Sept.

THE money has not yet been entrusted to the Superintendent. Letter to Mr. Johnston, to carry out the most urgent works. See 62-4108.

ROAD FROM SCONE TO MOONAN.

5

No. 16.

THOMAS DANGAR, ESQ., M.L.A., to SECRETARY FOR LANDS.

43, *Hunter-street,*
Sydney, 22 September, 1862.

SIR,

I have the honor to enclose from a copy of a letter received from a respectable resident on the Upper Hunter Diggings, complaining of the interference of Messrs. Collett and White, in marking out a new road from Belle Vue to the Upper Hunter Diggings.

May I request your usual and prompt attention to this important matter, so that the grave error may be rectified (if Mr. Rowland's grievance is well founded) before it is too late? and perhaps if you will be pleased to call for a reply from Mr. Neill, it would be of the greatest importance in deciding on this local matter.

I have, &c.,
THOMAS DANGAR.

[Enclosure in No. 16.]

EXTRACT of a Letter received from Mr. T. S. Rancland, dated Moonan, 15 September, 1862.

You will no doubt have seen the flourish of trumpets in the *Singleton Times* about the road Mr. Collett was laying out to miss twelve crossings of the Hunter and eight of Moonan? I think it is advisable that you should be initiated into some of the secrets of how the law works out of doors. You pass laws, and vote sums of money, with the intention of doing good, and, of course, cannot be answerable for the misappropriation of one or the evasion of the other, if you know nothing about it. As far as the road to Moonan is concerned, it will be unexceptionable, though he only misses four crossings; but for the Hunter, I imagine, for good reasons, that Mr. White has a great antipathy to seeing his nine blocks of land disfigured for public road and the convenient thoroughfare and traffic; he, therefore, persuades Mr. Collett, a thing I fancy not hard to do over a good dinner and its concomitants, that he will show him a good road, with the advantage specially put forth that he will miss so many crossings; but I think he kept in the background from the public that this good road makes a detour all round by Student's Brook and round under the base of Woolmas Mountain, having, as I am well informed, three steep gaps and several deep ravines and crossings, requiring, I am told, twelve or thirteen bridges, and increasing the distance between here and Belle Vue some nine or ten miles at least.

This is, of course, nothing to do with Mr. White; if he can but get the road surveyed and proclaimed he can shut the other up, except for himself; and we hear that another surveyor has been directed to lay the road out, Mr. Neale, I understand, being too obstinately impartial, although from his having been employed surveying in this locality for the last three or four years, I should think he was of all men most fit to judge where the best road was.

I understand there have been £400 voted for this road, but my authority is, I think, reliable, who says £4,000 would not make the proposed new road so that a team could bring a full load, and eight bullocks brought fifty cwt. up here last week, unaided by one penny of the money last voted. A petition is now in course of preparation against its adoption, and will soon be forwarded, through Mr. Smith, to the Minister for Lands.

No. 17.

MINUTE OF UNDER SECRETARY FOR LANDS.

REFER for the report of Mr. Road Superintendent Johnston.

M. F.
B.C.—24 September.

No. 18.

SUPERINTENDENT JOHNSTON to UNDER SECRETARY FOR LANDS.

Muswellbrook,
8 October, 1862.

SIR,

I do myself the honor to inform you I have inspected the road from Scone to Moonan, or Upper Hunter Diggings, and beg to state there has been no deviation or new road marked, excepting over Cook's Gap, for which I believe a special sum has been granted.

The sum of £211 has been expended up to the present time, in my opinion very judiciously.

It would be advisable to defer any further expenditure until the road has been surveyed.

I have, &c.,
ALEX. JOHNSTON.

No. 19.

No. 19.

UNDER SECRETARY FOR LANDS to J. HOSKINS, ESQ., M.L.A.

*Department of Lands,
Sydney, 14 October, 1862.*

SIR,

Referring to the Memorial presented by you from certain miners and others, residents on the Upper Hunter Gold Fields, applying for a sum of money to be appropriated for the repair of the road leading from Scone to those fields, I am directed by the Secretary for Lands to inform you that Mr. Road Superintendent Johnston has been instructed to visit the line of road in question, and to report on its necessities, putting in hand, at the same time, the most urgent works.

2. I am at the same time to apprise you, that it has been intimated to the Superintendent that the Government is not disposed to expend a larger sum than £400 on the work.

I have, &c.,
MICHL. FITZPATRICK.

No. 20.

UNDER SECRETARY FOR LANDS to SUPERINTENDENT JOHNSTON.

*Department of Lands,
Sydney, 14 October, 1862.*

SIR,

In forwarding to you the enclosed copy of a Memorial which has been received from certain miners and others, residents on the Gold Fields at the Upper Hunter, having reference to the condition of the road leading from the Great Northern Road to those Gold Fields, I am directed to request that you will have the goodness to visit the line of road in question, and report on its necessities, putting in hand, at the same time, the most urgent works.

2. I am, however, at the same time to intimate to you that the Government is not disposed to expend a greater sum than £400 on the work.

I have, &c.,
MICHL. FITZPATRICK.

No. 21.

POLICE MAGISTRATE, SCONE, to SECRETARY FOR LANDS.

*Police Office, Scone,
19 October, 1862.*

SIR,

I do myself the honor to transmit herewith vouchers for the payment of £239 7s. 8d., being for work done on the public road from Scone to Moonan.

With reference thereto, I beg to state that some misunderstanding appears to have existed with reference to the authority to expend this money. Messrs. White and Collett were under the impression that they were authorized to proceed with the improvements; but when a great portion of the work was completed, it was found that the money was to be expended under the superintendence of Mr. Road Superintendent Johnston. Mr. Johnston and myself have both inspected the work performed, and we find the improvements were necessary, and such as must have been executed in order to render the road passable.

Under these circumstances, as Messrs. White and Collett appear to have acted with *bonâ fides* and for the public benefit, although labouring under a mistake as to their authority, and as the money appears to have been economically and judiciously laid out, I have the honor respectfully to submit that the expense incurred may be defrayed out of the money set apart for the improvement of this road.

I have, &c.,
JAMES SMITH,
Acting Assistant Commissioner,
Upper Hunter Gold Field.

ROAD FROM SCONE TO MOONAN.

7

[Enclosures in No. 21.]

Police Office, Scone,
18 October, 1862.

To certify that we have inspected the work done on the road from Scone to Moonan, as specified in the annexed vouchers; we believe the money to be economically and judiciously expended, and the work done on those parts of the road which must, under any circumstances, have been repaired.

JAMES SMITH, P.M.
ALEXR. JOHNSTON,
Superintendent of Roads.

Road from Moonan to Scone.

THE Department of the Secretary for Lands,
Dr. to Peter Keilly.

| DATE. | | AMOUNT. |
|--------------------|--|-------------------|
| | For the undermentioned Services, performed for the Department, viz. :— | |
| 1862. Sept. 30. | Contract, No. 2. Forming and earth cuttings between Bell Trees and Scone, including contract for cutting down hill | £ s. d. 40 0 0 |

MINUTE OF SECRETARY FOR LANDS.

LET me see the authority under which the £211 alluded to has been expended.

JOHN R.
21 October, 1862.

No. 23.

MINUTE OF CHIEF CLERK.

THERE does not appear to have been any authority for the expenditure of any such sum.
Mr. Superintendent Johnston, however, was instructed on the 14th instant to proceed to inspect the road, and to put in hand the most urgent works.

S. B. W.
21 October, 1862.

No. 24.

SUPERINTENDENT JOHNSTON to UNDER SECRETARY FOR LANDS.

Muswellbrook,
25 October, 1862.

SIR,

In attention to your letter, dated 14th October, 1862, No. 533, with reference to the road leading from the Great North Road to the Upper Hunter Gold Field, I have the honor to report I have visited the line of road in question, and the following are the works most urgently required:—

1. The banks of the Hunter and Page's River require cutting down, and large stones removed from the crossings.
2. Several sidelings between the Gold Fields and Belltrees require cutting down.
3. Drains are required in several places, and second class culverts, to prevent the water from cutting channels across the road.

Mr. Surveyor Debenham has received instructions to survey the line, and I should think it injudicious to expend any money until he had completed the work.

Awaiting further instructions,—

I have, &c.,
ALEX. JOHNSTON,
Superintendent of Roads.

No. 25.

UNDER SECRETARY FOR LANDS to MR. JOHNSTON.

Department of Lands,
Sydney, 26 November, 1862.

SIR,

In acknowledging the receipt of your letter of the 25th ultimo, reporting on the nature of works required for the formation of the road leading from the Great North Road to the Upper Hunter Gold Fields, I am directed by the Secretary for Lands to remind you that your expenditure on the road in question must not exceed the amount authorized, in which is to be included the sums spent by Messrs. Smith, White, and Collett on the line, and certified to by yourself.

I have, &c.,
MICHAEL FITZPATRICK.

No. 26.

MEMORIAL OF THE INHABITANTS OF THE UPPER HUNTER.

WE, the undersigned inhabitants of the Upper Hunter District, having heard with alarm that it is contemplated by some interested parties to alter the course of the road at present in use between the Upper Hunter and the Great Northern Road, causing it to make a wide detour from the original and long used line, and thereby adding several miles to the distance, as well as encountering considerable local difficulties and obstructions, beg respectfully to offer to you our earnest remonstrance against such alteration, feeling confident that the wishes of a community in matters of public importance need but to be made known to you to insure your gracious attention.

781—B

We

We feel grateful for the consideration of the Government in placing the sum of £400 on the Estimates for the improvement of our road, but we feel also assured that it would take a much greater amount to make the proposed new road at all passable; and we much doubt if it could ever be made of service for the purpose of the conveyance of goods and other traffic, except at an expense that the Government would never think of allowing.

We understand that a surveyor has been directed to examine and report upon the roads in question; but we conceive that we should be wanting in duty to ourselves, as well as in respect to you, if we did not take an opportunity of expressing our own wishes on the subject.

We therefore beg leave to say, that from long experience and thorough acquaintance with the country around it, the present line of road, with very little deviation, is the best that can be chosen, and the judicious application of the money granted on the present road would remove the chief of the existing difficulties, and leave it in very efficient condition for the transit of goods, &c.

We have the honor to be, Sir,
Your most obedient Servants,

[Here follow a number of signatures.]

The Honorable John Robertson,
Secretary for Lands.

No. 27.

TELEGRAM FROM ACTING SURVEYOR GENERAL to SURVEYOR DEBENHAM.
13 December, 1862.

To Surveyor Debenham, Maitland.

Have you furnished a report or survey to the office, of a road from Brushy Hill to Moonan, or what road is referred to? Reply by telegram on Monday, and by letter to reach here on Tuesday morning at the latest.

No. 28.

SURVEYOR DEBENHAM to ACTING SURVEYOR GENERAL.
West Maitland,
15 December, 1862.

SIR,

In reply to your telegram of the 13th instant, requesting me to inform you whether I have furnished a report or survey of the road from Bushy Hill to Moonan, I have the honor to state that I hold instructions to survey a road from Scone to the Denison Gold Fields, of which the road referred to in your telegram forms a portion. I am not instructed to furnish any special report.

The duty of this survey was entrusted to me at the instance of a letter from Mr. Smith, Police Magistrate, Scone, to the Secretary for Lands, I being at the time in that neighbourhood. The survey of Maitland for alignment purposes being a more urgent matter, and finding a scarcity of feed, and a difficulty in obtaining forage for my horses about Scone, in consequence of this dry season, I obtained permission to carry out the survey of Maitland prior to the survey of the road above mentioned.

I have, &c.,

JNO. DEBENHAM,

Ld. Surveyor.

No. 29.

TELEGRAM FROM SURVEYOR DEBENHAM to ACTING SURVEYOR GENERAL.

Received the following message from W. Maitland Station, at 12:50 December 15, 1862, from Mr. Surveyor Debenham to Acting Surveyor General, Sydney:—
THE road referred to in your telegram formed a portion of the road from Scone to the Denison Gold Field, which I hold instructions to survey. I have neither furnished a survey nor a report of the road alluded to to the office.

No. 30.

REPORT OF ACTING SURVEYOR GENERAL.

Mr. Debenham, though he has instructions for the survey of the road in question (forming part of road from Scone to the Denison Gold Field), has not yet made any survey thereof, being engaged in the alignment of streets in West Maitland.

Surveyor General's Office,
16 December, 1862.

ROAD FROM MONARO TO THE COAST.

No. 1.

REPORT OF SURVEYOR GENERAL.

* Not necessary
for the purpose
of this return.
† See No. 2.

THIS report of Mr. District Surveyor Gordon's was called for in two enclosed papers, one being an *application from the Trustees of the Eden and Sturt Road for another special allowance of £300 for the road, and the other a †petition representing that the line *viâ* Sturt is the best and the shortest line from Eden to the Monaro table-land.

Mr. Gordon's report (see fourth paragraph) shows pretty conclusively that the line *viâ* Sturt does not possess equal advantages with the present main line; but as Mr. Gordon has still to report on a third line of ascent to the table-land—that by Tantawangola—I have requested him, when he shall have done so, to make a summary of the advantages and disadvantages of the three lines, having in consideration the character of the harbours to which they lead and other general grounds bearing on the question; and on the receipt of this summary, it will be practicable to determine finally which shall be the line of ascent on which the £2,000 specially voted shall be expended.

In reference to the application for £300, I would remark, that as the road is a new road and opens communication between Twofold Bay and (as Mr. Gordon reports) a considerable extent of agricultural land, something beyond the schedule allowance of a fifth class road might be made for it.

It appears, however, that in 1859 a special allowance of £300 was made for this road. It has been classified, and thus received £77 per annum for two years since the application for £300; and, considering the relative claims of other roads, I could not recommend that more than £100 to £150 should be allowed for the road, from the £5,000.

A. G. M.,

7 June, 1861.

[Enclosure in No. 1.]

Camp near Panbula,
20 April, 1861.

Sir,

In attention to your letter 60/1041 of 6 July last, directing my examination of the road from Eden *viâ* Sturt, and to report to you whether, in my opinion, it possesses such or any advantages over that from Eden *viâ* Panbula, towards Cathcart and Maneroo country, as will warrant its preferential adoption as the main leading thoroughfare thereto,—

I have the honor to report, that having duly visited and inspected the route in question,—

1st.—The only road at present used from those two points is that currently known or designated as the "Boyd Town Road," considered in length from eighteen to twenty miles *viâ* the west shore of Twofold Bay (now in parts all but impassable in condition, almost in disuse, and otherwise of a particularly hilly, rugged character, and the town traffic along it but very inconsiderable). From Sturt it is continued in a direction north-westward to its junction with that road, now in use as a main track, *viâ* Panbula and Honeysuckle, &c., their intersection occurring at Tuglamah. On the whole, this course is more circuitous and lengthy, and the eastern half much worse and inferior in respect to eligibility compared with the present Panbula route. That portion of the route, however, from Sturt *viâ* Jerusalem to Parricoot, is of a far better character; the ridges, spurs, and creeks present but few obstacles, and those in general unimportant. Any difficulties might be overcome and improved by slight detours and trifling cuttings. The most fatal objection and detriment prohibitory to its adoption is the numerous re-crossings in such latter moiety over the Towamba and tributaries, some being of a bad nature, and the bed of the river washed into holes, &c.

2nd.—The direct route from Eden to Sturt, designated as the "new line," as yet is unfrequented and not passable for traffic purposes, by reason alone of its incomplete, and unformed, and unfinished state. Its distance exceeds eleven miles, and with few and slight exceptions, it passes through and over barren, scrubby land, indifferently watered. As its position and course may be considered desirable to be known, I for that reason deemed it expedient to have effected survey thereof, and of which I now herewith beg to submit usual feature plan, as well a book of reference thereto.

3rd.—Starting centrally from Eden, this line firstly traverses for about some two and one-half miles over generally light sandy surface, but good sound subsoil, and of tolerably level, even, and good character for traffic purposes. Where not sandy, the ground is otherwise sound and firm; the hills and slopes are gradual and of easy incline. Little doing would be required along such distance, to render same very good, beyond corduroying and slabbing some small, narrow, insignificant flats of black soil and moist crossings, and at a trifling outlay. For considerable length onwards the road then follows on saddle-back of ridge, consisting of hard and firm bottom, ever descending a long stiff pinch and drag, and steep sideling, for a distance of some quarter of a mile to the bed of Gaynor's Creek; here a bridge is advisable, and I consider requisite, as it would effectually assist in relieving the existing and severe pinch on both its banks. The crossing over the Salt-water Creek is a good, firm, stony bottom—a bridge there would be unnecessary; hence, for some one and a half mile along sideling, as well as summit of ridge, at places encountering stiff pinches, the road follows and continues over a similar character of sound ground and high, crossing a tributary of Gaynor's Creek, over which a bridge structure is equally desirable and requisite; thence for some one and a half mile no impediments are encountered, the surface being pretty level, and equally firm, hard, and solid, till near the re-crossing of Gaynor's Creek, on each side of which, on approach to which, there is a very severe rigid fall and incline. That steepness occurs for some quarter to half a mile on either side. The creek bed at both the crossings is good firm, stony, and sound; no bridges are requisite, they would be ineffectual and of no avail in relieving the fall either way. The space intervening between the two adjacent crossings is

good

ROAD FROM MONARO TO THE COAST.

3

good and perfectly level. On the west extreme, pursued onwards in course, and before reaching the top of that main branch of spur ridge of southern lay or course, another very steepish elevated sideling and incline has to be surmounted; its surface, however, is of equally hard and firm a nature, and its subsoil good. The cutting hereabouts has been already executed.

On the line having reached this summit, the line at such spot ceases to have been cleared or formed, such point being a distance of some nine miles from Eden. The suspension of continuance of further work thereon, and for opening remaining portion onwards, having originated, I am informed, from the absence of sufficient funds and expenditure of former appropriation. For a considerable distance onwards (some half a mile) a very favourable saddle-back and sideling can be followed and passed, and on it no serious impediments are encountered, and from which a good available sideling descent and road, partially through dense scrub and bush, can, I consider, be obtained and formed. Its probable course and position is indicated on my plan, and proposed to connect with the old and existing "Boyd Town route," or thoroughfare; from its intersection therewith it traverses that line over uneven surfaces and hilly (some flat places and intervening spots requiring slabbing, bridging, &c.), until reaching Haigh's farm, opposite to the Sturt Village blocks.

4th.—On the whole, although the entire length of this route from Eden (*via* Sturt to Tuglanah) may be somewhat shorter, and a slight or inconsiderable saving of distance may be apparently gained by such adoption, as a line I do not consider it so desirably adapted for a main trunk thoroughfare as the already existing and established one (*via* Panbula), and less advantageous, as, I consider, likely to involve greater expenditure, the hilly surface and nature of the country, for some one and a half mile and more eastward from Sturt, presenting moreover further objections. The paucity of good available land, and greater scarcity of water, also tend to render it less desirable. Moreover, on assumption of substitution of such route as the main trunk, the detour for traffic from Panbula, Greig's Flat, &c., &c., would be so great, and generally considered so objectionable, that, without corresponding benefits otherwise to arise to existing interests, I fear the present established and frequented line would, in addition, still however eventually to be fully maintained, as well preferred.

5th.—The desirability to open and complete this new line, I, notwithstanding, consider important and beneficial—in fact, necessary in furtherance of and to public interests—it being the sole and readiest available approach from the coast to a capacious area of country, affording a large field of good tillage, and productive, as well grazing, soil well adapted and capable by nature for formation of farm settlement and numerous homesteads, the inhabitants of which, and future settlers, will, for years hence, possibly have to depend upon Eden and vicinity and port as market. Moreover, in support of its importance, it is the only direction whence approach *via* Bondi or Wog Wog and south-westerly onwards can eventually be beneficially carried; the interest of which part of Manero will, at future day, perhaps require extension of road connection, &c.

6th.—I may add that, along the Sturt line the incline and elevation of the hills, in some three or four places, are equal in sharpness, but no more than that in daily use of the "Box Range base," and its ascent from the Six Mile Creek, on the Panbula route; in this the greatest difficulty is encountered.

On the other hand, it possesses the advantage of, for and along several intervals of length of an occasional mile and more, excellent and particularly firm and sound even ground, not liable to bog or otherwise traffic to be impeded or affected much through wet, a desiderate much to be appreciated by teamsters and in the course of traffic. Its surface I am opinion can, with small expenditure, be maintained in efficient repair; for present requirements, cutting and reducing at occasional spots, the cutting of water-tables and placing breakwaters are needful and advisable. Abundance of suitable timber and stone is procurable in near proximity throughout.

I have, &c.,

LEWIS GORDON,

District Surveyor.

The Surveyor General,
&c., &c., &c.

[Sub-Enclosure in No. 1.]

BOOK OF REFERENCE of a Road from Eden towards Sturt, to be proclaimed as a Parish Road, under Act of Council, 4 Will. IV, No. 11.

| No. | Portion of Road. | Reputed owner. | Occupier. | Character of Land. | Bearing. | Length in Chains. | Enclosure. | Cultivation. | Breadth of Road in links. | Area. | Remarks. |
|-----|---|----------------|-----------|---|--|-------------------|------------|--------------|---------------------------|-------|---|
| 1 | From the south-east boundary of Falkner's 80 acres, near the Village of Sturt, thence along the old Boyd Town Road. | Crown land. | | Fair soil, thickly timbered, much underwood and brush. | East south-east | about 50'00 | Nil. | Nil. | 100 | | The position of the continuation of this road on westward, and in near proximity to Sturt Village, passes from No. 10 through alienated lands; in such farms, reservation of this road, I am informed, has been made in the deeds of grant, and it is already under dedication to public use as a thoroughfare. |
| 2 | Leaving old Boyd Town Road to intersection with a crossing over Salt-water Creek (near quarantine ground) adjacent to west shore of Twofold Bay. | Do. | | Well timbered; barren and sterile along ridges and spurs, and undulation good hard surface. | Easterly, northerly, and north-easterly. | 420'00 | Nil. | Nil. | 100 | | |
| 3 | From Salt-water Creek aforesaid, to the north-west corner of section 30 in the Town of Eden, being the intersection of Beach-street with Curalo-street. | Do. | | Well timbered; barren and sterile sandy surface; hard subsoil. | Easterly, northerly, and north-easterly. | 140'00 | Nil. | Nil. | 100 | | |

ROAD FROM MONARO TO THE COAST.

No. 2.

PETITION.

To the Honorable the Minister for Lands, &c., &c.

The humble Petition of the Inhabitants of the Town and District of Eden,—
HUMBLY SHEWETH:—

That your Petitioners are Merchants, Landowners, Householders, Traders, and others who are directly interested in the general prosperity of the district.

That your Petitioners are desirous of calling your attention to the incalculable benefits that would accrue to the community and the State, by immediately bringing into use the much neglected road proceeding from this township to the township of Sturt, from thence to Maneroo, and known as the Bondi Road.

That the distance would be considerably shortened between this town and Kiandra by adopting this road, and that any outlay that might be caused in placing the above road in thorough repair would be returned to the public exchequer many fold by the sale of an immense quantity of the finest agriculture land which would be thus rendered available for settlement.

And your Petitioners sincerely trust you will direct your attention immediately toward this important subject; for, independent of the national advantage which this route possesses over all others, a new field would be opened for the embarkation of that industry and capital within our Colony to which we are so justly entitled.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 62 Signatures.]

No. 3.

SURVEYOR GENERAL to DISTRICT SURVEYOR GORDON.

*Surveyor General's Office,
Sydney, 14 June, 1861.*

SIR,

I have to thank you for the very comprehensive report and survey in relation to the various ascents to Cathcart, furnished in your letter of the 20th of April.

2. £2,000 have been voted for the construction of the road from the table-land of Monaro to the coast, and as this will be in addition to the schedule allowance, it will probably be all expended on the mountain ascent.

3. The expenditure of this money will, however, be made on the line which may, on the receipt of your further expected reports, be adopted as the main line from the table-land to the coast.

I have, &c.,
A. G. McLEAN.

No. 4.

SURVEYOR GENERAL to UNDER SECRETARY FOR LANDS.

*Surveyor General's Office,
Sydney, 9 August, 1861.*

SIR,

In transmitting the enclosed report, with plan and sections, by Mr. District Surveyor Gordon, of the roads ascending to the Monaro table-land by the Eden and Cathcart line, I have the honor to explain, for the information of the Secretary for Lands, that a controversy has existed for years past as to the best line of road from the table-land to the coast, some persons supporting the line herein particularly referred to, which is that hitherto generally considered the main line; some supporting the line by Tantawangla mountain, which leads from the harbour of Merimbula; and others supporting the line *via* Sturt, on the Towamba River.

It was intended that Mr. Gordon, after completing this report, should examine the other two lines referred to—one of which he has already partially examined, and on the other of which he is now engaged—and should then furnish a comprehensive report on the merits of all the lines, from which it could be determined which should be adopted as the main line, and on which the £2,000 recently voted should be expended.

3. It has, however, been personally represented that the choice really lies between the two routes leading respectively from Merimbula and Eden to Cathcart; that the unquestioned superiority of the harbour of Eden ought to determine the Government on adopting the latter line, and that by the recent large expenditure on the wharf there, not only is the harbour made more available, but the Government is virtually pledged to make the road which leads to the harbour where so much has been expended.

ROAD FROM MONARO TO THE COAST.

5

4. There is considerable force in these arguments, particularly that relating to the erection of the wharf; and I feel almost disposed to recommend the adoption of the Eden line, without delaying further for Mr. Gordon's report.

5. As, however, Mr. Weber will, I understand, have charge of the expenditure, I would advise that he should be authorized to provide a reliable superintendent whom he can leave in charge of the work, and should, with the superintendent, proceed as early as convenient to Eden, to which place will be transmitted the instructions in reference to the work to be performed, which he may now be told is on the ascent to the Monaro table-land, about forty miles from Eden.

6. Time will thus be saved; and should Mr. Gordon not have, by the time Mr. Weber reaches Eden, shown any reason to the contrary, the Eden and Cathcart road may be finally adopted.

7. On this being done, I would advise that the line be classified higher than at present, and that the Merimbula and Cathcart Road be omitted from the road schedule, that all expenditure may be concentrated on the Eden line.

I have, &c.,
A. G. McLEAN.

[Enclosure in No. 4.]

Camp near Pambula,
20 April, 1861.

Sir,

Referring to your letter 60-794, of 26th May last, in which you desire my inspection of the country on the mountain line of ascent from Eden, Pambula, &c., to Monaro, towards and by way of Cathcart, Bombala, &c., with the object of ascertaining whether any material improvement in the position of the road there can be adopted, and otherwise to perform such survey as will requisitely enable me to report thereon, you further inclose copy of Mr. Surveyor Bransby's report, and refer my especial attention to his remarks applicable to the locality in question.

I have now the honor to report, for your information, that—

1. Having devoted attention to a minute inspection of the surrounding country for a considerable distance around, I have not succeeded in the discovery of any position thereabouts promising or affording greater facilities for approach or ascent, or more desirable in direction of course than in those of existing thoroughfares, while great and formidable obstacles of even more rugged and steep ridges, and sharp and short spurs, intercepted by deep precipitous gullies and ravines, present themselves in deviations on either side.

2. The routes already formed, either in present actual use or traffic, or otherwise which have been abandoned, consist of four in number. In explanation of the position, &c., of each, I herewith beg to submit a local or feature* plan, from survey, on which I delineate the same.

No. 1, defined as the "Purgatory Line," being the first or old original one, of the oldest formation, generally following the saddle-back of one continuous ridge ascent of steep inclines. In several spots in its present position it is wholly impassable, there being some three pinches on it of particularly stiff severity and sharpness (and unless by very circuitous detours, almost incapable of being surmounted by horse power draught); difficulties are encountered almost impossible to avert or overcome. The Purgatory Pinch is washed into deep chasms and ruts, forbidding all possible access over it for drays.

No. 2 is defined as the "Cow Bail Line," likewise in disuse, and utterly impassable for loaded vehicles. Its present condition is most dilapidated and damaged, its surface in many places being worn into deep gutters and chasms and water-ruts; as a whole it is similar in features to No. 1, but generally less severe in steepness of inclines. Its direction is somewhat circuitous, having been originally intended as a direct course to Bombala rather than one towards more central parts of Monaro, *via* Cooma, &c., &c., and Kiandra. A large expenditure of some £1,200 has been injudiciously expended to little purpose on this line, and it is generally considered that from the impediments of its rugged character in many spots, liability to frequent damage from wet weather on its cuttings and sidelings, of embankments in several places artificially made or built up; otherwise, from its long succession of heavy steep drags, it is not considered favourably adapted to be permanently maintained as one of superior eligibility—an opinion in which I concur—without much expenditure and outlay on it, and expensive deviations from present route, which are now practicable. Absence of water, moreover, renders the route more undesirable to the choice of teamsters.

No. 3, designated the "Coal Hole Line." This section of country commences its rise at some two and a-half miles distant, and below the gap situated on or at the summit top of the Monaro table-land, and although somewhat tortuous in course, and the most lengthy, presents in point of incline, on the whole, the easiest approach known. Owing to its intersection by numerous dry surface watercourses or streams, and heads of gullies and feeders, it is of a most uneven surface nature, and at frequent spots traverses black adhesive soil, liable to soften and bog in wet, and in a great degree retentive to moisture. Several of these low, objectionable spots are logged, bridged, or corduroyed—all, however, now in indifferent state of repair. In other places low spurs and the saddle-back of little branch ridges of fair, firm bottom in some places have to be surmounted; the impediments encountered being mainly the sharp and stiff and frequent short pinches and inclines. For frequent and considerable lengths comparative evenness and flatness of surface is afforded, desirable as convenient resting places for teams and cattle. Some of these spur branches, by slight deviations, I deem readily capable of improvement by cutting of sidelings, the erection and construction of embankments, and the reduction of the crown of some of the heights, provided immediate replacement of good road, stone or metal, be made thereon. There are, notwithstanding, two or three particularly severe and rigid, although but short inclines, which I fear must be faced as unavoidable under any circumstances. The pinch at its base, firstly encountered and crossed, can be much relieved by an elevated bridge structure over such branch of the Kioh River sources.

One advantage appertaining to this route will be the copious supply thereon and easy acquisition of both water and grass. While its main disadvantage appears to consist in its low position and south-western or southern aspect, partaking but little benefit from the effect of the sun's warmth until near after meridian turn; thereby may be attributed, in a great measure, the cause of its retention, in great measure, of wet and moisture. I consider this objection and disadvantage can be considerably set aside and removed by barking of and eradication of the large forest trees now overshadowing the road so plentifully. This step would be the means of admitting fuller effect of the sun's rays, and more free current of air and wind; and further, still more effectually cured by cutting numerous water-tables, placing breakwaters, and digging deepish channels for due discharge of stagnant or surface surplus water during rain and storms, &c.

In dry weather this route, I think, is taken in preference by teamsters when heavily laden. At intervals the slabbing and wood work are in disrepair, and in places unsound. Past outlay on this line seems to have been considerable.

No. 4,

*Not furnished.

No. 4, designated the "Mountain Hut" or "Bridle Track," lies south-west and south of No. 3. This route proves the shortest (one and a half mile) and, of consequence, most direct. The obstacles, however, presented and encountered along its course are formidable. Its elevation or incline, from its junction, at the base, with that of No. 3, to its summit, is one of almost one continued pinch and great steepness, with additionally severe and rigid ones rising therefrom, at sudden and several intervals, and although in length a mile less, its elevation on main summit equals that of No. 3. It affords, consequently, but few desirable restings for cattle teams. It has, however, the advantage of generally possessing a sound, firm, and hard bottom and subsoil; and from following generally the ridge summits it proves less liable to injurious tendency from effects of wet and weather than No. 3, still less owing to the absence along its course of streams or dry watercourses. These occur only at two spots, and which present but little difficulty to render them in effectual and passable state. If, however, the southernmost branch of this line (that branching to the inn) be hereafter selected as preferential of these two, the crossing over the same flat would involve absolute necessity of a highly constructed bridge, as well as slabbing; but the ascent thence would be less than the northern branch. Preference is given to this route by horsemen, owing to shortness of distance; as well, for same reason, by many teamsters. During wet it is, equally with No. 3, impassable for many successive days. Owing to its more favourable and genial aspect, compared with No. 3, greater incline, and harder surface, it sooner becomes dry and passable. There are but few spots on its course susceptible, by deviation or detour, of much improvement, nor am I aware that anything can be devised for it, or effected on it, to do so, or relieve the great pinches, as the ground will not admit of top cutting or lowering. The cutting of water-tables at suitable intervals, fixing breakwaters at others, would certainly contribute to preserve its surface in some degree, and save, perhaps, the formation of ruts thereon, through the means of more rapid discharge and expulsion of water during storms. Little expenditure has been outlayed on this line.

No. 3. In illustration of the respective elevations or inclines of the two latter lines, I herewith submit a longitudinal section of the surface undulations respectively of each, as well as the approximate heights along each distance, by which it is exemplified that the "Mountain Hut" line, although partaking of equal heights to summit, in a space somewhat more than one mile less in comparison with that of the "Coal Hole," exhibits far steeper and more confirmed elevation in such whole distance, namely, one foot rise in some five and a quarter feet, its surface capable of little or no improvement; while that of the "Coal Hole" exhibits one foot gradient to some every eight and a half feet length, and contrariwise is capable of undergoing improvement.

No. 4. Although more lengthy in distance, I am of opinion that by once placing the "Coal Hole" route in a sound, effective, and solid passable state, by necessary performance of adequate cuttings, erection of requisite embankments and sideling works, logging, bridging, corduroying, &c., &c., and thenceforward by judicious attention to, and regard for, its future maintenance in good condition and permanent repair, such route would prove the most beneficial, advantageous, and eligibly serviceable for public interests. I may add, that in the surrounding proximity good stone and timber is readily attainable.

5. In regard to connecting roads, I consider that at "Rixon's Pinch" a deviation of present thoroughfare may advantageously be substituted in the adoption of a course to cross the Purgatory Pinch, and thence direct to the junction of Nos. 3 and 4 roads, provided a solid and high structure of viaduct or bridge be carried over that now serious impediment—thus escaping "Rixon's Pinch," now in most inefficient condition and great disrepair, and ere long must prove impassable unless repaired. From the main summit westward, at top of Coal Hole, the road thence to Cathcart and beyond presents few and unimportant obstacles, an even character; logging and slabbing alone is requisite at intervals, and causeways desirable to be made over two crossings, viz., at the Yellow Water-hole and at the Dragon.

6. The road westward from the "Mountain Hut" would require to undergo similar process of work in places, and one causeway at the "Junction." One advantageous deviation in this route, for a short distance, might be effected in its formation, by skirting the ridge more closely adjacent and south of present line, and thus avoid much boggy, soft ground.

The Surveyor General,
&c., &c., &c.

I have, &c.,
LEWIS GORDON,
District Surveyor.

No. 5.

UNDER SECRETARY FOR LANDS to ROAD SUPERINTENDENT WEBER.

*Department of Lands,
Sydney, 20 August, 1861.*

SIR,

I am directed to inform you that Mr. Secretary Robertson has authorized you to take charge of the expenditure of the money (two thousand pounds) voted for special works on the road from Monaro table-land to the coast, and to request that you will have the goodness to proceed as early as convenient to Eden, where a suitable person for leaving in charge of the proposed works will be sent to meet you, to which place will be transmitted the instructions in reference to the work to be performed, which is the ascent to the Monaro table-land, about forty miles from Eden.

I have, &c.,
MICHL. FITZPATRICK.

No. 6.

SURVEYOR GENERAL to DISTRICT SURVEYOR GORDON.

*Surveyor General's Office,
Sydney, 6 September, 1861.*

SIR,

I have the honor to inform you that the Secretary for Lands has decided on expending the £2,000 on the line of road from Eden to Cathcart, and that Mr. Weber is to be sent down to supervise the expenditure.

2. It will, therefore, not be necessary that you should make any survey of the Tantawangla line, although it is desirable that you should report officially the result of your examination, as stated verbally.

I have, &c.,
A. G. McLEAN,
A. S. G.

No. 7.

ROAD FROM MONARO TO THE COAST.

7

No. 7.

SURVEYOR GENERAL to DISTRICT SURVEYOR GORDON.

*Surveyor General's Office,
Sydney, 9 September, 1861.*

SIR,

Referring to my letter of the 6th instant, informing you that it was the intention to adopt the road from Eden to Cathcart as the main line to the table-land, I have now the honor to request that you will survey for proclamation the line through the village of Pambula, which, in your letter* of the 3rd April, you recommend should be opened to the road above referred to.

I have, &c.,

A. G. M'LEAN,
A. S. G.

No. 8.

DISTRICT SURVEYOR GORDON to SURVEYOR GENERAL.

*Eden Road, Pambula,
4 January, 1862.*

SIR,

In attention to the instructions contained in your letter of 9th September last, 61/1259, I have now the honor to transmit a plan showing the position of the road therein referred to, connecting in the best and nearest direction from the Monaro and Eden line towards Pambula and Merimbula, &c., as well also* books of reference of road.

In reference, I take leave to remark, that in its proposed course for adoption, consistent with suitability of ground, &c., I have exercised all endeavour to have avoided as much injury as possible to private property. The general lay of the road traverses over even and favourable ground, meeting with impediments of scarcely any importance, side drains alone, and elevating the crown of the road, being desirable work to be performed at a few alluvial or flat surfaces, to render the entire length thoroughly passable. The crossing place over the Pambula River is sandy, and the approaches on either side is considered good. A partial clearing of timber, which is but thinly interspersed, and in many parts already bared, as well as double fencing in the tilled paddocks, will prove an expenditure of requisite necessity. One serious obstacle to the formation and opening of this route will be the alleged injury or detriment to the interests of the three small freeholders or occupants who in some spots have cleared and put parts of their land under partial tillage.

* See Enclosure
to No. 9.

I have, &c.,

LEWIS GORDON,
District Surveyor.

No. 9.

SURVEYOR GENERAL to UNDER SECRETARY FOR LANDS.

*Surveyor General's Office,
18 March, 1862.*

SIR,

Plan and book of reference of road from Pambula to Lochiel, on the Monaro and Eden Road, are forwarded herewith, for approval of the Governor-in-Chief and the Honorable the Executive Council.

A. G. M.

Plan not furnished for Parliament.
Book of reference herewith.

[Enclosure

[Enclosure in No. 9.]

BOOK OF REFERENCE of Road from Town of Panbula to Lochiel, on the Monaro and Eden Road, to be opened as a Parish Road under the Act of Council, 4 William IV, No. 11.

| Portion of Road. | Reputed Owner. | Occupier. | Character of Land. | Bearings. | Length in Chains. | Enclosures | Cultivation. | Breadth of Road. | Area. | Remarks. |
|---|-------------------------------------|------------------------------|---|----------------|-------------------|-----------------|--------------|------------------|--------------------|--|
| 1. From the boundary between the Town of Panbula and the Twofold Bay Pastoral Association 160 acres, at the west extremity of Yowaka-street in that town, to the east boundary line of L. Bolden's 155 acres. | Twofold Bay Pastoral Association. | Cusack, Wells, and Lockhart. | Arable, cleared, &c. | South-westerly | 23-50 | 4 | All .. | 1 chain | a. r. p. 2 1 16 | The general position of this road traverses the direction of that formerly known as the only one, and long in use and traffic, from Panbula towards Monaro, now adopted within a few years past, and which now commands all present traffic; also traversing the freeholds of the same proprietors and contiguous ones. In the subdivision of Bolden's (now C. Robertson), a road has been projected from its west to its east boundary, but its course and position have not been designed advantageously to suit the object now sought,—of a direct and short road to Panbula. |
| 2. From the last-mentioned boundary to the west boundary of that land. | Chs. Robertson.. | Clancy, Dunn, and Wells. | Arable, partly cleared. | Do. .. | 20-00 | 4 | In part | Do. | 2 0 32 | |
| 3. From the last-mentioned boundary to the east corner of a measured portion of 177 acres at the left bank of the Panbula River, and crossing that river to the north extremity of a reserved road forming the boundary between B. Carragher's 162 acres and Js. Furner's 117 acres 1 rood 2 perches, thence along that reserved road, southerly, to a point situate on the east boundary of Js. Furner's 117 acres 1 rood 2 perches, bearing south and distant 450 links from the Panbula River. | The Crown and partly reserved road. | | Scrub, indifferent and grassy. | Southerly .. | 12-50 | | | Do. | 1 1 0 | |
| 4. From the last-mentioned point through Js. Furner's 117 acres 1 rood 2 perches to the boundary between that land and B. Carragher's 96 acres 3 roods 20 perches. | Jas. Furner .. | J. Furner .. | Arable and all cleared. | South-westerly | 28-50 | 3 | In part | Do. | 2 3 16 | |
| 5. From the last-mentioned boundary passing through B. Carragher's (3 portions), viz.: 96 acres 3 roods 20 perches, 74 acres 2 roods 24 perches, and 53 acres 3 roods 17 perches, to the east boundary of Saml. Thompson's 34 acres 3 roods 20 perches. | B. Carragher .. | B. Carragher .. | Arable, but un-cleared; timbered and scrubby. | Do. .. | 66-00 | 1 in part only. | Nil .. | Do. | 6 2 16 | |
| 6. From the last-mentioned boundary to the Monaro and Eden Road in present use, at a point bearing south 62 degrees 10 minutes east from that road crossing over the Panbula River. | Saml. Thompson | S. Thompson and John Shipway | Sterile, barren, and heavily timbered. | Do. .. | 19-00 | Nil .. | Nil .. | Do. | 1 3 24 | |

ROAD FROM MONARO TO THE COAST.

NOTE 1.—Each number will represent one block of property through which the road may pass, whether of the Crown, of an individual, or devoted to the public as a reserve or road.
 2.—Each portion of road will be within the property to which the No. applies, and should be described as "from the south boundary of John Smith's 600 acres, to the boundary line between that land and Thomas Jones' 50 acres."
 "From the last-mentioned boundary to, &c., &c."
 3.—The name of the reputed owner may be filled in from information obtained on the spot, or falling such information, with the name of the grantee from the Crown.

NOTE 4.—The name of the occupier, should there be one, can of course be ascertained on the spot.
 5.—The bearings should be stated from the nearest cardinal point, as "E. 10° N.," but where they are numerous, and shown in a table on the plan, the general bearing need only be stated as "north-easterly."
 6.—In the column of remarks may be introduced any information which cannot conveniently be inserted in any of the other columns: such as the dedication of the portion of the road to the public, in the subdivision of surrounding land. The reputed free use of road by the public for any specified period, &c.

No. 10.

MINUTE OF EXECUTIVE COUNCIL.

Minute 62/12, 16 April, 1862. Confirmed, 25 April, 1862.

THE Executive Council advise that the intended formation of the line of road herein referred to as a parish road, be notified in the manner prescribed by the Act, 4 Wm. IV., No. 11. See enclosure to foregoing.

CHAS. COWPER, JUNR.,
Clerk of the Council.

30 April, 1862. Approved—J. Y.

No. 11.

PETITION OF MR. B. CARRAGHER to SECRETARY FOR LANDS.

The respectful Memorial of Bartholomew Carragher, of Yowaka, parish of Yowaka, County of Auckland, in reference to a proposed line of road, measured by Lewis Gordon, Esq., District Surveyor, through the said Bartholomew Carragher's property.

SIR,

Your memorialist begs most respectfully to state, being the owner of three farms at Yowaka, of respectively 53a. 3r. 17p., 74a. 2r. 24p., and 96a. 3r. 20p., through all of which the proposed line of road will come, to great injury of your memorialist, without any benefit to the public; the wants of the public could be met, without injury to private property, by opening the road laid out by the Government Surveyor between your memorialist's farm and the property of Mr. James Furner, which would answer the purpose better than the proposed line of road, the upper road being sounder; the road laid out by Lewis Gordon, Esq., along the river bank, being boggy and unfit for travelling.

Your memorialist hopes it is not the intention of the Government to injure private property, when the wants of the public can be satisfied without it; and begs that this matter, therefore, may be reconsidered, when it will be found that the line your memorialist mentions as already existing will be found to answer equally well.

BARTHOLOMEW CARRAGHER.

Panbula, 29th May, 1862.

No. 12.

PETITION OF MR. S. THOMSON to SECRETARY FOR LANDS.

The respectful Memorial of Samuel Thomson, of Yowaka, Landowner, in reference to a proposed line of road from Lochiel to Panbula, surveyed by Lewis Gordon, Esq., District Surveyor.

SIR,

Your memorialist begs most respectfully to state, that being owner of land at Yowaka, County of Auckland, situate as per sketch,* that the proposed line of road would be of no benefit to the public, but would be a serious hardship in his individual case. * Appendix A.

There was formerly a road through said land, as marked in annexed sketch, but said road was closed on the suggestion to the Government of S. L. Bransby, Esq., Licensed Surveyor, and instead the upper road (the one in present use) opened, as being approved of by C. E. Thomas, Esq., Government Superintendent, and the Trustees for repairing the road from Monaro to Panbula.

Since then your memorialist has improved the land, on the faith of the question of roads having been settled by the Government; but now, according to Lewis Gordon, Esq.'s survey, there will be three roads through your memorialist's land, and of which, so far as the public are concerned, only one will be fit for use, viz., the one at present travelled. The traffic on the road at present in use is very small. The cost of opening the proposed line of road would be very large, and is not required by the majority of the public; and if a fresh road was required, it would be better, for the benefit of the public, to open the road proposed by S. L. Bransby, Esq., Licensed Surveyor, on the opposite side of the river, and which would not interfere with any private property.

Hoping, sir, that the matter will be properly considered by the Executive, when it will be found that the statements of your memorialist are correct,—

I am, &c.,

SAMUEL THOMSON.

Panbula, 1st June, 1862.

No. 13.

PETITION OF MR. JAMES FURNER to SECRETARY FOR LANDS.

The respectful Memorial of James Furner, of Yowaka, parish of Yowaka, County of Auckland, Farmer and Landholder, in reference to a proposed line of road from Lochiel to Panbula, reported on to the Government by L. S. Gordon, Esq., District Surveyor, said road passing through your memorialist's purchased land,—

SIR,

Your memorialist would most respectfully state that, being owner, by grant of purchase, of a farm of 11a. 1r. 3p. at Yowaka, as shown in the accompanying sketch,* through which farm the proposed new line of road will come, such road, if carried into effect, would entirely destroy your memorialist's farm, as it passes through the only part of said land available for cultivation purposes; and your memorialist wishes to draw your attention to the fact of there being one road already provided by the Government, as per sketch, between the property of your memorialist and the land of Mr. Bartholomew Carragher, the difference in distance being only about twelve chains, and the upper road being the best for travelling in all seasons of the year; whereas the proposed line would, during the six months of the year, be boggy, and in consequence impassable.

Your memorialist, therefore, hopes that the matter in regard to the proposed line of road may be reconsidered, and that the road, as at present proposed, will not be carried into effect.

JAMES FURNER.

Panbula, 2nd June, 1862.

* Appendix B.

No. 14.

REPORT OF SURVEYOR GENERAL.

*Surveyor General's Office,
Sydney, 23 July, 1862.*

In the face of these objections I do not consider that the Government should open the road proposed, as the injury to individuals would, in my opinion, more than counterbalance the public advantage which would result.

A. G. M.

No. 15.

PETITION FROM INHABITANTS OF EDEN.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Landholders and Residents of the Police District of Eden, County of Auckland, in the Colony of New South Wales,—

HUMBLY SHEWETH:—

That whereas a new line of road has been surveyed by Lewis Gordon, Esq., District Surveyor, from Panbula to Lochiel, and such road is not required by the public, but would prove a serious hardship to parties through whose property the said road has been surveyed.

That the traffic on the road at present in use is very small; there is, therefore, not the slightest want of any additional road.

That the distance saved by the proposed road would not amount to twenty chains.

Your petitioners, therefore, humbly pray that your Honorable House will take cognizance of these facts, and that the said road may not be proclaimed.

And your petitioners, as in duty bound, will ever pray.

[Here follow 44 Signatures.]

No. 16.

PETITION.

To the Governor of New South Wales, and the Executive Council.

We, your humble Petitioners, beg to petition your Excellency and the Executive Council against the movement which is now taking place in this district, namely, to form a road from the present Twofold Bay and Panbula Road, a distance of two miles from the township, which new road will make it no shorter—the present road being a good one; the reason for proposing this new line of road is mainly for the purpose of benefiting private property, and thereby injuring the public welfare of the district. The new road will cost the Government a large sum of money, and will want constant repairs after every rising of the rivers, without benefiting this district in the least, and the old road requires no expense to keep it in order, as it is sound and level.

We humbly pray your Excellency and the Executive Council to give this Petition your favourable consideration.

[Here follow 42 Signatures.]

ROAD FROM MUDGEE TO WELLINGTON *viâ* THE DIGGINGS.

No. 1.

MINUTE OF ACTING SURVEYOR GENERAL.

INSTRUCT Mr. Combes to survey the line of road, with any improvements which he may be able to suggest, from Wellington to Mudgee; and in returning, to survey the line from Mudgee by Hargraves and Burrandong to Stony Creek.

These roads may be so marked during the survey that the formal opening may involve no more labour than the notice to remove or removal of fences where necessary. Refer Mr. Combes to the circular for formal opening, as to the character of marks.

A. G. M.
18th March, 1861.

No. 2.

ACTING SURVEYOR GENERAL to LICENSED SURVEYOR COMBES.

Surveyor General's Office,
20 March, 1861.

SIR,

I have to request that you will be good enough to survey the line of road, with any improvements which you may be able to suggest, from Wellington to Mudgee, and that in returning you will survey the line from Mudgee to Hargraves, and Burrandong to Stony Creek, and furnish the customary plans and books of reference, with sections of any places where works of a permanent character, such as bridges, would be necessary.

2. These roads may be so marked during survey that the formal opening may involve no more labour than the notice to remove or removal of fences when necessary.

3. The enclosed printed form will afford you information as to the character of marks.

A. G. M'LEAN.

[Enclosure in No. 2.]

GENERAL DIRECTIONS to be observed by Surveyors engaged in surveying roads proposed to be opened under the Act of Council, 4 William IV., No. 11.

HAVING proceeded to the locality, and having devoted such time to examination of the ground lying between the points to be connected by the road, as may be necessary to give the surveyor a thorough knowledge of it, he will proceed to survey the line which he may consider it expedient to open, and will furnish the Surveyor General with the usual plan and book of reference.

In selecting the line of road, in accordance, of course, with the provisions of section 2 of the Act, the first consideration should be, the convenience of that portion of the public by which the line will probably be used; and the second, the least possible interference with or injury to private property.

In pursuance of the latter consideration, the road should be carried, where practicable, along boundary lines of properties, the area being taken in equal proportions from each; the boundary line, where unfenced, forming the centre of the road, and where substantially fenced, the road being made to cross the boundary, to attain the object in view, without necessitating the removal of the fences.

It will be necessary to ascertain, in the course of survey, the position of boundary lines of portions through which the road may pass, so far as this may be done without much loss of time; and boundaries, the position of which may not have been ascertained, should be shown on the plan in dotted lines only.

The ordinary breadth for parish roads is one chain, but when the lands through which the road may be carried may be of more than ordinary value, the breadth may be reduced to 75, or even to 50 links; explanations being afforded in each case of the reasons for adopting any specific width. It is not essential that a road should be of equal width throughout.

In order that it may be easily followed by persons desiring to examine it, and eventually by any other surveyor who may be engaged in formally opening it, the road should be defined by the marking of trees or fences with the broad arrow, and where it can be done, by the letter R, and by stakes or lockspits, by which persons desiring hereafter to fence the road may be able to place the fences in their proper positions. The marking should be on one side of the road throughout, with occasional marks on the other side to show the breadth.

The letter of transmission should convey a report on the difficulties (if any) of the line of road, with a statement of the breadths and depths of any creeks to be crossed, or other impediments, the means of surmounting such, and the probable cost of any bridges or other works, and of clearing the line and making it available for traffic.

No. 3.

ACTING SURVEYOR GENERAL to LICENSED SURVEYOR PRICE.

Surveyor General's Office,
Sydney, 20 March, 1862.

SIR,

I beg to inform you that Mr. Licensed Surveyor Combes has been instructed to survey the line of road between Wellington and Mudgee, as also the road from Mudgee by Hargraves and Burrandong to Stony Creek.

2. These surveys, though partly within your district, are advisedly entrusted to Mr. Combes, in connection with other road surveys which he has performed.

I am, &c.,

A. G. M'LEAN.

No. 4.

No. 4.

LICENSED SURVEYOR COMBES to ACTING SURVEYOR GENERAL.

Mudgee, 1 June, 1861.

SIR,

The survey of the road from Wellington to Mudgee, *via* Guntawang, having been completed, I have the honor to inform you the portion that follows the Goolygowdra Creek—about seven miles on the Wellington side of the Cudgegong—is of such a character as to prevent any considerable amount of traffic from ever travelling by that route. The road crosses the above-mentioned creek eleven times, and from the abrupt and rocky nature of the country it would require a very large expenditure to carry the road along its banks. This track also crosses the Cudgegong River at three places, viz., at Lahy's, Guntawang, and Eliza's Flat.

There is another track by way of Merindee Creek, which only crosses the Cudgegong once, but at present is quite impassable for any description of wheel carriage. I have been also informed a better road could be formed by again crossing the Cudgegong twice, much nearer to its junction with the Macquarie.

I spent a considerable time in exploring among the hills in the vicinity of the Goolygowdra Creek, but failed in discovering any better line than the one surveyed. I am, however, of opinion that more extended explorations could not fail to discover a better if not a much shorter route. With this exception, the line would make a very fair road.

I therefore beg leave to suggest that further explorations be made by way of the Cudgegong, and also *via* Merindee. The latter is the route taken by the horse mail from Wellington to Mudgee.

If it were desirable, I could complete the Cowra and Lambing Flat Road survey before these explorations were recommenced, and in the meantime obtain all the information possible from stockmen, &c., between Burrandong and Lahy's, on both sides of the Cudgegong.

I have, &c.,
EDWARD COMBES.

No. 5.

S. B. DANIEL, ESQ., M.L.A., to MINISTER FOR LANDS.

Victoria Club,
1 June, 1861.

SIR,

I do myself the honor to bring under your notice, at the request of the inhabitants, farmers, and others, in the district of Wellington, the dangerous and almost impassable state of the road between the towns of Mudgee and Wellington, and further to request you will be pleased to cause the sum of two hundred pounds (£200) to be placed either to the credit of the Bench of Magistrates at Wellington, or the gentlemen named in the margin, who would be willing to superintend the carrying out both the payment of the money and construction of the repairs required.

Mr. D. H. Dunlop, J.P., miller, Wellington; Mr. H. J. Lambert, storekeeper, Wellington; Mr. J. Callaghan, settler, Apsley, Wellington. I beg to recommend the above persons.

S. B. DANIEL.

From my personal knowledge of the necessary requirements, I consider the sum asked for reasonable, particularly as no public money has been spent upon this mail line of road before; and as the large quantity of land of late purchased and under culture, I am informed by the small farmers that they experience great difficulty in getting their produce to the market, and the increased traffic between the above-named towns calls for this small outlay, which I trust you will be pleased favourably to consider.

I have, &c.,
S. B. DANIEL.

No. 6.

MINUTE OF ACTING SURVEYOR GENERAL.

THE road referred to has not been provided for on Schedule, neither has it been surveyed, but as it connects an important town (Mudgee) with another town (Wellington), and with the pastoral districts west of the latter, I have recently taken steps to have it surveyed.

Mr. Combes, who has been employed on the duty, reports that portions of the tracks in use are in very bad repair, and naturally very difficult in character; and he recommends further explorations than he has yet made in search of improved lines on those portions of the road.

Under these circumstances, it would not, it appears to me, be advisable to expend so much money as has been asked for on portions of the road which may be abandoned; but perhaps £100 might be appropriated in the meantime, to render the bad parts passable.

A. G. M.
19 June, 1861.

No. 7.

ACTING SURVEYOR GENERAL to LICENSED SURVEYOR COMBES.

22 June, 1861.

SIR,

I beg to inform you, with reference to your letter of the 1st instant, on the subject of the road from Wellington to Mudgee, that I approve of the further exploration therein suggested, after the completion of the Cowra and Lambing Flat Road survey.

A. G. McLEAN.

No. 8.

UNDER SECRETARY FOR LANDS to S. B. DANIEL, ESQ., M.L.A.

Department of Lands,
Sydney, 12 July, 1861.

SIR,

In reference to your letter of the 1st ultimo, requesting that the sum of £200 may be granted for the repair of the road from Wellington to Mudgee, I am directed by the Secretary for Lands to state that he does not object to the granting of the sum asked for, and would willingly authorize a large allowance for a road of apparently so much importance. As, however, instructions have been issued for having a survey made of the road as speedily as possible, and the line decided upon may possibly supersede the tracks at present in use, Mr. Secretary Robertson would prefer that no expenditure should be made until such survey has been completed.

I have, &c.,

MICHL. FITZPATRICK.

No. 9.

DISTRICT SURVEYOR DAVIDSON to SURVEYOR GENERAL.

Kirkconnell, 18 August, 1861.

SIR,

I have the honor to forward, under separate cover, Mr. Licensed Surveyor Simpson's survey of the deviation proposed by me from Mr. Combes' survey of the line of road from Mudgee to Wellington.

Mr. Simpson reports no difficulties on the line as surveyed by him, and the distance is not much increased.

I forward also his book of reference and his charge for survey. I informed Mr. Simpson I thought he might charge for the day he was out with me inspecting the proposed alteration.

I have, &c.,

W. B. DAVIDSON,
District Surveyor.

[Enclosure in No. 9.]

2 August, 1861.

Sir,

By telegram to Mudgee I received instructions from the Surveyor General to have a survey made of the proposed deviation from Mr. Licensed Surveyor Combes' survey of a line of road from Mudgee to Wellington. I have now to instruct you accordingly. I am of opinion that the survey ought to commence after the road passes through the range near Mitchell's Creek, shown on the tracing transmitted, somewhere about stations forty to forty-four, but in this you will be guided by the formation of the ground which we inspected, and I pointed out to you on the spot, keeping also in view the direction of the line as near as may be to the round hill at the north-west corner of Montefiore's 5121 acres,—the road then taking the direction towards the village of Montefiores by the west boundary of Mr. Aaron's land. I have, however, to point out, when your survey reaches where the Gobolgen and Montefiores properties join, you will be careful not to interfere with the former by taking any portion of the land for the road, as the deviation proposed is to secure Mr. Aaron from great injury to his property from the line passing through the centre of his land, but before being fenced by Mr. Aaron open and used by the public for many years. It is only right that Mr. Aaron should give the necessary area for the road on the west side of his property. It will be in your recollection, that when we inspected the road there was no difficulty in taking the direction in which I have instructed you, the soil being good, if not better than that through Mr. Aaron's property. The questions to be considered are, the increased distance and other inconveniences which arise to the public by the proposed alteration, and the object of the survey is to show this. You will be good enough to plot your plan on the usual scale, and transmit it through me, with a book of reference, for the Surveyor General, as early as possible.

I have, &c.,

W. B. DAVIDSON.

Licensed Surveyor Simpson.

No. 10.

No. 10.

ACTING SURVEYOR GENERAL to LICENSED SURVEYOR COMBES.

Surveyor General's Office,
21 August, 1861.

SIR,

Referring to the instructions addressed to you on the subject of the roads from Mudgee to Wellington, &c., I now forward, for your perusal, a memorial* which has been received from certain of the residents of the town and district of Mudgee, having reference to that portion of road formerly in use from the Wilbertree and Mudgee Road, near the Cudgegong River, about one mile from Mudgee, to the junction of the Mudgee, Windeyer, and Hargraves Road with the Mudgee and Wellington Road, and I request that you will give the matter your consideration, and furnish a report with survey.

A. G. McLEAN.

* See Note on
Schedule—
Petition lost.

No. 11.

ACTING SURVEYOR GENERAL to LICENSED SURVEYOR COMBES.

Surveyor General's Office,
24 August, 1861.

SIR,

I hasten to inform you, with reference to my instructions to you respecting the road from Mudgee to Wellington, that the business is of great urgency, and to request that I may be informed by you when you anticipate its completion.

A. G. McLEAN.

No. 12.

LICENSED SURVEYOR COMBES to ACTING SURVEYOR GENERAL.

Frederick's Valley,
30 August, 1861.

SIR,

With reference to your letter of the 24th instant, No. 61/1185, I have the honor to inform you the survey of the existing track from Wellington to Mudgee has been completed some time since, and at present I am engaged on the plan.

I will carry out the "further explorations," according to your instructions, with all possible dispatch, and, weather permitting, I anticipate completing the whole within a month.

I have, &c.,

EDWARD COMBES.

No. 13.

LICENSED SURVEYOR COMBES to ACTING SURVEYOR GENERAL.

Frederick's Valley,
9 September, 1861.

SIR,

Agreeably to your instructions of the 20th March, No. 61/402, I have surveyed a line of road from Wellington to Mudgee, and have now the honor to submit for your consideration a report thereon, together with the plan* and its accompanying book of reference.

* Not furnished.
Book of reference
cancelled.

The line leaves Wellington by way of Lee-street, crossing the Macquarie River at the site chosen for the punt now about to be constructed; from thence taking an easterly direction it passes through the Nanima Estate, crossing Nanima Creek (No. 1), at which place a thirty-five feet bridge will be required.

On leaving J. B. Montefiores' 1172 acres the line takes a more northerly direction, following the present track, which is moderately good, requiring no extensive works until it arrives at Mitchell's Creek.

A bridge over this creek, above high flood level, could not be constructed for less than £350; I should, therefore, advise that the steep banks should be cut down to the creek bed, forming proper approaches. Very little obstruction will then be caused, the creek being generally almost dry.

The creeks from No. 2 to 11 require culverts, averaging in price from £10 to £15 each; or their respective banks could be cut away, and bottoms floored with logs pinned to sleepers, or pitched with stone. This method would probably be considerably the cheaper.

Leaving

ROAD FROM MUDGEE TO WELLINGTON *via* THE DIGGINGS.

7

Leaving Mitchell's Creek, the line winds through a comparatively good country until it reaches the Goolygowdra or Uamby Creek; here the country becomes exceedingly broken, the road closely following the creek, and crossing it repeatedly, to avoid the abrupt and rugged hills which run into the banks on either side.

The crossings of this creek require expensive bridges, varying from £50 to £130 each, while the country on both sides is so rocky and mountainous as to render a road winding round its banks almost an impracticability.

Further explorations are now in progress, and I anticipate being able to avoid this portion of the road altogether.

The line now leaves this creek and Lahy's farm to the northward, crossing the Cudgegong at a point where a good ford might be easily made. The course of the river is then followed through the V.R. and several small farms, leaving it to the northward at Mr. G. Rouse's sheep station, where the Piambong and Dirt-hole Creeks are crossed. The line then proceeds to Guntawang through a hilly country.

The hills at 92nd and 14th require a little cutting on the ridge, and "forming" some short distance down their sides, the surface having been washed into small gullies. The Piambong Creek requires a twenty-five (25) feet bridge, costing about £45. The smaller creeks, from No. 25 to 29, will require a sum averaging about £6 each expended on them, in pitching and forming approaches.

The Cudgegong River is recrossed at Guntawang. The present ford requires considerable improvement, which could be easily done by carting stone into the bed of the river. A bridge would be a heavy undertaking, the valley of the Cudgegong being subject to high floods.

At Guntawang the road from Dubbo joins this line, which now takes a general southerly direction to Mudgee, and, passing over a long range of hills at a favourable incline, again crosses the Cudgegong at the village reserve.

The flats on both sides of the river at this place are subject to inundation; the river has, however, a sound bottom, with a good ford.

Skirting the river the road reaches the Green Swamp, where it crosses M'Donald's Creek. Here, on the property of Mr. G. Cox, a village has been formed. The road is tolerably good the entire distance from Guntawang to Mudgee.

A divergence from the present track was made from 68° to 74° in order to meet the views of the rural municipality of the Cudgegong, money having been voted by that body to clear the road on the line of this divergence.

The smaller creeks between Guntawang and Mudgee require culverts. These will average in price from £10 to £25 each.

Mudgee is approached by a street, through the property of Mr. G. H. Cox—surveyed and laid out as an extension of the town in that direction—leading into Market-street. My traverse is closed in on the south-west corner of reserve for Court House in Market-street.

The portion of the road from Guntawang will be used in common by the traffic from Dubbo and Wellington.

The country from Wellington to the Goolygowdra Creek is granitic, very badly watered, and only suitable for pastoral purposes. Schists make their appearance on the Goolygowdra, with quartz veins and overlying trap. This portion has evidently an auriferous character. The precipitous nature of the hills renders the land of little value, with the exception of small isolated flats.

Sandstone of very good quality, and adapted for building purposes, crops out at Guntawang and M'Donald's Creek. At the latter place a considerable quantity has been quarried from the road side and carted into Mudgee.

Sections of all creeks have been taken on this line of road, and will be forwarded as soon as the explorations are finished in the vicinity of the Goolygowdra Creek.

I beg leave to state, I should have delayed sending this until the whole of the work was completed, but, from the matter being urgent, I thought it would be as well to forward the portion already finished.

I have, &c.,

EDWARD COMBES.

No. 14.

ACTING SURVEYOR GENERAL to LICENSED SURVEYOR COMBES.

*Surveyor General's Office,
Sydney, 26 September, 1861.*

SIR,

In directing your attention to the petition* forwarded to you by my letter of the 21st ultimo, having reference to that portion of the road formerly in use from the Wilbertree and Mudgee Road near the Cudgegong River, about one mile from Mudgee, to the junction of the Mudgee, Windeyer, and Hargraves Road with the Mudgee and Wellington Road, I have to request that I may be favoured with your early report thereon.

A. G. M'LEAN.

No. 15.

LICENSED SURVEYOR COMBES to ACTING SURVEYOR GENERAL.

Wellington,
7 October, 1861.

SIR,

I have the honor to inform you, that having made a more extended examination of the country on both sides of the Goolygowdra Creek, and being unable to find a less difficult route, I have explored the country further to the northward, and succeeded in finding a much more practicable line, wholly avoiding the creek above mentioned, and joining the surveyed line near the Cudgegong River.

A road can be formed on this line far more economically than by the Goolygowdra.

It has also another advantage, as the Dubbo road will, when surveyed, join it at W. Bushby's, nearly midway between Mudgee and Dubbo.

I enclose a sketch of this proposed line, which I am now engaged in surveying.

Another slight divergence should also be made as the road approaches the town of Mudgee, in order to cut off the angle formed by the fences of a paddock belonging to Mr. G. H. Cox, between stations 80^e and 82^e, taking the road across in a straight line. These fences were erected some two years since, before which period the road traversed the paddock in the manner I now advise.

I have, &c.,
EDWARD COMBES.

No. 16.

LICENSED SURVEYOR COMBES to ACTING SURVEYOR GENERAL.

Wellington,
21 October, 1861.

SIR,

I have the honor to submit for your consideration a report on a portion of the Wellington and Mudgee Road, surveyed in accordance with your instructions of June 22nd, No. 61/831, in order to avoid the broken country on the Goolygowdra or Uamby Creek. I also forward a plan* with book of reference.

*Not furnished.
See enclosure to
No. 23. Book of
reference cau-
culed.

I thoroughly examined the country by way of the Merinda Creek, also between that track and the former surveyed line, but failed to discover any less difficult track to the southward; exploring further to the northward, I succeeded in finding a much better line offering no obstruction whatever to traffic of any character.

This line leaves Wellington at the site of the proposed punt, and passing in a north-easterly direction through the Nanima Estate, crosses Mitchell's creek at Euramingulgal, a sheep station belonging to Mr. Joseph Aaron. Avoiding the rugged country to the northward, the line follows the course of Mitchell's Creek to Geenobly, where it again takes a general north-easterly direction, and skirting the Badangora Mountain above the Wallombubba Creek, crosses the main range by an easy gradient, and running down a valley to the northward, it arrives at the Springs sheep station.

The line now bears more to the eastward, and passing over an undulating country, favourable to the construction of a road, it reaches the Goolma Creek, where it joins the present track to Dubbo.

From this point there is a good track to the Cudgegong River.

The country traversed is well adapted to make a good bush road. The line being infinitely superior to the former surveyed track, I can confidently recommend it to be adopted, as a road could be formed for less than half the cost it would require by way of Lahy's.

The creeks crossed are few in number, and in each case the banks are favourable to form good crossings; their beds are sound, and without any bridge or culvert there is no difficulty calculated to delay traffic on the entire line.

The distance is two miles fifty-four chains and ninety links greater than the route *via* Lahy's. This difference is, however, amply compensated by the superiority of the country, the other track being entirely impracticable for loaded drays.

From Geenobly to the Goolma Creek, there is a quantity of good agricultural land; the soil is of granitic debris, granite crops out in many places; schists appear on the main range beyond the Springs sheep station, and from the frequent occurrence of quartz veins, I should judge the country in the neighbourhood of the Goolma to be highly auriferous.

Water can be obtained at easy stages along the whole line.

I also have the honor to forward a tracing of the divergence through Mr. Cox's paddock, which I recommended to be made near the town of Mudgee.

I am, &c.,
EDWARD COMBES.

No. 17.

ACTING SURVEYOR GENERAL *to* LICENSED SURVEYOR COMBES.

*Surveyor General's Office,
Sydney, 24 October, 1861.*

SIR,

In reference to your further report of the 7th instant, on the subject of the road from Wellington to Mudgee, I have now to request that you will be good enough to supply plans, from which your previous plan and book of reference may be completed.

I am, &c.,
A. G. McLEAN.

No. 18.

LICENSED SURVEYOR COMBES *to* SURVEYOR GENERAL.

MUDGEE AND HARGRAVES ROAD.

*Frederick's Valley,
23 November, 1861.*

SIR,

I have the honor to report that, according to your instructions of March 20, No. 61-402, I have surveyed a line of road from Mudgee to Hargraves, and now beg leave to transmit, for your consideration, the *plan and book of reference.

*Appendix A.

With a few trifling exceptions, the surveyed line follows the present track.

From Mudgee to M'Donald's Creek the road is in tolerable condition, passing through an undulating country of schistose formation. This creek requires a bridge, which would probably cost one hundred and twenty pounds (£120). Stone and timber of this creek best quality exist here in abundance; the quarries in the neighbourhood of this creek supply Mudgee with building stone. From M'Donald's Creek the country is exceedingly unfavourable to road-making—a succession of ranges and ravines are passed over, sufficiently steep to render the road almost impracticable.

A large portion of this district is highly auriferous, more particularly so at Grattai, Avisford, and the spurs and gullies falling from the high table-land on which Hargraves is situate, towards the Meroo Creek. Quartz reefs are numerous, and it is my opinion that at some future time many of these will be worked to great advantage. On examining the country to the eastward I found a better road could be formed from Grattai to Avisford, *via* the Sugar Loaf Hill. This hill would require to be somewhat lowered by a cutting at the top, and forming a road on the sideling. While this would cost several hundred pounds, it would be judiciously expended, were there at any subsequent period sufficient traffic to warrant the outlay. My experience leads me to infer that this is not the case at present. The three crossings of Phillips' Creek require about thirty pounds (£30) expended on their approaches. Bridges at these places, as well as at the Meroo Creek, would require an enormous outlay. The ford of the Meroo at Avisford is in excellent condition. Captain William Browne, the Assistant Gold Commissioner stationed at Louisa Creek, has since my survey informed me, that a far more practicable route has been lately discovered to the westward of the present route, ascending from the Meroo Creek to the level of the Louisa Creek table-land by a much easier gradient. I beg leave to suggest that it would perhaps be expedient to examine this line before any considerable works were commenced on the line now surveyed.

I have, &c.,
EDWARD COMBES.

NOTE 1.—Each number will represent one block of property through which the road may pass, whether of the Crown, of an individual, or devoted to the public as a reserve or road.
 " 2.—Each portion of road will be within the property to which the No. applies, and should be described as "from the south boundary of John Smith's 600 acres, to the boundary line between that land and Thomas Jones' 50 acres."
 " "From the last-mentioned boundary to, &c., &c."
 " 3.—The name of the reputed owner may be filled in from information obtained on the spot, or failing such information, with the name of the grantee from the Crown.

NOTE 4.—The name of the occupier, should there be one, can of course be ascertained on the spot.
 " 5.—The bearings should be stated from the nearest cardinal point, as "E. 10° N.," but where they are numerous and shewn in a table on the plan, the general bearing need only be stated as "north-easterly."
 " 6.—In the column of remarks may be introduced any information which cannot conveniently be inserted in any of the other columns—such as the dedication of the portion of the road to the public, in the subdivision of surrounding land; the reputed free use of road by the public for any specific period, &c.

No. 19.

LICENSED SURVEYOR COMBES to SURVEYOR GENERAL.

*REPORT on Hargraves and Stony Creek Road via Burrandong.**Frederick's Valley,
18 December, 1861.*

SIR,

Having examined and surveyed the road from Hargraves to Stony Creek, *via* Burrandong, agreeably to your instructions of 20th March, 1861, No. 61-402, I have now the honor to submit, for your consideration, the following report:—

Plan—See
Appendix B.

The road on leaving Hargraves crosses the Louisa Creek on a flat; and passing through an undulating auriferous country, with many small creeks in the gullies, it reaches the high range of which the Burrandong Big Hill is the prominent feature. Here the line has many intricate windings, following the course of deep ravines and skirting the sides of precipices, with bad sidelings, and worse gradients—the spur known as “Big Hill” being more than a mile in length, and exceedingly steep. At and about this range I examined the country to a considerable distance on either side of the line, but failed in discovering anything better.

Having descended to the low ground, the line passes up the valley of the Oakey Creek, crossing it at four different places, to avoid the steep spurs of ranges that close in abruptly upon it. On leaving the cattle station of William Suttor, on this creek, the road improves; crossing the Macquarie River by an excellent ford at Burrandong, it bears southerly through the Burrandong township to Stony Creek, with a good road the entire distance. From the Black Willow sheep station to W. Suttor's cattle station the country is very difficult, and with the money usually granted for the improvement and repairs of parish roads may be considered wholly impracticable. Should there be another way of getting through the main range these difficulties may be avoided. This may probably be effected, were extensive explorations instituted. In a dry summer, with the exception of the Macquarie and the Oakey Creek, the road would be without water.

The country through which the line passes is generally unfitted for agriculture, but appears highly metalliferous; schists of various degrees of hardness, intersected with quartz veins, extend throughout the entire distance, and in several places on the Oakey Creek I obtained gold.

I have, &c.,

EDWARD COMBES.

NOTICE IN "GOVERNMENT GAZETTE."

*Department of Lands,
Sydney, 9 April, 1862.*

ROAD.

HIS Excellency the Governor General, with the advice of the Executive Council, having deemed it expedient to open and make a parish road (to be maintained at the expense of the parishes through which it passes) from Mudgee to Wellington, running through the lands supposed to be the property of Messrs. J. Aarons, Wm. Lowe, E. Rouse, G. Rouse, H. Bayley, G. Cox, H. Cox, H. Steel, and others; notice is hereby given, that in conformity with the provisions of the Act of the Governor and Council, 4th William IV., No. 11, a plan and book of reference, shewing the intended line of the road above named, are now deposited at the office of the Surveyor General, in Sydney, and at the Police Office, Mudgee; and all persons interested therein are requested to transmit, in writing, to the Clerk of the Executive Council, within one month from this date, any well-grounded objections which may exist to the formation of the road in question.

By His Excellency's Command,

JOHN ROBERTSON.

No. 29.

UNDER SECRETARY FOR LANDS to CLERK OF EXECUTIVE COUNCIL.

*Department of Lands,
Sydney, 16 April, 1862.*

SIR,

In drawing your attention to the notice in the *Government Gazette* of the 11th instant, respecting the intended formation of a parish road from Mudgee to Wellington, I am directed to request that you will have the goodness, at the end of one month from the date thereof, to inform me whether any objections have been received by you in respect of the said road, in pursuance of the notice alluded to.

I have, &c.,
MICHL. FITZPATRICK.

No. 30.

MR. GEORGE H. COX to CLERK OF EXECUTIVE COUNCIL.

Sydney, 24 April, 1862.

DEAR SIR,

I have this day examined the sketch of the proposed route of the Mudgee and Wellington Road, and find that it is marked through a field leased to a farmer named Jupp, and now under cultivation. Why it is to be changed from its present line I am at a loss to conceive, as the alteration would not make a better road, and would entail the expense of a double line of fence. I enclose a *sketch of the road at present used, and which has the further advantage of being upon high land; whereas the route marked on the chart in the Survey Office runs on to the flooded river flats. I object to the proposed road, because it would needlessly cut up a farm under cultivation, and now under crop; because it runs on to flooded land instead of keeping upon the ridge; and also, because it would entail the expense of a double line of fence.

I have, &c.,
GEO. H. COX.

You will observe that there is communication between the Coolah and Gratti and Wellington Roads.

No. 31.

MR. JOSEPH AARONS, JUN., to CLERK OF EXECUTIVE COUNCIL.

*Nanima, Montefiores,
6 May, 1862.*

SIR,

With reference to an advertisement in the *Government Gazette* of April 9th, 1862, notifying to all persons interested in the proposed line of road from Mudgee to Wellington through whose lands the said road has been marked, to send any objection they may have, directed to you, on or before the 9th May instant,—I beg most respectfully to object to that portion of the road which runs through my purchased lands, for the following reasons:—

1. I have, at considerable expense, fenced in large grazing paddock, containing about 7,500 acres, in which I depasture between 600 and 700 head of cattle. If the proposed line be adopted, and the road fenced on both sides, it would leave about 4,000 acres of the paddock on the west side perfectly valueless to me, from having no water for the stock depasturing there, and would entail upon me the necessity and expense of making dams and waterholes, or of removing the stock.

2. By taking a circuit round my paddock fence, of from one to one and a half miles, a better road, and one now in daily use, may be made, which will not interfere with any private lands, and which will run alongside of a large quantity of good agricultural Government lands, and touch at the point of the Macquarie River, below Gobolygon, where water can be obtained two miles nearer than by the proposed line. This I suggest is a great consideration to parties coming from Mudgee, as they cannot get a drink of water for stock after leaving Urneby Creek, a distance of sixteen or seventeen miles, even in ordinary seasons, unless at a well which is on a sheep station of mine, marked on the enclosed tracing as Euramengulga, and which is always dry in the summer seasons.

3. By the route I propose there is only one ascent beyond the Gobolygon boundary, and that an easy and short one, and when attained the road would be on a table-land, and in all seasons is a good, sound, dry road. I have measured the distance by the lines on the tracing No. 2, enclosed, and find it is not more than one and a half miles longer than the one surveyed by Mr. Combes; this, considering the loss and inconvenience to me, which thousands of pounds would not repay, I venture to hope will have weight with the Executive in adopting the line I propose, viz., to round the north-west corner of my paddock fence, down the west side line till it reaches the north-east corner of the Gobolygon boundary, and if there were any objection to follow the north boundary line of Gobolygon, down to the Dubbo Road. I would not object to give a road a chain wide, and to fence it in on both

18 ROAD FROM MUDGEES TO WELLINGTON, *via* THE DIGGINGS.

sides up to the road leading from Montefiores to Dubbo, without asking compensation. I may remark, that at the point where the two roads would join there is a watering place in the Macquarie, available for parties travelling; this advantage does not exist on Mr. Combes' proposed line, which, after going through my paddock towards Mudgee, passes through a scrubby, barren country, on the side of the ranges, totally unfit for agricultural purposes.

In adopting Mr. Combes' line through my paddock, the Government would have to put up on the sides of the road about eight miles of fencing, which at present prices would cost at least £850.

I remain, &c.,
JOSEPH AARONS, JUNIOR.

No. 32.

CLERK OF EXECUTIVE COUNCIL to SECRETARY FOR LANDS.

Executive Council Office,
12 May, 1862.

SIR,

Mudgee to
Wellington.

In compliance with the request contained in Mr. Under Secretary Fitzpatrick's letter of the 16th ultimo, No. 161, I do myself the honor to forward to you the objections lodged with me to the formation of the proposed parish road noted in the margin.

I have, &c.,
CHAS. COWPER, JUNR.,
Clerk of the Council.

No. 33.

MR. JOSEPH MATTHEWS to SECRETARY FOR LANDS.

Wellington, 2 June, 1862.

SIR,

I do myself the honor to address you on a matter of a road which was advertised in the *Government Gazette* some time since. It is the same that was surveyed by Mr. Combes, and approved of by the Government, from Wellington to Mudgee. May I request to be informed if the said road is open for the public to travel? My reason for troubling you is, to save litigation with the owner of some property near Wellington, who has that same road fenced in, which prevents the public from using it. The person to whom I allude is a Mr. Joseph Aaron, junr., Wellington.

I have &c.,
JOS. MATTHEWS.

No. 34.

MINUTE OF SURVEYOR GENERAL.

THE road has not yet been confirmed, objections having been made to it. It will not become a thoroughfare under the laws, until it shall have been confirmed, formally opened, and a return to that effect inserted in the *Gazette*.

A. G. M.
25 June.

No. 35.

UNDER SECRETARY FOR LANDS to MR. JOSEPH MATTHEWS.

Department of Lands,
Sydney, 5 August, 1862.

SIR,

Referring to your letter of the 2nd June last, inquiring whether the road from Wellington to Mudgee, as surveyed by Mr. Combes, is yet opened for public use, I am directed by the Minister for Lands to inform you that the road has not yet been proclaimed as confirmed, as several objections have been made to it; and that until this has been done, and the road formally opened, it will not become a thoroughfare under the Act 4th William IV., No. 11.

I have, &c.,
S. B. WARBURTON.
(For the Under Secretary.)

No. 36.

No. 36.

DISTRICT SURVEYOR DAVIDSON to SURVEYOR GENERAL.

Kirkconnell,
5 August, 1862.

SIR,

In reference to your blank cover letter of the 28th June, 62/1325, requiring me to report on the enclosed objections of Messrs. Aaron and Cox, two letters now returned. The latter you state is of comparatively small importance, but the former, affecting as it does, a valuable property and a large extent of fencing, is deserving of careful consideration.

You further inform me, that as expenditure will shortly be made between Mudgee and Wellington, with a view to facilitate communication between the former district and Forbes, it was desirable I should inspect and report at my early convenience.

I have the honor to inform you, immediately on my recovery from the attack of illness which I reported to you, I proceeded to Wellington, in order to inspect and make the required report.

I examined the deviation proposed by Mr. Aaron, down the north boundary of the 640 acres measured by me on the application of Mr. Challis, but I am not disposed to recommend this as the line of road in lieu of the one passing through Mr. Aaron's property to Montefiores, for the following reasons:—The line proposed along the north boundary of the Gobolyon property is rocky, and would take some labour to make it fit for traffic, and would also unnecessarily increase the distance. I propose instead, to deviate from Mr. Combes' line after passing through the range of hills on the Wellington side of Mitchell's Creek, and take a general bearing in the direction of a small rocky peak, close to the north-west corner of Montefiore's 5,120 acres. Mr. Licensed Surveyor Simpson, who accompanied me to the ground, has been instructed to make a survey. After rounding the small peak, I propose to continue the line south along the west boundary of Mr. Aaron's property, and when reaching where the Montefiores and Gobolyon properties join, to take the area for the road from the former, continuing the line south until it joins the present road from Dubbo, entering Montefiores by that road. If this line be adopted, the distance will not be greatly increased as compared with that passing through Mr. Aaron's paddock; nor do I think the public will be much inconvenienced by the alteration, as both lines enter Montefiores about the same point. Indeed the one now proposed is much more convenient to the ford generally used than the other, which is carried to the river bank, where it is proposed to place the punt, and about the best position for which there still appears to be some doubt. This line, although it may interfere with some of Mr. Aaron's fencing, could not in any way injure his paddock.

I have the honor to call your attention to the suggestion in Mr. Aaron's letter, as to keeping an access to the River Macquarie open along the north boundary of the Gobolyon property, and making a reserve fronting the river and adjoining it, for watering stock, and as a resting place for teams travelling from Dubbo, Mudgee, Maitland, &c. As this is the only good watering place now open for this purpose, it is important it should be reserved, as access to the river is generally fenced in about Wellington. All the traffic from the north-west country will pass through Montefiores and Wellington in the direction for Forbes, and is increasing daily. The prices at that place have been mainly kept down to a reasonable rate by the supplies sent not only from Mudgee but Maitland.

In reference to the objection of Mr. Cox, that the line is taken through his corn field unnecessarily, I have the honor to refer you to a tracing,* now transmitted, showing this line. The road left open in Mr. Cox's sketch is very objectionable, as in floods there is a rush of water from a lagoon into which there is a considerable watershed. The lagoon is shown on Mr. Cox's sketch. This feature, although a very important one, is not shown on the map at the Mudgee Court House. The course of the water-flow is directly from A to B, as on my tracing, the channel well defined, and bearing the marks of a torrent on the road, and must, in times of flood, be impassable. Near the point B the water spreads over the flat land, so that there is no perceptible channel.

No doubt, as represented by Mr. Cox, in very high floods the lower road is liable to be covered with water; still it is the one chiefly used, and appears the principal thoroughfare to Mudgee from that side by Market-street. The entrance by Mortimer-street is effectually stopped by a burial ground, extensively used and fenced in, leaving only about twelve feet of entrance to Mudgee by that street; so that, under any circumstances, the entrance to that town would be by Market-street. If the lower road is determined on, the line through the corn field would require to be opened; if the road shown in red on the tracing be adopted, a bridge would be required at A.

I am, however, of opinion it would give more general satisfaction if the line surveyed by Mr. Combes was adopted in its entirety.

I have, &c.,
W. R. DAVIDSON,
District Surveyor.

Appendix II.

No. 37.

DISTRICT SURVEYOR DAVIDSON *to* SURVEYOR GENERAL.*Kirkconnell, 18 August, 1862.*

SIR,

I have the honor to forward, under separate cover, Mr. Licensed Surveyor Simpson's survey of the deviation proposed by me from Mr. Combes' survey of the line of road from Mudgee to Wellington.

Mr. Simpson reports no difficulties on the line as surveyed by him, and the distance is not much increased.

I forward also his book of reference, and his charge for survey. I informed Mr. Simpson I thought he might charge for the day he was out with me inspecting the proposed alteration.

I have, &c.,
W. R. DAVIDSON,
District Surveyor.

[*Enclosure in No. 37.*]*2 August, 1862.*

Sir,

By telegram to Mudgee I received instructions from the Surveyor General to have a survey made of the proposed deviation from Mr. Licensed Surveyor Combes' survey of a line of road from Mudgee to Wellington. I have now to instruct you accordingly.

I am of opinion that the survey ought to commence after the road passes through the range near Mitchell's Creek, shown on the tracing transmitted, somewhere about stations 40 to 44; but in this you will be guided by the formation of the ground which we inspected, and I pointed out to you on the spot; keeping also in view the direction of the line, as near as may be, to the round hill at the north-west corner of Montefiore's 5,120 acres, the road then taking the direction towards the village of Montefiores by the west boundary of Mr. Aaron's land. I have, however, to point out, when your survey reaches where the Gobolyon and Montefiores properties join, you will be careful not to interfere with the former by taking any portion of the land for the road. As the deviation proposed is to secure Mr. Aaron from great injury to his property from the line passing through the centre of his land, but before being fenced by Mr. Aaron open and used by the public for many years, it is only right that Mr. Aaron should give the necessary area for the road on the west side of his property.

It will be in your recollection, that when we inspected the road there was no difficulty in taking the direction in which I have instructed you, the soil being good, if not better than that through Mr. Aaron's property. The questions to be considered are, the increased distance and other inconveniences which may arise to the public by the proposed alteration, and the object of the survey is to show this.

You will be good enough to plot your plan on the usual scale, and transmit it through me, with a book of reference, for the Surveyor General, as early as possible.

I have, &c.,
W. R. DAVIDSON,
District Surveyor.

Mr. Licensed Surveyor Simpson.

MR. JAMES KEPPIE *to* UNDER SECRETARY FOR LANDS.*Windeyer, 2 November, 1862.*

SIR,

I respectfully beg to state a fact, that on the 17th of August, 1861, I received a communication from the Department of Lands,* dated 13th August, 1861, informing me that my letter of the 5th† would receive due attention.

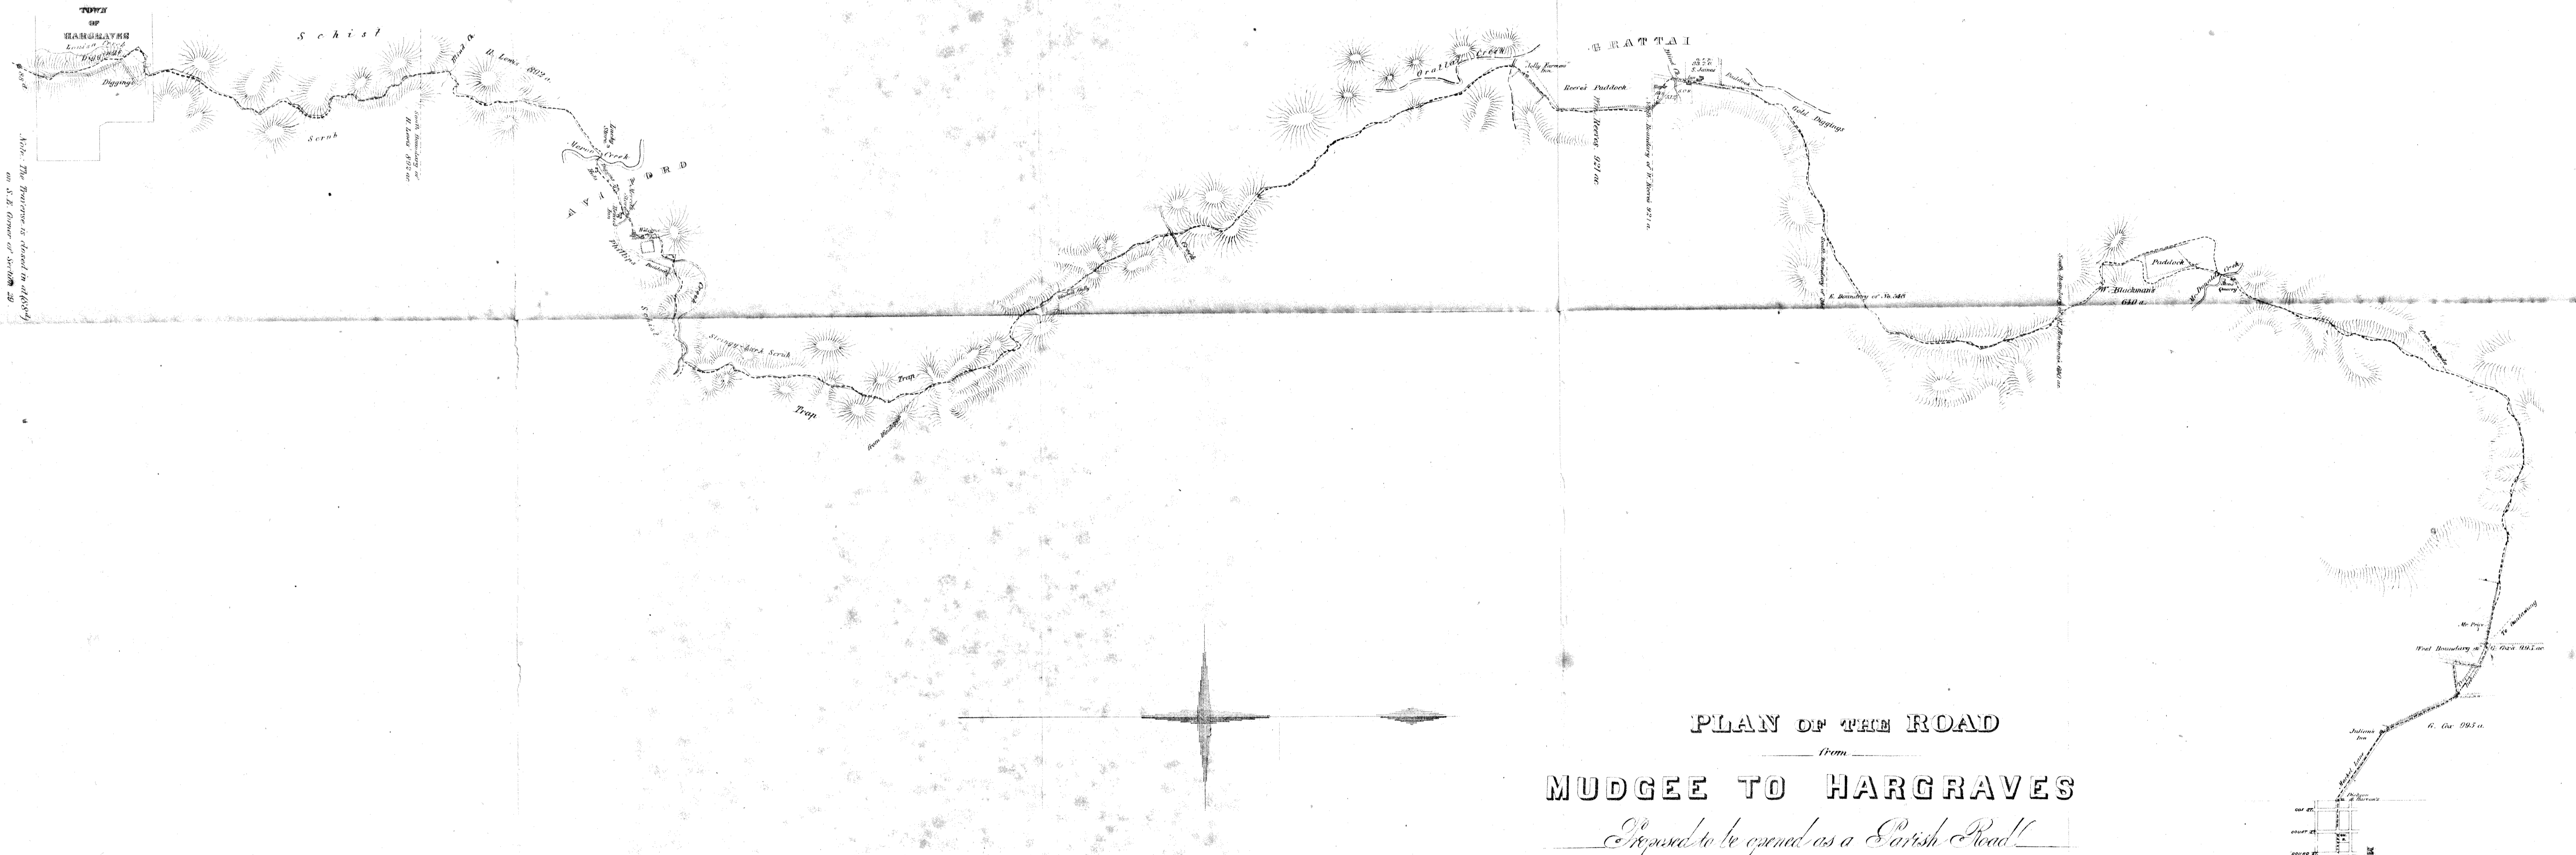

Subject: Road from Mudgee and Louisa Creek to Windeyer, &c.

I now beg to state, for your information, that up to this time no further notice has been taken in the matter, and request that you will be pleased to cause the sum or sums of money intended for said roads to be placed to the credit of the present Road Trust, which is as follows:—Mr. J. H. L. Scott, Commissioner; James Keppie, storekeeper; John Smith, gardener. The roads at present being in a very bad state of repair, causes me thus to trespass on your attention.

I have, &c.,
JAMES KEPPIE.

No. 1.

MR. ROBERT MURRAY to JOHN LUCAS, ESQ., M.P.

*Ellbank, Five Dock,
18 March, 1860.*

DEAR SIR,

As one of the representatives of Canterbury, I take the liberty of addressing you a few lines respecting the state of the road leading from the Parramatta Road to Bedlam Ferry. There was, I believe, a sum of £40 voted last year for the repair of the said road, which sum was not got by any person, although I understand there were trustees appointed for carrying out the expenditure of this sum; but, through some inadvertence in the matter, it is still in the hands of G. Shank; if you would endeavour to find out the reason why it cannot be applied for the purpose it was granted. My reason for being so urgent in the matter is, that some few weeks ago a poor woman, in bringing her fruit to market, the cart turned over and her leg was broken, through the roads being in such a bad state; and as one accident is in general the forerunner of another, if immediate attention is not paid there is likelihood of many serious occurrences taking place.

I remain, &c.,
ROBERT MURRAY.

No. 2.

MEMORIAL.

WE, the undersigned proprietors and residents of land at Five Dock, and also travellers over and residing in the immediate neighbourhood and vicinity, and having every confidence in B. C. Rodd, consider him a fit and proper person to be a road trustee, and believe that any funds paid to him by the Government will be judiciously expended and faithfully accounted for.

No. 3.

MR. JOHN CROKER to JOHN LUCAS, ESQ., M.P.

*Harrabrook, Five Dock,
8 October, 1860.*

SIR,

Being engaged in Sydney the greater part of last week, I had no time to draw your attention to a letter, &c., of Mr. Rodd's, in last Monday's *Herald*; I now beg to give for your, and if necessary, for the information of the Minister for Lands, a few facts in reference thereto. On looking over the names to his certificate of character, I find there are forty names of persons who have no direct interest in the question at issue. Surely Mr. Rodd was hard-up when he had to get the names of persons being in Moreton Bay (Gaden), at Kiandra (the Goughs), at New Zealand (Mr. Wright), at Ashfield (Habroi, Kelly, &c.), of women (Mrs. Conner, Nixon, &c.), of his own hired servants (Robertson, Jones), and the owners of unimproved allotments, living in Sydney and elsewhere. Of the fourteen in Five Dock whose names are to the document, Tilson, Donaldson, and others, signed it through misrepresentation. "My boy, Brent" brought round the paper, and said there was £40 granted for to get stones for the road, but could not be got unless there was a certain number of signatures. F. Deunham never allowed his name to be put down. Speed is tenant, as well, to Mr. Rodd; many are old servants whose employment was so "good"; and Jones, Mr. Rodd's hired servant.

In reference to his letter, I am at a loss to know how he could think the meeting was for the purpose of obtaining a Parish Road Act, a matter I never before heard mentioned, and which is not wanted, and when the advertisement stated the object of the meeting.

I am also surprised at his saying he thought he gave general satisfaction, when complaints of his mismanagement were long and loud.

I am credibly informed that Wright positively refused to be associated with him in this matter.

I must observe, that Mr. Rodd is mistaken when he says he annoyed me by cutting a drain before my house; the drain does not do me a great deal of harm, though he wasted some money in filling up the proper watercourse and in making this drain. The consequence is, that the water, in making a new way for itself, has made a deep and dangerous hole on the side of the Parramatta Road, to which the attention of the Committee ought to be drawn. But I can easily understand him if he said he sought to annoy me in this way for refusing, as Churchwarden, to give him some money he applied for, to spend on the road leading to St. John's Church.

In conclusion, I would beg to say, that should this present application fail, the next step will be a petition to the Parliament. Apologizing for the length of this letter, which is longer than I intended,—

I remain, &c.,
JOHN CROKER.

No. 4.

B. C. RODD, ESQ., to UNDER SECRETARY FOR LANDS.

*Barnstaple Manor,
Five Dock, 22 September, 1860.*

SIR,

I beg to inform you, for the information of the Minister of Lands, that a meeting was held at the School-house, Five Dock, last night, called together by an anonymous advertisement,—“To take into consideration the state of the Five Dock Road, and other matters connected therewith.”

2. My notice having been called thereto, I presumed it was with the view of obtaining a Parish Road Act, so much spoken of and wanted; but having a previous appointment I could not attend.

3. The meeting came off, and not more than twenty-two residents of Five Dock attended.

4. Amongst the resolutions passed was one to the effect, “that the meeting had no confidence in B. C. Rodd as road trustee, and that the money entrusted to him was injudiciously laid out.” This was the substance; but as this particular and very select meeting refused to let my son have a copy of the resolutions, I cannot be precise.

5. Why the meeting should have singled me out, when it must have known that I am associated with Mr. Wright and Mr. Abercrombie, I am at a loss to divine, except it was led, in my absence, to follow entirely the getters up of it.

6. The fact is conclusive to my mind, that the meeting was got up and carried out from personal motives against myself. Amor I twice sued, and recovered against him; and to Mr. Murray I had to write a very pertinent letter touching the road, to which he was gentlemanly enough to return no answer.

7. Had I had notice that my conduct was to come under discussion, I would have been there at all inconvenience.

8. I enclose advertisement, a copy of letter I sent to the Chairman, and a copy of my letter to Mr. Murray.

9. I know there is a difference of opinion as to the name of the road to Bedlam Ferry; by law it is called the Great North Road, which by law has not been altered; it is now known as Bedlam Ferry Road; Five Dock Road should be its proper name.

10.

10. There was also a resolution to this effect,—that a deputation should wait upon Mr. Lucas, M.P., to use his influence with the Government to get me removed.

11. I am unable to enclose a copy of my letter to the Chairman, Mr. Alderton, he having, like a simpleton, given it with the resolutions to Croaker. This person is annoyed with me, I understand, because I had a drain made before his house; he (Croaker) has a quarry close to the road, and refused to allow some of his rubbish to be taken for the repairs of the road.

12. I am credibly informed that no person attempted to show how the money was misapplied.

13. In conclusion, I cannot resist observing the meanness and cowardice of these parties in attacking me behind my back without notice. Why, if they had any legitimate complaint, would not their proper course have been to apprise me of it in the first instance? I was under the full impression that I was giving full satisfaction to every person but Mr. Murray.

I remain, &c.,
B. C. RODD.

I beg to add, that not one word was said at the meeting as to how I had been acting injudiciously.

[Enclosure in No. 4.]

Sydney, 16 May, 1860.

My dear Sir,

I told my boy Brent last Sunday to ask you for a subscription to repair the road to Ashfield Church; and you said you would not give a sou towards it; if so, you had a perfect right to say so.

You travel on the road, and use it—that is more than I do to the road leading to your house, to which I gave 10s. Now, had this been all you said, as reported to me, you would not have heard from me. My boy says you went on to say, I had £28 to repair the Great North Road, and you did not know what I was doing with it, and you would write to the Prime Minister and see about it. Of course you can do so if you please; but if you take the trouble to go to the Audit Office you may see the vouchers I have had the trouble to write and send. Would you take this trouble to serve the public? Then, as to the employment of old Paddy Maney, it was good, and I only paid him for the work he did. Then as to the heaps left on the road, I am not responsible for that, for I ordered them to be spread. And now, if at any time you have anything to complain of, state it at once fairly to myself, face to face, and not behind my back.

And remain, &c.,
B. C. RODD.

To Robert Murray, Esq.,
Elswick.

No. 5.

REPORT.

At a public meeting of the inhabitants of Five Dock and its vicinity, held at St. Alban's School, Five Dock, on Friday, the 21st instant, at 7 o'clock, p.m., Mr. Alderton in the chair, the following Resolutions were duly put and passed:—

1st.—Proposed by Mr. Pitts, seconded by Mr. W. Croaker:—"That this meeting considers the Five Dock Road in a very bad and dangerous state, and requiring immediate repair."

2nd.—Proposed by Mr. Murray, seconded by Mr. Amor:—"That this meeting is of opinion that the money granted of late years for the repair of the Five Dock Road has been injudiciously laid out, and that B. C. Rodd, Esq., has not the confidence of this meeting."

3rd.—Proposed by Mr. McKnight, seconded by Mr. Budd:—"That this meeting recommends Mr. John Croker, Mr. Robert Murray, and Mr. John Denny, resident landholders, as qualified and responsible persons to act as Trustees for the Five Dock Road."

4th.—Proposed by Mr. Murray, seconded by Mr. J. Croker:—"That Mr. Murray and Mr. Amor be appointed a deputation to wait on John Lucas, Esq., with the foregoing Resolutions, signed by the Chairman on behalf of the meeting, and request him to use his best exertions to have them carried into immediate effect."

On behalf of the meeting,
D. ALDERTON,
Chairman.

No. 6.

B. C. RODD, ESQ., to UNDER SECRETARY FOR LANDS.

Sydney, 13 October, 1860.

SIR,

In reference to my letter of the 22nd ultimo, relating to the Five Dock or Bedlam Ferry Road, I trust it may not be considered out of place my suggesting that a copy of my letter should be sent to the Chairman, Mr. Alderton, a respectable man, residing on the Parramatta Road, and that he be asked what reason was given at the meeting for not having confidence in me; and how I have expended the money entrusted to me and Messrs. Wright and Abercrombie, injudiciously.

I have, &c.,
B. C. RODD.

No. 7.

No. 7.

MEMO. OF SECRETARY FOR LANDS.

2 March, 1861.

I HAVE held over this matter, in hope of having time myself to go into it. That seems hopeless now. Refer these papers to the A. S. G., and ask his report and recommendation as to what is best to be done.

JOHN R.

A. S. General.—B.C., 4 March, 1861.

No. 8.

REPORT OF ACTING SURVEYOR GENERAL.

I HAVE looked carefully through the enclosed papers, and can see no grounds which, in my opinion, would warrant the removal from the Trust for the current year of any of the members.

The only grounds mentioned are, the expression of an opinion at a public meeting, that the money granted of late years for the repair of the road had been injudiciously expended, and a statement that Mr. Rodd had not the confidence of the meeting.

The numbers at the meeting are not stated by the Chairman, but are so by Mr. Rodd as twenty-two persons, and it appears to me that the removal of trustees, or any of them, should not be made unless some specific charge of neglect could be proved against them, or unless a very unanimous expression of want of confidence by the residents of the district were made.

It seems to me, further, that it would be highly inexpedient to appoint one or two of the present Trust with two or one other of persons in direct antagonism with them, as such a Trust could scarcely work harmoniously, or for the public benefit.

A. G. M.

No. 9.

MR. JOHN CROKER to JOHN LUCAS, Esq., M. P.

*Harrabrook, Five Dock,
20 March, 1861.*

DEAR SIR,

-At the request of several of the people at Five Dock, I beg to ask if anything has been done towards appointing a Trust for the Five Dock Road? It is high time something was done; the road is getting now in very bad order, and the winter is coming.

I trust you will do all in your power to have a proper Trust appointed, and as soon as possible, and you will add another obligation to this part of your constituency.

I remain, &c,

JOHN CROKER.

No. 10.

MINUTE OF SECRETARY FOR LANDS.

MR. Rodd being a relative of mine, perhaps the Chief Secretary will deal with the matter.

JOHN R.
28 March, 1861.

Principal Under Secretary.

Blank Cover—11 April, 1861.—M. F.

No. 11.

B. C. RODD, Esq., to COLONIAL SECRETARY.

Sydney, 23 April, 1861.

SIR,

I yesterday received a private note from the Minister for Lands, that he had referred a question to you about the North Road, and which he did not like to decide upon, as we are connected by marriage.

I have been a Trustee of the Great North Road for the last ten years, joined with others; but I had always the sole management, insomuch that the Government always recognized me solely. About six months since a hole-and-corner meeting was held at Five Dock

Dock concerning my conduct. I never had any notice of the meeting, or complaints made. I never had any direct notice of the meeting, or the result. I saw a report of it in the *Sydney Morning Herald*, and sent it to Mr. Robertson, together with testimonials in my favour of twice the number who signed the memorial.

I have been indirectly informed that Mr. Lucas (I presume the M.L.A.) has been writing to the Minister on the subject. If so, I believe the regular official routine is, that the communication ought to have been sent to me to answer. Mr. William Lucas, the brother of Mr. John Lucas, has repeatedly sent to me for the contract to repair this road, which I have declined. I believe Mr. John Lucas wishes to get me removed, and persons appointed who would give the contract.

I should like very much to speak to you on the subject, as I have that to say I would rather not put in a public letter.

B. C. RODD.

No. 12.

MINUTE OF COLONIAL SECRETARY.

26 April, 1861.

HAVING carefully read through all the papers regarding the Five Dock Road expenditure, I am of opinion that there exists no sufficient grounds for making other than the present arrangements. Mr. Rodd appears to me to have acted faithfully and zealously, and, though there is some dissatisfaction expressed, I apprehend that must be expected. Agreeing, as I do, with the view expressed by the Surveyor General, I would not advise any further appointments being made. Indeed, so far as the papers exhibited to me prove, Mr. Rodd is appointed sole trustee, with a suggestion that he should invite two or three more gentlemen to co-operate with him. I am not clear how Messrs. Wright and Abercrombie were appointed, but the primary correspondence evidently dealt with Mr. Rodd solely.

Having seen Mr. Rodd, I find he is unwilling that either Messrs. Croker or Murray should be united with him. To force him to accept them would be, virtually, to compel him to resign. I see no ground whatever for doing anything implying even a censure; and the sum is so small that to have five trustees for expending it would be an absurdity. Messrs. Abercrombie and Wright equally object to Messrs. Croker and Murray. The money may, in my opinion, be safely entrusted to Mr. Rodd, as hitherto.

2. This sum, I am to add, is to be charged to the vote for Subordinate Roads (as per Schedule, £46,167) for 1861.

I have, &c.,
MICHL. FITZPATRICK.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROAD THROUGH VILLAGE OF SUTTON FOREST.
(PETITION FOR.)

*Received by the Legislative Assembly, 17 October, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Landowners, residents of the Village of Sutton Forest, and others in the Berrima District, and in the Colony of New South Wales,—

HUMBLY SHEWETH :—

That your Petitioners having purchased allotments of ground in the Village of Sutton Forest, from the Government, erected dwellings thereon, and being residents in the said Village, perceive that your Petitioners (in consequence of the estate known as Underwood's being fenced in) have no ingress or egress to the southern portion of the said village, thereby causing your Petitioners much annoyance and loss of time, besides having a circuitous route to proceed to the Post Office and the principal stores in the settlement or township of Sutton Forest, quite two miles in distance.

That your Petitioners beg most respectfully to state, that the above grievance could easily be obviated by your Honorable House causing a road to be opened opposite the Post Office, in Sutton Forest, along the boundary fence belonging to the land known as Cosgrove's and Edward Lord's, to the extent of one hundred and twenty rod, or a quarter of a mile and one furlong in length, when it meets the Crown land, and runs in a line with M'William's allotment and the corner of a street in the said Village of Sutton Forest. The whole distance of the required road would not exceed in length, from one point to the other in a direct line, the one hundred and twenty rod named.

That your Petitioners are led to believe, no objection would be made by either Mr. Lord or Mr. Cosgrove to the road passing through their respective properties for so short a distance. Your Petitioners also beg to state that, at the present time, persons from the cross roads and the southern parts, desiring to reach the Village of Sutton Forest, or the railway station (when completed), could not do so without going to nearly the end of the Township of Sutton Forest, and to enter by the north end of the Village of Sutton Forest to reach the south end thereof, a distance of at least two miles, which could be easily accomplished by the line of road suggested by your Petitioners, by barely a quarter of a mile and one furlong in length.

That your Petitioners not only consider a great boon would be conferred on themselves, but to the public generally, as much time, labour, and annoyance would be saved by the road prayed for being adopted.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to take the foregoing into your favourable consideration, and cause such measures to be taken as your Honorable House shall deem fit, that the road prayed for in the premises may be granted. And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 53 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROAD, SUTTON FOREST.

(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 6 November, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Landowners and Residents of Sutton Forest, Mount Broughton, Throsby Park, and Wingecarrabee Swamp, all in the District of Berrima, in the Colony of New South Wales,—

HUMBLY SHEWETH:—

That your Petitioners most respectfully beg to state, that after a line of road having been in existence for the period of thirty years, has within a few months ago been blocked up to the extent of about a quarter of a mile in length, from the old Southern Road in Sutton Forest, opposite McPherson's, through the property belonging to O'Keefe and Hollands, and adjoining that of Wilmott's, when the interruption ceases and the road then continues on till it meets the main road.

That one of your Petitioners particularly, named James Cairns Wilmott, residing within a quarter of a mile of the township of Sutton Forest, cannot reach the northern part of the said township without trespassing on private property to get to a road, and then a round of two miles in distance to be performed, not having as much as a roadway to and from his farm; in fact, completely closed in on all sides, which has only been till lately the case.

That your Petitioners, desirous of reaching the northern part of Sutton Forest, the Church, or the post road to Berrima, have, at present two and a-half miles to travel before they can accomplish the same, besides the unnecessary waste of time and labour, and are likewise compelled to take a circuitous route.

Your Petitioners also respectfully beg to state, that by your Honorable House causing a road to be opened, as formerly, that is, from McPherson's on the old Southern Road in Sutton Forest, through the property of O'Keefe and Hollands, to the extent of a quarter of a mile in a straight line, very great benefit would not only be derived by your Petitioners, but by the public generally, travelling to and fro from Wingecarrabee Swamp, Bong Bong, Throsby Park, and Mount Broughton, to Sutton Forest and Berrima.

That your Petitioners believe little or no objection would be made to the road passing through the said quarter of a mile by the parties owning the land, viz. :—O'Keefe and Hollands. Also it was always understood by your Petitioners the road as formerly was a proclaimed public road.

That your Petitioners consider it will be a great boon, conferred not only upon themselves, but to the public generally, by the grievance complained of being removed, and the road now closed being again thrown open to the public.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to take the foregoing into your favourable consideration, and cause such measures to be adopted as your Honorable House shall deem expedient, that the road prayed for in the premises (to be again opened) may be granted.

And your Petitioners, as in duty bound, will ever pray, &c.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROAD FROM GOORANGOOLA CREEK AND FALBROOK
TO SINGLETON.
(PETITION.)

Ordered by the Legislative Assembly to be Printed, 28 May, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Landowners and Settlers on Goorangoola Creek and Falbrook,—

HUMBLY SHEWETH:—

That your Petitioners have from time to time purchased land from the Crown, on the above-named creeks, to the extent of about seven thousand acres.

That having no right of way to Singleton (the nearest post town), your Petitioners some two years and a half ago respectfully addressed themselves to the Honorable Minister for Lands, who caused a direct line of road to be surveyed, but no further steps that your Petitioners are aware of have been taken towards opening the road in question to the public, although the survey thereof was completed in May, 1860.

That your Petitioners have from time to time, since the survey of the road in question, pointed out to the Honorable the Minister for Lands the difficulties they labour under from the want of an authorized thoroughfare.

Trusting that your Honorable House will take the want we are under into your favourable consideration, your humble Petitioners will, as in duty bound, ever pray.

(Here follow 24 Signatures.)

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JAMES MILLER.
(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 17 July, 1862.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The Memorial of James Miller, of Corinda, in the District of Patrick's Plains, in the County of Northumberland, and Colony of New South Wales,—

MOST RESPECTFULLY SHEWETH:—

That, by order of the Honorable the Executive Council, a Parish Road leading from Singleton to Black Creek, by Belford, was opened up through my estate, Corinda, on the eighth day of January last, by Mr. Rodgers, Government Surveyor.

That the said Parish Road passes through the said estate to the extent of about $1\frac{1}{2}$ of a mile, and occupies an area of about thirteen acres.

That the opening up of the said Parish Road has been attended with serious inconvenience and injury to my stock in general, and to my breeding stock in particular, inasmuch as it has opened up the paddocks appropriated to their use, and cut them off to a considerable extent from the river.

That in order to the protection of my interest as far as possible, I have been compelled to erect on both sides of the said Parish Road, to the extent of $3\frac{1}{2}$ miles, a three-railed fence, at a cost of about two hundred and sixty pounds sterling.

That by Act of Parliament 4 William the IV, No. 11, section 18, the Parish is bound to compensate me for the said outlay in fencing. That inasmuch as there are no Parish Authorities to whom to apply, I am left, as far as the Parish is concerned, without means of redress.

That inasmuch as the General Government, by assuming and exercising the functions and prerogatives of the Parish Authorities, have, by the very act of opening up the said Parish Road, assumed the responsibilities and obligations of the said authorities, your Memorialist humbly prays that your Honorable House may be pleased to take these premises into favourable consideration, and grant such relief as to you may seem fit; and your Memorialist, as in duty bound, will ever pray.

JAMES MILLER.

Corinda, 26 November, 1861.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TOLL-GATE, MURRURUNDI.

(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 19 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The Petition of the Inhabitants of the Towns of Murrurundi and Haydonton, with the surrounding District,—

HUMBLY SHEWETH:—

That in October, 1861, a Toll-gate was established on the East side of Murrurundi.

That in consequence thereof, the major part of your Petitioners have an indirect tax to pay for each load of wood, &c., &c.

That the body of the agriculturists reside on the East side of Murrurundi, and therefore have a tax to pay for sending their produce to market.

That the Roman Catholics, of whom seventy per cent. reside on the East side of the Toll-gate, are visited periodically by their clergyman, and two out of every three such visits fall on working days of the week, whereby your Petitioners have to pay a tax for attending their place of worship on two occasions out of every three.

That your Petitioners will bear the expense of removing the Toll-gate and Hut from their present position to a place West of Murrurundi. Such removal would be a public good, and prevent many serious evasions of tollage at present practised.

That the Members of your Honorable House may take a favourable view of your Petitioners' prayer.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 90 Signatures.]

RAILWAY CONTRACTS.

No. 1.

SECRETARY FOR LANDS AND WORKS to SIR S. M. PETO & Co.

*New South Wales,
Department of Lands and Public Works,
Sydney, 12 February, 1859.*

GENTLEMEN,

Captain Martindale has placed in my hands your letter of the 12th December last, in which you state that you have decided to accept the proposition made to you, to enter into arrangements for the construction of Railways in this Colony.

2. I need only inform you by this opportunity that the Government will be happy to receive and to treat with the Agent, whom you state it is your intention of sending out by the January mail.

I have, &c.,
JOHN ROBERTSON.

No. 2.

S. WILLCOX, ESQ., to ENGINEER-IN-CHIEF.

*Great Northern Railway,
East Maitland, 10 June, 1859.*

DEAR SIR,

I have been over the line between Maitland and Lochinvar, and also that being marked out between Lochinvar and Singleton.

The portion between Maitland and Cutting No. 9, 21m. 60c., appears to be in an advanced state. The three miles between that place and Lochinvar have just been commenced; only 200 yards in Cutting 14, and 150 yards in Cutting 16, have been removed; and there are only some 15 men engaged upon it.

I find that, on the piece between Lochinvar and Singleton, some time must elapse before we can commence; the section is not ready, nor is the line definitively staked out.

As there is so little done between 21.60 and Lochinvar, I now propose taking it out of your hands, paying all expenses incurred upon it to the date of transfer, and taking too all the plant at your valuation—accepting, at the same time, all agreements which might have been made with sub-contractors for the execution of the works and the delivery of materials.

The addition of this portion of the line to our contract would be an advantage to me, for several reasons. As I am expecting men up from Victoria, I could put them to work immediately on their arrival; I could collect and concentrate men here, and draft them off to other parts of the line as we obtained possession of it; and as the rest of the line near Maitland is drawing to a close, I should then have the whole of the work in my own hands, which would give me a much greater control over the men.

Trusting that this proposition might meet with your approval,

I am, &c.,
SAML. WILLCOX.

No. 3.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,
Sydney, 4 July, 1859.*

SIR,

I have the honor to inform you that I have perused the accompanying papers, which have been forwarded to me, I presume, as instructions for the preparation of a bond, to be given by Sir M. Peto and Co., for the faithful performance, by that firm, of certain Railway work between Campbelltown and Menangle, and that, until I am furnished with the contract entered into by Messrs. Peto and Co. and the Government, I am quite unable to proceed with the preparation of the bond. So far as I can see, the papers herewith do not in any way disclose the contract, for the due performance of which Messrs. Peto are to give security.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

No. 4.

No. 4.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,
Sydney, 4 July, 1859.*

SIR,

I have the honor to inform you that, amongst other papers received by my predecessor in office, I have found a letter, dated the 19th of May last, addressed to him by the Under Secretary for Lands and Public Works, in which Mr. Under Secretary Fitzpatrick explains that the arrangements have been concluded with the Agent of Sir M. Peto and Co., for the construction of Railways, on the authorized extensions, by that firm, and in which he requests my predecessor in office to prepare the necessary bond to be entered into, by or on behalf of Sir M. Peto and Co., for the due fulfilment of the conditions of the agreement, which will be furnished to him by the Commissioner for Internal Communication.

I think it right to remind you that I have not yet received the agreement in such letter referred to, and that I have consequently been unable to prepare the bond as requested.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

No. 5.

SECRETARY TO RAILWAY DEPARTMENT to S. WILLCOX, Esq.

*Railway Branch,
Department of Internal Communication,
Sydney, 5 July, 1859.*

SIR,

Your letter of the 10th ultimo, addressed to the Engineer-in-Chief, has been laid by him before the Commissioner, and I am directed to inform you, in reply to it, that the Commissioner is prepared to recommend to the Government, that the construction of the Great Northern Railway between 21.60, and 25.30, should be intrusted to Messrs. Peto and Co., on the following terms:—

Messrs. Peto and Co. to accept all agreements which have been made with contractors for the execution of the works and delivery of materials.

For all contracts which the Government have already made, Messrs. Peto and Co. to receive only the price already settled with the contractors.

For all works not already contracted for, Messrs. Peto and Co. to receive payment at the prices contained in the schedule of prices already agreed upon.

Messrs. Peto and Co. to take over at once such of the Government Railway plant as the Government now wish to dispose of, and the remainder when the line is completed to 21m. 60c., at the valuation of the Engineer-in-Chief.

Messrs. Peto and Co., in addition to the construction of the line to formation level, to complete the line between 21m. 60c. and 25.30, provided terms can be agreed upon.

I am directed to observe, the delay in replying to your letter has arisen from the necessity of an interview with you upon this matter, and your absence from Sydney and other circumstances having prevented this taking place till yesterday.

I am, &c.,

JOHN RAE,
Secretary.

No. 6.

S. WILLCOX, Esq., to COMMISSIONER FOR RAILWAYS.

Sydney, 6 July, 1859.

SIR,

In reply to your letter of the 5th instant, I must beg, on the part of Messrs. Peto, Brassey, and Betts, to decline your offer.

As I explained to you yesterday, I have engaged several men for the Northern line, believing that before this (according to the terms of our contract) I should have been able to commence the works on that portion of the line between Lochinvar and Singleton. Several of these men have already arrived, and I am expecting others shortly. I am now paying a considerable amount daily for salaries and wages, which will be augmented on the arrival of other men.

For the purpose of keeping these men employed, I was induced to offer to undertake the completion of the line between the twenty-first and twenty-sixth miles.

My offer to you was, to take this line upon the same terms and conditions as agreed on between the Government and Messrs. Peto and Co. for the Railway works between Campbelltown and Menangle, and I can see no reason why there should be a difference between the two lines. I am still willing to undertake the works upon those terms.

I hope, however, that as the Government have only given eleven miles of Railway instead of the fifteen promised to be given by the 21st ultimo, that the four miles difference may be given to me at once on the Northern line, so that our losses may be lessened as much as possible.

I understand that the Government contend that the line between Campbelltown and Menangle forms a part of the fifteen miles; but this is an independent contract, entered into subsequent to the undertaking to give fifteen miles, and upon different terms to the general contract.

I am, &c.,
SAML. WILLCOX.

No. 7.

COMMISSIONER FOR RAILWAYS to UNDER SECRETARY FOR LANDS AND WORKS.

*Railway Branch,
Department of Internal Communication,
Sydney, 7 July, 1859.*

SIR,

I have the honor to transmit herewith, copies of a correspondence relative to an offer from Mr. Willcox, as Agent for Messrs. Peto, Brassey, and Betts, to construct that portion of the Great Northern Railway between 21.60 and 25.30, and which is now being carried out by this department direct.

The terms upon which Mr. Willcox wished to have this work are, to pay all expenses incurred upon it up to the date of transfer, to take all the plant at the valuation of the Engineer-in-Chief, and to accept all agreements already made on behalf of the Government with the sub-contractors; Messrs. Peto and Co. to be paid for the work as if it formed part of the main contract.

The arrangements for this work are so far advanced that I did not feel that I should be justified in recommending these terms to the Government. But desirous of carrying out the views of the Government of affording every facility to the Agents of Messrs. Peto and Co., I informed Mr. Willcox, after consulting with the Engineer-in-Chief, that I would recommend that the work which he desired to have should be given to him on modified terms: the alterations which I proposed being, that for contracts already made Messrs. Peto and Co. should receive only the price already agreed upon with contractors, and should take over the Government plant at two different times, in place of receiving the whole at once.

Mr. Willcox, by his letter of yesterday's date, declines these terms; but renews his previous offer.

Mr. Willcox argues that the present contracts have been made direct with navvies, and that upon the work undertaken by them he could therefore have no profit, not even remuneration for the cost of superintendence, &c.; and further, that whenever a rise of wages takes place, the navvies will either throw up the work or demand increased prices.

Under these circumstances I am desirous, before replying to Mr. Willcox's letter of yesterday's date, to receive the instructions of the Government.

I have, &c.,
B. H. MARTINDALE.

THE grounds upon which the application of Mr. Willcox appears to have been made is, that the Railway Department has failed in furnishing plans, &c., in accordance with agreements. Is this so, and are the Government therefore driven to make concessions?

JOHN R.

THE grounds upon which Mr. Willcox's application was made was not that the Railway Department had failed in furnishing plans in accordance with agreement, but that, for the reason stated in his letter, it would be an advantage to him to be intrusted with the work named by him, in addition to his contract. The date of Mr. Willcox's letter is the 10th June; the date when the plans were to be furnished to him is the 21st July.

I have already reported, by my letter of the 22nd instant, that the plans of the Northern line were not ready on the 21st instant; but the Engineer-in-Chief assures me that nine miles will be ready for proclamation next week—a length sufficient to afford Mr. Willcox full employment as soon as possession can be obtained of the land.

The only concession which, it appears to me, the Government should make, if Mr. Willcox requires it, is to extend the time for the completion of the works by whatever period may elapse between the dates when the plans are furnished and when they should have been furnished.

B. H. M.
26 July.

Under Secretary
for Lands and Works.

UNDER the circumstances stated, I would prefer that the minor contracts referred to, be carried out under the Railway Department.

JOHN R.
30 July.

No. 8.

S. WILLCOX, ESQ., to SECRETARY FOR LANDS AND WORKS.

*Great Northern Railway,
East Maitland, 16 July, 1859.*

SIR,

It would be a great convenience and assistance to us, in the execution of the works between Lochinvar and Singleton, if you would kindly grant us permission to enter upon the lands adjoining the Railway, for the purpose of cutting down any timber we might require for the construction of the line.

Trusting you will grant the permission,

I have, &c.,
SAML. WILLCOX,
Agent for Peto, Brassey, and Betts.

No. 9.

UNDER SECRETARY FOR LANDS AND WORKS to S. WILLCOX, ESQ.

*Department of Lands and Public Works,
Sydney, 21 July, 1859.*

SIR,

Your letter of the 16th instant, respecting cutting down timber for Railway purposes from lands adjoining the Great Northern line, referred for the report of the Commissioner for Internal Communication, &c.

I have, &c.,
M. FITZPATRICK.

No. 10.

S. WILLCOX, ESQ. to COMMISSIONER FOR RAILWAYS.

Sydney, 26 July, 1859.

GREAT NORTHERN RAILWAY EXTENSION—LOCHINVAR TO SINGLETON.

SIR,

On behalf of Messrs. Peto, Brassey, and Betts, I beg leave to submit to you the prices at which I am willing to undertake the execution of the following works and supply of material:—

- 1st. Fencing similar to that erected on the line between Maitland and Lochinvar, at per rod, 10s.
- 2nd. Clearing the line, at per acre, £7.
- 3rd. Sleepers delivered, each, 3s.

With respect to the permanent way and ballasting, I shall be happy to agree with Mr. Whitton as to price, after having seen the working sections of the line.

I have, &c.,
SAML. WILLCOX.

No. 11.

S. WILLCOX, ESQ., to COMMISSIONER FOR RAILWAYS.

Sydney, 28 July, 1859.

GREAT NORTHERN RAILWAY EXTENSION—LOCHINVAR AND SINGLETON.

SIR,

Having received no reply to my letter of the 6th instant, nor yet having been put in possession of any portion of the land or plans for the Northern line, I again take the liberty of addressing you.

According to the terms of our agreement, and as explained in my letter of the 6th instant, some portion of the line should have been given us on the 21st ultimo, and the whole on the 21st instant.

I must again urge upon you the necessity of giving us at least some portion of the line immediately, and beg leave to remind you of the heavy expenses we are daily incurring in having our staff upon the ground in expectation of receiving the land and plans at the specified — This expense might have been avoided had the Government accepted my offer to take a portion of the line between Maitland and Lochinvar.

I have, &c.,
SAML. WILLCOX,
For Peto, Brassey, and Betts.

RAILWAY CONTRACTS.

No. 12.

UNDER SECRETARY FOR LANDS AND WORKS to S. WILLCOX, Esq.

*Department of Lands and Public Works,
Sydney, 3 August, 1859.*

SIR,

Referring to my letter of the 21st ultimo, I am now directed to enclose, herewith, for your information, a copy of the Report of the Commissioner for Internal Communication, on the subject of your request to be allowed to enter upon the lands adjoining the proposed Railway line from Lochinvar to Singleton, for the purpose of cutting timber required for the construction of that line.

2. I am to apprise you that the Secretary for Lands and Public Works concurs with the Commissioner so far as private lands are concerned, but that as the Railway will pass in some places through public lands, you may, by paying a comparatively nominal fee, obtain licenses from the local Benches of Magistrates, for your men to cut timber on any vacant Crown lands within the Police District, under the Regulations of 11th September, 1850.

I have, &c.,

M. FITZPATRICK.

[Enclosure in No. 12.]

Under clauses 84 to 87 of the Government Railways Act, the Commissioner can grant the permission Mr. Willcox seeks, in respect to lands within 200 yards of the centre line of Railway, under the restrictions named in those clauses. But as by reference to the clauses it will be seen that questions of damage and compensation are involved, the Commissioner is not disposed to grant the general authority sought by Mr. Willcox, but would prefer giving special permission as Mr. Willcox may require it, on condition of his indemnifying the Government against any claims that may be made arising from such permission.

Under Secretary for Lands and P. Works.
B.C.B. H. M.
26/7/59.

No. 13.

SECRETARY TO RAILWAY DEPARTMENT to S. WILLCOX, Esq.

*Railway Branch,
Department of Internal Communication,
Sydney, 4 August, 1859.*

SIR,

I am directed by the Commissioner to acknowledge the receipt of your letter of the 28th ultimo, and to inform you that the Commissioner is waiting for the instructions of the Government upon your letter of the 6th ultimo, and that as soon as he receives these instructions he will communicate further with you. I am to observe that, on reference, you will see that there is nothing whatever in the terms of the agreement entered into between the Government and Sir S. M. Peto and Co., by which the Government were bound to give over any portion of the line to you on the 21st June. The whole was to have been given over to you on the 21st ultimo, and I am to express the Commissioner's regret that the Engineer-in-Chief has not found it possible to complete the plans within the time specified. I am further to observe, that both the Commissioner and Mr. Whitton verbally acquainted you with the causes of delay in the completion of the plans a day or two before the date of your letter, and also with the efforts being made to supply them as early as possible, and that the Commissioner at the same time acquainted you with the reasons why your letter of the 6th ultimo still remained unanswered.

I have, &c.,

JOHN RAE,
Secretary.

No. 14.

SECRETARY TO RAILWAY DEPARTMENT to S. WILLCOX, Esq.

*Railway Branch,
Department of Internal Communication,
Sydney, 5 August, 1859.*

SIR,

I am directed by the Commissioner to acknowledge the receipt of your letter of the 26th ultimo, submitting on behalf of Messrs. Peto, Brassey, and Betts, the prices at which you are willing to undertake the execution of the fencing, clearing the line, and supply of sleepers, on the Extension from Lochinvar to Singleton; and in reply, I am to inform you that the Commissioner has referred the same for the consideration of the Government.

I have, &c.,

JOHN RAE,
Secretary.

RAILWAY CONTRACTS.

No. 15.

SECRETARY TO RAILWAY DEPARTMENT to CROWN SOLICITOR.

*Railway Branch,
Department of Internal Communication,
Sydney, 5 August, 1859.*

SIR,

With reference to the instructions transmitted under blank cover to you on the 29th ultimo, in accordance with the request contained in your letter of the 4th ultimo, to enable you to prepare the contract between the Government and Sir S. M. Peto, Brassey, and Betts, I am directed by the Commissioner to request that you will have the goodness to complete the contract and bonds as early as possible, as it is desirable that these documents should be executed before any payment is made to the contractor, who is pressing for money.

I am to add, that Mr. Rhodes verbally informed me that Mr. Want, his attorney, will furnish you with the names of the sureties.

I have, &c.,
JOHN RAE,
Secretary.

No. 16.

CROWN SOLICITOR to SECRETARY TO RAILWAY DEPARTMENT.

*Crown Solicitor's Office,
11 August, 1859.*

SIR,

I have the honor to enclose, for the perusal of the Commissioner for Railways, a draft of the agreement proposed to be made with Messrs. Peto, Brassey, and Co, for the extension of the Great Southern Railway.

In it I have incorporated from the fourth to the fourteenth clauses of the specification, as they are clearly not specifications of the work to be done, but stipulations as to the manner in which it shall be done, and provisions against possible default, and therefore are more correctly part of the contract for the performance of the works.

If you will return the draft to me when perused by the Commissioner, I will forward it to Mr. Want, who will act for Mr. Rhodes.

Mr. Want proposes Mr. Rhodes and Mr. Willcox as sureties for the due performance of the contract;—will you inform me if they will be accepted?

I have, &c.,
JOHN WILLIAMS.

No. 17.

SECRETARY TO RAILWAY DEPARTMENT to S. WILLCOX, ESQ.

*Railway Branch,
Department of Internal Communication,
Sydney, 11 August, 1859.*

SIR,

In further reference to your letter of the 6th ultimo, declining on the part of Messrs. Peto, Brassey, and Betts, to undertake the completion of the line between the 21.60, and 25.30 miles of the Great Northern Railway, on the terms named by the Commissioner in his letter to you of the 5th ultimo, I am directed by the Commissioner to inform you, that the correspondence has been laid by him before the Government, and that it has been determined that the minor contracts already entered into shall be carried out by this department direct. In reference to the concluding part of your letter I am to observe, that the Commissioner can find nothing in the terms of the contract entered into with Sir S. M. Peto and Co. that should have induced you to believe that before the 6th ultimo you would have been able to commence the works between Lochinvar and Singleton; and to inform that Mr. Rhodes has now received the plans of the whole of the Southern and Western Extensions at present authorized; that the plans of part of the Northern line will be handed over to you early next week, and the remainder as soon as they are completed and have been proclaimed.

I have, &c.,
JOHN RAE,
Secretary.

No. 18.

No. 18.

SECRETARY TO RAILWAY DEPARTMENT to S. WILLCOX, ESQ.

*Railway Branch,
Department of Internal Communication,
Sydney, 16 August, 1859.*

SIR,

In reference to your letter of the 26th ultimo, stating that you are willing to undertake, on behalf of Messrs. Peto, Brassey, and Betts, the following works, including the supply of materials, on the Extension from Lochinvar to Singleton of the Great Northern Railway, viz. :—

1. Fencing, at per rod, 10s. ;
2. Clearing the line, per acre, £7 ;
3. Sleepers delivered, 3s. each ;—

I am directed by the Commissioner to inform you, that he has referred your tender to the Secretary for Lands and Public Works, and that the Government cannot accede to the terms for the fencing, sleepers, and clearing contained therein ; but that, to avoid the delay of procuring public tenders, Mr. Whitton has been directed to submit arrangements for the execution of the fencing at once, by procuring offers on the spot ; also, to fix a price on the spot for clearing, dividing the length into sections—and that the sleepers will be procured by public tender.

I have, &c.,
JOHN RAE,
Secretary.

No. 19.

SECRETARY TO RAILWAY DEPARTMENT to CROWN SOLICITOR.

*Railway Branch,
Department of Internal Communication,
Sydney, 16 August, 1859.*

SIR,

In reference to your letter of the 11th instant, enclosing, for the perusal of the Commissioner, a draft of the agreement proposed to be made with Messrs. Peto, Brassey, and Co., for the extension of the Great Southern Railway, I am directed to return you herewith the draft, as revised, with general instructions, and specifications A, C, D, E, and Schedules B and F, and to request your early attention to the matter.

I am to add, that the Commissioner has submitted the names of Messrs. Rhodes and Willcox to the Secretary for Lands and Works, who has approved of them, as sureties for Messrs. Peto, Brassey, Betts, and Co.

The Commissioner presumes that you have satisfied yourself that Mr. Rhodes has full power to act, and suggests that the power of attorney in his favour, or a certified copy of it, should be obtained, and lodged with the Crown Law Officers, or the Commissioner for Railways.

I have, &c.,
JOHN RAE,
Secretary.

No. 20.

SECRETARY TO RAILWAY DEPARTMENT to ENGINEER-IN-CHIEF.

*Railway Branch,
Department of Internal Communication,
Sydney, 16 August, 1859.*

SIR,

I am directed by the Commissioner to inform you, that having laid before the Secretary for Lands and Public Works the difficulties that might arise from the delay in proceeding with the fencing along the line of Railway between Lochinvar and Singleton if tenders were called for, Mr. Secretary Robertson has sanctioned the Commissioner causing this service to be executed by private arrangement. I am therefore to request that you will submit for approval, at your earliest convenience, the names of the parties by whom, and the price at which, you could arrange to have this work executed, between Lochinvar and Black Creek, and between Black Creek and Singleton, but that you will not conclude any arrangements without further instructions.

I am to bring under your recollection the tender once made, but since withdrawn by Mr. Miller, to erect this fencing at 7s. 6d. per rod. I am further to inform you that, in accordance with the Commissioner's recommendation, the Secretary for Lands and Public Works approves of a price being fixed on the ground for clearing the line, dividing the length into sections, in preference to accepting Mr. Willcox's offer of £7 per acre ; and I am to request that you will arrange accordingly, reporting the measures you adopt. I am to suggest that it is desirable, if fair terms can be made, that this work should be done by Mr. Willcox. Tenders will be called for for the sleepers required for this extension.

I have, &c.,
JOHN RAE,
Secretary.

No. 21.

S. WILLCOX, Esq., to COMMISSIONER FOR RAILWAYS.

*Great Northern Railway,
East Maitland, 20 August, 1859.*

SIR,

In answer to your letters of the 11th and 16th instant, I beg to call your attention to paragraph 3 of Mr. Rhodes' letter to you of the 21st April last, as to the time within which the Government were to furnish the plans and sections of the lines to Messrs. Peto and Co., and to paragraph 2 of your letter of the 25th April to Mr. Rhodes; also to your letter of the 26th April to Mr. Rhodes, giving the additional line between Campbelltown and Menangle.

From these I have certainly been induced to believe, that the plans, &c., for fifteen miles of line, exclusive of the piece between Campbelltown and Menangle, should have been delivered on the 21st June last, and the whole for the entire lines were to have been delivered to Messrs. Peto and Co. by the 21st ultimo.

I must also call your attention to your letter of the 15th April, in which you will find the following passage:—"The whole of the works, of whatever nature and description, required in making the extensions, shall be included in the contract;" and although it certainly adds, "that should the Government and the contractors not agree as to prices not specified in the schedule, the Government retain the right of otherwise executing the work," this was consented to under the supposition that a price would not be offered which would leave Messrs. Peto and Co. no profit, if the value of their superintendence and responsibility is to be at all considered. It certainly was not at all understood, when Messrs. Peto and Co. were invited to this Colony, that the work should be done by tender, still less that portions of the work intrusted to them should be taken away from them and be offered to public competition. It would be (it is well known) to the interest of some persons to tender for the performance of certain small matters at a loss, to interfere with Messrs. Peto and Co.'s working.

I feel compelled further to state, that I consider the treatment of the Government towards Messrs. Peto and Co. has not been characterized with that liberality and fairness to which they are entitled.

I have, &c.,
SAML. WILLCOX.

No. 22.

SECRETARY TO RAILWAY DEPARTMENT to S. WILLCOX, Esq.

*Railway Branch,
Department of Internal Communication,
Sydney, 2 September, 1859.*

SIR,

In reply to your letter of the 20th, received on the 25th ultimo, I am directed by the Commissioner to state, that he was not present at the interview between the Government and Mr. Rhodes, alluded to by Mr. Rhodes in his letter of the 21st April, but that he understands that no stipulation was made that the 15 miles were to be exclusive of the section between Campbelltown and Menangle.

You have already been made fully acquainted with the reasons why the whole of the plans could not be delivered to you on the 21st July, and with the efforts made to deliver them as rapidly as possible.

The Government were entirely disposed to leave the whole of the works in the hands of Sir S. M. Peto and Co.; but the prices at which you tendered to execute the fencing and provide the sleepers were so far in excess of what these services could be carried out for, that it was not possible for the Government to grant them.

The price for fencing named to you was 7s. 6d. per rod. Offers have since been received to execute it at 8s. per rod; but should you feel disposed to tender under this, it is still open for you to do so.

No work whatever included in that for which the Government undertook to enter into negotiations with Sir M. Peto and Co., in case of an Agent having been sent to the Colony, has been let by tender or public competition, until the endeavours made to arrange with Sir S. M. Peto and Co.'s Agents for its execution have failed, and fair prices have in every case been offered to them for the work.

The Commissioner must, in the strongest terms, repudiate any allegation that the treatment of the Government towards Messrs. Peto and Co. has not been characterized with that liberality and fairness to which they were entitled. On the contrary, every consideration which the Government could shew, and every facility which they could give, have been freely rendered to their agents.

I have, &c.,
JOHN RAE,
Secretary.

Crown Solicitor.

No. 27.

No. 27.

SECRETARY TO RAILWAY DEPARTMENT to S. WILLCOX, Esq.

*Railway Branch,
Department of Internal Communication,
Sydney, 22 September, 1859.*

SIR,

I am directed by the Commissioner to transmit to you herewith, a copy of the working plan and section of that portion of the Great Northern Railway from West Maitland to Singleton, extending from Black Creek to Singleton, being a distance of fourteen miles and ten chains.

I have, &c.,
JOHN RAE,
Secretary.

P.S.—The disposal of earth-work will be forwarded to-morrow.

No. 28.

S. WILLCOX, Esq. to COMMISSIONER FOR RAILWAYS.

Singleton, 26 September, 1859.

SIR,

I beg to acknowledge receipt of the plan and section of that portion of the line between Black Creek and Singleton.

I observe that the sides of the cuttings through rock on the above length are shewn to be perpendicular, and on the Lochinvar and Black Creek $\frac{1}{2}$ to 1. This I beg to state is contrary to what was understood when the prices were settled, and the price agreed upon for rock was supposing the slopes to be formed not less than 1 to 1.

The sections forwarded to London show that all cuttings shall have slopes of 1 to 1, and on that basis the price was given. I must further observe that your other lines are executed in this manner.

I need not remind you that it is much more costly to take out the middle of a cutting than to take off the sides where the gullet is through, and though I shall be happy to execute the work as directed, I shall be glad to know the system of measurement you propose to adopt. If the actual dimensions are to be taken, I beg to give notice that I shall expect an additional price, based on that agreed on for rock cuttings with slopes 1 to 1.

Or I am willing to accept the customary mode of taking the cube of the cuttings through rock, supposing the slopes to be $\frac{1}{2}$ to 1, whether excavated more or less upright.

I have, &c.,
SAML. WILLCOX.

No. 29.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,
Sydney, 26 September, 1859.*

Messrs. Peto & Co., and the Commissioner for Railways.

SIR,

Mr. Want has returned the specifications in two of these contracts, with a letter, in which he takes exception to the terms of the agreement and specification. I forward his letter and the specifications to you, for your perusal, and will send you the agreement and third specification as soon as I receive them from Mr. Want, to whom I have made application for them.

I have, &c.,

[Enclosure 1 in No. 29.]

Sydney, 22 September, 1859.

In the matter of Peto, Brassey, and Betts' Contract with the Commissioner of Railways.

Dear Sir,

I return herewith the agreement and specifications, with such alterations as Mr. Rhodes and Mr. Willcox have suggested.

1. One principal and general objection is, that the contract is unnecessary,¹ as the agreement is fully set out in the correspondence which has taken place between Mr. Rhodes and the Government, which appears to me to be amply sufficient for the protection of both parties.

2.

¹ May not be absolutely necessary, but is customary, and useful for reference.

2. The specification is an unusual² proceeding in extensive contracts, the contractors of which are bound by the terms of the agreement to perform their work satisfactorily before receiving payment; and although in little contracts a contractor may put himself entirely at the mercy of the Engineer,³ it cannot be so expected in large ones. Indeed, in a late case in England, the Judges animadverted strongly upon the folly of persons entering into such one-sided contracts.

3. Mr. Rhodes is, however, prepared to enter into any agreement, on the part of Messrs. Peto, Brassey, and Betts, which shall have the effect of binding them to perform the work in a satisfactory manner.

4. I cannot conceive the necessity of repeating clause⁴ by clause the same matters in both the agreement and specification; I have therefore struck out one set of clauses from the specification, leaving corresponding ones in the agreement; but it is immaterial to me whether they shall be in the specification or in the agreement.

5. We agree to paragraph No. 1, except that the contractors will not bind themselves to complete by the time mentioned; as, by the delay of the Engineer in not delivering the plans according to agreement (the whole of which even at the present time are not delivered),⁵ they cannot now fix the amount of damages⁶ they have sustained, nor the extra time they may require in consequence.

6. The last three months, it will be remembered, have been most favorable for them, but this may not continue.⁷

7. They will, however, do their utmost to complete the Contracts within the time, if possible, provided they have a sufficiency of rails and chairs.⁸

8. The Contractors would prefer that the Chief Commissioner⁹ should be the person to whose satisfaction the work should be done, subject, nevertheless, to the arbitration¹⁰ clause, in case of difference, as hereinafter contained.

[No. 2.]

9. For wrought iron straps, bolts, &c., substitute "ironwork, including nuts, bolts, and straps," as stated in the Schedule, which therefore comprises every description of iron-work.¹¹

10. I propose to strike out the words, "The Commissioner for Railways may, in such way as he may think fit, cause the said works to be constructed without reference to the said contracts,"¹² and substitute the following words, "The contractor shall execute the same to the satisfaction of the Chief Commissioner, and the price, in case of difference, shall be decided by arbitration, in manner hereinafter mentioned."

[No. 3.]

11. This clause must be struck out. It is at direct variance with the agreement contained in the correspondence, and would give the Engineer power to dismiss Mr. Willcox or Mr. Rhodes.¹³

[No. 4.]

12. The Contractors cannot accede to this clause; *First*—Because it substitutes an *indefinite* period for the delivery of possession of the railway land for the *definite* term¹⁴ before agreed to; *Secondly*—With respect to the liability for damages, occasioned by the destruction of the original fences referred to in this clause, the Contractors cannot undertake this liability, as, on a large portion of the line, the Government have taken the fencing¹⁵ into their own hands, and if it should be necessary in the formation of the line to pull down the

² I have never known a contract for Government works without a specification, and never could give my sanction to the present works being carried on without one.

³ The Contractor is not at the mercy of the Engineer. All Government officers are, of course, subject to its control, and to the Government the Contractor can always appeal.

A similar specification to those prepared for the present works was sent to Sir S. M. Peto and Co., and not objected to. It has been throughout laid down that the work was to be done according to the specifications, and I cannot assent to their being now abandoned.

⁴ I can see no objection to the clauses being repeated, with the exception only of the extra amount of writing, which can be of no moment.

⁵ The whole of the plans and sections for the authorized line have been sent to the contractors, the last having been sent on the 23rd instant. I have already recommended the Government to give an extension of time equal to any delay in the plans being given.

⁶ If I am to understand by this that the contractors intend to claim damages, the sooner that intention is openly avowed, and the question whether any are due is determined, the better.

⁷ I cannot see that this is of any moment in a contract extending to June, 1861.

⁸ The amount of rails and chairs furnished by the Government must not be mixed up with the time for the completion of the works. If the Government cannot spare what the contractors think sufficient, it is their place to find more.

⁹ Such a provision would be of no force in law, as the Commissioner is, under the Act, one of the contracting parties.

¹⁰ Arbitration was most deliberately given up by Mr. Rhodes, after prolonged discussion with the Government, and I cannot assent to it for a moment.

¹¹ Certainly not; under this Mr. Rhodes might claim 6½d. per lb. for wrought iron bridges or heavy castings, which is simply absurd.

¹² In other words, ALL the works must be done by Sir S. M. Peto & Co.'s assistants, at their own price, or under an arbitration clause! I dissent.

¹³ Clause can be amended so as to except these gentlemen. The Engineer must have the protection this clause—which is usual—affords him.

¹⁴ No alteration has been made in the clause, and no definite term was ever agreed to; but the Contractors have possession of all, or all but all, the land, and no delay has been, or can arise from this cause.

¹⁵ Where the Government have taken the fencing into their own hands the Contractors cannot be held liable for injuries sustained owing to the fencing not being erected, but they must be for any damage done by themselves, their agents, or workmen.

the cross fences, the Government may not have their side fencing performed, and the Contractors would in fact render themselves liable for the default of the Government; *Thirdly*—They cannot be liable for any damage done by their workmen, except by their order, or in the prosecution of works by their order.¹⁶

13. Mr. Rhodes and Mr. Willcox object also to the last part of the clause, which provides that the work shall be *set out* for the contractors, and that if the work is incorrectly *set out*, they are to be liable for the error of the Government.¹⁷

I have no objection to agree that the work shall be properly executed *according to such setting out*, and that if it should be improperly set out and require alteration, it must be at the expense of the Government, by whose fault it occurred.

We need not anticipate that the Government Engineers will set out the work improperly, but certainly if they do, they, and not we, should bear the loss. We shall also require to be furnished with the length of piles.¹⁸

14. We refuse to accede to this.¹⁹ [No. 5.]

15. Agreed to.²⁰ [No. 6.]

16. Objected to, for reasons stated as to clause No. 1.²¹ [No. 7.]

17. Nos. 8, 9, 10, 11, 12, agreed to.²²

18. In 13th, substitute the following:—"If, from any delay, default, or other cause whatsoever on the part of the Commissioner for Railways, the progress of the said works shall be stopped or retarded, the Contractor shall be allowed such further or other time as may be equivalent to the time so lost, calculated with reference to the price of labor and state of the labor market at the time of the loss, and be also entitled to such compensation for the loss and damages occasioned by such delay, to be decided on by arbitration in case of difference."²³

19. Substitute the Chief Commissioner²⁴ for the Chief Engineer, and provide that it shall not be a condition precedent to the Contractor's right to recover from the Government, either by arbitration or in the Courts of Law.²⁵ [No. 14.]

20. In the paragraph relating to the payment for the work I propose to add, after the words "Schedule hereto annexed," the words "or where there shall be no prices fixed in the Schedules, then a fair and reasonable sum for the works so performed."²⁶

21. I also propose to alter the succeeding paragraph as to the rails, namely,—that the Contractor shall be allowed all such rails and chairs as may be necessary for the performance of the works. Mr. Rhodes informs me that he always expected this, and that he could not have tendered at the price he did unless he felt sure that he would be allowed them, and he further informs me that the works cannot be done within four years unless he has them.²⁷

22. I propose to add to this clause the usual and customary clause, and which I have extracted from a specification of Mr. Lock, the President of the Institution of Engineers in England²⁸:—"It is intended to lay a single line of railway. The rails, chairs, spikes, keys, and sleepers will be furnished by the Commissioner for Railways, and delivered to the Contractor. The Contractor will be required to give a receipt for them at the time of delivery, and must be responsible. Should any of the rails or other materials be in any way injured by temporary purposes, the Contractor shall compensate the Commissioner for the whole amount of the injury done."

Or the following one from the specification of Mr. Jee, an engineer of great practice and repute:—"The rails will be used temporarily during the formation of the cuttings and embankments, for the purpose of conveying the materials. They must, however, be kept in good repair and condition, so that the rails may not be injured, and they will not be allowed to be used within 100 feet of any face in the cutting, but, for this purpose, temporary rails will be provided by the Government (Spanish.)"

In

¹⁶ Who then is to be liable? Surely not the Government.

¹⁷ I dissent generally from any deviation from the existing contract and specifications, but it may be arranged that the Contractors shall set out their own work according to plan and section, and be responsible for it.

¹⁸ I cannot assent to giving length of piles, for the reasons which I have already given to the Government.

¹⁹ I cannot give this clause up.

²⁰ Noted.

²¹ See remarks on clause 1.

²² Noted.

²³ I dissent to the alteration.

²⁴ Such a provision would be of no force in law.

²⁵ I certainly object to this. The very object of the clause is to avoid law and arbitration.

²⁶ Certainly not. Full provision is made in existing contract in respect to price not included in schedule.

²⁷ I dissent. Mr. Rhodes has never had any right to expect this, and other contractors can do, and do, similar work at the same prices as Mr. Rhodes, without any of the facilities given to him by the Government lending him, as agreed upon, such rails and chairs as they can spare. If Mr. Rhodes wants others, he is bound to find them at his own expense, and to complete the work in the time agreed on.

²⁸ Mr. Rhodes, on behalf of Sir S. M. Peto and Co., is the contractor for the sleepers, except on the Northern line, where the Government will provide them. To the remainder of the clause I dissent.

In connection with the question of rails, and in order that there may be no mistake as to a custom universally practised in England, I propose the following clause:—

23. The Contractors are to be at liberty²⁹ to lay the permanent road on formation whenever a quarter of a mile of formation is done, and the Contractor shall also be allowed to use such permanent road, without any charge being made for the use of the same.

24. The price for the damaged rails should not be their cost in the Colony³⁰ except when new rails are given, but the value of such rails as fixed, and on which the ten per cent. is payable; no interest to be charged for the rails when laid permanently, and all rails must be delivered at the terminus to the contractor.³¹

25. With respect to the payment of the final ten per cent., which is made payable on the certificate of the Engineer only—I have no objection to this, provided that the obtaining his certificate shall not be made a condition precedent to their right to recover from the Government the amount claimed to be due by them, in the event of the Chief Engineer, from any particular motive, refusing to give such certificate.³²

26. The certificate to be given as soon as any one of the four portions contracted for is ready for public traffic as far as the contractors are concerned.³³

27. In the event of dispute, all matters to be referred to arbitration to one person to be named by the Government, one person to be named by the Contractors—these two to select a third arbitrator, who shall decide in case of difference.³⁴

J. Williams, Esq.,
Crown Solicitor.

I have, &c.,
R. J. WANT.

[Enclosure 2 in No. 29.]

No. 139, Pitt-street,
22 September, 1859.

Dear Sir,

My clerk forgot to copy the following termination to my letter, which I now send, and beg that it may be taken as part of my letter of this date:—

28. As we are now about reducing into writing the whole of the matter, whether understood or otherwise, it will be necessary to alter the Schedule³⁵ with a view to fixing the length of lead, which is not to exceed half a mile—little more or less; and that, in the event of rock being hard rock, such as granite, a different price is to be paid as verbally arranged.

The above observations are all that suggest themselves to me at the present.

If you concur in them, and return me the draft so altered, I will then give a final approval.

J. Williams, Esq.,
Crown Solicitor.

I am, &c.,
R. J. WANT.

SECRETARY TO RAILWAY DEPARTMENT to CROWN SOLICITOR.

Railway Branch,
Department of Internal Communication,
Sydney, 27 September, 1859.

SIR,

I am directed by the Commissioner to acknowledge the receipt of your letter of yesterday's date, and to inform you that the correspondence has been referred to the Secretary for Lands and Public Works.

I have, &c.,
JOHN RAE,
Secretary.

No. 31.

²⁹ I dissent.

³⁰ This would open interminable questions as to what were old and what new rails. I certainly cannot agree to this.

³¹ Yet it is proposed that the contractor should use them for temporary purposes, and to have the carriage paid for him by the Government from Sydney, or any station to any point!!! I cannot agree.

³² I dissent to the alteration.

³³ I dissent from any alteration.

³⁴ I dissent, for reasons already given, most strongly.

³⁵ I cannot, for one moment, consent to alter the Schedule, and I may add that I would never have concurred in recommending the Government to give Mr. Rhodes the prices agreed to, except on the conditions at the time agreed upon.

B. H. MARTINDALE.

JOHN WILLIAMS,
Crown Solicitor.

No. 39.

COMMISSIONER FOR RAILWAYS to S. WILLCOX, ESQ.

*Department of Public Works,
Sydney, 29 December, 1859.*

SIR,

I have laid your letter of the 26th September last, relative to the cuttings through rock, before the Secretary for Public Works, and I am directed to inform you that you must be under a misapprehension when you state that the price for such cutting was agreed upon on the understanding that the slopes to be formed were not to be less than 1 to 1, as there was no such understanding. The price was fixed without any reference whatever to the character of the slopes, and I am to state that no addition whatever can be allowed to the contract price.

2. At the same time I am to observe that Mr. Secretary Eagar concurs in a suggestion offered by me, that if, on arranging for ballasting the permanent way, anything can be done to meet the difficulties you feel about the cuttings, the Government will be then prepared to consider the matter.

I have, &c.,
B. H. MARTINDALE.

No. 40.

S. WILLCOX, ESQ., to COMMISSIONER FOR RAILWAYS.

*Great Northern Railway,
West Maitland, 3 January, 1860.*

SIR,

I am in receipt of your letter of the 29th ultimo, in reply to mine of the 26th September last, and beg to say that I am under no misapprehension when I state that the price for rock cuttings was agreed upon on the understanding that the slopes should be formed not less than 1 to 1.

The trial sections (the only plans given to us when the price was agreed on) distinctly state that the slopes of cuttings should be 1 to 1, and further, when Mr. Rhodes went over the lines in course of construction before taking the contract, he was informed that the cuttings on the sections for which he was about to give a price would be executed in a similar manner. Upon the lengths above mentioned, no cuttings are excavated in the way you now propose for those on the Singleton extension.

With regard to the 2nd paragraph of your letter, I have to observe, that although you may consider the flattening of the slopes in connection with the ballasting and permanent way, I consider them entirely distinct questions, and feel compelled again to give notice that I shall either expect an increase in the price of the rock cuttings, or the customary mode of measurement, as stated in my letter of 26th September.

I must also observe, that from your long silence, and from the conversation we had on the subject, at our interview with Mr. Secretary Robertson in October last, I felt convinced that you saw the justice of my claim, or I should not have commenced the works before having the question settled.

To avoid further discussion on the subject, I am very willing to leave the matter to the decision of some disinterested and competent person, and trust you will see no objection to this fair proposition.

I have, &c.,
SAMUEL WILLCOX.

RAILWAY CONTRACTS.

19

No. 41.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,**Sydney, 4 January, 1860.*

Messrs. Peto & Co.'s Contracts.

SIR,

I have the honor to forward to you herewith, for your information, a letter that I yesterday received from Mr. Want, solicitor, relative to these contracts, and which letter you will, if you please, return to me at your convenience.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

[Enclosure in No. 41.]

Sydney, 31 December, 1859.

Messrs. Peto & Co. and Commissioner for Railways.

Sir,

I return you herewith the four several agreements accompanying your letter of the 5th December instant.

Mr. Rhodes declines signing them, as they do not embody the terms of the agreement under which the works are now being carried out.

I can only repeat that Mr. Rhodes is willing to sign any contract which shall fully carry out his agreement.

You are aware that since my letter to you of the 22nd September last, returning your draft contracts and specifications, various interviews have taken place and communications have been made between Mr. Rhodes and the Government, but as these were without prejudice, I am restrained from alluding to what took place at these meetings. As, however, these communications have enabled me to understand more clearly the views of the Government, I am induced now, on Messrs. Peto's behalf, still further to modify the terms of my letter to you of the 22nd September, upon the following points.

For more easy reference in referring to clauses, you will understand I am alluding to the agreement for extension of Southern Railway to Picton. The same suggestions will of course apply to the similar clauses in the three other agreements and specifications.

In addition to the objection contained in my previous letter to clauses 2 and 5, I think it right to inform you, that in the first negotiation with the Government for this contract, it was proposed that the work should be done in 20 months, and that Peto & Co. refused to accede to this proposition unless they were specially authorized to stop the works whenever the price of labour or other causes should arise, which, in their opinion, rendered it necessary for them to do so, and that in such case they should have an extension of time.

Long negotiations took place, and the contract was on the point of being abandoned, when it was agreed that 26 months should be allowed to them. This extension of time was given in order that they might perform the work in their own manner, and at such a rate as they should think necessary.

The proposition, therefore, that Peto & Co. shall do the work in such a manner, and employ such men, and proceed at such a rate as the Engineer should direct, would in fact neutralize entirely the agreement between them and the Government.

As Messrs. Peto's profit depends on the rapidity with which the works are performed, the Government have a sufficient guarantee for their diligence, independently of their position and character as contractors.

With reference to clause 7—this must of course depend upon the time when Peto & Co. are furnished with the plans of the bridges, the delay in the providing of which is a matter of very serious loss and inconvenience to them, and they will claim damages from the Government for their breach of contract in this respect.

Messrs. Peto would have no objection to waive the price in the schedule for iron, in respect of the construction of a tubular bridge, provided a satisfactory agreement as to price should be arrived at, otherwise they will not vary the schedule.

John Williams, Esq.,
Crown Solicitor.

I am, &c.,
R. J. WANT.

No. 43.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,
9 January, 1860.*

Messrs. Peto's Contract.

SIR,

I have the honor to enclose for your perusal a letter from Mr. Want, received by me this morning.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

[Enclosure in No. 43.]

Sydney, 6 January, 1860.

SIR,

I have been requested by Mr. Rhodes to make the following propositions to you, and which I request you will consider as incorporated in my letter of the 31st December last.

Mr. Rhodes' object is to clear away as many difficulties as possible, with a view, if possible, of coming to terms, as to the agreement to be signed by him, with the Government.

Mr. Whitton and Mr. Rhodes differ as to the understanding as to the mode in which the plate-laying and ballasting was to be carried out: Mr. Rhodes' offer being to do it according to the verbal understanding between him and the Engineer; the Engineer contending that it was to be done according to a specification to be sent to us.

A somewhat similar understanding also exists as to the fencing.

Under these circumstances, it cannot be considered that any final agreement has been entered into on the subject of your letter of the 23rd June; and therefore he desires me to say, that he considers all negotiation as to prices for extra work, contained in that letter, terminated, and the Government shall be at liberty to do the work themselves.

Mr. Rhodes hopes that this concession on his part will shew the Government his desire to remove a difficulty in the way of arriving at an agreement as to the terms of the contract.

John Williams, Esq.,
Crown Solicitor.

UNDER SECRETARY FOR PUBLIC WORKS to S. WILLCOX, ESQ.

*Department of Public Works,
Sydney, 21 January, 1860.*

SIR,

I have laid before the Secretary for Public Works your letter of the 3rd instant, in reply to mine of the 29th ultimo, relative to your claim for additional prices for cutting rock, if the slopes are to be less than one to one; and Mr. Secretary Eagar desires me to inform you that the measurement for rock cutting can only be taken and payments made in accordance with contract.

I have, &c.,
GERALD HALLIGAN,
For the Under Secretary.

No. 46.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,
Sydney, 2 February, 1860.*

Messrs. Peto's Contract.

SIR,

I have the honor to forward to you, herewith, a copy of a letter that I have received from Mr. Want, by way of reply to a letter I wrote to him on the 25th ultimo.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

[Enclosures]

[Enclosures in No. 46.]

Crown Solicitor's Office,
Sydney, 25 January, 1860.

Sir,

I beg to inform you that I have been instructed by the Honorable the Secretary for Public Works to inform you, that the Government cannot consent to release Sir M. Peto and Co. from the contracts mentioned in your letter dated the 6th instant; and that it is a matter of surprise that the desire of Mr. Rhodes to be released from these contracts should be put forward as a concession.

I am, &c.,

JOHN WILLIAMS,
Crown Solicitor.R. J. Want, Esq.,
Pitt-street.

Sydney, 31 January, 1860.

Sir,

I have to acknowledge the receipt of your letter of the 25th instant, informing me that you had been instructed by the Honorable the Secretary for Public Works to inform me that the Government could not consent to release Sir M. Peto and Co. from the contract mentioned in my letter dated the 6th instant, and that it was a matter of surprise that the desire of Mr. Rhodes to be released from these contracts should be put forward as a concession.

In reply, Mr. Rhodes has desired me to say that, notwithstanding the Honorable Secretary's interpretation of his letter, he does consider that his assenting to that part of the proposition contained in Mr. Fitzpatrick's letter of the 25th October, 1859, as to the making void the contract relative to ballasting and plate-laying, is a concession on his part.

It is possible that Mr. Secretary Eagar may not be aware of the particulars relating to this transaction, and I will therefore briefly state them.

Before tendering for the plate-laying and ballasting, a conference took place between Mr. Whitton and Mr. Rhodes, as to the mode in which it should be done. Upon this occasion Mr. Rhodes offered to perform the contract, if it were done in a particular way, and with particular materials (and Mr. Rhodes desires me to say, that the way he proposed would be superior to any similar work performed in the Colony, and equal to any in England), for seventeen shillings and sixpence per yard.

Mr. Rhodes, in tendering for this work, in his letter of the 14th July to Capt. Martindale, used the following words:—"I am willing to perform the work of laying and ballasting the permanent way in the manner and according to the verbal understanding between myself and the Chief Engineer, at the rate of seventeen shillings and sixpence."

Captain Martindale, in his letter of the 23rd June, does not in terms accept the contract, but says he has written to the Government for their approval as to certain items, and amongst them was the "laying and ballasting the permanent way complete, according to specification, at seventeen shillings and sixpence." Here the matter, so far as contract is concerned, rests.
