Mr. Rhodes presumes, naturally, that if his offer is accepted, it must be for the performance of the contract according to the verbal understanding, which was to be embodied in a specification to be prepared.

Mr. Whitton, on the contrary, I understand, disputes the verbal understanding, and contends that Mr. Rhodes tendered according to any specification he might prepare.

In consequence of the misunderstanding between the parties, it was thought advisable that all parties should be placed in *statu quo*, a course certainly more favorable to the Government than to Mr. Rhodes, who has already incurred expense in anticipation of the contract.

That this was the view of the Government appears by Mr. Fitzpatrick's letter of the 25th October, in the 16th paragraph of which he says,—“The portion of the contract relating to ballasting to be considered as void, but Messrs. Peto & Co. to be required to stack any stones or other materials from the cuttings that the Government may require, on payment of, say sixpence per yard for such stacking.”

Mr. Rhodes at first declined this offer, but subsequently on further consideration thought it better to concede the point, rather than there should be any dispute as to the verbal understanding, which, however, he is in a position to prove.

Mr. Rhodes is willing to perform the plate-laying and ballasting according to what he conceives to be the verbal understanding between him and the Government, or if this is disputed, to leave the matter as if no tender had been made.

J. Williams, Esq.,
Crown Solicitor.I have, &c.,
R. J. WANT.

No. 47.

S. WILLCOX, Esq. to COMMISSIONER FOR RAILWAYS.

Great Northern Railway,
West Maitland, 8 February, 1860.

SIR,

In reply to your letter of the 21st ultimo, relative to rock cuttings with slopes less than 1 to 1, I beg to state that I think Mr. Secretary Eagar cannot understand the question when he states "that the measurements for rock cuttings can only be taken, and payments made, in accordance with contract." To what contract does he refer? I contend that we have no contract for the execution of rock cuttings in the manner proposed on the Singleton extension, and I must again repeat that if the rock cuttings are executed with slopes less than 1 to 1, I shall insist on extra payments on them.

I have, &c.,
SAML. WILLCOX.

No. 48.

No. 48.

COMMISSIONER FOR RAILWAYS to S. WILLCOX, Esq.

*Department of Public Works,
Sydney, 15 February, 1860.*

SIR,

In acknowledging the receipt of your letter of the 8th instant, in which you inquire to what contract my letter to you of the 21st ultimo, relative to rock cutting, refers, as you are not aware of the existence of any contract for the work in question, I am directed to inform you that reference was made to the contract contained in the correspondence between the Government and Mr. Rhodes, and I am now to repeat that payment can only be made under that contract.

I have, &c.,
B. H. MARTINDALE.

No. 49.

S. WILLCOX, Esq., to COMMISSIONER FOR RAILWAYS.

*Great Northern Railway,
West Maitland, 3 March, 1860.*

SIR,

In reply to your letter of the 15th ultimo, I beg again to state that the price for rock cuttings, given in the correspondence between the Government and Mr. Rhodes, was agreed to, with the understanding (written and verbal) that the slopes of the cuttings should be 1 to 1. This I proved to you when you were last at Singleton.

The alteration made in the plan of executing the cuttings of this line much increases their value, and I cannot comprehend the reason of your objection to pay an additional price.

It appears to me most unfair that you should refuse my offer of referring the matter to arbitration.

I must further state, that I will not execute the cuttings in the manner proposed, at the price mentioned in the correspondence to which you refer, for the reasons before stated, neither will I hold myself responsible for the delay occasioned in the progress of the works in consequence of the non-arrangement of this question.

I have, &c.,
SAML. WILLCOX.

No. 50.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,
21 July, 1860.*

SIR,

I have the honor to return, herewith, the papers sent to me this morning, in reference to the payment about to be made to Mr. Willcox, under certificate of 2nd July instant, for works done at the Great Northern Railway, and to state that I am of opinion that the receipt, as altered by Mr. Willcox, is a sufficient acknowledgment of the receipt by him of the sum therein contained.

The Commissioner is only entitled to a receipt for the amount paid, and cannot, I think, claim as a matter of right to have inserted a statement that such payment is in full for the account upon which the receipt is given.

In the account I notice that the ten per cent., which by the agreement of the parties is to be retained by the Commissioner until the final completion of the works, is deducted, and the balance to be paid is shewn less that amount. Mr. Willcox therefore, I should suppose, might, with perfect safety, sign the receipt in its original form; the payment will in fact be in full for that account, although not in full for the work done, but he cannot be obliged to do so, and his refusal will not justify the Commissioner in declining to pay him.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

No. 51.

S. WILLCOX, Esq., to COMMISSIONER FOR RAILWAYS.

Sydney, 6 August, 1860.

SIR,

I have the honor to inform you that Mr. Rhodes has resigned his functions as Agent for Messrs. Peto, Brassey, and Betts, and is returning to England.

It is my intention now to take over the Southern and Western lines, as the lawfully constituted Attorney of Messrs. Peto and Co., and in future I have to request that all communications in respect to these lines may be addressed to me.

The Power of Attorney so constituting me to act in the event which has taken place, has been sent to you for perusal, and I believe you have a copy.

I have, &c.,
SAML. WILLCOX.

No. 52.

No. 52.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,
Sydney, 14 August, 1860.*

Messrs. Peto and the Government.

SIR,

I have the honor to inform you, in reply to the query contained in your minute of this day's date, that I have perused the accompanying certified copy of Power of Attorney, of date 2 March, 1859, executed by Sir S. M. Peto & Co., E. L. Betts, and T. Brassey, in favour of Samuel Willcox, and that I am of opinion that if Mr. Alexander Rhodes has expressed in writing his unwillingness and his intention not to act further as the Agent of Sir M. Peto & Co. in this Colony, under the Power of Attorney from that firm to him of date 5 January, 1859, and has left this Colony with the intention of returning to England, the Government may recognize Mr. Willcox as the Agent, in this Colony, of Peto & Co., for the purposes referred to in the certified copy Power of Attorney above alluded to.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

No. 53.

COMMISSIONER FOR RAILWAYS to S. WILLCOX, ESQ.

*Railway Branch,
Department of Internal Communication,
Sydney, 22 August, 1860.*

SIR,

I have laid before the Secretary for Public Works your letter of the 6th instant, stating that Mr. Rhodes had resigned his functions as Agent for Messrs. Peto, Brassey, and Betts, and that in consequence it was your intention to take over the Southern and Western Lines of Railway, as the lawfully constituted Attorney of Messrs. Peto, Brassey, and Betts, and submitting the Power of Attorney constituting you their Agent for carrying out the works upon those extensions; and I am directed to inform you, that under the advice of the Crown Solicitor, that if Mr. Alexander Rhodes has expressed in writing his unwillingness and his intention not to act further as the Agent of Sir S. M. Peto & Co. in this Colony, under the Power of Attorney from that firm to him of date 5th January, 1859, and has left this Colony with the intention of returning to England, and you will furnish a certified copy of such writing, or any other sufficient proof of his having so done, the Government will then be prepared to recognize you as the Agent in this Colony of Messrs. Peto, Brassey, and Betts, for the purposes referred to in the Power of Attorney above alluded to.

I am to add, however, that it is very desirable, before steps are taken by you for carrying on the said works, that all the points in dispute with Mr. Rhodes, as Agent for Messrs. Peto, Brassey, and Betts, should be settled; and I am to write to you to call at this office, with a view to such settlement as early as practicable after the transmission of the proof requested of Mr. Rhodes having resigned or left for England.

I have, &c.,

B. H. MARTINDALE.

No. 54.

R. J. WANT, ESQ., to COMMISSIONER FOR RAILWAYS.

Sydney, 25 August, 1860.

SIR,

Mr. Willcox has placed in my hands your letter of the 22nd instant, with instructions to reply to it.

I am desired to inform you that Mr. Rhodes has resigned the Agency of Messrs. Peto, Brassey, and Betts, has now left the Colony, with the intention of returning to England, and has taken his passage, I believe, in the "Sussex," which leaves Melbourne on the 26th.

Mr. Willcox is, therefore, by virtue of the Power of Attorney from Messrs. Peto, Brassey, and Betts, intrusted with the management of the works on the Southern and Western lines, and is prepared to carry out the contract.

The agreement to which you allude relates to private matters, which do not affect the Government, and which therefore will not be produced.

I can personally vouch for the above facts.

I have, &c.,

R. J. WANT.

No. 55.

CROWN SOLICITOR to COMMISSIONER FOR RAILWAYS.

*Crown Solicitor's Office,
Sydney, 29 August, 1860.*

Messrs. Peto and the Government.

SIR,

In returning to you the accompanying papers, I have the honor to inform you, in reply to your Minute of the 25th instant, that, in ordinary cases, I should consider that it would be necessary to have a declaration, in writing, made by some person verifying the fact of Mr. Rhodes having resigned the Agency of Messrs. Peto and Co. in this Colony, and of his having left this Colony with an intention of returning to England; but that, if the Commissioner is satisfied that the facts as stated in Mr. Want's letter of the 25th instant are, as no doubt they are, as therein stated, I see no objection to his recognizing Mr. Willcox, without being furnished with such a declaration.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

IMPROVED COMMUNICATION WITH THE INTERIOR.
(INHABITANTS, EVANS' PLAINS.)

Ordered by the Legislative Assembly to be Printed, 3 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Inhabitants of Evans' Plains and the surrounding country, in
Public Meeting assembled,—

HUMBLY SHEWETH :—

That your Petitioners have learned with surprise and regret that, in the system of improved communication with the interior proposed by the Government, a sum of money is named for the extension of the Southern Railway to Goulburn, and various sums for horse railways to other interior localities, but no provision made for improved transit to Bathurst.

That your Petitioners desire to impress your Honorable House with the due sense of the importance of the Western Districts, whether as regards their wealth, their population, or resources; and to point out, that whilst many of the latter are available, others of undoubted richness remain undeveloped for want of cheap and speedy transit.

They are also desirous of explaining, that during the prevalence of rainy weather the residents of the western interior suffer severe pecuniary loss and great inconvenience, owing to the protracted detention of merchandise upon the roads.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take into consideration the facts now set forth, and take such steps as will secure to them the benefits of a co-equal extension of locomotive transit with the other Districts of the Colony.

And your Petitioners, as in duty bound, will ever pray.

Signed on behalf of the Meeting,

P. B. WOODLEY,
Chairman.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HENRY WILLIAM DUDLEY.

(PETITION OF.)

Received by the Legislative Assembly, 24 June, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of Henry William Dudley, late of the Refreshment Room, Sydney Railway Station,—

SHEWETH:—

That your Petitioner considering himself, under the circumstances hereinafter stated, to have been unfairly and oppressively dealt with, is advised that he can obtain no redress, otherwise than by Petition to your Honorable House.

That on or about the first day of November, one thousand eight hundred and fifty-five, your Petitioner applied to the then Manager of the Great Southern Railway, Mr. Terry, to rent a room at the Sydney Terminus, as a refreshment room.

That after waiting on Mr. Terry nearly every day, for three months, your Petitioner finding the summer season passing away, and being unable to obtain a reply, applied to the then Commissioners of Railways, on the subject.

That the said Commissioners approved of the application, and agreed to rent to your Petitioner the room then lately occupied by him at the Sydney Station, for three months certain, at the rent of £2 per week, your Petitioner to fit up the said room with his own fixtures, at his own expense, and at the expiration of that three months to become a tenant thereof, from year to year, with a promise that your Petitioner was not to be turned out in favour of any person whomsoever, so long as the said room and the business thereof should be conducted in a respectable manner; and it was part of the contract that your Petitioner's wife was to act as female searcher, in case of necessity, or to attend on any female in case of sickness at the station.

That the terms on which the holding was arranged will be found in your Petitioner's letter to the said Commissioners, dated in February, 1856, and that on the first day of March, one thousand eight hundred and fifty-six, your Petitioner entered into occupation of the said room, in pursuance of that letter, and on the terms therein stated.

That your Petitioner found the accommodation of the room insufficient to meet the requirements of the public, especially as no fire-stove was allowed on the Railway premises, and the public wanted hot tea and coffee; and your Petitioner consequently applied for and obtained permission from the said Commissioners to erect a tent on the waste ground belonging to the station, and the rent paid by your Petitioner was then fixed at £6 10s. per month.

That in March, one thousand eight hundred and fifty-seven, the said tent having been blown down, and on two occasions narrowly escaped destruction by sparks from the engines, your Petitioner obtained permission to erect an iron house, quite as much for the convenience of the public as of your Petitioner, at a ground rent of 16s. 8d. per month, until the Commissioners should require the ground for Railway purposes; and the then Engineer, Mr. Brady, pointed out the exact site of such building to your Petitioner, being a portion of ground near the Chippendale gate, not likely to be required for Railway purposes for many years; and Captain Mann, then one of the said Commissioners, promised your Petitioner that the refreshment room should be fresh papered and painted before the ensuing spring, and gave orders to that effect to the said Mr. Brady, in your Petitioner's presence, but although in the ensuing September a storm so much damaged the station, especially over the refreshment room, that your Petitioner's property was continually injured by rain, no steps were taken to perform this promise, or to repair these damages, in spite of your Petitioner's remonstrances, and to his great loss and injury.

That shortly after this, Captain Martindale became the virtual Manager of the Railway, and in October, one thousand eight hundred and fifty-seven, an advertisement appeared, calling for tenders for renting the refreshment room, although your Petitioner held the same as a tenant, from year to year, and had received no notice to quit, whether sufficient or insufficient.

That your Petitioner had expended about £150 in manner aforesaid, on the premises, and accordingly had two interviews with Captain Martindale, on the subject, and afterwards with Mr. Rae, to whom the said Captain Martindale referred me, giving them notice of your Petitioner's position, and claiming his rights, and protesting against the injustice contemplated. These remonstrances were of no avail, and in December, 1857, your Petitioner received notice to quit on the 1st day of January, 1858, then next ensuing, to a person of the name of Gale, who was not even willing, in case of your Petitioner's abandoning his rights, to purchase your Petitioner's stock and fixtures at a fair or any valuation, and your Petitioner refused to give up possession.

That during the first fortnight of January, 1858, your Petitioner was exposed to all sorts of threats and annoyances, from the Railway authorities trying to make your Petitioner give up possession. On the 14th day of that month the Commissioners sent for your Petitioner, and admitted his right to remain until legal notice could be given, but stated that they wanted to commence fresh plans from the new year; that the threats and annoyances aforesaid were not with the Commissioners' sanction; and held out that the traffic would largely increase with the extension to Campbelltown, and in fact induced your Petitioner to consent to pay the rent offered by Gale, namely, £120 per annum, allowing out of it £10 per annum for the services of your Petitioner's wife, in attending to the ladies' waiting room. That agreement is dated the 13th of January, 1858, for one year certain, at £110 per annum, and Mrs. Dudley's services as aforesaid considered equivalent to £10 more, and £10 8s. per annum, ground rent for the ground held by your Petitioner. But in making to your Petitioner the statements that induced your Petitioner to consent to this arrangement, the said Commissioners concealed from your Petitioner the intended heavy increase of fares, which if your Petitioner had known he would never have consented thereto, and which did in fact so diminish the traffic as to prove in the highest degree injurious to your Petitioner, insomuch that your Petitioner's receipts for the twelve months following that increase was less than for twelve months before by the sum of £178 5s. 2d., although in the latter period an additional twelve miles of rail had been open to the public.

That in not more than a month after this agreement was signed, the said Commissioner actually leased the same ground (for which your Petitioner was paying ground rent) to Messrs. Scott and Jolly, for a timber yard, who are now, as well as your Petitioner was then, paying rent for the same, and allowed a six foot fence to be put up within three feet of the said iron house all round it, and only one foot in the top for air, until your Petitioner himself cut down another foot thereof.

That your Petitioner did make complaint on these points to the Commissioner, without redress, and did also apply for a reduction of rent, and to have the said refreshment room papered and painted, of which it stood much in need, nothing having been then done to it since the said storm; to which the reply given to your Petitioner was, that the Commissioner could not accede to my request.

That, moreover, since the extension to Campbelltown the gentlemen's waiting room has been converted into a parcel office, so that passengers waiting are obliged to wait in the room then rented by your Petitioner, to which it was not fitted and which was an inconvenience to your Petitioner and his customers, and which ought not to have been imposed upon your Petitioner, paying a rent for the said room four times greater than that paid by a stallholder in George-street Market.

That on the 7th day of December, 1858, your Petitioner, at the request of a number of very influential gentlemen, and supported by a Memorial of recommendation more numerous and respectably signed than anything of the kind ever done in Sydney, applied for a general license for the said refreshment room, and your Petitioner refers to the Memorial presented to His Excellency the Governor General and the Executive Council, on the 5th of January, 1859, for a special license for the same purpose, as evidence of the extraordinary support afforded by the highest classes to this application, such Memorial being signed by Members of all the Legislative bodies, by gentlemen of high station, familiar with the management of such matters in England and on the Continent of Europe, by Magistrates, Ministers of Religion, and others, who had known your Petitioner for twenty years past and upwards.

That on your Petitioner's said application, the said Mr. Rae appeared on behalf of the Commissioner, and took it upon him to inform the Bench that it would be of no use to grant your Petitioner a license, as your Petitioner should not rent the refreshment room after the end of the year, and a notice appeared as before, calling for tenders to rent the Sydney refreshment room, but no such notice relative to the room at Parramatta until a day or two afterwards, when the Commissioners had seen, upon reflection, the position in which they had placed themselves; and upon your Petitioner applying to the Commissioner to know whether, if the refreshment room were let to a third party, any arrangement was to be made about the building erected by your Petitioner, your Petitioner was told, in reply, that in that case your Petitioner must pull it down.

That your Petitioner applied for the ordinary confectioner's license on the 22nd December, 1858, when one of the Magistrates stated that it was no use to grant it, as the Commissioner would not let your Petitioner continue in the refreshment room after the end of the year.

That

HENRY WILLIAM DUDLEY.—PETITION.

That in consequence, your Petitioner was compelled, though at a loss, to tender the same rent as before.

That it abundantly appears from the foregoing statement, that the Commissioner kept your Petitioner in this position,—that either he must pay an exorbitant rent, at a loss, or lose the benefit of his investment and connection, contrary to the understanding on which that investment was originally made; and your Petitioner was obliged to abandon the said refreshment room and lose the benefit of such investment and connection, being unable to pay such high rent.

That your Petitioner's Petition was presented to your Honorable House by Thomas Broughton Esq., M. L. A., on the 30th November, 1859, but on account of a change in the Ministry, and other unforeseen circumstances, his Petition has never been investigated; by which your Petitioner has suffered severe losses.

Your Petitioner therefore humbly prays that your Petitioner's case may be so dealt with by your Honorable House, or such redress may be afforded to your Petitioner, as to your Honorable House may seem meet.

And your Petitioner will ever pray, &c., &c., &c.

HENRY WM. DUDLEY.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TRUCK (OR TOMMY SHOP) SYSTEM ON GREAT
SOUTHERN RAILWAY.

(PETITION RELATIVE TO.)

*Received by the Legislative Assembly, 4 November, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Storekeepers, Publicans, and Navvies, employed
on the Railway Works Extension from Picton,—

HUMBLY SHEWETH :—

That your Petitioners view with surprise and indignation the attempt made by the Contractor for Extension No. 1 on the Great Southern Railway, to establish the Truck, or Tommy Shop, System, which is now in full operation, by the erection of stores along the line in the name of one Mr. A. Mason (supposed to be a backer of the Contractor's), and paying the men with 5s. orders on the said Mason, not transferable—thereby attempting the monopoly of the whole traffic arising from the contract with the Government; and these stores are connected with the unlicensed sale of grog and malt liquors, with every inducement to drink held out, so that the poor fellows employed are fairly victimised, to their utter dissatisfaction, and the traders deprived of their just and legitimate portion of trade in the public outlay, as well the men of the option of dealing where interest or inclination may lead them.

And whereas these tickets on the Tommy Shops involve the necessity on the men to receive the greater portion in goods and drink, it becomes of necessity a burden and a hardship upon them, and men have been actually sent off the works for refusing these tickets, and others for insisting on cash for them when obtained.

The same system having been attempted at Victoria, was found to work so injuriously that it has been put down by the Legislature, so that all contractors and sub-contractors have been compelled to pay their men in cash only.

Your Petitioners, therefore, humbly pray that prompt and efficacious measures may be adopted by your Honorable House for the immediate suppression of this unfair attempt, so fraught with injury to the whole trading community, and the demoralization of the navvies employed.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 79 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. JOHN HANNELL.
(PETITION OF.)

Received by the Legislative Assembly, 26 November, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of John Hannell, of Hexham, in the Hunter River District (Licensed Victualler),—

HUMBLY SHEWETH :—

That your Petitioner has been informed, and verily believes, that the present Railway Station at Hexham is about to be removed to a position nearer to Newcastle, and called or known by the name of "Brown's Crossing."

That your Petitioner was induced by the promises of the then Commissioner for Railways, and on certain conditions, to surrender to the Government, by deed, dated the 7th day of September, 1857, a portion of his landed property situated at Hexham, viz., thirteen acres, more or less, for the use of the Great Northern Railway; and he further gave the usual right of Railway crossing through such land to the main road.

That your Petitioner, relying upon the promises and representations which were made by the then Commissioner, on the part of the Government, that the Railway Station should be built and continued in its present position, conveyed to the Government the requisite quantity of land for Railway purposes, at the Government valuation.

That your Petitioner is of opinion that no apparent advantage can arise to the public of Hexham by the proposed removal of the station to "Brown's Crossing," but, on the contrary, the general convenience of the Minmi, Tomago, and Hexham inhabitants would be consulted in a more equal degree by the removal of the station to a point on the Great Northern Railway, and shown in the annexed plan marked with the letter "A."

That your Petitioner, in addition to the injury and great loss he will sustain by the removal of the station to "Brown's Crossing," as aforesaid, would respectfully draw attention to the positive breach of faith inflicted upon your Petitioner—as by the terms of the deed, dated as aforesaid, the 7th day of September, 1857, such removal was never contemplated.

Your Petitioner, therefore, humbly prays that the Honorable the Legislative Assembly will take his case into their serious consideration, and that the prayer of this his humble Petition will be granted.

And your Petitioner, will ever pray, &c., &c., &c.

JOHN HANNELL.

Hexham, 22 July, 1862.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DARLING HARBOUR BRANCH RAILWAY.

(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 19 December, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of Pyrmont, and other Citizens of Sydney,—

SHEWETH :—

That at the present time the Darling Harbour Railway Branch is brought within three or four hundred yards of the Pyrmont Bridge, where it is of no use.

That the Branch Railway and the Land taken for the purpose, represent a capital of some £160,000, which capital, with interest thereon, has been lying idle for some years.

That your Petitioners and the whole public of Sydney would be benefited if the Branch were brought as far as the Bridge, and your Petitioners earnestly hope and pray that so obvious an improvement may be at once carried out to completion.

And your Petitioners, as in duty bound, will ever pray, &c.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY THROUGH ULTIMO ESTATE.
(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 15 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of John Harris, of Shane's Park, in the County of Cumberland, in the Colony of New South Wales, Esquire; George Harris, of Ultimo House, in the City of Sydney, in the said Colony, gentleman; John Harris, of the same place, gentleman; Matthew Harris, of the same place, gentleman; Nancy Ann Harris, of the same place, widow; James Fullerton, of Sydney aforesaid, Doctor of Laws; and George Henry Hamilton, of Kiama, in the said Colony, Surgeon;—the said James Fullerton and George Henry Hamilton being the Trustees of the Will of John Harris, late of Ultimo Cottage, in the City aforesaid, Esquire, deceased, and interested in the premises on behalf of his infant children,—

RESPECTFULLY SHEWETH:—

That your Petitioners are the proprietors for divers estates and interests of the Estate of Ultimo, situate within the City of Sydney aforesaid.

That in the month of April, one thousand eight hundred and fifty-three, in pursuance of the provisions of an Act of the Legislature of the said Colony, passed in the thirteenth year of the reign of Her Majesty Queen Victoria, the Sydney Railway Company took and entered upon, set out, and appropriated for the purposes of the Railway a large portion of the said Estate of your Petitioners, comprising in extent fourteen acres and a half or thereabouts,—that is to say, seven acres and a half of the said Estate for the Terminus of the said Railway, and seven acres for that portion of the line thereof, which should extend from the said Terminus to Parramatta-street.

That in accordance with the said Act, certain Justices, assembled in Petty Sessions, appointed Edward James Howes Knapp, John Bibb, and Thomas Cowlshaw, as practical Surveyors, to determine what compensation should be paid by the said Company to the owners or persons interested in the lands taken, used, or injuriously affected by the execution of the powers by the said Act granted.

That the said Surveyors, by their valuation, dated the third day of June, one thousand eight hundred and fifty-four, determined that the sum of one hundred and one thousand nine hundred and two pounds was the value of the land so taken, and of the damages occasioned by the making and completing the said Railway; and they also found that the adjoining land, belonging to the same owners, would be increased in value by the contemplated Railway and Terminus to the extent of ninety-nine thousand one hundred and thirty-three pounds; and they adjudged the sum of two thousand seven hundred and sixty-nine pounds, the difference between the said two sums, to be paid by the Company by way compensation aforesaid.

That at the time of the appropriation of the said land, portions thereof were under occupation by seven tenants of your Petitioners, whose rents, to the amount of eighty-one pounds per annum, have been thenceforth wholly lost to your Petitioners.

That not any payment whatsoever has been made to your Petitioners in respect of the land taken, which has been wholly lost and useless since the month of April, one thousand eight hundred and fifty-three.

That in the year one thousand eight hundred and fifty-four, under the provisions of an Act of the said Legislature, passed in the eighteenth year of the reign of Her Majesty

Queen Victoria, number forty, the Government of this Colony became the purchasers from the said Company of the said Railway, and all other property whatsoever belonging to them.

That neither the said Company nor the Government since its acquisition of their property, and its obligations, have ever made the Terminus of the said Railway on the land taken from your Petitioners for that assumed purpose, but on the contrary thereof the Terminus has been made and continued upon the Cleveland Paddock, and the land taken from your Petitioners has remained almost unused, and the benefit which might have arisen to your Petitioners from the flow of population to the Railway Terminus as a centre of business operations, and which was estimated by the said Surveyors in their award to confer on your Petitioners remaining estate the large additional value aforesaid, has not been realized.

That by reason of the premises your Petitioners are injured in the loss of their land without any equivalent.

That on the eighth day of September, one thousand eight hundred and sixty, your Petitioners, desiring redress, presented to His Excellency the late Governor General their respectful Memorial setting forth the facts above detailed, and submitting their right to the payment of the entire valuation placed upon their land of which they have been deprived, together with a compensation for the loss of rents as aforesaid with interest thereon; or to the sum so assessed and interest thereon, and to the abandonment of the present Terminus of the Railway, and the construction of the Terminus upon the land taken from them for that purpose; or to the return and release of the land taken together with compensation for the destruction of its surface, and for the deprivation of the rents which have been lost to them since its occupation by the said Railway,—the receipt of which Memorial was acknowledged on the tenth day of that month, and in the month of March, one thousand eight hundred and sixty-one, your Petitioners were informed by the Commissioner for Railways, that “so soon as the question of the Pitt-street Tramway then before Parliament should be determined, the Government would decide upon the question referred to by your Petitioners.” That nevertheless the said question still remains undecided, and your Petitioners are without any redress in the premises, and are obliged to pray the consideration of your Honorable House.

Your Petitioners therefore humbly pray, that such inquiries may be made as to your Honorable House shall seem meet, and that your Petitioners may have appropriate relief in the premises.

And your Petitioners will ever pray, &c.

(PETITION, TO BE HEARD BY COUNSEL.)

Received by the Legislative Assembly, 12 December, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of John Harris, of Shane's Park, in the County of Cumberland, in the Colony of New South Wales, Esquire; George Harris, of Ultimo House, in the City of Sydney, in the said Colony, gentleman; John Harris, of the same place, gentleman; Matthew Harris, of the same place, gentleman; Nancy Ann Harris, of the same place, widow; James Fullerton, of Sydney aforesaid, Doctor of Laws; and George Henry Hamilton, of Kiama, in the said Colony, Surgeon,—the said James Fullerton and George Henry Hamilton being the Trustees of the Will of John Harris, late of Ultimo Cottage, in the city aforesaid, Esquire, deceased, and interested in the premises on behalf of his infant children,—

RESPECTFULLY SHEWETH:—

That your Petitioners did, on the 15th day of October, in the present year, prefer to your Honorable House their humble Petition, praying as therein prayed.

That, on the 2nd day of December instant, the said Petition was duly referred to a Select Committee of your Honorable House.

That your Petitioners are desirous of being heard, by themselves, their Counsel, or Agents, before the said Committee, in support of their claims, by the said Petition made known.

Your Petitioners, therefore, humbly pray that they may be heard, by themselves, their Counsel, or Agents, before the said Committee accordingly.

And your Petitioners will ever pray, &c.

MOREHEAD & YOUNG'S RAILWAY BILL.

(PETITION OF ALEXANDER BROWN, No. 1.)

Received by the Legislative Assembly, 18 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Alexander Brown, of Newcastle, in the Colony of New South Wales, merchant, carrying on business in co-partnership with James Brown, under the firm of James and Alexander Brown,—

SHREWETH :—

1. That your Petitioner learns that a Bill has been brought into your Honorable House, to enable Robert Archibald Alison Morehead and Matthew Young to construct a Railway from land near Newcastle, leased by them from the Crown, to and to connect the same with the Great Northern Railway.

2. That it is essential that the line and position of the projected Railway be accurately defined and determined, and that the same ought to be shown upon a plan annexed to the Bill, and although no such plan is annexed, your Petitioner knows not whether your Honorable House will consider such non-annexure fatal.

3. That it is essential that the projected Railway and Locomotives should be open to public use, upon payment to the promoters of a fair and reasonable toll, and that for distances less than a mile the rate per ton of such toll ought to be proportionately diminished.

4. That it is essential that the Bill shall enable the owners or occupiers of lands traversed by or adjoining the projected Railway, or any other persons, to lay down, either upon their own lands or upon Crown Lands, with the consent of the Governor with the advice of the Executive Council, or upon the lands of other persons, with the consent of such other persons, any other Railways, either to join the projected Railway or to cross it.

5. That the power of making any such other Railway should not be restrained so as to prevent the same from running parallel to the projected Railway, nor so as to enable the promoters of the projected Railway to refuse to make openings upon any inclined plane.

6. That upon any other Railway being made to join or to cross the projected Railway, the persons making or using such other Railway should not be subject to all By-laws and Regulations to be from time to time made by the promoters of the projected Railway, with respect to passing upon or crossing the same, but only to such just and reasonable By-laws and Regulations, in regard thereto, as shall first have been approved and allowed by the Governor, with the advice of the Executive Council.

7. That the making of a Branch Railway to join the projected Railway would increase the traffic of the latter and benefit the proprietors thereof, and that the persons making or using any such Branch Railway ought not to be bound to construct nor to renew the off-set plates and switches. Your Petitioner, therefore, humbly prays that your Honorable House, in dealing with the said Bill, will make such provision in regard to the several matters aforesaid as the nature of the case may require.

ALEXR. BROWN.

Dated this seventeenth day of September, 1862.

MOREHEAD & YOUNG'S RAILWAY BILL.

(PETITION OF ALEXANDER BROWN, No. 2.)

Received by the Legislative Assembly, 18 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly, of New South Wales, in Parliament assembled.

The humble Petition of Alexander Brown, of Newcastle, in the Colony of New South Wales, merchant, carrying on business in co-partnership with James Brown, under the firm of James and Alexander Brown,—

SHEWETH :—

1. That your Petitioner learns that a Bill has been brought into your Honorable House to enable Robert Archibald Alison Morehead and Matthew Young to construct a Railway from land near Newcastle, leased by them from the Crown, to and to connect the same with the Great Northern Railway.

2. That the said Bill, in the first clause, purports to show the line of the projected Railway by means of some plan, and states that the said plan is annexed to the Bill.

3. That in point of fact no plan is annexed to the Bill.

4. That the Bill was initiated in your Honorable House, upon Petition presented thereto, but without any copy of the plan so referred to by the Bill, and forming in substance a most important part thereof.

5. That the promoters ought to have annexed to the said initiatory Petition a printed copy of the Bill, including also a copy of the plan, but that they have failed to do so, which your Petitioner conceives is a breach of the Standing Orders of your Honorable House.

6. That the effect of such failure has been to deprive Members of your Honorable House, and also the public generally, of that notice of the contents and effect of the Bill which it was in the intent of the Standing Orders to afford.

7. That your Petitioner's solicitor has not been able to see the plan referred to by the Bill, although he has applied to the promoters' solicitor for that purpose, and your Petitioner knows not, up to this moment, what is the intended line of the projected Railway.

Your Petitioner, therefore, humbly prays that your Honorable House will not pass the Bill.

ALEX. BROWN.

Dated the seventeenth day of September, 1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MOREHEAD AND YOUNG'S RAILWAY BILL.

(PETITION OF ALEXANDER BROWN, No. 3.)

Received by the Legislative Assembly, 18 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Alexander Brown, of Newcastle, in the Colony of New South Wales, Merchant, carrying on business in co-partnership with James Brown, under the firm of James and Alexander Brown,—

SHewETH :—

1. That your Petitioner has preferred to your Honorable House two Petitions, in respect of Morehead and Young's Railway Bill.

2. That your Petitioner and his said partner are proprietors and lessees of Mines situate in the immediate neighbourhood of the line of the projected Railway, and under the surface of the land traversed thereby, and are deeply interested in the said Bill.

Your Petitioner therefore humbly prays that in the event of the said Petitions, or either of them, being referred to the Select Committee appointed on the Bill, your Petitioner may, by Counsel, Solicitor, or Agent, be heard before the Select Committee.

ALEX. BROWN.

—
 MOREHEAD & YOUNG'S RAILWAY BILL.
 (PETITION OF ALFRED CANNING.)

—
*Received by the Legislative Assembly, 9 September, 1862, and Printed under the Sessional
 Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Alfred Canning, of Sydney, Manager for James Brown and
 Alexander Brown, both of Newcastle, in the Colony of New South Wales,
 Merchants, carrying on business in co-partnership under the firm of James and
 Alexander Brown,—

SHEWETH :—

1. That your Petitioner learns that a Bill has been brought into your Honorable House to enable Robert Archibald Alison Morehead and Matthew Young to construct a Railway from land near Newcastle, leased by them from the Crown, to and to connect the same with the Great Northern Railway.

2. That although by section three it is provided that "the Railway and locomotives shall be open to public use upon payment of a toll to the promoters of three-pence per ton per mile," the Bill does not expressly provide that for distances less than a mile the rate per ton shall be proportionately diminished.

3. That although by section four it is provided "that it shall be lawful for the owners or occupiers of the lands traversed by the said Railway to lay down upon their own lands any collateral branches of Railway to communicate with the said Railway for the purpose of bringing carriages to or from or upon the said Railway and that the promoters shall if required at the expense of such owners or occupiers make openings in the rails," yet that this provision is inconveniently qualified, and in danger of being rendered ineffective, by the restrictions and conditions that no such Railway shall run parallel to the said Railway, and that the promoters shall not be bound to make any such openings upon any inclined plane.

4. That it will be in the power of the promoters of the Bill to make the whole of their projected Railway upon an inclined plane, and to prevent any branch Railway from running for even the slightest and most necessary distance parallel to the promoters' projected Railway.

Your Petitioner therefore humbly prays that your Honorable House will not pass the Bill in its present shape.

ALFRED CANNING.

Dated this ninth day of September, 1862.

MOREHEAD & YOUNG'S RAILWAY BILL.
(PETITION OF ALFRED CANNING.)

Received by the Legislative Assembly, 18 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Alfred Canning, of Sydney, Manager for James Brown and Alexander Brown, both of Newcastle, in the Colony of New South Wales, Merchants, carrying on business in co-partnership, under the firm of James and Alexander Brown,—

SHEWETH:—

1. That your Petitioner lately preferred to your Honorable House a Petition in respect of Morehead and Young's Railway Bill, which was referred to the Select Committee sitting on that Bill.

2. That in the absence of a Petition containing a prayer to be heard by Counsel or Agent, the Select Committee have felt a difficulty as to whether they should allow your Petitioner's Solicitor to ask questions of witnesses, otherwise than through the medium of the Chairman or some other Member of such Committee.

3. That the Chairman and Committee have courteously suggested to your Petitioner's Solicitor the desirability of his obtaining from your Honorable House liberty to put all such questions directly, and to be heard as a matter of right upon all parts of the Bill.

Your Petitioner therefore humbly prays that he may by Counsel, Solicitor, or Agent, be heard before the Select Committee upon all parts of the Bill, and be allowed to put questions to witnesses directly.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 57. TUESDAY, 2 SEPTEMBER, 1862.

20. Morehead and Young's Railway Bill :—Mr. Dick moved, pursuant to notice,—
(1.) That the " Bill to enable Robert Archibald Alison Morehead and Matthew Young, to construct a Railway from Land near Newcastle, leased by them from the " Crown, to, and to connect the same with, the Great Northern Railway," be referred to a Select Committee for consideration and report.
(2.) That such Committee consist of the following Members, viz. :—Mr. Robertson, Mr. Hay, Mr. Macleay, Mr. Samuel, Mr. Mate, Mr. Gordon, Mr. Lewis, Mr. Hoskins, Mr. Hannell, and the Mover.
Question put and passed.

VOTES, No. 61. TUESDAY, 9 SEPTEMBER, 1862.

6. Morehead and Young's Railway Bill :—
(1.) Mr. C. Cowper, junr., presented a Petition from Alfred Canning (Manager for Messrs. James and Alexander Brown, of Newcastle), of Sydney, in opposition to this Bill.
Petition received.
(2.) Mr. C. Cowper, junr., then moved, That this Petition be referred to the Select Committee now sitting on the said Bill.
Question put and passed.

VOTES, No. 67. THURSDAY, 18 SEPTEMBER, 1862.

3. Morehead and Young's Railway Bill :—
(1.) Mr. C. Cowper, junr., presented two (2) Petitions from Alexander Brown, of the firm of James and Alexander Brown, of Newcastle, dated, respectively, 17 September, 1862, adverse to the said Bill.
Petitions received.
Mr. C. Cowper, junr., then moved, That the said two Petitions be referred to the Select Committee now sitting on the said Bill.
Question put and passed.
(2.) Mr. C. Cowper, junr., presented a Petition from Alfred Canning, of Sydney, Manager for the firm of James and Alexander Brown, of Newcastle, praying for leave to be heard by Counsel, Solicitor, or Agent, before the Select Committee now sitting upon the said Bill.
Petition received.
Mr. C. Cowper, junr., then moved, That Mr. Alfred Canning have leave to be heard before the said Committee by his Counsel, Solicitor, or " Agent."
Mr. Dick moved, That the Question be amended by adding, after the word " Agent," the words, " in support of his Petition."
Debate ensued.
Proposed Amendment by leave withdrawn.
Original Question by leave withdrawn.
Whereupon, Mr. C. Cowper, junr., moved, That Mr. Alfred Canning have leave to be heard by his Counsel, Solicitor, or Agent, in support of his Petition, before the Committee now sitting upon Morehead and Young's Railway Bill.
Question put and passed.
(3.) Mr. C. Cowper, junr., presented a Petition from Alexander Brown, of the firm of James and Alexander Brown, of Newcastle, praying for leave to be heard by Counsel, Solicitor, or Agent, before the Select Committee now sitting on the said Bill, relative to his Petitions respecting the said Bill.
Petition received.

VOTES, No. 82. WEDNESDAY, 15 OCTOBER, 1862.

11. Morehead and Young's Railway Bill :—Mr. Dick, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this Bill was referred on 2nd September last.
Ordered to be printed.

* * * * *

1862.

 MOREHEAD AND YOUNG'S RAILWAY BILL.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 2nd September last, the "*Bill to enable Robert Archibald Alison Morehead and Matthew Young, to construct a Railway from land near Newcastle, leased by them from the Crown, to, and to connect the same with, the Great Northern Railway,*" beg leave to report to your Honorable House,—

That they examined the Solicitor for the Bill* and the other witnesses† named in the margin, (whose respective evidence will be found appended hereto); and that the Preamble, as *verbally* amended,‡ having been satisfactorily proved, your Committee proceeded to consider the several Clauses and Schedule of the Bill, in which they found it necessary to make several Amendments.‡

* Mr. W. G. M'Carthy.
 † Mr. R. A. A. Morehead.
 Mr. W. Weaver, C. E.
 Mr. J. Whitton, C. E.
 Mr. T. Croudace.
 Mr. A. Brown.
 Mr. E. Burton.
 ‡ Vide Schedule of Amendments.

And your Committee now beg to lay before your Honorable House the Bill, as amended by them.

ALEXANDER DICK,
 Chairman.

*Legislative Assembly Chamber,
 Sydney, 15 October, 1862.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 11 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Dick, | Mr. Mate,
Mr. Hannell.

Mr. Dick called to the Chair.

Printed copies of Morehead and Young's Railway Bill, together with the original Petition for leave to introduce the Bill—before the Committee.

Order of the House appointing the Committee, by direction of the Chairman, read by the Clerk.

Parties called in:—

Present for the Promoters:—

Mr. W. G. M'Carthy, *Solicitor for the Bill.*

Mr. W. Weaver, C.E., *Engineer to the Promoters.*

Present for Petitioner:—

Mr. E. Burton, *Solicitor.*

Petition of Mr. Alfred Canning against the Bill—read.

Mr. W. G. M'Carthy, *Solicitor for the Bill*, examined.

Mr. R. A. A. Morehead, *One of the Promoters*, examined.

Witness produced a receipt from the Crown for rent of a portion of land on which the proposed Railway terminates.

Mr. W. Weaver, C.E., examined.

Certain plans handed in, shewing the position of the mines opened by the Promoters.

The evidence in support of the Preamble being closed, Mr. E. Burton, *Solicitor for Petitioner*, requested that time might be allowed him to procure certain witnesses whose evidence he was desirous of taking in support of the allegations in the Petition.

Strangers requested to withdraw.

Committee deliberated, and decided upon adjourning to this day week.

[Adjourned accordingly, to Thursday next, at Ten o'clock.]

THURSDAY, 18 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Dick in the Chair.

Mr. Gordon, | Mr. Macleay,
Mr. Hannell, | Mr. Mate,
Mr. Hoskins, | Mr. Hay.

Present for the Promoters:—

Mr. W. G. M'Carthy, *Solicitor for Bill.*

Mr. W. Weaver, C.E., *Engineer to the Promoters.*

For Petitioner:—

Mr. E. Burton, *Solicitor.*

Mr. Burton, *Solicitor for Petitioner*, stated to the Committee that certain Petitions against the Bill were waiting to be presented to the House, and requested the Committee to postpone putting the question on the Preamble until such Petitions be received and referred in due course.

And the Committee desiring to deliberate,—

Strangers requested to withdraw.

Committee deliberated, and decided upon proceeding to take evidence upon certain clauses of the Bill, previous to putting the Question on the Preamble; and also, that Mr. Whitton be examined.

Parties called in, and informed of the decision of the Committee.

Mr. W. Weaver further examined.

Witness cross-examined by Mr. Burton.

Mr. J. Whitton, C.E., *Engineer-in-Chief for Railways*, examined by the *Solicitor for Bill*; cross-examined by Mr. Burton, and then by the Committee.

Mr. Morehead further examined by *Solicitor for Bill*, and cross-examined by Mr. Burton.

Room cleared.

Committee deliberated.

Parties called in, and Mr. Burton informed that the Committee think it desirable that special Petitions be presented to the House, asking for Petitioner to be heard, in support of his Petition, by Counsel, Attorney, or Agent.

[Adjourned to Wednesday next, at Eleven o'clock.]

WEDNESDAY,

WEDNESDAY, 24 SEPTEMBER, 1862.

MEMBERS PRESENT :—

Mr. Dick in the Chair.

Mr. Hoskins, | Mr. Hannell.

Petitions from Alexander Brown, adverse to the Bill, which were referred to the Committee on the 18th instant,—*Read.*

Present for the Promoters :—

Mr. W. G. M'Carthy, *Solicitor for Bill.*
Mr. E. Broadhurst, Q.C.

Present for Petitioners :—

Mr. E. Burton, *Solicitor.*

Mr. Thomas Croudace, *Mining Engineer to the Promoters*, examined.

Witness cross-examined by Mr. Burton.

Mr. Alexander Brown examined by Mr. Burton.

[Adjourned to Friday next, at *Eleven o'clock.*]

FRIDAY, 26 SEPTEMBER, 1862.

MEMBERS PRESENT :—

Mr. Dick in the Chair.

Mr. Hannell, | Mr. Gordon,
Mr. Mate, | Mr. Hoskins,

Mr. Hay.

Present for the Promoters :—

Mr. W. G. M'Carthy, *Solicitor for Bill.*
Mr. E. Broadhurst, Q.C.

Present for Petitioners :—

Mr. E. Burton, *Solicitor.*

Mr. Alexander Brown, a Petitioner against the Bill, cross-examined by Mr. Broadhurst.

Witness further examined then by Mr. Burton and the Committee.

And Mr. Broadhurst, Counsel for the Promoters, desiring to re-examine Mr. Croudace,—

Objection taken by Mr. Burton to that course as irregular.
Objection waived, and examination proceeded with.

Section handed in by witness (marked 5.)

[Adjourned to Thursday next, at *Eleven o'clock.*]

THURSDAY, 2 OCTOBER, 1862.

MEMBERS PRESENT :—

Mr. Hoskins, | Mr. Macleay,
Mr. Hannell, | Mr. Mate,
Mr. Samuel, | Mr. Gordon,

Mr. Hay.

Mr. Hoskins, in the absence of Mr. Dick, called to the Chair.

Present for the Promoters :—

Mr. W. G. M'Carthy, *Solicitor for Bill.*
Mr. E. Broadhurst, Q.C.

Present for the Petitioners :—

Mr. E. Burton, *Solicitor.*

Mr. T. Croudace further examined by Counsel, and cross-examined by Mr. Burton and the Committee.

The examination of witness being concluded, Mr. Burton requested leave of the Committee to recall certain witnesses, in order to rebut a statement made by Mr. Croudace in his evidence before the Committee this day.

Strangers requested to withdraw.

The Chairman here entering the Committee Room,—

Chair vacated by Mr. Hoskins, and taken by Mr. Dick.

Committee deliberated, and decided that it is unnecessary to hear further evidence.

Parties called in and informed.

Whereupon Mr. Burton, desiring to make a statement by way of evidence, examined.

And

And his examination being concluded, he, as Solicitor for Petitioners, proceeded to address certain observations to the Committee;—

And the Committee being of opinion that Mr. Burton would in all probability require to address the Committee at great length,—

Motion made (*Mr. Samuel*) and *Question*—That the Committee do now adjourn to Tuesday next—*agreed to*.

[Adjourned accordingly to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 7 OCTOBER, 1862.

MEMBERS PRESENT :—

Mr. Dick in the Chair.

Mr. Gordon,
Mr. Samuel,

Mr. Hay.

Mr. Mate,
Mr. Hoskins,

Present for the Promoters :—

Mr. W. G. M'Carthy, *Solicitor for Bill*.

Mr. E. Broadhurst, *Q.C.*

Present for Petitioners :—

Mr. E. Burton, *Solicitor*.

Mr. Burton, before proceeding to address the Committee, requested that he might be allowed to be heard upon the several clauses of the Bill, as they come before the Committee for consideration.

And Committee desiring to deliberate,—

Strangers withdrew.

Committee deliberated, and decided to hear Mr. Burton generally upon the whole Bill.

Parties called in, and Mr. Burton informed of the decision of the Committee.

Whereupon, he continued to address the Committee generally upon the Bill;

And having concluded, Mr. Broadhurst, as Counsel for the Promoters, addressed the Committee in reply upon the whole case.

[Adjourned to Thursday next, at *Eleven o'clock*.]

THURSDAY, 9 OCTOBER, 1862.

MEMBERS PRESENT :—

Mr. Dick in the Chair.

Mr. Macleay,
Mr. Hoskins,

Mr. Hannell,
Mr. Mate.

Present for the Promoters :—Mr. W. G. M'Carthy, *Solicitor for Bill*.

Present for Petitioners :—Mr. E. Burton, *Solicitor*.

The room being cleared,—

The Committee proceeded to consider the Preamble of the Bill.

The same read and *verbally* amended. (*Vide Schedule of Amendments*.)

Motion made (*Chairman*) and *Question*,—That this Preamble, as amended, stand part of the Bill—*agreed to*.

Parties called in and informed that the *Question* on the Preamble has been resolved in the affirmative.

The *Chairman* then stated that the Committee were about to proceed to the consideration of the several clauses of the Bill, and that any amendment that might be suggested would be entertained, but that it would not be competent for either party to address the Committee any further.

Clause 1 read.

Motion made (*Mr. Macleay*) and *Question* proposed,—That the clause be amended in the 38th line by the omission of the words "and as shewn on the plan hereunto annexed."

Question,—That the words proposed to be omitted stand part of the clause—*negatived*.

Words omitted.

Motion made (*Mr. Mate*) and *Question*,—That the further consideration of this clause be postponed—*agreed to*.

Clause 2 read.

Motion made (*Mr. Hoskins*) and *Question* proposed,—That all the words from the commencement of the clause down to "land" inclusive, in the 3rd line, be omitted with the view of inserting in their place the following words—"Such land as shall be taken under the provisions of this Act for the purpose of the said Railway."

Question,—That the words proposed to be omitted stand part of the clause—*negatived*.

Question

Question then,—That the words proposed to be inserted be so inserted—*agreed to*.
Committee deliberated.

And Mr. Whitton being called in, and having given an explanation to the Committee, in reference to the 1st clause of the Bill,—

Motion made (*Mr. Hoskins*) and *Question*,—That the further consideration of the clauses be postponed in order to consider a proposed new Schedule, prepared by Mr. Weaver—*agreed to*.

Whereupon Mr. Weaver handed in a description of the line of Railway from the Promoters' eastern boundary to the junction with the Great Northern Railway, sufficiently in detail to enable any competent person to identify the line on the ground.

Motion made (*Mr. Hoskins*) and *Question*,—That the original Schedule be omitted with a view to insert in its stead the following new Schedule, just handed in—*agreed to*.

“ Commencing at a point on the eastern boundary of Messrs. Morehead and
“ Young's leased land forty-two chains eighty links or thereabouts from its
“ north-eastern corner and crossing the boundary line between Crown lands
“ the minerals under which are supposed to be leased respectively to Messrs.
“ Morehead and Young and Messrs. J. and A. Brown being a portion of the
“ Newcastle Pasturage Reserve at a point thirty-nine chains twenty-five links
“ or thereabouts from the northern boundary of said lands entering other
“ Crown lands being allotments at a point on their western boundary one
“ chain ten links or thereabouts from the south-western corner of said lands
“ proceeding diagonally across these allotments to a point on their eastern
“ boundary one chain ten links or thereabouts from the south-western corner
“ of said lands proceeding diagonally across these allotments to a point on
“ their eastern boundary one chain sixty links or thereabouts from the north-
“ eastern corner of said lands thence (crossing a reserved road) into
“ Crown land (being an allotment) at a point on its western boundary
“ seventy-eight links or thereabouts from its north-western corner thence into
“ land belonging to the representatives of the late Henry Dangar Esquire at
“ a point on the southern boundary of the said land one chain or thereabouts
“ from its south-western corner and through the said land until it meets the
“ fence of the Great Northern Railway at a point on the eastern boundary of
“ said lands ten chains seventy-five links or thereabouts from its south-eastern
“ corner and terminating by a junction with the Great Northern Railway at
“ a point two miles seventy-eight chains or thereabouts from the City of
“ Newcastle.”

Clause 1 reconsidered.

Amendment proposed (*Mr. Macleay*),—That the word “ twelve ” in the 41st line be omitted, with the view of inserting in its place the word “ fifteen.”

Question,—That the word proposed to be omitted stand part of the clause—*negatived*.

Question then,—That the word proposed to be inserted in place of the word omitted be so inserted—*agreed to*.

Further amendment proposed (*Mr. Macleay*),—That the word “ fifty ” in the 43rd line be omitted with the view of inserting in its place the words “ thirty-two.”

Question,—That the word proposed to be omitted stand part of the clause—*negatived*.

Question then,—That the words proposed to be inserted in place of the word omitted be so inserted—*agreed to*.

Clause, as amended, agreed to.

Clause 2 again postponed.

Clause 3 read.

Motion made (*Mr. Mate*) and *Question* proposed,—That this clause be omitted.

Question,—That the clause proposed to be omitted stand part of the Bill—*put*.
Committee divided.

Ayes, 2.
Mr. Hoskins,
Mr. Hannell.

Noes, 3.
The Chairman,
Mr. Macleay,
Mr. Mate.

Clause omitted.

Clause 4 read and *negatived*.

Clause omitted.

Clause 5 read and agreed to.

Clause 6 read.

Amendment proposed (*Mr. Macleay*),—That all the words after “ in ” in the 28th line to the end of the clause be omitted with the view to insert in their place the words “ the Supreme Court.”

Question,—That the words proposed to be omitted stand part of the clause—*negatived*.

Question then,—That the words proposed to be inserted be so inserted—*agreed to*.

Clause, as amended, agreed to.

Clauses 7 to 34 read and agreed to without amendment.

Clause 35 read.

Amendment proposed (*Mr. Macleay*),—That all the words after the word “ pleaded ” in the 42nd line to the end of the clause be omitted.

Question,—That the words proposed to be omitted stand part of the clause—*negatived*.
Words omitted.

Clause, as amended, agreed to.

Postponed clause 2, further considered.

Amendment proposed (*Mr. Macleay*),—That all the words from the commencement of line 9 to the words "owners and" in the 11th line, be omitted.

Question,—That the words proposed to be omitted stand part of the clause—*put*.
Committee divided.

Ayes, 2.

Mr. Hoskins,
Mr. Hannell.

Noes, 3.

The Chairman,
Mr. Mate,
Mr. Macleay.

Words omitted.

Further amendment proposed (*Mr. Hannell*),—That after the word "otherwise" in line 17, the following words be inserted:—"And also that the promoters shall at all times keep open to the satisfaction of the Minister for Lands proper communication for the passage of cattle and other live stock between the portions of the Newcastle Town Pasturage Reserve severed by the said Railway."

Question,—That the words proposed to be inserted be so inserted—*agreed to*.

Clause, as amended, agreed to.

Chairman requested to report the Bill, with amendments, to the House.

SCHEDULE OF AMENDMENTS.

Page 1, preamble, line 23. *After* "advice" *insert* "and consent."

Page 1, clause 1, line 38. *After* "Schedule" *omit* "and as shewn on the plan hereunto annexed."

Page 1, clause 1, line 41. *Omit* "twelve"; *insert* "fifteen."

Page 1, clause 1, line 43. *Omit* "fifty"; *insert* "thirty-two."

Page 2, clause 2, lines 1, 2, and 3. *Omit* "The ground and soil of so much of the site of the Railway as passes over the lands of the said owners of land respectively and over Crown Land"; *insert* "Such land as shall be taken under the provisions of this Act for the purpose of the said Railway."

Page 2, clause 2, lines 9, 10, and 11. *Omit* "if the promoters their heirs and assigns shall cease to use the said Railway for the space of one year at any one time the ground and soil shall revert to and become re-vested in the said owners and"

Page 2, clause 2, line 17. *After* "otherwise" *insert* "and also that the promoters shall at all times keep open to the satisfaction of the Minister for Lands proper communication for the passage of cattle and other live stock between the portions of the Newcastle Town Pasturage Reserve severed by the said Railway."

Page 2, clause 3, line 39. *Omit* clause, viz. :—

"3. The Railway and locomotives shall be open to public use upon payment of a toll to the promoters of three-pence per ton per mile the party seeking ^{Railway open to the public.} transit supplying and loading his own trucks or waggons and all trucks when emptied shall be conveyed on their return free of cost."

Page 2, clause 4, line 43. *Omit* clause, viz. :—

"4. And be it enacted that it shall be lawful for the owners or occupiers of the lands traversed by the said Railway to lay down upon their own lands any ^{Branch Railways.} collateral branches of Railway to communicate with the said Railway for the purpose of bringing carriages to or from or upon the said Railway and the promoters shall if required at the expense of such owners or occupiers make openings in the rails and such additional lines of Railway as may be necessary for effecting such communication in places where the communication can be made with safety to the public and without injury to the said Railway and without inconvenience to the traffic thereupon and the promoters shall not take any rate or toll or other moneys for the passing of any passengers goods or other things along any branch so to be made by any such owner or occupier or other person but this enactment shall be subject to the following restrictions and conditions that is to say :—

"No such Railway shall run parallel to the said Railway the promoters shall not be bound to make any such openings in any place which they shall have set apart for any specific purpose with which such communication would interfere nor upon any inclined plane or bridge nor in any tunnel.

"The persons making or using such branch Railways shall be subject to all by-laws and regulations of the promoters from time to time made with respect to passing upon or crossing the Railway and otherwise and the persons making or using such branch Railways shall be bound to construct and from time to time as need may require to renew the off-set plates and switches according to the most approved plan adopted by the promoters under the direction of their engineer."

Page 3, clause 6, lines 28 and 29. *Omit* "any of the superior Courts"; *insert* "the Supreme Court."

Page 9, clause 35, lines 42 and 43. *Omit* "and the same whenever cited shall be sufficiently described as Morehead and Young's Railway Act, 1862."

Page 10, Schedule, line 1. *Omit* Schedule, viz. :—

" Commencing at a point on the eastern boundary of the land leased by the
 " Crown to the promoters and going in a north-easterly direction through Crown
 " Land known as the Newcastle Town Pasturage Reserve thence through other
 " Crown Land measured for sale in allotments thence through land sold by the
 " Crown to the late Henry Dangar and now belonging or supposed to belong to
 " his representatives to the Great Northern Railway intersecting the same at a
 " point terminating two miles seventy-eight chains or thereabouts from the City
 " of Newcastle."

Substitute the following, viz. :—

" Commencing at a point on the eastern boundary of Messrs. Morehead and
 " Young's leased land forty-two chains eighty links or thereabouts from its north-
 " eastern corner and crossing the boundary line between Crown Lands the minerals
 " under which are supposed to be leased respectively to Messrs. Morehead and
 " Young and Messrs. J. and A. Brown being a portion of the Newcastle Pasturage
 " Reserve at a point thirty-nine chains twenty-five links or thereabouts from the
 " northern boundary of said lands entering other Crown Lands being allotments at
 " a point on their western boundary one chain ten links or thereabouts from the
 " south-western corner of said lands proceeding diagonally across these allotments
 " to a point on their eastern boundary one chain sixty links or thereabouts
 " from the north-eastern corner of said lands thence (crossing a reserved road)
 " into Crown Land (being an allotment) at a point on its western boundary seventy-
 " eight links or thereabouts from its north-western corner thence into land
 " belonging to the representatives of the late Henry Dangar Esquire at a point on
 " the southern boundary of the said land one chain or thereabouts from its south-
 " western corner and through the said land until it meets the fence of the Great
 " Northern Railway at a point on the eastern boundary of said land ten chains
 " seventy-five links or thereabouts from its south-eastern corner and terminating
 " by a junction with the Great Northern Railway at a point two miles seventy-
 " eight chains or thereabouts from the City of Newcastle."

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

MOREHEAD AND YOUNG'S RAILWAY BILL.

THURSDAY, 11 SEPTEMBER, 1862.

Present:—

MR. DICK, | MR. HANNELL,
MR. MATE.

ALEXANDER DICK, ESQ., IN THE CHAIR.

William Godfrey M'Carthy, Esq., appeared on behalf of the promoters of the Bill; and Edmund Burton, Esq., on behalf of the Petitioners against certain Clauses in the Bill.

William Godfrey M'Carthy, Esq., called in and examined:—

1. *By the Chairman*: You are solicitor for Messrs. Morehead and Young, the promoters of this Bill? I am. W. G. M'Carthy, Esq.
2. And you attend for the purpose of proving, on their behalf, the preamble of the Bill? I do.
3. Will you now proceed to call your witnesses? I beg in the first place to call in Mr. Morehead, one of the promoters of the Bill. 11 Sept., 1862.

Mr. Robert Archibald Alison Morehead called in and examined:—

4. *By Mr. M'Carthy (Solicitor for the Bill)*: You are one of the promoters of this Bill? I am. Mr. R. A. A. Morehead.
5. And Mr. Matthew Young is the other? He is. 11 Sept., 1862.
6. You and Mr. Young are in the possession of a coal mine? We are.
7. Where is it situated? About five miles from Newcastle.
8. In the County of Northumberland? Yes.
9. And in the Colony of New South Wales? Yes.
10. You hold that mine under a lease from the Crown? We do.
11. Have you paid the first year's rent on that lease? We have.
12. Under the provisions of the new Land Act? Yes.
13. Do you produce a receipt for the payment of the first year's rent? I do. (*Receipt produced, and marked No. 1.*)
14. Will you read it? It is in the following terms:—

"New South Wales,

"The Treasury, 4th April, 1862.

"No. 2651.

"RECEIVED from Morehead and Young, the sum of one hundred and sixty pounds sterling, for rent, for the year 1862, of 640 acres near Newcastle, for coal mining purposes, No. 49, of Notice of 29th November, 1861.

"£160 0s. 0d."

"JOHN G. LENNON,

"Pro Treasurer."

- Mr. R. A. A. Morehead.
 11 Sept., 1862.
15. Is the railway you now seek to construct in existence, in so far as your own land is concerned? It is marked out, but not yet made.
 16. Do you produce a map of that part of the Colony, showing the exact situation of your land? I do. (*Map produced, and marked No. 2.*)
 17. Is the situation of your pits marked upon that map? It is.
 18. Does it also show the course which it is proposed that your line should follow? It does.
 19. Your mine, I believe, is actually opened? It is.
 20. How far have the works hitherto progressed? A shaft has been put down, and has been completed to the coal. A staple has been put down some distance off, which is now in course of being formed into an up-cast pit. A communication has been driven between the two, and also several drifts made to open up the coal.
 21. At what depth from the surface have you met with the coal? The top of the seam is some 28 feet or 29 feet from the surface.
 22. Have you any idea of the extent and character of the seam? It is a portion of the Wallsend seam, and the thickness varies from 8 feet to 11 feet. It extends over a large portion of the land leased by us from the Government.
 23. Do you find it underlying the whole of this leased land? The greater portion of it, as well as certain land adjoining, of which we have been promised a lease by the Government; so that we shall have a very large area of coal.
 24. Has your opinion as to the extensive area of the coal seam been formed upon the judgment of competent persons? Yes, upon their opinions, and also upon the result of extensive borings. A large number of bore-holes have been put down by us upon different parts of our land and adjoining land—upwards of twenty.
 25. What is the nearest market for the coal from your mine? Newcastle is the nearest port of shipment.
 26. Your nearest market is the shipping wharf at Newcastle? Yes; the coal will almost all require to be shipped.
 27. There is no mode of obtaining access to these wharves at present, except by the Great Northern Railway? There is no other mode of doing so from our pit.
 28. What do you conceive would be the readiest mode of getting your coal to the wharf at Newcastle? By forming the railway we now propose from our pit to a point of junction on the Great Northern line.
 29. Are you aware whether any of the intervening land between your pit and the proposed junction of your line with the Great Northern has been granted by the Crown? The only granted land that our line is intended to pass through is a portion belonging to the representatives of the late Henry Dangar.
 30. And the remainder is still held by the Crown? I believe so.
 31. Is the authority you now ask by this Bill likely to prove beneficial to the Colony? Inasmuch as it will open up a new supply of coal, I should say certainly, yes.
 32. There is a very great market for coal, generally? A very large market, and an increasing one.
 33. The junction with the Great Northern line would also increase the traffic on that line, and to that extent would be a benefit to the country? Certainly; we expect, when we get to work, to send a large quantity of coal down the line.
 34. And you have ascertained that it was necessary, before proceeding with your line, to get legislative authority for constructing it, in consequence of its having to cross private property? Yes.
 35. *By Mr. Hannell:* How much of the Newcastle commonage reserve do you take up? Our pit is situated upon the land of which we have a lease from the Crown, and the portion of the commonage that we shall require for our line will be that lying between our pit and the point of junction with the Great Northern line. The portion of land of which the Government have promised us the lease will take in about 280 acres of the Newcastle Common Reserve.
 36. You have been promised a lease of 280 acres of the commonage? Yes.
 37. And over another portion of the commonage you will run your line? Yes.
 38. What quantity of land will you require to take up with your line? A very small quantity altogether; the breadth of our line is only a chain and a half.
 39. When you have this land for your line, and the land of which you have been promised the lease, will not a large portion of the commonage reserve be rendered valueless as a pasturage, by your operation? No, I think not; the portion of the surface we shall take up with our railway will be very small.
 40. But you sever the Common into two parts by your line of railway, and thus render one portion of it useless to the inhabitants? We are compelled to traverse the land in order to get to the Great Northern line.
 41. Does your Bill provide for giving compensation to any parties who may suffer injury by reason of the construction of your line—such, for instance, as this damage that will be done to the Commonage? We go on the assumption that no injury will be sustained by the public by our line crossing the Common; there is a provision in the Bill for giving compensation for whatever land we may require to take up.
 42. But is there any provision for giving compensation for any injury lands may receive by the formation of your line? Yes, there is.
 43. You do not know the actual quantity of land you will take up by your line from the commonage reserve? I do not myself know the actual quantity, but our engineer, who is present, will be able to give you that information; it will be very little, however.
 44. Will you leave openings on your line for the cattle to get across from one portion of the Common to the other? We shall leave openings for all the roads.
 45. But there is only one road across the Common, and your line severing the Common in

- two will virtually shut off the cattle from a large portion of the Commonage pasture? I cannot answer that question, as it has never been brought before us. Mr. R. A. A. Morehead.
46. You must be aware that this Common was a reserve for pasturage for the people of Newcastle, and if you completely sever the reserve by your fenced-in line, how are the cattle of the inhabitants to get across to the larger portion of the Common if you leave no openings for them to do so? This is a question that has not been brought before us at all. 11 Sept., 1862.
47. *By the Chairman*: Nearly all the land you wish to take up with your line is, I believe, Government land? It is, all but one portion.
48. Is payment usually made to the Government for Crown lands taken up by a railway line? I do not know positively, but I think not.
49. What is the necessity you have for coming to the Legislature for an enactment in the present case, seeing that, with one exception, your line passes exclusively over Crown lands? In the first place, the Government required it; and in the second place, we required to pass through the land of the late Henry Dangar, and that has been left in such a way as to put it out of our power to make any arrangement for taking up such part of that land as we required.
50. In what way?—are there no persons representing the late Henry Dangar able to give you a title to the land you required? No, there are not; so far as the parties interested are concerned, they would have been ready enough to arrange with us—there is no difficulty on their part; but the property has been left in such a position that nothing could be done without a legislative enactment.
51. How far is this land you have leased from the City of Newcastle? About five miles by the line we propose; but not so much in a direct line.
52. It is in the County of Northumberland? It is.
53. And what is the length of the line you propose to make from your pit to the junction with the Great Northern? About two miles; but our engineer will give you the exact length.

William Weaver, Esq., C.E., called in and examined:—

54. *By the Solicitor for the Promoters*: You are the engineer employed by Messrs. Morehead and Young in the construction of a railway from their pit to the Great Northern line? I am. W. Weaver, Esq., C.E.
55. And are generally Consulting Engineer to the promoters of this Bill? I am. 11 Sept., 1862.
56. Do you produce a plan showing the precise course of the proposed line of railway? I do. (*Plan handed in, and marked No. 3.*)
57. Does that show the spot at which the promoters have opened their mine? It does; the two shafts are represented here.
58. These are the shafts from which the promoters require a communication with Newcastle? Yes.
59. How far are the mines from Newcastle? About five miles; three miles by the Great Northern Railway, and two miles and eleven chains by the proposed branch.
60. Is that the whole length of the proposed line, from the pit to the junction with the Great Northern? Yes, two miles and eleven chains.
61. Reckoning from the pit, or from the boundary of the promoters' leased land? From the pit.
62. What length is it from the boundary of the leased land? About two miles.
63. What, in your opinion, would be the readiest mode of conveying coals from the pit marked on this plan to the wharves in Newcastle? The readiest mode would be by a branch from the Great Northern Railway, in the manner now proposed in this Bill.
64. That is, by connecting the pits with the Great Northern line? Yes.
65. By such a connection you believe the production of coal would be greatly facilitated? Yes, greatly.
66. Is the point of junction with the Great Northern line the most convenient for that purpose? Yes. Under all the circumstances I consider it to be so.
67. Over what land does the line pass? It passes over the estate of the late Henry Dangar, then through Crown lands, laid out in allotments, then through Crown lands known as the Newcastle Pasturage Reserve, and then into the land of the promoters. In fact, it only passes through the property of one private landowner.
68. You have stated, I believe, that this proposed line is the shortest and most practicable that can be made? It is.
69. Have you personally examined the mines opened by the promoters? I have.
70. Are they, in your opinion, likely to be productive mines? I think so. Since the pits have been down, and the coal proved, there cannot be a doubt of it.
71. Is it not also likely that the junction of this proposed line with the Great Northern line will cause increased traffic on that line? Yes, of course.
72. Have you a plan showing the gradients and the sections of the line? I have, and I now produce it. (*Plan produced, and marked No. 4.*)
73. Are there any public roads that the line passes over? Only one; that is the road leading from Newcastle to Lake Macquarie. I do not think it is a proclaimed road, but it is generally known as the Marked-tree Road. It is the same that, further on, is crossed by the Wallsend Company's line. It is in general use as a public road, but I do not think it has ever been proclaimed.
74. Was it marked as a line of road by the Government? Yes, I believe so, some years ago, and has been used since as a public road.
75. Has proper provision been made for crossing this road? Yes.
76. Will you look at the description of the line given in the schedule to the Bill, and inform the

W. Weaver, Esq., C.E.
 11 Sept., 1862.

the Committee whether that is a correct description of the course the proposed railway will take, or whether any alteration of the description will be required? It is perfectly correct, with the exception of a merely verbal alteration that will be required. In the description it is said that the proposed line *intersects* the Great Northern Railway, when, in fact, it does not actually do so.

77. Will you read the description and tell the Committee what alteration you consider to be required? The schedule is as follows:—"Commencing at a point on the eastern boundary of the land leased by the Crown to the promoters, and going in a north-easterly direction through Crown land known as the Newcastle Town Pasturage Reserve; thence through other Crown land, measured for sale in allotments; thence through land sold by the Crown to the late Henry Dangar, and now belonging or supposed to belong to his representatives, to the Great Northern Railway, intersecting the same at a point terminating two miles seventy-eight chains, or thereabouts, from the City of Newcastle." I would propose to omit the words "to the Great Northern Railway, intersecting the same at a point terminating," and to insert in their place the following words:—"and terminating by a junction with the Great Northern Railway at a point"—That, in my opinion, will convey a more correct idea of the course of the line.

78. Do you happen to know the course that the Waratah Company propose to take with their line? They have proposed so many different courses that I cannot speak positively as to any particular one having been decided upon.

79. Is there ample space on the west side of the line for the Waratah Company to make a line for themselves? Yes, ample space to the west.

80. Without at all interfering with the line that the promoters are now applying for? Yes.

81. From your knowledge of the extent and richness of the mine of the promoters, do you think that their own traffic on the proposed line will be very great? I should think it would be.

82. So much so as to render it inconvenient to the proper working of their trade to have other lines joined on to or running into it? Yes, it would be very inconvenient on so short a line to have another line running into it.

THURSDAY, 18 SEPTEMBER, 1862.

Present:—

MR. HANNELL,
 MR. HOSKINS,
 MR. MATE,

MR. GORDON,
 MR. HAY,
 MR. MACLEAY.

ALEXANDER DICK, Esq., IN THE CHAIR.

William Godfrey M'Carthy, Esq., appeared on behalf of the promoters of the Bill; and Edmund Burton, Esq., appeared on behalf of the Petitioners against certain clauses of the Bill; and ——— Barker, Esq., on behalf of the Waratah Company.

William Weaver, Esq., C.E., called in and examined:—

W. Weaver, Esq., C.E.
 18 Sept., 1862.

83. *By Mr. M'Carthy, Solicitor for the Promoters:* Is it proposed that the Government should run their engines along this proposed line? It is. The line will be made in such a manner as to enable the engines used on the Great Northern line to run upon it.

84. Does this proposal necessitate a different sort of work to what would be done if you required only to use your own engines? Yes, it will require much heavier and more substantial work; I may say that the object of the promoters has been to make such a line that the Engineer-in-Chief for Railways shall have no objection to run his rolling stock over.

85. And the rails used will be of sufficient strength to bear the weight of the heavy engines used by the Government? They will.

86. Will you state to the Committee the kind of rail, and the weight of rail to be used in the construction of the proposed line? The rail will be of a similar pattern to that used by the Government, the double-headed rail, weighing 72lbs. to the lineal yard, and laid and fixed in the same way in every respect as those used by the Government.

87. Precisely the same in every way as the public railways? Yes, exactly the same as the Government lines.

88. What is the steepest gradient that you have on the proposed line? The steepest gradient is 1 in 79; but the line falls all the way from the pit to the junction with the Great Northern line, so that all the loaded trucks will come down the incline the whole distance, leaving nothing but the empty trucks to be taken up.

89. And with regard to the curves—what is the smallest radius of a curve that you have on the line? There is one curve of fifteen chains radius; that occurs at the junction of the proposed line with the Government line. This is rather a sharp curve, certainly, but it would not be used had we not considered it desirable to avoid carrying the line across the private land of the A. A. Company; to avoid that we were compelled to adopt this curve.

90. Does the plan show this curve, and the reason for its being adopted? The large plan, marked No. 3, shows it very clearly. A curve of the same radius is in use at the junction of the Wallsend Company's line with the Great Northern.

91. Having reference to the probable traffic on this line from the pits of the promoters, and having regard to the public interest, do you think it would be a matter of benefit to the public that other lines should be allowed to join into this proposed line? I think not.

92. You do not think the public interest would be advantaged by the Legislature allowing other private lines to run into the line of the promoters? I think not; and I think there can be no necessity for giving private Companies permission to bring their lines into the line of the promoters, because, from the nature of the adjoining country, no lines can be brought in this direction.

W. Weaver,
Esq., C.E.

18 Sept., 1862.

93. If the traffic to be brought in upon the line of the promoters by other lines that were allowed to join was very great, would not the promoters be put to very much increased expense in order to secure their own traffic? Certainly they would. If the promoters had much traffic of their own, and large traffic were brought on by other lines, they would find it necessary to lay down a double line of rails, whereas otherwise they will have only one line. This will, of course, necessitate a greater width of earth-work, and double the cost of construction. This line being only a short one, the ordinary trade of the promoters will be constantly keeping the line in use, as, in fact, is now the case on the Wallsend Company's line.

94. And with regard to what you have already said with respect to the public interest being promoted by the increased production of coal, might not some dispute between the promoters and the owners of lines coming in to the proposed line—as to the mode of conducting business, for instance—lead to a stoppage of the working of the line, or to some inconvenience of that nature? It would not lead to a stoppage of the line, because, under any circumstances, we should keep the working in our own hands, and should not allow any others who came in upon our line to interfere in any way with our mode of working it; but I do not think it desirable, under any circumstances, to have more traffic brought in upon this line than that furnished by the promoters.

95. Are you acquainted with the locality through which the proposed line is intended to run? I am.

96. And with the other mines that have been opened in the vicinity? Which mine are you speaking of?

97. I allude more particularly to the mine of the Messrs. Brown? Yes, I am acquainted with it.

98. On which side of the proposed line is their mine situated? On the Newcastle side.

99. On the Newcastle side of the proposed line? Yes.

100. Will you be good enough to describe what course would have to be adopted if the Messrs. Brown sought to join a line from their pit on to our proposed line? Their proper course would be to go direct to the Northern Railway. To reach Newcastle, the most direct road from the pit they have opened would be to run it straight into the Great Northern line.

101. *By Mr. Hannell:* But why should those at the back of Messrs. Morehead and Young's section be prevented from running into the proposed line, if they thought proper? Nothing at the back can come in on our line, as an almost inaccessible range prevents it, except at a most enormous outlay, such as very few would be inclined to encounter.

102. *By Mr. Hoskins:* Why should they not do so if they choose to encounter the expense—why would you seek to prevent them in that case? Anybody having a mine in any direction but one could not come in to our proposed line, as the natural features of the country would prevent it; and in the only accessible direction the more direct line would be to join the Great Northern line without touching upon ours. (*Witness here exemplified his answer by a reference to the map, No. 3.*)

103. *By Mr. M'Carthy:* Will you state the relative distance from the pit of the Messrs. Brown by going direct to the Great Northern line, and by coming in upon the line of the promoters—in the first place, in what direction does Newcastle lie from the Messrs. Brown's pit? About south-east.

104. And what distance is it? It is about three miles from the junction of the proposed line of the promoters with the Great Northern line.

105. How far would it be from a junction made direct from Messrs. Brown's works to the Great Northern? Any line made direct from Messrs. Brown's pit, and opening independently into the Great Northern, would reach that line half a mile from the junction of the promoters.

106. At a point nearer to Newcastle than the proposed junction of the promoters? Yes.

107. By how much? By about half a mile.

108. On the other hand, if the Messrs. Brown were to join the proposed line of Messrs. Morehead and Young, what distance would they have to go in order to reach the nearest point of the line to their works? Nearly half a mile.

109. In what direction? In the wrong direction; west instead of east; away from Newcastle instead of towards it. They would then have to traverse the line of the promoters for about half a mile, on to the Great Northern line, and then for another half a mile along that line back again to the point at which they might have come in upon the line in half a mile. They would thus have to traverse a distance of a mile and a half in order to get to the same point which they might have reached in half a mile from their pits.

110. Taking the other side of the promoters' line, who are the proprietors of land there—that is, on the northern and western side of the line—has any of the mineral land been taken up there? There is only one large block of mineral land in that direction, and that has been taken up by the Waratah Coal Company.

111. Does the land of the Waratah Company come up to the land of the promoters, or is there any coal land intervening between the block of the Waratah Company and that of the promoters? There is no mineral land intervening between these two blocks.

112. So that the question of joining or of not joining on that side would be of no interest, except to the Waratah Company? No, not on that side—that is, on the north-eastern side.

113. Are you aware that the Waratah Company are applying for a Bill to enable them to construct a railway for themselves? I am.

- W. Weaver, Esq., C.E. 114. Do they propose to make an independent line for themselves, opening direct into the Great Northern line? They do.
- 18 Sept., 1862. 115. Direct from their works to the Great Northern line? Yes.
116. Will you look at the passage in the 1st clause of this Bill, commencing at the 14th line—"so that the same shall not occupy in any part thereof a greater space in breadth than ninety-nine feet, excepting as to the portion thereof within the distance of not more than twelve chains from the junction with the Great Northern Railway where the width may be one hundred and fifty feet." Is the distance, twelve chains, there mentioned, sufficient? No; we shall require the length to be extended to fifteen chains.
117. Will you explain to the Committee why this extension is required? There is a point on the railway at which a swamp occurs, and on which we shall have to make a bank ten feet high, and it is desirable to have an extra width of land at that point for a foundation for the embankment, as well as to get ground for our side-cuttings and room for the necessary sidings. We shall more especially require the sidings when we come to work the line with our own engines. Under any circumstances it will be absolutely necessary to have full accommodation for sidings; and on that account we require to have fifteen chains inserted here instead of twelve chains.
118. You will see that it is stated in the clause that "the width may be 150 feet." Now there appears to be some discrepancy between this and the plan as produced—will you state to the Committee the actual quantity that will be required? The width will be two chains, or 132 feet instead of 150 feet.
119. Therefore it will be necessary to alter the clause of the Bill in that respect also? It will.
120. Two chains was the width originally contemplated for the line? Yes, and I do not know how the 150 feet got into the Bill.
121. The line has been surveyed? Yes.
122. And staked out? Yes.
123. Since it has been staked out has there been any alteration? Not that I am aware of. It has been staked out two chains wide, and the whole line is plain to be seen, for the road has been cleared throughout, ready for formation.
124. So that anybody may see it that chooses? Yes.
125. There is a matter that I presume I may be permitted to allude to, since it is matter of public notoriety;—you are aware that disputes have occurred between the proprietors of coal mines and the miners? I am.
126. And these have occasionally reached to such a pitch as to lead to the suspension of the works on the mine for a considerable period? Yes, frequently.
127. Such disputes may possibly arise again? They may.
128. Then, with reference to such a possibility, I would call your attention to the 8th line of the 2nd clause, where it is stated, "Provided also that if the promoters their heirs and assigns shall cease to use the said railway for the space of one year at any one time the ground and soil shall revert to and become revested in the said owners"—Now do you think, having reference to the possibility alluded to, that the interest of the public requires that such a clause should stand in the Bill, or is it calculated to act injuriously upon the promoters, seeing that they will have to spend a very large amount in constructing the line, and may be deprived of the whole fruit of their expenditure by one of these disputes? In the case of a long strike, this clause might hereafter lead to the destruction of their property. It could not affect the public in any way, whilst it might, under some circumstances, lead to the confiscation of their property.
129. Some portion of the proposed line passes through the Newcastle Commonage Reserve? Yes.
130. What part of the line crosses it? The line enters it at a point nearly a mile on the proposed line, and continues through it to a point nearly a mile distant from the first point.
131. The line intersects the Commonage Reserve? It does.
132. Is it intended to make a means of communication between the two portions thus separated? Yes; it is proposed to make an opening in the embankment which occurs on the line at the 1 mile 58 chains marked on the plan and section before the Committee.
133. That is 1 mile 58 chains from the proposed point of junction with the Great Northern line? Yes.
134. Will that afford sufficient means of communication between the two portions of the Common? Yes; the bridge is shown on the section marked No. 4, at the 1 mile 58 chains.
135. By Mr. Burton, Solicitor for the Petitioners (through the Chairman): You know the proprietors and occupiers of the coal land in the neighbourhood of the line of the promoters? I do—most of them.
136. Will you look at the plan marked No. 3, and tell the Committee who has the right of mining on the land marked "Crown Lands Pasturage Reserve"? I believe the promoters of this Bill, but I am not sure.
137. You showed the Committee the spot on this plan where the Messrs. Brown had opened a pit? I did.
138. With regard to these 280 acres shown on the plan No. 2, through which the projected line is to pass—who has the right of mining on that land? I cannot say.
139. But I thought you knew the proprietors and occupiers of all the adjoining? I know most of them, but not all.
140. Who do you think has the right? I think the promoters have, but I do not know, certainly.
141. Are you not aware that these 280 acres are included in the Messrs. J. and A. Brown's mining lease? I know that it was not leased two months ago when I was there.
142. Now, assuming that these 280 acres have been proved to be included in the mining lease

lease of the Messrs. J. and A. Brown, would it be of importance to them to see that provision were made in this Bill for allowing them to join on to this line? That would depend entirely upon where they opened their pit.

W. Weaver,
Esq., C.E.

143. Suppose they opened it on these 280 acres? It would then depend upon what part of the section it was opened.

18 Sept., 1862.

144. It might then be of importance to the Messrs. Brown to see that provision were made for their joining the line, supposing them to have the right of mining over these 280 acres, and that they opened a pit in a convenient spot for joining? No doubt it might be convenient for them, but it would be more desirable that they should have a line of their own.

145. You are, I believe, a consulting engineer for the construction of railway lines? I am.

146. Is that the reason why you recommend the formation of independent lines for every mine? It is not.

147. Would it not be a convenience and a saving of distance to join the promoters' line, supposing the Messrs. Brown to open a pit any way near the proposed line? It would be a saving of distance of *line to be made*, but not in the total distance to Newcastle.

148. Can you tell the Committee what the saving of distance would be? It would depend entirely upon where the pit was put down.

149. If Messrs. J. and A. Brown were to have a pit on these 280 acres, through which the projected line runs, and near that line, would it not be a great saving of distance to them to join on to the promoters' line, rather than make a line of their own? It would be no saving of distance, but no doubt it would be very convenient for them, since they would have to make less line of their own. There would be no saving of expense, for they would have to pay for the use of the promoters' line; and there would be no saving of distance, for the coal would have to be taken further to reach a market, than if it was taken direct from the pit in a straight line to the Great Northern line.

150. Would it not be desirable for them to join the line of Messrs. Morehead and Young, rather than to make a separate opening into the Great Northern line for themselves? No, I think not; I think it would be more desirable that they should have their own line, for the short length of line they will require to reach the Great Northern.

151. Do you mean to assert that it would be to the interest of Messrs. J. and A. Brown to make a long line of their own rather than to make a short one to connect with that of the promoters? They would not require to make a *long* line. They could not by any possibility require to make more than three-quarters of a mile of railway in order to enable them to join the Great Northern. Even if they go to the extreme point of their land, they would not require to make more than this. On measuring by scale I find that I am mistaken in this, as I find that the farthest point of their land is about a mile and a quarter from the Great Northern line.

152. Would not a line of a quarter of a mile in length, or even less, enable the Messrs. Brown to join on to the promoters' line from any part of these 280 acres? No, not from *any* part of them.

153. What length of line would be required to enable them to join the promoters' line, supposing them to put down a pit at the part of their land the most distant from the projected line? Rather more than half a mile.

154. That length of line would be proportionately diminished according as the spot on the 280 acres where they opened their pit was nearer to the projected line? It would.

155. Morehead and Young's line passes through these 280 acres? It does.

156. The promoters' line has been so planned as not to pass over the land of the A. A. Company? It has.

157. If the Messrs. Brown made an independent line of their own, would they not experience some difficulty in managing to effect a junction with the Great Northern line in such a way as to avoid the opposition of the A. A. Company that would be occasioned by the line passing through their land; and have not the promoters gone round that land in such a way as to prevent us getting on to the Great Northern without going through the A. A. Company's land? That point was not considered by me in laying out the line. I never for a moment contemplated shutting out any other line from coming in upon the Great Northern.

158. I do not impute to you that you did, but I merely refer to the fact. As a matter of fact, might the Messrs. Brown make a line from their pit without going through the land of the A. A. Company? If you refer to the 280 acres block they could do so, certainly.

159. I allude to all their coal land? They might join without going through the A. A. Company's land. Of course I have not inspected the ground with a view to their making a line, but my impression is that they could get in upon the Great Northern without going through the A. A. Company's block.

160. From the 280 acres? Yes, certainly.

161. And from the 310 acres? That is possible also.

162. It would be possible then for the Messrs. Brown to make a line from their 310 acres to run into the Great Northern Line, without coming in on the line of the promoters or passing through the A. A. Company's land? Yes, without going through the land marked on this plan as occupied by the A. A. Company.

163. Are you aware that the A. A. Company have land adjoining that marked in their name on the plan No. 2, and extending to a continuation of the line dividing Dangar's 39 acres from the allotment of 39 acres and 32 perches? I believe they have.

164. Could Messrs. J. and A. Brown make a railway from their 310 acres portion of the Great Northern line without crossing some of the A. A. Company's land, supposing them to be the occupiers of the portion of land I have designated? I do not think they could.

165. It might then be an object with the Messrs. Brown to have provision made for their joining on to this line of the promoters rather than to risk the opposition of a competing Company

W. Weaver, Esq., C.E.
 18 Sept., 1862. Company to a line carried through the land of that Company? I am not aware of what may be the objects of the Messrs. Brown, nor do I know on what grounds the A. A. Company could refuse to allow a line to run over their land leased from the Government. Lines have been made already through the A. A. Company's land, by adverse and competing coal Companies.

166. But did you not state that Messrs. Morehead and Young purposely avoided making their line in such a direction as to cross the land of the A. A. Company? Yes, but that was because it would have been necessary to cross it only at a point close to the junction; and it was thought preferable to make the curve sharper rather than to run on and take only about half a chain of the corner of the A. A. Company's land.

167. In fact you did not think it worth while to encounter the opposition of so powerful a Company, merely for the sake of a half chain of land? It was not merely on the score of opposition, but mainly because we should derive no corresponding advantage in taking the land.

168. Will you look at section 13 of the Bill, where it says "or if a tramroad or railroad the ascent shall not be greater than the ruling gradient of such tramroad or railroad."—Will you explain to the Committee what you mean by the "ruling gradient"? The meaning in this clause is that it shall not exceed the steepest gradient on the line, which in this case is 1 in 79.

169. Then, according to your view, the "ruling gradient" here means the "steepest" gradient? That is I think what was intended.

170. Does the term "ruling gradient," when used professionally, always mean the steepest gradient? Not always.

171. Why does it mean the steepest gradient in this case more than in any other? I should not have used the term "ruling," but I presume that it means here the "steepest" gradient. I did not draw the clause, and am not therefore answerable for the term. What I think it is sometimes meant to understand is—the "average" gradient.

172. How do you account for the term "ruling gradient" meaning the steepest gradient in this clause, when it has not that meaning in general? (*Question objected to.*)

173. Will you state to the Committee the grounds upon which you come to the opinion that in this clause the term "ruling gradient" means something different here to what it does generally? I decline to answer the question; I have given my opinion, but I do not think I am called upon to give the grounds of any opinion I may form.

174. *By Mr. M'Carthy:* About these 280 acres that have been alluded to;—has there been any coal struck there? I cannot speak positively, but I do not think there has been; I believe that the borings made there have shown that there is nothing worth working there.

175. And with respect to the convenience it would be to the Messrs. Brown to be allowed to join their line on to that of the promoters, would not the convenience be all on one side in that case? Most certainly.

176. Messrs. Brown would have all the convenience, and the promoters all the inconvenience? Yes.

177. Do you think the promoters ought to be called upon to pay the expense of forming a line merely that it may suit the convenience of Messrs. J. and A. Brown? I do not.

178. *By the Chairman:* If you are of opinion that the products from Messrs. Morehead and Young's coal pit will be sufficient to occupy the whole of the proposed line, what is the use of throwing open the line to the traffic of other parties, as you do in clause 3, at 3d. per ton per mile? No use at all; I did not advise the insertion of that clause; I certainly should not recommend its retention.

179. Neither in this case, nor in the case of any Company having a coal pit the products of which are sufficient to occupy one line entirely? No; a line of such a short length as this would be always likely to be constantly in use by the owners, because a short length of line can be worked by a less number of wagons than one of a greater length. Two trips can be made on a short line where only one is made on a long line; in the longer line the loads are heavier, from the number of wagons used being greater.

180. Is that the reason why you consider it to be more convenient that the Messrs. Brown should have a line of their own? Yes; that is the reason why I consider that in every case where there is only a mile or a mile and a half, or some short distance of line to make, the owners of pits would do better to make an independent line of their own, than to run in upon the line of some other private owner.

181. What objection would there be to the Messrs. Brown laying down a second line of rails alongside those of the promoters? I conceive that there would be no objection to their doing that.

182. Are the plans of this proposed line so made as to allow of a second line of rails being laid down? No, not at present; to allow for a second line of rails all the works upon the line would have to be increased; the cuttings and embankments would have to be nearly double their present width, and in fact all the works would have to be doubled.

183. Were you the engineer employed in the construction of the Wallsend Company's line? Yes.

184. Is that a single line? Yes; and they are working it with their own traffic in such a way as to sensibly affect the traffic on the Great Northern line, so much so indeed that a second line is being laid down on the Great Northern line from the junction of the Wallsend line to Newcastle, in order to accommodate the increased traffic brought in by the Wallsend Company.

185. Do Messrs. Morehead and Young intend to provide their own locomotives? Ultimately they do.

186. But in the meantime they propose to make some arrangement with the Government? They do.

187. Do the Government work the Wallsend line? They do.
188. The only thing the Wallsend Company provide is the trucks and the railway? That is all.
189. *By Mr. Hoskins:* I have not heard it stated in evidence whether or not you were the engineer of this Company? I stated so in my evidence given on a former day.
190. Have you ever been connected with railways in England? I have.
191. Do you not know that there is always a provision in every charter incorporating a Railway Company, that the Company shall be compelled to allow their line to be used by other Companies on the payment of a certain toll? I know that there is always a provision to that effect in the charter of incorporation of railways made by carrying Companies, but I do not think it is the case in respect to railways made by producing Companies. In fact I am almost certain that there is no provision of the kind in the case of coal or mining Companies' lines.
192. In any railway for passenger or public traffic a provision is always inserted for allowing other lines to join? In public lines it is always the case, but not in private lines made by coal or iron Companies.
193. You do not know then that it is made compulsory upon all coal or mining Companies, that they shall convey the produce of other Companies whose lines come in on theirs, provided such parties pay a certain regulated toll? I do not; on the contrary, I am under the impression that such is not the case.
194. Have you not seen, at the stations of Railway Companies, notices put up, showing the conditions upon which the Directors of the line are prepared to take the goods or minerals of other Companies? Yes, but I wish you to understand that this has been in the case of a railway intended for carrying for the public, or what may be called a public line. I am not aware that such is the case in respect to lines made by private Companies, for their own particular purposes, and not for public carrying. I know that where a railway is made by a carrying Company, that a provision for the coming in of other lines is always inserted, but where mining Companies make lines for their own private traffic I do not think that the Legislature ever interferes to force them to carry the goods of other parties.
195. Have you ever seen a private line constructed for the conveyance of minerals only, running in upon a public railway line? I have not seen one finished, but I remember to have seen one in course of construction.
196. Where was it? It was a private line joining in on the South Wales line.
197. Were the parties constructing this line compelled by their Act of Incorporation to convey the goods or minerals of other persons, who might require them to do so, on those persons paying them a regulated toll for so doing? I cannot say certainly whether they were or not, but my impression is that they were not.
198. Then that is an exceptional case, seeing that the general rule is that the provision for carrying the goods of other parties is inserted? No; the instance I give is the only one I can speak of as coming within my own knowledge. My impression, however, is the very reverse of what you state. I believe that it is not customary to insert this provision, but I cannot speak positively.
199. You will admit, however, that private persons obtaining a right to make a private railway for their own particular advantage secure exceptionable privileges? They do.
200. Are they not empowered to take land to the extent they may require it? Yes, on paying compensation.
201. In the case of Government land they pay no compensation? No.
202. And your line passes mainly through Government land? It does.
203. Do you not think then, that having these privileges conferred upon them, by their being empowered to take possession of the lands of private individuals—on paying compensation it is true, but still it is a privilege to be entitled to take it—and by their being allowed virtually to have the monopoly of carrying particular articles of produce on their line,—do you not think that the interest of the public requires that other parties should be allowed to use the line, if they wish to have their goods conveyed along it, on the payment of a regular fixed toll? My opinion is, that the public derive an advantage in the minerals that are raised and sent to market, quite, if not more than corresponding with the advantages the Company obtain in having these privileges conferred on them. Beyond this I am not clear that it could be shown that the public would derive any advantage if the promoters were compelled to allow other parties to come in on and use their line.
204. Suppose the case of a line intersecting a series of mountain gorges, so that there is no possibility of making a line in any direction but that taken by the first line, would it be fair to the public, living beyond the range, if they wished to communicate with the lower country, to preclude them from so doing by allowing the parties forming the first line to monopolize that route? Certainly not; but that is a very different case from the one now before the Committee.
205. Has it not come within your knowledge that this wise provision for allowing the junction of other lines has been inserted in all the Railway Acts passed by the Imperial Parliament? I have said that they are inserted in the Acts incorporating public Railway Companies.
206. But in all Acts authorizing the construction of railway lines? It is usual to insert this provision, I am aware; but in all those cases where it is inserted the line is of a much greater length than this line of the promoters. This is a very short line, and offers no obstruction to the making of any other line in any direction to join the Great Northern Railway.
207. So that in point of fact no parties—neither the Messrs. Brown nor any others—would be put to any increased expense in effecting a junction with the Great Northern line from their 280 acres block? No, I think not.
208. Would they be prevented from joining it at the most eligible point, or would they be forced

W. Weaver,
Esq., C.E.

18 Sept., 1862.

W. Weaver, Esq., C.E.
18 Sept., 1862.

forced to make a junction at one point when they required to do so at another? I do not see that they would suffer any inconvenience, since, as I have explained, it would be a saving of distance for them to run in direct to the Great Northern line.

209. Would the land they would have to pass over be swampy, or would that they would have to buy be higher priced land, and so put them to a much greater expense? No; I think that so far from being a greater expense it would be cheaper in the end for Messrs. Brown, or any other person having a large traffic, to make a line of their own, rather than to make use of another line, and pay 3d. per ton per mile for carriage.

210. Your line passes through their 280 acres? Yes.

211. Now if they sink a pit on that block, what objection do you see to their using your line on payment of a toll of 3d. per ton per mile? The objection I see is that the traffic of the promoters will be likely to be obstructed if other traffic is brought in upon the line by another Company.

212. Did you not say just now that the Wallsend Company had been necessitated to lay down a second line of rails, in order to meet the requirements of their increased traffic? No; I said that the Government were about to lay down a second line of rails from Newcastle to the Wallsend junction, in order to accommodate the increased traffic from that and other sources.

213. Do you not think that the Government would be likely to object to having their numerous junctions with the Great Northern line from independent branch lines;—would it not be a source of greatly increased expense to them, in the employment of a larger number of switchmen and watchmen, and signalmen, and also in the laying down of an additional number of turn-tables? Any additional expense entailed by the junction will have to be borne by the Company making it.

214. *By the Chairman:* The Companies would have to pay a toll to the Government? They would.

215. And this toll would repay the Government for any expense to which they might be put? It would.

216. *By Mr. Hoskins:* Is there not a greater liability to accident at the junctions than at any other part of the line? Yes, but then it will depend chiefly upon the arrangements made. The communications with the main line from the junction will not be very frequent.

217. From what you have seen of railways in England, is it not always the case that, wherever there is a junction of three or four lines with one main line, these lines converge into one general short line, by which the junction with the main trunk line is effected? Yes, where the lines are very close together that is the plan adopted.

218. Do you not think it would be very objectionable to have a number of small lines all opening independently into the main trunk line at half a mile distant? Yes, of course it would.

219. Would it not be dangerous, in regard to the fast increasing traffic on the Great Northern line, to have numerous switches on the line, to provide for these lines coming in on it? I have virtually answered that question before; but if there were two, three, or more lines coming down into the Great Northern line, at half-mile distances, the Government would probably not allow them to enter upon the main line at several points; they would all be brought down on to a siding, and then from that they would all run in at one point on to the main line.

220. If the Messrs. Brown are not permitted to use this line, but are compelled to make one for themselves, would not the junction with the Great Northern necessarily be close to that of Messrs. Morehead and Young? Not necessarily. For instance, if they found coal at a spot marked on the plan No. 2, they would join the Northern Railway at a point nearer to Newcastle than our junction by a mile or more.

221. But suppose they opened a pit at the other end of their block? From what I know of the country I do not think it probable that coal will be found there. I have been told, by a party who has put down several bore holes, that there is no coal there, except a lower and almost worthless seam.

222. Through what lands will your line be taken? That has been already fully given in evidence.

223. Do you happen to know if Messrs. Brown have made any application to the promoters for permission to use this line which it is proposed to make? I have not heard that they have.

224. Are you aware how long it is that the Messrs. Brown have urged any objection to the promoters obtaining permission to make this line? I have only heard that they had any objection to the Bill, within the last week.

225. How long is it since this line was first projected; or perhaps it would be better to fix the time, by asking you how long it is since you surveyed the line? I surveyed it about five or six months ago.

226. Can you say whether, at the time you surveyed the line, the Messrs. Brown were aware that you were surveying it for Messrs. Morehead and Young? That I cannot say.

227. Did they speak to you at the time you were surveying the line? No, they did not.

228. Then they might not have known of it? It was generally known in the neighbourhood, and I should imagine that they must have heard of it.

229. *By the Chairman:* You had no conversation with the Messrs. Brown on the subject? I had not.

230. *By Mr. Hoskins:* You do not happen to know whether the Messrs. Brown made any overtures to the promoters to assist in the cost of constructing the work? I do not.

231. You have stated that you object to the proviso to clause 2,—“ Provided also that if the promoters their heirs and assigns shall cease to use the said railway for the space of one year at any one time the ground and soil shall revert to and become revested in the said owners ”?

"owners"? I do not object to it; but I was asked my opinion in reference to it, and I stated an objection that occurred to me that might very fairly be used by the promoters,—that in case of a protracted strike, they might without any fault of their own be made to forfeit their line. That is my opinion on the subject, and it was only given on being asked for.

W. Weaver,
Esq., C.E.

18 Sept., 1862.

232. Would not the omission of this proviso be exceedingly objectionable, since by this Bill parties will be prevented from obtaining a line of their own, as well as excluded from the right of running on promoters' line, and then promoters are to be at liberty to allow the line to lie idle? I do not see how parties will be prevented from making a line of their own.

233. Is there not a provision in clause 4 of the Bill, that no railway shall run parallel to the line of the promoters? There is, but I understood that that clause was intended to be given up altogether.

234. Do not the Messrs. Brown complain that the line will traverse some portion of their land in the direction in which they expect to find coal? I understood that their objection was that the rate of toll to be charged was too high.

235. Can you state what reasons have influenced the promoters of this scheme and induced them to propose to take out clause 4 of the Bill? Because they do not consider it desirable, for the reasons I have already given, to have other lines joining on to theirs and interfering with their traffic. But whilst they strike out the provision authorizing the use of their line by other parties, they also strike out the prohibition against making a parallel line; that being struck out, other parties will be at liberty to make a line of their own close up alongside the fence of the promoters, if they think proper to do so.

236. As a matter of justice, is there any reason why the Messrs. Brown should be prevented both from joining on to promoters' line, and from making a line of their own parallel to this proposed line? You will see, if you look at the clause, that this is not done; the one provision follows naturally upon the other. If the promoters are to be compelled to carry the traffic of another line, then it is only fair that they should have protection against any Company being allowed to run their line parallel to the line of the promoters. If they are not obliged to carry this traffic, then of course the prohibition against making a parallel line will be given up also. The clause is, I believe, the usual one inserted in public Railway Acts.

237. Have you not seen lines of railway in England running parallel to each other? Yes, but not close to each other.

238. Do not the Oxford, Worcester, and Wolverhampton, and the London and North-Western, run parallel and close together from Oxford to Wolverhampton and from Oxford to Rugby? Yes, but that was a special case.

239. Engineers, I believe, have generally an objection to one line of railway joining another on a curve or an incline? Of course; if we can get in on a level we always do so.

240. *By Mr. Hannell*: Do you know if the Wallsend line is fully employed? I have no doubt but they could send down more coal if they required to do so; but I know that they now make five or six trips a day, backwards and forwards, on their line.

241. Are you aware that the Co-operative Coal Mining Company have now a Bill before Parliament to authorize their joining in on the Wallsend line? I was not aware of it.

242. Would it not be unjust to these people not to allow them to come in upon the Wallsend line? Yes, but their case is different from the one now before the Committee; there they have four miles to go through a difficult country, whilst in this case we have a very short line over a very easy country—in fact, over a nearly level country; therefore there can be no hardship.

243. You told the Committee that there was no coal on these 280 acres;—now, is it not an ascertained fact that there is coal all round this block occupied by the promoters? There is coal in this range that runs round at the back of the block.

244. But all round? No, not all round; on the north there is none.

245. On the east, south, and west, however, there is coal? Yes, directly you get on to the high ground you have the coal. On the low ground it has been bored for and not found, except, as I have said, a low worthless seam.

246. Is not the A. A. Company's borehole pit sunk upon low ground? That is considerably further to the east.

247. Yes? There is coal there, but there is none here.

248. There is coal, however, upon three sides of the block? Yes.

249. Is the whole of this 320 acres coal land? This upper part is, but not the lower part.

250. How far will Mr. Dibbs have to go in order to make a junction from his land with the Great Northern line? They will have to go to the same distance as if they came in on our line, within 60 chains. They will only save 60 chains by coming in on our line as they proposed at first to do; and as the saving was so small, they abandoned that idea and determined upon making a line of their own.

251. *By the Chairman*: Mr. Dibbs' land is now occupied by the Waratah Company? Yes.

252. *By Mr. Hannell*: In reference to the provisions for the forfeiture of the line in the event of its not being worked for twelve months;—if it were made a public line, and three or four other lines were allowed to come in on to it, would not that prevent the possibility of the line being left for twelve months without being worked? It would not prevent the possibility of the discontinuance, because if there were half a dozen lines coming in on it, they might all be stopped at the same time by a general strike.

253. But it would render the probability much less? Yes, certainly.

254. Have you seen the plans of the line of the Waratah Company? I have.

255. Did you observe how they proposed to effect a junction with the Great Northern line? I did.

256. Does not the curve by which you propose to join the Great Northern interfere with their junction with that line? No, there is plenty of room for them to go in with their line.

257.

W. Weaver,
Esq., C.E.

18 Sept., 1862.

257. But the higher they go up the firmer the ground will be? No, it is hard enough here where they propose to run their line.
258. Will it not oblige them to alter their plans? No; the only object is to avoid going into the swampy ground, and this will be effected with our present plan.
259. Would it not answer your purpose to have the land you want on the east instead of the west side of your line? No, I think not. The Waratah Company make no objection to our line.
260. Where are the detailed plans mentioned in the first clause of this Bill? They are the plans placed before the Committee, and alluded to in my evidence on a former day.
261. *By the Chairman*: The Messrs. Brown are holders of mineral lands in the neighbourhood of the land occupied by the promoters? Yes, they are the lessees of Crown lands in the neighbourhood.
262. And consequently rivals? Yes.
263. Do you think that the objections taken to the Bill have been made upon public, or upon private grounds? Entirely upon private grounds.
264. You have stated, I think, that the proposed line intersects the Newcastle commonage reserve? Yes.
265. Is that land valuable for any public purpose? No, it is not of the slightest value.
266. You intend to make a bridge to carry your line over the road that crosses this Common? Yes, so as to keep open the communication between the two sections into which our line will divide the Common.
267. You intend to make only one bridge? Only one.
268. Will that be sufficient? Yes, quite sufficient. There is only a short distance of the Common traversed by our line.
269. *By Mr. Hannell*: Proper precaution has been taken on your plan not to cut off the communication between the two portions of the pasturage reserve? Yes, the proposed bridge will leave a sufficient means of communication.
270. And with reference to the objections of the Messrs. Brown being of a private rather than of a public character, would not those objections be equally applicable if made by any other owners of coal land, and do they not thus become public objections? I know of no others besides the Messrs. Brown. There is no objection to our Bill on the part of the Waratah Company, and there cannot be any on the part of others, because they are all situated nearer to the Wallisend line than ours.

John Whitton, Esq., C.E., called in and examined:—

J. Whitton,
Esq., C.E.

18 Sept., 1862.

271. *By Mr. McCarthy*: You are Engineer-in-Chief for Railways? I am.
272. Have you examined the plans of the proposed railway of Messrs. Morehead and Young? In so far as the junction with the Great Northern line is concerned—nothing more.
273. The junction is intended to be formed in such a way as not to prejudice the interests of the public? No doubt it will be.
274. Do you see any objection on the part of the public generally to the construction of the proposed line? I do not see any objection to it myself. Of course I do not know what the public generally may think of it.
275. Have you, from your presence during the proceedings of to-day, formed any opinion as to the desirability or otherwise of the public, or rather of other mining proprietors being allowed to join their lines on to the line of the promoters? If the line be only sufficient for the promoters' own traffic, it would be of course objectionable to allow other lines to join it. Unless some public necessity for their doing so could be shown, I think it would be objectionable to give the permission.
276. Do you think that any such public necessity arises in the present case, having reference to the evidence you have heard in regard to the lay of the land and other circumstances? I have not heard, in the evidence given before the Committee, any good reason for a junction with the promoters' line.
277. Do you not think that it would be more convenient for all parties if each private Company had each its separate line rather than that several should join into one line? Yes, I do; and from the evidence I have heard here, I should say that there is no reason why the Messrs. Brown should not make a line parallel to that of Messrs. Morehead and Young, instead of making a junction with that line. If the proposed line of the promoters be only sufficient to accommodate their own traffic, then any additional traffic will necessitate the laying down of a second line of rails; and the expense of laying down a second line of rails would be quite as great as that of making an independent line of their own, with the exception of the cost of purchasing the land of private individuals required for the line.
278. *By the Chairman*: Supposing three different lines are made to join the Great Northern line—that is, the line of the promoters, the line of the Waratah Company, and the line of the Messrs. Brown—at what place would you propose that they should effect their junction with the Great Northern line? There would be one point of junction for the three lines.
279. Then in effect, if Messrs. Brown or the Waratah Company make an independent line from that of the promoters, they will have to be joined ultimately before coming in on the Great Northern line? No, they would not. I propose to lay down a separate line on the Great Northern, and let all the three join on that line.
280. On a siding, in fact? Yes.
281. On the Great Northern line? Yes, but not on the main line. All these private lines will run in on the siding, and from the siding will be taken in at one point on to the main line.
282. Then the whole of these private junctions will be entirely independent of the main line on which the passenger traffic is conducted? Yes, the whole of them.

283. Do you undertake to give any opinion as to what amount of traffic there is likely to be on this line of Messrs. Morehead and Young? No, I know nothing about that.

J. Whitton,
Esq., C.E.

284. Nor do you pretend to form any opinion as to the probability of traffic on the Great Northern? No, none whatever.

18 Sept., 1862.

285. Your opinion is based on the assumption of traffic, without knowing positively whether there will be any or not? Precisely.

286. Could not the Wallsend Company do more traffic on their line than they now do, if they had it to do? I am not aware.

287. Neither one way nor the other? No, I know nothing about it.

288. *By Mr. Hoskins*: You say that if there are other lines besides that of Messrs. Morehead and Young, and coming from the same direction to join the Great Northern line, that you will not compel them to form a junction with each other, so as to have only one line of junction with the Great Northern? I do.

289. Should not such persons, or should not any persons proposing to make a line in the same direction as that taken by the line of Morehead and Young, be allowed, as a matter of justice, to use that portion of the line with which they will have to run parallel with their own line? I do not think it necessary to give them this permission, because I do not see what they are to gain by it. If they have to lay down a second line of rails on the line of the promoters, it will be just as much cost to them as if they made a line of their own on their own land. I say this on the assumption that the promoters will have sufficient traffic of their own to keep the line continually at work. They would have just the same extent of embankments and cuttings and sidings to make as if they made a line on their own land.

290. So that you would not object to another Company making a junction with the Great Northern line, at or near the point of junction of the promoters' line? Not unless they were sufficiently near to each other to form one junction. But if I understand aright the evidence given, if the Messrs. Brown form a line of their own, they will only have the same distance to go to reach a point on the Great Northern line as by the proposed junction with the promoters' line.

291. Then you would have no objection to these lines or to any other lines effecting a junction with the Great Northern, only they must do it at the same place? Yes, if practicable.

292. Have you any objection to lines running parallel with each other? Not unless they were carrying Companies, and were running in competition with each other. It would be objectionable to give the sanction of Parliament to two lines to run parallel and to compete for the same traffic; but in the case of private lines, used only for the traffic of the promoters, I see no objection to sanctioning it.

293. Therefore it would operate harshly upon persons desiring to construct a line parallel to that of the promoters, if they were precluded from doing so by the provisions of this Bill? I understood that it is intended to strike that clause out of the Bill.

294. *By the Chairman*: Have you any suggestion to offer in regard to this Bill? The only suggestion I would make is that a general clause should be inserted in it something to this effect—"That nothing herein contained shall alter, repeal, or annul, or anywise affect any of the provisions of the Government Railways Act of 1858."

295. That is what you, as Engineer-in-Chief for Railways, would suggest on behalf of the Government? Yes.

296. And you have no objection to urge against the Bill on the part of the public? No.

297. Will there practically be any difficulty in the way of the two other lines coming in at the same junction? None whatever. Provided they are made with the sanction of the Government, all these lines will come in upon the Great Northern line at one junction. A side line will be formed into which they will join, and that line will run into the main line.

298. Then the construction of this line will not in any way interfere with the coming in of other lines? Not in the least. The junction with the main line will be effected at a point below where the line nearest to Newcastle will join the side line. If another line nearer to Newcastle is made, then the siding will be extended so as to take in that line, and the junction will be made nearer to Newcastle.

299. And upon whom will the additional expense fall of making these extended sidings? Upon the parties applying last for the authority to enter on to the main line.

300. Would it not be possible to make a siding so as to take in all the additional lines that will be required? It would be, if I knew where they were likely to come in.

301. Are you aware officially that other lines are proposed to be made to come in upon the Great Northern line? Not officially; I received no official notice, but I do know that the Waratah Company propose to make a line to join the Great Northern.

302. Is it not usual to make application to the Government before applying for an Act of Incorporation? No.

303. The parties come, in the first instance, to the Assembly, with an application for a Bill? Yes.

304. How far is the junction of the proposed line of the promoters from the junction of the Wallsend Company? About a mile and a half, or more.

305. The junction of the Wallsend line is a mile and a half farther from Newcastle than the junction of this proposed line? Yes, rather more than a mile and a half.

306. And their traffic is carried on a separate line? Yes. It is the intention of the Government to lay down a second line of rails from the Wallsend Junction to Newcastle, for the accommodation of the coal traffic through that district.

307. You have no other suggestion to make on behalf of the public, beyond what you have already stated? I have not.

308. *By Mr. Hoskins*: Have Messrs. Morehead and Young pointed out to you the precise spot at which they propose to come in on the Great Northern line? They have pointed it out

J. Whitton,
Esq., C.E.
18 Sept., 1862.

out on the plan, but as the main line is nearly level for a considerable distance, the exact point of junction may be hereafter determined.

309. Have other parties intimated to you, or are you aware that they were anxious to make a junction with the Great Northern line? Yes, I know that the Waratah Company are applying for a Bill for that purpose.

310. Have any others made you acquainted with their intention to do so? No.

311. You have never heard that the Messrs. Brown wished to make a line from their pits and effecting a junction with the Great Northern? I have not.

312. Has it been customary with other Companies, when they proposed to make a junction with the Government line, to give you notice of the point at which they propose to come in? No, such has not been the practice.

313. Would it not be the more proper course for them to give you notice? Yes, I think so. I only hear of them now from notices I receive from the Select Committees, or from advertisements that appear in the newspapers.

314. Have you looked through the Bill now before the Committee? I have.

315. Have you noticed the provisions of clause 13? Yes.

316. In the last paragraph of that clause these words occur—"or if the same be a tramroad or railroad the ascent shall not be greater than the ruling gradient of such tramroad or railroad";—can you explain to the Committee what is meant by the term "ruling gradient"; is it a technical term? No, it is not a technical term.

317. What should you imagine it to mean? I should assume, from the way it is used, that it meant the greatest length of any one particular gradient on the line.

318. Would there be any great objection to another railway line joining on to this proposed line, for the purpose of making one common junction with the Great Northern, provided the other line came in on a moderate gradient, say of 1 in 70 or 80? The only objection I see is, that all the siding arrangements have to be made at the junction with the main line, and consequently it would be almost impossible, consistent with safety, for them to come in within fifteen chains at least of the junction with the main line.

319. What is the general or average gradient of the Great Northern line? The steepest gradient on the Newcastle line is about 1 in 67; but on the new line, West Maitland to Singleton, there is no gradient worse than 1 in 80.

320. You say that it would be objectionable for another line to join the line of the promoters within fifteen chains of their junction with the Great Northern line? Yes.

321. And yet you consider that it would be objectionable to come in on it further back? No, not objectionable; I simply say that it would be undesirable if the line be only sufficient for the amount of traffic the promoters will be able to put on it.

322. At all events no line ought to join in on another within fifteen chains of the junction with the main line? Certainly not.

323. *By Mr. Burton (through the Chairman):* Will you be good enough to explain more particularly the mode by which you intend that the several private lines made shall come in on the Great Northern line—I did not clearly understand it from your description? Yes, the matter is very simple;—a separate line of rails is laid down, and these private lines make their junction with this line; when it has been taken far enough to allow of all these lines to join, this side line will be taken into the main line.

324. *By Mr. Hoskins:* Do you happen to know whether or not it is the rule to make provision in all English railway Bills for compelling the proprietors of the line to convey the goods of other Companies, by the payment of a fixed rate of toll determined by law? Yes, for incorporated Companies it is; but there are a great number of lines that join in to others without any such condition.

325. Are not those lines constructed upon land belonging to the owners of the line? Yes, upon land belonging to or purchased by them.

326. But where the line is carried over land belonging to a number of different persons, are not the proprietors compelled to convey goods of other persons on the payment of a stipulated rate of toll? No, not if the line be a private one. If the parties intend to work as common carriers, then this provision is inserted.

327. *By the Chairman:* When they intend to engage as common carriers, a provision is inserted that parties shall have the use of the line, on the payment of a certain rate per ton per mile? Yes.

328. But this is not inserted when the line is a private one? No.

329. *By Mr. Hoskins:* Have you ever seen a line constructed in any other way, except through the property of the persons making the line, in which this provision was not made? I do not remember an instance at present.

330. Where no provision is made for conveying the goods of other persons, has it not only been because the line has been constructed on the land of the persons making the line? It might be so, but it has always been in the case of lines not incorporated. It might be that the owners of land would make a private arrangement to sell the land required for the railway, and thus an Act of the Legislature would not be required.

331. They would not require a special Act of the Legislature to enable them to take land in that case? No.

332. But where a special Act is required, does not the Legislature always insist upon this provision? If they intend to carry goods as common carriers the Legislature does so, but I am not aware that it does so in the case of private lines.

Mr. Robert Archibald Alison Morehead called in and re-examined :—

333. *By Mr. M'Carthy*: Has any communication been made to you by the Messrs. Brown, relative to their desire to connect their line with the line now proposed? I have heard nothing whatever from them. The first notice I got of their opposition to our Bill was in the report of the proceedings in the Assembly, which appeared in the newspaper of the following morning.

Mr. R. A. A.
Morehead.

18 Sept., 1862.

334. If any communication had been made to you, would you have been prepared to consider it on fair business grounds? As a matter of course I should.

335. Have you any statement to make in reference to this particular point, beyond that you have now made? No, I know nothing beyond what I saw in the newspaper, which was the first notice I got of their proceedings.

336. *By Mr. Burton (through the Chairman)*: When did you first give the Messrs. Brown an opportunity of knowing that you intended to strike out the 4th clause of your Bill? We have given the Messrs. Brown no notice on the subject at all. I had no communication at all with them. I could not know that they were in any way interested in the matter; and, as I have said, it was only by the report of the proceedings in Parliament that I knew they intended to offer us opposition.

337. You say that the Messrs. Brown never communicated with you requesting permission to join their line on to your proposed line? Never in any way.

338. What reason could they have for asking for such a permission, so long as the 4th clause remained in your Bill, and gave them that permission? As I understand the question put to me by Mr. M'Carthy, it had reference to the Messrs. Brown's petition, and not to the 4th clause of the Bill. The Messrs. Brown petitioned against our Bill without in any way communicating with me, so that the first notice I received of their proceedings was through the report in the newspaper. The question was then put to me, whether, before they petitioned Parliament, the Messrs. Brown had followed the course usually pursued by men of business and courtesy, by previously communicating with us in reference to their objections to our Bill.

339. Are you aware whether Mr. Brown's solicitor informed your solicitor of the points of objection taken to your Bill? I had not the slightest notice from any quarter of any movement on their part.

340. You are not aware whether there was any intercourse between your solicitor and the solicitor of the Messrs. Brown, in reference to the inclined plane? I am not aware.

341. The petition to which you have alluded is the petition now before this Committee, signed by the agent of the Messrs. J. and A. Brown? It is.

342. Would you have met the views of the Messrs. Brown, on those points set forth in their petition, if they had made application to you before presenting it to the Assembly? I do not think we should; but perhaps I should best answer this question by saying that any objection, or request, or suggestion made to us by anyone under the circumstances in which the Messrs. Brown are placed in respect to our line, would have been fully considered and fairly discussed by us as between men of business not desiring or contemplating injuring each other, but on the basis that each should, as much as possible, follow his own course without interfering with the other.

343. Was not a copy of the draft petition brought to you after the petition had been presented to Parliament? I think it was, but I know that the first intimation I received was seeing the report in the newspaper.

344. *By Mr. Hoskins*: Does your railway traverse any portion of land occupied by the Messrs. Brown? I cannot give an exact answer to that question. I may say, however, that at the time we planned our line of railway and gave our notices, I believed they had no interest in any land that our line traversed. I believe that now they have some kind of a communication from the Government that leads them to believe that they will get a portion of the land that was then known to be Government land, and which formed part of the Newcastle pasturage reserve.

345. Do you know, as a matter of fact, that at the time you planned your line, they had not leased from the Crown any portion of the land required by you for your railway? I do, understanding such time to mean the time when our engineer was engaged in surveying the line.

346. Have they served you with any notice of the objections they have to the construction of your line or to the provisions of your Bill? None that I know of; they have served none on me personally.

347. Are there any other persons besides the Messrs. Brown, who own land that your line of railway will intersect? Yes, there are the representatives of the late Henry Dangar; they are the only private owners of land required for our line.

348. Have you served them with notice of your intention to apply for this Bill authorizing the construction of a railway over their land? We have communicated with them, and obtained their sanction to our taking the land we require; that is to say, we received the sanction of the only person in a situation to give it; but this land was found to be so peculiarly affected by the mode in which it was settled on the representatives of the late H. Dangar, that we were advised that it would be necessary for us to obtain an enactment before we could get a proper title.

349. You believe, then, that the land that has been represented to this Committee as having been leased from the Crown by the Messrs. Brown, was only obtained by them subsequent to your application to make the railway? Yes, I believe so.

350. What do you mean by your application—was any application made by you in the first instance to the Government? Yes, we did apply to the Government some time ago, seeing that

Mr. R. A. A. Morehead. 18 Sept., 1862. that we had to pass into the Great Northern line, and that they were the only parties over whose land our line would have to pass—with the exception of the representatives of the late Henry Dangar, whose sanction we had obtained. Seeing this was the case, we applied to the Government for leave to construct the line, hoping that under the circumstances the whole thing might have been done without an Act.

351. In the first instance, then, you applied to the Government? Yes, we applied to them to allow us to proceed at once, as the representatives of the late Henry Dangar had done, so that we might have gone on without delay with the construction of the line. At that time I know that none of the Crown land passed over by our line was subject to any lease.

352. When you speak of your application to make the railway, you do not mean the application to Parliament for this Bill? No; but a reference to the Bill now before the Committee will show that these 280 acres claimed by the Messrs. Brown were considered Crown lands at the time the schedule of the Bill was drawn.

353. *By the Chairman*: Had notice of your intention to apply for this Bill been advertised prior to this 280 acres being taken up by the Messrs. Brown? Yes, I believe so.

354. *By Mr. Burton (through the Chairman)*: Can you speak positively on this point? I can of course only refer to the time when I got a knowledge of their having leased the land.

355. And when did you first have a knowledge of this land having been leased by the Messrs. Brown? I cannot say that I have a knowledge that such is the case now. I know, however, that on the 26th May last, they were not in occupation of it.

356. In what way do you know this? In a letter from the office of the Secretary for Lands, dated the 26th May, and in reply to a letter from us dated the 16th of that month, the Secretary for Lands treats these lands now claimed by the Messrs. Brown as Crown lands. At that time I had not the most remote idea that the Messrs. Brown or any other person had any interest whatever in these lands.

WEDNESDAY, 24 SEPTEMBER, 1862.

Present:—

MR. HOSKINS, | MR. HANNELL.

ALEXANDER DICK, Esq., IN THE CHAIR.

Mr. Broadhurst, with Mr. M'Carthy, appeared as Counsel for the Promoters; Mr. E. Burton on behalf of Petitioners against certain Clauses.

Mr. Thomas Croudace called in and examined:—

Mr. Thomas Croudace.

24 Sept., 1862.

357. *By Mr. Broadhurst*: What are you, Mr. Croudace? A mining engineer.

358. In what particular service are you engaged at this time, or in what service have you been engaged lately? In the employment of Messrs. Morehead and Young.

359. Are you acquainted with the property in question, and with the proposed line of railway? I am particularly acquainted with them.

360. Do you know the 280 acres now leased by the Messrs. Brown? I know the greatest portion of them.

361. Have you ever had occasion, and when, to try by boring or otherwise, whether there were any coal mines underneath that land? Yes, I have bored, not on the 280 acres, but on the adjoining property, which is of the same nature.

362. From your examination, have you reason to suppose that there is coal to a workable amount under the 280 acres? There is not, to the best of my belief.

363. To what extent have you bored or otherwise made examination? On Messrs. Morehead and Young's property we have had twenty-one borings put down, tracing the outcrop of the coal to the northward and eastward.

364. *By the Chairman*: These 280 acres are situated to the north of Messrs. Morehead and Young's property? To the north-east, I think.

By Mr. Broadhurst: You have not bored upon these 280 acres? No, it is of no use doing so; it is all swampy ground, and we have traced the outcrop of the coal near to points adjoining that land.

365. Does it end there, then? Yes. We cannot work part of our land on account of there being no coal in it—that part of the land adjoining these 280 acres. Very likely there is coal in it, but what there is, is near to these pits last sunk.

366. From what you have seen of Messrs. Morehead and Young's coal mines, do you think they will afford sufficient employment for this proposed line of railway? Yes; I think that in the course of a year or two the workings will be to such an extent that they will fully occupy their own railroad.

367. Then you think that to effect a junction with another line for the purpose of affording other coal proprietors the privilege of running upon this line now under consideration, would be to interfere with the proper working of Messrs. Morehead and Young's colliery? It would be to injure ourselves, and it would stint the working of our mines, which are laid out to raise 600 or 700 tons a day.

368. Two Companies or sets of collieries could not be conveniently working together on the same line? I scarcely understand you.

369. You say the admission of traffic from other collieries upon this line would interrupt the proper working of Messrs. Morehead and Young's mines? Our intention is, as soon as the workings

workings are opened, to go to the dip of the coal, and then this line will be scarcely sufficient to carry away the quantity we get ourselves, and might have to receive addition, with a considerable increase of expenditure, if a junction were allowed.

370. In short, you think there will be sufficient work for the line supplied by your own mines, and that the addition of traffic from any other would be injurious? Yes, I think so, in the course of a year or so, when the workings get opened out.

371. Would it be convenient that for distances less than a mile the rate per ton should be proportionately diminished? It is my opinion that for every mile or portion of a mile the per centage paid per ton ought to be the same as that to be paid for a mile.

372. Does the rate per ton mean the toll? Yes.

373. What are your reasons for thinking so? The reason is this—that the line forming a junction with this line now under consideration may require to run upon it only a few yards in extent; but the expense incurred in order to afford them this advantage would be almost the same; and there would be the same amount of loss to the Company as if those forming the junction travelled a mile upon the line.

374. *By Mr. Burton:* How far have you bored below Messrs. Morehead and Young's seam? I myself have never bored beyond twelve or fifteen feet, but I have information from the records, of borings which have been from 200 to 500 feet.

375. *By Mr. Hoskins:* How long have you been in the service of Messrs. Morehead and Young? A year on the 6th of this month.

376. Where did you acquire your knowledge as a mining engineer? I have had eleven years experience in some of the most difficult collieries in the north of England, including the Washington Colliery.

377. Whose land was this adjoining to Messrs. Brown's 280 acres, on which you superintended the operations of boring for coal? Messrs. Morehead and Young's.

378. When were you engaged in these boring operations? I think from January to May.

379. In this year? In this year.

380. Do you know when Messrs. Brown acquired possession of these 280 acres? I believe it was March or April; I cannot say exactly.

381. And did you commence boring for coal on Messrs. Morehead and Young's land previous to the Messrs. Brown acquiring the possession of this land? I think we did some time before.

382. Do you feel certain about that? Yes, I do.

383. Do you know whether Messrs. Brown applied to the Crown for permission to purchase or lease the land previous to the time when you made these borings? No, I cannot say.

384. Do you know whether Messrs. Brown do own or lease this land? I know they are supposed to lease it—that they applied for it and it was granted.

385. You do not know when they applied for it or came into possession of it? I do not, but I think it was in March or April.

386. I think I understood you to say that you believed no coal was to be found in this block of land in the possession of Messrs. Brown because it was swampy land? I said that from the proofs afforded by boring experience I believed there was no workable seam in this land, as we have proof that the workable seam in this district has cropped out on the land owned or leased by Messrs. Brown.

387. And how do you know, or on what grounds do you form the opinion, that there is no coal under this land—have you made a trial, or do you know that other persons have made a trial? I do not know exactly as to the 280 acres, but I know a gentleman who bored on the Broad Meadows.

388. Not on the 280 acres? No. I know, however, that he bored on the same flat, leading to the Waratah station and missed the coal.

389. May not the seam extend from some neighbouring mines under this 280 acres? I scarcely think it possible, when the A. A. Company have not got it.

390. Have they tried? I think they have. I think Mr. Plews, their mining engineer, prosecuted two or three borings from their D and E pits to the Broad Meadows.

391. What distance was it from these 280 acres? I think it is on the adjoining land.

392. You do not know that they bored? I know from Mr. Plews' record.

393. How far was it from these 280 acres? I do not know without making a measurement.

394. You have not seen the Messrs. Brown attempting to bore on the 280 acres to ascertain whether coal was to be found there? No.

395. They have given no proof of their intention to try it? I have never seen any.

396. Do you mean to say, from your experience of the use of tramways or railways in England, that this one coal pit of Messrs. Morehead and Young will occupy the whole traffic of this projected railway—that they will find constant use for it; or that if proper regulations were made to allow other persons working adjacent mines the use of it, this would interfere with the working of Messrs. Morehead and Young's pits? Yes; the pits will be laid out to such an extent that the quantity of coal raised will be sufficient to engage the whole traffic on the line.

397. Have you formed the opinion that the operations in working this mine will be more extensive than in any other? I have every reason to believe they will.

398. Do you know anything of the working of colliery lines in England? I do.

399. Have you ever seen a railway belonging to an incorporated Company worked exclusively by that Company? Yes, it is the general thing at Home for each colliery to have its own distinct railway; and in the district from which I come they are generally run to the North-Eastern Railway, which leads them to the port of shipment.

400. What are their average lengths? They are so varied I could not say.

401. They are not generally long? From one mile to ten, perhaps.

Mr. Thomas
Croudace.
24 Sept., 1862.

- Mr. Thomas Croudace.
24 Sept., 1862.
402. Do they generally traverse land belonging to the persons who own the pits? Sometimes they do, but they generally go on to land occupied by others.
403. Are they not generally taken through private land belonging to the proprietors of the pits? Yes, generally. It is usually stipulated in the terms of the lease that lessees sinking pits on one part of the land shall have power to construct a railway over any portion of it.
404. The land they lease? Yes, which they hold under royalty.
405. Have you ever seen a coal pit line in England traversing land belonging to other persons than the proprietors of the coal pits, where the owners of the land it traverses are precluded from using the line? Well, I have not seen any instance where there was a particular wish to use it.
406. Is it not a fact that whenever Companies seek to obtain charters of incorporation for the construction of these railways which traverse the land of others, a clause is inserted in the Bill compelling them to convey the goods of others, on the parties whose goods are carried paying a toll which is fixed by the Legislature? Sometimes it is the case, but not always.
407. Have you seen any exception? I cannot speak of collieries. We were never paid a toll, nor were we compelled to convey the goods of others.
408. Name one line? The Washington Colliery line.
409. Where does that line extend? From the North-Eastern Railway to the Washington Colliery.
410. What is the length? Two miles and a quarter, without taking the branches.
411. Through whose land is it taken? The proprietor of the coal is Sir James Musgrave; it then goes through land belonging to Mr. Shapto; the other portion is through glebe land.
412. How long has it been made? I cannot exactly tell—many years before I was born.
413. Do you know whether the parties constructing the line obtained the consent of those other persons through whose land it was to run, previous to laying it out? I cannot say; I know the farmers in the district at one time wished to use it, in order to get manure along the North-Eastern Railway. We would not allow them to use our line, and they could not compel us to do so.
414. Would you not consider that so far it was an injury to the public, and especially to the residents in the district? I do not know; the Washington station was close at hand; it would rather have been an injury to us, or we would willingly have done it.
415. Have you ever seen a railway made to a coal pit through lands belonging to different persons, on which the persons making the railway were compelled to convey the goods of others, unless the projectors had previously obtained the consent of the owners of the land, without any stipulation for the conveyance of such goods? I cannot say that I have. It is not a usual thing with us to have any parties to the traffic other than the owners of the line that works their colliery.
416. Have you looked through this Bill? I have, some time since.
417. It states in the 1st clause that this railway shall be a chain and a half in breadth;—do you not think that unnecessarily wide? It may be considered wide, but I do not think it will be unnecessarily wide for the probable requirements; it is a great advantage to have a wide line.
418. Assuming that other parties wish to make a line near to it, do you not think this is taking up too much of the land? I do not think the line will occupy more space than will be required, considering the purposes for which the line is made.
419. Are the coal pit lines in England generally 99 feet in width? Some are more, some are less.
420. Is not the average width considerably less? I think not.
421. Have you ever seen a private coal pit line as much as 99 feet in width? I have one with a greater width.
422. Do you think there is any necessity for having the line 150 feet wide at the junction? I do, in order to get a double row of sidings to the centre line of railway.
423. If you have a double line you will not require a double row of sidings? Yes, we should. Supposing the line laid out for working up to the junction of the Great Northern Railway with locomotives of the Company, and that from the junction the Great Northern were to lead the coal to the port, then even with a double line of railway it would be necessary to have these sidings, because we require one for round coal, one for small coal, one for empty waggons, and an off-standing branch for goods to any other point you may wish to lead up to in the colliery at that moment.
424. *By the Chairman:* A spare siding? Yes.
425. *By Mr. Hoskins:* How many sidings do you propose to have? Four; one for round coal, one for small coal, one for empty wagons, and a spare siding.
426. And two branches? From the side. The junction would be the actual terminus of the railway.
427. You know the junction of the Wallsend line? Yes.
428. Is it 150 feet in width? No, but they are working to a disadvantage there.
429. How do you know? Because they have the cuttings at the end of what is called the Great Hill.
430. Is there any junction with the Great Northern line having a width of 150 feet? I have not travelled up it much, and cannot say.
431. Is there any at Newcastle of that width? I have never measured them, but I should think the sidings there are much more than 150 feet.
432. Have you ever seen a branch or coal pit line where at its junction with the trunk line there were so many sidings occupying so great a width? I have seen six sidings. I think at a junction point you cannot do with less; it is a great evil to stint yourself in that respect.
433. You have been at Newcastle? Yes.

434. You know none there so wide? I cannot state with any degree of certainty.
435. Do you think any of the coal pit junction lines on the Great Northern Railway have anything approximating to 150 feet in width at the junction point—either the Newcastle Coal and Copper Company's, the A. A. Company's, the Minmi Coal Company's, or the Wallsend Coal Company's? No, they are working upon a different principle; they are working single lines, and have not looked forward to the time when there may be a necessity for working double lines.
436. What do you think is the value of this land belonging to the A. A. Company, close to the junction? I could not state.
437. Is it believed to be valuable mineral land, or is it reputed to be so in the district? I think not.
438. You do not know whether the allotments marked on sketch No. 2 as "Crown Lands" have been sold lately? I think they have been leased.
439. *By Mr. Hannell:* Then you believe that all these sidings are absolutely necessary to carry on the operations of your Company? Yes; I think the operations of this Company will in a short time become the most extensive coal workings in the Colony, and it would be a serious drawback to have too little traffic accommodation.
440. What quantity of coal do you expect to be able to raise for shipment in the course of a year? I hope, when the mines are fairly opened up and the operations under way, to get in a year or two 700 tons a day from this one pit.
441. Do you think you will find a demand proportionate to your expected means of supply, in the face of the opposition you will have to contend with? I trust we will.
442. Do you know how many coal Companies are there selling coal at Newcastle? Four, I think,—the Wallsend Company, Minmi Company, Coal and Copper Company, and the Australian Agricultural Company.
443. Do you know the probable average they sell in a month, day, or week? I believe the average of the Wallsend in a week, so far as I have had opportunities of observing, is from 2,000 to 3,400 tons per week.
444. My reason for asking you whether, in the face of the opposition it is likely you will meet with, you can ensure so large a sale is, to ascertain whether you think the demand for your coals will enable you to fully occupy the line, so as to make it injurious for any other Company to run their goods upon it? Yes, I think we shall fully occupy it ourselves.
445. Your opinion is that there is no coal under this 280 acres, and that opinion you say is based upon the records of boring you have had an opportunity of examining? Yes; I have the reports of Mr. Plews.
446. Do you know whether the borings were carried on under his superintendence? They were.
447. Did he reside on the spot? I think not.
448. Do you know how often he visited the place whilst the boring operations were going on? Probably once or twice a day; I cannot say exactly.
449. If he visited the place where the boring was going on once a fortnight, do you think he would be able to judge whether the men had passed through coal? He would, no doubt.
450. Is it not possible for unskilled persons to pass through a seam of coal without being aware of it? Scarcely, I think. It may be so under some peculiar circumstances. But I believe the person he had engaged—Mr. Dixon—to be a very skilful borer, and has been accustomed to boring and sinking all his life.
451. Is it not possible that the seam of coal may be found on the land of Messrs. Brown referred to? It may, but it would be very thin.
452. Is it not probable that the Bore Hole seam would be found on that 280 acres—are there not reasonable grounds for believing that it would? I think it would scarcely extend there, and it would be very thin if it did; that is my opinion.
453. Is your railway to be on an embankment of earthwork, or on piles? On an embankment of earthwork.
454. What will be the height of the embankment? For about a mile the average height will be three feet; then we have a cutting. The deepest part of the embankment will be from ten to eleven feet deep.
455. Will the embankment on the commonage reserve be from ten to eleven feet deep? Yes.
456. Is it proposed to make an opening for the cattle, to afford them a passage beneath the railway? We can either make them a passage there or make a bridge over the cutting.
457. It is not decided which course you will take? No.
458. If it is decided to have a bridge, will it not be necessary to have gates? No.
459. How then will the cattle be prevented from going over the sides? By placing paling at the sides. We can afford them a passage either by a bridge over the cutting or by an opening in the embankment.
460. *By Mr. Broadhurst:* Do you believe or suppose that there will be an increased demand for coal for export as well as for home consumption? Yes, I do—a largely increased consumption.
461. I mean from the adjacent Islands and Colonies? Yes, I think there is every likelihood of the trade being very much increased; I think it will increase in the same ratio that it has now for some years been increasing, and probably a greater.
462. *By the Chairman:* There is a great demand for coal for China? Yes, I think a large demand.
463. *By Mr. Broadhurst:* To your knowledge are there available coal mines in this Colony generally? Well, I am not sufficiently acquainted with the Colony to speak of it generally; I am only able to speak in reference to the district about Newcastle.
464. Do you know of any coal mines in the adjacent countries or in the eastern islands? I think

Mr. Thomas
Croudace.
24 Sept., 1862.

Mr. Thomas
Croudace.
24 Sept., 1862.

think the principal coal that could come into competition with those of New South Wales is the Borneo coal field. I believe that at Labuan they have coal pits, and I know the gentleman sent out to superintend the working of them will exert himself to raise as much coal as can possibly be extracted from them. That is the only coal field I am aware of that can oppose this Colony in the market.

465. You believe then that this Colony will form the coal depôt for all the adjacent countries in this hemisphere? I do; I think the trade will be immensely increased.

466. *By the Chairman:* Have Messrs. Morehead and Young already opened the mine? Yes, they have sunk two pits.

467. And have established a colliery? Yes, and are now having it laid out.

468. You are of opinion that it will prove beneficial to the Colony? Yes. When fully under way the works will afford employment to some 300 or 400 men, and it is probable that the Colony will have the benefit of getting coal cheaper.

469. Do you also believe that it will increase the traffic on the Great Northern Railway? Yes, considerably increase it.

470. Which would be an advantage to the public, in reference to the tolls derived from this increased traffic? Yes.

471. Suppose the line proposed by Messrs. Morehead and Young were completed as laid down in that plan, and supposing Messrs. Brown discovered a payable coal mine upon their land, do you conceive that it would be better for their interest to join Messrs. Morehead and Young's line, or to make a direct line to the Great Northern Railway for themselves? I think it would be more advantageous to them to have a line of their own than to use Messrs. Morehead and Young's line.

472. Why? In the first instance the amount paid for tollage in the course of a number of years would more than pay the cost of making a railway for themselves. If they propose joining Messrs. Morehead and Young's line from the point marked "Brown's pit," they would have to proceed in a very circuitous semi-circular route to reach the port of Newcastle. Instead of this, I think that a direct line of their own would be much more profitable.

473. Supposing such a direct line would cross the Australian Agricultural Company's land, would that be any great interference with the A. A. Co.'s working the land as a mine? I do not see that it can.

474. The mines disturb but a small portion of the surface? It depends upon the working. There are very large pits that occupy as much as ten acres.

475. Are you aware whether Messrs. Brown have made any borings in these 280 acres? I have never heard of or seen any; a portion of it is thick scrub.

476. If they were to join Messrs. Morehead and Young's line from the pit marked Brown's pit, it would be taking a very circuitous route to Newcastle? Yes, a more direct line must be an advantage to them.

477. *By Mr. Hannell:* But suppose they sink a pit upon the 280 acres? Then I would rather make a direct line to the Great Northern Railway. Suppose that 600 or 1,000 tons per day were raised from that pit, the amount paid for tollage would in no great number of years equal the amount of capital required to construct an independent line.

478. But supposing there were other and improved means of shipping coals at Newcastle, or supposing a line formed from the Great Northern Railway to Bullock Island—would not the state of circumstances be altered? Then from half a mile to a mile from the Waratah Station, the facilities afforded for joining the Bullock Island line would be the same. I do not know that there is any difference in the facilities.

479. If there were a branch from the Great Northern Railway to Bullock Island, would it not be more convenient for Messrs. Brown to ship from Bullock Island, instead of taking their coals down to Newcastle by the Great Northern line? It would depend upon the facilities at Bullock Island for taking the coals away.

480. Which would be the more expensive course to the Messrs. Brown—would they have to purchase private land from this point of starting to go on Messrs. Morehead and Young's line? In answer to this I would have to speak according to their expectations. If they expected to ship about 150 tons a day, it would be cheaper, perhaps, to go on to this proposed line; but if they expected to ship a larger quantity I should say it would be best to make a line of their own. There would be such a large amount absorbed for tollage that it would soon be more than would have paid for the construction of their own railway.

481. It would be better to pay to have a direct line, than to pay tollage over yours? Yes.

482. Are you aware of the present facilities for shipping coals at Newcastle with cranes? Yes.

483. Are they sufficient? I think they may be worked faster; but I understand that larger cranes are coming out.

484. You think greater facilities might be offered for the shipment of coals? Yes.

485. Are you aware that many complaints are made of the want of facilities for the shipment of coal by exporters? Yes.

486. Complaints by the shipping agents, merchants, and masters of vessels? Yes.

487. For want of wharfage accommodation for the shipment of coal? I do not know whether it is for want of wharfage or greater rapidity in working the cranes.

488. *By Mr. Burton:* Supposing Messrs. Brown were to adopt your suggestion and endeavour to make a line over the Australian Agricultural Co.'s land, would that Company be likely to oppose them? I should think it more than probable they would. They opposed the Wallsend Company, but when they found a likelihood of its getting under way they were glad to come to terms. Messrs. Brown would have as good an opportunity of getting it as they had, I should think.

489. Do you know whether the Wallsend Company gave the Australian Agricultural Company £500 to discontinue their opposition? I cannot say that I do.

Mr. Alexander Brown called in and examined:—

490. *By Mr. Burton*: What is your occupation? I am a coal proprietor.
491. Have you been engaged in coal mining for any length of time? In this Colony for upwards of twenty years I have been engaged in coal mining operations.
492. Have you had much experience during that time in laying down tramways and railways in the mining districts? Yes, I have had considerable practical experience, which I have had to pay for in many cases, unfortunately.
493. Do you desire to make the line now projected by Messrs. Morehead and Young serviceable to yourself and the rest of the public? I am desirous that it should be serviceable to ourselves and the public generally. Of course I want to join upon it, and I desire therefore that others should be placed in the same position with regard to the use of the line as the promoters themselves.
494. Have you large sums of money invested in works of this kind? Very large.
495. In the Hunter District? Yes at Miami. We have also commenced operations at the place marked "Brown's pit," on Appendix 2.
496. On the 310 acres? Yes.
497. You have a railway attached to your Miami works, I believe? Yes, between six and seven miles long.
498. Running to Hexham Swamps? Yes.
499. Was an Act of Parliament obtained to enable you to construct that line? Yes. It was necessary to obtain an Act of Parliament, as the line had to pass through other people's property. Legislative authority was therefore required to enable us to make the line.
500. *By the Chairman*: When you say they are bound to carry for the public, it was on payment of tolls that the promoters of that line were obliged to admit the public to the use of it? Yes, we charged a tollage. The Company are bound to carry for the public, on payment of a toll.
501. There is a difference between the tolls paid by those using it when they use their own trucks, and when you find them? We are bound to carry their goods.
502. *By Mr. Burton*: So long as you supply locomotive power on the Miami line, no other person is at liberty to use other locomotive power upon it? Just so.
503. But if you were to cease to use locomotive power on your line, other persons would be entitled to use such power? Yes. If we ceased to supply, the parties looking to get their goods conveyed would find it, and be charged a less tollage per mile.
504. So that on your line you are bound to carry other people's goods? We are bound to carry their goods.
505. And I suppose you think it only fair that Messrs. Morehead and Young should be bound to carry other people's goods on their projected line? When it becomes a public matter I think they should concede what is required for the public advantage, and as one of the public I should desire that it be open to me to send my goods by it.
506. *By Mr. Hannell*: Are you aware whether the Newcastle and Burwood line is a public or a private line? The Legislature here gave a Bill for it as a private line. It was sent Home to England for the royal assent, and as the line was exclusively private the royal assent was not given. It was returned to the Colony, and the line having been made a public line, the Bill was again sent to the Imperial Government and obtained assent.
507. I believe that, in the terms of their Act, the proprietors of that line are bound to admit horsemen and foot passengers upon it? The charge is 4d. per mile; no definite weight is named, nor does it say whether there is any difference for a mile or two miles, or for a ton or 20lbs. weight.
508. *By Mr. Burton*: Is your knowledge of English railways applicable to this subject at all? I think they are parallel cases. The nature of railways here and at Home must be alike, having the same general objects, and what is applicable to the one would be applicable to the other.
509. What is done at Home in these matters? When Parliamentary interference is sought the lines are generally made public. Of course when a line passes through private land, of which the promoters are the proprietors Parliamentary interference is not necessary, and the line would be private.
510. In England, when Parliamentary aid is sought for the construction of a railway line, it is generally made open to the public? Yes, when Parliamentary interference is made necessary the line is thrown open to the public, so I understand.
511. In this particular case, what advantages are the public about to give to Messrs. Morehead and Young? The advantage of going over other people's land and joining the Great Northern railway, and the public get no corresponding advantage if the line is made private. By the present Bill they seek to have an exclusively private line, so that the public derive no advantage; it is all on the side of Messrs. Morehead and Young.
512. I understand you to refer to the proposed intention of striking out from the Bill those clauses which would allow the public to use the line? Just so.
513. Have you seen the plan marked Appendix 3? Yes.
514. Does that plan contain a correct description of the commencement, course, and termination of the proposed line? No, there is no description; it is merely a plan without description. There is no description on the plan that I could trace the line by.
515. Have you referred to the description in the Bill? I have; and if I were asked to describe the direction of this line, and the land through which it passes, I should be quite unable to do so by the schedule. The only fixed point in the schedule is the point of junction with the Great Northern Railway. The schedule, in fact, is no schedule at all.
516. Therefore, for all you see in the plan and in the schedule, although the line is to go finally to a fixed point, there is nothing to show where it starts from, or what course it pursues?

Mr. A. Brown.

24 Sept., 1862.

- Mr. A. Brown. pursues? No, the only thing shown distinctly in the schedule is the point where it arrives at the Great Northern line. It does not describe the various properties through which the proposed line passes; it is not stated clearly. The schedule is very imperfect, and does not correspond with the plan; at least I should not be able to trace the plan by the schedule.
- 24 Sept., 1862. 517. The Bill and schedule say, commencing at a point on the eastern boundary of the land leased by the Crown to the promoters? Yes. It does not say on what part of the eastern boundary. It might have said so many chains from the north-eastern corner.
518. *By the Chairman*: Is the line pegged out? Yes, I have seen it pegged out.
519. *By Mr. Burton*: Do you find in the Bill any reference to the line pegged out? No; the only reference is in the schedule, by which, as I have stated, I could not trace the line.
520. If the starting point were fixed, is the direction or course of the line sufficiently indicated? If the starting point were fixed it would make it more easy to trace the line; but it would be also necessary to describe the boundary lines of the various properties through which it passes, so that the line may be traced from the starting all through—from the starting point at the north-eastern boundary line to the Great Northern Railway. It is not stated in what course the line is to be taken.
521. So that, in short, if you had only the Bill and schedule to guide you, you could not tell where the line was to be? I could not; it is an utter impossibility.
522. Have you read clause 4 of the Bill? I have.
523. Can you offer any evidence to the Committee upon the provisions of that clause, in regard to junctions on inclined planes? The clause provides that there shall be no junctions on inclined planes, when, in point of fact, according to their section, the line is an inclined plane from beginning to end. It is apparently copied from the Wallsend Company's Act, which was framed for a special purpose—to prevent people from joining their line. In fact, it is now proverbially known as "the Wallsend dodge."
524. How are you in a position to afford the Committee any reason for supposing that the provisions respecting inclined planes are designed for the purpose of defeating the intention of the Legislature in making all these lines capable of being made use of by the public? There may not be an actual design on the part of the promoters to keep the public off the line; but if this provision remains in the Bill, junctions on an inclined plane being prohibited, and the line being an inclined plane from one end to the other, we should have to come to the Legislature for an Act to enable us to join it.
525. *By the Chairman*: You could not join the proposed line without repealing so much of this Act? Just so.
526. *By Mr. Burton*: If I understand you, you do not accuse the present promoters, by their seeking this prohibition against joining on an inclined plane, of a design to defeat any junction at all? They might not have accepted this provision with the express intention of entirely prohibiting others from joining their line; but at some future time disputes might arise on the subject, when this provision of the Act might be referred to, and junctions thereby prevented. Thus the object we are now seeking to accomplish in having the line made public might be defeated.
527. That has been done by another Company? Yes, by the Wallsend Company; and the Co-operative Company had to come before the Legislature to get a Bill to enable them to join the Wallsend line, which they could not do without an Act, there being a provision in the Wallsend Company's Act identical with this, whilst the line itself was an inclined plane from beginning to end.
528. Who was the engineer of the Wallsend line? Well, its paternity is ascribed to Mr. Weaver, but it is rather difficult to father it.
529. Do you consider that the proposed line is laid out to the best advantage for carrying out the purposes mentioned in the preamble? Well, in the preamble it says that it is for the benefit of the public, and I, as one of the public, certainly do object to the way in which it is laid out; it has not been laid out for the best advantage of the public.
530. Explain in what respect? In the first place, Mr. Weaver, in his evidence the other day, stated that at the junction with the Great Northern Railway they had gone up to the A. A. Company's boundary line, but had avoided coming into contact with that Company's land. Now if we were to construct another line, an independent line, from the 310 acres, we should be forced, in forming a junction with the Great Northern Railway, to interfere with the A. A. Company's land. We should meet with great opposition, and have to give them a large amount of compensation for their land. These difficulties the promoters have avoided, but if we were to construct an independent line the difficulties they have avoided would fall upon us. Another thing is, that they have taken up 99 feet for the width of their line. Now I do not know of any railway in the Colony, except the Great Northern, that has 99 feet in width. The Wallsend, I believe, is 66 feet; the Minmi, 66 feet; the Burwood and Newcastle, 33 feet.
531. *By Mr. Hannell*: That is the width between the fences? Yes, which would be ample room for six lines of railway, if laid down. At the junction I find they have taken up 150 feet. For all purposes that may be required by Messrs. Morehead and Young, even as stated by Mr. Croudace, 66 feet would be ample; it would be even an extravagant width for all their purposes. 66 feet in width would give them room for six lines of rails.
532. *By the Chairman*: You have no junction with the Great Northern Railway—your line crosses it? We have a junction also at Minmi.
533. Does your coal sometimes find its way to Newcastle? Yes; our line joins on private land.
534. What is the width of your junctions? At the embankment it is about 30 feet wide, but that is on private land. There is room for three lines of railway.
535. *By Mr. Burton*: Then the present promoters want to have four times the width of your junction? They want to have three times the width that will be actually required; and

and in consequence of their taking up this unnecessary width they will force us, if we make an independent line, to interfere with the A. A. Company's land, which they themselves have been anxious to avoid.

Mr. A. Brown.

24 Sept., 1862.

536. *By Mr. Hannell*: Would this width be unnecessary if their operations are as extensive as they expect? Yes.

537. *By the Chairman*: By the plan marked 2 it does not appear to be necessary that you should pass over the A. A. Co.'s land? The plan shows that they go south along the A. A. Co.'s land, and then sweep in to join the Great Northern Railway.

538. *By Mr. Hoskins*: Will the junction of Messrs. Morehead and Young's proposed line absorb any of the A. A. Co.'s land? No, they do not interfere with it; they stop there; they have studiously avoided interfering with it.

539. *By Mr. Burton*: If I understand you, the A. A. Co. have some land not marked on any of the plans in evidence before the Committee? Their original grant is not marked on either of the plans.

540. And by having the line as proposed you would be driven on to that land? Yes, on to the original 2,000 acres of the A. A. Co.

541. Can you suggest to the Committee any mode by which they could have obviated that difficulty? Yes; I would suggest that the line be slightly removed to the north, say half a chain, through the whole extent of the line, and that the width be reduced to 66 feet. If at one mile from the Great Northern Railway the line be removed to the north 33 feet, and the amount of land taken up at the junction be reduced to 66 feet, they would have ample room for six lines of rails, which would be quite equal to all their requirements.

542. *By the Chairman*: That would leave you room to go in without touching the A. A. Co.'s land? Yes.

543. If that were done, would you be disposed to withdraw your objection? No; that applies as far as the 300 acres are concerned; not, however, with reference to the 280 acres.

544. *By Mr. Hannell*: Would this involve them in extra expense or inconvenience? No, or if any, very trivial. By removing the line half a chain, there would scarcely be an appreciable difference in the cuttings or fillings up.

545. *By the Chairman*: That would not bring them into difficulty with the Waratah Company? I should think not.

546. They are quite close to the northern side? I have not seen their plan. It would be absolutely necessary to shift the line at one point, unless they wanted to keep the curve.

547. *By Mr. Burton*: As to the promoters' line being confined to their exclusive use, have you any other objections to make? The objections are, as I have already stated, by having it all private. The object is to make it a public line, so that I, as one of the public, may make it available for the working of these 280 acres. If it be not made a public line it would involve us in the necessity of making another line, parallel all the way, from these 280 acres. That land will not be available except by the construction of another line, which would unnecessarily cut up the Common. I may have to sink a pit on the 280 acres, on the south side of the promoters' line, and I may afterwards find that, for practical mining purposes, it would be necessary to sink another pit on the north side of the line, as the law will now compel us to have two shafts. That is another reason why it should be open to the public.

548. You mention these things as reasons why the promoters should not be allowed to strike out the 3rd and 4th clauses? Yes.

549. Did you hear the evidence of Mr. Whitton, the Engineer-in-Chief? I did.

550. And you remember the assumption that his evidence was based upon? If I recollect rightly, he assumed that the promoters would have sufficient trade to occupy this line exclusively.

551. What is your opinion upon it? My opinion is that the line will not be required exclusively for their own traffic. I put it in this way: they employ locomotive engines, and supposing these travel at the moderate rate of ten miles an hour, fetching down 150 tons a trip, as they do at the Minmi Colliery, they will go backwards and forwards twenty-five times a day, the line being two miles long; but say twenty times a day, allowing for stoppages, they will fetch down 3,000 tons a day, or 900,000 tons a year, which is double the production of the whole Colony at the present time. I cannot see therefore that a line of this capacity, though their expectations may be very great indeed, will be required for their exclusive use.

552. You do not imagine that that enormous amount of coal will be either raised or brought down? My ideas, during twenty years experience, have not reached to these proportions; but Messrs. Morehead and Young may see from a different point of view. They appear to have extraordinary expectations, but I have doubts whether they will be so far fulfilled as to keep this line exclusively employed by their own traffic.

553. Have you noticed that part of the clause which speaks of by-laws? Yes, and I have a strong objection to those by-laws. By the provisions stated, it would be quite competent for the promoters to make such by-laws so objectionable as to prohibit any other person from joining their line, and thus render it exclusive.

554. *By Mr. Hoskins*: That would not be inconsistent with the object it is supposed they have in view—to exclude the public from using it? No, if that be the object then the public have nothing to say on the subject. But I would ask, is not the public entitled to have the use of it?

555. *By Mr. Burton*: What would you propose? That they should frame by-laws, as prescribed by the amended Municipalities Act, and that they be submitted to the Executive Council; then if approved of, to take effect. By that means by-laws may be made fair and reasonable to the promoters, as well as to the public generally.

- Mr. A. Brown. 556. You think then that the 3rd clause ought not to be struck out? I think that clause ought to be retained, in order that the line may be available for public purposes.
- 24 Sept., 1862. 557. Do you think that with regard to distances less than a mile, the rate of tollage per ton ought to be proportionately diminished? Well, that is a question which at the present time I would rather leave unanswered; there may be a difference of opinion as to that. It may be maintained that a portion of a mile should be paid for as if a full mile; still I think we should pay just in proportion to the distance we travel.
558. As to the 4th clause, should that be retained and modified, or be struck out? The 4th clause provides that the parties seeking a junction shall put in and keep in order the points called switches and crossings. It is usual, on all lines, that within the limits of their own line the proprietors lay down their own points and crossings, and keep everything in order, and others must do the same with regard to their lines. It is not customary for any one joining a line to come within the limits of another's line, or interfere with his rails in any shape whatever, each keeping distinct and separate on his own property.
559. What do you say as to traversing or crossing the promoters' line—ought other parties to be at liberty to cross it? Yes, I should ask for the liberty to cross it on that understanding, that the party crossing should put in the crossings, and keep them in order. The way in which it is usually done is this: the proprietors of the line you cross make the necessary alterations on their line, and charge the party crossing with the costs.
560. You think then that other parties ought to be at liberty to join and cross the line? Yes, if they cross for the purpose of meeting another line. For instance, it is proposed to carry the Waratah line to the waters of the Hunter, and to reach that line it would be necessary for us to cross Messrs. Morehead and Young's line, so that it is desirable we should be enabled both to join it and cross it.
561. You think the Bill should enable the owners or occupiers of lands traversed by or adjoining the projected railway, or any other persons to lay down either upon their own lands or upon Crown lands, with the consent of the Governor, with the advice of the Executive Council, or upon the lands of other persons, with the consent of such other persons, any other railways, either to join the projected railway or to cross it? Yes, I think so.
562. You think it essential that the Bill should contain such enabling clauses as are referred to in the 4th section of your petition, dated the 17th September? I think it should.
563. Do you think that the power of making another railway should be so limited as to prevent the same from running parallel with the projected railway? I entirely object to that. It may be necessary to run to some extent parallel with it, and if it were to ever so short a distance there would be this objection,—it would be quite competent for the present promoters to strenuously oppose any Bill for a line running to the very smallest extent parallel with their own, and they might ask for compensation for damage done. It should be open to run a line parallel with it.
564. That might be so done as not to injure the promoters? Oh yes, without injuring them.
565. I understand you to say that the course of the proposed railway ought to be defined much more clearly than the Bill and schedule define it? It ought to be more clearly defined in the schedule.
566. Would the making of a branch railway to join the intended railway increase the traffic, and thus benefit the promoters? It would have that tendency, because it is not at all likely that any one would construct a line to join theirs unless traffic was expected upon it, and therefore the promoters would have an immediate advantage.
567. I believe that whilst the course of this line is not clearly defined, it is quite plain it must pass through your 280 acres? There is no alternative; it must pass through that, from the position indicated in this general sketch.
568. You seek then to have the power of sending coal that you may raise from the 280 acres by and upon the promoters' line? Yes, upon that line.
569. You may possibly open a coal pit as close to the promoters' line as safety will allow? It is quite likely.
570. On the 280 acres? Yes.
571. And therefore, if you were refused permission, either to join the line, or to have your coal carried by it, you would be driven to the necessity of making a line altogether parallel to it? If this is to be made a private line, and the public excluded from the use of it, I should have to make a line from the 280 acres, and a separate line from the 310 acres—two lines instead of one. But if the promoters' line is left open to the public I would join on, and convey my coal by that means to the Great Northern Railway. If from the place marked "Brown's pit" we went direct to Newcastle, in a north-easterly course, we should have to go over A. A. Company's property; but the promoters of the proposed line say, in order to avoid the opposition of and compensation to that Company, we find it desirable to go along here and join the Great Northern at the A. A. Company's boundary. Now we also would like to avoid the A. A. Company's land. If we do not do so we shall be subject to considerable opposition; a large compensation will be demanded, or they will stop our progress.
572. *By Mr. Hoskins*: Would it not be taking a circuitous way to Newcastle to carry a line from the 310 acres to Messrs. Morehead and Young's junction? Yes, but it would be cheaper. My objection to the Bill, as not being to make a public line, applies to the 280 acres; no doubt for the 310 acres we should require a separate line; but the difficulty then would be that the land at the junction is absorbed.
573. *By the Chairman*: Dangar's land? Yes; I could not form a junction without interfering with the A. A. Company's land.
574. *By Mr. Burton*: You want then to be able to use Messrs. Morehead and Young's line for carrying the minerals from the 280 acres without making any junction at all? Yes.
575. Whether you would seek to make a junction for that land would depend upon where your pits were sunk? Just so.
- 576.

576. You also seek the power of making a junction line from the 310 acres? We seek to make a junction with the Great Northern Railway, and in making that junction we are desirous of avoiding the A. A. Company's land, and are also desirous that the promoters should not monopolize so much land at the junction, as so large a quantity is quite unnecessary for their requirements. It is ample for thirteen lines. I also object to the mode adopted with regard to crossing the line. There is only one crossing allowed for in the line when there should be three at least in the two miles.

Mr. A. Brown.
24 Sept., 1862.

| MR. GORDON, | | MR. HAY, |
| MR. HANNELL, | | MR. HOSKINS, |
| | MR. MATE. | |

ALEXANDER DICK, ESQ., IN THE CHAIR.

Mr. W. G. McCarthy appeared as Solicitor and Mr. Broadhurst as Counsel for the Promoters.

Mr. Edmund Burton appeared as Solicitor for the Petitioners, Mr. Alexander Brown and Mr. Alfred Canning.

Mr. Alexander Brown called in and further examined :—

577. *By Mr. Hannell:* You have had very considerable experience as a producer and shipper of coal from the port of Newcastle? Yes.

Mr. A. Brown.
26 Sept., 1862.

578. For how many years? From Newcastle, for upwards of ten years.

579. Are there sufficient facilities afforded at the Port of Newcastle for the shipment of coals produced in the neighbourhood? By no means; there are not sufficient facilities,—so much so that we are almost entirely prohibited from shipping our coals there. The wharf erected by the Government is practically monopolized by one Company, and any other parties sending coals for shipment cannot do it successfully—in point of fact, I have had within the last fortnight to abandon it altogether, the Government having refused to ship any more coals for me.

580. To meet the requirements of your trade, have you not been put to the expense of establishing a drop ship? I have had to establish a drop ship, to build barges, to erect steam cranes at Hexham, and also to purchase a steamer to work in connection with the drop ship, barges, and so forth, to carry on my trade; had I not got these things I might as well have shut the place up, and all for the want of accommodation at Newcastle.

581. Is there a general complaint amongst owners and masters of vessels, of the want of sufficient accommodation for getting cargoes shipped? It is a general complaint, it is a daily complaint—indeed, I may say it is an hourly complaint—the want of facilities.

582. Have you known vessels to be detained for any lengthened period in consequence of this want of facilities? I have known vessels detained for months for want of accommodation—vessels that I could have loaded if there had been facilities. The captains came to me for the special purpose of loading them, but not being able to get wharfage accommodation at Newcastle with cranes upon it, I was unable to do anything for them, and consequently they had to wait on and get loaded by the best means they could—that is, by lighters.

583. Are some of these occurrences of recent date? Very recent date; an instance occurred last week. The Government has a crane upon the wharf; it broke down, and the Government notified me to ship no more coals; the coals had to be shipped by wheelbarrows; the ship was detained, and made a claim on me for demurrage, which I had to pay—four days £24. It will now be sometime before the Government will be in a position to ship any coals whatever, and when they have the crane working they can only do so to a very limited extent.

584. Do you think the exports from the port would be largely increased if additional facilities were afforded? If additional facilities were afforded it would be an inducement for ships to come to the port, and the exports no doubt would be increased. Several ships that would have come from Sydney to load coals at Newcastle have been deterred from coming, not on account of any want of supply of coals, but from the difficulty of getting them shipped.

585. Are not large vessels in the habit of shipping at Sydney coals brought up from Newcastle, instead of going to the port of Newcastle for them? Yes, I have been loading five ships at once in Sydney.

586. Recently? Within the last month. Some of them would have gone to Newcastle could they have got dispatch and facilities for discharging ballast and so forth, when they got there; but the detention, port charges, and other drawbacks prevent them from going there. For the same reason, ships that would take coal to the East take no coal at all.

587. Could you suggest any improvement in the arrangements with the view of affording greater facilities? If the Government were to make a branch line of railway across Bullock Island to the deep channel, which is the principal part of the harbour, all these difficulties would be obviated; that is to say, if there were a sufficient number of shoots put up along the deep channel. These steam cranes must be a failure, because they are continually

Mr. A. Brown. breaking and cannot be depended upon for one hour in the day. They are built to lift fifteen tons at a radius of thirty feet, but they have now reduced the lift to four tons and the radius to about eighteen feet, and they are only now suitable for shipping the coals of the Wallsend Company, they having only boxes, but not the coals of any other person having large waggons; the cranes are now unfit for shipping, consequently all the capital we have invested in connection with it is practically useless, as far as that is concerned.

26 Sept., 1862.

588. Would this line of railway across Bullock Island, of which you suggest the construction, in no way diminish the profits of the Great Northern Railway? It would materially increase them; it would bring traffic on the line, and so be a direct and immediate gain. If it were constructed to-morrow, and the shoots were erected on Bullock Island, I would avail myself of their use, and the Northern Railway would profit very largely by it.

589. It is your opinion that under the present arrangement it is impossible to provide for all the coals that could be shipped at Newcastle? It is possible only to provide for one Company, but when another comes in I do not know how they are going to manage, for I find now that I cannot get my coals shipped, the Government having notified me that they cannot ship any more for me, and I have been shut off the line for a fortnight past.

590. Do you know if the Government have any arrangement in prospect to obviate these difficulties? They are importing two larger cranes to be put down on the position of the Wallsend cranes, but they will, to a very small extent, obviate the difficulties.

591. They will not be sufficient to meet the demand? Not by one-fourth. The Company proposes to join the Great Northern Railway, and they have got their plant coming out, and the Coal and Copper Company some time since did propose to join also, and do so still I believe, and if these new Companies join on the Great Northern Railway I cannot see where they are going to get their accommodation for shipping. It is all monopolized now by one;—what is it going to be when it is divided among five or six?

592. You are aware that the Waratah Company propose taking their line to the waters of the Hunter by a different route? Yes, which I think will be a great advantage to the Coal Companies, and get rid of the difficulties and annoyances experienced by the want of shipping accommodation.

593. There is plenty of room and plenty of deep water all along the frontage of Bullock Island? Ample room and ample accommodation, if the necessary erections were put up; it is the deepest part of the harbour—22 feet is about the average depth there.

594. *By Mr. Broadhurst:* When did you obtain a lease of the 280 acres of land from the Government? In March last. I may state that I applied for the same land on the 14th January last, but finding it did not come under the free selection clause, being a town reserve, I got the money returned that I had paid into the Treasury on the 14th January, and I applied to lease it in March last.

595. What measures have you taken to ascertain the existence of coal underneath the 280 acres? I have taken no measures at all, but I believe that coal is there.

596. You have taken no measures at all, but you believe there may be coal there? I have every reason to believe there is coal there.

597. What reason? Well, it is a coal district; there is coal on each side of it, and I have not the slightest doubt there is coal there also—not the Wallsend seam that Morehead and Young are getting, for that I know crops out about their boundary line—but there are other seams below I have not the slightest doubt.

598. If you were to be told that borings had been made close upon the 280 acres, by a competent person, and that no coal had been found, would you expect to find coals there? If they were to tell me that borings had been made on each side and no coal found I would not believe them for certain reasons. Great care is requisite in boring. I believe borings are made in various places where no care is exercised. I will give you a case. The A. A. Company put down a borehole —

599. Where? Not far from this.

600. I am speaking about this particular locality—the 280 acres. Am I right in supposing that it is in respect of the 280 acres that you are now advocating the cause of the public? Quite so. I believe there is coal there, and if they were to tell me they had bored on each side and got no coal I would not believe it, because these borings I know are not to be depended upon.

601. What borings? That were made on each side of the 280 acres.

602. By whom were those borings made? I do not know the men who bored, but there was one under the superintendence of Mr. Plews, and one under the superintendence of Mr. Beaumont—how often they were there during the time the boring was going on I cannot tell, but not very often I think.

603. I believe both of these gentlemen are men of considerable experience in these matters? They may have been, but they were not always there.

604. Are not both of those gentlemen considered men of experience in mining and coal mining matters? I have not the slightest doubt of it; but I do not see that it follows that, though they are men of the greatest experience, these borings should be correct if they are trusted to other people.

605. If skilful persons are engaged to bore with a view to ascertain whether coals exist in a particular district, it is not usual for them to delegate the task to subordinates who know nothing of it? It is too often the case—almost invariably the case—and I believe it was so in this instance. I believe they were not there, on the average, more than once a fortnight.

606. What instance do you speak of? These borings made on each side of these 280 acres.

607. By these two gentlemen you speak of? Yes, Mr. Plews and Mr. Beaumont.

608. Have you yourself sufficient skill, technical and scientific skill, to ascertain where coal is, or to superintend borings, or to test them? I have bored a good deal myself.

609. Any man may dig a bore without having any scientific knowledge of what he is about? Mr. A. Brown. So far as boring is concerned. I think you can hardly apply the term "scientific" to it; if you were to say practical it would be far better. 26 Sept., 1862.

610. Practice and science combined, are requisite—are they not? No, you cannot apply science to boring, you must practically be acquainted with it; it is a matter of mere labor.

611. You object very much, I see, to the quantity of land taken up by this railway, 99 feet? Yes.

612. I believe you said in your examination the other day that it was more than any other Company had? I said I believed the Wallsend Company's Railway was 66 feet.

613. There is the Wallsend Company's Act (*handing to witness*); will you see if that is 66 feet,—do you find 99 feet there? Well, it may be desirable in their case to have 99 feet; they have very heavy cuttings and very heavy embankments, which are not on this proposed line.

614. Is there any part of the Wallsend line narrower than 99 feet, to your knowledge—is not that the width? Do you mean the land taken up or what the line itself occupies.

615. What is actually occupied by the railway? In some places I dare say the tops of the deep cuttings may be 70 feet across.

616. *By the Chairman*: It is a single line? Yes.

617. *By Mr. Broadhurst*: Are not these the words of the Act—"so that the same shall not occupy in any part thereof a greater space in breadth than 99 feet excepting at a creek on the Australian Agricultural Company's property," and so on? That is a very heavy embankment, and the base requires to be considerably broader.

618. That provision applies to the whole line? The land is not taken up by the line, notwithstanding it is taken up by the Act. It is a heavy line; it is an exception. The embankments in this case will be necessarily narrow; there is no heavy cutting in it or embanking either.

619. You favoured us the other day with a calculation of what ———? 900,000 tons a year I think. I made it out to keep the line employed.

620. Have you taken into consideration, in making that calculation, any drawbacks—do you not assume that there is to be a perpetual stream of coals from the pit to the place of discharge? I take it upon their assumption that they would constantly employ the line;—that they would have a sufficient trade to occupy the line—and on that assumption I made the calculation—10 miles an hour, allowing five trips a day for stoppages, making twenty trips a day in place of twenty-five, and by keeping the line constantly employed on their assumption they could bring down 900,000 tons a year, which, as I said before, is double the present amount raised in the Colony.

621. You have not made any allowance for drawbacks or casualties? Yes, five trips a day.

622. What other allowances have you made? No other allowances.

623. You assume a continued uninterrupted stream of traffic? Yes, that is their assumption.

624. As to the 310 acres I think you do not oppose the Bill? I oppose the Bill as far as the junction is concerned. According to Mr. Weaver, as he stated here, they joined the Great Northern line at the point indicated on the plan, in order to avoid interfering with the A. A. Company's land; the very thing they want to avoid they necessarily make me come in contact with. If I made a separate line for the 310 acres, I should have to go through the A. A. Company's land, and should meet with their opposition, and have to pay a large amount of compensation.

625. Your main objection then is really this, that if you are not allowed to join this line you will have to go through the A. A. Company's land? So far as the 310 acres are concerned; but I have an objection to its being a private line, as far as the 280 acres are concerned.

626. Part of the objection is that you will have to go over the A. A. Company's line, and expect their opposition? I would expect opposition from the A. A. Company, and to have to pay to them very large compensation.

627. What reason have you to expect opposition from the A. A. Company, and to have to pay them very large compensation;—have you made any application to them on the matter? I have spoken to Mr. Merewether to see if he would sell me some land, but he did not see his way quite clear to the disposal of any.

628. That is not exactly an answer to my question? Well, the reason why I should expect to have to give the A. A. Company large compensation would be that when the Great Northern line passed through their land they got from the Government £9,000, and if we were to compensate them in proportion for the price we should require —

629. *By Mr. Hannell*: How much did the Great Northern take? Really I cannot tell you; not a great deal.

630. *By Mr. Broadhurst*: You have never sounded the Company on the subject farther than asking them to sell a piece of land? Quite so.

631. Is there no other way of joining the Great Northern from your land except by going through the A. A. Company's land? If this line is put down, as shown on the plan, there is no way without going on the A. A. Company's land or crossing this line and coming between it and the Waratah Company's line, and I believe there would be no room between the two lines, besides its being very undesirable to cross this line simply to join the Great Northern at this point (*referring to the plan*.)

632. Do I understand you to say that there is no way in which you could join the Great Northern except by going through some private property? Not without going through some private property or the A. A. Company's land, unless these 15 chains were reduced by one-half—instead of 150 feet say 75 feet in width—then I could join the Great Northern without interfering with the A. A. Company's land.

- Mr. A. Brown. 633. I see in your evidence you say the embankment at the junction is about 30 feet wide and that there is room for three lines of rails? That is speaking of the Miami line.
 26 Sept., 1862. There is room for three lines; I laid it out for three lines.
634. I was referring to the wrong part of your evidence. I see in your evidence you say that if they reduced the amount of land they propose to take up, to 66 feet, that would give room for six lines of rails, which would be ample for all their requirements? Eleven feet is the usual thing for all commercial purposes, so that 66 feet would give room for six lines of rails to be put down.
635. You adhere to that? Yes, most decidedly.
636. That sixty-six feet would give them room for six lines of rails? Yes.
637. Six proper lines, convenient and workable, safe, and all that kind of thing? Eleven feet is the proper thing that is always allowed on a commercial line where they want to have ample room; on a coal line it might be reduced to ten feet safely; but even at eleven feet it would give room for six lines.
638. Are you aware that the Government have already intimated an intention of requiring compensation from us for going over the surface? I am not aware of that.
639. If that should be the case, and compensation were also to be given to other persons, for instance yourself, then Messrs. Morehead and Young would have to pay twice over? If they had to pay compensation to us and to the Government, of course that would be paying twice over, but I apprehend the promoters of this line will not be asked to pay twice.
640. What is the distance which the proposed line would traverse over your 280 acres? Well, I think it would be about 40 chains, from the appearance of it (*looking at the plan*); there is no scale here to measure.
641. Are you going on with operations on these 280 acres now? No, I have done nothing, waiting until the promoters have finally fixed upon their line.
642. And then probably you will try to ascertain if there is any coal underneath? Just so.
643. You have stated, I think, that you are deeply interested in the Miami colliery? I am.
644. You are the sole proprietor, I believe? My brother and myself.
645. Is that a very flourishing concern, or is it going down-hill? Well, it is rather flourishing.
646. Has it a tendency downwards? It has rather a tendency upwards; indeed, I may say it is at a premium.
647. Are you trying to get rid of it? No, I am not trying to get rid of it.
648. Not at present? Not at present.
649. I suppose you consider that Morehead and Young's colliery is likely to be a formidable rival? No, I do not think so, by any means; I would be very glad to see them in operation, because the more collieries that join the Great Northern line the pressure will be all the stronger on the Government to increase the facilities for shipping.
650. The more coal that is got the dearer it will not get? Well, I have not found it so; I have rather found, that as collieries have increased the demand has almost proportionately increased.
651. The increase of mines may be eventually rather too great for the demand? I apprehend there will be room for us all, so far as the demand is concerned, and I do not think we ought to be afraid of one another.
652. Are there any other coal pits further back on the ridge, or in that direction? Yes, the seam of coal the promoters have got continues right through.
653. Are there any other parties who would have an interest in the use of this line? Dr. Mitchell would; he would be benefited by having the line opened to him.
654. Is he an opponent to this Bill? Not that I am aware of; he finds it opposed already, and does not think it necessary perhaps to oppose it himself.
655. What other members of the public have made objection to it? Finding it already objected to, I daresay it answers their purpose.
656. What other members of the public have made specific complaints? I do not know that they have made specific complaints, or that they have appeared before this Committee to urge their complaints.
657. How is it you appear on behalf of the public, so as to become their champion? I am not connected with anybody to become their champion; it has emanated entirely from ourselves.
658. You have spoken of the public benefit being involved in this matter—I want to know what portion of the public have chosen you as their champion? So far as being one of the public I am looking to get the line opened; I cannot have the exclusive benefit, because if this line is going to be opened, it will be opened to other people as well as myself.
659. You oppose it, then, solely for your own interest, it being just possible that some other person will be benefited by your efforts? Yes, that is quite possible. I believe that Mr. Stephen will ultimately benefit by it, and also Dr. Mitchell.
660. Have you heard any one of these gentlemen complain on the subject? I have not spoken to them on the subject at all.
661. Do you consider it reasonable that the promoters should spend their money, and go to enormous expense upon the chance that some other persons may come in and claim the benefit of it, and in the shape of tollage make some contribution to the expenses so incurred? I think it is quite reasonable. I think when they make a line they should make it the same as all other lines, open to the public, and it would be a very good thing to the promoters indeed, very remunerative, to get plenty of traffic on any line of railway at a fair tollage.
662. Supposing this Bill were to pass substantially as it is now ———? For a private line ———?
663. Yes;—do you believe that for the next twenty years the public would sustain the slightest injury? I believe they would.
- 664.

664. In what way? Because they would be excluded from the line.
665. Who would be excluded? I would be excluded for one, as well as others that might be disposed to join the line; every one would be excluded from it, and the supply of coals perhaps thereby would not be increased to meet the requirements of the trade.
666. Can you give the Committee any notion how many persons would be injured by the passing of this Bill substantially in its present form? That is to say, with respect to the production of coal. Well, I believe Dr. Mitchell as a landholder here would be injured.
667. He is one? Yes, and I believe Mr. Stephens would be eventually.
668. Why? Because he would not be able to join the line.
669. Has he the remotest intention or wish to join it? As I stated before, none of them have spoken to me on the subject.
670. Then, although you have spoken of the public benefit, you really mean the Brown's benefit? I speak of the public benefit in the same way as the promoters speak of it in the preamble of the Bill. They propose to increase the supply of coal, but they are hindering that to a great extent by prohibiting me, as one of the public, to supply coals to the public.
671. For this short distance? For this short distance. I want to contribute to this for the supply of coals to the public as well as Morehead and Young, and if the public are going to be benefited they will be as much benefited by the quantity I am going to supply as by the quantity supplied by the promoters.
672. Supposing that the joining of other persons would be an injury to Morehead and Young's projected railway, would not the public be injured? They cannot be injured if they get a remunerative price.
673. Supposing it would be an injury to Morehead and Young's colliery that you and others should be allowed to join that particular line, would not the public suffer from it—Is it not a logical conclusion that if Morehead and Young's supply is at all prevented by your coming on the line, the public will be injured—the public being as much interested in their supply as in yours? I cannot see that they will be prejudiced, taking into account that the line is capable of fetching down 3,000 tons a day, or 900,000 tons a year.
674. I understood you to say in your examination that it is always usual in Bills of this kind to enact that the promoters should be carriers? Public carriers—yes.
675. Do you mean to say that that is an invariable rule, that where a private Bill of this kind is obtained by a Company, the Legislature insists upon their being made and makes them public carriers? Yes; I do not know of any Bill for which the promoters have come before Parliament where it has been made an exclusively private affair.
676. Would you make the railway a public road without imposing any terms—without compelling the public to use it? You could not force the public to use it; it would not be at all desirable to force people out of Newcastle to run up and down the line.
677. Would you not impose some conditions on the public? Yes.
678. I understand you to have said that they are bound to carry for the public? Yes; I should imagine so.
679. You say it is so with the Minmi railway? Yes; we are bound to carry for the public.
680. Unrestrictedly? Well, there are certain conditions.
681. Imposed upon the public? Yes.
682. What are the conditions? They pay 6d. a ton a mile, and if I recollect right we are not bound to carry less than forty tons at a time upon receiving a given notice.
683. I refer you to the 3rd clause of the Minmi Railway Act. (*Clause read.*) You propose to have this Bill free from any such restrictions on the public? I think it would not be right to ask the promoters to carry a few tons; I think a reasonable number of tons ought to be guaranteed to them.
684. You see the Legislature, in dealing with these Bills, do not act so unreasonably as you would wish them to do? That was passed at a different time of day; I do not think any one will get such another Bill as this in a hurry. This was passed when railways were in their infancy, and when every encouragement was held out to urge them on.
685. *By the Chairman:* What is the reason the same facilities should not be given now? It was a great undertaking, at the time the Minmi Bill was passed, to make a railway.
686. *By Mr. Hannell:* More of a speculation than it is now? More of a speculation and less of a certainty.
687. *By Mr. Broadhurst:* I see in your petition you take objection to the schedule that there is no plan? I could not discover the line from the schedule; the schedule is very incomplete.
688. In point of fact is not the line pegged out upon the ground? I have seen a line cleared, but I could not say the line cleared is in accordance with the schedule, or with that plan (*referring to the plan on the table.*)
689. Setting aside the schedule altogether, did you not know, at the time you presented your petition, the exact line it was proposed to take? No; if I was to walk upon the line I would not know that the line was in accordance with the plan, or that the schedule was in accordance with the plan.
690. I am excluding the map altogether—supposing there was no map or schedule at all, have you not seen the line pegged out? Yes, I have seen a line pegged out.
691. And you knew what line that was? I was told it was Morehead and Young's line.
692. You know now it is the line? I do, but I do not know it is the line referred to in this plan; I do not know that the line laid out is in accordance with that plan, without actually surveying it.
693. You saw the pegs on the ground? Yes.
694. And you were told it was Morehead and Young's line? Yes; but I may also state that I would not know it was Morehead and Young's line from the schedule. The schedule ought to be as accurate as possible, but there is only one point you can discover in this schedule, that is where it joins the Great Northern line.

Mr. A. Brown.

26 Sept., 1862.

- Mr. A. Brown. 695. Who obtained this Minmi Bill? Mr. Eales and Mr. Christian.
696. Were you a shareholder at that time? I had nothing at all to do with it then.
- 26 Sept., 1862. 697. What is the length of the Minmi line? Between six and seven miles.
698. Just be good enough to read over the schedule to the Minmi and Hexham Railway Act, and say whether the schedule to this Bill is not as good as that? Ours is rather the better of the two, though it is not so accurate as it ought to be.
699. Could you find out the Minmi line by that schedule merely? Upon my word I would be puzzled to find it out.
700. And then the Newcastle Wallsend Company's Railway Act —? I dare say they are all troubled with the same complaint.
701. Just run your eye through it—is it not painted with the same brush? About the same kind.
702. Having looked at these two schedules, are you aware of any inconvenience having resulted from what you consider the too great generalities of description? I am not aware of any actual inconveniences, but if the line, at some future day, was discovered not to be on the site here named, it would be a feast for the lawyers I should imagine.
703. The Minmi line, you say, is some six or seven miles long? Upwards of six miles.
704. I suppose the longer a line is, the more expedient it is that the description of it should be accurate? Of course.
705. And the public in all probability would be more interested or concerned in a long line than in a very short one? Yes, because it comes in contact with more of the public. If you make a railway of 100 miles long of course the public would be more interested in it than in half a mile of railway.
706. By Mr. Burton: You have been speaking of the schedule to the Minmi and Hexham Railway Act, passed in 1854;—be so good as to look to the commencement of the preamble of that Act—do you observe that that railway was partly constructed before the passing of the Act? The railway was partly constructed by private arrangement before the Act was passed, on Mr. Wentworth's and Dr. Mitchell's land, and on Mr. Christy's; Mr. Malcolm's land was a piece that came in between. The line was intended to be exclusively a private one, but Mr. Malcolm objecting, they had to come to the Legislature for an Act, and it was then made a public line.
707. The schedule to that Act, I believe, only describes so much of the line as passes through Mr. Malcolm's land? Quite so.
708. What length of line passed through his land? 1,375 yards.
709. Less than a mile? Yes.
710. The whole line was six or seven miles? Upwards of six miles.
711. But so much as was described in that schedule was a part less than a mile? Yes.
712. That Act speaks of continuing the railway? Yes, continuing it through Malcolm's land.
713. So that the schedule there was helped by the part of the line already made? Yes, the other portion of the line indicated the direction clearly.
714. The bearing, in degrees and minutes, is given in the schedule to that Act? Yes.
715. By Mr. Hoskins: This proposed railway will traverse your land? It will.
716. Do you object to the definition of the route in which this railway is to traverse, in consequence of your land not being mentioned in the schedule, and also in the preamble? I do not object to the line, but I object to the description not being accurate and clear; there should be some definite starting point.
717. In point of fact, there is nothing stated to show that the line will traverse any portion of your land? Nothing whatever; it is ignored altogether as far as I can see.
718. By the Chairman: It is all Crown land? Yes.
719. By Mr. Hoskins: Some of that Crown land is in your occupation—the 280 acres? Yes.
720. By the Chairman: Are you of opinion that a mineral lease under the Act will entitle you to compensation for the use of the surface land? I think not.
721. By Mr. Hay: Are you of opinion that land held under a mineral lease is not correctly described as Crown land—is it not still Crown land? It is Crown land under lease, of course.
722. By Mr. Hoskins: For what term do you lease the land? Fourteen years; and at the termination of the fourteen years, by paying a fine you can have a further term under the new Land Act.
723. Is there not a stipulation in the lease, when you obtain a lease of mineral lands from the Government, that you are to have undisturbed possession? Yes, I believe there is.
724. Or is there any condition that persons are to be allowed to take roads or railways through it? I believe they will be empowered to take railways through it, if absolutely necessary.
725. Have you a copy of the lease? No, they are not issued yet—none of them.
726. Do you know whether the reservation in respect to railways refers to public or private railways—whether private parties would be allowed to make railways through land leased from the Government, without the consent of the lessee being obtained? I think it would be essential to have the consent of the lessee, but I am not clear upon the point whether the Government reserves that right to allow railways to be made indiscriminately or not.
727. The preamble of this Bill states that it will prove beneficial to the public and the Colony if this railway is made;—now you consider it would be injurious to the public who may lease lands from the Crown in the neighbourhood in which this railway is made, if, by any concession made to this Company, they are precluded from making arrangements for conveying

conveying their product to the shipping port? I think it would be injurious to the public to prohibit other persons from joining this line. To the very thing that they show to be beneficial they are going to limit the contribution to themselves, by not allowing anybody else to use the line, the line being the channel through which the coal passes to contribute to the public benefit. Mr. A. Brown,
26 Sept., 1862.

728. Do you purpose boring for coal on these 280 acres? Yes.

729. If you find a seam of coal there, will you sink a pit? Yes.

730. And construct machinery? Yes, the machinery necessary to work the seam of coal if discovered.

731. What would be an approximation to the expense entailed on you by making these arrangements? It depends upon the depth of the seam, and the difficulties met with; it may go from £100 to many thousands. I knew a pit at Home that cost nearly £200,000.

732. Is there not machinery required on the surface? Yes; to sink a pit, provide machinery, and so on, may cost ten or twelve thousand pounds.

733. Did you contemplate, in leasing this land, that persons might make a railway in the immediate vicinity of any works you might put up? At the time I leased it I did not contemplate a railway coming through it at all, in March last, because they had been laying out lines in all manner of shapes and directions, so that it was hard to know where they were going to make the line.

734. Do you know the direction the proposed line will take through the 280 acres you have leased? If the line they now cut out is in accordance with this plan, it will be in about a north-easterly direction.

735. In the event of this line being made, and of your erecting works on this land for working the coal pits, if you sink them there, should the exclusive use of this line be granted to Messrs. Morehead and Young, will it restrict you in your operations, and prevent you from getting your coals to the sea-board? Yes, supposing this line is constructed as shown on this plan, and I was to sink a pit to the north of their line, the Waratah Company joining the Great Northern close to the promoters' line, if I was precluded from joining the promoters' line on the 280 acres, I would not be able to join the Great Northern Railway without coming in contact with either of these two lines, and consequently I would be shut up altogether, so far as a pit in this position (*pointing to the map*) would be concerned. You see I would be completely locked up.

736. You would have to cross Morehead and Young's line? I would have to cross Morehead and Young's line, and interfere with the Waratah line, in order to come to the Great Northern Railway, provided I was to sink a pit on the north side.

737. *By Mr. Hay*: Do the Waratah Company propose to come close to Morehead and Young's line? Yes.

738. Have they got a Bill? They have given notice for one. The only point where I could get down to the Great Northern line I would have to cross the promoters' line and join the Northern Railway on the A. A. Company's land.

739. Or otherwise cross the Waratah line? Yes.

740. That is supposing an Act is passed sanctioning the construction of the Waratah line as coming close up alongside Messrs. Morehead and Young's line, so as to leave no space between? Yes, there would be no space left between.

741. *By Mr. Hoskins*: Is the land on which Messrs. Morehead and Young have these coal pits sunk, Crown land leased? It is leased in the first instance, but I believe they will be able to convert it into freehold when the Act is complied with.

742. Have you any intention of converting your leasehold into a freehold? I believe, so far as this Crown land is concerned, that I will not be able to convert it into freehold, it being a town reserve and excluded from purchase, and being also within the limit of three miles.

743. Still you consider you have a good title to use it, provided you comply with the terms of the lease? Yes, certainly.

744. Do you consider that a line of railway for which the promoters obtain an Act of Parliament to enable them to take possession of land from private persons through whose land the line traverses is a private line? I do not; I consider it a public line when they come to Parliament to get an Act. I cannot see how they can have a line of that sort for exclusively private purposes. I never knew an instance, where it was necessary to apply to Parliament, in which they have had such powers granted them as would prohibit the public from using the line on payment of tolls.

745. Provision is always inserted in such cases, requiring that the line should be open to the use of the public? In all cases, so far as I know.

746. You do not consider this a case that ought to be an exception? Certainly not. It will be an exception if it is made so.

747. If they get their Act they will be empowered arbitrarily to take a portion of your leased land or a portion of Mr. Dangar's land? Yes.

748. And any other? Any land they may pass through.

749. What others are there? Only Mr. Dangar's and the Crown land, I believe.

750. And the land reserved as pasturage? That is the Crown land.

751. Therefore I infer that you consider that the interests of persons who might own or lease lands in the vicinity of this railway, and who might engage in coal mining operations, might be injured if this Company were allowed to make this railway, and prevent the public from using it? I believe they would be materially injured, and I have explained that if I were to sink a pit there I would be entirely locked up. That is one instance.

752. I think you stated, in reply to a question from Mr. Broadhurst, that every coal pit Railway Company in the Hunter district that you had known to obtain an Act from the Legislature, had been compelled to have a provision inserted to enable the public to use the line? Yes.

- Mr. A. Brown. 753. Are you aware that this Company propose to omit the 3rd and 4th clauses? Yes, they propose to have it all their own way.
- 26 Sept., 1862. 754. If they succeed in obtaining this Bill with the excision of the 3rd and 4th clauses, would it not be an exceptional piece of legislation? It would be an exceptional piece of legislation, without precedent in the Colony that I am aware of.
755. What is the nature of the works at the junction of this contemplated line with the Great Northern—is there an embankment? It is pretty level. This (*pointing to the plan*) is a very boggy swamp. I do not see that they make any provision for any gates or crossings over this line.
756. What distance is between the swamp and the proposed junction of the line with the Great Northern? Twenty-eight chains.
757. Between that swamp and the Great Northern are there no heavy earthworks? No, it is all nice and level—rather a sandy flat.
758. If this line joined the Great Northern at a high and wide embankment, for instance, or a deep cutting, it would be necessary to have a larger quantity of land taken up? They would then have to take up more land, but as it happens it is almost level; you see the section shows just a mere paring; the rails can be laid almost to the boundary line.
759. In consequence of the character of the country, you think there is no necessity for having a line so wide as the projectors contemplate? No necessity whatever. There is no necessity for 132 feet; 66 feet would be ample—more than they require.
760. If the width at the junction were only 66 feet, it would not preclude you or any other parties from making a line to the Great Northern Railway in the same direction, and easily and readily making a junction? We could make a junction if it were reduced to 66 feet.
761. What is the average width of the various coal pit lines where they join the Great Northern Railway? On the Wallsend line there is a very deep cutting that involves an extra width. Where we join with the Minmi line it is 33 feet wide; those are the only two lines that join at present, I believe.
762. Does not the Coal and Copper Company's line join it? No, it is an independent line.
763. You would be satisfied to make a junction at or about the place where Morehead and Young propose to do so if you could get a concession of 66 feet? Yes; from the 310 acres I could make a separate line and join at the same point.
764. What is the average width of the Minmi Railway, or the average quantity of land taken up in its construction? Sixty-six feet.
765. What is the average width of land taken up on other lines of the coal pit railway? The Wallsend Company have taken up 99 feet, but theirs is rather a heavy line with embankments, cuttings, and so on, and consequently they had to take in a greater quantity of land.
766. Are there any physical difficulties in constructing this line? No, it is a very easy line indeed.
767. Is there any special reason why this line should be 99 feet wide when other lines are only 66 feet? I do not think, from the cuttings and embankments, that they require it, though the section does not show the depth of the cuttings or embankments either; it is on too small a scale.
768. Supposing the Legislature passed this Bill, allowing this Company to have a railway 99 feet in width—would that injure, unnecessarily, persons in the neighbourhood, or put them to increased expense in making other lines of railway? So far as giving 99 feet along the line is concerned, it would make no material difference to any one, but it would make a very material difference at the junction where you come to be limited for space; it would be an injury to those constructing lines at a future time by continuing to give 132 feet at the junction.
769. Your objection is urged principally to the width at the junction? Yes, although 99 feet are not at all requisite anywhere.
770. Did Morehead and Young serve you with a notice of their intention to construct a line of railway to traverse through your 280 acres? No.
771. Had you no notice at all? No, except in the newspapers.
772. Is it customary for those who propose to make a railway to serve owners through whose land the line will traverse with notice of their intention? I believe it is.
773. How did you happen to know that Morehead and Young intended to apply for this railway? Simply by seeing the notice of their intention to make the application in the newspapers.
774. *By the Chairman*: Not by any marks on the ground? That was the first time. They made lots of marks; they have cut as many lines as there are days in the week, or days in a month.
775. *By Mr. Hoskins*: You received no official notice? No official notice whatever.
776. Did you take up these 280 acres of land subsequent to Morehead and Young taking up the land from which they propose to make a railway? I leased I believe subsequently, but I had applied for it on the 14th January, under the free selection clause.
777. Had you seen any persons staking out this land for the purpose of making a railway previous to your obtaining possession of the 280 acres? Not that I recollect.
778. You consider the schedule inaccurate, because your land is not mentioned? It is inaccurate because it does not give a starting point; it simply says, from the eastern boundary, not saying what part of that eastern boundary it starts from.
779. Do you see any objection to a railway joining this line? I can see no objection at all; it appears to me it would benefit the promoters to have traffic coming on to the line.
780. Could any other parties join except on an incline? It is all incline from top to bottom. 781.

781. Would not any other parties who might make a railway to join this railway at the junction be compelled to run for a certain distance parallel with this line? It would not be absolutely necessary. Mr. A. Brown.
26 Sept., 1862.

782. If you wished to make a railway from your 280 acres, would you not be compelled to run parallel? We would be compelled to run parallel; and as we approached the Great Northern Railway we would be stopped altogether, because we would come in contact with the Waratah line. It would be impossible to make an independent line from the 280 acres north of Morehead and Young's line, because we should come in contact with the Waratah line about two-thirds of the way from Morehead and Young's line.

783. Therefore you think that if a provision is inserted preventing persons from making a railway to join at this place it would cause great inconvenience? It would; it would shut up these lands, in fact, or otherwise cause a great deal of unnecessary expense in going through the A. A. Company's land, as well as making the line longer, and perhaps more difficult, besides the larger amount of compensation.

784. Is there any similar provision inserted in any of these railways you speak of that no railway shall run parallel with them? In the Wallsend Act I believe there is—not in the Minmi.

785. There is only one precedent? Only one—the Wallsend.

786. *By Mr. Broadhurst*: Not the Minmi, you think? The Minmi Act, I think, does not provide for prohibiting a parallel line.

787. *By Mr. Hoskins*: Do you consider it objectionable that parties making a line of railway, with a special Act of Parliament, should be allowed to make what by-laws they think proper? I think it very objectionable to give them power to make by-laws with the force of law without being referred to some authority. They might make such by-laws as would prohibit traffic altogether. I think it would be much better that the by-laws should be submitted to the Executive Council, and if approved, then let them take the force of law.

788. Do you know whether in the Minmi or any other Acts passed for the construction of coal lines of railway in the Northern District, a provision has been passed authorizing the framing of by-laws not subject to the approval of the Executive? I believe in the Act for the Wallsend line there is no provision of that kind. The Co-operative Company were desirous of joining their line—I do not know whether they had framed any by-laws—but there was no portion of the line set apart for any specific purpose, and the Company had actually to come to the Legislature to get an Act to enable them to join the line, notwithstanding its being a public line.

789. How long is it since the Minmi and Wallsend Companies obtained their Acts? The Minmi in 1854, and the Wallsend two or three years ago.

790. Is there not at the present time a greater disposition to invest money in coal mining enterprise than there was at that time? Much greater.

791. Do you not consider it the duty of the Legislature, seeing the disposition there is to invest money in coal pit railway lines, to insert provisions insuring active Government supervision? Yes, I think it peculiarly the province of the Legislature to look into such matters, and to make such provision as will prevent obnoxious rules being adopted by private individuals.

792. You do not consider that the character of the legislation, passed at a time when it was difficult to induce people to invest money in coal mining, should influence present legislation? I should say not; circumstances are altered.

793. What are your general objections to this Bill? I object to its being a private line, and I object to its monopolizing so much land at the junction of the Great Northern line. I also think the by-laws should be submitted to some authority.

794. Are these all? These are the principal objections. All the objections are stated in the petition. The schedule also should be in accordance with the plan.

795. *By Mr. Hannell*: Are you aware that the promoters have given up part of the width at the junction? I am not aware.

796. *By the Chairman*: The A. A. Company's land comes up to a point at the junction of the proposed line with the Great Northern Railway;—do you contemplate that any large sum will be demanded for making a junction there? I believe the Company would demand a large sum.

797. Why—is it only from surmise, or the result of any interview with any of the Company's officers? I have asked Mr. Merewether to sell me a piece of land here, but he did not see his way clear. Taking into consideration the fact that the A. A. Company got £9,000 for the small portion of land taken up by the Great Northern Railway, and that two lines join at this point, which will give a great value to this land, I am under the impression that they will ask a very large compensation for a very small portion of land.

798. If the junction of three railways would give an increased value to the other land, one would think they would be prepared to give as much as would be required without any charge at all? The difficulty would be to get the Company to that belief.

799. Is not Mr. Dangar's land there as valuable as the Company's? I dare say it may be as valuable, but different proprietors come to different conclusions.

800. There would be no difficulty in settling the amount of compensation whether to a Company or an individual, by arbitration? There may be a difficulty; they may value it at an enormous value.

801. *By Mr. Hay*: Would not the arbitration follow the same course whether Mr. Dangar or the Company were concerned? It might.

802. *By the Chairman*: You made a calculation based on taking 150 tons of coals per trip—is that the usual quantity taken? It depends upon the nature of the line. In this case they could take 200 tons a trip easily.

- Mr. A. Brown. 803. How much do you take on the Minmi line? I have taken along the swamp 200 tons at once on a level.
- 26 Sept., 1862. 804. What is your usual quantity? 150 tons. But the inclination being with the traffic, in this case they could take much more.
805. Are there any inclines on the promoters' line that it would be objectionable to join? No, the inclines are much easier than where the Wallsend line joins the Great Northern; they join at 1 in 66; the steepest in this is, I think, about 1 in 79.
806. You stated that you withdrew any objection to the Bill on account of there not being a proportionate reduction in the toll for any distance less than a mile, did you not? Well, I practically did so.
807. Are the Committee to understand that you do withdraw that? Yes, I will withdraw that, provided I can form a junction without being forced to interfere with their line, by their monopolizing so much space at the junction, 132 feet; if they reduce that to 66 feet.
808. The toll you are allowed to charge by your Act is 6d. a ton a mile? Yes.
809. And there is no provision for anything less than a mile? No, but I think it is quite competent to the parties seeking traffic to raise the question whether they are to pay for a mile or a part of a mile.
810. The toll, 3d. a ton per mile, is not excessive? I think not; it has usually been allowed.
811. Do you know any line where the charge is proportioned to the distance travelled less than a mile? The Government charge me in proportion to distance; for instance, from Hexham to Newcastle is nine miles and a quarter, and they charge me nine miles and a quarter.
812. Is there anything in this Act to prevent any railway you may lay down crossing this line? I am not aware of anything that prohibits it, but I dare say they would object to any line crossing theirs.
813. You stated, as one of your objections, that provided you opened a pit to the north of Morehead and Young's contemplated line, it would be necessary, supposing the Waratah Company to lead their line close alongside the promoters, to cross either that line or Morehead and Young's line, to get to the Great Northern line? Yes.
814. What is there to prevent your crossing Morehead and Young's line, if you are desirous to do so? There is nothing in the Bill that I can see to prevent it, but there is nothing to allow me, and possibly when the time came Morehead and Young would prevent me.
815. Do I understand you to suggest a clause giving you permission to cross? Yes.
816. Of course the gates being kept at the expense of the party requiring it? Yes, something similar to the Minmi Act; we cross the Great Northern and have to put in a crossing and maintain a man stationed there. A similar clause would be fair to the promoters, to be introduced into this Bill.
817. You stated that you had opened a great number of mines—what mines have you opened? I opened the first mines in the Colony at Four Mile Creek—the first after the A. A. Company, and at Burwood, and at Minmi.
818. Were these taken up on your own individual opinion with respect to the lands containing coal? In all the cases the coal was seen cropping out.
819. Is there any cropping out on the 280 acres? No.
820. The indications are not so good there? You see no indications on these 280 acres, because there is no broken surface; there is soil on the whole 280 acres.
821. As proprietor of the 310 acres you make no objection whatever to Morehead and Young's contemplated Bill? I make an objection to the junction being so wide. I want to join the Great Northern line without being forced on to the A. A. Company's land. I object to their monopolizing so much land at this point.
822. You have no objection to the railway, as proprietor of the 310 acres, except as to the junction? No.
823. As proprietor of the 280 acres, you also desire to have facilities for connecting any line you may make with their line? Yes.
824. But I understand you to say that generally you have no objection to the Bill if you have that facility? On the other hand I am desirous of promoting the Bill as much as possible; that is to say, I wish to have the line as practically useful as possible, but I object to the line being held exclusively to the use of Morehead and Young.
825. Provided you have the facilities you require, you think this line will be a public benefit? Yes.
826. The line does not pass over any portion of your 310 acres? No.
827. Is not the 280 acres you hold from the Crown on lease a portion of the Common? It is.
828. You say you have no claim to be paid anything for the surface that may be taken for the purpose of carrying this railway to the Great Northern line? I believe the surface will be reserved by the Government, allowing the lessee sufficient space for building work-shops, houses, and so forth. They give us no right to the surface except what we may reasonably require for these purposes—perhaps 20 or 30 acres.
829. Can you state the exact date when you applied for this lease? It was some time in March; I do not remember the exact date.
830. Is not this land properly described as being Crown land? You may call it so; we take the bottom and the Crown holds the top.
831. You spoke about the Wallsend "dodge"? That was a regular dodge.
832. The whole of the line being on an inclined plane, they have refused to allow any party to join it? They constructed the line, I believe, for the special purpose of preventing any party from joining, by making it inclines and curves from beginning to end.

833. Have they made any opposition to the Co-operative Company? I believe not. Mr. A. Brown.
834. How then do you consider it a "dodge"? It was generally considered a dodge; and when the Co-operative Company applied to them to point out a place where they could join they would not do so. 26 Sept., 1862.
835. You stated that the Co-operative Company have made application to Parliament for an Act, for the sole purpose of avoiding this dodge? Yes, they have come through private land with the whole of their line.
836. Have you read the Co-operative Company's Bill? Partly.
837. Are you not aware that it is also to incorporate the Company? Yes, to join the line and incorporate the Company.
838. When you applied for this lease, was not this line laid out from Messrs. Morehead and Young's property to the Great Northern Railway? This line, so far as I myself know, has been cleared almost within the last fortnight or within the last month. I was not aware where the line was coming till I saw it cleared.
839. Did you know that it passed through the 280 acres at all when you applied? No, I was not aware where it passed through when I applied.
840. Is it a matter of any particular importance where it passes through? I cannot say at the present time that it would be important; but when I sink a pit and see which way the strata lie, it may then become a question of importance. They may put the line in a position that will be very fortunate for me, and on the other hand it may be the source of great inconvenience.
841. As you have had no mining on your land, you have no specific objection to the contemplated position of the line? No.
842. In that respect you can have no particular objection to the schedule? The schedule ought to describe accurately where the line is going to be.
843. What does it matter to you, supposing the schedule does not describe it accurately over anybody else's land? When once the line is made I do not suppose it will matter a great deal.
844. What objection can you have to the schedule, if it is a matter of indifference to you on what part it crosses your land? It is not very material, certainly, where it crosses.
845. Therefore the inaccuracy of the schedule cannot affect the Bill or yourself? No, so far as that goes, it does not affect the Bill much.
846. *By Mr. Burton:* Is it not important to you that when the Act is passed, the line should be fixed in some certain position or other? Yes, it would be important, so that they could not change the line.
847. *By Mr. Broadhurst:* Could Morehead and Young get from their land to the Great Northern Railway without coming through either your land or some other private land? They must go through somebody's land.
848. Through your land as the most direct? As the most easy.

Mr. Thomas Croudace further examined:—

849. *By Mr. Broadhurst:* You have heard Mr. Brown's evidence about what width will be sufficient for this line? Yes. Mr. Thomas Croudace.
850. Will you be good enough to say what your opinion is—whether you agree with him, and if not, where you differ from him? In passing from one point to another with a railway, we so seldom find the country ready made for the railway that the breadth must be taken up in accordance with the features of the country. Commencing at the junction with the Great Northern Railway, and proceeding for upwards of a mile in the direction of Messrs. Morehead and Young's pit, the ground is pretty level, but we have three feet of embankment to raise to keep the rails clear from a great flow of water, and to do that it is necessary to have side-cuttings—at least it will be more than necessary—in the greater portion of it we are obliged to have side-cuttings, and side-cuttings occupy a greater breadth than many parties are aware other than engineers; for to work it to advantage, you must have an equal quantity on each side the centre of the line of railway; if not, you are obliged to carry entirely from one side over to the other; but, by having the cuttings on each side of the centre line of the railway, then you work to the greatest advantage. Now this (*plan produced*) is a simple cross-section of the railway which I did in ink yesterday afternoon, having time to spare, to shew that 99 feet will be just sufficient to form this railway from these side-cuttings. I consider that the least advisable breadth to take for a good and permanent line of railway, for a single line, is 28 feet at the bottom of the formation of a three feet embankment; then, taking either the right or left side, it is immaterial, but I have marked it on the left; before coming to the slope of the side-cutting I should like a space of 8 feet, so that the rush of water, after the side-cutting is taken out, should form no wearing away, and, therefore, loosening of the embankment. On the other side, and looking to futurity a little to the probability of making a double line of railway, I have put from the bottom of the embankment 13 feet, being an extra amount of 5 feet more than on the left hand side, and these 5 feet being in the extra quantity required to form a double line of railway; then the breadth of the side-cuttings being required to be 14 feet on each side to form the 28 feet of embankment, and allowing a smaller portion, from the slope of the side-cuttings to each side of the fence, for which, I think, 10 feet is little enough, the full breadth will be found, including fences, at something like 98 feet 6 inches. I might make a suggestion here, if allowed, that I would not wish this to be taken solely on

my

Mr. Thomas
Croudace.

26 Sept., 1862.

my opinion, but that this section should be given to Mr. Whitton, whom I believe to be an eminent, talented, and just man, to say whether he thinks I have taken more than is necessary for the formation of this line.

851. You have already stated that you believe you will be able to employ fully this railway? I have. I have here a few calculations which Mr. Brown's statement induced me to make, in answer to the very absurd calculation he has made. Mr. Brown states, that an engine travelling at the rate of 10 miles an hour, and conveying 150 tons, would be able on our branch to take the enormous and unheard-of quantity of 3,000 tons a day, or 900,000 tons a year; but, I believe, as perpetual motion has never been attained, Mr. Brown forgot that stoppages must occur at both ends on each transit, which, in nearly every instance, I believe, amounts to nearly half, but, in some calculations I have made here, I have only taken one-third off. The distance from Messrs. Morehead and Young's pit to Newcastle is $5\frac{1}{2}$ miles, or thereabouts, and if the coal were conveyed at the rate of 10 miles an hour, and allowing 11 full working hours for a day's work, an engine could only perform 10 journeys to Newcastle in a day. I believe a very good load for an engine would be 120 tons, which is more than is generally carried, either by the Wallsend or the Minmi railway at a trip, though they might at occasional times exceed it, but very seldom. That would give us a carriage of 1,200 tons a day; but as we are obliged to allow for stoppages, which every one observing goods carried from one point to another must know to occupy very considerable time, I think it only reasonable, instead of taking off half, to take one-third off 1,200 tons, which would leave 800 tons a day carried along the railway of Messrs. Morehead and Young. I think we may fully expect to carry that quantity. I have had several opportunities of observing the transit of coal from the Wallsend Company's pit to Newcastle, for the last few months, and I have generally observed that they perform near six journeys a day, their distance being somewhere about 8 miles, I believe, and the time occupied something like 13 hours; they commence working at about five o'clock in the morning, and I have often known them to continue to work till seven, eight, or nine at night, and sometimes even till twelve o'clock. But I have taken 13 hours as the time occupied, and I should state the average quantity of coal conveyed each journey at somewhere about 90 tons, as they are not able on their heavy gradients to convey much more, and that only in very favourable weather. I think if their time is taken and the distance, it will be found to agree very conclusively with my first calculation, and go so far to prove it. Having a very extensive connection at home in England, I would illustrate this further, and on a more extensive scale, taken from a colliery where I was engaged for nearly five years previous to coming out here. From one part alone we wrought about 1,100 tons a day, and from another we worked about 500 tons, making together 1,600 tons a day, which were conveyed to the ports of Jarrow, Shields, and Sunderland. I think the distance was estimated at from 10 to 12 miles, and to convey this quantity we required two locomotive engines, one the most powerful that the North-Eastern Railway had. The usual time for starting was five o'clock, and the usual time we left off was eight o'clock. And I think that both the distance and the average number of journeys taken, will go greatly to prove my first calculation of the amount we will be able to convey. But Mr. Brown's calculation was based, I believe, entirely on supposing us to have the junction formed with the Great Northern Railway, and locomotives of our own; which, of course, would make the distance to be travelled with our own locomotives, to be only $2\frac{1}{2}$ miles, the distance from the junction to Newcastle being 3 miles. Now, if we worked from the junction to the pit we would be able, at the rate of 10 miles an hour, to perform in 11 full hours for a day's work 11 journeys, allowing a quarter of an hour's stoppage at each, which is about one-third taken off, the same as the first calculation. But it is necessary to have a greater number of sidings, which are put in for the purpose, and to have nearly double the quantity of trucks; and instead of conveying 120 tons each journey to the junction, we could only convey about 15 trucks, or 90 tons, on each journey, which, upon the 11 journeys, would give us 990 tons a day. It is very often necessary in working a colliery, owing to many things, perhaps too numerous to mention, to free the screens next the pit from a superfluous quantity of coal, and to allow for that; supposing we took only half a load down to the junction twice a day, we should have to make a deduction of 90 tons from the 990, which would give us an advantage of 100 tons over the other system of conveyance. I can only state that I trust this will go far to show the absurdity of Mr. Brown's enormously erroneous calculation.

SELECT COMMITTEE ON MOREHEAD AND YOUNG'S RAILWAY BILL.

THURSDAY, 2 OCTOBER, 1862.

Present :—

MR. HAY,
MR. MACLEAY,
MR. HANNELL,MR. GORDON,
MR. MATE,
MR. SAMUEL,

MR. DICK.

JAMES HOSKINS, Esq., IN THE CHAIR.

Mr. Broadhurst appeared as Counsel and Mr. W. G. M'Carthy as Solicitor for the Promoters of the Bill.

Mr. Burton appeared as Solicitor for Petitioners.

Thomas Croudace, Esq., called in and further examined :—

852. *By Mr. Broadhurst*: You were yesterday making a statement which you did not finish? Yes. T. Croudace,
Esq.

853. Will you be good enough to proceed with it—you said the breadth must be taken according to the features of the country? Yes. This (*produced*) is the cross-section of which I promised the Chairman I would make a fresh copy. (*Fresh copy handed in, and numbered 5.*) 2 Oct., 1862.

854. Will you be good enough to proceed with your statement? I have stated, I think, all about this portion beyond the junction leading up, and also relative to the cross-section, as well as what was necessary in reference to the side-cuttings.

855. *By Mr. Hannell*: You were speaking about the necessity of having 99 feet? Yes; and now I am speaking as to the extra width of the junction. I stated in my evidence before that I considered the distance taken at the junction was not more than necessary. I can only reiterate that statement, also bearing it out by the portion occupied and taken up for 99 feet where only two lines could be formed, providing they found it necessary to form two lines at a future time. At the junction it would be necessary to have six sets of sidings, as I explained before. We should occupy the full width at that junction, and were not the features of the country so very well adapted for it we should require to have a greater width than 132 feet. The ground is very level there, and instead of having side-cuttings we would have merely a couple of drains to lead down to the creek, and free the Great Northern Railway from the excess of water caused upon these extra sidings. Mr. Brown stated that he could work, and did work three sidings at his junction with the Great Northern Railway at Hexham, and that he only occupied 33 feet. I thought it singular that he could do it in so small a compass, and I went and measured the line, and I find that he has not three sets of sidings on but merely one working and another dead set—(and not a working siding)—at the junction. The formation part of that is 44 feet wide at 8 chains from the junction, and 55 feet wide at 10 chains from the junction point. He has side-cuttings similar to what these are, and the total width from the side-cuttings, taken barely from the edge to the other side at 5 chains from the junction point with the Great Northern Railway, is 110 feet wide; at 8 chains it is 110 feet wide; and at 10 chains it is 121 feet wide. I would simply state that if that is requisite for Mr. Brown, with merely two sets of working sidings, I think 132 feet would be little enough for the promoters of this Bill.

856. I believe, Mr. Croudace, seams of coal are rather capricious, are they not—do they not sometimes suddenly come to a full stop? Oh, yes, sometimes a fault or a dike will take a seam very abruptly up or down 20, 50, or 100 feet, and sometimes more? In some instances it might throw the seam out entirely.

857. Does it not often happen that a piece of land is entirely without coal, although contiguous to lands that have coal in them? Yes, that is a very frequent occurrence. I have brought a plan down, and if the Committee like I will show them a section of some borings.

858. *Cross-examined by Mr. Burton*: If I understand you aright, the promoters of this Bill propose to have the use of the Government locomotives on the promoters' line, and entirely to exclude the public from the use of the promoters' line? The promoters intend using the Government engines, and any one else joining, as I stated before, would, in my opinion, injure the promoters. It would be detrimental to their working.

859. Therefore the promoters seek that no one else should join? I think it would be advisable that they should do so.

860. The promoters propose to use the Government engines, and that no one shall be entitled to have goods carried on their line? The Government themselves have a truck which conveys passengers and goods up to the township of Wallsend, or to the colliery, and I suppose the promoters of this Bill would stand by the same arrangement. I believe that is entirely optional with the Government.

861. The promoters seek to strike out clauses 3 and 4 of this Bill? I believe such is their intention.

862. Then they propose that their line shall not be open to the public even on payment of a toll—that the public shall have no power to join their line, and yet that the promoters shall use the Government locomotives on their line—is that so? I believe the Government would not allow ———

863. Now do answer the question—"yes" or "no"? They intend using the Government engines on their lines; and any one joining them would be detrimental to their interests.

864.

- T. Croudace, Esq.
2 Oct., 1862.
864. I should be very much obliged to you, if I am entitled to have the question answered, if you would answer "yes" or "no," or make a statement that you cannot answer to that effect. Do the promoters intend to use the Government locomotives on the promoters' line, and yet that that line shall not be open to public use, and that the public shall not be entitled to join it? They do propose to use the locomotives of the Government.
865. Well, go on? And I believe it is the intention to prohibit any one from joining their line, knowing that it would be detrimental to their interest do so.
866. Do you consider it a very modest proposal that the promoters, although they propose to use the Government locomotives, wish to debar the public both from using their line or joining in it? Yes, I do. The promoters will have to pay the Government for the use of their engines, and they will have to pay for the formation of the line. After the promoters have been at all this trouble and expense it would seem very monstrous that the public should be allowed to come in and injure them.
867. You think it would be monstrous that the line should be used by the public even on payment of a toll? If the toll were greater than the injury the promoters would sustain. I do not know that it would be; but I am afraid the public would not be willing to pay an amount equivalent to the loss of the promoters upon such a junction.
868. *By Mr. Hannell:* You give us the widths Mr. Brown has at the junction of the Minmi line with the Great Northern line? Yes.
869. Are you aware that that land is private property? I am not aware that such is the case. I merely went into the matter on Mr. Brown's statement. He said he occupied 33 feet for three lines of railway, and I have given a proof that he occupies more. He occupies for three lines of railway, with the side-cuttings, within 20 feet on one part and 12 on another—of what we shall occupy for a greater number.
870. Are you aware whether the Waratah Company propose to join the Great Northern Railway at the same point as your line? I believe they propose to join at very near the same point, and we have conceded part of the width which was stated in the Bill on account of that.
871. If each Company were to construct a line of railway in that locality to join the Great Northern line at separate points, would it not render necessary a greater outlay on the part of the Government to extend the sidings they would have to put in? I believe Mr. Whitton, the engineer, proposed to make an extra siding at that point, so that each could go off from it. There would be three sidings in the Government line of railway—that is, between the fences of the Government line, and from this extra siding both the promoters' railway and the Waratah Coal Company's Railway would strike off.
872. You do not expect to find full employment for the Great Northern Railway from that junction in carrying the coal you send for shipment? I am afraid not.
873. Would not your line of railway be idle for a long time—for many hours during the day? I trust not. As far as our line is concerned I think it will be occupied the full time that constitutes a day's work in running trains; but although we may occupy our own line we cannot of course expect to occupy fully the Great Northern line.
874. If you expect to do so much, and the Waratah so much, and Mr. Brown so much, we should hardly have time to get the Government train down? The engineer, I believe, sees the necessity of doubling the railway, and for that purpose I believe they have already formed a portion of the leading from where we have joined to the Waratah portion, and intend to form the junction to the Wallsend portion; unless that is done they say we shall not be able to lead the coal we expect to come to market.
875. Do you know any line of railway in the Colony, used exclusively for private purposes, constructed over public land? No, I cannot say that I do.
876. The Wallsend is a public line? Yes.
877. And the Minmi? Yes, and I believe also the Minmi.
878. And the Burwood line? And the Burwood line too.
879. Can you state as to the necessity of greater facility for the shipment of coal at the wharves? I can state this much:—I have seen the Minmi coal waggons up to the Waratah siding, above the Waratah Station, and I have known them have to wait nearly the length of an hour until the Wallsend Company got their empty waggons to lead back again to their collieries. With greater facilities, of course, there will be quicker dispatch in the transit of coal and other goods. I know there are great complaints in reference to the matter.
880. Is it not likely that the increasing production of coal will demand greater facilities for the shipping of coal? It will, most certainly. There will have to be something done, either by Government or by private enterprise. Cranage is a very bad way of shipping coal; it is a slow process, and also very injurious to the coal.
881. Do you know whether any complaints have been made in reference to that matter? I am informed so. I cannot speak from experience, but I know that it is complained of generally.
882. There are great complaints? Yes.
883. *By Mr. Hay:* Is there any provision in the Bill relative to the using of the locomotive engines of the Government upon this railway? I am not sure. (*Witness refers to Bill.*) I do not see anything particularly relative to that.
884. In that case I suppose it would be a matter of arrangement between the Company and the Government as to that? As to that; it is a matter of arrangement between any parties who join the Great Northern line of railway.
885. I am asking you about this Company? It would be a matter of arrangement between this Company and the Government.
886. It would be open for the Government to furnish this requisite upon any conditions it might think necessary for the public interest—would it not? They have stated conditions on which they lead coal from the collieries to the wharf.
- 887.

887. But you will observe that in the Bills which have passed hitherto there were certain clauses which provided to a certain extent for making these railways public railways? Yes.
888. And if there is no clause in this Bill either in reference to the use of the Government locomotives, or giving a public character to this railway, it will be, I think, a matter of arrangement between the proprietors of this railway and the Government as to whether the Government locomotives shall be used, and upon what terms they shall be used? It would be, I believe. I suppose the terms would come under the present arrangement.
889. What is the present arrangement? I believe one shilling is the minimum charge the Government have for six miles, and above that twopence extra.
890. Would it not be open for the Government to make the concession of using its locomotives on this line dependent upon any conditions it thinks necessary for the public advantage or interest?—there is nothing to bind the Government, is there? There is nothing to bind the Government that I am aware of.
891. You must make a bargain with the Government? Yes; I am merely supposing that that bargain or arrangement will be the same as the present standing charges.
892. But the Government, perhaps, might impose other conditions if your Act is deficient in some provisions which are contained in other Acts? Well, I would not like to state that.
893. There is nothing to prevent them? I do not know of anything.
894. You cannot, as a matter of right, take the Government engines and use them on the same terms that they are granted to other railways? No; but it would be only reasonable to expect the same rate of charge.
895. That might depend upon whether the public interest had been provided for by your Act as it is provided for by other Acts? I believe the promoters of this colliery will benefit the public equally as much as any others.
896. Still it would be for the Government to have a voice in coming to a conclusion on that matter? Oh! yes! I suppose so.
897. You are disposed to leave that matter unprovided for by the Act, and to take your chance of making a satisfactory arrangement with the railway authorities? I think that would be best. I also might state, as I have stated before, that I believe it would be for the benefit of the promoters to have engines of their own as soon as possible. I think it would be a benefit to any Company to run their own engines to convey their coal to the junction, and to allow the Government to take the waggons down the Government railway.
898. If they have those full arrangements for a railway there does not appear to be any reason why they should not work it with their own engines? No.
899. The advantage of employing the Government engines is, I presume, because there might not be sufficient traffic to make it advisable to run an engine of your own? No; it is more the loss of time before you can get plant such as engines, trucks, and other material of that kind from England. For the present I think it would be well to use Government engines, but at a future time I think it would be better for the Company to run engines of their own to the junction, and let the Great Northern Railway lead them from the junction to the wharf.
900. If no provision is made with regard to these matters by enactment an arrangement can be made from time to time by the Government, so as to satisfy the promoters and the Government, I presume? I believe so.
901. You would expect the Government to protect the public interest I suppose? I would expect the Government to protect the public interest as their own interest.
902. *By Mr. Hannell*: Would it not be exceedingly dangerous if each of these Companies had engines of their own running on this public railway? I say, on their own lines. I think it would be a benefit to this Company, and to Companies generally, if they ran their own engines on their own lines. The shorter the distance, of course the greater the quantity of coal they would be able to lead.
903. *By Mr. Hay*: You do not contemplate the running of their engines further than the junction? No.
904. Not on the Government line at all? No; only to the junction.
905. *By Mr. Hannell*: It would otherwise be necessary to insert provisions in this Bill? Oh no; I only said that they might, with advantage, run their own engines on their own lines.
906. *By the Chairman*: It was never contemplated by the Company, if they obtained locomotive plant, to use their locomotives on the Government railway? Never, I think the Government would not allow it.
907. When did you make the measurement of the width of the land at the Minmi junction? On Monday.
908. Last Monday? Yes.
909. You are certain that your measurements are correct? I am certain of it. I went myself, and took one of my men with me. I measured it myself. Had there been a fence—as I think there ought to be—the width would be greater than I have stated. The least there could be then would be fully two chains in width. The land about the Minmi junction is open all through the Hexham Swamps. There are some gates at the Government railway, but not between their junction and the Hexham Swamps.
910. But you do not know whether the land is private property or not? No.
911. *By the Chairman (at the request of Mr. Burton)*: Can you say of your own knowledge, whether, in the event of the Waratah Company obtaining a right to make a junction at the place, Messrs. Morehead and Young propose to join their line with the Great Northern Railway, there would still be sufficient room for another Company (Messrs. J. and A. Brown) to make a junction with the Great Northern Railway at the same place, unless they purchase land from the Australian Agricultural Company? I think they would be obliged to purchase land.

T. Croudace,
Esq.

2 Oct., 1862.

T. Croudace, land. If they came on to the same portion proposed to be taken up by Messrs. Morehead and Esq. Young, it would be injurious to them. They would not be able to have the same number of sidings on.

2 Oct., 1862.

912. Who—Morehead and Young? Yes.

913. That is not what I asked you, but whether there would be room for the Waratah Company, and also for J. and A. Brown to make junctions with the Great Northern Railway at the same place without having to purchase land from the Australian Agricultural Company? I think they would have to purchase land from the Australian Agricultural Company—which I think, they would be able to get at a very reasonable price. I saw Mr. Winship, and he said that the Company would only require a reasonable price for the land.

914. He did not specify what he considered to be a reasonable price? No, a fair price; similar to that we would charge to any private individual.

915. When you say "we," do you mean Messrs. Morehead and Young? We pass over Mr. Dangar's property, and shall have to remunerate him, and Mr. Brown would merely have to remunerate the Australian Agricultural Company.

916. Do you happen to know whether the land held by Mr. Dangar's representatives is believed to be mineral land, and whether they contemplate working that land for mineral purposes; and also, whether the land held by the Australian Agricultural Company at or near the junction of this proposed line, is mineral land, and whether the Australian Agricultural Company contemplate working it for mineral purposes? Neither the one nor the other is workable mineral land at the particular part about the junction.

917. *By Mr. Hay*: Can you say whether the ground upon which Messrs. J. and A. Brown would be driven to form this junction is favourable or otherwise for the purpose? Favourable for a railway.

918. And for a junction? It is very favorable indeed—very much so.

919. You do not drive them into any country unfavourable, for the purpose of effecting a junction? Not at all. Almost from Newcastle to a considerable distance above Waratah—three quarters of a mile—it is known as the Broad Flat Meadows. It is a very flat, sandy plain.

920. *By the Chairman*: Do you know whether the Australian Agricultural Company have ever resisted any other Railway Companies desirous of constructing railways through any portion of their land? I cannot state. The Wallsend line was made before I arrived here. I think I have heard that they offered a little opposition, although I do not know whether they offered so much as Mr. Brown is offering to us. I heard Mr. Brown speak of the enormous sum that Government had to pay; but that is hardly any criterion, because it was valuable building land in the heart of Newcastle.

921. Is this land of the Australian Agricultural Company at or near the junction of the proposed railway, and which Mr. Brown alleges they would have to purchase if they were not permitted to form this junction—valuable land?—Do you consider it valuable land? I do not.

922. Can you give us any approximation to the value of this land? I cannot. I am not sufficiently well versed in the value of land in this Colony; but I should think its value would be very trifling. It is scarcely good for agricultural purposes, I should say, owing to its sandy nature, and there is no mineral underneath it of workable extent. There is not workable coal at 550 feet, I believe.

923. Is not land near mining works, or in the vicinity of large centres of population, even although worthless for agricultural purposes, considered valuable? It might be, but the Waratah freehold being nearer to the Waratah coal mines, renders that land of the Australian Agricultural Company of little value, I think, and it is at least a mile from the Bore Hole. There the land is more valuable; but this is out of the way, as it were.

ALEXANDER DICK, Esq., IN THE CHAIR.

Edmund Burton, Esq., examined:—

E. Burton, Esq.

2 Oct., 1862.

924. *By the Chairman*: You are Solicitor to Messrs. J. and A. Brown? Yes.

925. Please to make what statement you desire to place before the Committee? I produce a copy of the original Minmi and Hexham Railway Act by which the promoters of that railway were limited to a breadth of not greater than 66 feet, including supports, abutments, and foundations. I believe I am in a position to state that, with the exception of the land taken by that Act, and except any roads which may be crossed (about the breadth of the line over which I know nothing) the Minmi line is made exclusively with the assent of the proprietors of the land over which it is carried. And although Messrs. J. and A. Brown obtained another Act for extending that railway, it was an Act unopposed, so soon as they had agreed to pay a minimum amount of purchase money.

926. *By Mr. Hay*: Do you allude, in your last observation, to the Minmi and Hexham Railway Act Amendment Act of 1861? I do.

927. Will you look at that Act? I have not a copy with me.

928. Do you recollect whether there were not certain lands taken, the owners of which do not appear to have been accessible, and that provision was made for paying the compensation into the hands of the Master in Equity? The owners were only technically not accessible. They were really represented by Mr. Bradley, who opposed that Act until Messrs. J. and A. Brown agreed to the minimum rate of £80 per acre being inserted, after which Mr.

Bradley

Bradley discontinued his opposition. The Act was passed, and Mr. Bradley and his clients have recently obtained the compensation from the Master's office, or at least they have got an order to that effect.

E. Burton,
Esq.

2 Oct., 1862.

929. In this case, does Mr. Dangar oppose the present Bill? He is dead.

930. In this case? Mr. Dangar is dead, but his representatives are alive.

931. I suppose his representatives represent his estate as fully as Mr. Bradley did the owners in reference to the Minmi and Hexham Railway Act Amendment Act? I think so. As in that case they do not technically represent him, so that they cannot make a title, it appears by the Act.

932. In point of fact, you do not know how much land is occupied by the Minmi Railway at its junction with the Government railway? I do not, and have had no opportunity of communicating with my client on the subject.

933. It may be 66 feet, or it may be twice that? Yes, or it may be half that—I rather think, half that, from what I was told recently, at least I understood so.

934. *By Mr. Hoskins:* You have not heard your client complain that in the event of his not being permitted to join this projected line at the junction—or, to use their line at the junction, he would be driven into the swamp if he proposed to make a railway to his pits? No; but only that he would encounter the Australian Agricultural Company's opposition.

935. *By Mr. Samuel:* Are you aware whether Mr. Whitton has stated, in his evidence, that the Government will permit only one line to join the Government line? I am aware that he did not say so. He said that if three lines were made he would first lead them all into one, and then join that one to the Great Northern.

TAYLOR AND WALKER'S RAILWAY BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 16th instant, "*Taylor and Walker's Railway Bill*,"—beg leave to report to your Honorable House,—

That they have examined one of the Promoters of the Bill*, * Mr. C. Walker. and the other witness named in the margin,† (whose respective † Mr. F. W. Holland. evidence will be found appended hereto), and that the Preamble having been satisfactorily proved by the evidence of those gentlemen, they proceeded with the several Clauses and Schedules of the Bill, in the consideration of which they deemed it necessary to make certain Amendments.‡

‡ *Vide Schedule of Amendments.*

And your Committee now beg to lay before your Honorable House the Bill as amended by them.

THOS. GARRETT,
Chairman.

*Legislative Assembly Chamber,
Sydney, 21 October, 1862.*

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 21 OCTOBER, 1862.

MEMBERS PRESENT:—

| | | |
|--------------|--|----------------|
| Mr. Garrett, | | Mr. Alexander, |
| Mr. Mate, | | Mr. Dangar, |
| Mr. Flett. | | |

Mr. Garrett called to the Chair.

Copies of "Taylor and Walker's Railway Bill"—before the Committee.

Petition for leave to introduce the Bill, by direction of the Chairman, read by the Clerk.

Mr. Christopher Walker, *one of the Promoters of the Bill*, called in and examined.

Mr. Frederick William Holland, *Engineer, Surveyor, and Architect*, examined.

Plan produced by witness, shewing the direction of the proposed line.

Room cleared.

Preamble read.

Committee deliberated.

Motion made (*Mr. Mate*) and *Question*,—That the Promoters be requested to supply an accurate tracing of the Plan produced, and lodge it with the Clerk of the House,—*agreed to*.

Motion made then (*Chairman*) and *Question*,—That this Preamble stand part of the Bill,—*agreed to*.

Parties called in and informed of the resolutions of the Committee.

Tracing to be supplied as early as possible, in accordance with the wish of the Committee.

Clauses 1 to 6 read and agreed to, without amendment.

Clause 7 read.

Amendment proposed (*Mr. Dangar*),—That after the word "forfeit," in the 28th line, there be inserted the words, "any sum not exceeding."

Question,—That the words proposed to be inserted be so inserted—*agreed to*.

Clause, as amended, agreed to.

Clauses 9 to 36 read and agreed to, without amendment.

Schedule read.

Motion made (*Mr. Alexander*) and *Question*,—That the word "seven," at the end of line 25, be omitted, with the view of inserting in its place the word "six,"—*agreed to*.

Motion made (*Mr. Alexander*) and *Question*,—That the words "twenty-seven," in line 26, be omitted, with the view of inserting in their place the word "ten,"—*agreed to*.

Motion made (*Mr. Alexander*) and *Question*,—That the words "thirty-eight chains and ninety-eight links," in line 28, be omitted, with the view of inserting in their place the words "forty-five chains and ninety-four links,"—*agreed to*.

Motion made (*Mr. Alexander*) and *Question*,—That the words "thirty-two" in line 30 be omitted, with the view of inserting in their place the words "twenty-four,"—*agreed to*.

Motion made (*Mr. Alexander*) and *Question*,—That after the word "twenty" in line 30, the word "four" be added,—*agreed to*.

Word added.

Motion made (*Mr. Alexander*) and *Question*,—That the word "fifteen" in line 32, be omitted with the view of inserting in its place the word "thirteen,"—*agreed to*.

Motion made (*Mr. Alexander*) and *Question*,—That the words "forty-six" and "eighty-one" in line 34, be omitted, with the view of inserting in their stead the words "fifty" and "twenty-six" respectively,—*agreed to*.

Motion made (*Mr. Alexander*) and *Question*,—That after the word "links" in line 40, the words "or thereabouts" be inserted,—*agreed to*.

Words inserted.

Schedule, as amended, agreed to.

Chairman requested to report the Bill, as amended, to the House.

SCHEDULE

SCHEDULE OF AMENDMENTS.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

TAYLOR AND WALKER'S RAILWAY BILL.

TUESDAY, 21 OCTOBER, 1862.

Present:—

| | | |
|----------------|--|--------------|
| Mr. ALEXANDER, | | Mr. FLETT, |
| Mr. DANGAR, | | Mr. GARRETT, |
| Mr. MATE. | | |

THOMAS GARRETT, Esq., IN THE CHAIR.

Christopher Walker, Esq., appeared as one of the promoters of the Bill, and was examined:—

1. *By the Chairman*: You are one of the petitioners for this Bill? Yes.
2. You lease some land from the Osborne family, near Russellville, in Illawarra? Yes.
3. In which you are working a coal mine? Yes.
4. You are desirous, according to your petition, of having permission to lay down a railway from that land to the Harbour of Bellambi? Yes.
5. Through whose land is it proposed this railway shall pass? The property of Francis Peter M'Cabe, Michael Cowley, Patrick Farragher, John Cawley, Thomas Hale, and the Crown.
6. You believe this railway would be a public benefit? Yes.
7. Will it increase the facilities for supplying coal? Yes.
8. For general uses? Yes.
9. *By Mr. Mate*: What is the length of the proposed line? About two and a quarter miles.
10. Is it proposed to make it a public or private line? A public line.
11. *By the Chairman*: According to the 4th clause you draw the trucks of parties who make use of the line, with your engines? Yes.
12. *By Mr. Dangar*: Is 3d. per ton per mile the usual charge in other Companies? I believe so.
13. *By Mr. Alexander*: There is no objection made by your neighbours to the passage of this railway through their land? Not that I am aware.
14. It will not be any injury to those properties? No.

C. Walker,
Esq.

21 Oct., 1862.

Frederick William Holland, Esq., called in and examined:—

15. *By the Chairman*: You are a surveyor and engineer? Surveyor, engineer, and architect.
16. Have you surveyed the line of this proposed railway? I have.
17. Have you plans? These are the plans. (*The witness produced the same.*) This is the working section.
18. Will you be so good as to describe to the Committee the course of the line? Commencing on the north-eastern side of Messrs. Taylor and Walker's mine, situate near Russellville, in the County of Camden; thence in a north-easterly direction through lands known

F.W. Holland,
Esq.

21 Oct., 1862.

- F.W. Holland, known as Russellville, believed to belong to Francis Peter M'Cabe, a distance of forty-six chains and ten links or thereabouts, to the eastern boundary of said land; thence across the parish road from Wollongong to Appin; thence in an easterly direction through land believed to belong to Michael Cawley, forty-five chains and ninety-four links, or thereabouts; thence in the same direction through lands believed to belong to Patrick Farragher, a distance of twenty-four chains and twenty-four links or thereabouts, to the eastern boundary of said lands; thence in a south-easterly direction across Salt Water Creek; and thence through land believed to belong to John Cawley, a distance of thirteen chains and eight links or thereabouts; thence in a south-easterly direction, once crossing Hale's tramway through lands believed to belong to Thomas Hale, a distance of fifty chains and twenty-six links or thereabouts, to the western boundary of an allotment of land the property of the said Taylor and Walker, at Bellambi Harbour. Also commencing at a point a distance of three chains and forty-five links, or thereabouts, in a south-westerly direction from said allotment, in a south-easterly and easterly direction through lands believed to belong to Thomas Hale, a distance of ten chains and seventy links, or thereabouts; thence in a north-easterly direction through land believed to belong to the Crown, seven chains and thirty links or thereabouts, to Bellambi Harbour.
19. *By Mr. Mate*: Has this line been pegged out according to this schedule? Yes; the only difference is that in the schedule appended to the Bill, although the quantities were right, they were not set down in their proper portions to the several names. The total quantities are right, but there are more put down to one than there should be, and not so much to another. The plan is correct.
20. The parties through whose land this line passes, are they aware of this alteration of the schedule? Yes.
21. It does not interfere with the line at all? No, there can be no possible mistake, for we have put the pegs in chains and half chains.
22. This schedule, as you now describe it, is as it is pegged on the ground? Yes.
23. *By the Chairman*: This alteration in the schedule of the distances in crossing the land arises from your not having known, in the first instance, the precise boundaries of the various owners of land? Yes, and we gave more to one person and less to another.
24. With regard to the gradients on this line, do you think they are perfectly safe? Yes.
25. What is the steepest gradient? One in $27\frac{1}{2}$ is the steepest.
26. Do you know where it is intended that the locomotive shall start? The locomotive of course will start from the foot of the incline.
27. Are there any curves on this line? Yes.
28. Will you state the radii of the curves? 11 chains 80 links, 14 chains, and so on.
29. What is this (*pointing to the plan*)? $8\frac{1}{2}$ chains at the starting; that is on a dead level.
30. Where do you cross the main road? Just after you come to M'Cabe's, on a dead level.
31. Do you purpose putting up gates? Yes, we have gates on both sides of the road, and also a gate-house, which will be a residence.
32. *By Mr. Alexander*: Is it necessary that the land on both sides should be fenced, or will it be fenced? It will be fenced.
33. *By the Chairman*: With regard to crossing Mr. Hale's tramway, is there a proper provision in the Bill for that? I believe so.
34. With regard to approaching the harbour works, has this plan been submitted to Mr. Moriarty? I submitted it last Saturday to Mr. Moriarty; he looked at it for some little time, and stated that he had no objection to it.
35. Did he give permission to you to state that to the Committee? Yes. I asked him to give me a note; he declined to do so, saying that he would not give a note to any one under such circumstances, but that I could state what he had said to the Committee.
36. You think this line is perfectly safe? No doubt of it whatever.
37. And in no way injurious to public interests? Not at all—quite the reverse.
38. Do you know the nature of the permanent way intended to be put down? We are going to put down longitudinal sleepers, eight inches by _____, transverse sleepers of the same scantling, and about twelve inches of ballast.
39. What is the weight of the rails? 40 lbs. to the yard.
40. In the first place you intend to bring this line to the end of an allotment of Walker's and Taylor's—you do not intend to come to the harbour until the other portions of the works are finished? No.

BULLI COAL MINING COMPANY'S RAILWAY BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 5th August, the "*Bulli Coal Mining Company's Railway Bill*," beg leave to report to your Honorable House,—

That they have examined one* of the Directors of the Com-
 pany, and the Surveyor† of the Line (whose respective evidence is
 appended hereto), and that, the preamble having been satisfactorily
 proved by the evidence of those gentlemen, they proceeded to consider
 the several clauses and schedule, when it was deemed necessary to
 make certain amendments,‡ and also to introduce a new clause.§

Mr. William
Speer.

† Mr. William
Weaver.

‡ Vide Schedule
of Amendments.

And your Committee beg to lay before your Honorable House
 the Bill, as amended by them.

THOS. GARRETT.

Chairman.

Legislative Assembly Chamber,

Sydney, 21 August, 1862.

SCHEDULE OF AMENDMENTS.

Page 1. *After* Clause 1 *insert* the following new Clause,—

" 2. It shall be lawful for the Company either in substitution for some portion of
 " the Railway by the first section of this Act authorized to be made or in Power to con-
 " addition to the said Railway to make and continue a Railway through land tinue Railway
 " known as the Bellambi Estate or Village and believed to be the property to dock or
 " of Thomas Hale for the purpose of connecting the Railway and works of harbour works.
 " the Company with any public dock or harbour works which may hereafter
 " be constructed at Bellambi and to take and use so much of the said lands
 " as the said Company may require not exceeding in any part thereof a greater
 " space in breadth than sixty-six feet including the supports abutments and
 " foundations of the said Railway Provided that before such last-mentioned
 " work shall be commenced to be made a plan and section thereof shall be
 " laid before and approved by the Governor and Executive Council."

Page 4, Clause 10, line 7. *After* "highway" *omit* "or."

Page 4, Clause 10, line 7. *After* "road" *insert* "or tramway."

~~Page 4, Clause 10, line 7. *After* "road" *insert* "or tramway."~~

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

BULLI COAL MINING COMPANY'S BILL.

THURSDAY, 21 AUGUST, 1862.

Present :—

Mr. GARRETT, | Mr. HARPUR,
Mr. LEWIS.

THOMAS GARRETT, ESQ., IN THE CHAIR.

G. W. Allen, Esq., appeared as Solicitor for the promoters of the Bill.

William Speer, Esq., called in and examined :—

1. *By Mr. Allen* : You are a proprietor of the Bulli Coal Mining Company? Yes.
2. And a director also? Yes.
3. Do you produce the deed of settlement? Yes. (*The witness produced the same.*)
4. Is it executed by the proprietors? Yes.
5. Is the Company incorporated? Yes.
6. Under what style? The Bulli Coal Mining Company.
7. Have the Company opened their mines? They have.
8. Are they desirous of constructing a railway from the Company's mines to the harbour of Bellambi? They are.
9. Is the land through which the railway is intended to pass the Company's property? Part of it is, but the greater part of it is other parties'.
10. To whom does it belong? To George Somerville, John Somerville, James Holden, James Somerville, George Organ, Robert Campbell, William Campbell, Patrick Collins, Sarah Salter, John Cawley, Elizabeth Colleary, Thomas Hale, and a small portion to the Crown.
11. Is it necessary to obtain legislative authority to make the railway? I presume it is.
12. Are the Company desirous of obtaining that authority? They are.
13. Is it probable that the opening of the Company's mine will prove beneficial to the Colony and the public? Undoubtedly.
14. Will you state in what way? By opening up a large export of coal, in fact, a new export in that district, and anything that facilitates that, is an improvement both to the district and to the country.
15. Has the demand for coal consumption, steam navigation, and export, increased of late years? Yes.
16. Will the construction of the railway to Bellambi facilitate the obtainment of a supply of coal? Yes.
17. Has any opposition been offered to this Bill by the proprietors of land through which it is intended that this railway should pass? Not that I am aware of.
18. Can you tell the depth of the seam of coal that is opened? I could not exactly say, but it is from eight to ten feet, more than eight I know.
19. Are there any bands of clay or other substance in it? Not that I am aware of.
20. Is the coal field extensive? Very extensive; it extends all along the mountain range.
21. *By the Chairman* : If the Company get this Bill, other persons will be allowed to use this line on equitable conditions? Yes, certainly.

Wm. Speer,
Esq.

21 Aug., 1862.

William

William Weaver, Esq., called in and examined:—

- W. Weaver,
Esq.
21 Aug., 1862.
22. *By Mr. Allen*: What are you? An engineer and architect.
23. Have you been employed by the Bulli Coal Mining Company? I have.
24. Do you produce plans showing the position of the mine, and of the lands through which the Company desire to pass, in order to reach the harbour of Bellambi? This is the plan, showing the course of the line from the mine to the port of Bellambi, with the various proprietors' names. (*The witness produced the plan and working sections.*)
25. *By the Chairman*: There is no Crown land? Not till you get to high water mark.
26. *By Mr. Allen*: Where are the mines situated? In the County of Camden, on land originally belonging to George Somerville, very near the north boundary of the County of Camden, where it joins the County of Cumberland, immediately to the west of the point known as Bulli Point.
27. How far is the mouth of the mine from the harbour of Bellambi? The length of the locomotive railway will be three miles and thirty-five chains, then beyond that is an incline a distance of about thirty chains I think, nearly half a mile, to the mouth of the mine, which is worked by a self-acting incline, and by horse power. The only road crossed is a parish road, known as Bulli Road, which is crossed by a bridge.
28. Can you say that the line, a plan of which you produce, is the readiest mode of conveying coals from this mine to Bellambi? Yes.
29. Will the construction of that line facilitate the communication of the mines with Bellambi;—what is the course of the proposed railway from the mine to Bellambi? Commencing at a point on the eastern boundary of the Company's property, and proceeding thence in an easterly direction through lands believed to belong to George and John Somerville, a distance of nineteen chains eighty-five links, or thereabouts, to the eastern boundary of the said lands; thence, in a south-easterly direction through open swampy land, believed to belong to John Somerville, a distance of thirty chains seventy-five links, or thereabouts, where it crosses the parish road from Bulli to Wollongong; thence, in the same direction, a further distance of six chains forty-five links, or thereabouts, to the southern boundary of the said John Somerville's property; thence, in the same direction, through lands believed to belong to James Holden, a distance of nineteen chains ninety links, or thereabouts, to the southern boundary of the said lands; thence, in the same direction, through land believed to belong to James Somerville, a distance of twenty-nine chains twenty-five links, or thereabouts, to the southern boundary of the said lands; thence, in the same direction, through land believed to belong to George Organ, a distance of thirteen chains seventy-five links, or thereabouts, to the southern boundary of the said lands; thence, in a southerly direction, through land believed to belong to Robert Campbell and William Campbell, a distance of twenty-one chains sixty-five links, or thereabouts, to the southern boundary of the said land; thence, in the same direction, through land believed to belong to Patrick Collins, a distance of twenty-five chains eighty-five links, or thereabouts, to the southern boundary of the said lands; thence, in the same direction, through lands believed to belong to Sarah Salter, a distance of twenty-six chains, or thereabouts, to the southern boundary of said land; thence, in the same direction, through land believed to belong to John Cawley, a distance of fifteen chains forty links, or thereabouts, to the southern boundary of said land; thence, in the same direction, crossing Hale's tramway, through land believed to belong to Elizabeth Colleary, to the southern boundary of said lands; thence, in a similar direction, through lands believed to belong to John Cawley, to Bellambi Creek, the southern boundary of said lands; thence, in an easterly direction, twice crossing Hale's tramway, a distance of forty-four chains fifty links, or thereabouts, through lands believed to belong to Thomas Hale, to the waters of Bellambi Harbour; thence, in a northerly direction, a distance of nine chains fifty links, or thereabouts, into Bellambi Harbour.
30. All these lands you speak of are in the County of Camden? Yes.
31. Can you state whether the proposed line is likely to be a benefit to the Colony? Yes.
32. Do you believe it will promote facilities for the supply of coal for local consumption, steam navigation, and export? Yes.
33. Do the plans you now produce show clearly the properties through which the line passes? Yes, and the sections.
34. They show the entire works? Yes, with the exception of the bridge drawings.
35. *By the Chairman*: Mr. Hale has no objection to your crossing his line? Mr. Hale told me himself yesterday that the promoters of this Bill had satisfied him as to the mode in which they proposed to cross his property.
36. There will be a bridge over the parish road? Yes, a timber bridge, giving a greater amount of headway than is generally required by such Acts. There is the usual clause for that purpose.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CO-OPERATIVE COAL MINING COMPANY'S
RAILWAY BILL.

(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 3 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Michael Metcalfe, of Sydney, Merchant,—

SHREWETH :—

That your Petitioner is one of the Directors and Chairman of the Newcastle Wallsend Coal Company.

That such Company is an incorporated Company, and was incorporated by an Act of the Legislature of this Colony, passed in the twenty-third year of the reign of Her present Majesty.

That under the provisions of the Act so incorporating the said Company, the said Company constructed a Railway from their pits, situate at Wallsend, near Newcastle, to the Government Great Northern line of Railway.

That from the time of its construction up to the present time, the said Company have used the said line for the purpose of taking their coal on to the said Government line, for conveyance on such last mentioned line to Newcastle.

That a Bill has lately been brought into your Honorable House, intituled "A Bill to incorporate the New South Wales Co-operative Coal Mining Company and to enable the said Company to connect a Railway proposed to be constructed over land belonging to them with a certain Railway belonging to the Newcastle Wallsend Coal Company."

That in and by the twentieth section of the said Bill it is proposed to repeal a portion of the said Act, incorporating the said Newcastle Wallsend Coal Company, and to compel the said last-mentioned Company to make such openings and additional lines of Railway upon the Railway of the said Company, at a place to be pointed out by the Promoters of the said Bill, notwithstanding at such place the Railway of the said Newcastle Wallsend Coal Company is upon an inclined plane.

That if the said clause is passed into law, the interests of the said Newcastle Wallsend Coal Company will be greatly damnified and injured thereby.

That great additional wear and tear will be thereby occasioned to the said Company's Railway, and such communication cannot be made with the said Company's line, where it is upon an inclined plane, without injury to the said Railway, and inconvenience to the traffic thereupon.

That your Petitioner respectfully submits to your Honorable House, that in passing the said Company's Act the question of allowing other parties to join their line, in places where it is upon an inclined plane, was duly considered by Parliament, and it was then decided that the said Company should not be compelled to allow other parties to join their line at such places; and your Petitioner respectfully contends, that inasmuch as the said Company completed their said Railway and commenced their business upon the faith of the said clause protecting them from being interfered with by parties joining their line at places where it is upon an inclined plane, that it would be unjust to the said Company to repeal that portion of the said Act in the manner proposed by the twentieth section of the said Bill.

That your Petitioner is informed, and believes, that in the event of the said Bill being passed into law in its present shape, it is the intention of the Promoters thereof to join their Railway on to the said Company's Railway at a spot where there is an incline in the Company's said Railway. The joining of the said Railway at the said spot would be most inconvenient and injurious, and detrimental to the interests of the said Company.

2 CO-OPERATIVE COAL MINING COMPANY'S RAILWAY BILL.—PETITION.

That no notice whatever was given by the Promoters of the said Bill to the said Company, of the alteration proposed by the twentieth clause of the said Bill, and the said Company were not aware of the said proposed alteration until after the said Bill had been reported upon by the Committee of your Honorable House, to whom the said Bill was referred, and consequently the said Company were unable to have their interests represented before the said Committee.

Your Petitioner, therefore, humbly prays that your Honorable House will not consent to repeal the said portion of the said Company's said Act in the manner proposed in and by the twentieth section of the said Bill, and that in considering the said Bill, your Honorable House will be pleased to preserve to the said Company all the rights, privileges, and advantages conferred upon and granted to the said Company in and by the said Act, and that in passing the said Bill into law, due provision may be made to compel the said Promoters to give due notice to the said Company of the spot at which they may desire to enter upon the said Company's Railway, and for the reference to competent parties of any dispute or difference which may arise between the said Company and the said Promoters as to the spot at which the said Promoters ought to be allowed to enter upon the said Company's said Railway.

And your Petitioner will ever pray, &c.

M. METCALFE,
Chairman of the Newcastle Wallsend Coal Company.

Sydney, 3rd October, 1862.

CO-OPERATIVE COAL MINING COMPANY'S BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 16th September, the "Co-operative Coal Mining Company's Bill," beg leave to report to your Honorable House,—

That they have examined the Solicitor for the Bill,* and the Engineer† and Secretary‡ to the Company (whose respective evidence will be found appended hereto); and the Preamble having been satisfactorily proved by the evidence of those gentlemen, and verbally amended,|| they proceeded to consider the several clauses of the Bill, in which it was not deemed expedient to make any amendment.

*Mr. T. Iceton.
†Mr. R. Whytte.
‡Mr. R. Busfield.

(Vide Schedule.)

And your Committee now beg to lay before your Honorable House the Bill, as verbally amended by them.

J. BOWIE WILSON,
Chairman.

Legislative Assembly Chamber,
Sydney, 24 September, 1862.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 23 SEPTEMBER, 1862.

MEMBERS PRESENT :—

Mr. Wilson, | Mr. Garrett,
Mr. Driver.

Mr. Wilson called to the Chair.

Present for the Promoters :—

Mr. T. Iceton, *Solicitor for Bill.*

Mr. Robert Busfield, *Secretary to the Company.*

Mr. Robert Whytte, *Engineer to the Company.*

Petition for leave to introduce the Bill, by direction of the Chairman, read by the Clerk.

Mr. Thomas Iceton, *Solicitor*, examined.

Original Deed of Settlement referred to in the Preamble *produced* by witness, and a printed copy of the same *handed in*.

Mr. Robert Whytte, *Engineer to the Company*, examined.

Mr. Robert Busfield, *Secretary to the Company*, examined.

Plan of proposed Railway *produced*.

Room cleared.

Preamble read, and *verbally* amended. (*Vide Schedule of Amendment.*)

Motion made (*Chairman*) and *Question*,—That the Preamble, as amended, stand part of the Bill,—*agreed to*.

Clauses 1 to 23 severally read and agreed to without amendment.

The Chairman submitted Draft Report.

The same read and agreed to.

Chairman requested to report the Bill, as verbally amended, to the House.

SCHEDULE OF AMENDMENT.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CO-OPERATIVE COAL MINING COMPANY'S BILL.

TUESDAY, 23 SEPTEMBER, 1862.

Present:—

MR. DRIVER, | MR. GARRETT,
MR. WILSON.

JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

Thomas Iceton, Esq., called in and examined:—

1. *By the Chairman*: You are solicitor for the promoters of the Bill? I am.
2. That Company desires in the first place to obtain an Act of Incorporation, and in the next an authority to make a junction of a line of railway they propose to make, with the line of the Newcastle Wallsend Coal Company which intersects their land? Yes, the line of the Newcastle Wallsend Company passes through land of which they have the lease; it may be said to go through their land.
3. Will you be good enough to state the object the promoters have in view in being incorporated? Their object in being incorporated is to enable them to sue and be sued in a more convenient way than they could be if they were not incorporated.
4. But they could exist and carry on business as a Company without this Act? Certainly; they can carry on all their operations without the assistance of the Legislature, but they would be subject to some considerable inconvenience, because the Company consists of a very large number of persons, and it will be necessary to use the names of every one of them in every contract or procedure of the Company.
5. Then the Act of Incorporation does not affect any other parties but the individual shareholders? No, this part relating to the incorporation of the Company does not affect any one except the shareholders, with the exception of the 18th clause, which proposes to limit the liability of the shareholders in the Company—that is a matter affecting the community and can only be done by the Legislature.
6. Have you the deed of settlement? Yes, I now produce it. (*Deed of settlement produced.*)
7. Have many of the shareholders signed it? Yes, it bears the signatures of between 200 and 300 shareholders.
8. Do you know the precise number of shares in this Company that have been taken up? The Secretary of the Company will be examined, and he will give you more precise information on this point than I can do.
9. Will you state whether any correspondence has taken place between the Secretary of the Co-operative Coal Mining Company, or yourself on their behalf, and the Newcastle Wallsend Company, relative to this proposed junction? Yes, some letters have passed between Mr. Mellon and myself on the part of this Company, and the Secretary of the Newcastle Wallsend Company. A copy of that correspondence is now before the Committee, and I can produce the original letters

Thomas
Iceton, Esq.

23 Sept., 1862.

Thomas
Iceton, Esq.
23 Sept., 1862.

- letters if the Committee desire it. I may state briefly that the substance of the correspondence is that the Newcastle Wallsend Company have refused to lay down a point at the place indicated by our engineer as the most eligible spot for effecting a junction, because their line is at that point on an incline; and the Wallsend Company insist that their Act excludes them from being obliged to allow a junction at any place where the line is on an incline.
10. Have you seen that clause in the Newcastle Wallsend Company's Act? Yes; it is recited fully in the 19th clause of the Bill now before the Committee.
11. It is there stated that the reason for this prohibition is that every such communication with their line shall be made with safety to the public and without injury to their railway? Yes.
12. The reason why a junction is not allowed to be made on an incline is that in the first place public safety shall be insured, and next that the line of railway shall not be injured? Their Act goes farther than that, for it prohibits a junction on an inclined plane, whether such junction can there be made with safety or not; and that is going, as I conceive, much farther than the Legislature intended.
13. Do you not think that the previous part of the clause to a certain extent interprets the other part of it? Yes, it shows what the Legislature had in view when they passed the clause; but the subsequent part goes farther than the object the Legislature intended to attain.
14. You are not in a position to give evidence as to what would be an incline within the meaning of this clause of the Wallsend Company's Act? I do not consider myself competent to do that, but I shall call professional evidence for the purpose.
15. You have read the preamble of this Bill? I have.
16. Can you say that the facts there stated are correct? It recites the deed of settlement correctly, so far as it does recite it; and the other part of the preamble is to the effect that the Company desires to be incorporated, and of that I have already given evidence, having been employed by the promoters for the purpose of procuring the passing of this Bill.
17. *By Mr. Driver:* I see by the deed of settlement that the capital of the Company is to consist of 6,000 shares of £5 each;—how many of these have been allotted? I must refer you to the Secretary for an answer. I have the information only on hearsay, and I would prefer that he should give evidence on this point.
18. By the deed of settlement has due provision been made for the management of the affairs of the Company by a director to be from time to time appointed for that purpose? There has.

Mr. Robert Busfield called in and examined:—

Mr. Robert
Busfield.
23 Sept., 1862.

19. *By Mr. Iceton (Solicitor for the promoters):* You are Secretary to the New South Wales Co-operative Coal Mining Company? I am.
20. Will you look at the deed of settlement now before you? Yes.
21. Is that the deed of settlement of the New South Wales Co-operative Coal Mining Company? It is.
22. Can you say how many of the shareholders have executed this deed? Yes, 267.
23. I believe that it is one of the objects of this Company that the shareholders should work the property as well as have an interest in the capital of the Company? It is.
24. How many shares have been taken up? 2,500.
25. The total number of shares being 6,000? Yes.
26. How much has been paid up on each share? Thirty shillings.
27. Is there any reason to suppose that, from want of funds, or from any other cause, the Company will not be able to carry on their operations;—do you anticipate any failure of means to carry on the Company? No, I do not.
28. No public mischief would be entailed if the corporation were broken up, but you do not anticipate any failure to render the breaking up of the Company necessary? No.
29. The Co-operative Coal Mining Company are in possession, under a legal instrument, of land upon which the proposed railway is intended to be made? They are.
30. And this land immediately adjoins the land occupied by the Newcastle Wallsend Coal Company? It does.
31. Will there be any difficulty in effecting a junction with the Wallsend Company's line, provided you are allowed to make one? None whatever.
32. You are well acquainted with the locality? I am.
33. At the place where it is proposed to make the junction, is the Wallsend Company's line used, or any part of it, for a station, a bridge, or a tunnel? No, it is not.
34. It is not used for any other purpose than the ordinary and direct traffic? For no other purpose than I know of.
35. Do you know what the incline is at that point? No, but our Engineer will inform you precisely what it is.
36. Will there be any danger or inconvenience to the public, or any injury to the property of the Newcastle Wallsend Company, in having the junction of your line at that particular spot? No, I think not.

Mr. Robert Whytte called in and examined:—

Mr. Robert
Whytte.
23 Sept., 1862.

37. *By Mr. Iceton:* What are you by profession? An engineer.
38. Are you acquainted with the land in the occupation of the promoters? I am.
39. And you know the Newcastle Wallsend Coal Company's land pretty well? I do.
40. Are you engaged in making a survey of a line of railway to connect the pits of the promoters with the line of the Newcastle Wallsend Coal Company? I am.

41. With respect to the proposed point of junction of the two lines, is the line of the Newcastle Wallsend Coal Company on an incline at that place? Yes, it is.
42. What is the incline at that point? 1 in 124, just about the point of junction.
43. Is there any point on the Wallsend Company's line within the land of the promoters at which the incline is less than this? No, the incline is less there than on any other point on their line.
44. Do you know the rest of the Wallsend Company's line? I do.
45. Is the whole of that line on some incline or other? I should say that there is not a level piece of ground along the whole line—not a piece that is not either on an incline or a curve.
46. Is there any curve at this point? Not at the point of junction, but just before we join there is.
47. Is that so sudden or so sharp as to interfere with the proper working of this junction? Not at all. They branch in on the Great Northern with a curve precisely similar to the one we now ask for.
48. Is it so great that any danger whatever need be apprehended from this proposed junction? Not in my opinion.
49. Is there any engineering difficulty that would render a junction at this spot inconvenient to the Wallsend Company to a greater extent than it would be at any other point? None at all.
50. Is there any engineering difficulty whatever in the way of the construction of the promoters' line? No. There will be a good deal of money wanted to make a viaduct, but there will be no difficulty about it.
51. *By the Chairman:* You state that the gradient at the point of junction is 1 in 124? Yes.
52. Can the junction be made at this point with safety to the public? Yes, with perfect safety.
53. And without injury to the railway of the Newcastle Wallsend Company? Yes.
54. And without inconveniencing their traffic? Yes.
55. Have the Newcastle Wallsend Company, to your knowledge, set this particular point apart for any specific purpose? No.

Mr. Robert
Whyte.

Page 15, clause 36. *After "said clause" insert the following new clause:—*

" 37. And be it enacted that it shall be lawful for the owners or occupiers of ^{Branch railway.}
 " the lands traversed by the said railway to lay down upon their own lands any
 " collateral branches of railway to communicate with the said railway for the
 " purpose of bringing carriages to or from or upon the said railway and the
 " promoters shall if required at the expense of such owners or occupiers make
 " openings in the rails and such additional lines of railway as may be necessary
 " for effecting such communication in places where the communication can be
 " made with safety to the public and without injury to the said railway and without
 " inconvenience to the traffic thereupon and the promoters shall not take any rate
 " or toll or other moneys for the passing of any passengers goods or other things
 " along any branch so to be made by any such owner or occupier or other person
 " but this enactment shall be subject to the following restrictions and conditions
 " (that is to say)

" No such railway shall run parallel to the said railway the promoters shall
 " not be bound to make any such openings in any place which they shall
 " have set apart for any specific purpose with which such communication
 " would interfere nor upon any inclined plane or bridge nor in any tunnel.

" The persons making or using such branch railways shall be subject to all
 " by-laws and regulations of the promoters from time to time made with
 " respect to passing upon or crossing the railway and otherwise and the
 " persons making or using such branch railways shall be bound to construct
 " and from time to time as need may require to renew the off-set plates and
 " switches according to the most approved plan adopted by the promoters
 " under the direction of their engineer."

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

BOTANY RAILWAY COMPANY'S BILL.

WEDNESDAY, 24 SEPTEMBER, 1862.

Present:—

Mr. GARRETT,
Mr. HARPUR,
Mr. HOSKINS,CAPT. MORIARTY,
Mr. MORRIS,
Mr. SHEPHERD,

Mr. SUTHERLAND.

THOMAS GARRETT, Esq., IN THE CHAIR.

Mr. John Robert Radford called in and examined:—

1. *By the Chairman*: You are Secretary of the Botany Railway Company? Yes.
2. And the person who petitioned for leave to introduce the Bill? Yes.
3. Has the Company been regularly formed? Yes.
4. What is the number of shareholders? Thirty-eight.
5. What is the total amount of capital subscribed? £8,250.
6. How much has been paid up? 7s. 6d. per share.
7. What is the amount of the shares? £5 shares.
8. What is the total amount paid? £548 5s.
9. Have the directors been chosen? Yes.
10. By the body of the shareholders? Yes, at a public meeting.
11. What is the object of this Company? To form a Railway from Mudbank, near the City Water Works, to effect a junction with the Great Southern Railway, near the Erskineville Bridge.

Mr. J. R.
Radford.

24 Sept., 1862.

Thomas Holt, Esq., M.P., examined:—

12. *By the Chairman*: Are you one of the proprietors and directors of the Botany Railway Company? Yes.
13. For what purpose has the Company been formed? To connect Sydney with Botany Bay, by means of a Railway joining the Great Southern Railway at or near Newtown at the Erskineville Bridge. A very careful survey has been made of the line.
14. How far is the junction from the Erskineville Bridge? Speaking from memory, I should think about 100 feet.
15. The Great Southern Railway does not curve at this junction? No, it is straight and nearly level; this is the best place for joining the Great Southern Railway.
16. Does the proposed line pass through private property? It does.
17. Have you secured the assent of the owners? There will be no difficulty about that.
18. I suppose the Bill contains the usual compensation clauses? Yes, of course.
19. Does the line cross any parish roads? No parish roads that are used, merely some that exist on paper.
20. You purpose constructing this railway in order to promote the more expeditious and economical conveyance of passengers and goods? Yes, of which there will be a considerable traffic.

Thomas Holt,
Esq., M.P.

24 Sept., 1862.

MINUTES OF EVIDENCE TAKEN BEFORE THE SELECT COMMITTEE

- Thomas Holt, Esq., M.P.
24 Sept., 1862.
21. And you believe that the carrying out of this railway will develop the natural resources of the neighbouring localities? To an immense extent; there is no doubt about it.
22. Do you anticipate that it will have the effect of drawing any trade into Botany? Yes, very considerable.
23. Do you think it will draw any of the Illawarra trade that way? We have spoken of it certainly; but independently of the Illawarra trade, there will be very considerable traffic. I feel quite sure that all the Illawarra steamers will land their passengers there as well as goods.
24. *By Mr. Shepherd:* In lieu of coming up Sydney Harbour? Yes; I am told the very worst part of the trip between Wollongong and Sydney is from Botany Heads to Sydney; the rest of it is merely a pleasure trip; the passengers do not become sea-sick until they have passed the Botany Heads.
25. *By the Chairman:* You believe that the formation of this line will be a great public advantage? An immense public advantage.
26. With regard to the Company, do you believe they would be in a position to carry out the undertaking if the Bill were passed? I am quite sure they would. In fact, were it not that it might cause a good deal of envy and jealousy to see such a line in the hands of a private individual, I would make it at my own expense rather than not have it done at all, so satisfied am I that it will be a very lucrative undertaking.
27. Is it proposed to form this Company under a limited liability to the extent of the shares? Yes, that has always been the case in this Colony.
28. Is there any deed of settlement? No, we have not considered any deed of settlement necessary, inasmuch as we do not intend to commence the works until we get the Bill.
29. Do you propose to work the Company under this Act alone? Under the Act alone, in the very same way that the Sydney Railway Company was formed originally.
30. What is the proposed capital of the Company? The proposed capital is considerably more than will be required. We seek powers to create 2,500 shares of £5 each, or a capital of £12,500; but we do not expect to require more than £7,000 or £8,000. We shall not issue more shares than are necessary.
31. The Company are desirous of being incorporated? Yes.
32. *By Captain Moriarty:* I presume that you anticipate that all the land to the southward of Botany, and all the inhabitants of that district, will derive some benefit from this railway? No doubt of it.
33. Is it your opinion that property in that neighbourhood will increase in value in consequence? Yes, both public and private property, to an immense extent.
34. Not only the land between that and Cook's River, but also the land on the other side? I do not think it will affect the land on Cook's River much; it is rather out of the way of the line; it will improve the property at the mouth of Cook's River, but it does not go near Cook's River above the Dam.
35. Then the land from that to George's River will be benefited thereby, in your opinion? You mean between the Dam and George's River; I do not think that will be much benefited. If you have a map of that portion of the country you will find it avoids that part; the proposed railway goes in a straight line from the Erskineville Bridge on the Great Southern Railway to near the Water Works at Botany, and therefore it avoids all that land now traversed by the road from the Dam to Rocky Point on George's River. No doubt land even at a distance will be greatly benefited by this railway. All the land on George's River will be very much benefited. The Government have a great deal of land there. There is no doubt this railway to Botany will be a great public good. It will be the means of enabling tens of thousands of persons on holidays to go and enjoy themselves on the beautiful bay of Botany.
36. *By Mr. Hoskins:* Do you know whether the owners of the land which this railway is intended to traverse have been served with notices of your intention to apply for an Act of Parliament to construct this railway? I presume they have, but from my own personal knowledge I cannot say.
37. This proposed railway of yours will cross several turnpike roads, will it not? Not one.
38. *By the Chairman:* Is there any power given in this Bill for the Government to purchase this railway? I believe there is.

John Lucas, Esq., M.P., examined:—

- John Lucas, Esq., M.P.
24 Sept., 1862.
39. *By the Chairman:* Are you one of the Directors of the proposed Botany Railway Company? Yes, I am a Director and Chairman.
40. Do you produce plans of the proposed railway? I do. (*Plans produced.*)
41. Will you be so good as to describe the intended course of the line? It connects with the Great Southern Railway about 100 feet from the Erskineville Bridge—I have a book of reference here showing the different persons' property that it goes through, and the whole of them are aware that the railway line was being surveyed, and would be proceeded with as soon as this Bill is passed. This book of reference has been lying three or four months at the Company's Office. It gives the names of the owners of the land, the present occupiers, and the quantity we propose to take from each.
42. Do you know, of your own knowledge, that the required legal notices were given in the *Gazette* and other papers? Yes, I had to introduce the Bill, and I handed over to the Clerk of the Assembly copies of the *Gazette*, *Herald*, and *Empire*, in which the notices required appeared.

43. Do you know what is the gradient on the Great Southern Line where the proposed line joins it? It is as nearly level as possible. Our gradients are these:—The first gradient from the bridge for 229 feet falls 1 in 50; then comes a fall of 1 in 48 for 720 feet; for 833 feet a rise of 1 in 62; 36 feet level; 982 feet a fall of 1 in 45—which I may say is the stiffest gradient on the line; 860 feet a rise of 1 in 75 feet; 732 feet a fall of 1 in 150; 2,075 feet a fall of 1 in 54; 842 feet a fall of 1 in 57; 1,060 feet level; 1,938 feet a rise of 1 in 352; 1,300 a rise of 1 in 928 feet; 1,087 feet a rise of 1 in 1,087 feet; 2,770 feet a fall of 1 in 1,833; 441 feet a fall of 1 in 90 feet. You will perceive on the plan a track marked "Anceel-street," which I may say is very little used indeed, it merely goes down to a brick yard; we cross that nearly on a level—if I remember right, we have to take off about a foot and a half of the street.
44. In whom is that road vested? I think it is a public road. In some subdivision of some small property this was a road marked out. This, marked "Rochford-street," we also go over very nearly on a level. In crossing this "cart track," we go down about eighteen inches; of course it will be made a level crossing. This (pointing to a road shown on the plan) was the original road to Cook's River, called many years ago the ——— road, but it is not now used.
45. It is not closed up, is it? No, but it is not used at all; it was abandoned after the new road was made, just as the old piece of the Parramatta Road was after the new cut near the University was made.
46. Is this road vested in any trustees? No, it merely appears on the map as an old road. I believe the proprietor of the Waterloo Estate intends to apply to the Government to allow him to purchase it. On plan No. 2 we commence with swamp land; this marked "reserved road" is a road reserved for some allotments that were purchased from the Government by Mr. Holt and two or three other gentlemen, and we cross it on a level; it is all a swamp. Then we cross "Ricketty-street," which is a mere cart track from the Newtown Road across to the Botany Road; it is very little used indeed. This (pointing to a road marked on the plan) is a road used by the market gardeners who carry on their business here; it is merely for their convenience to come across.
47. At what level do you cross these? All these will be crossed at a level, and we shall have to provide sufficient gates and so forth.
48. Is this (referring to what appeared on the plan to be waste land) Crown land? No; we do not go through any Crown land. There is another reserved road that we skirt, but it is not used, and I think the neighbouring proprietors have agreed each to take in half of it; it does not appear there at all now. Here we come down to the terminus through land belonging to Mr. Lord.
49. This reserved road, just before you come to the terminus, is that used? No.
50. At what level do you cross it? About one foot below the present level.
51. *By Mr. Shepherd:* Whose land is this abutting on the terminus? All this is Mrs. Lord's.
52. *By the Chairman:* Have you asked for powers to make a jetty, in this Bill? We have asked for powers to make the necessary works, which will include a jetty. We expect, and I am confident, that the whole of the passenger traffic between Wollongong and Sydney will go along this railway, as well as dairy produce; for the steamer can run from the pier at Wollongong to our pier at Botany in three hours; so that a person leaving Wollongong at six o'clock could be in Sydney by taking our railway at half-past nine, and having done his business, go back again the same evening. In the same way butter could be brought to Sydney without being exposed to the heat of the sun, whereas by the present mode of conveyance it is often reduced almost to oil in warm weather.
53. *By Mr. Shepherd:* What is the distance from the mouth of the Bay to your intended pier? About six miles.
54. And how far is it to Sydney? Twenty miles—ten miles from Heads to Heads, and ten more to the wharf. It will save fourteen miles to the steamers to come this route.
55. How long would it take to come from Botany to Sydney by rail? Twenty minutes.
56. *By the Chairman:* What is the length of your line? Three miles within 100 yards more or less.
57. You believe it a great public advantage that this line should be carried out? I do. I believe it will increase the value of Government land very considerably; and I know it will be an immense private benefit.
58. Where is this Government land situated? Between Botany, Mr. Beaumont's house, and Randwick, and out to the ocean; and there is also an immense extent of public land on the opposite side of the Bay, the south side of Botany. I may mention that the Messieurs Lord have offered to give the Company two acres of land for a terminus.
59. You believe that this railway will conduce to the more regular, expeditious, and economical conveyance of passengers and goods between the various localities indicated and Sydney? I do. I may also say that I have spoken to several persons through whose land this line goes, and they seem very willing to give the Company the land required, as they think it will be so beneficial to themselves and the public generally.
60. The Company has been duly constituted? It has. In the first instance a public meeting was called and a Committee formed to collect evidence and report to a public meeting, and after that surveys were made. I may say that four or five different lines were surveyed, until they had got the one they thought most advantageous to the public and the Company. The Committee then called a public meeting, and at that meeting directors were appointed to manage the affairs of the Company.
61. In this Bill is there any power given for the public to use the line—for other lines to join on? I think not.

John Lucas,
Esq., M.P.
24 Sept., 1862.

- John Lucas, Esq., M.P.
24 Sept., 1862.
62. Have you any objection to introduce a provision of that sort? No, certainly not. On the contrary, I believe the Company will be very willing to have a clause similar to that which we intend to take advantage of in the Government Railway Bill.
63. Is there any provision in this Bill for limiting the time within which to exercise the powers given under the Act? I think it is two years, but I am in hopes the line will be laid and ready for a locomotive in less than five months after the Act is passed. We have the necessary shares taken up, the original deposits and the first call paid.
64. What was the amount of the first call? The first deposit was 2s. 6d. a share, and the first call 5s., making together 7s. 6d. per share. As Mr. Holt has said, we originally intended to have a capital of £12,500, but we anticipate that the whole of the works will be constructed for between £8,000 and £9,000. We have subscribed capital already to the amount of £8,250.
65. *By Captain Moriarty*: I think I understood you to say that you consider it will be attended with public benefit? I do.
66. And also with benefit to the proprietors of land in the neighbourhood? I do.
67. And it cannot be attended with any private disadvantage sufficient to do away with the public advantage? Not the slightest. I have not heard one single individual say a word against the proposed line, but on the contrary they are all very anxious to have it made.
68. *By Mr. Morris*: On what do you base your calculations when you say the cost including permanent way will be only £3,000 a mile? The Company intend to try an experiment in the permanent way. We believe we will lay our permanent way for £350 a mile, equal to what now costs the Government £2,000.
69. Have you any objection to state to the Committee what plan you propose to adopt? We propose to form a platform of timber. The Government railway at present merely has a sleeper every three feet, and that sleeper is about ten inches wide by six feet long, so that there is only a bearing of five superficial feet in the lineal yard; but the railway we propose to construct will have a bearing of eighteen superficial feet to the lineal yard, instead of five feet.
70. *By Captain Moriarty*: Do you think that will diminish the expense? I do.
71. *By Mr. Morris*: Your permanent way will be made of timber altogether? Of timber altogether, a continuous platform, instead of broken stone or other material.
72. What timber do you propose to use? Ironbark. In fact, this is a plan I proposed in the House some time ago, and I estimated the cost of such sleepers as we propose to lay, eight inches through, at 8d. each, but it was laughed at, and said to be ridiculous. One honorable member said it would be "cheap and nasty;" but the fact is now, that we have an offer to supply them for 5d. each. Our timber platform will be something on the principle of the corduroy roads, only flat at top and bottom, to give a good bearing surface.
73. *By Mr. Shepherd*: Would these sleepers that you can get at 5d. each be similar to those used on the railway? Exactly.
74. *By the Chairman*: Do you know whether the Government Engineer-in-Chief for Railways has been consulted with regard to this proposed undertaking? A deputation from the directors waited on the Minister for Works, and of course the Engineer-in-Chief was called in in consultation; the plans were shown to that gentleman, and he said he could not see the slightest objection; and further than that, the Government promised to give us every assistance in their power to carry the line out. I believe, instead of its being necessary for the Government to take any objections, that the line will add considerably to the profits of the Government railway, because we will have to work on a mile and three-quarters of their line, and it will be much better on the southern line than on the northern, because the southern line is a double line, whereas the northern is a single line; and possibly other lines coming into it may be some impediment to the general traffic.
75. *By Captain Moriarty*: In your opinion this proposed line will test a fact in engineering, with reference to the permanent way, independently of any other public benefit? Yes.
76. *By Mr. Morris*: I suppose you will use a different kind of rails to those in common use? Certainly not, just the same; any rails would do for this sort of permanent way.
77. *By Mr. Shepherd*: Do you not imagine that by making a continuous platform, you will add considerably to the expense? No, quite the contrary; we do away with the present expensive mode of ballasting.
78. And you believe the expense of ballasting would be far greater than that of planking? Yes, and far inferior. We will lay our sleepers similar to the corduroy roads, only that our sleepers will be larger than those usually used for corduroy roads; they will be eight inches through and flat at top and bottom, to give a bearing. We insist they shall be at least six inches from flat to flat, which would make them eight inches at the smallest end when round.
79. *By Mr. Moriarty*: Have you taken the opinion of more than one civil engineer? Yes, several have been spoken to and they quite agree with the principle. I may say that I spoke to Mr. Weaver about this system of roads to Bathurst and those places, and he says he is sure it will answer better than any other.
80. *By the Chairman*: The way in which you propose to construct this line will not, I suppose, make it dangerous at the junction with the Government line? Not in the slightest.
81. Will the gauge be the same? Yes, it must be. We intend to take advantage of the Government rolling stock, and the Engineer-in-Chief no doubt will see that the line is safe before he entrusts his engines upon it.
82. *By Mr. Harpur*: It is owing to the abundance and inexpensiveness of timber that your method would answer here? Yes; it would not do in England, or any country where timber is not plentiful.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PITT-STREET TRAMWAY.

(PETITION.)

Received by the Legislative Assembly 10 June, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned Residents and Proprietors of Property in Pitt-street, in the City of Sydney, and others,—

SHEWETH :—

That your Petitioners have suffered and are still suffering serious injury by reason of the ill-designed and ill-constructed piece of machinery known as "The Pitt-street Tramway," and humbly pray that your Honorable House will direct that such Tramroad be immediately taken up and removed, for the following, amongst other, reasons:—

Firstly.—That the said Tramroad does not answer the purpose for which it was originally intended, namely, for the conveyance of Goods.

Secondly.—That the vested interests which your Petitioners have acquired in a street so long established, and so long dedicated to the public, as Pitt-street, have been sacrificed for the sake of a few Travellers to and from the Railway Terminus at Redfern, who can, at the same expense, and with equal facility, avail themselves of the ordinary omnibuses.

Thirdly.—That numerous serious accidents have occurred, and are likely to occur, as well from the defective construction of the said Tramroad as from the narrowness of the roadway on each side thereof.

Fourthly.—That the trade formerly carried on in the said street has considerably decreased since the formation of the said Tramway, and is still decreasing.

Fifthly.—That your Petitioners fear that unless immediate steps are taken for the abolition of the said Tramroad, and the restoration of the street to its former condition, the chief part of the trade now carried on there will be permanently diverted into other channels.

Sixthly.—That your Petitioners anticipate that in wet weather the roadway on either side of the Tramroad will be almost impassable, in consequence of the practical impossibility of draining the centre of the road.

And your Petitioners humbly pray that your Honorable House will take the premises into your serious consideration, and grant your Petitioners the relief sought for.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 646 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WILLIAM ANDERSON.

(PETITION OF.)

Received by the Legislative Assembly, 17 June, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of William Anderson,—

HUMBLY SHEWETH :—

That on the afternoon of the 24th of February, 1862, your Petitioner was a passenger in the tramway car, "Young Australia," from the Circular Quay, along Pitt-street to Liverpool-street, where your Petitioner, with his wife and family, intended to stop. On nearing that street the bell was rung, the carriage almost stopped, and your Petitioner had proceeded to the platform, in readiness to step out, when the whistle sounded; the horses starting at full speed precipitated your Petitioner from the carriage on the street, and thereby caused him severe bodily injury, in consequence of which he was a month under medical treatment, and thereby subjected to heavy pecuniary loss. Your Petitioner being entirely dependent on his labour, has received a permanent injury which seriously affects his health and consequent means of obtaining a living, and having a wife and five children dependent on him for support, humbly prays your Honorable House to take his humble Petition into your favourable consideration, and grant such relief as your Honorable House may deem meet; and your Petitioner, as in duty bound, will ever pray, &c.

WILLIAM ANDERSON.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PITT-STREET TRAMWAY.

(RETURN IN REFERENCE TO.)

Ordered by the Legislative Assembly to be Printed, 10 June, 1862.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 30 May, 1862, That there be laid upon the Table of this House,—

“ A Return shewing the first cost of the Construction,
“ including Material, together with the Expenditure on, and
“ the Receipts from, the Pitt-street Tramway, from the date
“ of its opening to the 1st of May, 1862.”

(Mr. Dalgleish.)

PROGRESS REPORT FROM THE SELECT COMMITTEE

ON THE

PITT-STREET TRAMWAY;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

AND

MINUTES OF EVIDENCE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
12 *December*, 1862.

SYDNEY:

THOMAS RICHARDS, GOVERNMENT PRINTER, PHILLIP-STREET.

1862.

1862.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 36. FRIDAY, 25 JULY, 1862.

25. Pitt-street Tramway:—Mr. Lucas moved, pursuant to notice,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report as to the desirability of taking up the Pitt-street Tramway.
- (2.) That such Committee consist of the following Members:—Mr. Arnold, Mr. Dickson, Mr. Caldwell, Mr. Sutherland, Mr. Dalglish, Mr. Garrett, Mr. Piddington, Mr. Hoskins, Mr. Driver, and the Mover.
- And Mr. Robertson requiring that the said Committee be appointed by Ballot,—
- Question,—(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report as to the desirability of taking up the Pitt-street Tramway,—put and passed.
- The House then proceeded to the Ballot, during which process notice was taken that there was not a Quorum of Members present, and the Speaker declared the following Members to be the Committee duly appointed:—Mr. Lucas, Mr. Arnold, Mr. Dalglish, Mr. Piddington, Mr. Caldwell, Mr. Sutherland, Mr. Hoskins, Mr. Dickson, Mr. W. Forster, and Mr. Driver.

Chairman.

Legislative Assembly Chamber,

Sydney, 12 December, 1862.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 7 AUGUST, 1862.

MEMBERS PRESENT:—

| | | |
|-----------------|--|-----------------|
| Mr. Lucas, | | Mr. W. Forster, |
| Mr. Sutherland, | | Mr. Piddington, |
| Mr. Dalgleish, | | Mr. Hoskins. |

Mr. Lucas called to the Chair.

Order of the House (Votes, No. 36, 25 July, Entry 25)—appointing the Committee—on the Table.

Committee deliberated as to their course of proceedings.

Ordered, That Mr. Rae, *Under Secretary for Public Works*, be summoned to attend at the next meeting, and furnish the Committee with a Return shewing the original cost of constructing the Pitt-street Tramway, the cost of the tramway cars and their repairs, cost of the hire and keep of horses, and the cost of maintaining the permanent way, from the date of opening to the present time.

[Adjourned to Wednesday next, at *Eleven o'clock*.]

WEDNESDAY, 13 AUGUST, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|-----------------|--|-----------------|
| Mr. W. Forster, | | Mr. Dickson, |
| Mr. Piddington, | | Mr. Hoskins, |
| Mr. Dalgleish, | | Mr. Sutherland, |
| | | Mr. Driver. |

Mr. John Rae, *Under Secretary for Public Works*, called in and examined.

Witness handed in certain Returns ordered at the last meeting. (*Vide List of Appendix*.)

Witness withdrew.

Committee deliberated.

Ordered, That Mr. W. Scott, *Locomotive Foreman, G. S. R.*, be summoned as a witness for Tuesday next.

[Adjourned to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 19 AUGUST, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|----------------|--|-----------------|
| Mr. Dalgleish, | | Mr. Piddington, |
| Mr. Hoskins, | | Mr. Caldwell. |

Mr. W. Scott, *Locomotive Foreman, Railway Branch*, examined.

Certain Papers handed in by witness. (*Vide List of Appendix*.)

Mr. J. Whitton, *Engineer-in-Chief of Railways*, to be summoned for the next meeting.

[Adjourned to Friday next, at *Eleven o'clock*.]

FRIDAY, 22 AUGUST, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|-----------------|--|----------------|
| Mr. W. Forster, | | Mr. Dalgleish, |
| Mr. Caldwell, | | Mr. Hoskins, |
| Mr. Sutherland, | | Mr. Dickson. |

The Chairman stated to the Committee that he was informed that certain statistical returns handed in by Mr. Rae, in evidence, had been made use of in the House, by the Secretary for Public Works.

And the Clerk, when called on, having explained that he had, according to the usual practice, transmitted these returns, together with the evidence, to the witness, for revision,—

Committee deliberated.

Motion made (*Mr. Dalgleish*) and Question,—That before proceeding with any farther business, Mr. Rae be requested to attend—*agreed to*.

Letter

Letter requesting Mr. Rae's attendance written and despatched accordingly.
 On motion of Mr. W. Forster,—*It was then resolved*, That the Committee adjourn until Mr. Rae be in attendance.
 Committee adjourned accordingly.

After the lapse of a quarter of an hour, Mr. Rae being in attendance, Committee resumed proceedings.

Mr. John Rae, *Commissioner for Railways*, examined.

And Mr. W. Forster objecting to the line of examination pursued by Mr. Dalgleish,—
 Witness requested to withdraw.

Committee deliberated.

Witness recalled, and—no Member desiring to put any further questions—informed that his attendance was no longer required.

Witness withdrew.

Whereupon motion made (*Mr. Dalgleish*) and *Question proposed*,—"That" the matter be reported to the House as a breach of privilege.

Committee deliberated.

Amendment proposed (*Mr. W. Forster*),—That all the words after the word "That" be omitted, with the view of inserting the following words,—“That the breach of privilege be reported in the following form to the House:—

“Your Committee consider it their duty to report to your Honorable House, that a
 “statistical document which had come into the custody of your Committee as a
 “part of the evidence of a witness, namely, Mr. Rae, Commissioner for Railways,
 “and which had been transmitted by the Clerk to Mr. Rae, for revision, with
 “the rest of his evidence, has been, by this gentleman, transferred to the
 “possession of the Secretary for Works.

“Your Committee at the same time are of opinion that Mr. Rae gave up the docu-
 “ment from inadvertence, and without the least intention to show disrespect
 “to your Committee, or to abuse the confidence reposed in him.”

—*agreed to.*

Chairman to ask leave to bring up Special Report.

Mr. John Whitton, *Engineer-in-Chief for Railways*, called in and examined.

Witness withdrew.

Committee deliberated.

[Adjourned to Thursday next, at *Eleven o'clock.*]

THURSDAY, 28 AUGUST, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

Mr. W. Forster, | Mr. Hoskins.

Mr. Sydney Charles Burt called in and examined.

Witness withdrew.

And the second witness summoned not being in attendance,—

[Committee adjourned to Wednesday next, at *Eleven o'clock.*]

WEDNESDAY, 3 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

Mr. W. Forster, | Mr. Driver,
 Mr. Hoskins, | Mr. Dickson.

Mr. E. Bell, *City Engineer*, called in and examined.

[Adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY, 9 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

Mr. Sutherland, | Mr. Dickson,
 Mr. Hoskins.

Mr. George Hill, and Mr. W. W. Billyard, examined.

And there being no other witness in attendance,—

[Committee adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY,

TUESDAY, 16 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|-----------------|--|-----------------|
| Mr. Piddington, | | Mr. Sutherland, |
| | | Mr. Hoskins. |

Mr. William Tunks called in and examined.

Witness withdrew.

The Chairman here vacated the Chair, which was taken by Mr. Sutherland, *pro tem*.

Mr. R. Wynne called in and examined.

Witness withdrew.

Committee deliberated.

Motion made (*Mr. Piddington*), and *Question*,—That Mr. Rae be requested to supply a Return of the working expenses (including those for the maintenance of way) for the month of August, in continuation of Return already furnished,—*agreed to*.

Mr. S. Hebblewhite to be summoned as a witness on Tuesday next.

[Adjourned to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 23 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|-----------------|--|---------------|
| Mr. Piddington, | | Mr. Caldwell, |
| Mr. Hoskins, | | Mr. Dalglish. |

Mr. Samuel Hebblewhite called in and examined.

Mr. John Rae called in and further examined.

Additional Returns *handed in* by witness. (*Vide List of Appendix*.)

And Committee desiring to deliberate,—

Strangers requested to withdraw.

Committee deliberated.

Motion made (*Mr. Piddington*), and *Question*,—That the duplicate copy of Returns handed in by Mr. Rae, on the 13th August last, be retained in the hands of the Clerk,—*agreed to*.

Ordered, That the Returns for the month of August, this day handed in, be added to the Returns of the previous months, if not already printed.

Mr. Hebblewhite called in and further examined.

Mr. Lucas here vacated the Chair, which was taken by Mr. Piddington *pro tem*.

Witness withdrew.

Committee deliberated.

Ordered, That Mr. Whitton be summoned to attend at next meeting.

[Adjourned to Wednesday, 1st October, at *Eleven o'clock*.]

WEDNESDAY, 1 OCTOBER, 1862.

MEMBERS PRESENT:—

| | | |
|-------------|--|-----------------|
| Mr. Arnold, | | Mr. W. Forster, |
| | | Mr. Hoskins. |

Mr. W. Forster, in the absence of Mr. Lucas, called to the Chair.

Mr. John Whitton, *Engineer-in-Chief for Railways*, called in and further examined.

Witness withdrew.

Reassembling of the Committee to be arranged by Chairman.

[Adjourned.]

FRIDAY, 12 DECEMBER, 1862.

MEMBERS PRESENT:—

| | | |
|-----------------|--|--------------|
| Mr. Piddington, | | Mr. Dickson, |
| Mr. W. Forster, | | Mr. Stewart. |

Committee met, pursuant to the request of a Quorum—the Chairman (Mr. Lucas) having declined calling a meeting.

Mr. Piddington called to the Chair, and elected *permanent* Chairman of the Committee.

Letter from Samuel Hebblewhite to the Chairman of the Committee, dated 23rd September, 1862, mentioning the names of persons who would be glad to give evidence on the Tramway question, laid before the Committee.

Committee

Committee deliberated.
 Chairman requested to frame Progress Report.
 Draft, thereupon, prepared and read.
 Progress Report considered and agreed to.
 Chairman requested to report to the House.

LIST OF WITNESSES.

| | PAGE. |
|--|-----------|
| Bell, Edward, Esq., C.E. | 34 |
| Billyard, William Whaley, Esq. | 40 |
| Burt, Sydney Charles, Esq. | 33 |

| Wynne, Mr. Richard | 47 |

LIST OF APPENDIX.

(To Evidence given by John Rae, Esq., 13 August, 1862.)

| | PAGE. |
|--|-------|
| A. No. 1. | |
| Return shewing the original cost of constructing the Pitt-street Tramway, the cost of the tramway cars and their repairs, hire and keep of horses, and cost of permanent way, from day of opening, 23 December, 1861, to 31 July, 1862 | 16 |
| A. No. 2. | |
| Return of the cost for working the Pitt-street Tramway, <i>excluding</i> the maintenance of way (open for traffic 23 December, 1861), from 23 December, 1861, to 31 July, 1862 | 17 |
| A. No. 3. | |
| Ditto, <i>including</i> maintenance of way | 17 |
| A. No. 4. | |
| Return of cartage and wharfage on the Great Southern Railway, from 1 January to 31 July, 1862 | 18 |
| A. No. 5. | |
| Table showing repairs, alterations, &c., made in the Tramway Cars | 18 |
| A. No. 6. | |
| Rules for the management of the Tramway | 18 |
| A. No. 7. | |
| Copy of Rules, in which the streets to serve as stopping-places are indicated | 19 |
| A. No. 8. | |
| Copy of Rules, with alterations | 19 |
| A. No. 9. | |
| B. H. Martindale to Captain Galton, R.E.; dated Sydney, 13 June, 1860 | 19 |
| A. No. 10. | |
| Return of the Number of Passengers carried by each of the Tramway Cars, on each day, from 23 December, 1861, to 31 July, 1862, and the amount received for same | 20 |

(To Evidence given by Mr. W. Scott, 19 August, 1862.)

| | |
|--|----|
| A. | |
| Wages for repairs to Tramway Cars | 26 |
| B. | |
| Cost of making, turning, and fitting one set of axles for Tramway Cars | 26 |

(To Evidence given by J. Rae, Esq., 23 September, 1862.)

| | |
|---|------------------|
| A. | |
| Returns respecting the Pitt-street Tramway, for the month of August | 56 56 |
| B. | |
| Conditions for leasing the Tramway, extending from the Railway Station, Redfern, to the Circular Quay | 56 |

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PITT-STREET TRAMWAY.

WEDNESDAY, 13 AUGUST, 1862.

Present :—

| | |
|-----------------|-----------------|
| Mr. DALGLEISH, | Mr. HOSKINS, |
| Mr. DICKSON, | Mr. LUCAS, |
| Mr. DRIVER, | Mr. PIDDINGTON, |
| Mr. W. FORSTER, | Mr. SUTHERLAND. |

JOHN LUCAS, Esq., IN THE CHAIR.

John Rae, Esq., called in and examined :—

1. *By the Chairman* : This is a Committee appointed by the House to consider whether or not it is desirable to take up the Pitt-street Tramway, and we have summoned you to give us some information on this point ;—you are Commissioner for Railways, I believe? I am.
2. And Under Secretary for Public Works? Yes.
3. The management of the tramway is connected with your department? It is.
4. How long has it been in operation? Since the 23rd December, 1861. It was opened on that day.
5. Since that period have there been any complaints in reference to the working of the tramway? In what way?
6. As regards accidents that have occurred or inconvenience arising? We have had a few complaints about accidents.
7. What has been the nature of those complaints generally? We have had very few. One complaint we had of a carriage having been run into by the tramway car, whereby there was considerable risk to the passengers in the vehicle. The tramway car ran against it. We found, however, upon inquiry, that the fault lay entirely with the parties themselves, owing to careless driving.
8. Who was the party complaining in that case? I forget now. There was a Catholic priest in the conveyance at the time, but I do not remember his name.
9. Was any person hurt at the time? No. The conveyance and horse only were injured. A claim was made on us by the cab owner for the injury suffered by his vehicle, but we did not entertain it, as we found, on inquiry into the circumstances, that the accident had occurred through the carelessness of the driver, and therefore we were not liable.
10. Have there been other complaints? Yes, we have had other complaints, such as injury to the wheels of vehicles in crossing the rails, but in most of these cases the fault has been with the drivers of the vehicles. By trying to get out of the way too hurriedly, they get their wheels injured. But we have had very few complaints, considering the traffic on the line; in fact, not nearly so many as might have been anticipated.
11. However, when complaints have been made, you have inquired into them? Yes, in all cases.

John Rae,
Esq.
13 Aug., 1862.

John Rae,
Esq.

13 Aug., 1862.

12. And what has been the result, generally? Generally it has been that they arose from careless driving on the part of the persons complaining.

13. Have you heard any complaints made of the manner in which the line has been constructed? I do not remember any.

14. Has any person ever brought under your notice that they were not proper rails? I have heard the thing talked about. I have heard it alleged that the rails were unsuitable, but no formal complaint has ever been made to me on the subject.

15. You have heard it remarked that they were not proper rails? Yes; I have heard that said repeatedly.

16. Can you give the Committee a return of the original cost of the construction of the line, of the plant, and the rolling stock? Yes; I have had such a return prepared, and now beg to lay it before the Committee. (*Witness lays return on the table. See Appendix A, No. 1.*)

17. *By Mr. Piddington*: Does this include the whole cost of cars until they were put on the tramway line? Yes, every penny. By referring to the cost under the head of "Maintenance of Way," the Committee will see that it amounts to £583 15s. 2d. This has been a very heavy item, because the line was brought into use before it was properly consolidated; and I think a part of the cost of maintenance may very properly be looked upon as part of the original outlay upon the line. Even now it is not so complete as I should wish it to be, as I consider we shall never make a complete job of it until the line is paved for a certain distance on each side of the rails.

18. Is this paving part of the consolidation you allude to? Not part of the consolidation, but part of what I consider necessary before we make a perfect road. But what I wish to point out to the Committee is, that the expenses of the line are much larger than they otherwise would be, because the line was not properly completed when the traffic was put on it.

19. And you consider paving each side of the line as part of the idea of a good line, and in order that it shall be properly completed? That is only my own opinion on the matter.

20. It was not, then, part of the original plan? The idea, in the first instance, was to make a good line; but, from what I have seen of the line, I have come to the conclusion, that to make the work complete, and to prevent accidents, it will be necessary to pave each side of the line.

21. Have you proposed such a plan? I have not, in consequence of the large additional expense that will be entailed. I have had some calculations made of the cost of paving eighteen inches on each side of the line, and I find it will be about £2,000. If to this be added a proportionate amount for paving the centre, the Committee will see that a very heavy cost would have to be incurred.

22. *By Mr. Hoskins*: You mean to pave the centre and each side of the line, so as to have a level surface for vehicles to cross? To have a level surface on each side of the rails, with an opening left to receive the flange of the wheel.

23. *By the Chairman*: I see by this return that the receipts in the month of June were lower than those of any of the other months? Yes, I see that it is so.

24. How do you account for this falling off? Owing to the season of the year, I presume. It is the mid-winter month, and fewer persons are travelling at that time of the year.

25. Do you find the same falling off in the railway traffic in the same month? Yes, there is generally a corresponding decrease, according to the seasons.

26. In July, I see, the receipts rise again? Yes; some £20 additional were received.

27. I believe that you have been asked, through the Clerk of Select Committees, to furnish a detailed account of the cost of working the tramway? Yes.

28. The returns show the whole of the working expenses? The whole of them.

29. Will you hand them in? I now beg to do so. (*Witness hands in returns.*) I may be allowed to explain, that I have got this return out in two ways. In the one (*Appendix A, No. 2*), I exclude the maintenance of the road entirely, regarding it, for the reasons I have before given, as a portion of the first cost of forming the line; the other (*Appendix A, No. 3*) includes the cost of maintaining the permanent way, which of course makes the balance against the line look so much the worse.

30. Who supervised the construction of the permanent way? It was done under the Engineer-in-Chief.

31. Under Mr. Whitton? Yes.

32. I understood that he had refused to have anything to do with the construction of a tramway? You allude, I presume, to the time when the order was given for the rails; but I was not in the same position then, in the Railway Department, as I hold now. I believe he was opposed to the line; but that is a matter that he can better explain himself. He was the only officer that I am aware of responsible for the work.

33. Was there any particular officer set apart to look after this work whilst it was in course of construction? It was one of the officers under Mr. Whitton who supervised it.

34. Was it not originally intended that heavy goods should be carried by this line? It was; and I am not aware that that intention has been since altered.

35. As a matter of fact, heavy goods never have been carried by it? No; except only the "engines and cars"* belonging to Sir M. Peto and Co. They were brought along the line from the railway terminus to the Circular Quay.

36. Can you inform this Committee why it is that heavy goods have not been carried on the line, as originally intended? I am not aware of any particular reason, except that it was considered advisable to give the line a fair trial with the passenger traffic in the first instance. But besides that, the unsettled state of the question has done much to prevent it.

37.

*Revised:—Trucks.

37. Do you not think that the time taken for the trial of the passenger traffic has been quite long enough, and that it is time enough now to give a trial to the second object for which the line was formed, namely, the goods traffic? It has only had a seven months' trial as yet.
38. Do you know, as a matter of fact, whether the line has been tried for the heavy goods traffic, and found to be a failure? I do not know that it has had a fair trial. I believe that it will be found competent to carry any amount of traffic that may be required.
39. Are you aware that they have tried goods cars on this tramway, and that they found the horse power insufficient to draw up the empty cars on the incline? I have heard a statement of the kind.
40. What have you heard? That it was tried, and that the horses found enough to do to pull the empty trucks up the incline; but I think there will be no difficulty, with four good horses, in taking eight or ten tons of goods up the incline.
41. Then you think there is no foundation for what has been said? No, I think not.
42. But you have heard it reported that the horses found their work to do to take up the empty cars? Yes; but that was a long while ago, when the line was first opened, and before the horses got accustomed to that kind of work. They would naturally be a little frightened when first put to this work, and you would not be able to get the full amount of power out of them.
43. Since then you have had eight months' trial of the line? It is not eight months since the trial I allude to was made.
44. But since that first trial the capability of the line for heavy goods traffic has not been tested? No; nothing in the shape of heavy goods have gone along it, except the engines and cars* of Messrs. Peto and Co.
45. And they came down the railway, and were brought from the railway terminus along the tramway to the Circular Quay, and no difficulty was found in getting them along the line? I believe not. I was given to understand that no difficulty was experienced. I do not, however, pretend to be an authority on this point, but I have made inquiries from those who are competent judges, and from what they assure me, and from what I have seen in the passenger traffic, I believe that four good horses will have no difficulty in taking eight or ten tons along the line.
46. Who has given you the information upon which you base this assertion? I have it from Mr. Whitton.
47. Do you know if he was present when the line was tried with the empty cars? I am not aware that he was; but he can better answer this himself, as I presume the Committee will take his evidence.
48. Do you know whether these rails that have been laid down are those that were ordered by Captain Martindale;—he was the person who ordered the rails? I believe he was.
49. Is this the description of rail he ordered? I believe so. They are Train's patent. The flange, however, is not the exact size that was ordered, at least I think not. I did not expect I should be questioned on this point, or I would have looked into the papers and have given full information; but, at all events, the rails were found practically not to suit our railway carriages. The flange of the Train's rail sent out is only five-eighths of an inch, whereas the flange on our wheels is one inch, so that to enable our wheels to run on these rails we have had to reverse the rails, and make the flange of the wheels run inside the rails.
50. You cannot tell us anything about the construction of the line? I would rather you would ask Mr. Whitton, as it comes more immediately under his branch.
51. Do you believe that the tramway has been a public convenience? I do, most decidedly.
52. And has the tramway, in so far as the passenger cars are concerned, answered the expectations of the Government and the public? That is a difficult question to answer, since it is a matter of opinion more than anything else. If you mean to ask whether the tramway is popular, I say most decidedly that it is.
53. Not, however, with the holders of property in Pitt-street? I have heard little to the contrary; at least, I have heard quite as much upon the one side as upon the other.
54. You have heard it objected to? Yes; I have heard complaints.
55. Can you give us an idea of the amount the Government pay for the carriage of goods from the Circular Wharf to the railway terminus at Redfern? I think I have already sent in a statement of this amount in answer to questions or motions of Mr. Dalgleish; but I will supply an answer to this question if the Committee wish it. (*Vide Appendix A 4*.)
56. How is this work—the cartage of Government goods—done? By contract.
57. By annual contract? Yes.
58. *By Mr. Dalgleish*: This return (A No. 3) purports to be a return of the total cost connected with the working of the Pitt-street Tramway from the time of opening the line to the 31st July? It does; it contains every penny expended.
59. There are items charged here under the head of repairs to railway carriages;—do they embrace the costs of the alteration of the cars rendered necessary to enable them to run on the line? They include, I believe, every item of cost.
60. Then, in the month of January, I see, under the head of "Repairs," that £16 15s. 9d. were paid for wages, and 5s. 2d. for materials;—was that the total cost of making the alterations in that month? It does not necessarily follow that it was, because expenses might be incurred that would not be paid in the same month in which the alterations were made. The work may be done in one month and the money paid in the month following. I cannot say, without reference to the accounts themselves, in what particular month the expense was incurred.

John Rae,
Esq.
13 Aug., 1862.

* Revised:—Trucks.

John Rae,
Esq.
13 Aug., 1862.

61. Does this cost occur in consequence of the alterations necessarily made in the cars, or from the ordinary wear and tear? Both are conjoined in the accounts before the Committee.
62. It might be advisable to have the cost of the first alteration sent in separately from the cost of repairs through wear and tear? I will put the return in any shape the Committee may wish to have it.
63. It seems to me that it would only be fair to the tramway, that in balancing current expenditure against receipts, nothing should appear in the former as repairs which are not really legitimate repairs? I will make the division you suggest. (*Vide Appendix A, No. 5.*)
64. Were any rules promulgated to the servants of the department and the public, for the management of the tramway? Yes, rules were made.
65. Were they published in the *Government Gazette*? No, they were not.
66. Is it not usual to publish the rules for the management of public vehicles on the railway in the *Government Gazette*? Yes; but these were not rules in the way in which you mean; they were merely directions for the guidance of the persons connected with the cars.
67. They were the ordinary by-laws, I presume, passed on the authority of the Government Railways Act? No; the by-laws were published in the *Government Gazette*.
68. If they were not published in the *Gazette*, they would, at all events, be printed and posted up somewhere for general information? They were published in the *Government Gazette*, and printed as passed by the Executive Council, in the same way as all other by-laws. I append a copy. (*Vide Appendix A 6.*)
69. Will you furnish the Committee with a copy of the rules in which the streets are indicated that are to be made stopping places? I will. (*Vide Appendix A 7.*)
70. Has any alteration been made in the rules as originally passed and published? There has.
71. Will you furnish the Committee with a copy of that alteration also? I can tell you what the alteration was if you wish it.
72. Of course the Committee can have no objection to your doing so? It was intended to make a stopping place at the corner of Liverpool-street, but it was found that the incline there was so severe that this street was struck off the list of stopping places.
73. Do you remember the time when this alteration was made? Not exactly; but it was not long after we began running on the line. I will, however, give you the date, and add it to my evidence.*
74. Was it after the accident you speak of had occurred that the alteration was made? I think it was made before that; but I will furnish the Committee with the precise date.† Since that stopping place has been struck off, two additional stopping places have been appointed on application sent in to the department. One of these is at Tattersall's Hotel, and the other at the Metropolitan. These are the only alterations that have been made on the original rules.
75. I am not sure whether I understood you aright—but I thought you stated, in answer to a former question, that you had nothing to do with the department when these rails were ordered? I stated that I was not then in my present position in the department.
76. Have you any means of knowing how these rails were ordered, and why this particular kind of rail was ordered? I can refer to the records of the office. The information will no doubt be contained in the correspondence with the English agents.
77. The special reasons that caused this particular kind of rail to be ordered? Yes; but I presume it was Train's patent rail that was ordered, as well as Train's patent carriages.‡
78. Did you say that the alteration in the mode of laying down the rails was made for the purpose of enabling the heavy goods cars to run on them? Yes; so that the goods trucks running on our railway line should be able to come on and off the tramway line without reloading.
79. So that the common railway trucks could be sent down this branch line from the Circular Quay, or wherever they might take up their loading, and thence to the Redfern terminus, and on to the railway line? Yes.
80. Without the necessity of reloading, or shifting of cars? Yes.
81. The ordinary railway trucks used on the railway line? Yes.
82. At whose suggestion was this done? At Mr. Whitton's. He saw that the rails we had received would not answer in any other way to carry the goods traffic direct from the railway line on to the tramway, and he suggested this alteration in the manner of laying the rails as the only way of accomplishing this object.
83. In order to make this plan of traffic, direct from one line to the other, available? Exactly.
84. And has it been made available? Not yet; some steps have been taken; we have made arrangements for the occupation of a piece of land on the Circular Quay as a goods depôt; but nothing has yet been done beyond this. The matter, however, is still under consideration.
85. Have any attempts been made to load the goods trucks at the Circular Quay, and to take them along the tramway line to the Redfern terminus, and on to the main line of railway? I have heard nothing beyond what your honorable Chairman has stated relative to some experiments that were tried on the line soon after it was opened.

86.

* NOTE (on revision):—I now find that the alteration took place on 8th January last, and was published in the newspapers on the 9th. (*Vide Appendix A 8.*)

† NOTE (on revision):—The accident referred to happened on 19th May last.

‡ NOTE (on revision):—I have appended a copy of Captain Martindale's letter to Captain Galton, of 13th June, 1860, from which it will be seen that it was left to Captain Galton's discretion to send such rails and carriages as he considered best adapted for the object in view—and Train's rails and carriages were adopted. (*Vide Appendix A 9.*)

86. You have not heard officially of any such an attempt having been made? I have not.
 87. Had such an attempt been made officially, you must, from your position, have become cognizant of it? Most assuredly; such a thing would not be done officially without my knowledge.

John Rae,
Esq.

13 Aug., 1862.

88. And you have heard of nothing of the kind? I have not.

89. *By Mr. Hoskins:* What is the gradient of the incline at Liverpool-street? I think about 1 in 20; but I forget.*

90. What is the reason that this street was discontinued as a stopping place? It was found that the gradient was too difficult. The carriages stopped there well enough, but owing to the incline there was a difficulty experienced in starting again if there was a heavy load on the carriage. These tramway cars take very heavy loads. Sometimes there are as many as a hundred persons on one car; and if their average weight is estimated, you will find that there is a very considerable load on the car.

91. What is the weight of one of the tramway cars? The carriage itself weighs about two tons. They are made to carry seventy† persons, though we have had as many as a hundred on them; these seventy‡ persons would be four or five tons more perhaps, or seven tons altogether, taken up by four horses. For that reason alone I believe that the trial mentioned by your honorable Chairman could not have been a decided one, as the new trucks which we are building weigh four tons, and our old trucks are considerably lighter, so that four horses that can take four tons up this incline at a trot, would surely experience no difficulty in taking an empty truck over it.

92. You do not know, however, officially or personally, whether such an attempt was made? I do not, except what I have stated.

93. Nor do you know the exact gradient of the line at Liverpool-street? I do not remember at this precise moment. It is rather a heavy one, I know; and I understood that it was 1 in 20.§

94. Do you happen to know whether there are any railway stations or stopping places on the line used by the locomotives with gradients as heavy as this at Liverpool-street? No; nor anything like it. There is no gradient at any station on our line, I think, steeper than 1 in 80.

95. Who directed that the cars should discontinue stopping at Liverpool-street? It was done by the direction of the Government, under the advice of the Executive Council,|| in the ordinary way.

96. Upon whose representation? Some complaints were made by the conductors and drivers, and reported by the traffic manager, that they found a difficulty in stopping at this street.

97. In what way—was it that they found the break power insufficient to arrest the progress of the carriage? No, not at all. They could stop readily enough, but the difficulty they found was in starting again when the motion of the carriage was once arrested.

98. Is not the crossing of Liverpool-street by Pitt-street nearly on a level? No, it is very far from a level; it is just the end of the incline rising towards Bathurst-street.

99. What is the average number of passengers conveyed per day by each carriage, each trip? I cannot tell you that at the moment; but I have a daily account of the number of passengers, and I will furnish the information if you desire it.

100. You do keep a daily account of the number of passengers on the tramway? Yes.

101. Of the number conveyed by each trip? Yes, and by each car. (*Vide Appendix A 10.*)

102. Are the conductors of these cars supplied with cheques to give to persons who travel by them? No. The parties using the cars pay their fare in cash as they enter.

103. You have no check then on the honesty of the conductors? No; nor do I see any way of establishing such a check on them as will be efficient. We have tried all sorts of plans, but, like omnibus proprietors, we find that every system of check is useless, and that we must trust almost entirely to the honesty of the conductors. The check I suggested was, that the station master at Redfern should keep an account of those that came into, and those that started from, the Redfern terminus by each carriage, and that he should send in his return daily to be compared with that of the conductors. But this was not at all an efficient check, because a large number of passengers always get up and down on the road.

104. You happen to know, then, that a good many of those who use the tram are wayside passengers? Yes, a good many of them are.

105. Persons who do not go to the terminus, but get out on the line, in the same way as they travel by an ordinary omnibus? Yes; I have seen passengers myself getting up and down on the line.

106. What is the average time that the tramway cars take to go from the Circular Quay to the Redfern terminus? A quarter of an hour.

107. And what is the distance? About two miles. Scarcely so much; about $1\frac{3}{4}$ miles.

108. Are the cars generally very regular—do they keep their time well? Generally they are very regular. With one or two exceptions, when they have got off the line, and so have been a little late, I may say that they are quite regular. They are so much so that I have never known but one instance of their being behind the train since they began running.

109. I think I understood you to say, that there was not a preponderance of complaints over expressions of satisfaction at this line? It appears to me that the preponderance is all the other way.

110.

* *Revised:*—I think the steepest gradient is about 1 in 20; but I forget what it is at Liverpool-street.

† *Revised:*—60.

‡ *Revised:*—100.

§ *NOTE (on revision):*—On referring to the section I find that the gradient opposite Liverpool-street is 1 in 51.

|| *Revised:*—Minister of Works.

- John Rae,
Esq.
13 Aug., 1862.
110. You have heard more expressions of satisfaction than of dissatisfaction at the line? I think so.
111. Have you heard these from persons resident on the line? From all parties.
112. And in what way? They have generally spoken of these cars as being a great convenience.
113. Do you know whether persons of all classes avail themselves of this means of conveyance? Yes. I think they have been most popular ever since they began running.
114. Have the railway authorities tested, in any way, the maximum weight that four horses can draw on this tramway? I am not aware, beyond the daily experience of the loads carried.
115. You are not aware, officially, whether any actual trial has been made? Officially I know of none beyond what I have stated.
116. Then in your statement that four horses would find no difficulty in taking eight or ten tons along the line, you do not go upon any official or reliable data? The data were these:—I gave instructions to one of the officers of the department, who is fully competent to judge of these matters,* to take the weight of the car and the weight of the maximum number of passengers carried in it. Adding these together, I am enabled to form an idea of what four horses can draw on the line. These cars have run with as many as a hundred passengers; and from that I judge that, if four horses can take one of these cars with one hundred passengers up this incline, the same number of strong horses would have no difficulty in taking up eight or ten tons.
117. I understood you to say that the engine and trucks belonging to Peto and Company were taken along this line—can you give any idea of their weight? I am not prepared to say what is their weight. I can, however, get that information, if it is considered desirable, and include it in my evidence on revision.
118. Do you know if these trucks of Peto and Company are made differently from the ordinary railway trucks? That I can hardly say. They have the same kind of wheels as ours; but I do not know as to their weight, though I think they are not so heavy as ours. But I will give you their weight, and also the number of horses that were required to bring them down.
119. I believe they were brought from the Redfern Terminus down to the Circular Quay? Yes; they came down the railway line by steam, and were then brought by horse power along the tramway.†
120. Do you happen to know if it was originally intended, when the proposal to construct this line was under consideration, to use the tramway for the conveyance of goods by the railway trucks from the Redfern terminus to the place of shipment at the Circular Quay? Most unquestionably that was part of the original design; and that is the design we intend to carry out. We have already made one step towards it, by getting a piece of land at the Circular Quay for the purpose of erecting a goods shed, preparatory to opening the line to the goods traffic.
121. Are you aware that upon the various street tramways in England and America goods are not conveyed? I know that they are more particularly intended for the conveyance of passenger traffic; but I am not aware that there is no carriage of goods on them.
122. Are you aware that in England and America another and a different description of rail is used for the goods traffic? You mean the rail for the street tramways?
123. Yes? I understood that the rail used in all the street trams was the same as ours. That Train's patent rail was used.
124. But with the alteration that has been made here in the mode of laying them down, do you think they are suited to the peculiar object originally had in view in proposing the line, namely, the goods traffic? I do not see how the alteration affects the capability of the rail. The rail is merely turned the opposite way. The same wheel runs upon the same rail, only the flange runs inside the rail.
125. Can you inform the Committee what are the net receipts upon this tramway, including, on the debit side, the interest of the money expended on its construction? The net receipts will be nil, since the working expenses are more than the receipts for the last few months. It will be seen from the returns I have given in, that this last month we ran at a loss of £30, and the month previous at a loss of £50. This is excluding the cost of maintaining the permanent way, as shewn in Return No. 2.
126. *By Mr. Piddington*: So that, exclusive of the cost of maintaining the permanent way, there was a loss to the country last month by the tramway of £30? There was.
127. And including the cost of the permanent way? Of course that will make the statement appear still worse.
128. *By Mr. Hoskins*: Then, according to this shewing, the tramway is actually a losing concern? Yes; but then I may explain, in order to account for the expenditure being in excess of receipts in some months, that in those months we have run two cars. Sometimes we run only one car. We commenced running with one only, and it was found that the one car would not take all the passengers that offered. We then ran two; but it often happens that we have not enough to fill two cars, though too many for one. However, the last return I had of the traffic on the line satisfied me that we could not profitably run two cars. The last proposition was, that we should return to one car, and that is now under consideration.

* Revised:—Omit "who is fully competent to judge of these matters."

† ADDED (on revision):—I find that Messrs. Peto and Company's trucks weigh about 3½ tons; nineteen trucks were brought on the tramway—but no engine; three horses were attached to each truck from Campbell-street to Bathurst-street; and four horses took two trucks from Bathurst-street to the semi-circular Quay.

129. You run two cars now? Yes.

130. And do you not think that one car would have been sufficient? It was reported to us that one was not sufficient to carry the passengers that offered; we therefore tried two, and sometimes they are full—sometimes not. It is evident now, that there is not traffic enough for two cars; but then the difficulty we experience is this, that sometimes there are more passengers than the one car will take, and we do not like to disappoint passengers who depend upon us to take them; thus, whether we run one car, or whether we run two, a difficulty presents itself in either case.

131. On the average, however, the number of passengers that travel by the line is not more than one car can conveniently carry? On the average there is not more; but then there are some trains that bring down, or take away, a larger number of passengers than others.

132. How many persons are employed on these cars? There is a conductor to each car—he receives 8s. a day; there is also an assistant-conductor, who is paid partly by the contractor, and partly by us. He acts as stable-man for the contractor, and as assistant conductor for us, and his wages are paid between us and the contractor. The driver is paid by the contractor.

133. Then there are two breaksmen for each car? Yes.

134. Do you think it requires two breaksmen to each car? We employed only one in the first instance, but it was afterwards reported to me that two were required. This was reported to me by the contractor; and I then made inquiry of the traffic manager, who reported that one was not sufficient on the inclines.

135. From what you now know of the cost of work on the line, and the necessary expenses, do you think that if one carriage only is used, the expenses would be covered by the receipts? I do. There is a difficulty in the way of running one car only; but this may be got over by knocking off the early trip to meet the first train, by which there are very few passengers. The difficulty is this:—On calculating the distance from the terminus to the Circular Quay, and multiplying that by the number of trips made to and fro, we found that the horses had to go a greater distance than one set of horses could be expected to do in a day. We made it out that they would have to go $24\frac{1}{2}$ miles in the day. Comparing this with the daily work ordinarily done by omnibus horses, we found that it was expecting the horses to do more than they could accomplish. It was then suggested, that if we did not run the car to meet the morning train we might do the work with one set of horses. As the present arrangements had gone before the Executive Council, and as they had fixed the times for meeting the train, we could not alter them without going to the Executive again. The contractor, however, agreed to meet all the trains, and to run one car with six horses, or to run the two cars with four horses to each. By either of these courses he would not be obliged to run the same horses all day, as he would be enabled to give them a change in the one case, and in the other would be able to save one or two trips in the course of the day, in running to meet those trains by which only few passengers travel, and only one car is required. He has now offered to run one car to meet all trains, with six horses. We have tried all ways to save expenses, and to make the line pay, but none have been successful, and we must now try something else.

136. How many times does the car pass each way? It runs to meet each train going and coming.

137. It makes four or five trips a day, backwards and forwards? Yes; five trips and two additional runs.

138. If these cars run more frequently, not merely to meet the trains, but to get the wayside traffic, do you think they would be likely to pay better? Yes; no doubt they would.

139. Then what objection is there to their doing so? I should imagine that there would be objections to their running all day, if there is an objection made now to their running only five times a day to meet the trains.

140. But for your part you think it would be preferable? Yes; I think if they were to be run all day they would pay well.

141. Can you say whether the majority of persons who now use the tramway are wayside or through passengers? The majority now are through passengers, because we run to meet the trains arriving and departing; but if we ran all day long, we should get many more wayside passengers.

142. Are the railway authorities deterred from running the railway cars more frequently, even though they believe that such a plan would pay better, by reason of the complaints from the residents in Pitt-street? I believe that the Bill authorizing the cars to run on the Pitt-street Tramway was passed with the consideration of facilitating the railway traffic, and it has been suggested, that if we ran at any other times than those necessary to meet the trains we may be going beyond the meaning of the Act. That is one difficulty I see in the way of running the cars all day. We asked for authority to run our cars by a tramway through the streets for the convenience of passengers to and from the train, and our Act says nothing about our running for the accommodation of wayside passengers. No doubt the line would pay better if we could run the cars all day long, because we have to keep the horses whether they are running or not.

143. How many horses do you pay for? Four for each car.

144. Then you require eight horses to do the work? Yes.

145. Would it not be better under such circumstances to lease the line to private individuals to work it at their own risk? No doubt it would; and I have already prepared a specification for the purpose of calling for tenders for the lease of the line.

146. You have not yet advertised for tenders? No, but I have prepared the specification in anticipation of the advertisement. Then, again, by the terms of our contract we are bound to give the contractor three months' notice prior to terminating his contract.

147.

John Rae,
Esq.

13 Aug., 1862.

- John Rae, Esq.
13 Aug., 1862.
147. Have you given him that notice? Not yet; but the matter was under discussion a fortnight ago, and reports are ordered to be prepared and laid before the Minister for his determination. He was, however, always in favour of leasing the line from the first.
148. Can you say whether the Government have ever considered the question of the propriety of taking up the tramway altogether? I have never heard such a thing suggested.
149. *By the Chairman*: With reference to the difficult gradient at Liverpool-street—is that before reaching Liverpool-street or at the street itself? Directly opposite the street, where Pitt-street crosses it. It is near the commencement of the gradient.
150. But where Pitt-street crosses Liverpool-street, is it not quite level? No, far from it. Many persons have been deceived in the same way, and have imagined that it was level, until they came to look closely at it.
151. *By Mr. Driver*: There can be no doubt about its not being level? No, none whatever.
152. *By Mr. Sutherland*: You stated that Peto and Company's engine and trucks were taken down the line from the Redfern terminus to the Circular Quay? Yes.*
153. Are you aware how many trucks one horse drew at one time? I do not know positively.
154. Are you in a position to place the Committee in possession of any facts on this point? I am, and I will take care that the Committee shall be furnished with all particulars.†
155. No difficulty was found in bringing them down the line? I believe not, but I cannot say of my own knowledge. I will, however, give the Committee such information as I have myself received.‡
156. You have stated that the Pitt-street Tramway is popular;—is that amongst the people travelling by it, or amongst the people residing in the street? I have always understood it to be so, even amongst the residents in the street, with the exception of some two or three who have always been opposed to it. I have heard complaints made, but the majority of those I have conversed with have been in favour of it; and I have always understood that it was highly popular.
157. And you are running these cars for a less amount of receipts than you have to pay in expenses? Yes.
158. And I suppose if you were to run them for nothing at all they would be still more popular? I have no doubt they would.
159. Do you not think, then, that it is the cheap ride the people get that makes the line popular, rather than any actual usefulness it has? No, I do not think so; I have heard everyone who has ever ridden in these cars speak of the immense advantages they possess over the common omnibus in comfort.
160. What is the charge made for travelling by them? Threepence.
161. And what is the charge by the ordinary omnibus? The charge used to be fourpence before we began running, and now it is threepence, the same as we make.
162. Do you think it is any part of the business of a Government to compete with individuals in any branch whatever, at a loss to the country? No, I do not.
163. And yet you are doing so in this instance? I am not aware that we are in anyway competing with anyone. The railway omnibus certainly runs for the same fare as we do, but then I think that threepence is quite sufficient for the distance; in fact, I think it would pay the other omnibuses better if they were to run for threepence instead of sixpence for a similar distance.
164. On the same rule, then, if you lowered the fare to three-halfpence instead of threepence, it would pay better still? No, I do not say that, because there is a limit below which a reduction will not pay. You cannot take more than a certain number in a vehicle, and therefore you must not go below a certain price. I think the experience of England is very conclusive on this point, that the more fares are reduced the better the vehicle pays—that is, a reduction to a certain limit.
165. *By Mr. Piddington*: Do you find that remark confirmed by the experience you have had on the Pitt-street tramway? We have not had two prices there yet.
166. *By Mr. Sutherland*: Have you had complaints made to your department by the inhabitants of the street, of the want of water, owing to the water pipes being broken? We have had one complaint, but not of the water pipes being broken.
167. Only one complaint? Only one, and that was not a complaint against us, but a complaint by an officer in our department against one of your plumbers for intercepting the line.
168. *By Mr. Dalgleish*: What do you mean by one of "your" plumbers? I should have said one of the Corporation plumbers; I was wrong in addressing the Honorable Member for Paddington as a member of the Municipal Council.
169. *By Mr. Sutherland*: What was this one complaint? It was against one of the Corporation plumbers, for opening the road and intercepting the line, without giving us notice. I was obliged to communicate with the Town Clerk on the subject; and it then turned out that the plumber was not an officer of the Corporation, but only a plumber licensed by the Corporation.
170. Then what you stated in reference to our plumbers was not correct? In what way?
171. As to our plumbers having intercepted the line? It was merely a mistake in names; he was not a Corporation plumber, but a plumber licensed by the Corporation.
172. Were they repairing the main or making a connection with the main? I believe they were making a connection with the main.

173.

* ADDED (on revision):—The trucks were.

† NOTE (on revision):—See answer to a former question.

‡ NOTE (on revision):—I was informed that, with the number of horses employed, no difficulty was experienced in bringing the trucks over the line.

173. And the plumber was paid by some private individual? Yes.
174. Are you aware that a pipe was broken in Pitt-street, and that for some two days a large portion of the inhabitants of the street were without water, through the bursting of the main? I am aware that a pipe burst upon one occasion, but it was not caused by the tramway cars, I believe.
175. Are you aware that upon one occasion one horse got killed through the breaking of the water pipe, the roadway having been washed away by the escaping water? I do not recollect such a thing; I may have heard of it, but I do not remember it now.
176. Have you heard of the tramway cars having been stopped from travelling on the line through the fire engines being connected with the main, near the corner of Pitt and King streets, on the occasion of the late fire in King-street? Such a thing has not been reported to me.
177. If anything of the kind took place it should be reported to you? Certainly.
178. In the event of a fire taking place in that part of Pitt-street which was deprived of water through the bursting of the pipe, would not a great destruction of property ensue from the street being deprived of water? Yes; unless there were some other means of getting water.
179. And suppose there were no other means of getting water in that street, would not the destruction of property be very great? No doubt it might be so.
180. Do you think it safe for the citizens to be placed in that dangerous position through the tramway cars going over the main and bursting the pipes? I do not conceive that there is the slightest danger likely to arise from our cars injuring the water pipes.
181. Have you seen a section of the street, showing the position of the water pipes and sewers, and the way in which the framing for the tramway cars lies on them? I am not aware that I have.
182. Are you aware that the framework on which the cars travel lies very close upon the water main? It is not very far from it, but sufficiently distant to prevent injury to the pipes.
183. In the event of the tramway being allowed to remain, and of the heavy goods traffic being carried on it, would it be safe to continue the water mains in their present position under the framing? I think it would; but the Engineer-in-Chief is better able than I am to give an opinion upon this question.
184. *By Mr. Forster*: You say that you consider yourself limited by the Tramway Act to carrying passengers for railway purposes only, and that by running all day for chance passengers you would be going beyond the meaning of the Act? I say that is my impression; I do not state it positively.
185. Has it not always been deemed that the line was more particularly established for carrying goods to and from the railway terminus and the point of shipment? Yes, I believe that was more particularly the intention.
186. And you consider the line to be perfectly well adapted for that peculiar traffic? I do.
187. Then how is it that goods have never yet been carried on the line? As I have said before, it has been mainly owing to the unsettled state of the question; as yet, we may regard what has been done upon the line as little more than a trial.
188. The law, however, does not prevent you from carrying goods on the line? No.
189. Nor the adaptability of the line itself? No.
190. Then the difficulties in the way are merely official? Yes.
191. And you cannot explain the reason why no goods have yet been carried, further than this, that official difficulties have intervened to prevent it? Yes.
192. It is merely because you cannot get the necessary official machinery to work to set the traffic in motion? No actual orders have yet been given on the subject, except to make an arrangement at the Circular Quay for the establishment of a goods depôt.
193. Have there been no orders whatever given on this subject—nothing done to expedite matters? It has been merely talked over, with a view to making arrangements, but nothing further. The head of the department, Mr. Arnold, has always been in favour of leasing the line.
194. Is he in favour of carrying goods on the line? He is.
195. Has he given no orders towards attaining that object? No, nothing has yet been positively ordered, beyond arranging for the goods depôt.
196. You say that arrangements are being made;—have you been making arrangements ever since the tramway was opened? I have explained that, as yet, we have done nothing further than getting the land on the Circular Quay for a goods depôt. We wished to give the line a trial with the passenger traffic, to see if it would answer for that before we went into the other part of the traffic it was intended to carry.
197. And are you satisfied with the trial you have had? I think it has been to some extent satisfactory, but it certainly has not been profitable; but we have not yet tried the goods traffic.
198. So that if the line is continued to be worked, there is some chance of its being made profitable also, if the other part of the traffic is run upon it? Yes.*
199. And in what time do you suppose that the goods traffic will be put on it? It is difficult to say. We shall require to give three months' notice to the contractor, unless he be disposed to waive this notice.
200. He horses the tramway cars? Yes.
201. He has nothing to do with paying the conductors? No, nothing; he merely pays the half of the wages of one man, an assistant conductor or breaksman, on each car.
202. And the other—who pays him? We do.
203. They are not Government officers? Yes, they are; at least, one conductor to each car, who receives the money from the passengers.

John Rae,
Esq.
13 Aug., 1862.

* ADDED (*on revision*):—And one car instead of two.
532—B

- John Rae,
Esq.
13 Aug., 1862.
204. Have you had complaints made to you against the conductors? Yes, we have, occasionally.
205. Complaints of incivility? Yes.
206. Have they been frequent? No.
207. Have they been inquired into? Yes, invariably.
208. And have you had reason to reprimand the conductors in consequence of such complaints? Yes, on one occasion one of them was warned.
209. Is that one of the present conductors? That I am not prepared to say.*
210. Have there been any complaints made to you of the drunkenness of the conductors? No, I have never received any complaints of drunkenness, officially.
211. You have never heard it said that a conductor was drunk upon any particular occasion? No; he would not have been long in his situation if I had.
212. You mean the conductors of the tramway cars? Yes.
213. Is the expense of altering the tramway cars, so as to enable them to run on the present line, included in the return of expenditure you have laid before the Committee? It is; that return includes, I believe, every penny that has been expended.
214. I suppose, in running two cars, the extra expense entailed consists solely of the cost attached to one car? That is all. It consists of the wages of an additional conductor, of four additional horses, and half the wages of a breaksman. My proposal was, in order to reduce the expense, to run only one car, to give up the additional breaksman and the trip to meet the early train, so that we might do with four horses instead of eight. These would very materially reduce the working expenses.
215. You admit, I think, that you are now running the line at a loss? Yes.
216. And that this has been the case for some months past? Yes.
217. Has not the member of the Government who has charge of this branch stated to the contrary, in all the public statements he has made upon the subject? Whatever statement he has made has been a correct one, I believe.
218. Have not statements been made to the House, by the Minister for Public Works, contrary to what you are saying now? Not that I am aware of. Every statement that has been made to the House has been made from the same data that I now lay before the Committee.
219. Whenever formal questions are put to the head of the Department of Works, he goes to you, I believe, for the information necessary to supply the answer? Invariably.
220. And you are responsible for the correctness of the data with which you furnish him? I am.
221. You are not aware, then, that the Minister for Public Works has stated in the House that the tramway was a paying concern? It was so, for some time. It is only within the last three months that it has fallen off.
222. It has been a paying concern, taking off the expense of maintaining the permanent way? Yes. I have before stated that the whole expense of the permanent way ought not to be taken into account, as the line was so hurriedly made in the first instance that it had not time to consolidate before the traffic was put upon it. I remember, too, that this was distinctly stated in the House by Mr. Arnold. I explained to him, that it was not fair to charge to the current expenses what was really a part of the first cost of making good the permanent way, and he stated this to the House.
223. You think, I believe, that the preponderance of opinion is in favour of the tramway, as a great public advantage? Yes, decidedly.
224. What sort of evidence have you had of this? In what way do you mean?
225. Has it been the evidence of persons using the line? Yes.
226. Not that of persons who are precluded from the use of it? No; it has been merely hearsay—remarks I have heard from persons who have travelled by the cars.
227. Then in giving it up, these persons would fancy that a public injury was done? Those who have spoken to me think so.
228. That is, those who make use of the line? Yes, exactly; unless they do make use of it they are not likely to know the advantage of it.
229. That, then, is, in your opinion, the only way of forming a correct idea of it? Yes, in the same way as I form an opinion of its popularity from what I hear.
230. Then, according to your opinion, the tramway is very popular amongst those who find it a convenience to use it? That is the only way in which it would be popular with any persons.
231. *By Mr. Piddington:* How many use it to those who do not—what proportion does the one bear to the other? That I cannot say.
232. *By Mr. Forster:* Have you seen the effect that this line of tramway has upon foot passengers who find it necessary to cross it? I have seen no difficulty in the way of crossing it.
233. Have you never observed that in wet weather the centre of the street is full of water and mud? Not more than any other street is in wet weather.
234. Have you ever walked over the tramway line in wet weather? I am not very often in Pitt-street, but I have been there occasionally, and I have seen no difference between it and any other street.
235. But in wet and muddy weather? It is not worse than any other street, I think.
236. Does it not stand to reason, that if two lines of iron rails are laid down the centre of the street they must check the flow of water off the roadway, and so cause an accumulation of mud? Yes, to some extent; but means might be taken to prevent this accumulation.
237. How do you propose to do this? By surface drainage.

* ADDED (on revision):—I think it was one who is since dead.

238. You have stated that this would not be a complete job until the line was paved? Yes.

239. In what sense do you use the word "job"? Not in its offensive sense. What I meant to say was, that it would put an end to all complaints from parties using the street if good granite paving were laid down along each side of the rails, as the roadway would then be level, and the wheels of vehicles would not get in against the edge of the rails, as they now do.

John Rae,
Esq.

18 Aug., 1862.

240. If you were to discontinue working this line, the result would be to throw a great number of persons out of employment? I do not understand the question.

241. How many persons would be thrown out of employment if you discontinued the working of the line? Only two officials, the conductors of the cars.

242. But does not the running of these cars give employment to a large number of men, in the repairs that are required to be made in the street? There are a few men employed on the street.

243. Would not these men be thrown out of employment by the stoppage of the tramway traffic, by the street not requiring to be repaired so often? I do not think it likely.

244. Or the men employed in the repair of the water pipes and other works, alluded to by Mr. Sutherland, that lie below the street—they would not have the same amount of work? I believe that the tramway does not interfere with those works.

245. Do you not think that the public loss on all these incidental matters, by the larger amount of repairs required to the street and other public works that the tramway causes, is more than sufficient to counterbalance any advantage the tramway may confer? I am not aware that it causes more expense.

246. Not more than if there was no tramway through the street? Certainly not, as regards the water pipes.

247. Nor as regards the street itself? There is some more expense attached to maintaining a permanent way than to keeping an ordinary street in repair.

248. Do you think the laying down the rails was a good job? I had rather you would question the engineer on this point; he is a better judge of this kind of work.

249. But in looking down the line of rails, do they seem to you to have been laid level? They have been repeatedly altered since they were first laid down, and on this very account.

250. Is it a feature peculiar to tramways, that they should be laid in a gentle waving line? This has been owing, I believe, to the rails having been laid down before the roadway was properly consolidated, and from the warping of the sleepers.

251. *By Mr. Piddington:* What has been the total cost of working the line, since its first starting, down to the end of July last? Including the permanent way?

252. Including everything? The total expenditure has been £1,545 3s. 9d.

253. And what have been the total receipts during the same period? £1,115 18s. 9d.

254. What has been the actual loss to the country, independent of interest on capital invested, of working the line to the end of July last? £429 5s.

255. Has not the country been a loser every month for the last six months on the working of this tramway? Yes, including the maintenance of the permanent way, there has been a loss during the last six months.

256. During the whole of the last six months, without exception? Yes.

257. How many complete months has the tramway been at work, up to the end of July? Six months, and a portion of the seventh. I should rather say that it has been open seven months, during six of which it has been worked at a loss. The first month we had a large gain.

258. Then during the period it has been open, reckoning complete months, it has been worked at a loss six months out of the seven? Yes.

259. During only one month has it ever been worked except at a loss? So it appears.

260. And is it necessary to run two cars in order to accommodate the public? I do not think it necessary to have the whole of two cars. Sometimes one car is not sufficient to accommodate all the passengers, but we seldom find sufficient to fill two cars altogether.

261. How do you propose to do then—cut them in half? I propose to run one car only. I do not think that we are called upon, merely for the accommodation of a few extra passengers occasionally, to run the line at a loss. We should endeavour to bring the working expenses within the receipts.

262. Do you think, then, that there is not more demand on the part of the community for this means of conveyance than one car will be sufficient to supply? The information that I have received, in answer to my inquiries on the subject, is to the effect that one car will generally be sufficient, and therefore it is that I am trying to arrange to do away with the second car. It is only by one or two trains that we get more passengers than one car will accommodate.

263. And notwithstanding this—notwithstanding your having more than one car will carry—you propose to run only one car? That is my intention at present. Except by these one or two trains, one car is sufficient, and I do not think that for these few persons we should be called upon to put on another car.

264. Then by one or two trains there is an excess of passengers beyond what one car will carry? Yes.

265. And this excess, you think, should be disregarded? I do.

266. Would they be able to find some other means of conveyance? No doubt they would. They did formerly, before we put on the second car.

267. Was not this tramway constructed in order to accommodate that portion of the public who used the railway? It was.

268. Seeing that was the case, and that the public had been put to the expense of making this tramway, on what ground would you exclude this excess by the one or two trains from the enjoyment of its advantages? Merely on the ground that it is necessary to keep our working expenses within our receipts.

John Rae,
Esq.
13 Aug., 1862.

269. And if one car only were used, would that be sufficient to enable the Government to work the line at a profit? It is my opinion that it will be, but we can only judge by giving the proposal a trial.

270. You have no other ground to go upon than your opinion? No other, except the fact that we shall materially reduce the expenditure.

271. Would it not reduce the expenditure even more if there were no cars running? Certainly, but then there would be no receipts.

272. You have stated that you think it would be right for you to run your cars at all hours of the day, independent of the periods when you are required to run to meet the trains;—do you think it would be right for you to do so? I see no objection to it.

273. Do you think it would be fair for your cars to come into competition with private enterprise—with the omnibus proprietors, for instance? I do not think it advisable to run in competition with private parties in any matter, and I do not speak of this in that light. I refer to the matter only in the way of making it a paying concern. I was asked the question, whether it would pay better to run the cars all day long, and it was merely in answer to that question that I gave the opinion that it would do so, because now we have to keep a certain number of horses, whether we run them all day or not.

274. Were they not established expressly to run in connection with the railway, to meet the different trains? They were.

275. *By the Chairman*: The Bill does not state so? No; I have already said that there is nothing in the Tramway Act to limit our right of running only to meet the trains.

276. *By Mr. Piddington*: Do you know of any case, either in England or America, where tramways have been established by the Government for the purpose of running cars for the use of the public, and independent of the railway traffic? Dr. Smith, who has just arrived from England, has mentioned to me, in reference to the English tramways, that the cars are run on them between the times of the arrival and departure of the trains. He tells me that they run there all day long.

277. But what I ask you is, whether you know of any case, either in England or America, of the Government establishing a street railway to run at all hours of the day, and to enter into competition with private enterprise? I say, in answer to that, that I was conversing with Dr. Smith on the subject, and he suggested to me that we ought to follow the example of the English tramways, and run our cars all day.

278. Did he say that in England and America the Government had established tramways to run in competition with the omnibus proprietors? He tells me that they do so.

279. What, the Government? Not the Government, but the Companies.*

280. Then you do not know of any case, either in England or America, of the Government running tramway cars in opposition to private enterprise? No, I do not. In England the Government do not run the railways.

281. Or the tramways? No.

282. Nor do they in America? No.

283. Will there be, in the event of your leasing the tramway, any limitation of the times when the cars will be allowed to run? The proposition is, that they should be allowed to run between the times necessary to meet the train.

284. Is that to be one of the conditions of the lease? The conditions are not yet in a complete form, but this is proposed.

285. Do you, as Commissioner for Railways, intend to propose this as one of the conditions? I think I shall, unless it is found to throw any difficulty in the way of leasing the line.

286. You think you will propose it? I think I shall.

287. Do you think that the Pitt-street tramway is any benefit to the inhabitants of that street, or that it has tended to enhance the value of house property in that street? The great advantage of the cars is, that they are more convenient than the ordinary omnibuses. From what I have seen, however, I cannot say that it has been a very great benefit to the street, as there can be no doubt but that the line causes some inconvenience to carriages.

288. It has been found to interfere with the other and ordinary traffic of the street? To a certain extent it must do so, necessarily. The street itself is rather narrow, and that is the main source of the inconvenience. The original idea was, that it would increase the traffic in this street; and it was under that impression that a large number of the residents in the street signed the petition in favour of its construction.

289. From the experience you have now had of the working of the line, has that idea been confirmed? I do not think so; from what I have seen, my impression is that the effect has been otherwise. I have heard, in fact, of persons giving instructions not to drive their carriages through that street.

290. From the circumstance of two bars of iron running down the centre of the street, above the level of the roadway, a very considerable obstruction is experienced from that alone? Certainly it is.

291. Is the tramway laid down here the only description of tram used in England for street railways? I am not aware of any others. This is Train's patent, the one universally used, I believe, in England.

292. Are there not some laid with grooved rails? The grooved rails have been tried in some cases, but they were soon given up, because the groove so quickly fills up with stones.

293. If the grooved rails were laid down, and the space between was pitched, would the risk of filling up with stone be lessened? It would be lessened; but in any way there would always be a difficulty in regard to filling up, where the grooved rail is used.

294. Are you aware that the object of constructing this tramway was to convey goods between the Railway Terminus and the wharf, quite as much as it was to convey passengers? Certainly I am.

295.

* ADDED (on revision):—I misunderstood your question.

295. And though the line has now been in use over seven months, no goods have been conveyed on it? Not as yet.

296. Are you aware that a resolution was passed by the Assembly, in June last, to the effect that the House considered it desirable that experiments should be made on the Pitt-street Tramway, and the Pyrmont railway extension, in order to ascertain whether goods could be transported on these lines or not? I do remember such a resolution having been carried, and I believe that in consequence of that, experiments were made on the Pyrmont line.

297. I allude more particularly to the tramway? But it would be the same thing, whether tried on the one or the other.

298. Not at all;—the resolution I allude to had two objects in view: one was an experiment by horses on the Pitt-street Tramway, and the other an experiment by locomotive power on the Pyrmont line; and what I wish to know is, whether, in accordance with that resolution, any experiment has been made on the tramway? I am not now in a position to say, but I will refresh my memory on the subject, and append an answer on revising my evidence.

299. Are you aware whether any experiments were made in accordance with that resolution? I believe there were, now that you bring the matter to my mind; I did not remember this circumstance at the time this was first mentioned to me.*

300. And what would be the expense of pitching all the way down between the two lines of rail, and for two feet on each side of the line? I think I have stated that an estimate was given to me of £2,000 for the pitching on each side of the line alone; a still larger sum would be required for pitching the centre.

301. *By Mr. Dickson:* The tramway does not pay at present? It does not.

302. It was intended, when first constructed, to convey passengers and goods between the railway terminus and the point of shipment? It was.

303. You have conveyed no goods by it? Not hitherto.

304. When you run the goods traffic, I believe the returns from the passenger and goods traffic combined will be much greater than they are now, particularly if you convey all the mercantile consignments one way, and all the colonial productions the other, between the terminus and the quay? It is rather difficult to answer that question; we have yet not tried the goods traffic, and perhaps when we come to do so we may find that it does not pay better than the passengers.

305. However, you believe it to be the duty of the Government, so long as they have the line under their control, to do all in their power to make it profitable? I do.

306. You believe that conveying the merchandise received by the shipping, from the wharf to the railway station, thence to be forwarded direct to the interior, and conveying all the productions of the country coming into Sydney by railway, from the terminus to the quay, where they can be shipped, would be likely to benefit the country and add materially to the revenue derived from the tramway? I do.

307. Do you believe that the tramway, as it is now laid down, can be made competent to convey all the merchandise that it may be required to send from the harbour to the terminus, and all the produce required to be sent from the terminus to the harbour? That is what I am led to believe; but you had better question Mr. Whitton upon this point, since he is better able to give an opinion on it. One reason, however, why the goods traffic has not yet been commenced I should have mentioned before, only it escaped my memory at the moment. It has been owing not only to the unsettled state of the tramway question, but also to the other question of the Darling Harbour extension to the bridge and deep water. The difficulty we experienced was, that after we thought of establishing the goods traffic on the tramway, the other question was taken up of continuing the Pyrmont line down to the bridge. As in the event of our carrying the Pyrmont line down to deep water in order to obtain the goods traffic, it would be next to useless to run a goods traffic on the tramway lines, the question as regards the tramway has been allowed to stand over until the other question of the railway is settled.

308. Then the tramway now is only really doing one-half its work? Only the half of what was the original intention.

309. And the most important half has not yet been commenced? No.

310. That which has been done as yet is little better than an experiment? Very little more.

311. If facilities for conveyance were given, would they not greatly increase the number of passengers by the railway? I am not aware that they would.

312. Would not increased facilities of conveyance be likely to induce many persons to reside outside the town, and on the line of railway? I am not aware. I do not see how they could do that.

313. I suppose the country has been a loser by the establishment of railways in the first instance, and until they were extended some distance into the interior, as well as it is now a loser by the tramway? Yes, it has.

314. Is there anything extraordinary about this loss on the tramway, as compared with the loss that has been experienced on the railways? I do not think so; we are arriving, month by month, at the means of ascertaining the cheapest way of running all our railways. The railway has been getting better and better every year.

315. The extra expense of conveying merchandise from the wharf, and the products of the country from the terminus, would not add very much to the working expenses? Not a great deal in comparison to the proceeds.

316. It would not add more than 25 per cent. to your present working expenses? I do not think it would; the great advantage would be, that products from the interior, such as wool and tallow, would be brought down direct to the wharf without unloading, and placed there ready for shipment.

317.

* *NOTE (on revision):*—On referring to the records, I can find no report of any experiments having been made, except those on the Darling Harbour branch, and the tramway before opening the line.

John Rae,
Esq.
13 Aug., 1862.

- John Rae,
Esq.
13 Aug., 1862.
317. That was one of the objects for which the tramway was established? Yes.
318. And the main one? Yes.
319. Do you think the object for which the tramway was constructed will be completely attained until it does convey all these articles backwards and forwards between the wharf and the terminus? I do not.
320. I suppose that, in your opinion, it is the duty of the Government to consider the general benefit of all the inhabitants of the Colony, and not that of the residents in any one street? Unquestionably it is.
321. Do you think that a general benefit has been experienced by the inhabitants of the Colony, by the construction of this tramway? I think so; it has been a general convenience to the public.
322. Do you think it would be desirable to take it up? I think not; it is too soon to do that yet. It has not yet had sufficient time allowed to show its capabilities.
323. *By Mr. Driver*: What would you consider to be sufficient time? When it has been fairly tried for both purposes—for goods as well as passengers; it has not had a trial with the goods traffic yet, and until this has been done, it would be completely throwing away all the money that has been expended on it, to take it up.
324. When did you first discover it to be a losing concern? It has been a losing concern, in one sense, nearly from the very commencement, that is, if you take into account the cost of maintaining the permanent way, which I consider ought not all to be charged against it.
325. *By Mr. Hoskins*: But this is done in England? Yes, after the line is fully established, the maintenance of the permanent way clearly forms part of the working expenses; but then it must be remembered that this work was begun in a hurry and finished as rapidly as possible, and then that we commenced running the cars upon it before the roadway had become properly consolidated. Under those circumstances it was only natural to expect a much larger amount of expense in keeping it in repair; since we had to do whilst the cars were running, what ought to have been done before the traffic was put upon it.
326. *By Mr. Driver*: You have said, I think, that a large proportion of the public would be averse to taking up the line? Yes, I believe so.
327. How have you obtained that information? From conversations I have had with different persons.
328. Have you ever had conversations on the subject with shopkeepers and owners of property in that street? Some of these I believe are as much in favour of pulling it up as others are of maintaining it.
329. Have you been able to form an opinion as to which way the balance lies? In favour of keeping it on.
330. The balance of the testimony of shopkeepers and freeholders in the street? Yes, I think a majority of the residents in the street are in favour of the line.
331. And you are also of opinion that what has as yet been done being merely an experiment, the tramway has not had a fair trial? Yes.
332. And that it should not be taken up at once, but that this fair trial should be given to it? Exactly.
333. *By the Chairman*: With reference to the competition, some questions have been asked you by Mr. Sutherland and Mr. Piddington, as to whether you considered it desirable that the Government should enter into competition with private enterprise;—would not the same remarks that have been made in reference to running the tramway cars apply equally to the railway between Parramatta and Sydney, which came into competition with the coaches running between the two places, and is now competing with the steamers running on the river? Yes, of course.
334. And also to the Hunter River Railway, which comes into competition with the steamers plying to Morpeth? Yes, the Government cannot undertake any work of this kind without coming into competition with somebody or other.
335. It is a different thing in England and America, where the railways are not in the hands of the Government? Yes, they are all run by Companies in those countries.
336. But the Companies keep cars for the accommodation of the passengers by their lines, and these cars come into competition with individuals? Exactly. I would remark, with reference to the loss that has been spoken of, that the expenditure on the line is always much larger on first going off than it will be hereafter. For instance, in the item of repairs to the permanent way, there is the large sum of £378 set down under this head, caused by the repairs necessary from the want of consolidation when the line was opened; then there are tools and implements, £13; and ballasting, £191. Now it stands to reason that these expenses are not likely to occur continually for years; it was only at first starting that they were so heavy, and they are being now reduced gradually.
337. Then is the amount shown in this return a fair test of the average cost of maintaining the permanent way, after the line has been some time at work? No, when once the roadway has settled down and become consolidated it will be nothing like that. The maintenance of the permanent way is always a great expense on railway lines at the first going off.*
338. And afterwards it does not require an expenditure at the same rate? No, not afterwards. After a time it is not so high.
339. I believe that a great many persons holding property in Pitt-street petitioned to have this tramway constructed? They did.
340. I see by your return that a very large amount of receipts is shown for the month of January;—was that the month when the English cricketers were here? I think it was.
341. Some questions were asked you with reference to establishing a check upon the conductors;—now is it not a fact, that the same difficulty has been found in the way of providing

* ADDED (on revision): In proof of which, I may state that railway Companies are in the habit of charging the first year's maintenance of way to capital.

- a check upon the honesty of omnibus conductors in England as well as here? Yes, I have tried every means of securing a check, but as yet I can see no way of doing it thoroughly.
342. You say you have had as many as a hundred passengers at one time in one of your cars? Yes, on a few occasions, but that was an extraordinary number. They are not made to carry so many as that; seventy* is the number they are intended to accommodate.
343. But they have carried one hundred? Yes.
344. And they would weigh on the average about seven tons? Yes, about that, I should think.
345. So that you regard that as a good test of the capability of the line? Yes, if a car with a hundred persons on it can run easily along the line, we can form a good idea from that of what amount of goods can be taken on it by the same number of horses.
346. Two horses on the ordinary street would not be able to draw above a third of what they would on the tramway? I do not know the exact proportion, but it is somewhere about a third.
347. How much do you pay per horse? Three† and sixpence per day.
348. And the contractor finds drivers as well as horses? Yes.
349. *By Mr. Hoskins*: Do you know anything of the management of railways in England? Not much.
350. Did you ever inspect railway accounts? I have, repeatedly.
351. But the English railway accounts? Not in England.
352. Do you know if it is the practice to charge the consolidation of the permanent way against capital or against receipts? Against receipts, after the line has been handed over. It is the principal part of the working expenses of a railway after it is in use.
353. Immediately after the line is opened, I gather from what you have stated, that keeping the permanent way in repair is more expensive than it is subsequently? Yes.
354. Do you know if they charge this cost, in the first instance, when it is heaviest, against receipts or against capital? Against receipts; because after the line is handed over by the contractor it is considered to be completed, and a certificate to that effect is given to the contractor by the inspecting engineer. But I may say again, that this tramway line was got up, the permanent way made, and the line laid down in a hurry; and the work was not, therefore, done so completely as it would have been if more time had been given for the consolidation of the road. In that way more expense has been incurred in maintaining it than there would have been if more time had been taken over it.
355. Supposing the line to have been properly laid down and consolidated, would it have cost more to maintain it than it would cost to maintain a road for the ordinary street traffic? I think it would.
356. In auditing railway accounts are you in the habit of charging the cost of the permanent way against receipts? Yes.
357. Immediately after the line is opened? Yes; only I explain that the expense is a little more than it would have been had the road been properly consolidated.
358. You have never heard of any cases, either in England or America, of the Government having railways under their control? No, but they have in Belgium.
359. Do you happen to know whether a statement was ever made in the Assembly that this tramway was the best paying railway in the Country? I do not remember such a statement being made.
360. Was not such a statement made by the Minister for Public Works? I do not remember it.
361. Not under any circumstances? I do not remember to have heard such a statement; but I know that, leaving out this expense of maintaining the permanent way, the line has been a fairly paying one until lately.
362. But is this not an ordinary charge against the receipts of a line? I have already explained that it is.
363. As a matter of fact, has this tramway been the best paying line of railway in the Country? None of the railway lines have been paying much.
364. Do not the railways now pay 2 per cent.? On the capital expended?
365. Yes? No, not at all.‡
366. However, they have not been working at a loss. No; the receipts are paying the working expenses, and leaving a per-centage over.
367. And is it not the fact that the tramway has been worked at a loss during six months out of the seven it has been running? Yes, there is a loss.
368. And therefore there is not so much as half per cent. of net receipts upon the working expenses of the tramway, leaving out of question the interest on the money expended? There has been a loss, and therefore there are no net receipts.
369. Is it not a fact that the railways have paid 1 per cent. upon the working expenses, exclusive of interest? Yes, there has been a small per-centage on the working expenses, which is steadily improving.
370. Has the tramway ever paid one-half per cent on the working expenses? It has not.
371. Then the statement that it was the best paying line in the Country was an incorrect one? I do not remember its being made.
372. But if it was made it was incorrect? Yes.
373. *By Mr. Dalgleish*: You have stated, in the course of your examination by Mr. Piddington, that now your memory was refreshed by circumstances mentioned to you by him, you believed experiments had been made on the tramway? I did.
374. Will you send in the results of those experiments to this Committee? I will.§

375.

* Revised:—Sixty. † Revised:—Eight shillings. ‡ Revised:—Latterly.

§ ADDED:—But I have stated that these experiments were made before opening the line.

- John Rae, Esq.
13 Aug., 1862.
375. Are you aware of any additional carriages or trucks for goods are now in process of manufacture for this line? I am not aware of any.
376. Have you heard of none having been ordered? No.
377. What are your duties as Commissioner of this tramway? It would be difficult to state all my duties at a moment's notice, they are so various.
378. Will you be good enough to define them in writing, and send them in to this Committee? I will.*
379. With regard to this permanent way, might you not just as well leave out of your account any other item of expenditure, as select this one of maintaining the permanent way—might you not with as much justice leave out the repairs to the carriages, as this particular item? No, not in the manner in which I look at it. In general it is part of the working expenses, most unquestionably, but in this instance I have endeavoured to explain why a portion of it should be charged to capital, as being part of the first cost; but I have given the account in both ways, so that the Committee may take whichever they choose.
380. By Mr. Sutherland: You have stated in one of your answers that it costs the Corporation no more to repair the pipes and in making connections, through the tramway being in the street, than it did before the line was laid down? I do not see how it can do so.
381. Would you be surprised to find that it costs them three times as much as it did before? I should, certainly.
382. And do you think it right that this should be the case? It would depend upon what cause it arises from; but I am not aware that such is the case, nor can I see how it is possible to be so.

APPENDIX.

A. No. 1.

RETURN showing the Original Cost of Constructing the Pitt-street Tramway; the Cost of the Tramway Cars and their Repairs, Hire and Keep of Horses; and Cost of Permanent Way, from day of Opening, 23rd December, 1861, to 31st July, 1862.

| DATE. | EXPENDITURE. | AMOUNT. | TOTAL COST. |

E. & O. E.
Railway Department,
Sydney, 11th August, 1862.

R. C. WALKER,
Accountant.

A. No. 2.

* ADDED (on revision):—My duties as Commissioner of Railways include the collection of revenue, supervision of accounts, and payment of all disbursements; control of the officers in the Traffic Branch and the general establishment, settlement of all claims on account of railways, including land claims; making all contracts for carrying out works, or for supplies, and all other duties imposed by the Railway Act. I may add, that these duties are performed under the sanction of the Minister for Works, and that no pay is attached to the office of Commissioner.

A. No. 2.

RETURN of the Cost for working the Pitt-street Tramway, *excluding* the Maintenance of Way (open for Traffic, 23 December, 1861), from 23 December, 1861, to 31 July, 1862.

A. No. 6.

PITT-STREET TRAMWAY.

Department of Public Works,
 Sydney, 11 December, 1861.

HIS Excellency the Governor-in-Chief, with the advice of the Executive Council, has been pleased, in pursuance of the powers vested in him, to approve of the following Time Table and By-laws, made by the Commissioner for Railways, for regulating the Pitt-street Tramway, from and after the 23rd day of December, 1861.

W. M. ARNOLD.

PITT-STREET TRAMWAY.

Time Table.

THE Passenger Cars will leave the Circular Quay at—

| | |
|-----------|-----------|
| 6:25 A.M. | 4:40 P.M. |
| 9:55 A.M. | 6:10 P.M. |
| 1:40 P.M. | |

Sunday:—

| | |
|-----------|-----------|
| 8:10 A.M. | 4:40 P.M. |
|-----------|-----------|

and the Redfern Station on the arrival of every passenger train.

By-Laws.

1 No person will be allowed to take his seat in or upon any Tramway Car, without having first paid the fare or toll determined upon by His Excellency the Governor-in-Chief, with the advice of the Executive Council, and published from time to time, under the authority of the Government Railways Act, 22 Victoria, No. 19, and under and by virtue of the provisions of the Pitt-street Tramway Act, 24 Victoria, No. 15, under a penalty not exceeding forty shillings for each offence.

2 No person will be allowed to take his seat in or upon any car, in a state of intoxication, under a penalty not exceeding forty shillings for each offence.

3 All persons smoking within any car after being required by the conductor in charge to desist, shall be liable to a penalty of forty shillings for each offence.

4 Any person using obscene language, or committing any nuisance, or wilfully interfering with the comfort of the passengers in or upon any car, shall be liable to a penalty not exceeding five pounds, and shall be liable to be immediately removed from such car.

5 Any person who shall wilfully injure, or cause any damage to the fittings, or break or deface the windows of any car, shall be liable to a penalty not exceeding (£5) five pounds, in addition to the cost of repairs.

6 The word "Car" in these By-laws shall be held to mean the vehicle used for the conveyance of passengers on the Tramway.

(L.S.)

JOHN RAE,
 Commissioner for Railways.

The Seal of the Commissioner for Railways was affixed hereto, at Sydney, this third day of December, 1861, in the presence of

R. MOODY,
 Chief Clerk.

Department of Public Works,
 Sydney, 11 December, 1861.

PITT-STREET TRAMWAY.

HIS Excellency the Governor-in-Chief, with the advice of the Executive Council, has been pleased, in pursuance of the powers vested in him, to declare and determine, that the following shall be the charges to be taken in respect of passengers to be carried on the Pitt-street Tramway, from and after the twenty-third day of December, 1861.

W. M. ARNOLD.

PITT-STREET

PITT-STREET TRAMWAY.

Table of Fares for Passengers.

For the conveyance of every passenger, from the Redfern Station to the Circular Quay, or vice versa, or for any intermediate distance—threepence. Children under five years of age, travelling with the parents—free.

A. No. 7.

Department of Public Works, Railway Branch, Sydney, 24th December.

PITT-STREET TRAMWAY.

In order to avoid inconvenience and delay, the Tramway Car in connection with the Railway will not stop to take up or set down passengers, except at the intersections of the following streets:—

- Bridge-street
- Hunter-street
- King-street
- Market-street
- Park-street
- Bathurst-street
- And Liverpool-street.

JOHN RAE,
Commissioner of Railways.

A. No. 8.

Department of Public Works, Railway Branch, Sydney, 8th January, 1862.

PITT-STREET TRAMWAY.

In order to avoid inconvenience and delay, the Tramway Car in connection with the Railway will not stop to take up or set down passengers, except at the following places, viz.:—

- Bridge-street
- Hunter-street
- King-street
- Market-street
- Tattersall's Hotel
- Park-street
- Bathurst-street.

JOHN RAE,
Commissioner for Railways.

A. No. 9.

Department of Public Works, Sydney, 13 June, 1860.

Sir,

I am directed by the Secretary for Public Works to transmit herewith, for your information, certain papers relative to a tramway proposed to be laid down along Pitt-street, Sydney, together with a plan and section of this proposed line.

You will perceive by perusal of the above papers, that this tramway is intended to convey both passengers and goods by horse traction between the Railway Station at Redfern and the harbour, a distance of about 1½ miles, and that, under the recommendation of a Select Committee, it is proposed to lay before the Legislative Assembly of this Colony, next Session, a Bill to confer on the Commissioner for Railways the powers necessary for the construction and maintenance of the line.

The scheme is looked upon as an experiment merely, but one which it is very desirable should be successful.

Unfortunately Pitt-street is somewhat narrow, and the gradients not as favourable as could be wished, and part of it is occupied by a constant traffic during most of the day. Notwithstanding these disadvantages, it presents the most favourable line that can be obtained. It is now a well macadamized street.

It was intended, when the experiment was first proposed, in March, 1858, to lay down the Barlow rail only, on account of its being on the spot. The length of time that has since elapsed, and other circumstances, render it undesirable, however, so to do; and in order to avoid unnecessary delay, and to give the experiment every chance of success, the Government desire to have the most suitable rails and carriages at once from England.

I am therefore to request that you will contract for, without delay, such rails as your experience and the opportunities which your position naturally affords you of judging, point out as the best. I have to suggest that longitudinal timber bearers, covered with a grooved iron plate, and framed together at intervals, might answer well, and be an economical arrangement—a matter of special importance in trying an experiment—the timber being obtained in this Colony.

The total length of rails or plates required would be two miles of single way. As the railway goods waggons will have to run on the tramway its gauge will require to be 4-8½.

I am further to request that you will at the same time contract for and forward two carriages or omnibuses for passenger traffic.

These should be light, while strong; to be drawn by say three horses abreast, and capable of containing from forty to fifty people each, including inside and outside passengers; so fitted as to permit being drawn from either end, and with very powerful brakes, to admit of their being stopped instantaneously. The seats might be constructed with movable backs, as in an American railway car, or else as in a saloon omnibus. It would be an advantage if they admitted of separating 1st from 2nd and 3rd class passengers.

In requesting your early attention to this matter, I have to observe, that the suggestions I have offered are not intended to fetter you in obtaining such rails and carriages as in your discretion you may consider best adapted to secure the end in view.

The total estimate for this service was £7,500, being £4,500 for rails and construction, £1,500 for the goods shed, and £1,500 for two carriages.

A copy of this communication has been addressed to Messrs. L. Merry and Co., 35, Cannon-street, London, who will, as usual, make the arrangements for the shipment to this Colony of the above rails and carriages, and who will be provided with the necessary funds for their payment.

Captain Galton, R.E.,
Whitehall Garden,
London.

I have, &c.,
B. H. MARTINDALE.

TUESDAY, 19 AUGUST, 1862.

Present:—

MR. CALDWELL,
MR. DALGLEISH,MR. HOSKINS,
MR. PIDDINGTON.

JOHN LUCAS, ESQ., IN THE CHAIR.

Mr. William Scott called in and examined:—

383. *By the Chairman:* You are employed by the Railway Department? Yes.
384. What position do you fill? Locomotive foreman.
385. Have you done any repairs to the tramway cars? Yes.
386. What was the nature of those repairs? There were both repairs and alterations. The first alteration was strengthening the bottoms of the cars.
387. As they were imported they were not strong enough? No.
388. They are supposed to carry how many passengers? Seventy.
389. Was the roof strong enough? No, they were very light altogether.
390. How many passengers do you believe they could have carried with safety, as imported, before they were strengthened? I should say they might carry the same number of passengers—seventy.
391. Before they were strengthened? Yes, if they had been in the same condition as when they were built; but in fact, they were not fit to run as they were; they were wracked in coming out—one of them in particular; the whole of the joints had to be strapped before it was of any service at all.
392. Was that in consequence of bad packing? Yes.
393. Do you consider that when these cars left the manufacturers in England they were sufficiently strong to carry seventy passengers? Yes.
394. Had they arrived here safe they would have carried seventy passengers? Yes.
395. What was the nature of the alterations you made? One was to make seats for the drivers and ironwork for supporting them.
396. What was the cost of that alteration? £63 17s. 6d. was spent on the two of them before they commenced running.
397. For all the alterations? Yes, including erecting, cleaning and painting, repairing, alterations, and additions.
398. That pays for materials and labour? No, for labour only.
399. Are you aware what was the cost of material? No.
400. From whom should we get that information? The storekeeper.
401. What repairs have been done to these cars since they have been running? After they had been running some time we were obliged to take them in and take off the inside linings, and strap them throughout with iron straps.
402. Were there any other repairs? Yes, one set of wheels re-tired, one spare set of wheels fitted, stretcher bars, poles; I believe that is about the whole, with the exception of irons and brooms put on them at first to throw the stones off the rails, but that did not succeed.
403. What was the cost of all the repairs you have done to the cars since they have been running? £112 5s. 1d., from the 31st December to the 30th June.
404. That is for labour only? For labour only.
405. Do the papers you have in your hand contain the particulars? Yes.
406. Have you any objection to hand them in to the Committee? Not the least. (*Papers handed in. Vide Appendix A and B; also Appendix A 5, to Mr. Rae's Evidence, 13 August.*) One of these papers shows the cost of fitting two axles to two pairs of wheels we had by us.
407. The cost of these wheels does not appear in your list? No.
408. That we will get from the storekeeper? Yes.
409. What was about the cost of these spare wheels? About £15.
410. Did you not alter the wheels that came with the cars originally? Yes; they were rather too tight for gauge, for one thing, and we turned a little off the tire to give the flanges a deeper hold, from half to three-quarters of an inch.
411. Is the cost of doing that included? Yes.
412. Have you seen any street tramways in the old country? No.
413. Do you think the rails laid down in Pitt-street are the best possible rails for a street tramway? For a macadamized road I see no objection to them, but for a tramway I would give the preference to a bridge-rail or a foot-rail.
414. Is not the chief object in designing rails for a street tramway to answer for a flange-wheel, and give the least resistance to the ordinary traffic? Yes.
415. You do not suppose the present rails laid down in Pitt-street give the least possible resistance or obstruction to the ordinary traffic? Of course there is an obstruction.
416. Did you ever see Mr. Light's rails? Not that I am aware of.
417. Look at Figure 11 in this book (*Burn on Tramways*)—would not that be a better form of rail for a street tramway than those at present in use in Pitt-street? Is this wrought iron or cast iron?
418. Cast iron. Will you turn over the leaf, and look at Figure 6, the description of rails laid in France;—do you think that would be a better description of rail—would it obstruct the general traffic so much as Train's patent, the one now used here? I should say these are preferable to others. The only objection is their being cast iron.
419. A wrought iron rail, formed as they are formed, would, you think, be preferable to the ones in use in Pitt-street? They would offer less obstruction.

Mr. W. Scott.

19 Aug., 1862.

- Mr. W. Scott. 420. If laid as shown there, there would be little or no obstruction to the general traffic? No obstruction at all. The only difficulty would be in keeping this groove free of stones.
- 19 Aug., 1862. 421. *By Mr. Piddington*: Have you ever seen any grooved rails such as these? No.
422. *By the Chairman*: Of course, being connected with the railway, and as a practical man, you have paid some attention to the manner in which the present tramway down Pitt-street is constructed? Yes.
423. I presume you are aware that one side of the rail is laid higher than the macadamized street? Yes, it is a little.
424. Do you not think it would be a great improvement if it were some two or three inches lower? I do not think it would; in wet weather it would be a great obstruction, by getting filled up with mud.
425. Now the longitudinal sleepers appear above the macadamized road, which is a great obstruction? Where they do, of course it is a great obstruction.
426. It would be much better if it were two or three inches lower? I think the rail ought to be kept half an inch, at least, above the level of the macadamized road.
427. Supposing Mr. Light's rail was used, do you think there would be the same objection to the obstruction of the ordinary traffic as there is with the rail now used—Train's patent? I do not think there would—not to the obstruction.
428. Did you see them constructing the Pitt-street Tramway—do you know how the timber is laid down? Yes.
429. I believe there is a transverse piece and then a longitudinal piece merely laid upon the edge? They are checked in a little way, I believe.
430. Not otherwise secured? I think there are wooden pins driven through.
431. Now, as a mechanic, do you not think it would have been more substantial if, instead of putting these transverse pieces down, they had been all framed together, mortised and tenoned? Yes, certainly, but it would have been more expensive.
432. What would have been the difference in the cost between mortising and tenoning, and boring through and pinning both pieces with a wooden pin? A little additional expense, but not a very great deal.
433. £20 on the whole construction? £20 would not do it.
434. £50? The tenons would be useless without bolts.
435. Why not draw-bore and pin? It would rot in time and break off.
436. Not before the rails rotted—if properly put in there would be no possibility of the damp getting to it? It depends on what sort of timber is used.
437. If mortised and tenoned together, and draw-bored, and pinned with iron-bark dowels, would it not be a more substantial and better mode of constructing the foundation—that is the wooden rails—than the present mode? Yes, provided they were bolted together with tie bolts.
438. You do not believe in draw-boring? No.
439. You are a practical engineer, are you not? Yes.
440. You have not been much accustomed to using our timber? Not a great deal; more in the iron line.
441. You believe in iron, do you? To a certain extent.
442. *By Mr. Dalgleish*: Is the account you have handed in a detailed account of the repairs effected on the Pitt-street tramway cars? Yes.
443. Giving the detail of all the work done? Yes.
444. Is the detailed account of alterations also given in? I do not know whether the jobs are enumerated.
445. That is what I meant by a detailed account? The jobs are not all enumerated.
446. You stopped, in giving the description, when you stated that the inside lining had been taken off in order to strap the joints of the carriages together—was anything else done at that time? Yes, I believe some new flooring boards were put in, and any repairs that were found necessary were made. In taking to pieces old work we always find something that wants renewing; but that was the principal thing, taking the inside lining off and strapping.
447. Have you observed the arrangements for breaking the carriages? Yes, the breaks are too light.
448. What arrangement was it? It is worked by a lever and chain and a ratchet wheel.
449. Is that a good arrangement for breaking? No.
450. Have you had to repair or alter it? I had to strengthen the levers and also the chains.
451. Is it a good job now? It answers the purpose, but it is not so good as a screw would be; I prefer a screw and lever.
452. Had you to alter the axles and wheels in the first instance before the carriages could run? We had to put the wheels on the axles, and make them narrower for the gauge; they were rather too wide.
453. Did they do that with the lathe? No, just shifted them on the axle.
454. Were they turned axles? Yes, turned for the wheels and bearings only.
455. Is the tramway rail in Pitt-street now laid down in the position it was intended to occupy? That I had nothing at all to do with; I can give no opinion on the matter.
456. You are aware of the present form of rail—do you know if it was intended to be used in the mode in which it is used now? Well, I believe the wheel was intended to run in the centre of the rail.
457. Where does it run now? On the inside edge as the rail is laid.
458. *By the Chairman*: As the rail was originally intended to be laid down, they work on what was intended to be the outside of the rail—they have turned the rail? They have only put it a little wider to gauge.

459. *By Mr. Dalgleish*: Then it has been necessary to lay the rails at a different gauge to what was intended? Yes. Mr. W. Scott.
460. What was this arrangement made for? I believe it was for taking our ordinary trucks down, as far as I can learn. 19 Aug., 1862.
461. Could it not have been made still to have answered the purpose of the tramway as originally intended—could the tramway cars not have been used upon it, as originally intended, notwithstanding it was also adapted to the common trucks? I do not think there is sufficient flange to keep the trucks from running off.
462. By keeping the rails at the present gauge, and lengthening the axles of the tramway cars, could not both objects have been attained? You must alter the frame of your car altogether to do that; you cannot do it without altering the frame of the car entirely.
463. Do not the wheels run outside the car? The wheels run inside the frame-work; the bearing is underneath the frame.
464. So that the distance between the wheels could not be increased? Not without altering the frame of the car.
465. Would that be difficult? Yes.
466. What is the width of the frames? It is a 4 ft. 8½ in. gauge—they would be a little under 5 feet, not exact to an inch.
467. What is the weight of these tramway cars, do you know? I believe about two tons originally, but there have been several additions to them since—heavier tires, and so on.
468. Do you know the ascent from the Haymarket to Goulburn-street? No, I do not know what the gradient is.
469. You know the place? Yes.
470. When these carriages are loaded with seventy passengers going down that gradient, if it was necessary to stop suddenly to preserve life, would the breaks at present on the tramway cars be sufficient to attain that object? Yes, they would stop them dead.
471. At full speed? Yes.
472. *By Mr. Hoskins*: Within how many yards? Say thirty yards when at full speed.
473. *By Mr. Dalgleish*: What makes you think they are not sufficient for the purpose of a break? A screw is much better—surer, but not so quick; you have not the same power on the lever, but still they are sufficient to stop the car.
474. You have handed in a time-sheet, showing the time of the men employed on these cars;—in calculating the time of the men, did you make any allowance for the machines they may have been using in the manufacture? No, only the men's time and their wages.
475. No other expense? No other expense.
476. Supposing the same work had to be done in any other establishment than the Government establishment, what would have been the expense of making these alterations and repairs? I should say 25 per cent. added at the least.
477. Is it not usual in all cases where a lathe is used, to charge more for the lathe than what is charged for the labour of the person that uses it? Yes, it is the general custom.
478. From £1 to £3 or £4 a day? Yes.
479. Were many of these machines used? A large lathe was the principal thing that was used.
480. What would the value of that be a day when at work? 5s. an hour—£2 10s. a day.
481. Is any charge made for that in the time-sheet you have handed in? No.
482. When this work was being proceeded with in the shop, I presume the lathe was kept unemployed for other work? Yes, certainly.
483. Could it have been profitably employed during that time on other work? Yes, we have always to keep the lathe going; there is plenty to do with it.
484. You have not got another lathe that would answer the purpose at present? We have not got it put up; we have one there.
485. You spoke of a spare set of wheels—what spare set of wheels was that? As far as I can trace them, they were a pair that were lying in Mr. Randle's yard in 1855.
486. They did not come out with the tramway cars? No.
487. Was anything allowed for those wheels? No.
488. So that the cost you have named does not include the cost of the wheels? No.
489. Is the men's time charged at the usual wages they receive in the shop? Yes.
490. For all the tools employed there is no charge? No.
491. But a list of the tools employed is given in the paper you have handed in? No.
492. I thought you said the time of the lathe was given? Not the time of the lathe, but the time of the men at the lathe; but of course that is the same thing.
493. Do you keep a separate account for the tramway cars? It goes into the general account to the office, and is made out there in what they call their appropriation sheets.
494. What plan have you for taking the time of the men? The timekeeper goes round once a day and takes down each man's time, what he has been doing, and enters it in the time-book; from the time-book it is copied into a sheet every fortnight and sent to the office, and they make out the returns there.
495. That is the same plan as is adopted in private establishments? Yes.
496. You say you do not know the amount of material used? No; the storekeeper keeps that in a separate account.
497. Is there any blacksmiths' time included? Yes.
498. Is the time of the hammermen and helpers given also in that account? Yes.
499. Any price for the forge? No.
500. It has been found necessary, has it not, to lay a different description of rail for the incline from the railway station? Merely for the switch points, and for the incline from the railway station.

- Mr. W. Scott. 501. Is there any reason why the switch points were not made from the same description of rails as the tramway? It was considered, I believe, that the gradient was too steep, and the curve too sharp, and therefore it would be unsafe to put down the points that came out with them originally; they were only fit for a level road.
- 19 Aug., 1862. 502. Are the rails on the tramway adapted for sharp curves? I do not think they are.
503. Can the rails be altered easily to fit curves? By heating you can bend them to any sweep; it would be a good deal of work.
504. The flange is not supposed to make it safe for sharp curves where the wheels are all fixed? No.
505. The wheels are fixed in these cars? Yes. I do not consider that rail would have been safe from the Haymarket up to the station; the depth of flange is not sufficient.
506. Were you allowed your own discretion in repairing the cars, or did you work to order? My own discretion, along with the foreman of the carriage department.
507. Have you seen tramways in use in England? No, I have never been in any way connected with them.
508. Have you seen horse railways for coal carriage? Yes, I have seen them—not to any great extent.
509. Have you seen any heavy gradients on those lines? No.
510. Was it in Scotland you saw these horse railways or tramways? No, at Newcastle, in this Colony.
511. Have you been on lines of railway in England? Yes, since 1845.
512. What is the heaviest gradient you have seen worked by steam? From Queen-street to Cowlairst, on the Edinburgh and Glasgow Railway; I believe it is 1 in 45.
513. Is that worked with a stationary engine? It is at present. It was worked by a stationary engine at first, then by locomotives, and since by a stationary engine again.
514. Did they ever use horse power on the incline at Cowlairst? No, and they are not likely to attempt it.
515. What weight of trains or carriages generally, as a rule, went up that incline? Wagons similar to those we use now, about four tons each, five tons in them when loaded—about nine tons each.
516. How many of them? About fifteen.
517. If, on the Pitt-street Tramway, the carriages were stopped dead half way up the incline between the Haymarket and Goulburn-street, would they be able to start with the carriages and load again? I doubt it.
518. Has anything of the kind been tried? Not that I am aware of; I have not been present at any trials.
519. Were you present when the trucks were sent down the incline? No.
520. When the tramway was first opened was any attempt made to send down loaded trucks? I believe there was; I was not present; Mr. Thomas and Mr. Nealds were the principal men.
521. Who is Mr. Nealds? The Traffic Manager.
522. You do not know the result? No.
523. Have any engines been sent down the tramway? No, none.
524. Mr. Rae stated in his evidence that an engine of Messrs. Peto and Co. was sent down the incline? No; it was once proposed to send the tender down, but they took it down in the ordinary way.
525. You have tenders with breaks, have you not? Yes.
526. It would be a safe trial with a tender? Yes, quite safe. All the trucks have breaks.
527. What is the weight of your tenders, loaded? Some about twenty tons, with water and fuel; our largest tender holds 2,000 gallons of water.
528. And the smallest? About ten tons, holding 1,000 gallons.
529. Have you intermediate sizes? Yes, three sizes.
530. All fitted with breaks? Yes.
531. So that if it be thought desirable to try experiments on the line, these tenders could be made available with horses on the line? Yes.
532. Are the tenders always in use on the railway? They are generally either under repair or in use.
533. If that line was laid with rails, have you any engines that would work the incline? I believe we have one.
534. By Mr. Hoskins: What incline do you mean? The incline in Pitt-street, I understood Mr. Dalgleish.
535. Do you know what the gradients are in Pitt-street? I should say about 1 in 30.
536. What peculiarity has this engine that leads you to believe it would surmount that gradient? It has the same length of stroke as our larger engines, and smaller wheels, and of course the crank is nearer the power.
537. Are the driving wheels connected? Yes.
538. Has it ever been tried on such a gradient? It has frequently been used on the Darling Harbour branch.
539. What is the gradient there? 1 in 30 or 35, I am not quite certain.
540. I suppose you are not quite certain about the gradients on the Pitt-street Tramway? No.
541. Did you ever hear that it was 1 in 20? It may be 1 in 20 approaching the station.
542. Did you ever hear it was 1 in 20 in Liverpool-street? No.
543. Is the gradient more severe on the tramway approaching the station than on the Darling Harbour branch? Yes, I believe so.
544. What is the weight of the engine you speak of? 25 to 30 tons.

545. Is the tender attached? You can either attach or detach it—it is movable; it is Mr. W. Scott, not a tank engine.
546. Is it not generally considered that tank engines are the best for ascending inclines? 19 Aug., 1862. Yes, there is more weight on the wheels.
547. You think that an advantage? Yes, certainly.
548. Have experiments been tried with this engine on the Darling Harbour branch? No more than frequently bringing coals and other traffic up.
549. What weight of coal does this engine draw up the Darling Harbour branch? It will take six waggons, each weighing four tons, and carrying five tons of coal; fifty-four tons in all.
550. Do you happen to know the reason why the directors of the Glasgow Railway you spoke of discontinued the use of locomotive power on the incline you mentioned? There was about a mile and a quarter of tunnel, and the exhaust steam was damaging the roof of the tunnel; that was the principal reason.
551. *By Mr. Dalgleish*: Destroying the masonwork? Yes.
552. *By Mr. Hoskins*: What is the length of that incline? Somewhere about two miles, I think.
553. You alluded to the breaks on these tramway cars—I think I understood you to say they were defective? Yes, they have been strengthened from the first; they were too light.
554. I suppose the leverage power of a break is in proportion to the velocity expected to be attained by the train or carriages? Yes, the leverage power ought to be sufficient to stop the car on any incline likely to be worked.
555. Do you happen to know what was the cost of these tramway cars in England? I believe somewhere about £450 each; the two of them cost £906 3s. 3d.* I believe, including the first alterations that were made, and putting them together here ready for use.
556. Can you say, of your own knowledge, whether similar vehicles, with as good work in them, could have been constructed here for the same money? I believe they could.
557. Can you give us any data to go upon—any information? No, I have no data; that is my opinion, that they could be constructed here for the same amount.
558. You say so from your general knowledge of the cost of work? Yes.
559. Do you think it would have been superior work, generally, from what you have seen of the work done in the Colony? Yes; I always prefer Colonial work to English, because the English work gets damaged coming out, loading and unloading such heavy packages.†
560. Do you think the manufactured articles received here from England, forwarded by order of the Government, are equal to the articles you have seen manufactured and used in England for the same purpose? Yes, I believe they are, in the first instance; but there is a deal of damage done to these large packages in shipping and unloading them.
561. Then you believe it would be better to have them manufactured here? Yes.
562. They would be equally as cheap, and more durable? Yes, I believe so.
563. Are the rails laid down in Pitt-street wrought iron? Yes.
564. The rails mentioned as Mr. Light's are cast iron? Yes.
565. What would be the difference between cast iron rails and wrought iron rails in price? You must have a deal more metal in cast iron rails than in wrought iron; wrought iron rails can be made much lighter. I do not think there would be a great difference in the price per ton.
566. Of course you consider it a material advantage to have the lighter rail for a tramway, if you can get it equally durable? Yes.
567. *By the Chairman*: Who keeps the men's time in your establishment? Mr. Dickson is the time keeper at present.
568. Do the men keep any account themselves? Yes, for their own satisfaction.
569. Do they hand it in at the pay-table? No, the time keeper goes round every morning, and takes down an account of what each man has been doing the day before.
570. Have you been in any large establishment where the practice is adopted of the men keeping an account and handing it in at the pay-table? No; there are a great many different ways of keeping the time.
571. With reference to the engine you spoke of;—do I understand that the longer the crank and the smaller the wheel, the more the leverage power? Yes, the longer the crank and smaller the wheel, the nearer the power.
572. That is the reason why an engine with small wheels will ascend steeper gradients than one with large wheels? Yes.
573. *By Mr. Dalgleish*: Is the locomotive you spoke of in a former part of your evidence one of the heaviest, or one of the lightest? One of the lightest—what we call the "Governor General."
574. It is not a tank engine? No; she has 2 feet stroke, and 4 feet 6 inches wheel.
575. What is the diameter of the cylinder? Fourteen inches.
576. What is the weight of the engine? From twenty-five to thirty tons.
577. What is the weight of the heaviest engines on the line? Forty-three or forty-four tons.
578. If the wheels of the heavy engines were small in proportion, would they or the "Governor

* NOTE (on revision):—The £906 3s. 3d. includes freight, also the first capital charge of £63 17s. 6d., for erecting, cleaning, and painting, &c. The invoice cost in England was £521, or £260 10s. each.

† NOTE (on revision):—The only data I can give is, we have got as good timber in this Colony, viz., blue gum and cedar, as can be got in England, and we have some of the very best English workmen, and the difference in wages would not amount to the charge of freight.

Mr. W. Scott, "Governor General" be best adapted to ascend an incline? The larger engines, of course, with a smaller wheel.

19 Aug., 1862. 579. Was that the description of engine used on the Cowlair's incline? No, six 4 feet 6 inch wheels coupled, and seventeen and eighteen inch cylinders.

580. And very heavy engines? Yes.

581. *By Mr. Caldwell:* Can you suggest any plan to obviate the hindrance to the traffic caused by the tramway rails in Pitt-street as now laid down and used? I do not know of any, unless they are pitched.

582. Do you think pitching would answer the purpose? Yes, no doubt it would.

583. What width would it be necessary to leave for the flange to run in? An inch and a quarter.

584. What plan would you suggest to keep that clear of stones and rubbish? There is no method that we could fix on to the carriages.

585. Would there not be danger of accidents by stones filling up the groove? I do not see that there would be any great amount of danger, not on a straight road, even if the car went off the track.

586. I suppose you are aware it has already been off the track sometimes? Yes.

587. Is there any danger in the cars stopping at Liverpool-street or Goulburn-street? No danger in stopping, but I suppose there is difficulty in starting again.

APPENDIX.

A.

TRAMWAY CARS.

| Date. | | | | | | | | £ | s. | d. |
|---------------------------------------|----|----|----|----|----|----|----|------|----|----|
| 31 Dec., 1861.—Wages for repairs, &c. | .. | .. | .. | .. | .. | .. | .. | 1 | 17 | 6 |

NOTE.—£18 9s. 8d., for wages, is included in the Revenue sheet of £112 5s. 1d.—W. SCOTT.

FRIDAY, 22 AUGUST, 1862.

Present:—

MR. CALDWELL,
MR. DALGLEISH,
MR. DICKSON,

MR. W. FORSTER,
MR. HOSKINS,
MR. SUTHERLAND.

JOHN LUCAS, Esq., IN THE CHAIR.

John Rae, Esq., Commissioner for Railways, called in and further examined:—

588. *By the Chairman:* The Committee have sent for you, to ask you to return a document, handed in by you the other day as an Appendix to your evidence, and transmitted to you when your evidence was sent you for revision, having reference to the cost of the Pitt-street Tramway;—have you got it with you? I stated, in answer to a note from the Clerk of Select Committees, that I had given it to Mr. Arnold last night to refer to in the House, and that whenever he came to the office I would send it. In the meantime I sent the rough draft from which it had been copied. J. Rae, Esq.
22 Aug., 1862.

589. Seeing that that document had been handed in to this Committee, do you think you were justified in giving it to Mr. Arnold? I think so, most unquestionably. It was a copy of information that was in the office books.

590. But it was the property of this Committee—you handed it in as a document to this Committee—and I ask you, do you think you were justified in giving it into the custody of any individual before you returned it to the Clerk of Select Committees? It certainly did not occur to me in that light. The matter happened in this way: Mr. Arnold, in a hurry last night, at the House, asked me if I could supply him with information as to the expense of coaching the tramway cars; I said I could, and ran off for it at once, and having obtained this document, as the first upon which I could put my hand, I handed it to him. Of course it is an exact copy of information contained in the books of the office.

591. You see when you were requested by the Committee to bring this document, and furnished it, it became an Appendix to your evidence, and was transmitted to you with your evidence, when it was sent for revision. It seems that appendices are usually transmitted with evidence when sent for revision, though that is a sort of document that should not require correction after having been handed in. And the Committee believe that you had no right to give it out of your custody to any person whatever until you returned it to the Clerk of Select Committees? Perhaps I may have done wrong in doing so, but I looked upon it, not as part of my evidence, but as a mere office document which could not be altered. I could have given Mr. Arnold this rough draft, of which I believe it is an exact copy, if the clerks had not left; but I went off from the House in a hurry, when he asked me for the information, and took up the only document containing that information on which I could put my hands. The clerks were all gone, and I had no other means of supplying the information then. It did not occur to me that I was doing anything wrong in supplying the Minister at the head of the department with the information he wanted from the official document I had handed to the Committee.

592. The Committee do not know the Minister from any person else? I am aware of that.

593. The Minister had no more right than anyone else to make use of documents handed to the Committee;—nothing should be published until the Report of the Committee is brought up; and no Member of the Committee, whether a Minister or not, has any right to make use of any information obtained by the Committee, until then—in fact it is a breach of privilege? I may state that the Minister did not apply for it as part of the evidence; he simply asked if I could supply him with the information.

594. *By Mr. Dalgleish:* Given before the Committee? Not at all. He did not allude to the Committee directly or indirectly. It was with reference to something that was said in the House at the time. He came to me and said, "Could you furnish me with a statement of the expense of coaching the tramway cars," I think it was whether the expense was more than the receipts; I said my impression was that it was not—that I was almost certain, but that I could supply him with the information in a few minutes; and I just ran down to the office at the moment, and took the first and only document I could get that would give the information. I never have said anything to him, directly or indirectly, of the evidence I have given here.

595. *By Mr. Hoskins:* You know the information contained in the document referred to is similar to the information contained in the document you sent up this morning? I believe it is an exact copy. I could have given him this as soon as the other, if the clerks had not left the office.

596. *By Mr. Forster:* Did you get orders from Mr. Arnold to hand to him that document? Not at all; he merely asked for the information, and that was the only way I had of giving it to him.

597. Was Mr. Arnold cognizant of its being the actual document that had been handed to the Committee? I am not aware. He merely received it from me as office information.

598. *By Mr. Dalgleish:* Did Mr. Arnold allude to the Committee at all last night, in conversation with you. Not in the slightest degree. I was not with him two minutes.

599. Did you give him any information with regard to the questions asked or answered in the Committee? Not a syllable that I remember.

600. Then if he mentioned any such information, he must have obtained it from other sources? I presume so.

601. Are you aware whether he did mention any such information in the House? I am not aware that he did; I have not seen the report of the proceedings last night.

J. Rae, Esq. 602. You are not aware that Mr. Arnold said, "Neither did the answers given to the
 22 Aug., 1862. "Honorable Member's questions, by the gentleman alluded to, in any way bear the construction which the Honorable Member had put on them"? I do not think I said anything about it, but I would not be very certain. I may have made some casual remark on the subject; I do not remember having done so. I do not remember making any reference to the evidence at all.

603. *By the Chairman*: Did you hand him the written evidence? No, I merely ran over for this document; and I remember, when I put it into his hand, he asked me if the coaching charges were higher than the receipts, and I stated to him, as far as I remember, that I was almost certain they were not so high as the receipts by themselves, and I may have added that I stated so before the Committee; but I was in a hurry at the time, and I did not pay very much attention to what passed.

604. It was the document appended, not your evidence, that you handed to Mr. Arnold? Not the evidence; it was a copy of this memorandum.

605. *By Mr. Dalgleish*: Then you had not a copy of your evidence in the House last night? No, I had not.

606. Then Mr. Arnold had no means of knowing what questions I asked you? He has never seen my evidence. He knew I had been examined, I believe, but he never saw my evidence.

607. You think you informed him of the questions and answers asked and given on that matter? No, as I have told you, I think I said the coaching expenses were not higher than the receipts, and that I had stated so to the Committee. But it was really done in such a hurry that I have no distinct recollection on the matter.

608. Did you volunteer to Mr. Arnold to give him this information? I did not; he asked me for the information, and I believed when I was supplying it that I was merely supplying information that the office documents furnish, nothing more.

609. The information that you gave the Committee on the last occasion of your examination was to the effect that the passenger traffic, with the ordinary expenses attending on it, did not pay the working expenses of the line? Do you mean the actual expense of coaching?

610. That the passenger traffic did not pay the working expenses of the line, independent of the alterations and independent of the permanent way? No, it did not, latterly.

611. Then, if I stated last night that the passenger traffic did not pay the working expenses, I was correct? Let me be quite sure of the way you put it. All my statements were made from these figures, and I can state them just in the same manner now if you will put your questions in the same way. I mean with reference to including or excluding the expense of maintenance.

Mr. Forster objecting to the line of examination, witness was directed to withdraw. Committee deliberated. Witness recalled, and no Member of the Committee desiring to put further questions, informed that his attendance would be no longer required. Before leaving the room, the witness said:—

I may state that if I have done wrong I regret it, but I did not think I was doing wrong at the time. I believed that if the Minister asked me for information from the office, it was my duty to furnish him with it from whatever sources I could, and although I handed him the document I had previously laid before the Committee, it only contained information that was procurable from the office records.

John Whitton, Esq., called in and examined:—

J. Whitton, Esq. 612. *By the Chairman*: You are Engineer-in-Chief for Railways? Yes.

613. You know the object of this Committee,—to inquire into the desirability of taking up the Pitt-street Tramway? Yes.

22 Aug., 1862. 614. Was the Pitt-street Tramway constructed under you? The details were carried out under me.

615. Do you think it is constructed in the best possible manner? I think it is, considering, of course, the materials used in its construction. I had no option whatever with regard to the rails or timber.

616. You did not order the rails? I did not.

617. Did you order the timber? I ordered the timber simply as Colonial timber, but the manner was arranged in England in which the line was to be laid down; the drawings were furnished from England.

618. I believe there are short pieces of timber, of about six feet long, as transverse pieces, and then the longitudinal rails are laid upon them? The rails are laid upon longitudinal timbers.

619. I am speaking of the longitudinal timber rails? The rails are laid upon the longitudinal timbers.

620. How are these longitudinal pieces secured to the transverse timbers? By knees.

621. Iron knees? Iron knees. (*Witness produced a plan.*) This is the original drawing sent out from England, and the tramway is laid in accordance with that.

622. Does this show a bolt or a pin? A pin—a wooden treenail.

623. Do you not think it would have been much better if the transverse pieces had been framed into the longitudinal timbers? I do not know that it would. The timber is iron-bark, which twists and warps very much when first used; there is no way of putting it together without some shrinking taking place.

624.

624. Do you think the rail used is the most suitable rail for a street tramway? I do not know any other description of rail that could have been much better. J. Whitton, Esq.
625. Is not the chief object to have a rail that answers all purposes of a tramway, and at the same time offers as little resistance or obstruction to the ordinary traffic as possible? This offers a little obstruction, but it is not so much the fault of the rail as the want of pitching on the two sides; if they were pitched with granite there would be less difficulty in carts or other vehicles passing over it than at present. The cause of the obstruction is not the way in which the rails have been laid down, but because the carts run along the edge of the rail and cut down the metalling. 22 Aug., 1862.
626. Do you not think it would have been much better if the tramway had been laid two or three inches lower? I do not think it would; if it had been lower the metalling would have worn down to it.
627. Looking at the formation of the street, it seems the crown of Pitt-street is very high? Yes, it is between the rails; it is kept high.
628. Do you think that if the tramway was pitched on both sides of the rail it would get rid of the objection now made, in consequence of the obstruction to the ordinary traffic? I do not think so, because in England, where they have been laid down, they have taken them up again, in consequence of the projecting flange.
629. There would still be an obstruction? Yes, to a certain extent.
630. Have you seen Mr. Light's rail? I am not aware that I have; I have seen so many modifications of rails for tramways that I scarcely remember what forms I have seen. (*A drawing of the rail in question was shown to the witness.*)
631. Do you think that would be a better form of rail than Train's patent—the one now adopted? I do not know that it would; any description of rail laid down in a public street would be objectionable. If laid down in the way this is shown, the two sides must be pitched with granite or hard stone of some kind, and there would still be the objection of this groove being filled up by carts passing over it.
632. I see by a paragraph here, that Light's rail is so formed that the wheel working in it forces the stones out of the groove? The object of the invention may be that it should work itself clear, but I doubt very much if it will do so in practice.
633. Have you tried any trucks upon the tramway? I have not.
634. Have there been any experiments tried on the Pitt-street Tramway? I do not know of anything in the way of experiment; I have heard that a truck loaded with stones stuck fast at the bottom of the incline at the Haymarket, with six or seven horses attached to it, but they must have been "jibbers."
635. What weight of goods, besides the weight of the trucks, should four horses draw on the Pitt-street Tramway? Exclusive of the weight of the truck, they should draw about six tons of goods.
636. What would four horses draw on the ordinary street, supposing the tramway was removed? Probably three or four tons. I am speaking now of the incline of 1 in 20. It depends a good deal, of course, on the description of horses employed. They would be very good horses that would bring six tons of goods on the tramway up that incline, exclusive of the weight of the truck. Four horses should draw about ten tons including the truck.
637. And on the same street, if the tramway was removed, four horses would not draw more than four tons? I do not think they would.
638. Do you include the vehicle? The dead weight altogether.
639. You think that horses would draw fifty per cent. more on the tramway than on the ordinary street? They will draw much more, no doubt.
640. What is the reason goods have not been conveyed on the tramway? I do not know of any particular reason. One cause has, no doubt, been the unsettled state of the question with reference to the Darling Harbour branch. If that is to be constructed, it would be useless to go to any expense for goods sheds at the Circular Quay.
641. Do you believe the present tramway cars are a great convenience to the Southern and Western Railways, for passengers? I believe they are for passengers; that is, the travelling is much easier in the tramway cars than in any other conveyances.
642. The price is the same? I believe the price is less on the railway cars.
643. I saw a 'bus going up the street with a piece of tin on it with "3d. to the Railway Station" painted on it? That is the same price as the cars; I have not seen that; I thought it was 4d.
644. Do you suppose the passengers by the railway would be inconvenienced to any great extent if the tramway was removed? I think they generally prefer the tramway to the ordinary conveyances; but if there were other means of getting to the Railway Station, I do not think there would be any great inconvenience if the tramway were removed.
645. If it is found the tramway will not pay its working expenses, do you think the Government should run the cars between the trains, merely as a street conveyance? I think that is hardly a matter on which I could give an opinion. It is a question more for the public to decide, whether the tramway should remain down or not. No doubt all such matters should be made to pay, not only their working expenses but interest on the money expended.
646. You do not know whether it does or does not pay—that is not in your department? No.
647. If you had had the ordering of these passenger cars, would you have ordered them so large as the present ones? If the whole matter had been in my hands, I should not have ordered them at all. They were not ordered of any particular size, but to be sent out in accordance with the tramway cars used in England—the best form of rail and the best description of car.

- J. Whitton, Esq.
22 Aug., 1862.
648. You are not favourable to the construction of tramways generally? I am not.
649. You prefer railways? Yes, decidedly.
650. We could not have a railway down Pitt-street? I do not think it is necessary, but I strongly recommend that the Southern line should be extended to Hyde Park.
651. You do not think it any great convenience to passengers that the Pitt-street Tramway should be continued? The passengers generally are much better pleased with the cars than with the ordinary 'buses.
652. *By Mr. Sutherland:* Do you think that there would come one passenger less by the railway if the Pitt-street Tramway were taken up? I do not think there would.
653. To what depth are the timbers of the tramway sunk in the street, from the top of the rail to the bottom of the timbers? About thirteen inches.
654. Are you aware of the depth where the water-pipe lies under this timber in the centre of the street? No, I am not; but it is quite clear the tramway can do no harm to the water pipe, even if almost laid on the top of it, if the same damage be not done by the ordinary conveyances in the street. I presume the question has reference to any injury the water pipe might sustain from the pressure upon it of the cross timbers of the tramway.
655. Yes, that was partly the intention? It is quite clear the pressure can be no greater.
656. You say it is quite clear the water pipes can receive no harm from the cross bearers of the tramway? Not more than from the ordinary traffic of the street. I am not aware that in any single instance the cross bearers touch the water pipes; if they do, the water pipes are not sufficiently low.
657. What is the weight of the tramway cars loaded? Loaded with about 100 passengers, I think they weigh from seven to eight tons—nearly eight tons.
658. Is that not more than the general traffic of the street would be in any one instance? I think not; ten tons for four wheels would be two tons and a half on each wheel, and I believe some of the drays have four tons on two wheels at times.
659. You are aware that the water-pipes have been broken a great many times since the tramway has been working? I am not aware that that has arisen from the tramway; I am aware that they have been repaired, but for what cause I do not know.
660. Have you known that there has been difficulty in getting them repaired, on account of the tramway being there? I do not know of any difficulty that there need be.
661. Are you aware that the men under your charge have stopped them from being repaired? I am not aware of it. I heard notice had been sent to the Town Hall that before they were repaired notice should be given to the Commissioner of the intention to repair them, but I am not aware that that has been carried out.
662. According to the rules of your office, notice has to be sent to your office, and a reply or authority given to allow them to repair them? A man called at my office the other day, and said he was going to repair some of these pipes, and asked me about the notice; and I told him to go at once and repair the pipes, so long as he did not obstruct the traffic of the tramway.
663. Then you were not aware of the men under your charge stopping them from being done until they got that notice? I am not, because I gave the order distinctly to the man myself to repair them at once, provided he did not obstruct the working of the tramway, and did it between the times the cars ran; and so far as I know, he did so.
664. Is it possible to do it between the times that the cars run, when there is a large breakage of the water? The man told me he could do it, when he made the application.
665. I wish the question not only to apply to any particular man, but to any ordinary breakage there might be in the pipes? I do not know of any difficulty in repairing the pipes; I do not know what the breakage might be, but a new pipe might easily be inserted in a very short time.
666. Are you aware of the water being off in Pitt-street for two nights and a whole day through their not being able to get the pipes repaired? I have not heard of it.
667. If such a thing has been, is it not a great risk to the property in that street, in the event of a fire taking place? If such a thing did take place, I should say it was unnecessary.
668. That is no answer to my question;—the question I put to you is, if such a thing did take place, would it not be a great injury to property in that street, in the event of a fire taking place? No doubt; it would be a great inconvenience to the public generally, even assuming there was no fire, to be without water for two days and a half.
669. In the event of the tramway remaining there, would you not think it advisable to have the water pipe either removed out of that altogether, or other pipes put down clear of the tramway? If the obstruction be so great as has just been stated it is, there is no doubt some better provision for repairing the pipes should be made; but I can scarcely understand how the water should be off for two days and a half in Pitt-street, simply because the tramway cars run there.
670. You will remember I said two nights and a day? The length of time is about the same.
671. Are you aware that the water plugs that are used in case of fire are right in the centre of the tramway, and that either they cannot work the plugs or the tramway cars cannot run, in the event of a fire taking place? I believe they are in the centre, but in the event of a fire, I should see no objection to stopping the cars for the time.
672. Have you given any orders that the cars should be stopped in the event of a fire? I have nothing whatever to do with them in any shape, or with the working of the traffic on any of the lines, either the Pitt-street Tramway or any other portion.
673. Who is the person having charge of that? Mr. Nealds has charge of the working of the traffic.
674. Are you aware that the cars were stopped on the Sunday the fire took place in King-street, through the engines being at work, the water being taken from Pitt-street to put the
fire

fire out? I am not aware of it; I never heard of it; but I may inform the Committee that reports connected with the tramway never come to me unless they are sent to me by the Commissioner, nor do I feel it my duty to take any notice of the working of the tramway unless I am specially requested to report.

J. Whitton,
Esq.
22 Aug., 1862.

675. Then in the event of anyone stopping the cars, by either repairing the water pipes or having the hose of an engine for putting a fire out connected with the main in Pitt-street, who would be responsible for that stoppage? I think for any unnecessary stoppage the City Council would be responsible; but for any necessary stoppage I think it would be a matter of duty merely. If the tramway cars cannot run when the water pipes are required for other purposes, no doubt they ought to be stopped.

676. You are not aware that the persons in charge of the cars tried forcibly to remove the hose out of Pitt-street at the last fire? I am not aware of it; I never heard of it before.

677. And you are not aware that the men having charge of the Pitt-street Tramway forcibly stopped the men from repairing the pipe in Pitt-street? I am not aware of it.

678. If they did so, or if they have the power of doing so, do you think it is right the water pipes should remain there at all to be under their control? No; if the obstruction exists, no doubt it would be better that either the tramway were removed or the water pipes.

679. Do you think the tramway in Pitt-street is an obstruction to the ordinary traffic of that street now, after seeing it in work for some time? It has been very much complained of as an obstruction.

680. Do you think there would be any difficulty in carrying heavy loads on that tramway, now, after seeing it in work? It is simply a matter of power, there is no difficulty beyond that.

681. Would it be profitable for the Government to establish traffic upon that tramway now for goods? That would depend very much on the rates charged for the conveyance of goods.

682. I suppose you to be aware of the rates charged now for Government cartage? The rate is 4s. a ton, I believe.

683. Taking that as a guide to my question, would it be profitable for the Government to carry their goods by the Pitt-street Tramway, in place of paying for carrying them by the ordinary cartage? Yes, I think they might be taken along the Pitt-street Tramway at a less expense; but the difficulty would be, that the tramway does not go to the different stores in the town; the goods would have to be carted from the stores to the tramway.

684. Do you suppose that even the cartage would be 4s. a ton if the Government stores were landed at the Circular Quay, in place of Botts' Wharf, as they are now? No, I do not; but looking at the arrangement the Government made with reference to Botts' Wharf, I do not know that at the present time they could order the goods to be landed at the Circular Quay.

685. I am taking the future into consideration;—when this contract is done with, the goods may be landed at the Circular Quay, and I wish to have your answer to this question;—supposing they were landed at the Circular Quay, would the carriage of them cost 4s. a ton then? Certainly not.

686. What do you suppose would be the expense of carting from the Circular Quay to the railway station by contract, as at present? That I do not know.

687. Supposing it is 4s. from Botts' Wharf, coming up that steep gradient, what would it be likely to be, taking the shorter distance from the Circular Quay and the level road all along? It would be something less, I have no doubt; but really I do not know what the price would be.

688. You have stated in your former evidence that there would be no trouble in repairing or renewing the pipes in Pitt-street, or running the tramway over them, if twenty or thirty feet of pipe were lifted at once—that the tramway could be carried over by planking? Yes, I think so still, if the water-pipes had been at the depth I assumed they would be below the surface of the street.

689. What depth was that? About two feet six inches below the level of the street, I assumed they would be. No doubt the tramway is inconvenient when the pipes require repair, but I do not think the inconvenience is insurmountable.

690. Is it not more expensive to the inhabitants of that street, making and repairing their connections, through the tramway being there? There is no doubt it would be more expensive, but at the same time the connections are something very small, they require a very small opening; and I assume that it is very seldom necessary to repair the main pipe.

691. Are you aware that the main pipe has been broken six times in the last six months? I am not aware of it. If it has, I should think it is because the pipe has been laid much too near the surface of the street, or from the pressure.

692. *By Mr. Hoskins:* Would not the ordinary traffic be equally obstructed by the fire plugs being used at a fire, as well as the tramway cars? The ordinary traffic could take to one side of the street, but the tramway cars cannot do so.

693. In every case are the fire-plugs in the centre of the tramway? I believe they are in many instances, but I am not clear that they are throughout the whole length of the tramway.

694. However, this is not a very frequent obstruction? I have never heard of it before.

695. With reference to the inconvenience which is stated to arise in getting at the water pipes and sewers, that inconvenience and expense falls upon the Government, does it not, in repairing the road of the tramway—not upon the residents? The expense of getting at the pipes of course falls upon the residents or the Corporation; the Government do not pay for the repair of the pipes.

696. If the roadway is broken up by the servants of the Corporation, it loosens the roadway and requires more expense in consolidation? To that extent some expense falls upon the Government.

J. Whitton,
Esq.
22 Aug., 1862.

697. You also said that there have been complaints of the tramway as an obstruction—do you consider it an obstruction to the traffic of Pitt-street? Yes, I do.
698. In what way? Simply from the fact of Pitt-street being a very narrow street, and the rails standing up above the surface of the ground, making it very inconvenient and sometimes dangerous for carriages or cabs to cross. I think the two things are incompatible, a tramway in a public street and traffic by ordinary conveyances.
699. Have you ever seen a street tramway used before? I have seen many at the Docks at Liverpool and Hull, but no other conveyances were used on the same roads. In all cases in which they have been laid in the public street I believe they have been found inconvenient.
700. Have you ever seen street tramways used for transporting passengers from one point to another? Never.
701. You are aware that such tramways are in existence? Yes, and I am also aware that others have been pulled up.
702. Where have they been removed? In London.
703. Are there no lines of street tramway in existence at the present time? There are.
704. It is only in particular localities they have been removed? I assume, from the fact of their being removed, that they were found an obstruction; and I know that many applications have been made to have them taken up, which have not yet been successful.
705. Do you know they are in extensive use in large towns in America? Yes, and I am also aware that the streets in America are very much wider than here or in London. No doubt the conveyance by means of cars running on tramways is much more easy than by the ordinary omnibuses, but at the same time, when they are laid down in a public thoroughfare they must be an inconvenience.
706. The primary objection to this tramway appears to be the resistance or obstruction to the ordinary traffic of vehicles crossing it? It is not the crossing at right angles—it is the oblique crossing that is the objection.
707. Do you not think that might be obviated by having the sides pitched, as you have suggested, with blocks of granite or timber presenting a concave surface? Yes, that is what I stated some time ago, that to make the tramway better, it would be advisable to pitch it with large stones on either side; but at the same time that does not remedy the obstruction caused by the rails standing above the surface of the street.
708. Could not the surface of these blocks of stone or timber, whatever might be used, be level with the top of the rail on which the wheel of the car runs? Yes.
709. Would there be an obstruction then? Yes; one side of the rail is higher than the other, and though the stone might be placed level with the lower side, the higher side of the rail must still stand up above the street. There must be an obstruction, unless you have a grooved rail, or the pitching be extended over the rail. No doubt it might be pitched so as to present no obstruction whatever, but then the tramway cars would be apt to be thrown off the line.
710. Do you think that might not be obviated by having some kind of guard-iron fixed in front of the wheels of the cars, so as to throw out any stones or obstruction offered to their passage in the groove of the rail? It would be somewhat difficult to fix it so that it would work. You must give a certain play to the wheel, and if the guard-iron were fixed so low as to reach the bottom of the groove at ordinary times, when the cars were loaded it would not travel at all, because the springs would yield to the weight and let down the guard.
711. Do you consider the line as it stands a great convenience? I believe it is, for passengers.
712. What is the length of the line? About two miles.
713. How long do the cars occupy in running that distance? About a quarter of an hour.
714. That offers great facilities to passengers transporting themselves from one part of the town to the other? No doubt it is much more easy for the passengers. It might be that the tramway would be considerably improved by pitching the sides with granite.
715. You think that, if your suggestion to pitch the sides with granite were carried out, the objections to the tramway would be obviated? I do not know that they would be entirely obviated, because I have heard that horses get frightened at the cars running down the street—the street is so narrow; and all sorts of objections have been raised to it.
716. Do you know from whom these objections mainly proceed? I can only say from the public. I have heard them so often that I cannot particularize; but some people always have an objection to everything. The greatest objection I see to the Pitt-street Tramway is, the narrowness of the street.
717. You think some of the objections are frivolous? I do.
718. Do you happen to know whether these objections have mainly proceeded from residents in the street? I do not think they have; I have not heard them from residents.
719. Do you think that if the cars were run more frequently, there would be an increased number of what may be called way passengers—persons wishing to travel from one part to the other—who would avail themselves of the railway cars? I think so. I think they should be run oftener.
720. Not alone to meet the railway trains? No, but to make it pay as a commercial speculation.
721. You think the public do really consider this tramway to be a great convenience? I do.

THURSDAY, 28 AUGUST, 1862.

Present:—

MR. W. FORSTER, | MR. HOSKINS.

JOHN LUCAS, ESQ., IN THE CHAIR.

Sydney Charles Burt, Esq., called in and examined:—

722. *By the Chairman*: You are an auctioneer in the City of Sydney? I am.
723. Your place of business is in Pitt-street? In Pitt and Castlereagh streets.
724. How long have you been carrying on business there? Since 1849, I think.
725. You were carrying on business there before the establishment of the Pitt-street Tramway? Yes.
726. Have you given any attention to the construction of the Pitt-street Tramway, or the working of it since it has been in operation? Yes, I have paid considerable attention to it.
727. Do you believe that the Pitt-street Tramway is an obstruction to the ordinary traffic in that street? I do.
728. Do you think it injures property in Pitt street? Seriously.
729. Do you find it has any effect upon your business? I cannot say it has any effect upon our business, because we have the other entrance by Castlereagh-street; but I find that we are compelled to make more use of the Castlereagh-street entrance than we formerly did. It would have injured my business if I had not had the other entrance.
730. Do you think it dangerous? I do.
731. In what way? It is dangerous for this reason—that it is impossible, from the rise of the rails above the surface of the road, for a vehicle to pass over the tramway except by being turned directly across the street; you cannot turn off in the ordinary way.
732. Your objection, then, is that the rails are above the street—that the rails are laid too high? Yes.
733. Do you think there would be the same objection if the rails were some two or three inches lower? Not so much.
734. If the line were paved along each side with one or two rows of granite, to raise the street to a level with the rail, do you think that would have the desired effect? I think it would be very much better—that is, if it were done on both sides.
735. Have you seen any accidents which have occurred in Pitt-street in consequence of the tramway being there? I have seen breakages of vehicles. I have seen a wheel torn off the axle by catching on the rail in going over it.
736. Were you one of those who petitioned for the tramway? No.
737. Did you sign a petition against it? I did. I was always opposed to it, from the narrowness of the street.
738. You have no doubt it depreciates the value of property there? I have not a doubt about it myself. I consider my own property considerably depreciated.
739. And it also interferes with business in the street? Yes, almost every gentleman directs his coachman not to go into Pitt-street; it is a general direction not to go into Pitt-street, except when it is necessary to cross it.
740. In consequence of the tramway? In consequence of the tramway.
741. *By Mr. Forster*: I suppose you have often walked along Pitt-street in wet weather? Yes.
742. Do you not find it a serious nuisance to foot passengers? Yes; the mud and slush collect between the rails.
743. Can you say, putting all the inconveniences on one side, and the supposed convenience to passengers by the cars on the other, whether the convenience or the inconvenience is the greater? The inconvenience, I should say.
744. Would you recommend its being taken up? Yes, I think so. It was originally contemplated to put goods trucks on the tramway, and I think if that were done the street would be almost wholly taken up by the railway traffic, there being so little room to pass between the tramway and the side of the street. The street is altogether too narrow for it.
745. Do you think there is any street in Sydney wide enough for it? I do not think there is.
746. In that case the tram system is inapplicable to Sydney? Yes, to our narrow streets. It would be very applicable to Melbourne, where the streets are as wide again; the space would not be lost there.
747. *By the Chairman*: Do you not think it would be much better if the tramway had been taken on one side of the street? Very much better. You see, the best part of the street, in a street so narrow as Pitt-street, is the crown of the road. From the heavy rush of water, we have all our streets formed with a great deal of crown; and that is all taken up now by the tramway, so that a vehicle passing when the cars are going by is run into the gutter, or on to the awning posts.
748. Instead of laying the rail some two or three inches below the macadamized road they have actually laid it two inches above it? Yes; and the road will wear away from the iron, however good it may be; you cannot possibly make an ordinary macadamized road so good as to lay level with the iron.
749. *By Mr. Hoskins*: I infer that if the tramway had been laid down on one side of the street you would not have had so much objection to it? Not so much. There would have been great objection by the owners of property on that side of the street on which it was laid, on account of obstructing the access to their premises; people calling at shop doors in carriages could not remain there.

S. C. Burt,
Esq.

28 Aug., 1862.

- S. C. Burt, Esq.
22 Aug., 1862.
750. Do you not think having the tramway there increases the passenger traffic in the street, by bringing persons from the other streets to travel by the cars, and thereby increases the trade of the shopkeepers in Pitt-street? I think not.
751. Is there not considerable "way" traffic;—do not the cars take up and put down many persons besides those who go on by the railway? Very few people get down; they go right through. The tramway has driven a great deal of traffic out of the street, both foot passengers and vehicles.
752. Are there not a larger number of persons conveyed by these tramway cars from the north to the south end of the city than by the omnibuses? Yes; the George-street 'buses have suffered, because the people all go to the railway by the tramway cars.
753. You think the majority of passengers by the cars are railway passengers? I do.
754. Have you ever heard it stated, or do you consider yourself, that the tramway cars are a much improved method of traction for passengers? I believe they are a much improved mode of conveyance—no doubt about it.
755. You would still object to having the tramway in Pitt-street, even if laid down on the side of the roadway? Yes, I would; there is not sufficient space; the street cannot afford the width to be taken off it; and there would always be great danger of collision.
756. What is the width of the street? I think about 23 or 24 feet from kerb to kerb; I do not know the width the rails take up.
757. Is there sufficient room for two vehicles to pass on one side of the tramway? No.
758. You think one great objection to the tramway is the danger of accident to vehicles crossing it? Yes.
759. Do you not think all this danger would be obviated if there were some pitching on each side of the rails, with a concave surface? It would certainly be improved.
760. Do you not think it would be entirely obviated? No, because between the tramway cars and the kerbstone it is impossible for two vehicles to pass. There is scarcely room even for one vehicle to pass the tramway car; the gutter occupies about three feet, and the road on the side of the gutter is thrown up to such a height that a vehicle is tilted to one side, and if it comes too near it must touch the awning post. A much wider street is, of necessity, much flatter.
761. I think I understood you to say that you considered property in Pitt-street considerably depreciated in value in consequence of the tramway? I do.
762. Have you any data to go upon—have you seen any sales of property there? The rents are reducing, and I have noticed that the shops are not so good as they were.
763. Is it not a fact, that shop rents all over Sydney are reduced? I think not. The shops in Pitt-street do not do the business they did.
764. You have not seen any sales of property in Pitt-street that would enable you to form any reliable estimate whether there has been an actual depreciation or not? No, it is a class of property that seldom comes into the market.

WEDNESDAY, 3 SEPTEMBER, 1862.

Present:—

| | | |
|--------------|--|--------------|
| MR. DRIVER, | | MR. FORSTER, |
| MR. DICKSON, | | MR. HOSKINS. |

JOHN LUCAS, Esq., IN THE CHAIR.

Edward Bell, Esq., City Engineer, called in and examined:—

- E. Bell, Esq., C.E.
3 Sept., 1862.
765. *By the Chairman:* I believe you gave evidence on the subject of the Pitt-street Tramway in 1860? I did.
766. Do not the tramway cars run over the water pipes? The water pipe is about the centre of the tramway track.
767. Did you notice the workmen when they were constructing the line? Yes, in some places.
768. Do you think they adopted the best plan of constructing it? They were putting in the timbers very light, I thought. I did not pay much attention to it.
769. There is first a transverse sleeper laid on the ground, and a light wooden rail laid on the top of that, merely secured by an iron knee? Yes.
770. Do you not think it would have been much better if they had been mortised, and tenoned and framed together? Yes, I think it would, if the timbers had been heavier.
771. But whether or no? I do not think it would have improved the present timbers to have cut a mortise in them.
772. Not to have draw-bored and framed them together? I think the timbers were not strong enough for framing.
773. Not six by twelve? These were not six by twelve.
774. Would six by twelve be strong enough? Six by twelve would be strong enough, on edge.
775. The present wooden rails are laid on edge, are they not? Yes.
776. But there is no way of keeping them together except the earth on each side? I think not, except the iron bracket nailed into the angle.
777. Would it not have been much better if they had been framed together? If the timbers were strong enough.
778. If they were six by twelve? Yes.

779. Is that the plan you would have adopted? I think I would have made them twelve by E. Bell, Esq., twelve. C.E.
780. Do you think the rail laid down is the most suitable that could be got for the purpose? I think not. 3 Sept., 1862.
781. Would you have had a grooved rail? No; I think I would have had a simple flat bar laid on the twelve-inch log of timber.
782. Do you think Mr. Light's rail would have suited better? No, I think not. The objection to the present rail is that the road can never be kept even with the surface.
783. Do you think if there was a course of stone pitched up to it on each side of the rail, that that would remove the objections? Yes; I stated that in my evidence in 1859.
784. As at present constructed, the tramway causes great inconvenience and obstruction to the ordinary traffic, does it not? It is such a nuisance that no one drives through Pitt-street who can avoid it.
785. You think it would remove the objection if a course of stone were pitched down each side of the rail? Very greatly.
786. Do you not think the tramway was originally laid at least two or three inches too high? It never occurred to me.
787. I may remark that there is a great curve to the roadway in Pitt-street, and the tramway is laid an inch, or, in some places, two inches above the ordinary level, and as the macadamized road, as was sure to be the case, has worn down by the side of it, in some places the rails are as much as three inches and a half above the level of the street;—do you not think it would have been much better to have laid it lower originally? Generally it did not occur to me that it was laid too high; but in some few places, near Hunter-street and some other points near the Haymarket, I have noticed that the rails were too high.
788. Could you give the Committee any information as to the probable cost of laying a course of stone on each side of the rails? A course of hard stone?
789. Yes, at per lineal yard if you like? It would be necessary to get granite pitchers for that.
790. Would not the hard blue stone answer the purpose? I think not; it does not come in suitable shapes and sizes. I think the granite pitching would be the cheapest and best, and I should think it would not cost less for a course on each side than 4s. 6d. a yard run. You might do it for from 3s. 6d. to 4s. 6d. if you imported a quantity on purpose for it. That is about the price it has cost us for such granite pitching stones as we have had to purchase.
791. You now mean a stone on each side of the rails—four courses? No, two courses; a stone on each side of the rail, about a foot in width.
792. Two courses of stone, a foot wide, for 3s. 6d. a yard lineal? I think it might cost about 3s. 6d. I know all the granite pitches we have purchased or imported have cost that money—say 5s. or 5s. 6d. a superficial yard; and the stone we purchased from Gabo Island was much dearer.
793. Where do you obtain granite pitching from now? We have purchased none since the Corporation have been in existence; it was bought during the time of the Commissioners—the granite pitchers from the Aberdeen vessels, and the Gabo Island granite from Mr. Johnson, who then worked the Gabo Island quarry.
794. Do you think the present rail is the most suitable? No, I do not. I think a flat bar on a twelve inch square log would answer better, and be much cheaper, similar to those I described in my previous evidence as laid in New York. I then stated that I had seen tramways in the City of New York, “constructed with wooden sleepers laid longitudinally, with a flat bar of iron laid on their surface.” The bar was from two to two and a half inches wide and one inch thick. That was all the projection that existed above the surface of the roadway, because the wood on each side presented a surface of about four inches, which was not so easily depressed as the material of which the road is made in Pitt-street; a wheel ran easily over it. An inch was scarcely enough to cause any serious impediment to large gig or carriage wheels passing it.
795. Do you think the present tramway is any convenience to the public? It does appear to be a convenience to passengers travelling upon it between Redfern and the Circular Quay, but to the public generally it is very little convenience, and to most persons it is very inconvenient, particularly to the shopkeepers in Pitt-street, who complain that they are great losers by it.
796. The flange on the present rail is not above five-eighths of an inch deep? About five-eighths, I think.
797. Would not a bar of iron an inch deep be an obstruction? It is not the flange of the rail that is now an obstruction and a nuisance; it is the rail itself and the timber, which is in many places standing five inches above the ground, or above the ruts on each side which now exist. The centre of the track is now above the rails in many places, but in places the rails—that is the timber and the iron—are five inches above the surface of the ground immediately in connection with them.
798. Do you find that the tramway has done any injury to the City property, such as the water mains? The water mains have suffered from it; five times they have been broken, and on each occasion the whole of Bourke Ward has been deprived of water two days, and in one instance three days.
799. What has it cost the City authorities to repair the damage? From £7 to £10 and £11 each time.
800. Do you find any difficulty in making connections with the water mains in consequence of the tramway? We find no difficulty in making connections, but it causes considerable inconvenience to the tramway cars when we have to make them; they have to stop the cars, unyoke the horses, pass the car over by hand, and then yoke the horses again on the other side.

E. Bell, Esq., C.E. 801. Could not that be managed for the time by a movable platform? We have had that in one or two instances.

3 Sept., 1862. 802 You do not break up the street to any extent? Not when making the ordinary plumbers' connections; but when there is a fracture in the main, we have to make a considerable opening.

803. And that is the only inconvenience the City authorities are put to in consequence of the tramway? Yes, except in connection with the sewers. The main sewer in Pitt-street is under the tramway.

804. The sewer is at a considerable depth, is it not? Yes, and consequently, when a connection has to be made, it requires a tolerably large opening; but we can get under the tramway without disturbing the rails, except where the man-hole is between them. In making connections and side entrances, we are obliged to open the man-hole for a man to get down and work inside the sewer. That causes an obstruction on the tramway, and the horses are unyoked, and the cars passed over by hand, as I said before.

805. Do you think the present tramway cars are too large, too lumbering? Yes, I think they are.

806. Do you not think it would be much better to have them smaller, and to work them by two horses instead of four? They would be much more under control, and much cheaper to work; they would not require a breaksman. They work them in New York similar to the ordinary omnibuses, perhaps rather larger, about half the size of the present cars; they work them with two horses to each, which only requires a coachman and a conductor.

807. The present cars are supposed to carry seventy or eighty passengers;—do you not think it would be more convenient to the passengers, and more economical to the public, if they carried thirty or forty passengers, and worked with two horses? Yes, I think if they carried about thirty passengers in each car, as a maximum, they would be much more convenient than they are now, and much safer too.

808. You have no doubt that if there were a course of granite pitching at each side, it would remove the objection as to the obstruction to the ordinary traffic? I think it would; I never had any doubt about it.

809. *By Mr. Hoskins:* You have seen street tramways in America? Yes.

810. Do you not think they are considered, in large towns in America, a very great convenience in locomotion? They had not introduced them into large towns, as a system of locomotion from one part of the town to another, when I was there, but merely from a village about five miles distant from New York up to the Bowery Theatre. You will bear in mind that the Bowery is a very wide street indeed, and the tramway was scarcely observable in it—in fact you had to look for the tramway in the street. It was a bar of iron on wooden longitudinal legs, and was no impediment or obstruction to the traffic at all.

811. Do you think that if a similar tramway were adopted here it would be an impediment to the ordinary traffic? I do not think it would be any impediment to the traffic. The bar only would generally be above the surface of the ground, and the wood occupying a space of three or four inches on each side of the bar would prevent carriage wheels running close to the bar and causing ruts as they do now; the wheels of the carriages would come first in contact with the edge of the wooden rail, which would soon lose its sharpness, and the wheels would pass easily over it. The track of the Harlem line, you may remember, was paved, but outside the timbers it was not paved.

812. I gather from what you say, that you think the reason why this Pitt-street Tramway has been generally so unpopular with residents in Pitt-street, is in consequence of the rail, as you conceive, not having been of the best description for a street tramway? Yes, I think so. If the tramway itself was not objectionable, it would not be injurious to the inhabitants of the street.

813. Nor yet to travellers in the street? Exactly. The inhabitants suffer because travellers avoid the street. I know many people will not allow their coachmen to drive into Pitt-street. I will not myself drive into it if I can avoid it. Horses will run on the track, and you cannot easily get the wheels off it again, once they are inside; and perhaps you lose your tire.

814. The most material objections would be removed, you think, if this iron bar were laid down on wooden sleepers? Yes, with a sufficient width of sleeper on each side.

815. Do you consider that a horse tramway is a very much improved system of locomotion through a town, from one end of a town to the other, as compared with any other system of locomotion? No, I do not.

816. Do you not think it is much more convenient to passengers, and much more agreeable? Yes, for the persons travelling.

817. And more expeditious? That depends on circumstances.

818. You, of course, consider that a horse can move a given weight much more expeditiously on a tramway than on a common road? With the present tramway they could not do it at all unless they did it expeditiously; they could not get up the line near Goulburn-street unless they went at a good hard gallop—the gradient is too steep.

819. Could not such an objection as that be surmounted by using better horses? They are good horses, I believe, but I doubt whether, on the present tramway, horses will draw the cars up at slow speed. I have been informed they will not.

820. Do you not consider that the same amount of horse-power will draw a given weight on a tramway with more facility than on an ordinary road? Yes, of course they will; but if the horses jib they let the carriage go back.

821. The carriage could be stopped by the break? Yes, but then they could not get the horses to start again.

822. Would not that happen on an ordinary roadway? I have not observed it to the same extent.

- extent. It is the fact, however, that they do not stop the cars at any street which crosses the incline, because the horses will not go on again. E. Bell, Esq.,
C.E.
823. Is that the fault of the horses or of the tramway? It seems that very much depends upon the humour of the horses, whether they will go up a steep incline with the tramway carriage behind them. You see these carriages are very heavy, and though they will run easier on a tramway, still it is nearly as difficult to start the load on a tramway as on the ordinary road. 3 Sept. 1862.
824. Do you not think that objection would be obviated by having lighter carriages? Yes, decidedly.
825. Do you not consider that, for the amount of traffic, the carriages used are unnecessarily heavy? Yes, I think they ought to be smaller, and to run oftener—every quarter or half an hour—and then they would be much more useful.
826. The line would then be more frequently and extensively patronised by way travellers? Much more.
827. Would you have any particular objection to the retention of the tramway in Pitt-street, if there were a different description of rail? Yes, the same objection I always had, that the street is too narrow. The tramway carriages must always pursue a straight line, regardless of other traffic, and every other must be put to inconvenience to accommodate this particular traffic.
828. That is only whilst the carriages are passing? Yes; but it is very awkward to find yourself met, in one of these narrow strips between the tramway and the side of the street, by another vehicle at the same time that the tramway car is passing.
829. But if the tramway carriage was not there at the same time, and if the rail laid down were different, these objections would be obviated? No, I do not think the objection arising from the narrowness of the street can be obviated. If there is a horse or vehicle standing at the side of the road, at a shop door, or any other place, there is not room to pass between it and the tramway; you must go on the tramway, and when you try to get off again the wheels skid along the rail, perhaps for half a dozen yards.
830. If the rail you speak of were laid down with wider timbers, or the same rail with broader longitudinal sleepers, and if the sides of the sleepers were pitched with blocks of granite with a concave surface rising from the side of the street—do you think these objections would be obviated? In a great measure they might; but then you devote the street entirely to this tramway, to the inconvenience of the shopkeepers, who wish naturally to have carriages drive up to their doors.
831. If these precautions were taken in constructing the tramway, do you think there would be any difficulty in vehicles crossing the tramway? I should think not.
832. Is it not generally considered by shopkeepers and residents on a line of road in any town, that bringing traffic to the street naturally increases the business of the shopkeepers? Not by a tramway, which moves on without stopping at all, or only at the street corners. If the trains stopped anywhere where a passenger chose to get down, then I grant you would be bringing a great deal of traffic to the street; but if the tramway goes on without stopping, you take the traffic past the shops.
833. Does not the tramway stop at the corners of the streets? Not at Goulburn-street.
834. Did you ever see any horse tramways in use besides that on the Haarlem road? No; and there they will stop anywhere for you.
835. How far is it generally, on the average, between the corners of the street, or the crossing-places, where the cars stop and passengers alight—is it an average of 100 or 150 yards? I cannot tell you, but I should think between King and Hunter-streets it is over 200 yards.
836. *By the Chairman*: Do they not stop at the Metropolitan Hotel? I am not aware.
837. *By Mr. Hoskins*: The inconvenience of walking from where they do stop to any house between one stopping-place and another is not very great? Still it is far enough away for people not to turn back. But if you had light omnibuses on that line, that could be stopped anywhere—they would just be as useful as any others.
838. Would they not be superior? I think they would be a great deal better.
839. In point of comfort? Yes, very probably, if they were a little more roomy than ordinary omnibuses.
840. Do you happen to know, as a matter of fact, whether property in Pitt-street has depreciated in value since the tramway has been laid? Yes, I know, as a matter of fact, that it is rated lower than it used to be, but I do not know whether that is confined to Pitt-street.
841. Do you know if property there has been sold at lower rates or not? I do not know as a matter of fact.
842. Have any house properties in Pitt-street been recently in the market for sale, since the tramway was laid down? None that I can point out. I think the Government recently put up some lots for sale in Pitt-street—the land near Pitt and Bridge streets—and I do not think they had the offers for it they anticipated.

TUESDAY, 9 SEPTEMBER, 1862.

Present:—

MR. SUTHERLAND, | MR. DICKSON,
MR. HOSKINS.

JOHN LUCAS, Esq., IN THE CHAIR.

George Hill, Esq., called in and examined:—

- G. Hill, Esq. 843. *By the Chairman:* You are a large holder of property in Pitt-street, Mr. Hill? Yes, I hold some property in Pitt-street.
- 9 Sept., 1862. 844. Did you watch the construction of the Pitt-street Tramroad? Well, I cannot say that I did minutely. I had an opportunity of seeing it laid down as I passed backwards and forwards.
845. Do you think that tramway interferes with the ordinary traffic of the street? I am certain of that.
846. Do you think it causes a depreciation of the value of property in that street? I am certain of that, from the properties I hold. The rents have gone down very much in Pitt-street.
847. Are you one of those who petitioned for the construction of the tramway? No, I petitioned against it, and contended against it in the Legislative Council when it passed.
848. Oh! you were a member of the Legislative Council at that time? Yes, I was a strong opponent of the Bill in the Legislative Council.
849. Do you think that if the rails were laid some two or three inches lower, the tramway would be as great an obstruction to the street as it is at present? I think it is a great nuisance in the street, and that it is not only injurious to property, but also dangerous to persons travelling in gigs and carriages.
850. But do you think it would be as dangerous if the rails were two or three inches lower? I do not know that it would, but I think it would still be as great a nuisance.
851. Do you think that if there was a course of granite on each side of the rail, your objection would be removed? I think, on account of the width of the street, that no matter in what way you may lay down this tramway it would be a nuisance to the street. It will prevent private carriages going along Pitt-street. It will prevent persons with their families, at all hours of the day, going down Pitt-street, on account of the passing backwards and forwards of the tram carriages. This is a great nuisance to carriage horses; in fact, many of them are shy and will not pass the cars.
852. You are now alluding to the tramway cars when passing? Yes.
853. But do you not think that if there were a course of stone on each side of the present iron rail, to raise the street to a level with the top of the rail, the obstruction you complain of would be removed? It might relieve the obstruction to carriages crossing the rails in a slanting way, but in a direct way I do not think it would.
854. Of course you have not seen other tramways—you are a native of the Colony? This is the only one I have seen, and I am perfectly satisfied that, in whatever way it might be laid down, it would be a nuisance in a narrow street like Pitt-street.
855. But do you not think the rails were laid too high in the first instance? Well, you see I am not prepared to answer that question—to give a fair answer to it—because I do not know how the tramways have been laid down in the Mother Country. Persons who have had some experience in these matters would be better qualified to answer such a question.
856. In some places the iron rail is three inches above the macadamized road? You know a carriage has got a lock to it, and whenever you get the wheels of the carriage within the rails, the moment you attempt to get out, the vehicle keeps wriggling about and grinding against the iron, and you have no opportunity of getting out. But I may say this: supposing that the tramroad cars were coming down Pitt-street, and that I was going up the street with my family, I have an equal right to Pitt-street with the tram, and why should I endanger the lives of my family to give way—why should not the tramway carriages give way or pull up?—but you must either be run over, or pull out of the way at the risk of the lives of your family.
857. Do you not consider the tramway cars equally a convenience to those who travel by rail? It may be a convenience to poor people who live out at Newtown, but is it a convenience to the majority of the country?
858. That question will follow? It may be a convenience to a few people to the injury of some thousands.
859. Do you think it is so? I think it may be beneficial to a few, to the injury of thousands.
860. *By Mr. Sutherland:* Suppose you were going up Pitt-street with your family, as you have stated, and your carriage got locked in the rail, can you readily get out again, or are you not many times compelled to drive at least twenty yards before you can draw your carriage off the rails? In answer to that question, I may state that I have gone more than fifty yards and could not get my carriage out. The minute the wheel comes against the rail the carriage goes sidling along, and you may get out in a few yards or you may have to go fifty.
861. Are you aware whether any accidents have taken place on the tramway through gigs and carriages getting locked in? Yes, there was an accident with two drays yesterday—one was going up and the other was coming down. One of them was inside, and the driver wanted to pull away, but could not, and his dray got foul of the other and upset it.
862. In Pitt-street? Yes; and a dray is a much more likely vehicle to be able to get out of the way than a carriage.

863. Have you heard of any other accidents taking place in Pitt-street? Not of a serious nature. I had the tire pulled from my gig a short time ago in trying to get out of the way of the tram carriage. G. Hill, Esq.
9 Sept., 1862.
864. You think property is depreciated very much through the tramway going down Pitt-street? Yes, very much. The property is depreciated, because persons who used to go into Pitt-street to buy articles will not now approach the street in any way unless it is compulsory to do so.
865. You believe the retail trade of Pitt-street, and more particularly the retail drapery trade, must suffer in consequence of the passing to and fro of the tram carriages? Nearly all the trades requiring the presence of families, or persons connected with families, has been drawn from Pitt-street into George-street; persons who formerly visited the shops in Pitt-street will not now go near the street if they can avoid it. In confirmation of my statement upon this point, I may say, that if any gentleman will take the trouble of going into George-street between three and six o'clock in the evening, he will find it almost impossible to pass along with a carriage or gig; while on going into Pitt-street he will find it nearly abandoned. No one will go into it if they can help it. On several occasions I know that not only myself, but other persons also, have left their carriages in George-street when business required them in Pitt-street. They would sooner walk than take their carriages there.
866. *By Mr. Dickson:* You mentioned that rents had gone down in Pitt-street? Yes.
867. Have they gone down in other streets? Oh, yes; they have gone down generally all over the country, with the exception of George-street. George-street and Pitt-street maintained their rents throughout the time of difficulty; but the rents in George-street have not now gone down like those of Pitt-street.
868. But rents in the city generally have gone down? Yes, in some parts of the city. Some have maintained their rents; George-street has maintained its rents.
869. In other streets the rents have gone equal to those in Pitt-street? Well, they have—equal to Pitt-street.
870. There are a great many people who travel by the tramway, I suppose? I think it goes as often with a few as with many; I often see it in the middle of the day with very few passengers, but towards sundown it goes with a good carriage full.
871. And in the morning? Yes, in the mornings and evenings it is full; at other times of the day it is almost empty.
872. It would be a convenience to those who travel by railway? No doubt of it.
873. And many hundreds must travel by railway? By the tramroad, you mean —
874. By the tramroad? I dare say hundreds a week travel from the city to the terminus.
875. Do you think any alteration in laying down the rails would remedy, to any material extent, the nuisance which you say is caused in the street by the tramway? No, I do not think so; in whatever way it might be laid I think it would be injurious to the city. I cannot say whether it would be dangerous to life, because I am not prepared to answer that question fairly, but it would be very injurious to Pitt-street, and depreciate the value of property there; it would cause hundreds, getting a living by their business, to leave it and go to other parts of the town.
876. Do you think the tramway would be equally objectionable if carried along any other street in the city? I do not think it would, if some back street could be selected for the tramroad, if it is required. A back street might be selected where there is not so much traffic as in George-street and Pitt-street; but they have selected Pitt-street, where, in my opinion, there was as much traffic as in George-street before the tramroad was laid down. The minute the tramway began to run, that minute the traffic began to fall off in Pitt-street.
877. I think some of the leading retail houses in Pitt-street had removed to George-street before the tramway was laid down? I think there were some few who left before the tramway put down. But there have been sad complaints by persons paying large rents, and who held upon leases, that the tramroad had almost ruined them; and all for no other benefit than to carry a few passengers backwards and forwards.
878. But of course it is only those who drive, that experience the nuisance of which you complain—foot passengers do not experience it? I think there is a good deal of danger to foot passengers. Supposing your family, or my family, or anybody else's family, were going up and down, do you think they would be safe when these carriages were going backwards and forwards.
879. Do you think it is dangerous to pedestrians? I think it is dangerous for families to be going where these carriages are running backwards and forwards; in fact, fathers and mothers will not allow their families to go into Pitt-street if they can keep them out.
880. Do you speak in reference to pedestrians, or to those driving? To pedestrians. I think there is a good deal of danger to all passengers in Pitt-street, whether walking, driving, or riding. One of Mr. Wooller's sons was crippled a short time ago. He was cantering along Pitt-street, when his horse slipped on one of the rails and fell, breaking one of the small bones of his leg.
881. Then you could suggest no remedy in point of construction? No; I think whatever remedy might be suggested as to the laying of the line in a different way would not remove the inconvenience. The tramroad would always be injurious in a narrow street like Pitt-street. I think a tramroad ought not to be laid in either Pitt-street or George-street. That is my opinion—that no tramway ought to be laid in either Pitt-street or George-street, on account of the traffic backwards and forwards.
882. *By the Chairman:* Do you consider the tram cars a great convenience to passengers by rail—just answer "yes" or "no," if you please, to this question, because I want two or three others to follow it? No doubt self-interest is always a consideration to every man,
and

- G. Hill, Esq. and if a man can get from the bottom of Pitt-street to the railway terminus for threepence or two-pence, instead of sixpence or a shilling, it will be beneficial to him.
- 9 Sept., 1862. 883. Will you please to answer the question as briefly as possible? Then I must answer, that no doubt it is beneficial to those who travel by rail.
884. Do you consider that it obstructs the ordinary traffic of the street? I am certain of it, in every way.
885. Looking at it in a public light, do you think the convenience it affords to passengers by rail is more than counterbalanced by the obstruction to the ordinary traffic of the street? Yes, by 100 per cent.
886. *By Mr. Sutherland:* I suppose you do not think it proper for the Government of the country to bring passengers from the railway terminus through the town for half the amount it costs the country to convey them;—they charge 3d., and I believe it would cost double that rate for each passenger, to keep the tramway going? I do not think the Government ought to have made a speculation that way at all. I think that those persons who pay licenses for 'buses, and safeties, and cabs, ought to have the privilege of carrying passengers backwards and forwards without having to contend against competition by the Government.
887. Do you think there is one passenger more carried by railway in consequence of the Pitt-street Tramway having been constructed? I do not think there is. I think those persons who now go by tram would go otherwise if the tramway was not there.
888. That is, that the railway would have the same number of passengers if the tramway was not there at all? Exactly.

William Whaley Billyard, Esq., called in and examined:—

- W. W. Billyard, Esq. 889. *By the Chairman:* You have been resident in Sydney many years? Yes.
- 9 Sept., 1862. 890. And you have property in Pitt-street? Yes.
891. Were you one of those who petitioned for the construction of the Pitt-street Tramway? No.
892. You are a professional gentleman, I believe—a solicitor? Yes.
893. Do you believe that the present tramway is an obstruction to the ordinary traffic of the street? Yes, a very great obstruction.
894. Do you think the property in Pitt-street has depreciated in value in consequence of the tramway being in that street? Yes, very much. I will give you an instance of my own. I have some property between Sir Stuart Donaldson's stores and Rickards' in Pitt-street; I have 43 feet 6 inches. It was valued to me by Mr. Hilly two years ago at upwards of £71 per foot. I have had it put up to auction, and have been offered only £50 per foot. I have offered to take £55 per foot. I consider that property depreciated to the extent of 20 per cent. It is property of an enormous depth—207 feet; but it is not now available for stores, because the occupiers could not get their goods delivered from the street.
895. The rails about Hunter-street are many inches above the surface of the macadamized road, are they not? Yes.
896. And it is next to impossible to pass over the tramway about that locality? Yes.
897. The street, too, is so narrow that there is scarcely room for two vehicles to pass each other? Yes.
898. Do you think that if the present rails were lowered, or a course of granite or other stone were laid on each side, so as to raise the macadamized road above the rails, it would then be as objectionable as it is at present? I think it would.
899. According to your opinion, then, no matter how the tramway is constructed, it would be a nuisance to the street? I think it would, in so narrow a street.
900. Do you not consider the tramway a great convenience to passengers by rail? It no doubt is a convenience to people who live at Ashfield and Newtown—to a few people; but I think they could get by the ordinary omnibuses at very little more expense.
901. Do you consider that the tramroad obstructs the ordinary traffic of the street? Yes, I think it does, very much. I have a large family; but since the construction of the tramway they have always avoided going into Pitt-street. When my wife has occasion to go to a shop in Pitt-street, she leaves the carriage in George-street, and walks down to it.
902. Do you think, looking at the matter in a public light, that the convenience afforded by the tramway to passengers by rail is more than counterbalanced by the obstruction to the ordinary traffic of the street? The convenience to passengers by the tramway is very slight compared with the great drawbacks consequent on the construction of the tramroad in Pitt-street.
903. Do you think it would be a public convenience to remove it? I think it would.
904. *By Mr. Hoskins:* Has there not been a great depreciation in the value of property in Sydney generally within the last two years? Yes, excepting in George-street.
905. Excepting in George-street? Excepting in George-street. I have sold property in George-street within, say, a year, for £80 per foot—building land.
906. There has been no depreciation in the value of property in George-street? The depreciation has not been so great in that street as in others; but there has been generally a great depreciation in the value of property.
907. I presume that land in Pitt-street was never so valuable as land in George-street—that it never fetched so high a price? No.
908. Do you consider that the depreciation in the value of this property of yours to which you have alluded was greater than the general depreciation in the value of land in other parts of the city, excepting George-street? I do. It may not have depreciated to the amount

amount of 20 per cent. solely in consequence of the construction of the tramroad, but I think it has depreciated to a very considerable amount.

W. W.
Billyard, Esq.

909. Have you seen or heard of any land in Pitt-street which has been put up to auction during the last two years, besides your own? Yes.

9 Sept., 1862.

910. Do you know if it was sold, and whether the amount realized by the sale was 20 per cent. below the price the land would have fetched three or four years ago—was there a corresponding reduction in the land so sold? There has been a great reduction in the value of all land in Pitt-street, and particularly within the last two years; I am not quite certain to what amount. The lowest price given for property in Pitt-street in a good situation, of which I am aware, is that paid for the land where Richardson and Wrench's auction rooms now stand; that land was sold for a very low price; Mr. Holt bought it. I will give you another instance: Sir Stuart Donaldson (I was his solicitor), before he went to England this last time, was offered by the Union Bank £6,000 for his Pitt-street property; he gave his brother £3,000 for half of it; he sold it to Mr. Holt for £2,700.

911. Can you say whether the land on which Messrs. Richardson and Wrench's stores are erected was sold previous to the Pitt-street Tramway being laid down? I am not sure, but I think it would be about the time. It may have been sold a little before.

912. And when it was sold it was sold remarkably cheap? Yes.

913. Much lower than the rate at which land had been previously sold? Yes. I receive the rents of considerable property in Sydney; perhaps I have £100,000 worth of property in my charge. In Pitt-street I have some property of Mr. Robert Lowe's, which I let on lease before the tramway was laid down. I have other houses of my own that I let on lease before the tramway was constructed, and I can speak as to the depreciation in the value of property there.

914. But can you state, as a matter of fact within your own knowledge, whether the rents of properties in Pitt-street have been reduced since the Pitt-street Tramway has been laid down? I have had no personal experience. All my properties I let before the tramway was laid down.

915. You are not prepared to say whether the depreciation in the value of land in Pitt-street is greater than the general depreciation in the value of land all over the town, excluding George-street? I believe it to be very much greater. I believe the depreciation in the value of Pitt-street property, in consequence of the tramroad, to be very much greater than the depreciation of property in the rest of the city. Of course I collect that from personal inquiries of different people. A great many people tell me that they are nearly ruined by the tramroad.

916. Well, are the persons who tell you that they are nearly ruined by the tramway the owners of property or the occupants of houses? They are the occupants.

917. Do you know whether the storekeepers have sustained a diminution in their business since the Pitt-street Tramway has been laid down? I believe the drapery firm of Farmer and Painter has sustained a diminution of more than £1,000 a year from the custom being diverted from Pitt-street to George-street.

918. But you do not know that? I do not know.

919. You have never heard any person say so? Yes, I have. Mr. Moore told me that Messrs. Farmer and Co's losses would exceed £1,000 a year, in consequence of the laying down of the tramroad in Pitt-street.

920. Was that Mr. Moore, the auctioneer? All the people of large families (like my own) who used to shop in Pitt-street never go there to shop now; they go to George-street.

921. Do you consider a tramway from one end of the street to the other a superior system of locomotion? No.

922. Do you not think the traction is much easier? No.

923. Do you not consider it more convenient and pleasant to ride in the carriages on the tramway? I inquired of Mr. Salting, who came out from England lately, and he tells me that the tramways in all the broad streets of London are being taken up—they being a nuisance. Of course, you are aware that they have been decided to be a nuisance.

924. I am not asking you that question—have you ever ridden in the tramway cars? No.

925. Have you heard persons say that they are superior to other modes of conveyance? No. Mr. Mann told me that he had only travelled three times by the tramroad, and that on two of those occasions he met with an accident.

926. Have you noticed whether there has been a diminution or an increase in the number of persons travelling through Pitt-street since the construction of the tramway? There has been an increased number by the tram cars.

927. There has been a larger number travelling by conveyances? Decidedly; I have no doubt about that.

928. Do you know whether those who travel in the tramway cars are chiefly "through" passengers (railway passengers) or "way" passengers, who get into the cars, and alight at different streets on the road? As far as I have observed—my office being close to the tramroad—they are chiefly people who reside at Ashfield and Newtown. I generally see Mr. Holden and Major Fanning, and people who live in the same direction. They, no doubt, find it convenient.

929. You have not remarked people availing themselves of that mode of conveyance by getting up at Hunter-street and alighting at Bathurst-street? I have no doubt they do, but I cannot say.

930. Do you not think the fact of there being—according to your own testimony—an increased number of passengers, is a proof that the tramway is considered not only more expeditious and convenient, but also a better system of locomotion than the ordinary vehicles? I do not see why it would not be as convenient to go by the ordinary omnibuses.

- W. W. 931. But were the ordinary omnibuses patronized to the extent these tramway cars are
 Billyard, Esq. patronized, as a matter of fact? I should think not quite to that extent.
932. Setting aside the opinions of persons to whom you have spoken in reference to this
 9 Sept., 1862. matter, is it not generally found to be the case, that when any new system of locomotion has
 been brought into operation in a particular road or thoroughfare, the number of passengers
 has increased, and that the business of persons residing along the line has had given to it a
 natural stimulus? I think that in Pitt-street experience shows otherwise. I was under the
 impression, when this tramway was formed, that it was to be a tramway for the conveyance of
 goods; but now I see very few goods conveyed by it, and I think it has altogether failed in
 the object for which it was laid down.
933. But in your own evidence you admit that it has not failed for the conveyance of pas-
 sengers? I admit that more passengers go by it to the railway than used to go by the
 ordinary conveyances; but I do not think they go to the shops in Pitt-street.
934. But you do not know that of your own knowledge? I do not. A great many country
 gentlemen, I know, direct their servants never to drive into Pitt-street, so objectionable do
 they think it.
935. Have you been in the habit of driving in Pitt-street yourself? Yes, I have been in
 the habit of driving across it; but I direct my servant never to go down by the side of the
 rails. I am obliged to cross the tramway.
936. You cross it at right angles? Yes; I go every day in a Hansom to my office, and I
 make the man go down Hunter-street; I would not allow him to go down Pitt-street.
937. You have never crossed the tramway in a vehicle when you have had to go over the
 rails in an oblique direction? No.
938. And personally you have experienced no inconvenience? No.
939. Do you really consider yourself that the presence of this tramway in Pitt-street is a
 great inconvenience, and calculated to entail loss of life and inflict injury upon persons
 traversing the street? I think it is calculated to occasion damage to carriages.
940. Will you state in what way you think it would damage carriages? I have heard of
 the tires of wheels being taken off, and of various accidents. Of course I have not witnessed
 them myself. I have heard of the horses taking fright, and the carriage being turned off.
941. The railway car? Of the railway car being turned off the line. I have heard of many
 instances, but I have never witnessed them.
942. I presume you do not consider a horse taking fright an unusual accident—a horse may
 take fright and overturn an omnibus? Yes.
943. I suppose the obstruction you consider dangerous arises from the rail being much
 higher than the roadway—is not that the difficulty? No doubt.
944. That is the primary difficulty? No doubt.
945. That is your own opinion, I presume? Yes, but I know very little of engineering, and
 the fact is, I do not feel competent to give an opinion.
946. I am taking your own evidence;—you said you considered the presence of this rail,
 being so high above the roadway, to be an inconvenience, inasmuch as people will not cross
 with their carriages, and you therefore naturally consider this to be the great objection? Yes.
947. Do you not consider that that objection could be obviated? It might to a certain
 extent.
948. For instance, if the roadway was made level with the top of the rail, do you think the
 difficulty would be removed? To a certain extent; but I consider that a tramway in such
 a narrow street would always be attended with great disadvantages, no matter how it might
 be constructed.
949. In what way? The street is too narrow, and it must inevitably depreciate the value
 of property. You will find that every occupier and landlord will tell you the same.
950. But if no obstruction were offered to the free passing of vehicles over the tramway, this
 objection would no longer exist, would it? There is very little room for carriages to turn.
 We have had no rainy season yet; but when we have, I think you will find that, with the
 tramway constructed as it is at present, the road will be almost impassable.
951. What part of the road? Those portions on either side of the rails. I do not see how
 it is to be drained. We have had no experience yet, but when we have had a little rain it
 has been very bad.
952. Has it been worse than George-street? Yes.
953. Have you ever seen tramways in use in any other towns for the conveyance of
 passengers? No; I have seen them at English collieries.
954. But you have never seen street tramways for passenger accommodation? No.
955. If any means were devised to prevent the obstruction caused by the rails being so much
 above the surface of the road, and if drays and other vehicles unloading at the stores could
 do so with facility, do you consider the principal ground of objection to the tramroad would
 be removed? One ground of objection would be removed, but I think the principal ground
 is the narrowness of the street.
956. But Pitt-street is no narrower now than it was previous to the tramway being laid
 down? No, but previously there was not the tramway in the centre.
957. But if the tramway were made level with the roadway, it would not offer any obstruction
 to ordinary vehicles? It would still be inconvenient.
958. *By Mr. Dickson*; You stated that Mr. Donaldson was offered £6,000 for his Pitt-street
 property? Yes.
959. What time was that? I forget how long Mr. Donaldson was in England.
960. Three or four years ago? Yes.
961. And he sold the property for how much? £2,700.
962. When did the sale take place? Just before he left for England again, at the beginning
 of this year.

963. Has not property generally in Pitt-street depreciated in value since the time the offer of £6,000 was made, and up to the period of the sale? Yes, to a certain extent.
964. The fall in price, then, is not to be attributed solely to the tramway? No, not solely.
965. Was it attributable in any degree to the tramway? Yes, I think it was a good deal.
966. I think you have stated in your evidence that a good many more passengers travel by the tramway than formerly travelled by the omnibuses? Yes, I think that is the case.
967. Then there must be a considerable increase in the railway traffic? I do not think that. I think they would go by the railway whether they were conveyed to the station by the ordinary omnibuses or by the tramway.
968. Do you not think that the tramway has increased the traffic by the railway? To a trifling extent it may have done so.
969. What would you recommend should be done with the tramway? Taken up.
970. *By the Chairman*: Do you think the removal of the tramway would increase the value of property in Sydney? I think it would increase the value of property in Pitt-street.
971. To what extent? 15 per cent.

W. W.
Billyard, Esq.
9 Sept., 1862.

TUESDAY, 16 SEPTEMBER, 1862.

Present:—

MR. HOSKINS, | MR. PIDDINGTON,
MR. SUTHERLAND.

JOHN LUCAS, ESQ., IN THE CHAIR.

Mr. William Tunks called in and examined:—

972. *By the Chairman*: You have been a long resident in Sydney, have you not? Yes, upwards of twenty years. Mr. W. Tunks.
973. You are a mechanic, are you not? Yes. 16 Sept., 1862.
974. A builder, I believe? A carpenter and joiner.
975. You have been engaged very extensively in contracts for the City Corporation—both the old and the new—and for the City Commissioners? Yes, I have had several contracts.
976. Did you notice the construction of the present Pitt-street Tramway? I have seen it as I passed along the street occasionally.
977. Do you think it is laid as you would lay it,—if you had the planning and laying of the tramway, would you lay it in the manner in which the tramway is laid now? No, I do not think I should.
978. I believe there are transverse pieces put down first, as beds or sleepers? Yes, there seem to be some pieces of wood as sleepers underneath the longitudinal woodwork.
979. And then the longitudinal woodwork —? Is just halved together at the ends.
980. Laid on the sleepers, and fastened with an iron knee? Yes, there is a bit of a crank iron.
981. Would it not be much better if they were framed together? Yes, my impression is that it would be much better framed together, supposing the framing were held with an iron bolt or something of that kind.
982. What do you think about draw-boring and pinning? That would necessarily imply the mortising to go through the side pieces. The other mode might have been more expensive, but it strikes me it would have been much more secure, because the tenons need not have gone through the side pieces, and so far weakened them.
983. Does not the draw-bore consolidate the wood round where the pin is driven, and draw it tight together? Yes.
984. Do you not think that would have been much better than the present mode of construction,—would it not have kept the timber from springing? You mean the oscillation in the length.
985. Yes? No doubt it would have been, to some extent, more secure in that way; besides which, being a solid frame, it would have afforded opportunity for laying it down on a solid bed, whereas, by cutting narrow trenches along and across the street they, the persons who put it down, had not the opportunity of properly bedding it. There was either too great a regard for the street, or too great a regard for their labour.
986. Do you not think it would have been much better if the tramway had been laid two or three inches lower than it has been, to allow the macadamized road to wear down to it instead of away from it? The macadamized road will never stand up to the tramway, because it always wears very quick.
987. Was it not a great mistake to have laid it above the road when it was just finished? I should have remedied that by putting granite or whinstone, or any hard durable stone, in blocks along the rails—in fact, paving the centre of the tramway with five by nine inch paving stones set on edge; and the outer side of the road could have been protected by granite paving stones somewhat higher than the iron-work, and thereby it would have allowed carriages to cross it at acute angles.
988. By that means the tramway would not be such an obstruction to the ordinary traffic? I do not think it would be any obstruction then, if it were done with granite or some other durable stone that would not wear too smooth.
989. Do you think a grooved rail would have caused the same obstruction to the ordinary traffic as the present sharp angle for instance, a rail in this form, Mr Light's rail (*exhibiting*

Mr. W. Tunks. *a drawing*)? With a macadamized road I think this would be always subject to small stones, grit, and other stuff filling up these cavities.

16 Sept., 1862. 990. The construction of that rail works it out? If it does that would meet the difficulty. I would rather have fancied that with the clay and grit we have, it would not work it out in ordinary weather.

991. Would you propose now to lay a course of stone on each side of the rail? Yes.

992. Do you think suitable stone could be got out of the present blue stone quarries at Pennant Hills? No. There is a stone at Prospect that would answer.

993. What would be the probable cost, per superficial yard or foot, of that stone, eight or nine inches thick? I have had no experience here in working paving stones, and therefore I should not like to give an opinion about the price of it. I attempted, I may say, to introduce granite paving stones, but the City Council did not choose to encourage that kind of thing, and such a thing was never developed; therefore I have had no opportunity of knowing the cost. A sample of the stone that can be got is now in the Corporation Depôt, on the site of the old Government House, which you might like to see as an article of Colonial produce. They are sample stones that I prepared for exhibition to the Corporation.

994. Where was that stone obtained? At Prospect, but not at the Government quarries.

995. There is no doubt, you think, that stone suitable for paving the tramway could be got there? No doubt of it.

996. Will you just read this paragraph, referring to Mr. Light's rail, a drawing of which I showed you just now? "The sketch, figure 11, shows the section of the rail used in Dorchester Avenue Tramway, and the Metropolitan Tramway, Boston, United States. It is of cast iron, and weighs 75lbs. to the yard. The chief object in designing forms of rail for street railways is to make the rail answer all the purposes of the tramway, and, at the same time, not offer any obstruction to the ordinary traffic; also that the groove into which the flange runs shall not get clogged up, but shall work itself clear. This object, we think, is best attained by Mr. Light's rail, figure 11. The groove is not so deep as the New York rail, figure 8; still it is found to be quite deep enough to guide the wheels, and offers less obstruction to the ordinary traffic. It has been found, in cases where the groove is too deep and too wide, that the narrow wheel tires of other vehicles get into the groove, and are often torn off in consequence. The inside bevel of the rail allows small pebbles that get in the groove to be pushed out of the way up the bevel by the flange of the wheels, without crushing them, thereby preventing them from being the cause of throwing the omnibus off the track. The rails are cast in lengths of eight feet, and have a dowel and socket cast on the ends, so that the rails fit into each other at the joints. Each length is fastened to the sleepers by three spikes." (*Burn on Horse Railways*.) Well, as this is stated as an engineering fact, I cannot dispute it; I have no experience to contradict it; but at the first blush it would not seem to me that it would act.

997. You have no doubt that if the present tramway in Pitt-street were properly paved with good hard stone that would remove the obstruction to the ordinary traffic of the street? There is not the least doubt of it in my mind. I think vehicles could pass the tramway in any direction if the rails were protected by granite.

998. Have you any property in Pitt-street? No.

999. You have in Castlereagh-street? Yes.

1000. Do you think the tramway depreciates the value of property in Pitt-street? I am not aware that it has done so.

1001. Do you think it is calculated to depreciate the value of property? No, I think it is calculated to improve it ultimately.

1002. Would you have any objection to its running down Castlereagh-street? Not the least. I am aware there was a furor got up about it, but I do not think that amounts to anything; two or three persons who fancy their business is injured for a few days may get up a great noise.

1003. There is not so much business carried on by linen-draperies in Pitt-street now as there used to be;—do you know whether they were moving out of Pitt-street before the tramway ran? I saw that several—Mr. Hordern and others—had built what I call magnificent places, in other streets, and it seemed to me they were spreading over a wider circuit. I fancy the theatre might have something to do with the linen-draperies shifting out of Pitt-street, by bringing into it a concourse of persons at night that might be objectionable to some of the drapers.

1004. *By Mr. Piddington*: You say that the tramway in Pitt-street is not in such a desirable state as it might be? That is my opinion; I mean with regard to its construction.

1005. You have spoken of paving the tramway between the rails? Yes.

1006. Do you know the width between the rails? I should suppose it is between four and five feet.

1007. Do you consider it desirable also that the tramway should be paved on the outer side next the rail? Yes, that would seem to be the most important part to be paved.

1008. *By the Chairman*: Just one course of stone along the rail? As to that matter, I would undertake to defend the paving of the whole street, as a matter of economy.

1009. *By Mr. Piddington*: You think paving would be more economical than broken up metal for the streets? Yes, where there is great traffic.

1010. What I wish to know is, the expense, additional to the original outlay for the tramway, that would be caused by paving the tramway inside the rails, and the necessary quantity outside the rails? I have had no experience in pitching stones. I never had a chance of developing the granite quarries as I wished to do.

1011. Your opinion is formed without reference to the cost of the proposal? Yes; I believe generally that pitching would be cheaper in the end than macadamizing, where there is much traffic. It is found to be so in London.

1012. Do you speak now with reference to tramways in London, or with reference to paving ^{Mr. W. Tunks.} as compared with macadamizing? Of paving as compared with macadamizing.
1013. My question applies to the cost of paving the tramway? I am not able to say at a ^{16 Sept., 1862.} word what it would be.
1014. Have you seen the Gabo Island granite? Yes, that was the first thing that drew my attention to the procuring of granite; it has cost me some £50 at times searching for granite.
1015. Is the granite you have discovered equal in quality and hardness to Gabo Island granite? What I have got is not, probably because it is merely from the surface; a little deeper I have no doubt it would improve.
1016. You do not know what would be the cost of paving the tramway with it between the rails and outside the rails as far as necessary? No, I am not able just now to say. The cost of a work like that is a matter of figures, not guess.
1017. The tramway has already cost a certain sum in its present imperfect condition, and I wish to know what would be the cost in addition, to put it in the more perfect state you wish to put it in? I cannot say at present what it would be.
1018. *By Mr. Sutherland:* Perhaps you could attach to your evidence an estimate of the expense? I should not like to give such an estimate for mere amusement; it would cost me some trouble.
1019. *By Mr. Piddington:* Are you acquainted with the traffic on the tramway since it has been established? I have no other acquaintance with it than merely casually seeing the returns in the newspapers, and seeing the cars go along occasionally. I have made no estimate as to the number of passengers, or whether it pays.
1020. Have you formed any opinion as to whether the tramway interferes with the general traffic through Pitt-street? I do not think it does. I am aware that a number of people have said so, but I do not think it does.
1021. Do you know that part of Pitt-street near the Metropolitan Hotel? Yes.
1022. How wide is it from kerb to kerb there? About thirty feet.
1023. Notwithstanding that Pitt-street is only thirty feet wide at that part, you think the tramway occupying five feet out of the thirty does not interfere with the traffic? It does not occupy it, only occasionally, while the car is passing along.
1024. I am speaking of the part abstracted from the thirty feet width of the street there? I do not think it is abstracted from the width of the street, except when the tramway carriage is passing.
1025. Is not that part of the street occupied to the extent of the surface covered by the tramway carriage? At that particular moment it is.
1026. Is there any guarantee that two other carriages may not be coming up the street at that particular time, and meeting the tramway car at that particular spot? The same objection would apply to every carriage, of whatever kind.
1027. Is not the tramway carriage rather a wide one? It is rather wide; probably five or six feet.
1028. *By the Chairman:* It takes a great number of passengers at the same time? Yes.
1029. *By Mr. Piddington:* The width of the carriage extends over the tramway, does it not? Not nearly so far as a load of hay would do over an ordinary cart.
1030. I am asking whether the tramway carriage does not occupy a considerable portion of the street? About six feet probably.
1031. When the tramway carriage is in motion, do you think it would be safe for two carriages to pass it at the same time? I do not see that there is any danger in it. People unaccustomed to driving may look upon it as a difficulty; but where carriages have been very thick I have seen them have to ferret their way with much more difficulty than there is in passing along Pitt-street.
1032. Have you ever observed the car coming along Pitt-street at the particular part I have mentioned? I cannot say I have.
1033. You do not know whether it goes at a rapid pace? The pace does not seem to be very great.
1034. Do you think they travel seven or eight miles an hour? They do not keep up a regular pace. Probably they travel sometimes at the rate of eight miles an hour for a short interval, but not the whole distance.
1035. There is nothing in that particular part of the street to prevent them driving at that rate? I think going down towards the wharf they travel the fastest.
1036. In the present condition of the tramway can carriages cross the iron rails at all places at right angles? Yes, at right angles they can; the acute angles seem to me to be the difficulty, but a great deal of it is owing to the drivers of the vehicles themselves. I have seen horsemen insane enough to try and keep their horses on the line of rail, and go at a canter, as if their object was to throw them down.
1037. You do not know whether the iron rails are laid properly? I am not able to say.
1038. You have not been accustomed to lay tramways yourself? No.
1039. You do not know whether the rails of this tramway are laid the reverse way to what they ought to be? As far as I can understand they are the reverse way.
1040. You know very little about tramways practically? No, but I have got some common sense by which I can judge of them when I see them.
1041. Have you ever been out of the Colony? Yes, I have been out of this Colony as it is at present.
1042. Have you ever been anywhere where tramways are laid down for general traffic? No.
1043. Are you aware that tramways for general traffic are being constructed in England now? I am aware they have been.
1044. To what extent, and for how long? I am not able to say; not a very great length, I dare say. There may be some in America.

Mr. W. Tunks. 1045. *By Mr. Hoskins*: Is not that portion of Pitt-street opposite the Metropolitan Hotel the narrowest part of Pitt-street? Yes, because it is not opened to its proper width yet; the houses project upon the street beyond the proper line.

16 Sept., 1862.

1046. In the event of the Corporation directing a proper alignment of the street, would not the verandah, or that portion of the Metropolitan Hotel which projects into the street further than the other houses, have to be removed? It will have to be removed in course of time, no doubt, but it is not in the power of the Corporation to remove it at present.

1047. In the event of the Corporation obtaining an Act enabling them to align the streets, would it not be removed? Yes; but the street would be narrow at any rate, probably not more than 36 feet from kerb to kerb.

1048. It would be wider there, of course, than it is now? Yes, I think it would be a little wider than it is now.

1049. Did you ever ride in these tramway cars? Yes.

1050. Did you ever observe that there was any difficulty in stopping them? No. The momentum will sometimes carry them a little further than the exact corner, but that depends upon the inexperience of the man that has got the break in hand. I take it, that in the first instance, these men could have known nothing at all about the working of these things.

1051. You have never seen any accidents occur from the breaksman being unable to stop these carriages? No.

1052. Do you consider it a superior mode of locomotion to ordinary vehicles? I do.

1053. I suppose you never saw a tramway in which the rail was a flat bar of iron bolted on to a wider sleeper than those used in the tramway here? Such as are used for temporary purposes are so, and those at coal mines, quarries, and such places. I have seen something like the tire of a cart-wheel laid on edge.

1054. Do you not think that would be better than the kind of rails they have in Pitt-street, not being open to the objection as to the obstruction of other vehicles? The obstruction could be met in the way we were speaking of before, by raising the roadway a little above the rail, by means of granite or other hard pitching stones.

1055. *By the Chairman*: Which do you think would take up the most space, or obstruct the street the most,—the present tramway cars, or a sufficient number of ordinary vehicles to take the passengers now taken by the tramway cars? The ordinary vehicles necessary to carry the same traffic would take up more of the street, and be more dangerous on the whole than the present arrangement.

1056. In that point of view, instead of the tramway cars obstructing the other traffic of the street, they facilitate it? I think they do.

1057. *By Mr. Piddington*: How would omnibuses used in the ordinary way be more dangerous than omnibuses used on the tramway? Because there would be more of them required to carry the traffic, and therefore a greater crush among them, which would end, perhaps, in their fouling one another. I have seen the ordinary omnibuses often come to a dead lock.

1058. Is it absolutely necessary that omnibuses starting from the railway terminus should pass down Pitt-street, or would they not take George-street, which is a wider street? George-street is not a wider street throughout; it is wider generally, but there are places where it is as narrow as Pitt-street.

1059. Would it be imperative for the ordinary omnibuses to pass down Pitt-street? Not imperative, but convenient.

1060. Is it not imperative on the tramway omnibuses to pass down Pitt-street? Yes, no doubt; but the Chairman's question was, whether the number of omnibuses sufficient to carry the same traffic as that carried by the tramway cars would not obstruct Pitt-street more than the tramway cars do now. If some of the omnibuses go into another street that would necessarily imply a diminished traffic in Pitt-street. It seems to me that if the same number of passengers were conveyed along Pitt-street in ordinary omnibuses they would create a much greater obstruction.

1061. I ask whether it is imperative on the ordinary omnibuses to pass along Pitt-street at all? No, it is not.

1062. Is it not imperative on the tramway cars? Yes.

1063. How, then, can you make any comparison where there is free action in one case and no free action in the other? It seems to me that streets are like men, when they come to maturity they will do a certain amount of work, or carry a certain amount of traffic, and will not do more; when the traffic reaches that amount, other streets must relieve them.

1064. *By the Chairman*: Did not the railway omnibuses run down Pitt-street previously to the tramway being laid down? Yes.

1065. Have you not, of your own knowledge, known or heard of many accidents occurring by omnibuses running into gigs, dog-carts, and other vehicles, upsetting in the streets, occasionally killing a man, or breaking two or three legs, and so forth? I have heard of them, but I cannot call to recollection any particular accidents.

1066. Are not accidents just as likely to occur with ordinary omnibuses as from the running of the tramway cars? Yes, and more so, because a practice has prevailed lately of just catching a horse, strangling him for a bit—what is called Rareyfying him—and clapping him into a 'bus, when he has no more notion of work than I have of flying; with such horses of course accidents are probable.

1067. *By Mr. Hoskins*: Can you say, as a matter of fact, whether the number of passengers who traverse Pitt-street has increased since the opening of the tramway? I am not in a position to say.

1068. Do you think there are more passengers now by the tramway cars than there used to be by the railway omnibuses previously? I think there are.

Mr. Lucas here vacated the Chair, and Mr. Sutherland was called to it pro tem.

Mr. Richard Wynne called in and examined:—

1069. *By the Chairman*: You have a business place in Pitt-street? Yes.
1070. Has the Pitt-street Tramway been a convenience to you in your business or otherwise? It has been a convenience on the whole.
1071. Do you think it has been a benefit to the proprietors or residents in Pitt-street? Not generally. It may be a convenience, so far as passengers are concerned; but it would be a very great benefit if it were to carry luggage. I know it would then be a great benefit to me, and many merchants round the Circular Quay; in fact, it would be a blessing to the people there. I am sending my drays every day to the railway, three, four, and five times, over the same ground as the tramway runs on, and if the tramway took luggage I would avoid that; and in fact, neither I nor others would have to pay so much for dray hire.
1072. Is the tramway an obstruction to the ordinary traffic of the street, as it is now constructed? I think not, now that people have got used to it. My men and horses seem to know the tramway as well as possible now; they know how to pass over it, and they go right along the street to the railway, instead of turning into George-street, as they used to do at first.
1073. Then you think it is the want of knowledge of the people, more than the construction of the tramway, that has caused the accidents that have happened in Pitt-street? No doubt. Living, as I do now, at Burwood, I have been on the tramway when many of the accidents have taken place, and I have always seen the cause it. I have seen five or six accidents take place, and I have seen whose fault it was as plain as possible.
1074. Will you tell the Committee whose fault it was, in your opinion? In one case I saw a cabman coming down Bridge-street at such a rate that he ran his horse's head right against the tramway carriage, which, being in full motion, hit his horse and slewed him right round. And I have seen a lot of sleepy-headed people and boys driving carts and vehicles—people that ought not to be allowed the management of horses and carts—who would not get out of the way, although the people on the tramway car were whistling and singing out to them. There is very great care and diligence used indeed by the persons in charge.
1075. You, living at Burwood, the tramway is a great convenience to you, in enabling you to get direct to your place of business from the railway? Very great.
1076. Do you think it is right for the Government to run a tramway at a loss, for the convenience of people living at Burwood, or travelling by the railway? Knowing that the money comes from the people who get the convenience and advantages of it, I think it is right, because all the money expended by the Government is for the use of the public.
1077. *By Mr. Piddington*: What part of Pitt-street do you live in? My place of business is next to Dawson's Iron Foundry, near the Circular Quay.
1078. Your place of business is within a few yards of the terminus at the Circular Quay, where the cars stop? Yes, within three hundred yards.
1079. Is there much traffic in that part of Pitt-street? There is more there than any other part.
1080. More carriages pass your place of business, within three hundred yards of the terminus, than pass the place of business, for instance, of Mr. Moffitt? Not carriages, drays.
1081. I am speaking of the general traffic? There are very few carriages, mostly loaded drays.
1082. Then the traffic of vehicles is not so great in that part of Pitt-street as between King and Market streets? No.
1083. Is there half as much? I dare say there is half as much.
1084. Are you quite sure there is half as much? I would not say I am quite sure either.
1085. You say the money expended on this tramway, in constructing and maintaining it, comes from the persons using it? I imagine it does, directly or indirectly.
1086. What interest does a country resident, who never comes to Sydney, possess in the tramway? A country resident who never comes to Sydney of course does not receive any benefit from the tramway.
1087. Do not country residents, as tax payers, pay their share of the expense of constructing the tramway? No doubt.
1088. Are you aware that this tramway is carried on at a serious loss to the public? I have heard it was.
1089. For whose benefit? For the general benefit.
1090. For the benefit of those persons who do not use the tramway? Not exactly for their benefit.
1091. Is it not exactly for the benefit of those who do use it? Of course it is a benefit to them.
1092. If those who do use it do not pay sufficient to meet the expense of working the tramway, the balance must be paid by some other persons? I suppose so, but they will not pay any more, because they can travel by the ordinary 'buses at the same price.
1093. Then you think it is a benefit to yourself, for instance, to be able to travel as cheap or cheaper than at your own cost? No, I do not travel cheaper, but I can go by the 'buses at the same price.
1094. Why do you prefer the tramway? Because it comes opposite my door.
1095. For general reasons you prefer the tramway car to the ordinary 'bus? Yes.
1096. You do not think you are called upon to pay a sufficient sum to enable the Government to pay the expenses of working the tramway? I cannot answer that question.

Mr. R. Wynne.
16 Sept., 1862.

- Mr. R. Wynne. 1097. You are aware that the tramway does not pay the expense incurred in working it?
I am.
- 16 Sept., 1862. 1098. Well, then, those who receive the advantages of the tramway do not pay sufficient to enable the Government to pay the expenses? According to the argument of your questions, I receive a certain amount of disadvantage as well as advantages from it, because if it is a disadvantage to other vehicles, I have two vehicles, drays, continually going and drawing to the railway, which experience the inconvenience that has been mentioned.
1099. I was asking with reference to your actual use of the tramway—I understood you to say that you preferred it to ordinary omnibuses—for what reason do you prefer it? It is pleasant riding—it goes smoothly along.
1100. For reasons connected with the pleasant mode of travelling, you think it an advantage to you to travel by it? Yes, and for its punctuality.
1101. And you think it right that the public should have to pay the balance they have to pay, in order that you and other gentlemen may have the pleasure of travelling by this improved mode of conveyance? I think so, finding that the Government does the same thing in other instances which perhaps I do not participate in.
1102. You think the tramway cars a decided improvement as compared with the ordinary omnibuses? Yes.
1103. As travelling more pleasantly, and being more roomy and safe? Yes.
1104. Do you know whether the two omnibus cars placed on the tramway are run on every occasion when the railway train reaches the terminus? They always run.*
1105. Both of them? Yes.
1106. You have never seen one run crowded with passengers, and the other left at the terminus without any? I have seen that in the winter months.
1107. Within the last month, August or September? No, I think not. I know three times as many people travel now as used to do; two ordinary omnibuses used to take all the traffic; and now these cars are chock-a-block in some instances, besides the 'buses in George-street.
1108. Have you observed whether the cars are as full now as they used to be two or three months ago? There has been more traffic lately than at any other time, with the exception of the first month.
1109. You are not aware that during the whole of six months of this year these cars have been travelling at a loss to the public every month? I have heard they were.
1110. If they have been travelling at a loss to the public, who pays the expense? I imagine the country in general.
1111. For whose benefit does the country in general pay the expense? All those who choose to travel by it.
1112. What proportion do you suppose the passengers on this tramway to bear to the general population of the country? I cannot answer that question. I believe everyone in this town travels on the railway occasionally, and you must look on the tramway as part of the railway.
1113. Do you think the passengers by the tramway are in the proportion of one to twenty to the community? I cannot answer that.
1114. *By Mr. Hoskins:* Will not the inference to be drawn from Mr. Piddington's questions apply still more strongly to residents on the Manning, the Clarence, Twofold Bay, Kiama, Shoalhaven, and other places, who have to pay their share towards the expenses of the management of the railways, though they do not participate in the benefit? The people of Kiama do benefit in some degree by the railway.
1115. Have not the people of the Clarence and the Manning to contribute, though they receive no benefit? Yes, they cannot receive any benefit there.
1116. Therefore, the same objection would apply to the railways and other public works, as well as to the tramway? Of course.
1117. Did I understand you to say, you thought the number of passengers on the tramway was increasing? I think so; in fact, I am sure of it.
1118. In the event of your ascertaining that the tramway did not pay its working expenses, and if it was represented that the fares were insufficient, would you object to pay a trifle more? Not at all.
1119. Do you consider the mode of locomotion so much superior to ordinary vehicles that a small increased charge would not be objected to? It would not, I think.
1120. You consider it much safer than the ordinary mode of conveyance? Yes.
1121. In what way? Because the car is low to the ground, and keeps in one straight line, and comes foul of nothing without it is the fault of that it comes in contact with. It is the fault of the people who come in contact with it, because there is always sufficient warning given by the drivers of the tram carriages to warn them off; therefore, I think, that any accidents that take place are not owing to the fault of the tramway carriages.
1122. You think the Government servants employed in connection with these carriages adopt every precaution to prevent accidents? I think they do.
1123. You are a daily traveller by the tramway? Yes.
1124. Have you ever seen any difficulty experienced in stopping the carriages with the breaks? None at all.
1125. Did you ever see any accidents occur through the conductors or persons in charge of the breaks not being able to stop the momentum of the carriages to prevent an accident? No, I have not seen an accident happen in that way.
1126. Can you say, as a matter of fact, being a daily traveller on the tramway, whether there are a larger number of through passengers by the cars or way passengers—passengers
who

* NOTE (on revision):—I understand only one car runs from Circular Quay at 1:40 p. m.

who get in at the different crossings, and alight at other crossings, or railway passengers, who come to and from the railway trains and the northern end of the city? There are very few passengers by the tramway cars who are not also passengers by the railway—very few indeed. I think I know most of these "way" passengers, and could count them; there are not a dozen I should suppose.

Mr. R. Wynne.

16 Sept., 1862.

1127. At what hour do you come in, in the morning? I get into Sydney usually a quarter before nine, or sometimes a quarter before ten.

1128. Do you mean to say that nearly all the passengers by the cars at that time are railway passengers? Yes.

1129. Can you say, from what has come under your observation, whether the number of way passengers has increased lately—the number of roadside passengers—persons wishing to travel from the northern to the southern end of the city? I cannot say that.

1130. Have you remarked that they have increased? No; the people I have known to travel by the tramway, as way passengers merely, generally live at Redfern. I know three persons who get out at the Railway Station who live at Redfern, and I have known them to travel by the tramway all the time I have been using it myself.

1131. You have known persons who have patronized the tramway when the cars commenced running, and have continued to do since? Just at that particular time I did not travel by it. I was living in Sydney then; but finding the tramway and the railway convenient, I went out of town to live, for the benefit of my health chiefly.

1132. When you are in the habit of coming in or leaving town by the tramway, is there generally only one car or two cars used? Two generally. Whenever I travel there are always two.

1133. On these occasions, are both tramway cars generally full of passengers? Yes.

1134. Both of them? Both of them. The people are sometimes standing up, holding on; there are not seats enough for them.

1135. How many times a day do the cars pass backwards and forwards, can you say? Six times.

1136. Each way? Yes.

1137. Are both tramway cars used on each occasion;—does one follow the other? I cannot say whether both are used on all occasions. I am not in Sydney the first thing in the morning, by the five o'clock train, but I should think they would not be likely to use two then, or the last thing in the evening.

1138. Have you not frequently remarked, during the day, one car following the other, and neither of them with a complement of passengers? I have seen that sometimes; but the probability is that they have had a full load when they started from the station, and have left the passengers at different points as they came along. I have seen the carriages nearly emptied at one of the streets near that horse-racing place, O'Brien's, when a lot of people—sporting characters—have been coming down.

1139. Then, whenever you have travelled both from the terminus and to the terminus the car has been full? No, not full always, but there has always been a good traffic.

1140. Do you think one car could accommodate all the passengers? No, I think not.

1141. You are of course aware that the expenses of working the tramway would be greatly reduced if one car could accommodate all the passengers;—you are aware that one car will accommodate a hundred persons? Yes, but I am certain one of them could not take all the traffic.

1142. Do you happen to know whether property in Pitt-street has been depreciated in value since the establishment of the tramway? I do not know.

1143. Have you ever seen any land or house property in Pitt-street sold since then? No.

1144. Have you ever heard that property in Pitt-street has been depreciated in value in consequence of the tramway? No. I have heard property is lower everywhere than it used to be.

1145. You have not heard that there has been a greater depreciation in Pitt-street than elsewhere? No.

1146. Do you think if the tramway cars were run more frequently the number of way passengers would be increased—that persons would use the cars to travel from one end of the town to the other? If it was generally known, I think they would; but I think that a great many people believe now that they are not allowed to travel on it except to the railway.

1147. Have you heard that stated? No, but I have got that impression. I think that if the cars were to run oftener through the day, with the same punctuality as at present, they would get a good many passengers.

1148. If the tramway were leased to a private person, who would of course necessarily endeavour to consult the interests of passengers, do you think it would be more likely to be remunerative than when in the hands of the Government? I am sure of it.

1149. With reference to the accidents to which you have referred, would not the kind of accidents you have alluded to occur to persons who were carelessly driving through some of the cross streets which intersect Pitt-street, even with other vehicles besides the tramway cars—the ordinary omnibuses for instance? Yes, just the same.

1150. Have you ever seen any accident specially attributable to the peculiar system of locomotion by tramway? No.

1151. Can you say, of your own knowledge, whether the proprietors of property in Pitt-street have suffered, in a business point of view, in consequence of the establishment of this tramway? I do not think they have.

1152. You do not think the number of wayfarers—passengers along the street—has diminished? The number of foot passengers has increased if anything; in fact, people come

Mr. R. Wynne. out of the other streets into Pitt-street now; you can see them running out of George-street to catch the tramway car.

16 Sept., 1862. 1153. You have remarked that? Yes; that is why I think that if a tramway carriage was to run all day it would get a great many passengers, because the buses go with such irregularity, and crawl along the streets so slowly, that people do not like to get up in them, especially if they are in a hurry. Another reason is, that they have to pay sixpence when they can ride on the tramway for threepence.

1154. Do you think there would be any objection on the part of the public who use the tramway to pay fourpence? No, that was what we used to pay in the railway omnibuses before the tramway was started.

1155. Have you ever seen tramways in any other part of the world? I have not.

1156. Do you think that if this tramway was adapted for the transmission of goods, the trucks would be largely patronized? Yes, and it would be more likely to pay then.

1157. Would you patronize it yourself? Yes.

1158. What business have you, may I ask? I import building materials—slates, cement, galvanized iron, sheet lead, paving stones, and so on.

1159. This tramway would be a much better way of transporting goods from one end of the city to the other than by drays? Not unless they were going by the railway.

1160. Is there a large quantity of goods—building materials and other heavy goods—sent to the different stations along the railway line? Yes, people are continually building on the line.

1161. Have you ever remarked the increased load a horse will draw on the tramway compared with what he will draw on an ordinary road? No, I cannot answer as to that.

1162. Without making any calculation, you must have remarked the much larger load a horse can draw on the tramway cars than on an ordinary vehicle? I dare say a horse will draw four or five tons on a dead level on a tramway, when a ton or a ton and a quarter would be his load in an ordinary vehicle.

1163. And therefore the tramway must be an advantage for the transmission of goods? Yes.

TUESDAY, 23 SEPTEMBER, 1862.

Present:—

MR. CALDWELL,
MR. DALGLEISH,

MR. HOSKINS,
MR. PIDDINGTON.

JOHN LUCAS, Esq., IN THE CHAIR.

Mr. Samuel Hebblewhite called in and examined:—

Mr. Samuel Hebblewhite. 1164. *By the Chairman:* You have a place of business in Pitt-street? I have.

1165. And have had for some considerable period? For five or six years.

23 Sept., 1862. 1166. I believe you were originally one of the petitioners to have the Pitt-street Tramway constructed? I was.

1167. From your experience since, do you think it has answered the desired purpose? For a short time after its construction it did not answer my expectations, on account of the very imperfect way in which it was laid down, and the bad state it was kept in; in fact, it was not properly finished for some time.

1168. Do you think it is in a proper state now? My opinion is that they will never be able to make what I would call a good job of the present tramway without pitching it in the centre.

1169. Do you think it is an obstruction to the ordinary traffic of the street? No, I do not.

1170. Not at all? ———

1171. If it was, do you think that by paving the inside—the horse-track—and laying a course of stone on the outside of the rail ———? It would not require it outside the rail. I think a course of pitch paving on the inside would render it everything that is desired.

1172. Do you not think that it is too high—that if it had been laid two or three inches lower it would have been much better? If the street had been originally reduced six inches in the centre, so as to have made it nearly flat, it would have been better than it is now.

1173. Then you think the only objection to the present tramway is the mode in which it has been constructed? That objection has been obviated a great deal by the good repair in which it has recently been put.

1174. You have some freehold property in Pitt-street? I had, but I have sold it.

1175. Do you think property in Pitt-street has been depreciated in value in consequence of this tramway? No.

1176. Do you think property in Pitt-street has depreciated in value more than in other parts of the city? I do not think it has, from sales I have noticed.

1177. You are still of the same opinion as when you petitioned for the construction of the tramway, that it is a general benefit to the public? Yes, I am fully of opinion that it is one of the best things that could be done in the absence of a central terminus for the railway. That has always been my opinion. I was always in favour of a more central terminus.

1178. Then you would regret to see the tramway removed? I would, very much indeed; and I speak the opinion of a great many of my neighbours with whom I have consulted. I may state that I have been requested by a great many of the former petitioners to get up a petition in favour of its remaining.

1179.

1179. Have you declined to do so? I do not think the time has come yet. If the time comes when I think it is seriously intended to remove it, I shall use all my endeavours to get up a petition; but I do not think the Government will be so foolish as to take it up, or the Assembly so foolish as to recommend it.
1180. Do you think a majority of the people in Pitt-street, men of business, are in favour of the continuance of the present tramway? I do. The majority signed the petition for it formerly, and the majority would sign a similar petition again.
1181. *By Mr. Piddington*: Have you observed the number of passengers that use the tramway? Yes.
1182. During the whole period since it has been in operation? Yes, with the exception of a little time that I have been out of town.
1183. Do you think the number has increased or decreased since the beginning of the year? I think it is slightly on the increase, judging from appearances.
1184. Are you aware whether the tramway has been conducted at a loss to the public, independent of all payment of interest, during the whole of this year? I am not aware of it. I have been given to understand, by some of the railway people, that it is paying.
1185. You are not aware, then, that it has been conducted at a loss to the public, without reference to payment of interest on the cost of construction. I was not aware of it.
1186. Do you think a partial benefit ought to be purchased at the cost of daily loss to the public, such as I describe? I do not think it is a partial benefit; it is a public benefit. Both the benefit and the receipts could be very much increased if it were used for the carriage of goods as well as passengers, as was originally intended; but they have never brought any goods upon it yet.
1187. If the public do not use the tramway to the extent of paying its expenses, how can it be called a public benefit? You may say just the same of all turnpike roads; they do not pay their expenses.
1188. This is not a turnpike road, but a special improvement—a special public work? I have always looked upon it as a benefit to the general railway lines of the Colony—as an addition to the line of railway. I myself never expected that it would repay its cost, and I do not think the Government ever expected it would do so.
1189. I am not speaking of paying interest on the money borrowed, but of the working expenses? I should be very glad to take it to-morrow and work it; I know I could make it pay.
1190. You appeared to think it did pay as it stood? I think it does pay. It either does pay, or ought to pay.
1191. It is a mistake, it does not pay? We all know very well that the Government do not offer those facilities to the public that a private set of persons would do.
1192. Does not this tramway work in connection with the railway? Yes.
1193. Was it not constructed in order to work in connection with the railway trains? Yes.
1194. What more can be done than to work it in connection with the railway trains according to the Act under which it is constructed? I do not know that the Act authorizing its construction restricts it to that alone. I thought it was to work up and down the street.
1195. If it does work in connection with the railway trains, what more can be done, as far as the passenger cars are concerned, than is done? It is a thing I have never gone into, not intending to be one of the lessees.
1196. If it be a fact, as given in evidence here, that the tramway has been carried on at a loss to the public ever since it has been opened, with the exception of the first month, do you think the public use it to such an extent as to make it properly a public benefit? I certainly do.
1197. Then you would be content to see it remain if only one passenger a day used it? No, that is another thing altogether.
1198. To what amount of loss do you think the public ought to submit? You are putting questions to me that would require that I should go into figures to answer them. But I may say, that I consider this matter is so great a convenience to the public, that we are warranted in keeping it down even at a loss.
1199. To what extent of loss do you think the public ought to submit, without respect to the payment of interest? There is one thing to be borne in mind, that this tramway cost as much more in laying it down as it had any business to do. It was put down in the most expensive way it could possibly be, with no particular benefit to be derived from the outlay. To bring the matter to a point, I would say, that if the Government were losing even 50 per cent. by it, I think it should be continued.
1200. If the public lose one-half of the cost of working this tramway, you still think it ought to be kept down? Yes, I do; at the same time I am satisfied they have no business to lose so much.
1201. If they lost 75 per cent. do you think it ought to remain down? I should begin to look into the working expenses. I should say it would be a rascally bad concern if it would not pay more than that.
1202. Do you think that if the public were to lose three-fourths, or 75 per cent.; out of every £100 of the cost of maintaining and working this tramway, it still ought to remain down? I should certainly be of a different opinion then.
1203. Then a difference of 25 per cent. would cause you to alter your opinion? Yes; but I should say, from the hundreds of persons using it, that there must be something very wrong if it is losing even 25 per cent.
1204. Do you keep a retail establishment in Pitt-street? Wholesale and retail.
1205. Chiefly wholesale or chiefly retail? Chiefly wholesale.

Mr. Samuel
Hebblewhite.

23 Sept., 1862.

- Mr. Samuel Hebblewhite.
23 Sept., 1862.
1206. Then the effect of an obstruction in Pitt-street would not much injure your trade? Decidedly it would. I have often several drays standing at my door.
1207. Is your trade of such a nature as to be injured in the same proportion as a draper's, haberdasher's, or grocer's? I sometimes have carriages with ladies in them at my door, and they stand as old fashioned now as before the tramway was laid down.
1208. What is the width of the street opposite your establishment? I think thirty-five or thirty-six feet between the kerbs.
1209. As wide as most portions of the street? About the average width; some portions are wider and some narrower.
1210. *By Mr. Hoskins*: I suppose you have not sustained any perceptible diminution in your business since the tramway was laid down? I believe my business has increased since; my returns have increased considerably.
1211. Have you heard from any other residents or storekeepers in Pitt-street, that they have sustained any perceptible diminution in their business since the tramway has been laid down? I have never heard anything definite. I have heard rumours of people saying that ladies have been driven out of the street by it, but not from the parties interested themselves. Several of the persons who signed the petition before are drapers, and they are anxious the tramway should remain down.
1212. The drapers are? Some of them. I have very little doubt I could get nearly the whole of them to sign again.
1213. If the tramway, as has been represented by some persons, was an obstruction to the traffic in Pitt-street, and also considered a dangerous obstacle to carriages conveying females, the retail shopkeepers would be more affected than any other class of persons? Yes, they are the persons most affected by anything in that way, because the carriages are generally standing at the door while the ladies are making their purchases inside.
1214. And you have heard some of those persons state that they wish the tramway to remain? Yes, I have; one in particular, who lives close to me. I think they are rather anxious to be summoned here to give evidence.
1215. Do you think the number of persons traversing Pitt-street has increased since the tramway has been laid down? At the very first it was quite a new thing, and many persons, through the novelty, used it; and since then there may have been some falling off; but I think now that the really permanent customers to the affair are increasing. I know several persons who are going to live out on the line of railway, on account of the convenience afforded by the tramway for reaching their places of business without the intervention of the omnibuses.
1216. Do you consider the ordinary passengers through Pitt-street, not by the tramway cars, have diminished in number since the tramway has been laid down? I do not think there are quite so many carriages in the street. I attribute that in a great measure to the alarm that has been spread by letters in the papers, and by several influential parties who have always been opposed to it.
1217. Have you seen any accidents occurring to horses and vehicles crossing the Pitt-street Tramway? No. I was on the tramway one day when an accident happened to a person who jumped from the car.
1218. Are not the facilities for alighting from the tramway cars much superior to the facilities for alighting from the ordinary omnibuses? Very much. This accident occurred through the rashness of the man himself; he was drunk, and wanted to get down between two streets; the men in the car tried to stop him, but he struck out and jumped right off, fell on his back, and lay senseless for a couple of hours. The carriage was at full speed.
1219. Have you ever seen any difficulty in stopping the cars? No.
1220. Have you ever seen any damage done to vehicles in crossing the tramway, unavoidable damage from the obstruction presented by the rail? I have never seen any immediate damage. I have heard persons say it had taken tires off wheels; but that was at first, before it was properly raised in the middle. It has stopped a very great nuisance—furious driving in the street; persons are obliged now to drive rationally and reasonably.
1221. You have never seen any inconvenience occur to a careful driver? No, not since the tramway has been in good repair.
1222. Have you seen horse tramways in use in other places? I have seen them in England forty years ago.
1223. Where, and for what purpose? This is not a tramway in reality. I have seen what was properly called a tramway, around the docks in the town of Hull.
1224. Have you never seen a tramway used for the transmission of passengers? Never.
1225. I presume you are aware that tramways are in use for that purpose in the large towns of America? Yes, I have heard they are.
1226. Have you ever heard that the per centage of accidents is less on tramways in America than the per centage of accidents occurring to the same number of persons in ordinary vehicles? From inquiries I have made from Americans who come to my establishment, the per centage of accidents is considerably lower; in fact, accidents are of very rare occurrence.
1227. You are in the habit of conversing with intelligent Americans? I am.
1228. Have you ever heard them making any remarks in reference to the Pitt-street Tramway? Yes, a good many have done so.
1229. Do they approve of the way in which it has been laid down, or have they complained of the defective construction or inadaptability of the rails? They say the rails are of very improper construction, and that if they were of a proper description, such as are used in the United States, they would afford no obstruction at all.
1230. Did they describe the kind of rail? The rail they have described to me is much like
like

like the ordinary rail laid on the line of railway. It is thoroughly bedded in the soil, and nothing appears but a slight rim just above the ground.

Mr. Samuel Hebblewhite.

1231. Have you never heard that horse tramways in America have rails like flat bars of iron spiked on to wide longitudinal wooden sleepers, the bar of iron not rising more than about an inch above the surface of the ground? No, the rails have been described to me as much like ordinary rails.

23 Sept., 1862.

1232. However, the Americans with whom you have conversed have generally stated that the rails used there are not of the description laid down in Pitt-street? Decidedly; and that the rail we have is not at all suitable; they say it is one of the worst that could be laid down.

1233. Are you in the habit of travelling by the tramway cars? Whenever I can.

1234. Do you consider it an improved system of locomotion as compared with the ordinary 'buses? I do most assuredly. There is as great a difference as between the old stage coach and a railway.

1235. Do not the cars travel much more rapidly than ordinary vehicles? They run with greater regularity, and I think quicker, because there is none of that trailing along the road to get passengers as they go along, which is so annoying to a passenger in an ordinary omnibus.

1236. Are there not many way passengers who take the car at one street and alight at some other, without going right through by the railway line? There are a few.

1237. Are there very few way passengers? Of course the great majority are railway passengers.

1238. Can you ascribe any cause for the paucity of way passengers, seeing that the omnibuses traversing a parallel line of road have to depend entirely on way passengers? Because these cars run so very seldom—only just on the arrival and departure of the railway trains. If they were running every quarter of an hour they would soon eclipse the George-street 'buses altogether.

1239. Then I should infer, from your evidence, that in your opinion, if the Pitt-street Tramway is not a paying concern, the reason is that the interests of the travelling public are not considered? That is precisely my idea.

1240. Do you think that, in the hands of private persons, it would be a lucrative concern? I do. A private Company would run it at a much cheaper rate than the Government. The Government pay double or treble for everything they get done.

1241. Do you know the rate the Government pay the contractors for drawing these cars? No; but, as a general rule, we know the Government do pay more for everything than private persons.

1242. In answer to a question from Mr. Piddington, you stated that if you had the tramway you would undertake to make it pay? If I was to lay myself out for it I would.

1243. Do you think that any person knowing the traffic in Pitt-street, and the number of persons who traverse from the northern to the southern end of the city, might venture—or that you yourself, if you had given the matter any consideration, would venture—to give the Government any interest on the money sunk in the construction of the tramway? I do. I think there would be no difficulty in getting the interest.

1244. Do you think that if it was managed by private individuals—who of course would look to the public custom to indemnify them for the expenses of working and a return for their outlay—they might safely calculate on being able to pay a fair amount of interest on the cost of construction? I think so. I think it would be a very poor concern indeed if it would not.

1245. You are not prepared to say what rate of interest could be given? I am not.

1246. You were asked what per centage of loss you think the Government would be warranted in incurring for the sake of benefiting the public, or a portion of the public, by retaining the Pitt-street Tramway as a medium of communication;—now you are aware, I presume, that the railways have not paid their working expenses? I am.

1247. You must be also aware that railways are very little, if any, benefit to the residents of the Manning, the Richmond, the Clarence, Kiama, Twofold Bay, and other places, and therefore are only a benefit to a certain portion of the public;—now what amount of loss do you think the Government would be warranted in incurring in constructing and working railroads, if those railroads only benefit a portion of the public? I am satisfied of one thing, that even if there was a loss of 75 per cent. on the working expenses of railways, you could not shut them up, they are so vital to the interests of the community; and I think that if you shut up this tramway, you will find your mistake out very soon. Railways may now be said to be part and parcel of the constitution of the country; and though I consider that the Government have no business to work railways at all, I think that having done so, even if they should lose 75 per cent. of the working expenses, they could not shut them up.

1248. On account of their being a national benefit? Just so. I look on this tramway as conferring benefits equally great, so far as it goes. I go the whole figure for tramways; I would have one in every street of the city, and so do away with the nuisance of omnibuses—one of the greatest nuisances in the city. Three-fourths of the blackguardism of the streets proceeds from 'bus boys and drivers.

1249. *By Mr. Caldwell:* Do you mean to say you would make the tramway in Pitt-street pay under any circumstances, if confined only to passengers? I would have passengers and goods too; I would take everything on the line that could possibly be conveyed upon it.

1250. Would you carry goods on the line as it is now? I would, as was originally intended.

1251. Is it constructed as was originally intended? It is not constructed as I expected it would be.

- Mr. Samuel Hebblewhite,
23 Sept., 1862.
1252. As it now stands, is it fit for goods traffic? I consider it is. A couple of horses could draw about ten tons on it.
1253. Have you ever known two horses draw five tons on it? I do not think they have ever attempted it. I have seen in England, on a proper tramway, two horses run away with ten tons of goods.
1254. Are you aware that an attempt has been made to bring goods along this tramway? I am aware they have brought some of those seven or eight ton trucks on it.
1255. What quantity of goods was on them? I do not know. But if you have not proper appliances, there is no use in calling a thing a trial.
1256. What mode would you suggest in order to make it pay? I should have all the railway material which is landed at private wharves landed at the Circular Quay; and there can be no difficulty in taking fifteen or twenty tons on proper trucks, because from the Circular Quay down to the terminus it is principally down hill.
1257. What quantity of goods do you think four horses would bring along that tramway now to the present railway station? It is a thing I never tried; but I should have no hesitation myself, if I were going to make the experiment, in putting ten tons behind two horses from the Circular Quay to the railway station. It is very different the other way.
1258. And you would expect two horses to bring ten tons to the railway station? I would; and I would lay a wager of £10 I would have it done, too.
1259. Supposing the tramway was confined to passengers alone, do you think it would pay under any circumstances? In private hands I am satisfied it would pay considerably better than it is paying now.
1260. Have you found any inconvenience arising from the rail being laid in Pitt-street? I have heard of many fancied inconveniences, but I never knew a case in which the fault was applicable solely to the tramway.
1261. Have you yourself driven along Pitt-street? Yes.
1262. Have you found any inconvenience in doing so? When there was a gutter several inches in width alongside the rail I did; but wherever the road has been kept in a proper state I am not aware that there has been any real inconvenience.
1263. The inconvenience, you think, has been done away? Yes, in great measure.
1264. In what way? By the road being better filled in the centre.
1265. Has the space where the flange of the wheel runs been filled up? I consider that will never be perfect for traffic without pitch paving, and then there would not be a groove of more than an inch and a half wide, which no wheel could get into.
1266. I suppose you have observed that wheels run now alongside the rail? They do; that is the only inconvenience that arises from it, and could be obviated by pitch paving. I consider that pitch paving the centre would make it perfect.
1267. Do you not consider that there is some danger to passengers driving along the street at present? If they drive like ordinary sober people there is no danger. As I noticed before, we have got rid of the nuisance of furious driving in Pitt-street, on account of the tramway. I saw a butcher's cart pulled up by it one day, when going at a rapid rate.
1268. In what way? It took the tire off his wheel. It is notorious that the butchers' carts are a nuisance all over the city.
1269. By Mr. Dalgleish: You gave evidence, I think, before the former Committee on the Pitt-street Tramway? I did.
1270. Your opinions at that time were, that it would be a very valuable work for the country? Yes.
1271. Have you had any reason to change your opinion on that subject? The present tramway, as I have said before, has not come up to my expectations, in the way in which it is laid down, either as to expense or utility.
1272. Is it the same description of tramway you were led to believe would be laid down? Not exactly.
1273. Does it differ on any material points? I have already given evidence as to the sort of rail I would have had laid down; perhaps you do not want me to repeat what I have said before.
1274. Is it the description of rail you anticipated would be laid down? No; it is not the description of rail that was generally anticipated would be laid down.
1275. Was it anticipated that this line would be available for goods carriage? Yes.
1276. Has it been so? No.
1277. Are you aware of anything to prevent its being used for that purpose? No.
1278. Are you aware whether the Pitt-street Tramway at present pays its working expenses and maintenance? I was not aware of it, but I have been told to-day it does not pay.
1279. I think you stated, that if it was in the hands of private persons it might pay? I have already said that I am satisfied it would.
1280. Then you infer that the line at present is not properly managed? It is managed in about the same way that all Government affairs are. That is my honest opinion with respect to Government works generally. What with political influence, and one thing or other, we get a lot of bad servants and pay them high salaries.
1281. In your opinion, then, it is in consequence of bad management that the Pitt-street Tramway does not pay? That is my opinion.
1282. Have you any private vehicles, carts or drays, for taking heavy weights? None that I use in Sydney.
1283. Have you any experience of cartage in the city? Yes, a good deal.
1284. What is the heaviest weight that one horse could take up Pitt-street on the steep inclines, from say the Haymarket to Goulburn-street? I have had a ton brought up from the various wharves, for instance, Botts' wharf.

1285. That is much steeper? Yes.
1286. You have not had any cartage of goods in common drays up the same inclines as the Pitt-street Tramway? No.
1287. In what way would you suppose the Pitt-street Tramway would pay better, were it in the hands of private individuals—by raising the fares? No, by offering greater facilities—running oftener.
1288. Is the accommodation sufficient for the passenger traffic to and from the railway, more especially from the railway? From the railway I think the carriage is generally pretty well filled.
1289. Is it usual to have both carriages running on the line? Generally.
1290. Have you seen occasions when there was only one carriage run? Yes.
1291. Have you any means of knowing whether passengers were left behind from want of accommodation on these occasions? No, but the carriage appeared to me to be inconveniently crowded.
1292. You have seen it more than conveniently full? Yes; all the sitting room occupied, and persons standing in the middle—thoroughly filled.
1293. And at the same time only one carriage running? Yes; that was when there was only one carriage running, and there was a great outcry for more accommodation.
1294. It might be reasonably inferred that there were passengers who could not find accommodation, though you have not heard that any were left behind? I had not the means of knowing.
1295. Has property been much injured in Pitt-street in consequence of the laying down of the tramway? I do not think it has been more depreciated in value than property in other streets; there has been a general fall.
1296. Supposing the tramway cars were run more frequently, once an hour for instance, do you think it would be any detriment to the ordinary traffic of the street? I do not think it would.
1297. Was there any anticipation on the part of the inhabitants that goods depôts, in connection with this tramway, would be established in different parts of the city? It was my impression that there would.
1298. In order to facilitate the transfer of goods from the city to the railway? Yes.
1299. That has not been carried out? No.
1300. Were there any other public advantages anticipated from the construction of the line, which have not been carried out? The only facility that has been kept back that occurs to me, is their not taking goods. If they did so, both to and from the railway, I think it would add very much to the revenue of the line.
1301. Bathurst-street, I think, is the last street to the south at which the cars stop? Yes.
1302. Would there be any difficulty in stopping at Liverpool-street? It is rather steep there, but I have seen them stop there; when they first started I think they used to stop there.
1303. The junction of Liverpool-street and Pitt-street would be a very important station, if the carriages were stopped there? Well, I do not know; it is so near the line. But I do not see why they should not stop there.
1304. If passengers were going to the railway, a quarter of an hour's walk would be a great object, would it not? Yes, no doubt.
1305. Liverpool-street would be the nearest point for all passengers from the South Head Road and that direction? When they did stop there, I never saw any difficulty in stopping; they always had full control and command of the carriages at all times by the breaks.
1306. You know of no other inconveniences that have arisen from the construction of the tramway? No, except what I have given evidence of here to-day.
1307. And of no accidents, except the one to the butcher's cart? There have been other accidents, I believe, but that was one I happened to see, and it certainly was not the fault of the tramway.

Mr. Samuel
Hebblewhite.

23 Sept., 1862.

John Rae, Esq., Commissioner for Railways, called in and further examined:—

1308. *By the Chairman:* You were requested to attend to-day and bring some further returns respecting the Pitt-street Tramway, in continuation of returns already laid before the Committee;—have you those returns? I have a return for the month of August, from the 1st to the 31st, which I beg to hand in. (*Vide Appendix A.*)
1309. *By Mr. Piddington:* Does this include the maintenance of way? Yes, everything.
1310. In accordance with the former return up to the end of July? Yes, the same particulars.
1311. Have you any objection to furnish the Committee with the specifications and conditions with reference to the leasing of the tramway? Not the slightest, with the sanction of the Minister, of course. I do not believe there will be the slightest objection. (*Copy of conditions handed in. Vide Appendix B.*)

John Rae,
Esq.

23 Sept., 1862.

John Rae,
Esq.

E. & O. E.
Sydney, 18 September, 1862.

R. C. WALKER.

B.

CONDITIONS for leasing the Tramway, extending from the Railway Station, Redfern, to the Circular Quay.

The Government is prepared to lease the tramway and cars appertaining thereto, together with the stables erected in the station yard.

Tenders will be at liberty to offer for the above with or without maintenance of permanent way.

The terms of lease will be for one year, terminable on three (3) months' notice by the Commissioner or the contractor.

Tender to state a fixed sum per annum, payable by monthly instalments, in advance.

Tenders must be addressed to the "Commissioner for Railways," by whom the lease will be granted.

The lessee will be required to keep the cars in proper repair, subject to the inspection of the officer appointed by Government for that duty.

Should the permanent way be taken by the lessee, it must be maintained in good condition to the satisfaction of the officer appointed for this duty.

The lessee must run cars in conjunction with the arrival and departure of all advertised railway trains, and may run them at such other times as may be approved by the Government.

Should the lessee fail to maintain the cars, permanent way, or other property taken under this lease, in a proper and efficient manner, and to the satisfaction of the officer appointed for the purpose, the Commissioner shall have full power, on giving twenty-four hours' notice to the lessee, to make such repairs as may be considered by such officer requisite, and the cost of such repairs shall be recovered from the lessee or his sureties.

The lessee will be liable in every legal respect as owner of the tramway during the period of the lease.

The lessee will be required to give approved security for performance of contract to the amount of £300.

The maximum rate for passengers will be (6d.) sixpence for any distance, each trip.

The maximum rate for goods 2s. 6d. per ton either way: but it must be distinctly understood that the goods traffic will be subject to arrangement for the use of trucks in the event of a tender being accepted for leasing the railway.

In the event of acceptance of any tender made in pursuance of this advertisement, a contract embodying the above stipulations will be prepared for execution.

WEDNESDAY, 1 OCTOBER, 1862.

Present:—

MR. ARNOLD, | MR. HOSKINS.
WILLIAM FORSTER, ESQ., IN THE CHAIR.

John Whitton, Esq., called in and examined:—

J. Whitton, Esq. 1312. *By the Chairman:* You have always, I believe, expressed an opinion against putting down a tramway in Pitt-street? Yes, I think I have generally done so.

1313. But when once it was determined to lay down that tramway, the superintendence of the work was placed in your hands? It was.

1314. I think you have stated in evidence, that complaints have been made about this tramway by different people? Yes.

1315. On what grounds? In consequence of the narrowness of the street, and on account of the rails projecting above the roadway.

1316. What was the ground of your objection in the first instance? The narrowness of the street.

1317. You have no general objection to a tramway through the streets of a city like this? No, provided the street be sufficiently wide to admit of a tramway that would not interfere with the ordinary traffic.

1318. It would then be impossible to obviate your objection to this tramway without knocking down the houses, and thus widening the street? I have no further objection to it than the

the one I have stated. I was asked my opinion as to the propriety of carrying this tramway down Pitt-street, and I stated that I thought the street too narrow; but if the public have no objection on that ground I have none.

1319. Then, on balancing the advantages and disadvantages, do you think it is advisable to retain it? The disadvantages I am not personally aware of, and I think it is a great convenience to railway passengers and the public.

1320. And the inconveniences are to the owners of property in that street? Yes; but the owners of property originally were the very first to insist upon the line being laid down in that street.

1321. But they are now opposed to it? I do not see any complaints from them in the newspapers, and I have heard none of them make objection to it.

1322. Does it strike you that there are public inconveniences that can be placed against the conveniences to railway passengers? The inconveniences I have heard of are, that in consequence of the projecting flange of the rail, ordinary vehicles coming in contact frequently have their axles twisted; but this might, to a great extent, be obviated by pitching the sides with granite or blue stone.

1323. Then the rail would be level with the street? The only projection would be to the extent of five-eighths of an inch.

1324. Then, by levelling the rail with the street in that way, you get rid of that objection? Yes, with the exception of the groove inside the rail.

1325. Then you would not say, that whilst this inconvenience could be easily met, it would form a reasonable ground for taking up the tramway? I should say not.

1326. Has it not occurred to you that there is an objection to it as regards foot passengers? No, I do not know of any such objection.

1327. Are you not aware of the fact, that that street is more muddy than any other—that on the slightest shower you cannot pass it without going through much mud? It may be so; perhaps the Corporation have paid less attention to it in consequence of the tramway running down that street.

1328. Do you ever pass that street on foot? Yes.

1329. Did you notice it this morning? I have not crossed it this morning.

1330. As a general rule, would you not suppose the tramway must make a street muddy, from the tendency of the rails so laid to collect water, being above the level of the street? That would be obviated, to a great extent, by pitching it.

1331. But not altogether? No; there must be a small groove for the water to pass down.

1332. Have you never heard the muddiness of this street complained of? No, except on the last occasion when I was in attendance at this Committee.

1333. Supposing this improvement of levelling and pitching that you speak of were carried out, would it not be open to this objection, that stones and mud would be continually getting on the rails? The only objection would be, that stones might get in between the pitching and the rail.

1334. If you had the line level with the street, would it not be always subject to have dirt and other substances falling upon it? It would be scarcely level, as the rail has a flange projecting above the level of the street.

1335. The flange of the rail would be above the level of the street on one side, and level with it on the other? Yes.

1336. The rail would be level, but the projecting flange of the rail above the level? Yes, about five-eighths of an inch.

1337. Would it not then hold water? Only in the groove made for the flange of the wheel, and it would soon evaporate.

1338. There would be no remedy except evaporation? No, and absorption.

1339. Then there would always be this annoyance with street tramways or railways of any kind? Yes; but the space in which water would collect would be only an inch and a half wide.

1340. Do you think there would be any improvement in using locomotives instead of horse traction upon this line? No, I do not think it would be any improvement. Locomotives could not run over this line.

1341. Are not locomotives better suited to tramways in towns than horse traction? I think not. Locomotives are not suited to run through towns, unless the line be entirely away from the thoroughfares for public conveyances. If the line were not brought through a public street, and did not come in contact with extensively frequented thoroughfares, no doubt locomotives would be an improvement.

1342. Have the rails been laid down in the best possible way? They have been laid down in accordance with drawings from England.

1343. Are they the best rails for the purpose that could be obtained? I do not know of any better; all are open to the same objection.

1344. Are they perfectly levelled now? No; that arises from the cambering of the timber.

1345. That will require alteration? Yes, until the timber is seasoned.

1346. It was not owing to any fault in the laying down of the line? No, certainly not.

1347. Nor of the rails? No.

1348. Is it true that the rails are placed in a different position to what was intended by the inventor? Yes.

1349. Will you explain? The instructions sent to England in reference to rails for this service were, that they were to be of such form as would admit of trucks travelling over them as well as 'buses; but when they came out it was found that they were not so constructed that ordinary trucks could run over them.

1350. And they could not now run upon them? Yes, they can now, as the rails are laid down differently.

J. Whitton,
Esq.

1 Oct., 1862.

J. Whitton,
Esq.

1 Oct., 1862.

1351. You had them laid down as they are now? I recommended it. The flange of the 'bus wheel runs outside instead of inside the rail. The projecting portion of the rail is turned inside instead of outside.

1352. Do the rails answer the purpose quite as well that way? Quite as well. Had we laid them the other way we could not have used the ordinary trucks upon them.

1353. Have you used the trucks upon them yet? They have been over them.

1354. You intend to use them? Yes.

1355. Upon the whole, you do not recommend that the rails be taken up? I do not. I think the line may be greatly improved by pitching it on the two sides; and I think it would be a great convenience in communicating with the waters of the harbour.

1356. Does it add to the traffic of the Great Southern Railway? I do not know that it does.

1357. Its greatest advantage is as a convenience to railway passengers—is not that the only one? No, the public make use of it between the different streets as well as when proceeding by the railway.

1358. *By Mr. Hoskins:* You do not apprehend any difficulty in working the goods trucks on this tramway if you require it? No.

1359. *By Mr. Arnold:* When you speak of your objection to this tramway originally, do you not mean that you objected to it as compared with some other means you suggested of bringing the railway into town? Yes. I proposed to bring the railway to Hyde Park, and my original objection to this tramway was, that it was in opposition to that proposition.

1360. Do you think some means should be provided for continuing the railway into the more populous parts of the town? I do. I think the Great Southern Railway should be continued to Hyde Park, so as to make the permanent station in Sydney; and as a new station must shortly be erected, it would be unwise to spend a large sum of money at so inconvenient a place as the Redfern Terminus.

1361. Supposing it were thought undesirable to continue the railway into the town—do you know of any better mode of meeting the convenience of passengers by the railway than by means of this tramway? None better than this, for meeting the convenience of passengers.

1362. Do you know of any better mode for goods? No doubt it would be a greater convenience for goods if either the Darling Harbour branch were completed, or some other means adopted for bringing the goods traffic by locomotives to the waters of the harbour.

1363. Can you suggest any more convenient mode of conveying goods from the Circular Quay than by a tramway of this kind? No, I think there are no other better means for conveying traffic between the railway and the Circular Quay.

1364. So far as this tramway can be looked upon as an accessory to the railway, do you not think it a complete success? I consider that it is a great public accommodation to have this tramway, and it is generally preferred to any other means of conveyance between the Circular Quay and the railway.

1365. Have you seen or heard of anything that detracts from the success of the tramway as calculated upon originally? No, nothing in that respect; of course I have heard all sorts of complaints.

1366. Has it not answered the purpose originally in view in all respects? So far as it has been tried; but I think the original intention was to bring the goods traffic to the Circular Quay.

1367. Is there any difficulty now in bringing goods along this line to and from the Circular Quay? No.

1368. I suppose it would be desirable to have a lighter kind of truck for horse traction? Yes, for horse traction, but then in that case there would be the disadvantages and expense of loading and unloading at the railway station, in order to change goods from the one set of trucks to the other.

1369. Then it would be more economical to employ a greater horse power than is now employed, than to submit to the trouble and expense of loading and unloading at the station? Yes.

1370. Would there be any danger in using the heavy railway trucks on the tramway? None whatever.

1371. Not in descending the inclines? Not if sufficient break power were used.

1372. With regard to the inconvenience and danger stated to arise in regard to the ordinary traffic in Pitt-street, from the groove alongside the rail, is not that inconvenience and danger created more by the ruts made by drays and carriages running alongside the tramway, than by any peculiarity in the construction of the tramway itself? It is caused almost entirely by that means.

1373. Is it not the case, that the tramway forming the best part of the street, all the traffic goes along it in preference to any other part of the street? It may be so.

1374. From whatever cause it may arise, such a preference is shown, and the inconvenience and danger spoken of arise from the ruts thus made? Yes, to a great extent, if not altogether.

1375. Have you observed that Pitt-street is more inconvenient to foot passengers, or more muddy than George-street? I have not noticed it, but if it be so it may arise from the Corporation not paying so much attention to Pitt-street, in consequence of the tramway being there. I do not know any other cause for it.

1376. When this idea was first suggested, was it not originally proposed to use the Barlow rail? Yes, I proposed that Barlow rails should be used.

1377. Would not the same inconvenience have arisen from the use of the Barlow rail, or would it not have been aggravated by the use of that rail? I do not know that there would have been much difference.

1378. Would it not have been more difficult to pass with a rut on the side? No, it is precisely the same top—2½ inches in width.

1379.

1379. Would not a rut be made on both sides? A rut may be made on both sides of this rail. J. Whitton, Esq.

1380. You think the Barlow rail would have answered the purpose just as well? I do not know that it would be so convenient; it is not perpendicular at the sides. I suggested it because we had plenty of old rails of that kind in the Colony, and as this was to be only an experiment I thought it would have been best to use them on the line. 1 Oct., 1862.

1381. Which do you think is the best suited more completely to answer the purpose with regard to this tramway? I think the present rail is the best suited.

1382. Do you think the plan and construction, looking to the purpose it was intended to serve, are as perfect as they could be? It is possible that some improvements may be made in it, but nothing of any very great importance; it would have been better if seasoned timber had been used instead of Colonial timber unseasoned.

1383. That is the only improvement you can suggest in the way of construction? I would have had iron pins instead of the wooden ones.

1384. How was it that unseasoned timber was used? In the first instance, I believe seasoned Colonial timber could not be obtained in town within so short a time as was required; that it was difficult to get the timber, seasoned or unseasoned; and as I understand, a resolution was passed in the Assembly in favour of the use of Colonial timber, I ordered it to be used. I have frequently tried to get seasoned timber, either American pine, Memel, or Baltic, but have scarcely ever been successful in getting it in the Colony.

1385. Is not the reason why more use is not made of this tramway for the conveyance of goods, that the nature of the arrangement with the Commercial Agent prevents the goods from being landed at the Circular Quay? That has been the sole reason.

1386. There is no other reason why the goods should not be landed at the Circular Quay, and run along this tramway to the railway? No reason. It would require great care in taking the trucks down the steep inclines near the Haymarket.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

COAL TRAMWAY AT WOLLONGONG.
(PETITION.)

*Received by the Legislative Assembly, 24 June, 1862, and Printed under the Sessional Order
of 4 June, 1862.*

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of the Town of Wollongong
and its vicinity,—

HUMBLY SHEWETH :—

That the District of Illawarra is known to contain a number of valuable
Coal seams, some of which are, and others about, being worked by Companies, to the great
benefit of the residents of the District generally.

That a Company known as "The Illawarra Coal Company" has been lately formed,
and is laying down a Tramway along the sea shore, on land belonging to the Government.

That the said Company has not obtained an Act of Parliament authorizing such
Tramway, or in any way regulating its construction.

That Parliament having commenced its sitting and no application for a Bill having
been made by the said Company, your Petitioners fear that this Company will become
possessed of exclusive rights, to the prejudice of other Coal Companies.

Your Petitioners therefore pray that the said Company, as well as all others that
may hereafter require Tramways into the town, should be compelled to obtain an Act of
Parliament by which all such Tramways may be thrown open to those who may be willing to
use them on fair and equitable terms.

And your Petitioners will ever pray.

[Here follow 131 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MOUNT PLEASANT TRAMROAD BILL.
(PETITION OF JOHN HUBERT PLUNKETT.)

Received by the Legislative Assembly, 31 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of John Hubert Plunkett,—

HUMBLY SHEWETH:—

That your Petitioner is the proprietor of certain land which contains coal mines; that this land has been leased by him for a term of only ten years, commencing from July, 1861.

That he has learned with surprise that evidence has been given before a Select Committee of your Honorable House, to whom the Bill "to authorize the completion of a Tramroad from Mount Pleasant Coal Mines to Wollongong Harbour" was referred, to the effect "that James and William Byrnes, of Sydney, Merchants, are the owners of the Mount Pleasant Coal Mines;" and your Petitioner further observes, that in the preamble of the said Bill the recital is to that effect.

That your Petitioner has endeavoured to obtain a view of the plan shown to the said Select Committee, but without effect, although he applied to the Clerk of your Honorable House, and also to the Solicitor of the Promoters.

That your Petitioner, in the absence of the plan, has reason to believe that the coal mines in question are on the land so leased by him, and that the said James and William Byrnes are only the assignees of his lessee.

Your Petitioner respectfully urges upon your Honorable House that his rights should be protected by the Bill in question, and that the said Bill ought not to be passed in its present shape.

That its recital should be altered according to the real facts, that the owners of adjoining mines should be entitled to use the intended tramroad throughout, that is, from the mines, because the point at which that right purports to be given by the Bill is upwards of two miles from the coal mines, and would be delusive and useless.

That your Petitioner's property would be much deteriorated in value, and would be of no avail either to himself or the public at the expiration of the said lease, if he had not the right to use the said tramway throughout, on the usual equitable conditions.

Your Petitioner prays your Honorable House to extend to him the same rights and privileges which have been secured to the proprietors and owners of the Mount Keera Coal Mines, from which a tramroad was authorized, by an Act passed in the year 1860, entitled "*An Act to authorize the completion of a Tramroad from the Mount Keera Coal Mines to Wollongong Harbour.*"

And your Petitioner will ever pray.

JOHN H. PLUNKETT.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 77. TUESDAY, 7 OCTOBER, 1862.

10. Mount Pleasant Tramroad Bill :—Mr. Faucett moved pursuant to notice,—
- (1.) That the Mount Pleasant Tramroad Bill be referred to a Select Committee for consideration and report; the Committee to have power to send for persons and papers.
- (2.) That such Committee consist of the following Members, viz., Mr. Robertson, Mr. Piddington, Mr. Hay, Mr. Burns, Mr. Smart, Mr. Lucas, Mr. Dickson, Mr. Leary, Mr. Suttor, and the Mover.
- And Mr. Garrett demanding that the said Committee be appointed by Ballot,—
- Question,—That the Mount Pleasant Tramroad Bill be referred to a Select Committee for consideration and report; the Committee to have power to send for persons and papers,—put and passed.
- Whereupon, the House proceeded to the Ballot, and the Speaker declared the following Members to be the Committee duly appointed :—Mr. Faucett, Mr. Hay, Mr. Piddington, Mr. Dickson, Mr. Leary, Mr. Lucas, Mr. Smart, Mr. Robertson, Mr. Arnold, and Mr. Garrett.

VOTES, No. 84. FRIDAY, 17 OCTOBER, 1862.

6. Mount Pleasant Tramroad Bill :—Mr. Faucett, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee to whom this Bill was referred, on 7th October, for consideration and report.
- Ordered to be printed.

MOUNT PLEASANT TRAMROAD BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 7th instant, the "*Mount Pleasant Tramroad Bill*," beg leave to report to your Honorable House,—

That they have examined one of the Promoters of the Bill,* the Engineer-in-Chief for Railways,† and the Engineer-in-Chief for Harbours and Rivers,‡ (whose respective evidence will be found appended hereto), and that the Preamble having been satisfactorily proved by the evidence of those gentlemen, they proceeded to consider the enacting part of the Bill, in which they deemed it necessary to make certain amendments,§ and to introduce two new clauses.¶

* Mr. J. Byrnes.

† Mr. J. Whitton,
C.E.‡ Mr. E. O. Moriarty,
C.E.¶ *Vide Schedule.*

And your Committee now beg to lay before your Honorable House the Bill as amended by them.

P. FAUCETT,
Chairman.

*Legislative Assembly Chamber,
Sydney, 17 October, 1862.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 9 OCTOBER, 1862.

MEMBERS PRESENT :—

| | | |
|--------------|--------------|------------|
| Mr. Garrett, | | Mr. Smart, |
| | Mr. Faucett. | |

Mr. Faucett called to the Chair.

Printed copies of the "Mount Pleasant Tramroad Bill"—before the Committee.

Present for the Promoters :—Mr. E. Daintrey, *Solicitor for Bill*.

Resolution of the House, appointing the Committee, by direction of the Chairman,—read by the Clerk.

Petition for leave to introduce the Bill,—read.

Committee deliberated.

Ordered, That Mr. Whitton, Mr. E. O. Moriarty, and Messrs. James and William Byrnes be summoned to give evidence at the next meeting.

[Adjourned to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 14 OCTOBER, 1862.

MEMBERS PRESENT :—

| | | |
|------------|---------------------------|--------------|
| | Mr. Faucett in the Chair. | |
| Mr. Leary, | | Mr. Dickson, |
| | Mr. Robertson. | |

Present for the Promoters :—Mr. E. Daintrey, *Solicitor for Bill*.

Mr. James Byrnes called in and examined.

Plan *produced*, shewing the portion of the Tramroad from the Mount Pleasant Mine, as far as completed.

Mr. John Whitton, *Engineer-in-Chief for Railways*, examined.

Mr. E. O. Moriarty, *Engineer-in-Chief for Harbours and Rivers*, examined.

Room cleared.

Committee deliberated, and

[Adjourned to Friday next, at *Eleven o'clock*.]

FRIDAY, 17 OCTOBER, 1862.

MEMBERS PRESENT :—

| | | |
|-----------------|--|--------------|
| Mr. Lucas, | | Mr. Leary, |
| Mr. Piddington, | | Mr. Garrett. |

In the absence of Mr. Faucett, the Chair was taken by Mr. Lucas.
Committee deliberated.

Parties called in.

Present for the promoters :—Mr. E. Daintrey, *Solicitor for Bill*.

Two new clauses proposed to be introduced into the Bill, by direction of the Chairman, read by the clerk.

Mr. Faucett here entering the Committee Room,

Chair vacated by Mr. Lucas and taken by Mr. Faucett.

Room cleared.

Preamble read and considered.

Motion made (*Chairman*) and *Question*,—That this Preamble stand part of the Bill,—*agreed to*.

Clauses 1 and 2 read, and agreed to without amendment.

Clause 3 read.

Amendment

Amendment proposed (*Mr. Lucas*),—That the word "two," in line 3, be omitted, with the view of inserting in its place the word "three."

Question,—That the word proposed to be omitted stand part of the Clause,—*negatived*.

Question then,—That the word proposed to be inserted in place of the word omitted be so inserted,—*agreed to*.

Further amendment proposed (*Mr. Lucas*),—That after the word "mile," in the 3rd line, the following words be inserted, "or for any fraction of a mile."

Question,—That the words proposed to be inserted be so inserted,—*agreed to*.

Further amendment proposed (*Mr. Lucas*),—That the following words be added at the end of the Clause, "and all such trucks or waggons when emptied shall be conveyed on their return free of cost."

Question,—That the words proposed to be added be so added,—*agreed to*.

Words added.

Clause, as amended, agreed to.

Clauses 4, 5, 6, 7, 8, 9, and 10 severally read and agreed to without amendment.

New Clause read, viz. :—

9. It shall be lawful for the Governor with the advice of the Executive Council at any time after the completion of the Tramway authorised by this Act to be made to purchase the same with the appurtenances in the name and on behalf of Her Majesty upon giving to the promoters six months notice in writing of the intention to do so and on payment to them of a sum equal to the whole sum expended in completing the said Tramway by this Act authorised to be made and its appurtenances with a premium thereon at ten per cent. reserving nevertheless to the said promoters their heirs and assigns the use of the said Tramway or any other Tram or Rail way laid down in place thereof for the transit of coal from the said mine to the harbour at Wollongong on such reasonable conditions as to the Secretary for Works for the time being may seem fit.

Motion made and *Question*,—That this clause stand clause 9 of the Bill—*agreed to*.

Another new clause read, viz. :—

10. The said promoters shall within six months after the completion of the Tramway authorized by this Act to be made file in the office of the Colonial Secretary a true and faithful account in detail of all costs and expenses incurred in the making of the said Tramway or connected therewith verified by a declaration of the promoters or one of them and the amount of such costs and expenses so verified shall together with such premium as aforesaid be the amount at which the said Tramway may be purchased under the power in the foregoing clause contained.

Motion made and *Question*,—That this clause stand clause 10 of the Bill—*agreed to*.

The Chairman here requiring to be absent on other business, Chair taken *pro tem*.

by Mr. Lucas.

Committee deliberated.

Motion made (*Mr. Garrett*)—That clause 3 be reconsidered—*agreed to*.

Clause 3 reconsidered accordingly.

Amendment proposed (*Mr. Garrett*)—That the word "three," in the third line, be omitted with the view of inserting in its place the word "two."

Question,—That the word proposed to be omitted stand part of the clause—*negatived*.

Question then,—That the word proposed to be inserted in place of the word omitted be so inserted—*agreed to*.

Further amendment proposed (*Mr. Garrett*)—That the words at the end of the clause, viz., "and all such trucks and waggons when emptied shall be conveyed on their return free of cost," be omitted with the view of inserting in their place the following words "and no additional charge shall be made on the return of such trucks or waggons."

Question—That the words proposed to be omitted stand part of the question—*negatived*.

Question then—That the words proposed to be inserted, in place of the words omitted, be so inserted—*agreed to*.

Draft Report submitted and read.

Motion made and *Question*—That this be the Report of the Committee—*agreed to*.

Chairman to report to the House.

SCHEDULE OF AMENDMENTS.

- Page 2, Clause 3, line 3. *After* "mile," *insert* "or for any fraction of a mile."
- Page 2, Clause 3. At the end thereof *add*, "and no additional charge shall be made on the return of such trucks or waggons."
- Page 4, Clause 8. At the end thereof insert the following new clauses, to stand clauses 9 and 10 of the Bill respectively:—

" 9. It shall be lawful for the Governor with the advice of the Executive Council at any time after the completion of the Tramway authorized by this Act to be made to purchase the same with the appurtenances in the name and on behalf of Her Majesty upon giving to the promoters six months notice in writing of the intention to do so and on payment to them of a sum equal to the whole sum expended in completing the said Tramway by this Act authorized to be made and its appurtenances with a premium thereon at ten per cent. reserving nevertheless to the said promoters their heirs and assigns the use of the said Tramway or any other Tram or Rail way laid down in place thereof for the transit of coal from the said mine to the harbour at Wollongong on such reasonable conditions as to the Secretary for Works for the time being may seem fit.

" 10. The said promoters shall within six months after the completion of the Tramway authorised by this Act to be made file in the Office of the Colonial Secretary a true and faithful account in detail of all costs and expenses incurred in the making of the said Tramway or connected therewith verified by a declaration of the promoters or one of them and the amount of such costs and expenses so verified shall together with such premium as aforesaid be the amount at which the said Tramway may be purchased under the power in the foregoing clause contained."

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MOUNT PLEASANT TRAMROAD BILL.

TUESDAY, 14 OCTOBER, 1862.

Present:—

MR. FAUCETT,
MR. LEARY,MR. DICKSON,
MR. ROBERTSON.

PETER FAUCETT, ESQ., IN THE CHAIR.

James Byrnes, Esq., called in and examined:—

1. *By the Chairman:* You and your brother, William Byrnes, are owners of coal mines near Wollongong, known as the Mount Pleasant Coal Mines? Yes. J. Byrnes,
Esq.
2. Have you commenced and made considerable progress in the construction of a tramroad for conveying coal from these mines to the harbour of Wollongong, for shipment there? 14 Oct., 1862. {
3. In your opinion will the completion of that tramroad be a great public benefit? I think it will.
4. In what respect? In opening up the resources of the district.
5. What resources do you allude to? Particularly to coal mining operations, which cannot be carried on without the construction of a tramroad or railway in the district.
6. Is there a supply of coal in the district for local and general consumption? Yes, a very large supply.
7. Will the tramroad be a public benefit, in promoting the supply for both purposes? It will.
8. Is it your opinion that, in order to complete the tramroad, you should be empowered to carry the line of tramroad through certain lands described in the Bill, in the first section? It is almost absolutely necessary.
9. Can the tramroad be completed unless you are enabled to carry it through these lands? Not according to the way in which it is laid out at present. Another line might have been constructed, which would have been constructed at very great inconvenience.
10. For the completion of the present line of tramroad—a line partly made—is it necessary that you should be able to carry it through these lands? Absolutely necessary.
11. You have brought a plan of the proposed line? Yes. (*Plan produced.*)
12. Will you be good enough to point out to the Committee the line as already made, and the portion you propose to have completed? The line is nearly complete from the Mount Pleasant mine to the point marked A on the plan, where it intersects a road marked down on the Government chart, at the north-east corner of Smith's land.
13. Does that portion of the line run through private or public property? Through private property. We have purchased the whole of the land necessary for making the tramway between this point and the mine—the land over which the tram runs.
14. There was some mention the other day, in conversation, of a road which you have marked yellow on that plan? Yes, the road to Bulli.

15.

J. Byrnes,
Esq.

14 Oct., 1862.

15. Is that a public road? Yes. The trustees of this public road gave me permission to cross that road, so long as I constructed the approaches to the road in a way that would not inconvenience the public.
16. Does the line, as made, in any way affect the convenience of the public in using that road? Not by any means.
17. There is a sheet of water marked there—some creek? Yes, Fairy Creek.
18. Do you know if that is on private property? Yes.
19. I believe the Bill does not propose to interfere in any way with the line from the commencement of the mine to the point A? No.
20. That being entirely private property? That being entirely private property purchased by J. and W. Byrnes.
21. The Bill proposes to commence at the point A, and go to what point? Point B, at the north-east corner of land occupied by M'Arrah.
22. Not further? Not further, except by permission of the Government.
23. What is the distance between these two points A and B? Forty-six chains.
24. What is the description of country between them? Rocky; immediately on the sea coast, under a cliff from forty to fifty feet high.
25. Do you run along the top or along the bottom? Along the bottom, upon the sea coast.
26. In your opinion, will this line in any way interfere with the use of that part of the harbour by the public? No, the public could not use that portion of the coast; it is all rock, and the sea rolls in there at times with great violence.
27. Have you submitted this plan to Mr. Whitton and Mr. Moriarty? I believe Mr. Daintrey, my solicitor, did so.
28. *By Mr. Dickson*: Do I understand you that the Bill has no reference to that portion of the line between point A and the mine? None whatever. We have purchased a sufficient quantity of land there to form the tramway, from private persons.
29. Is the line being formed on the land so purchased? Yes; it is completed as far as the main road, and partially so from the main road to the point A.
30. *By the Chairman*: Are there not extensive deposits of coal in the neighbourhood of your mine on land belonging to other proprietors? There are several extensive coal seams, and a mine is now in operation within a quarter of a mile of ours, known as Robson's mine, from which a tramroad runs down to the harbour, coming in at the point B.
31. In another direction? Yes.
32. *By Mr. Leary*: If you took any other course from your coal mine to the point B, would it pass through private property and intersect the main road? Yes, it would pass through a great deal of private property. The only other direction in which it could be constructed would have brought us through a large portion of private property which we do not touch now. This line is constructed in a position that does less damage to private property than any other line that could be constructed in the neighbourhood; that is admitted by every person throughout Wollongong.
33. Would the other line pass through any public property? No, I think not. It would have been almost fatal to our operations altogether to have crossed in this direction (*pointing to the plan*), because the land here is exceedingly high, and it would have been attended with an expense that would have made the undertaking comparatively worthless.
34. *By the Chairman*: Supposing other coal seams in the neighbourhood of your coal seam were to be worked, and that other lines of railway or tramroad were to be constructed from them, could they be joined on to this public line between A and B? Yes, that I have no doubt will be one of the great objects of persons to the north of our mine.
35. To make a line to about the same point A? Yes.
36. Would it be convenient for those persons to bring their lines, supposing they had the power and wish to do so, into any point between the mouth of your mine and the point A? They might be able to come in on some of the low land near the main road.
37. If they did so they would have to purchase private property to a considerable extent? Yes.
38. Would the point A be as convenient as any other point for lines to join on from these seams? The most convenient point in the district, I have no doubt.
39. *By Mr. Robertson*: I suppose you are aware that from point A to the harbour is the line that will be wanted for bringing in the whole of the coal from the northward and westward? Yes, this is the most convenient point for that purpose.
40. A question would therefore arise for the consideration of the Committee, whether it would be proper to part with that line permanently, or whether the Government, with the view of continuing the railway so as to meet all the other coal lines, should not have a provision inserted in this Bill, as in the Pymont Bridge Bill, to enable them to resume possession of the line on payment of the cost of construction? I shall not object to that for one moment; I do not care three straws to make it a private line; I only want to be enabled to carry out my operations at the mine immediately.
41. Then you have no objection to a provision being put in the Bill, that in the event of the Government desiring to take the line into its own hands and make a general railway along that portion of the coast, they may resume the line on paying you the cost? I shall be most happy, because I believe it would be the proper course for the Government to adopt in a case of this kind.
42. *By the Chairman*: You think this ought to be a public line, in consequence of the number of other lines that will probably join at the point A? Yes, I think the Government ought to have an eye to constructing that permanently as a railway at some future period.

43. But you wish to have the line made at the present time for the purpose of carrying out your operations in connection with your own mine? Yes. I should be quite willing to surrender it at any time. I do not ask for any thing beyond the point B, because the Government, I believe, intend to have a series of trams to carry the coal down to the harbour. I only seek the assistance of Parliament to enable me to carry out my present undertaking, and they may put into the Bill any clause they think proper to enable the Government to resume at any period they may desire.
44. *By Mr. Leary*: I suppose you would be very glad if the Government would make the line now? Yes, very glad indeed.

J. Byrnes,
Esq.

14 Oct., 1862.

John Whitton, Esq., examined:—

45. *By the Chairman*: You are Engineer-in-Chief for Railways? Yes.
46. Has this plan been submitted to you by Mr. Daintrey, Solicitor for the Bill? Yes.
47. Have you considered it in reference to the public interests concerned in the construction of the line? I know nothing of the district of Wollongong in which this line is to be made, and therefore I have simply looked at the plan and Bill to see if there are any provisions that would interfere with the public convenience.
48. Do you see anything objectionable in it? No. I was under the impression, from the plan, that the intention of the promoters was to obtain powers from the Legislature to carry the line from the point A to the wharf at Wollongong, but I find now, from Mr. Byrnes' evidence, that it is only intended to take power to carry it to the point B.
49. Having heard Mr. Byrnes' evidence, do you see, on public grounds, any objection to his carrying out the line in the manner proposed, and subject to the condition that Mr. Robertson spoke about? No, I see no objection to it. It would have been more satisfactory if the gradients of the proposed line had been shown; there are no gradients on the section at all. (*Mr. Byrnes here stated the gradient to be 1 in 50.*) The gauge is a very small one—3 feet 6 inches.
50. Have you any observation to make with respect to that? No, I do not know that this line is at all likely ever to join the Government Railways, and consequently the gauge of 3 feet 6 inches may be used for coal lines; but if there was any prospect of the line ever joining a main line of railway the gauge should be the same as that adopted by the Government.
51. As there seems no prospect of that at the present time, you think the gauge may answer for the purpose for which it is intended? Yes.
52. *By Mr. Leary*: Would the expense be considerably greater if the gauge were made suitable to the locomotives at present in use on the Government lines? There would be considerably more expense in rolling stock, and greater expense in actual construction. This line, I presume, is not intended to be worked by locomotives, but it could be; there is no reason why it should not if the gradients are 1 in 50. It might be worked with an engine of ten tons weight far cheaper than by horses, if there is considerable traffic.
53. *By the Chairman*: I suppose it is entirely a question for the promoters whether they will work the traffic by locomotive engines or by horse power? Entirely.
54. A mere question of expense? Yes.
55. *By Mr. Robertson*: In the event of its being worked by locomotives, will not the line require to be specially protected by fencing? I think there is every thing necessary on that account provided in the Bill; it provides that all public roads are to have gates, and that gatemen are to be kept to close and open them.
56. Ought not this beach to be protected? I think it is intended by the Bill to fence it.

J. Whitton,
Esq.

14 Oct., 1862.

Edward Orpen Moriarty, Esq., examined:—

57. *By the Chairman*: You are Engineer for Harbours and Rivers? Yes.
58. Has this plan been submitted to you? Yes.
59. You are acquainted with the district of Wollongong, and the harbour? Yes.
60. You have heard the evidence of Mr. Byrnes to-day? Yes.
61. Have you read the Bill? Yes.
62. From the evidence you have heard, and your acquaintance with the circumstances of the place, do you see any objection to the line being carried out as proposed by the Bill? No, provided a clause insuring the right of purchase by the Government is introduced.
63. The clause Mr. Robertson has spoken of? Yes.
64. You know the nature of the country through which the proposed line passes on the coast? Yes.
65. It runs along the shore under the cliffs? Yes, it goes along a ledge of rocks, from a point designated a high bluff on the plan, between high water mark and low water mark generally.
66. Do you know the description of country at the back, near where the mines are? Yes.
67. Do you think it would be a convenience and advantage to the proprietors of other mines in that neighbourhood, if this line should be constructed so that it may be used by them afterwards? Yes, clearly.

E.O. Moriarty,
Esq.

14 Oct., 1862.

E.O.Moriarty, Esq. 68. That is the only objection you see to the Bill—that there should be a clause inserted as Mr. Robertson has proposed? It might be advisable that Mr. Byrnes should be called upon to lodge a statement of the exact amount the line costs, with the Government, immediately on the completion of the work, in order that hereafter, if it be resumed, the Government should know the amount they would have to pay. It has been done in the case of the Pymont Bridge Company.

14 Oct., 1862.

69. Is there such a clause in the Pymont Bridge Company's Act? Yes; the Company, on the completion of their works, lodged a statement of the whole cost, and on that statement the purchase money, whenever the work is taken up by the Government, will be adjusted. The Pymont Bridge Company are allowed 10 per cent. on their outlay in addition.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ALIGNMENT OF STREETS OF MUDGEE.
(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be Printed, 17 December, 1862.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 29 July, 1862, That there be laid upon the Table of this House,—

“ A copy of all Correspondence between the Government
“ and the Municipal Council of Mudgee and others, in
“ reference to the Alignment of the Streets of Mudgee.”

(*Mr. Terry.*)

SCHEDULE.

ALIGNMENT OF STREETS OF MUDGEE.

No. 1.

TOWN CLERK, MUDGEE, to SECRETARY FOR LANDS.

Municipality of Mudgee,
10 July, 1860.

SIR,

At a meeting of the Town Council of the above Municipality, held the 9th July instant, it was resolved:—

“That this Council direct the Town Clerk to communicate with the Government, requesting that measures may be taken, as soon as possible, to align the streets within this Municipality.”

In obedience to such directions, I do myself the honor, on behalf of this Council, to request that the necessary instructions may be given for such purpose.

I have, &c.,
HENRY TEBBUTT,
Town Clerk.

No. 2.

UNDER SECRETARY FOR LANDS to TOWN CLERK, MUDGEE.

Department of Lands,
Sydney, 9 August, 1860.

SIR,

In reference to your letter of the 10th ultimo, requesting, by direction of the Municipal Council of Mudgee, that the Government would take steps for aligning the streets within the Municipality, I am directed to inform you that there will be no objection, on the part of the Government, to survey and proclaim the alignment of the streets alluded to, on condition that the Council provide the necessary posts.

2. I am at the same time desired to request that the Council will state or show, on the lithographic plan of the town now enclosed, what streets they have aligned at present, and also whether they are prepared to provide the necessary posts, of which, properly speaking, eight, but at least four, will be required at each street intersection.

I have, &c.,
MICHAEL FITZPATRICK.

No. 3.

TOWN CLERK, MUDGEE, to SECRETARY FOR LANDS.

Town Hall, Mudgee,
18 September, 1860.

SIR,

I have been directed by the Town Council of the Municipality of Mudgee to acknowledge the receipt of your letter of the 9th ultimo (60-910), and in reply to state, that the Council are willing to provide the necessary posts, upon the understanding that the Government insist upon the same terms with every other Municipality; but if the Government provide posts at their expense for any other Municipality, the Town Council of Mudgee to have the amount expended by them refunded by the Government.

I have, &c.,
HENRY TEBBUTT,
Town Clerk.

No. 4.

UNDER SECRETARY FOR LANDS to TOWN CLERK, MUDGEE.

Department of Lands,
Sydney, 29 November, 1860.

SIR,

Referring to your letter of the 18th September last, respecting the cost of procuring posts for the alignment of the streets of Mudgee, I am directed to state, for the information of the Municipal Council of that town, that provision will be made in the Estimates for 1861 for this purpose.

I have, &c.,
MICHAEL FITZPATRICK.

No. 5.

No. 5.

TOWN CLERK, MUDGEE, to SECRETARY FOR LANDS.

*Town Hall, Mudgee,
13 April, 1861.*

SIR,

I do myself the honor to inform you, that at a meeting of the Town Council of Mudgee, held on Wednesday last, the following resolution was unanimously adopted:—

“ That the Town Clerk be instructed to write to the Government, asking when the alignment of the streets in this Municipality will be commenced, and urging the necessity of promptitude.”

In compliance with such resolution, I respectfully beg to call your attention to the matter.

I have, &c.,
HENRY TEBBUTT,
Town Clerk.

No. 6.

TOWN CLERK, MUDGEE, to SECRETARY FOR LANDS.

*Town Hall, Mudgee,
16 August, 1861.*

SIR,

On the 13th of April last I did myself the honor, by order of the Town Council of Mudgee, to address a letter to you, dated as above, No. 26-61, urging the immediate necessity of aligning the streets.

To this letter a reply was received on 17th April last, No. stating that the matter would meet with due attention. Four months having elapsed, and there being nothing done in the matter, I am further directed to call your attention to the subject, and to observe that the improvements to the town are necessarily delayed, waiting this important work.

I have, &c.,
HENRY TEBBUTT,
Town Clerk.

No. 7.

UNDER SECRETARY FOR LANDS to TOWN CLERK, MUDGEE.

*Department of Lands,
Sydney, 10 September, 1861.*

SIR,

Referring to your letter of the 16th ultimo, respecting the alignment of streets in the Township of Mudgee, I am directed to inform you, that the practice with regard to the alignment of streets in Sydney has been, for the Corporation to have the necessary surveys made and plans prepared.

2. Should, however, the Municipality of Mudgee be in possession of a survey showing with sufficient accuracy the various streets, with all the erections and improvements fronting them, such a survey might be made use of for the necessary proclamation.

I have, &c.,
MICHAEL FITZPATRICK.

No. 8.

TOWN CLERK, MUDGEE, to SECRETARY FOR LANDS.

*Town Hall, Mudgee,
25 September, 1861.*

SIR,

I am directed by the Town Council of Mudgee to acknowledge the receipt of your letter of the 10th instant, No. 61-2689-870, which was duly laid before the Council and considered.

I am further directed to furnish you with the accompanying *plan of the Town of Mudgee.

It will be necessary to state that all the coloured allotments are occupied, and have buildings upon them.

The Council wish all the streets to be proclaimed.

I have, &c.,
HENRY TEBBUTT.

* Plan not furnished for Parliament.

No. 9.

ALIGNMENT OF STREETS OF MUDGEE.

No. 9.

UNDER SECRETARY FOR LANDS to TOWN CLERK, MUDGEE.

*Department of Lands,
Sydney, 14 November, 1861.*

SIR,

In reference to your letter of the 25th September last, forwarding a plan of the Town of Mudgee, with a view to the proclamation of the streets, I am directed to state that the plan supplied appears to be merely a Government lithograph of the town, and does not of course, therefore, contain the necessary information for alignment purposes.

2. I am to add, that should the Municipal Council of Mudgee employ Mr. Licensed Surveyor Price, or any other surveyor who may be approved of, to make the necessary survey, the requisite directions will be given by the Surveyor General.

I have, &c.,

MICHAEL FITZPATRICK.

No. 10.

TOWN CLERK, MUDGEE, to SECRETARY FOR LANDS.

*Town Hall, Mudgee,
27 November, 1861.*

SIR,

I do myself the honor to inform you, that I have been directed by the Town Council of Mudgee to acknowledge the receipt of your letter of the 14th instant, wherein you state that the plan supplied appears to be merely a Government lithograph of the town, and does not, of course, therefore, contain the required information for alignment purposes.

I am further directed to call your attention to a letter, dated 10th July, 1860, No. 12 of '60, in which the Government was requested to take measures to align the streets within this Municipality.

To this letter a reply was received from your department, No. 60-910 60-2396, stating that the Government would have no objection to survey and proclaim the alignment of the streets alluded to, on condition that the Council provided the necessary posts, and, accompanying this letter, a lithographic plan of the town, with directions to the Council to show on the lithographic plan what streets they desired to have aligned. The Council agreed to provide posts, provided other Municipalities were called upon to make the same provision, and also returned the lithographic plan with the required information.

Your letter in reply is dated 29 November, 1860, 60-4429, stating that provision will be made on the Estimates for 1861 for the supply of posts.

The following letters have since that period been sent by the Council:—April 13, 26-61; August 16, 44-61; September 12, 52-61; the latter containing all the correspondence between your department and the Town Council.

Taking into consideration your letter of the 9th August, 1860, No. 60-910, the Town Council of Mudgee conceive that the survey, &c., should be made by the Government. I am further directed to observe, that a large sum has been expended on forming the streets, but for the want of the necessary proclamation the footpaths are being cut up by carts, &c., the Council not being able to prosecute until the proclamation is made.

I have, &c.,

HENRY TEBBUTT,
Town Clerk.

No. 11.

UNDER SECRETARY FOR LANDS to TOWN CLERK, MUDGEE.

*Department of Lands,
Sydney, 11 February, 1862.*

SIR,

Referring to your letter of the 27th November last, respecting the alignment of the streets of Mudgee, I am directed to state, for the information of the Municipal Council, that the Surveyor General has been authorized to cause the necessary survey to be made.

I have, &c.,

MICHAEL FITZPATRICK.

No. 12.

SURVEYOR GENERAL to SURVEYOR PRICE.

3 March, 1862.

SIR,

I have the honor to inform you that the Government, at the instance of the Municipal Council of Mudgee, has determined on the alignment of the streets of that town, under the Act of Council 2 Vict., No. 2, such alignment to extend to all named streets.

2.

2. You are aware that it is necessary in aligning streets, that plans of those streets, or of each of them, should be laid before the Governor General and Executive Council, and that the plans should show the positions of the proposed kerb and building lines in relation to the various buildings which have been erected or may be in course of erection.

3. The survey should, of course, be made entirely with the theodolite and chain, and should record the precise position of every house, fence, or other erection which may occupy a street frontage; but the alienation of land or the boundaries of properties need not be regarded, as the object sought is to reduce the building lines laid down by measurements made at various times, and with various and often imperfect instruments, to one regular line or lines, the positions of which will be determined with regard to those of the more valuable and permanent buildings in the town.

4. The kerb lines should in no case be on alienated land* (indeed in Mudgee they need never, I should think, be near any), and should be at distances throughout of twelve feet from the proposed building lines—the variation in width of street, where necessary, being invariably thrown into the roadway, which may vary, should there be necessity, to the extent of two or three feet, which will allow for non-interference with buildings which may have inadvertently been erected beyond the building line.

5. Although, for purposes of accurate scale measurement, the plan should be on a scale of two inches to one chain, yet the very inconvenient size which the plans would thus attain renders it desirable that the scale of two chains to one inch (which the regularity with which the town has been laid out renders less objectionable than in the case of a less regular town) should be adopted in lieu.

6. The smallness of the scale, however, renders it essential that the drawing should be executed with the greatest neatness and precision.

7. The buildings, of which the frontage only need be shown, should be outlined entirely in fine black lines, and they should be tinted in various colours—such as red for stone buildings, yellow for brick, and Indian ink for wood; the fences should be shown simply by a fine black line.

8. The proposed kerb line and building line should be shown respectively in blue and orange; and where the former would cut a building of any value, it would be well that you should enclose a separate large-scale diagram, showing the extent to which the building will be thus affected.

9. The precise distances to the proposed kerb lines in each street, as measured from two or more permanent buildings, should be shown in feet, by figures, on the plan, and where the proposed kerb line may vary in direction in the same street, it will of course be necessary to report this. A schedule of the streets, with their widths, and those of carriage and foot ways, should be inserted in the plan.

10. I may mention for your information, that the cutting of a building by the building line will not interfere with the building further than to prevent its renewal or repair otherwise than in accordance with the building line.

11. The provision of posts to mark the alignment shall form the subject of a future communication, and in the meantime your survey need only be recorded on the ground so far as may enable you, on the proclamation of the alignment, to place the posts in the true positions.

I have, &c.,

A. G. M'LEAN.

P.S.—Should you feel doubt as to the best position for the kerb line in any of the streets, you may show them in pencil only in your plan, and reporting fully on the point in doubt, leave to my determination the position in question.

No. 13.

SURVEYOR PRICE to SURVEYOR GENERAL.

Mudgee, 17 May, 1862.

SIR,

I have the honor to transmit a *plan, showing the proposed alignment of Short, Market, Mortimer, Gladstone, and one side of Denison Streets, and their cross streets, in the town of Mudgee, in obedience to instructions conveyed in your letter dated March 3rd, 62-312.

1. The roadways generally are the full width, but the deviations from the straight lines are rather numerous, though many are scarcely worthy of notice; but I will now point them out.

2. Short-street varies a little in direction from the east side of Court-street, but from that point the kerb line is straight to either end of the town.

3. Market-street is seventy-three feet wide at the west boundary, caused by some irregularity in early surveys; the street, however, widens until it reaches the east side of Court-street, where it is the full width; from that point it continues to the west side of Perry-street the full width. At the east side of Perry-street it is six inches narrower, but widens again until it reaches the west side of Lewis-street, at which point it is seventy-five feet, and continues that width to the east boundary.

4.

* Not furnished for Parliament.

4. Mortimer-street is straight, and seventy-five feet wide, to the west side of Douro-street. The building line cuts off a little of the two unimportant buildings of Mr. Croning, near the brewery, at the north-east corner of section twenty. The Roman Catholic cemetery fence encroaches some feet on the street, but the fact has been known some years. No bodies have been interred on any of the ground required to render the street its correct width. I would mention that a priest's body was interred, but afterwards removed in consequence of the encroachment having been pointed out. From the east side of Douro-street to Perry-street, although the street is the regular width, the building line is about one foot more to the north (to some encroachment on the Presbyterian grant, the land belonging to the Bank of New South Wales, and the Wesleyan Church, the fences of the lands having been erected on the line laid down by Mr. Armstrong).* From Perry-street to Church-street, the street is narrowed one foot six inches, to save Mr. Charlton's store and the other permanent brick buildings to the eastward. From Church-street to the end of the town the full width is obtained; the only buildings touched are the two brick ones nearest Lewis-street, in section number twelve. This encroachment, as also in the case of the adjoining fence, having been made, if not wilfully, at least without taking the slightest trouble to ascertain the correct line, I did not make any special alteration in width of street.

5. Gladstone-street is correct throughout, but the building line cuts a small portion off an unimportant building at the south-west corner of section seventeen, and a little of the fencing. Both building and fencing were erected carelessly on the street—in fact, the former wilfully.

6. In Cox-street and Court-street all is correct, except in a slight deviation from the north side of Short-street.

7. Douro-street is quite correct throughout.

8. Perry-street is two feet narrower from Denison-street to Market-street. The whole of the encroachment of the street has, I believe, been made on the east side. I know it to be so at the south end, as the National School fence is correct. It was always reported that the large building at the north-west corner of section ten encroached. From the north side of Market-street the width is correct.

9. Church-street is correct as to width, the only encroachment being one of three inches. An effect is given from the building in section ten. Lewis-street is correct to Market-street. From the north side of Market-street a deviation of a few inches from last line to Short-street.

10. Lawson-street is three feet narrower at Denison-street, in consequence of error in survey of section thirty, explained by me when forwarding allotments to the south of Denison-street; however, the street is again correct at Gladstone-street, and continues so to the end.

11. All the footways are twelve feet wide.

12. At the intersection of kerb lines a six-inch iron spike has been driven.

13. I am in doubt as to the width of Market-lane; the lithograph shows it one and a half chain, but if I remember correctly the approved town map shows it one chain. I did not, therefore, drive down any spikes, but when the posts are erected any width can be given that I may be instructed to use.

14. I enclose separately a schedule of the streets, with their width, which could not have been inserted on the plan for want of room.

15. I ordered a quantity of drawing paper from Sydney, which arrived in a fearful state, from some cause or other; every sheet was more or less wet and much buckled. I had much difficulty in preparing a sheet so that I could use it at all, from the difficulty of transferring.

16. From the smallness of the scale in plotting I found the alignment a complete second survey, having to test the distance of every projecting house and fence, or, I should say, everything apparently projecting.

I have, &c.,

JOHN A. H. PRICE.

P.S.—I should have mentioned that the fencing round section seven was erected without consideration—in fact, was left almost to the fencers. In the case of that portion at Perry-street, to the north of Short-street, no regard was paid to streets at all.

* The fences in question are not of sufficient importance to admit of this deviation from the regularity of the alignment, and the plan and schedule have been corrected accordingly; thus leaving the street between Perry and Church Streets only six inches narrower, instead of one foot six inches.—*25 July.*

No. 14.

MEMO. OF SURVEYOR GENERAL.

PLAN and schedule of those streets in the Town of Mudgee which have been surveyed with the view to their alignment, under the Act 2 Victoria, No. 2, are now forwarded for submission to His Excellency and Executive Council. It will be seen from the above documents that, with one exception, the footpaths are twelve feet, and the roadways seventy-five feet, in width.

HENRY HALLORAN.

(For the Surveyor General.)

B.C., 28th August, 1862.

No. 16.

TOWN CLERK, MUDGEE, to SECRETARY FOR LANDS.

Town Hall, Mudgee,
20 August, 1862.

SIR,

I am directed by the Town Council of Mudgee to draw your attention to the urgent necessity there exists for the immediate proclamation of the streets of Mudgee, or those portions already surveyed by Mr. Licensed Surveyor Price.

The

ALIGNMENT OF STREETS OF MUDGEE.

The greater portion of the rates have been expended in forming footpaths, &c., but horsemen, carts, and vehicles of every description are daily cutting them up.

In the absence of the necessary proclamations, the Mudgee Bench is powerless to inflict punishment, and of this the public are aware, so continue their work of destruction with impunity.

I have, &c.,
HENRY TEBBUTT,
Town Clerk.

No. 17.

NOTICE in Government Gazette of Tuesday, 23 September, 1862. No. 167.

Executive Council Office,
Sydney, 19 September, 1862.

NOTICE.—ALIGNMENT OF STREETS—TOWN OF MUDGEE.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified, in conformity with the provisions of the Act of Council 2 Victoria, No. 2, that the breadth of the carriage and footways of the undermentioned streets in the Town of Mudgee, shall be those set forth in the annexed *schedule, and that, consequently, it will not be lawful for any person to erect any building within the said distances so set forth from the curbstone or the exterior edge of the said footways, as delineated on the plan submitted to His Excellency and the Executive Council, in conformity with the said Act, which said plan lies at the Office of the Surveyor General, for the inspection of the public.

By His Excellency's Command,
CHARLES COWPER, JUNIOR,
Clerk of the Council.

THOMAS RICHARDS, GOVERNMENT PRINTER, PHILLIP-STREET.

1863.

[*Price*, 4d.]

787—A

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE TAKEN AT THE BAR OF THE
LEGISLATIVE ASSEMBLY.

FRIDAY, 5 DECEMBER, 1862.

Edward Orpen Moriarty, Esq., having been introduced by the Sergeant-at-Arms, was examined:—

1. *By Mr. Arnold:* You are Engineer-in-Chief for Harbours? Yes.
2. Have you with you any plan of the proposed improvements of the Clarence River Harbour? I have.
3. Will you have the goodness to explain in what way the sum of £30,000 is intended to be expended in carrying out the proposed improvements? The £30,000 I ask for is intended for the purpose of constructing part of the northern breakwater at the entrance to the Clarence River.
4. On what portion of the proposed works is the £30,000 now upon the estimates intended to be expended? On the northern breakwater,—towards the construction of the northern breakwater.
5. For what purpose do you propose this expenditure—what are the effects you expect to result from it? The object of the northern breakwater is to give the ebb currents a set-off from the land, to prevent the influx of sand during flood-time.
6. Will the sum which has been already voted for the purpose of carrying out this improvement be expended upon the contracts already taken for the works in connection with the Clarence? The £20,000 already voted will be expended on the southern breakwater; the £30,000 now asked for is for the northern.
7. The whole of the £20,000 now voted will be expended on the southern? Yes.
8. Is it necessary, in order to carry out your plan of improvements, that the northern as well as the southern breakwater should be completed? I think it is.
9. What is the amount of your estimate for the whole of the works proposed? £117,000 some odd hundreds.
10. Do you anticipate any good result from the partial carrying out of these works before the whole of the proposed improvements are completed? Yes; I think from the commencement it will be found to act beneficially.
11. Have you any additional reason to believe now, from what experience you have had of the means of obtaining contracts, that the whole of the works proposed can be completed within your estimate? I believe I have. We are getting the work now done at a rate considerably below my estimate.
12. That affords you an additional reason for believing that the whole of the proposed works can be completed within the estimated amount? I have no doubt they can.
13. Are there any particular difficulties in obtaining material for the completion of the work on the north side of the harbour? No, there are none.
14. Will there be any other mode of making the entrance to this harbour safe, with a less expenditure than that you have proposed? I do not think there would be. The space is so considerable, that to do anything with it our works must be of considerable magnitude.
15. Would not the works be completed much more economically if carried on continuously, than if they were abandoned for a time and then recommenced after the plant of the contractor had been removed? No doubt if the contractor were to remove the whole of his plant and working materials it would involve a considerable expense to renew the contract; besides, he would probably require a considerable sum for the loss of his present contract.
16. I am supposing the present contracts were completed, and that the other proposed works were abandoned for a time;—is there not a probability that the contracts would be much higher than if the contractor could avail himself of the plant at present on the ground? I do not think that would affect the question. I do not think we should be likely to have the northern breakwater constructed by the same contractor as the southern; but I should not like to go on with the southern without the northern breakwater were also carried on.

E.O.Moriarty,
Esq.

5 Dec., 1862.

- E.O.Moriarty, Esq.
5 Dec, 1862.
17. *By Mr. Lucas*: Which do you think the more important—the southern or the northern breakwater? I think they are about equally important; I should not like to carry on one without the other.
18. Do you think the southern breakwater is equally important with the northern? I think so. The object of the southern breakwater is different from that of the northern; the object of the southern breakwater is to give vessels entering the harbour smooth water from the moment they round the southern pier head. At present, vessels have to run a considerable distance broadside to the run of waves across the southern reef, at the risk of having their decks swept; the southern breakwater would intercept that, and give vessels smooth water the moment they round its head.
19. What is the object of the northern breakwater? To cause the current to set off the land.
20. Do you consider that your estimate will cover the cost of constructing both breakwaters? I believe it will.
21. Supposing this £30,000 were voted now, you would expend it all on the northern breakwater? Yes.
22. You have already commenced expending the £20,000 on the southern breakwater? Yes.
23. How much of that amount has already been expended? About £1,500.
24. Then you have still about £18,500 to spend? Yes.
25. Will £20,000 complete the southern? No; my estimate of the southern is £46,500 for the whole.
26. How far have you to bring the stone? A short quarter of a mile; the stone is quarried under the late Flagstaff Hill.
27. Can you get that stone for the northern breakwater? No, I propose to get the stone for that from the North Head.
28. How far is that? About two miles, over a dead level country.
29. You will have to lay a tramway for the conveyance of stone from the North Head? Yes.
30. *By Dr. Lang*: Is there any natural foundation of rocks for the northern breakwater as there is for the southern? I believe there is; I have had a boring made at the head of the northern breakwater. After some difficulty we made a boring there, and got down seven feet, when we could get the boring rods no further. I tried also at the part of the breakwater where it starts from the land, and got down twelve feet, when we could get no further; and I am informed by pilots that in clear weather you can see a ledge of rocks in about twenty feet of water.
31. Do you consider it indispensably necessary to have a breakwater on the northern as well as on the southern side of the harbour? I think it is, otherwise the ebb current, which the northern breakwater will have the effect of setting to seaward, will be dispersed along the beach, and cause the channel to be continually altered, as it is now.
32. *By Mr. Dalgleish*: Have you been engaged on any similar work to this breakwater? I have.
33. On this coast? Yes.
34. Have you been engaged upon any similar work in any other part of the world? I have been engaged on Howthe, and many other works.
35. Is the position of that breakwater similar to the position of the proposed breakwater at the Clarence River Heads? No.
36. What is the difference? The natural features of the country are entirely different. The differences are so many that it would be difficult to describe them.
37. Is the weight of the wave to which the one breakwater is subject equal to the weight of the wave to which the other is exposed? It is not.
38. Which is the greater? The Clarence River.
39. Have you been at the Clarence River yourself? No.
40. You have made no survey of the proposed breakwater? I have had it made.
41. By yourself? I have stated that I have not been there.
42. You are not aware of the natural features of the river from your own knowledge? No, I have not been down there.
43. What is the probable amount to be expended on this breakwater? The northern breakwater?
44. The whole work? £117,000.
45. How did you obtain that estimate? By calculating the quantities, and multiplying them by the prices for which I considered the work could be done.
46. In what way did you obtain the quantities? By making soundings, borings, measuring, and estimating the cross sections.
47. What allowance did you make for waste, in this calculation, by the removal of the deposit you make by the weight of the wave—the surf? I do not quite understand the question.
48. What allowance do you make, in your calculation, for the waste caused by the removal of the deposit by the action of the sea? I make no allowance for waste.
49. Did you form an estimate for forming a pathway or roadway across a branch of Darling Harbour, or the waters of Port Jackson? I did.
50. From Pyrmont to the Glebe side? I did.
51. Did you make a calculation of the quantity necessary for filling up that portion that is filled up in the water? I did, roughly.
52. Were your calculations anything near the amount consumed in filling up? It took considerably more than the amount estimated by the contractor and myself.
53. Did you make your calculations in this instance in the same manner that you made the calculations in the other? I have already sunk some distance under the sand —
- 54.

54. Is any portion of this sand quicksand? It is all fine sea-sand. I do not know whether you call it a quicksand. E.O.Moriarty, Esq.
55. Have you had any report from any one employed on that breakwater, as to the description of stone employed there in the construction of the breakwater—whether it is water-worn stone found on the beach? I think not; they have had a quantity from a quarry about a quarter of a mile from the works, and the whole of the stone, so far as I am aware, has been brought from there. It would be impossible to pick up water-worn stones and hoist them to the height of the breakwater. 5 Dec., 1862.
56. You have had no report of water-worn stones having been used? No, and I do not believe they have.
57. If they had been used would you approve of their use? I would, if they had been large enough.
58. What weight stones do you propose to use? My specification states that the stones shall be from three to ten tons, fully one-half over five tons.
59. Do you know if that is being carried out? I have no reason to doubt it—I believe it is. I may tell you that I have now a letter which I received this day from the gentleman in charge of the works, and he states—“The stone improves each day as we advance into the quarry; it is procured readily in masses of from three to eight tons. I occasionally get blocks of ten tons and upwards.”
60. You say you have had some experience of breakwaters in the old country? Yes.
61. I think you mentioned something about Portland breakwater? Yes.
62. Do you know the original estimate for Portland breakwater? I cannot give the amount.
63. Are you aware whether the amount estimated, which was based upon a calculation made in the same manner that you have made yours, was sufficient, or whether it did not cost more than double? I believe the amount was considerably increased.
64. Have you known any breakwater ever to have been made for the amount of the original estimate? I believe the general rule has been that they have exceeded their estimates; but I think the reason of that has been, that in the old country, breakwaters have been constructed where there has been an enormous depth of water, and this would be likely to cause an immensely increased proportionate expenditure. There many of the breakwaters are in sixty feet water, while here the greatest depth is twenty feet.
65. What portion has been most frequently washed away, that subject to the ground swell or that to the heave of the ocean? That portion exposed to the action of the water between high and low water mark.
66. That is to say, to the ground swell? No.
67. Is the Portland breakwater, or any breakwater in the English Channel, subject to half the weight of wave to which a breakwater would be subject on our coast? I believe it to be greater at Portland than it is here. The reason I make that assertion is this,—the action of the sea is confined principally to the space between high and low water. At the Portland breakwater the rise and fall is about twelve or fifteen feet sometimes, while here the rise and fall of the tide is not generally more than five feet.
68. Has the rise and fall of the tide anything to do with the weight of the wave? Everything, as regards its effects on a breakwater.
69. What I mean by the weight of the wave is, the height of the breakers and the force with which they will be forced on the land or against any object opposed to them? It depends upon the rise and fall of the tide. In England there is a surface of twenty-five feet exposed to this action, while here there is only five feet.
70. Has the breakwater at Kiama been formed to any extent? Not to any considerable extent.
71. Was it not raised to some extent and then again levelled? Yes, repeatedly.
72. After the last storm, when such portion of the Kiama breakwater as had been formed had been washed away, was there any considerable difference in the depth of the water at the place where it had been formed, as compared with what there was before it was commenced? Certainly.
73. What was the difference in the soundings? There was a considerable difference, but we have not had any soundings.
74. How do you know the difference? Because you can see the stones there.
75. I am alluding to that portion of the breakwater which is beneath the surface—that portion which was in course of formation, but which has been washed away;—have you had soundings taken at that place at any time? Before the breakwater was made, but not since; I did not consider it necessary.
76. Did you not consider it necessary to have soundings taken after you found such portions of the breakwater had been removed by the waves? No, for the simple reason that I expected it in carrying out a work of this kind. In forming a breakwater you do not pack the stones, but throw them down and allow the sea to wash them to their proper inclination; that has been done at Wollongong, and that is what has been done at Kiama.
77. Then your calculations are made in one instance to face the breakwater at one and a half to one, and in the other the inclination will be five to one? Yes.
78. Will that be the natural face which the sea will form for this breakwater? I believe at the outside it will be at that slope; we allow the fullest margin. We find at present, as the work settles, it stands at one and a half to one; when we get out farther we shall no doubt have a greater slope.
79. Is so much of the Clarence River as is at present marked protected by a headland? It is to some extent.
80. Is it not completely protected by a headland? Not completely.
81. You have no means of making yourself acquainted with this, except from reports? I can

- E.O.Moriarty,
Esq.
5 Dec., 1862.
- can check off the plan the extent to which the breakwater will go out, and in southerly gales it would completely protect it; in easterly gales it would partially protect it; but from east to north not at all.
82. We have had remarkably few north-easterly gales during this season? The north-east is the prevailing wind on this coast, and it often blows with great violence.
83. What is called a "black north-easter" we have not had for the last twelve months? I think we have had one or two within the last month.
84. You say that, with this portion of the breakwater now built, vessels would be completely unprotected under these circumstances? Yes.
85. Have you had any report since this north-easter prevailed? I have had one to-day.
86. Has any damage been done to the works by that north-easter? No farther than that a portion has settled down. I expect the stones to be washed down till they get to their proper inclination; when you tip stones you cannot expect them to run to five to one—you must wait till they are washed down by the waves to their proper slope, at which they will ultimately stand.
87. Is not one and a half to one a common slope in railway embankments, where you have not a run? It is for earth and sand; sandstone embankments will stand at three-quarters to one.
88. When built will they stand so from the tip? They will.
89. Have you consulted the captains of coasters and steamers—persons who are acquainted with the navigation of the river—with regard to the best entrance to this river? I have had conversations with several of the captains, and I believe they are generally disposed to think the plan I propose will be the best.
90. Do they generally agree? I think so.
91. Is the course of the river now the same as it has been for some years? At what point?
92. On the northern side? At the entrance?
93. Yes? No; since my survey was made originally, a considerable change has taken place; the channel which was then called the North Channel is now closed, and the south is now opened. In order to prevent the occurrence of a continued change of channel I propose the construction of the northern breakwater.
94. Does this change of channel alter your plans? In no degree, for I was aware that similar changes had formerly taken place, and looked for their continuance until they should have been stopped by the permanent fixing of the channel by the northern breakwater.
95. Would not the southern channel be the more practicable if some few rocks were removed? The southern entrance will not be touched by the works I propose. I am very careful not to interfere with the southern entrance. My works go to the outside extreme of a ledge of rocks which extends from the north of Clarence River Head, and terminates there, and does not go into the southern channel.
96. In your report you allude to prison labour,—do you consider the works would be performed more cheaply by the employment of prison labour than in any other way? I should not like to speak confidently—it might or might not; I do not know that I am sufficiently acquainted with prison labour to express a decided opinion upon that subject.
97. You have alluded to Portland breakwater as your authority in that matter? Yes.
98. Do you know whether the employment of prison labour on the Portland breakwater has made the construction of that breakwater cheaper than it would otherwise have been? I should not like to say; I believe it is not a cheap kind of labour generally; but with reference to these works at the Clarence River, I thought they were of a kind that might fairly be spread over a number of years, and that, therefore, it would be a suitable place to employ prison labour if they could not be employed more profitably elsewhere.
99. Is it not generally considered that a work of this kind should be pushed forward in as short a time as possible, in order that advantage may be taken of smooth weather, so that there may be less time for the unconsolidated portion of the works to be exposed to the action of the sea? Taking one year with another you have as much rough weather in one as you have in another, and the stones must wash down to the level at which they will stand.
100. What is the entire length that you intend to extend the southern breakwater? About 2,000 feet.
101. And the length of the northern breakwater? About 1,500 feet.
102. Have you any reason to suppose that your estimate of expenditure—what reason have you to suppose that your estimate of expenditure is a closer approximation to the cost than the estimates of other engineers have been with regard to the cost of others? Because, as I explained, in consequence of the enormous magnitude of the breakwaters of the old country, and the depth of water in which they are constructed, the slightest error in price involves such an enormous error in amount of money that half a million of money would scarcely cover it; whereas the same proportionate increase here would involve a comparatively insignificant sum.
103. Did you not take that into consideration in making out your estimate? I did; I allowed liberally, and the result is that I am getting the work done for considerably less than I estimated.
104. Have the difficulties of the work yet commenced? No, they have not.
105. What has been done is no criterion of what may be expected in the prosecution of the work? Very little.
106. In what way is this work contracted for—is it so much for a certain length of the breakwater when completed, or is it at a rate per ton? Per ton.
107. What means have you adopted to tally off the number of tons deposited? We run the trucks over a weigh-bridge.

108. Is it a self-registering weigh-bridge? No, it is not; the Clerk of Works registers it. E.O.Moriarty, Esq.
109. Who is the person who has charge of the works for the Government there—is he an engineer? Yes, Mr. Barron; he was formerly City Engineer, I believe.
110. What salary has he? I think £600 a year—between £500 and £600. 5 Dec., 1862.
111. Has he an assistant? Yes.
112. Is this assistant postmaster of the district? I think not—not that I am aware of.
113. Does he perform the duties of postmaster? I believe not; if he did I would very soon stop him; but I have no reason to believe he does.
114. Do you consider this mode of constructing a breakwater, at so much per ton, an economical and proper mode? I believe it is the only way by which it could be done.
115. Has not the contractor a direct interest in spending as much money as possible in the formation of the breakwater? He may have an interest in the expenditure of as much money as possible, but he has not the power of increasing the expenditure, because he cannot wash the stones away. Every stone is measured that goes into the work.
116. By collusion with the person stationed to weigh, he can make a charge for any number of tons passed over to the breakwater? Yes, no doubt if the engineer were a rogue the Government might be robbed to a trifling extent.
117. On Government contracts of this description in England are any steps taken to prevent anything of this kind occurring? I do not think any steps are taken beyond trying to get honest men to look after the contractors.
118. Do you not know whether they do not use on breakwaters self-registering weigh-bridges, which not only register the number of tons but the number of trucks which pass over them? They may do so, but we cannot get such things here; we are obliged to take what we can get.
119. Cannot you send for them? It would take too long.
120. How long is it since this work was begun? I think about four months.
121. How long is it since the vote was obtained from this House? In the early part of this year, I believe.
122. Of this year—was it not obtained in 1861? It was obtained last session.
123. Was it not the session before last? Really I would not say—I do not know.
124. If this money was obtained for the breakwater the session before last, could you not by this time have imported a weigh-bridge which would have the effect of keeping a correct tally of every ton of stone passed into the breakwater? I believe that any weigh-bridge we could get could be as easily doctored by a rogue in the shape of a Government officer and a contractor as any we have here.
125. Do you know the construction of these machines? I do; but I do not see anything to prevent the contractor running the loaded trucks backwards and forwards over this weigh-bridge.
126. If he ran them backwards and forwards what would be the effect? If he did so half-a-dozen times he would have half-a-dozen loads registered.
127. Are you aware that the weigh-bridge registers only one way? No, I never heard of such a thing; I do not believe it is possible; it is an absurdity.
128. Although you do not believe it is possible, you do not mean to say that it is not the case? I say I believe it is not possible.
129. Are you aware that a self-registering machine of this kind registers only loaded trucks? That may be, but if you ran a loaded truck half-a-dozen times over the weigh-bridge, backwards and forwards, that would register six loads.
130. Would it not register a loaded truck going and coming? I think it is not possible to register only one way, for the register does not come into action till the truck passes on to the weigh-bridge.
131. If, as a matter of fact, it registers the weight of the loaded truck, and also the weight of the light truck, would it not, if it registered more heavy than light trucks, prove that there had been fraud? It might show different weights by a stone being knocked off the truck.
132. Do you think the English Government would adopt all these means for the prevention of fraud in the formation of these works if they were not desirable? These weigh-bridges to which you allude are probably locked up, and the tallies taken once a week, by a responsible officer, who examines them; but it would be quite impossible for me to go myself for that purpose, and an officer might falsify the return.
133. No doubt if any number of men are determined to falsify returns of this kind it is possible to do so, but is that any reason why there should not be as many checks as possible imposed to prevent it? I think the great object is to get honest men, in whom confidence may be placed.
134. Would not the chief engineer in charge of these works be the proper person to attend to the weigh-bridge and take off the tallies? Yes, I expect him to give a constant eye to these things; he is never off the works. I do not believe there is the smallest chance of any collusion.
135. How much per ton do you pay for the stone deposited in the breakwater? 3s. 4½d.
136. Do you pay anything for stones of less than a certain weight? We pay 2s. 6d. a ton for stones deposited under the weight of three tons, and 3s. 4½d. for stones of from three to eight tons.
137. Would the smaller stones be comparatively of any use in the formation of a breakwater subject to the breaking of the sea? They would be of some use in filling up the interstices of the larger blocks. It is found by experience that a breakwater composed of stones of varying sizes holds together better than one composed entirely of larger or smaller stones.
138. Is there any limit as to the size of stones used in this breakwater? Yes.

- E.O.Moriarty, Esq.
5 Dec., 1862.
139. What is the limit? I do not allow any small stone into the breakwater. The training walls inside the river are being constructed at the rate of 10d. a ton.
140. Is there any limit as to the proportion of small stones above 3 cwt. as compared with the large stones? Yes, there is; the small stones are not allowed into the body of the breakwater at all.
141. I forget whether I asked you whether the sand here is a quicksand? It is a shifting sand.
142. Are your borings for your calculations of quantities taken from the bottom of the sand or from the surface? The term "boring" implies going through the sand; we do not talk of boring through water.
143. Have you allowed for the sand being a quicksand—have you taken the data for your measurements from the rock or from the surface of the sand? I have allowed the breakwater to go to the rock.
144. You have made your calculations in all cases from the rock? Yes, that is on the exposed parts of the work.
145. Is it a quicksand where it is not considered to be exposed? It is a hard sand on the inner parts of the river.
146. Have you anticipated, in the formation of your plans, the price for what may be called solid masonry or building? I have.
147. To what depth do you intend to take this face work? On the southern breakwater I propose that all the head of the breakwater shall be solid masonry; on the northern I propose that sea-pitching shall be carried to about three or four feet below low water mark, as low as can be conveniently got at.
148. What is the depth at the pier head on the South Head? About twelve feet of water.
149. On the North Head? The whole depth is about twenty feet; I do not propose any masonry on the North Head—sea-pitching.
150. Then on the South Head, where the head of the breakwater is to be of solid masonry, what are the conditions of the contract for that head? We have not let the contract for that; the present contract is for the first 1,000 feet, the whole length being 2,000 feet.
151. To what distance would the present vote extend the breakwater that is at present in course of formation at the South Head? It would take it about 1,500 feet.
152. Is that at the present rate at which you have succeeded in obtaining a contract? Yes.
153. Which is of course considerably farther than you could have carried it on your first estimate? Yes; I allowed 4s. a ton for the stone to be put into the breakwater, and I am now getting it for 3s. 4½d.
154. Would the breakwater, if not gone on with after it has been extended to a distance of 1,500 feet, be an advantage to the navigation of the river? I think it would be a very considerable advantage.
155. So that the money would not be lost if no further improvements were to be carried on? The money expended on the southern breakwater would not be lost.
156. It would continue to be an advantage to the navigation of the river? Yes, in one point of view. The object of the southern breakwater is totally different from that of the northern—it is to procure smooth water for vessels, and to that extent it would be an advantage to the navigation, but it would have the effect of sending the ebb of the current along the beach to the north, and would have no tendency to fix the channel, which we now find to be one of the greatest difficulties in the navigation of the river.
157. Would the northern breakwater in any way tend to fix the channel? I believe it will actually have that effect; it will send the ebb current to seaward instead of setting in a line parallel to the beach. We now find the channel varies sometimes two miles from north to south, from the shifting nature of the sand.
158. Is this shifting channel not a very serious impediment to the formation of a breakwater? I do not think it is the least impediment; I do not see how it affects it.
159. Do you think when a vote of this magnitude is concerned, in a work which is certainly one of the most important works that have been put into execution under your department, that you should have entirely left it to a subordinate as to the making out of the entire plans and specifications—that, in fact, you should have entirely derived your knowledge from him, and have taken no steps to make yourself acquainted with the locality? A subordinate has had nothing to do with making out the plans and specifications; I did it myself. He made the survey, took the soundings and borings, and gave them to me, and I then drew out the plans and specifications, and made the estimates.
160. Were any steps taken to determine the current? Yes.
161. What steps? The usual steps, with floats—to drop floats in the water and intersect them.
162. I understand the arrangement. Then you state that you left the entire survey of this river to your subordinate; that you have no knowledge whatever of the river or of the proposed breakwater, and the other conditions attending it, than the experience you have derived from the plans and reports of your subordinate officer? I have never visited the place, for the simple reason that I have never had time to get away. I have intended to do so.
163. You are unable to attend to your duties? I am unable to go to the Clarence; it would take me three weeks, and I could not spare the time now.
164. *By Mr. Stewart:* Do you know any place—any river of a similar character—in any part of the world, where a breakwater has been erected? Yes, many.
165. Name where? Sunderland is one, Dublin is another, Yarmouth is another, Aberdeen is another, Newcastle —

166. I speak of the comparative volume of water to be emptied out of the river;—has either of these rivers the same quantity of water to carry out? I think they have.
167. Dublin you spoke of? I do not allude to Dublin; many of the others, although the rivers have not the same area, have a greater rise and fall of tide.
168. The quantity of back water? That would depend upon the depth of the tide.
169. Are you aware of the force of water out of this river in heavy floods? Yes, it is very considerable.
170. Are you aware that during these floods this river rises higher than those you have mentioned from tidal changes—that it rises from fifteen to twenty feet? At the higher parts it may, but not at the lower; it spreads over large lakes, very extensive lakes inside.
171. Supposing the force of the back water, and a heavy sea setting in with an easterly wind, do you conceive that the breakwater would have the effect of making it safe for a vessel to enter—that it would check the break of the sea, supposing the southern breakwater were completed? Yes, I believe it would entirely.
172. That is assuming there would be no break with an easterly gale between the southern breakwater and the beach? There could be none, because it would be intersected by the breakwater.
173. I presume from looking at that map (*referring to the plan produced by the witness*) that a considerable portion of that channel would have a bearing north of the breakwater? Yes, it would.
174. It could have no effect upon that portion beyond the influence of the breakwater? It would only affect the upper part influenced by the breakwater.
175. Which of these places you have alluded to would, in the extent of country to be drained, bear any comparison with the Clarence? Probably the back drainage of the Clarence would be greater than that of either the rivers I have alluded to—considerably greater.
176. Are either of these exposed to the open ocean—the Atlantic? No, they are not; they are principally in the Channel and the German Ocean.
177. During such storms as that in which the “Dunbar” was wrecked, does not the sea strike the land with as much force on this coast as at any of the places you have mentioned? I dare say it does in very heavy gales.
178. Are either of these so much exposed to the open sea—are not most of them protected by a projecting headland? Many of these are exposed to the whole range of the German Ocean, which is not, of course, of the same magnitude as the Pacific.
179. Are these breakwaters erected in any case upon sand of a similar character to this? Yes.
180. This is a peculiar bank—the surface is sand with rock under it? There is about seven feet of sand over it.
181. Can you name any of the places you have alluded to where a breakwater is erected upon a similar sandy bottom? Yes, I think Sunderland is nearly a case in point. To trace the history of the Sunderland breakwater is most interesting.
182. Is the object of the breakwater at Sunderland to keep the channel open, or to break the sea? To keep the channel open, and to prevent the drift of sand. There was a considerable drift of sand, which washed into the harbour and formed banks; and there was no corresponding power to expel it; hence the harbour became choked up. Now the tide keeps the channel open.
183. Do you know the force of the tide there at any time—its action outwards? It is very considerable. I believe it runs five knots an hour.
184. Can you recollect the greatest force in the discharge of the Clarence? I have been told that the measurements they have got show the tide running at five knots an hour.
185. Then in ordinary tides it runs as fast as at Sunderland? I dare say about the same. The great rise and fall of tide in the English ports makes up for the larger area of the rivers on our coast.
186. The point I want to arrive at is the rapidity of the tide? About five knots at spring tide.
187. You have not had an opportunity, since the survey of the Clarence was taken, to know at what rate the water runs at the time of flood? At the time of land flood?
188. Yes? There were some very heavy floods while the survey was being made, and I found that it was somewhat more, but not much.
189. Are you aware that at times of flood the back water of some of our rivers forces out with more than double the rapidity it does at spring tides? Yes, I know it does.
190. Supposing then the water to run at the rate of ten miles an hour out of this place, then the breakwater would be of no advantage as a means of saving vessels that might attempt to enter at such a time? I do not believe it is possible that such a thing ever occurs as that the tide runs at the rate of ten knots an hour there; but supposing it to be the case, I believe it would be very dangerous for any vessel to attempt to enter, for the chances are that it would sweep her over the reefs instead of out of the deep channel.
191. Would there be room for a vessel of the ordinary capacity of those running to the Clarence to work up, supposing the wind to be from the south-west? Yes, I have been careful not to restrict the width of the channel; there is over 2,000 feet from one pier to another. It is considerably wider than it is inside at what they call the Narrows.
192. Are the breakwaters you have spoken of erected in the same way, by pitching or mason work from the foundation? The practice varies according to the nature of the bottom, or the circumstances with which they have to deal. On a rocky bottom I believe it is cheaper and better to bring it up of masonry, particularly if you have to build a light-house; but on the northern breakwater there is no occasion for a light-house.

F.O.Moriarty,
Esq.
5 Dec., 1862.

- E.O. Moriarty, Esq.
5 Dec., 1862.
193. Suppose the sand were to move at all under the stone thrown there, would it have the effect of scattering the stone, and of spreading it over a portion of the channel—I would call your attention to the breakwater originally formed at Plymouth; did you ever hear that that had spread at the time of its formation, and that it had become necessary to take it up? They never took it up again.
194. Were not portions of it taken up again? No. Plymouth breakwater was constructed at a time when these works were in their infancy, and they had not then learned that they must trust to the action of the sea to cause the proper incline for the face of the breakwater. It was formed of too light material.
195. You think there is no danger, with the stone you propose to use, of its spreading? No; there is a slope of five to one where it is subject to the action of the sea.
196. Do you know anything of the breakwater at Dover? Yes.
197. The bottom there is sand, something like this? No, the bottom is chalk.
198. That is under the drift—there is drift over that? Yes.
199. Could you say what was the object of erecting that by square masonry—why they did not pitch it? Yes; at Dover they can get no stone, but an endless quantity of chalk, which, when burned, makes good hydraulic mortar, and, with shingles from the beach, forms an excellent concrete. Without resorting to that expedient they could not have made that Dover breakwater.
200. Would it not have been much more advantageous to you, having to construct this work, if you had taken an opportunity of seeing the locality before you entered upon your plans? I do not know that it would, as, after all, you must trust to your plans.
201. Are you aware if there was ever an opening much further north than the present one—much further out from the Clarence? I have been told, and can readily believe it. In order to obviate that I have carried the inside training walls beyond that, in order to prevent the chance of the river during land floods breaking out a fresh entrance.
202. You think if you did not take that precaution, another entrance might be forced further north? It might be so.
203. Have you visited any other bar harbours—the Macleay or the Manning? I have been to the Macleay, not to the Manning.
204. Is the Macleay anything similar to this in character? No, the Macleay is a very difficult subject to deal with.
205. You ground your belief of your safety in making this erection upon the fact that on the southern side you have a break of wind, and a sound bottom under the sand? It affords a considerable chance of safety, because the headland greatly protects the whole of the works from the heaviest gales this coast is subject to, namely, the easterly and south-easterly.
206. What will be gained in point of sea from the southern breakwater being completed—will there be less sea? I believe there will be still water from the moment a vessel rounds the southern pier head.
207. According to this map (*referring to the same*) it appears that this shallow water lies north of your breakwater? There is some shallow water there (*pointing out the position on the map*).
208. Is not that the shallowest part just between your two piers? No, it is the deepest part—it is in fact the channel.
209. *By Mr. Wilson:* Has any unforeseen difficulty in prosecuting these works been discovered since this work has been commenced or the plans and specifications have been made? Not the least.
210. *By Mr. Hoskins:* Was Mr. Barron the gentleman who had the survey of this work? Yes.
211. How long was he engaged in taking these surveys? I think he was there four or five months.
212. I suppose he took, then, very careful and elaborate surveys, to enable you to form an accurate estimate? You will be able to judge of the elaborate nature of his survey by looking at the soundings on the map; it is a mass of soundings from end to end.
213. Has Mr. Barron ever before been engaged upon works of a similar character to this? I cannot say. Mr. Barron is a gentleman who is said to have had considerable experience here as an engineer. I believe he was City Engineer, and I have every confidence in him; I believe he is a very able officer.
214. You have every confidence in Mr. Barron? Yes.
215. You of course drew out plans and sections, and estimates of cost, from his surveys? From his surveys.
216. In the event of Parliament not voting the whole of this £117,000, do you think a permanent and deeper channel could be formed by constructing a breakwater on the northern side of the river? I do not think either so deep or so permanent a channel would be formed by the construction of the northern breakwater alone, as a considerable body of tidal waters passes in and out over the south reef which, on the completion of the southern breakwater, will be discharged through the proper channel.
217. Has it never been represented to you, by the masters of coasting vessels and others, that they consider it would be better to have the ridge of rocks projecting on the southern side blasted away and the breakwater erected on the northern side? I should have said, if that suggestion had been made to me, that it would be quite absurd to attempt to blast a channel to any depth,—perfectly ridiculous; it would cost more money than the breakwater would cost altogether.
218. I believe there are unusual facilities for the formation of a breakwater there, in consequence of the contiguity of the stone? Yes, the southern headland gives us all the stone we require.
219. Do you believe, from the surveys of Mr. Barron, that by the expenditure of £117,000

- a permanent channel will be formed? I have no doubt whatever that a permanently deep channel will be formed. E.O. Moriarty, Esq.
220. Could you give us an estimate of the probable depth? I think we should be able to scour the channel to the rocks, which are from eighteen to twenty feet from low water mark; it deepens too, considerably deeper than that, about a quarter of a mile further out. 5 Dec., 1862.
221. The mouth of the Clarence would be the only place available as a harbour of refuge for vessels to make for in case of bad weather on the coast, if proceeding from Port Macquarie northward to Moreton Bay? At present there is no other place at which a vessel can lie with safety. I have been on two occasions out in bad weather, coming from Moreton Bay: on one we lay for six days at anchor at Trial Bay, and on the other under Cape Byron; and I believe if the gale of wind had come more to the eastward the vessel would have been lost.
222. In the event of this breakwater being constructed, do you consider that there would be a more secure harbour of refuge at the Clarence than there would be at Kiama or Wollongong? Infinitely superior; neither Kiama nor Wollongong is suitable for a harbour of refuge.
223. I believe you said you had never been in the Clarence River? Never. I propose going, but I have not had time.
224. I see in your report you state that you believe if prison labour were employed on these proposed works the estimate of expenditure might be reduced? I thought so then, and I am half inclined to think so now; but I cannot say that I based that opinion on very good grounds.
225. Does it not seem to be a place naturally suited for the employment of prison labour,—would not convicts employed there be isolated from the population in a considerable degree,—are there many persons residing in the neighbourhood? None at all, with the exception of the Government establishment.
226. Then if a hulk were stationed at the mouth of the Clarence, in which the prisoners could be kept, excepting when they were at work, they might be very usefully and profitably employed in the construction of these works at the mouth of the river? Now that I have got free labour I should be disposed to stick to it if I could. It is much more satisfactory to work with free than with prison labour.
227. At all events it would be a much superior place for the employment of prison labour than on the roads of the Colony, would it not?—because the prisoners would not come in contact with free people? In that respect it might be an advantage, as I think they could be kept in restraint there much more easily.
228. *By Mr. Wilson:* Supposing the channel were swept to the depth of eighteen feet—as you hope it will be by the erection of this breakwater—would there not be a probability of a new bar being formed outside? I do not think there would, because there is considerable rapidity in the current—the shore current inside these principal headlands—which I think would help to keep it clear, coupled with the increased action on the bottom by confining the current.
229. When do you expect to have this work finished, provided you are supplied with funds for the purpose? I should say in five or six years.
230. *By Mr. Stewart:* You said just now that you were taken short under Cape Byron and Trial Bay, as you were coming up from Moreton Bay;—do you think if the breakwater had been erected at the time you were at Cape Byron, a vessel could by possibility have made the Clarence? Not when we were at Cape Byron.
231. What wind was it? A southerly gale.
232. Do you think, in a southerly gale, any vessel of the class, so far as your information or knowledge of that matter goes, trading there, running from the southward, would, unless in danger of going on shore, attempt to go in, having to work against the channel? In the first place all steamers would go in, and I believe all sailing vessels would do so, for they do so now with a leading wind.
233. In those cases they have no difficulty in running in here, but if they attempted to work up, and missed stays, they would go on shore? Not on a flood tide. I do not think any vessel ought to enter the Clarence on an ebb tide with a southerly wind, but if a vessel were beating out of the harbour, instead of the current having a set on to the beach, as at present, she would have the ebb current setting her out to sea.
234. In speaking of a port of refuge, it is understood that a vessel would be able to run either in or out in bad weather? With a leading wind a vessel could go in—an easterly or south-east wind.
235. *By Mr. Forster:* I suppose you have formed some theory as to the causes that have formed this bar at the mouth of the Clarence? Yes, I have; I believe it is the result of the joint action of the tides and waves.
236. Does that occur at the mouths of most large rivers? It occurs generally at the mouths of all large rivers that have not rocky headlands.
237. Like the Hawkesbury or Port Jackson? It does not take place there to the same extent as the other.
238. The accumulation depends upon the lowness of the coast? In a great degree upon a sandy beach.
239. You used the word “bar” in your examination—do you mean by that the whole mass of sand that accumulates at the mouth of a river, or simply a spit which a vessel has to cross when it first enters upon a difficult part of the navigation? I mean the ledge that lies off the mouth of the river.
240. The first ledge that it encounters upon entering? Yes; it shoals and deepens on each side.
241. Still there is difficult and intricate navigation from this ledge until the vessel gets into

- E.O. Moriarty, Esq.
5 Dec., 1862.
- into the part where she anchors? No, not if you follow the soundings; the pencil-line shows the former channel, and if you take the soundings you will find they average from thirteen to eighteen feet.
242. After you enter this (*referring to the plan*) are there no ledges of sand to obstruct a vessel before she gets to her anchorage? No, there is a good depth of water all the way.
243. Did you never hear of a vessel, after getting over the first ledge, or what you call the bar, grounding and being kedged in till she got to her anchorage? If she came in here (*referring to the plan*) at this point to the north of the present channel, she would get into five feet of water.
244. You think if she kept her proper channel she has a good depth of water all the way from the original bar? Yes.
245. Then the object of your breakwater is to get rid of this—what you call a bar—the first obstacle in the way? Yes, that is the principal object of both breakwaters. In addition to that is the other object of the southern breakwater—the producing of smooth water over the reefs.
246. Is there no danger that a bar may form elsewhere, even if swept away from this? I do not think it will form in front of the mouth of the river, because we shall have a much greater amount of current at the completion of these works than there is at present constantly passing over that same ground, that will no doubt act in some degree upon the bar.
247. The formation of this bar depends upon the general causes to which you have referred; is there not a danger that, by obviating the action of these causes on this particular point, we may merely extend the operation of them to some other point where a similar bar may be formed almost more beyond our reach than the present? No, for there is much deeper water out there.
248. Is not this bar caused by a constant accumulation of sand—an accumulation that must be kept up by the causes that have operated from the beginning;—there must be a constant accumulation of sand? It is constantly accumulating and constantly shifting. I believe the law we shall call into operation will tend to prevent the accumulation at that point.
249. If you remove it from one point will not the same general causes operating at another point create a bar elsewhere—may not shallow water extend further out at sea? I do not think it will, for I think, by the construction of these two works, we get the condition that we find to produce deep water in all parts of the world, namely, two rocky headlands.
250. In fact, you propose, by these breakwaters, to produce artificial headlands? Yes.
251. In speaking of the probable results of your work, you say you look “to the probability of this river being used to a very great extent as a harbour of refuge for the colonial coasting trade”;—do you mean by that to say that colonial coasting vessels would be able to enter in any weather? I believe in almost any weather that a vessel will be able to beat into this harbour in flood tide.
252. Cannot vessels beat in now? No, they cannot.
253. Did you never hear of a vessel beating in? No. I do not think any vessel would beat in in a gale of wind.
254. Perhaps you may have heard of a vessel beating in with a westerly wind? In smooth water.
255. Did you never hear of a vessel beating out with a north-easterly wind? I do not think a vessel would attempt it in a gale of wind. I think after these works are completed a vessel might attempt to beat out with perfect safety on an ebb tide, because she would then have a strong tide under her lee setting her out to seaward.
256. You think when these works were completed she would be able to go out with either ebb or flood tide? With a leading wind, and with an adverse wind I think she would beat in or out if the tide were suitable.
257. You do not anticipate any larger tonnage of vessels would be able to go up the river? There is only one obstruction higher up the river, at a place called the Elbow.
258. Is there not a narrow slip about the anchorage before you go up the river? I believe nearly the whole of these sands come in at flood tide, and that they would be interrupted by this northern breakwater.
259. You do not anticipate but that you can construct a breakwater that will stand any amount of storm? I look upon it as one of the natural operations of making a breakwater, that it shall be washed down till it comes to such a slope as the material will ultimately stand at.
260. And that you will have to make it till you get it to stand? Yes, until ultimately, by the working of the stones, they get dove-tailed into each other.
261. Ultimately you expect the work to stand, but you expect the first work may be swept away and require renewal? I know it will be flattened down, for the effect of every gale of wind will be to spread out the base until the work stands at the proper incline.
262. Do you think any breakwater would have any effect in preventing the shifting of the channel? I think it would have every effect.
263. You do not think this shifting will occur again? No, because the tidal action will be confined to that one channel, instead of being dispersed as it has been hitherto.
264. Have you made any calculations as to the probability of a return from tonnage dues? No, I have not; but I believe if the same course were adopted here as in England, of levying a small toll upon all vessels going along the coast which might benefit by the work, a considerable income might be derived.
265. Do you think the return that would be derived would pay the interest of the money? I think it would as the Colony increased, though it might not do so at once.
266. Do you propose to do anything to other parts of the river—to the Elbow? I do not contemplate it at present; ultimately we may dredge it, or remove the ledge of rock.

267. *By Mr. Dalgleish:* Are these lithographs, which are furnished with the report of the proposed improvements, laid upon the table of the House, calculated on the mud with the sinkage as shown —? That is altogether wrong from beginning to end. E.O. Moriarty,
Esq.
268. Is it wrong on the base? Yes, that is the main base of the inner part. 5 Dec., 1862.
269. The base is here shown to be sand? Yes.
270. Are the calculations taken intended to be upon sand? The breakwater is shown as sinking a considerable distance to the bottom.
271. But it is not calculated to the rock? It is calculated to the rock.
272. Are we to suppose that this lithograph is altogether wrong? It is essentially wrong.
273. You will observe at the outer edge of the south-east pier the foundation is given as rock, and on the other sand—can you explain that? The only explanation I can give is, that I suppose, as they could only bore to the depth of seven feet, they assumed that there was some bottom, either of rock or something that would carry the work.
274. When you discovered that the bottom was not sand, why did you not cause these lithographs, which were laid before the House, to be corrected? I do not know that that is any part of my business.
275. Is this a report which has emanated from your office, and is it of no consequence to you whether it is a correct or a false report? I do not consider myself in any way responsible for the correctness of that lithograph; it is manifestly incorrect.
276. The error has reference only to the middle section, the other two are apparently right—is that so? Yes.
277. The foundation is there said to be sand—is that so? Yes.
278. As this is a quicksand, have you formed any conclusion as to how much the foundation will sink? Yes; the training walls inside the river, I believe, will stand, as shown in section No. 3; the section No. 2 is shown as sinking about seven feet into the bottom, the depth to which we are enabled to bore.
279. It is wrong, then, to place this sand as being the foundation, as you would have no difficulty whatever in boring through sand? It might be hard gravel, and, as you will understand, it is a difficult place to bore among rollers.
280. Do you know whether these soundings were taken by Mr. Barron or by other persons? I believe by Mr. Barron and his assistant.
281. Were they not taken by the pilot? I believe not; the pilot might have assisted Mr. Barron—he might heave the lines; but I believe every sounding was registered by Mr. Barron.
282. Do you think Mr. Barron could, with one assistant, have made soundings of this magnitude in five months? I never said he had but one assistant.
283. How many had he? Four or five.
284. What assistants were they? Young engineers.
285. What do I understand by the term “a young engineer”? A young gentleman who is learning the business of an engineer—Mr. Barron’s assistants were of that class.
286. In what stage of learning were they—how long had they been in the business? Some three or four, others five or six years. I may explain to you that the way in which these soundings are taken is this:—Mr. Barron goes out in a whaleboat with a boat’s crew, and takes soundings; at every five minutes or so he exhibits a red flag, and when he does so two assistants with two theodolites intersect his position; he then takes another series of soundings between two lines, two poles having been put on shore to steer by. His position is intersected at every five minutes, whenever he exhibits a red flag, and these positions are subsequently put down on the plan.
287. If these soundings are taken on sand—and you are not certain whether it is sand or gravel—suppose this bottom sinks three feet deeper than what you have calculated, what would be the gross difference in the estimate—would it not proportionately extend the base? No it would not.
288. Would not the entire height of the bank be altered by three feet? Yes.
289. If the slopes were one, or say one and a half to five, would not the base be extended? No, it would not; stone will not stand at the same slope on land that it will in water.
290. In quicksand will it stand at that? I believe it will.
291. From your engineering experience will you say that it will stand at the same slope as in a hard bank? I will give an instance. I sent one of my assistants to Moruya to make some borings in the inside of the bank there; he got his boring rod down fifteen feet, close to the edge of the dyke, showing that it had not spread out in the sand.
292. Is the Moruya bank a quicksand? The Moruya bank is of precisely the same character as the Clarence.
293. Is not the north-east the wind from which it is most necessary to obtain shelter on the coast? I do not think so.
294. What is the prevailing wind from which vessels require shelter? I should say a south-easterly gale.
295. Would a vessel be able to make this harbour with a south-east gale when the breakwater was completed? If she were to the southward I think she would.
296. Do you know she would? I believe she would, taking a common sense view of the matter.
297. Has any evidence been taken from nautical men on the subject? No.
298. Before spending a quarter of a million of money, is it not usual to take evidence as to what will be the probable value of the contemplated works when completed? I have not thought it necessary to inquire what was the opinion of masters of coasters.
299. I think you have already, in answer to questions by Mr. Forster, said you think another bar will not be formed outside the present mouth of the river? I do not think it will.

- E.O.Moriarty, Esq.
5 Dec., 1862.
300. Can you give any scientific reason why such a bar will not be formed? Yes, I think I can, a very simple one, namely, that by producing a considerably greater scour than at present exists the sand will be removed.
301. Is not the bar formed by the water washing up the sand from the sea which has been brought down by the river? Yes.
302. Will not the effect of a north-east wind be to form a bank across the channel of the breakwater itself? I do not think there is the slightest danger.
303. But, taking your own theory, that at the point where two opposing currents meet, sand being held in suspension, the currents become neutralized and a bank is formed—will not the effect be, under these circumstances, to form a bank? That is the very condition of things these two walls will intercept. There are two currents now which neutralize each other—the one along the beach and the other coming in; by the formation of these walls there will be a straight current both out and in, and the effect of that current will be, I believe, to scour the bar.
304. With a north-east wind will not the effect be, that the sea will break directly into the mouth of the breakwater, and consequently will not the current from the mouth of the river meeting the sea current form a bar right across the channel? I do not believe there is any current forced in by the wind.
305. Not when the set of the sea is in that direction? No; the current is not caused by the wind, but by the flow and reflow of the tide.
306. You still consider that it would be advisable to trust to the honesty of one man, and that man no doubt — what wages do you pay the man who has charge of the weighing machine? £150 a year.
307. Do you consider it advisable to trust to the honesty of a man who is receiving £150 a year, and who is responsible, no doubt, for the entire expenditure of this money, seeing that he is to be accountable for the weights passing over this bridge? As far as my experience goes the quantity of a man's wages is not a guarantee for the quality of a man's honesty, and I have no doubt Mr. James will act honestly.
308. Is Mr. James an engineer? He says he is, and I have no reason to doubt him.
309. A civil engineer at £150 a year—is he a young engineer? He is quite a young man.
310. Would he not be peculiarly liable to the temptation of bribery, seeing that his wages are so very small, and that he has the power of making the profits of the contractor anything that he may think proper almost;—is it desirable that he should be open to this temptation? If you like to give him £600 a year I shall be very glad.
311. Is it desirable that any one man should be subject to such temptation? I can conceive of no condition of things in which you must not trust to the honesty of somebody.
312. Do you think it desirable to throw a man into a position of temptation? I do not consider it throwing him into temptation to place him as a check upon the contractor.
313. Must you not consider the contractor as honest as your officer? I have no reason to doubt the honesty of the contractor.
314. Might not a contractor, if he were losing upon his contract, pay £200 a year to a man in the receipt of only £150, in order that he might forget how many tons of stuff were deposited in the breakwater? I am not going to say that contractors are rogues, and I have no reason to doubt the honesty of Mr. James.
315. People who have been in this Colony some years have had some reason to be careful with respect to the honesty of contractors? Yes, I think they have.
316. The Circular Quay and some other great works, for instance? Yes.
317. Do you think it desirable, under these circumstances, to place any one individual under such peculiar temptation as he would be subject to from a dishonest contractor? Mr. James has not sole control; Mr. Barron is also constantly on the spot; and I do not think, with the constant supervision Mr. Barron gives, any organized system of roguery could exist.
318. Did you get the weigh-bridge in Sydney? Yes.
319. Was it advertised for? Yes.
320. What weight can the weigh-bridge weigh at once? It is capable of weighing twelve tons.
321. Was it ordered a sufficient time before the order was executed to have enabled you to obtain it from England? I do not think it was; but we are restricted from ordering from England now.
322. You were not at the time this vote was passed? At the time we commenced the works.
323. Did you not think it advisable, when the contractor undertook the work at so much per ton, that there should be some mechanical means, where it could be applied, of testing the quantity supplied to the works? I quite hold with these mechanical tests where they can be obtained; but I am satisfied that no mechanical means would prevent collusion if the parties were so disposed. Every engineer knows how easy it is to doctor these machines, and I believe a sharp engineer could doctor a weigh-bridge.
324. You said it was necessary that the register should be sent down to you for correction—not for correction, for summing up? No, it would be no hindrance at all, further than that I should have to send up an officer; and I believe a self-acting machine would be as easily falsified as another.
325. You are aware that these mechanical means are employed upon the Government works in England? I am aware they are.
326. Do you think they would use them there if they were of no value? I do not say they would, and I do not say but that perhaps a self-acting weigh-bridge might be of some benefit, but I do not believe there is any absolute occasion for it.

327. Have the captains of different steamers employed in the Clarence River trade objected to the proposed arrangement? Not that I am aware of. I have spoken to most of them, I think, and discussed the subject with them, because I always like to take the opinion of nautical men upon nautical matters, and I believe generally they are in favour of the plan. I know at one time it was suggested by one man that a channel should be cut through the ledge of rocks on the south side, but that is so utterly futile that I have never since thought of the matter.

E.O.Moriarty,
Esq.
5 Dec., 1862.

328. Have you not often heard the opinion expressed by those parties who may be considered most interested in the matter, that the whole scheme is equal to throwing the money into the sea? I never heard it.

329. *By Mr. Moriarty*: If any statement had been made, would you attach any importance to it? I never saw any work of importance yet undertaken that there was not some little growl at, and I believe if an engineer were to pay attention to every opinion he received he would never do anything.

330. *By Mr. Hart*: Can you say the work will not exceed the estimate you have formed? I believe confidently it will not, on the ground that I am now getting work done for a sum considerably less than my estimate. My estimate was 4s. a ton for stone, for which we are now paying 3s. 4½d.

331. Do you believe that the trade will be greatly increased? I believe it will. Looking ahead, when the trade becomes of importance, I think tonnage dues should be imposed on vessels entering the port.

332. *By Mr. Dalgleish*: Can you state to the Committee how much the cost exceeded the estimate of the work at that portion of the Darling Harbour before referred to? I can tell you that the cost did not exceed by one penny my estimate for —

[*The witness, in answer to some questions by Mr. Lucas, referred to the plan produced by him, but the conversation was carried on in so low a tone of voice, as not to be heard distinctly by the shorthand writer.*]

333. *By Mr. Lucas*: There has been nothing done on the north side? No.

334. And only about £1,500 expended on the south? Yes, the contract is taken for £14,000.

335. Only £1,500? Yes, in stone; of course the contractor has sent down stock.

336. Is there a clause in that contract by which the Government have the power to rescind that contract? No, but to alter—decrease or increase.

337. The tramway is from this quarry (*referring to the plan*) to the southern breakwater? Yes.

338. If the contract were closed the contractor would require compensation for this line that he has laid down? Yes.

339. Have you a copy of the contract? Yes.

340. Will you read the clause in the contract? (*The witness read the same.*)

341. Do you know anything of the tonnage that goes in and out of this river? There are three large steamers running there.

342. How often do they make their trips? I think there are two steamers a week.

343. Are there many coasting craft? I cannot say.

344. *By Mr. Laycock*: Has it not been acknowledged by nautical men that the northern breakwater is essentially necessary, leaving the southern entirely out of the question? I cannot say that.

345. You have never heard a person speak against the northern? Never. I have heard a suggestion that it would be better to cut a channel through the ledge of rocks than to form it; but I never heard an objection to the northern.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LAKE MACQUARIE.
(RETURN RELATIVE TO ENTRANCE INTO.)

Ordered by the Legislative Assembly to be Printed, 9 December, 1862.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 1 October, 1861, That there be laid upon the Table of this House,—

“ The Report of the Engineer for Harbours, on the state of
“ the Entrance into Lake Macquarie.”

(*Mr. Lewis.*)

LAKE MACQUARIE.

ENGINEER-IN-CHIEF FOR HARBOURS AND RIVER NAVIGATION to UNDER SECRETARY
FOR PUBLIC WORKS.

*Department of Public Works,
Harbour and River Branch,
Sydney, 19 November, 1862.*

SIR,

I have been delayed much longer than I anticipated in reporting on the entrance to Lake Macquarie, in consequence of the difficulties experienced in taking the requisite borings to enable me to form an estimate of the probable depth of water we might expect to secure on the bar, as well as the cost of the works which might be necessary to ensure it.

The first attempt which was made to reach the entrance to the lake by sea failed, in consequence of the heavy surf which was found to be breaking on the bar; and on returning to Newcastle the boat was swamped and lost, with all our boring apparatus. Fortunately no further loss was sustained, as the men had previously been taken on board the steamer which had them in tow.

The second attempt proved more successful; and I am now in possession of a series of borings, showing the depth at which rock occurs beneath the sand on the bar and on the adjoining banks.

I regret to say the borings show very unfavourable results, there being but from five to seven feet to the surface of the rock on the bar at low tide.

This, I may observe, was very much what I had anticipated, for on no other supposition than the existence of some such obstruction was it possible to account for the phenomenon of such an enormous tidal area as that of Lake Macquarie having so insignificant an outlet; and the existence of such an obstruction precludes the prospect of ever making the entrance to Lake Macquarie safe for vessels of any but a small class of coasters, unless the costly and difficult operation is entered upon of cutting a channel through the rocky ledges which underlie the sand on the bar—a work, the cost of which, from the exposure of the place and the constant and tedious interruption to which it would be liable in bad weather, it is difficult even approximately to estimate.

I believe that by the works I have sketched out, namely, two piers—one on the south side, which would have the effect of regulating and confining the tidal scour; the other on the north, which should also confine the tidal action on that side, and serve to intercept the in-run of sand from the adjoining beach during flood tide—we might look forward confidently in time to scouring away, by means of the tidal action alone, the sand now overlying the rock; but this, as I have stated, would only give a depth of five to seven feet at low water, which is, in my opinion, quite insufficient for the purpose of navigation.

I believe (as far as my present information enables me to judge) that the principal if not the whole difficulty in opening a deep and wide channel into the lake, lies in the existence of this reef which I have mentioned as choking its outlet. Were this removed, I have no doubt whatever but that the lake would soon make for itself an outlet as wide and deep as that of Port Jackson.

For could we, by the removal of the reef and the regulation of the inner channel, get the tidal influence to extend into the lake, so as to cause its waters to ebb and flow, we should immediately call into existence a mighty power which now lies dormant; but the rocky nature of these obstructions quite precludes all hope of its removal by natural means.

I have not gone very carefully into the question of the removal of the reef, or rather the excavation of a channel through it by manual labour, because before determining on such a work it would be necessary to continue the line of borings up to the lake, so as to ascertain that there exist no other ledges of rocks which would require removal in order to carry the full depth of whatever channel might be determined upon from the sea into the lake, but presuming the absence of such obstruction, and that it be determined to cut a channel, say 9 feet deep by 300 feet in width, through the rocky ledge, the probable cost could not be safely estimated at less than from £40,000 to £60,000.

And on the supposition that the reef is not interfered with, the utmost that we can expect would be to deepen the water on the bar from three feet, the present depth to the sand, to seven feet, the depth to the rock from low water mark. This would give, say nine feet water at half-tide, from which would have to be deducted the rise and fall due to the swell at the bar, which in ordinary fine weather cannot be safely placed at less than two or three feet; this would reduce the actual available draught of water for navigation to from six to seven feet. In rough weather the surf that must break across the entrance would render it quite impracticable at any stage of the tide.

That I have not understated the depth of water, say seven feet, as only available for navigation, supposing the sand to be removed and the rock laid bare, will I think be admitted by every nautical man.

No

No captain would like to run his vessel into a rocky channel in a sea-way with less than from two to three feet between his keel and the rocks; in most cases it would be quite insufficient, but looking at it in the most favourable point of view, a depth of two feet under the keel is quite little enough clearance on such a bottom.

The works which I have sketched for the inner portion of the channel are merely training walls of stone ballast, for regulating and straightening the currents.

I have included them in the estimate, but they might possibly be executed for a less price than I have named, if ballast were to become plentiful in consequence of a great development of the coal trade from the lake; but we should not be able to calculate on any considerable reduction in the amount, inasmuch as the vessels entering in ballast would require to retain most of it for the lake navigation.

This portion of the work, however, might be allowed to extend over a series of years, as there is now throughout its entire length nearly as great a depth of water in this inner channel, as there would be on the bar after its partial deepening in the manner I have proposed.

Indeed it would seem that the possible depth of water on the bar, and that which I have no doubt is frequently the actual depth (for it must at times happen, after heavy easterly gales, that the sandy covering is washed off the reef),—it would seem, I say, that this depth regulates that of the inner channel; and to whatever degree we could deepen the water on the bar, to the same depth the increased scour, when once called into operation, would deepen the remainder of the channel.

But to call it into operation it is more than probable a considerable amount of dredging would be required, to cut through the numerous bars and banks of clay, shells, and other material which the sluggish current would be unable to act upon.

The cost of dredging I have approximately estimated at £10,000; the estimate is merely an approximate, because we find when dredging in sand, that when quite pure and unmingled with mud and shells, it runs in almost like water from a distance of several feet all round.

The whole probable cost of the works I estimate as follows:—

| | |
|--|---------|
| Dyke AB, formed of large stones, 42,910 tons, at 3s. 6d. | £7,509 |
| Dyke BC, formed of smaller stones in ballast from vessels, 40,457 tons, at 1s. 6d. | 3,034 |
| Dyke ED, 8,486 tons, at 1s. 6d. | 636 |
| Dyke FG, 11,314 tons, at 3s. 6d. | 1,980 |
| Dyke GH, 12,170 tons, at 3s. 6d. | 2,130 |
| Dyke IK, 15,400 tons, at 3s. | 2,310 |
| Breakwater KL, 34,334 tons, at 5s. | 8,584 |
| Breakwater pitch paving head | 3,000 |
| A wharf for landing stone to breakwater KL | 300 |
| An embankment from wharf to breakwater, 2,800 tons, at 3s. 6d. | 490 |
| Dredging channel | 10,000 |
| | <hr/> |
| | £39,973 |

I have, &c.,

E. O. MORIARTY,
Engineer-in-Chief.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PORT OF NEWCASTLE—STATISTICS.
(RETURN RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 21 August, 1862.

*RETURN to an Order made by the Honorable the Legislative Assembly of New South Wales, dated the 1 July, 1862, That there be laid upon the Table of this House,—

- “ (1.) The Names of all Vessels which have entered the Port of Newcastle from 1 January, 1861, to 30 April, 1862, inclusive.
- “ (2.) The Date of Entrance, the respective Tonnage, and the Amount of Tonnage Dues and Pilotage Fees, and other charges paid by such vessels, distinguishing, in each case, those which have cleared for and loaded at Newcastle from those which have cleared for and loaded at all other places above the Port of Newcastle.”

(Mr. Hannell.)

TOTAL REGISTERED TONNAGE and AMOUNT of DUES paid by all Vessels that entered the Port of Newcastle, from 1 January, 1861, to 30 April, 1862, inclusive.

| | TONNAGE. | TONNAGE DUES. | PILOTAGE. | HARBOUR DUES. | TOTAL. |
|---------------------------------|----------|---------------|-----------|---------------|-------------|
| | | £ s. d. | £ s. d. | £ s. | £ s. d. |
| Total loaded at Newcastle | 271,759 | 3,278 13 6 | 3,582 8 4 | 427 15 | 7,288 16 10 |
| Do. at Morpeth | 135,230 | 248 8 6 | 49 18 0 | | 298 6 6 |
| Do. at Hexham | 36,918 | 226 11 6 | 103 2 8 | 2 0 | 331 14 2 |
| TOTAL.. .. | 443,907 | 3,753 13 6 | 3,735 9 0 | 429 15 | 7,918 17 6 |

Custom House, Newcastle,
4 August, 1862.

C. BOLTON,
Sub-Collector.

* NOTE.—Only a portion of this Return ordered to be printed, viz.,—Abstract of “ Total Registered Tonnage and Amount of Dues paid by all Vessels that entered the Port of Newcastle, from 1 January, 1861, to 30 April, 1862, inclusive.”

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BRIDGE OVER TENTERFIELD CREEK.

(CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be Printed, 16 December, 1862.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 20 June, 1862, That there be laid upon the Table of this House,—

- “ (1.) Copies of all Correspondence that has passed between
“ the Government and Messrs. Readitt and Simpson, Sur-
“ veyors, with reference to the proper site for the construc-
“ tion of a Bridge over the Tenterfield Creek.
- “ (2.) Copies of all Petitions from the Inhabitants of
“ Tenterfield, on the same subject.
- “ (3.) Copies of all Correspondence that has subsequently
“ passed between the Government and the Surveyor General,
“ with reference to the site which has been at last deter-
“ mined on.”

(Mr. Gordon.)

SCHEDULE.

| NO. | PAGE. |
|--|-------|
| 1. Surveyor General to Licensed Surveyor Simpson, to select site for a bridge and to report. 5 April, 1861 | 3 |
| 2. Same to same, reminder, same subject. 18 May, 1861 | 3 |
| 3. Joseph James to Minister for Works, respecting choice of site for bridge. 1 July, 1861 | 3 |

BRIDGE OVER TENTERFIELD CREEK.

No. 1.

SURVEYOR GENERAL to SURVEYOR SIMPSON.

*Surveyor General's Office,
Sydney, 5 April, 1861.*

SIR,

With reference to certain correspondence which has passed between Mr. R. Meston and the Honorable the Secretary for Lands, relative to the erection of a bridge over Tenterfield Creek, to connect East and West Tenterfield, I have to request that you will select the best site for that purpose, and make a plan and section thereof (the latter showing the ordinary height of water and height of usual and extraordinary floods), and furnish a report as to the character of the approaches, the supply of timber in the vicinity suitable for the construction of a bridge, and every other information likely to be useful in determining the probable cost of a bridge.

I am, &c.,
A. G. McLEAN.

No. 2.

SURVEYOR GENERAL to SURVEYOR SIMPSON.

*Surveyor General's Office,
Sydney, 18 May, 1861.*

SIR,

In reference to my letter to you of the 5th April last, to furnish a plan and section of the proposed site for a bridge over Tenterfield Creek, and to furnish a report as to the timber existing in the vicinity, I have now to request that you will be so good as to supply the information required with as little delay as possible, the matter being of an urgent nature.

I am, &c.,
A. G. McLEAN.

No. 3.

MR. JOSEPH JAMES to SECRETARY FOR WORKS.

*Tenterfield,
1 July, 1861.*

SIR,

I hear, on good authority, the bridge to be made over the Tenterfield Creek will be in Molesworth-street; but I beg to state, a bridge in Manners-street, for convenience and central position for the township, surpasses any other place below, and could be erected with half the expense. It is only fifty-two feet span, and no danger of being flooded; on the eastern side, already formed by nature, a solid foundation of rock, and plenty of stone, of large dimensions, to build it; and the western side a regular grade for the Great Northern Road, without any cutting or filling up; Government reserve ground on each side of creek for public works;—while in Molesworth-street (130 feet span, beside a low swampy ground), unless built very high, would be swept by the next flood, and cost as much to fill up each side of the bridge and finish the road as would build a good stone bridge in Manners-street.

Dear sir, public works of this kind ought to be built of stone, which is durable and lasting, and creditable to the Government.

Believe me, &c.,
JOSEPH JAMES.

No. 4.

CHAIRMAN AND COMMITTEE OF A PUBLIC MEETING to SURVEYOR GENERAL.

Tenterfield, 16 July, 1861.

SIR,

We, the undersigned, have the honor to inform you that in consequence of a report to the effect that Mr. Readitt had recommended two sites for a bridge over the Tenterfield Creek—the one at the intersection of Manners-street, and the other at Molesworth-street—and that his report is most favourable to the former of the two sites, a public meeting was convened, for the purpose of taking the matter into consideration; at which the following resolutions were all but unanimously adopted:—

1st Resolution.—Believing that a bridge is about to be erected over the Tenterfield Creek, and two sites having been proposed by the Government surveyors, this meeting is of opinion that the one particularly recommended by the surveyors, as being in the centre of the township as it appears in the map, is not the one best adapted for the present requirements of this community.

2nd Resolution.—That this meeting is of opinion that a bridge erected over the creek at the intersection of Molesworth-street would be the most conducive to the convenience of the inhabitants generally, and that the erection of a bridge in that locality would be a considerable saving to the Government.

3rd Resolution.—That a Memorial be drawn up and sent to the Government, embodying the foregoing resolutions.

4th Resolution.—That Messrs. Wilson, Kemble, Ritchie, Heydon, Lethbridge, and Sullivan be requested to communicate with the Surveyor General on the subject, on behalf of the meeting.

We, therefore, on behalf of the meeting, respectfully request that you will take this matter into favourable consideration.

Although Manners-street may be the most central position as the town appears on the map, it is not at all central as the town actually is; and as it is very questionable whether the town will spread in the direction of Manners-street for many years, if at all, we would hope that in the building of a public work of this kind the immediate present wants of the community to be benefited thereby may be taken into consideration.

We have, &c.,

GEORGE WILSON, Chairman.

BYRON THOMAS KEMBLE,

P. RITCHIE,

JAMES LETHBRIDGE,

G. T. HEYDON,

PHILLIP SULLIVAN,

} Committee.

No. 5.

PETITION OF INHABITANTS.

To His Excellency Sir John Young, Knt. Commander of the Most Honorable Order of the Bath, Commander-in-Chief of the Colony of New South Wales, and Vice-Admiral of the same, &c.

The Petition of the resident Landholders and Householdors of the township of Tenterfield and its environs,—

HUMBLY SHEWETH:—

That a Petition from residents of this township has been forwarded to the Surveyor General, with a view to alter the site of a bridge, fixed upon by the Government surveyors in this township, to Molesworth-street. Your Petitioners humbly beg your Excellency to withhold your sanction to such alteration, on the grounds that Manners-street, the site fixed upon by the surveyor, is in the centre of the township, and is better adapted in every way with equal advantage to all parties; and that a bridge can be erected there at one-half less expense, and with much less danger of being swept away by floods. That Molesworth-street is two and one half sections from the centre of the township, and only two sections from the suburban allotments, and it is only through self-interested motives that such alteration is sought.

Humbly hoping your Excellency will take the matter into your favourable consideration, and have a bridge erected in a situation where it may be of equal advantage to all parties.

And your Petitioners, as in duty bound, will ever pray.

(Here follow 86 Signatures.)

BRIDGE OVER TENTERFIELD CREEK.

5

No. 6.

MR. JOSEPH JAMES to SECRETARY FOR LANDS.

Tenterfield, 26 October, 1861.

SIR,

Some time has elapsed since the people of Tenterfield were first promised a bridge to cross the creek. I hope, dear sir, you will make the necessary arrangements as early as possible, for it is an eye-sore to cross the creek on business, or to carry the corpse to the grave by travelling up or down the creek, to cross on a plank. The public feel themselves aggrieved to think their wants have not been properly attended to. Meston has sent here his resignation; it is accepted and carried unanimously this evening, at Mr. Baker's, Royal Hotel. Mr. Kemble's appointment has given general satisfaction, both as Coroner and Magistrate; he is fully competent to discharge the duties assigned to him.

I am, &c.,

JOSEPH JAMES.

No. 7.

REPORT OF SURVEYOR GENERAL.

The enclosed Report, with plan and rough section, are forwarded for approval.

It will be seen that Mr. Licensed Surveyor Simpson has examined both the proposed sites in Molesworth and in Manners-street, and has recommended the latter.

One numerous signed petition and one letter are enclosed, in favour of the latter, and one paper, stated to be the opinions or resolution of a public meeting, in favour of the former.

This latter paper tacitly admits, however, that Manners-street will prospectively be the more central position, and there appears to me to be no room for questioning its adoption.

A. G. McLEAN.

B.C.—*Surveyor General's Office,*
Sydney, 8 November, 1861.

[Enclosure in No. 7.]

Warraldra, 20 September, 1861.

Sir,

In compliance with your letter of instructions, dated the 5th April last, No. 61-488, I have now the honor to transmit a plan and section of a proposed site for bridge to connect East and West Tenterfield, and I have the honor to report that the character of the approaches is good, the soil on both sides of the creek being of a good sound description, possessing a moderate fall sufficient to prevent water lodging in wet weather.

Timber suitable for the construction of a bridge, such as blue gum and stringy-bark, can be obtained within fifteen miles of the proposed site. Iron-bark is scarce, but I have been informed that sufficient for the purpose may be procured about Glenlyon, say within twenty miles from Tenterfield.

Stone similar to that used for building in the township can be obtained on the reserve in section 23, adjoining the proposed site, and I would suggest its being made available in the construction of the proposed bridge, for abutments, &c.

I would also suggest that if the bridge be built of timber, that a clerk of works be stationed on the spot to inspect the construction, in order that no inferior timber be used, as has been the case in buildings put up in Tenterfield by contract.

Several other sites for the proposed bridge have been pointed out to me, and particularly one in Molesworth-street; but after giving that site most careful consideration, I am unable to recommend it as a suitable place—the approaches thereto being particularly objectionable, as the land on the east side of the creek at that spot is subject to inundation from back water, and to make good approaches would involve considerable additional expense. Neither are the banks of the creek as favourable as the site in Manners-street, and the creek is broader than the site I have now the honor to recommend. Although probably Molesworth-street is more central at present, still, looking at the direction in which the town must extend, the site proposed by me will in a very few years be the more central, and in all other respects—in my opinion—more suitable than any other.

I may also add, that the erection of a bridge in Manners-street would give increased value to the unsold allotments in the neighbourhood.

I have, &c.,

J. M. SIMPSON, L. S.

The Acting Surveyor General,
Sydney.

No. 8.

UNDER SECRETARY FOR LANDS to MR. JOSEPH JAMES.

*Department of Lands,**Sydney, 23 November, 1861.*

SIR,

With reference to the inquiry contained in your letter of the 26th ultimo, relative to the proposed new bridge at Tenterfield, I am directed to inform you that a report having been obtained from the local surveyor, in which Manners-street is recommended as the most suitable site, the Secretary for Lands has approved of the sum of £500 being placed on the additional Estimates for 1862, for the construction of a bridge in the locality referred to.

I have, &c.,

MICHL. FITZPATRICK.

No. 9.

No. 9.

TELEGRAM from SURVEYOR GENERAL to UNDER SECRETARY FOR LANDS.

Tenterfield, 21 May, 1862.

MR. KEELE has instructions from you to call for tenders for Tenterfield Creek Bridge. E. O. Moriarty is, I believe, preparing plan and specification. I have directed Mr. Keele not to proceed until he hears further. I have examined sites with Mr. Keele, and will report on my return to Sydney next week, till when it would be well to defer plan.

A. G. M'LEAN.

No. 10.

MR. T. B. DOWLING to SECRETARY FOR LANDS.

Tenterfield, 24 May, 1862.

SIR,

Since the Surveyor General's official visit here of the 21st ultimo, I have been particularly requested to write you on the subject of this long talked of and much needed bridge for Tenterfield. I do not know if I am doing wrong now in addressing you on public matters; if so, the importance of the subject, for the present and future public convenience, may in some measure palliate my error.

I am aware that you have received many conflicting applications concerning the site of this bridge; some advocating Manners-street, some High-street, others Molesworth-street, and as I fear party influence has or may be brought to bear to serve their particular interest, I have ventured once more to draw your attention to the party whose interest would be best served by having the bridge in Molesworth-street, even at the risk of ignoring the convenience of the present and future population of Tenterfield.

I do not hesitate to state, that it is Mr. M. H. Marsh's property here that would derive the most benefit from it, having an inn in Molesworth-street undergoing extensive improvements; in close proximity he has wholesale and retail stores, consequently it would materially benefit him, in the event of the bridge being there.

I may here state, on that side of the creek crossing Molesworth-street is nothing but suburban allotments; this side of the creek north there are but very few town and suburban allotments ere we come to Mr. Donaldson's purchased land; the town cannot extend any further that way. To Queensland we are near enough already. High-street is, I imagine, out of the question—the very great span caused by the different course the creek has taken when flooded, with other disadvantages, would cause an immense outlay to the Government to place a bridge there.

I now come to the site selected with most judgment and care by the surveyor, Mr. Readett, in Manners-street. It is the most conveniently situated to the Grafton road; its position is the most commanding, and will not only benefit the townspeople, but all the farmers in and about Groombridge's Swamp, Stony Creek, &c., &c.; and last, though not perhaps the least important, is the natural advantages Manners-street has, viz., the span is much less, the embankment much superior, being of solid rock—consequently the cost would be infinitely less than any other site in the town. With these natural advantages before you, and the benefit that will be conferred on the greatest number of its inhabitants now and hereafter, may possibly assist you, as the guardian of the public interest, to determine on that site best calculated to confer the greatest benefit on the greatest number.

I have, &c.,

T. B. DOWLING.

No. 11.

REPORT OF SURVEYOR GENERAL.

AFTER a personal inspection of the various possible sites for this bridge, with Mr. Keele, Superintendent of Northern Subordinate Roads, I have arrived at the conclusion that Molesworth-street would prove the site most convenient to the majority of the inhabitants of Tenterfield, and otherwise most desirable, the approaches being good on either side, and the Court House and probable sites for other public buildings being in Molesworth-street.

The creek at Molesworth-street is wider than at the other site proposed in Manners-street, but the banks, although alluvial, are high and sound, the course of the creek above and below, for some short distance, is direct, and there does not appear to be any probability of a bridge being injured by floods. At Molesworth-street a span of 120 feet, with a height of twelve feet from the bed of the creek, which is of alluvium and suitable for pile-driving, will place the bridge above the reach of all floods. Mr. Keele, who has had considerable experience in the erection, under contract, of such minor bridges, believes that a bridge of sawn timber would be contracted for within the £500 voted, and I would, therefore, suggest that a plan be prepared and tenders invited for the erection of a bridge at Molesworth-street.

A. G. M.

Surveyor General's Office, Sydney,

No. 12.

SURVEYOR GENERAL to SURVEYOR SIMPSON.

*Surveyor General's Office,
Sydney, 6 August, 1862.*

SIR,

It having been determined that the proposed bridge over Tenterfield Creek shall be erected at Molesworth-street, I have to request that you will be good enough to furnish a plan and section of the site and borings of the creek, in order that the plan and specification for the bridge may be prepared.

I am, &c.,
A. G. McLEAN.

No. 13.

PETITION OF INHABITANTS.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.
The Petition of the undersigned Inhabitants of Tenterfield,—

RESPECTFULLY SHEWETH:—

That we, your Petitioners, do humbly beg to submit to your most Honorable House that the site for the bridge over the Tenterfield Creek be placed in Manners-street; being the most central, eligible, and economical site in the creek aforesaid. The same was selected by the local surveyor, and approved of by the Governor-in-Chief and the Executive Council.

The proposed site lies in proximity of the Roman Catholic Chapel, School of Arts, Church Reserve, Recreation Ground, and a direct line of road to the Cemetery. A few influential persons in Tenterfield resolved to remove it to Molesworth-street, to the great injury of the people generally.

May it please your Honorable House to take the subject under consideration, and do justice to all parties concerned.

And your Petitioners will ever pray.

[Here follow 157 Signatures.]

No. 14.

MR. JOSEPH JAMES to SECRETARY FOR LANDS.

Tenterfield, 23 August, 1862.

SIR,

As you stated in the House of Assembly, on the 4th June, that the bridge over the Tenterfield Creek is to be built in Molesworth-street, I enclose in this letter a copy of Mr. Fitzpatrick's letter, contradicting your statement in the Assembly, which was read by our Member, Mr. Gordon, about the 10th June, and you were not present.

Dear sir, I hope you will inform me why you altered the original site, which was selected by Mr. Readett, also approved of by Mr. Simpson, and backed by the majority of landholders and householders in this township and vicinity.

When Mr. McLean, the Surveyor General, was in Tenterfield, about three months ago, he informed Mr. Patrick Curry that Manners-street is the most suitable and economical site for a bridge in the creek, and a good permanent bridge built of stone could be built for £600, and why build a mere temporary wooden bridge to please the minority? Now, sir, if you change the original site without a just cause, I will publish Mr. Fitzpatrick's letter in the *Herald* and the *Empire* on the first news of tender for the construction of the bridge. And if this Government is based on democratic principles, that is, the majority rules, why is the Ministry so equivocating as to be led astray? They, as a body, have no right to alter it.

Believe me, &c.,
JOSEPH JAMES.

No. 15.

SURVEYOR SIMPSON to SURVEYOR GENERAL.

14 September, 1862.

SIR,

With reference to your letter of the 6th ultimo, No. 62-1948, to furnish plan and section for proposed site of bridge at Tenterfield, I have the honor to inform you that I hope to be able to transmit the same in the course of about three weeks.

I have, &c.,
J. M. SIMPSON,
L.S.

No. 16.

SURVEYOR SIMPSON to SURVEYOR GENERAL.

Wairialda, 4 October, 1862.

SIR,

I have the honor, in compliance with your instructions 62-621 of the 6th August last, to transmit a plan and section of proposed site for bridge at Molesworth-street to connect East and West Tenterfield.

I have, &c.,

J. M. SIMPSON,
L.S. & C.C.L.

No. 17.

MR. GORDON, M.L.A., to SECRETARY FOR LANDS.

Sydney, 7 October, 1862.

DEAR SIR,

Mr. Hoskins has handed me his letter for perusal, respecting the site for the construction of a bridge over the Tenterfield Creek. I quite concur in his view of the case, and although I cannot give an opinion from my own personal knowledge, I may however state that I have taken some considerable trouble to ascertain the most eligible and the least expensive site; and I have no hesitation in saying that I believe that if the bridge is constructed in Manners-street it will be most in accordance with the wishes of a large number of the residents of the township of Tenterfield.

Yours, &c.,

HUGH GORDON.

No. 18.

MR. HOSKINS, M.L.A., to SECRETARY FOR LANDS.

7 October, 1862.

DEAR SIR,

On Saturday when I was at your office in company with Mr. Gordon, the Member for Tenterfield, you requested me to address a letter to you about the proposed site for the Tenterfield Bridge, which I promised to do, and which promise I now hasten to fulfil.

When last in Tenterfield it was pointed out to me, that if the bridge was erected over the creek at Molesworth-street, in consequence of the banks of the creek at that site being precipitous and rocky, there being large granite boulders at that place, the cost of constructing it would exceed the amount of money appropriated by the Legislative Assembly for the purpose—£500; and that there was a smaller number of persons residing upon both sides of the creek near that place than in almost any other part of the township. On the other hand, if the bridge was erected at Manners-street the physical difficulties would be less, the banks of the creek being lower, and without any granite boulders; consequently it was the general impression that a bridge would be constructed for the amount appropriated for the purpose, while the expense which would be entailed in making the approaches to it on both sides of the creek, would be much less than at Molesworth-street, and there would be this additional advantage, that it would benefit a much larger number of the residents, being in the centre of the township.

Apologizing for trespassing on your valuable time,—

I am, &c.,

JAMES HOSKINS.

No. 19.

MR. JOSEPH JAMES to SECRETARY FOR LANDS.

Tenterfield, 26 October, 1862.

SIR,

Ever since June 4, from an assertion made by you in the Legislative Assembly, I formed an opinion that, for mere political motives, you upheld the minority of this community, to the annoyance of the majority of landholders, respecting the proposed site for the bridge over the Tenterfield Creek; and the most conspicuous of the minority alluded to are Messrs. Wilson, Sweetland, Ritchie, and Cowper, P.M. Is it for the three last-named favoured individuals, that do not own a particle of land in the township, the Ministry want to change the site for? I hope it is not for individual interest the bridge will be built, like most of the buildings in the township, but for the benefit of the whole community. Messrs. Donaldson and Riley have property in the township of some extent, without any improvements whatsoever on them. Mr. Fagg, innkeeper, made more fuss with one allotment, by taking a trip to Sydney to bring the bridge on his back to Tenterfield, than Messrs.

O'Connell,

O'Connell, Irby, and Baker, who own more property in Molesworth-street than all the former combined, and yet they favour the site in Manners-street for being the most central, eligible convenience to the inhabitants, and for economical expenditure. I want to know, why do you deny the ninety-three adult male landholders their privileged rights, when there is about only 133 male adult landholders in the township? Have they not paid dear for their land—do they not pay their taxes—are they entitled to some consideration or respect—are the majority to be put aside for more favoured individuals, whom the Ministry respect on account of their "separation" notoriety? I have avoided agitation, to some extent giving evasive answers, except on business, depending upon justice from a liberal Government. I did not expect the Ministry dilly-dally their time away until the Session closes. Where there is a justifiable grievance, why not grant them their just demands of an injured people? After confirming the site in Manners-street, why change elsewhere without a just reason? Such conduct on the part of the Ministry, unless they are misled, is dishonourable in the extreme. In several instances I took their part, but now I have no excuse.

Believe me, &c.,

JOSEPH JAMES.

No. 20.

UNDER SECRETARY FOR LANDS to MR. JOSEPH JAMES.

*Department of Lands,
Sydney, 17 November, 1862.*

SIR,

In reference to your letter of the 24th ultimo, respecting the site of the intended bridge over Tenterfield Creek, I am directed by the Minister for Lands to inform you that if you desire him to notice your communications, you must use less offensive style in conveying your wishes.

I have, &c.,

MICHL. FITZPATRICK.

No. 21.

MR. JOSEPH JAMES to SECRETARY FOR LANDS.

*Tenterfield,
30 November, 1862.*

SIR,

I have the honor to acknowledge the receipt of a letter of the 17th instant from Mr. Fitzpatrick, respecting the site of the intended bridge over the Tenterfield Creek, complaining of the offensive style I conveyed my wishes to you, so I make an apology so far—through ignorance of facts I did it. I was duly informed by respectable parties that Mr. Wilson and his party should receive every attention from you, both direct and indirect, and especial advice to what manner they should act to carry their purpose, and declaring the signatures were spurious, through Mr. Cowper, P. M., "and if we would not accede to their wishes we shall have no bridge in Tenterfield," being the very same language repeated by Mr. Wilson and his hired servants to me six months ago; also, as you directed Mr. Fitzpatrick to inform me by letter dated 23rd November, 1861, the site for a bridge in Manners-street being particularly recommended by the local surveyor, and £500 being placed on the Additional Estimates for 1862, and then to countermand it by declaring the proposed site for a bridge was not especially to be in Manners-street but Molesworth-street, without showing me why you altered it; also, retarding the production of papers, correspondence, &c., since June 20th (what our Hon. Member, Mr. Gordon, asked for). It annoyed me to a degree that "I suited action to the word" by writing you that letter; but still further, Mr. Wilson, when in Sydney, called on you, and you showed him the petition sent down from Tenterfield, and he pointed out several false signatures, of which I heard him say to three men in the room of Mr. Baker's Royal Hotel—he saw their names attached to the "Manners-street petition." They then said it was done by their especial permission; and I will defy him or any person to say that any person's name is attached to it without their consent, and we four persons are responsible for them. I should say, send them both to Tenterfield to investigate, and leave it to arbitration; and since I am creditably informed that you advised parties in Molesworth-street, "to avoid disputes, if they raise by subscription a certain amount of money, the Government will aid them to build it," I should say, why not offer the like terms to Manners-street, and I am sure we shall have two bridges instead of one,—add double the amount that can be collected, and the people will be satisfied.

I have, &c.,

JOSEPH JAMES.

[Enclosure in No. 21.]

NAMES of all the Landholders owning property in Molesworth-street, shewing the extent of each, and which site they are in favour of.

| Names of all Owners of Land fronting Molesworth-street. | Persons in favour of having the Bridge in Manners-street. | Persons in favour of having the Bridge in Molesworth-street. | Persons opinion not ascertained. |

BRIDGE AT BOMBALA.

No. 1.

C. M. BADDELEY, ESQ., to D. EGAN, ESQ., M.P.

Bombala, 10 April, 1858.

MY DEAR SIR,

Enclosed I beg leave to forward you a Petition to the Executive Council, praying for the erection of a Bridge over the River that divides this town. You will find there are somewhere about 120 signatures, comprising the whole of the inhabitants of the town and vicinity, excepting Kisterton and Flavelle. Will you be so good as to forward it to the proper quarter, and further oblige us by supporting, to the utmost of your ability, the prayer of the said Petition?

I have, &c.,
C. M. BADDELEY.

[Enclosure in No. 1.]

Bombala, 10 April, 1858.

To the Honorable the Executive Council, &c., &c., of New South Wales, &c., &c., &c.

The Petition of the undersigned residents in the Township of Bombala and its vicinity,—
Humbly Sheweth:—

That the said Township of Bombala is (as your Petitioners are of opinion) injudiciously measured out on the two sides of a river which intersects the said township, dividing one side thereof from the other.

That no bridge being erected across the said river, all communication on the part of the inhabitants residing on the one side with that resident on the other is at times totally suspended, and during the winter time more especially for a continuous period, when, after heavy rains, the river is utterly impassable for either man or beast.

The Church of England place of worship and the Roman Catholic place of worship are erected on opposite sides of the river, and during the prevalence of floods, those of the inhabitants residing on the opposite side of the river to that on which their respective places of worship are erected, are deprived of the blessing of joining their fellow beings in public worship.

There is but one medical practitioner residing in the township, who, in such cases and at such periods as those alluded to, would be unable to give the necessary relief and assistance in cases of sickness, however urgent, should it unfortunately happen that the suffering person requiring such aid were on the opposite side of the river to that on which the said practitioner was living at the time being, and death might in any case ensue ere the flooded river were sufficiently fallen to be passable by the practitioner in question.

That there is one school only in the township, and in many cases the children of your Petitioners resident on the opposite side to that on which this school is held are, during a great portion of the winter, prevented from sending their children to said school.

That in cases of crime or outrage, the Police Station being on the one side, the assistance of the constabulary could not in any such cases be obtained in sufficient time to insure the speedy apprehension of the offending parties, thus in a manner almost encouraging others to commit offences; and more generally, your Petitioners feel justified in asserting that an efficient system of police protection cannot, for such reasons and at such times, be carried out, as the police could not cross and recross the river without great risk of life. That the administration of public justice is frequently interrupted through the inability of the witnesses and others, when resident on the opposite side, to cross to the side of the river on which the Court House stands.

That similar inconvenience is experienced in reference to the Post Office, many of your Petitioners having been for days together without their letters, not being able to communicate with such Post Office, for want of some suitable means of crossing the river; and that generally, your Petitioners most positively affirm, that from past experience they know it to be the case, that the want of a Bridge across the Bombala River, and the consequent suspension alluded to of intercourse between the one portion of the inhabitants of the township with the other is, and has been for some time past, in the highest degree detrimental to the commercial interest, moral advancement, and general comfort of such inhabitants.

And, under such circumstances, your Petitioners hope that you will, without loss of time, instruct Mr. James Henry Thomas, now stationed at Eden, to draw out such plans, estimates, and suggestions as may be necessary for the guidance of the Government in reference to the erection of a suitable Bridge across the Bombala River; and that, in accordance with that gentleman's estimate, you forthwith cause a sufficient sum of money to be placed on the Estimates, shortly to be brought before the Legislative Assembly, to be expended in the erection of a Bridge, the absence whereof is and has been so much felt by your Petitioners and their respective families.

In conclusion, we beg leave most respectfully to remind your Honorable Council that the Town of Bombala in the year 1857 contributed no less a sum than £1,911 14s. 3d. to the general revenue of the Colony; we therefore trust that, in considering the matter of this Petition, the above-mentioned fact will be borne in mind, and induce your Honorable Council to grant the prayer thereof.

And your Petitioners, in duty bound, will ever pray.

[Here follow 6 Signatures.]

No. 2.

MEMORANDUM OF SECRETARY FOR LANDS AND PUBLIC WORKS.

Mr. Thomas may perhaps be asked to report, but without pledging the Government to the construction of the proposed bridge.

It does not appear from this Petition why the communication cannot be kept up, as in places of much greater importance, by means of a punt or ferry boat.

JOHN R.

20 April, 1858.

Captain Martindale may be requested to instruct Mr. Thomas to report accordingly.

Blank Cover,
23 April, 1858.

M.A.

No. 3.

UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to D. EGAN, ESQ., M.P.

*Department of Lands and Public Works,
Sydney, 23 April, 1858.*

SIR,

With reference to the Petition presented by you on the 16th instant, from certain of the residents in the township of Bombala and its vicinity, representing the necessity for the erection of a bridge over the river in that township, I am directed by the Secretary for Lands and Public Works to inform you, that in accordance with the suggestion of the petitioners, Mr. Thomas, who is at present superintending the repair of the road from Eden to Bombala, will be instructed to report on the proposed bridge.

I have, &c.,

MICHL. FITZPATRICK.

No. 4.

SECRETARY TO RAILWAY DEPARTMENT to MR. THOMAS, C.E.

*Railway Department,
Sydney, 10 May, 1858.*

SIR,

I am directed by the Chief Commissioner to enclose herewith, for your report, a Petition from the Inhabitants of Bombala, respecting the erection of a bridge across the river, with the minute, blank cover, of the Honorable the Secretary for Lands and Works thereon, and I am at the same time to inquire why a communication cannot be kept up across the river without a bridge.

I have, &c.,

JOHN RAE,
Secretary.

No. 5.

COMMISSIONER FOR RAILWAYS to SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Department,
Sydney, 30 June, 1858.*

SIR,

In reference to your minute, blank cover, of 23rd April last (herewith returned), directing me to instruct Mr. Thomas to report on a Petition from the inhabitants of Bombala, respecting the erection of a bridge across the river at that place, I have the honor to enclose, for your information, a copy of Mr. Thomas' letter of the 31st ultimo, and a plan of the Town of Bombala.

I have, &c.,

B. H. MARTINDALE.

[Enclosure in No. 5.]

*Eden, Twofold Bay,
31 May, 1858.*

Sir,

I do myself the honor to acknowledge the receipt of your letter of the 10th instant, No. 58/782, enclosing, for my report, a Petition from the inhabitants of Bombala, respecting the erection of a bridge, and inquiring why a communication cannot be kept up across the river by means of a ferry boat.

2nd. There is nothing to prevent the employing of a punt as a means of communication, as far as the river itself is concerned, as the floods do not cause a great rush of water, but merely a gradual rising of the river.

3rd. It will be seen by the enclosed plan of Bombala² that it differs somewhat from other places ^{*Vide Appendix.} where a punt is employed, as in this case, the river divides the town into two portions; and as about an equal number of the inhabitants are located on either side, a much greater inconvenience is caused than would be the case if the river merely intersected a road outside the town, and which would only have to be crossed occasionally.

4th. A bridge for foot passengers and horses could be erected for the sum of £400; and one capable of accommodating drays and carts would not cost less than £1,000. I return herewith the Petition referred to.

I have, &c.,

JAS. H. THOMAS.

The Chief Commissioner,
Railway Department,
Sydney.

UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to D. EGAN, ESQ., M.P.

*Department of Lands and Public Works,
Sydney, 19 July, 1858.*

SIR,

With reference to my letter of the 23rd April last, respecting the Petition presented by you from certain residents of Bombala and its vicinity, praying for the erection of a bridge over the river which divides that township, I am directed by the Honorable the Secretary for Lands and Public Works to inform you, that the Government are not at present prepared to incur the expense, viz., (£1,000) One thousand pounds, which would be involved in the erection of a bridge at that place.

I have, &c.,
MICHL. FITZPATRICK.

No. 7.

MEMORIAL.

*Bombala, Maneroo,
November, 1859.*

To the Honorable the Minister for Lands and Public Works, &c., &c.

The Memorial of the undersigned Inhabitants of the District and Township of Bombala,—
HUMBLY SHEWETH:—

That the prayer of your Memorialists, dated March [April?], 1858, applying that a sum of money might be placed upon the Estimates, to be expended in the erection of a Bridge across the Bombala River, may be again taken into consideration by Her Majesty's Government, in framing the Estimates for the ensuing year. Your Memorialists feel that any recapitulation of the cause upon which such application is grounded to be unnecessary, and would simply refer you to such said Memorial.

Your Memorialists are humbly of opinion, and have reason to believe, from information received, that the requirements were in a great measure understood by the Government, inasmuch as their application was for a sufficient sum of money to erect a bridge across the said river, which would facilitate the passage of man and horse across the same, leaving the construction of a bridge of larger dimensions, suitable for dray traffic, as a matter of future consideration.

Your Memorialists feel that they have a right to assume that their requirement could, if rightly understood, be complied with at a comparatively small outlay on the part of the Government, and therefore pray that the whole matter of their Petition may again be taken into consideration. And your Memorialists, as in duty bound, will ever pray.

[Here follow 202 Signatures.]

No. 8.

MEMO. OF SECRETARY FOR LANDS.

SEEING that a bridge estimated to cost £1,000 is what the memorialists want, and that the Government never contemplated an expenditure of more than £400, I presume nothing farther need be done in the matter at present.

J. B.
3 March, 1860.

No. 9.

S. H. SOLOMON, ESQ., to A. HAMILTON, ESQ., M.P.

Bombala, 29 February, 1860.

DEAR SIR,

Your kind favour of the 17th February came duly to hand; and, in reply, we beg to inform you, that during the recent floods here two more lives have been lost by drowning in the Bombala River; one of whom was the Twofold Bay postman, and the other person only lately come to reside in the district; lost their lives in endeavouring to cross the river. So you will see at a glance the immediate necessity of erecting a bridge, without loss of time, over our river; more particularly as the winter is approaching, when floods will most probably be very frequent. We would also beg to call your attention to the very weak state of the Police Force here, only three ordinary constables to assist the Chief Constable, which we suggest should be increased by two more constables at least, in consequence of the great rush of people passing daily through the district on their route to the Snowy River, or Gibson's Plains Gold Fields, and there is no doubt but depredations will be of frequent occurrence

BRIDGE AT BOMBALA.

5

occurrence by disappointed diggers returning back penniless and starving; so that to preserve the peace of the district, we think the Police Force ought to be strengthened forthwith; for what use would three or four men be in an outbreak with so many hundreds of desperate characters?

Hoping to have the pleasure of soon hearing from you, with kind regards to Mrs. Hamilton and self,—

S. H. SOLOMON.

No. 10.

MINUTES OF SECRETARY FOR LANDS.

*Bombala River,
Maneroo District.*

MR. Hamilton, M.P., states that this river runs through the town of Bombala, and that a bridge is much wanted, to preserve life. Ascertain from Acting Surveyor General the nature of the claims of this place,

JOHN R.
12 March, 1860.

INFORM that the bridge would cost one thousand pounds, and that the present state of the Revenue does not warrant the Government in placing the amount on the Estimates at the present time.

JOHN R.
28 March, 1860.

No. 11.

UNDER SECRETARY FOR LANDS to A. HAMILTON, ESQ., M.P.

*Department of Lands,
Sydney, 30 May, 1860.*

SIR,

With reference to the Petition of certain inhabitants of the Maneroo District for the erection of a bridge over the Bombala River, and the representation made by you as to the necessity of the same, I am directed to inform you that, as the cost of the proposed bridge has been estimated at £1,000, the Secretary for Lands does not consider that the present state of the Revenue would warrant the Government in placing the amount on the Estimates for that purpose.

I have, &c.,
MICHL. FITZPATRICK.

No. 12.

MEMORIAL.

To the Honorable the Minister for Works, &c., &c., Sydney.

The Memorial of the undersigned Inhabitants of the Town and District of Bombala,—
HUMBLY SHEWETH:—

That the Township of Bombala is intersected by a river known as the Bombala River, which divides the one portion of the said township from the other.

That the absence of any permanent bridge across the said river, which at seasons is totally impassable, has retarded the advancement, hindered the prosperity, and prejudiced the welfare and comfort of your Memorialists as inhabitants of the said township.

Your Memorialists respectfully draw your attention to the fact, that while there is one principal school on the one side of the said river, many of your Memorialists' families live upon the other side. The same argument applies to the Church of England, known as St. Matthias' Church.

In the matter of postal arrangement, many of your Memorialists (the river being impassable and unbridged) have been delayed, for days, the delivery of their letters. Deaths have occurred through the absence of some safe secure bridge, by persons attempting to cross at night.

Your Memorialists feeling that the erection of a structure such as that applied for would entail but a trifling expense on the Government, and feeling moreover conscious that the result of recent scientific research justifies the anticipation that this important district is rich in hitherto undeveloped mineral resources, and destined to occupy a most prominent position in the annals of the Colony,—humbly, briefly, but most earnestly pray that Her Majesty's Government will cause such steps to be taken as will comply with the prayer of their petition, in causing the very urgently needed structure to be erected with the least possible delay.

[Here follow 39 Signatures.]

Forwarded under B.C. to Minister for Lands.—W. M. A.—25 Jan., 1861.

Referred to the Acting Surveyor General, to ascertain the amount of traffic over the river generally.—B.C., 11 Feb., 1861.—JOHN R.

No. 13.

SURVEYOR GENERAL to MR. SURVEYOR GORDON.

Sydney, 27 February, 1861.

SIR,

I have the honor to enclose, for your perusal, the copy of a Memorial which has been received from certain inhabitants of Bombala, requesting that a bridge may be erected across the Bombala River at that place; and I request that, in reporting thereon generally, you will favour me with your opinion as to the necessity of a bridge, and the probable cost.

I have, &c.,
A. G. M'LEAN.

No. 14.

UNDER SECRETARY FOR WORKS to UNDER SECRETARY FOR LANDS.

*Department of Public Works,
Sydney, 7 May, 1861.*

SIR,

In reference to my B. C. of the 25th January, forwarding a Memorial from the inhabitants of Bombala, praying for a bridge over the river at that place, I am now directed to enclose herewith an extract from a letter received from Mr. Thomas Garrett, bearing on this subject.

I have, &c.,
JOHN RAE.

[Enclosure in No. 14.]

Extract alluded to.

"Would you also kindly inform me, whether anything further has been done in your department relative to the erection of a bridge over the Bombala River at the Township of Bombala, in reference to which I presented a Petition or Memorial to you in February last, and which Memorial was, I think, referred to the Lands Department, to have action taken on it by the Survey Office?"

No. 15.

ACTING SURVEYOR GENERAL to MR. SURVEYOR GORDON.

22 May, 1861.

SIR,

I have to call your attention to my letter of the 27th February last, requesting your report and opinion as to the necessity for a bridge across the Bombala River, and to say that I shall be glad to receive your report at your very earliest convenience.

I have, &c.,
A. G. M'LEAN,
A.S.G.

No. 16.

REPORT OF MR. SURVEYOR GORDON.

Bombala, 19 June, 1861.

SIR,

In attention to your letters of the 27th February last and 22nd May last, requiring my report as to the necessity for a bridge in this town, and the probable cost thereof, I have the honor to report that, having made minute inspection of the surrounding locality, I find there are four contiguous fords in connection with the town, access to and approach over which are by nature good, and waters shallow, and presenting slight inclines or slopes in regard to steepness, and, except in periods of excessive floods, readily accessible and fordable; on such occasions, however, the fall of the water recedes very rapidly. One of these falls has, within the last few months, been much improved, at considerable public pecuniary outlay, and thus rendered more effectually desirable and available, and both are now in good condition, while that at the termination of Mahratta and Young streets proves a very superior one, shallow, and equivalent for all ordinary usage. I, of consequence, deem such sufficient and adequate for existing public requirements of teamsters and travellers, and public community generally.

The

The object sought for by Petitioners appears rather, however, for one of an exclusively local benefit to the town interests, than for special welfare to accrue from it to the public—a thoroughfare by means of a foot bridge for pedestrians being the desiderata sought for, to secure certain and uninterrupted intercourse and communication during highest river rises—one numerous share of the inhabitants residing on either side, and the Court House, Post Office, &c., &c., being situate as well on opposite shores during ordinary river height. The existing causeway at sect. 19, erected by means of subscription, effectually serves all purposes of such desired convenience; it is however but of a frail temporary nature, built of slender material, and, but for its submergement in common floods, it could not for any time withstand the force of the strong current thereabouts; on such occasions of rise, entire stoppage of intercourse of necessity occurs; notwithstanding I consider it but reasonable, should such a structure be entertained as desirable, and as urgently required, that the greater moiety of expense should be shared by the town residents, as representing the body most interested and concerned, and who would mainly derive benefit therefrom.

In respect to position, the north termination of Forbes-street appears to be the best adapted, by reason of central position, as a favourable and eligible site, which, at a distance of but a few yards from the river edge, proves of such favourable elevation as had never known to have been flooded; the sub-strata appears also hard and desirable for foundation purposes; the ground on the north bank is somewhat lower, of a more loose and sandy character of soil, and approach from Atkinson and Mahratta streets would require a few feet of raising of earthwork to bring such to corresponding level. No other spots up or down the river course within the town appear to present such advantages or facilities, the banks of which hereabouts remain firm, solid, and unencroached upon from flood effects, while in several other adjacent spots considerable encroachments have and do continually occur, thus liable to endanger frequent damage to and imperil the destruction of any bridge structure. In rough estimates, I deem that a suitable timber bridge for wheels, &c., might be erected at a cost from £1,500 to £1,800; that for a suitable substantial structure for pedestrians alone, for £400 to £500; at the spot indicated as eligible the river width is about 60 yards, and depth of water about 18 to 20 feet; the length of structure with span for lofty elevation from each of its extremes, and extending across from each embankment beyond reach of highest flood, would average about 125 yards, inclusive of the required raising, and the requisite height from present water level would prove about 25 feet.

I beg to add, that on occurrences of known floods during average of past seven years, I ascertain by reliable information, that no more than three successive days have ever elapsed, as that total interception or cessation of intercourse between both sides has been thereby caused or discommoded, and to observe that, viewing all circumstances, I do not entertain opinion that the wants of the public community generally are in need of the bridge communication herein sought for, now that the importance of existing thoroughfare or passing internal traffic (now but insignificant) through the town of Bombala are adequate to the demand for, or as would reasonably justify or either warrant an outlay of public funds on the object sought for, particularly because the advantages to be accrued would result in all probability to the town people alone, or otherwise prove of but little or no avail to the public in general.

I have, &c.,

LEWIS GORDON.

No. 17.

REPORT OF ACTING SURVEYOR GENERAL.

THE main features of Mr. District Surveyor Gordon's report are: 1, That there are several excellent crossing places over the Bombala River, within the town; 2, That there is no larger traffic through the town; and 3, That the erection of a bridge must be looked on as a matter of convenience to the townspeople, and of little importance to the general public; and this is indeed implied by the Petition, that in the last seven years the interruption to traffic, which is unfrequent, has never lasted for more than three consecutive days; 4, That a permanent bridge for vehicles would probably cost from £1,500 to £1,800, while a bridge for foot passengers only might be erected above the reach of all floods, for £400 to £500. Mr. Gordon considers that a foot bridge would meet the requirements of the inhabitants of Bombala, and considers that they should bear a larger proportion of the cost, as being the only section of the community interested. In Cooma and other places, local requirements have been met by the provisions by Government of an equal sum to that subscribed, and I would recommend, that on the Bombala residents subscribing a moiety of what may be shown to be sufficient to erect a foot bridge beyond the reach of floods, an equal amount should be placed on the Estimates.

A. G. M.

6 July, 1861.

No. 18.

UNDER SECRETARY FOR LANDS to T. GARRETT, Esq., M.P.

*Department of Lands,
Sydney, 31 July, 1861.*

SIR,

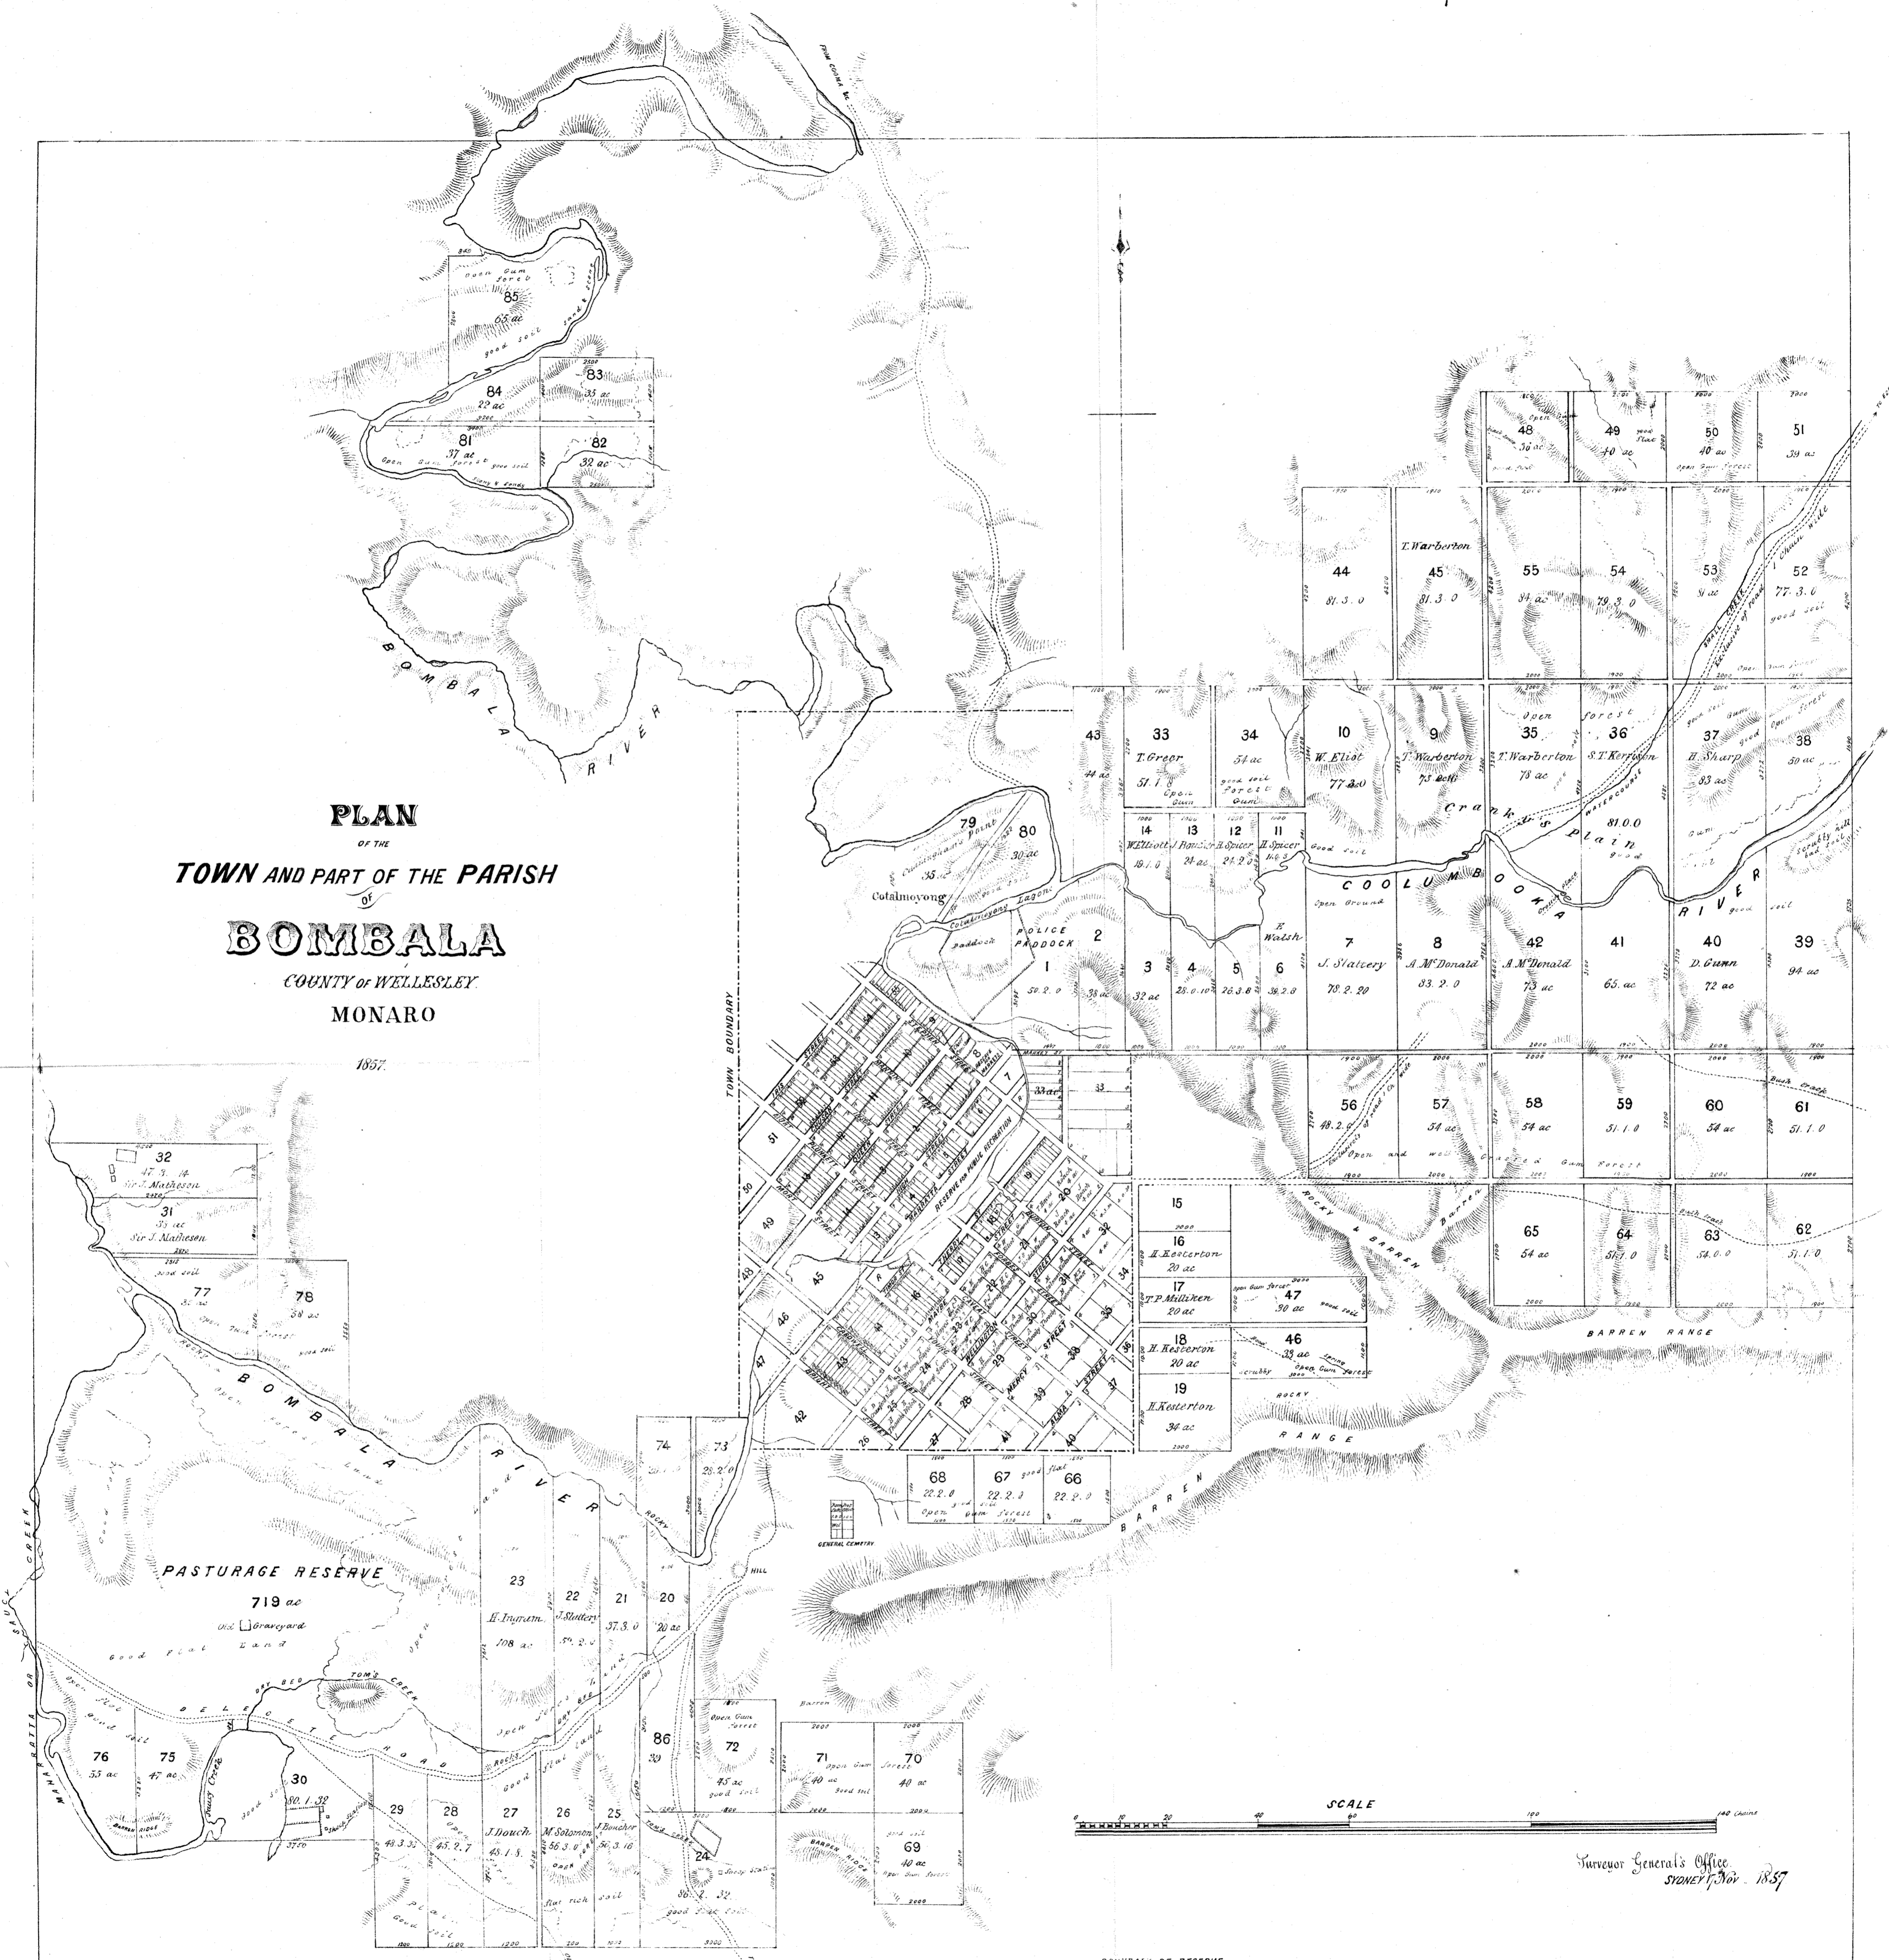

Referring to the Petition presented by you in January last, from certain inhabitants of Bombala, praying for the erection of a bridge over the Bombala River at that place, I am directed to inform you, that after due inquiry on the subject, it appears to the Secretary for Lands that there is no large traffic over the river at Bombala, and that within the last seven years the interruption to the traffic has never lasted more than three consecutive days. Moreover, that a bridge for vehicles would probably cost from £1,500 to £1,800, while a bridge for foot passengers, which would, it is considered, meet the requirements of the inhabitants, might be erected above the reach of all floods for £400 or £500.

Under the circumstances, I have to state, that Mr. Secretary Robertson, upon the inhabitants of Bombala—the only section of the community interested—subscribing a moiety of what may be shown to be sufficient to erect a foot bridge beyond the reach of floods, will be prepared to place an equal sum upon the Estimates for the purpose.

I have, &c.,
MICHL. FITZPATRICK.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PROPOSED BRIDGE OVER THE NAMOI RIVER.
(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 12 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The Petition of the Residents of the Namoi River,—

HUMBLY SHEWETH:—

That your Petitioners having heard with regret that it is the intention of the Government to place the proposed Bridge over the Namoi River at Terriara, instead of Broadwater, as originally intended, they would most respectfully bring the following under your notice, that if the Bridge is built at Terriara, at the time it should be most useful (*viz.*, flood time) it would be useless, from the flooded state of the approaches; and to make such approaches available at such times would cost nearly as much as the erection of the Bridge, whereas at Broadwater it would be accessible at all times.

Your Petitioners therefore pray that your Honorable House will take the matter into your consideration, and urge on the Government the necessity of instituting inquiries into the subject, when they humbly hope they may be induced to comply with prayer of this Petition.

And your Petitioners will, as in duty, ever pray.

PROPOSED BRIDGE OVER THE RIVER PATERSON,
AT DUNMORE.
(DISTRICT OF PATERSON AND ALLYN RIVERS.)

*Received by the Legislative Assembly, 15 October, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Landowners and others interested in the District
of Paterson and Allyn Rivers,—

HUMBLY SHEWETH:—

That your Petitioners have heard with surprise that it is the intention of the
Government to propose to your Honorable House, during the present Session of Parliament,
an estimate for the erection of a bridge over the River Paterson, at or near Dunmore.

That having regard to the claims of other and more important localities than the one
in question, it would be an inequitable appropriation of the Public Revenue the sanction of
the said estimate.

That a Bridge at Dunmore would be of service only to parties residing or having
property adjacent thereto.

That the traffic at that place is inconsiderable.

That there is no Town on the eastern side of the River, to the inhabitants of which
such Bridge or structure would be of much utility.

That the River is navigable by vessels of forty tons burthen to the Town of Paterson,
some twelve or fourteen miles further than Dunmore from the sea, which navigation your
Petitioners apprehend would be much impeded by any Bridge so constructed.

That your Petitioners are unanimous in their opinion, that the quantity of timber
and other *debris* floating down the River would collect and form an obstruction to the
navigation.

Your Petitioners for the above reasons, therefore, most humbly pray your Honorable
House to refuse its assent to the said estimate.

And your Petitioners, as in duty bound, will ever pray.

Paterson, September, 1862.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PROPOSED BRIDGE OVER THE RIVER PATERSON
AT DUNMORE.
(DUNGOG.)

*Received by the Legislative Assembly, 28 November, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Residents of Dungog and the adjacent District,—

HUMBLY SHEWETH :—

That a regard for the interests of the community at large, and a keen perception of the wants of this District in particular, impel your Petitioners earnestly to beg of your Honorable House to cancel a recent vote of £6,000 towards the erection of a bridge over the Paterson, at Dunmore.

That your Petitioners, although alive to the duty incumbent upon the Government to carry out public works conducive to the material interests of the community, are nevertheless convinced that the expenditure of such a sum, for such a purpose, would be a misappropriation of the public money, even if the public revenue were in excess of the public requirements.

That in the opinion of your Petitioners, such an expenditure under actual circumstances would be tantamount to reckless extravagance.

That the proposed bridge would subserve the interests of scarcely any save the few inhabitants in the immediate locality of Dunmore.

That a bridge in that locality is about the very last structure that could have been conceived of as a desideratum, by the inhabitants of this or any of the Districts to the eastward and northward of the Paterson.

That your Petitioners, as the best judges of their own interests, feel justified in making the assurance, that nought but unprincipled selfishness, or the well-meaning ignorance of strangers to the District, would attempt to persuade your Honorable House that the outlay of thousands of pounds upon a bridge at Dunmore, would either minister to their wants, or accord with their notions of justice.

That your Petitioners, therefore, humbly pray that your Honorable House will not sanction the erection of the said bridge. And your Petitioners, as in duty bound, will ever pray.

[Here follow 128 Signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PROPOSED BRIDGE OVER THE RIVER PATERSON
AT DUNMORE.

(DISTRICTS OF THE PATERSON, THE WILLIAMS, &c.)

*Received by the Legislative Assembly, 5 December, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Landowners and others interested in the Electoral
Districts of the Paterson, the Williams, the Hunter, &c., &c., &c.,—

SHEWETH:—

1st. That your Petitioners have observed with much pleasure that a sum of £6,000 has been passed by your Honorable House, during the present Session of Parliament, for the erection of a bridge over the Paterson River at Dunmore, in the vicinity of the mill, which your Petitioners regard as a most suitable and convenient spot.

2nd. That your Petitioners feel grateful that the claims of the several important localities which will be connected by such a certain means of communication, have obtained consideration from your Honorable House, and that a sum has been passed to promote so general a benefit to the inhabitants of the surrounding districts.

3rd. That the traffic at present is far from inconsiderable, although the difficult approaches to the punt render it a most inconvenient means of crossing the river, but that great accommodation will be afforded by the erection of a bridge, and consequent increase of traffic follow.

4th. That the erection of such a structure, as a means of communication, would not only be of great service to the inhabitants of the districts of Paterson, Maitland, Morpeth, Dunmore, &c., but also to the towns on the eastern side of the river, viz. :—Seaham, Clarence Town, Brookfield, Dungog, Stroud, Gloucester, Manning River, Port Macquarie, Hastings River, Macleay River, and, in fact, connect the port of Newcastle with the New England line of road.

5th. That your Petitioners learn with satisfaction that the proposed bridge will not interfere with the navigation of the river, as they gather from the report of the Engineer-in-Chief that it will be of such a construction as to admit of vessels passing up or down at any time.

6th. That your Petitioners humbly express the opinion that no more suitable expenditure of public money can be made than on works which have the effect of opening up means of certain communication between producing and manufacturing districts separated by natural obstacles, and therefore pray that your Honorable House will take the premises into your favourable consideration.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 1,150 Signatures.]

PUBLIC FERRY AT MORPETH.

(PETITION FROM INHABITANTS, PHOENIX PARK.)

Received by the Legislative Assembly, 2 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and Members of Legislative Assembly of New South Wales,
in Council assembled.

The humble Petition of the undersigned Inhabitants of the District of Phoenix
Park, near Morpeth, and its District, in the Colony of New South Wales,—

MOST RESPECTFULLY SHEWETH:—

That in the District of Phoenix Park your Petitioners have not the benefit of
a National School, and there is none nearer than Morpeth, to which your Petitioners have
no other access than by means of the public ferry at Morpeth.

That the toll your Petitioners have to pay exceeds the amount charged for school fees,
and is a heavy tax on your Petitioners, and precludes some of them from giving their
children the means of education, although so near at hand.

Your Petitioners, therefore, humbly pray that your Honorable House will take the
premises into your consideration, and to grant to your Petitioners such relief as to your
Honorable House may seem meet.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 84 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PROPOSED GOVERNMENT STEAM FERRY BETWEEN
SYDNEY AND THE NORTH SHORE.

(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 9 December, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Merchants and others, residents of the City of Sydney, and also of the undersigned Farmers, Market Gardeners, and others, residents of St. Leonard's, Lane Cove, Pennant Hills, and South and North Colah, on the northern shore of the Harbour of Port Jackson, within the Colony of New South Wales,—

RESPECTFULLY SHEWETH :—

That there are resident within the country localities above set forth upwards of four thousand individuals, the greater portion of whom are engaged in agricultural or other rural pursuits, and that the inhabitants of Sydney generally are deeply interested, and strongly impressed with the urgent necessity existing, that certain and regular means of access should be afforded to these persons for the transit of the produce of their labours (on which they mainly depend) from their stations to the Sydney Markets, or other portions of the city, for the disposal of the same.

That at the present time there are two steamboats plying between the North Shore and this city, by means of which alone the residents of the country districts above set forth can have their goods conveyed to the city.

That in consequence of the said steamboats being the properties of private individuals, they are frequently, and for days together, taken from the Ferry and employed elsewhere in the harbour, as tugs or otherwise, the consequence of which is that the market gardeners and others, residents of the North Shore, are for considerable periods deprived of the means of conveying to the city the produce or other goods which they have brought to the wharfs, greatly to the detriment of their produce, as well as subjecting this industrious class of persons to most serious loss of time and heavy expenses, caused by the (otherwise) unnecessary detention of themselves, their horses and carriages—and this detention also tending greatly to the injury of dealers and other citizens dependent upon such produce for the supplies of the citizens generally.

That Petitioners respectfully submit to your Honorable House, that if a regular Steam Ferry were established, regulated by stringent Government rules, and giving your Petitioners, as well as the general public, means of certain access to either shore of the harbour at all reasonable times, it would not only greatly benefit your Petitioners, residents of the North Shore, and the citizens generally, but would greatly enhance the value of Government and other lands in the localities hereinbefore enumerated.

That your Petitioners would finally submit, that were such a regular Ferry established, and subject to the control of Government, it would not only be a great boon to Petitioners, who are now deeply aggrieved by the want of the same, but would, by the leasing of such establishments, tend considerably to increase the public revenue.

Under the above circumstances, your Petitioners now most earnestly pray that your Honorable House will be pleased to take the serious grievance under which they labour into your most favourable consideration, and that you will afford them (your Petitioners) such speedy relief as to your Honorable House may seem meet.

And your Petitioners, as in duty bound, will ever pray.

STEAM CRANE AT NEWCASTLE.

No. 1.

SPECIFICATION of a Steam Crane for Shipping Coal at Newcastle.

THE work to be executed under this Contract will consist in supplying, erecting, and putting to work, on the Wharf at Newcastle, a good, substantial, and powerful Steam Crane, with boiler, and all proper appliances and fittings, suitable for the loading of coals on board ship.

The accompanying drawing and this specification describe, generally, the dimensions and kind of Crane required. The ordinary weight which the Crane will have to lift, will be about eight (8) tons; but the Crane will be required to be constructed of strength sufficient to be capable of lifting, with safety, a weight of not less than twelve (12) tons; and in order to prove that the Crane is competent to do the work required of it, and above described, the contractor will be held responsible for its safe working for a period of two months after it shall have been opened for *bonâ fide* use by the public.

A five horse-power high-pressure boiler, of approved construction, fitted with proper feed apparatus, and all the usual cocks and pipes, steam and others; blow-off pipes and cocks; steam and water gauges; and, in fact, all fittings and mountings usually required in such cases, shall be supplied and erected by the contractor, on some convenient part of the wharf adjoining the Crane.

The drawing exhibits the size and general arrangements of the Crane, as much in detail as it is considered necessary to shew them.

Minute details or particulars are not given, it being presumed that an intelligent contractor will understand all that will be required, and will estimate accordingly; it being distinctly understood that the work will be required, in all its parts, to be turned out in first-class style, and finished in every respect, both as regards material and workmanship, to the satisfaction of the Engineer-in-Chief for Harbours and Rivers, or whomsoever he may appoint to superintend the same.

The boiler is to be capable of being worked up to a pressure of fifty pounds to the square inch.

All bearings to be of brass or gun-metal, with proper lubricating apparatus.

Any slight modification which may be suggested by the contractor, the effect of which would be either to improve the work or diminish the cost, such as slightly altering dimensions to suit patterns, will, if approved of by the before-named Engineer, be allowed.

The amount stated in the contractor's tender will be considered as the full price of the Crane, complete, and set to work to the satisfaction of the Engineer; and no allowances whatever will be made for any alleged extras.

The contractor is to state in his tender the time within which he will be prepared to complete the Crane and put it to work, under a penalty of £3 3s. per day, for every day that the work remains unfinished after the time so specified.

Payments will be made in three instalments, on the certificate of the Engineer as to the value of the work performed; the first instalment to be paid when the castings are all made; the second instalment to become due when the Crane and its appliances have been erected on the Wharf at Newcastle; and the third and final instalment to be paid when delivery shall have been taken by the Government at the end of the period of maintenance by the contractor—two months, as before specified.

The cast iron centre frame of the Crane is shewn as fittings on a pile; this pile will be supplied, driven, fixed, and braced into the Wharf, and roughly trimmed up by the contractor for the Wharf; the cost, therefore, of this pile should not be included in the estimate of the contractor of the Crane; but, with the exception of this pile, all other matters or things connected with the Steam Crane, such as holding-down bolts, chains, slings, and all other things required to set the Crane to work, shall be furnished by the contractor for the Crane, and are to be considered as included in the amount specified in his tender.

E. O. MORIARTY.

No. 2.

NAPIER & Co. to ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.

Waterview Bay,
24 June, 1861.

MY DEAR SIR,

I was sorry that I missed you last week, but did not think you would be at Newcastle on Saturday. We lifted the empty truck and swung it round, then weighted it, so as to make about ten tons, and lifted it. On swinging it, however, the keys came out of the worm, loosened, no doubt, by the strain brought on it by the great speed of the swinging motion so suddenly stopped, as the weight kept surging from side to side for some time after. This will be prevented in future by two pins, which I have put in, but more especially when the speed is reduced, which it will be absolutely necessary to do before using the Crane much. Instead of reducing the speed of the wheel from equality to $\frac{1}{2}$, I am convinced that $\frac{1}{3}$ is quite fast enough, that being still further than the other Cranes. The pinion being thus reduced

reduced to about $6\frac{1}{2}$ inches diameter, would be better made of wrought iron or brass. At the same time it would be a great improvement to have a conical friction clutch to throw the pinion in and out of gear; it would be so much easier to accomplish the operation, and the engine not requiring to be altered in speed. Perhaps the frictional grooved gearing might be adopted, when no clutch would be required; it would only require the worm shaft to have a slight sliding motion in one bearing. I would also strongly recommend a small fly-wheel on the crank shaft, to enable the engines to go more regularly and avoid surging the weight, and also to enable the engines to go slower when throwing on the clutches. There was considerably more spring in the column than I anticipated, but I think that arose from the iron-bark post springing below the deck, which could be avoided by putting brackets as represented; this would entirely prevent any spring in the post below the deck, or on the platform itself, and reduce the deflection at the top of the column to one-half, therefore giving twice as much of the stiffness of the wood to the column. No doubt the shrinking of the wood, and compression from the strain, augmented the deflection, as we took a whole turn of the nuts of the holding-down bolts after the strain was off.

I did not think of it till after leaving, that measurements can easily be taken when the weight is on, to shew where and how much the spring is. And if the steam is not up—the steam can be put on in a few minutes by making fast the chain and heaving on the barrel-wheel with a block and tackle—half a ton on the circumference will put twelve tons on the end of the jib.

As I cannot conveniently get to-night to Newcastle, I have asked my brother to go, who will do equally well.

I am, &c.,
FRANCIS NAPIER.

No. 3.

ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS to NAPIER & Co.

*Department of Public Works,
Harbour and River Branch,
Sydney, 3 July, 1861.*

DEAR SIR,

Will you oblige me by stating what will be the cost of the additional work proposed to be executed on the Steam Crane, namely—

Holding-down bolts and cramps,
Fly-wheel on crank shaft,
3 to 1 wheel and pinion on slewing gear.

Truly yours,
E. O. MORIARTY.

No. 4.

NAPIER & Co. to ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.

Balmain, 4 July, 1861.

DEAR SIR,

In reply to your communication of yesterday's date, I beg to state that the cost of the holding-down bolts and cramps will be twenty-one pounds ten shillings (£21 10s.); the fly-wheel on crank shaft six pounds ten shillings (£6 10s.); the 3 to 1 wheel and pinion twenty-four pounds.

Yours truly,
FRANCIS NAPIER.

No. 5.

ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS to NAPIER AND Co.

*Department of Public Works,
Harbour and River Branch,
Sydney, 5 July, 1861.*

DEAR SIR,

I am directed by Mr. Moriarty to inform you that he accepts your offer for the supply of the holding-down bolts for the sum of £21 10s.; for the fly-wheel on crank shaft, £6 10s.; and for the 3 to 1 wheel and pinion, £24.

I remain, &c.,
EDW. BERTHON.

No. 6.

ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS to NAPIER AND CO.

*Department of Public Works,
Harbour and River Branch,
Sydney, 6 September, 1861.*

SIR,

I have received a letter from Mr. J. McKeachie, Clerk of Works at Newcastle, complaining of the dilatory manner in which you are proceeding with the erection of the Steam Crane, I have therefore to request that you will be so good as to use more expedition in this matter, by employing, if necessary, more men to execute the work.

I have, &c.,
For E. O. MORIARTY,
Engineer-in-Chief for Harbours and Rivers,
EDW. BERTHON.

No. 7.

ROUNTREE & CO. to ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.

*Morr's Dry Dock,
18 December, 1861.*

SIR,

I have the honor to inform you that the Steam Crane erected at Newcastle for the Government, is now ready for service. On Friday last it was tested by lifting a Wallsend wagon and coals, which worked successfully, and ten tons was suspended from the end of jib the whole of the following day, and reported on Monday as satisfactory.—Beg to hand over the Crane to Government as complete.

We are, &c.,
ROUNTREE & CO.

No. 8.

NAPIER & CO. to ENGINEER-IN-CHIEF FOR HARBOURS AND RIVERS.

Sydney, 4 January, 1862.

SIR,

We have the honor to inform you that the Steam Crane, which we have erected at Newcastle, was this day proved to its proof strain of twelve tons, that weight having been lifted and swung half round and lowered several times, everything working satisfactorily.

We have, &c.,
FRANCIS NAPIER & CO.

No. 9.

NAPIER & CO. to SECRETARY FOR PUBLIC WORKS.

Balmain, 2 April, 1862.

SIR,

Mr. Moriarty informs us, that in the case of the Crane erected by us at Newcastle, it is your intention to inflict the full penalty of £3 8s. per day for the time elapsed from the 19th April, the day on which the Crane was to have been completed, till the 11th June, when it was tried.

As this decision would bear exceedingly hard upon us, the delay having taken place from circumstances over which we had no control, we beg that you will reconsider the matter, and would direct your attention to the following facts:—According to specification the centre pile was to have been driven and foundation prepared by the Government all ready to receive the Crane; but instead of this, when we sent up the Crane to Newcastle with men to erect it, the foundation was not ready for them for more than a week afterwards, our men having had to wait all that time idle, to our great loss. By the time the piles and foundation were ready for us, wet and boisterous weather set in, rendering it impossible to work at fixing the foundation of the iron-work, thereby causing another considerable delay and loss of money.

It is not usual to enforce penalties unless in flagrant breaches of contract; but when the cause of delay was unavoidable on our part, it would be very hard that we should be the sufferers, especially when it is known that we have lost very considerably from the alterations required in the original design, in order to enable the Crane to work satisfactorily. Under these circumstances we again beg that you would mitigate the penalties, and

Have, &c.,
FRANCIS NAPIER & CO.

No. 10.

No. 10.

UNDER SECRETARY FOR PUBLIC WORKS to NAPIER & Co.

*Department of Public Works,
Sydney, 12 May, 1862.*

GENTLEMEN,

With reference to your letter of the 2nd ultimo, requesting that the penalties incurred by you for non-completion, within the contract time, of the Government Steam Crane at Newcastle—viz., £3 3s. a day from the 19th April to the 11th June last—may be mitigated, I am directed to inform you, that the Secretary for Public Works, after consultation with the Engineer-in-Chief for Harbours and Rivers, finds that you could, in the absence of unforeseen hindrances, have completed the Crane in question in ten or twelve days after its arrival at Newcastle, which was on or about the day named in the contract for its completion. Under these circumstances, and considering the difficulties alluded to in your communication, which you had to contend against in carrying out the work, Mr. Secretary Arnold is of opinion that the penalty may be reduced from £163 16s. to £31 10s., and Mr. Moriarty has been instructed to pay you the balance.

I have, &c.,
JOHN RAE.

No. 11.

DETAILED Statement of defects in Design and Construction of Steam Crane.

*Department of Public Works,
Harbour and River Branch,
Sydney, 18 January, 1862.*

SOME alterations were made in the Crane during its construction, such as altering the speed of slewing gear, introducing strengthening brackets with extra holding-down bolts, and the addition of a small fly-wheel to equalize the motion of the pistons, and in order to diminish the spring of the centre core or column the pile was sheathed with boiler plate.

The cost of repairs rests not with the Government, but with the contractor, who is bound to erect the Crane to the satisfaction of the Engineer for Harbours and Rivers; and although the above enumerated additions have been made to the original design, as their effect was to improve the permanent working of the Crane, I did not consider that the contractor was fairly bound to execute them at his own cost.

By the terms of the contract, the Crane was to have been completed by the 23rd April, 1861; it was not handed over to the Government until the 4th January, 1862.

[Price, 2d.]

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

INCORPORATION OF MUNICIPALITIES.
(DISTRICT OF KIAMA.)

Received by the Legislative Assembly, 23 July, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of certain Landholders, Landed Proprietors, Householders, and others, residents of the District of Kiama, County of Camden, in the Colony of New South Wales,—

SHEWETH :—

1st. That the Rural Districts of Jamberoo, Gerringong, Broughton Creek, and others, having been proclaimed a part of the Kiama Municipality, since which time (a period of about three years) the said Municipality have been acting as a corporate body, levying taxes and expending the same.

2nd. That the great bulk of the taxes have been raised in the Rural Districts, and expended in the Town, to the manifest disadvantage of the rate-payers in the Rural Districts.

3rd. That from the amount of the population of the Town, and their influence, we find that the Rural Districts have not been fairly represented in the Kiama Council.

4th. That your Petitioners, taking all the above matters into consideration, humbly pray that your Honorable House may not pass any Bill into law binding or compelling the incorporation of a Rural District with a Town or other Corporation ; and that the first clause of the Municipalities Act of 1858 (as interpreted by the Supreme Court) be left in its integrity.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 170 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC VEHICLES.
(PETITION OF MUNICIPAL COUNCIL OF PADDINGTON.)

Received by the Legislative Assembly, 8 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Municipal Council of Paddington,—

RESPECTFULLY SHEWETH :—

1. That the Municipality of Paddington was established under the Municipalities Act of 1858, by Proclamation dated the seventeenth day of April, one thousand eight hundred and sixty.
2. That by clause 72 of the said Act, your Petitioners are empowered to make By-laws, *inter alia*, for the "regulation and licensing of porters, public carriers, carters, water-drawers, and public vehicles."
3. That under the Hackney Carriage Act of 1847 (11 Vict., No. 21) the Corporate Authorities of the City of Sydney are authorized "to make and publish such By-laws as to them shall seem meet for licensing and regulating hackney carriages plying for hire "within the said City, and the owners and drivers thereof, and within the distance of eight "miles from the corporate limits of the said City."
4. That by reason of the Municipality of Paddington being within the said distance of eight miles from such Corporate limits, the authority of your Petitioners is wholly inoperative in respect to the control of public vehicles, the regulation thereof being confined to the Municipal Council of Sydney, by virtue of the said Hackney Carriage Act.
5. That in this and similar matters, your Petitioners are of opinion that the several Municipal Institutions should have exclusive jurisdiction within their own boundaries, and therefore pray that, in any Bill for consolidating the Laws relating to the City of Sydney, or for amending the Municipalities Act, your Honorable House may see fit to repeal all powers vested in the City of Sydney, in so far as the corresponding powers of Suburban Municipalities are thereby prejudiced.

Adopted by the Municipal Council of Paddington, this 29th day of July, one thousand eight hundred and sixty-two.

(L.S.) By order of the Council,
THOMAS ALSTON,
Chairman.

HY. GALE,
Council Clerk, &c.

1862.

NEW SOUTH WALES.

SEWERAGE AND WATER SUPPLY.

(FIFTH YEARLY REPORT OF MUNICIPAL COUNCIL.)

Presented to both Houses of Parliament by Command.

Town Clerk's Office,
Sydney, 19 March, 1862.

SIR,

I have the honor, by direction of the Right Worshipful the Mayor, to transmit herewith the Fifth Yearly Report of the Municipal Council of Sydney, of their Proceedings under the Sewerage and Water Acts, and beg that the same may be submitted to the Houses of Parliament in due course.

His Worship desires me to express his regret that so long a delay has occurred in forwarding this document, but a great pressure of other important business has prevented its preparation at an earlier date.

I have, &c.,
CHAS. H. WOOLCOTT,
Town Clerk.

THE UNDER SECRETARY,
Colonial Secretary's Department.

FIFTH YEARLY REPORT of the Municipal Council of the City of Sydney, of their Proceedings under the Sewerage and Water Acts.

THE Municipal Council of the City of Sydney have the honor to submit, in terms of the provisions of the 75th section of the Sydney Corporation Act of 1857, for the information of the Parliament of New South Wales, the following Report of their Proceedings and Statements of the Receipts and Expenditure under the Sewerage Act, 17 Victoria, No. 34, and Water Act, 17 Victoria, No. 35, to the 31st December, 1861.

SEWERAGE.

There have not been any works executed during the past year in the extension of the City Sewerage. The number of subsidiary drains at present connected with the sewers is 862.

The whole of the new sewers are in perfect order, and have been found in every respect to answer the purpose for which they are intended.

WATER.

It affords the Municipal Council much gratification to be enabled to state that the engines, mains, and all the machinery connected with the Sydney Water Works, have continued in successful operation for ten months by day, and for the last two months of the year by day and by night (Sundays excepted), beyond the starting of two leaden joints in the 30-inch main, which was discovered in the month of January, 1861, and rectified without obstruction to the supply of the City.

During the year 1861 the single engine made 862,205 revolutions, and the coupled engines each 922,730, as indicated by the counters attached to each engine. The total quantity of water sent into Sydney from Botany during the year 1861, by the engines, was 384,000,000 gallons.

By the contract entered into by Mr. P. N. Russell, on the 17th April, 1860, he was to deliver to the Municipal Council, before the month of April, 1861, cast-iron pipes to the value of £10,000, and before the 1st January, 1862, a further quantity of £10,000.

The value of the pipes delivered by Mr. Russell to the 1st April, 1861, was £7,154 4s. 11d., and the value of pipes delivered by him to the 1st January, 1862, was £14,423 18s. 6d.

The contracts entered into by Messrs. P. N. Russell and Co. for the supply of water locks, by Mr. R. Dawson for general castings, and by Mr. Thomas Hale for the supply of coals to the Botany Works, during the year 1861, have been very satisfactorily completed.

The contract entered into by Mr. A. A. Marshall for street water posts and drinking fountains, for 1861, has been properly carried out; and an additional number of these great public conveniences have been erected in the following localities, namely:—

- 2, west side of George-street Markets;
- 1, Charlotte-place and Prince-street;
- 1, Argyle and Kent streets;
- 1, William-street and Darlinghurst-road;
- 1, Erskine-street, near York-street.

Hydrants for street-watering purposes have been laid down in George and Patramatta streets, throughout the whole length, to the number of ninety-six. These hydrants, although not intended originally for extinguishing fires, have been found very useful for that purpose upon the only occasion which has occurred to test them; a fire which took place on the Brickfield Hill, and which threatened destruction to large property, having been extinguished by a hose from one of these hydrants before the engines arrived at the spot.

Appendix A. Appended hereto is a return of the new water mains laid down in the City during the past year.

The tunnel from Lachlan Swamp (which in a former Report was referred to as having fallen in) has not yet been repaired, but the water has again found its way through the obstructions, and a supply therefrom has been afforded, for a considerable portion of the year, to the District of Woolloomooloo and the southern portion of the City.

The supply of water at the Botany Reserve has continued abundant throughout the year, notwithstanding the prolonged drought to which the City and its neighbourhood have been subject. The escape of water at the weir has been considerably larger than the quantity consumed in the City, and the Council have every reason to believe that the opinion which has been before expressed as to the capabilities of the present works for affording an unfailling supply, will be found to be a correct one.

FINANCIAL.

Appendix B. Statements of the Receipts and Expenditure on account of the Sewerage and Water Works, for the year 1861, are appended hereto.

JAMES OATLEY,
Mayor.

Adopted by the Municipal Council of the City of Sydney, on the 18th day of March, 1862.

CHAS. H. WOOLCOTT,
Town Clerk.

1862.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 73. TUESDAY, 30 SEPTEMBER, 1862.

9. Town Hall Site Exchange Bill :—
- (1.) It having been discovered that the 63rd Standing Order, which requires the introduction of a private Bill within thirty days from the receipt of the Petition, had been inadvertently infringed in this case,—Mr. Cowper, *with the concurrence of the House*, moved (without notice), That the Standing Order referred to be considered as having been suspended, with regard to the introduction of the said Bill on the 25th September, upon the Petition for leave received on the 20th August.
Question put and passed.
- (2.) Mr. Cowper then moved, pursuant to notice,—
- (1.) That the Town Hall Site Exchange Bill be referred to a Select Committee for consideration and report.
- (2.) That such Committee consist of the following Members, viz. :—Mr. Alexander Mr. Caldwell, Mr. Dalgleish, Mr. Dickson, Dr. Lang, Mr. Lucas, Mr. Smart, Mr. Windeyer, and the Mover.
- And Mr. Hoskins demanding that the said Committee be appointed by Ballot,—
Question,—That the Town Hall Site Exchange Bill be referred to a Select Committee for consideration and report.—put and passed.
- Whereupon, the House proceeded to the Ballot, and the Speaker declared the following Members to be the Committee duly appointed :—Mr. Cowper, Mr. Dickson Mr. Caldwell, Mr. Dalgleish, Mr. Piddington, Mr. Smart, Dr. Lang, Mr. Alexander, and Mr. Lucas.

VOTES, No. 82. WEDNESDAY, 15 OCTOBER, 1862.

10. Town Hall Site Exchange Bill :—Mr. Cowper, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this Bill was referred on 30th September last.
Ordered to be printed.

TOWN HALL SITE EXCHANGE BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 30th ultimo, the "*Town Hall Site Exchange Bill*," beg leave to report to your Honorable House,—

That they have examined the Engineer and Surveyor to the Municipal Council of Sydney, *(whose evidence will be found appended •Mr. E. Bell, C.E. hereto), and that the Preamble having been satisfactorily proved by the evidence of that gentleman, they proceeded to consider the several clauses and schedules of the Bill, in which it was not found necessary to make any amendment.

And your Committee now beg to lay before your Honorable House the Bill without amendment.

CHARLES COWPER,
Chairman.

*Legislative Assembly Chamber,
Sydney, 15 October, 1862.*

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 7 OCTOBER, 1862.

MEMBER PRESENT :—

Mr. Cowper.

In the absence of a quorum, there was no meeting of the Committee held this day.
[To be called on Friday next, at *Eleven o'clock.*]

FRIDAY, 10 OCTOBER, 1862.

MEMBERS PRESENT :—

| | |
|----------------|-----------------|
| Mr. Cowper, | Dr. Lang, |
| Mr. Alexander, | Mr. Piddington, |
| Mr. Dickson, | Mr. Caldwell, |
| Mr. Dalgleish. | |

Mr. Cowper called to the Chair.

Printed copies of Bill referred—on the Table.

Petition for leave to introduce the Bill, by direction of the Chairman, read by the Clerk.

Mr. E. Bell, *City Engineer*, called in and examined.

Deed of Grant, to the Corporation, of land for the site of a Town Hall, *produced* by witness.

At the request of the Committee, witness withdrew in order to procure certain plans and sections of the proposed new Town Hall and Police Offices,—

And being returned—the same laid before the Committee.

Room cleared.

Preamble read and considered.

Motion made (*Chairman*) and *Question*—That this Preamble stand part of the Bill—*agreed to.*

Witness recalled and further examined.

Clause 1 read, blanks filled in, and agreed to without amendment.

Clause 2 read and considered.

Motion made (*Mr. Alexander*) and *Question* put—That this Clause be postponed.

Committee divided.

Aye, 1.
Mr. Alexander,

Noes, 6.
The Chairman,
Mr. Dickson,
Dr. Lang,
Mr. Piddington,
Mr. Caldwell,
Mr. Dalgleish.

Clause, as read, *agreed to* without amendment.

Clauses 3, 4, and 5, read and agreed to without amendment.

Schedules 1, 2, and 3, read and agreed to without amendment.

Chairman requested to report the Bill without amendment to the House.

WITNESS.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

TOWN HALL SITE EXCHANGE BILL.

FRIDAY, 10 OCTOBER, 1862.

Present:—

| | |
|----------------|-----------------|
| MR. COWPER, | MR. PIDDINGTON, |
| MR. ALEXANDER, | DR. LANG, |
| MR. DICKSON, | MR. CALDWELL, |
| MR. DALGLEISH. | |

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

Edward Bell, Esq., C.E., City Engineer and Surveyor, called in and examined:—

1. *By the Chairman*: Have the lands, as stated in the Schedule of the Bill, and referred to in the Preamble, been granted as a site for a Town Hall for the City of Sydney? They have, by Governor Fitz Roy, on the 30th September, 1851. Edward Bell,
Esq., C.E.
2. You hold in your hand the deed of grant? Yes. 10 Oct., 1862.
3. Do you consider that land so situated as to afford a suitable site for the purposes of municipal buildings and the erection of a Town Hall, with reference to the convenience of the inhabitants of the City? No, it is not well suited to the convenience of the inhabitants of the City, in consequence of its being at the extreme end of the City, instead of in a more central position.
4. The Corporation entertain objections to erecting a Town Hall there on that account? Solely on that account. That is the objection of the citizens generally.
5. Are you aware of any negotiation having taken place with the Government in reference to a site in a more central position? I was present at an interview which the Mayor had with yourself and the Minister for Lands, in reference to the site of the present Police Office.
6. The arrangement then proposed was that the Corporation should erect buildings for a Police Office as well as a Town Hall and Municipal Offices on the Crown Land there? Yes.
7. The Corporation therefore desire to obtain authority to sell the present site, in order to carry out that arrangement? They do.
8. Will you state shortly the particulars of that arrangement? The arrangement I understood they were anxious to propose was that they should have power to sell the present site; and on the site of the present Police Office in George-street, in the first place, build suitable Police Offices for the Government in lieu of those which at present stand there, and in the next place, appropriate the residue of the money derived from the sale of this Town Hall site to building a Town Hall and offices for the Corporation, on the remainder of the land now occupied by the Police Office.
9. *By Mr. Alexander*: Where is the site granted for the Town Hall? It lies between Phillip and Elizabeth streets and between Bent and Bridge streets, having Bridge-street on the north, Phillip-street on the east, Elizabeth-street on the west, and Bent-street on the south.
10. Are you aware that certain lands have been sold by the Government in that locality, upon a plan which set forth that the site for the Town Hall was fixed upon there? I have no knowledge how the lands in the immediate neighbourhood of this were sold.

Edward Bell, Esq., C.E. I have heard that some allotments were sold, but I never knew that any on the opposite side were sold until the other day, when complaints were made to us about breaking stone there.

11. When was this grant made? In September, 1851.
- 10 Oct., 1862. 12. Then of course all the allotments that were sold were sold with the expectation that the Town Hall was intended to be built on this particular site? I cannot say so; I do not know when they were sold.
13. If they were sold after the grant, they were certainly sold with that expectation? It is possible it might be the case.
14. *By the Chairman:* Do you think it would affect the value of the buildings in that neighbourhood very much whether the Town Hall was or was not erected there;—would it depreciate the allotments to which Mr. Alexander alludes? I do not think it would.
15. Supposing the land to be occupied by private residences, would it not be equally valuable for that purpose, although the Town Hall might be erected elsewhere? Yes, I should think so.
16. *By Dr. Lang:* Do you not think it would be more valuable for private residences if the Town Hall were not there? I should think it would.
17. *By Mr. Alexander:* Do you think that land is fit for private residences? Yes, I think it a fine site for private residences.
18. Why is the site not fit for a Town Hall if it is fit for the Colonial Secretary's Office, the Treasury, and other Government Offices? Because the Corporation Offices, to which the citizens have to come for various purposes from all parts of the town, should be as central as possible; but if the Town Hall were erected on this site, those at the southern end of the City would have to traverse its entire length. I may mention that the City Council went to some expense to prepare plans, and in fact we commenced getting out the foundations for a Town Hall on this site; but the outcry from the citizens commenced, and the Aldermen refused to vote the money, solely on account of the representations made to them by the citizens. They seriously went to work, and spent £300 in preparing plans, and I think £150 in getting out the foundations, as you may see now on the ground itself.
19. You say you think the land in this locality is suitable for private residences? Yes, the upper part of it. The streets between Bridge-street and the quay are probably better adapted for stores and warehouses, but the frontages to Bridge-street would undoubtedly be suitable for private residences, I think.
20. You are not of opinion that by altering the site of the Town Hall, these properties will be injured? I think not. Very possibly some persons might give more for the land in that neighbourhood, thinking the Town Hall being there might enhance its value for some purposes; but as far as my opinion goes, if I had a private residence there, I would rather not have it in the neighbourhood of the Town Hall.
21. *By Dr. Lang:* Is it not the custom in the Mother Country, and on the Continent of Europe, to have the Town Hall buildings as nearly as possible in the centre of the City in each case? I have been in a great many Cities, and never saw it anywhere else but in the most central parts.
22. Do you think the site given by the Government in Bridge-street is a central position for the City of Sydney? Certainly not.
23. Do you not think that the objections of a portion of the citizens to that site were very reasonable? I think so.
24. *By Mr. Alexander:* Who applied for this site—how came it to be granted to the Corporation? I am not aware; I was not in the Colony at the time, and I do not remember ever to have heard how it was. It was before the present Corporation came into existence.
25. If the City authorities of that day applied for that site, they must have thought it sufficiently central? Very possibly they applied for a site, and took what was given them. I know when the Commissioners were in office, they were in favour of having their offices among the Government Offices, because to a great extent they were Government officers themselves; but now any alderman who would advocate the expenditure of the public money in erecting a Town Hall there, would be exceedingly unpopular with the citizens at the southern end of the City.
26. *By Mr. Dickson:* What is the estimated value of this land in Phillip-street? I estimate it now at about £25 a foot frontage to Bridge-street and Bent-street, and £15 to Phillip and Elizabeth streets.
27. What would be the gross amount? Something like £24,000 or £25,000.
28. Have plans for the proposed new buildings in George-street been made out? Yes.
29. What is the estimated cost of erecting those buildings altogether, for Police Office and Town Hall? It is possible they may cost £7,000 or £8,000 over and above the £25,000 to be raised by the sale of this land. It is first intended to build the Police Office on land over which the Corporation are to have no control, and the residue of the money is to be spent in erecting a Town Hall and offices, so far as it will go, and the Corporation will have to raise the remainder, probably £7,000 or £8,000 pounds.
30. *By Mr. Alexander:* What is the extent of the land on the present site of the Police Office? It is very much smaller than this; a little over half an acre, and this is one acre three roods and thirty-nine perches.
31. Have you not heard it said that the present site is a great deal too small for the present Police Court? No, I never heard that.
32. *By Mr. Piddington:* Is this Bill supported or approved by the present Corporation of the City? I do not think there is a single objection to it.
33. Do you know whether it is the intention or wish of the Corporation to lay out the proceeds of the sale of the new site in erecting certain municipal and police buildings upon the portion of land that is occupied now by the Central Police Office?

Certainly,

Certainly, that is distinctly their wish and intention—not to build offices for Captain M'Levie's department—the police of the Colony—but to build two large Police Courts, with the necessary offices, watch-house, and lock-ups underneath, all which have been planned according to the wish of the Police Magistrate, Captain M'Levie, and the Colonial Architect; and then a Town Hall, and all the offices for a Town Hall. *(The witness here withdrew for a time, in order to procure the plans of the intended buildings, and, having returned, produced the same. Witness again withdrew. Preamble ordered to stand part of the Bill. Witness recalled, and further examined.)*

Edward Bell,
Esq., C.E.
10 Oct., 1862.

34. *By the Chairman:* There is a blank in the first clause;—can you suggest what, in your opinion, would be reasonable dimensions, as a minimum size, for the allotments? I gave in a plan for the allotments on the Town Hall site to the Minister for Works. I think the frontages were about 30 feet on Bent-street, 32 feet on Bridge-street, and about 26 feet on the other two streets, as near as my memory serves me.

35. What was the depth? They varied in depth. The allotments to Phillip and Elizabeth streets were 86 feet in depth.

36. Were there any of less depth than 86 feet? No, I am sure they were not less. To Bridge-street they were about 90 or 100 feet.

37. Then we may put this not less than 26 feet in width, and 86 feet in depth? Yes.

1862.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MUNICIPALITIES ACT OF 1858.

(MUNICIPAL COUNCIL, PADDINGTON.)

Received by the Legislative Assembly, 14 November, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Municipal Council of Paddington,—

RESPECTFULLY SHEWETH:—

1. That the Municipalities Act of 1858, although an admirable law, and one which has worked much practical good, is, in many of its details, very defective, and especially so in those provisions which relate to the levying and enforcement of Rates.

2. That these defects not only render the carrying out of the law very difficult, but are in some respects even productive of absolute injustice, inasmuch as many escape the payment of Municipal taxation who are great gainers by the expenditure of money thus raised.

3. That Bills for the amendment of the said Act in several particulars have been, from time to time, before Parliament during the past two years, and that the fifth of such Bills is now before your Honorable House.

4. That the amendment of the law respecting Municipal Institutions is a necessity affecting all parts of the Country where such institutions exist, and all persons who reside or hold property within their jurisdiction; and that further delay will increase and materially complicate the already existing difficulties before referred to.

Your Petitioners, therefore, humbly pray that your Honorable House will take the premises into your consideration, and will at once be pleased to pass such an Act as will remedy the defects complained of, or such other Act as will shortly validate assessments formerly made *bonâ fide* for the calendar year, and legalize the continued use of this period, for the purpose of levying Municipal Rates.

By order of the Council.

THOMAS ALSTON,
Chairman.

Adopted by the Municipal Council of Paddington, this eleventh day of November, one thousand eight hundred and sixty-two.

HY. GALE,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES ACT OF 1858.

(MUNICIPAL COUNCIL, WATERLOO.)

Received by the Legislative Assembly, 21 November, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the Municipal Council of Waterloo,—

RESPECTFULLY SHEWETH :—

That the Municipalities Act of 1858, although an admirable law, and one which has worked much practical good, is, in many of its details, very defective, and especially so in those provisions which relate to the levying and enforcement of Municipal Rates.

That these defects not only render the carrying out of this law very difficult, but are in some respects even productive of absolute injustice, inasmuch as many escape the payment of Municipal taxation who are great gainers by the expenditure of the money thus raised.

That the attention of Parliament has been repeatedly, by Petition, most respectfully called to the existence of these defects, and to the absolute necessity of some amendment.

That Bills for that purpose have been, for the past two years, before Parliament, and that one such Bill is now before your Honorable House.

That the amendment of the law as to Municipal Institutions is a necessity affecting all parts of the Country where such Institutions exist, and all persons who live under their rule; and that further delay will increase and materially complicate the already existing difficulties.

Your Petitioners, therefore, humbly pray that your Honorable House will take the premises into your consideration, and will at once pass such an Act as will remedy the defects complained of.

JOHN GEDDES,
Chairman.

F. M. SLATTERY,
Council Clerk.

November 19th, 1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MUNICIPALITIES LAW AMENDMENT BILL.
(HOUSEHOLDERS AND LANDED PROPRIETORS, SHOALHAVEN.)

Received by the Legislative Assembly, 20 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Householders and Landed Proprietors
within the Municipality of Shoalhaven,—

MOST RESPECTFULLY SHEWETH:—

That statements have been publicly made, to the effect that the Petition under the Municipalities Act of 1858, for incorporating the Municipality of Shoalhaven, and presented to the Executive Government for that purpose, was signed by us with a fraudulent intention, and has been carried fraudulently into effect.

That the undersigned did severally affix their names to the aforesaid Petition deliberately, and under the full conviction and belief that the incorporation then prayed for would prove of material service to the interests of the entire District, and amount to a great public benefit, which view Petitioners do still very respectfully maintain.

Petitioners, therefore, pray your Honorable House to permit them to state distinctly, that no fraud whatever was either intended or committed in the original design and subsequent formation of the Shoalhaven Municipality, or in respect of the signatures affixed to the Petition aforesaid.

Petitioners have full faith in the efficiency of Municipal Institutions, and hereby further pray that you will be pleased to perpetuate and extend their operation, by passing the amended Municipalities Act now before your Honorable House. And your Petitioners will ever pray.

And Petitioners, as in duty bound, will ever pray.

[Here follow 65 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUNICIPALITIES LAW AMENDMENT BILL.

(DISTRICT OF KIAMA.)

Received by the Legislative Assembly, 30 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of certain Landholders, Landed Proprietors, Householders, and others, residents of the District of Kiama, County of Camden, in New South Wales,—

SH EWETH :—

1st. That the Rural Districts of Jamberoo, Gerringong, Broughton Creek, and others, having been proclaimed a part of the Kiama Municipality, have been acting illegally as a corporate body, levying taxes, and expending the same.

2nd. That the great bulk of the taxes have been raised in the Rural Districts and expended in the town, to the manifest disadvantage of the ratepayers in the Rural Districts, in some of which not one penny has been expended by the Council; and further, that from the following balance-sheet it is clear that Municipalities are not suited to country districts, from the fact that the management cost £190, while only £99 was expended on the roads during the last six months.

4th. That your Petitioners, taking all the above matters into consideration, humbly pray that your Honorable House may not pass Mr. Cowper's Bill, now before your Honorable House, styled the Municipal Institutions Act of 1862, or any other Bill binding or compelling the incorporation of a Rural District with a town or other corporation.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 297 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUNICIPALITIES LAW AMENDMENT BILL.

(MAYOR AND ALDERMEN, KIAMA.)

Received by the Legislative Assembly, 2 December, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, the Mayor and Aldermen of the Municipality of Kiama,—

RESPECTFULLY SHEWETH:—

That under an Act of Legislature, entitled the "Municipalities Act of 1858," a defined portion of the Police District of Kiama was, upon petition, and without opposition, proclaimed a Municipality, by the name of the Municipality of Kiama. That in virtue of such proclamation, the rate-payers have from time to time duly elected the required officers to serve in the Corporation so formed. That at an early period after its incorporation, it was deemed expedient to undertake the removal of a serious natural obstruction to the traffic of a large proportion of rate-payers as well as to all travellers visiting Kiama from the North or Western Districts. That the passing of a resolution to remove the said obstruction involved a prospective outlay, which rendered it necessary to apply, under the 87th clause of the Act, for power to borrow a sum of money equal to three years' revenue of the Corporation, which power His Excellency Sir William Thomas Denison, then Governor, was pleased, with the advice of the Executive Council, to grant. That thereupon, two-thirds of the Corporation became jointly and severally, in their private estates, responsible for a cash credit of (£1,800) one thousand eight hundred pounds. That the Corporation was effecting substantial improvements calculated to promote facilities for traffic, and having a tendency to enhance the value of property, when its usefulness was interrupted by the decision given in the Supreme Court in a cause, *Berry v. Graham and others* (Municipality of Shoalhaven), the said decision having suggested points of identity in the constitution of this and other Municipalities with that of Shoalhaven to the minds of some parties, who thereupon refusing voluntarily to pay rates, threw upon the Corporation the responsibility of becoming involved in vexatious lawsuits, by enforcing payment, or of suspending its operations, in the hope that the Legislature would, immediately upon assembling, have anticipated the difficulties in which your Petitioners are placed, by amending the Act. That encouraged by the assurance received from the Honorable the Colonial Secretary, that a Bill would be brought in to remedy the defects of the present Act, your Petitioners deemed it prudent to adopt the latter course; it was, therefore, matter of special gratification to those of your Petitioners who had signed the cash credit, to know that a Bill was in due course introduced, which, if it pass into law, will relieve them from the fear of being sued for payment of a corporate debt honorably incurred, and expended for the benefit of posterity. Your Petitioners further, being in their corporate capacity the representatives of nearly one thousand rate-payers, have ascertained with the greatest satisfaction that the Bill to amend the Municipalities Act of 1858, now before the Legislature, while it proposes to adjust all difficulties and errors consequent upon a misconstruction of the Act by existing Corporations, affords ample opportunity for re-constructing existing Municipalities wherever a majority may deem it right to do so, and do therefore pray your Honorable House that the said Bill may be allowed to pass into law, as soon as the importance of its necessity requires.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 9 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MUNICIPALITIES LAW AMENDMENT BILL.

(MUNICIPAL COUNCIL, WAVERLEY.)

Received by the Legislative Assembly, 6 November, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the Municipal Council of Waverley,—

RESPECTFULLY SHEWETH :—

That the Municipalities Act of 1858, although an admirable law, and one which has worked much practical good, is, in many of its details, very defective, and especially so in those provisions which relate to the levying and enforcement of Municipal Rates.

That these defects not only render the carrying out of this law very difficult, but are in some respects even productive of absolute injustice, inasmuch as many escape the payment of Municipal taxation who are great gainers by the expenditure of the money thus raised.

That the attention of Parliament has been repeatedly, by Petition, most respectfully called to the existence of these defects, and to the absolute necessity for some amendment.

That Bills for that purpose have been for the past two years before Parliament, and that one such Bill is now before your Honorable House.

That the amendment of the law as to Municipal Institutions is a necessity affecting all parts of the country where such Institutions exist, and all persons who live under their rule; and that further delay will increase and materially complicate the already existing difficulties before referred to.

Your Petitioners, therefore, humbly pray that your Honorable House will take the premises into your consideration, and will at once pass such an Act as will remedy the defects complained of.

CHA. BROWNE,
Chairman.

J. F. MORTIMER,
Council Clerk.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MUNICIPALITIES LAW AMENDMENT BILL.

(MAYOR AND ALDERMEN, WOLLONGONG.)

Received by the Legislative Assembly, 18 November, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Mayor and Aldermen of the Municipality of Wollongong,—

RESPECTFULLY SHEWETH:—

That after the passing of the Municipalities Act of 1858, the inhabitants of Wollongong were amongst the earliest to avail themselves of the advantages which they believed the measure held out to them.

That although willing to tax themselves for the purpose of carrying out the improvements of the Town, they were of opinion that, for works of permanent utility, posterity should bear a portion of the burden.

That entertaining this view, they looked upon the borrowing powers contained in the 87th section of the Municipalities Act as enabling them to carry out this principle to a fair and reasonable extent.

That on making application to the banking and other monetary institutions, they were unable to negotiate a loan, owing to the security they had to offer not coming within the limits of ordinary monetary transactions.

That consequently the 87th section has become inoperative, and the beneficial working of the Municipal Council considerably impaired.

That the recent decision in the case of *Berry v. Graham* has raised doubts as to the legality of many existing Municipalities, and has consequently created considerable reluctance to distrain for overdue rates, and otherwise to enforce the provisions of the Act.

That these doubts, whilst tending strongly against the well working of existing Municipalities, have also the effect of preventing similar institutions being formed, whereby the public good is considerably damaged.

That your Memorialists are informed that a Bill is now before your Honorable House by which the present Municipalities Act will be amended, and many of its existing defects remedied.

Your Memorialists, therefore, humbly pray that, with a view of increasing the benefits of Municipal Institutions, and of establishing the legality of existing ones, your Honorable House will not allow the present Session of Parliament to terminate without passing the Municipalities Amendment Act.

And your Memorialists, as in duty bound, will ever pray, &c., &c., &c.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MUNICIPALITIES LAW AMENDMENT BILL.
(JOHN DAWSON.)

*Received by the Legislative Assembly, 26 November, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Municipal Council of Randwick beg respectfully to inform your Honorable House, that to carry out the principles of the Municipality Act of 1858 has become a matter of impossibility, and in consequence thereof, great loss and inconvenience have been the result. The Council, therefore, humbly pray that your Honorable House will remove the present difficulty by passing, as early as possible, the Bill now submitted by the Government.

And your Council will ever pray, &c., &c.

*Randwick Municipal Council,
21st November, 1862.*

JOHN DAWSON,
Chairman.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUNICIPALITIES LAW AMENDMENT BILL.

(MUNICIPAL COUNCIL, PARRAMATTA.)

Received by the Legislative Assembly, 3 December, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Mayor and Aldermen of the Municipality of Parramatta,—

SHEWETH :—

That in many particulars, in working out the municipal affairs of the Town of Parramatta, your Petitioners find the present Municipal Act imperfect.

That your Petitioners, being most desirous of making the institution as efficient and useful as possible in all its operations, observe with pleasure that an amended Municipal Bill is now under the consideration of your Honorable House.

Your Petitioners humbly pray that your Honorable House will take the matter into your favourable consideration, and pass the measure with as little delay as possible.

And your Petitioners will ever pray.

(For the Council,)

JAMES BYRNES,
Mayor.

Parramatta, 27 November, 1862.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUNICIPALITIES LAW AMENDMENT BILL.

(CHAIRMAN AND COUNCILLORS OF MUNICIPALITY OF SHELL HARBOUR.)

Received by the Legislative Assembly, 5 December, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, the Chairman and Councillors of the Municipality of Shell Harbour,—

RESPECTFULLY SHEWETH :—

That under an Act of Legislature, entitled "The Municipalities Act of 1858," a defined portion of the Police District of Kiama was, upon Petition, and without opposition, proclaimed a Municipality, by the name of the Municipality of Shell Harbour; that, in virtue of such proclamation, the rate-payers have, from time to time, duly elected the required officers to serve in the Municipality so formed.

That the Corporation has effected many substantial improvements, calculated to promote facilities for traffic, and having a tendency to enhance the value of property, to increase the prosperity of the district, and greatly to benefit the public.

That the current annual revenue not having been found adequate for the payment for the various improvements effected, your Petitioners have become jointly and severally responsible, in their private capacities, for a debt incurred in accomplishing the said improvements. This debt, however, could easily be discharged if the rates due to this Corporation were paid; but in consequence of the decision given in the Supreme Court, in a case *Berry v. Graham* and others (Municipality of Shoalhaven), many consider that the said decision suggests points of identity to this and other Municipalities with that of Shoalhaven, and therefore withhold the voluntary payment of rates, and thus throw upon this Corporation either the responsibility of becoming involved in vexatious lawsuits, by enforcing payment, or of suspending its operations, or otherwise to increase the debt for which, in their private estates, the Councillors of this Municipality are liable.

That it is a matter deeply to be regretted, that this and other Municipal Corporations have been compelled to discontinue many works of great local importance and public benefit, and that the acknowledged usefulness of Municipal Institutions should be thus brought to a stand-still, in consequence of the dubious nature of the power given them for the recovery of Municipal rates.

That it is a matter of much gratification to your Petitioners that a Bill to amend the Municipalities Act of 1858 is now before the Legislature. Your Petitioners are of opinion that the said Bill, if carried into law, will remove the difficulties under which your Petitioners, in common with other Corporations, are labouring; that it will relieve your Petitioners from the personal liability to be sued for the payment of a debt honorably incurred in their corporate capacity, and judiciously expended for the benefit of posterity; that it will remedy the various defects in the said Act, and adjust all errors consequent upon the misconstruction of the said Act by Municipal Corporations.

Your Petitioners, therefore, pray that your Honorable House will allow the proposed Bill for amending the Municipalities Act of 1858 to pass into law, with that speed which the necessitous condition of this and other Corporations, and the importance of the required amendment, demands.

And your Petitioners will ever pray, &c., &c., as in duty bound.

[Here follow 9 Signatures.]

1862.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT FROM TRUSTEES.)

Presented to both Houses of Parliament, by Command.

REPORT OF THE TRUSTEES OF THE AUSTRALIAN MUSEUM, FOR THE
YEAR ENDING 31 DECEMBER, 1861.TO HIS EXCELLENCY THE GOVERNOR-IN-CHIEF,
&c., &c., &c.

1. The Trustees of the Australian Museum have the honor to submit to your Excellency this their Eighth Annual Report.

2. The Museum has been open to the public daily (Sundays excepted), during the past year, and has been visited by 19,905 persons.

3. The system of exchanging specimens of natural history with the principal Foreign Museums is still fostered by the Trustees, who have received the following valuable collections during the past year :—

From the Museum of Natural History at Hamburg :—6 species of mammals ; 30 species of birds, and a collection of coleopterous insects, comprising 315 specimens and 156 species.

From the National Museum of the Netherlands, at Leyden :—2 species of mammals ; 81 species of birds ; 4 birds' nests and 9 eggs.

From the Museum of Natural History at Brunswick :—33 specimens, including 23 species of birds, and a collection of coleopterous insects, comprising 202 species.

4. Numerous donations have been received during the year, a list of which, with the names of the donors, is appended. (*Appendix No. 2.*)

5. Many valuable works, purchased out of the Endowment Fund, have been added to the Museum Library, a list of which is appended. (*Appendix No. 3.*)

6. It is with deep regret that the Trustees have to report the loss which the Museum has sustained this year, through the death, in August last, of their talented Curator and Secretary, Mr. S. R. Pittard. In connection with this melancholy event, the Trustees have much satisfaction in acknowledging the liberality of the Government in permitting the unexpended portion of the vote for the Curator's salary to be applied towards the provision of a passage to England for Mrs. Pittard and her children.

7. The Trustees have entered into a correspondence with the Government, with a view of securing the services of an able successor to the late Mr. Pittard. Pending the arrangements necessary for this purpose, they have appointed Mr. Gerard Krefft, Acting Curator and Secretary.

8. Two experienced taxidermists have been occupied during the year in preparing and mounting specimens, and in cleaning and preserving from decay the collections already displayed for public inspection.

AUSTRALIAN MUSEUM.

9. The Trustees have to record the retirement of Sir William Macarthur, and the election of William Macleay, Esq., M.P., to fill the place on the Board vacated by His Excellency Sir W. T. Denison, K.C.B.

10. The liberality of the Legislature has enabled the Trustees to purchase, for the sum of £200, a highly instructive mineralogical and geological collection, for the display of which arrangements are now being made. It is the intention of the Trustees shortly to publish a Catalogue of these collections, which will enable students to compare our native minerals and formations with those which occur in other parts of the Globe.

11. The valuable series of casts of fossils, presented by the British Museum some years ago, has been unpacked, and is now in part exhibited to the public.

12. The Trustees, thinking it desirable to enlarge the collections in the Museum as much as possible, have purchased a number of specimens during the year, of which those not hitherto exhibited have been added to the collection; and such specimens as could be spared have been forwarded to other Museums, for the purpose of exchange.

13. The Trustees have the satisfaction of reporting that the additions to the Museum, for which the Legislature voted the sum of £10,000, are now in progress. The plan and general arrangements having been designed by the Colonial Architect, after consultation with the Trustees, were approved by the Government. Tenders were then invited for the construction of the building as high as the first story, and one for £9,300 accepted. It is this portion of the building that is now in course of erection. For the completing of the upper part and the roof, together with the internal fittings, a further sum of £10,000 will be necessary. As this additional expenditure is essential towards completing the portion of the building now in hand, the Trustees take leave to urge on the Government the necessity of obtaining from the Legislature, a vote for the further sum required.

14. Appendix No. 1 contains an abstract of the receipts and payments of the Trustees, on behalf of the Museum, for the year ending December 31, 1861.

15. Appendix No. 2 contains a list of the various donations during the same year, with the names of the donors.

16. Appendix No. 3 contains a list of books purchased for the Museum Library.

17. The Trustees have the honor to submit this their Report for the year one thousand eight hundred and sixty-one, and in testimony thereof, have caused their corporate Seal to be hereunto affixed, this twenty-third day of May, one thousand eight hundred and sixty-two.

(L.S.)

GEORGE E. TURNER,

Chairman.

By order of the Trustees,

GERARD KREFFT,

Acting Curator and Secretary.

CURATOR OF AUSTRALIAN MUSEUM.

No. 1.

THE UNDER SECRETARY to TRUSTEES OF THE AUSTRALIAN MUSEUM.

*Colonial Secretary's Office,
Sydney, 31 October, 1861.*

GENTLEMEN,

With reference to the report of the decease of Dr. Pittard, Curator of the Australian Museum, I am directed by the Colonial Secretary to request that you will have the goodness to state whether the manner in which the vacancy may be advantageously filled, has engaged your attention; and if so, to beg that you will communicate to him, for the consideration of the Government, what your views are upon the question.

I have, &c.,
W. ELYARD.

No. 2.

ACTING CURATOR to COLONIAL SECRETARY.

*Australian Museum,
Sydney, 8 November, 1861.*

SIR,

I am directed by the Trustees of the Australian Museum to acknowledge the receipt of your letter, dated October 31, and to inform you that the Trustees have had under their consideration the adoption of immediate steps for the appointment of a successor to the late Mr. Pittard, as Curator of the Museum.

I have, &c.,
GERARD KREFFT,
Acting Curator.

No. 3.

THE UNDER SECRETARY to TRUSTEES OF THE AUSTRALIAN MUSEUM.

*Colonial Secretary's Office,
Sydney, 19 November, 1861.*

GENTLEMEN,

I am directed to acknowledge the receipt of a letter, dated 8th instant, in which, by your direction, the Acting Curator of the Australian Museum apprised the Colonial Secretary, that you had under your consideration the adoption of immediate steps for the appointment of a successor to the late Mr. Pittard, as Curator of the Museum.

2. Mr. Cowper desires me to state, in reply, that he will be glad to be favoured with your views, as early as possible, in order that he may be prepared to give every information to Parliament, when the Estimates are under consideration.

3. I am also to observe that you will, the Colonial Secretary hopes, understand that any arrangement proposed will be subject to the approval of the Government.

I have, &c.,
W. ELYARD.

No. 4.

ACTING CURATOR to COLONIAL SECRETARY.

*Australian Museum,
Sydney, 5 December, 1861.*

SIR,

I have the honor to acknowledge the receipt of your letter, dated 19th November, in which you request to be favoured, as early as possible, with the views of the Trustees, with respect to the appointment of a successor to the late Mr. Pittard, as Curator of the Museum, in order that you may be prepared to give every information to the Parliament, when the Estimates are under consideration.

In reply, I am directed to inform you that the Trustees propose, in the first place, to invite by general advertisement, gentlemen who may be possessed of the necessary qualifications to apply for the vacant post, and then (should this course fail to obtain a competent person) to avail themselves of the kind offer of one of their number, Sir Charles Nicholson, Bart., who intends to proceed to Europe in the early part of the ensuing year, and who will select, in conjunction with Professor Owen or Professor Huxley, some competent gentleman to fill the office, on the terms on which Mr. Pittard was first appointed.

These

These terms are,—an allowance of £100 to defray the expense of a passage to Sydney, and a salary not exceeding £700 per annum, to commence from the day of his arrival in Sydney.

With respect to the third paragraph of your letter, in which you express a hope that the Trustees will understand that any arrangement proposed will be subject to the approval of the Government, I am directed to inform you, that the Trustees presume that this remark has reference only to the salary of the Curator, as the 7th Clause of the 17th Victoria, No. 2, incorporating the Museum, throws the entire responsibility of the appointment of their officers on the Trustees.

I have, &c.,
GERARD KREFFT,
Acting Curator.

No. 5.

THE UNDER SECRETARY to TRUSTEES OF THE AUSTRALIAN MUSEUM.

Colonial Secretary's Office,
Sydney, 11 December, 1861.

GENTLEMEN,

I am directed by the Colonial Secretary to acknowledge the receipt of a letter dated the 5th instant, from Mr. Krefft, stating by your desire, the steps proposed to be taken for providing a successor to the late Mr. Pittard, as Curator of the Museum, and observing, with reference to the remark made in my communication of the 19th ultimo, that any arrangement for the purpose would be subject to the approval of the Government, that the entire responsibility of the appointment of their officers is placed by the 7th clause of the 17th Victoria, No. 2, on the Trustees of the Institution.

2. In reply, I am instructed to point out, that the situations to which the Trustees of the Museum are authorized to appoint under the 7th clause of the Act of Incorporation, are those for which salaries are provided out of the endowment granted by the 3rd section of the same Act. But the office of Curator having been created subsequently to the passing of that law, and the stipend appropriated by a special vote of the Legislature, must be considered as coming under the 37th clause of the Constitution Act, which vests all appointments in the Governor and Executive Council.

3. The Government is not therefore prepared to concede to the Trustees the right which they now claim, to appoint a Curator to the Museum, or to make arrangements for the selection of an individual to fill that office.

4. I am further desired to state, that on the first occasion of the selection of a gentleman for this appointment, the arrangements were made by the Governor General, through the Right Honorable the Secretary of State for the Colonies.

I have, &c.,
W. ELYARD.

No. 6.

ACTING CURATOR to COLONIAL SECRETARY.

Australian Museum,
Sydney, 3 January, 1862.

SIR,

I am directed by the Trustees of the Australian Museum to acknowledge the receipt of a letter dated December 11, 1861, from Mr. Elyard, stating that the situations to which the Trustees of the Museum are authorized to appoint under the 7th clause of the Act of Incorporation are those for which salaries are provided out of the endowment granted by the 3rd section of the same Act. But the office of Curator having been created subsequently to the passing of that law, and the stipend appropriated by a special vote of the Legislature, might be considered as coming under the 37th clause of the Constitution Act, which vests all appointments in the Governor and Executive Council, and that the Government is not therefore prepared to concede to the Trustees the right which they now claim, to appoint a Curator to the Museum, or to make arrangements for the selection of an individual to fill that office. Mr. Elyard further states, by your desire, that on the first occasion of the selection of a gentleman for this appointment, the arrangements were made by the Governor General, through the Right Honorable the Secretary of State for the Colonies.

2. In reply, I am directed by the Trustees to inform you, that they adhere to the opinion expressed in their letter of December 5th, 1861, namely, that by the Act of Incorporation, the entire responsibility of the management of the Museum, and the appointment of all its officers, rests with the Trustees.

3. That the fact of an additional amount having been granted by the Legislature for the salary of the Curator does not in any way absolve the Trustees from the performance of any of the duties cast upon them by the Act.

4.

4. That the appointment of the late Curator was made by Professor Owen and George Macleay, Esq., under the authority of the Trustees, and receiving their instructions from the Board, through His Excellency Sir William Denison (himself an elective Trustee), who, in this as in all other matters connected with the appointment of the late Curator, acted on behalf and at the request of the Trustees.

5. The Trustees beg to call the attention of the Government to the absolute necessity that exists of filling up the vacancy with as little delay as possible, as the increasing amount of their collections require the careful supervision of, and arrangement by a competent Curator, not only for exhibition to the public, but for their preservation from damage and destruction. Finally, the Trustees again desire to submit the arrangement proposed in their letter of December 5th, 1861, to the Government, for their approval.

I have, &c.,
GERARD KREFFT,
Acting Curator.

No. 7.

THE UNDER SECRETARY to TRUSTEES OF AUSTRALIAN MUSEUM.

*Colonial Secretary's Office,
Sydney, 27 March, 1862.*

GENTLEMEN,

I am directed by the Colonial Secretary to acknowledge the receipt of a letter dated 3rd of January last, from the Acting Curator of the Australian Museum, respecting the appointment of a Curator in succession to the late Dr. Pittard, and to state that the delay which has occurred in replying to Mr. Krefft's letter, has arisen from Mr. Cowper's desire to look fully into the subject before coming to a final decision in the matter.

2. With reference to what is urged by the Trustees in this letter, and by the deputation from that body in the interview which he had with them in support of the principle contended for, the Colonial Secretary feels obliged to state that the further he has searched the more he has become confirmed in the opinions expressed in the former communications made to you.

3. Mr. Cowper must, in the first place, point out that the Trustees are in error in assuming that the appointment of the late Curator was made by Professor Owen and George Macleay, Esquire, under the authority of the Trustees, whose instructions were conveyed through His Excellency Sir William Denison, acting as one of the Trustees on behalf of, and at the request of the whole body. The real state of the facts is this:—Sir William Denison as Governor General, on behalf of the Government of New South Wales, addressed a despatch to the Secretary of State upon the subject of the appointment of a Curator in the following words, viz.:—

*"Government House,
Sydney, 6 May, 1859.*

"Sir,

"The Legislature of the Colony having placed at the disposal of the Government a sum of £700 per annum, as the salary of the Curator of the Museum at Sydney, I have requested Mr. George Macleay, who has lately gone to England, to put himself in communication with Mr. Owen, for the purpose of selecting a person thoroughly competent to take charge of an establishment which is likely to prove a most valuable assistance in developing the resources of the Colony.

* * * * *

"I have, &c.,
"W. DENISON."

4. A copy of the despatch of the Secretary of State, dated 30th August, 1859 received in reply, was forwarded to the Trustees, and the Government was entirely ignorant of any proceedings having been undertaken by that body, such as those stated in the Acting Curator's letter. Sir William Denison's communication to Mr. George Macleay was, in his capacity as Governor, with the concurrence of the Executive Council.

5. The Colonial Secretary has referred to the Act of the Imperial Parliament 26 Geo. 2, c. 22, and the evidence given before the Select Committee of the House of Commons, appointed to inquire into the condition and management of the British Museum in the year 1835. From these it appears that the Trustees of that Museum, as a body, have nothing to do with appointments to offices. The Archbishop of Canterbury, the Lord Chancellor, and the Speaker of the House of Commons are appointed as Official Trustees to deal with the patronage. The Principal Librarian is, upon their nomination, appointed by the Crown, under the Royal Sign Manual; and all other appointments are made by the three Trustees named.

6. The principle for which the Trustees of the Sydney Museum contend, does not therefore appear to be recognized in the Mother Country, and Mr. Cowper is persuaded that the view taken by him of the Act, and of the course which it is proper should be adopted in regard to such appointments as that of the Curator of the Museum, as previously explained, is correct.

I have, &c.,
W. ELYARD.

No. 8.

No. 8:

ACTING CURATOR to COLONIAL SECRETARY.

*Australian Museum,
Sydney, 8 May, 1862.*

SIR;

I am directed by the Trustees of the Australian Museum to acknowledge the receipt of your letter dated March 27, in reply to which the Trustees have desired me to enclose a copy of a series of resolutions passed at a special meeting of the Board held this day.

I have, &c.,
GERARD KREFFT,
Acting Curator.

[Enclosure in No. 8.]

*COPY of Resolutions passed at a Special Meeting of the Trustees of the Australian Museum,
held May 8th, 1862.*

THE Colonial Secretary's letter of the 27th March, 1862, having been read, the Trustees resolve as follows:—

1st. That by the Act of Incorporation the appointment of all the officers of the Institution is by law vested in them only.

2nd. That the Trustees are of opinion that the Legislature having voted an amount for the salary of Curator whilst this law existed, must be taken to have granted it with the knowledge that the appointment would rest with the Trustees, and therefore that they are entitled to the disposition for that purpose of the amount so voted.

3rd. That independently of the question as to the right of appointment of the Curator, which, of course, confers also the right of dismissal, the Trustees are of opinion that they would not have that control over an officer not appointed by them which would be essential to the due management of the Museum.

4th. That the Curator is not an officer of the Government, but an officer of an Institution endowed by the Parliament in the same manner as the University, the Benevolent Asylum, the Sydney Infirmary, and similar Institutions.

5th. That the Government has already recognized the right of the Trustees to appoint the Curator. In the case of Mr. Pittard, this appointment was made by them through the instrumentality of His Excellency Sir W. T. Denison, acting as one of the elected Members of the Board, and not as Governor General, as communicated by their Secretary's letter to you, from which the following is an extract:—
"I am directed by the Trustees to inform you, that having entrusted the selection of a competent gentleman to fill the office of Curator, to Professor Owen and Mr. George Macleay, they have, after much trouble and inquiry, chosen Mr. S. R. Pittard, a Member of the Royal College of Surgeons of London, and Demonstrator of Anatomy at the Grosvenor-place School, as the most eligible of the candidates who presented themselves for the appointment, &c."

The Colonial Secretary's reply of the 24th February, 1860, acknowledges the receipt of the above letter, and in his second paragraph states as follows:—

"In reply I am directed by the Colonial Secretary to state that no payment can be allowed, except of sums actually agreed to or paid by the gentleman who undertook to make the engagement, &c."

The Trustees consider that it is clear from this correspondence that the right of the Trustees was not disputed by the Government.

6th. That with respect to the despatch addressed by His Excellency Sir W. T. Denison, to the Secretary of State, and the reply to that despatch, it is sufficient to state, that neither the Board nor any of its members were aware of either of them, and that no copy of that reply, stated to have been forwarded to them, has ever been received by the Trustees.

7th. That the Trustees regret the determination which the Colonial Secretary has arrived at, as the non-appointment of a Curator at a time when his services are particularly required, must materially injure, not only the institution but the public, by depriving them of the lectures which the Curator would give.

8th. The Trustees cannot, for the reasons herein before given, consent to incur the responsibility of managing an institution with an officer who would, in fact, be independent of their control, and they therefore cannot admit the right of the Government to the appointment, nor indeed the policy of vesting it in any other body but the Trustees.

9th. Under these circumstances the Trustees must endeavour, to the best of their ability, to carry on the Institution with the present acting Curator, who also fills the office of Secretary, and whose joint occupations will necessarily prevent him from devoting all that care, as Curator, which the Museum imperatively demands. The blame, should the Institution not prosper as the Trustees would desire, will not rest with them.

10th. The Trustees are under the impression that the Government only refuse to them the right of appointment of the Curator, from a belief that the Constitution Act of the Colony renders it imperative on the Government to nominate such an officer,—an interpretation of the law in which this Board cannot concur. They would suggest, however, to the Colonial Secretary, that, in order to solve the difficulty, the Government should place the amount of the salary of the Curator on the ensuing Estimates, as an addition to the Endowment Fund, indispensable to the proper management of the Institution.

11th. The Trustees are extremely anxious to procure the services of a thoroughly qualified Curator, and, if the salary be granted, propose to request two or more of the most distinguished naturalists in England to select such a person for the appointment. At present they have heard of no person qualified for the office.

12th. That a copy of these Resolutions be forwarded to the Colonial Secretary, in reply to the letter from his office of the 27th March, 1862.

I certify this to be a correct copy.

GERARD KREFFT,
Acting Curator.

No. 9.

DESPATCH from the Secretary of State, of the 30th August, 1859, referred to in the Under Secretary's letter (No. 7), and of which it is recorded that a copy was sent to the Secretary to the Trustees (Mr. Angas) on the 9th December, 1859.

(No. 17.)

*Downing-street,
30 August, 1859.*

SIR,

2700 I have received your Despatch, No. 41, of the 6th of May last, informing me, with reference to your previous Despatch of the 31st of January, No. 9, on the importance of developing the mineral resources of New South Wales, that the Legislature of the Colony have placed the sum of seven hundred pounds per annum at the disposal of the local Government, as the salary of the Curator of the Museum at Sydney, and that Mr. George Macleay, who is now in this country, has been requested to consult with Professor Owen, with a view to securing the services of a person well qualified to fill the situation in question.

You also express a wish that the Curator, when selected, may be authorized to place himself in communication with the Head of the Museum of Economic Geology, for the purpose of obtaining such duplicate specimens of minerals and fossils as can be spared by that department, and on this subject I have to refer you to my predecessor's Despatch, No. 42, of the 16th of May last (in reply to yours above referred to), enclosing a copy of a letter from Sir R. Murchison, in which he states the difficulty of affording the desired assistance, but points out the mode in which he considers that such collections might best be formed. If Mr. Macleay, or the new Curator, should apply to this department, he will be placed in communication with Sir R. Murchison, who will no doubt afford any advice or assistance in his power.

I have, &c.,
NEWCASTLE.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUSEUM OF COLONIAL PRODUCTS.

(LETTER FROM EDWARD HAMILTON, ESQ., RELATIVE TO THE ESTABLISHMENT IN LONDON OF A.)

Ordered by the Legislative Assembly to be Printed, 11 September, 1862.

EDWARD HAMILTON, ESQ., to COLONIAL SECRETARY.

5, Cannon-street, London,
26 July, 1862.

SIR,

I have the honor to inform you that a meeting has been held, for the purpose of considering the feasibility of establishing in London a Museum of the products, raw and industrial, of the Colonial Empire of Great Britain. It was attended by many of the Colonial Exhibition Commissioners, and by other gentlemen interested in the Colonies; and a number of resolutions were passed, approving the object, and determining on a certain course of action pending communication with the various Colonial Governments.

It is, I fear, more than probable that the application for temporary accommodation and support may not be entertained by Her Majesty's Government; but, on the other hand, the scheme is so generally approved, that it is not impossible that other arrangements will be made, with a view to prevent the dispersion of the whole of the Colonial collections on the close of the Exhibition. I therefore feel that the subject ought to be brought under your notice without delay.

If the collection is temporarily kept together, the ultimate fate of the project will depend on the amount of support promised by the Colonies. If the Colonies will provide for the annual charges incident to such an establishment, every difficulty will be removed; and I believe that, in the course of a few years, the Museum will adequately represent the boundless and at present unknown resources of the Colonial Empire of this country.

No definite information has as yet been given as to the amount of the annual charges, but it is not at all probable that it will exceed £1,500. If each Colony contributes according to its revenue, the contribution of New South Wales would be about £140—£150; and I hope to receive from you authority to promise co-operation to that extent.

Another question, involving a heavier expenditure, will ultimately arise, though it may be postponed for some years, that is the erection of a suitable building. I trust, however, that the prospect of such a charge will not influence you in considering the very limited proposal now submitted to you. My belief is, that the value of a Colonial Museum in London will be fully acknowledged as soon as it is opened, and that it will then receive support from various quarters from which at present it gets but little encouragement.

Applications have been received by all the Colonial Commissioners from the different Museums in this country—all are interested in getting portions of the Colonial collections; and if the project now under consideration fails, such an appropriation of these collections would, I feel sure, be fully approved by the Colonial Government; but the distinctive value of them would then be lost; the main object being to show the natural and industrial resources of each portion of the Colonial Empire, its progressive development, and its eligibility for settlement.

I have, &c.,
EDWD. HAMILTON.

[Enclosure.]

At a Meeting of Commissioners representing the British Colonies at the International Exhibition, and other gentlemen connected with the Colonies, held in the Board Room of the Royal Horticultural Society, South Kensington, on Friday, July 18, 1862;—

Present :—Sir R. G. MacDonnell, C.B., (South Australia); Sir H. E. Young, Joseph Milligan, M.D., and J. A. Youl, Esqs. (Tasmania); Sir Daniel Cooper, Sir William Macarthur, Edward Hamilton, Esq., and S. S. Cowper, Esq. (New South Wales); Sir Redmond Barry, and C. E. Bright, Esq. (Victoria); M. H. Marsh, Esq., M.P. (Queensland); Sir Charles Clifford (New Zealand); B. Chamberlin, Esq., and Dr. Hurlbert (Canada); Hon. A. J. Langley (Vancouver Island); T. Daniel, Esq. (New Brunswick); H. Haszard, Esq. (Prince Edward's Island); Hon. F. V. Inglott (Malta); James Morris, Esq. (Mauritius); S. Harris, Esq. (Bahamas); Dr. Stacpoole (St. Vincent); P. L. Simmonds, Esq. (Dominica); Dr. J. Forbes Watson, Reporter on Indian Products, Professor J. Wilson, &c.;—

Sir Daniel Cooper was voted to the Chair.

Mr. P. L. Simmonds, Deputy Superintendent of the Colonies at the International Exhibition, acting as Honorary Secretary, read letters of excuse from the following gentlemen, regretting their unavoidable absence, but expressing their hearty concurrence in the projected movement for the establishment of a Colonial Museum, and their desire to co-operate in every way possible :—A. M. Uniacke, Esq., Commissioner for Nova Scotia; E. B. Power, Esq., Commissioner for Ceylon; Professor Miles, Hon. Commissioner for Canada; Alexander Andrews, Esq., Commissioner for Western Australia; N. Solomon, Esq., Commissioner for St. Helena; Robert Hunt, Esq., F.R.S., and others.

The following Resolutions were unanimously passed :—

Proposed by Edward Hamilton, Esq.; seconded by B. Chamberlin, Esq. :—

1. That it is desirable to establish in London a Museum for the exhibition of the products of the British Colonies.

Proposed by Sir William Macarthur; seconded by James Morris, Esq. :—

2. That the present time, when complete collections of these products exist in the International Exhibition, is an eligible opportunity for commencing this important project.

Proposed by the Hon. F. V. Inglott; seconded by M. H. Marsh, Esq., M.P. :—

3. That the Commissioners acting for the various Colonies at the International Exhibition be requested to present to the Museum such portions of the collections in their charge as are at their disposal.

Proposed by Sir R. G. MacDonnell, C.B.; seconded by J. A. Youl, Esq. :—

4. That Her Majesty's Government be requested to provide a building for the temporary accommodation, and a small sum of money for the temporary superintendence of such contributions.

Proposed by M. H. Marsh, Esq., M.P.; seconded by T. Daniel, Esq. :—

5. That the Commissioners of the various Colonies be requested to bring this project under the notice of the Colonial Governments which they respectively represent, and to urge upon them the importance of providing funds, each according to its revenue, for the foundation and maintenance of the Museum.

Proposed by Dr. Joseph Milligan; seconded by C. E. Bright, Esq. :—

6. That the Museum shall be under the direction of a body of Trustees, and that each contributing Colony shall have the right to name its own Trustee.

Proposed by Sir Charles Clifford; seconded by the Hon. A. J. Langley :—

7. That a scientific Curator of competent ability shall, subject to the direction of the Trustees, have charge of the Museum.

Proposed by Edward Hamilton, Esq.; seconded by J. A. Youl, Esq. :—

8. That the Commissioners of the various Colonies wait upon His Grace the Duke of Newcastle, to request him to support the project and use his influence in Parliament to obtain the temporary assistance required. That Mr. Simmonds, the Honorary Secretary, communicate, on behalf of this Meeting, with His Grace the Duke of Newcastle, to ascertain when His Grace will be willing to receive the Colonial Commissioners on the subject embodied in the foregoing Resolutions.

AUSTRALIAN LIBRARY.

No. 1.

UNDER SECRETARY FOR WORKS to SECRETARY TO AUSTRALIAN LIBRARY.

*Department of Public Works,
Sydney, 22 April, 1862.*

SIR,

I am directed to request that you will have the goodness to inform me whether the Committee are prepared to accept an offer (£6,000) for the building in Bent and Macquarie streets known as the Australian Subscription Library; as, if so, Mr. Secretary Arnold will recommend the purchase of the building in question by the Government, to be used as Public Offices.

I have, &c.,
JOHN RAE.

P.S.—The favour of an early answer is requested, as other parties who have offered premises for the purpose of Offices are pressing the Minister for a decision.

No. 2.

UNDER SECRETARY FOR WORKS to SECRETARY TO AUSTRALIAN LIBRARY.

*Department of Public Works,
Sydney, 29 April, 1862.*

SIR,

I am directed by the Secretary for Public Works to invite your attention to my letter of the 22nd instant, relative to the proposal of the Government to purchase the building known as the Australian Library, and to request the favour of your early reply.

I have, &c.,
JOHN RAE.

No. 3.

HONORARY SECRETARY TO AUSTRALIAN LIBRARY to UNDER SECRETARY FOR WORKS.

*Australian Library,
30 April, 1862.*

SIR,

I have the honor to acknowledge the receipt of the letter of the Under Secretary, of date the 22nd instant, requesting to be informed whether the Committee are prepared to accept £6,000 for the building described as the Australian Subscription Library; and having this day laid that letter before the Committee, as well as another of yesterday's date, requesting an early reply, have been directed to state that the Committee do not feel that they can entertain the above offer, but that if the Government were to offer £8,000 for the property, the Committee (who have not the power themselves to conclude a sale) would recommend the shareholders to accept that price.

I have, &c.,
R. A. A. MOREHEAD,
Honorary Secretary.

No. 4.

UNDER SECRETARY FOR WORKS to SECRETARY TO AUSTRALIAN LIBRARY.

*Department of Public Works,
Sydney, 2 May, 1862.*

SIR,

In acknowledging the receipt of your letter of the 30th instant, stating that if the Government were to offer to purchase the Australian Subscription Library Building for £8,000, the Committee would recommend the shareholders to accept the same, I am directed to inform you, that the Estimate which the Secretary for Public Works has obtained puts down the value of the building in question at £6,000, and he could not therefore recommend that an offer of £8,000 should be made for it; but if, I am to add, the Committee or the shareholders would consent to have the value decided by arbitration, the Secretary for Public Works would recommend that the amount estimated by the arbitrators as the value of the building should be provided for on the next Estimates, for the purchase of the same.

I have, &c.,
JOHN RAE.

No. 5.

No. 5.

ASSISTANT SECRETARY TO AUSTRALIAN LIBRARY to UNDER SECRETARY FOR WORKS.

*Australian Library, Bent-street,
10 May, 1862.*

SIR,

I am directed by the Committee of the Australian Library to inform you, in reply to your letter of the 2nd instant, proposing that the value of the Library Buildings should be decided by arbitration, that the Committee decided, at a Meeting held this day, "that a Special General Meeting of the proprietors and shareholders be called for Wednesday the 28th instant, for the purpose of deciding upon the proposal submitted by the letter of the Secretary for Works."

The Committee regret that they cannot shorten the time for the holding the Meeting, the Library Act requiring such notice to be given.

I have, &c.,
P. J. ELLIOTT,
Librarian, &c.

No. 6.

UNDER SECRETARY FOR WORKS to SECRETARY TO AUSTRALIAN LIBRARY.

*Department of Public Works,
Sydney, 16 May, 1862.*

SIR,

I am directed by the Secretary for Public Works to acknowledge the receipt of your letter of the 10th instant, stating that a Special General Meeting of the proprietors and shareholders of the Australian Library will be called for Wednesday the 28th instant, for the purpose of deciding upon the proposal of the Government to purchase the Library Buildings in Bent-street for Public Offices.

I have, &c.,
JOHN RAE.

No. 7.

ASSISTANT SECRETARY TO AUSTRALIAN LIBRARY to UNDER SECRETARY FOR WORKS.

*Australian Library,
Sydney, 5 June, 1862.*

SIR,

Referring to your letter of the 2nd ultimo, I am directed to inform you that the Committee are now prepared to accede to the proposal of the Honorable the Secretary for Works, viz.,—that the value of the building shall be decided by arbitration, provided that the arbitrators determine the value without reference to the previous negotiations between the Works Department and the Committee.

The Committee cannot bind the shareholders to accept the price put on the building by the arbitrators, but they undertake to recommend them to do so; and, on the other hand, they understand that the payment of the price by the Government will be conditional on Parliament voting the money, the Honorable the Secretary for Works undertaking to place the amount on the Estimates of the present year.

I have further to intimate that the Committee have decided on requesting Mr. T. W. Smart, M.P., to act as arbitrator for the Library.

I have, &c.,
P. J. ELLIOTT,
Assistant Secretary.

No. 8.

UNDER SECRETARY FOR WORKS to ASSISTANT SECRETARY TO AUSTRALIAN LIBRARY.

*Department of Public Works,
Sydney, 9 June, 1862.*

SIR,

In acknowledging the receipt of your letter of the 5th instant, stating that the Committee of the Australian Library are now prepared to accede to the proposal that the value of the Library Building, which the Government desire to purchase for Public Offices, should be decided by arbitration, provided that the arbitrators determine the value without reference to the negotiations that have already taken place between the Committee and this department, on the subject,—I am directed by the Secretary for Public Works to inform you that this provision is satisfactory, as are also the other proposals contained in your letter, relative to the steps to be taken on the decision of the arbitrators being known.

2. With reference to the arbitrators, I am to inform you that the nomination by you of T. W. Smart, Esq., M.P., as arbitrator for the Library, is quite unobjectionable, it being of course presumed that that gentleman has no interest in the question; and I am to promise that the arbitrator on behalf of the Government shall be nominated in a day or two.

I have, &c.,
JOHN RAE.

No. 9.

No. 9.

UNDER SECRETARY FOR WORKS to ASSISTANT SECRETARY TO AUSTRALIAN LIBRARY.

*Department of Public Works,
Sydney, 16 June, 1862.*

SIR,

With reference to my letter of the 9th instant, I am now directed by the Secretary for Public Works to propose Mr. Thomas Cowlshaw, of the Railway Branch of this Department, as arbitrator on behalf of the Government, for determining the value of the Australian Subscription Library Building.

I have, &c.,
JOHN RAE.

Sydney: Thomas Richards, Government Printer.—1862.

[Price, 1d.]

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

AUSTRALIAN LIBRARY.

(FURTHER CORRESPONDENCE RESPECTING PURCHASE OF.)

Ordered by the Legislative Assembly to be Printed, 19 September, 1862.

HONORARY SECRETARY, AUSTRALIAN LIBRARY, to COLONIAL SECRETARY.

Australian Library and Literary Institution,
Sydney, 15 September, 1862.

SIR,

Referring to the communications that have recently taken place between the Government and the Committee of Management of this Institution, on the subject of the proposed purchase by the former of the Library Building, I have now the honor to intimate that the Proprietors and Shareholders have decided not to sell the Building at the price that has been put upon it by arbitration.

Understanding, however, that the Government is desirous of commencing a Free Public Library in temporary premises, as soon as practicable, and being of opinion that the possession of the present Library Building and collection of Books would enable the Government to make such a commencement in a very advantageous manner, the Proprietors and Shareholders, at a meeting held on the 25th ultimo, empowered the Committee to offer the Building and Books to the Government for such sum as they (the Committee) might judge sufficient, subject to the approval of a Special General Meeting.

In virtue of this authority, the Committee now offer the property above indicated for the sum of £10,000 (ten thousand pounds); and I am desired to add that the Committee will feel obliged if the Government will, with as little delay as is convenient, definitely accept or decline the above offer, as the Committee do not feel they will be warranted in entertaining a proposition for a sale at any lower price.

There is no catalogue of the Books belonging to the Institution which the Committee can guarantee as absolutely correct; the Librarian, however, has been instructed to make up as accurate a catalogue as he can, and I now transmit the result of these instructions, which consists of three volumes, two in print, and one in manuscript.

The Committee believe the contents of the Library to be no less than is represented in this catalogue, but they wish it to be distinctly understood that they give no further assurance on this head, and desire that the Government may satisfy itself as to the character and value of the property now placed conditionally under offer.

The Librarian has further made out an abstract of the contents of the Library classified according to subject, and this I have the honor to append, with the above qualified statement as to its accuracy.

This shows a smaller total than has been recently represented to the Committee, but the books that may be considered fairly suitable for the Institution contemplated by the Government, are, I believe, more numerous than either the Government or the Committee had anticipated; the number of volumes, after deducting works of fiction, amounting in round numbers to ten thousand, and constituting, the Committee are confident, on the whole, a very valuable collection of books.

I have, &c.,

R. A. A. MOREHEAD,

Honorary Secretary.

LIVERPOOL AND LONDON FIRE AND LIFE INSURANCE
COMPANY'S BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, to whom was referred, on the 20th instant, the "*Liverpool and London Fire and Life Insurance Company's Bill*," beg leave to report to your Honorable House,—

That they have examined the Solicitor for the Bill,* whose *Mr. W. Barker evidence is appended hereto, and that the Preamble, as *formally* amended,† having been proved to the satisfaction of your Committee, + Vide Schedule of Amendment, p. 4. they proceeded to consider the several clauses of the Bill, in which it was not deemed expedient to make any amendment.

And your Committee now beg to lay before your Honorable House the Bill, as amended by them.

CHARLES COWPER,

Chairman.

Legislative Assembly Chamber,

Sydney, 26 June, 1862.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 26 JUNE, 1862.

MEMBERS PRESENT:—

| | |
|-------------|----------------|
| Mr. Cowper, | Mr. Garrett, |
| Mr. Gordon, | Mr. Alexander. |

Mr. Cowper called to the Chair.

Printed copies of the "Liverpool and London Fire and Life Insurance Company's Bill" on the Table.

Present for the Promoters:—Mr. W. Barker, *Solicitor for Bill*.

Mr. W. Barker, *Solicitor*, examined.

Room cleared.

Committee proceeded to consider Preamble of the Bill,—and,

The style of the latter part thereof having been amended (*Vide Schedule of Amendments*);—

Motion made (*Chairman*), and *Question*,—That the Preamble, as amended, stand part of the Bill,—*agreed to*.

Solicitor for Bill called in and informed.

The several clauses of the Bill then read and agreed to without amendment.

Draft Report submitted by *Chairman*, read, and agreed to.

To report.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

LIVERPOOL AND LONDON FIRE AND LIFE
INSURANCE COMPANY'S BILL.

THURSDAY, 26 JUNE, 1862.

Present:—

MR. ALEXANDER,
MR. COWPER,MR. GARRETT,
MR. GORDON.

THE HONORABLE CHARLES COWPER, ESQ., IN THE CHAIR.

William Barker, Esq., appeared as Solicitor on behalf of the Promoters of the Bill.

William Barker, Esq., examined:—

1. *By the Chairman:* You are the Solicitor for this Bill? I am. As the evidence I have to produce in support of the allegations of the preamble is documentary, I have not thought it necessary to request the attendance of witnesses, but am prepared to give the Committee a history of the Company, if they wish it.
2. Will you proceed? The Company was originally established by a Deed of Settlement, dated 21st May, 1836, under the name of the "Liverpool Fire and Life Insurance Company," for the purpose of carrying on the business of insurance in all its branches. An Act of the Imperial Parliament was afterwards passed, 6 and 7 William IV., chapter 119, for the purpose of enabling the Company to sue and be sued in the name of the Chairman or of any of the Directors. Subsequently, another Act was passed, the 11th Victoria, for the purpose of changing the name of the Company from the "Liverpool Fire and Life Insurance Company" to the "Liverpool and London Fire and Life Insurance Company." In the month of February, 1851, a supplemental Deed of Settlement was executed, for the purpose of authorizing the Company to appoint Local Boards in the various cities in the United Kingdom, and also in the various Colonies and Possessions abroad. A Local Board has, under the authority of that deed, been for some time established in Sydney, and it has been found expedient, for the more conveniently enabling persons who may have claims against the Company to sue them, to apply to the Legislature for the Act now before the Committee. It is an Act to enable the Company to sue and be sued in the name of the Company, but without incorporating it or limiting their liability in any way. The Company have not, since they have been carrying on business in the Colony, found it necessary to sue for any purpose; but they have been sued on three or four occasions in the very manner they seek to have the power legally given to be sued by this Act. It has been found convenient, on the part of the Company, to allow themselves hitherto to be sued in this way, although the Company might have raised an objection; but in order that parties may have no inconvenience or risk whatever, we now ask for this Act, to enable the Company to sue and be sued in the name of the Company.
3. What is the capital of the Company? Two millions, of which one hundred and eighty-nine thousand has been paid up.
4. How do the Local Directors hold their appointments? They are appointed by the Board of Directors in England.

William
Barker, Esq.
26 June, 1862.

5.

William
Barker, Esq.
26 June, 1862.

5. How long has the Company been in operation in Sydney? It has been in operation in Sydney for several years—since September, 1853.
6. Can you state to what extent they have carried on transactions in this Colony? They have carried on business in this Colony to a very large amount, and they have a very large amount of capital invested at the present time in the Colony. I believe there is at the present time upwards of £156,000 invested in the Colony.
7. Do you mean lent? Lent on mortgage security in the Colony, and deposited with the bankers.
8. How is it you have got on so long without an Act? The Company have never found any inconvenience, because they have never had occasion to sue; and in the actions that have been commenced against the Company, they have been irregularly and improperly brought against the Company, in the name of the Company, as though they were incorporated, and they might have objected, being unincorporated, and the actions must then have failed. The object of this Bill is to remove this difficulty.
9. It is generally to facilitate your transactions with the public? It is to facilitate the public in prosecuting claims against the Company. Inconvenience was felt in a prosecution conducted by the Government at Maitland, in March last year, in shewing in whom the property was vested.
10. Then of course the Company are indirectly interested in this Bill, inasmuch as parties may now go to other Companies where they may have an easier remedy than they now have against you? No doubt; I believe there is a general impression that the Company is incorporated, and so long as the questions were to be fairly tried the Company did not care how they were sued.
11. *By Mr. Garrett:* Is not the Company incorporated by the British Parliament? No, on the contrary, there is a clause declaring that the Act shall not be deemed to incorporate the Company. I am not aware that the British Parliament has ever incorporated an Insurance Company so as to limit the liability of the shareholders.
12. *By the Chairman:* There is an unlimited liability on the part of the shareholders? There is.
13. Are these the whole of the members of the Local Board of Directors—J. S. Willis, Benjamin Buchanan, and Edward Knox? No, there are other Directors who are Members of the Legislature, and they felt that it would not be proper for them to sign the petition—the Honorable E. Deas Thomson, and the Honorable Mr. Watt are also Directors.
14. “Whereas a Joint Stock Company has been for some time established in England by the name of ‘The Liverpool and London Fire and Life Insurance Company’ with power to appoint Local Boards of Directors in any District City Town or place in any Colony or Possession of the United Kingdom”: Your evidence goes to that effect? It does.
15. “And whereas a Local Board of the said Company has been duly appointed in the City of Sydney in this Colony for carrying on and managing in this Colony for and on behalf of the said Company the business of Fire and Life Assurance and all matters connected therewith and for other purposes in connection with the affairs and business of the said Company”: That you also prove? Yes.
16. “And whereas it is expedient that provision should be made for enabling the said Company to sue and be sued in this Colony in the name of the said Company but without incorporating the same”: That also you have proved? Yes.

PACIFIC FIRE AND MARINE INSURANCE COMPANY'S
INCORPORATION BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, to whom was referred, on the 21st instant, the "*Bill to incorporate the Pacific Fire and Marine Insurance Company,*" beg leave to report to your Honorable House,—

That they have examined the Solicitor for the Bill,* and the Chairman† and Manager‡ of the Company, (whose respective evidence will be found appended hereto), and that the Preamble having been satisfactorily proved by the evidence of those gentlemen, they proceeded to consider the enacting part of the Bill, in which they deemed it expedient to make certain amendments.§

*Mr. G. P. Slade.

†Mr. J. L. Montefiore.

‡Mr. C. M. Smith.

§Vide Schedule of Amendments.

And your Committee now beg to lay before your Honorable House the Bill as amended by them.

SAUL SAMUEL,
Chairman.

*Legislative Assembly Chamber,
Sydney, 23 October, 1862.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 23 OCTOBER, 1862.

MEMBERS PRESENT:—

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PACIFIC FIRE AND MARINE INSURANCE COMPANY'S
INCORPORATION BILL.

THURSDAY, 23 OCTOBER, 1862.

Present :—

| | | |
|--------------|--|-------------|
| MR. GORDON, | | MR. MATE, |
| MR. HART, | | MR. SAMUEL, |
| MR. HOSKINS, | | MR. SMART. |

SAUL SAMUEL, ESQ., IN THE CHAIR.

George P. Slade, Esq., appeared as Solicitor on behalf of the promoters of the Bill, and was examined :—

1. *By the Chairman*: Do you desire to give evidence yourself? I desire to give evidence myself, in the first instance, as to some preliminary points. I am one of the solicitors to the promoters of this Bill. The Company are desirous of obtaining an Act of Incorporation, with the usual view of facilitating proceedings either by or against the Company. The Act is framed in all respects upon precedent. We desire no unusual powers, and particularly no power to limit the liability. The deed is signed by 157 of the shareholders; the preamble of the Bill is true, and the facts therein stated are correct. G. P. Slade,
Esq.
23 Oct., 1862.
2. *By Mr. Hart*: Do you produce the deed of settlement? I do. (*The witness produced the same.*)

Jacob Levi Montefiore, Esq., called in and examined :—

3. *By Mr. Slade*: Are you the Chairman of the Pacific Fire and Marine Insurance Company? I am. J. L. Mon-
tefiore, Esq.
23 Oct., 1862.
4. What was the object of the formation of this Company? The effecting fire and marine insurances in Sydney.
5. Limited to Sydney? In Sydney, and elsewhere.
6. Was it, prior to the promotion of this Company, considered desirable that such an institution should be incorporated? It was.
7. In addition to such institutions of a similar nature as may exist here? At the present moment the larger proportion of the fire insurances of the Colony are transacted by English offices. I think there are thirteen foreign offices, and it was considered desirable that a new Company should be formed, in order that the larger proportion of the profits arising from that business should be secured by the capital of the Colony.
8. Apart from that object, was there not need for such a Company with the view of acceptance of increased risks? There was; for even with the extended number of foreign offices, a large number of risks are still insured in England.

- J. L. Montefiore, Esq.
23 Oct., 1862.
9. Do you happen to know whether the shareholders paid up their calls readily and willingly? Yes.
10. From what time did the Company commence business? From the 14th August.
11. This Bill is required simply for the usual purpose of facilitating proceedings by and against the Company? That is all.
12. You have read the preamble of the Bill? I have.
13. Are the facts as stated there? They are.
14. *By Mr. Hart*: What is the amount of capital of the Company? Do you mean the nominal capital, or the amount of actual paid-up capital?
15. Nominal capital? £500,000.
16. What amount of capital has been subscribed? The amount that was paid up by shareholders, on signing the deed of settlement, was £20,000. The deed of settlement in one of the clauses gives authority to the directors, should they consider it necessary so to do, to call a further sum of £20,000.
17. What amount of deposit has been paid? £2 per share.
18. Do you think it would be advantageous to the mercantile and shipping interests to have a Company of this nature? I entertain no doubt of it.

Colin McKay Smith, Esq., called in and examined:—

- Colin McKay Smith, Esq.
23 Oct., 1862.
19. *By Mr. Slade*: You are the Manager of the Pacific Fire and Marine Insurance Company? I am.
20. What is the capital of the Company? The nominal capital is £500,000—the paid-up capital £20,000.
21. The latter is actually paid-up? Yes.
22. Have the persons representing that capital all signed the deed? They have all signed, with the exception of one individual representing ten shares.
23. The call was readily paid, I believe? Yes.
24. When did the Company commence business? On the 14th August.
25. You have had considerable experience, have you not, in the fire and marine insurance business, in Sydney and elsewhere? Yes.
26. Previous to the erection of this Company were you aware of the necessity or occasion of the erection of a new Company for either of those purposes? Yes.
27. In the words of the preamble, you think it will be advantageous “to the mercantile and shipping interests” of this Colony, that this Company should be erected and incorporated? Yes, I do.
28. *By Mr. Stewart*: Is this the original deed (*referring to the Deed of Settlement produced by Mr. Slade*)? Yes.
29. Are these the signatures of the proprietors? Yes.
30. *By the Chairman*: Some of the proprietors have changed since the execution of that deed? There are a few additional proprietors; some of the original proprietors have sold out.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

UNITED FIRE & LIFE INSURANCE COMPANY.

TUESDAY, 4 NOVEMBER, 1862.

Present :—

MR. COWPER,
MR. SAMUEL,

MR. PIDDINGTON,
MR. MORRIS.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

Mr. Teale, solicitor, appeared on behalf of the Promoters.

Mr. William Rae called in and examined :—

1. *By Mr. Teale*: You are the Secretary of the United Fire and Life Insurance Company of Sydney? I am. Mr. W. Rae.
2. You produce the deed of settlement? I do. 4 Nov., 1862.
3. What is the date of it? The first day of September, 1862.
4. Can you tell us what are the objects of the Company, as stated in the deed? It is a Fire and Life Insurance Company, for the purpose of effecting and granting insurances on all kinds of movable and immovable property against the risk of damage or destruction by fire; and assurances or insurances on lives and survivorships, or against any contingency involving the duration of human life; the purchasing, granting, or sale of annuities, certain or on lives present, deferred, or reversionary; the purchasing and granting of endowments; and of carrying on the business of a Fire and Life Insurance Company in the Colony of New South Wales, and in any other place or places within the Australian Colonies, including New Zealand.
5. *By the Chairman*: How many signatures have you to the deed of settlement? About 230.
6. What is the amount of capital? £500,000.
7. In how many shares? In 25,000 shares.
8. How much of the capital is paid up? £1 per share.
9. All subscribed for? Yes.
10. And the directors are appointed? They are.
11. *By Mr. Teale*: It is expedient that the Company should be incorporated? Yes, to enable them to commence and carry on business.
12. *By Mr. Samuel*: Have you power in the deed to create a marine branch? Yes; it is similar to clause 3 in the Bill.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

COAL FIELDS REGULATION BILL.

(CERTAIN COAL MINERS, HUNTER RIVER DISTRICT.)

Received by the Legislative Assembly, 10 June, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly for the Colony of New South Wales.

The humble Petition of the undersigned Coal Miners, in the Hunter River District,—

SHEWETH:—

That your Petitioners, being Coal Miners employed in the Coal Mines of the Colony of New South Wales, are desirous of submitting for your favorable consideration the necessity and expediency of legal provision being made for the proper inspection, ventilation, and better regulation of Mines in the said Colony of New South Wales.

And insomuch as the Coal-mining interest of the Colony is rapidly extending, and in proportion as this extension has taken place, the risk and liability to danger has increased also.

That considering the hazardous nature of this employment at all times, and its pernicious effects upon the health, when followed under unfavourable circumstances, such as a lack of effective ventilation, and an absence of a general and scientific supervision and control over the management and method of working these Mines, your Petitioners have arrived at the conclusion that a system of general inspection should be introduced, for the preservation of health, the prevention of accidents, and the protection of life; and that further neglect of such regulations will be prejudicial not only to the interests of your Petitioners, but to the welfare of society generally.

We, your humble Petitioners, are aware that a Bill for the better regulating of Coal Mines is now before the Honorable the House of Assembly, and we beg leave to draw your attention to the necessity of inserting in the said Bill the following measures, which recent experience has suggested.

That from the frequent number of terrific disasters amongst Miners, produced by one shaft only being sunk at one time, as instanced in the late fearful catastrophe at Hartly Pit, England, your Petitioners are convinced that there is no safety for themselves or security for their families from destitution, while your Petitioners are exposed to the dangerous conditions of single-shafted Mines.

Your Petitioners humbly pray that two distinct shafts be sunk to any seam of coal previous to its being worked, and that an underground communication be at once made between them in the coal to be first worked.

That your Petitioners humbly submit that the practice of employing boys in the Mine under fourteen years of age, more than eight hours per day, does not afford sufficient opportunity for obtaining an adequate amount of education, and is the principal cause of the low social condition of the mining classes.

Your Petitioners therefore humbly pray that some provision may be made and introduced in the Bill now before the Honorable House of Assembly for the education of those employed in the Mine under fourteen years of age.

Your Petitioners also humbly pray that a clause may be inserted in the Bill for the better regulating of Coal Mines, providing for a fair system of weighing the Miners' coals on the pit bank, thereby putting a stop to the constant disputes arising from the absence of such an enactment.

And your Petitioners, if required, will be ready to tender such evidence as experience may have taught in behalf of this their humble Petition. And they, as in duty bound, will ever pray, &c., &c., &c.

[Here follow 636 Signatures.]

Clause 34 read and agreed to without amendment.
Clause 35 read.

Motion made (*Mr. Lucas*) and *Question proposed*,—That the words “one hundred” in line 4 be omitted, with the view to the insertion in their place of the word “fifty.”

Question put,—That the words proposed to be omitted stand part of the clause.
Committed divided.

| | | |
|---|--|----------------------------|
| Ayes, 3. | | Noes, 2. |
| Mr. Samuel, Mr. Garrett, Mr. Hannell. | | Mr. Lucas, Mr. Sadleir. |

Clause, as read, then agreed to.
Clauses 36 to 80 read and agreed to without amendment.
Clause 81 read and negatived.
Clause 82 read.

Motion made (*Mr. Garrett*) and *Question*,—That the first word “for” in line 1 be omitted, with the view to insert in its place the words “All such land as shall be taken under the provisions of this Act for,”—*agreed to*.

Motion made (*Mr. Garrett*) and *Question*,—That the words “and subject to the provisions of this Act the land delineated and described on the said plan as aforesaid” be struck out—*agreed to*.

Words struck out accordingly.
Clause, as amended, agreed to.
Clauses 83 to 86 read and agreed to without amendment.
Clauses 87 and 88 read and negatived.
Clauses 89 and 90 read and agreed to.
Clauses 91, 92, 93, and 94 read and negatived.
Clauses 95 to 114 read and agreed to without amendment.
Schedules A, B, C, and D read and severally agreed to without amendment.

The Solicitor for the Bill here brought up a new clause, to stand clause 81 of the Bill, with a new schedule, E, in substitution of the plan annexed.

Mr. W. Weaver, *Engineer to the Company*, further examined.
New clause read, viz. :—

“ 81. It shall be lawful for the said Company to make construct and maintain a
“ Railway with all proper works and conveniences connected therewith upon
“ across and over the lands and in the direction delineated and described in
“ the Schedule E hereunto annexed commencing at a point on a parcel of
“ three hundred and twenty acres of land situated at or near Waratah in the
“ Parish of Newcastle in the County of Northumberland in the said Colony
“ selected by Thomas Grove and continuing to and terminating at or upon
“ the southern boundary of a parcel of one hundred and eighty-four acres of
“ land selected by Thomas Sutcliffe Mort near to the waters of the Hunter
“ River and it shall be lawful for the said Company to effect a junction
“ between the said line of Railway and the Great Northern Railway at or
“ near the point where the said line crosses such Great Northern Railway in
“ accordance with Section ninety-nine of the Government Railway Act of one
“ thousand eight hundred and fifty-eight And for the more conveniently
“ effecting such junction it shall be lawful for the said Company with the
“ consent of Robert Archibald Alison Morehead and Matthew Young to divert
“ and alter the course of the Railway now being constructed by them so far
“ only as may be necessary for the said Company to form a junction with the
“ said Great Northern Railway by a curve of approach of twenty chains radius
“ provided that in such alteration the curve of approach of the Railway so
“ diverted or altered shall be of no less radius and the altered line shall be
“ vested in the said Robert Archibald Allison Morehead and Matthew Young
“ and they shall have the same rights and powers in respect thereto as if the
“ land had been taken and the Railway made under the authority of the Act
“ passed to enable them to make their said Railway Provided also that such
“ Railway

Power to Com-
pany to make a
Railway.

" Railway shall be constructed and brought into use within the term of five years from the passing of this Act and that the said Company in constructing the same and in forming the junction with and crossing over the Great Northern Railway as aforesaid shall do so in a proper and workmanlike manner to the satisfaction of the Engineer in Chief for Railways and shall repair all damages caused by so doing."

Motion made and Question,—That the Clause as read stand Clause 81 of the Bill,—*put.*

Committee divided.

Ayes, 3.
Mr. Samuel,
Mr. Sadleir,
Mr. Hannell.

Noes, 2.
Mr. Lucas,
Mr. Garrett.

Two new Clauses proposed by Mr. Garrett, to stand as Clauses 92 and 93 respectively, of the Bill.

The same read, viz. :—

Railway open to the public.

" 92. The railway hereby authorized to be made and the locomotives shall be open to public use upon payment of a toll to the Company of three-pence per ton per mile for such carriage the party seeking transit supplying and loading his own trucks or waggons and all trucks when emptied shall be conveyed on their return free of cost.

Branch railways

" 93. And be it enacted that it shall be lawful for the owners or occupiers of the land traversed by the said railway to lay down upon their own lands any collateral branches of railway to communicate with the said railway for the purpose of bringing carriages to or from or upon the said railway and the Company shall if required at the expense of such owners or occupiers make openings in the rails and such additional lines of railway as may be necessary for effecting such communication in places where the communication can be made with safety to the public and without injury to the said railway and without inconvenience to the traffic thereupon and the promoters shall not take any rate or toll or other moneys for the passing of any passengers goods or other things along any branch so to be made by any such owner or occupier or other person but this enactment shall be subject to the following restrictions and conditions (that is to say)—No such railway shall run parallel to the said railway the promoters shall not be bound to make any such openings in any place which they shall have set apart for any specific purpose with which such communication would interfere nor upon any inclined plane exceeding one in fifty or bridge nor in any tunnel the persons making or using such branch railways shall be subject to all by-laws and regulations of the promoters from time to time made with respect to passing upon or crossing the railway and otherwise and the persons making or using such branch railways shall be bound to construct and from time to time as need may require to renew the off-set plates and switches according to the most approved plan adopted by the Company under the direction of their Engineer."

Question,—That the Clauses as read stand Clauses 92 and 93, respectively, of the Bill.—*agreed to.*

Another new Clause proposed by Mr. Garrett, to stand Clause 109 of the Bill.

The same read, viz. :—

Not to affect Government Railways Act of 1858.

" 109. Nothing herein contained shall alter annul or anywise affect any of the provisions of the Government Railways Act of 1858 excepting as provided in Clause 81 of this Act and the Schedule E therein referred to."

Question,—That the Clause as read stand Clause 109 of the Bill,—*agreed to.*

Schedule E read, viz. :—

SCHEDULE E.

" Commencing at a point on land comprising three hundred and twenty acres situated at or near Waratah in the Parish of Newcastle in the County of Northumberland in the Colony of New South Wales selected by Thomas Grove and running in a south-easterly direction to the southern boundary thereof thence continuing across three hundred and twenty acres of land selected by G. R. Dibbs to a point about ten chains east from the north-east corner of one hundred and sixty acres of land leased or selected by Messrs. Morehead and Young and continuing by a curved line through two hundred and eighty acres of land leased or selected by Messrs. J. and A. Brown to the western boundary of forty-two acres selected by Thomas Ware Smart thence continuing the curve through the last-mentioned selection and a line bearing north-easterly to its northern boundary across thirty-eight acres also selected by the said Thomas Ware Smart to or near the north-east corner thereof and across the south-east corner of Joseph Moate's thirty-nine acres thence continuing north-easterly across a reserved road and two parcels of land known as Henry Dangar's thirty-nine acres and Henry Dangar's thirty-three acres two roods and sixteen perches to a point on the Great Northern Railway about three miles from the City of Newcastle and across the said railway to the eastern boundary of the said thirty-three acres two roods sixteen perches thence continuing north-easterly

“ easterly through the north-west corner of the Australian Agricultural
 “ Company’s two thousand acres to the Maitland Road and across said road
 “ thence through a parcel of three hundred and twenty acres selected by
 “ Charles Smith to a reserved road on the eastern boundary thereof and
 “ across said road to Tully’s or R. R. S. Bowker’s twenty-two acres crossing
 “ the north-west corner thereof and proceeding north-easterly across Living-
 “ stone’s twenty-four acres to the northern boundary being also the southern
 “ boundary of one hundred and eighty-four acres selected by the said Thomas
 “ Sutcliffe Mort near to the water of the River Hunter the width of the said
 “ railway to be about seventy-five links on each side of its centre line and the
 “ total length thereof about three miles.”

Question,—That the Schedule, as read, stand Schedule E of the Bill,—*agreed to*.
 Chairman submitted Draft Report.
 The same read and agreed to.
 Chairman to report.

SCHEDULE OF AMENDMENTS.

Page 1, Preamble, line 33. *After* “ assembled” *insert* “ and by the authority of the same.”

Page 7, clause 29, line 51. *After* “ shares” at the end of clause, *add* “ Provided always
 “ that no shareholder shall be entitled to more than twenty votes altogether.”

Page 17, clause 81, line 23. *Omit* said clause, viz. :—

“ 81. It shall be lawful for the said Company to make construct and maintain
 “ a railway with all proper works and conveniences connected therewith upon Power to Com-
 “ across and over the lands delineated and described in the plan hereunto annexed pany to make a
 “ commencing at a point on a parcel of three hundred and twenty acres of land railway.
 “ situated at or near Waratah in the parish of Newcastle in the county of
 “ Northumberland in the said Colony selected by Thomas Grove and proceeding
 “ to the southern boundary of the said parcel of land thence across another parcel
 “ of three hundred and twenty acres of land selected by George Richard Dibbs to
 “ the southern boundary thereof at a point distant ten chains easterly from the
 “ north-eastern corner of Messrs. Morehead and Young’s two hundred and eight
 “ acres and thence continuing by a curved line through lands leased or supposed
 “ to be leased by Messrs. J. and A. Brown to the western boundary of another
 “ parcel of one hundred and twenty-three acres of land selected by Thomas Ware
 “ Smart thence bearing north-easterly and passing through the properties of
 “ Joseph Moate and of the representatives of the late Henry Dangar to a point on
 “ the Great Northern Railway about three miles from the City of Newcastle and
 “ thence across the Great Northern Railway to and through the lands of the
 “ Australian Agricultural Company to the Maitland road and crossing the said
 “ road continuing through a parcel of three hundred and twenty acres of land selected
 “ by Charles Smith and the lands of R. R. Bowker and A. Livingstone and thence
 “ across another parcel of one hundred and eighty four acres of land selected by
 “ Thomas Sutcliffe Mort to the waters of the Hunter River as delineated and described Railway to be
 “ on the said plan And it shall be lawful for the said Company to effect a junction constructed
 “ between the said line and the Great Northern Railway at or near the point where within five
 “ the said line crosses such Railway as aforesaid as shewn by the said plan and in years.
 “ accordance with section ninety-nine of the Government Railway Act of one
 “ thousand eight hundred and fifty-eight Provided that such railway shall be
 “ constructed and brought into use within the term of five years from the passing
 “ of this Act and that the said Company in constructing the same and in forming
 “ the junction with and crossing over the Great Northern Railway as aforesaid
 “ shall do so in a proper and workmanlike manner to the satisfaction of the
 “ Engineer in Chief for Railways and shall repair all damages caused by so doing.”

Insert—

“ 81. It shall be lawful for the said Company to make construct and maintain Power to
 “ a Railway with all proper works and conveniences connected therewith upon Company to
 “ across and over the lands and in the direction delineated and described in the make a Railway.
 “ Schedule E hereunto annexed commencing at a point on a parcel of three
 “ hundred and twenty acres of land situated at or near Waratah in the Parish of
 “ Newcastle in the County of Northumberland in the said Colony selected by
 “ Thomas Grove and continuing to and terminating at or upon the southern
 “ boundary of a parcel of one hundred and eighty-four acres of land selected by
 “ Thomas Sutcliffe Mort near to the waters of the Hunter River and it shall be
 “ lawful for the said Company to effect a junction between the said line of Railway
 “ and the Great Northern Railway at or near the point where the said line crosses
 “ such Great Northern Railway in accordance with Section ninety-nine of the
 “ Government Railway Act of one thousand eight hundred and fifty-eight And
 “ for the more conveniently effecting such junction it shall be lawful for the said
 “ Company with the consent of Robert Archibald Alison Morehead and Matthew
 “ Young to divert and alter the course of the Railway now being constructed by
 “ them so far only as may be necessary for the said Company to form a junction
 “ with the said Great Northern Railway by a curve of approach of twenty chains
 “ radius provided that in such alteration the curve of approach of the Railway so
 “ diverted

“diverted or altered shall be of no less radius and the altered line shall be vested in the said Robert Archibald Allison Morehead and Matthew Young and they shall have the same rights and powers in respect thereto as if the land had been taken and the railway made under the authority of the Act passed to enable them to make their said railway. Provided also that such railway shall be constructed and brought into use within the term of five years from the passing of this Act and that the said Company in constructing the same and in forming the junction with and crossing over the Great Northern Railway as aforesaid shall do so in a proper and workmanlike manner to the satisfaction of the Engineer in Chief for Railways and shall repair all damages caused by so doing.”

Page 18, clause 82, line 1. *Omit* “for”; *insert* “All such land as shall be taken under the provisions of this Act for”

” ” lines 1, 2, and 3. *Omit* “And subject to the provisions of this Act the land delineated and described on the said plan as aforesaid”

Page 19, clause 87, line 39. *Omit* said clause, viz. :—

Bridges to be constructed where railway crosses highway.

“87. If the line of the railway cross any public highway then either such road shall be carried over the railway or the railway shall be carried over such road by means of a bridge of the height and width and with the ascent or descent by this Act in that behalf hereinafter provided and such bridge with the immediate approaches and all other necessary works connected therewith shall be executed and at all times thereafter maintained at the expense of the Company. Provided always that with the consent of the Secretary for Public Works it shall be lawful for the Company to carry the railway across any highway on the level.”

Page 19, clause 88, line 48. *Omit* said clause, viz. :—

Owners crossing.

“88. Until the said Company shall have made the bridge or other proper communications which they shall under the provisions herein contained have been required to make between lands intersected by the railway and no longer the owners and occupiers of such lands and any other persons whose right of way shall be affected by the want of such communications and their respective servants may at all times freely pass and repass with carriages horses and other animals directly but not otherwise across any part of the railway made in or through their respective lands solely for the purpose of occupying the same lands or for the exercise of such right of way and so as not to obstruct the passage along the railway or to damage the same nevertheless if the owner or occupier of any such lands have in his arrangements with the Company received or agreed to receive compensation for or on account of any such communications instead of the same being formed such owner or occupier or those claiming under him shall not be entitled so to cross the railway.”

Page 20, clause 91, line 43. *Omit* said clause, viz. :—

Construction of bridge over roads.

“91. Every bridge to be erected for the purpose of carrying the railway over any road shall be built in conformity with the following regulations (that is to say) :—

“The width of the arch shall be such as to leave thereunder a clear space of not less than thirty feet if the arch be over a public highway and of twenty feet if over a parish road and of twelve feet if over a private road.

“The clear height of the arch from the surface of the road shall not be less than sixteen feet for the space of twelve feet if the arch be over a turnpike road and fifteen feet for the space of ten feet if over a public carriage road and in each of such cases the clear height at the springing of the arch shall not be less than twelve feet the clear height of the arch for a space of nine feet shall not be less than fourteen feet over a private road.

“The descent made in the road in order to carry the same under the bridge shall not be more than one foot in thirty feet if the bridge be over a public highway one foot in twenty feet if over a parish road and one foot in sixteen feet if over a private road not being a tramroad or railroad or if the same be a tramroad or railroad the descent shall not be greater than the ruling gradient of such tramroad or railroad.”

Page 21, clauses 92, 93, 94. *Omit* said clauses, viz. :—

Construction of bridges over railroad.

“92. Every bridge erected for carrying any road over the railway shall be built in conformity with the following regulations (that is to say) :—

“There shall be a good and sufficient fence on each side of the bridge of not less height than four feet and on each side of the immediate approaches of such bridge of not less than three feet.

“The road over the bridge shall have a clear space between the fences thereof of thirty-five feet if the road be a public highway and twenty-five feet if a parish road and twelve feet if a private road.

“The ascent shall not be more than one foot in thirty feet if the road be a public highway one foot in twenty feet if a parish road and one foot in sixteen feet if a private road not being a tramroad or railroad or if the same be a tramroad or railroad the ascent shall not be greater than the ruling gradient of such tramroad or railroad.

" 93. Provided always that in all cases where the average available width for the passing of carriages on any existing road within fifty yards of the points of crossing the same is less than the width hereinbefore prescribed for bridges over or under the railway the width of such bridges need not be greater than such average available width of such roads but so nevertheless that such bridges be not of less width in case of a public highway or parish road than twenty feet. Provided also that if at any time after the construction of the railway the average available width of any such road shall be increased beyond the width of such bridge on either side thereof the said Company shall be bound at their own expense to increase the width of the said bridge to such extent as they may be required by the trustees or surveyors of such road not exceeding the width of such road as so widened or the maximum width herein prescribed for a bridge in the like case over or under the railway.

The width of the bridges need not exceed the width of the road in certain cases.

" 94. Provided also that if the mesne inclination of any road within two hundred and fifty yards of the point of crossing the same or the inclination of such portion of any road as may be required to be altered or for which another road shall be substituted shall be steeper than the inclination hereinbefore required to be preserved by the said Company then the said Company may carry any such road over or under the railway or may construct such altered or substituted road at an inclination not steeper than the mesne inclination of the road so to be crossed or of the road so being to be altered or for which another road shall be substituted."

Existing inclination of roads crossed or diverted need not be improved.

Page 22, clause 97 (now 91), at the end thereof. *Insert* the following new clauses, viz. :—

" 92. The railway hereby authorized to be made and the locomotives shall be open to public use upon payment of a toll to the Company of three-pence per ton per mile for such carriage the party seeking transit supplying and loading his own trucks or waggons and all trucks when emptied shall be conveyed on their return free of cost.

Railway open to the public.

" 93. And be it enacted that it shall be lawful for the owners or occupiers of the land traversed by the said railway to lay down upon their own lands any collateral branches of railway to communicate with the said railway for the purpose of bringing carriages to or from or upon the said railway and the Company shall if required at the expense of such owners or occupiers make openings in the rails and such additional lines of railway as may be necessary for effecting such communication in places where the communication can be made with safety to the public and without injury to the said railway and without inconvenience to the traffic thereupon and the promoters shall not take any rate or toll or other moneys for the passing of any passengers goods or other things along any branch so to be made by any such owner or occupier or other person but this enactment shall be subject to the following restrictions and conditions (that is to say)—No such railway shall run parallel to the said railway the promoters shall not be bound to make any such openings in any place which they shall have set apart for any specific purpose with which such communication would interfere nor upon any inclined plane exceeding one in fifty or bridge nor in any tunnel the persons making or using such branch railways shall be subject to all by-laws and regulations of the promoters from time to time made with respect to passing upon or crossing the railway and otherwise and the persons making or using such branch railways shall be bound to construct and from time to time as need may require to renew the off-set plates and switches according to the most approved plan adopted by the Company under the direction of their Engineer."

Branch railways.

Page 25, clause 112 (now 108), at the end thereof,—*Insert* the following new clause, viz. :—

" 109. Nothing herein contained shall alter annul or anywise affect any of the provisions of the Government Railways Act of 1858 excepting as provided in clause 81 of this Act and the Schedule B therein referred to."

Not to affect Government Railways Act of 1858.

Page 26. *After* Schedule D *insert* the following new Schedule, viz. :—

SCHEDULE E.

" Commencing at a point on land comprising three hundred and twenty acres situated at or near Waratah in the Parish of Newcastle in the County of Northumberland in the Colony of New South Wales selected by Thomas Grove and running in a south-easterly direction to the southern boundary thereof thence continuing across three hundred and twenty acres of land selected by G. R. Dibbs to a point about ten chains east from the north-east corner of one hundred and sixty acres of land leased or selected by Messrs. Morehead and Young and continuing by a curved line through two hundred and eighty acres of land leased or selected by Messrs. J. and A. Brown to the western boundary of forty-two acres selected by Thomas Ware Smart thence continuing the curve through the last mentioned selection and a line bearing north-easterly to its northern boundary across thirty-eight acres also selected by the said Thomas Ware Smart to or near the north-east corner thereof and across the south-east corner of Joseph Moate's thirty-nine acres thence continuing north-easterly across a reserved road and two parcels of land known as Henry Dangar's thirty-nine acres and Henry Dangar's thirty-three acres

" acres two roods and sixteen perches to a point on the Great Northern Railway
 " about three miles from the City of Newcastle and across the said railway to
 " the eastern boundary of the said thirty-three acres two roods sixteen perches
 " thence continuing north-easterly through the north-west corner of the Australian
 " Agricultural Company's two thousand acres to the Maitland road and across said
 " road thence through a parcel of three hundred and twenty acres selected by
 " Charles Smith to a reserved road on the eastern boundary thereof and across
 " said road to Tully's or R. R. S. Bowker's twenty-two acres crossing the north-
 " west corner thereof and proceeding north-easterly across Livingstone's twenty-four
 " acres to the northern boundary being also the southern boundary of one hundred
 " and eighty-four acres selected by the said Thomas Sutcliffe Mort near to the
 " water of the River Hunter the width of the said railway to be about seventy-
 " five links on each side of its centre line and the total length thereof about three
 " miles."

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

WARATAH COAL COMPANY'S RAILWAY BILL.

FRIDAY, 5 DECEMBER, 1862.

Present:—

MR. ARNOLD,
MR. GARRETT,
MR. HOSKINS,

MR. LUCAS,
MR. SADDLEIR,
MR. SAMUEL.

SAUL SAMUEL, Esq., IN THE CHAIR.

W. Barker, Esq., appeared as Solicitor for the promoters of the Bill.

Charles Smith, Esq., called in and examined:—

1. *By Mr. Barker:* You are one of the petitioners for the Waratah Coal Company's Bill? C. Smith, Esq.
Yes.
2. Are you aware whether the several parties named in the first clause of the Bill are possessed of any coal fields in the parish of Newcastle, in the county of Northumberland? 5 Dec., 1862.
Yes.
3. Can you state what land they are possessed of? Thomas Grove 320 acres, G. A. Dibbs 320 acres, T. W. Smart 200 and 123, and myself 320 acres, and Mr. T. S. Mort 184 acres.
4. Are these the several portions of land shown upon the map annexed to the Bill, with the names of these several persons upon them? Yes.
5. Are you aware whether these persons have at any time formed themselves into a company for working this coal field? They have.
6. Have they taken any steps with the view of working any coal field—have they spent any money? They have spent a large sum of money, £16,000 or £18,000.
7. In making preparation for efficiently working the coal field? Yes.
8. And generally for advantageously disposing of the coal? Yes.
9. Are you aware whether these persons have agreed among themselves to extend their operation, and to form a joint stock company, with more extended capital? Yes.
10. Under the name of the Waratah Coal Company? Yes.
11. With a capital of £60,000? To increase it to £60,000, in 10,000 shares of £6 each.
12. For the purpose of working this land, and any other they may become possessed of? Or any other they may become possessed of.
13. Has it been agreed that these lands of which they are now possessed shall be transferred to the company to be established under this Act? Yes; an application has gone in to Government for that purpose, and is in course of preparation now.
14. To transfer the whole of them to the company? To transfer the whole of them to the company.
15. Is there any stipulation made—any reserve with regard to shares? There is a stipulation that the portion that went to the public should receive a dividend of five per cent. assured to it before the original proprietors received any dividend.

- C. Smith, Esq. 16. The original proprietors, however, reserve 5,000 shares? Yes.
17. As a consideration for transferring their lands to the new company? Yes.
- 5 Dec., 1862. 18. And the rolling stock and other property possessed by the company is also to be transferred, at the price the original proprietors have paid or have contracted to pay for it? Yes.
19. Is it the desire of the company that they should be established and incorporated under an Act of Parliament? Yes.
20. The company, by this Bill, seek power to make a railway, commencing at their mines on Grove's 320 acres, and extending as far as Mort's 184 acres, near to the waters of the river Hunter? Yes.
21. Will you state to the Committee for what purpose this railway is required—how it is intended to be used;—is it intended that the company should become carriers, or that they should merely carry their own coal to their own property for the purpose of shipping? It is intended that they shall merely carry their own coal, provided the Legislature will allow us to do it; that is all we desire to do. The facilities for the shipment of coal at Newcastle at present are far too small for the requirements of the port, and without this outlet we will not be able to ship the quantity of coal we expect to be able to obtain.
22. The railway you propose to construct would terminate on the private property of the company? Yes.
23. It is not their intention to become public carriers? Certainly not. The Waratah Coal Company's Railway goes into a portion of the 184 acres near the waters of the River Hunter, selected by Mr. T. S. Mort, at the south channel.
24. *By the Chairman*: Is that selected for lease or purchase? For lease, under the Crown Lands Occupation Act, for mining purposes.
25. *By Mr. Barker*: So that this railway is to terminate at this land of Mr. Mort's? Yes.
26. There is no intention, unless you are compelled by Parliament, to use it for any other purpose than for the purposes of your own trade? Certainly not.
27. Could you have equal facilities for the shipping of coal if, instead of crossing this line, you were to have a junction, and to proceed from thence to Newcastle, from the Great Northern Railway? We intend to have a junction, but the facility will not be so great as having a shipping place of our own—a place entirely away from the Hunter, about a mile out of the course of the Hunter.
28. You intend to have a junction with the Great Northern Railway, but it is because you believe there is not sufficient facility for shipping purposes at Newcastle that you intend to carry your line across the Great Northern Railway to the south channel of the river Hunter, and to construct a wharf at your own expense for your own purposes? Decidedly.
29. I presume it is because the company cannot otherwise obtain sufficient convenience for shipping their coal, that they would incur the expense of making this wharf? Certainly; if we could get the same facilities at the harbour of Newcastle, we should be glad to avail ourselves of it, so as to avoid the expense of going to the south channel.
30. Are you able to say whether the company will incur any very considerable expense in constructing this wharf? I should think they will; if they have to go to so high a level as it is proposed, it will cost from £20,000 to £25,000 to carry it out.
31. Then the object is not to divert the traffic from the Great Northern Railway, but simply to find sufficient convenience for your own purposes? Yes, certainly.
32. And to use the Great Northern Railway as far as you can conveniently do it? As far as it is practicable to do so.
33. It is proposed by this Bill to divert to a certain extent Messrs. Morehead and Young's railway, for the purpose of enabling the company more conveniently to effect a junction;—can you state whether there has been any communication with Messrs. Morehead and Young upon that subject? I have had several conversations with Mr. Morehead upon the subject, and he has agreed, in consideration of our buying the land from the A. A. Company, and giving them a larger curve, to allow us to remain on a fifteen chain curve. We extend their line to a twenty chain curve, and ours is to follow theirs as nearly as possible.
34. That power is sought to be exercised only with the consent of Messrs. Morehead and Young? Certainly.
35. *By Mr. Arnold*: I see in the preamble this statement,—“Whereas the said several persons are desirous of extending their operations and have agreed to form a joint stock company under the name of the Waratah Coal Company having a capital of £60,000 in 10,000 shares of £6 each”;—now I understand you to say that 5,000 of those 10,000 shares, which are supposed to be of the value of £6 each, are reserved to the original proprietors? Yes.
36. Is there anything paid on those shares? Those shares are paid up.
37. They are considered to be paid up? They are considered to be paid up.
38. But in point of fact they are not paid up? In point of fact they have been paid up, to a certain extent, by a consideration.
39. The consideration being the assumed value of the land? Yes.
40. Supposing that all the shares were now paid up, what would be your actual capital? The actual capital would be £60,000.
41. That is supposing the property to be worth £30,000? But the company have been at considerable expenses.
42. Have not those expenses to be paid out of the £30,000? Some part of them; there are a great many expenses that are not chargeable to the company.
43. Do you know what actual expenditure has taken place is represented by those 5,000 shares? I could not say exactly what the expenditure has been.

44. Anything approaching to £30,000? No, not so much as £30,000; taking into calculation what has been given in proportion to the land, it would be over £30,000. C. Smith, Esq.
45. I suppose the books of the company will show what has been spent—what actual outlay has taken place? No doubt. 5 Dec., 1862.
46. Could you say to £1,000 what has been spent—what expenditure is represented by these 5,000 paid-up shares? The expenditure I can scarcely state how much it has been.
47. Not within £1,000? Not within £1,000.
48. Could you give us some idea? The expenditure altogether of the company has been somewhat about £20,000.
49. Which is represented by these 5,000 shares? It is not all represented by them; the plant will have to come out of that; then there have been portions of that land bought from certain parties, and large sums have been given for them. This is part of that £30,000 which is actually not seen by the new company at all.
50. I am speaking of the actual expenditure, independently of the estimated value of the land—the premiums upon these selections—the actual outlay on the land? The actual outlay, what has been spent in money upon the land, towards the actual working. There has been somewhere about £5,000 spent now, with plant and labour and one thing or other, upon the land.
51. No part of which has to be paid back to the original proprietors? Part of which has to be paid back; the plant has to be paid back.
52. What are the items of expenditure beyond the plant? Labour in putting tunnels in, erecting huts, making surveys, and clearing the line.
53. No part of that has to be paid back;—I am speaking solely with reference to the portion represented by these 5,000 paid-up shares? We have expended money up to a certain time that will not be charged to the company; what that sum is I am not prepared to say. The plant will have to be paid for by the company.
54. The amount that will not have to be paid back, will that amount to £5,000? It would not amount to £5,000, what has actually been spent on the land.
55. Would it amount to £1,000? It would amount to more than £1,000; it would amount to between £4,000 and £5,000, I believe.
56. That portion which has actually been expended on the land, not taking into consideration the increased value of the land itself? Not taking into account the increased value of the land, but what has been spent on it for surveys and for one purpose or another.
57. That money has been actually expended? Yes.
58. Then when you say you have a capital of £60,000, you mean £30,000 in money and the other £30,000 in the supposed value of the land? Yes, and what improvements had been made upon it up to that time.
59. Then I understand your proposal with regard to the line to be this: You propose to effect a junction with the Great Northern line, and also to cross the Great Northern line to a wharf opposite Bullock Island? Yes, to the south channel opposite Mosquito Island.
60. Then I suppose you would take all the coal you could to your own wharf? We would take all our own coal to our own wharf, provided we could not get better facilities for the shipment of coal at the Port of Newcastle. There would be this objection to our wharf, that we could not take a deep vessel up to it, and we should have to employ lighters.
61. Then I understand you, that if it could be shown that there were sufficient facilities at Newcastle for shipping your coal, you would not care to extend your line beyond the junction of the Great Northern Railway? Certainly not, if we were satisfied that there were facilities. I may mention here, that in going to where we are in the south channel we are not going near the navigation at all—the principal branch of the river, on which the Tomago and Brown's shoots are. We do not go near that at all; we go to the south branch, clear of the navigation of the river.
62. *By Mr. Hoskins:* I did not clearly understand the answer you gave to Mr. Arnold—am I to understand you to say that the original projectors of the scheme expended somewhere about £5,000? Somewhere about that on the land; but they expended more than that.
63. You propose to increase the number of shares to 10,000 at £6 each, and the original projectors having expended about £5,000, you propose to allot to them about £30,000 worth of stock? They have expended more, but they have not expended it upon the land.
64. Then all this land was previously acquired by the original shareholders? It was selected by parties who considered that they had a good thing, and they required a good sum for the land they had so selected.
65. Then the land through which you propose to take the railway was not all purchased by the original shareholders? It was all selected by the original shareholders.
66. But not paid for? Yes, it was paid for to the end of next year by the original proprietors.
67. *By Mr. Arnold:* Almost the only item in this £30,000 is the premium on the original selection? Yes.
68. *By Mr. Hoskins:* In fact, the original projectors have expended a trifle of £5,000, for which they will get £30,000 of stock? No, some of the original selectors spent a great deal more in buying the selection of other parties, so as to get shares.
69. In this £5,000 the expense of plant is included? No, I think there has been from £14,000 to £15,000 sent Home for plant.
70. *By Mr. Arnold:* I suppose this estimate of the value of these selections generally is in some degree a fanciful value? No doubt.
71. It would have been as easy to have said £60,000 as £30,000? Yes.
72. In point of fact, you would have been justified in saying you had a capital of £60,000 if you had not had a penny? Yes, just so, if the public chose to come in.

- C. Smith, Esq. 73. *By the Chairman*: Have the public taken the whole of the shares? Five times the number of shares open to the public were applied for; and the best proof of the estimation in which the property is held by the public is, that shares are now at a premium of from 12s. 6d. to 15s.
- 5 Dec., 1862. 74. The public, who have purchased the shares, quite understand the terms on which they take them? Yes.
75. *By Mr. Hoskins*: The original shareholders have not expended £30,000? No.
76. *By Mr. Barker*: The public have thought the provision contained in the 63rd clause was a sufficient manifestation of the *bonâ fides* of the original proprietors, and was a sufficient guarantee to them that they were getting value for their money? No doubt of it.
77. *By the Chairman*: You get payment in shares? Yes, in shares.
78. *By Mr. Arnold*: Are there any provisions in your Bill for compelling the Government railway to take on your coal from the junction to Newcastle? No, none; not for compelling the Government, certainly.
79. Then it would be optional with the Government whether they would take your coal or not? I imagine so.
80. *By Mr. Garrett*: Is there any provision in this Bill for allowing parties through whose land the proposed line will pass, to join on to the line? No, there is no power.
81. *By Mr. Saddleir*: It is reserved entirely for the company's coal? Yes.
82. *By Mr. Garrett*: Have the company any objection to that right being given to other parties to join on to the line, on fixed terms? I do not know that there is any serious objection to it; they would rather have a private line if it can be got.
83. Can you state whether the directors of the proposed company have objected to that power being given to other persons to join on to the line, at certain fixed terms? They would rather get it private without giving any party that power.
84. *By Mr. Arnold*: I suppose you intend to purchase under the Act? Yes.
85. You intend to make this terminus freehold? Yes, just so; it will be done as soon as the necessary expenditure has been made.
86. I forget whether the lease gives you all the surface right? Yes, we have the surface right of all that has not already been alienated. There is some where the surface right has already been alienated, and that we cannot get; part of the land is freehold—the Common. Of the land selected by Mr. Mort we have now the surface right.
87. *By Mr. Hoskins*: Is it leased from the Crown? It is leased from the Crown.
88. Under the Crown Lands Occupation Act, for mining purposes? Yes.
89. Have you got the lease? Yes.
90. Do you produce it? No, I have not it here. We have no surface rights where the land has been alienated before—there we have only mineral rights; but where the land has not already been alienated we have both mineral and surface rights.
91. Do you mean to say that of the land taken under the Crown Lands Occupation Act for mineral purposes, you have, by the terms of the lease, acquired surface rights? Certainly.

John Whitton, Esq., called in and examined:—

- J. Whitton, Esq. 92. *By Mr. Barker*: You are Chief Engineer for Railways in this Colony? Yes.
- 5 Dec., 1862. 93. Has your attention been called to the proposed line of railway to be made by the Waratah Coal Company? Yes, it has.
94. You observe that it is proposed to cross the Great Northern Railway at a certain point, and also to effect a junction with the Great Northern? Yes.
95. Will you be so good as to inform the Committee whether it would be less objectionable to the Government, and more advantageous to the parties concerned in this railway, if the radius of the curve, at the junction with that of Morehead and Young's Railway line, were increased from what it is shown on the plan annexed to the Bill? I think it would be an advantage to increase the radius of the curve. The radius is not marked on the plan, but I have understood from Mr. Weaver that one curve is to be ten chains radius. There can be no doubt that a larger radius would be better.
96. Do you think it would be expedient to make the alteration, and to increase the radius of the curve? It depends entirely upon what engines it is intended to work this sharp curve of ten chains radius with; it would be large enough for the small engines which it is intended by the company to work upon this line, but it would not be large enough for the engines worked by the Government upon the Northern line.
97. You see no objection to the increase of the radius of the curve? I see no objection to the increase of the radius.
98. Is it your opinion that it would be preferable? No doubt it would; the larger the curve the better; and I do not know of any injurious effect it could have upon any other portion of the line.
99. Will you be so good as to state whether you see any engineering difficulty or objection to the Waratah Coal Company's line crossing the Great Northern at the point shown in the plan? I see no engineering difficulty, but I think there is an objection. The principal objection is, that I believe it is the intention of Government to make arrangements at Newcastle to provide for the shipping of coal there upon a large scale, and if they do that, I think it would be objectionable that a private company should take away the traffic which would otherwise go there.
100. Even for the purposes of their own trade? I think so, on the assumption that the Government can give sufficient facilities for the shipment of coal at Newcastle.

101. Are you able to say whether, at present, there are sufficient facilities there to enable the company to carry on satisfactorily an extensive coal trade? I scarcely think that, at present, there are sufficient facilities. J. Whitton, Esq.
102. In the absence of that, have you any objection beyond the mere fact that the Great Northern Railway might not have this profitable carriage of the coal of this company? The objection I see is this—that if the Government intend to make large accommodation for the shipment of coal, the traffic should be kept on the Government railway, and should not be for the purposes of a private company. 5 Dec., 1862.
103. Your objection applies equally to a company forming a line merely for the purposes of its own trade? I see no reason, if this Bill were granted to the Waratah Company, why other companies should not join that line, and so divert the whole of the trade to their own wharf from the Government wharf.
104. Then, in your opinion, the Great Northern Railway ought to have a monopoly of the carrying trade in that part of the country? I do not think it should have a monopoly of the whole of the carrying trade; but I think as it is intended to provide at the public expense greater facilities at Newcastle for the traffic, that traffic should not be diverted from it for the benefit of private parties.
105. At present you believe that there is not sufficient accommodation at Newcastle? There is not sufficient accommodation, I believe, at present, but it could be greatly enlarged in a short time.
106. Is it not very uncertain whether there will be sufficient accommodation there for several companies carrying on an extensive trade;—are there not already several companies which carry on a large trade? Yes, the Wallsend and Minmi carry on an extensive trade, and there is also Morehead and Young's. Still, it is simply a question of money; and if the Government intend to make all these facilities, I think it objectionable for private companies to take all the traffic off the line.
107. Supposing there are sufficient facilities at Newcastle at present, do you not consider that it would be better for them to make a wharf for their own purposes than to depend upon the other? I think it would be better for them to do so.
108. Do you see any objection, in the meantime, to their having this line, seeing there are not at present, and that it is uncertain whether there ever will be, sufficient facilities for the trade at Newcastle? The objection I have previously stated. If this line were granted, there is nothing in the Bill to compel other companies to give up the use of this line and to work upon the Government line of railway.
109. But, apart from the objection you have just stated, do you see any engineering objection? It is objectionable to cross the main line; but it is not of such importance that the Government should oppose it on that ground.
110. At the particular point where it is proposed to cross the line, can the crossing be effected without risk? Yes, without more than the ordinary risk, for there is always risk in crossing on a level.
111. That risk you would not consider in itself a sufficient objection, if there were not the other you have stated? No, I would not.
112. *By Mr. Arnold:* Would the crossing on the main line involve any expense or inconvenience? It would involve expense; but all that is provided for in the Government Railway Act.
113. Any expense would be paid by the company? Any expense would be paid by the company.
114. Then the disadvantage, do I understand you to say, that this would be to the Government would be, that this line running down to a wharf at deep water, where products might be shipped, might divert the whole traffic from the whole line? I think it would.
115. It is so much nearer? I do not know that it is nearer, but the terms might be fixed lower than those of the public railway, and it would lead to competition between the Government and this line; for application might be made, and no doubt would be made, for a junction with this line and the proposed line to the Hunter; and if so, the whole of the traffic might be taken over this line instead of by the Government railway.
116. Then your objection to this proposed railway refers only to that part of it which extends the new line beyond the point of junction with the Northern line? Yes.
117. *By Mr. Garrett:* What is the distance by the Northern line to Newcastle from the point where it is proposed that this line shall cross it? About three miles.
118. What is the distance from the Northern line to the shipping wharf? About two miles.
119. Then any person going on to this line would save a mile's carriage to deep water? Yes, no doubt.
120. In preference to going to Newcastle? Yes.
121. Would your objection be removed by giving the power to Government to purchase this portion of the land between the Northern line and deep water? No, I think not. My impression is, that as the Northern line has been made at the expense of the public, all the traffic should be protected over that line, provided there were proper facilities for shipping at Newcastle—separate wharves and shipping arrangements.
122. Do you know whether any progress has been made in this proposed line of railway? I do not know that any progress has been made; I should assume that there has not been.
123. Do you know whether any plan has been commenced for the extension of the means of shipping coal at Newcastle? I know that plans were partly prepared some time ago for arrangements at Newcastle, very large arrangements.
124. Have not Parliament voted a large amount for that purpose? I am not aware whether the amount has been voted; I understood a large sum was placed on the Estimates for that purpose.

- J. Whitton,
Esq.
5 Dec., 1862.
125. You allude to the wharf accommodation at Newcastle? Yes, to the general arrangement, which I believe the Government have in contemplation at Newcastle, for increasing very considerably the accommodation there.
126. Do you think it is likely the extension will be carried out in sufficient time for this company to take advantage of it? I do not know; the money, I think, has not yet been voted by Parliament. The accommodation might be increased by putting additional sidings at Newcastle; we have funds for that purpose.
127. That would afford the additional accommodation required? I cannot say what accommodation might be required for all these companies, but very considerably increased accommodation might be given there.
128. *By Mr. Sadleir*: Do you think the same accommodation could be given for shipping at Newcastle as here? I think much better accommodation—much greater facilities could be given for shipping at Newcastle than here.
129. *By the Chairman*: Than at this particular place? Yes, as they have more convenience there.
130. *By Mr. Sadleir*: Do you know what is the distance from this wharf by the river to Newcastle? I am not aware of the distance, as it is not shown on the plan, but it is not very much; I think it is not more than a mile and a half or two miles from Newcastle.
131. *By Mr. Hoskins*: Are not colliers at present loaded at Newcastle by the use of steam cranes? Yes.
132. If this railway company were permitted to make their railway to cross the Great Northern at the junction they propose, would not the elevation at Bullock Island be greater than it would at the Northern Railway at Newcastle? I do not know that there would be much difference between the elevation at Bullock Island and at Newcastle.
133. Do you know whether the altitude of this railway would be greater than that of the Great Northern would be? I do not know at all what height they intend to make their railway.
134. Would not vessels be much more expeditiously loaded if the trucks could be discharged into shoots over the hatches of vessels? No doubt.
135. If this company could make any arrangement by which this mode of loading could be adopted, would not their wharf afford superior facilities to any that are given at Newcastle? I believe that in the proposed facilities at Newcastle the Government intend to carry out an arrangement with regard to shoots.
136. When do they propose to carry out the arrangement with regard to shoots? I do not know when it will come into operation.
137. Of course, I presume, you expect that the coal trade at Newcastle and in the Hunter River district will be greatly increased in consequence of the lines of railway projected? No doubt.
138. If the present system of loading vessels by steam cranes at Newcastle were continued, it would be impossible greatly to increase the facilities of loading vessels there under the present system? It might be considerably increased by extending the wharves and by increasing the number of cranes.
139. Is there sufficient room to extend the wharves and increase the number of cranes? Yes, as far as Nobby's.
140. Still, if the coal traffic in that district greatly increased, as we may assume it will, by the number of railways which will be formed, do you think the system of loading vessels by steam cranes will be so expeditious as that of loading them by means of shoots? I think the system of loading vessels by shoots is far the best, but I do not see why the Government should not provide shoots; it will be simply a question of money, whether sufficient accommodation can be made to provide for the whole district.
141. Would it not entail great expense to provide greatly increased accommodation, and, at the same time, to provide the means of loading vessels from shoots? Yes, no doubt; but the only question is, whether Government intend to make that arrangement, or allow each company to make their own private arrangements. My impression is, that Government having expended a considerable sum of money in making the Northern Railway, all the traffic that can be brought by it should be.
142. May I ask you when you were furnished with a copy of the Bill? I was furnished with a copy of the Bill, I dare say, a month ago, but I have never read it.
143. You have not had an opportunity of reading it? I have not perused it.
144. You cannot say whether there is any material difference between this Bill and private railway Bills in general? No, I think it is much the same. I read over a few of the clauses relating to engineering matters, and I think it is much the same as the Bills that have previously passed the House.
145. *By the Chairman*: Your principal objection to the making of this line is, that it would interfere with the traffic on the Great Northern line? I think so.
146. Do you not think the public would benefit by the competition, although the Government might be a competitor? I think if the accommodation can be given by the Government, after all the money that has been expended upon the Great Northern Railway, it should be the wish of the Government to make it pay, and to draw all the traffic they can to their own railway; but if the Government grant facilities to private companies to divert that traffic, all the money that has been spent will be simply so much money thrown away.
147. *By Mr. Barker*: Are you aware how many steam cranes there are at present at Newcastle? I think four or five.
148. I am told there are only three working? I am not aware of that.
149. Are you aware whether the Wallsend Company do not require the full working of the three steam cranes at present working? That I do not know.

150. You believe that at present the accommodation is insufficient? For a large increase of traffic.

J. Whitton,
Esq.

151. *By Mr. Hoskins*: How long do you think it would take to carry out the alterations which, you say, the Government contemplate in order to give increased facility for shipping coal by shoots? That I cannot say; the arrangements will not be under my direction.

5 Dec., 1862.

152. *By Mr. Arnold*: When you say the shipping accommodation at Newcastle is insufficient, I understand you to mean, or do you mean, that it is insufficient for the present traffic, or that it will be insufficient for the future traffic, supposing this new railway to bring as much traffic as existing ones? I think I explained in my last answer that it will be insufficient if largely increased traffic were brought to Newcastle.

153. Do you know the shoots at present used by the Coal and Copper Company? Yes, I do.

154. Are you aware that these shoots are the property of the Government? I believe it is a question between the Coal and Copper Company and the Government, but I have always understood the land was the property of the Government.

155. Supposing that land to be the property of the Government, and it were to be placed in the hands of the railway for the purpose of affording shipping accommodation, what time would it be necessary should elapse before those shoots could be converted to the use of this new company? I should think it could be done in from six to nine months.

156. Do you think that that site would afford sufficient accommodation for all these contemplated new companies? There are only two new companies that I am aware of, and I should think the shoots of the Coal and Copper Company would be sufficient—that is, assuming the land to be improved. I would wish to suggest a clause in the Bill to this effect, “that nothing herein contained shall alter repeal annul or in any way affect any of the provisions of the Government Railway Act of 1858.”

157. *By Mr. Hoskins*: In looking through this Bill, have you remarked whether there is any provision in this Bill that this railway should be open to the public? I have seen no such provision.

158. Do you not think it desirable that such a clause should be inserted, that the public should be at liberty to use this line of railway on paying a certain stipulated toll? In the case of Morehead and Young's Railway I said I did not consider it necessary, unless good reason could be shown that there would be some public advantage in making it. I believe that was altered in the House.

159. Have you since altered your opinion, or are you of opinion that these lines of railway should be open to the public? I think not; I do not see any advantage to the public that could accrue; they are very short lines, intended merely for the private purposes of the parties, and I do not see that any advantage could arise to the public from opening them.

160. I suppose you observe that this railway passes through land belonging to a number of people? I think most of them are promoters of the line of railway. I think Mr. Brown and Mr. Dangar are the only parties whose land it passes through, excepting the promoters of the railway.

161. *By Mr. Barker*: Do you know whether it is usual in England, or do you know a single case in England, where the promoters of a Bill for making a railway, intended for their particular and private trade, have ever been compelled to open that line for the public—I do not mean railways for private carriers, but railways merely for the trade of the promoters? I do not know an instance.

162. Assuming the power is given to the Waratah Coal Company to make the line now asked for, to terminate on their own land, do you see that it would be an advantage to anybody to have the power to come upon it, seeing it leads nowhere but to the private property of the company? If, as I assume, it was made to join on to the public railway, other parties would have facilities for running over the line and shipping their coal at the wharf of the company.

163. That assumes the using the present construction at the cost of the private company? I do assume that. I have previously stated that on these short lines the tolls are so small that it is not worth having them.

164. It is merely for carriage? Yes.

165. In your opinion, would it not be unreasonable to have the use of a wharf, constructed at private expense for a private trade? Yes, I think so, except on a private arrangement.

166. *By Mr. Garrett*: Does this Bill provide for the construction of a wharf? I think the preamble does.

167. I think you are in error? I have already stated that I have not carefully looked through the Bill.

168. *By Mr. Barker*: The plan attached to the Bill shows that it is intended to make a wharf, and I assume that the company would be bound by that;—have you seen the schedule it is proposed to attach to the Bill? No. (*A paper was handed to the witness.*)

169. That schedule does not say anything about a wharf? No.

170. Then would you infer, from the absence of all mention of a wharf, that persons would have the power of using this wharf without any extra payment—supposing the power were given in the Bill for parties to use this line, would they have the power of using the wharf also without extra payment? I do not know how that might be, but if you do not give them the power, persons who have a compulsory right to run over a line would be able so to annoy a company that they could compel them to make any arrangement they liked.

William Weaver, Esq., called in and examined:—

- W. Weaver, Esq.
5 Dec., 1862.
171. *By Mr. Barker:* You are an engineer? I am.
172. You have been employed by the Waratah Coal Company in respect to a railway proposed to be made by them? Yes.
173. Are you acquainted with the proposed line of railway? Yes.
174. Do you know how this line of railway is situated with respect to the railway now in course of being made by Messrs. Morehead and Young? Yes, it runs alongside for some distance, as shown in this plan. (*Producing a working section of the railway.*) In fact, the lines are parallel to each other for nearly three-quarters of a mile to the junction.
175. To the junction with the Great Northern? To the junction with the Great Northern.
176. I believe it has been recommended by you, that there should be a more extended curve, both for Morehead and Young's line and the Waratah, where the line forms a junction with the Great Northern? Yes.
177. Will you have the goodness to state to the Committee whether you are of opinion that it will be for the interest of all parties that there should be an extension of the curve? I think so.
178. You are also engineer for Morehead and Young's line? I am also consulting engineer for that line. I have advised that the curve should be altered from fifteen chains, as at present set out, to twenty chains; and the only objection to that being done in the first instance was, that we did not think it worth while, for the sake of getting that curve, to go on to the Australian Agricultural Company's land, which we should have had to do; but as the Waratah Coal Company have made arrangements with the Australian Agricultural Company to go on to their land, there is no longer any objection; and I think it desirable, on the part of both parties, that this alteration should be made—that Morehead and Young's should be altered from fifteen to twenty chains—which would give the Waratah Coal Company room to alter their curve, which is laid out here at ten chains, to fifteen chains; fifteen chains being the minimum curve that the present engines working upon the Northern can work. Of course, other engines could work upon the original curve; but having regard to the rolling stock of Government, fifteen chains is the smallest on which we could work advantageously.
179. As an engineer, you believe that this extended radius would be safer and more convenient for all parties? Yes, for both parties.
180. Are you aware whether there has been any communication between Messrs. Morehead and Young and the Waratah Coal Company upon the subject? Yes, I am aware that several conversations have passed between Captain Smith and Mr. Morehead in my presence.
181. It is the desire of both parties that this shall be effected, if it can be done conveniently? Yes; I understood Mr. Morehead to say, that if the Waratah Coal Company could make an arrangement with the Australian Agricultural Company for the land, he would have no objection.
182. It is proposed, besides having a junction with the Great Northern Railway at the point shown on the plan, to carry the line of railway towards Bullock Island? Yes.
183. Will you state why it is considered desirable to carry the railway across the Great Northern line to the waters of the Hunter? In order to give the Company facilities for the shipment of coal at their own wharf.
184. That is their only object? Yes; there is not sufficient accommodation in Newcastle for the increased trade about to be brought there, and I do not know what the Government are going to do; without some definite understanding with the Government as to the nature of the facilities to be provided at Newcastle, it is necessary that the Company should provide accommodation for the shipment of their coal.
185. You know a good deal of the shipping trade of Newcastle? Yes, I was there yesterday.
186. Can you inform the Committee whether the shipping accommodation is sufficient or insufficient for the present trade? The present accommodation, I should say, is not sufficient for the present trade. Perhaps I may be permitted to explain what is the nature of the present accommodation. There are now four steam cranes at Newcastle; one of them is broken and not fit for use; the other three cranes are available for the public, and are all in use by the Wallsend Company, and I am informed by the manager of that company that they constantly require the three cranes. Then, supposing Mr. Brown, of Minmi, thought proper to send his coal to Newcastle by the Northern Railway, which he can do if he pleases, there would be at the present moment not sufficient accommodation for the shipping of coal.
187. Then, when Morehead and Young and the Waratah Coal Company have their lines and mines in full operation, the accommodation will be very insufficient? It would be just now; but it is proper to explain, that of course the crane which is now broken will be put in order speedily, and there are one or two cranes now imported from England, which are lying on the wharf; at all events there is one more, so that these will afford increased facilities.
188. Supposing these companies were in full operation, would there then be anything like full accommodation? Certainly not. I should say that, with the cranes now there, the broken crane repaired, and the cranes imported from England erected, there would then be only full accommodation for the present trade, leaving out the trade of Morehead and Young, and of the proposed company—the Waratah.
189. Then, apart from the objection that the Great Northern Railway might lose the carriage of some of the coal of the Waratah Company, do you know any objection to crossing the Great Northern and carrying the line as now proposed to the waters of the Hunter? No.

190. Do you know of any engineering difficulty or objection—of anything involving expense or risk? Only the expense of keeping a man at the crossing-place.
191. Which would fall on the Waratah Company? Yes.
192. The expense of crossing would also fall on the Waratah Company? Yes, all the expense.
193. The greater part of the line goes through the property of promoters of the Bill? Nearly the whole of it.
194. There are only two or three persons affected? Mr. Moate, whose land is just touched, Mr. Dangar, Mr. Livingstone; Mr. Tully's or Mr. Bowker's land is just touched.
195. Have you looked through the clauses of this Bill? Yes.
196. Do you observe anything in these clauses different from those of other Railway Bills? No, I think they are similar to other private Bills already passed.
197. I shall be obliged if you will inform the Committee whether it is necessary to have any bridges on any part of this line? The roads all cross on the level.
198. Therefore there will be no bridges on the line? There will be bridges over swamps or creeks.
199. But there will be no bridges over public roads, navigable rivers, or under or over any other railway? Not any.
200. *By Mr. Garrett*: Do you propose to take the power to construct a wharf? No.
201. *By Mr. Lucas*: You say there is scarcely sufficient accommodation to meet the traffic upon the wharves at Newcastle? At the present moment, for instance, an accident having happened to the fourth crane there, the Wallsend Company are using all the accommodation there is there at present; therefore if Mr. Brown were to send his coal from Minmi, which he can do, instead of shipping it at Hexham, there would not be accommodation.
202. Is it a question of the number of railways, or a question of the consumption of coal, whether the accommodation for shipment is or is not sufficient at Newcastle? Of course it is a question of the consumption of coal; it depends upon the quantity of coal shipped, and would make no difference in that respect whether it were spread over a dozen railroads or were confined to one.
203. Is it not the fact that the supply is equal to the demand at present? I am not prepared to say that it is. I think the supply has heretofore been so irregular that the demand has been influenced by it, and that there will be a greater demand when people at distant parts know that by sending to Newcastle they can have coal.
204. Do you know whether there is not at present a stock of coal on hand? I believe the Australian Agricultural Company has a small quantity, but they are not allowed to keep much.
205. Does not that show that the supply is equal to the demand? No, I think it is a very small quantity.
206. However, the whole consumption is fully met now by the supply—there are now no vessels coming into Newcastle that are compelled to leave without a cargo? I believe not.
207. So that if half a dozen more companies were formed, that would not interfere with the matter? I imagine they are looking forward to an increase in the demand.
208. I am looking forward six or nine months;—you heard the answer Mr. Whitton gave to the question as to when further accommodation could be given, and that he stated it might be provided in six or nine months—do you suppose that the creation of new companies will open up a larger demand? It will very much increase the means of supply; the question of demand is rather a speculative matter. No doubt it will increase the supply, and I think there will be a greater demand when there is a regular supply.
209. You hardly think there will be a much greater demand in less than six or nine months? I cannot say.
210. *By Mr. Sadleir*: Do you not think it likely that the demand will be increased by steam navigation along the coast and with England? No doubt there will be a great increase.
211. If the Government refused to you the use of the line to convey your coal to your own wharf, would it not in effect be a monopoly by them of the coal traffic? That would be the effect.
212. If the traffic were too much for the Government to manage, what would be the effect upon your company? I presume if the Government refused to allow us to make our own arrangements they would provide accommodation for us.
213. Suppose they did not—that would depend upon the votes of the House here? Yes.
214. Then, in case of any accidents along this line, from flood or other causes, what would be the consequence to you? There is no likelihood of accident.
215. I am speaking of the Government line? Of course any interference with the carriage on the line would be an interference with our trade.
216. With regard to the wharfage accommodation, do you think the Government could give you the wharfage accommodation you could have at your own wharf, considering the number of vessels there are already trading to Newcastle? As the Waratah Company proposes to ship from a high level, I do not think any arrangement the Government could make would be so convenient as the one the company could make for themselves.
217. Have the Government the power to purchase this railway if it should interfere too much with the public traffic? No.
218. *By Mr. Hoskins*: I believe this company propose to raise coal from land selected by T. Grove? Yes, and by Mr. Dibbs and Mr. Smart.
219. They do not propose to raise coal between the junction and that portion at Bullock Island? I cannot say; I do not think they have any immediate intention of doing so.
220. If the Government give increased facilities for the shipment of coal at Newcastle, do

- W. Weaver, Esq.
5 Dec., 1862.
- do you know whether this company would make that portion of their railway from the junction with the Great Northern Railway and Bullock Island? It is all a question of money, and depends upon the changes made by Government. Provided it can be done at a reasonable cost, it would be more to the advantage of the company to provide its own accommodation than to depend upon the accommodation that Government might provide.
221. From what you have heard, you believe that this company only intend at present to raise coal upon this land selected by Mr. Groves? Yes.
222. Therefore this line of railway would be made to convey coal from the pit sunk upon that property to the sea-board? That is all.
223. If Government gave every facility for conveying coal from Groves' selection to Newcastle, would there be any necessity for making a railway from the junction at the Great Northern to Bullock Island? There would be no necessity, but I think it would be an advantage, as it would save a mile and a half of distance to the river, and would be a saving of expense at the present rates on the railway and for shipping at the Government wharf at Newcastle. Taking the relative facilities into account, I think it would be much to the advantage of the company to do what they propose; among other reasons, and chiefly, because, as I have stated in a previous answer, they propose to ship from a high level. I do not approve of shipping by steam cranes.
224. Did you not hear from the evidence of Mr. Whitton that the Government propose to erect shoots? That might not be for some years. This expensive arrangement is not likely to be carried out for the next three or four years.
225. Do you think a private company could make arrangements for the shipment of coal, providing the distance were equal, cheaper than Government can at present at Newcastle? Yes, it does amount to that; I say, so long as present rates were maintained, the company would save money by making a line direct to the river.
226. You do not think the present rates charged by the Government for the shipment of coal at Newcastle are excessive? No, I do not think they are.
227. Do you think a private company could do it cheaper? I think they would if they carried out these proposed works.
228. By having an improved system—by having shoots? Yes, I do not think it would cost the company so much by shipping it at the jetty as by shipping it at Newcastle.
229. Because you include in your estimate the cost of conveying it the increased distance? Yes, of course.
230. I say supposing every other consideration were equal, do you not think the Government could ship coal on board vessels at Newcastle as cheaply as a private company? Supposing other circumstances were equal, but the circumstances are not equal.
231. In consequence of the increased distance? Yes, and the employment of steam cranes.
232. Do you see any difficulty in carrying out improved means of loading vessels at Newcastle by shoots? I do not suppose it would be impossible.
233. Do you think it would entail very great expense upon Government? I think it would, taking into consideration the levels of the Great Northern Railway.
234. I apprehend that there will be a great increase in the quantity of coal that will be taken to Newcastle for shipment, in consequence of the numerous lines of railway about to be opened? No doubt there will be.
235. If the production of coal increases, do you not think the Government will be justified in going to a large expense in providing increased accommodation for the shipment of coal? No doubt; I think there will be a very large increase in the traffic there.
236. Therefore, it might be to the interest of the Government to go to the expense of constructing shoots? Yes.
237. And they might then be able to come into competition with private companies who have the same appliances? Yes.
238. Does this railway traverse any part of the Newcastle Pasturage Reserve? Yes.
239. Do you happen to know whether the selectors of land under mineral leases have any surface rights—whether the lease gives them any surface rights? I believe so.
240. Have you ever seen a lease? I have not, but I have always understood that it gives surface rights.
241. There are no leases issued—I suppose you know that? No, I do not.
242. Do you know whether there is any provision in this Act securing the right of uninterrupted communication between the different portions of the Newcastle Pasturage Reserve intersected by this railway? There is no provision in the Act.
243. For cattle to cross either over or under that railway? It is a parallel case to that of Morehead and Young's Railway; there was no provision in the Act, but there is an opening in the embankment on their line over which a bridge is thrown, and the same provision will be made in this case.
244. I understood you to say that there will be no bridges required on the line—will not a bridge be required in this case? Not across a road.
245. Would it not be over the railway? It would be *under* the railway.
246. Would you not require a bridge in that case? It would not be necessary that there should be a clause in the Bill for that purpose, as the bridge would not be over a public road, or navigable river, but what is called an occupation bridge.
247. Do you know whether Thomas Grove is a shareholder in this Company? Yes; he is one of the directors.
248. Is Mr. Dibbs a shareholder? I am not aware.
249. I see a portion of the line intersects a portion of land leased by A. J. Brown? It comes through it, that is the Pasturage Reserve.
250. Do you know whether there is any clause in this Bill providing that the railway shall be open for the use of the public? I believe there is not.

251. If this line were made a private line, and the public were excluded from the use of it, would it not present increased difficulty to Messrs. Brown conveying any coal from the land through which this railway passes? No; because the line of Messrs. Morehead and Young passes through the centre of the leased land referred to, and is already open to the public.
252. Supposing Messrs. Brown were desirous of sinking a pit here at the northern corner of that land, would it not, if you were empowered to make a railway on the northern corner of their land, and were also empowered to prevent the public using your line, prevent Messrs. Brown from conveying the coal from their pit, at the northern portion of their allotment, to the shipping port? No, they would merely have to cross our line.
253. Would they not have to cross your line and that of Morehead and Young? No; I imagine they would have to cross the Waratah line, but there would be no difficulty in that; but I may state that it is very unlikely Messrs. Brown will open a pit there.
254. Would it not occasion inconvenience to Mr. Brown if he had to cross your line? I think not; but I may state as a positive fact, that Messrs. Brown have put down a pit at the south-eastern corner of the land.
255. Are not Messrs. Brown extensive coal owners? Not as regards this particular block.
256. Have they not others besides this in the Hunter District? No doubt, but the Minmi Colliery is far away.
257. Is it not very probable that Messrs. Brown, who are extensive coal owners, may be disposed to work a piece of land which they have leased from the Government? Not that at the northern corner I think.
258. Would not the making this line be an impediment to Messrs. Brown working that portion of their selection if they thought proper? No.
259. Does not your railway intersect the whole northern boundary of their allotment? It leaves only a small piece to the north; it does not leave more than a tenth or a twelfth portion of the land leased to them.
260. *By Mr. Barker:* Would not Messrs. Brown be in precisely the same position with reference to crossing the Waratah Company's Railway as the Waratah Company is at present with reference to the Great Northern, namely, that it would simply have to cross it at a level? Yes.
261. And by pursuing the same course that you have done with reference to Messrs. Morehead and Young, they would be in the same position that you are, and would have the same advantages in all respects? Yes.
262. They would have the use of a line that had been constructed by some one else? Yes.
263. And would be saved that expense? It could only prevent their opening the land at a very small portion of their selection.
264. *By the Chairman:* Are you aware whether Messrs. Brown have made any objection? I have not heard of any objection on the part of Messrs. Brown to this line.
265. *By Mr. Hoskins:* Has the line been surveyed through their land? Yes, it was staked out some months before notice was given at all.
266. *By Mr. Barker:* You were asked something about the supply of coal,—are you not aware that there is already a considerable export of coal? Yes.
267. Is not competition likely to increase that trade? I think so.
268. You said just now that you were not aware that the company were likely to work any but the land of Grove's;—have you any doubt that the company intend to work the whole of the coal field? I referred to the immediate intention of the Company; this is the portion of the land in which the seam of coal is already opened, and I imagine that for the present they would work this upper seam.
269. You do not intend to convey to the Committee that it is the intention of the company to work only that? Certainly not.
270. It is the intention of the company to work the whole of their fields? It may be; but they have commenced on this seam, and it does not exist on the lower ground.
271. *By Mr. Sadleir:* As to the supply of coal—are you aware that dyes and spirits are made from coal? Yes.
272. And that glass manufactures are likely to arise in towns where coal is easily obtainable? Yes.
273. So that the demand is likely to be considerable? Yes.
274. *By Mr. Lucas:* You are in favour of the employment of shoots for the purpose of loading vessels with coal? Yes, certainly.
275. Are there any great engineering difficulties in the way of carrying out the arrangement for the construction of shoots? The difficulty in the case of Newcastle arises from the fact that the ground about Newcastle and the Great Northern Railway is on a very low level; that would require to be got over.
276. How high would you have to raise the railway to get the proper level? Thirty feet to get a proper drop; that is to say, the present level of the railway at Newcastle is very near high water, and a shoot should not be below thirty feet above high water mark.
277. It would be very expensive to raise it to that level? Yes.
278. You have spoken of the curve;—what is the sharpest curve engines have been known to work upon? A very sharp curve of two chains radius, but then it has been a very small engine.
279. I believe now a radius of five chains is common? Eight chains is very common. There is no difficulty, of course, in a certain description of engines working this sharp curve, but we were led to adopt this fifteen chain curve in consequence of the description of engine now used on the Great Northern line.
280. The present mode of shipping by crane is very expensive? Yes.

W. Weaver,
Esq.
5 Dec., 1862.

- W. Weaver, Esq. 281. And the construction of steam cranes is very expensive? Yes, and the working is more expensive than shipping from shoots; in the case of shoots it is a matter almost entirely of the first outlay.
- 5 Dec., 1862. 282. And the saving in the annual cost of working the steam cranes would almost pay for the shoots? Yes.
283. Would you advise the adoption of a different system? I think it would be very desirable to abandon the steam cranes altogether; in fact, it has been done in England.
284. And to adopt shoots? And to adopt shoots.
285. There is plenty of earth about Newcastle for the purpose of raising the embankment? There would be no difficulty in getting material from side cuttings some little distance back.
286. There might be viaducts running along the wharf? Yes.
287. Would not that be much better than to have engines running on a level with the town? I believe that shipping from shoots at Newcastle would refer to the Bullock Island side; they would not go to the present wharf.
288. That would not involve so much greater an expense—nothing compared to the expense of shipping from the wharves at Newcastle? It is impossible to say what the expense would be, without seeing the plan; I have never seen what they do propose.
289. However, there are no engineering difficulties? None at all. No doubt, to provide for a large trade at Newcastle, it would be very desirable to alter the arrangement entirely, and to ship from shoots.
290. There would then be no likelihood of the accidents that occur at the present time from steam cranes? No.

WEDNESDAY, 10 DECEMBER, 1862.

Present:—

| Mr. GARRETT, | | Mr. LUCAS, |
| Mr. HANNELL, | | Mr. SADLEIR. |

SAUL SAMUEL, ESQ., IN THE CHAIR.

W. Barker, Esq., appeared as Solicitor for the promoters of the Bill.

William Weaver, Esq., further examined:—

- W. Weaver, Esq. 291. *By Mr. Barker:* You have already been examined, and have stated that you are Engineer for the Waratah Coal Company, for the construction of the line of railway sought to be made under this Bill? Yes.
- 10 Dec., 1862. 292. Will you inform the Committee the direction and course of the line of railway proposed to be made? I will hand in the schedule which describes it, and before doing so will read it to the Committee. (*The witness read the same, and handed it in. Vide Appendix.*)
293. Will you state whether the description you have just read describes the line of railway shown upon the plan annexed to the Bill before the Committee? Yes, it describes the line of the proposed railway as accurately as possible.
294. You know that is the line of railway as staked out upon the ground? Yes, as staked out upon the ground.
295. *By Mr. Garrett:* Does this proposed line cross the roads mentioned and the railway on a level? Yes, the Great Northern Railway and all roads.

APPENDIX.

Commencing at a point on land comprising three hundred and twenty acres situated at or near Waratah in the parish of Newcastle in the county of Northumberland in the Colony of New South Wales selected by Thomas Grove and running in a south-easterly direction to the southern boundary thereof thence continuing across three hundred and twenty acres of land selected by G. R. Dibbs to a point about ten chains east from the north-east corner of one hundred and sixty acres of land leased or selected by Messrs. Morehead and Young and continuing by a curved line through two hundred and eighty acres of land leased or selected by Messrs. J. and A. Brown to the western boundary of forty-two acres selected by Thomas Ware Smart thence continuing the curve through the last-mentioned selection and a line bearing north-easterly to its northern boundary across thirty-eight acres also selected by the said Thomas Ware Smart to or near the north-east corner thereof and across the south-east corner of Joseph Moate's thirty-nine acres thence continuing north-easterly across a reserved road and two parcels of land known as Henry Dangar's thirty-nine acres and Henry Dangar's thirty-three acres two roads and sixteen perches to a point on the Great Northern Railway about three miles from the city of Newcastle and across the said railway to the eastern boundary of the said thirty-three acres two roads sixteen perches thence continuing north-easterly through the north-west corner of the Australian Agricultural Company's two thousand acres to the Maitland Road and across said road thence through a parcel of three hundred and twenty acres selected by Charles Smith to a reserved road on the eastern boundary thereof and across said road to Tully's or R. R. S. Bowker's twenty-two acres crossing the north-west corner thereof and proceeding north-easterly across Livingstone's twenty-four acres to the northern boundary being also the southern boundary of one hundred and eighty-four acres selected by the said Thomas Sutcliffe Mort near to the water of the River Hunter the width of the said railway to be about seventy-five links on each side of its centre line and the total length thereof to be about three miles.

1862.

NEW SOUTH WALES.

VACCINATION.

(REPORT FROM MEDICAL ADVISER TO THE GOVERNMENT, FOR THE YEAR 1861.)

Presented to both Houses of Parliament, by Command.

MEDICAL ADVISER TO THE GOVERNMENT to COLONIAL SECRETARY.

Parramatta, 10 April, 1862.

SIR,

I have the honor, in accordance with the directions contained in your letter of March 1st, 1862, to furnish a report of the number of persons vaccinated at the several Government Institutions, shewing the age and sex of each.

2. I also forward a report from the Superintendent of the Sydney Vaccine Institution, speaking of the demand for lymph, &c. He furnishes a report of Vaccinations by various parties evidently not all medical, but shewing in some degree the extent of the general Vaccination of the country.

3. It will be perceived that the returns of the last year are considerably above the average of the preceding eight years, being above all but the two years in which an alarm of small-pox prevailed. This must of course be ascribed to the increased number of Vaccinators. The appointments being made in the last quarter, many of the gentlemen have not been able to make full arrangements, and I have no doubt that the present year will shew a large increase on the last.

4. As the service lymph of England, from which the lymph used here is derived, is considered inferior to that furnished by Mr. Ceely, of Aylesbury, or Mr. Badcock, of Brighton, I think it would be advisable to procure, from one or both of those gentlemen, a periodical supply, by which our own could be tested.

5. I annex, in the margin, the number of persons vaccinated in each year since 1853, inclusive. These figures, compared with the number of Births in the Colony, shew that much more must be done before the number of Vaccinations approaches that of Births.

6. The new arrangement seems likely to work very satisfactorily, as far as I can judge by the numbers vaccinated since the alteration took place.

* Appointed during the last Quarter of 1861 only.

No Vaccinations were performed at Wagga Wagga, Campbelltown, or at the Burrangong Gold Fields, the appointments being late, and the weather and other circumstances preventing. No reply has been received from Armidale as to the Vaccinations there.

R. GREENUP,
Medical Adviser to the Government.

1st January, 1862.

VACCINATION.

VACCINATION.

3

[Enclosure 2.]

Vaccine Institution,
Sydney, 5 March, 1862.

Sir,

I do myself the honor to report, for the information of His Excellency the Governor General, my progress during the year 1861.

Judging from the number of applications from all parts of the country for vaccine lymph, the practice of Vaccination is by no means neglected, as I have supplied some hundreds of applicants.

I beg to forward a return of the names of Medical Practitioners who have furnished me with a list of the numbers vaccinated by them during the year.

The number of individuals who have undergone the operation at the Vaccine Institution amounts to seven hundred and forty-nine (749).

I have experienced a great falling off in the demand for vaccine lymph from the northern parts of the Colony, as also from New Zealand, but have forwarded, upon requisitions, supplies to King George's Sound and the various Islands of the Pacific.

The Medical Practitioners of this city practice Vaccination more regularly than in past years, as not a day passes without demands for lymph. The class of applicants for Vaccination is not of the lower class (who present themselves at the Institution).

I have, &c.,

JOHN YATES RUTTER,
Superintendent V. I.

Dr. Greenup,
Medical Adviser to the Government.

Names of Medical Men who have supplied me with Returns of the numbers Vaccinated during the year 1861.

 LEGISLATIVE ASSEMBLY.
 NEW SOUTH WALES.

MR. JOHN ANDERSON ROBERTSON.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 28 May, 1862.

Unto the Honorable the Legislative Assembly of New South Wales.

The Petition of John Anderson Robertson, Esquire, Writer to the Signet, late
 Commissioner of Crown Lands for the District of Bligh, in that Colony,—

HUMBLY SHEWETH:—

That your Petitioner having, in the year 1851, submitted to Her Gracious Majesty the Queen, the hardships he had endured from the year 1843, when his office of Police Magistrate in New South Wales was suppressed by the Legislative Council of the Colony (an office conferred on him by Lord Glenelg, in 1839, on resigning his Treasury appointment in the Audit Office), the Queen was graciously pleased to cause inquiry to be made into his case, and finding his age precluded his being restored to Her Majesty's Treasury, Lord Grey, then Secretary of State, by Her Majesty's desire, wrote a strong letter of recommendation in favour of your Petitioner, to Sir Charles Fitz Roy, then Governor General of New South Wales, and the sum of seventy pounds was paid, by the Queen's commands, out of the Privy Purse, for the Petitioner's passage to Sydney.

Soon after your Petitioner's arrival at Sydney, Sir Charles Fitz Roy appointed him in January, 1852, to the Commissionership of Crown Lands for Bligh, with a salary and allowances of nearly £500, and residence, in which office your Petitioner continued till July, 1856, when he was summarily removed by Sir William Denison, who had succeeded Sir Charles Fitz Roy as Governor General, in the year 1855.

The following was the mode of your Petitioner's dismissal:—In 1855 a protégé of Sir William Denison, named Alfred Pickwood, was appointed Clerk of the Bench at Dubbo, where your Petitioner presided as Police Magistrate (an extra office entailed upon your Petitioner without pay), and Mrs. Pickwood having brought a charge against your Petitioner of an indecent assault upon her, he was summoned before the Magistrates of the District of Bligh. Accordingly the Magistrates, misled by their want of knowledge of Mrs. Pickwood's previous history and character, believed her unsupported oath, and pronounced a most extraordinary verdict, damaging her own statement, and yet fining your Petitioner one farthing damages as the punishment for this very serious charge.

Your Petitioner transmitted this judgment to the Governor General, and demanded the removal of Mr. Pickwood. But instead of doing so, His Excellency referred the papers to the Executive Council, and your Petitioner was called upon to shew cause why he should not be removed from office.

He did accordingly shew cause and prayed to be heard in defence. The Council granted this prayer, but His Excellency cancelled the order, and thereafter your Petitioner received, in July, 1856, a letter dismissing him from his office without a day's warning.

Your Petitioner returned to England early in 1857, bringing with him a letter from the Bishop of Sydney to Mr. Labouchere, the then Colonial Secretary, stating his Lordship's very favourable opinion of your Petitioner, and a certificate from the Chief Commissioner of Crown Lands, that your Petitioner had performed his public duties to the entire satisfaction of his superior officer.

Your Petitioner petitioned the Privy Council in May, 1857, to be allowed to appeal, and the Queen's Order in Council, calling for the papers, was transmitted to Sydney by the Colonial Secretary of State.

On the arrival of these papers in May, 1858, your Petitioner printed them, and his law advisers were engaged in preparing his appeal case, when a petition was lodged by the Governor General, praying that the Queen's Order in Council might be rescinded. This petition was heard at the Bar of the Privy Council, when the Lord Advocate of Scotland appeared on behalf of your Petitioner, and their Lordships held that the Order must be rescinded, as the Governor General pled that your Petitioner had no right of appeal, from your Petitioner's commission being granted on the Governor's sole authority, which His Excellency could recall at pleasure. At the same time His Excellency sent Home the papers in the case, he transmitted another despatch—copy of which was sent your Petitioner by Lord Stanley, then Secretary of State—claiming a sum of sixty pounds which your Petitioner had collected during the time he held his office, and His Excellency understanding your Petitioner had been appointed to another office, he requested the Secretary of State to receive the money, which would save the Colony the expense of proceeding civilly or criminally against your Petitioner in the matter.

To this demand your Petitioner informed Lord Stanley that the sum asked was only a portion of his collections when in office; but from having no access to the books of his office, from the manner of his instant removal, which prevented the adjustment of the same, and your Petitioner besought His Lordship to call for a full statement of the amounts, and to allow them to remain over till the issue of the appeal, when, if successful, as your Petitioner's Counsel had no doubt he would be, the arrears of salary would more than meet the whole balance due.

Before the Petitioner received a reply the Privy Council had dismissed the appeal on the technical objection made by the Governor General, and your Petitioner then memorialized Sir Edward Bulwer Lytton, who had become Secretary of State, praying for relief. This Memorial was recommended and forwarded to the Colonial Office by Mr. Inglis, your Petitioner's leading Counsel, then Lord Advocate of Scotland, and now Lord Justice Clerk—and that Memorial has never been disposed of, as the only communication your Petitioner had in reply to his former letter stated that the accounts had been called for from the Governor, but that the money admitted to be due ought to be refunded.

To this demand your Petitioner pled his total inability to pay any money, but if the Secretary of State would hold out any hope of his being re-appointed to office, the Petitioner thought it probable he might get the sum required, for otherwise no one would advance money without seeing a prospect of repayment. These are the facts.

The Petitioner has been in the service of Government since 1834. He performed his duties to the satisfaction of his superiors; and when this unjust charge is brought against him, he is at once dismissed. The authorities at Downing-street are prejudiced against him by Governor Denison bringing forward a claim for £60, a portion of a sum collected by your Petitioner, and for which the Governor suggests your Petitioner may be criminally prosecuted, at the very time your Petitioner is urging an appeal against the Governor for re-establishment to the office he had deprived your Petitioner of, and the accounts in which were not called for when he left the Colony to obtain justice in England, nearly six months after his dismissal. So the Governor having damaged your Petitioner's interest in Downing-street, and quashed the proceedings at the Privy Council in 1858, your Petitioner was utterly prostrated, for he could not approach the Throne with a case embodying the disgusting charge of an indecent assault upon a female. Your Petitioner has therefore remained for some years in profound grief, not knowing where to turn for relief, when, in the providence of God, he heard from his eldest son, who is a clerk in the District Police Court at Melbourne; that the Mrs. Pickwood, who had so cruelly charged your Petitioner in 1855, had applied at the Police Office for a summons against her husband for desertion, and for support of her children. The history of these worthless people since your Petitioner left the Colony, in December, 1856, is unknown to him; but he had heard enough of them before, and strangely does this discovery of their present proceedings break upon your Petitioner. The finger of God seems to point out the propriety of appealing to your Honorable House in search of redress.

Your Petitioner approaches your Honorable House with the greatest respect, and with no small anxiety; for if the door of your Honorable House is shut upon him, his case and his character are lost for ever. Prevented from being heard in person before the Executive Council, by Sir William Denison's sole act, by his individual order the day after his Council had issued a Minute for your Petitioner's appearance before them—excluded from the Privy Council, on the Governor General's motion before that body, on the ground that your Petitioner could not be heard, as the Privy Council had no authority over his acts towards inferior officers—though they might have had, your Petitioner been appointed directly by the Queen—your Petitioner now claims the protection of your Honorable House as the guardian against all acts of injustice done in the Colony. It was very trying to be shut out from a hearing before so competent a Court as the Privy Council, when your Petitioner was quite prepared, and in a letter just received from one of your Petitioner's Counsel, Mr. James Anderson, Queen's Counsel, he says—"The convictions on the minds of your Counsel, the late Lord Advocate and myself, that on the *merits* your case was *complete*, and that you were only prevented from getting into it in the Privy Council by a point of *form*. The Lord Advocate expressed this opinion at the time the question was argued before the Judicial Committee."

It is not, however, too late to try the question now—your Petitioner is confident he would have justice done him by your Honorable House. All he claims is to be tried—to be heard in his defence. Every felon is entitled to this act of justice, and no man is safe if any vile woman having a grudge against another, or being used as the tool by the enemies of a public man, makes a false oath, and that oath unsupported, contradicted by written documents which could not have existed if what she swore was true, and which letters were

sent

sent to the Governor by the Petitioner when he first heard of this monstrous charge, and retained by His Excellency when he desired the Prosecutor to bring the charge before the Dubbo Bench.

These all important letters were thus retained in Sydney, and the Dubbo Bench refused to wait for their production. The important point in these friendly letters is their respective dates, written by Mr. Pickwood to your Petitioner in his usual manner, two or three weeks after the time Mrs. Pickwood had sworn she had communicated to her husband the alleged assault. Your Petitioner possesses the original letters, and copies of them were retained by the Colonial Secretary from the original, and now lie with the papers in his office in Sydney. Besides, surely in a matter of this sort character has much to do with the process of finding where the truth lies. The party making the charge was a stranger in the Colony where your Petitioner had for twenty years been a public officer, and the after conduct of this woman will confirm the impression on any honest mind that your Petitioner could not be guilty of the crime laid to his charge. Your Petitioner would refer your Honorable House to the Lord Bishop of Sydney as to his moral character. Besides being disgraced and dismissed your Petitioner is rendered utterly penniless, depending on his children for support out of their limited salaries. All the Petitioner's patrimony has been spent in his repeated voyages to and from the Colony,—and now, without salary, pension, or hope of obtaining the means of support, he is left in his old age the victim of gross injustice, after nearly a lifetime spent in the service of the Colony. The Petitioner cannot think he cries out for help from your Honorable House in vain.

Your Petitioner trusts, too, he has a claim to be heard, independent of the cruel sufferings he has of late endured, from his having held office as Police Magistrate at Scone from 1840 to 1844, when his office was reduced by the Colonial Parliament, and deprived by the Secretary of State of his share of the money voted by that House, as a compensation for loss of office; and from having been obliged three times to bring his family from London to the Colony, in consequence of the suppression of his office in 1844. Your Petitioner prays and beseeches your Honorable House to remit his Petition to a Committee of the House, to investigate your Petitioner's case, for he declares he has never been tried before a competent Court, and call for proof of the antecedents of Mr. and Mrs. Pickwood—the protégés of Governor Denison, with whom he was acquainted in Van Diemen's Land; and beyond all, their career since 1855, which will go far to confirm your Petitioner's opinion of this woman, when he stated, in his defence before the Bench, that Mrs. Pickwood was a drunkard, and an abandoned woman. For this language, a solicitor at Bathurst (Mr. M'Intosh), instituted an action of damages against your Petitioner; and before he left the Colony, in 1856, he had to pay to Mr. M'Intosh upwards of £34 for the suppression of language which your Petitioner believes was true in every respect.

It does not become your Petitioner to attempt to point out the remedy your Honorable House may be inclined to apply to your Petitioner's case; he only trusts your Honorable House will entertain it, rescue his name from that list of persons who have been dismissed the Government service on an unjust charge, and restore him to his position in life. Your Petitioner claims redress at the hands of the Colony he has so long faithfully served, and trusts he will be restored from starvation in this remote Island to the bosom of his family in Australia.

And your Petitioner, as in duty bound, will ever pray, &c.

J. A. ROBERTSON.

Amhurst House, Guernsey,
18 December, 1861.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. CORNELIUS BRIDE.
(PETITION OF.)

*Received by the Legislative Assembly, 1 July, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of Cornelius Bride, of Cunnamulla, Warrego River, in the
Colony of Queensland,—

RESPECTFULLY SHEWETH:—

That during the month of June, 1859, or thereabouts, your Petitioner tendered for certain land on the Warrego River, in the Colony of New South Wales, called Eringa, West Eringa, West Billaby, Billaby, Eubady, West Eubady and Dungany.

That the local Commissioner reported the same to be in Queensland, without having visited the locality.

That upon the local Commissioner's report, the said tenders were referred to the Chief Commissioner of Crown Lands of Queensland.

That the local Commissioner has reported favourably upon the subsequent tenders of a person named Collins, for the said lands, as being in the Colony of New South Wales, and the said lands gazetted in Collins' favour.

That your Petitioner has sustained grievous injury, by the partiality shewn in the matter.

That upon the tenders being referred to Queensland, your Petitioner paid twelve pounds ten shillings upon each Run so tendered for, into the Treasury, at Brisbane, Queensland, which money has since been refunded to your Petitioner, the land being found to be in New South Wales.

That the said Runs are fully, or rather commence, forty miles, or thirty miles, below the Queensland boundary, and improvements made thereon, which the local Commissioner must have seen, if he ever visited the locality, or else wilfully mis-reported these Runs to be in Queensland.

That the Chief Commissioner of Crown Lands of the Colony of New South Wales, supporting the reports of his subordinate, affords your Petitioner no relief.

Your Petitioner begs that the case may be fully investigated, and redress afforded him, which his remonstrances to the Head of the Crown Lands Department have failed to effect, and that your Petitioner may be put in possession of the lands unjustly licensed to Collins.

And your Petitioner, as in duty bound, will ever pray.

CORNELIUS BRIDE.

1862.

LEGISLATIVE ASSEMBLY:
NEW SOUTH WALES.

MRS. KATHERINE HAMELTON HARPER.
(PETITION OF.)

*Received by the Legislative Assembly, 12 August, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly, in Parliament assembled.

The respectful Memorial of Katherine Hamelton Harper, widow of the late
William Harper, formerly Government Surveyor in this Colony,—

RESPECTFULLY SHEWETH:—

That her late husband, William Harper, arrived in this Colony in the year 1821, recommended by the Home Government for an appointment, and was consequently employed as land surveyor for a period of seven years, and performed his various duties, both in the office and in the field, in the most satisfactory manner. Notwithstanding his robust health and strength, the arduous duties devolved on him considerably affected his health, and he at length was attacked by fever, which deprived him of his sight at the early age of thirty-four years, unfitting him for the high office of Surveyor General, for which a commission had been signed for his appointment by His late Majesty King George the Fourth.

That your Memorialist has been a widow twenty-five years, and has had to struggle very hard to support herself and family—the youngest is, and has been many years, bedridden.

Your Memorialist respectfully lays her case before your Honorable House, praying for such relief as you may be pleased to grant.

And will ever pray.

K. H. HARPER.

Hunter's River, 20 January, 1862.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JOHN M. BATE.

(PETITION OF.)

Received by the Legislative Assembly, 19 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of John M. Bate,—

RESPECTFULLY SHEWETH :—

That Petitioner's brother was appointed to office in 1827, as Assistant Surveyor of Distilleries, and after several years, was appointed Surveyor of Distilleries.

That in 1835, while holding the above office, he received from the Colonial Secretary's Office the following circular, viz :—

"(Circular.)

*Colonial Secretary's Office,
Sydney, 29th May, 1835.*

" Sir,

" I am directed by His Excellency the Governor to inform you, that the gratuities authorized by the Secretary of State's Despatch of 29th September, 1831, can be claimed, in case of reduction, by those officers only who were in employment on the receipt of that Despatch in the Colony, on the 13th February, 1832, and that the persons appointed to office since will have no claim to a gratuity on reduction, under that authority.

" I have the honor to be,

" Sir,

" Your obedient Servant,

(" For the Colonial Secretary.)

" (Sgd.) T. C. HARRINGTON."

" The Surveyor of Distilleries.

That in 1838 the situation of Surveyor of Distilleries, then held by Petitioner's brother, was abolished, as intimated in following copy of a letter from the Colonial Secretary :—

*Colonial Secretary's Office,
Sydney, November 12th, 1838.*

" Sir,

" I am directed by His Excellency the Governor to inform you, that as it is proposed to bring the new Distillery Law into operation under control of the Officers of the Customs, the situation of Surveyor of Distilleries, which you have held, will be abolished.

" I have the honor to be,

" Sir,

" Mr. Richard Bate.

" Your obedient Servant,

" (Sgd.) E. DEAS THOMSON."

Your Petitioner's brother immediately put forward his claim for two years salary, authorized by the Despatch referred to in the Colonial Secretary's letter of 29th May, 1835.

That in consequence of the loss of office, Petitioner's brother turned his attention to other pursuits, viz., farming; and having collected what means he possessed, by disposing of property in Sydney, he purchased land in the country and made improvements thereon, looking forward to the receipt of the money he was entitled to from the Government for the loss of his situation, to enable him to complete his preparations; but in consequence of not receiving it or compensation in any shape whatever, he was unable to carry out his intentions, and not only lost the land he had purchased and improved, but was indeed almost ruined.

That the records of the Colonial Secretary's Office will abundantly testify the unceasing efforts made by Petitioner's brother to obtain redress at the hands of the Government, during the eleven years that elapsed between the period of the abolishment of the office and his death, which happened in December, 1849; and that no complaint had ever been made

against him, neither had he ever been censured for any neglect of duty, but that he was allowed, in the face of a contract entered into on the part of the Government with its servants, to die almost in want, under the bitter feeling that he had no means of enforcing payment of a debt the justice of which had never been disputed.

That by the death of Petitioner's brother, who died intestate, Petitioner is his next of kin and heir-at-law, and as such, Petitioner applied to the Government for payment of the claim referred to, and during the time that has elapsed since the death of Petitioner's brother to the present, has made repeated applications without success.

That in consequence of the non-payment of the claim referred to, Petitioner's brother was placed in great difficulties, and the land that he had purchased with the savings of former years was necessarily sold at a considerable sacrifice, thereby reducing him from a comparatively easy position to one of poverty and distress, whereas had the land remained in possession of Petitioner's brother, it would at his death have devolved on Petitioner, and would at this time been of considerable value.

That your Petitioner humbly submits that, in taking into consideration Petitioner's case, the circumstance of the claim being so long unsettled should also meet with attention, as the interest alone on the principal would amount to a considerable sum.

That Petitioner begs to name a few of the cases where gratuities have been given by the Government to parties claiming under the authority referred to, viz :—

Charles Cowper, Agent or Clerk to the Church and School Corporation; Mr. Busby, senior, Superintendent of Sydney Water Works; Mr. Busby, junior, Assistant Do; Mr. D. Egan, Master Boat-builder; Mr. J. S. Hanis, Colonial Architect;—this case was allowed and paid after a period of upwards of twenty years had elapsed.

That your Petitioner, therefore, humbly, and with confidence, lays his case before your Honorable House, and prays for such redress as your Honorable House may in its wisdom consider best.

For which, as in duty bound, your Petitioner will ever pray.

JNO. M. BATE.

Sydney, 19th Augt., 1862.

1862.

—

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JOHN SMITH, BAILIFF OF DISTRICT COURT,
SHOALHAVEN:
(PETITION RESPECTING.)

*Received by the Legislative Assembly, 19 August, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents of the District of Shoalhaven,—

HUMBLY SHEWETH,—

That your Petitioners having heard that the following questions were asked in your Honorable House, on the 3rd day of July, 1862,—

- “ 1st. Was John Smith, the Bailiff of the District Court, Shoalhaven, dismissed from the Police Force, for misconduct, about five years ago? ”
“ 2nd. Was the aforesaid John Smith brought before the Shoalhaven Bench of Magistrates, charged with Arson? ”

That your Petitioners regret the above imputations, through your Honorable House, should have been cast upon John Smith, the Bailiff of the District Court, Shoalhaven, and it is the humble request of your Petitioners, on behalf of the said John Smith, that your Honorable House will, by a strict investigation of the matter alluded to, remove the scandal of the imputation so unjustly injuring the character of the said John Smith.

That your Petitioners are of opinion that the said John Smith is a fit and proper person to hold the office of Bailiff of the District Court, Shoalhaven. And your Petitioners beg most humbly but forcibly to remark, that they are strengthened in their opinions by the Bench of Magistrates, Shoalhaven, having lately appointed the said John Smith to be the Bailiff of the Court of Requests.

That your Petitioners are also of opinion that the alleged imputations brought under the notice of your Honorable House, bearing upon the character of the said John Smith, have been made by certain parties in this District, for the purpose of unjustifiably injuring the character and ruining the prospects of the said John Smith. And your Petitioners feel that it would be an act of oppression to allow the imputations complained of to go forth without your Honorable House investigating the matter.

And your Petitioners trust your Honorable House will give this Petition your most serious consideration.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 458 Signatures.]

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JOHN SMITH.

(LATE BAILIFF OF DISTRICT COURT, SHOALHAVEN.)

Received by the Legislative Assembly, 16 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of John Smith, late Bailiff of the District Court, Shoalhaven,—

HUMBLY SHEWETH:—

That your Petitioner has read with deep concern, the Parliamentary report of 3rd July, 1862, wherein the following questions were asked in your Honorable House:—

“1st. Was John Smith, the Bailiff of the District Court of Shoalhaven, dismissed
“ from the Police force about five years ago?”

“2nd. Was the aforesaid John Smith, brought before the Shoalhaven Bench of
“ Magistrates, charged with arson?”

That your Petitioner was discharged from the office of Bailiff of the District Court, Shoalhaven, on the 31st July, 1862, by the order of their Honors the Judges of the said Court, and through the instigation of the Chief Secretary.

That your Petitioner feels that an act of injustice and oppression has been committed upon him, first, in so being discharged from the means of earning a living for himself and large family of twelve children, without the privilege of offering an explanation; and second, that such dismissal following after the questions asked in your Honorable House, will have the effect of ruining his worldly prospects, and damaging to a very serious extent his character and reputation as an honest and upright resident of this Colony, and would in all probability rest as a stigma upon his family hereafter. Your Petitioner therefore prays that your Honorable House will take the premises into consideration, and allow him to bring under your notice the whole facts of the case connected with the questions asked in your Honorable House, so that the act of oppression which has been so unjustly laid upon him, and the stigma of shame under which he labors, may be removed.

And your Petitioner, as in duty bound, will ever pray.

JOHN SMITH,
Nowra.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. This includes both manual and automated techniques. The goal is to ensure that the data is as accurate and reliable as possible.

The third part of the document provides a detailed breakdown of the results. It shows that there is a significant correlation between the variables being studied. This finding is supported by statistical analysis and is consistent with previous research in the field.

Finally, the document concludes with a series of recommendations for future research. It suggests that further studies should be conducted to explore the underlying mechanisms of the observed correlations. This will help to build a more comprehensive understanding of the subject matter.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. ARTHUR J. LIDDINGTON.

(PETITION OF.)

Received by the Legislative Assembly, 9 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Members of the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of Arthur J. Liddington, resident in the Colony aforesaid,—
RESPECTFULLY SHEWETH:—

That your Petitioner emigrated from England to this Colony, and arrived in the year 1825, bringing with him property and cash to the amount of £500, and an order from the then Secretary of State to the Governor here, to give him land in proportion to his means.

That your Petitioner was advised to accept, and received, an appointment in the Commissariat Office, under Deputy Commissary General Wemyss, being employed in the Cash Office.

That your Petitioner, subsequently, was requested by that officer to join the Account Branch of that department, for the purpose of making up his accounts.

That your Petitioner's health failed from the laborious nature of those duties, which necessitated his retirement to the country for a considerable time, after which he received an appointment in the Colonial Office, having four clerks under him to carry on his duties.

That your Petitioner repeatedly applied for his grant of land, verbally, and in writing, but was always informed that he could not have it whilst he held a Government appointment.

Your Petitioner was also informed by the late Surveyor General Oxley, in the presence of Alexander Berry, Esquire, that the order for his grant of land was in the Surveyor's Office, signed by the Governor.

But from the fact of your Petitioner holding his appointment during the administration of Governor Bourke, at which time grants of land were done away, your Petitioner was wrongfully kept out of his claim.

Your Petitioner therefore prays that your Honorable House will take into your consideration his Petition for such compensation as he may in your wisdom be considered entitled to.

And your Petitioner, as in duty bound, will ever pray.

ARTHUR J. LIDDINGTON.

(PETITION OF.)

Received by the Legislative Assembly, 18 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and Honorable Members of the Legislative Assembly of New South Wales.

The humble Petition of Percy Simpson,—

MOST RESPECTFULLY SHEWETH :—

That your Petitioner arrived in Sydney, November, 1822, bringing a letter of introduction to Governor Sir Thomas Brisbane, from the late Sir Henry Torrens, Adjutant General, in which Sir Henry stated that your Petitioner "held the situation of Judge Advocate, " and subsequently Local Governor of one of the Ionian Islands for some years, and he " returned to England in consequence of the reduction of the regiment to which he belonged, " bringing with him a strong recommendation from Sir Thomas Maitland, with a request " from the General that I would exert myself in the behalf of Mr. Simpson, and I feel " assured that, should you have an opportunity of serving him, he will prove himself worthy " of your favourable notice and protection."

That your Petitioner was appointed by the then Governor, the late Sir Thomas Brisbane, on 1st January, 1823, to form a new Colony and penal settlement at Wellington Valley, with a view to lessen the expense of maintaining the large number of convicts then rationed by the Commissariat Department in Sydney and elsewhere, and the successful formation of such an establishment was considered as being intimately connected with the rising interest of the Colony.

That your Petitioner conducted the expedition 100 miles beyond Bathurst, through an unknown country, that had never been previously explored, an undertaking in those days of more than ordinary difficulty, great personal deprivation and hardships to your Petitioner, who devoted his sole attention to the very arduous duties entrusted to him, for three and half years, at Wellington Valley, after which period it was considered desirable to discontinue the settlement, and which was finally broken up, your Petitioner's services discontinued without his claim on Government being liquidated or settled in accordance with the terms on which he was engaged.

That your Petitioner subsequently held other offices of trust and responsibility, the duties of which he discharged in a satisfactory way.

That in 1842 your Petitioner, then a Police Magistrate of some years standing, together with some twelve or more Police Magistrates, was discontinued without any compensation having been granted to your Petitioner.

Your Petitioner now humbly prays that your Honorable House may be graciously pleased to institute such inquiry into his case, and the discontinuance of his services, from economical arrangements, without compensation, as to your Honorable House may seem just and reasonable, and your Petitioner as in duty bound, will ever pray.

PERCY SIMPSON.

Parramatta, 18 September, 1862.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

JEREMIAH O'BRIEN.

(PETITION OF.)

Received by the Legislative Assembly, 3 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of Jeremiah O'Brien, of Scone, in the Colony of New South Wales, Farmer,—

HUMBLY SHEWETH :—

That on or about the twenty-sixth day of September, in the year one thousand eight hundred and sixty-one, your Petitioner was arrested under a warrant granted upon the information of William Little, Esq., of Scone aforesaid, Justice of Peace in and for the Colony of New South Wales, charging him with horse stealing. Your Petitioner was confined in the Lock-up at Scone aforesaid several hours, and subsequently brought before the Bench, remanded, and admitted to bail several times, and eventually on the eighteenth day of October, one thousand eight hundred and sixty-one, committed to take his trial at the Quarter Sessions holden at Muswellbrook, in the Colony of New South Wales, before which date, however, your Petitioner was informed by the Police Magistrate of Scone, that the Honorable the Attorney General found no Bill against him, and declined to prosecute the said charge.

Shortly afterwards, to wit, about the twenty-first day of November, one thousand eight hundred and sixty-one, your Petitioner commenced an action in the District Court, at Scone aforesaid, against the said William Little, for malicious prosecution, which was on the eleventh day of December, one thousand eight hundred and sixty-one, tried before Mr. District Court Judge Purefoy and a Jury of four, at which trial your Petitioner produced the party from whom he purchased the filly he was charged by the defendant in the said cause with stealing, and after hearing the evidence, the Jury found a verdict for your Petitioner, the plaintiff, with damages fifty pounds; the defendant then appealed to the Honorable the Supreme Court, on account of the said Judge having improperly admitted some evidence at the said trial, when the appeal was granted, a new trial ordered, and your Petitioner directed to pay the costs of the said appeal.

On the ninth day of September instant, the said cause was again tried at Scone, before Mr. District Court Judge Purefoy and a Jury of four, which resulted in nothing, the Jury being divided in opinion, and therefore discharged.

Immediately afterwards, to wit, on the tenth day of September instant, Mr. H. W. Ellis, Counsel for the defendant, applied to the Court to change the venue of the said cause from Scone aforesaid, alleging in his speech that as the cause had been before a Jury twice at Scone, it was likely to become popular, and that it could be more fairly tried elsewhere; and although Mr. W. J. Forster, Counsel for your Petitioner, opposed the application, on the ground that it was unsupported by any affidavit, that it would be ruinous to your Petitioner, who could not afford to attend and bear the expense of taking his witnesses elsewhere, and that the effect of changing the venue would be a frustration of justice, and prevent the cause being tried on its merits, and equivalent to an order for your Petitioner to pay all the costs hitherto incurred, and that an affidavit of the above facts would be filed in Court (which has since been done, and a copy hereunto annexed), notwithstanding this, the Judge ordered the venue of the said cause to be changed from Scone aforesaid, to Maitland, a distance of seventy-five miles from Scone, and further ordered the unsuccessful party to pay all the costs, and this unsuccessful party must be your Petitioner, as he cannot appear.

The

The defendant, Mr. William Little, is a wealthy and influential person in the District of Scone aforesaid, and able to meet the increased expense, and the effect of this order will be to give him a verdict in the said cause, as he will be able to appear, and your Petitioner will not, which your Petitioner respectfully submits to the Honorable House is contrary to the spirit of the District Court Act, that was framed for the purpose of bringing justice to every man's door, and not to compel suitors to travel long distances, to the advantage of the rich man and injury of the poor.

And your Petitioner respectfully submits that the hardship in his case results from the arbitrary power given to the Judge to remove the venue in this cause, or grant as many new trials as he may think fit, or as long as the verdict does not agree with his views or wishes; and your Petitioner believes, and it is the expressed opinion of others, that as often as your Petitioner gains the said cause, a new trial will be granted, as the Judge expressed himself strongly in favour of the defendant, and appealed to one of the jurymen personally, by name, in summing up the last trial; and your Petitioner is advised and informed that by the District Court Act the Judge has the power, without any restriction, to grant as many new trials as he may choose, and that the right of appeal does not lie to any Court of Law against the exercise of this arbitrary power.

And your Petitioner humbly prays, that as this Honorable House being the only legally constituted tribunal which can interfere to prevent your Petitioner suffering an injustice, through the powers conferred by the said Act, will cause an investigation and afford redress, or grant such other relief as to your Honorable House may seem meet.

And your Petitioner, as in duty bound, will ever pray.

his
JEREMIAH × O'BRIEN.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. JOHN BUSBY.

(PETITION OF.)

Received by the Legislative Assembly, 15 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of John Busby, now residing in Sydney,—

RESPECTFULLY SHEWETH :—

That your Petitioner came to the Colony in the beginning of 1824, with the view of remaining in it.

That in a letter to your Petitioner's late father, from the Colonial Department, dated 29th March, 1823, he is told, that, "I am instructed to acquaint you, that if any of your sons " who may proceed with you take with them capital to the amount of £500, they will be " considered as settlers, and have grants of land, with the usual indulgence of convict labour." That the regulations of the Government forbade the issue of grants to any employed in the Government Service; but the Government promised that such as came to the Colony to settle should have the land on relinquishing such employment.

That your Petitioner, in giving up an office he held under Government, made an application accordingly, but was informed that His Excellency the Governor did not consider that the above quoted extract contained a promise; yet many obtained land who had not the means nor the purpose of settling, but at once sold their claims.

Your Petitioner respectfully submits that the intention of the Ministry was that the Country should be settled, and that the construction placed upon the above communication virtually charged the Secretary of State with a heartless mockery.

Your Petitioner, therefore, respectfully submits his case to your impartial consideration, and to award him that justice which a consideration of the case warrants.

And, as in duty bound, he will ever pray, &c., &c.

JOHN BUSBY.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. GEORGE JOLL.

(PETITION OF.)

Received by the Legislative Assembly, 21 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of George Joll, late Teacher, of Appin,—

SHEWETH:—

That he arrived in this Colony in the year 1828, and immediately upon your humble Petitioner's arrival he was very kindly received by the Venerable Archdeacon Scott, who took a warm interest in your humble Petitioner's future prospects, by strongly recommending him to the Revd. Mr. Reddal, of Campbelltown, (the Church of England Minister,) as a suitable person for the imparting of education to children. The Revd. Mr. Reddal, after examining your humble Petitioner upon the necessary points, at once placed him at Lower Minto, under his direction, as a teacher in connection with the Church of England. This appointment took place in the early part of the year 1829, which appointment your humble Petitioner continued to hold for a period of about five years, and discharged the duties with satisfaction to his superiors and credit to himself. The school at Lower Minto having declined, in consequence of the inhabitants leaving the district, the Revd. Mr. Reddal obtained an appointment for your humble Petitioner, at Appin, as a public teacher for all children who might attend the school, without reference to creed. This second appointment your humble Petitioner held for five years. When your humble Petitioner arrived at Appin there was no place suitable for carrying on a school, nor any residence for himself, and your humble Petitioner having a few pounds of his own, purchased a piece of ground, and, with the assistance of a friend, it enabled your humble Petitioner to erect a dwelling thereon, which your humble Petitioner used as a school-house and residence for himself.

While your humble Petitioner was in Appin he was also appointed Poundkeeper, but in consequence of subsequently accepting the honorable office of Postmaster for the town of Appin, your humble Petitioner resigned the duties of Poundkeeper, and held the office of Postmaster for a period of thirteen years, and thus discharging the duties of the two callings at one time.

In the year 1838 your humble Petitioner was offered a more lucrative employment, which he was induced to accept solely for the purpose of liquidating the debt your humble Petitioner had incurred in building his house; and during his absence of about four years, there had been four different teachers, who failed to meet the wishes of the inhabitants, consequently, the inhabitants solicited your humble Petitioner to return to his original appointment as teacher for Appin. In consequence of the failing health of your humble Petitioner he was obliged to resign the various duties, being obliged to attend the receipt and dispatch of the mails every morning throughout the year, at the early hours of 4 and 5 a.m., on account of which your Petitioner's health became seriously impaired.

Your Petitioner, therefore, humbly prayeth that your Honorable House may be pleased to take into consideration the long services which your humble Petitioner had the honor to perform in the three Government situations above mentioned.

That your Petitioner is in his 70th year, and is totally unable to follow any kind of occupation, and is therefore unable to keep himself in the common necessaries of life.

Your Petitioner, therefore, humbly prayeth that your Honorable House will be pleased to take his case into your kind and generous consideration, and, as in duty bound, your humble Petitioner will ever pray.

GEO. JOLL.

Appin, 15 October, 1862.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

JAMES KILLOUGH.

(PETITION OF.)

Received by the Legislative Assembly, 19 November, 1861, and Printed under the Sessional Order of 4th June, 1862.

The Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of James Killough, late a Constable in the Gunnedah Police, in the District of Liverpool Plains,—

HUMBLY SHEWETH :—

That your Petitioner has been for a period of ten years in the Police Force of New South Wales, six years of which he has been attached to, continuously, the Police at Liverpool Plains, and has been in receipt of good conduct pay for the last three years.

Your Petitioner was formerly in the Army—the 11th Regiment of Foot—quartered in this Colony, and left it with a good conduct badge, and was a non-commissioned Officer.

That your Petitioner's health having rapidly declined during the past twelve months, from exposure in the discharge of police duty, has compelled him to yield to the solicitation of his friends and medical adviser, and pursue other employment of a less trying nature upon his now very infirm constitution.

On your Petitioner's retirement he applied to the Inspector General of Police for the usual gratuity for service, from the "Police Superannuation Fund," furnishing the customary recommendations and certificates; but that officer has ignored your Petitioner's claim, thereby depriving your Petitioner from a participation in those advantages contemplated in the framing of that clause of the "Police Regulation Act."

Your Petitioner is married, having a wife and four small children, who are entirely dependent upon his individual exertions for their support.

In conclusion, your Petitioner humbly begs that your Honorable House will see fit to admit the claim, and justify the course thus adopted; and your Petitioner, as in duty bound, will ever pray, &c.

JAMES KILLOUGH.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

—
MR. HENRY HINE NEWMAN.

(PETITION OF.)

—
*Received by the Legislative Assembly, 26 November, 1862, and Printed under the Sessional
 Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Henry Hine Newman, of Pitt-street, in the City of
 Sydney, Accountant,—

SHEWETH :—

That your Petitioner has for many years carried on in Sydney the business of
 an Accountant and General Agent.

That your Petitioner has during that period occasionally engaged in the preparation
 of Insolvents' Schedules, when the parties could not afford to employ a Solicitor for that
 purpose.

That the Chief Commissioner of Insolvent Estates lately expressed his intention of
 prohibiting the receipt in future of Schedules prepared by Agents, and stated that he would
 direct the Chief Clerk to refuse every Schedule so prepared.

That your Petitioner feels aggrieved by such order, and respectfully submits to your
 Honorable House that it would be unjust to a very large majority of those persons who,
 finding themselves compelled to seek the protection of the Insolvent Court, can hardly pay
 the fees of Court, and are consequently unable to employ a Solicitor in the preparation of
 their Schedules.

That your Petitioner respectfully submits, that the preparation of an Insolvent's
 Schedule does not necessarily require the assistance of a Solicitor, and that the carrying out
 of the Chief Commissioner's said order would be productive of great injustice to persons
 whose pecuniary difficulties oblige them to resort to the Insolvent Court.

Your Petitioner, therefore, humbly prays that your Honorable House will be pleased
 to adopt such measures in the premises as to your Honorable House shall seem meet and
 just.

And your Petitioner will ever pray, &c.

HENRY HINE NEWMAN.

Sydney, 24 November, 1862.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MR. GEORGE THORNTON.

(PETITION OF.)

Received by the Legislative Assembly, 3 December, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The Petition of George Thornton, of Sydney, Newspaper Reporter,—

RESPECTFULLY SHEWETH :—

That your Petitioner, son and heir-at-law of James Charles Thornton, deceased, has recently, and at various times, endeavoured, unsuccessfully, to obtain recognition of his claim to a Deed of Grant of a town allotment promised to, and selected by, James C. Thornton aforesaid, in the year 1826, the order to select being under the hand of Frederick Goulburn, Esq., the then Colonial Secretary and Registrar of Records for the Colony of New South Wales.

Without entering minutely into the facts of the case (which Petitioner believes are set forth pretty fully in the documents relating to the matter), your Petitioner would briefly state the following as the main grounds on which he bases his claim to consideration on the part of the Government :—Firstly, all the conditions on which such grants were given were duly fulfilled by the promisee, who resided permanently in the Colony (with a few brief intervals of absence, partly in the service of the Government, under Captain Raymond, of the Revenue Service) up to the period of his decease, in 1857. Secondly, the selection made and described by him was made in pursuance of the authority given, and remains vacant to this day, various objections having been, from time to time, made against the issue of the grant. Thirdly, promisee never abandoned his right in the matter, as is shown by his repeated petitions, and he never received any other grant or compensation in consideration of the non-fulfilment of the promise. Fourthly, that the objections on which the claim has been rejected are not, in the opinion of the Petitioner, based upon pertinent conclusions; as certain regulations of 1826 and 7, which are referred to in different minutes and letters, evidently have no reference to town allotments, but apply exclusively to lands taken up for purposes of agriculture, and this particular selection was made for a purpose altogether different. That without wishing to blame the Government, or accuse it of any neglect or injustice in the matter, your Petitioner, feeling confident of the equity and justice of the claim, and relying on the fact that an investigation will make the same perfectly clear, now approaches your Honorable House, and respectfully prays that you will take the premises into consideration, and arrive at such decision therein as to your Honorable House shall seem meet.

And your Petitioner will ever pray.

GEORGE THORNTON.

December 3rd, 1862.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MRS. ELLEN COHEN.
(PETITION OF.)

Received by the Legislative Assembly, 12 December, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and the Members of the Legislative Assembly.

The humble Petition of Ellen Cohen, the Widow and Executrix of Joseph Newton, late of Sydney, Merchant, deceased,—

SH EWETH :—

That in the month of June, 1840, your Petitioner's late husband obtained a judgment, in the Supreme Court of New South Wales, against one Joseph Smith Papps, upon which judgment execution was issued and lodged with the Sheriff, endorsed to levy the sum of £1,254 17s. 6d.

That the place at which the said writ was required to be executed being beyond the distance which the Sheriff's Bailiffs were compelled to travel, your Petitioner's late husband was necessitated to employ a Special Bailiff, and, in accordance with the usual practice in such cases, paid into the hands of the Sheriff the sum of £33 17s. 8d., being poundage calculated on the amount required to be levied by the said writ.

That the said writ was never executed, the Bailiff employed having been unsuccessful in his endeavours to discover any property on which a levy could be made; and the whole amount of the said judgment debt was ultimately lost to your Petitioner's husband by the said John Smith Papps becoming insolvent.

That your Petitioner's late husband afterwards applied to the Sheriff for the return of the said poundage money, and was informed that the amount thereof had been paid into the Treasury. Your Petitioner submits to your Honorable House that the Sheriff held the said poundage money as a trustee only, and that the same should not have been paid into the Treasury until after levy made, and then only in proportion to the amount of such levy. And your Petitioner further submits, that no levy having been made, her said husband was entitled to the return of the poundage money at the hands of the Sheriff.

That your Petitioner's husband applied to His Excellency the late Sir George Gipps, for the return of the said poundage money, and received a reply expressing His Excellency's regret that he could not interfere, as the amount had been paid into the Treasury.

Your Petitioner, therefore, humbly prays that your Honorable House will take the foregoing circumstances into your favourable consideration, and grant your Petitioner such relief as to your Honorable House shall seem meet.

And your Petitioner, as in duty bound, shall every pray, &c.

ELLEN COHEN.

Sydney, 22nd October, 1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

HENRY WILLIAM EDWARDS.

(PETITION OF.)

Received by the Legislative Assembly, 12 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Henry William Edwards, late Boatman in the Sydney Harbour Pilot Department,—

Your Petitioner humbly sheweth, that on the nineteenth day of July last, your Petitioner was employed, with others, in putting provisions and water on board the barque "Clara Sayers," in this harbour, for transmission to Booby Island, for the relief of shipwrecked mariners. The water casks had lately been payed over with coal tar, and your Petitioner being cleanly dressed, as is required in the boat service, happened to say to Mr. Crook, the Harbour Master, "This is nice work for boatmen," when Mr. Crook said, "Well, what of it?" and your Petitioner replied, "Mr. Crook, I am not aware that we had to do this,"—still continuing my work. Then Mr. Crook ordered your Petitioner to knock off. On the Monday following your Petitioner called at the Harbour Master's Office to ask him why your Petitioner was suspended from duty, when Mr. Crook said your Petitioner was discharged from the Public Service for refusing duty.

Your Petitioner is in a position to bring forward witnesses to prove that your Petitioner did not in any way do so. •

Your Petitioner then wrote to the Honorable the Colonial Treasurer, praying him to grant an investigation, when your Petitioner received for reply that the Treasurer was satisfied with the Harbour Master's report.

Your Petitioner humbly prayeth, that the Honorable Members will take into consideration the unjust and summary dismissal, together with the refusal of an investigation, to enable your Petitioner to exculpate himself.

And your Petitioner, as in duty bound, will ever pray.

HENRY W. EDWARDS,
Late Boatman, Harbour Pilot Department,
Sydney, New South Wales.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GOVERNMENT BOATMEN.

(PETITION OF.)

Received by the Legislative Assembly, 16 July, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned Boatmen, in the employ of Government,—

SHEWETH :—

That your Petitioners are employed by the Government of New South Wales as Boatmen.

That your Petitioners' duties are to take the various Officers of the Government, that is to say, the Harbour Master, the Custom House Officers, the Health Officer, and various other officials, about the harbour.

That your Petitioners are expected to keep themselves clean and tidy, and well and respectably clothed.

That for some time past your Petitioners have had cast upon them duties for which they were not engaged, and have been compelled to perform menial offices for nearly all the Government departments using boats—such as scraping, cleaning, and painting boats, and other employments which your Petitioners never contemplated, and which are totally inconsistent with their duties as Boatmen.

That there are daily four of your Petitioners on duty thirty-six hours consecutively, with barely sufficient time allowed for meals.

That fourteen of your Petitioners are required to be on duty every Sunday.

That your Petitioners find that, owing to the various duties imposed on them, they are unable to maintain that decent and respectable appearance which is expected of them.

Your Petitioners, therefore, humbly pray that your Petitioners' grievances may be taken into the consideration of your Honorable House, and that such redress may be afforded to your Petitioners, and that their Petition may be so dealt with, as to your Honorable House may seem meet.

And your Petitioners will ever pray, &c.

*Received by the Legislative Assembly, 24 October, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Thomas Charles Bentley, of Sydney, Gentleman,—

SHWETH:—

That your Petitioner and his Wife have been grievously injured by reason of certain anonymous letters, and otherwise.

That your Petitioner and his Wife have been subjected to great suffering by reason of the said persecution.

That your Petitioner has sought for redress from the Police authorities, and otherwise, without effect.

That an insinuation or statement has been circulated, to the effect that your Petitioner and his Wife are themselves the authors of the said anonymous letters, and that no such persecution in fact ever existed, but that the whole is a concoction of your Petitioner and his Wife, which insinuation or statement is wholly false; and your Petitioner and his Wife feel most acutely the injustice and cruelty of the said insinuation or statement.

That your Petitioner and his Wife are most anxious that the fullest inquiry and investigation should be made into the matter. Your Petitioner therefore humbly prays that your Honorable House will be pleased to take the premises into your consideration, and adopt such measures, with a view of affording justice and right to your Petitioner and his Wife in the premises, as your Honorable House in its wisdom may deem fit.

And your Petitioner will ever pray, &c.

MR. THOMAS CHARLES BENTLEY.

(PETITION OF CESARE CUTOLO, RELATIVE TO CASE OF.)

Received by the Legislative Assembly, 14 November, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Cesare Cutolo, of Sydney, Professor of Music,—

SHEWETH :—

That a Committee of your Honorable House has been appointed to inquire into the Petition of Thomas Charles Bentley, of Sydney, Gentleman, received by your Honorable House on the 24th day of October last.

That at the first meeting of such Committee, held this 14th day of November instant, depositions have been received, made by the said Thomas Charles Bentley and others, before Daniel Egan, Esquire, a Justice of the Peace, on the 17th day of September last, together with a report made by Inspector Harrison, of the Detective Police Force, in which the name of your Petitioner is frequently mentioned; and, as your Petitioner is informed and believes, the said depositions have been tendered to create the belief that your Petitioner is the author of the anonymous letters referred to in the Petition of the said Thomas Charles Bentley.

That your Petitioner's Solicitor attended the meeting of the said Committee, and was allowed to remain during the examination of one witness and the partial examination of another, but was then directed by the said Committee to withdraw, being informed that the said Committee had determined no stranger should be present at its sittings without the permission of your Honorable House, although the Attorney of the said Thomas Charles Bentley expressed his consent that your Petitioner's Solicitor should be present, as he was desirous the fullest investigation should be had in the matter; adding, while my clients suspect, they do not charge.

That your Petitioner is informed he has been frequently charged by the said Thomas Charles Bentley as the author of the said anonymous letters, and your Petitioner is desirous of attending the meetings of the said Committee, to repel the false charge made against him, as your Petitioner feels the injustice and cruelty of the said charge.

Your Petitioner submits to your Honorable House that he is directly interested in the said inquiry; that unless your Petitioner is allowed to attend the sittings of the said Committee, great injustice will be done; the said inquiry will be incomplete; your Petitioner's character assailed, without the power of contradiction being afforded him, or the opportunity of defence.

That the innocence of the said Thomas Charles Bentley and his wife cannot be affirmed without establishing the guilt of writing the said letters upon some other person.

Your Petitioner, therefore, humbly prays that your Honorable House will be pleased to take the premises into your consideration; and that your Honorable House will be pleased to grant to your Petitioner leave to attend the meetings of the Committee of your Honorable House appointed to inquire into the Petition of the said Thomas Charles Bentley, and that your Petitioner be permitted to be heard before the said Committee, by Counsel or Attorney, as to your Honorable House may seem fit.

CESARE CUTOLO.

Sydney, 14 November, 1862.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. WILLIAM SIMS BELL.
(PETITION OF.)

Received by the Legislative Assembly, 9 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of William Sims Bell,—

SH EWETH :—

That your Petitioner's father and his family arrived in this Colony in the year one thousand eight hundred and seven, as an officer in the 102nd Regiment, and shortly afterwards His Excellency Governor Bligh gave to your Petitioner's father, Archibald Bell, an allotment of ground in Barrack Square, Sydney, which allotment he occupied and enclosed, and improved the same at considerable expense.

That shortly after the arrival of Lieutenant Governor Paterson, your Petitioner's father was solicited by him to relinquish his land in Barrack Square, for another allotment, assigning as a reason, that the allotment interfered with a plan proposed by the Governor for the enlargement of the Barracks.

That the said Archibald Bell readily met the views of Lieutenant Governor Paterson, and relinquished the ground he held, in exchange for an allotment of ground upon the Eastern Hill, containing forty and one-half rods, upon which land the Parliamentary Buildings are now erected.

That by Letters Patent, bearing date the third day of October, one thousand eight hundred and nine, under the hand of the said Lieutenant Governor Paterson, duly recorded, and under the seal of the Territory, the last-mentioned land was granted to the said Archibald Bell.

That upon the arrival of Governor Macquarie, in one thousand eight hundred and ten, the said Archibald Bell was called upon to produce the Grant to His Excellency, which he did. The Grant was never returned to him, and your Petitioner is informed that the same was some years afterwards, namely, in September, one thousand eight hundred and twenty-five, destroyed by Major Goulburn, the then Colonial Secretary—Governor Macquarie repudiating, for political reasons, the acts of Lieutenant Colonel Paterson.

That afterwards, and during the administration of Governor Macquarie, the said Archibald Bell had frequent interviews with Mr. Oxley, the Surveyor General, and others, with the view of obtaining compensation for the land taken from him, but the said Archibald Bell was advised not to press his claim then, lest he should incur the displeasure of Governor Macquarie, which would be prejudicial to the interests of your Petitioner's father and his family.

That your Petitioner's father again, during the administration of Governor Darling, pressed his claims upon the Government, and the matter having been referred to the Home Government, it was intimated to your Petitioner's father, in September, one thousand eight hundred and thirty-two, that the Secretary of State had declined to enter upon a consideration of the claim, in consequence of the length of time which had been allowed to elapse without any application having been made upon the subject; which statement your Petitioner alleges is contrary to the fact.

That the said Archibald Bell died in the year one thousand eight hundred and thirty-seven, and did not receive any compensation for the land relinquished by him to the Government, or for the forty and one-half rods in Macquarie-street, of which he was deprived as aforesaid.

That your Petitioner, as heir-at-law of the said Archibald Bell, deceased, has made several applications to the Government for compensation similar to that granted to other persons under somewhat analogous circumstances, but without success.

Your Petitioner therefore humbly prays that your Honorable House will be pleased to take his case into favourable consideration, and adopt such measures as may do your Petitioner equity and justice.

And your Petitioner will ever pray, &c.

W. S. BELL.

Sydney, 9 September.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MR. WILLIAM SIMS BELL.

(CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be Printed, 8 October, 1862.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 16 September, 1862, praying that His Excellency the Governor would be pleased to cause to be laid upon the Table of this House,—

“ A copy of all Correspondence, Petitions, and other Papers,
 “ relative to a Claim for Compensation by Mr. Archibald
 “ Bell, or Mr. William Sims Bell, in respect of certain Land
 “ granted to Mr. Bell by Lieutenant Colonel Paterson, in the
 “ year 1809; and also a copy of the said Grant.”

(Mr. Hart.)

No. 1.

MR. ARCHIBALD BELL to THE HONORABLE ALEXANDER M'LEAY.

Belmont, 29 January, 1830.

SIR,

I request the favour of you to lay before His Excellency the Governor the accompanying Memorial.

I have, &c.,
ARCHD. BELL.

No. 2.

MEMORIAL.

To His Excellency Lieutenant General Darling, Governor-in-Chief of New South Wales, &c., &c., &c.

The Memorial of Archibald Bell, which

MOST RESPECTFULLY SHEWETH,—

That on the arrival of your Memorialist, in 1807, His then Excellency Governor Bligh gave to your Memorialist an allotment of ground in Sydney, situate on that part of the Barrack-square on which Officers' Quarters are now erected, at the south-east end, and was enclosed by your Memorialist at a considerable expense.

That on the arrival of Lieutenant Governor Paterson, your Memorialist was solicited by him to relinquish his right, stating as a reason, that such an allocation interfered with the plan proposed for the enlargement of the Barracks.

That your Memorialist, impressed with the propriety of the request, readily met the views of Lieutenant Governor Paterson; and in lieu of the ground he held he received a grant of forty rods and a half on East Hill, Sydney, on the south of Mr. John Blaxland's, the deeds of which grant were engrossed on parchment, dated the third day of October, 1809, witnessed by William Gandry, deceased, and Thomas Moore, Esq., J.P., of Liverpool, and was registered and subscribed James Finucane, Secretary.

That on the arrival of Governor Macquarie, in 1810, your Memorialist was called upon by him for a sight of the deeds, which were never returned.

That your Memorialist had frequent interviews with Mr. Oxley on the subject, who informed your Memorialist that it was useless to make an application for any restitution; and as your Memorialist was enjoying great indulgences under Governor Macquarie, he was fearful that in urging his claim he might incur the displeasure of His Excellency, and its consequences to himself and family.

That your Memorialist having learnt that Mr. Blaxland has received an equivalent for the allotment which he held adjoining, and which was measured on the same day, begs leave most respectfully to submit the justice of his claim to His Excellency the Governor.

That your Memorialist is aware that to lay claim to, and urge the restoration of the original allotment, would be productive of circumstances involving much embarrassment; your Memorialist therefore prays that he may either receive a pecuniary consideration, or such a quantity of land in the interior as may be an equivalent in value.

Your Memorialist is, with profound respect,
your most obedient and most humble Servant,

ARCHD. BELL.

Belmont, 29 January, 1830.

No. 3.

GRANT.

By Colonel W. Paterson, Lieutenant Governor, &c., Commanding, &c., &c.,

To Archibald Bell, Esq., his heirs and assigns for ever, $40\frac{1}{2}$ rods, situate on the East Hill, in the Town of Sydney, bounded on the north side by Blaxland's allotment, bearing west 3° south, 130 feet; on the west side by a street bearing south 3° east, 85 feet; on the south by a line east 3° north, 130 feet; and on the east by a line north 3° west, 85 feet, he paying or causing to be paid to the Crown an annual quit rent of £2 per annum from the day of the date hereof.

In testimony whereof, &c., this 3rd October, 1809.

W. PATERSON.

JAMES FINUCANE, Secretary.

W. GANDRY,
THOS. MOORE.

Destroyed the 5th September, 1825.—F. G.

No. 4.

COLONIAL SECRETARY to MR. ARCHIBALD BELL.

*Colonial Secretary's Office,
Sydney, 4 March, 1830.*

SIR,

I had the honor to receive and submit to the Governor your Memorial of the 29th January, *soliciting compensation for an allotment of ground*, of which you represent the deeds to have been retained by Government, adjoining Mr. Blaxland's, on the East Hill, Sydney, alleged to have been given to you in lieu of an allotment surrendered to the Crown in the Barrack-square.

In attention thereto, I am directed to inform you, that the compensation to Mr. Blaxland for his allotment, to which you allude, was by order of the Secretary of State, and that it will be necessary to refer your application for a similar authority. I am therefore commanded to request that, as the circumstance appears extraordinary, you will have the goodness to furnish His Excellency with any further explanation in your power, in order that it may be forwarded, with your Memorial, to England.

I have, &c.,

ALEX. McLEAY.

No. 5.

MR. ARCHIBALD BELL to COLONIAL SECRETARY.

Belmont, 2 April, 1830.

SIR,

My absence from home has prevented me from acknowledging your letter of the 4th ult., which I had the honor to receive in reply to a Memorial I took the liberty of submitting, through you, to His Excellency the Governor, respecting my claims to the lands granted to me on East Hill, Sydney.

As the Memorial contained all the facts and relative circumstances, I am not able to render any further statements on the subject, other than I beg most respectfully to invite His Excellency to an inspection of the Public Register, where he will find the words and figures following, viz. :—

Archibald Bell, Esq., $40\frac{1}{2}$ rods, East Hill, Sydney, on the south of Blaxland's.
30 October, 1809.

W. PATERSON.

JAMES FINUCANE, Secretary.

Witness—

WM. GANDRY,
THOS. MOORE.

I feel obliged to His Excellency, and beg to offer my grateful acknowledgments to him for his attention, as also for his proposition of laying the case before His Majesty's Secretary of State for the Colonies.

I have, &c.,

ARCHD. BELL.

No. 6.

MR. ARCHIBALD BELL to COLONIAL SECRETARY.

Belmont, 25 July, 1831.

SIR,

I had the honor of addressing a Memorial, on the 29th January, 1830, to His Excellency the Governor, respecting my allotment of land on East Hill, Sydney, and your acknowledgment of the same, dated 4 March following, No. 30-377. In reference to that communication, I would respectfully solicit to be informed if the same has been transmitted to the Secretary of State, and if any reply has been received thereupon.

I have, &c.,
ARCHD. BELL.

No. 7.

COLONIAL SECRETARY to MR. ARCHIBALD BELL.

*Colonial Secretary's Office,
Sydney, 11 August, 1831.*

SIR,

In reference to your letter of the 25th ult., requesting to be informed whether your Memorial, dated the 29th January, 1830, respecting an allotment of land on East Hill, Sydney, has been transmitted to the Secretary of State, and if any reply has been received thereupon,—

I do myself the honor, by the direction of His Excellency the Governor, to inform you that the Memorial in question has been inadvertently overlooked, but that it shall be forwarded to the Secretary of State by the first opportunity.

I have, &c.,
(For the Colonial Secretary.)
T. C. HARRINGTON.

D. H. DENIEHY, Esq., to COLONIAL SECRETARY.

95, Elizabeth-street, Sydney,
10 May, 1858.

SIR,

I am instructed by Mr. William Bell to forward you the accompanying correspondence between a former Government and his deceased father, together with an annexure, in the shape of a statement of Mr. Bell's claim to a parcel of land upon which the present Legislative Assembly Chambers stand, for which, though granted by the Crown to Mr. Bell's father, and never by him alienated, neither Mr. Bell's father nor Mr. Bell himself, as the heir-at-law, have received compensation. I am directed to beg very respectfully that you will lay the matter before the Executive at your earliest convenience, with the view that Her Majesty's Ministers may direct an inquiry to be made, and such justice as may thereupon be found due to Mr. Bell awarded him.

I have, &c.,
D. H. DENIEHY.

No. 13.

UNDER SECRETARY'S MINUTE.

Mr. Archibald Bell was, it is alleged, in occupation of an allotment of land at the south-east extremity of the old Barrack-square (now Wynyard-square), that after the deposition of Governor Bligh he was called upon to give up this occupation, and that in lieu thereof, he received a grant of 40½ rods of land in Macquarie-street, on the site of the present Legislative Assembly.

There is no proof of the occupation in George-street, but on the other hand there is no doubt of the issue of the grant, or of what purported to be a grant for the land in Macquarie-street, by Colonel Paterson, bearing date the 3rd October, 1809, that is a few weeks before the arrival of Governor Bligh's lawful successor. The acts of the so-called Rebel Government were repudiated by Governor Macquarie. No doubt persons found in occupation of land under their assumed authority were not always disturbed, the occupation being in many cases practically sanctioned *de novo*. No occupation of the land in Macquarie-street by Mr. Bell is alleged.

The deed of grant issued by Colonel Paterson was recalled by Governor Macquarie, and was some years after (5th September, 1825) destroyed by the then Colonial Secretary, Major Goulburn.

During the long administration of Governor Macquarie no serious effort was made by Mr. Bell to enforce the claim. Indeed it is clear from the language used in his Memorial, (30-707) that he himself regarded the claim as of very questionable validity, otherwise he could not reasonably apprehend that its attempted enforcement would bring upon him and his family the displeasure of a Governor under whom he admits that he was enjoying "*great indulgences*."

In like manner, the entire administration of Sir Thomas Brisbane was allowed to pass without any movement on the part of Mr. Bell.

But in 1830, upwards of four years after the arrival of Sir Ralph Darling, Mr. Bell applied for compensation, alleging as the moving cause, that Mr. Blaxland had received compensation for an allotment in the same locality, measured on the same day.

Sir Ralph Darling sent the case to the Secretary of State, by whom whatever was given to Mr. Blaxland was specially authorized; but the Secretary of State rejected the claim "in consequence of the length of time which has been allowed to elapse without any application being made to that effect, and the indulgence which Mr. Bell was receiving during that time from the local Government."

This decision was conveyed to Mr. Bell in September, 1832, and after a silence of twenty-six years (Mr. Bell died in 1837), his son now renews the claim, alleging as the reason of this silence, his want of means to prosecute the matter. In fine, a claim which was chiefly rejected for slumbering twenty years, is now revived after another sleep of twenty-six years.

9 June.

M. F.P.

Mr. Bell's statement that the reason he did not sooner move in this matter was "want of means," seems very unsatisfactory, considering that all he would have required would have been a few sheets of foolscap. Irrespective of the inadmissibility of the excuse on that ground, I am personally aware that he was living in great affluence at Jerry's Plains for several years previous to 1840.

JOHN R.

No. 14.

UNDER SECRETARY to D. H. DENIEHY, ESQ.

*Department of Lands and Public Works,
Sydney, 22 June, 1858.*

SIR,

I am directed by the Secretary for Lands and Public Works to acknowledge the receipt of your letter of the 12th ultimo, preferring, on behalf of Mr. William Bell, a claim to compensation for certain land in Macquarie-street stated to have been granted to his late father, Mr. Archibald Bell.

2. The following appear to be the circumstances of the case, as disclosed by the papers, namely,—The late Mr. Archibald Bell was, it is alleged, in occupation of an allotment of land at the south-east extremity of the Old Barrack-square (now Wynyard-square); after the deposition of Governor Bligh he was called upon to give up this occupation, and in lieu thereof he received a grant of forty and one half rods of land in Macquarie-street, on the site of the present Legislative Assembly.

3. There is no proof of the occupation in George-street, and no occupation of that in Macquarie-street is even alleged, but on the other hand there is no doubt of the issue of the grant, or of what purported to be a grant for the latter, by Colonel Paterson, bearing date the 3rd October, 1809, that is, a few weeks before the arrival of Governor Bligh's lawful successor.

4. The acts of the Rebel Government being uniformly repudiated by Governor Macquarie, the so-called deed of grant issued by Colonel Paterson was recalled by Governor Macquarie, and was some years after (5th Sept., 1825) destroyed by the then Colonial Secretary, Major Goulburn, as appears by a record of the office of the Chief Secretary.

5. During the long administration of Governor Macquarie no effort was made by Mr. Bell to enforce his claim. In like manner the entire administration of Sir Thomas Brisbane was allowed to pass without any movement on his part, and it was not until the year 1830, that is to say, upwards of four years after the arrival of Sir Ralph Darling, that Mr. Bell applied for compensation, alleging, as the motive for his then moving in the matter, that Mr. Blaxland had received compensation for an allotment in the same locality measured on the same day.

6. Sir Ralph Darling sent the case to the Secretary of State, by whom whatever was given to Mr. Blaxland was specially authorized; but the Secretary of State of that period rejected the claim in consequence of the length of time which had been allowed to elapse without any application being made by Mr. Bell, and because of the indulgence which Mr. Bell was receiving during that time from the local Government.

7. This decision appears to have been conveyed to Mr. Bell in 1832, and now, after a silence of twenty-six years, Mr. Secretary Robertson finds it impossible favourably to entertain a claim which was originally rejected chiefly for having been allowed to slumber so long.

I have, &c.,

MICHL. FITZPATRICK.

1862.

MR. WILLIAM SIMS BELL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 30th September last, "to inquire into the case of Mr. William Sims Bell, as set forth in his Petition presented to this House on the 9th September,—with power to send for persons and papers," and to whom, on the 9th October, were referred "the papers relative to the case of Mr. William Sims Bell, laid upon the Table of the House" on the previous day,—have agreed to the following Report:—

Your Committee have examined the witnesses named in the margin,* and have considered the official documents above referred to; and the following are the facts of the case, as proved to your Committee:—

* Mr. M. Fitzpatrick.
Mr. W. S. Bell.
Mr. G. Whittel.
Mr. E. Blaxland.

In the year 1807, the Petitioner's father, Mr. Archibald Bell, arrived in this Colony, as an officer in the 102nd Regiment, having at that time a large family, and was located with the other officers on a portion of ground forming a portion of the Barracks, where he resided for a period of four years or thereabouts.

Mr. Bell alleges that his father, at the request of the then Lieutenant Governor of the Colony, relinquished this allotment in exchange for another, situated in Macquarie-street, the present site of the Parliamentary Buildings, but there is no proof of this, further than a statement of the late Mr. Bell, contained in a memorial, dated the 29th January, 1830, and addressed by him to Lieutenant General Darling, claiming compensation; but it is undoubted that a Grant, under the Great Seal of the Colony, and under the hand of Lieutenant Governor Paterson, did issue to Mr. Bell, on the 3rd October, 1809, of forty and a half rods in Macquarie-street, being the allotment before mentioned, adjoining Mr. Blaxland's. This Grant, it appears, was afterwards called for by Governor Macquarie, and was cancelled or destroyed, during his administration, in the year 1825, as appears by a memorandum of the then Colonial Secretary, Major Goulburn, to that effect. Mr. Bell, in his Memorial before mentioned, alleges that this was done without his sanction or authority, and there is nothing to show that this course was justified by political or other reasons.

It

It appears, that although the Grants issued by Lieutenant Colonel Paterson, between the departure of Governor Bligh and the arrival of Governor Macquarie, were declared illegal, yet fresh Grants were all in instances granted to the persons holding Colonel Paterson's Grants.

It further appears, that the late Mr. John Blaxland also obtained from Colonel Paterson, on the 19th July, 1809, a Grant of an allotment adjoining Mr. Bell's, which was also resumed by Governor Macquarie, and that he subsequently got compensation for this land; the difference between Mr. Blaxland's case and Mr. Bell's being this: in the one case Mr. Blaxland vigorously prosecuted his claim; whilst in the other, Mr. Bell allowed his to slumber for a number of years; Mr. Bell assigning as a reason that he, being then a Government Officer, and having a large family to provide for, feared that he might thereby incur the displeasure of the Government.

Your Committee are of opinion, that these facts having been proved, the delay which has occurred ought not to prejudice Mr. Bell's claim; and they recommend his case to the favourable consideration of the Government.

JAMES HART,
Chairman.

*Legislative Assembly Chamber,
Sydney, 28 November, 1862.*

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 3 OCTOBER, 1862.

MEMBERS PRESENT :—

| | | |
|--------------|--|--------------|

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PETITION OF WILLIAM SIMS BELL.

THURSDAY, 9 OCTOBER, 1862.

Present :—

| | | |
|-------------|--|--------------|
| MR. DANGAR, | | MR. HART, |
| MR. GORDON, | | MR. MORRICE. |

JAMES HART, Esq., IN THE CHAIR.

Michael Fitzpatrick, Esq., called in and examined :—

1. *By the Chairman* : The Committee have requested the favour of your attendance to see if you can afford them any information, whether by documentary evidence or otherwise, respecting the claim of Mr. W. S. Bell, as set forth in the petition presented to the House? The only information I possess of the case is derived from the correspondence, copies of which were laid before the House yesterday and ordered to be printed, and the originals of which I produce; beyond that I know nothing. The case occurred, I believe, before I was born, or chiefly so; but it was conceived to be a part of my duty at the time the claim was preferred by Mr. Bell, in 1858, to express an opinion upon it, which opinion is in the *précis* among the papers laid before the House. I have nothing beyond my opinion to offer to the Committee, as derived from the facts as alleged in the petition and as shown in the original papers.
2. Have you read the petition of Mr. Bell? I have.
3. Are the statements contained in it, as far as you can gather, correct? With one exception I think they are, and on that I am not prepared to say the statement is not correct; I can only say that there is nothing in the correspondence to sustain it.
4. Perhaps you will point out what you refer to? He says, in the 6th paragraph of his petition,—“That afterwards, and during the administration of Governor Macquarie, the said Archibald Bell had frequent interviews with Mr. Oxley, the Surveyor General, and others, with the view of obtaining compensation for the land taken from him, but the said Archibald Bell was advised not to press his claim then, lest he should incur the displeasure of Governor Macquarie, which would be prejudicial to the interests of your Petitioner’s father and his family.” I can only say that there is nothing in any of the offices, or in any of the correspondence, to sustain that assertion that he had those interviews, although it is quite possible that he had them. It also seems to me that the reason alleged is an inconsistent one, and does not bear out the statement.
5. Is it not very likely, as Mr. Bell held a Government office at the time he refers to, and a subordinate office too, that it would have been somewhat inconsistent with his position to insist upon his claim for compensation being satisfied;—would he not have been likely to have incurred the displeasure of Governor Macquarie, who, I believe, was somewhat impetuous and imperious as Governor, and also the displeasure of Mr. Oxley, who was somewhat of the same disposition? So far as the Governor was concerned it might be quite possible, if Mr.

Michael
Fitzpatrick,
Esq.

Oct., 1862.

Michael
Fitzpatrick,
Esq.

9 Oct., 1862.

Bell were insisting upon a claim that was regarded with disfavour by the Governor; but there is nothing here to show that he preferred a claim at all to the Governor. So far as Mr. Oxley is concerned, the Chairman's question is answered by the fact that the petitioner asserts that he had frequent interviews with him, so that it could not have been from any apprehension of his displeasure that the thing fell through.

6. Can you state when Governor Macquarie ceased to hold his office in this Colony? Historically I can; it was in December, I think, of 1821, or in a very early month of 1822.

7. And there is nothing in the papers to show that during his administration any claim was preferred? Nothing whatever; the grant which was alleged to have issued, which did issue by Colonel Paterson, was in October, 1809. Governor Macquarie came here in 1810, and he left at the end of 1821, or the beginning of 1822; then there was another Governor—another administration altogether. Sir Thomas Brisbane intervened, and it was not until well advanced in the administration of Governor Darling that this memorial of Mr. Bell's was received.

8. What is the date of that memorial? It is dated the 29th January, 1830. There is a mistake in the date, for it was received in the Secretary's Office on the 28th January; that is the date of the registration in the office, which can hardly be wrong. It is accompanied by a letter from Mr. Bell, dated the 29th.

9. That memorial, I believe, was referred to the Secretary of State, in consequence of the Colonial Government having no power at that period to deal with this matter? Yes.

10. When was the answer received from the Home Government? According to the practice of the period, the instructions to convey that answer was dated 30th August, 1832, and the dispatch would be received somewhere about that time. The minute of Sir Richard Bourke is as follows—"Let it be communicated to Mr. Archibald Bell, that the Secretary of State has declined entering upon his claims for remuneration for a town allotment, in consequence of the length of time which has been allowed to elapse without any application being made to that effect, and the indulgence which Mr. Bell was receiving during that time from the Government." That is dated the 30th August, and a letter was written to Mr. Bell on the 1st September, 1832, and from that time until 1858 there is no notice of any claim.

11. A period of nearly twenty years would have elapsed —? Twenty-six years from the refusal of this claim on the ground that it had slumbered too long.

12. I am alluding to the period that had elapsed from the time the claim was first made to the time when this application was made? He was nominally displaced from the occupation, if there were any, of the allotment in Macquarie-street, by Governor Macquarie. That Governor came here in 1810, and it would be from that time to 1830—twenty years—which was considered by the Secretary of State long enough to bar the claim; and then, after that unfavourable decision, it slept again for six-and-twenty years, when the claim was revived in its present form.

13. Has it ever been the practice of any former Government to set up a statute of limitation to any just claim? Yes, cases are numerous where claims have been refused because they have slumbered too long; it was considered unreasonable to entertain them after they had been allowed to remain for such a long period.

14. Has it come under your notice that claims have been recognized by the Government which have been allowed to remain unsettled even for a greater period than Mr. Bell's? Not parallel to this. I cannot say that I know any case that has been entertained favourably after such a period has elapsed as in this case, unless under very different circumstances, as, for instance, where a claim was originally refused for a reason which was afterwards proved to be incorrect. In such a case, no matter how long a period may have elapsed, I believe that no Government would bar a claim by reason of lapse of time. Of course, I speak without notice, and from memory it is not easy to instance claims, but Dr. Douglass' claim will illustrate what I mean. You are aware that Dr. Douglass had a claim, which was carried through successfully in a former Parliament, for compensation for 2,000 acres of land he had lost. That claim was originally refused on the ground that he had never selected the land, and that refusal was repeated more than once by successive Governments and Secretaries of State; and they would not re-open the case, as it had been decided so and so. After a lapse of years Dr. Douglass came out to this Colony, either for that or other reasons, and succeeded in satisfying the local Government that he did make the selection, and Mr. Wentworth proved that he had occupied part of that land from Dr. Douglass as his tenant. As soon as that fact was made apparent, the Government immediately re-opened the case, and granted his claim, because it was patent that the lapse of time was not the fault of the applicant, but originated in a mistake that was afterwards corrected. But that is not parallel to this case, for this is a case—I state my own opinion in great deference to the Committee—the *bonâ fides* of which could only be made apparent at the time of the displacement of Mr. Bell, and not twenty years afterwards.

15. In this case one of the reasons assigned for not granting the prayer of Mr. Bell's memorial is, that there was no proof of his occupation of the land in Macquarie-street? That is not stated in the decision of the Secretary of State.

16. But in the *précis*? I mention in the *précis* that occupation is not alleged.

17. You are of opinion that it ought to have been so alleged and proved? It ought to have been so alleged and proved. I think, from my experience in dealing with cases of this kind, it would be a very important feature in the case if it were alleged, and that it would have been alleged if it had been so. Occupation of the land in George-street is alleged, but not of that in Macquarie-street.

18. Would not the possession of the actual grant from the Crown be stronger than any mere occupation

occupation of the land? It was not a valid grant recognized by competent authority. All such grants were either renewed or annulled by Governor Macquarie.

Michael
Fitzpatrick,
Esq.

9 Oct., 1862.

19. That appears to be a matter of argument? I believe it is a matter of history; and I allege, without the slightest hesitation, as the result of my long experience, the fact that all those grants that were not renewed by the constituted Government, were annulled. The cases are numerous were they were renewed; but the grants issued by the so-called Rebel Government were universally cancelled and annulled. I cannot now, after so great a length of time, say positively, but I believe a proclamation was issued by Governor Macquarie to that effect.

20. Do not many persons hold grants of land now, under documents issued by Colonel Paterson, which have not been annulled? Not at this period. I think in every case they have been renewed, and another deed has been issued. I think so; of course it would require a great deal of research to settle the fact. But there was, I think, a previous period during which Colonel Paterson legally administered the Government of this Colony.

21. Can you charge your recollection as to whether the land of which Mr. Bell is now in possession was not originally granted by Colonel Paterson? I cannot; but I think, with great respect to the Committee, that I have little to do with the abstract question. The document I produce shows that the constituted authority of the period conceived that he destroyed, or purported to destroy, this particular grant.

22. That may have been an arbitrary deed? I am not expressing an opinion upon that; but I say that this (*referring to a paper*) purports to have been done at that period.

23. This (*referring to the paper produced*) is not the original? No, that is a true copy of the original entry.

24. Do you produce a copy of the alleged deed of grant to Archibald Bell? This (*producing the same*) is a copy of the registration of the grant, not a copy of the grant *in extenso*. In the registry of grants, on that entry appear the words of which a copy are here, purported to be written by Major Goulburn, then Colonial Secretary—"Destroyed the 5th September, 1825.—F. G."

25. Is there any record among the papers, showing that Governor Macquarie authorized this grant to be destroyed, or that Mr. Bell consented to it? Nothing that I am aware of.

26. If grants issued during the interregnum were destroyed, or recalled, are you aware whether other grants were issued for them, or whether the Government refused to recognize the acts of Colonel Paterson? I believe, as I have already stated, that it was the invariable rule either to cancel or to renew the grants issued during the time of the Rebel Government.

27. Were the grants that were cancelled renewed? By new grants, that is what I mean by their being renewed; they were treated by Governor Macquarie as a perfect nullity. My conception of the case is, that where a person was in occupation of land purported to be granted by the Rebel Government, Governor Macquarie, or subsequent Governors, renewed them to make them legal; but always treated the grant of the Rebel Government as a nullity.

28. If it had been proved, to the satisfaction of the then Government, that Mr. Bell resigned the land which he held in George-street, to the Government, do you consider that a fresh grant would have issued to him of any land that had been issued to him in exchange? That I cannot say, that would depend entirely upon the view of the Government of the period—which was the Governor of the period—and would be qualified by many considerations: the purpose to which Mr. Bell would apply it; whether he was in a position which entitled him to a grant. I know that if a person were now put out of one allotment he would get another. The original memoranda upon the memorial of the late Mr. Bell will show that these grants were always treated exceptionally. The memorial of Mr. Bell was referred for the report of the Surveyor General, by the late Assistant Colonial Secretary, Mr. Harrington. The late Surveyor General, Sir Thomas Mitchell, says:—"No record of any such deed in this office, probably owing to the suspension of Governor Bligh." Then Mr. Macleay, the Colonial Secretary, takes up the question, and inquires:—"Is there any record of this deed in this office?" Then the Record Clerk, the late Mr. Raymond, I think, says, "Yes. See folio, &c."

29. Then Mr. Raymond's memorandum contradicts your experience? It does not contradict —

30. At all events, it supplies the want that Sir Thomas Mitchell alleges to exist? What I want to invite your attention to is this, that the practice of the Colony was, that all regular deeds were recorded in the Surveyor General's Office. We look to that as the source of all information, as to authority to occupy land. Sir Thomas Mitchell could find no record of any such grant in his office, but suggested that that fact might be owing to the suspension of Governor Bligh; that is to say, that the grant was by the Rebel Government. Then, taking up the cue, Mr. Macleay inquires whether there was such a grant in his office, and the answer is given, there was such a grant.

31. It was quite consistent to suppose that a grant might have existed, although there might have been no record in the Surveyor General's Office? It was known that it was issued, but was regarded as irregularly issued.

32. Have not grants issued, but without being recorded in the Surveyor General's Office, and has not Sir Thomas Mitchell reported that such grants have not issued, whereas, in fact, they have? I cannot say; I do not know any case of the kind.

33. I would direct your attention to the case of Thomas Hyland, whose father had fifty acres of land in the district of Prospect, and a grant issued to him, but a second grant was afterwards issued to another person, in consequence of Sir Thomas Mitchell having reported that no such grant as the first had issued? I do not remember the case thoroughly, but no doubt it was of this character—of which several cases have occurred—that the grant had issued and been recorded in Sir Thomas Mitchell's office; but from some misnomer of the locality,

Michael
Fitzpatrick,
Esq.
9 Oct., 1862.

locality, or from the search not having been an accurate or complete one, it had been overlooked. That has frequently occurred, and a very remarkable case of the kind occupied the consideration of the Legislature some years ago upon the petition of Sutherland, where Knight was the grantee. I think in that case there were three grants issued for the same land, one by the Rebel Government, treated as an absolute nullity; the second by the proper authority; and the third from a misnomer of the locality, through ignorance of the second grant.

34. *By Mr. Gordon:* Is there any document showing that Mr. Bell was ever in possession of the land at Barrack-square? I have none; but the non-existence of such documents does not contradict Mr. Bell's assertion that he occupied, for at that period documents were very scant.

35. You said that the acts of Colonel Paterson, with regard to grants, were annulled? During the Rebel Administration. I have an impression that I require to set myself right upon that. There was a period during which Colonel Paterson was legally acting—during some other period of interregnum—but I state my belief that all the grants issued during the interval between Governor Bligh's departure and Governor Macquarie's arrival, were treated as a nullity.

36. Would it not have been fair, if the act of Colonel Paterson in requesting Mr. Bell to give up the land at Barrack-square, on condition of his receiving the land in Macquarie-street, had been disallowed, that Mr. Bell should have been allowed to return to his former grant? That is a matter within the bosom of the Governor of the time; but it is impossible to say, after forty-six years, why that was not done.

37. Are you aware whether any of the grants made by Colonel Paterson were allowed? No, I could not say merely from memory; my impression is that some were renewed.

38. Are you aware of any that were destroyed besides this one? I could not certainly say from memory, but my impression is that they were numerous. My impression, the result of twenty-five years' experience in the office is, that all grants issued between the departure of Governor Bligh and the arrival of Governor Macquarie, were treated as a nullity.

39. What period of time was that? It was from 1808 to the beginning of 1810. This grant was issued in 1809.

40. Was it during that time that the acts of the Rebel Government were not recognized? Yes, at that particular time.

41. *By the Chairman:* There was a Government *de facto* at that period? There was a Government *de facto*, but not recognized by the Home Government, and I have a strong impression, that requires research to satisfy, that Governor Macquarie publicly declared the disallowance of the acts of that Government. I believe, historically, that Governor Bligh was re-instated for a day as a mode of constitutionally disavowing the acts of the Rebel Government.

42. Were not people punished for crimes in that period? Yes, but that is a thing that cannot be undone; if you hang a man you cannot undo it.

43. I believe several men suffered capital punishment during the interregnum? I have not the slightest doubt of it; but the hanging would not be any the more legal for that reason.

Mr. William Sims Bell called in and examined:—

Mr. W. S. Bell.
9 Oct., 1862.

44. *By the Chairman:* Where do you reside? At Bexley, near Canterbury.

45. I believe you are the eldest son of your father, the late Mr. Archibald Bell? I am.

46. Can you say when your father arrived in this Colony, and under what circumstances? He came here as an officer of the New South Wales Corps, afterwards called the 102nd Regiment.

47. In what year? 1807.

48. What family had he? He had a wife and nine children then.

49. Including yourself? Including myself.

50. What took place after your father arrived? He went into barracks, and shortly afterwards had a piece of land between George and York streets given to him by Governor Bligh.

51. Was that place then occupied by the 102nd Regiment? The front of it was.

52. Opposite the Post Office? Almost, but nearer to the present Bank of New South Wales.

53. Extending from York to George streets? Not quite, but up to where the square is now.

54. Do you mean the site that was occupied by the military? The part now known as Wynyard-square was then occupied by the military.

55. What portion of that was allocated to your father? Where the Commercial Bank now stands, from George-street towards York-street.

56. What quantity of land did that parcel contain? I believe it to have been the same quantity as was given to him here in exchange.

57. Can you speak with certainty as to the quantity? I think I could, my father spoke of it so often. He said he got the same quantity here as he had had in George-street. I was young at the time.

58. You heard your father make that statement? Yes.

59. How old were you then? I was twelve years old.

60. Have you any recollection of your father in any way improving or doing anything with that land? Yes, I recollect his fencing it in; he paled it and made a garden there. He held it two years.

61. Was it the custom of the Government at that time to give grants to officers? I should think so, for the Government at Home, when he was coming out here as an officer, gave him a grant of 500 acres; he received an order for that from the Secretary of State.
62. By whom was that land granted to him afterwards in the Colony? It must have been by Colonels Johnstone or Paterson; I do not recollect. My father, I know, selected his land over at the North Shore in the first instance. He subsequently exchanged that land at the North Shore for land at Richmond, now known as Belmont.
63. Was that land afterwards granted under the hand of Lieutenant Colonel Paterson, or Colonel Johnstone? I do not know; it must have been under Colonel Paterson, I suppose, afterwards, but the order was from Home.
64. Do you know anything, personally, about your father having been asked to give up the land in Barrack-square? He told me that he gave it up at the request of Colonel Paterson, who wished to make Barrack-square larger.
65. Do you know, personally, whether he vacated that land or not? He exchanged it voluntarily for the piece of land here. It was the wish of the Government to have it.
66. That is, he exchanged it for the land in respect of which you now claim compensation, now the site of the Parliamentary buildings? Yes.
67. Do you know anything about your father having been called upon by Governor Macquarie to produce the deed of grant? Only from my father's letters.
68. And from the memorials presented by him to the Government? Yes.
69. Did your father ever get compensation, either for the land relinquished by him in Barrack-square, or for the land in Macquarie-street? Never.
70. Do you know anything about your father having any interview with Mr. Oxley on the subject at this time? He has told me he did.
71. Will you state to the Committee what you know of the matter? It is only hearsay. He has told me that he has called upon Mr. Oxley; but Mr. Oxley, I suppose, was one of the most irritable men ever known. He always put my father off in a very short way. I could not tell you what he said, of course.
72. Did you ever have any interviews with Mr. Oxley yourself? I had, on one occasion, about some land; but not respecting this matter.
73. What offices did your father hold during the early part of the government of Governor Macquarie? He went Home with his regiment soon after Governor Macquarie came out.
74. In what year was that? 1810.
75. When did he return to the Colony? He was two years away.
76. Upon his return was he appointed to any office under Government? Yes, as Police Magistrate at Windsor.
77. I think you said your father had a large family? Yes, nine children.
78. Was he in any way dependant upon the Government at that period? So far as this, that he was not rich enough to lose his appointment; that made him quiet about the loss of his land. He was afraid of losing his salary.
79. Was that the reason assigned by him for not pressing his claim? Yes, he was afraid of losing his salary; in fact, I believe he lost his appointment as Police Magistrate in consequence of interfering with the proceedings of the Government in the case of Judds and Thompson. When those prisoners came to Windsor, thinking they would die from the effect of the iron chains they had on, he, as Police Magistrate, ordered their irons to be taken off; and not long after he was superseded by Mr. North. That shows the strictness of the Government.
80. Can you assign a reason why you did not prosecute your claim after your father's death? I did not like to run the risk of going to law; I, therefore, did not take any steps until the Assembly became independent.
81. And had the control of the waste lands? Yes.
82. Have you any evidence besides your own, to show that your father was ever in possession of the land in George-street? Yes, a soldier, a veteran; he is here now.
83. What is his name? Charles Whittell.
84. Supposing the Government should be of opinion that you were entitled to any compensation, can you fix any valuation either upon the land that was relinquished by your father in George-street, or that granted in Macquarie-street? Land in George-street, where the Commercial Bank stands, has sold at a very high figure—£80 or £90 a foot; however, I must leave it entirely to the gentlemen of the Committee to say what they think a proper compensation.
85. Have you also any evidence to show that the land granted to you is that upon which the Parliamentary buildings are erected? The deed.
86. Can you identify the description in the deed with the land I refer to? I can so far identify it that it was adjoining a piece of land that was granted to Mr. John Blaxland.
87. Was an allotment also granted to Mr. John Blaxland? Yes.
88. Adjoining this granted to your father? Yes.
89. By whom was this granted to your father? By Colonel Paterson.
90. Did Mr. Blaxland afterwards relinquish his land under circumstances similar to those under which your father gave up his? It was taken from him; but he bothered the Government so long that he got 10,000 acres of land.
91. Do you know what reason Governor Macquarie assigned for taking both those allotments? It was to erect these buildings for the Medical Board.
92. And the Infirmary? Yes.
93. Then it was not for any political reason that the land was taken from your father, but simply to carry out the views of the Government in the establishment of a military hospital and infirmary? That was all.

Mr. W. S. Bell.

9 Oct., 1862.

- Mr. W. S. Bell. 94. Do you say that Mr. Blaxland got compensation for the allotment he relinquished? Yes, for that and for some cattle that were over the Cowpastures. His farm at Luddenham was adjoining the Cowpastures, and some of his cattle got over, and Governor Macquarie would not let him go on the Cowpastures for them; he wrote a memorial Home, and at last 10,000 acres of land were granted to him at Gammon Plains, on the Hunter.
95. *By Mr. Gordon*: You have just said that Governor Macquarie did not deprive your father of his grant for political reasons, but merely because the land was required for certain public buildings? Yes.
96. Do you think that was a just act on the part of Governor Macquarie? Anything but that.
97. How can you account for Governor Macquarie doing anything of the kind, if not for a political reason? Only that he wanted the ground.
98. Do you not think that a disgraceful act on the part of the Governor, if there were no other reason? I think so, and so did my father.
99. Do you know any other instance of a similar tyrannical act? Yes, that of Mr. Blaxland's; but I know that only by hearsay.

THURSDAY, 16 OCTOBER, 1862.

Present:—

| | |
|-----------------|--------------|
| MR. DANGAR, | MR. HOSKINS, |
| MR. R. FORSTER, | MR. MORRICE, |
| MR. GORDON, | MR. SMART. |

JAMES HART, ESQ., IN THE CHAIR.

Mr. George Whittel called in and examined:—

- Mr. G. Whittel. 100. *By the Chairman*: What is your age? I am in my seventy-fourth year.
101. When did you arrive in the Colony? The last time I came in 1830.
102. Was that your first arrival? I was born here. Mr. Wentworth went to school with me before he went to England. He was born in Norfolk Island.
103. Where were you born? At Camp Cove, South Head.
104. I believe your father belonged to the 102nd Regiment? He did; he was sergeant-major.
105. It was then known as the New South Wales Corps? Yes.
106. Do you recollect Mr. Archibald Bell, who was an officer in that regiment? Yes, he was.
107. Do you recollect when he arrived in this Colony? In 1806 or 1808, I believe.
108. Where did he take up his quarters after he arrived? In the old Barrack-square. I escorted his baggage by order of Sergeant-Major Whittel.
109. Will you describe the particular locality where he was located? On the south wing, at the bottom next to George-street, as it is now called; it was Sergeant-Major's Row at that time.
110. Or Soldier's Row? Soldier's Row was what they call York-street now.
111. Did he remain there? Yes, he did.
112. Do you recollect his doing anything with the land? Yes, he fenced it in from the barracks to George-street, as it is called now, and made a garden of it.
113. Did he erect quarters there? No; quarters were given him in the barracks; but the ground was always understood to be a gift from Governor Bligh to every officer who had a large family, which he had—a very large one.
114. Was the place he then occupied the same site as that now occupied by the Commercial Bank? The same place.
114. Extending along York-street? No, not up to York-street all the way; there were other officers' quarters between Lieutenant Bell's and York-street. He had the east wing.
116. Can you state about the quantity of land he held there? I should think it was 400 or 500 yards; it was a good large garden. There was a great space from the officers' quarters to the street that is now. On account of Mr. Bell having a great family, that was the reason it was given him.
117. How long did he continue in occupation of the land? From the time he arrived till we were ordered home to England.
118. How long was that? About two years—as far as my memory will teach me. At the time Colonel Johnstone put the Governor under arrest, he was obliged to go Home with his regiment, and me too. He had possession of it all that time; I cannot tell you how long that was exactly.
119. Do you recollect Colonel Paterson coming to take charge of the Government here? He did.
120. Are you aware whether he made any arrangements for extending the barracks in that locality, so as to include this piece? No, I do not think he ever did; I am almost positive he did not. It remained in Mr. Bell's possession all the time; if there had been any alteration I should have known it.
121. After Lieutenant Bell relinquished it? No, he did not.
122. Did you go Home with Mr. Bell? Yes.
123. And when did you return to the Colony? In 1830.

124. Did Mr. Bell remain at Home all that time? Not that I am aware.
125. Do you know when he returned? No.
126. Do you recollect by what name the portion of the city where we now are was then called? Some called it the Camp—some Sydney.
127. I am speaking of this part where we now are? This was all bush then.
128. Do you know whether it was called East Hill? Not that I am aware of; it was the bush, and we used to come here for jeebungs and five-corners. From the Cove there were no houses, excepting down by where the Botanical Gardens are. Woolloomooloo belongs to Commissary Palmer; it was always called Woolloomooloo, or Mr. Palmer's.
129. Do you recollect Mr. Wentworth or Mr. Blaxland having any allotment of land in this locality? Somewhere hereabout Mr. Blaxland had some land; I always understood so.
130. Do you know what he did with it? No, for I went Home, or from Home I should say.
131. Was Mr. Blaxland ever located on land up here? I cannot say; we used always to say, "We will go up to Blaxland's and get some jeebungs."
132. Were you on terms of intimacy with Lieutenant Bell? Perfectly so; I was never confined while I was in the army, nor have I been once since I was out of it.
133. Do you recollect having any conversation with him as to a grant of land up here? When I was living with Captain Dumaresq, when he married Miss M'Lean, at the time he was living in Castlereagh-street—my wife and I were living with him as domestics—Mr. Bell called one day and he says, "Well, Mr. Whittel, I suppose you recollect the old quarters perfectly well?" I says, "I think I ought, when I took you there, when I escorted your baggage." He said, "I think I ought to have my garden back again." I said, "If you do not it is your own fault; you ought to go and fence it in and take it now."
134. That conversation related to the land he held in George-street? Yes, the same.
135. *By Mr. Gordon*: Do you know what Mr. Bell did with this allotment of land in George-street? No, I cannot say.
136. You never heard? No, I did not.
137. What improvements did he make? He fenced it, and had a fine garden for growing cabbages and vegetables.
138. How many years had he this garden to your knowledge? I would not be positive; I think five or six, or four or five years—it is so many years back. I know he had it soon after he came, and he fenced it directly.
139. You never heard what became of it? No, I never inquired; it did not belong to me; any further than when he came to Captain Dumaresq's he made that observation.
140. *By the Chairman*: I believe those were very stormy times in the Colony, after the arrival of Colonel Paterson, and the subsequent arrival of Governor Macquarie? They were rather stormy times when Colonel Johnstone and Governor Bligh were here; not with Governor Paterson.
141. Do you recollect any trials taking place during the time of Colonel Paterson, and before Governor Macquarie arrived—any trials for murder or other offences? Yes. I believe there was a man hanged for killing Government cattle—a man upon crutches; he was lifted up in the cart with his crutches, and hanged. His name I forget—I believe his name was Cheeseman. He was grey-headed.
142. *By Mr. Dangar*: The house Mr. Bell resided in was not on this land? Yes.
143. Did Government build the house or did Mr. Bell? The Government; the land went right up to his door.
144. *By the Chairman*: Was Mr. Bell's house within the limits of the barracks? Yes.
145. Was this piece of land also within the limits of the barracks? Yes; it came from his door down to George-street.
146. *By Mr. Hoskins*: Were the barracks enclosed? Yes, they were fenced round; that part was not; it was all open to George-street in those days.
147. Can you speak with any degree of accuracy as to the limits of the barrack reserve? Yes; north, east, west, and south.
148. From common repute, not from your own knowledge? I must have known them when I was a soldier.
149. *By Mr. Dangar*: Do you know when this wall was built all round? Yes, in Governor Macquarie's time.
150. *By the Chairman*: Had Lieutenant Bell this piece of land as a private allotment of his own? Certainly.
151. Was the house that he resided in, his own property? No; it was in the officers' quarters; but the garden was his own.
152. *By Mr. Gordon*: Was the allotment fenced between the quarters and the land? Yes.
153. Was there a fence running between the house and the land—was he obliged to go through a gate from his house to the land? Yes.
154. *By Mr. Hoskins*: Did Mr. Bell enclose this piece of land and prevent other persons who lived in the barracks from going in? Yes; it was his own private land.
155. Were there other officers in the regiment who also enclosed pieces of land in the barracks? No, they did not.
156. *By the Chairman*: Had they allotments, to your knowledge, in other parts of the city? Yes. How Dr. Harris got Ultimo I cannot say, but I know well that Captain Lewis had a piece of ground at the back of the old barracks as a garden.
157. Major Grose—had he any? Yes, Grose Farm, on the Parramatta Road.
158. Who else? Colonel Johnstone, out at Annandale; Quarter Master Laycock, in George-street—it was Sergeant-Major's Row then. I cannot recollect any more this minute.
159. The barracks were enclosed, after your departure from the Colony, by Governor Macquarie? Yes, they were not enclosed in my time.

Mr. G.
Whittel.

16 Oct., 1862.

- Mr. G. Whittel.
16 Oct., 1862.
160. The wall which he erected took in this piece of land that Mr. Bell formerly occupied? Yes; at the north end, below Dr. Harris' wing, there was a large billiard-room for the officers, and no one else. That took up that part of the division on the north side.
161. At the time Lieutenant Bell arrived in the Colony, was it the practice of the Government to allow military officers to occupy certain portions of land for themselves and families? Not without leave from the Governor.
162. *By Mr. Smart*: With the Governor's permission, did they occupy pieces of land? Yes.
163. In some instances some only temporarily occupied it? I cannot say for that.
164. How can you say whether the Governor granted this land absolutely to Mr. Bell? If the Governor gives you a grant to occupy this piece of land I consider it your property.
165. But you cannot say, from your own knowledge, whether he ever did that? I suppose an officer would not occupy the land without he did. I know some people who were not in the army were turned off the land.
166. This piece of land occupied by Mr. Bell, can you say, of your own knowledge, whether he fenced it in himself, or whether it was fenced in by Government? He fenced it in himself at his own expense, and he would not have done that without he had got permission from the Governor.
167. The land that Mr. Bell occupied afterwards became what was called the officers' quarters? It was always the officers' quarters.
168. The house occupied by Mr. Bell was pulled down, and a different description of building was erected for officers' quarters? Yes, but not in my time.
169. The same ground that Mr. Bell occupied was within the boundary of what was known to be the barracks and parade? Yes. Governor Macquarie made a wall all round it when he took it in.
170. *By Mr. Hoskins*: Do you know whether the other officers in the same regiment did or did not generally enclose pieces of land for themselves, for raising vegetables? They did not.
171. Do you know of any other pieces having been enclosed for gardens besides Mr. Bell's? No, not about the barracks; they got grants in other places.
172. Can you state positively whether any other officers did enclose land for gardens besides Mr. Bell? No; I cannot say.
173. *By the Chairman*: You lived opposite this place on the site now known as the Post Office? Yes.
174. So that if any officer had enclosed land you would have had an opportunity of seeing it? Undoubtedly.
175. *By Mr. Gordon*: Can you state, from your own knowledge, whether any other officers besides Mr. Bell got grants of land at the same time that he got this land in George-street? I cannot.
176. *By Mr. Hoskins*: That is to say, you do not know? I do not.

THURSDAY, 23 OCTOBER, 1862.

JAMES HART, ESQ., IN THE CHAIR.

Michael Fitzpatrick, Esq., again called in and further examined:—

- Michael Fitzpatrick, Esq.
23 Oct., 1862.
177. *By the Chairman*: It has been represented to the Committee by the petitioner, Mr. Bell, that the late Mr. Blaxland held a piece of land in Macquarie-street, which was granted to him somewhere about the same time as Lieutenant Bell's land was granted to him, and that Mr. Blaxland, in consideration of having relinquished his piece of land, received compensation from Government;—are you able to afford the Committee any information from documents in your office upon the subject? In pursuance of the summons from the Committee, I procured from the Chief Secretary's Office the papers in Blaxland's case; they had not hitherto been in my custody, for they are of too old a date, and I am enabled, from a careful perusal of them, to answer the question. I learn from these papers that a grant of an allotment of land, in the same locality as that claimed by Mr. Bell, was made in his name by Lieutenant Colonel Paterson, and that as the result of a very long correspondence, having reference to that and other claims of Mr. Blaxland, extending over a great many years, he received a money compensation for the relinquishment of it.
178. Have you a copy of the deed of grant that was issued to Mr. Blaxland? The papers here purport to give what I have no doubt is a correct copy; it is a document of the same character as that produced in Mr. Bell's case, namely, the copy of the registration of the deed. It is to this effect:—"To John Blaxland his heirs and assigns for ever one acre situate on the east side of the town of Sydney bounded on the west side by an intended street bearing south 3° E. 171 feet and the south side by a line east 3° N. 260 feet on the east side by an intended street bearing north 3° W. 171 feet and on the north side by a line west 3° S. 260 feet which said acre of ground is granted to the said J. Blaxland Esquire for the purpose of his erecting substantial buildings thereon and is not to be
"alienated

"alienated or disposed of for the term of five years from the date hereof and paying an annual quit-rent of ten pounds for the term of five years after which period to pay an annual quit-rent of 2s. 6d. per rod. In witness whereof this 19 of July 1809—(Signed) "WM. PATERSON." That is the ordinary record in the old register of a grant having issued.

Michael
Fitzpatrick,
Esq.

23 Oct., 1862.

179. Does it appear, as far as you can gather from the correspondence, that Mr. Blaxland relinquished that piece of land to the Government for any specific purpose? Yes; it appears that it was relinquished for a very specific purpose. It was required by Governor Macquarie as part of the site of hospital buildings—the new hospital as it was then called, of which this building (*the Legislative Assembly Chambers*) is a portion. The correspondence on the subject is very complete, showing that it was relinquished during Mr. Blaxland's absence, at Governor Macquarie's request or command, and that the Governor promised he would give him compensation. There was a long correspondence as to the selection of another allotment. One selection was made at Soldiers' Point, Darling Harbour, but it was not approved. The correspondence having extended over a great number of years, and the claim still being kept alive by Mr. Blaxland, eventuated in the grant of £400, which was supposed to be the value of the allotment relinquished.

180. That was as distinguished from other compensation? Yes. His claims, briefly stated, were of this character: He had suffered, or conceived he had suffered, great losses, which he valued at many thousand pounds, by cattle having strayed over one of the then boundaries of the Colony, the Cowpasture River. The Governor would not allow anyone to pass over that river without a permit, and he would not grant a permit to Mr. Blaxland, except for very short periods. Mr. Blaxland was, therefore, unable to recover his cattle. This was one claim. On the report of the Land Board of the period, this claim was sustained. Another claim was, for not having received a large number of convict artificers promised to him by the Home Government prior to his leaving England. That was also sustained. The minor claim was for this allotment. This claim, I conceive, with great respect to the Committee, to be distinguished from the one now under consideration, because from the outset there was a promise from the Governor that Mr. Blaxland should be compensated, and the claim was kept alive until compensation was given.

181. Does it appear that Governor Macquarie repudiated this grant on the ground that it was issued by Lieutenant Colonel Paterson? No; as I stated on my last appearance, Governor Macquarie formally repudiated all the acts that had taken place from the time of the removal of Governor Bligh. When I was last here I stated that Governor Macquarie had reinstated Governor Bligh for a day, to testify the King's disapproval of what was done in the meantime; but I find, on reference to the history of the period, that this was not literally the fact, because Governor Bligh was not here at the time of Governor Macquarie's arrival; but Governor Macquarie was instructed to reinstate Governor Bligh, and he issued a Proclamation, expressive of the King's disapprobation of the acts performed by the *ad interim* Government.

182. Then he disapproved of both the grants;—they were issued in the same year, and if one was repudiated for political reasons why was not the other repudiated also? I do not say it was not so; I say the grants were treated as null from the beginning; but where Governor Macquarie found people in possession he renewed the grant at his own instance, but he disavowed the act of the Rebel Government. In this case the correspondence makes it very plain that Mr. Blaxland had the allotment, that he occupied it, and my impression is that during his absence in England, Mrs. Blaxland lived there—at all events the inference is, that she did; that while Mr. Blaxland was away during the trial of Colonel Johnstone in England, Governor Macquarie took this land away, and promised other land in lieu of it. That promise was never disavowed by Governor Macquarie.

183. Was Mr. Blaxland an officer in the 102nd Regiment? No; he came out here as a settler with large property, to establish a large agricultural speculation.

184. He then went Home to attend the trial? He went Home, as he says, to prosecute his own claims for compensation, and while there was kept as a witness in the long pending trial of Colonel Johnstone, growing out of the rebellion; he was away from the Colony four years altogether. I think Messrs. John and Gregory Blaxland came out here as large settlers at the instance of Lord Castlereagh.

185. It does not appear that Governor Macquarie issued a new grant to replace the one issued to Mr. Blaxland in 1809, but that a money compensation was granted? Governor Macquarie promised another one in lieu, and a long correspondence ensued as to the position of the land to be selected; eventually a money compensation was granted. Governor Macquarie unequivocally stated that he meant to give another allotment in lieu, and that if one could be selected to his satisfaction, he would grant it.

186. I suppose there is no doubt the place described as East Hill, in the grant of 1809, is the present Macquarie-street? I do not think there is any doubt of it. The correspondence makes it plain in this way: the land taken up in Mr. Blaxland's case was required as the site of the hospital, which puts it beyond doubt.

187. And Mr. Bell's allotment adjoins Mr. Blaxland's? I cannot say that is the fact, without referring to the previous papers (*the witness referred to the printed papers*); "bounded on the north side by Blaxland's allotment."

188. *By Mr. Hoskins*: Have you any official records to show that? It is stated here, in the official description of Mr. Bell's land, that it adjoins Mr. Blaxland's, and this correspondence shows beyond a doubt that Blaxland's land was required as the site of the proposed hospital. The description in Mr. Blaxland's case is of this character: It is bounded on the west by an intended street not named; on the east by an intended street not named; and on the south and north by lines; but its being required for the hospital, I think, puts it beyond all doubt.

Michael
Fitzpatrick,
Esq.
23 Oct., 1862.

189. *By the Chairman*: In the letter from the Colonial Secretary, dated 1st September, 1832, reference is made to an indulgence which Lieutenant Bell received from Government—have you any idea of the special indulgence he received? I cannot say; it may have alluded to the privilege the officers of that corps had as to the disposal of spirits, which was a monopoly of considerable value; it may have been the allotment of a number of assigned servants—it may have been rations for his family or servants—it may have been a great many things.

190. The indulgence alluded to is not specially mentioned in any of the papers? No.

191. *By Mr. Hoskins*: Is there any correspondence in the records of the Lands Office to show that the land that was granted to Mr. Bell was resumed possession of by Governor Macquarie, on the understanding that he was to receive another grant? No; all that is shown is what is alleged in Mr. Bell's petition, that he had such an allotment, which was given up. My conception of the two cases is this: That both allotments of land were granted by Lieutenant Colonel Paterson about the same period; that these grants were absolute nullities, and were always so regarded, and were declared by the Governor on his first arrival to be so—a Proclamation in the King's name having been issued to that effect. In Mr. Bell's case there is no record that any step was taken with reference to this matter (except by personal communication with Mr. Oxley) for twenty years, that when a claim was made twenty years after, it was disallowed, on the ground that it had slept too long; what may be called the first sleep extended over twenty years, and then after, another lapse of twenty-six years, the claim is renewed again by him.

192. *By the Chairman*: By his son? Yes. Then, with reference to Mr. Blaxland's case, the position is this: We have the same record that the grant was issued by Lieutenant Colonel Paterson, which I treat in the same way as the other, but we have unmistakable proof that Governor Macquarie took this for a specific purpose, and declared that he would grant another allotment in lieu of it, and the correspondence shows that Mr. Blaxland, in what I may almost call a litigious way, kept the claim alive until he did get compensation.

193. *By Mr. Gordon*: You have not said when he got remuneration? No, it was very late; but the correspondence had kept the claim alive, which you will see if you have leisure to go through it. (*The witness referred to the papers.*) It was just about this period—somewhere in 1829.

194. Was Mr. Bell in the Colony at the time the land was taken from him? I do not know.

195. Was he here when the matter was settled? I am not aware; I never heard that he was away.

196. *By Mr. Hoskins*: You have been a long time connected with the Government? Upwards of five-and-twenty years.

197. Did you at any time know that Mr. Bell made an application to any member of the previous Government, for instance, to Mr. Deas Thomson? I never heard of the claim till it was referred to the Government, under the responsible system, in 1858.

198. Have you never, at any time, seen any letter from Mr. Bell to any member of the Government, urging his claim? I have no recollection of having ever seen or heard of a claim until that petition was referred to me, and I then asked for the old papers which were before my time, and put them before the Secretary for Lands.

199. *By the Chairman*: Is there any document among those papers which gives a *précis* of the transactions in relation to that land? There is the report of the Land Board, which includes the land, although the other matters referred to are of more importance. The following paragraphs are those which refer to this matter specially:—"Mr. Blaxland's 2nd complaint is the loss of an acre of ground, granted to him and to his heirs, as an allotment for building on in one of the most eligible situations in Sydney, and which Mrs. Blaxland, during his absence in England as a witness in the trial of Colonel Johnstone, was induced to give up at the urgent request of the late Governor Macquarie, in consequence of its being wanted to form part of the site of the present general hospital, which he was then preparing to erect. By Mr. Blaxland's documents, transmitted, Nos. 10, 11, 12, and 13, and which contain the correspondence on that subject between him and Governor Macquarie, it appears that his claim was acknowledged, and that no objections existed on the part of the Governor to his having a suitable allotment of ground in lieu of it in the town of Sydney, 'provided he came under an engagement to erect a proper dwelling-house thereon, within eighteen months from the date of the said allotment being marked out for him.' By reference, however, to the copy of the original grant (dated the 19th day of July, 1809, and marked No. 22), herewith enclosed, it does not appear that Mr. Blaxland was fettered by any engagement to erect buildings on it within any given period. On due consideration, therefore, we are of opinion that he has a well-founded claim to an equivalent for the acre in question, which was given up for the erection of an important public building, and in the very eligible situation in which it was granted him, would undoubtedly have rendered it a valuable acquisition at the present day; we conceive that the sum of £400, which he claims as an equivalent, must be considered as moderate, if it should be determined to give him the value in money."

200. *By Mr. Hoskins*: In no other Government office is there a likelihood that any documents could be found to show that Government resumed possession of this land which Mr. Bell alleges was given up under a promise of having another allotment of land granted? There is no hope of such a document being found if it is not in the Chief Secretary's Office.

201. *By Mr. Dangar*: All records were kept there in those days? Yes, they were all there, and have been kept with tolerable accuracy, at all events since 1826—from the time of Mr. Alexander M'Leay's arrival here.

Edward Blaxland, Esq., called in and examined :—

202. *By the Chairman* : We have been informed that your father held a piece of land in Macquarie-street, which was granted to him about the year 1809, by Lieutenant Colonel Paterson, and that he afterwards relinquished that land to the Government ;—are you aware of that fact ? My father came out to this Colony with a very large amount of capital, and with unusual advantages, I believe simply because it was Lord Bathurst's desire in those days to induce men like my father to come out here. He came with permission to select land where he thought proper, so that it did not interfere with Government arrangements, and I have heard my father state, that he selected on one occasion that point from the head of the Circular Quay to Darling Harbour, and had it in his possession a considerable time. Governor Macquarie and he could not pull together very well, and he was deprived of that and several other portions of land he had selected. As to the locality of any particular portions besides that I cannot speak ; in fact, I went to England when I was eleven years of age, and did not return to the Colony until six years after, and it was during this time that these disputes were going on ; but a considerable time after I know my father got 10,000 acres as compensation for the injuries he had received from the Government in that and other ways.

E. Blaxland,
Esq.
23 Oct., 1862.

203. Do you know of his having held an acre of land on a place called Eastern Hill ? I cannot say I do.

204. In what year did you go to England ? In 1824.

205. Are you aware whether your family ever resided in this locality before that ? They did ; whether it was on this hill or in Clarence or George streets I cannot say ; it was before my time ; I was born in Parramatta, after my father left Sydney some time.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. ANDREW LENEHAN.

(PETITION OF.)

Received by the Legislative Assembly, 24 June, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of Andrew Lenehan, of Castlereagh-street, Sydney, upholsterer,—

MOST RESPECTFULLY SHEWETH :—

That, about the latter end of the year 1856, your Petitioner was requested to estimate, and did then estimate, the cost of re-furnishing the public rooms at Government House.

That such estimate was made upon the distinct understanding that the new furniture was to be of the same description and quality as the old.

That when, about eight months afterwards, your Petitioner was called upon to carry out the work, designs of a much more costly character were substituted, and materials of a much more expensive kind were called for.

That the work was carried out in this way, with a full knowledge on the part of those with whom your Petitioner had to do, and was as he had every reason to believe bound to obey, that its cost would thereby be greatly in excess of the original estimate.

That after the completion of the work, some question was raised as to the reasonableness of your Petitioner's charges; and that after an imperfect valuation by an officer of the Government, an additional £550 was offered, by way of compromise, to your Petitioner.

That your Petitioner having been finally compelled to resort to a suit at law, proved at the trial of the same, by uncontradicted and most reliable evidence, that all his charges had been very reasonable.

That notwithstanding the admission on the part of the Government already mentioned—that at least £550 was due to your Petitioner—the suit was defended on the plea (then advanced for the first time) that your Petitioner's original estimate was to be treated as a tender, by which, notwithstanding the extra work performed, and superior materials provided, he was to be bound; and that this defence succeeded.

That the Judge who tried the case—Sir John Dickenson—held that your Petitioner would be at liberty to remove from Government House all goods furnished by him in excess of the original estimate, but that this was for many reasons quite out of the question.

That by these means your Petitioner has been put to great cost, loss, and inconvenience, and has been kept out of money to which he was fairly entitled, while the goods which he has furnished, and which have not been paid for, remain public property.

Your Petitioner therefore humbly prays that your Honorable House will take the premises into your consideration, and will afford him such relief as to your Honorable House may seem meet.

ANDW. LENEHAN.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

 REPORT FROM THE SELECT COMMITTEE

ON THE PETITION OF

MR. ANDREW LENEHAN;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND

APPENDIX.

 ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
 3 December, 1862.

SYDNEY:

THOMAS RICHARDS, GOVERNMENT PRINTER, PHILLIP-STREET.

1862.

1862.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF
THE LEGISLATIVE ASSEMBLY.

VOTES, NO. 33. TUESDAY, 22 JULY, 1862.

17. Mr. Andrew Lenehan :—Mr. Faucett moved, pursuant to *amended* notice,—
- (1.) That the Petition of Andrew Lenehan, of Castlereagh-street, Sydney, Upholsterer, presented by him on Tuesday, the 24th June, be referred to a Select Committee of this House for their consideration and report thereon; and that such Committee have power to send for persons and papers.
- (2.) That such Committee consist of the following Members :—Mr. Robertson, Mr. Egan, Mr. Windeyer, Mr. Lord, Captain Moriarty, Mr. Atkinson, Mr. Alexander, Mr. Dick, and the Mover.
- Question put and passed.

VOTES, NO. 110. WEDNESDAY, 3 DECEMBER, 1862.

3. Mr. Andrew Lenehan :—Mr. Faucett, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee appointed on the 22nd July last, in the matter of the Petition of Mr. Andrew Lenehan,—together with Appendix.
- Ordered to be printed.

MR. ANDREW LENEHAN.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred on the 22nd July last, the "*Petition of Andrew Lenehan, of Castlereagh-street, Sydney, Upholsterer,*"—"with power to send for persons and papers,"—have agreed to the following Report:—

Your Committee having examined the witnesses mentioned in the margin* and considered the documents, copies of which are appended to the evidence, have the honor to report as follows:—

In the year 1856, Mr. Lenehan, in pursuance of a message received through Mr. Dawson (the then Colonial Architect), went to Government House, and had an interview with the Governor General, Sir William Denison—Mr. Dawson being present.

As the result of that interview, and with a view to enable the Governor General to fix a sum to be placed on the Parliamentary Estimates as the probable cost of refurnishing some of the rooms at Government House, Mr. Lenehan, along with Mr. Dawson, examined the various old articles, and mentioned to Mr. Dawson certain prices as the probable cost of replacing those articles with new ones of a similar description.

In consequence of this approximate or probable estimate or valuation, the sum of £1,300 was placed upon the Estimates, and voted by Parliament for the purpose.

Some time after, Mr. Lenehan having been employed by the Government to execute the work, submitted to Sir William and Lady Denison designs for some of the articles of furniture, and patterns for the curtains, carpets, &c. These designs and patterns, although for articles of a similar description to the old ones, were not approved of, and other designs for those articles were furnished to Mr. Lenehan from the Colonial Architect's Office, and other patterns for the curtains, carpets, &c., were selected from Mr. Lenehan's stock. These latter designs and patterns were of a far more costly description than those originally contemplated. The consequence was, that when the work was completed, Mr. Lenehan's account was found to considerably exceed the amount voted by Parliament.

The total amount claimed by Mr. Lenehan for the articles so furnished is £2,203 11s. 10d., and he received, in various payments, during the progress of the work, the sum of £1,300; thus leaving

*Mr. A. Lenehan
Mr. H. Woolley.
Mr. A. W. Norton.
Mr. J. Hill.
Mr. C. Read.
Mr. C. Hunt.
Mr. T. Webb.
W. Weaver, Esq.,
C. E.
Mr. H. W. Strong.
A. Dawson, Esq.

leaving a balance of £903 11s. 10d. Out of this the sum of £6 13s. 5d. has also been received, leaving a balance of £896 18s. 5d., which he claims as due to him by the Government.

This claim was disputed by the Government, and after much correspondence the Government offered to compromise the matter by paying him the sum of £550, thus admitting that he was entitled to a part, at all events, of his claim. This offer Mr. Lenehan appears to have been, at that time, willing to accept, with a view to a final settlement of the question at once, and to avoid being any longer shut out from Government employment, as he had been from the commencement of the dispute; and the sum of £550 was accordingly placed on the Estimates, but, having been refused by Parliament, the offer was not carried out.

Mr. Lenehan then sued the Government in the Supreme Court, but was unsuccessful.

Your Committee, having given the whole matter the fullest consideration, have come to the following conclusions:—

1. That if at the interview with Sir William Denison there had been a contract or undertaking, on the part of Mr. Lenehan, to perform the work at the prices he mentioned to Mr. Dawson, there would be an end of the matter, unless some material alteration had taken place in his instructions sufficient to vary or put an end to such a contract; but that, although there is some misunderstanding, either on the part of Sir William Denison or Mr. Lenehan, as to what took place at that interview, no such contract was entered into by Mr. Lenehan.
2. That Mr. Lenehan believed that he was justified in supplying the various articles according to the directions of Sir William Denison, and that he entered the prices of them in his day-book as they were delivered, and that those prices in no way varied from those charged at the time to private persons for similar articles.
3. That, according to the evidence of competent witnesses, the articles supplied were of a superior description, and that the prices charged are fair and reasonable.
4. That Mr. Lenehan is justly and equitably entitled to the sum of £896 18s. 5d., as the balance of his account.
5. That Mr. Lenehan has lost a very large amount both in law costs and by being deprived for so long a time of the amount to which he is justly entitled.

P. FAUCETT,
Chairman.

*Legislative Assembly Chamber,
Sydney, 3 December, 1862.*

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 15 AUGUST, 1862.

MEMBERS PRESENT:—

| | | |
|-----------------|--|----------------|
| Mr. Faucett, | | Mr. Alexander, |
| Capt. Moriarty, | | Mr. Robertson. |

Mr. Faucett called to the Chair.

Printed copies of the Petition *referred*,—before the Committee.

Committee deliberated as to their course of procedure.

Ordered, That application be made to the Secretary for Lands, for all Correspondence, Minutes, and other documents connected with the case of Mr. Andrew Lenchan.

Re-assembling of the Committee to be arranged by Chairman.

[Adjourned.]

TUESDAY, 14 OCTOBER, 1862.

MEMBERS PRESENT:—

Mr. Faucett in the Chair.

| | | |
|-----------------|--|----------------|
| Capt. Moriarty, | | Mr. Robertson, |
| Mr. Alexander, | | Mr. Dick. |

Committee met, pursuant to summons.

Certain Papers, Correspondence, &c., connected with the case of Petitioner,—before the Committee.

Portions of the same read by the Chairman, and *ordered* to be printed forthwith in a *Separate Appendix* to the Report.

[Adjourned to Thursday next, at half-past *Eleven* o'clock.]

THURSDAY, 16 OCTOBER, 1862.

MEMBERS PRESENT:—

Mr. Faucett in the Chair.

| | | |
|-----------------|--|----------------|
| Capt. Moriarty, | | Mr. Alexander. |
|-----------------|--|----------------|

The witness not being in attendance,—

[Committee adjourned to Tuesday next, at half-past *Eleven* o'clock.]

TUESDAY, 21 OCTOBER, 1862.

MEMBERS PRESENT:—

Mr. Faucett in the Chair.

| | | |
|-----------------|--|----------------|
| Capt. Moriarty, | | Mr. Atkinson, |
| Mr. Windeyer, | | Mr. Alexander. |

Chairman laid before the Committee a Letter from Mr. Alexander Dawson, excusing his attendance this day, on account of severe illness which confines him to bed, and enclosing a medical certificate to that effect.

Printed copies of the Papers, &c., connected with the case of Petitioner, forming a *Separate Appendix* to the Report,—upon the Table.

Mr. Andrew Lenchan examined.

[Adjourned to Friday next, at half-past *Eleven* o'clock.]

FRIDAY,

FRIDAY, 24 OCTOBER, 1862.

MEMBER PRESENT :—

Capt. Moriarty.

In the absence of a Quorum, the Meeting called for this day lapsed.

THURSDAY, 30 OCTOBER, 1862.

MEMBERS PRESENT :—

Mr. Faucett in the Chair.

Capt. Moriarty,
Mr. Egan,

Mr. Alexander.

Mr. Lord,

Mr. Robertson,

Committee met, pursuant to summons.

Letter from Mr. Binney, on behalf of Mr. Dawson, excusing the absence of the latter through severe indisposition, received on the 24th instant—read.

Mr. A. Lenehan further examined.

Mr. Henry Woolley examined.

Mr. Alexander William Norton examined.

At the close of the examination, Mr. Lenehan produced the original designs for curtains, sideboard, &c., for Government House.

[Adjourned to Tuesday next, at Eleven o'clock.]

TUESDAY, 4 NOVEMBER, 1862.

MEMBERS PRESENT :—

Mr. Faucett in the Chair.

Capt. Moriarty,
Mr. Egan,

Mr. Alexander,
Mr. Robertson.

Mr. John Hill called in and examined.

Witness handed in copy of a Valuation of the Furniture, made by himself and Mr. Hayes. (*Vide List of Appendix.*)

Mr. Andrew Lenehan further examined.

Witness produced copy of Account furnished by him to the Government.

Mr. Charles Read, Mr. Charles Hunt, Mr. Thomas Webb, and Mr. William Weaver, C.E., severally examined.

[Adjourned.]

FRIDAY, 14 NOVEMBER, 1862.

MEMBERS PRESENT :—

Mr. Faucett in the Chair.

Capt. Moriarty,

Mr. Egan.

Mr. Robertson,

Committee met, pursuant to summons.

Mr. Thomas Webb called in and further examined.

Paper handed in by witness. (*Vide List of Appendix.*)

Mr. H. W. Strong examined.

Mr. Thomas Webb re-examined, producing Books of Accounts.

Witness withdrew.

[Adjourned to Tuesday next, at half-past Eleven o'clock.]

TUESDAY, 18 NOVEMBER, 1862.

MEMBERS PRESENT :—

Capt. Moriarty,

Mr. Alexander.

Mr. Egan,

In the absence of Mr. Faucett, Capt. Moriarty called to the Chair.

Mr. A. Dawson called in and examined.

Papers handed in. (*Vide List of Appendix.*)

Ordered, That the Evidence be circulated prior to next meeting, and that the Chairman (Mr. Faucett) be requested to prepare heads of Report.

Re-assembling of Committee to be arranged by Chairman.

[Adjourned.]

TUESDAY,

TUESDAY, 2 DECEMBER, 1862.

MEMBERS PRESENT:—

Mr. Faucett in the Chair.

Mr. Robertson, | Mr. Egan,
 Capt. Moriarty.

Committee met, pursuant to summons.

Printed copies of Evidence *circulated* prior to meeting.

Committee deliberated, and agreed upon certain heads of Report.

Chairman to prepare Draft Report.

[Adjourned to To-morrow, at half-past Ten o'clock.]

WEDNESDAY, 3 DECEMBER, 1862.

MEMBERS PRESENT:—

Mr. Faucett in the Chair.

Capt. Moriarty, | Mr. Egan,
 Mr. Dick.

Committee deliberated.

Letter from Under Secretary for Lands to Andrew Lenehan, Esq., dated Sydney, 12th May, 1859, intimating refusal of the Legislature to vote the amount in the Settlement,—*read*.

Ordered to be appended. (*Vide List of Separate Appendix.*)

Chairman submitted Draft Report.

Same read, amended, and agreed to.

Motion made (*Mr. Egan*) and *Question*,—That this Report be the Report of the Committee,—*agreed to*.

Chairman requested to report to the House.

LIST OF WITNESSES.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE CASE OF

MR. ANDREW LENEHAN.

TUESDAY, 21 OCTOBER, 1862.

Present:—

| | | |
|-----------------|--|----------------|
| CAPT. MORIARTY, | | MR. ATKINSON, |
| MR. WINDEYER, | | MR. ALEXANDER, |
| MR. FAUCETT. | | |

PETER FAUCETT, ESQ., IN THE CHAIR.

Mr. Andrew Lenehan called in and examined:—

1. *By the Chairman*: Your name is Andrew Lenehan? Yes.
2. You are an upholsterer, carrying on business in Castlereagh-street? I am.
3. Do you recollect, about the year 1856, being requested to go to Government House to inspect the furniture there, for the purpose of making certain alterations in it? I do.
4. Will you state, as nearly as you can recollect, what occurred on that occasion when you were so requested to go to Government House? Mr. Dawson, the Colonial Architect, called upon me, and told me the Governor would meet me at an appointed hour that day with himself.
5. This was towards the end of 1856, I suppose? Yes, towards the close of that year.
6. He requested you to go to Government House, and told you the Governor would meet you there? Yes, and I went there and met Mr. Dawson.
7. Mr. Dawson was then Colonial Architect? He was.
8. Well, what took place on that occasion? The Governor, Mr. Dawson, and myself went into the drawing-room, and he pointed out the dilapidated state of the furniture, curtains, carpets, &c., and said he wished that I would give him an idea of what amount he should ask the Legislature for, as the cost of replacing the old with new articles of a similar description.
9. It was Sir William Denison who said that? Sir William Denison himself said that, in the presence of the Colonial Architect. Mr. Dawson set down upon paper the various estimates, and asked first of all as to the carpet. I told him a fixed sum that I thought would be sufficient to enable me to supply similar articles. I said £40 for the carpet, £50 for the glass, and so on. Mr. Dawson wrote down what the Governor required to be altered, and asked me what sum for this or that, and I stated £10, £20, and so on, according to the nature of the article. He added up the figures. We went from one room to another. In the drawing-room we made an estimate of each article required to be replaced, and when we had finished there we went into the ante-room and did the same there, enumerating the different articles to be replaced, and fixing the prices of them. We next went into the dining-room. I might here say that the drawing-room and ante-room curtains were made with silk without draperies.

Mr. Andrew
Lenehan.
21 Oct., 1862.

- Mr. Andrew Lenehan.
 21 Oct., 1862.
10. That is, the old ones? Yes. They were single silk curtains, and had no drapery. The ante-room curtains were of the same material. The carpets were Brussels. The dining-room curtains were worsted damask on brass poles, without any draperies whatever. He ordered new tables and new sideboards for the dining-room, as well as two dinner waggons and a side-table to hold the spare leaves of the dining tables. That is a thing that the house had not before, and it stands at the end of the room. I was occupied about half-an-hour in this room in giving the prices of each article. I then left.
11. Did anything take place between you and Mr. Dawson, at that interview, except your telling him the amount that each of the articles would, in your opinion, cost? Nothing more. That was all the information Sir William Denison required. He said they could not order them until they knew whether they could get the money or not from the Government.
12. Then I understand you to say, that on that occasion you gave to Mr. Dawson an estimate of what you thought it would cost to replace the old articles with new ones of the same kind? That was decidedly so, as near as I could guess.
13. On that first interview you saw Lady Denison? Yes.
14. After this estimate was made? Yes. When I was going away she asked me if I had any amber silk tabouret of the same pattern as that of which the curtains were then composed in the drawing-room. I said I had, and she then asked me if I had sufficient of it.
15. You said you had? Yes, as I had at that time.
16. Did anything more take place on that occasion? Nothing more.
17. Then for some seven or eight months you heard nothing more of the matter? Nothing, except what I read in the newspaper—that the House was asked for the money, and it was refused.
18. In the meantime, from anyone connected with the Government you had no communication? No, for nearly eight months.
19. After that Mr. Dawson called upon you? Yes, and told me that the money was voted. He requested me to send over designs and materials for Lady Denison's selection, with patterns of carpets and curtains.
20. What did you then do? I sent patterns of carpets, patterns of silks, and some articles of furniture (chairs, &c.)—small furniture which was portable enough to send—and all my design-books.
21. You called at Government House after these things were sent? I sent them in the evening, and I called the next day. I saw Sir William Denison, Lady Denison, and Mr. Alfred Denison.
22. Who was then Sir William Denison's private secretary? He was.
23. What took place then? Mr. Alfred Denison and the Governor selected from the design-books the dining tables, and gave instructions for an extra table, a King Arthur table. They approved of a design for a sideboard as well as the tables, and, with Mr. A. Denison's assistance, selected a pattern of chairs from the patterns sent, and not from the books. Lady Denison saw the silk of the same pattern, which she approved of.
24. You sent some silks, then, of the same pattern as the old silks? Yes, for the drawing-room curtains.
25. Lady Denison saw these? Yes; I sent also damask for the dining-room curtains.
26. Of the same kind as the old? Of the same kind as the old. She disapproved of the material for the dining-room curtains, and said she would call at my house and select some other material.
27. Did she say anything as to the curtains for the drawing-room? She approved of the silk, and ordered them to be made of that.
28. That was of the same kind as the old silk? Yes. She also approved of a design from one of my upholsterers' design-books, for poles for the drawing-room curtains, to a certain extent. She said she wished to have draperies introduced, which the old curtains had not; and she said she would get the Colonial Architect to make a design for the draperies and curtains, and furnish me with it.
29. Did anything further take place? Yes; they consulted together as to the carpets, and made a selection—a velvet pile was selected for the drawing-room and ante-room.
30. Was that of a different kind from the old carpet? Yes, the old carpet was Brussels.
31. Then the velvet pile was more expensive? At that time it was 8s. 6d. a yard; it had been 10s. a short time previously.
32. What was the old one? The other was 5s. 6d. a yard.
33. At the time they selected these things, did you mention that they were more expensive than the old articles? I did not like to mention it to the Governor; I mentioned it to Mr. Dawson.
34. You did not, at that time, mention it to Lady or Sir William Denison? No.
35. What further took place? These are the principal matters. Then Sir William Denison said he wished some alteration in the sideboard; he said he wanted a handsome one, and would get Mr. Dawson to furnish a design for it. That design I received about a week afterwards; it was different from that in the book. He first selected one from the book. Mr. Alfred Denison, however, spoke to me, and said he would get Mr. Dawson to furnish a design, which I received, and have now in my possession.
36. You can produce that design? I can.
37. With respect to the table,—was the table selected from your design-book of the same kind as the old table? Not at all; the old table was composed of a number of separate tables of the very plainest character, put together, which were made use of as side-tables occasionally. They had half-round ends, and formed a dining-table originally, each table being about six feet by three feet.

38. Then the table that was selected from your design-book was more expensive than the old one? It was worth twenty tables like the original; I should think such a table as the old one would not be sold for more than £10. Mr. Andrew Lenehan.
39. According to that your table would be worth £100? No doubt of it. 21 Oct., 1862.
40. You afterwards got a design from Mr. Dawson? Yes.
41. They first selected a sideboard from your design-book? Yes.
42. A more expensive one than the old one? Yes.
43. The sideboard they selected from your design-book they subsequently rejected, and Sir William Denison said he would get Mr. Dawson to send a design for one? Yes.
44. Was the sideboard first selected from your design-book more or less expensive than the old one? It was considerably more expensive than the old one.
45. And was the design sent by Mr. Dawson of a still more expensive character than that? It was. The sideboard selected from the book eight months afterwards was one of the most modern and elegant that could be made; it was ridiculous to place the two in comparison. The old one was on six or eight turned legs.
46. What else took place on that occasion, whilst they were selecting this design? I think nothing else but the giving of instructions to proceed with the work immediately. They desired me not to go on with the curtains for the drawing-room until I had the sketch I required.
47. Nothing more of importance took place at that visit? No. Some six weeks afterwards Lady Denison sent a message, stating that she wished to see me.
48. In the meantime you were proceeding with the work? I was, and had proceeded a good deal with it. She sent, asking me to have the drawing-room curtains lined with brown holland, and, to protect the curtains, an under-lining of white silk.
49. The brown holland was to be between the two silks? Yes. I said it was contrary to the original intention; and she wished me to go and see Mr. Dawson, and get his consent to the alteration.
50. Did she say anything more on that occasion? No, that was the whole extent of the conversation. She wished to have them done by the Queen's Birthday, and I told her I thought it was impossible—that I had not sufficient silk. Though I had enough at first I had used a good deal, and I was obliged to send to Melbourne for it, and it would not be up in time. She was very anxious to have them done and put up, if it was only in a temporary way; and I told her ladyship that I would endeavour to get them up in a temporary way until the silk arrived. She wished me to make every effort to have the curtains up by the 23rd or 24th May.
51. Did you mention in any way how you would accomplish it, in consequence of the want of silk? No, I did not know; but I said I would try to get them up in time; and I made every effort.
52. Between this occasion and the former visits some six weeks had elapsed, and had Lady Denison called at your house? No, not up to that time.
53. After that interview? She wished the drawing-room curtains, in particular, to be finished in time for the Queen's Birthday ball, and it was as much as I could do to accomplish that. She was not particular about the dining-room curtains, as long as those for the drawing-room were finished in time.
54. Did you see Mr. Dawson? Yes, in his own office.
55. What took place when you were with him? I had come direct from Government House, and I told him what Lady Denison wanted done. I took a piece of silk in my hand, and when I told him her wishes, he hesitated some time as to whether he would consent to the extra expense. He asked me the expense of the silk; I told him 5s. 6d. per yard extra, and that it would take as much silk as the curtains themselves.
56. What did he say? He was in company with some gentleman at the time; he consented to allow the silk to be used. The silk lining and brown holland were to be used as a protection to the curtains themselves.
57. After some hesitation he sanctioned it? Yes; he was very unwilling at first.
58. Did he consent before you left? He did; I should never have used it before I had his consent. It was her wish that I should get his consent before I did use it.
59. There was no lining to the former curtains? None whatever; and when the design was furnished me by the Clerk of Works, I told him and Mr. Dawson that the additional quantity of silk and material, independent of fringes and trimmings required in the design furnished, would involve as much expense as the cost of the curtains.
60. It would be double the expense? Double the expense, independent of the brown holland linings; and to accomplish the work in time for the ball, I put about twenty yards of the old material in the draperies. I had the work done and the curtains up in time for the ball. When I got the whole of the new material, it cost between £200 and £300.
61. You finished the curtains in time for the ball by using some of the old material? Yes.
62. About what quantity? About twenty yards.
63. What was about the value? About 2s. a yard.
64. *By Captain Moriarty*: It was a mere temporary arrangement? Yes.
65. *By the Chairman*: Had you any intention of leaving the old material instead of replacing it with new? Never.
66. Would it have been profitable to do so? Certainly.
67. But could it have escaped the notice of an ordinary observer? No; it had been there before. At night it might not be observed, but in the day time none could pass it without noticing it.
68. Were the colours of the old and new alike? In the old they were quite faded.
69. You never had the slightest intention of leaving this old material? Never, for the veriest fool must have seen it; it might however pass unnoticed at night.

- Mr. Andrew Lenehan.
21 Oct., 1862.
70. Did Sir William Denison or Lady Denison know that the old material was used? My man took the curtains to put them up, and I instructed him to tell Sir William and Lady Denison that, to accomplish the thing in time for the ball, I had adopted this mode until the new material came up from Melbourne.
71. You recollect giving him these instructions? Yes; to tell Lady Denison that, in order to accomplish her wishes, I had used a few yards of the old material, but only until the new came up from Melbourne. A friend of mine at that time in Melbourne was to send it up to me, and I remitted £200 or £300 for material. I told Sir William Denison myself the cause of the old material being used.
72. When? After the curtains were sent home. He sent for me.
73. How soon after? Before the curtains were put up. I told him that in the presence of the Colonial Architect.
74. That you were obliged to use some of the old material? Yes, to get them up in time. The Colonial Architect was then present in the drawing-room.
75. Then you have no doubt that you yourself mentioned the matter to Sir William Denison? No doubt whatever, and he appeared perfectly satisfied with the explanation I gave him.
76. He sent for you? He did so.
77. Before you told him? Yes.
78. Why did he send for you? To speak to me about it.
79. Was it he who observed it first, or was he told of it—do you know? I am not aware.
80. Did he introduce the subject to you when you went? He did.
81. How? He said, "Lenehan, how was it you used that material for the curtains?" I said, "I have already directed my upholsterer to explain the reason to you." I said, "Lady Denison wanted the curtains up by the 23rd or 24th May, and that in order to comply with this wish, I was obliged to use the old material until the other came from Melbourne—that it was unavoidable, if the curtains were to be up in time." He walked away, apparently satisfied, saying, "I hope it will be done soon." I had abundance of the material when I was first spoken to, but in the meantime it was used up. 400 or 500 yards of silk of one pattern is a large quantity.
82. What next took place? Lady Denison called a few days afterwards, and selected some medallion silk. I had not enough of it, and I told her it was 18s. a yard. By accident I was enabled to buy some from a gentleman then going to England (Mr. Marks), paying him 16s. a yard for it. I thought I was very lucky to get it. It was of the same pattern.
83. She selected that? Yes; she also ordered draperies.
84. Was that medallion silk of a superior kind to the old silk? It was worsted damask that was in the dining-room before.
85. And therefore, I suppose, this silk was much more expensive? The value of the worsted damask used before was 2s. 6d. a yard.
86. She selected this medallion silk? Yes, and desired that the dining-room curtains should be made of that material.
87. And they were substituted for the worsted damask curtains? Yes; and the designs introducing draperies were furnished by the Colonial Architect. She also had these curtains lined, but not with silk. They were lined with brown holland and coburg, instead of a second thickness of silk—the side next the window being coburg. To the best of my recollection, brown holland was between them.
88. Was that of a more expensive character than the former curtains? One was worth 2s. 6d. a yard, and the other 18s. 6d. It is impossible to know the value of the medallion silk that was used without seeing it; every figure is different, there is no repetition or succession of figures in the pattern.
89. *By Mr. Alexander:* Then the dining-room curtains were of this silk that Mr. Marks imported for his own use? Yes. Being about to go to England he had no use for it. I should have had to pay more than that for it in England. I know I could not have obtained it any cheaper in England.
90. *By the Chairman:* Well, what next took place? I completed the work entirely, and the account went in.
91. These were the particular matters about which any new directions were given? Yes.
92. *By Mr. Windeyer:* Was there any dispute about the second table? No; it was an extra, but there was no dispute about it.
93. This was not to replace any table there before—it was made to the order of Sir William Denison, according to his own fancy? Yes. He wanted a King Arthur table, which he could add to the dining-table and make it answer domestic purposes.
94. Adapted to be added to the large public table? Yes.
95. *By Captain Moriarty:* When you had the first conversation with Mr. Dawson, at Government House, as to the value of goods to be supplied, was it an absolute estimate that was given, or only an approximate estimate? A rough estimate of what they should ask the Legislature for.
96. *By the Chairman:* After that you completed the work, and had you any further interviews with anyone connected with the Government, in reference to the alterations at Government House? Yes, frequently.
97. When were they? From time to time I had repeated visits from the Clerk of Works, and messages from Government House.
98. Were these verbal messages? Yes. Mr. Dawson said, "I know there will be an excess." I said, "What is to be done?" He said, "I do not know." I then said, "Sir William Denison's instructions must be attended to." He said, "I suppose you will have to dispense with something else. One of my managing men (Mr. Norton) has been over with Lady Denison, and he can testify that Lady Denison had repeatedly given instructions to vary the order, and make improvements in the curtains.
- 99.

99. Were any other orders or directions given by Lady Denison varying from the former orders given particularly to Mr. Norton? Yes.
100. Not to yourself? Not to myself.
101. Had you yourself any further interview with any of the Government authorities? Yes, with Mr. Charles, now dead. He was Chief Clerk of Works, and it was from his designs I worked, and not from the Colonial Architect's.
102. He was under the direction of the Colonial Architect? Yes. The designs were first of all submitted to Sir William and Lady Denison, upon whom I waited when they were furnished to me, and I received their approbation of them, and instructions to adopt them.
103. What designs were they particularly? Of the sideboard, and the curtains of the drawing-room and dining-room, and others.
104. Those you have already spoken of? Yes.
105. Is it your opinion that Sir William and Lady Denison were aware that these articles you have particularly spoken of were all more expensive than the old ones, both as to design and material? They were. I was also furnished, by direction of the Governor, with a design for a chimney glass, which I sent to England for execution. I think £60 was the sum I estimated (it is on one of the records) for a glass of that sort; but he would not have the glass I intended to order, and he ordered the Colonial Architect to make a design that I might import a glass. I had that design also. I imported one, accordingly, from England, the cost of which, on landing here, was about £120. The plate was twelve feet by six feet. I think I charged him £130 for it. At the time it arrived, which was about twelve months after it was ordered, my account had been disputed.
106. You had finished the work? Yes, except the glass and the bell-ropes, which I have not been paid for yet.
107. Did you see the Governor yourself about it? Yes.
108. What did he say? I said, there is some dispute about the payment of the account, and that, unless he ordered me to do so, I would not send in the glass. He said "You had better send it." I did send it on his authority. I paid freight and insurance for the glass, and I told him I had paid an insurance against breakage as well as against damage by sea water.
109. You finished the work, and sent in your account? I did.
110. I suppose we can have a copy of that account? I think so; there are copies of it.
111. Can you furnish a copy of it? I can.
112. The account was disputed? The account was disputed.
113. Now, what was the first communication you had with reference to the disputing of the account? I had no dispute about the account until the sum voted was exhausted.
114. You had been paid from time to time? Yes, different sums; the account was running for more than two or three quarters.
115. And you were paid in instalments as the work progressed? About £150 generally, because the Colonial Architect said he had no authority to give a cheque for a larger amount. When the whole amount was exhausted, the Colonial Architect, who had not mentioned it before, told me that there were overcharges in my account, and that he should have to get the goods valued.
116. I find several items of £150 paid, £136, and odd sums, and that the entire amount paid was close upon the sum voted by the Legislature? Nearly the whole sum voted was paid.
117. Did you send in your accounts of what had been done, from time to time? I did.
118. Showing the work done and the charges up to the time the account was sent in? Yes.
119. To whom did you send in the accounts? To the Colonial Architect invariably.
120. Instalments were paid, from time to time, in liquidation of these accounts? They were.
121. Were the charges in these accounts questioned until the sum voted by the Assembly was on the point of being exhausted? No, the account was not questioned until nearly the whole sum voted was exhausted. Mr. Dawson said if the charges were fair he would make inquiry, and my account should be paid.
122. Did anything take place, on either occasion of sending in your account, with respect to the correctness of your charges? Nothing, until the money voted was nearly paid up.
123. And were the works then completed? Yes.
124. Did you send in your final account before the correctness of the charges were questioned? Yes, and no objection was made.
125. There was a valuation by some officer of the Government—do you know who he was? Yes, Mr. Coles.
126. Chief Clerk under Mr. Dawson? I am told so. From the report sent in I may presume he did make a valuation.
127. After that time had you any communication from the Government with respect to the sum which you claimed;—what amount do you claim? About £800.
128. That is the balance still remaining? Yes.
129. After the valuation by Mr. Coles, was any offer made to you by the Government? There was an offer from them.
130. By whom was it made? Mr. Hill called upon me, on the part of the Colonial Architect or Government, and said if I would accept £500 he was authorized to make the offer to me—with a recommendation that I should take it; and I thought it would be better to do so, and have a share of the business, than be without it, as I had been for a year or two; I consented to take it, provided the costs incurred by me were paid to my solicitor.
131. About how much were the costs? Mr. Rowley said about £50 would cover the costs at the time. As I had never brought an action against any person I did not feel disposed to go into law upon this matter, as it was promised that the patronage would be restored. On these two considerations I thought it better to make the sacrifice.

- Mr. Andrew Lenehan. 132. Was there any consent on the part of the Government to give you this £550? Yes.
133. By whom? By Mr. Billyard, the Crown Solicitor.
- 21 Oct., 1862. 134. Will you tell us in what way? They communicated with my solicitor, who communicated with him. He read a letter on the subject to me.
135. The communication was in writing? It was. There was an Executive minute made to that effect, I believe; or at least I have heard so from some source.
136. You agreed to that offer? Yes; I was asked then to wait until the next Session of Parliament, and I agreed to do so. In the meantime they restored the patronage to me. I received orders immediately after.
137. No further terms were come to, and you were compelled to have recourse to law? As they did not fulfil the offer they made to me I was compelled to sue them.
138. I suppose you can produce the same witnesses in proof of the reasonableness of your charges as you produced at the trial? Yes, I can.
139. Will you mention their names? Mr. Henry Woolley, upholsterer; Mr. Hunt,—indeed, I appeal to their own witnesses, Mr. Hill, who told me he valued some of the things at more than I charged; then there is Mr. David Jones and Mr. Sly.
140. I suppose the withholding of payment of your account has occasioned you considerable loss? Yes, it has been a very serious affair for me.
141. I find here, Mr. Lenehan, that the amount claimed, according to the account rendered by you, is £1,137 12s. 11d., which includes chandeliers, upholsterers' work, &c., at Government House (*vide C, Separate Appendix*), of which the sum for chandeliers has been paid? Yes.
142. And the only balance remaining is that after that reduction? I suppose so.
143. *By Captain Moriarty*: What is the amount of your claim upon the Government? £1,371 9s. 6d., that is charging them interest upon the money.
144. Deduct that, and the real value of the things supplied to the Government—the amount of demand at the time the goods were furnished—being the amount claimed under the last bill—is £794 16s. 4d.? I will say so, although I believe it is a larger amount considerably.
145. *By Mr. Windeyer*: When you received these payments from the Colonial Architect, were they on the general account, or payment for specific articles? On the general account. He would have given me more, he said, at a time, but he had not the power.
146. *By the Chairman*: Then the sum claimed at the time the dispute took place was £794 16s. 4d.? Yes.
147. *By Captain Moriarty*: Does that comprise all the goods supplied by you from the time of the arrangement for furnishing? Yes.
148. *By Mr. Alexander*: Then you have been paid the £71 16s. 8d. for furniture for Legislative Offices? That I am sure has been paid.

THURSDAY, 30 OCTOBER, 1862.

Present:—

| | | |
|-----------------|--|----------------|
| CAPT. MORIARTY, | | MR. ROBERTSON, |
| MR. EGAN, | | MR. LORD, |
| MR. ALEXANDER. | | |

PETER FAUCETT, ESQ., IN THE CHAIR.

Mr. Andrew Lenehan called in and further examined:—

- Mr. Andrew Lenehan. 149. *By the Chairman*: There is one question I desire to ask you, in completion of your examination;—independently of any contract whatever—or, in other words, assuming that you supplied these goods without any previous contract—were the prices you set down for those goods you supplied, and which are included in the claim you made, fair and reasonable prices? They were just and honest prices; I could not have done more justice to any person than in the charges I made to the Government in this and all similar instances.
150. I will put it to you in another way:—Suppose a private person—Mr. Egan or myself, or anyone else—had gone into your establishment, and had said, supply these articles—without making any arrangement as to price at all? The same prices would be charged to yourself, or to Mr. Egan, or to any other gentleman in Sydney, that I made to the Government in this case.
151. In the claim you sent in, and on which you claim a balance of £700 and some odd pounds? Yes, the prices are precisely the same as would have been made to any private person.
152. *By Captain Moriarty*: I think I understood you to say distinctly, Mr. Lenehan, that, in point of fact, no actual contract was entered into between you? There never was.
153. There was never any contract at all? Never.
154. It was a mere general matter; so many things were wanted, and what would be something like an approximate amount? That is the very understanding conveyed at the time the question was put to me:—“What amount shall I ask the Government for to replace these things with new ones of a similar character?”
155. And you never did, in point of fact, enter into any agreement, either with Mr. Dawson or any other person on the part of the Government, for the supply of those articles at the sums stated in Mr. Dawson's communication? Never, directly or indirectly—impliedly or expressly.
156. *By Mr. Lord*: You never furnished any written tender or estimate? Never.

157. *By Mr. Egan*: You merely stated, I suppose, in conversation, the probable amount that such and such things, as they were then described, would come to? Yes.
158. And not as to what they afterwards received? No; if they had adhered to their first intention it would not have cost more.
159. *By the Chairman*: I understood you before to say, that nothing occurred with respect to any contract at all but what you have told us? There never was a contract, and had they adhered to their first instructions my account would never have amounted to as much, I think, as the sum voted; but Lady Denison thought she could get any amount.
160. *By Mr. Lord*: Did you ever furnish an estimate yourself, in writing? Never; the Colonial Architect took down round sums on a piece of paper, from my verbal statement, so as to arrive at that amount, to know what to apply for; but I never furnished, directly or indirectly myself, any tender, or stated fixed prices for any article. I may mention, perhaps, a matter which I desire to correct. I received a copy of my evidence, and there is a passage in it I would wish to correct. I did not say what I am made to say. I am made to say that the Governor asked me to get the Colonial Architect to get designs. That is not correct; I do not say so.
161. What did you say? That the Governor himself said—and Lady Denison also—that they would get the Colonial Architect to furnish me with designs, by which I was to work.
162. Will you be good enough to correct that, in writing, at the foot of the evidence? Yes. I may mention now, in passing, that my solicitors cannot find either the sketches I received from the Government or the papers. They were with the papers when we went to trial; but neither the papers nor the sketches can be found now, nor the Civil Crown Solicitor's letter, offering £5,500; but Mr. Garrick suggested that he would supplement it, as he cannot find the papers in his office.
163. You have searched for these papers and have not been able to get them? All the papers were with Messrs. Rowley, Holdsworth, and Garrick. They were put away, and we cannot find them at present. I only asked for them on Monday. Mr. Garrick, however, knows everything about the matter.
164. *By Mr. Robertson*: Did you give all the things originally contracted for, or rather, originally estimated for? No, there were a few small matters, I think, that were never provided for.
165. They having been part of the original estimate? They were part of the list first made.
166. The original list or estimate? Yes.
167. *By the Chairman*: Let it be called an estimate? Yes.
168. *By Mr. Robertson*: You did not give the whole of those things? No.
169. What proportions did you give? There was unfurnished not more than £20 worth of the articles originally intended to be supplied.
170. What sort of a carpet was it—there was a complaint about that? It was a velvet pile carpet.
171. Is that carpet there now? It is.
172. It is the same carpet now that is at Government House? It is. I would wish to state, in addition to the question you put to me a few minutes ago, that although all the things originally intended to be supplied were not supplied, many things were furnished in addition which were not intended to be supplied in the first instance.
173. *By Captain Moriarty*: And, in point of fact, you only charged for those articles that were supplied? That is all.
174. Without any reference to the estimate made by Mr. Dawson? The things originally intended to be supplied, but which were not furnished, were not charged, but those additional articles which were sent, although not intended to be supplied in the first instance, were charged for. Nothing was charged for that was not sent.

Henry Woolley, Esq., called in and examined:—

175. *By the Chairman*: Mr. Woolley, may I ask what is your business? My business now is that of a printer and publisher; my old business was decorator.
176. Decorator? Yes, I was decorator to Her Majesty at Home. I was in that business here for six or seven years, until I lost my leg.
177. What, exactly, do you mean by decorator—it is so extensive a word? I furnished the palace with the furniture, and decorated the walls. We used to call ourselves decorators in England. We were upholsterers and decorators—artistic decorators.
178. You were a decorator, which includes the business of upholsterer? Yes; I kept a large manufactory of cabinet furniture.
179. Then you are acquainted, I suppose, with the precise value of furniture supplied to such places as Government House? Yes; I went over that furniture.
180. Have you gone over the furniture in Government House, and if so, has anyone pointed out to you the furniture supplied by Mr. Lenehan to Government House? Yes.
181. Who pointed it out to you? Mr. Lenehan.
182. Have you been shown any account furnished by him for that furniture? No, I have never seen an account of it.
183. You have never seen the account? No; I was told the prices afterwards. I went over with Mr. Hunt.
184. Who is Mr. Hunt? A cabinet-maker. We both put down our prices for the things. He, perhaps, would give a higher price for some things, and me a lower. We mentioned the prices, and afterwards we knew the prices charged. We found that in many cases they were below what we put down.

Mr. Andrew
Leuhan.
30 Oct., 1862.

H. Woolley,
Esq.
30 Oct., 1862.

- H. Woolley, Esq.
30 Oct., 1862.
185. Did you in any case find the prices higher than you put down? We thought altogether that the bill was considerably lower than we should have made it out. There was one article in particular—the silk curtains for the drawing-room—that I had used 1,000 or 1,500 yards of. The pattern was set up for me. It was for the Honorable Mr. Matheson. That silk was charged 18s. a yard, and I used to pay a guinea.
186. You paid a guinea? Yes, for my 1,500 yards.
187. And what did you charge Mr. Matheson? A guinea and a half.
188. *By Mr. Egan*: I suppose that includes the work? No.
189. You charged that for the silk alone? Yes; I drew the designs.
190. *By the Chairman*: You drew the designs? Yes, and the firm in the city made the silk.
191. According to your designs? According to my designs.
192. And you paid for making it a guinea a yard? Yes.
193. And you supplied it, and were paid for it, at the rate of a guinea and a half? Yes.
194. Which of course included some remuneration for your design? Yes. Mr. Billiard's brother-in-law paid 27s. 6d. for the same thing in different colours; I paid a guinea.
195. That is one article;—did you observe any other articles that were charged in anything like a similar way? The dining-room chairs Mr. Hunt considered very considerably under the cost, but they were English made, part of them. I believe they were made up. A certain number were English.
196. At that time, I suppose, you saw the account furnished by Mr. Lenehan, and were aware what prices had been charged? I was aware of the prices, but I never saw any account. I did not wish to see any. I agreed with Mr. Hunt when we went in: I said, "Let us take our notes, and compare them afterwards."
197. But how did you know the prices Mr. Lenehan had charged? We then after that spoke to Mr. Lenehan about it, and he told us then what he had charged, and we told him what we had put down.
198. *By Captain Moriarty*: You had no knowledge whatever of the nature of Mr. Lenehan's demand until you and Mr. Hunt had valued the articles yourselves? I cannot say that exactly, because, if I recollect rightly, Mr. Lenehan told me his account was somewhere about so much, and that they disputed so much.
199. It was a general amount? It was a general amount. I do not think I saw an account of the prices of any particular article on paper, to the best of my recollection.
200. At all events, your opinion was formed without reference to any amounts? Quite. When we went there I suggested to Mr. Hunt that we should do so. I said, "I will take my book and put down a price, and you put down a price, and we will compare notes."
201. *By the Chairman*: You went there at the invitation of Mr. Lenehan? Yes.
202. Did you consider that the articles furnished were of a good description? I thought them very good indeed.
203. And the workmanship, was that well done? We agreed that it was all very good indeed. We did not notice anything at all —
204. You saw nothing to find fault with? No; I thought it was most satisfactory; I was quite pleased.
205. And on the whole you consider the prices fair and reasonable? Yes, both of us did.
206. And as you think, considerably (in some instances) under what you would have charged? That would depend upon circumstances, as in the case of this silk. Mr. Lenehan visited England, and no doubt if a man has money in his pocket he can go into the city and buy. He seemed to have given the advantage.
207. To the Government? To the Government.
208. Did you observe the carpeting, do you recollect? It is some time ago. I do not think I paid so much attention to that as to the other things.
209. The curtains, I suppose? The curtains were particularly gone into, and all the cabinet furniture. No doubt we made our remarks about the carpet too, but I do not recollect particularly now about that.
210. But on the whole that was the result of your examination? Yes, we thought the charges were very fair.
211. *By Mr. Egan*: And in some instances they were charged less than you valued them at? Very many of them were. I believe that if the dining-room chairs had been made in the Colony, Mr. Lenehan could not have sold them at the price. I think there were eighteen English, if I recollect rightly, and the rest were made up to match.
212. Do you recollect the sideboard and tables? I remember the sideboard particularly.
213. *By Captain Moriarty*: Do you agree with this statement—"Many of the charges are so very much in excess of what I considered reasonable, that I did not consider myself justified in dealing further with the account until I had caused it to be carefully examined by some competent and disinterested person." That is a statement made by the Colonial Architect at the time—do you concur in that view? I think anything but so.
214. You entertain a directly opposite opinion? I entertain an opinion directly opposite to that. Indeed my idea was, that the whole matter hinged upon whether an estimate was given or whether it was not. I stated in Court that I had given dozens and dozens of estimates. I had the honor of appointment from Her Majesty, and supplied furniture to Somerset House, Greenwich Hospital, Chelsea Hospital, and the Admiralty; we were in the habit of supplying furniture every week when changes were made, and at Chelsea Hospital there were changes every week. We were sent for by the Architect, we took down exactly what was required to be done, and sent in our price as a sort of guide. If a nobleman went into any of the apartments we used to furnish them much more expensively, but we always had the order from the Architect. I am satisfied that I have sent in many memoranda where the price put down had not been more than £200 or £300, but where the bill has been £600 or £700.

215. *By Mr. Egan*: Independently of that consideration, and leaving it out of your consideration also on what the matter hinged, do you consider the goods furnished at the prices you were told by Mr. Lenehan that they were marked down by him,—were furnished at reasonable prices? I do.

H. Woolley,
Esq.

30 Oct., 1862.

216. Independently of whether there was a contract or not—independently of what, in your opinion, the matter hinged on? I do; I think that they were very fair prices indeed.

217. *By Mr. Alexander*: Do you know Mr. Coles? No.

218. *By Captain Moriarty*: The Clerk of Works? No.

219. *By Mr. Egan*: Have you any idea of the gross amount of your valuation of the furniture pointed out? We did not go on the full amount, but on the different articles; we took the principal articles, and did not go through every little item.

220. And you do not know what was the gross value of the articles supplied? No; we took the larger things—the curtains and the furniture, I think all the cabinet furniture. I think, too, we did take the carpets; we took them at so much per yard—we did not carry them out.

221. *By Captain Moriarty*: Did you take the pier glass—there was a large pier glass supplied? Upon my word I almost forget; I fancy we did.

222. That was an important item? Yes, we did, because at the time I made a remark. Mr. Hunt was not quite so conversant with the plate glass as I was, and I remember telling him, that in the year of the coronation of our present Queen I was a shareholder in the Thames Plate Glass Company, and that we produced the largest sheet of plate glass that had ever been made. I gave £250 for it. I think it was 144 inches by 90 inches. I was telling him what a vast difference there was in the price now—how it had come down. That was at the time the largest sheet of glass ever made, except in Russia. It cost about £56 silvering, and I think about £20 for the mouldings.

223. *By the Chairman*: Glass has been greatly reduced in its price? Yes. I was speaking to Mr. Hunt about it, he never having dealt in those large glasses, and he did not understand how they told up in price according to size.

224. In fact, they increase in something like a geometrical progression? Yes. You cannot afford to cut a large glass. A glass double the size is worth more than double the value.

225. *By Captain Moriarty*: Four times the value? Yes.

226. *By the Chairman*: Have you had any experience in reference to the prices in the Colony here? Well, yes, I was in the business here for seven years.

227. You were engaged in the business here? Yes, I was in the trade, and did a good business. I had one account of upwards of £3,000 for furniture in the Colony. That was a pretty good private account. It was for Mr. W. A. Gardiner, of Launceston.

Mr. Alexander William Norton called in and examined:—

228. *By the Chairman*: Mr. Norton, you are assistant to Mr. Lenehan? I am.

229. What is your exact position with him? As managing man.

230. Do you recollect the circumstance of Mr. Lenehan having supplied some furniture to Government House? I do.

231. You were with Mr. Lenehan at that time? I was, and, under Mr. Lenehan, I had the superintendence of the workmen.

232. That is the work about which a claim is still pending? Exactly so.

233. Will you be good enough to tell the Committee what was the first thing you did in reference to that matter? The first time I went round to Government House was on the occasion of taking some coburgs for the lining of the reception-room curtains, for Lady Denison's inspection.

234. For Lady Denison's inspection? Yes, different shades of coburgs.

235. Do I understand you that you took samples? Yes, samples of coburg cloth.

236. For Lady Denison's inspection? Yes, for Lady Denison's inspection.

237. What took place—did you see Lady Denison? I did.

238. Was anyone else present? I think not.

239. You saw her at Government House? Yes.

240. What took place? Her Ladyship desired me to get some better materials; she said they were far too common—that they were not good enough for the material that was going to be on the outside.

241. Were there articles of the same kind forming part of the furniture of Government House before? Yes, the old curtains were lined with the same material, as far as value is concerned.

242. That is what I want to know;—were they of the same kind as the old materials for which they were intended to be a substitute? Yes.

243. Those that you took on that occasion? Those that I took on that occasion.

244. What did you say then? I asked her ladyship what style of material she would require, and she said it ought to be of silk.

245. Yes? And that I was to procure patterns of silks.

246. Yes, and what then took place? I returned and acquainted Mr. Lenehan, and patterns were procured. I submitted them to her ladyship, and she selected one.

247. She selected a pattern? She selected a pattern.

248. A silk pattern? It was a shot glace silk—gold and silver.

249. Was the one she selected of a more expensive kind, or of a less expensive kind, than the one it was intended to replace? It was about four times the value.

250. What took place then? That was all that took place on that occasion.

621—B

251.

Mr. A. W.
Norton.

30 Oct., 1862.

- Mr. A. W. Norton. 251. What is the next thing that took place? I returned to Mr. Lenehan, and Mr. Lenehan had to consult Mr. Dawson as to the propriety of using it. I was there generally every day while the men were there. It was my business to see that they were at their work.
- 30 Oct., 1862. 252. You saw the work done? I did.
253. Had you any conversation with Lady Denison? No, excepting casual observations she might make in coming into the room—such as, she did not like this being done, or that being done, and I had to alter it.
254. Had you any conversation with her about substituting any other material for any you had brought? I had not.
255. Had you any other conversation with Lady Denison, in respect to varying the kind of material you had brought? I had not, excepting in reference to the drawing-room curtains. I was cognizant of her having done so, but not to me. The foreman of the upholsterers was the person to whom her ladyship varied the order in reference to the dining-room curtains.
256. Is he here? He is not. If he is in the Colony, he is somewhere up the country; he has been lost sight of for some time. It was to him that her ladyship stated she would not have damask curtains, and she told him to send Mr. Lenehan to her.
257. After that did you supply new curtains? They were supplied both to the dining-room and to the reception-room.
258. Did you see her after they were brought? I saw her ladyship there generally every day.
259. Looking over the work? Yes.
260. Are you aware of any other alteration being made, or of any other change being made, in the materials supplied? Nearly all the articles in the original estimate were altered; the sideboard was altered from that originally intended; the dining-tables were altered. I had to see Mr. Charles, who was at that time draughtsman, to confer with him on several occasions as to the alterations.
261. Draughtsman!—I suppose you mean the Colonial Architect? Yes.
262. Have you got your account here? No, I have not.
263. Are you aware of all the articles mentioned in the account being furnished? I am; they all passed under my supervision prior to their being sent in.
264. You, I believe, have been a long time in the trade? I have been in the trade ever since I was of the age of fourteen—now about twenty-five years.
265. Can you say whether the terms charged in Mr. Lenehan's account are fair and reasonable? They are; I *costed* every article. There is one stated rate of profit in the business, and that rate of profit was applied to Government House, the same as it would be to yours or to any other private establishment.
266. *By Captain Moriarty*: What do you mean by the original estimate? There was an original document at Mr. Lenehan's, which was made prior to me going with him, giving an idea of the prices for repairing and altering certain of the furniture at Government House, and in that estimate it gave the cost of new curtains, to be of the same material and hung in the same manner as those then in existence; and in the dining-room the material stated there was worsted damask.
267. *By the Chairman*: Could you find that estimate? Yes.
268. Would you be kind enough to get it for the next day of meeting? I will do so.
269. *By Captain Moriarty*: Was that an estimate made by Mr. Lenehan, or a copy? What I had was a rough copy.
270. Was it made by Mr. Lenehan and supplied to the Government, or was it made by the Colonial Architect for Mr. Lenehan's guidance? It was in Mr. Lenehan's clerk's handwriting, and therefore I presume it was made by Mr. Lenehan.

TUESDAY, 4 NOVEMBER, 1862.

Present:—

| | | |
|-----------------|--|----------------|
| CAPT. MORIARTY, | | MR. ALEXANDER, |
| MR. EGAN, | | MR. ROBERTSON. |

PETER FAUCETT, Esq., IN THE CHAIR.

Mr. John Hill called in and examined:—

- Mr. J. Hill. 271. *By the Chairman*: You are a cabinet-maker, doing an extensive business in Sydney? Yes.
- 4 Nov., 1862. 272. Have you seen the furniture supplied to Government House by Mr. Lenehan in 1857? It is about three years ago since I saw it.
273. By whom was it pointed out to you? By the Governor himself.
274. As the furniture supplied by Mr. Lenehan? Yes; Lady Denison was also there some time.
275. Will you state what was the object of your going there? To make a valuation of the furniture, as near as I possibly could.
276. Were you invited there on the part of the Government? Yes.
277. By the Colonial Architect? Yes; the Colonial Architect told me at the time, that he was authorized by the Governor and Lady Denison to appoint me as one of the valuers.
278. Did you estimate the whole of the furniture on that occasion? Yes, we did so as near as we possibly could.
279. Who was with you? Mr. Hayes, the cabinet-maker, who was in a small way of business in those days.

280. Was he a skilful person in his business? Yes; I believe Mr. Lenehan can state as well as myself, that he was one of the best workmen in the Colony at the time, as a practical man. Mr. J. Hill.
4 Nov., 1862.
281. Was he also requested by the Government, in the same manner as yourself, to act as a valuator? Yes, there were two on one side, and two on the other, I believe.
282. Were any other persons with you at that time? No, Mr. Hayes and I were alone.
283. And both acting on the part of the Government? Yes.
284. Had you at that time seen, or did you afterwards see, the charges made by Mr. Lenehan—the accounts sent in by him? No, I do not recollect ever seeing them. I have a copy of the valuation Mr. Hayes and I made at the time, which will perhaps be the best evidence I can give in the matter.
285. Will you hand it in? Yes. (*The witness handed in the same. Vide Appendix.*)
286. You consider that this statement contains a fair estimate of the value of the articles you examined? Yes. But there is one thing I consider it my duty to state here now, that a great deal of that work was done some two or three years before that valuation was made, and when men's wages and materials were much higher than they were then. I should mention also that there are two or three items not carried out as to price—some alterations and repairs that were made because we could not get pointed out to us exactly what had been done. If these amounts had been carried out, it would swell this account a few pounds.
287. Could you state what would be a fair per centage to add on to the prices you have fixed against these articles, having reference to the period at which they were supplied? We thought about fifteen per cent. on the cabinet work, as near as we could get the prices. We sent round to the different houses in the trade, and ascertained, as well as we could, what the prices were of upholstery materials three years before.
288. Does that fifteen per cent. include the value of both labour and material? Yes. Everything was dearer at that time, and particularly to those that had to buy in the Colony.
289. Then you think fifteen per cent. would be a fair addition to the prices you have set against these articles in the statement you have handed in? Yes.*
290. And that fifteen per cent. would cover everything? Yes, except of course those articles that there is no price carried out for.
291. Did you furnish a copy of this to the Government at the time? Yes, we made out two similar to this, and Mr. Hayes and myself signed them both; one we kept, and one we sent to the Crown Solicitor. That was at the time the case was coming on in the Supreme Court.
292. *By Captain Moriarty:* I understood you to say, that if you had valued the articles when they were supplied to Government House, you would have put a higher price upon them than you have done, labour and materials being dearer at that time? Yes; I have no doubt from ten to fifteen per cent. would have been added to the whole of the articles of cabinet furniture made by Mr. Lenehan. We were paying men £1 a day, two or three years before this valuation was made.
293. *By the Chairman:* This valuation amounts to the sum of £1,666—you would have added fifteen per cent. to that amount, if you had made the valuation at the time the articles were supplied? Yes, I believe I should have added fifteen per cent. to the cost of the cabinet work. The valuation of the upholstery work was made, as nearly as possible, in accordance with the prices paid for materials and labour three years before the valuation was made.
294. *By Mr. Alexander:* Was that document brought forward when the trial took place? It was sent in by us to the Crown Solicitor, and I expected to be called as a witness on the trial, but was not called.
295. *By Mr. Egan:* Were you subpoenaed by the Attorney General? I was subpoenaed on the part of the Government, but was not called. I may state that I heard at the time that my valuation was considered too high.

APPENDIX.

| | £ | s. | d. |
|--|-------|----|----|
| Dining and ante-room— | | | |
| 275½ yards velvet pile patent carpet, at 7s. | 96 | 8 | 6 |
| Upholsterer cutting out and making ditto, at 8d. | 9 | 3 | 8 |
| Dining-room— | | | |

JNO. HILL, JUNR.
G. C. HAYES.

Mr. Andrew Lenehan further examined :—

- Mr. Andrew Lenehan.
4 Nov., 1862.
296. *By the Chairman*: Do you produce a copy of your account furnished to the Government? I do. (*The copy produced.*)
297. Mr. Woolley told us that the furniture he saw at Government House, and about which he spoke in his evidence, was pointed out to him by you? Yes.
298. Was that the furniture you supplied to Government House? It was the same furniture.
299. I understand you wish to make a statement, in correction of some of your former evidence? Yes, in correction of the evidence I gave on the last occasion, with regard to the balance due to me. I was asked the balance, and having nothing at hand to guide me, I adopted the account printed in a letter of the Colonial Architect, dated 8th January, 1858, (marked C in the Separate Appendix,) which was in reality the statement made by the Government, and not by me. My accountant, Mr. Webb, is here, and I shall be glad if you will allow him to state the amount that really is due.

Mr. Charles Read called in and examined :—

- Mr. C. Read.
4 Nov., 1862.
300. *By the Chairman*: You are, I believe, an upholsterer? Yes, and carpet salesman, in the employ of Messrs. David Jones and Company.
301. You have had a large experience, I believe, in that department? Yes.
302. Have you seen the furniture supplied by Mr. Lenehan, in 1857, to Government House—carpets, curtains, and other things? Yes.
303. Have you seen the account furnished by Mr. Lenehan? I saw that account, some three years ago, at Government House.
304. You accompanied Mr. Thompson, of the firm of Thompson, Symonds, and Co., (successors of the former firm, and predecessors of the late firm of David Jones and Co.,) and made an estimate of the value of these articles? Yes; we were called upon to go over the furniture, to look to the qualities, and also the value of the material.
305. By whom were you called upon to do this? By Mr. Coles, of the Colonial Architect's Department.
306. Did you furnish any estimate in writing? I am not certain about that. If it was done, it was done by Mr. Thompson.
307. You say you saw the account furnished by Mr. Lenehan? Yes, the account, or a copy of it, was given to us at Government House by Mr. Coles.
308. Assuming that there was no contract between Mr. Lenehan and the Government with respect to the supply of that furniture, were the charges in his account fair and reasonable charges? I considered them so at the time I went over it, which is now some three years ago. I think it was some two years before that, that furniture was supplied. In fact, I found the charges for curtains and carpets were slightly below what they could have been supplied for at the time we went over it.
309. Were prices higher or lower in 1857 than at the time you speak of? Materials were higher in 1857, particularly carpets and the silk in the curtains.
310. Was the workmanship well executed? Very well.
311. Everything you saw was well done? Yes.
312. Did you examine the furniture, such as the tables and sideboards? No, we confined ourselves to the carpets and curtains, and all the trimmings and workmanship connected with them.
313. Did you examine them minutely? Yes, and also measured them. We were particularly instructed to check the quantities.

314. Did you and Mr. Thompson agree in your valuation? Yes. In the position in which I was placed, that being my particular department of my business; and having an intimate knowledge of it, I was rather better able to give an opinion on the subject than Mr. Thompson, whose knowledge was merely general. Mr. C. Read.
4 Nov., 1862.
315. You took a more active part in that department than Mr. Thompson? Yes.
316. And you had greater and longer experience than he had, and more special experience in that department? Yes.
317. *By Captain Moriarty*: What was the description of carpet supplied? There were two or three different kinds, velvet pile, Brussels, and tapestry carpet.
318. Was the velvet pile carpet a good one? Yes.
319. As good of its kind as could be supplied? Yes, as good as was procurable in this Colony. There are better goods made, but it was as good as I have seen in this Colony.

Mr. Charles Hunt called in and examined:—

320. *By the Chairman*: You are an upholsterer and cabinet-maker? Yes. Mr. C. Hunt.
4 Nov., 1862.
321. And have been so for many years? Yes.
322. In extensive business in Sydney? At one time it was extensive.
323. Did you examine the furniture at Government House, supplied by Mr. Lenehan in 1857? Yes.
324. At whose instance? At the instance of Mr. Lenehan himself.
325. About when was it that you examined it? I think about two years ago.
326. For the purposes of the trial? Yes.
327. Preparatory to giving your evidence at the trial? Yes.
328. Did you at that time, from your examination, form an estimate of the value of the furniture supplied, as pointed out to you? Yes, I did.
329. Was that in writing? No, I did not put it in writing. I went through the different articles of furniture, carpets, curtains, and so on, with Mr. Woolley, and we both thought that Mr. Lenehan's charges were reasonable.
330. Had you seen Mr. Lenehan's charges at that time, or did you afterwards see them? Yes, I was acquainted with his prices.
331. And you thought they were reasonable? Yes, I thought the whole of them were reasonable.
332. You and Mr. Woolley were together on this occasion? Yes.
333. And you talked over the matter together? Yes, we were nearly three hours going through the things.
334. You made a minute examination? Yes.
335. Did you consider the question of value in reference to the time at which you were examining the articles, or in reference to the year 1857, when they were supplied? In reference to the time they were made, in 1857. At that time it was difficult to get workmen to do what you wished them.
336. Prices were higher? Yes; and you could not control the men then as you could now; there was greater anxiety at that time.
337. In reference to the year 1857, did you consider Mr. Lenehan's prices as fair and reasonable? Yes, I did indeed, very fair and very reasonable.
338. I mean independently of any contract whatever, assuming there never had been a contract at all? Yes, assuming there was no contract.
339. *By Captain Moriarty*: Did you and Mr. Woolley examine the articles separately, and then compare notes, or did you examine them together? We went through them together. I mentioned the prices I thought they should be, and I think sometimes my prices were above Mr. Lenehan's. Mr. Woolley, having been out of business for some time, was not altogether conversant with prices as they were just then, till he had brushed up his memory.
340. You examined every item? Yes.

Mr. Thomas Webb called in and examined:—

341. *By the Chairman*: You are accountant to Mr. Lenehan? I am. Mr. T. Webb.
4 Nov., 1862.
342. Will you be good enough to state what the total amount of Mr. Lenehan's claim against the Government was originally? £1,122 17s. 5d.,* of which £225 19s. was paid into Court; the balance remains due.
343. How much is the balance remaining due? That would make it to be £896 18s. 5d.
344. *By Mr. Robertson*: Is that calculation made on the basis of the account contained in the Colonial Architect's letter of the 8th January, 1858? There is some irregularity in the amounts that have been put down there.
345. What is the difference between the two accounts—yours and the one furnished by the Colonial Architect? He puts down the balance at £794 16s. 4d., which makes a difference of £102 2s. 1d.
346. The account you now put in is £102 2s. 1d. more than that referred to by Mr. Dawson, the Colonial Architect, in his letter of 8th January, 1858? Yes.
347. Will you tell us how that difference arises? The balance arises simply in this way—that as articles of furniture were supplied they were regularly charged to the Government, and all the moneys paid by them were credited against the account. Hence arises the balance that I speak of.

348.

* NOTE (on revision):—This was the balance only of the original account due when Mr. Lenehan sued Government.

- Mr. T. Webb. 348. How was it that the discrepancy you now speak of was not discovered at the time of furnishing the Government with this account, which appears by the Colonial Architect's letter to have been furnished by Mr. Lenehan? I cannot tell you how he arrives at that.
- 4 Nov., 1862. Even after the item of £188, for chandeliers, included in the account in the Colonial Architect's letter that you refer to, was paid, there was a balance of £1,122 17s. 5d., if my memory serves me, less £225 19s. paid into Court.
349. What I wish to know is, how this discrepancy of £102 2s. 1d. arises between the amount of the balance you now claim, and of that shown in the account which this letter says Mr. Lenehan sent to the Colonial Architect? Simply because Mr. Dawson must have put down the amount wrong in that printed letter. It is an error in their office, not in Mr. Lenehan's.
350. Is this a correct statement of the account? It is not.
351. *By the Chairman*: What is the entire amount of Mr. Lenehan's charge against the Government, for furniture supplied, and the entire amount of money paid to him by the Government? I am not in a position to say, without time to examine the accounts.

William Weaver, Esq., C.E., called in and examined:—

- W. Weaver, Esq., C.E.
4 Nov., 1862.
352. *By the Chairman*: You were formerly Colonial Architect? I was.
353. For what period? Rather more than a year and a half.
354. Was there any furniture supplied to Government House, or to the public offices, during your time? Yes, a great deal, at various times.
355. Will you tell us what was the course adopted in dealing with those who supplied furniture? About three months before I left office, in the beginning of the year 1856, Sir William Denison arrived here, and at that time particularly there was a great deal of new furniture required at Government House. An approximate estimate was generally made on such occasions as that when a large amount was required.
356. How was that arrived at? Generally speaking, Mr. Lenehan, or whoever the person was who was to supply the furniture, was asked for an approximate estimate of the cost of the furniture required. I remember particularly a very expensive article, in the shape of a book-case, which was supplied by Mr. Lenehan, at the request of Sir William Denison. In that case, as in others, a gross sum was arrived at by approximation, and the details were to a great extent left to the Governor himself.
357. Having obtained an approximate estimate, what was done then? An order was given to the party supplying the furniture—Mr. Lenehan, generally speaking, in the case of Government House—to supply certain articles required, without any exact limit as to the cost of each specific article, and the selection of them, when supplied to Government House, was invariably left to the Governor.
358. Do you recollect any instances in which the selection was left to the Governor, and the Governor actually selected the articles? I remember that about this period, early in 1856, on the arrival of Sir William Denison, a great deal of new furniture was required; and, I believe, in all cases, the selection of carpets, curtains, and things of that kind, was invariably left to the Governor.
359. How were the prices afterwards arrived at? Mr. Lenehan, or any other party supplying the articles, sent in accounts, and the officers of the department had to satisfy themselves by the best means they could that the prices were reasonable. We never did anything of that kind by contract, or anything approaching contract, further than that an approximate estimate was given that about so and so would be the cost.
360. Was that approximate estimate considered by your department, or by the Government, as binding against the persons supplying the articles? No, certainly not, if the quality of the article was varied in any way; in fact, it was not a binding contract, there could be no doubt about that. In the case of Government House in particular, we did not limit the amount.
361. Did it occur, at any time, that the actual charges subsequently made greatly exceeded the approximate estimate previously made? I do not remember any particular instance; but during 1855 and 1856 everything was very expensive, and no estimates whether for buildings or furniture could be accurately made; it was utterly impossible at that period, and therefore we did not consider these estimates at all binding; but when the accounts were sent in, we used to ascertain by inquiry of other tradesmen whether the charges were fair or not.
362. Was the Government at that time in the habit of allowing the Governor General to give directions as to the kind of furniture supplied to Government House, and as to the style of workmanship? Yes, no doubt it was left, to a great extent, to his own wishes.
363. In leaving it to the Governor to carry out his own wishes, was the circumstance of his doing so necessarily increasing the expense considered? Not generally speaking. He would describe what articles were required, and it might so happen that he would increase the gross amount or he might not; some articles might be more expensive than the estimate; others might be less; but the probability was that the gross amount would be more than was at first expected.
364. Supposing a tradesman had been directed by you, as Colonial Architect, to supply certain articles to Government House, would you consider him justified in receiving directions respecting them from the Governor General? As the practice then was, I think he would be. We should not object, so long as the articles really supplied were only fairly charged for. If the charges were fair for what was actually supplied, we should not feel it necessary to object to what the Governor had ordered.

365. *By Mr. Egan:* Was it not a common practice, when articles of this kind were supplied, to apply to other persons in the trade for information as to the prices? The officers of the department necessarily did that for their own satisfaction. An architect, as a professional man, is not supposed to have any better knowledge necessarily of curtains, or bedsteads, or such things, than anybody else.

W. Weaver,
Esq., C.E.

4 Nov., 1862.

FRIDAY, 14 NOVEMBER, 1862.

Present:—

CAPT. MORIARTY, | MR. ROBERTSON,
MR. EGAN.

PETER FAUCETT, ESQ., IN THE CHAIR.

Mr. Thomas Webb called in and further examined:—

366. *By the Chairman:* You were asked to produce an account of the goods furnished by Mr. Lenehan to Government House—have you got that account? I have made from the general account, a copy of which is already in possession of the Committee, an extract, showing the furniture supplied to the public rooms at Government House. (*Account handed in. Vide Appendix.*)

Mr. T. Webb.

14 Nov., 1862.

367. You were asked to produce an account of the furniture supplied to Government House, with the prices set opposite; showing also the total amount these goods so furnished would come to; and then, in a separate list, the items of cash or payments received by Mr. Lenehan on that account—a debtor and creditor account, in fact;—will you be kind enough to say does this paper contain those particulars? It gives the prices of the articles supplied to Government House for the public rooms therein, and it gives at foot the amount of cash received on account of that, showing a balance to be due, as you will see, of £903 11s. 10d., or a little over the £896 18s. 5d. sued for.

368. *By Mr. Robertson:* Is this account in accordance with the account furnished to the Government at the time? It is part of that account. It is that portion which belongs to the public rooms at Government House, selected from the general account containing all the items, whether for other departments, or other work for Government House independently of that.

369. How did you make that selection—did you make it with the consent of the Colonial Architect, or from the fact of the furniture being sent to other places? I made it from the fact of the entries being made in our books describing what the articles were, and what they were for.

370. Did you receive no more than £1,300? Not on that account.

371. Do you happen to know how it was the suit was for £896 18s. 5d., instead of £903 11s. 10d.? The £896 was the balance of the whole account generally.

372. Then you made some little over-charges on other accounts, and that is the reason of this discrepancy? Perhaps under the head of "Government House" I might have put one or two items amongst the sundries that did not belong to the public rooms.

373. Were these prices in accordance with the selling prices at Mr. Lenehan's warehouse? I suppose they were. It is not in my department to make the estimate of prices; but Mr. Lenehan adopts one usual course, whatever work is done to make an estimate of it.

374. Were they entered in the books at the time at these prices? They were at the time of sale and delivery.

375. Were you ever present at Government House with Mr. Lenehan, waiting upon Lady Denison or upon the Governor? Never, on any occasion.

376. Is it customary in Mr. Lenehan's warehouse, in the case of large purchases of this kind, to make any per centage of reduction? If the goods were sold to any person without terms being named—as cash, for instance—we would then perhaps feel bound in a measure to give him the usual trade time for payment; but if a person says, "I will pay you cash prompt," we may allow one-and-a-half per cent. discount, and sometimes as much as two-and-a-half per cent.

377. You only make a reduction of the difference of discount between cash and your trade credit? Cash and three months; supposing a person, instead of taking three months' credit pays cash prompt, we allow him a discount, but not after three months.

378. Are you not aware that in England it is customary to make a rebate—I forget what they call it—of sometimes twenty per cent., sometimes ten per cent. on large purchases? That is where manufacturers publish lists of prices; but that is a very different thing from allowing discount. It has never been done in this Colony.

379. Is it the practice of Mr. Lenehan to do this? No, never, in any instance.

380. *By Captain Moriarty:* That is the practice in very large manufactories where the trade deal with them? Only the trade.

381. *By the Chairman:* Is not the practice that Mr. Robertson alludes to this—that there are certain prices in large establishments, such as iron manufactories and others, fixed against the different articles, which are known as standard prices, and afterwards, according as the prices of these goods rise or fall in the market, it is the custom in these trades to strike off or add so much per cent. to make up the selling price? I believe that to be the practice.

382. *By Captain Moriarty:* But you do not, in point of fact, know it? I do not know it as a matter of fact.

383. *By Mr. Robertson:* Do you know within what time Mr. Lenehan furnished his account after the delivery of these goods? The last account appears to have been furnished on the 31st March, 1858.

384. How long after the delivery of the last of the goods? The delivery of the last of the goods would have been close to the end of March—the 23rd.

- Mr. T. Webb. 385. Is there not a practice in these warehouses, that if persons having bought goods disapprove of them, they can return or exchange them within a certain period after the account is furnished? No practice whatever.
386. Then if goods are sent the parties are bound to keep them? They are.
387. Suppose they do not suit them —? They are always approved before they are sent away; the person purchasing sees them.
388. Is it not a common thing, after goods are sent home, for the lady of the house to say exchange this for me? Very uncommon. If done at all, it is only done as an act of courtesy, but not as a rule, by any means whatever.
389. *By the Chairman*: Supposing you send some articles to a private person that you believe to be of the kind he requires, although not specifically selected by him—if he keeps these articles beyond a certain time, do you or do you not consider that he intends to keep them altogether? We would consider the sale was then concluded.
390. *By Mr. Robertson*: Within what time? I should say that if a person disapproved of the articles he ought to be able to do so within a week's time.
391. I think I had something to do with a large transaction of the kind with Mr. Lenehan, on the part of the Union Club, and the arrangement then was, that if we did not send the goods back within a certain period we were to keep them? That was an unusual case, and the arrangement was made in that instance, I presume, because there were so many parties concerned, and the articles had to be approved by the members of the Club.
392. Do you know within what time? No.
393. Was there any such arrangement in this case? Not that I know of. I did not sell the goods.
394. *By the Chairman*: With respect to this account which you have handed in, you have made the balance that appears due to Mr. Lenehan something larger than the amount sued for? A trifle; and that may be because one or two small items have been put under the head of "Government House," which I could not definitely say belonged to the public rooms.
395. Is the sum for which you formerly sued, or the sum of £903 11s. 10d., which you now say is the balance, the amount properly due? The £896 we sued for is the proper balance on the whole account.

APPENDIX.

MEMO. OF GOODS SUPPLIED TO GOVERNMENT HOUSE.

Mr. Henry William Strong called in and examined :—

396. *By the Chairman* : I believe you are foreman in Mr. Lenehan's establishment? Yes. Mr. Henry
Wm. Strong.
397. Were you so during the time Mr. Lenehan was supplying furniture to Government House? I was not actually foreman then.
398. You were in his employment? Yes. 14 Nov., 1862.
399. Do you recollect being the bearer of any messages from Mr. Lenehan to Sir William or Lady Denison? I do.
400. Will you be good enough to state what messages you received and delivered upon those occasions? Mr. Lenehan requested me to tell her ladyship that we would be compelled to use some of the old material to make the curtains of sufficient length, until Mr. Lenehan could send to Melbourne for more new material, as Lady Denison wished to have the curtains put up in time for a ball.
401. Mr. Lenehan told you to take that message? Yes.
402. Did you see Lady Denison? Yes.
403. What took place? I told her, and she seemed perfectly satisfied, and expressed her wish that the curtains should be put up in time for the ball.
404. You saw the quantity of old material used? Yes.
405. What quantity was there altogether? I can hardly recollect the quantity.
406. Was it a large or a small quantity? Not a very large quantity.
407. About how many yards? I should not think there were more than a dozen or fourteen yards; there might have been more, but it is so long back that I can scarcely remember.
408. Had you any other interview with Sir William or Lady Denison? No, not about that furniture.
409. Was that the only occasion on which you saw Lady Denison? I saw her frequently during the time the curtains were being put up, for I assisted in putting them up.
410. Did she make any observations on those occasions? No, except to express her satisfaction at the curtains having been put up.
411. Before or after the ball? Before the ball.
412. And after they were put up? Yes; if I recollect rightly it was the second day prior to the ball taking place; I will not be positive.
413. Within a day or two? Within a day or two.
414. *By Captain Moriarty* : Using the old material was a mere temporary arrangement? Yes.
415. Clearly understood at the time? Yes.
416. *By the Chairman* : Do you recollect that old material being removed? I do.
417. Do you recollect the circumstances under which it was removed? No, I do not.
418. Do you recollect whether it was removed at the suggestion of Sir William or Lady Denison, or by Mr. Lenehan's direction without that? I recollect that an order came up from Government House that we were to remove the old material.
419. Do you recollect when that order came? No.
420. Or from whom it came? I think it was from Sir William Denison; if I recollect rightly it was through the Clerk of Works, but I will not be positive as to that.
421. Did you ever hear any complaint from Sir William or Lady Denison with respect to the old material having been put up on that occasion? No, I did not.
422. You do not recollect how long after the ball that order came from Government House? No.
423. Do you recollect whether the new material had arrived at the time the order came from Government House? I know the new material arrived in a very short time after the curtains had been fixed.
424. You do not know whether it arrived before the order came? No, I will not be positive as to that.
425. Was the old material removed as soon as the new material arrived? It was.

Mr. Thomas Webb recalled and further examined :—

426. *By the Chairman* : You produce books of account showing entries of the items mentioned in the abstract you have already handed in? Yes. (*Books produced.*) Mr. T. Webb.
427. Having now those books before you, and having referred to several of the items, can you say that the prices were entered at the same time that the articles were entered in the books? They were at the same time. 14 Nov., 1862.
428. What book is that you have before you? The day-book, in which the entry is first made. It is the groundwork of the account. That is the book which contains all the entries in detail.
429. And in that book the prices appear in detail opposite every item? They do.

TUESDAY,

TUESDAY, 18 NOVEMBER, 1862.

Present:—

Mr. ALEXANDER, | Mr. EGAN.

CAPTAIN M. M. MORIARTY IN THE CHAIR.

Alexander Dawson, Esq., called in and examined:—

- A. Dawson, Esq.
18 Nov., 1862.
430. *By the Chairman:* You were Colonial Architect, I believe, at the period when Mr. Lenehan supplied furniture to Government House? Yes, in 1856; in February, I think—the beginning of the year.
431. Or in 1856? In February I received a note from His Excellency to accompany Mr. Lenehan to the Government House.
432. Did you give any instructions to Mr. Lenehan in September, 1856? Any instructions—in what way?
433. With reference to the furniture? Instructions?
434. Yes? No instructions, except to supervise the manufacturing of it.
435. Had you an interview at Government House with Mr. Lenehan, in 1856? Upon that subject in 1856?
436. Yes? I had, in 1856. I received a note from the Private Secretary to accompany Mr. Lenehan to Government House.
437. Did you form any rough estimate of what the expense of the furniture would be? I may qualify my answer to that question in this way—the reason why the Governor General wished Mr. Lenehan to accompany me was, for the express purpose of giving the description, quality, and value of the articles of furniture suitable for the state rooms of Government House, otherwise there would have been no need for Mr. Lenehan to have been there at all. Dependence was solely placed upon the professional opinion of Mr. Lenehan to give the description and value of the articles, there being few tradesmen who could undertake the work but him, from his capital, the extent of his stock, and the manner in which he could perform the work.
438. No order was given until the vote of the House was arrived at? None; I have the correspondence to that effect here. (*The witness handed in a letter. Vide Appendix A.*) I have also other correspondence, which bears upon the same thing. (*The witness handed in a letter. Vide Appendix B.*)
439. Will you favour the Committee with your statement upon these facts—whether you ever entered into a positive agreement with Mr. Lenehan for supplying certain articles to the Government, upon clear, distinct terms of price? The prices were agreed to, but no actual contract was taken—no written contract.
440. I would like to have a distinct answer to that question? There was no written agreement.
441. There was no positive estimate formed between you and Mr. Lenehan—he had no instructions from you to supply certain articles to Government House upon certain fixed prices? The prices were fixed by Mr. Lenehan in the estimates I have just submitted, and I gave him authority, by virtue of my office as Colonial Architect, to supply them —
442. Are there any documents to substantiate that fact? There is no written contract at all; there is an estimate of Mr. Lenehan's of the extent of furniture required, and of that to be renewed. This (*producing a paper*) is the estimate prepared by Mr. Lenehan, while I accompanied him through the state rooms; one column gives the amount which Mr. Lenehan considered he would furnish the articles for—the estimated cost of repairs or renewals—and the other column is the value of the old furniture not serviceable, to be taken away from the house altogether, and the total amount of that is £1,389 10s. That is the only tender or agreement existing.
443. Is Mr. Lenehan's name appended to that document? No, there was no actual contract.
444. I want to know this from you, if you will do me the favour to explain it to me,—was that upon the assumption that the goods for Government House were to be manufactured in a certain way? These prices were estimated by Mr. Lenehan, and the manufacture of them was also left to his taste. The prices are his; and I agreed with him at his own prices for £1,389 10s.
445. Just reflect a little;—that was upon the assumption that the goods supplied to Government House were to be made in a certain way? No specific way; it was left to Mr. Lenehan's taste to produce those articles as estimated.
446. Was it intended that Mr. Lenehan should modify all his plans by orders from Government House? No; the only modification that may have taken place was in minor articles; the superior articles were well made, and were well worth the money put down for them, perhaps a little more, but the additional expenditure —
447. You would save a great deal of trouble if you would give an answer to my question, and no more—a portion of your answer would explain what I wanted;—what I want now to know is, how it happened that the plans were provided from your department and forwarded as modifications to the maker of the furniture? In one instance it was, and that single instance does not form a part of the amount at all—it was an extra piece of furniture.
448. Was that an expensive article? Yes, it was a large mirror for the drawing-room; Mr. Lenehan brought it out from England.
449. Was there any difference in the expense of the table? I should say in one table in particular, and several other articles; I do not know the difference exactly, because the manner in which they were to be made was entirely left to Mr. Lenehan.

450. They were not ordered to be made according to a specified plan? No, not as a general rule; some of them were. The drawing-room chimney glass was £60. A. Dawson, Esq.
451. Was there not a considerable difference in the price estimated and the price charged for the tables? I cannot tell the exact price claimed, but the table—that is the dining-room table, I presume, you allude to? 18 Nov., 1862.
452. Yes? The dining-room table was £60—estimated.
453. Then there were two tables supplied which cost £185? £60 was the estimated amount of the dining-room table, but I think it was increased to £185.
454. All these matters tended to increase the amount, according to the original estimate made between you and Mr. Lenehan? Yes.
455. Was there not some considerable addition to the sideboard? The sideboard was wholly Mr. Lenehan's own designing; to my own knowledge there was no drawing made of it from my office. I think Mr. Lenehan designed it. It is an elegant piece of furniture, and I think the price put down for it beneath its actual value.
456. In fact, a great deal of the furniture exceeded in value the price charged for it? I should say several articles did, and that is one.
457. You admit that there is no contract between you and him? No written contract—simply an agreement for the furniture to be made at the prices named in the estimate.
458. An agreement is a contract;—is there such a document? There is no written contract; indeed it is seldom that there are any written contracts drawn up for furniture.
459. Were not the curtains supplied to Government House much more expensive than was originally contemplated? That was another item, in my opinion, overcharged. I think the charge is very enormous for them. They were put down in Mr. Lenehan's estimate—dining-room curtains, £150; that was the sum allowed in the agreement; the charge claimed is, I think, about £800.
460. You keep talking of an agreement, and yet you say there was no agreement existing? There is this agreement (*referring to a paper*), but no written contract.
461. *By Mr. Egan*: That is simply a memorandum of prices? Yes, for goods that were to be made by Mr. Lenehan to suit the apartments.
462. *By the Chairman*: Was it, or was it not, a simple estimate of works of a certain character, to be furnished by Mr. Lenehan? It was.
463. Any deviation from that would, of course, in no way bind Mr. Lenehan to those prices? He was bound in honor to carry out the works as estimated by himself.
464. If there were any deviation required by Sir William Denison or by you, by which the cost would be increased, was he still bound by those prices? The excess in the work did not at all originate with the Governor General or with myself. I was not aware of any one of these overcharged items till I received Mr. Lenehan's bill.
465. But we have it in evidence before us, clearly and distinctly, that these alterations did originate with the Governor General? I can simply say, that all the conversation I had with anyone in Government House—either the Governor General, Lady Denison, or the Private Secretary, Mr. Alfred Denison—was, that I was to be sure not to exceed the vote.
466. *By Mr. Egan*: Were many of the articles that were supplied of a more expensive character than you contemplated at the time the prices were fixed? A number of the articles certainly must have exceeded the amount that Mr. Lenehan called an approximate amount.
467. *By the Chairman*: Mr. Lenehan calls this in his estimate an approximate amount? In his correspondence he does.
468. Will you hand in the estimate to which you have referred? (*The witness handed in the same. Vide Appendix C.*)
469. *By Mr. Alexander*: Was it represented to Mr. Lenehan, at the time he got this order, that he would be expected to supply this furniture at the prices put down in the estimate? The work was commenced and nearly done before I received Mr. Lenehan's account showing the enormous increase on this list of prices.
470. Were you not aware that some alterations had been made by the Governor General? Yes; but I conceived they would be covered by other alterations in the minor works, so that the sum voted by the Legislature would not have been exceeded.
471. How far does your experience go with reference to the practice of tradesmen in taking such orders? As far as twenty years back.
472. I mean what has been your experience with reference to the practice of tradesmen who have made an estimate of the price of furniture? To prevent their being an increase upon the price it would be necessary that there should be drawings and specifications. If it were left to the maker's taste there would be no limit.
473. *By the Chairman*: Supposing it were not left to the maker's taste? But it is so, in nine cases out of ten, or ninety-nine cases out of a hundred.
474. This, then, is the one case out of the hundred, as Mr. Lenehan had plans supplied from your own office, and also plans supplied by the Governor General? One or two designs from my office; they were chiefly left to Mr. Lenehan himself. I will admit that the prices put down were some of them low; they were a mere approximation.
475. Do you call £60 an approximation to £185 in the price of a table or sideboard? Those articles I considered too high. To fortify my own judgment, I called in the assistance of two or three tradesmen, as well as that of a Clerk of Works, who valued the work, and they made an addition to the agreed prices of Mr. Lenehan of £250 1s. 10d.
476. Then your valuers stated that the articles supplied by Mr. Lenehan were undervalued at your valuation? They increased Mr. Lenehan's original agreement by £250 1s. 10d.
477. *By Mr. Alexander*: Did Mr. Lenehan furnish to Government House, goods of the full value of what he charged? In some things he did.

- A. Dawson, Esq.
18 Nov., 1862.
478. *By the Chairman*: I wish to arrive at your opinion, irrespectively of any vote of the Legislature—whether, upon the rough estimate—the approximate estimate, as you call it—there was not so considerable an increase in the value of the articles supplied as would warrant an increase in the charge made? I gave my opinion just now that there were a number of items increased in value that the agreed prices would not cover.
479. Do you think it a probable thing, supposing it to be a matter of arrangement between Mr. Lenehan and the Government that he should supply certain articles at a fixed sum, that he would go out of his way to increase the value of those articles to the extent of £400 or £500 beyond what he imagined he should get? No.
480. *By Mr. Alexander*: What would be your opinion, as an architect, if you were to take a builder to a spot of land, and say, "I want a house built according to this specification," and he were to say, "I will build it for £1,500," and afterwards brought in a bill for £2,000,—would you think he was bound by the £1,500? If the contract were for £1,500.
481. I am not supposing a contract? Then it would subside into a case for arbitration.
482. Suppose, after the contract had been taken, an alteration were made in the size of a room? If a person went to work in that loose way he must pay for it. He certainly would be entitled to the value of the additional size of the room. It would depend upon the conditions of the specification. The conditions may cover any trifling departure from the original contract.
483. *By the Chairman*: Has it not occurred to you, in your progress through life, that you have often estimated the cost of a building, which cost, before the completion of the building, has been considerably increased? Repeatedly.

APPENDIX.

A.

*Department of Land and Public Works,
Sydney, 14 January, 1857.*

Sir,

In reply to your letter of the 9th instant, requesting authority to get made or purchase some furniture for the public rooms at Government House, for which provision has been made in the Estimates, I am directed to inform you that the Secretary for Land and Public Works has been pleased to comply with your request, provided the amount appropriated is not exceeded.

I have, &c.,

MICHL. FITZPATRICK.

The Colonial Architect, Sydney.

B.

*Department of Land and Public Works,
Sydney, 17 December, 1856.*

Sir,

With reference to your communication of the 18th August last, addressed to the Honorable the Colonial Treasurer, submitting a list of furniture in the public rooms at the Government House, Sydney, together with an estimate of the cost of repairing such of the articles as are worth it, and of purchasing new articles to replace the remainder, I have the honor to request that you will have the goodness to communicate personally with His Excellency the Governor General as to any modifications in the estimate, which may not entail any additional expenditure upon the whole. In this the estimate need not be taken subject to the reduction of the sum set down as the proceeds of the sale of the old furniture, as an additional estimate will be proposed to this extent.

I have, &c.,

MICHL. FITZPATRICK.

The Colonial Architect.

C.

A. Dawson,
Esq.

INVENTORY of Furniture in Government House, Sydney, requiring to be repaired or replaced.

18 Nov., 1862.

| | Value of old Furniture. | | | Estimated cost of repairs, or new. | | | Remarks. |

| 3 Sofa tables (repaired) | | | | 7 | 10 | 0 | { These tables are very rickety, and of bad pattern and make. Card tables should be covered with cloth. |
| 2 Pair of card tables (re-polished) | | | | 6 | 0 | 0 | |
| 1 Fender and irons | 2 | 0 | 0 | 8 | 0 | 0 | |
| 1 Stove | 5 | 0 | 0 | 20 | 0 | 0 | |
| 1 pair of bell-pulls | 2 | 0 | 0 | 7 | 0 | 0 | |
| 1 Chimney glass | 20 | 0 | 0 | 60 | 0 | 0 | { I question whether this will cover the cost of a proper glass. |
| 3 Half sets of holland window-blinds | | | | 7 | 0 | 0 | |
| | 225 | 4 | 0 | 1,389 | 10 | 0 | |
| | | | | 225 | 4 | 0 | |
| | | | | 1,614 | 14 | 0 | |

No provision is made for muslin curtains, which, during the summer would be not only more appropriate, but be a great saving to the damask curtains, which would last double the time if taken down in the summer, or protected by the muslin from the action of the sun.

MINUTES OF EVIDENCE—PETITION OF MR. ANDREW LENEHAN.

SEPARATE APPENDIX.

A.

In the Supreme Court of }
New South Wales. }

Between Andrew Lenchan, in pursuance of the Act 20 Vic., No. 15, and of a Reference of his Petition under that Act to this Honorable Court, plaintiff; and John Robertson, the Secretary for Land and Public Works, being the person nominated by the Governor, with the advice of the Executive Council, in pursuance of the same Act, defendant.

Brief for the Defendant, to oppose Motion for new Trial.

TAKE notice that, in this cause, which was tried on Wednesday the 24th, and Thursday the 25th days of August instant, before His Honor Mr. Justice Dickinson and a Jury of Four, when a verdict was returned for the defendant, this Honorable Court will be moved, on the first day of the ensuing Term, or as soon after as Counsel can be heard, that the said verdict may be set aside, and a new trial granted, on the following grounds, viz. :—

First.—That the said verdict was contrary to evidence and the weight of evidence, and against law.

Second.—That His Honor misdirected the Jury, in telling them that the real point of the case was whether the plaintiff was entitled to any more than the sum voted by the Legislature; whereas it is submitted that His Honor ought to have told the Jury that it was admitted on the face of the pleadings, and clearly established by evidence, that more work was performed, and more costly furniture supplied, than was originally contemplated by and between the parties, and that a larger sum than the amount voted by the Legislature had been paid to the plaintiff and into Court, which negated any such agreement, or at all events showed that it had been departed from, and that they ought therefore to consider to what extent such departure affected the question, and give damages for the fair value of the furniture actually supplied and the work performed.

GEORGE ROWLEY,
Plaintiff's Attorney.

I certify that, in my opinion, the grounds specified are sufficient to support the above motion.

ROBERT M. ISAACS.

Judge's Notes.

Wednesday, 24th August, 1859. }
Cor. Dickinson, J. }

Mr. Dalley opened the pleadings.—Mr. Broadhurst stated the plaintiff's case.

Andrew Lenehan: I am the plaintiff; I am an upholsterer; in 1857 I furnished work and materials for Government House, by direction of the Colonial Architect, Mr. Dawson; I began the work at the end of 1856, and finished it in May, 1857; I furnished an account of charges to Government. (*Looks at accounts.*) These are the accounts; I received verbally and in writing that a rolling blind was supplied; this account (blind excepted) has never been challenged; I admitted it was incorrect; every item but that has been supplied; the upholsterer forgot to furnish the article; the value of it was 30s.; the charges are fair and reasonable; labour was then 30 per cent. more than now.

Cross-examined: I first received instructions from Dawson about September, 1856; I went over the various rooms with Dawson in 1856, because he asked me to ascertain prices of work to be done; when I went over I furnished him with certain (probable) prices; he pointed out in detail what was wanted; I put down the estimate on paper; Dawson has it; between £1,300 and £1,400. Dawson told me no furniture could be ordered till a vote of the House was obtained; eight months after I received an order for furniture; I believe the sum voted was the same as I estimated; I considered and went over Government House to make an estimate for a sum to be placed on the Estimates; I looked to be paid by the legislative vote; the great bulk of the goods were supplied in January and February, 1857; no article I sent was disapproved of; plans were furnished to me by Dawson; work extended over twelve months; I sent to England for some; they were lost in December; I sent again; I pointed out to Dawson that some things would exceed my estimate; some articles were made more expensive, some less; I never submitted an additional estimate for extras; for the articles mentioned in the first estimate the charge was £1,938 18s. 4d., that was occasioned by alterations in the articles in respect of which I made the original estimate; the £185 was for two tables; the original estimate was for one table at £60, as a probable amount; the change was thus occasioned:—Designs were furnished to me different from what I contemplated; I remarked to Dawson and Clerk of Works "that would cost more;" he said "reduce other things;" some things originally estimated were not sent in consequence of change in table; I originally estimated a sideboard at £100; I was told it was to be large; no plate glass at back mentioned; I saw sketch of sideboard as now, back excepted, shown me eight months afterwards; a plate glass back was three times more valuable than carved back—my own suggestion; the Governor General approved of it; I worked up some old materials for curtains, for a temporary measure; I proceeded with work according as I was ordered; I submitted my own plans for approval before I began to work; my original estimates for curtains and cornices was £200; carpet and rug £80, according to designs shown; curtains, cornices, carpets, rugs, &c. charged for on different plans; I was desired to make alterations according to designs furnished me by Mr. Charles, the Clerk of the Works; he told me to make the alterations accordingly. (*Letter, 22nd October, from plaintiff to Government, read.*) I had before sent in accounts; I received payments from time to time; these entries in red ink, when I signed these papers, charged to vote; I received payment to amount of £1,300; I shortly after I sent my letter of 22nd October received a letter from the Secretary of Lands, enclosing the report of Colonial Architect. (*Looks at a paper.*) This is that report. (*Report read.*) A minute from Coles accompanied that. (*Looks at another paper, 21st December, 1857—read.*) This is it. Original estimate, £1,389 10s. 9d.; amount charged, £1,938 18s. 4d.; value assessed by Coles, £1,478 1s. 10d. Items not supplied in report when this was sent to me; the articles had not then been

been supplied; articles since supplied to £155; in original estimate a chimney glass, £60; charge for chimney glass was £130; I was afterwards ordered to import a glass, which with charges amounted to £130; it was half again as large as what I intended for £60; I replied to the Secretary's letter, enclosing reports. (*Looks at paper, 25 January, 1858—paper read.*) This is it; any competent workman could do the same things if he once saw them executed; everything in this could be measured and estimated by others.

Re-examined: No complaints were made about the quality of the work; all I furnished were there yesterday; I have been employed by Government since and now; I made the table and sideboards here; the machinery came from London; I could not get it here; that added to the expense.

Henry Woolley: I have been an upholsterer here and in London, and to Her Majesty at Windsor Castle; I yesterday inspected plaintiff's work at Government House; I remarked curtains in the drawing and dining rooms; I think the charges for them are reasonable; reasonable charges for the sideboard; I saw chairs in dining-room; £4 10s. is a reasonable charge; I saw gas pinnacles on the staircase; £8 is a reasonable charge for 1856; £10 was reasonable for the bell-pulls; I saw a dining table that forms two; the amount charged is reasonable; I saw the rugs; the charge is reasonable; the price for the hall tables is reasonable; I saw the mirror; the price reasonable; I have seen Lenehan's account; the charges are reasonable.

Cross-examined: Three months ago I knew what charges were; I was a general decorator in Buckingham and Windsor Palaces.

C. N. Hunt: I have been an upholsterer for 25 years in England and Sydney; I have been 19 years here; I inspected the Government House yesterday; I saw a round table in the dining-room; I did not then know the price charged for it; I estimated it above the plaintiff's charge; I estimated the sideboard at £175; I saw curtains in both rooms; the charge was reasonable; I had the account in my hands; I can't say I looked at all the articles; the prices of all I looked at were reasonable; I saw the mirror in the drawing-room; I did not estimate that; I thought the sideboard was worth more than plaintiff charged.

Cross-examined: I think the curtains are worth £600; £45 or £50 for the work in them; I should think £75 too high for the —

Re-examined: The £45 I estimate as value of the upholsterer's cutting out and putting up curtains, and the needlewomen sewing them.

[Adjourned.]

Thursday, 25 August, 1859.

[Continued.]

Letter—13 Nov.—Billyard to Rowley—read.

12 Nov.—Rowley to Billyard—read.

Rowley to Billyard—read.

The Attorney General called,—

Alexander Dawson: I have been Colonial Architect for four years; I was told to go over Government House, in 1856, and to report necessary repairs, and materials, and renewals; I received instructions from the Government; I applied to Lenehan, and went over Government House with him; we went over things, and made estimate £1,300; that examination was particularly careful; plaintiff disputed the expense of the work; I pointed out to him then all that was required; plaintiff furnished information with regard to the dining table; that was supplied a little larger than in the estimate; we were occupied three hours; I ordered him to do the works after the money was voted; Lenehan's opinion was asked as to the value of the works; the amount of estimate was voted; nothing was said about the mode of payment, or as to the amount; nothing was said as to how and when plaintiff should be paid when he gave me the estimate; when estimate was made he engaged with me to do the work for the amount of his estimate; I had a conversation with the plaintiff after the money was voted; I then told him to do the work; he began in 1856; I inspected work from time to time as it went on; I told plaintiff there would not be a farthing beyond estimate voted; he had no instructions from me to make any deviation; in the original estimate there were two looking-glasses 60 x 50; only one was supplied; the cornices of the curtains were always supposed to be in the original contract; the variations were trifling—little matters of detail; there were no variations in drawing-room curtains that I am aware of; portions of the old work were used and afterwards taken out by my instigation, and new materials put in; the details were left to plaintiff, under my supervision; the King Arthur table could be put on to the telescope table; advances were made before the work was finished; I have confidence in the journeymen I employ; when the bill was sent in I told the clerk of works to report on the articles and charges; I considered the charges exorbitant; I think so still.

Cross-examined: I have furnished rooms such as at Government House; I know Coles; he is my chief clerk of works; Orford is my foreman; very competent persons; they had not more to do with these matters than I had; items generally are too highly charged. (*Looks at a paper.*) That is the plaintiff's original estimate; curtains are not the same pattern as old one; better than the old ones.

Re-examined: It is the architect's duty to keep in check all those under him; extra goods were delivered for Government House to £225 4s. 6d., but not connected with that contract; that sum has been paid into Court.

William Coles: I am clerk of works in the Colonial Architect's office; I have seen the furniture; I made a report on it. (*Looks at a paper.*) This is it, but not the whole; only includes articles in Lenehan's contract; some things were not supplied because not required; it is difficult to judge of furniture. (*Looks at another paper.*) That is Charles' signature.

Cross-examined: I am an architect; the work was all done before I saw it; the drawing-room curtains were worth eight shillings a yard; I don't know the value of the dining-room curtains; I never had to do with such a sideboard before; I formed my opinions from inquiries I made; I and Dawson have had conversations about alterations; it was understood that "alterations" were not to exceed estimate.

Robert Alfred Denison: I know the furniture; I have seen much furniture; the curtains there are new, very fair curtains, not beyond ordinary skill; nothing uncommon about dining-room table—it is very good.

The Attorney General (Mr. Wise with him) addressed the Jury for the Crown.
Mr. Broadhurst replied.

Verdict for Defendant.

B.

*Castlereagh-street, Sydney,
3 October, 1857.*

Sir,

I have the honor to request you will be good enough to bring under the notice of Mr. Secretary Murray, the circumstance of an account amounting to £1,138 3s. 3d., being due to me from the Government, for goods supplied by direction of the Colonial Architect in refurnishing Government House, in May last, with a hope that he will be pleased to take action in the matter, with a view of liquidating the said account at as early a period as possible.

I regret very much that I am compelled to trouble the Honorable Secretary for Lands and Public Works in this matter; but in consequence of my having made repeated applications to Mr. Dawson for a settlement of the above claim without receiving any definite or any satisfactory answer, I am, though reluctantly, compelled to adopt what, under ordinary circumstances, I would consider an unusual course.

I have, &c.,
ANDW. LENEHAN.

The Under Secretary for
Lands and Public Works.

C.

*Colonial Architect's Office, Sydney,
8 January, 1858.*

Sir,

In returning the enclosed letter from Mr. A. Lenehan, complaining that he cannot obtain a settlement of his account for furniture supplied the Government House, referred to me under blank cover on 3rd October last,—

2. I do myself the honor to state that the reason of the nonpayment of his claim is, as Mr. Lenehan was aware, that the correctness of many of the charges is in dispute.

3. The amount claimed by Mr. Lenehan is, according to accounts rendered, £1,137 12s. 11d. (stated in his letter as £1,138 3s. 3d.), composed of the following:—

| | £. | s. | d. |
|---|--------|----|----|
| Chandeliers, Government House | 188 | 0 | 0 |
| Upholsterers' work and repairs | 35 | 9 | 11 |
| Staircase, Government House | 47 | 10 | 0 |
| Furniture, Legislative Offices | 71 | 16 | 8 |
| Balance for furniture, Public Rooms, Government House | 794 | 16 | 4 |
| | £1,137 | 12 | 11 |

Of these, the first portion, for chandeliers, has since been paid, and, subject to a reduction in some of the charges, I am prepared to recommend payment of those for upholsterers' work and staircase at Government House, and for furniture for legislative offices; the remaining item—the claim on account of furniture for public rooms at Government House—is that principally in dispute.

4. The whole amount of Mr. Lenehan's claim for furniture for public rooms, Government House, is £2,094 16s. 4d.; on account of which, payments to the extent of £1,300 have been made to him, being within £89 10s. of the sum voted for the service.

5. I objected to this claim of Mr. Lenehan, because in his charges he had departed from and exceeded very considerably his estimate and the prices for which he undertook to supply the furniture; and because, moreover, many of the charges appeared to me excessive, and such as I could not certify to be either fair or reasonable.

6. The amount estimated for replacing the furniture at Government House was £1,389 10s.; this estimate was made in detail by Mr. Lenehan, accompanying myself, examining each particular, and furnishing the prices for which he undertook to supply the respective articles; upon this estimate, which may be considered as Mr. Lenehan's tender, the vote of the Legislature was based. Mr. Lenehan's claim it will be seen, exceeds this by £705 6s. 4d., but articles are provided for in the estimate but not supplied, of the value of £275 10s., so that the real excess amounts to £980 16s. 4d.

7. Mr. Lenehan asserts, that during the progress of this service he was from time to time requested to make deviations by which the cost was increased, but I am not aware that any such instructions were given him, and I was certainly in full reliance that he would abide by his own estimate, especially being fully acquainted as he was, with what was required and contemplated in the first instance, and of the exact amount voted for the purpose, which he was aware could not be exceeded without express sanction and further provision.

8. But beyond this, many of the charges are, as I before observed, so very much in excess of what I considered reasonable, that I did not consider myself justified in dealing further with the account, until I had caused it to be carefully examined by some competent and disinterested person. Upon the appointment of a First Clerk of Works, the matter was at once placed in the hands of that officer, by whom, assisted by competent tradesmen, a careful examination was made of every article, inquiries made as to the usual prices of similar work, and the charges in the accounts have been checked by them as far as practicable. Mr. Cole's report, which I enclose, bears out my opinion as to the nature of the prices charged. From the abstract appended to this report, it will be seen that articles charged at £1,938 18s. 4d. by Mr. Lenehan, Mr. Coles values at £1,478 1s. 10d., shewing an overcharge of £460 16s. 6d., quite irrespective of the question as to whether Mr. Lenehan was in any way authorized to exceed his original estimate for them. The overcharges, according to Mr. Coles' valuation, upon other articles in the accounts, amount to £67 7s. 6d. Being myself well acquainted with the articles in question, and having gone carefully over the prices and valuations, I am of opinion that the amounts allowed by Mr. Coles are fair and liberal.

9. Although I do not consider that Mr. Lenehan was justified in deviating from his original estimate, still, as additional articles have been furnished, and to some extent work of a more expensive character substituted, I am not prepared to recommend that payment be withheld. I would therefore propose, that if Mr. Lenehan be willing to make a reduction in the prices, in accordance with Mr. Coles' valuation, the balances be paid to him; it will however, in that case, be necessary to make further provision in the Estimates for the amount in excess of the original vote.

I have, &c.,
ALEXR. DAWSON,
Col. Archt.

The Honorable the Secretary for
Lands and Public Works.

D.

D.

Sydney, 25 January, 1858.

Sir,

I have the honor to acknowledge receipt of your letter, dated the 8th instant, containing enclosures and a report from the Colonial Architect on my claim for furniture, &c., supplied twelve months ago to Government House.

Mr. Dawson (very unintentionally, I am convinced) does me great injustice. He states, First,—That I was aware the delay in the payment of my account was the disputed accuracy of many of my charges;

Second,—That I have departed from and exceed my original estimate;

Third,—That many of my charges are such that he cannot certify to their being either fair or reasonable.

I beg to be allowed to reply to these unexpected complaints *seriatim*.

To the first then I answer, that Mr. Dawson never expressed any dissatisfaction with my charges, nor had I the remotest suspicion that he had any, until after my appeal against the delay had been made to the Honorable the Colonial Secretary, who was at the time acting (I was given to understand) for the Minister of Lands and Works. On the other hand, Mr. Dawson *did* allege as the cause of the delay in payment of my account, the excess of the amount beyond the sum voted by the Legislative Assembly, and further suggested to me, as the best course to be pursued, that very application to Government which at his suggestion I did make. I may mention further, to show entirely Mr. Dawson's charges are calculated to strike me as an afterthought, that since my account was first rendered I have received no less than eight separate payments in part discharge, amounting together to the sum of £1,149.

To the second I reply, that I never made an estimate in the strict sense of the word. The estimate amounting to £1,359 10s., for replacing the furniture at Government House, was made by the Colonial Architect—not by me. At the time I went over the rooms with Mr. Dawson, I gave the best rough idea I could give at the moment of the probable expense, but I must protest against this being considered an estimate or tender in the technical sense, as Mr. Dawson seems to have represented it in his report. I have never given tenders; since I have been in business I have made it my first care to secure excellence of material, first-rate style in design, and workmen of special skill each in his line, and only after all this had been cared for, have I made either estimate for myself or charge for my customers. It is, however, true that the expected and provided cost of the furniture in question fell considerably short of what I actually expended; but Mr. Dawson will allow me to recall to his memory a fact that seems to be overlooked or rather contradicted in his report, viz., that for every change from the original plan, either in the way of omission or addition, I had his express sanction, both generally and in detail, to carry out as well as I could everything that was desired; and this sanction was given, as all his other instructions were, that is to say, verbally, whenever I reported to him that such and such a desire had been expressed. I remember a circumstance which I do not doubt will bring to Mr. Dawson's own recollection others of like kind; it is, that he, Mr. Dawson, seeing that some of the desired alterations would necessarily far exceed the original plan, expressed his hope that in some other articles there might be, as there in fact was, a saving by way of set off.

In answer to the third complaint of overcharge (from which I did hope that my reputation of so many years in this Colony, and the continued patronage I had enjoyed both from Government and from so many in the highest classes of society, would have protected me) I beg to observe, first, that if I had been guilty of such practice, I have been already mulcted in a twelve month's delay which of itself is no trifle in a business that requires the rapid movement of a large capital.

Further, it has not been taken into account by the Colonial Architect, that a year ago, when I manufactured many of the articles in question, the cost of workmanship was very much higher than it is now. And again, that several articles I was obliged to procure from the neighbouring Colonies at considerable expense.

These, however, are by the way; what I principally object to and protest against is, the putting my furniture and work to the appraisal of others in what they consider the same line of business. I do not wish to except against either the knowledge or integrity of those who have been so employed; but I do say, that without boasting I may claim to have won and maintained a position which gives me the right to name my own price for my own goods. Furniture and furnishing, I take it, are so far like the works of an artist or the skill of a successful professional man, that not everything in them is to be measured by the foot rule and the price per yard. I respectfully claim to occupy the position of a successful artist in my own business; it has cost me money, and time, and anxious thoughts, to attain it, and it is not unreasonable that I should name the value I put upon my work. The proof that I have not been unfair and unreasonable, in the charges which Mr. Dawson's appraisers except against, is, that I have for many years demanded and received, and am even now demanding and receiving the same prices from persons of the highest consideration in the Colony, and of undoubted intelligence and good taste.

On these grounds, then, which I trust will be acknowledged as obviously reasonable, I conceive that I have a right to complain that Mr. Dawson should have made a report which, by implication, charges me with dishonorable dealing in a quarter where I have every inducement to act honorably and maintain the character I have so long enjoyed.

It will not then, I hope, be esteemed either disrespectful or obstinate if I persist in requiring the full discharge of my account. As I have already mentioned, the delay hitherto has been no slight loss to me, and I may in truth add to this the loss of some considerable business which the Colonial Architect, without awaiting my justification, and I presume, at his own mere will, has already diverted from me to others.

The Minister of Land and Public Works.

I have, &c.,

ANDW. LENEHAN.

P.S.—There is an overcharge for blinds for some rooms in Government House, which shall of course be corrected. It arose from the error of the clerk, who wrote the entry with insufficient knowledge of the work actually done; and it would ere now have been corrected if I had enjoyed the opportunity of going over the work with Mr. Dawson, or indeed if the account had gone through the usual course.

E.

Colonial Architect's Office,
Sydney, 11 February, 1858.

Sir,

25 Jan., 1858.

I do myself the honor to return the further letter from Mr. Andrew Lenehan, relative to my report upon his claim for furniture supplied, which was referred to me under blank cover on the 30th ultimo.

2. Mr. Lenehan contests the statement of the case contained in my report of the 8th ultimo; he says that he was not aware the delay in the settlement of his account arose from any question as to the correctness of his charges, and suggests that this was a reason advanced only when it was found that the expense of the service exceeded the amount granted for it. To this I will only reply that I took exception to such of the charges as were in excess of the estimate as soon as Mr. Lenehan, by furnishing a portion of his bill, made me aware that he was departing from his original agreement as

to

to prices, and this was intimated to him. As regards the other items of account which are objected to, although dissatisfied with the charges, which appeared to me much too high, I was not in a position to estimate the actual amount of overcharge until a careful inspection and valuation of the respective articles had been made; but that I was dissatisfied with the charges generally Mr. Lenehan was fully aware.

3. Mr. Lenehan, however, denies that he ever made any such estimate as would bind him to the prices he named, and states that every deviation from what was first intended had my express sanction, implying thereby that such deviations were the cause of the increased cost, and that I was cognizant all along that the estimate was being exceeded. I at once admit that no *written* tender or estimate was furnished by Mr. Lenehan, and perhaps, in a *legal* point of view, he is not compelled to abide by his prices and agreement. A written engagement was not considered necessary, as every reliance was placed upon Mr. Lenehan's carrying out the spirit of the arrangement made with him. Mr. Lenehan was selected as a tradesman of established reputation, accustomed to works of the kind, and possessing a varied stock of the materials required, and from having been previously extensively employed at Government House. As the works required were of a nature difficult to be accurately estimated by a person unaccustomed to trade details, it was considered the best course that what was required should be pointed out in detail to Mr. Lenehan, who should name the prices for which he would execute it; this, as before stated, was done, Mr. Lenehan accompanying myself and furnishing the prices which formed the basis of the estimate submitted. There could scarcely have been any misapprehension; the distinct understanding was, that if the funds were granted by the Legislature, Mr. Lenehan should be authorized to carry out the works at the prices given. Having every confidence that Mr. Lenehan would carry out what he undertook in good faith, no further tender or contract was asked for or considered requisite.

4. As regards the deviations referred to by Mr. Lenehan, no doubt alterations were occasionally made from what was first contemplated, and to a certain extent I was aware of and acquiesced in them; but it certainly was in the belief that the whole cost would not be increased by changes in the details, nor was it at any time pointed out by Mr. Lenehan that any of these deviations would render necessary an addition to the estimate; until the receipt of the bill, I remained under the conviction that there would be no material alteration in the prices as estimated, and that where there was some excess of cost the saving on other items would compensate, so that the total amount would be unaffected.

5. With respect to the question of Mr. Lenehan's prices, leaving out of view any previous agreement, but considering only the fair value of the articles or work, I have little to add to what was expressed in my former report. Many of the charges appeared to me to be excessive, and this opinion was justified by the subsequent examination and valuation by persons in every respect competent to the duty. The ground taken by Mr. Lenehan, that the work is of an artistic character, and not susceptible of being valued, is quite untenable. There is nothing whatever in the character of the work but what a tradesman with the usual amount of skill and experience would be expected to produce, nor is the execution such as to place it out of comparison with the furniture made by other persons employed by the department. The only advantages that I am aware of possessed by Mr. Lenehan over other tradesmen in the same line of business are the command of capital and credit, and the possession of an extensive stock and business premises; these, however, ought to enable him to supply at lower prices than would be profitable to others. There is certainly nothing whatever, as far as I can see, to justify Mr. Lenehan's assumption that his charges are to be accepted without question or inquiry; my duty to the Government requires me to repudiate any such doctrine, and to withhold payment whenever I consider an overcharge has been made; I should not indeed be justified in dealing with Mr. Lenehan at all upon any such terms.

6. In the valuation due consideration was had for any variation of prices which might have occurred; and the prices were fixed having in view what Mr. Lenehan might fairly expect to be paid, independently of any agreement, rather than as for what similar work could be obtained. As to the remark that some of the articles had to be procured from the neighbouring Colonies, I have to observe, that these had to be obtained to make good deficiencies in his stock, which Mr. Lenehan had assured me contained ample for the purpose.

7. As regards any loss Mr. Lenehan may have sustained from delay in settling his account, I can only say it has arisen from his own fault; payment has been made to him for all work not in dispute, and on account of the Government House work to nearly the extreme limit of the available funds, and these payments, which were made from time to time upon his urgent applications, are quoted by him as evidencing that the objections to his claim were the result of an afterthought. His remark that a considerable portion of business has been diverted from him I do not understand; I am not aware that Mr. Lenehan possesses any exclusive right to be employed, and I am compelled to say that advantage to the Government results rather in employing others. If Mr. Lenehan places himself above comparison or competition with other and equally competent tradesmen, who, with work of quite as good quality, are much more moderate in their charges, I do not see that I should be justified in giving him orders, much less a preference. In point of fact, however, it will I believe be found, that while the work of the department has been as far as possible distributed impartially, Mr. Lenehan has enjoyed a share equal to that of any other tradesman.

8. Having stated the facts, I must leave to the Government to decide whether Mr. Lenehan shall be relieved from the implied if not actual contract made by him. As regards the overcharges referred to in my previous report, Mr. Lenehan has advanced no reasons which would enable me to modify the opinions therein given, and I can only repeat my belief in the sufficiency of the valuation given by the Clerk of Works.

I have, &c.,
ALEX. DAWSON,
Col. Archt.

The Honorable the Secretary for
Lands and Public Works.

F.

I return the papers relative to Mr. Lenehan's charge for the furniture for Government House. I have not seen Mr. Lenehan's bill, I cannot therefore comment upon any particular item of overcharge. In contradiction to Mr. Lenehan, however, I may state that he got the order to supply the furniture for Government House under the distinct understanding that he was to do the work for the prices in the estimate. I may observe that the additional work was in many instances caused by Mr. Lenehan's own misconduct, in attempting to insert into the new curtains of the drawing-room portions of the materials from the old curtains.

I am by no means satisfied with the quality of some of the articles furnished: the dining-room carpet is of very inferior quality, and the stair carpet is not a good one.

No changes have been made in the work to be done, except, perhaps (for I do not now recollect whether the old curtains were lined) in the lining of the curtains of the drawing-room, and the object of this was to protect them from the sun. The patterns of the furniture were submitted for approval, but this was always under the idea that, as Mr. Lenehan had undertaken to do the work for a given sum, he was prepared to use any of the articles which he submitted.

T. W. D.
18 March, /58.

G.

Put by.

His Excellency Governor General, 20th April.—JOHN R.

Clerk of the Council, B.C., 20 April.—M.F.

Re-submitted to His Excellency the Governor General. 30th April.—
JOHN R.

Mr. Lenehan says, that at the time he spoke of the price he had not the drawing—that the drawing was furnished seven or eight months afterwards, and that to complete it a much greater expense was incurred.

Mr. Lenehan had the sideboard described to him when he made the estimate, and it was his business to object if the drawing furnished was of a more expensive character than that contemplated.

The dining-room curtains were always intended to be of silk damask, as will be seen by the price put upon them by Mr. Lenehan; and the drawings for approval were furnished by himself. If reference be made to the estimate, it will be seen that the price of the curtains is put at £40 per window, the same as in the ante-room, where the curtain is of silk damask, and very nearly the same as in the drawing-room, allowing for the larger size of the window, and the drapery over the spaces between the windows.

*This is a positive falsehood.

†The material was submitted for approval by Mr. Lenehan himself, and it was his business only to submit such as could be used for the price stated.

The lining may perhaps be admitted; the object being to secure the curtain from the action of the sun, which very soon takes out the colour and injures the material. Mr. Lenehan submitted his own specimens for approval; he also submitted his own drawings, and the estimate of £66 per window is, in my opinion, ample. I have a strong idea that the deficiency of lining was pointed out to Mr. L. at the time, but I am not positive. Of a much inferior material.

The lining is of a thin poor silk.

Mr. Lenehan says, that any person in the trade would describe it as superior rather than inferior.

Mr. Lenehan says the conversation alluded to was that which occurred when he said the Colonial Architect waited on the Governor General, by appointment, six or seven months before the final order was given.

What conversation? I am not aware of any special conversation with Mr. Lenehan.

Not for lining. Mr. Lenehan attempted to work up the old material (which he had no business to touch, as it belonged to the Government) into the new drawing-room curtains; and whatever he may say, I am not at all inclined to believe that he would have taken down the curtains and re-made them, had the substitution of old material for new not been found out.

I am of course not aware of what the Colonial Architect may have done; but if a man offers to supply drapery for windows at a given sum per window, and then submits drawings for approval or assents to modifications of those drawings, he must be supposed to do so on the understanding that he is to execute the work for the contract price.

W.D.

Mr. Lenehan says he does not consider that he made a contract at all—that he merely stated a price as a rough estimate, and that many months after, other and more expensive designs were furnished to him for execution, and that he now most respectfully requests that the whole matter may be submitted to arbitration.

JOHN R.,
30 April, 1858.

Mr. Lenehan's Claim.

Since my receipt of the papers of His Excellency the Governor General, of the 14th March, on this matter, Mr. Lenehan has called upon me; and having the information conveyed by the Governor, I was enabled the more readily to ascertain Mr. Lenehan's version of each particular item alluded to as disputed.

Mr. Lenehan says, had there been no deviation from the instructions given when he submitted the probable prices alluded to as an estimate, he would have done the work at those prices; but that designs for curtains, and for a sideboard, were furnished by the Colonial Architect, six or seven months afterwards, and into which were introduced much additional as well as more costly work. That the old dining room curtains were made of crimson worsted, and had no draperies, and that his original instructions were simply that the old were to be replaced with new articles of the same kind and quality.*

† The designs, as subsequently submitted, required draperies that alone, without the curtains, cost more than the whole work (for those items, as at first intended) would have cost. He says, "cornices" were required instead of "brass poles"—costing three times the price of the former; costly "silk damask" for the curtains, instead of "worsted," costing 18s. per yard instead of 3s., the price of the latter.

He complains also of some difference in the value of the table and sideboard, by which he was placed at a disadvantage. He also says, that the original drawing-room curtains were made of Gabnett, and were not lined, nor had they draperies; and that instead of being replaced by articles of a similar description, they are now lined with silk, with also an inner lining of brown holland, costing 50 per cent. more than those originally contemplated. He adds, that heavy and expensive draperies, such as were finally introduced, were not contemplated at the time the estimate was made, and that with the lining throughout of the same kind as the curtains, had more than doubled the material used.

Mr. Lenehan also says, with reference to his conversation with the Governor General, that it occurred before and not after these second designs were furnished; and also, that from time to time, he mentioned to the Colonial Architect that the work would be more costly than was at first intended, but that Mr. Dawson said arrangement would be made for his payment, by dispensing with some of the articles or otherwise.

With reference to his having used old materials for lining, he says he was importuned to get the curtains ready in time for a ball, and in consequence of the greatly increased requirement of the new designs he had not sufficient material—that he had sent to Melbourne for some, and had only used a few yards of the old material, and never had any intention of charging for it. He states also that the old material has all been returned according to his agreement.

After carefully examining the whole of the papers, especially the fourth and subsequent paragraphs of the Colonial Architect's letter of the 11th February, I think Mr. Lenehan's statement, that a second series of designs were furnished to him subsequently to the time of the first estimate having been made, is to some extent corroborated. For that and other reasons, I think it right to again refer the matter to His Excellency the Governor General. I also take the liberty of suggesting a hope that His Excellency will kindly grant to Mr. Lenehan an interview, as the most probable means of satisfactorily disposing of this matter.

JOHN R.,
19 April.

H.

*Colonial Architect's Office,
Sydney, 6 September, 1858.*

Sir,

In reply to your letter of this date, relative to Mr. Lenehan's claim against the Government, I do myself the honor to inform you that, with respect to the furniture for the public rooms,
Government

SEPARATE APPENDIX.

7

Government House, viewing Mr. Lenehan's original estimate as a contract, there is nothing due to him, as will appear by the following statement:—

| | | | | |
|---|----|--------|----|---|
| The estimate, according to the prices furnished by Mr. Lenehan, was | .. | £1,389 | 10 | 0 |
| But articles included therein, but not supplied by Lenehan, amount to | .. | 131 | 10 | 0 |
| <hr/> | | | | |
| Leaving balance.. | .. | £1,258 | 0 | 0 |
| Payments have been made to Lenehan to amount of | .. | 1,300 | 0 | 0 |
| <hr/> | | | | |
| Excess | .. | £ | 42 | 0 |

so that he has received £42 more than was originally agreed. But if this agreement be waived, and payment made according to the value of the articles actually supplied, the account will stand thus:—

| | | | | |
|--|----|--------|-----|----|
| Mr. Coles' valuation of articles supplied | .. | £1,478 | 1 | 10 |
| Articles supplied since, which were not included in Mr. Cole's valuation | .. | 72 | 0 | 0 |
| <hr/> | | | | |
| Payments made to Mr. Lenehan | .. | £1,550 | 1 | 10 |
| | .. | 1,300 | 0 | 0 |
| <hr/> | | | | |
| Balance | .. | £ | 250 | 1 |

which shows a balance due to Mr. Lenehan of two hundred and fifty pounds one shilling and ten-pence. In addition to his claim for the public rooms, Government House, Mr. Lenehan's accounts contain charges for other services, viz.:—

| | | | | | |
|--|----|---|-----|----|----|
| 1. Upholsterer's work and repairs at Government House | .. | £ | 35 | 9 | 11 |
| To which no objection is made. | | | | | |
| 2. Staircase, Government House | .. | | 47 | 10 | 0 |
| Which is considered an excessive charge, the work being valued at £24, | | | | | |
| which sum I have no objection to pay. | | | | | |
| 3. Furniture for Legislative Offices | .. | | 1 | 16 | 8 |
| This contains over-charge to amount of | .. | | 3 | 9 | 8 |
| <hr/> | | | | | |
| Balance | .. | | £68 | 7 | 0 |

The balance, £68 7s., I consider Lenehan to be entitled to. These three sums amount to £127 16s. 11d.

I have no money in my hands specially appropriated for payment of Mr. Lenehan's bills, and, under the circumstances, should require authority from the Secretary for Lands and Public Works, before paying them out of my advances.

The Civil Crown Solicitor,
&c., &c.

I have, &c.,
ALEX. DAWSON,
Col. Archt.

I.

Sydney, 28 November, 1861.

Sir,

I beg respectfully to recall the attention of the Government to my outstanding claim for the refurnishing, in 1857, of the public rooms at Government House.

A rough estimate, with a view to such refurnishing, was made towards the end of 1856, by myself and the Colonial Architect. This estimate was £1,389 10s. It was made, however, upon the distinct assumption that the old furniture was to be replaced by new of the same character and materials; but when, some eight months afterwards, the work of refurnishing was actually commenced, I was required to carry out designs (furnished by the Colonial Architect) of a most elaborate and costly nature, and to supply draperies, carpeting, &c., of a far more expensive fabric; thus the cost of the work was increased to £1,938 18s. 4d.

This increased cost was a matter of discussion between myself and the Colonial Architect at the time, and efforts were made to diminish it, by withholding some of the articles originally estimated for; but it was found impracticable to effect any material saving in this way.

Difficulties arose, and a valuation was made by Mr. Coles, First Clerk of Works, to which I was no party, and which was, in many respects, necessarily a very imperfect one. This estimate was £1,478 1s. 10d.

To this reduction I for some time declined to submit, but ultimately, for the sake of avoiding litigation, and for other reasons which need not be here entered upon, I agreed to accept the additional £500, which, even according to Mr. Coles' estimate, would be then due to me, and which was offered by the Government, together with £50 for law costs to which I had been put.

But Parliament having failed to vote the necessary amount, I was compelled to go on with my suit against the Government, in which you were the nominal defendant. At the trial it was proved, without contradiction, by most competent men (who being my competitors in business, were not likely to favour me), that all my charges were most reasonable—in fact that I had undercharged. Yet, notwithstanding this evidence, and the admission that according even to Mr. Coles' estimate, £500 more was due to me, I was met and defeated, upon the plea that my rough estimate in 1856 was to be treated as a tender by which, notwithstanding all subsequent alterations, I must be bound.

From that time to the present, although the furniture remains public property, I have never been paid for it. I most respectfully submit that, besides being most oppressive and unjust to myself, this is inconsistent with public honesty.

I would, therefore, beg, with great respect, to urge the early reconsideration of the matter, with a view to an application to Parliament during the present Session, for such a sum as will compensate me for the loss to which I have been subjected.

The Hon. John Robertson, M.L.C.,
Secretary for Lands.

I have, &c.,
ANDW. LENEHAN.

K.

Department of Land and Public Works,
Sydney, 12 May, 1859.

Sir,

In reference to the arrangement come to between the late Attorney General and your Solicitor, according to which the Government were to place on the Estimates the sum of five hundred and fifty pounds, which you were to accept by way of compromise for your claim on the Government for the sum of £1,100, for furniture, &c., supplied by you for the Government House, I am directed to inform you, that in pursuance of that arrangement, the amount named was placed on the Supplementary Estimates for 1858, but was rejected by the Legislative Assembly, in Committee of Supply, on the 24th March last.

Andrew Lenehan, Esq.,
Sydney.

I have, &c.,
MICHL. FITZPATRICK.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON

JAMES RALFE;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
29 *August*, 1862.

SYDNEY:

THOMAS RICHARDS, GOVERNMENT PRINTER, PHILLIP-STREET.

1862.

1862.

JAMES RALFE.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 5th August, "to consider and Report upon the Evidence taken before the Grievance Committee of the Legislative Assembly, in the case of James Ralfe, late Government Surveyor of Port Macquarie," have agreed to the following Report:—

Your Committee having carefully considered the evidence taken before the Committee of Grievances, are of opinion that Mr. Ralfe has not been fairly treated.

Your Committee find that Mr. Ralfe arrived in this Colony in the year 1825, with an appointment from Lord Bathurst to the Surveyor General's Department, at a salary of £250 per annum and the usual allowances; that in January, 1859, the salary was increased to £350 per annum; and that he remained in active service as a Surveyor for 17 years.

That about the year 1840, during the administration of Sir George Gipps, the Government adopted the experiment of survey by Contract, when Mr. Ralfe was induced to enter upon that service, with the distinct understanding that, by so doing, he should not be deprived of his official rank, but to which rank he was refused to be restored; thereby depriving him of that means of support which from his long service he might reasonably expect.

Your Committee would further observe, that Mr. Ralfe was entitled to a grant of 1,000 acres of land, which other officers of the Department received, but of which, owing to informality on his part, he was deprived. Mr. Thomson, (then Deputy Surveyor General), as appears from Appendix E,* observes—"the promise undoubtedly established by Mr. Ralfe's claim for 1,000 acres of land, merits the serious consideration of the Government, and is apparently provided for in the 58th Section of the Constitution Act, 18 and 19 Vic. cap. 54."

*Vide Appendix to Evidence given by Mr. McLean, 26 April, 1861, before Select Committee on Grievances.

Your Committee, viewing all the circumstances brought before them relating to Mr. Ralfe's case, beg to recommend to the favourable consideration of the Government Mr. Ralfe in his present circumstances, and trust that he may be awarded that justice which, in the opinion of your Committee, he appears to merit.

H. FLETT,

Chairman.

Legislative Assembly Chamber,
Sydney, 29 August, 1862.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 14 AUGUST, 1862.

MEMBERS PRESENT:—

| | |
|--------------|----------------|
| Mr. Flett, | Mr. Shepherd, |
| Mr. Dangar, | Mr. Sadleir, |
| Mr. Stewart, | Mr. Dalgleish. |

Mr. Flett called to the Chair.

Resolution of the House appointing the Committee, *read*.Copies of the Evidence taken before the Select Committee on Grievances in 1861—
on the Table.

At the suggestion of the Clerk, the Chairman brought under the notice of the Committee a letter from James Ralfe, to the Chairman and Members of the Select Committee on Grievances, of 1861, dated Port Macquarie, 9th September, 1861.

The same, by direction of the Chairman, *read*.

Committee deliberated.

And objection being taken to the letter being received without its being previously referred to the Committee,—

Motion made (*Mr. Dalgleish*) and *Question put*,—That the Chairman move the House that the letter just read be referred to this Committee.

Committee divided.

Ayes, 2.

Noes, 2.

Mr. Dalgleish,
Mr. Dangar.Mr. Shepherd,
Mr. Stewart.

The Chairman gave his casting vote with the Ayes.

So it passed in the affirmative.

[Adjourned to Thursday next, at *Eleven o'clock*.]

THURSDAY, 21 AUGUST, 1862.

MEMBERS PRESENT:—

Mr. Flett in the Chair.

| | |
|---------------|--------------|
| Mr. Shepherd, | Mr. Stewart, |
| Mr. Sadleir, | Mr. Dangar. |

Letter from James Ralfe *referred* on the 14th instant, before the Committee.

The Chairman submitted a Draft Report.

The same read 1^o.

Committee deliberated.

Ordered,—That the Draft Report, as read, be printed and *circulated* prior to the next meeting.

Committee further deliberated.

Motion made (*Mr. Dangar*) and *Question*,—That the letter from James Ralfe, referred to this Committee, be printed and *circulated* with the Draft Report—*agreed to*.

Re-assembling of the Committee to be arranged by Chairman.

[Adjourned.]

FRIDAY, 29 AUGUST, 1862.

MEMBERS PRESENT:—

Mr. Flett in the Chair.

| | |
|---------------|--------------|
| Mr. Shepherd, | Mr. Sadleir, |
| Mr. Stewart, | Mr. Dangar. |

Committee met pursuant to summons.

The following letter, together with the Draft Report, printed and *circulated* amongst the Members of the Committee during the interval of adjournment:—

“ MR. SURVEYOR RALFE to THE HONORABLE THE CHAIRMAN AND MEMBERS OF THE
“ SELECT COMMITTEE OF GRIEVANCES.

“ SIR AND GENTLEMEN,—

Paragraph 229.

“ With reference to the remark in paragraph 229, in the printed Evidence of
“ my case, that ‘ it was necessary for me to prove that there were no grounds for my dis-
“ ‘ missal,’ with my reply that ‘ the letter I had produced contained the only grounds I
“ ‘ knew of,’ I hope, now that your Honorable Committee has been put in possession, by the
“ Acting

" Acting Surveyor General, of the letters of the late Sir Thomas Mitchell upon that subject, I shall not be denied the opportunity of showing the truth of my statement. I therefore most respectfully entreat that your Honorable Committee will be pleased to compare Sir Thomas Mitchell's letter to Governor Gipps, of 11th November, 1841, with the one written to me, of 26th of that month, and it will clearly appear that the former now, for the first time, discloses to me the real cause of my discharge, whilst the latter alleges another; and as the charges brought against me were concealed, and my appeal for an inquiry denied me, I trust I may be indulged this opportunity of refuting them.

In appendix to the Surveyor General's evidence.
A, 41-403, in appendix to Surveyor General's evidence.
D, No. 41-405, in appendix to my evidence.

" I therefore beg leave to state,—

" 1st. That the charge of inaccuracies in my surveys could only have been made in palliation of the unjustifiable breach of contract on the part of Sir Thomas Mitchell, in withholding the whole amount of my earnings in place of the stipulated £25 per cent.; for I maintain that no inaccuracies whatever occurred in any of my plans; I admit that there was one trifling inadvertency in not showing the same features twice over to an exact nicety on the dividing line between the two first parishes I had sent in, fourteen months previously; at all events, they must have been of a very trifling character, or Sir Thomas Mitchell would never have renewed my contract, as he virtually did by his letter to me of 27th July, 1841, containing fresh instructions; and how Sir Thomas Mitchell could have stated to Governor Gipps that 'my contract had expired in the previous month of June,' I am quite at a loss to conceive, after having raised in my mind every reasonable expectation 'that my contract would have been continued for a year at least from the date of his letter.'

C, 2nd query by Lord Stanley, in appendix to Surveyor General's evidence.
B, No. 37-378, in appendix, Surveyor General's evidence.

" 2ndly. That it would have been just, and comparatively generous, had Sir Thomas Mitchell, in place of raking up a letter of the Colonial Secretary's, nearly five years old, submitted to Governor Gipps, as fair subjects, such letters of mine as might have appeared to justify the steps he had taken to deprive me so suddenly of employment; for I am willing to confess that it is possible, whilst smarting under the galling and ruinous consequences of the stoppage of the whole of my earnings, I may have written in my capacity of Contract Surveyor in stronger terms than I otherwise should have done; but as this unfortunate letter of mine of 25th March, 1837, the perusal of which caused Governor Bourke such 'great disgust,' has now been twice brought forward to my disparagement, after intervals of several years, I must candidly acknowledge, though grown, I hope, 'a wiser and a better man,' that I do not feel any shame or remorse at the exposure of its contents; for although it may not be written in the most approved style of diplomacy, it was expressive of honest indignation at the wasteful expenditure of the public resources as regarded inefficient supplies as well as frustrations to my duties. I am fully aware that had I acted the part of 'Corporal Trim,' all would have been well; but unfortunately, from possessing a thorough knowledge of my vocation and only an infinitesimal grain of spirit and enterprise, I could not brook the unnecessary restraint that was incessantly put upon my exertions, and tamely submit to be tied down to a wretched tent under a gum tree, wasting all my energies in helpless inactivity, awaiting the pleasure of a storekeeper at Parramatta to send me supplies, between two and three hundred miles from the field of my operations, when I could have purchased, if only allowed, all I required on the spot; goaded, too, as I was, with letters continually from Sir Thomas Mitchell of so reproachful and censorious an import that I sought and obtained redress by submitting them to the consideration of Governor Bourke.

F, in appendix, Surveyor General's evidence.

" I have thus replied as briefly as possible to the charges so insidiously brought against me, and I will not abuse the patience of your Honorable Committee by commenting upon the answers of Sir Thomas Mitchell to the queries, which I never saw before, submitted by Governor Gipps in 1842, and Lord Stanley in 1844, respectively, evidently misgivings on the part of both as to the justness of the proceedings that had been instituted against me; it is sufficient for me to state they relate to my contract only, a matter of such little importance that I should never have alluded to it had it not involved the loss of my Imperial appointment.

G and D, in appendix, Surveyor General's evidence.

" In justice to the memory of the late Sir Thomas Mitchell, I am in duty bound to call to the attention of your Honorable Committee that that officer never recommended my total discharge from his department, the deprivation of my appointment therefore can only be attributed to the arbitrary act of Governor Gipps, in direct violation of a solemn pledge given me in writing, and no other reason is assigned for this cruel proceeding but that now brought forward by the Acting Surveyor General, 'that there was at that time a desire on the part of the Government to get rid of any officer they could, because they had sent home for six Surveyors.' Whatever may be thought of the 'great disgust' Governor Burke suffered under in consequence of my representations of abuses or my agitation for the Contract System, I have the satisfaction of observing that all my suggestions were afterwards adopted. Licensed or Contract Surveyors were appointed, and an annual allowance made to stipendiaries to find their own equipments, consequently complaints were never afterwards punished, because prevented; and had it been my good fortune to have been placed in either position at the commencement of my career, I should not have been now reduced to the humiliation of appealing to your Honorable Committee.

Paragraph 248, Surveyor General's evidence.

" I

" I will now conclude this painful subject with a short recapitulation of my circumstances :—

A, No. 197, 1st
Nov., 1826, in
appendix to my
evidence.

" I arrived in this Colony in 1825 with an appointment from Lord Bathurst, and
" was refused a grant of land because I was in Government employ, and yet
" that boon was given to my junior in office, Mr. Surveyor White, after several
" years solicitation.

" I was promised, by the Secretary of State, increase of pay and promotion, but
" that I was deprived of by Governor Gipps, who thought proper to introduce
" a system of surveying by contract.

" I took a contract accordingly, but that I was deprived of because Surveyor
" General Mitchell was hostile to it.

" I was promised restoration to my rank and emoluments, but I was deprived of
" them because six Surveyors were expected from England.

" I was appointed a Licensed Surveyor in August, 1852, and now, after an absolute
" service of 26 years, I am worn out, and cannot obtain sufficient employment
" to afford me a maintenance.

" I have the honor to remain,

" Mr. Chairman and Gentlemen,

" Your most humble servant,

" JAMES RALFE,

" Licensed Surveyor."

" Port Macquarie, 9 Sept., 1861."

Draft Report read 2^d paragraph by paragraph.

Paragraphs 1 and 2 read and agreed to without amendment.

Paragraph 3 read, amended, (on motion of Mr. Sadleir), and *agreed to*.

Paragraph 4 read as follows :—

4. Your Committee would further observe, that it appears from Appendix E, that
Mr. Ralfe was entitled to a grant of 1,000 acres of land, which states—
" the promise undoubtedly established by Mr. Ralfe's claim for 1,000 acres of
" land, merits the serious consideration of the Government, and is apparently
" provided for in the 58th Section of the Constitution Act, 18 and 19 Vic.
" cap. 54."

Motion made (*Mr. Sadleir*) and *Question*,—That the words " that it appears from
Appendix E, that Mr. Ralfe was entitled to a grant of 1,000 acres of land, which states,"
be omitted, with the view to insert in their place the following words :—" That Mr. Ralfe
" was entitled to a grant of 1,000 acres of land, which other officers of the Department
" received, but of which, owing to informality on his part, he was deprived. Mr. Thomson
" (then Deputy Surveyor General), as appears from Appendix E, observes—"

Question,—That the words proposed to be omitted stand part of the proposed Report
—*negatived*.

Whereupon Question,—That the words proposed to be inserted in place of the words
omitted be there inserted—*agreed to*.

Paragraph, as amended, agreed to.

Paragraph 5 read, verbally amended, and agreed to.

Motion made (*Mr. Sadleir*) and *Question*,—That this Report, as amended, be the
Report of the Committee—*agreed to*.

Chairman requested to report to the House.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES, No. 41. TUESDAY, 5 AUGUST, 1862.

16. Mr. Francis Flanagan :—Mr. Faucett, *with the concurrence of the House*, moved, on behalf of Mr. Gray, pursuant to *amended* notice standing in the name of Mr. Gray,—
 (1.) That a Select Committee be appointed to consider and report upon the Petition of Mr. Francis Flanagan, presented to this House on the 7th November, 1861.
 (2.) That such Committee consist of Mr. Cowper, Mr. Faucett, Mr. Hart, Mr. Egan, Captain Moriarty, Mr. Wilson, Mr. Garrett, Mr. Bell, Mr. J. T. Ryan, and Mr. Gray.
 Question put and passed.

VOTES, No. 43. THURSDAY, 7 AUGUST, 1862.

5. Mr. Francis Flanagan :—Captain Moriarty, *with the concurrence of the House*, moved, (without presentation of petition),—That leave be granted to Mr. Francis Flanagan to appear by Counsel, or Attorney, before the Select Committee of this House now sitting on his case.
 Question put and passed.

VOTES, No. 90. WEDNESDAY, 29 OCTOBER, 1862.

8. Member of Legislative Council as Witness :—Captain Moriarty moved, That the following Message be carried to the Legislative Council :—
 MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee “to consider and report upon the Petition of Mr. Francis Flanagan,” and that Committee being desirous to examine the Honorable Terence Aubrey Murray, in reference thereto, requests that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,
 Sydney, 29 October, 1862.*

Speaker.

Question put and passed.

VOTES, No. 91. THURSDAY, 30 OCTOBER, 1862.

1. * * * * *
 Members of Legislative Council as Witnesses :—

(1.) The Speaker reported that the following Message had been received yesterday from the Legislative Council :—

MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 29th instant, requesting leave for the Honorable Terence Aubrey Murray, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly, appointed “to consider and report upon the Petition of Mr. Francis Flanagan,” the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

*Legislative Council Chamber,
 Sydney, 29 October, 1862.*

T. A. MURRAY,

President.

 MR. FRANCIS FLANAGAN.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 5th August last, "to consider and report upon the Petition of *Mr. Francis Flanagan, presented to this House on the 7th November, 1861,*" have agreed to the following Report:—

Your Committee having examined the witnesses named in the margin,* and carefully investigated all the documents submitted to them, connected with his case, have arrived at the conclusion that Mr. Flanagan has substantially established the allegations contained in his Petition.

* W. Elyard, Esq.
R. Johnson, Esq.
The Hon. T. A. Murray.

Your Committee, therefore, beg strongly to recommend his case to the favourable consideration of the Government.

MERION MORIARTY,
Chairman.

*Legislative Assembly Chamber,
Sydney, 4 November, 1862.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 7 AUGUST, 1862.

MEMBERS PRESENT:—

| | |
|-------------------|--------------|
| Mr. Egan, | Mr. Hart, |
| Captain Moriarty, | Mr. Gray, |
| Mr. Bell, | Mr. Garrett. |

Captain Moriarty called to the Chair.
 Order of Reference read by the Clerk.
 Copies of Petition referred—on the Table.
 Committee deliberated as to their course of procedure.

Resolved,—That the Chairman move the House that leave be granted to Mr. Francis Flanagan to appear by Counsel, or Attorney, before the Committee now sitting on his case.
 Mr. W. Elyard and Mr. R. Johnson to be summoned for next meeting, each to produce all Papers and Correspondence in his possession relating to the claims of Mr. F. Flanagan.

[Adjourned to Tuesday next, at Noon.]

TUESDAY, 12 AUGUST, 1862.

MEMBERS PRESENT:—

Captain Moriarty in the Chair.

| | |
|--------------|--------------|
| Mr. Cowper, | Mr. Gray, |
| Mr. Garrett, | Mr. Bell, |
| Mr. Egan, | Mr. Faucett. |

Present, as *Solicitor for the Petitioner*, Mr. R. Johnson.
 Mr. R. Johnson stated to the Committee that, from defective communication with Petitioner, he was not prepared to enter fully into the case of his client.
 New South Wales *Government Gazette*, No. 282, Wednesday, June 28, 1837, containing a notification concerning additional Grants of Land; also Government Order, No. 35—Regulations for the Granting and Sale of Land—*Colonial Secretary's Office*, Sept. 5, 1826,—before the Committee.
 Mr. W. Elyard, *Principal Under Secretary*, examined.
 Cross-examined by Mr. Johnson.

[Adjourned to Tuesday, 26th instant, at Eleven o'clock.]

TUESDAY, 26 AUGUST, 1862.

MEMBERS PRESENT:—

Captain Moriarty in the Chair.

| | |
|-------------|-----------|
| Mr. Cowper, | Mr. Hart, |
| Mr. Egan, | Mr. Gray. |

Committee deliberated.

[Adjourned to Tuesday next, at Eleven o'clock.]

TUESDAY, 2 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Captain Moriarty, | Mr. Garrett.

In the absence of a Quorum, the meeting of the Committee convened for this day lapsed.

THURSDAY,

THURSDAY, 11 SEPTEMBER, 1862.

The meeting called for this day, by direction of the Chairman,—
[Postponed to Wednesday next, at *Eleven o'clock.*]

WEDNESDAY, 17 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Captain Moriarty in the Chair.
Mr. Egan, | Mr. Garrett,
Mr. Faucett.

The Witness summoned not being in attendance,—
[Committee adjourned to Friday next, at *Eleven o'clock.*]

FRIDAY, 19 SEPTEMBER, 1862.

MEMBERS PRESENT:—

Captain Moriarty in the Chair.
Mr. Wilson, | Mr. Garrett,
Mr. Hart, | Mr. Faucett.

Mr. Robert Johnson, *Solicitor for Petitioner*, examined.
Copies of several documents handed in by Witness. (*Vide List of Appendix.*)
Witness withdrew.
Committee deliberated, and

[Adjourned.]

TUESDAY, 14 OCTOBER, 1862.

MEMBERS PRESENT:—

Captain Moriarty, | Mr. Hart.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 28 OCTOBER, 1862.

MEMBERS PRESENT:—

Captain Moriarty in the Chair.
Mr. Egan, | Mr. Hart,
Mr. Garrett, | Mr. Faucett.

Committee met pursuant to summons.
Printed copies of Evidence previously *circulated*.
Committee deliberated, and *Resolved*,—

That the Honorable Terence Aubrey Murray be requested to attend and give evidence before this Committee, and that the usual Message requesting leave for his attendance be transmitted to the Legislative Council.

[Adjourned to Friday next, at *Eleven o'clock.*]

FRIDAY, 31 OCTOBER, 1862.

MEMBERS PRESENT:—

Captain Moriarty in the Chair.
Mr. Garrett, | Mr. Bell,
Mr. Egan.

The Honorable Terence Aubrey Murray, attending by permission of the Legislative Council, examined.

Witness withdrew.

Committee deliberated, and

[Adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY, 4 NOVEMBER, 1862.

MEMBERS PRESENT:—

Captain Moriarty in the Chair.
Mr. Egan, | Mr. Faucett,
Mr. Garrett, | Mr. Hart.

Committee deliberated.

Chairman submitted Draft Report.

The same read, amended, and *agreed to*.

Chairman requested to report, this day, to the House.

LIST OF WITNESSES.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PETITION OF FRANCIS FLANAGAN.

TUESDAY, 12 AUGUST, 1862.

Present:—

MR. COWPER,
MR. BELL,
MR. GRAY,CAPTAIN MORIARTY,
MR. FAUCETT,
MR. EGAN,

MR. GARRETT.

M. M. MORIARTY, ESQ., IN THE CHAIR.

Robert Johnson, Esq., appeared as Solicitor for the Petitioner.

William Elyard, Esq., called in and examined:—

1. *By the Chairman:* You are Under Colonial Secretary, I believe? Yes; Under Secretary Wm. Elyard, to the Government. Esq.
2. We have requested the favour of your attendance here, to give us any information which it may be in your power to afford with reference to the claim of Mr. Francis Flanagan contained in the petition presented to the Legislative Assembly;—are you in a position to afford us any evidence on this subject? That is, with reference to documents bearing on the matter? 12 Aug., 1862.
3. Yes; with reference to documents bearing on the subject? The statements contained in the petition of Mr. Flanagan are generally correct.
4. The statements contained in this petition are correct? The history of the case, as stated in Mr. Flanagan's petition, is generally correct; under the regulations persons were entitled in the way therein stated to additional land, on showing that improvements had been made on their original grants.
5. On the original grant? On the original grant; and that they possessed capital sufficient to cultivate additional land. They were also required to be in possession of the land first granted at the expiration of seven years; that is, they were to expend within the seven years a certain amount of money on the land, and to be then in possession of it. In July, 1831, it was notified that the system of disposing of land otherwise than by public sale—(that is, by granting it)—had been discontinued; and on the 27th June, 1837, a notice was published, requiring applications for secondary grants under the regulation which is referred to in the petition, to be sent in by the 31st December.
6. Of that year? Yes; or within six months from the expiration of seven years from the time of obtaining possession of the original grant.

Wm. Elyard, Esq.
12 Aug., 1862.

7. *By Mr. Garrett*: Of 1831? No, of 1837. Mr. Flanagan should have sent in his application by the 31st of December, 1837, or within six months from the expiration of seven years from the date of possession; but it seems that he did not prefer his claim until the expiration of about six months beyond the time prescribed.

8. *By the Chairman*: That is, in June, 1838? June, 1838. It seems that in consequence of that delay the Government of the time declined to entertain it. Mr. Flanagan then appealed to the Secretary of State, who also refused to do so. The despatch on the subject is dated 6th March, 1839, and contains the following passage:—
“Mr. Flanagan, I perceive, attempts to account for the delay by stating that he resides at a distance from Sydney, and is frequently for months without receiving any news from thence; but he acknowledges that he was informed by the Government notice on the eve of Christmas Day—that is, five days before the expiration of the period allowed; and he permitted a further delay of nearly six months to elapse before making his application. This I consider fatal to his claim, and you will have the goodness to inform him that I regret I do not feel justified in complying with his application.” The Secretary of State at the time was the Marquis of Normanby. The information contained in this despatch was duly communicated to Mr. Flanagan, who seems to have brought forward his claim again in 1842.

9. *By Mr. Cowper*: Is there nothing between 1837 and 1842? Merely the application or memorial in 1838.

10. *By the Chairman*: What memorial? The memorial on which the case was forwarded to the Home authorities. He submitted his claim, as before mentioned, in 1842, by a further memorial, which was reported to the Secretary of State, who, on the 19th January, 1843, wrote—“You will acquaint Mr. Flanagan, in reply to his memorial of the 22nd October, 1841, that as the decision of the Marquis of Normanby on his memorial dated the 6th of August, 1838, was duly communicated to him, and as no new matter has been adduced by him, I cannot consent to re-open the case.” This is a despatch from Lord Stanley, who was then Secretary of State. I do not find in the Colonial Secretary’s Office anything further on the subject.

11. Supposing that he did admit that on Christmas eve he became aware of that Government notice—that is, within five days of the termination of the period within which it ought to have been made, was the state of the Colony such that Mr. Flanagan could, within the time, have communicated with Sydney from Moruya, where he lived? I should think that from any part of the Colony there might have been communication with Sydney in less time than six months; the communication was, of course, more difficult than at present, and the post might not have been very regular.

12. You are not in a position to afford us any information as to the period the post took at that time? No; but I see that a letter from Mr. Flanagan, dated from a place called Mundarry, St. Vincent, on the 2nd September, was received in the office on the 15th September—that is, in less than a month.

13. And what period would elapse before any communication would arrive there? This letter was from his residence; he acknowledged the receipt of the notice at a certain date.

14. *By Mr. Faucett*: Though the proclamation came to his notice five days before the expiration of the period, does it appear that he possessed the knowledge that the term was to expire within five days after the receipt of that notice? The notice itself would afford this information, if he read it.

15. He does not state that he read the notice? I think this is implied.

16. It appears that the existence of some notification of this kind came to his knowledge, in some way or other, five days before the expiration of the period referred to; but does it appear that in ascertaining that the Proclamation had been made by the Government, he also ascertained that the time was limited to five days after he heard of it; and was not this notification from the Government attaching unfairly a condition to those parties who came out, as Mr. Flanagan did, under the former state of things? The object of the notice was, I suppose, to bring these transactions to a close; perhaps on the same principle as cases under the Statute of Limitations. It is difficult, when matters are deferred to a late period, to investigate them properly. I am not prepared to say that it was unfair.

17. Was not the limitation as to time a new condition imposed upon Mr. Flanagan and those who came out under the same conditions? I think it may be considered in the light of a modification of a regulation, rendered necessary by the termination of the system of making grants of land. It was nearly seven years after that system had terminated that this notice was issued, and therefore, unless in exceptional cases, the claims would be confined chiefly to those of persons who had then been in possession of their land for that period.

18. It was very fair to put an end to the former state of things by limiting the time with respect to those who had not come out under former conditions; but it does seem somewhat hard to impose a limitation as to time upon those who had come out without any such limitation in reference to the obtaining of secondary grants? I do not see the ground of distinction. The system of granting land was discontinued in 1831.

19. That was after he came out? Yes; and at the time he made the application he had been seven years in possession of his land.

20. I will put it briefly in this way: Mr. Flanagan came out here under certain conditions; one was, that under certain conditions, he was to obtain a primary grant; the other was, that after a certain residence, and the fulfilling of certain other conditions, he should be entitled to obtain a secondary grant. To these conditions there was attached no limitation as to time, in reference to the application for the secondary grant; but after he had fulfilled the conditions which would entitle him to a secondary grant, the Government impose a new condition, limiting the application for a secondary grant as to time? It may be necessary to refer to those regulations, to ascertain whether there was any limit; I cannot say from memory.

21. I think it would assist the Committee if it could be ascertained whether, in the conditions under which Mr. Flanagan came out, there was any limitation as to the period within which he should be entitled to apply for a secondary grant. If there was no limitation the Government had no equitable right to impose that new condition on Mr. Flanagan and those who came out under the same regulations? Whether there was an expressed condition in the regulation or not, the condition was implied by its being required that certain improvements should be shown to have been made at the expiration of seven years, and additional grants were only to be allowed on this proof of their having been so effected.
22. *By the Chairman:* Can you favour us with the regulations then in existence? The regulations referred to in the memorial are, I think, those published in the *Sydney Gazette* of the 19th May, 1825.
23. Would not those regulations of the Government with more propriety take a prospective than a retrospective effect? No, I think not. You now refer to the notice dated 27th June, 1837?
24. I mean that in all future grants this system should obtain? The system of granting land had been discontinued when this notice was issued, so that there would be none, except in special cases.
25. *By Mr. Faucett:* This notice was given for the purpose of winding up that system? Yes.
26. And thus a new condition might have been imposed on those persons who came out here under the old regulations, and one which they had no reason to suppose would be imposed? Yes; but the former regulations implied, in requiring certain things to be done within seven years, that the termination of that period was the proper time to have made the claim.
27. Would not that rather seem to imply that they should be in possession for seven years before they could apply at all? Yes.
28. And not to limit the time within which they should apply, to seven years? I think it implies both.
29. Perhaps within a reasonable time after the expiration of the seven years? Yes, within a reasonable time.
30. *By the Chairman:* Was not the original grant to Mr. Flanagan in July, 1831? I see that it was on the 12th of June, 1829, that Mr. Flanagan received authority, in the usual form, to select land.
31. *By Mr. Faucett:* The date of the primary grant is July, 1829? Yes, that is the authority to take possession of the land selected.
32. Before that notice was issued a great number of persons, I suppose, had applied for and obtained secondary grants? Yes, no doubt a number of secondary grants had been made before the time referred to.
33. Could you tell me whether any of those applications had been sent in after the lapse of two years subsequently to the expiration of the seven years? I cannot, without reference is made to some particular case.
34. But it is a common thing, is it not, for persons to defer sending in applications for two or three years? Applications are no doubt frequently made without reference to time.
35. In fact they were not limited to a period of one or two or three years? Of course it would be difficult at this date to say whether there are instances which might be applied to this case, but I find that there was one; that of Mr. M'Intyre, whose application was made shortly after the expiration of the time fixed by the notice; but it was only a few days, and it was admitted.
36. What was the excuse in that case? On Mr. Flanagan's application there is this note:—"The case of Mr. D. M'Intyre is in point; he exceeded the period fixed, although only a few days." I suppose that was not held to form a precedent, and as I do not observe that any other case was brought forward, I conclude there were none sufficiently in point to be of any service.
37. *By the Chairman:* Was not Mr. M'Intyre's claim admitted? It was admitted.
38. Do you remember the case of Mr. Murray, the present Speaker, applying for land under circumstances similar to those in the case of Mr. Flanagan? No, I do not remember the circumstances of the case.

Cross-examined by Mr. R. Johnson, Attorney for Petitioner:—

39. Will you state what were the land regulations in force in March, 1826, and where they are to be found? They were published in the Colony, I think in 1825, as before stated. The regulations referred to in the notice of 27th June, 1837, appear to have been issued from Downing-street, in April 1826 and 1827.
40. These [lithographed] seem to be those that were issued, but they bear date 1824;—is there a publication in the Colony which comprises these regulations bearing date 1824? I cannot say with reference to 1824, but regulations were published here in 1825. The regulations referred to in the notice of 1837 are dated in 1827.
41. 1827? Yes.
42. I want to know whether there was any regulation affecting the right of immigrants between 1824 and the time when Mr. Flanagan got Mr. Hay's letter? Between 1824 and what date.
43. Between 1824 and, we will say, 1826? You mean as to the system under which land was given.
44. Yes? The system of 1824 was, I think, that adopted by Sir Thomas Brisbane, by which land was given in proportion to the number of prisoners a settler would undertake to maintain. The regulations to which you refer are different, and are probably those published here in 1825.
45. It appears that Mr. Flanagan came out under a system, in accordance with which individuals immigrating with capital, and intending to purchase land, were entitled to land without purchase, irrespective of Sir Thomas Brisbane's regulations? Yes. 46.

Wm. Elyard,
Esq.
12 Aug., 1862.

- Wm. Elyard, Esq.
12 Aug., 1862.
46. Where do those regulations, dated 1824, appear in the Colony? I think, in the notice of 1825.
47. *By the Chairman*: Mr. Flanagan himself says that on the 5th September, 1826, he received a printed memorandum, No. 35.
48. *By Mr. Johnson*: Where is that Government Regulation of the 5th September, 1835, to be found? In the Book of "Proclamations, Government Orders, and Notices issued by His Excellency Lieutenant-General Ralph Darling,"—Order No. 35, page 22 of Government Orders, 1826.
49. *By Mr. Garrett*: Who made the minute on that document containing the case of Mr. M'Intyre? It is in the handwriting of Mr. Newcombe, who was at that time one of the senior clerks in the office.
50. Was that decided by the Colonial Secretary? The decision was of course that of the Governor, or of the officer administering the Government for the time being.

FRIDAY, 19 SEPTEMBER, 1862.

Present:—

MR. FAUCETT, | MR. HART,
MR. GARRETT, | MR. WILSON.

M. M. MORIARTY, ESQ., IN THE CHAIR.

Robert Johnson, Esq., called in and examined:—

- R. Johnson, Esq.
19 Sept., 1862.
51. *By the Chairman*: Do you produce any documents with reference to the case of Mr. Flanagan, now under the consideration of this Committee? I do.
52. Will you state what they are? The first I produce is an affidavit by Francis Flanagan, verifying the truth of the facts alleged in his petition, and stating the cause of his inability to attend the Committee to give evidence orally, namely, his great age and decrepitude. (*The witness handed in the same. Vide Appendix A.*) I also produce an affidavit sworn by Francis Flanagan, sworn the 23rd of August last, in which he states that he did not take possession of his primary grant until after the 25th of August, 1829. (*The witness handed in the same. Vide Appendix B.*) I wish to show to the Committee that Mr. Flanagan received the identical documents which I now produce, and of which I furnish copies, namely, the letter of Mr. Hay, dated Colonial Office, Downing-street, London, 10th March, 1826, and memorandum inclosed therein, and that he emigrated upon the faith of these documents.
53. Your argument is this,—that the regulations in force at the time Mr. Flanagan was furnished with these documents, is the ground upon which he is entitled to obtain an additional grant? I take that as my fundamental principle; but even supposing the Government had authority to impose an *ex post facto* Statute of Limitations, they have not acted with that liberality, and I may say with that justice, with which they ought to have acted in shutting out Mr. Flanagan because he was a month or two out of the time. It appears by his affidavit, that, according to the regulations, he had six months after the expiration of seven years from, say the 1st September, 1829, to apply, because he did not take possession till after the 25th August, 1829, and, by the regulation imposing the limitation, parties were to have six months from the expiration of seven years from the time of taking occupation; therefore he had six months from the 1st of September or the 25th of August, 1836; so that he was only a few months out in the time of applying. The Government do not seem to have considered that subject at all. (*The witness handed in several papers. Vide Appendices C. and D.*) I have nothing further to say on the part of Mr. Flanagan, excepting that he emigrated to this Colony, not under the ordinary circumstances of a casual emigrant, but by express application to the authorities at Home, by whom he was informed that he would get a certain quantity of land, on condition of his bringing out a certain amount of capital. He came out with his family; brought out a large capital; he has been a *bonâ fide* settler, not a land speculator, but one of those individuals who have improved the country, and he has not received that compensation which he bargained for when he arranged with the Home authorities to come out here. Even assuming that the Government were justified in passing a Statute of Limitations, they have acted in a harsh and, I would say, an unconscientious manner, under the circumstances mentioned by Mr. Flanagan, in precluding him from availing himself of his right by a regulation which did not reach him till a considerable time after it was passed, as he was living in a part of the country then almost inaccessible from Sydney; and that the delay of a few months which did occur, under the circumstances set forth in the petition, ought not to be a bar to his obtaining that right and justice to which he was entitled, and upon the faith of which he emigrated to this country. I would also call the attention of the Committee to the case mentioned by Mr. Elyard, of Mr. M'Intyre, to show that the Government never intended that to be an absolute bar, as in a Court of law, where, under the Statute of Limitations, if a party is a day over, he cannot avail himself of his right.
54. *By Mr. Wilson*: What is the date of the primary grant? 24th July, 1829. (*Vide Appendix, D 2.*)
55. It appears that Mr. Flanagan arrived in 1827;—can you inform the Committee what he was doing during those two years? He was, for a great portion of it, engaged in worrying the Government to obtain his primary grant. The Government threw obstacles in the way of his getting that, because the whole amount was not in cash; and they referred the matter to Downing-street, and at length he was allowed to make a selection. Another great delay occurred in this way:—He was entitled to a primary grant of 2,500 acres; he was required

to make his selection in two allotments, and he claimed to make these so as to give him a frontage of a much more extended nature than he did get. A great deal of correspondence took place on that subject; the Surveyor General would not allow him to do as he wished, and he was obliged to make his selection in such a way that he was deprived of a great deal of the frontage he was entitled to. That was a cause of a great deal of the delay that took place; but it appears that he was active himself, for as soon as he got the land he went into possession within a month.

R. Johnson,
Esq.
19 Sept., 1862.

56. Can you give the Committee any information as to how and when the £3,000, which he states in his petition was expended, was laid out on that land;—he states that he has “cleared, cultivated, and improved the land, at an outlay of upwards of £3,000”? No, I have no personal knowledge. I have been Mr. Flanagan’s solicitor for a great many years, and I know, in the way a solicitor knows things—from the information of his clients—that this is a very valuable property, and would not be parted with for anything like three or four times that amount.

57. That may easily be accounted for by its situation or some natural advantages? I know, from granting leases to parties—for it is property leased out and largely farmed—that there are valuable improvements and houses upon it.

58. I am well aware of that, but I wish to know at what time this £3,000 was expended,—was it during the first ten years of occupation that this money was expended for improvements? I am not in a position to answer that question, but Mr. Elyard stated distinctly that Mr. Flanagan made out his case in every respect at the time he applied in 1838, and that the only objection was that his application was considered to be out of time.

59. *By the Chairman:* The application was made on the 27th of June in that year? He ought to have applied by the 27th March, and he did not apply till the following June, 1838. I presume they considered that the limit was the 31st December, 1837, but he was entitled under that very regulation till the 25th of March, because the regulation was that all parties should apply for grants before the end of 1837, where their seven years occupation had expired, but they were to have seven years from the expiration of seven years from the commencement of their occupation in all cases. He did not commence his occupation till the 25th August, 1829, so that his seven years expired in August, 1837, and he had six months after that to apply for his grant, or until the 27th March, 1838, so that he was really in default about three months; that is, he delayed from the 27th March to 30th June.

60. *By Mr. Garrett:* I think he received a letter, did he not, on Christmas Eve? He was aware of the regulation on Christmas Eve, but as I explained before, according to my instructions, he left the matter in the hands of some Sydney agent, who delayed the application, and then Mr. Flanagan was told it was too late. I see, on reference to the dates before-mentioned, that the seven years in Mr. Flanagan’s case expired in August, 1836, and therefore, under the Government regulation, he had only until the 31st December, 1837, to apply for his additional grant. Still he was only a few months out of date even under that order (which I contend ought not to bind him), and even that delay is, I think, satisfactorily accounted for by the circumstances before-mentioned, and therein set forth in the documents handed in. (*The witness handed in several papers. Vide Appendices E, F, G, H, and I.*)

APPENDIX.

A.

New South Wales, }
to wit.

Francis Flanagan, of Shannon View, Broulee, in the County of St. Vincent, and Colony of New South Wales, Esquire, being duly sworn, maketh oath, and saith as follows:—

All and every the statements contained in my Petition presented to the Legislative Assembly of the said Colony, on the seventh day of November now last past, are true in substance and matters of fact. I am unable to attend personally to give evidence before the Committee of the said Assembly appointed to consider the matter of my said Petition, in consequence of my advanced age (upwards of eighty-two years) and great infirmity, which absolutely prevent my leaving my residence at Shannon View aforesaid.

FRANCIS FLANAGAN.

hundred and sixty-two, before me,—

W. STEWART CASWELL,
Commissioner for Affidavits.

C.

C.

Colonial Office,
Downing-street, London,
10 March, 1826.

Sir,

I am directed by Earl Bathurst to acquaint you, in reply to your letter of the 20th ultimo, that the printed memorandum, which I enclose, will explain to you the conditions upon which persons are permitted to hold lands at New South Wales and Van Diemen's Land; and if under such circumstances you should think it advisable to proceed to either of those settlements with a view to agricultural objects, the Governor will, on your making the necessary application to him for that purpose, and provided he shall be satisfied of your possessing sufficient capital to enable you to fulfil those conditions, make to you a grant of land accordingly.

I am directed further to acquaint you that the general instructions, with which the Governor has been furnished, will render it unnecessary for you, on your proceeding to the Colony, to be provided with any other letter from the Colonial Department than this.

I am, &c.,
R. H. HAY.

Mr. Francis Flanagan,
20, Patrick-street, Cork.

D.

(Copy Regulations enclosed in preceding letter.)

For the information of persons proceeding to New South Wales and Van Diemen's Land as settlers, it has been deemed expedient to prepare the following summary of the rules which His Majesty's Government have thought fit to lay down for regulating the grants of land in that Colony:—

1. A division of the whole territory into counties, hundreds, and parishes, is in progress. When that division shall be completed, each parish will comprise an area of about twenty-five miles. A valuation will be made of the lands throughout the Colony, and an average price will be struck for each parish.
2. All the lands in the Colony not hitherto granted, and not appropriated for public purposes, will be put up to sale at the average price thus fixed.
3. All persons proposing to purchase lands, must transmit a written application to the Governor, in a certain prescribed form, which will be delivered at the Surveyor General's Office to all parties applying, on payment of a fee of 2s. 6d.
4. All correspondence with the local Government, respecting grants of land, must take place through the same office.
5. The purchase money is to be paid by four quarterly instalments. A discount of ten per cent. will be allowed for ready money payments.
6. On payment of the money a grant will be made in fee simple to the purchaser, at the nominal quit rent of a peppercorn.
7. The largest quantity of land which will be sold to any individual is 3,600 acres. The lands will generally be put up to sale in lots of 3 square miles or 1,920 acres. Persons wishing to make more extensive purchases must apply to the Secretary of State, in writing, with full explanations of their objects and means.
8. Any purchaser who within ten years after his purchase shall, by the employment and maintenance of convicts, have relieved the public from a charge equal to ten times the amount of the purchase money, will have the purchase money returned, but without interest. It will be computed that for each convict employed and wholly maintained by the purchaser for twelve months, £16 have been saved to the public.
9. Lands may also be obtained without purchase, but upon different conditions.
10. Persons desirous to become grantees without purchase, will make their application to the Governor, in writing, in a prescribed form, copies of which are to be obtained at the Surveyor General's Office, on payment of 2s. 6d.
11. The largest grant that will be made, without purchase, is 2,560 acres. The smallest 320 acres.
12. No grant is to be made to any person without purchase, unless the Governor is satisfied that the grantee has both the power and the intention of expending in the cultivation of the lands a capital equal to half the estimated value of it.
13. A quit rent of £5 per cent. per annum upon the estimated value will be fixed upon the land granted without purchase.
14. The quit rent will be redeemable within the first 25 years next following the grant, on payment of a sum equal to twenty times the annual amount of it.
15. In the redemption of his quit rent, the grantee will have credit for one-fifth part of the sums which he may have saved to His Majesty's Government by the employment and maintenance of convicts; and for the purpose of making this allowance it will be calculated that the Government has saved £16 for each convict employed by the grantee, and wholly maintained at his expense on his land for one whole year.
16. Until the expiration of the first seven years next succeeding each grant, without purchase, no quit rent will become due upon the lands comprised in it.
17. Every grantee without purchase must at the expiration of the before-mentioned term of seven years prove to the satisfaction of the Surveyor General, that he has expended in the cultivation and improvement of his land a capital equal to half its value as that value was estimated at the time of his grant; on failure of such proof the land will be forfeited to the Crown.
18. No additional grant of land will be made to any person who has not proved, as last-mentioned, the necessary expenditure of capital on the lands already granted to him.
19. Persons receiving a second grant of land without purchase will become liable to pay a quit rent upon the lands comprised in such second grant immediately from the date of it.
20. Persons desirous to receive grants of land without purchase, on terms different from those above stated, must lay before the Secretary of State a full explanation, in writing, of the circumstances which they may conceive to exempt them from the fair operation of these general rules.

Colonial Office, Downing-street,
November, 1824.

D 2.

Primary Grant.

Colonial Secretary's Office,
Sydney, 24 July, 1829.

Sir,

The Surveyor General having stated in his Report for 15-30 June, 1829, No. 29-128-1, that, in pursuance of the authority given to you by His Excellency the Governor, you have selected twelve hundred and eighty acres of land, situated in the County of Saint Vincent, parish unnamed, at Peroga Flat, in Millendera, about (1) one mile to the east of Mogandora Creek, and (3) three miles from the mouth of Mourouwa River, and bounded on the south by that river; and you having entered into a bond that

APPENDIX TO FOREGOING EVIDENCE.

7

that you will reside in the Colony for at least three years, I am directed to communicate to you His Excellency's sanction to take possession of the said twelve hundred and eighty acres of land, and to retain the same (if it has been surveyed) until His Majesty's pleasure be made known on the subject, or until a regular deed of grant be made out in your favour.

But if the selection which you have made be in an unsurveyed part of the country, it will not be possible to determine at present whether there are any prior claims or other objections to your obtaining the precise spot applied for or not. It is presumed, however, that there will be a sufficiency of land for all purposes, and the Government will not interfere with your selection if it can be avoided.

If the grant be confirmed, the land is to be held by you in free and common socage, on the following conditions, viz. :—

1st. You are to pay a quit rent to the Crown of five per cent. per annum on the value of the land, which is to be hereafter fixed by the Commissioners appointed for that purpose, or by order of His Majesty's Government.

2nd. The payment of the quit rent is not to commence until the end of seven years from this date, but within that period you must expend in improvements on the land a sum equal to its full value, estimated as above, under the penalty of forfeiting the grant.

3rd. The quit rent is to be redeemable at your option on a payment to the Colonial Treasury of a sum equal to twenty years purchase, provided such payment be made within twenty years from the present date.

4th. The land is not to be alienable under any pretence whatever before the expiration of seven years from this date, nor until the sum above stipulated to be laid out in improvements shall have been actually expended on the said land; and you will not be put in possession of the title deeds until the end of that period.

5th. The Crown reserves to itself all land within one hundred feet of high water mark on the sea coast, creeks, harbours, and inlets, all mines of gold and silver, the right of making and constructing all roads and bridges which may be necessary for public purposes, and such stone, indigenous timber, and other materials, the produce of the land, as may be required at any time for making the said roads and bridges, and keeping them in repair, for naval purposes, and for public works.

6th. You must either reside in person on the land, or employ in the immediate charge of it, as your agent or manager, a free man of approved character and respectability, and you must continue in this Colony for at least three years.

I am, &c.,

ALEX. McLEAY.

Mr. Francis Flanagan,
Sydney.

*Colonial Secretary's Office,
Sydney, 24 July, 1829.*

Sir,

The Surveyor General having stated in his Report of the 15/30 June, 1829, that in pursuance of the authority given to you by His Excellency the Governor, you have selected twelve hundred and eighty acres of land, situated in the County of St. Vincent, Parish unnamed, adjoining your grant at Peroga Flat, in Millendera, about (1) one mile to the east of Mogandora Creek, and (3) three miles from the mouth of Mourouwa River, and bounded on the south by that river, as a reserve to be confirmed by a grant, provided you fix your residence on the land within twelve months from this date,—I am directed to communicate to you His Excellency's sanction to take possession of the said twelve hundred and eighty acres of land, and to retain the same as a reserve until His Majesty's pleasure be made known on the subject, or until a regular deed of grant be made out in your favour, but subject to any prior claim which may be discovered on surveying that part of the country, and liable to be resumed at the end of twelve months from this date, if within that period you do not fix your residence on the land.

If ultimately granted, the land is to be held by you in free and common socage, on the following conditions, viz. :—

1st. You are to pay a quit rent to the Crown of five per cent. per annum on the value of the land, which is to be hereafter fixed by the Commissioners appointed for that purpose, or by order of His Majesty's Government, the said quit rent commencing at the end of seven years from the present date.

2nd. Within seven years from the date of this letter, you must expend in improvements on the land a sum equal to one-fourth of the value estimated by the Commissioners, under the penalty of forfeiting the grant.

3rd. The quit rent is to be redeemable at your option, on a payment to the Colonial Treasury of a sum equal to twenty years purchase, provided such payment be made within twenty years after the date and execution of the grant.

4th. The land is not to be alienable under any pretence whatever before the expiration of seven years from this date, nor until the sum above stipulated to be laid out in improvements shall have been actually expended on the said land.

5th. The Crown reserves to itself the right of making and constructing such roads and bridges on the land herein described as may be necessary for public purposes; and also the right to such indigenous timber, stone and other materials, the produce of the land, as may be required for making and keeping the said roads and bridges in repair.

6th. You must either reside on the land, or employ in the immediate charge of it, as agent or manager, a free man of approved character and respectability.

I am, &c.,

ALEX. McLEAY.

Mr. Francis Flanagan,
Pitt-street, Sydney.

E.

Petition of 6th June, 1833.

To His Excellency SIR GEORGE GIPPS, Knight, Captain General and Governor-in-Chief of the Colony of New South Wales and its Dependencies, and Vice Admiral of the same, &c., &c., &c.

The respectful Memorial of Francis Flanagan, Settler, of Pargago Flat, in the County of St. Vincent,

SHEWETH :—

That your Excellency's Memorialist arrived in this Colony a free emigrant in the year 1827, and subsequently, in the year 1829, after qualifying before the Land Board, obtained his grant of land situate as above, and on which he has resided with his family ever since, clearing, cultivating, and improving the same (at an outlay of £3,000), and fulfilling all the conditions requisite for obtaining a secondary grant, as promised in the instructions issued to him by the Right Honorable Earl Bathurst, dated April, 1826.

That from the remoteness of the Memorialist's location, he being the most south-eastern settler, and his land surrounded with almost impassable mountains and gullies, and the limited intercourse therewith, both by sea and land, he was unacquainted with the promulgation of the Government Notice dated 27 June last, relative to applications for secondary grants, until the latter end of December last, when there was not sufficient time to communicate with Sydney until after the expiration of the term prescribed.

That

APPENDIX TO FOREGOING EVIDENCE.

That as the Memorialist has been prevented from making his claim within the time required, from the causes above stated, and over which he had no control, and as he is quite sure he can produce clear proof that he is entitled to a secondary grant, he earnestly entreats that he may not be deprived of the reward of his industry and outlay of capital, owing to his failure in making his claim within the specified time; and therefore prays that your Excellency will be pleased to allow him to apply for his secondary grant, and also to instruct the proper officers to receive and investigate the same, as if it had been made in due time.

And your Memorialist will ever pray, &c.

FRANCIS FLANAGAN.

F.

*Colonial Secretary's Office,
Sydney, 12 June, 1838.*

Sir,

With reference to your memorial, dated the 6th instant, addressed to the Governor, claiming an additional grant of land, I am directed by His Excellency to inform you that, according to your own statement, you became acquainted with the regulations in December last, and that as the delay of six months in making your application is quite unaccounted for, His Excellency cannot admit your claim.

I have, &c.,

(For the Colonial Secretary),
T. V. HARRINGTON.

Mr. Francis Flanagan, care of Mr. Connolly,
Australian Subscription Library, Sydney.

G.

Sydney, 16 June, 1838.

Sir,

I beg to acknowledge the honor of your letter dated 12th instant, No. 38/523, informing me, in reply to my memorial, dated 6th instant, claiming a secondary grant of land, that as the delay of six months is unaccounted for, His Excellency cannot admit my claim.

Before supplying the omission pointed out, I have to express my great regret thereat, and confident hope that it will not be attributed to any want of respect to His Excellency.

In the memorial above alluded to, I have sworn that I was unacquainted with the promulgation of the Government Notice of the 27th June last, until the latter end of December, when there was not sufficient time to communicate with Sydney until after the expiration of the time prescribed, and I trust I shall now be able to convince His Excellency that I could not have sooner made my claim without very great loss to myself.

I beg further to state, that the period of the receipt of the information in question was the commencement of harvest, which lasted about four months, during which time I had a number of free men hired for that season, and was during the early part without an overseer; I could not, therefore, without very great loss, leave my establishment;—that on the completion of harvest it was absolutely necessary to muster and brand my cattle, for which important duty I was obliged to detain my son from his studies in Sydney;—and further, it would not have been prudent to have left so many as twenty (20) prisoners, besides many others, under the control of a strange overseer, until by experience I had ascertained in some degree his fitness for a trust so responsible.

To the above particulars I have to add, that for some time I was very unwell—for one fortnight confined to bed, and that I trusted to a friend to make the required application, but as I did not specifically request him, he contented himself with recommending my personal attendance. I again beg to impress upon His Excellency the limited intercourse between my farm and Sydney. A journey by land, at my age and state of health, would have been impossible, and the only opportunity I could have had of coming by sea, between the month of December and my actual arrival, was in the month of March last, and then I was not only prevented by business but by illness.

Moreover, I own that I have trusted much to that indulgence which the Government has always so considerably shown to settlers, especially when resident in parts remote from and difficult of communication with Sydney; and I hope I shall stand excused if I say that, if ever a case merited that indulgence, mine is that case.

I trust that His Excellency will be graciously pleased favourably to consider the particulars above set forth, and permit me to send in my application for a secondary grant of land, it being a matter of primary importance to myself and family, to obtain which I have in all things strictly fulfilled every condition required by the Government, excepting only the delay of application.

I have, &c.,

FRANCIS FLANAGAN.

The Honorable the Colonial Secretary,
&c., &c., &c.,
Sydney.

H.

*Colonial Secretary's Office,
Sydney, 2 July, 1838.*

Sir,

I duly received and submitted to the Governor your letter of the 16th ultimo, explanatory of the delay in your making application for an additional grant of land, and in reply am directed to acquaint you that His Excellency cannot reverse his former decision, as communicated to you by my letter of the 12th ultimo.

I have, &c.,

E. DEAS THOMSON.

Mr. F. Flanagan, care of Mr. Connolly,
Australian Subscription Library.

I.

*Colonial Secretary's Office,
Sydney, 31 July, 1843.*

Sir,

With reference to your letter of the 23rd July last, and former correspondence, I beg to inform you that His Excellency the Governor has received a despatch from the Right Honorable the Secretary of State for the Colonies, negating your claim to an additional grant of land under the Regulations of 1826 and 1827.

Lord Stanley observes, that as the decision of the Marquis of Normanby on your Memorial, dated the 6th of August, 1838, was duly communicated to you, and as no new matter has been adduced by you, His Lordship cannot consent to re-open the case.

I am, &c.,

E. DEAS THOMSON.

Mr. Francis Flanagan,
Broulee.

FRIDAY, 31 OCTOBER, 1862.

Present :—

MR. GARRETT,

MR. BELL,

MR. EGAN.

M. M. MORIARTY, ESQ., IN THE CHAIR.

The Hon. T. A. Murray, President of the Legislative Council, called in and examined :—

61. *By the Chairman:* We have taken the liberty of requesting your attendance before this Committee, in order that you may favour us with some information which we have been led to believe you have it in your power to afford, with reference to a demand made by you to the Government for a certain grant of land, it being imagined that there was some similarity in that claim to the claim of Mr. Flanagan, now the subject of inquiry? There seems to be some difference between Mr. Flanagan's case and my own. By what I gather from the papers connected with Mr. Flanagan's case that I have read, it appears that Mr. Flanagan's claim was rejected simply because the application was not made within a certain time. In my case the application was made within the specified time, and my claim was granted; but I also, after a lapse of time, made a claim for another grant on behalf of my father, and as his representative, he having come out to the Colony under the regulations Mr. Flanagan refers to, by which each settler on arrival was entitled to receive a grant of land proportioned in extent to the capital he had brought with him for investment in the way of improvements upon the land; and each settler was promised an additional grant after the lapse of seven years, on the condition that he effected certain improvements upon the land he originally received. These were the regulations in those days. However, the seven years passed, and for a considerable time thereafter the Government took no notice of the promise thus made, and we all looked upon it as a dead letter; but a proclamation at last appeared, calling upon all persons having such claims to prefer them within the next six months. I preferred a claim, and obtained a grant of 1,280 acres. My father was dead, but if he had lived he would have been entitled to a grant, of which I should have had the benefit. Accordingly, I sent in my application to Governor Bourke, a few months before he left the Colony, for a grant to which, as my father's representative, I considered myself entitled. That claim Sir Richard Bourke disallowed. On the arrival of Governor Gipps I renewed the claim, but he refused to depart from the decision which his predecessor had given. Still I preferred the claim, urging it in stronger terms, and insisting upon it as my due. He again refused, and again I renewed it in still stronger terms, until ultimately I received a letter declining further correspondence upon the subject, in terms that I was not well pleased with at the time; but not disposed to give it up, I wrote to Sir George Gipps, referring to the letter I had received from the Colonial Secretary under his directions, declining further correspondence upon the subject. I said I had no alternative but to apply to the Secretary of State. I requested him to forward my application, in which I stated all the points. He did so, and within ten months thereafter I obtained the decision of the Secretary of State that my claim should be entertained.

Hon. T. A. Murray.

31 Oct., 1862.

62. The application was to be made within six months? Yes.

63. But with regard to your father's claim? That was an after consideration. For some time I do not think I could in any way establish it; but it occurred to me, arguing that if he had lived he would have been fully entitled to the grant, and that the original *laches* (if I may so term it) was the fault of the Government, not on our part. Had they fulfilled their agreement we should both have had grants; and his death, some time after, was no reason why they should not fulfil the promise they should have fulfilled during his lifetime. The Secretary of State ordered that the claim be entertained. The opposition was, however, carried to such an extent by Sir George Gipps, that after the first decision of the Court of Claims in my favour he sent back their decision for further consideration, and put me to great expense, in bringing down from a distance witnesses to show that the conditions had been fulfilled. I had plenty of land at the time, and did not want to keep this additional grant. The original grant was 2,560 acres, and the additional grant was to be to the same extent. I proved on the second occasion, by several witnesses, that the improvements effected upon the property had been two or three times the amount required; and I had an order for the grant in due form, from the Surveyor General's Office, being authorized to select from lands open for selection at a particular period. I sold the order for £2,560. Governor Gipps heard that I had sold it, and I offered to make a selection on the part of the person who had purchased my claim; but Governor Gipps directed a reply to be communicated to me, in which he said he would take care that no land of that value should be granted to me. The selection I made was near Jervis Bay, where a road had recently been made, and a rising township laid out; but my selection was not confirmed. I did not get the land, and after battling about it for a considerable time I was obliged to cry quits with the purchaser of my claim, who had paid me £1,280 down; he said he would only give me 10s. an acre for the land I should get; and not being able to get land worth £1 an acre, I gave in to this proposal. Governor Gipps was very candid about the matter: he said, "You have beaten me, and I cannot help it; you have got the better of us;" but he added, "I will take very good care what sort of land you get." It is now so long ago that I speak from memory, and my impression is that my application was not sent in until the time had expired; but the sole ground of objection was, that I was not entitled to it as my father's representative.

64. I think the time expired in December, 1837? I did not get my grant until 1840. Lord John Russell was then Secretary of State for the Colonies, and the communication upon the subject was with him.

Hon. T. A.
Murray.
31 Oct., 1862.

65. *By Mr. Egan* : There can be no doubt that on the faith of these regulations being carried out, you were induced to come out here? No doubt, and I produced the documents identical, I believe, with those in Mr. Flanagan's case. The application which I made first of all was that the claim should be entertained, and, according to the existing custom, it was referred to the Court of Claims, which was exceedingly particular in taking evidence to show that the person claiming was fairly entitled. There I produced documentary evidence to show that my father and myself had come out to this Colony on the faith of the promises contained in these regulations.

66. You did not do it in the first instance? Yes.

67. When you made an application previous to the expiration of the time? Yes, I proved improvements in both cases.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MATRIMONIAL CAUSES BILL.

(ROMAN CATHOLIC ARCHBISHOP OF SYDNEY AND CLERGY.)

*Received by the Legislative Assembly, 10 July, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.
The Petition of the undersigned, the Roman Catholic Archbishop of Sydney and
Clergy,—

HUMBLY SHEWETH :—

1. That your Petitioners have seen with regret and alarm, the progress of the
“ Matrimonial Causes Bill” presently before your Honorable House.

2. That your Petitioners are most firmly convinced that increased facilities for
obtaining divorce have resulted, and always result, in deplorable injury to public morality,
and to the permanency of those family relations which lie at the base of all Christian civili-
zation.

3. That the law already in existence, by which provision is made for separation,
“ *a mensa et thoro*”, gives all the relief that can be properly desired.

4. That for the Roman Catholic population of this country the measures of the pro-
posed Bill would be useless and pernicious; useless, because the vinculum of matrimony is
in all cases indissoluble; and pernicious, because legal facilities for divorce *quoad vinculum*
would practically offer to the unworthy members of their community an incentive to bad
conduct, and a premium for the violation of their conscience.

5. That the indissolubility of the vinculum of matrimony is, amongst Roman Catholics,
not a matter of opinion, but a received dogma of the Christian faith, and a denial of it by
any one would be tantamount to a renunciation of his religion.

6. That in the case, therefore, of mixed marriages, *i.e.* of Catholics with Protestants,
the operation of the Bill in question would be especially oppressive to the conscientious
Roman Catholic, who would remain bound, whilst the partner would be at liberty by law to
form a new connection.

7. That the Roman Catholics of the Colony being, as is shewn by the last Census,
one-third part of the entire population, your Petitioners feel themselves justified in respect-
fully expressing their confident hope that, in the decisions of your Honorable House, their
religious feelings and belief will, in this matter, be duly regarded.

Your Petitioners, therefore, for themselves and on the behalf of the whole Roman
Catholic population, humbly pray that the Bill known as the “ Matrimonial Causes Bill”
may not pass.

By authority and on behalf of His Grace the Archbishop,
S. J. A. SHEEHY, V.G.

For ourselves and the rest of the Catholic Clergy,
S. J. A. SHEEHY, V.G.,
J. McENCROE, Archdeacon.

St. Mary's Cathedral,
1 July, 1862.

MATRIMONIAL CAUSES BILL.

(DISTRICT OF PARRAMATTA.)

Received by the Legislative Assembly, 15 July, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Clergymen and Residents of the District of Parramatta,—

SHEWETH :—

That they have heard, with great regret and alarm, that a Bill has been introduced into your Honorable House, under the title of the Matrimonial Causes and Divorce Bill, providing that, in certain cases, persons may obtain a dissolution of marriage.

That your Petitioners earnestly deprecate the passing of a law which, they feel convinced, will be attended with great social and moral evils to the people of the Colony at large, and which has not been called for by any expression of public opinion.

That although there may be a judicial separation, *a mensa et thoro*, for sufficient cause, between man and wife, yet the marriage tie is regarded by the great body of Christians as indissoluble; and that it would be both dangerous and unwise to facilitate or sanction its violation by any act of the Legislature.

For these reasons, your Petitioners humbly pray that the Bill may not pass into law.

And your Petitioners will ever pray, &c.

MATRIMONIAL CAUSES BILL.

(CERTAIN CLERGY AND LAY MEMBERS OF CHURCH OF ENGLAND.)

Received by the Legislative Assembly, 18 July, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Clergy and Lay Members of the Church of England,—

RESPECTFULLY SHEWETH :—

1. That your Petitioners have learnt that a Bill has been introduced into your Honorable House, intituled " A Bill to amend the Law relating to Divorce and Matrimonial Causes in New South Wales."

2. That your Petitioners believe that in a Colony in which there is so much disposition to disregard the sanctity of the marriage tie, such facilities for its dissolution as are provided by this Bill would be attended with very dangerous consequences.

3. That your Petitioners regard the provisions of the 6th clause, which permits of divorce for other reasons than adultery, as at variance with the Divine law.

4. That your Petitioners further regard the provision of clause 43, which allows the marriage of persons who have been judicially separated, as open to the gravest objections, and as virtually encouraging adultery for the promotion of divorce.

Your Petitioners, therefore, believing this Bill to be alike unnecessary, and socially and morally pernicious in its tendencies, pray your Honorable House to withhold your assent therefrom.

The humble Petition of the undersigned Clergymen and Residents in the District of Raymond Terrace,—

SHewETH:—

That they have heard, with great regret and alarm, that a Bill has been introduced into your Honorable House, under the title of "The Matrimonial Causes and Divorce Bill," providing that in certain cases persons may obtain a dissolution of marriage.

That your Petitioners earnestly deprecate the passing of a law which, they feel convinced, will be attended with great social and moral evils to the people of the Colony at large, and which has not been called for by any expression of public opinion.

That although there may be a judicial separation, *a mensa et thoro*, for sufficient cause, between man and wife, yet the marriage tie is regarded by the great body of Christians as indissoluble; and that it would be both dangerous and unwise to facilitate or sanction its violation by any Act of the Legislature. For these reasons, your Petitioners humbly pray that the Bill may not pass into law.

And your Petitioners will ever pray, &c.

NEW SOUTH WALES.

MATRIMONIAL CAUSES BILL.

(DISTRICT OF BATHURST.)

Received by the Legislative Assembly, 26 August, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned the Catholic Clergy and Population of the District of Bathurst,—

HUMBLY SHEWETH:—

That your Petitioners have seen, with regret and alarm, the progress of the "Matrimonial Causes Bill" presently before your Honorable House.

That your Petitioners are most firmly convinced that increased facilities for obtaining divorce have resulted, and always result, in deplorable injury to public morality, and to the permanency of those family relations which lie at the base of all Christian civilization.

That the law already in existence, by which provision is made for separation *a mensa et thoro*, gives all the relief that can be properly desired.

That for the Roman Catholic population of this country the measures of the proposed Bill would be useless and pernicious: useless, because the *vinculum* of matrimony is in all cases indissoluble; and pernicious, because legal facilities for divorce, *quoad vinculum*, would practically offer to the unworthy members of their community an incentive to bad conduct, and a premium for the violation of their conscience.

That the indissolubility of the *vinculum* of matrimony is, amongst Roman Catholics, not a matter of opinion, but a received dogma of the Christian faith, and a denial of it by anyone would be tantamount to a renunciation of his religion.

That in the case of mixed marriages—that is, of Catholics with Protestants—the operation of the Bill in question would be especially oppressive to the conscientious Roman Catholic, who would remain bound, whilst the partner would be at liberty to form a new connection.

That the Roman Catholics of the Colony being, as is shown by the last Census, one-third of the entire population, your Petitioners feel themselves justified in respectfully expressing their confident hope that, in the decisions of your Honorable House, their religious feelings and belief will in this matter be duly regarded.

Your Petitioners, therefore, for themselves, and on behalf of the whole Roman Catholic population, humbly pray that the Bill known as the "Matrimonial Causes Bill" may not pass.

And your Petitioners will ever pray, &c.

STATE OF MANUFACTURES AND AGRICULTURE IN THE
COLONY.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 2nd September last, "to inquire into and report upon the progress and state of Manufactures and Agriculture in this Colony, with power to send for persons and papers," have agreed to the following Progress Report:—

In consideration of the matter referred to them, your Committee have taken the evidence of the persons named in the margin,* which evidence clearly shows, that during the last twenty years manufactures have not increased in the Colony; further, that there were many flourishing some time back which at present are not in existence; in consequence of which, thousands of youths who would be profitably and creditably employed in acquiring some trade of skill, are wandering in the streets in a state of vagrancy; and the witnesses are unanimous in attributing the falling off of this branch of enterprise to the free importation of inferior goods, particularly the system of consignments, which are generally sold at auction for much less than the first cost of manufacturing. The witnesses are also of opinion that an import duty of from ten to fifteen per cent. would correct the evil; and when it is considered that a duty must be levied to maintain the Government, and as it is of very little difference to the consumer on what goods this duty is imposed, but to the producer it is of the greatest importance whether it is laid on such articles as he produces, or whether it is so levied as to take from him his employment, and make him subservient to the labour of other Countries—your Committee, therefore, recommend that should it be found necessary to revise the tariff, the alteration should be so made that it will tend to encourage the manufactures and cultivation of the Colony.

*J. Byrnes, Esq.
M. M. Campbell,
Esq.
W. M. Alderson,

E. W. Rudder,
Esq.
Mr. J. Fletcher.
Mr. B. Cooke.
Mr. J. Vickery.
E. Hunt, Esq.
Mr. J. Hill.
Mr. C. Hunt.
Mr. E. Arthur.

Your Committee regret that (in consequence of the magnitude and importance of the inquiry) it would be impossible to complete it at this late period of the Session. Your Committee, therefore, deem it advisable to conclude the examination for the present, and lay before your Honorable House the evidence which has been taken before them, and recommend that the inquiry should be resumed during the ensuing Session.

JOHN LUCAS,
Chairman.

Legislative Assembly Chamber,
Sydney, 12 December, 1862.

| Mr. Lucas, | | Mr. Stewart, |
| | Mr. Harpur. | |

Mr. Lucas called to the Chair.

Resolution of the House appointing the Committee, by direction of the Chairman, read by the Clerk.

Committee then deliberated as to their course of proceedings, and
[Adjourned.]

TUESDAY, 30 SEPTEMBER, 1862.

MEMBERS PRESENT :—

| | | |
|-------------------------|-------------|-----------------|
| Mr. Lucas in the Chair. | | |
| Mr. Allen, | | Mr. Sutherland, |
| | Mr. Harpur. | |

Committee met pursuant to summons.

The witness not being in attendance,—

Ordered, That Mr. James Byrnes and Mr. M. M. Campbell be summoned to attend at the next meeting.[Adjourned to Tuesday next, at *Eleven* o'clock.]

TUESDAY, 7 OCTOBER, 1862.

MEMBERS PRESENT :—

| | | |
|-------------------------|--|--------------|
| Mr. Lucas in the Chair. | | |
| Mr. Macleay, | | Mr. Harpur, |
| Mr. Allen, | | Mr. Stewart. |

Mr. James Byrnes called in and examined.

Mr. M. M. Campbell, a witness summoned for this day, not being in attendance, to be re-summoned for Friday next.

[Adjourned to Friday next, at *Eleven* o'clock.]

FRIDAY, 10 OCTOBER, 1862.

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting convened for this day, lapsed.

TUESDAY, 14 OCTOBER, 1862.

MEMBERS PRESENT :—

| | | |
|-------------------------|-------------|--------------|
| Mr. Lucas in the Chair. | | |
| Mr. Dalglish, | | Mr. Stewart, |
| | Mr. Harpur. | |

Committee met pursuant to summons.

Mr. M. M. Campbell called in and examined.

[Adjourned to Friday next, at *Eleven* o'clock.]

FRIDAY, 17 OCTOBER, 1862.

MEMBERS PRESENT :—

None.

In the absence of a Quorum, the meeting convened for this day, lapsed.

WEDNESDAY,

WEDNESDAY, 22 OCTOBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|-----------------|--|-----------------|
| Mr. Sutherland, | | Mr. W. Forster, |
| | | Mr. Dalgleish. |

Committee met pursuant to summons.

Mr. W. M. Alderson called in and examined.

[Adjourned to Friday next, at *Eleven o'clock*.]

FRIDAY, 24 OCTOBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|----------------|--|--------------|
| Mr. Dalgleish, | | Mr. Stewart. |
|----------------|--|--------------|

Mr. E. W. Rudder called in and examined.

[Adjourned to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 28 OCTOBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|-----------------|--|----------------|
| Mr. Allen, | | Mr. Harpur, |
| Mr. Sutherland, | | Mr. Stewart, |
| | | Mr. Dalgleish. |

Mr. John Fletcher called in and examined.

[Adjourned to Thursday next, at *Eleven o'clock*.]

THURSDAY, 30 OCTOBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|-----------------|--|-----------------|
| Mr. Allen, | | Mr. W. Forster, |
| Mr. Sutherland, | | Mr. Stewart, |
| | | Mr. Harpur. |

Mr. Richard Cooke called in and examined.

[Adjourned to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 4 NOVEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

| | | |
|--------------|--|-----------------|
| Mr. Stewart, | | Mr. Sutherland, |
| | | Mr. Dalgleish. |

Mr. James Vickery called in and examined.

Re-assembling of Committee to be arranged by Chairman.

[Adjourned.]

WEDNESDAY, 19 NOVEMBER, 1862.

MEMBERS PRESENT:—

None.

In the absence of a Quorum, the meeting convened for this day lapsed.
To be called for Tuesday next, at *Eleven o'clock*.

TUESDAY, 25 NOVEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

Mr. Stewart, | Mr. Harpur,
Mr. Sutherland.

Committee met pursuant to summons.

Mr. Edward Hunt, Mr. John Hill, and Mr. Charles Hunt, severally examined.

[Adjourned to Tuesday next, at *Eleven o'clock.*]

* TUESDAY, 2 DECEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

Mr. Sutherland, | Mr. Stewart.
Mr. Edward Arthur examined.

[Adjourned to Tuesday next, at *Eleven o'clock.*]

TUESDAY, 9 DECEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

Mr. Allen, | Mr. Stewart.
Committee deliberated, and

[Adjourned to Friday next, at half-past *Ten o'clock.*]

FRIDAY, 12 DECEMBER, 1862.

MEMBERS PRESENT:—

Mr. Lucas in the Chair.

Mr. Harpur, | Mr. Sutherland,
Mr. Stewart.

Committee deliberated.

Chairman submitted Draft Progress Report.

The same read, amended, and agreed to.

Motion made (*Mr. Sutherland*) and *Question*,—That this Report be the Progress Report of the Committee,—*agreed to.*

Chairman requested to report to the House.

LIST OF WITNESSES.

| | PAGE. |
|---|-------|
| Alderson, William Madison, Esq. | 19 |
| Arthur, Mr. Edward | 72 |

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

STATE OF MANUFACTURES AND AGRICULTURE
IN THE COLONY.

TUESDAY, 7 OCTOBER, 1862.

Present :—

| | | |
|-------------|--|--------------|
| MR. ALLEN, | | MR. LUCAS, |
| MR. HARPUR, | | MR. MACLEAY, |
| | | MR. STEWART. |

JOHN LUCAS, ESQ., IN THE CHAIR.

James Byrnes, Esq., called in and examined :—

1. *By the Chairman* : You reside in Parramatta? Yes.
2. You have been engaged in the manufacture of woollens there? I have.
3. How long have you been so engaged? Directly or indirectly, about sixteen years, I think.
4. What description of woollens do you manufacture? Generally tweeds, with some fancy doeskins, and at one period, pilot cloth.
5. Can you, with your present machinery, manufacture superior cloth—broadcloth? We should want some little additions to our machinery to do that.
6. What additional expense would you have to incur in order to manufacture superior cloth—broadcloth? I can hardly answer that question; it is a matter my attention has not been directed to particularly.
7. Have you any objection to inform the Committee of the cost of your establishment—of the building and the machinery? No. We have expended in our buildings and machinery over £40,000.
8. Could you give the Committee any information as to the probable cost of constructing in England such an establishment as yours? No, I could not.
9. Do you think it would cost more or less? I think it would cost, perhaps, less in England to construct an establishment for the production of merely the quantity of cloth we could produce.
10. How many persons do you now employ in your factory? At present only about fifty.
11. How many males and females over and under sixteen? Males over sixteen, twenty-five, and under sixteen eight; females over sixteen, nine, and under sixteen, eight.
12. What is the largest number you have ever employed? The largest number we have ever employed, in connection with that establishment, was about eighty.
13. And about the same proportion of sexes? About the same proportion.
14. How many could you employ if your factory were in full work? I should think about 100.
15. Of course you would have a large floating capital at the same time employed in manufacturing? Yes.

J. Byrnes,
Esq.

7 Oct., 1862.

J. Byrnes,
Esq.

7 Oct., 1862.

16. Which would indirectly give employment to a great number of others? Yes.
17. Even more, perhaps, than would be actually employed in the factory? Indirectly it would employ a much larger number.
18. Is there not a large amount of labour in the country unproductive, which could be employed if the whole of the woollens we use were manufactured in the Colony? Yes, there is a large amount of that class of labour that is generally used in factories.
19. For which there is no employment now? No employment in that particular branch of business.
20. Have you ever thought of the future condition of the people of the Colony, with regard to the employment of future generations? Yes, I have frequently thought of it.
21. Do you not think there is a great want of employment for the youth of the country? Yes, I think there is a very great want of employment for the rising generation; so much so, that it has come within my knowledge that large numbers are brought up in vagrancy for want of proper employment.
22. Do you think it is possible to find employment for the youth of the Colony unless manufactures are carried on here? Manufactures of every description?
23. Manufactures of every description? I think it is quite impossible.
24. Do you think there are so many young persons apprenticed to various trades now as there were twenty or thirty years ago? Comparatively there are not so many.
25. Do you think there are so many absolutely apprenticed to trades as there were twenty or thirty years ago? I think it is very likely there are not; in fact, I am pretty certain there are not. In the neighbourhood more immediately under my notice, that is, Parramatta, although the population has increased 150 per cent., there are not so many persons engaged in learning trades of skill as there were twenty or thirty years ago. In fact, young persons seem entirely opposed to being bound apprentices, in consequence of there being no profitable employment for them after they have learned their trade.
26. You mean, that although they may serve five or seven years' apprenticeship to a trade, that there is no employment for them after, and that they consider the time employed by them in learning a trade as wasted? As comparatively thrown away.
27. Do you think there would be a more general disposition to learn trades if there were a prospect of future employment? I think in well-conducted families there is a disposition, but that idleness on the part of both parents and children, and habits of intemperance, have caused the present generation rather to prefer roving about the country with a pipe in the mouth.
28. Do you not think that is the effect of the want of employment for those persons who have learned trades? I think, to a very great extent, it is. I know, as a matter of fact, that even well-conducted youths are indisposed now to bind themselves, or to allow their parents to bind them to any trade. The only trade that offers inducements to young persons at present is that of engineering.
29. You think that is partly in consequence of the improbability of finding future employment? I think it is, to a very great extent. I think I could name as many as 100 young persons in the neighbourhood of Parramatta, who have been obliged to abandon their pursuits after spending five or six years in learning a trade.
30. There is not much encouragement to others to learn a trade where that is the case? I think it is highly prejudicial.
31. Have you not noticed a number of youth, of both sexes, in the streets, in apparent vagrancy? A very large number.
32. Do you think the unfortunate state of these children is caused by the want of employment? I think to a very great extent it is.
33. Do you think that in legislation we should keep in view the desirability of finding employment and of securing mental improvement for the rising generation? I think certainly that is a very prominent part of the duty of legislators.
34. Are you a free trader? I can hardly answer the question as you put it.
35. You cannot tell whether you are a free trader or a protectionist? My trade has been a free trade. If you desire to know whether I am a protectionist in the absolute sense of the term, I can answer the question.
36. What do you call the absolute sense of the term? I will put a case: For instance, my own business as a manufacturer has languished for years, and during the great excitement after the gold discovery I was obliged to lock up my establishment for five years, and to keep a man in it only to take care of the machinery. Since I have commenced business again, which I have transferred to my sons, the business has advanced rapidly, and I believe the only protection we require is, that the inhabitants of the country should prefer the use of our cloth to English cloth.
37. You have been engaged for many years in various manufactures? Yes, I have, in various pursuits.
38. Do you think there are as many engaged as manufacturers now as there were twenty or thirty years ago? No, certainly not.
39. The manufactures of the Colony instead of progressing have retrograded? Yes.
40. I believe at one time it was rather the exception than the rule to find a piece of English manufactured furniture in any house you might go into? It was very rare at one time.
41. Now I believe it is the reverse—it is very rare to find any Colonial manufactured furniture in a house? I believe many persons have imported their furniture, but there is still a great deal of Colonial furniture in different houses.
42. In the manufacture of woollens, is not a great portion of the labour suitable for young people? Yes, highly so.

43. Have you any objection to inform the Committee the rate of wages you pay to each class of your employés? My son states that the wages in our establishment varies now from 50s. to 5s. per week; when I was manufacturing they varied from £3 to 7s. 6d. J. Byrnes,
Esq.
44. Do you think, in the present state of matters, there is a probability of your receiving a fair rate of interest for the capital expended in your factory? Certainly not. 7 Oct., 1862.
45. Do you think it is possible, under present circumstances, that you will receive a fair interest for your capital? I have to keep a very large floating capital as well; it varies from £10,000 to £20,000; and there is no possibility at all, under existing circumstances, of my getting anything like a fair interest for it.
46. You have given us the rate of wages you pay in your establishment—can you inform us of the rate of wages the same class of persons receive who are employed in producing the same class of manufactures in England? No; I can scarcely do that, but it is very much lower. I may state, that nearly all the people whom I have employed of the higher class of workmen, have saved money and bought themselves homesteads, which is a proof that they have done well.
47. What do you consider a fair rate of interest per cent. per annum for the capital sunk in your establishment—in the construction of your factory, as well as for the floating capital required to keep it in operation? I should think for my building and machinery, if I were fairly remunerated, I ought to have at least 15 per cent.
48. You say you have £40,000 sunk in the factory and machinery, and from £10,000 to £20,000 of floating capital? Yes.
49. Which would be, say £55,000? I would not reckon the floating capital at the same rate of interest. I reckon the buildings and machinery at 15 per cent., to make allowance for the wear and tear, which is very considerable in machinery of that kind; and then I think a fair remuneration for the floating capital would be 10 per cent. per annum. I should be satisfied with 8 per cent., but I think 10 per cent. would be fair.
50. You say you have sunk £40,000 in building and machinery? Yes, and say £10,000 for floating capital.
51. That would be £6,000 for interest and wear and tear, and £1,000 for floating capital—so that you ought to receive £7,000 per annum to remunerate you? Yes, I ought to get that to remunerate me in that establishment, and during five years I did not receive a penny.
52. What would be considered in England a fair rate of interest for an investment in a similar manufacture? I should think, for an investment of that kind, looking to the wear and tear, they would expect at least 10 per cent.
53. What would be the difference in the cost of the raw material in England and in New South Wales for the goods you make in your manufactory? There is no analogy between the goods manufactured in England and the goods we manufacture.
54. Because they make up very inferior material? Yes, a very large quantity of old clothing is used up again, called shoddy.
55. Which, although we send them the wool, makes their raw material as cheap as the raw material is here? I think cheaper, because shoddy is comparatively costless, except in the preparation for manufacturing.
56. One of the great objects of the Committee is to get the comparative cost of manufactures here and in England;—now, imagine that a parcel of goods costs you £100 to manufacture ready for market, how much would it cost to manufacture the same quantity of goods in England, taking into consideration the cost of the raw material, the value of capital, and the rate of wages in the two places? It is really a question I can scarcely answer, but I should imagine that our goods would cost 25 per cent. more than English goods would, although we have the raw material, as far as the wool is concerned, at a lower price.
57. But you said they make up a quantity of an inferior article, which brings their raw material cheaper even than ours? Yes.
58. How much would it cost to import these goods, taking the freight, brokerage, and all other charges, until they are landed in a store in Sydney—how much per cent.—I am not speaking of the profits of merchants, but the actual cost, say, of importing £100 worth of tweeds? Tweeds vary so much—
59. I am speaking of £100 worth of goods of the same description as those usually manufactured by you? I can scarcely answer that question.
60. You say that in England they could make goods that would cost you £100 for £75,—how much would it cost to import that £75 worth from England here? I may point out one fact to show how these things vary: There are tweeds now selling in Sydney which cost the importer only 2s. 6d. per yard.
61. Delivered in his store? Yes.
62. What could you make such tweeds for? We could not manufacture an article of that description in the Colony.
63. Why? Simply because we have not the inferior stuffs to put into it, nor have we the cotton. There is very little wool in an article of that kind; but I believe it sells freely, and the importer gets a larger profit upon it than he does upon my goods.
64. I am desirous of arriving at the comparative value of Colonial and imported produce. You say an English manufacturer would make for £75 what would cost you £100—what would it cost him to import that £75 worth of goods? All the charges, I suppose, would amount to about £7 10s.
65. Then, in reality, what would cost you £100 could be imported for £82 10s.? Yes.
66. Then you would require about £17 10s. per cent. to put you on a fair footing with an importer? Yes, somewhere about that sum; I do not pretend to say that my estimate is accurate.

J. Byrnes,
Esq.

7 Oct., 1862.

67. There are persons in England and elsewhere who consign largely to this Colony, who have not very correct information as to the supply and demand of the market? Yes; it is not done to the same extent as it was some few years ago. The rapidity with which information is conveyed from one part of the world to another, and the present postal arrangements, have in a measure corrected that sort of thing.
68. Nevertheless, this reckless speculation always causes great fluctuation in the supply? I do not think it is likely there will be speculation of a reckless character in future.
69. But at all times there are large consignments sent by merchants in England, America, and other places? Yes, there are; and these are brought into the market, and sold at auction.
70. At a sacrifice? Yes.
71. Do you think the consumer, as a rule, gains anything from the unsteadiness of the market—is it not the fact that goods that sell at much below their value at one time will, after the glut is over, sell at prices as much above their value? Yes.
72. So that the consumer is not benefited? The person who goes into the market daily or weekly for his supply is not, but the person who has the command of means, and can lay in a stock, may be benefited.
73. But the great body of the people cannot avail themselves of the means of laying in a stock at a low price? No, they are subject to all these fluctuations, and I do not think they either gain or lose by it, as at one time the prices press very hardly upon them, and at another they are very light.
74. The unsteadiness of a market has a much more unpleasant effect upon the manufacturer than upon the merchant or the consumer? Yes, where their particular class of goods is affected.
75. For instance, take your own case: You have large manufacturing machinery, and a large amount of capital invested in the production of one single article;—if there is a glut in the market, that interferes with you, in consequence of the amount of labour you have to employ, and the value of the capital you have sunk? It does, very considerably indeed.
76. Have you any idea how many thousand pounds worth of goods you could manufacture in a year? Yes; with our present appliances I think about £25,000 worth.
77. Do you think a great portion of the labour you would require to manufacture that £25,000 worth of goods is unemployed at this time? I do not think it is absolutely unemployed.
78. Do you think it is as profitably employed as it would be if it were engaged in manufactures? Certainly not, for the very best of reasons, that the class of persons brought up in that line of business, from their early habits and early training, are comparatively unfitted for any other employment than that to which they have been brought up from their infancy.
79. You say that by importing instead of manufacturing, the consumer would save something like $17\frac{1}{2}$ per cent.? Yes, I should think that amount.
80. But in consequence of your machinery being idle, and of the loss of interest on your capital, and of the great portion of the labour being unemployed, the Colony loses a much larger amount than that? The Colony loses a much larger amount.
81. Do you think the Colony loses 50 per cent.? I do.
82. So that by importing instead of manufacturing, the Colony actually loses $32\frac{1}{2}$ per cent.? Yes.
83. What has become of those who were employed by you previously to the stopping of your mill? The strong, robust men went to the diggings; the others became scattered throughout the Colony, and some of them have returned since the establishment has re-opened.
84. The loss to you from your establishment being idle for five years was £30,000? It was a loss to us to that amount; in fact, the year before I had to close my establishment I made a very large sum of money.
85. Can you tell us within a thousand or so? Yes, I made about £5,000—perhaps more.
86. And nearly the whole of the persons whom you employed were during that time not profitably employed, with the exception of able-bodied persons? Some of them went to the gold fields, but they never made anything, so far as I have observed; but having entered into that pursuit, some of those men have not returned. I know, however, as a positive fact, that they have only been enabled to hold on the property they had when they left me.
87. *By Mr. Macleay:* You say the only kind of protection you wish for your woollen manufacture is that the people of the Colony should prefer the use of the cloth to that imported? Yes.
88. But I fancy the price has something to do with the preference given to imported cloth? I think the price only has to do with the sale of it. I do not think the consumer considers the price at all; I think it is the retailer of the article, who, from being able to import an inferior article at a lower price, prefers the sale of that to the other.
89. You believe that your manufactures are superior to the generality of the English tweed? Yes, very much superior for wear.
90. If superior, how do you account for the fact that people do not prefer it? Simply because they do not know the difference—the buyers do not. They go into a retail shop, and ask for Colonial tweed, and I know as a fact that English tweed is laid before them.
91. If the English tweed were not so much cheaper than colonial, there would be no inducement to the retailer to pass off English tweed for colonial? No, they would prefer the other, and the consumer would benefit largely.
92. In the present state of Colonial manufactures, do you consider that there is any inducement for a capitalist to invest money in woollen manufacture? Not in the present state of things.
93. Do you believe that if there were a certain amount of duty placed upon the imported article,

article, it would not act as an encouragement for capitalists to invest? I am afraid a thing of that kind would not operate favourably. I cannot see any way in which a sum that would be a protective duty could ever well be placed upon the importation of this article.

J. Byrnes,
Esq.

94. You have said already that you believe the manufacture is beneficial to the Colony? 7 Oct., 1862.

Yes, decidedly.

95. And that the principal cause of the present state of the manufacture is the excessive cheapness of the English article? Yes.

96. Would the increase of the price of the English article have the effect of increasing the colonial manufacture? Certainly it would; but at the same time I think an impetus might be given to that particular branch of trade, without going beyond it, by the Government of the country, that would in a large measure operate favourably to the manufacturer. For instance, I think that throughout the Government establishments in the Colony, colonial manufactures ought to be preferred to the imported trash that is now used for the clothing of the inmates of the various establishments.

97. You do not like the word "protection," but that is simply another kind of protection? It is, no doubt. I cannot disguise that, as far as I am individually concerned, it would be an immense advantage to me if the Legislature would put 1s. a yard upon the imported article.

98. Would it not have the effect of encouraging the demand for colonial tweed? Yes, I think it would.

99. Simply as a free trader you would not recommend it? I can scarcely say what I would do if I were driven up into a corner.

100. You have said that cloth that would cost £100 here could probably be produced for £75 in England? Yes, and I believe for less.

101. Would that cloth be made of the same good material? No.

102. I should like to know what would be the comparative cost of cloth made of equally good wool here and in England? I should say it would cost 25 per cent. more in England.

103. That is to say, it would cost £125? Yes; it is the inferior trash that is brought into the Colony that we have to contend with.

104. This inferior trash, does it not wear as well as colonial tweed? By no means.

105. It is not so lasting? Certainly not.

106. All English tweeds are not made of this material? No, some of it realizes a higher price than colonial tweed.

107. Does it realize a higher price in the colonial market? Yes.

108. It is really good tweed? What is called the warp is exceedingly good, but the cross-thread, which is known among weavers as the weft, is inferior; but the warp holds it together when it is well milled.

109. Is the colonial manufactured tweed really good wear? Yes.

110. Is it not of a looser texture than good English tweed? No.

111. Is it as lasting in every respect? It is far superior. That which gives a character to all cloth is the milling or felting process.

112. You stated that you have expended some £40,000 upon your buildings and machinery, and that altogether you would require an annual interest of £6,000 to repay you for the outlay upon that establishment, and that there was no present prospect of your receiving that? None.

113. But if the mill were fully employed, would it ever pay interest upon that amount? Yes.

114. The greater part of this establishment, I suppose, was put up many years ago? Yes.

115. If you were to establish a mill of the same kind now, do you think you would require the same amount? If I were to erect a mill now, I would put it up in a different way. The mills that are now erected in England have only a ground floor.

116. Even the present mill, if you had full employment, would pay? Yes.

117. And you find, notwithstanding the competition of English tweeds, and their low price, that the demand for your tweeds is increasing? Yes, it is increasing just now. My sons, who are working the establishment now, say the business with them is increasing daily.

118. The quantity of wool manufactured into cloth in this country is a mere nothing as compared with what it was fifteen or twenty years ago? Twenty years ago I think there was scarcely any wool manufactured.

119. Say just before the gold discovery? No, nothing like the quantity that was manufactured then.

120. You say that you manufactured some pilot cloth—do you mean by pilot cloth the kind of cloth that was known by the name of Parramatta? No.

121. Is that ever manufactured now? No.

122. Why is it not manufactured—was it not considered a very valuable cloth? It was valuable for the use it was put to in those days; it was a loose stuff.

123. It was manufactured only for the use of prisoners? Yes, that was all. It was never milled; the spinning was done with hand jennies—spinning wheels—in fact, with common single spindles.

124. Do you dye? Yes.

125. All colours? Yes. My sons, I may tell you, are much more successful in that part of the business than I was when I was manufacturing.

126. Do you consider that the colours are as lasting as those in English cloths? Better; the only defect in colonial manufactured goods at present is want of finish.

127. Are you aware that the Volunteer Artillery had determined to have their uniform of blue colonial cloth, and that they were compelled to abandon their intention from finding that the dye was so bad? I am aware of that.

J. Byrnes,
Esq.
7 Oct., 1862.

128. Is the blue a more difficult colour than others? Yes, it is more difficult to obtain a good blue. My sons are now trying some experiments in blue; they have an application from the Commanding Officer of the Volunteers at Port Phillip for some of their patterns, and they are going to send them down. The English dyes, as far as tweeds are concerned, are bright at first; but they are very inferior dyes, and very soon fly when exposed to the heat of this Colony.
129. But they do not come off? No, nor do the dyes my sons produce—not one of them. They have succeeded in producing a very excellent red, a colour never before in the Colony known to stand; it has stood milling for twenty-four hours, which is a very severe test.
130. *By Mr. Allen:* Have you any machinery for blanket making? No, it would not pay.
131. Is the wool too fine? Yes, it is too good.
132. In the event of farmers here introducing Southdown sheep, would the wool from these sheep, with heavy carcasses, be suitable for blanket making? Yes.
133. Would the machinery you have be adaptable to that purpose? We should require some coarser machinery.
134. Did you ever make any shawls? No.
135. Shawls have been made in the Colony? I believe they have; I made a very light cloth for ladies' dresses at one time when I was manufacturing. Previously to the gold discovery I made light black cloth in large quantity, and it was worn by some of the nuns and sisters of charity.
136. That was equal to what is known in the trade as French ladies' cloth? It is of that character, but not so light. I also manufactured a black cloth that was worn by a great number of clergymen in the Colony.
137. This fine ladies' cloth, if I remember correctly, was used by ladies for riding habits and winter dresses? It is very likely.
138. In answering a question of the Chairman, you said that the younger portions of your former workmen and workwomen were scattered about the Colony? Yes.
139. Are you aware that at the present time there is a considerable cry-out about the bush-ranging of the Colony? Yes.
140. Do you think that the idleness that was induced by upsetting manufactures has any bearing upon the demoralization of the Colony—has that idleness had a demoralizing influence upon the morality of the people? Do you mean in towns or in the country?
141. In towns, and in the country too—the idleness caused by the destruction of manufactures? Idleness at all times has a baneful influence upon both young and old; but I can scarcely say that it has had anything to do with the bush-ranging of the Colony.
142. Are you aware that the settlers in the country, if they could find profitable trades—such as yours, in a mill, in foundries, or in shipbuilding, or in any way connected with machinery—would be inclined to apprentice their sons to those branches of trade? Do you refer to farmers?
143. To farmers? I do not think they would. I think there is always sufficient material in towns to fill up all positions of that kind—there are sufficient children reared in towns to supply all such requirements.
144. To what object is the labour of those children now directed? They are nearly all vagrants; they will not go into service, while they would be glad to be employed in another way—they do not like what is called service.
145. What kind of service is open to them just now? House service.
146. But a very small number would be sufficient to fill vacancies of that kind? Yes. The fact is, there is no employment for them unless something turns up in the shape of manufactures. They are now thieves and vagrants.
147. Are there any manufacturers of tweed besides yourself? Yes, several.
148. Then there would be plenty of competition in the trade among the manufacturers in this Colony? Yes.
149. Now mark! If a duty were placed upon the foreign tweeds coming in, do you think that the competition existing amongst the manufacturers would keep the price of tweed so that no one could have a monopoly? I am perfectly satisfied it would.
150. And the consumer would have a better article, and as cheap as it could possibly be produced? Yes; competition would be sufficient to prevent any one having extraordinary profits.
151. Supposing this country grew into a large manufacturing country, equal to the supply of itself, of all sorts of coarser woollens, such woollens as would be suitable for the climate—I am not speaking of West of England broadcloths—a large quantity of wool would be consumed here;—what effect would the having a market open here on the spot, in competition with England, have upon the wool-grower—would it lower or raise the price of wool? I think the price of wool even then would be controlled entirely by the price of that article in England.
152. It would no doubt. But if we worked this wool up, we would put in new wool where they would put in shoddy and cotton; that would create a demand for wool here, and would not the increased demand in the market have a tendency to raise the price of wool? I do not think it would increase the price of wool here, because I believe that wool can be produced to any extent almost in this Colony—that the supply will always be quite equal to the demand, no matter what quantity is used here or elsewhere, especially now the northern settlements are opening up in the way they are.
153. That is not exactly the question;—in the first place, if these goods were made here—? I fully understand your question. I do not think it would raise the price of wool even then.
154. It would create a greater demand, but would not raise the price—there would be more wool used? There would be more wool used in this Colony; in fact, we should use wool where shoddy and cotton are now used.

155. Supposing all this machinery were in operation, and this work were going on, and a greater number of people were thus employed, what effect would that have upon the price of butchers' meat? I think it would rather increase the price.
156. It would create a greater demand? Yes, for this reason, that in this Colony and Victoria the great bulk of the population would be settled, and there would be very little beef or mutton brought from the northern districts; all that could be reared in the middle and southern districts would be consumed in those districts; and therefore, at all events, a fair price would be always kept up for beef and mutton in those two Colonies.
157. So that squatters, as a class, would not lose by the country engraving manufacturing pursuits upon its present industry? I do not think so, one iota.
158. You have been brought up to trade yourself? Yes.
159. Does not your experience of the world teach you, or lead you to conclude, that men brought up to a particular pursuit from early childhood, who have grown up to manhood, find it difficult to change their occupation? It does not. I could adapt myself to any circumstances in life, but I may be on better terms with myself than most people; I think there is scarcely any kind of business I could not apply myself to.
160. Suppose twenty tailors were to come from England—? They are a very different class of men.
161. Suppose, then, that twenty carpenters came here from England, and there were twenty horse-shoers required in Bathurst, would the labour of those twenty carpenters be suitable for supplying the material for the labour of twenty horse-shoers in Bathurst? No; that is a very different thing.
162. These men who had been brought up as carpenters would find great difficulty in adapting their labour to horse-shoeing? Certainly.
163. And young people brought up in factories such as yours, until they became thoroughly acquainted with the business, and had that business engrafted upon their habits, would be as likely to find a difficulty in becoming ploughmen as—? I think there is perhaps no class of individuals in the world whose habits could be considered as analogous to that of persons brought up in a weaving factory. In the first place, their minds never rise higher than the spinning wheel or the shuttle—they are, generally speaking, uneducated, which is a lamentable fact—
164. Uneducated out of their own branch of business? Out of their own branch. I believe that you might as well put a number of blackfellows in a place to perform duties to which they have been unaccustomed, as people from the West of England who have been engaged in that particular branch of business. I think it is not at all analogous to any other kind of business; it is entirely different from anything else. An educated carpenter, bricklayer, or mason, may enter upon a variety of other pursuits with success—
165. Kindred pursuits? Not merely kindred pursuits, but occupations entirely different; that, at least, is my opinion, and I am led to that opinion from experience; but I believe, from the education and training of persons brought up in a factory, they are adapted to that kind of labour and nothing else.
166. You are speaking of the factory system in England? Yes.
167. Are you conversant, from reading books upon the subject, with the factory system of the United States? I am, to a certain extent.
168. Are you aware that at Lowell, and other factories, there are public schools for the benefit of those who are employed? Yes.
169. And that girls brought up in those factories—reared in those factories and schools—become very often the mothers of men who are the ornaments of America in her highest ranks? Yes; and so much have I always been impressed with that subject, that previous to the gold discovery, I had arranged to have two sets of working children in my establishment, so that each might be unemployed in the factory every second day, and be placed under the instruction of a schoolmaster. So that the two sets would work the establishment, each being employed three days in the week.
170. Then I understand you to say, that it is not a concomitant necessity of the factory system that the people employed under it shall be illiterate and ignorant? It is one of the concomitants connected with its working under the old system.
171. It is not necessarily so? Not necessarily so by any means; but there again the reasonable remuneration which the employers ought to have for the investment of their capital in such undertakings would come in, and an employer who had to keep his nose to the grindstone in order to make his establishment pay would not be likely to engage a schoolmaster.
172. You have spoken of dye stuffs;—is the Colony adapted to the growth of some of those dye stuffs which are largely required in this manufacture? We have some very good native dyes, if they were brought out.
173. Are you acquainted with the native cochineal—have you seen or tried any? I have not tried any.
174. About fourteen years ago there was a dyer here who dyed some wools beautifully—did you see any of those—they were dyed with native dyes? Very likely I might have seen them, but I do not recollect. There is a gentleman now in Sydney, a Mr. Rudder, of 119, Woolloomooloo-street, who, I believe, has been very successful with native dyes.
175. *By Mr. Stewart:* You have said that in your opinion there are not so many engaged in manufactures at the present time as there were five-and-twenty years ago? Yes.
176. You are aware that the population has increased 500 per cent. since then? Yes.
177. Consequently, there must be four-fifths of the youthful population untrained to ordinary mechanical operations? Fully that.
178. Can you suggest any occupations in which these youths can be engaged? No, I cannot.

J. Byrnes,
Esq.

7 Oct., 1862.

J. Byrnes,
Esq.

7 Oct., 1862.

179. In fact, their services are lost to the community? Yes, and under the present system they grow up to fill our gaols by-and-by.
180. So that you think, as a matter of policy, the country should, if possible, enter upon undertakings that would give employment to youth, and train them to useful occupations? Yes, I think as a matter of policy, and of duty, the country should do something for them.
181. With the knowledge you have of the past history of the Colony, generally speaking, have you not found those who have been apprenticed, after having served their time, have rarely been criminally convicted? Yes, very rarely. Those that have been brought up to habits of industry are rarely criminally convicted.
182. So that by the encouragement of manufactures crime would be lessened? Very much, I think, among native youth.
183. In the manufacture you have spoken of, you say that 20 per cent., or less, of import duty would insure the profitable occupation of a large number of youth? Yes; there might be no limit to the quantity I could produce under those circumstances, for I could increase my machinery without much trouble; all I want is an opportunity to increase my machinery.
184. The labour is a very small item in the produce, if there were, then, an unlimited demand? Very small.
185. It is the want of demand that limits your operations? Yes.
186. You think the consumer would not have to pay a higher price for the article with which you could supply him than he has at present? I am sure he would not. Mr. Macleay, a few minutes ago, referred to some English manufactured tweeds that were superior to the colonial. I may mention that before the gold discovery I manufactured a doeskin for which I obtained 7s. 6d. a yard—a higher price than ever was paid for anything of the kind that came from England. My sons, the other day, manufactured a single warp, a particular kind of cloth, in imitation of some of the best English cloth of the same character, for which a house in Sydney gave me 5s. 6d. a yard, but the same character of English cloth, I know as a fact, they were selling at 7s. 6d. a yard.
187. Have you ever given any attention to the progress made during the past thirty years of manufactures in America? No, I have not given much attention to that.
188. You are not aware that it is only recently they have commenced manufactures? Yes, I am aware of that.
189. Are you aware that they were commenced after import duties were imposed? Yes.
190. And during that short period are you aware that they have made such progress that in many articles they can compete with England in foreign markets? Yes; in fact a very large quantity of the cotton that is used in the manufacture of English tweeds is sent over to England from America in cotton warps spun already for them.
191. *By Mr. Allen:* Is that mixed with wool there? The warp is pure cotton in England, the cross-thread, or weft, is all sorts of material, said to be wool, some of it wool, some of it shoddy.
192. *By Mr. Stewart:* Do you think it would have been possible for America to have acquired the position she now holds in manufactures if it had not been for her import duty? I think not.
193. You are aware that in the free trade policy of England, on many articles where labour is added to the raw material, is charged an additional duty? Yes.
194. Do you not think it is a natural course for every country to give a little encouragement to its own manufactures? I scarcely know what to say upon the subject when driven into a corner.
195. In fact, it is the practice of England to give, to some extent, encouragement to the labour of her people? No doubt it is.
196. Did you send tweeds to England at any time? Yes.
197. Were any duties charged? No. In Van Diemen's Land, at this moment, there are a quantity of my sons' tweeds locked up in the Custom House.
198. Having been engaged in business in the Colony a number of years, you know something of various trades;—are you aware that the furniture manufacture is not in so forward a state as it was? I know it is not.
199. In fact it has retrograded? Yes.
200. Are you aware that there are not now so many establishments in the Colony as there were twenty-five years ago, where a youth may be taught the trade? From my own personal knowledge I am not aware of that, but from all I can gather from inquiries on the subject, I believe that is the case.
201. That, in fact, since the commencement of a supply from foreign sources—the introduction of American and European furniture—we have gone back in our own manufactures? No doubt.
202. *By Mr. Harpur:* I think you said that the only protection you required was that the people of the country should generally prefer your manufactures to those imported from abroad? Yes, that is individually.
203. If they would do so they would enable you to extend your operations? Yes.
204. And in that case you could make it pay better? Yes.
205. What do you conceive to be the reason of the people not giving you that preference which it appears your goods, from their superiority, deserve? I think the cause is obvious: An inferior article is supplied at a lower price to the importer, and the retailer gets larger profits from them than they would from the sale of my goods.
206. Do you not think if an import duty were placed upon the imported article it would equalize your chance of successfully competing with the importers of this foreign rubbish? I think it would at once effectually check the importation and use of the inferior article.

207. Would not that create this preference which you wish to have? Certainly it would.
208. Do you think there is any practicable mode of creating it in any other way—you have mentioned the Government? They might give a little impetus to it, but that would not be very considerable; it would not have the desired effect to the extent I should wish to see it.
209. Were people to agree together, by means of societies and associations, to wear nothing but colonial stuffs, would that have the effect you desire? No doubt.
210. But you think there is no probability of bringing about such a result? Certainly not.
211. Then, in fact, there are no other means of arriving at it but by means of an import duty? I do not think there is any other means.
212. *By the Chairman:* Do you think if there were an import duty of 15 or 17 per cent. placed upon these goods, the consumers would lose? I do not think they would.
213. *By Mr. Harpur:* Do you not think that a duty of the kind, one that should be productive of the effect I refer to, is quite as fair to the population at large, and also as little oppressive upon the consumer, as the major part of the present import duties—take, for instance, the duties upon tea and sugar? I think it would.
214. Then, again, do you not think it would be an improvement upon the existing system of taxation if duties were placed upon such things as could be produced in the Colony, instead of being placed on things that cannot, as tea and sugar, which we cannot raise by native industry? I think it is much more reasonable to place a duty upon articles that we can produce.
215. It would have the incidental effect of increasing our own manufactures? Yes.
216. Whereas now we are obtaining a revenue by placing a duty upon articles which we cannot do without, and yet which we cannot raise? Yes.
217. Could you assign any principle, protective or otherwise, upon which the present system of taxation is based for revenue purposes, as illustrated by the statement of the Finance Minister? I could not.
218. It is a jumble? Yes.
219. The other would have an object in view, which object it might serve? I think it would serve that object very materially.
220. The present system presses oppressively upon the consumer, and at the same time has no object in view—is based upon no principle? Yes.
221. *By Mr. Stewart:* Do you not consider that an article produced by the labour of the Colony contributes a considerable amount to the revenue of the Colony, in the consumption by the manufacturer and proprietor of dutiable articles? Indirectly it does.
222. By the consumption of tea, sugar, and rum, the revenue of the country is contributed to? Yes.
223. Supposing you produce £100 worth of tweeds, a proportion of that amount, say 5 per cent. of that amount, would have been expended by the men employed in its production in articles of consumption which would contribute to the revenue? That would be the case whether I employed the men or not.
224. *By the Chairman:* If these persons were idle they would have no money with which to purchase duty paying articles? They would find it in some other way.
225. *By Mr. Stewart:* Supposing an employer with a number of workmen were to arrive here for the purpose of establishing a business of any kind, they would become consumers of articles paying duty at once? Yes, in that case.
226. Supposing it were to establish a manufactory—before its establishment he and his workmen would have contributed a considerable per centage upon the value of the article to be produced? Yes.
227. If the article were manufactured elsewhere it would come into the market without having contributed anything? Yes.
228. *By Mr. Harpur:* Do you think that the effect of such duties as we have spoken of would be to give employment to our idle population? It would have a tendency to employ them.
229. Then the effect would be, that it would increase our annual returns? Yes, no doubt.
230. And increase our wealth by the value of the work done? Yes.
231. That is the foundation of all wealth—labour? No doubt about that. It is a fact that cannot be disguised that, no matter what amount of money is brought into the Colony, it has to be sent away again for supplies of various kinds.

J. Byrnes,
Esq.
7 Oct., 1862.

TUESDAY, 14 OCTOBER, 1862.

Present:—

MR. DALGLEISH, | MR. HARPUR,
MR. STEWART.

JOHN LUCAS, ESQ., IN THE CHAIR.

Malcolm McIntyre Campbell, Esq., called in and examined:—

232. *By the Chairman:* You are engaged in the woollen manufacture in Sydney? Yes.
233. How long have you been so engaged in this Colony? About six years.
234. Were you engaged in the manufacture of woollens before you came to this Colony? No.
235. Did you know anything of it before you came here? Nothing at all.

M. M.
Campbell,
Esq.
14 Oct., 1862.

M. M.
Campbell,
Esq.

14 Oct., 1862.

236. You knew nothing about the manufacture of woollens in England? Nothing at all; I was never inside a factory till I came to this Colony.
237. You are now carrying on your manufacture at Barker's? Yes, I lease his establishment.
238. What description of cloth do you manufacture? Different sorts of tweeds, and sometimes doeskins and fancy goods as well.
239. Could you, with your present machinery, manufacture superior cloth—broadcloth? We could manufacture superior cloth, but not broadcloths.
240. Could you manufacture kerseymere? Yes, I could easily, in the first instance; but the finishing machinery I have is not adapted for broadcloths.
241. But kerseymere is single width? Yes, we have gig mills, &c., for finishing.
242. You could manufacture a fine description of cloth? Yes; for instance, this I have on is my own manufacture, which is just as finely finished, or nearly so, as any that can be made in Britain, but it can only be produced at a great expense.
243. Could you give the Committee any idea of the cost of your establishment, speaking of the building and machinery—the plant? I do not exactly know what was the cost, but I believe it cost somewhere about £20,000 or £24,000.
244. Could you form any idea of the difference between the cost of such an establishment as yours in this country and in England? I think in Britain both building and machinery could be erected for about £8,000 or £9,000.
245. Do the Committee understand your answer in this way—that what costs £20,000 in this Colony would cost only £9,000 or £10,000 in England? I am talking of the present time. I dare say a building and machinery could be erected now at considerably less than that cost.
246. Do you think it could be erected as cheaply here as in England? No, that is impossible; for in the first place if you made the machinery here it would be at a very high cost; the castings would be perhaps three times the cost they would be in England, unless there were a very large quantity made, and the moulds could be used in a great number of instances.
247. Suppose you imported the machinery? The freight alone would be more than the expense of it in England.
248. Do you think it would cost about 50 per cent. more to establish a factory here than it would in England? It would cost 100 per cent. more on the machinery, but I do not think there would be such a difference on the building.
249. Could you form an idea of the difference—taking the building and the machinery? There would be at least 50 per cent.—I should say more—between 50 and 60 per cent. at least—that is, taking the building and machinery together.
250. How many persons have you employed in your factory? Fifty only just now.
251. How many males and females have you over, and how many under, sixteen years of age? Males over sixteen, thirty; under sixteen, eighteen. There are three females who are not employed in the establishment; they are engaged in piecework at their own houses.
252. Is that the largest number you have ever employed? No, at one time I had sixty-five.
253. Is your establishment in full operation? Not altogether; we could do a little more by pushing.
254. When you had sixty-five was it in full operation? We were doing as much as we possibly could in the daytime. The reason of our having so many then was that we made more light fancy goods, which were then more in demand, and the process of preparing them was rather different from the present. We used then to dye principally in the yarn; and we required a greater number of winders and reelers. We also attempted to make a finer description of yarn, so that we had to employ more piecers; the weaving was also more difficult. In short, in all branches we had to employ more hands. Now we dye in the wool, which renders a smaller number of piecers, winders, and reelers necessary.
255. Is a large floating capital necessary in carrying on your business? That entirely depends upon the stock, and the sale we get for our goods; at present it requires in my establishment between £8,000 and £9,000; my stock at present is rather over £6,000.
256. Your factory gives, indirectly, occupation to many persons, from the floating capital? Of course it does, in this way:—I require so much wool; that wool must be grown, and so many men are employed in its production. Then, again, I use a quantity of coal; that, of necessity, must require so many miners to bring it to the surface; then it has to be carried in vessels to Sydney. I also use a good quantity of oil, which requires so much labour to bring it to market. I also use a large quantity of water, for which I pay over £100 a year.
257. Is it not a well known fact, that fifty persons employed in producing any article, indirectly employ some hundreds of persons? In growing the raw material, in manufacturing it into cloth, and the making it up into garments by tailors. I think it would take more than a hundred to grow the wool I consume; because I consume in a year as much as a very large station can produce, and a great number of men are employed on a large station. In raising the coals I consume, I do not know how many men could be employed; then, again, it keeps a large number of tailors during the whole year to make it up into garments.
258. Is not a large amount of labour in the Colony unproductive, which could be employed if the whole of the woollens used in the Colony were manufactured here? No doubt, a very large amount.
259. Have you ever thought of the future condition of the people of this Colony, in regard to the employment of the rising generation? I have occasionally reflected upon the subject.
260. Do you not think there is a great want of employment for young people in this Colony? Judging from my own experience of the number of applications made to me, there is, for young boys especially.

261. Have you many applications? A very large number indeed. Not a week passes but there are perhaps twenty applications from boys to be taken into my establishment.

262. Which boys now are running about in idleness? Yes, or selling fruit in the fruit season, or doing any odd jobs they can get to work at.

263. Do you not think idleness has a very demoralizing effect upon young persons? Certainly—no doubt about it.

264. Do you think it is possible to find employment for the youth of the country unless manufactures are established here? I do not myself see any prospect in this Colony, unless we have more shipping out of our ports, and more shipowners in the Colony.

265. Are there any shipowners? There are a few; and a few youths might be apprenticed to the sea, or engage in bush occupations; those are the only legitimate occupations I can see for youth.

266. Do you know, of your own knowledge, that there is in this Colony a single owner of ships trading to England? I am not aware that there is.

267. You do not know one single owner? I could not say positively that I do, but I know there are many owners of coasters and inter-colonial traders. There is another means of employment I can see, but that might be considered as a manufacture also. I refer to the establishment of gold mining as a regular business; by the employment of machinery in quartz crushing.

268. Do you not think the life of a gold digger is a rambling one? Not if they settle down upon a good reef. I know places up the country where people might have occupation for years to come—where a great number of men might be employed.

269. Of course, as you have been only a few years in the Colony, you cannot give us any idea of the state of manufactures some years ago in the country? No.

270. Was your attention called to the state of manufactures when you first came into the country? When I came into the country there was not a single woollen manufacture in operation.

271. Have you not heard that there were seven or eight in operation in 1849? I think there were seven.

272. Can you name them? The Aberdeen; I am not sure whether the Stockton, Messrs. Donaldson's, was in operation or not; Mr. Barkor's, Parramatta; Rayner's, French's, and Lord's establishments.

273. From your answer to a question just now, in which you stated that you had applications from some twenty boys every week, I infer that there is a desire among young people to learn trades of skill, if opportunities offer? Yes, I think there is; at any rate there is a desire on the part of parents to send them to permanent employment if possible.

274. Have you noticed a large number of children running in the street in apparent vagrancy? Yes, I have often.

275. Particularly in some of the back yards and on some of the wharves? Yes, especially about Sussex-street, and on the wharves in the west of Sydney—in short, in almost all parts of the city.

276. From your previous answer, I should imagine that this unfortunate state of things is caused by the want of suitable employment for young people in the country? Yes, to a very large extent; I do not mean to say that it is to the whole extent.

277. Under any circumstances there would be a great number of young people who would be brought up in idleness? Yes.

278. You think a great number would be employed if there were suitable employment for them? Yes, in any manufactures. I do not allude particularly to woollen manufactures, but to any other where a large number of young persons might be employed, and where they might have an opportunity of learning a trade.

279. In cabinetmaking, shoemaking, tailoring, and such trades as those? Yes, in engineering, boatbuilding, and manufacturing generally. There is no doubt that in Britain the great outlet for the young of the lower classes is in the large silk, cotton, and woollen manufactures, and in the engineering establishments there.

280. Do you think the Legislature should keep in view the desirableness of finding employment, and of developing the mental capacity of the rising generation? I should certainly say it is the duty of every legislator, as far as it is possible for him, and as far as his judgment will lead him, to do the best for his country and constituency; and I think one great object of his attention should be the rising generation, because the future of the country depends very much upon the moral advancement of the rising generation. If they are allowed to grow up in ignorance and neglect, they must of necessity remain for ever in that way, and the tendency of that will be to lead them into paths which might not be for the benefit of the country.

281. What do you think of the prospect of the country if we go on as we have done, importing everything we consume—do you think it will be possible to find suitable employment for the people? I am not much of a political economist.

282. Is it not common in England, where people have large families, for many of the children to add something to the common stock? Yes.

283. That is not the case here? No. In Britain sometimes a crisis may come round, when the people cannot get employment, such as unfortunately prevails at present; but as a general rule, in all parts of Britain I have been in (and I have been in almost all the seaports of Britain, and in a great portion of the manufacturing towns, and I resided for a couple of years in one of the principal manufacturing cities in Scotland, namely, in Glasgow), there is not the slightest difficulty in getting a boy apprenticed to a trade in which he would have a prospect in time of earning what will support himself, and perhaps of assisting in maintaining his family as well.

M. M.
Campbell,
Esq.

14 Oct., 1862.

M. M.
Campbell,
Esq.

14 Oct., 1862.

284. He would also assist his parents in bringing up a growing family? Yes, after a time.
285. He brings in something from the commencement? He always brings in something, but very little at first.
286. Here the parents have to support their families altogether—they receive no assistance from their children? That is not the case with all, but the greater number of the children are idle.
287. I am speaking generally? I should say about half the children under fifteen, or perhaps under fourteen, in Sydney, bring in nothing at all to their parents—that is, children of the working class.
288. You are not, I suppose, an advocate for sending children into factories at a very tender age? Not at a very tender age; but I think if there were a system of Factory Acts, such as they have in Great Britain, but with perhaps shorter hours, making it compulsory upon the employer to give certain hours a day for the purpose of education, and in some cases to provide the means of education, it would be far better even for children of nine years of age to be in a factory than to be fighting and scrambling in the streets, picking pockets, or taking away everything they can lay their hands on.
289. That is the case in Germany, is it not—though there children are not allowed to enter a factory till they are ten years old? I did not know there was such a law there, though I have been in Germany.
290. The owner of a factory there is compelled to keep a schoolmaster at his own expense, and to give two hours' education for six following years? I believe in Britain, under the Factory Act, an employer is compelled to allow so many hours a day for education.
291. At the manufacturer's expense? They do not receive any payment for the time, I should think, but the wages are proportionate. I know that in connection with the largest factories in the neighbourhood of Glasgow they have schools, as, for instance, at Pollockshaw, Barhead, Nelston, Blantyre, Paisley; for I have been through the whole of these towns.
292. In the manufacture of woollens, a large portion of the labour is suitable for young people? Machinery has been brought to such perfection that not anything like so many young people need be employed now as there were formerly, before 1849.
293. Have you any objection to inform the Committee the rate of wages you pay? The fireman £2 15s. 6d. a week; spinners, slubbers, and dyers, £2 5s; fullers, cutters, and warehousemen, £2 2s.; piecers and feeders from 7s. to 10s. These latter are boys of from nine to fourteen or fifteen years of age. The weavers I employ by piece-work, and give them from 10d. to 15d. a yard for weaving.
294. I gather from your evidence that the youngest boy you have in your establishment is about nine years of age? Yes, and he has been there only a few days, but I have boys who have been in the place since they were eight who are now about fourteen.
295. Can you inform the Committee the rate the same class of persons would receive in England, if employed in manufacturing the same class of goods? Firemen, from 15s. to 18s.; spinners and slubbers about the same rate of wages; dyers from 14s. to 21s.—a really good dyer is a valuable man at Home as well as here. A weaver would get from 3d. to 5d. a yard for what I give from 10d. to 15d.; and piecers or feeders would get from 1s. 6d. or 2s. to 2s. 6d. a week.
296. *By Mr. Dalgleish*: That is in Scotland? Those are about the rates both in Scotland and in England; I have men who have come from both places.
297. *By the Chairman*: With reference to dyeing—do you find any difficulty in setting the colours? No, if you choose to go to the expense it is quite an easy matter.
298. Do you think there are any materials in the country suitable for dyeing? Plenty; there are plenty of dyewoods in the Colony.
299. Have you tried any of them? Yes.
300. And found them succeed? Yes, as well as any dyes that can be got in any part of the world; though the expense of bringing them from the interior is greater than that of importing them from England.
301. But if there were a good demand for dyewoods—if all the woollens used were manufactured in the Colony—it would be worth a person's while to turn attention to these matters? Yes, in that case the demand would be so great that it would be worth while for people to turn attention to it as a branch of trade, and if they did so they would at length export instead of import. I know there are several valuable dyewoods in the Colony. I may have been a little wrong in saying that the expense of bringing these woods from the bush was as great as that of importing them. I should have included the expense of chopping it down into chips, or perhaps of grinding it down, which is the course pursued with many dyes in Britain. If this were done here it would make our dyes dearer than those imported.
302. *By Mr. Stewart*: Would our colonial dyewoods require to be conveyed from the interior? Some of it would be brought from the coast; a great many kinds of dye could be brought from the Clarence and Macleay Rivers. There are some also near Sydney, but they are not so good.
303. *By Mr. Dalgleish*: Have you had any communication with Mr. Rudder relative to dye stuffs? I had some years ago. There is plenty of fuller's-earth in the Colony; there are beds of it on the Hunter River.
304. *By the Chairman*: If there were a large demand for these dye stuffs, there would be mills for crushing them, in the same way that there are for crushing the mimosa bark for tanning purposes? Yes, no doubt grinding mills would be erected. I know one very large dyeing establishment in Glasgow, where they have a mill of their own for that purpose.
305. What do you think a fair rate of interest per annum for capital employed in the construction of a factory—I am referring to the building and machinery? You mean what would be a fair rent to get. I should say 10 per cent. would be ample. There is certainly a great deal of wear and tear in the machinery.

306. Taking wear and tear of machinery, insurance, and all other items? I could speak from the terms of my lease, but that is only one case.

307. I am not speaking of an individual case, but as a general rule as a manufacturer—supposing you were going to establish a factory to-morrow, what do you think would be a fair return for your capital—of course taking into consideration the wear and tear, insurance, and profit upon capital? It is difficult to make an estimate of wear and tear, but I think if I were going to build a factory, and put in machinery to let it out, I ought to get as much rent as 15 per cent. per annum; that is, if I did not let it with the condition that the tenant should keep the machinery in order; if that condition were made, I should be satisfied with from 8 to 10 per cent.

308. You think, with wear and tear, nothing less than 15 per cent. would pay? Nothing less than 15 per cent. would pay.

309. What would you think a fair return for the floating capital employed? From 8 to 10 per cent. in this Colony.

310. Our object is to get the comparative value as between New South Wales and England—have you any idea what manufacturers in England consider a fair return for the capital expended in their factories? In Britain, for instance, a manufacturer, if he builds an establishment, can mortgage that establishment at a rate of interest of from 3 to 4 per cent. per annum, or even from 2½.

311. In the same way he could mortgage it here for about 8 per cent.? About 8.

312. *By Mr. Dalgleish*: From 8 upwards? Yes.

313. *By the Chairman*: What do you think would be a fair return for the floating capital? In Britain manufacturers like to have good returns, and will not be satisfied with small profits, as manufacturers must be here. I know that in Yorkshire they generally put on their interest at the rate of 6 per cent., even for the interest of money over and above their profits. They have a way of making out their calculations, and put down many items we do not here; but I really do not know what a manufacturer in Britain considers a fair rate of interest for his capital.

314. They make up a very inferior material in England from what they do here? They make in England the worst description of goods in the world, and they make the best; they make some three times the value of any we produce here, and they make others not worth one-tenth of the goods we make here.

315. What is the difference of the cost of the raw material here and in England—I am speaking of what is sent out here and sold as colonial tweed? The colonial tweed is more particularly used by the working classes here; and the article they send out to correspond with that is made of very inferior material indeed, for it is principally made of shoddy; but the best class of goods is made of the best wool that can be got in the world. Between the cost of wool here and in England there is very little difference. Last season I was very largely engaged in the purchase of wool—I purchased nearly £100,000 worth, not on my own account, but for export, and I made tables of the prices that were given here and the prices realized in England, from which it appeared that the difference was a little under a penny a pound.

316. Is that generally the case, or was that the result of a falling market? That is one year.

317. Sometimes they have to pay considerably more? Yes.

318. On the average, what would be the difference? I do not believe, on the average, the difference is more than 2½d. a pound, or say 10 per cent.

319. Imagine a parcel of goods which costs you, say £100 in the manufacture, ready for market—how much would it cost the manufacturer in England to produce the same quantity of the same description of goods, taking into consideration the cost of manufacture, the price of wool, the interest upon capital, and the price of labour in both places? I think it would cost in Britain about £60—that is as near as I can roughly go. I divide the cost of production into three classes:—labour costs with us nearly three times as much as in Britain; wool costs about three here, and about three and a half at Home; dye wares, oil, fuel, and other expenses cost in England about one-third of what they do to us. I think the proportion would be about 65 in England to 100 here.

320. How much would it cost to import these goods, taking into consideration the interest of money, and all charges, till they are put into the warehouse here for sale? For exactly the same class of goods, I think the expenses would be from 15 to 16 per cent.

321. That would be an addition of £8 or £9 to the cost? £9 or £10—it might cost more; there is inland carriage. I am afraid I have estimated the cost in Britain rather too low.

322. You think they could manufacture the goods in England and import them here for 75 per cent. on what you could manufacture them? It would appear so from that calculation, so that I must evidently be wrong in it, for they could not do that.

323. What do you think would be the difference between the cost of goods manufactured here, and goods of the same quality imported here? I made some calculations a long time ago, and as far as I can recollect, the difference is about 15 per cent.

324. Then the public, by using these woollen goods manufactured in this country instead of those manufactured in England, lose an amount of 15 per cent.? You must take another matter into consideration—they do not lose it; for if you place the two articles beside each other you will at once see the difference; for instance, this pair of trowsers, made of colonial tweed, would outlast two pairs made of English, so that there would be a gain instead of a loss. The goods in Britain corresponding with those we manufacture here are made chiefly of ground-down clothes, or shoddy, as it is called, and with this is put a sprinkling of good combed wool, and plenty of oil. When cotton was cheap they used cotton warp, but since cotton has risen to so great a price, they use short, coarse English wool and shoddy, and this

being

being short, the cloth takes a better face with little trouble, after leaving it lying in a damp cellar for a week.

325. Then it is easier to give a good appearance to a bad material than to a good? Yes; it is easier to give it a good appearance, because the material is broken up already.

326. According to your explanation the people would lose 15 per cent.? Yes, for I made a calculation of the same quality of goods—those that would supply the market for the same purpose. There is another thing I would draw the attention of the Committee to: There is very little difference between the average cost of the raw material here and in England. For instance, my tables of the prices obtained for wools in this market, and the prices obtained for the same in Britain, average from $\frac{3}{4}$ d. to 1d. per pound, or about 5 per cent. The actual average cost of conveying wool to Britain, and the sale charges, insurance, &c., thereon, are about $2\frac{1}{2}$ d. to $2\frac{3}{4}$ d. per lb.—or, say, 10 to $12\frac{1}{2}$ per cent. on the cost here. Dyewares, oil, and fuel are much cheaper in Britain; but if there were several factories in operation in the Colony, attention would be paid to the dyewoods, which are abundant in the Colony, and indigo could be procured as cheap if not cheaper than in Britain; and for blanketing, coarse wool could be imported from India at a lower cost than that at which it is sent to Britain. There is a large amount of blanketing required in this Colony, and if manufactures were established here, blanketing could be produced here as cheap as in Britain. The two principal items in the cost of manufacture are, the price of the raw material and the price of labour; but in the manufacture of blankets the labour required is very little, and the wool might be obtained from India for this purpose at as low a price here as in Britain.

327. You have no doubt, if a duty of 15 per cent. were placed upon imported woollen goods, you could drive them out of the market? As regards my own feelings, I am very averse to duties. Though I was brought up a conservative, I believe I have imbibed free trade principles. As regards the manufactures and machinery we have got, the sooner they are over South Head the better; but I think it would be for the benefit of the Colony to have a duty upon woollens, and upon other goods that could be manufactured in the Colony, so that the attention of capitalists might be directed to the fact, and might be induced to build factories; because the history of woollen manufactures in this Colony is enough to keep any capitalist from sinking money in them; not from the fact that they could not compete with Britain if they were in favourable circumstances, but from the factories having been built in connection with flour mills, and not for the special purpose of manufacturing woollen goods. I believe the want of success on the part of manufacturers here prevents capitalists from embarking in these pursuits here; and I have little doubt that if a duty, even of 10 per cent., were imposed on imported woollen goods, we should, within the next eight years, manufacture all the woollens required by the Colony.

328. That would of course employ a large amount of the labour which is now quite unemployed? A very large amount indeed. There would be laid out by manufacturers alone, within the factories, £100,000 a-year for wages.

329. That labour is now unproductive? A great portion of it—not all. At present, I think, there is not a very large proportion unproductive.

330. Did not I understand you to say that a large number of the youth of this country were unemployed? Yes, but I think there are not so many adults out of employment who could take part in this.

331. Is it not the fact, that persons brought up to a particular trade can earn more at that trade than at another? They prefer it, but I do not know that they can earn more at it.

332. For instance, weavers;—do they not earn more at their trade than they could at any other? They do not like to be employed at other occupations; but I know that there are more weavers employed on the gold fields, at the present time, than there are in all the factories in the Colony.

333. Do you think that would be the case if manufactures were increased? No, I do not think it would; I do not think, if they could get employment in factories, they would remain at the gold fields.

334. There are a great number of persons who consign largely to this Colony? Yes. When the season is over in Britain, warehousemen must clear out their old stock of goods, and there is no way of doing so but by sale to an exporter, or by consignment to some foreign market. In the latter case the goods are hypothecated to some merchant at two-thirds of their value, which is drawn against them, or they are hypothecated to a bank, and drafts drawn upon the correspondents to two-thirds of their value or invoice price; and in many cases the goods immediately upon arrival at the foreign or colonial port must be sold to meet the drafts. In most cases the balance of proceeds over drafts are barely sufficient to cover commission. Of course this puts the warehouseman in possession of funds to carry on his business, but his profit, as a general rule, is made on goods sold in their season. The manufacturers, on the other hand, before the season sets in, take orders for a quantity of various patterns—say ten pieces each of ten different patterns, for, say, twenty firms. As a rule, these houses, though ordering ten pieces, will, in all likelihood, require twenty, and the manufacturer, in anticipation of this, makes from fifteen to twenty. He will also generally have job goods, or goods with some flaw in them, and if his customers, whom he contracted to supply at a certain price, say 5s. per yard, do not take them from him, he cannot sell to the trade at a lower figure, or he would be competing with his own customers. His only alternative, then, is to sell on condition that the goods are for a foreign or colonial market; and in many cases the price is 30 to 40 per cent. lower than he made them to order. Our legitimate warehousemen in Sydney know this well, and they purchase accordingly from the manufacturers in Britain towards the close of the season. There is not the slightest doubt but that the large extent to which heavy advances are given on goods consigned to this Colony operate against the legitimate importer, and cause a fluctuation in the price of imported

imported goods, which would not be the case if such consignments were not so heavy or so frequent, the consignees being only influenced by the endeavour to procure funds, and not by any knowledge of the state of the market to which they are sending the goods. Of course they can have an idea from the entries passed, and trade tables, and reports of the amount of goods exported for various markets within stated periods, but of the stock of the particular style of goods they are sending they know not whether the goods exported were like them or not. They may know, for instance, that in value £1,000 were exported in woollens, but whether fancy, heavy, broad, or any other quality, they have no idea; and there is every probability the same quality of which there is a glut in the British market is sent by every needy warehouseman to the same market. I do not believe the consumer gains anything at all by this. Legitimate importers can never militate against manufacturers, and in short, they are the best customers of manufacturers, as far as my experience goes. A steady market is particularly necessary in this Colony, as the system of trade is so different to what it is in Britain. In the first place, labour costs here more than double what it costs in Britain, and labour must be paid for in cash. In Britain wool can be purchased on terms; but in this Colony, to offer your acceptance or promissory note for wool, would damage your credit considerably. Every article that is required by the manufacturer here, such as wages, wool, coal, tallow, oil, &c., must, according to established custom, be paid for in cash.

M. M.
Campbell,
Esq.
14 Oct., 1862.

335. We gather from your remarks, that the consumer does not, in the long run, gain by these gluts in the market? Nothing at all; for instance, I had a conversation the other day with a man of great experience in the London market, who has come out to Messrs. Christopher Newton and Co., and he corroborated the statement I have made with regard to the purchase of these goods. He says that as a draft is drawn against these consignments, the consignor must of course sell them at any price—the consequence is, that others will not import these goods of which there has been a glut, and in a short time they rise greatly in price. But in woollens generally, in Sydney, the warehouseman gets 50 per cent. over the price paid for them in England; so that the consumer, the man who wears the goods, pays more for them than he would for the same goods manufactured in the Colony—considerably more.

336. Although you say this unsteadiness, which is caused by consignments, is detrimental to the merchant, it is much more so to the manufacturer? Yes.

337. Where there is a large quantity of machinery and a large number of people employed in manufacturing one article? Yes, it falls upon him very heavily, because the manufacturer has to lay out so much money in wages and other things. For instance, if I had my establishment idle one week it would be a loss to me of £140.

338. If the persons you employ were kept idle a month or more they would be dispersed over the country I suppose, and you would scarcely get them together again? I have had my place standing idle but once since I commenced, and then I was making some alteration in the machinery, and getting new boilers; at that time my establishment was six weeks idle, but all my men, with the exception of one, remained without taking other places.

339. That was because they knew you were going to commence again? Yes.

340. But if there had been an uncertainty on that point, do you think there would have been difficulty in securing men fit for the work? I could get others in their place, because there are so many in the Colony who have been brought up to the manufacturing business at Home.

341. What amount of goods have you manufactured in your factory per annum? At present I manufacture about £15,000 worth.

342. Do you think these persons you have employed can earn as much at other avocations as they can in the manufacture of woollens—take the children? On the average they would not.

343. What would be the difference—have you any idea? There may be a difference of 20 per cent.—I dare say there is; there is nothing for them but to turn labourers.

344. Some of them are not even suitable for labourers? A few of the weavers are not, the others are.

345. They would not find any suitable employment? No, unless they broke stones, or were employed by the Corporation.

346. Or sold oranges? That is what many of them did in the fruit season, when the factory was closed.

347. Have you any idea of the quantity of woollens imported here? I tried to make out a table, but I could not arrive at any satisfactory conclusion with regard to the amount; but taking it in round numbers, without entering into statistics, I should think £300,000 worth at least.

348. That would give employment to how many persons? I dare say it would give employment to 2,000 at least. The per centage of labour would be one-third of the cost, although if there were a steady occupation of the labour I think we might get it a little lower; there is now no certainty with manufactures at all.

349. *By Mr. Stewart:* You find that the tendency of a steady employment of labour is to lower the rate of wages? Yes, if you could give a man steady occupation for two years he would rather take 36s. a week than be employed from week to week at £2 2s.

350. *By the Chairman:* How much of this labour do you think is now unproductive? The value is not much, but the number is very large, because it is unproductive more with regard to boys than with men. Girls also might be employed in factories, and at one time I did employ both boys and girls together, but for various reasons I discontinued doing so.

351. Do you think there is 30 per cent. loss? No, there is not.

352. Taking into account the larger amount men can earn at a business to which they have been brought up, and the number of youth now unemployed, and who might be employed in this

M. M.
Campbell,
Esq.

14 Oct., 1862.

this branch of industry? With regard to adults, I think if they went to any other occupation they would have to take employment at an average of from 20 to 25 per cent. less; and I think also that there are over 1,000 boys who might be employed in this business, but the value of their labour would not be much; still they would be kept out of a great deal of mischief.

353. You say those who are now employed would have to submit to a reduction of 20 per cent. if they were to turn to any other occupation;—would not that, added to the loss of the labour of these youths, bring it up to 30 per cent.? I do not see how you can add both together.

354. *By Mr. Dalgleish*: What did you mean by saying that it would be a good job for the Colony if the whole of the machinery were thrown over South Head? Because the machinery now used for the manufacture of woollens is not the best for it, or anything near it.

355. It is ill adapted? Not so well adapted as it might be. It would do very well for some old out-of-the-way place in Britain, where plenty of hands could be obtained at a cheap rate; but in a Colony like this, where labour is high, the object is to obtain machinery to economize labour as much as possible; and, as I explained before, the factories here were not specially built for woollen manufactures, but in connection with flour mills, and the result is that they are not so well adapted for the purpose as they would have been if they had been specially erected for it. The lights must be placed in such a way as that the operator may be able to work with advantage.

356. I understand from you, that you conceive the factories built in this Colony have not been erected with a special view to the carrying out of the particular manufacture of cloth, and that the machinery is ill adapted to that purpose? Not so well adapted as it might be. We have not all the latest improvements. Men built these factories without a thorough knowledge of the trade of manufacturing, and the circumstances of the Colony at the time of their erection were quite different from what they are now.

357. *By Mr. Stewart*: Even supposing that at the time they were built they were equal to factories in England, I presume great improvements have since been made in machinery? Yes, great improvements. Such great improvements have been made in Britain with regard to machinery, that the machinery we have now in the Colony is quite in the shade by comparison. The only object I have in view in recommending a tariff or duty on wools is to draw the attention of capitalists to manufactures in the Colony; for I believe, even at the present time, if capitalists would enter into the manufacture of woollens upon proper principles, and conduct it upon proper principles, they would make some money even at the present time; but we cannot get people to believe that.

358. *By Mr. Dalgleish*: Though you recommend 10 per cent. as being necessary to the encouragement of manufactures in the Colony? Yes; having that in view, not so much with the view of protection as to draw the attention of capitalists to manufactures, so that they might enter into the business with some degree of confidence.

359. With your manufacturing knowledge acquired in the Colony, have you any hesitation in stating it as your opinion, that manufactures carried on in the Colony in competition with England would pay—could you compete with manufacturers in England? Not with the factory I have at present.

360. With improved machinery could they? I think they could.

361. Without any duty of 10 per cent.? Of course I am moderate in my idea of an income. I do not believe I should make a fortune, but I believe I should make no loss. My attention was drawn to it through this fact: A couple of years ago I was in correspondence with some parties in Victoria, with respect to the introduction of manufactures there, and I wrote to Britain for a specification for buildings and machinery; and I think, from the price of them, and what I considered should be the rate of wages to people employed permanently, and living in houses erected by the proprietor of the establishment, out of town, the saving of the cost of water and fuel, I thought we could compete with English manufacturers.

362. You use a large quantity of water in the manufacture of woollens? Yes; but we could get that easily.

363. It is absolutely necessary that you should get a good supply of water for dyeing, fulling, and scouring? Yes. I should never attempt to establish a factory in the heart of Sydney; but there are plenty of places about Sydney admirably adapted for it. In Sydney there is very great difficulty in keeping men steadily to their work; but if the factory were a little distance from town the difficulty would not be so great.

364. Your present manufactory pays, I presume? It just pays, that is all.

365. As it pays at present, with your imperfect plant, it is a fair presumption on the part of the Committee, that with plant better adapted to the purpose, you could better compete with the English manufacturers? Yes.

366. Then the inference would be, that manufactures can be carried on in your particular branch to compete with English manufacturers under favourable circumstances? Yes.

367. *By Mr. Harpur*: That is your opinion? Yes.

368. It is not an opinion generally entertained? No.

369. Your object in recommending an import duty is to encourage that belief? Yes.

370. That is, to give capitalists confidence? Yes.

371. And that they might enter into it with some degree of confidence? Yes. With regard to the profits made by manufacturers I may say that since I have entered into this business the balance has been on the wrong side of the ledger.

372. *By Mr. Dalgleish*: From manufacturing? Yes.

373. You are engaged also in other business altogether irrespective of your manufacture? Yes.

374. Your experience as a manufacturer, so far as that experience goes, is adverse? Yes; the sooner I get clear of it the better.

375.

375. One of the great drawbacks with which you have to contend is the want of proper machinery? Yes.

376. Do you consider that the prospects of the trade are such as to induce a capitalist to invest his capital in the purchase of improved machinery, and the erection of premises in situations that might be deemed the best for carrying on manufactures here? The general public have not a knowledge of that particular trade. There may be, say a hundred capitalists in Sydney who are willing to lay out their capital in any branch of manufacture, if they thought it would pay them; but all they know of the woollen manufacture is, that those who are engaged in it, instead of making money are losing it, and they do not know the cause.

377. Do you infer from that, that if a duty of 10 per cent. were imposed—an embargo were placed by Government to that extent—upon English woollen goods, it would have the effect of drawing the attention of capitalists to that branch of manufacture? Yes.*

378. Do you think it would cause men to invest money in a business of that description, when all their previous experience of the business was, that it had ruined those who had entered into it? In the first place, there is the 10 per cent. itself to be looked at, and not only would that be a clear margin for him against the importer, but it would be more than that, as it would prevent reckless consignments.

379. Then you consider that these reckless consignments are a great cause of the inability of the colonial manufacturer successfully to compete? I believe so, in a very great measure, and I believe even English capitalists, if they found there were a duty upon woollens in this Colony, would send out men and machinery, and erect buildings in this Colony for the carrying on of these manufactures. They would send out what I may call the bones and sinews of such an establishment—say, one good dyer, a couple of good spinners, and a good slubber, and they would employ the rest of the labour in this Colony.

380. In giving your evidence with reference to the profits of English manufacturers, I understood you to say they would be satisfied with 8 per cent.? I did not say that they would, but that they should.

381. You have stated that you have not had much actual experience in manufactures in England? No, I was never engaged in them at all.

382. Are you aware of any instances where manufacturers have amassed immense fortunes in a very short period of time, from the outlay of a capital exactly the same in all respects as others who have lost all they have invested? I have known such instances, even in this Colony. In Parramatta Mr. Donaldson lost over £2,000, while I made a profit. We were engaged upon the same work, with the same machinery. It is the same in Britain, but that does not arrive at the question as to what the rate of profit should be. A great deal depends upon a person's skill, or his knowledge of business generally, or of that branch of business in particular.

383. You state that you think 10 per cent. would be sufficient here for rent of premises and wear and tear of machinery? No, 15 per cent. That is a very difficult matter to arrive at, for an injury may take place to machinery which may involve great expense to repair, or you may go on for years without it.

384. In speaking of the cost of English manufactures you have stated the difference between wages in England and here? Yes.

385. Is money cheaper here than in England, as a rule? No, much dearer.

386. Then that accounts for the difference between the two places. A person engaged in manufacture here is not much better off here than in England? As a rule, labourers are better off here than in England; for instance, the cost of living is not much more expensive here than in England; beef is cheaper considerably; there is very little difference in flour, very little difference in the price of bread; rent is certainly dearer—that is the only item in which there is a glaring difference.

387. You say there is very little difference in bread? Yes.

388. Your experience will tell you that in England the average price of a four-pound loaf is from 4d. to 5d., whereas here the two-pound loaf is the same price? There are exceptional cases where there is great scarcity. For instance, I have seen the two-pound loaf 1s.

389. I am speaking of the present time, when it is cheaper than it has been at any time during ten years? Taking it as it is, I do not think there is more than 25 per cent. difference in bread. I do not think the expense of maintaining a family of six in Sydney, leaving out house-rent altogether, is above 12s. more here than in England, or 2s. each. My attention was drawn to this matter by a man I had in my employment who came from Paisley. He was getting £2 5s. a week, and I reduced him to £2 2s. He grumbled tremendously, and said he could not live on the money. I said, "What were your average earnings when you were employed as a weaver in Paisley?" "About 12s. a week." "What did you pay for house-rent?" He told me, and I then asked him what he paid here. I found he could save £1 a week here, and he could not save a penny in Paisley. I go to the actual facts of what a man would have to expend in England, and what he would have to expend here. Sometimes beef here is one-fourth the price of what it is in Britain.

390. We are speaking of the present time? At the present time you cannot get really good beef in Britain under 10d. a pound, or say, for the labouring classes 8d., and here they can get it for 3d.

391. From your experience, you say you would have no difficulty in obtaining any number of men accustomed to your manufacture? I would not say any number, but a very large number—five times the number I require.

392.

* Note (on revision):—I explained at the time that this question was not properly put, and that it was evidently meant to lead me to acquiesce in views which I did not entertain. I said that a duty of 10 per cent. was no embargo, and was only calculated to make trade more steady.

Campbell,
Esq.

14 Oct., 1862.

M. M.
Campbell,
Esq.

14 Oct., 1862.

392. What do you consider the loss to the revenue of this country is from the absence of the persons who would be employed in this manufacture? It would make an immense difference in the revenue, but I have not thought of that.
393. Upon what rule do you fix upon 10 per cent. as a proper amount to encourage manufactures in this Colony? I look at it in this light—I allude more particularly to woollens than to other articles, though I would not confine it to woollens—that a person before entering upon any branch of manufactures would calculate what his profits would be, and with this 10 per cent. he would have a much better prospect than without it.
394. How long a time would it take to establish a sufficient number of manufactories, with the requisite machinery, to supply all the woollen goods consumed in the Colony? It could be done in eighteen months.
395. Do you think it likely it would be done in three years? No.
396. Even with this inducement of 10 per cent.? No, nor in five years.
397. Have you ever considered the extra amount it would cost the inhabitants of this Colony to pay 10 per cent. more for the woollens consumed by them for five years, until the colonial manufacturers could supply them? I do not think they would have to pay 10 per cent. in the first place, for this reason: At the present time, the large amount of goods that come out consigned glut the market, and that causes the market to be unsteady. At the present time the warehouseman gets 50 per cent. advance on an invoice.
398. Does he not sometimes get more? Yes, because the market fluctuates; and if there is a glut of woollen goods to-day the prices go down, and he has to increase the price in proportion when there is a scarcity. If this duty were put on, these reckless consignments would cease, and warehousemen would be satisfied with much less profit. The imposition of the duty would also have the effect of giving employment to a number of manufacturers who are now almost idle, and a good number of men would be taken up to work in these manufactories; for instance, there is French's, where perhaps fifty men might be employed, and I do not know that they have ten at present; at Rayner's in the same way; at Parramatta I do not think more than three-fourths of the number that might be are employed; at Houston's, at Bowenfels, there are not more than half-a-dozen, if there are that number. If we had this duty, I would put on double the number of men, and work night and day.
399. And order new machinery? Yes.
400. *By Mr. Stewart:* If an import duty of 10 per cent. were imposed upon imported woollen goods, that description of manufactures would extend considerably? Yes; in fact I would endeavour to form a large company for the purpose of carrying on the manufacture.
401. *By Mr. Dalgleish:* I presume you would send to England for machinery? Yes.
402. You would not employ colonial engineers in the manufacture of the machinery? I might do so.*
403. Would not that, in consequence of the increased cost, prevent the establishment of a colonial woollen manufactory? I do not think it would, for if a man gets a good return for his capital he does not care for the outlay.
404. You have not considered the question of the price the community would have to pay during the time these manufactories were getting into operation, for duty upon goods imported? I have not, but I can calculate it, and furnish the Committee with a statement showing that it would be an advantage to the community.
405. *By Mr. Stewart:* Do you think, at the present time, the goods supplied by you to the community are as cheap as those that are imported? Yes. There is one thing which operates against the manufacturer in this Colony, namely, that the warehousemen have, as it is called in this Colony, a "down" upon colonial manufactured goods, because every one knows what is about the original price of the article.
406. And that narrows down his trade profit? Yes, he gets only from 15 to 20 per cent., or from 6d. to 9d. a yard profit on colonial goods, while on imported he can get 75 per cent.
407. One great disadvantage under which you labour is, that you are not countenanced by those who are in the wholesale trade? Yes. With regard to my establishment, I send as much to other Colonies as I sell in Sydney; even to Colonies where there is a tariff and they pay duties for them.
408. *By Mr. Dalgleish:* Do you find any prejudice against them on the part of those who are engaged in their manufacture, that is the tailors? Just the same prejudice as I find among warehousemen.
409. That prejudice does exist? Yes, among master tailors, not among journeymen. They cannot get the profit upon a suit of colonial tweed that they can upon English tweed. A tailor will only get £4 4s. for a suit of colonial tweed, while he will get £6 6s. for English.
410. So that while tailors would like to have an import duty placed upon slops, they would object to an import duty upon English woollen goods? I do not say that.
411. In effect they do? Yes.
412. Irrespective of this inquiry,—as a matter of public policy, do you think it desirable that a duty of 10 per cent. should be put upon woollen goods? I believe it would be a great advantage. I am not prepared to say that it would for the first two or three years, but before ten years were over I believe it would be a saving of great misery to the Colony.
413. *By Mr. Stewart:* Although you are opposed to import duties, you think, in the present circumstances of the Colony, a duty of 10 per cent. upon woollen goods would be an advantage to the community? I am a free-trader, but I think, considering the state of the community—that this is a young Colony labouring under great disadvantages—it is necessary to assist it in establishing manufactures, in order that it may rise in the scale of nations. Looking to other nations, I think we have precedents for such a course. In
America

* ADDED (on revision):—I would get the boilers, engine, and heavy shafting made in the Colony; but the fine machinery, such as cards, pinions, &c., from Britain.

America manufactures have been encouraged in this way, and I believe are still; they have there a tariff upon articles they are capable of manufacturing. Seeing, also, that there are so many young people in the Colony without employment, and that many who are really good tradesmen—as carpenters, engineers, &c.—are turning to other occupations, and going into the bush for any sort of employment, I think it is absolutely necessary some encouragement should be given to the manufactures of the Colony, so that the population which is idle—more especially the rising youth—should be employed in some legitimate occupation.

414. In the manufacture with which you are more particularly acquainted, you think a duty of 10 per cent. would have the effect of encouraging that particular trade? Yes, I do; I think even a small per centage would check reckless importation.

415. You believe that the speculative importations—the clearing-out of old stocks—is more mischievous than the regular import trade? Yes, that is worse than the regular trade, because these goods come without any proportion to the demand.

416. And they are generally sold without any restriction as to price? Yes.

M. M.
Campbell,
Esq.
14 Oct., 1862.

WEDNESDAY, 22 OCTOBER, 1862.

Present:—

MR. DALGLEISH, | MR. W. FORSTER,
MR. SUTHERLAND.

JOHN LUCAS, ESQ., IN THE CHAIR.

William Madison Alderson, Esq., called in and examined:—

417. *By the Chairman:* You have been engaged for some time in manufacturing in the city, have you not? Yes.

418. How long have you been so engaged in the Colony? About twenty years.

419. Were you so engaged before you arrived in the Colony? Yes, as a working man, not as an employer of labour.

420. For any considerable period? About sixteen years.

421. What description of manufactures have you been engaged in? In manufacturing leather, and in making leather up into various articles—as boots and shoes, harness, and various other things, from the raw material.

422. Have you any objection to state to the Committee the cost of your establishment—I mean of the building and machinery? I suppose it has cost, from beginning to end, about £15,000; but a great deal of that used up and thrown away.

423. And replaced? And replaced.

424. Supposing you wanted to erect a factory similar to yours now, would it cost you £15,000? To make it a perfect thing it would not be far short; to carry out the manufacture to the full extent we ought.

425. Can you do so with your present establishment? I could do a great deal more than I am doing with my present establishment.

426. Do you manufacture first-class articles—saddlery and boots? They bring first-class prices, and that is a very good criterion; we think them first-class.

427. I presume, if the purchasers give first-class prices for them they must be of the same opinion? Yes.

428. Do you manufacture the better descriptions of leather, patent leather, and so forth? Yes.

429. You make up a great deal of saddlery, do you not? Yes, a great deal.

430. Also boots and shoes? Yes; we made a great many last year. I see we made nearly 30,000 pairs of boots and shoes of all sorts. I have not taken this year into consideration, because we generally make up our numbers at the end of the year. This year has been a very dull one.

431. How do you account for that? One reason is, that the market is completely glutted with English goods, and another, I think, is the continued dry weather. As long as the weather keeps dry people can wear any inferior article; but if it be wet they must have good strong boots. In my opinion, and I believe it is the general opinion of the trade, that accounts for the general dullness in the colonial trade.

432. Can you give the Committee any information as to the probable cost of such an establishment as yours, if erected in England? I could not give that.

433. Do you think it would cost as much, if erected in England, as it would if erected in New South Wales? I do not, as everything is cheaper in England than here. You can get builders, and can buy machinery, cheaper there than here generally.

434. You have no idea what would be the per centage of difference? No, for the reason I gave before, that I was not in that line in England.

435. How many people have you employed in your factory? At present I have about 160, of whom about thirty are apprentices; then there are the bootmakers, who take their work home; I do not know how many these employ, but many have the younger branches of their families employed at home. I mention merely the number upon my wages book. Sometimes one of these men represents a family.

436. But you directly employ about thirty apprentices? Yes.

437. Is your factory in full work? Not at present.

438. How many is the largest number you have ever employed? About 190, when in full work; at that time the wages I paid amounted to £420 a week.

W. M.
Alderson, Esq.
22 Oct., 1862.

- W. M. Alderson, Esq.
22 Oct., 1862.
439. You must have a large floating capital employed? Yes, I am obliged to have that in order to give credit.
440. Your factory must also indirectly give employment to a large number of persons? Yes, I do not know how many.
441. You use a large quantity of lime and bark? Yes; for instance, last year we used 260 tons of bark, and it would employ a great many men to get that, and we used about 6,000 bushels of lime, and it would employ men to burn and get the shells. At one time I went into a sort of rough estimate of the number of persons, directly and indirectly, we were the means of supporting, and I calculated the number at about 1,000 individuals,—that was reckoning the families. I may mention also, that we used 200 tons of coal, besides oil and tallow, of which we use a large quantity. In our business we are employed in the manufacture of the raw material from beginning to end. Last year we tanned 12,000 hides, 8,415 calf-skins, 3,000 dozen sheep-skins, besides kangaroo-skins, and odds and ends that came in and I did not take note of.
442. Then you must manufacture many thousands of pounds worth of goods during the year? I think we did a business of about £60,000 last year. We also fellmongered 700 bales of wool, but I do not reckon that as a manufacture at all, as that is merely taking the wool off sheep-skins, washing it, and getting it up for shipment.
443. Have you any idea of the quantity of manufactured leather that comes into the country in the shape of boots, shoes, harness, &c.? I think about £300,000 worth of boots and shoes came here last year. I never went into the matter of harness and saddlery, but it is a very large amount, besides carriages.
444. About £48,000 worth of saddlery? I dare say there is all that, if not more. There are also a great many other things where leather is used.
445. Is there not a large amount of unproductive labour here, which could be profitably employed in the manufacture of these leather goods which are now imported? Yes, a large amount.
446. That is not now employed in any way? There are a number of boys running about the streets doing nothing, and a lot of men cadging and dealing, and that is not very productive to any country.
447. Have you ever thought of the future condition of the people of this country, as regards the employment of the rising generation? I have perhaps thought more than a great many, and I have felt very much about it. I am quite of opinion—although it is of no use mentioning the matter here, as most of you know my ideas on the subject of encouraging manufactures—
448. Do you think there is a great want of employment for the youth of the country? I do. I am almost tormented out of my life by boys coming of their own accord, without their parents, begging me to take them apprentices; but we can only take a certain number. My impression as regards boys is, that it is of no use giving them an education up to twelve or fourteen years of age, without we are in a position, as a country, to take hold of those boys and teach them some business. It is a fine thing for a country to have manufactures to fall back upon, for as soon as a lad is taken into a manufactory he is under proper surveillance, and begins to feel himself, because he knows he is learning to be a mechanic and a man. I think between the ages of fourteen and twenty-one is the making or the losing of a man, independently of any education that may be given him previously.
449. You think there is a desire among the young people of this Colony to learn trades if they had opportunities? Yes, a very great desire. I have had apprentices who have turned out very fine young men, who are working for me now; some are married and have got families.
450. It is not only among the children of the labouring class that want of employment is felt, but among the children of the upper classes—there is no employment for them? Yes.
451. If there were manufactories, people in good circumstances would send their children to them to learn various occupations? I have been offered premiums by very respectable people, to take their sons as apprentices, but we can only take a limited number.
452. Do you think there are as many persons learning trades as there were when you first came to the Colony? I do not think there are so many in our trade, nor indeed in other trades.
453. You say you have noticed a large number of children in the streets in apparent vagrancy? Yes.
454. They are to be seen in all parts of the city? Yes.
455. From your evidence we are to infer, that these unfortunate circumstances of the children are in a great measure to be attributed to the want of suitable employment? I am quite satisfied of it. I have gone into a new branch in bootmaking, and am making boots by machinery, with rivet-work, and I have three or four lads who are making children's boots beautifully. That is a description of boot we never could get made here by men, as it does not pay them; but by introducing this rivet-work I can employ boys, and I anticipate to be able to do a large business, and thus be able to employ a large number of boys.
456. Do you think, as legislators, we should keep in view the desirability of finding employment for, and developing the mental resources of, the rising generation? Yes, I quite think that; that is to be done by a tariff.
457. You are in favour of a tariff? Yes, decidedly; nothing else will do, particularly in a young country. It has been the way that all countries have been made, according to all my reading and the experience I have had. A well-regulated tariff is the best thing for making a country. I must admit that it is rather a troublesome thing to go into by our legislators—free trade is much easier.
458. You say the manufacture of leather generally is a suitable employment for young people? Yes; we can employ them in a variety of ways in the manufacture of leather, and in making it up into various articles.
- 459.

459. Have you any objection to inform the Committee the rate of wages you pay to your people? I pay labourers from £2 to £2 10s. a week; mechanics (some work by the week and some by piece), they average from £2 10s. to £3 10s. There are a great many of our mechanics who work by piece; for instance, all bootmakers, saddlers, harnessmakers, and carriers.

W. M.
Alderson, Esq.
22 Oct., 1862.

460. Having been engaged many years in manufactures, do you think, taking into consideration the increase of population, there are as many men employed in manufacturing now as there were fifteen or twenty years ago? I do not.

461. Can you form an idea of the rate of wages the class of men you employ would receive in a factory in England? When I left England a man in a tanyard had only £1 a week, and a man who could work at the beam £1 or £1 1s. I am speaking now of the north of England, I never had much experience of the south; but wages are lower in the north than they are near London.

462. What do you consider a fair rate of interest per annum for the capital employed in your business? That is a thing I can hardly go into, it varies so much.

463. What do you think a fair remunerative rate of interest? In our business we have such a variety of articles.

464. Taking the factory generally? I think we ought not to have less than 25 or 30 per cent. Do you mean profit to cover losses?

465. Clear net profit? I should be very glad if I could get it. I think I ought to have 15 or 20 per cent. at any rate, because there is great risk in manufacturing.

466. What do you think manufacturers in England consider a fair profit? I could hardly tell you that—they used to calculate about 25 per cent., but that was to cover losses.

467. The same as you have given? That is the only way you can calculate it. That is the way we generally go into it; we say so much per cent. profit to cover the risk of bad debts.

468. What is the difference in the value of the raw material in England and New South Wales? I should think latterly the difference has been about 20 per cent.

469. Twenty per cent. cheaper in New South Wales? It is cheaper here, generally, in our line, but latterly it has been dearer. I have been losing money on the hides I have been shipping to England. There is one thing I would like to mention as regards that—we import so largely into this country that a great deal of money has to be remitted Home. People, with the idea of saving the rate of exchange, buy the raw material to ship to England, and this causes us to give more for the raw material than we otherwise should. Certainly that is doing the country good. We have been giving more for the raw material lately than we have been getting from England; I have lost thousands of pounds shipping wool and hides.

470. Can you give the Committee the relative value of the raw material employed in the articles you manufacture, the cost of the labour employed, and the cost of other matters,—as waste, interest of money, &c.;—take £100 worth of goods manufactured by you, and state the proportionate cost of these several items? The question is not sufficiently definite, as our manufacture embraces so many articles, some of which yield four times as much profit as others. On the whole, I could not answer this question, as it stands, in such a manner as to convey any direct information; besides which, it refers too much to the secrets of trade.

471. Supposing a parcel of goods to cost you for their manufacture £100,—say boots and shoes, saddlery, or leather,—how much would it cost the manufacturer in England to produce the same quantity and quality of goods? I could not tell you that; the only thing we can go by is this: If we import—and I import largely myself—how much would those goods be charged in England?

472. You import and you also manufacture;—what would a parcel of goods that would cost you £100 to manufacture in this country, cost you to import them? That would depend upon the kind of article.

473. I ask the question generally For instance, boots and shoes; we import them very cheaply.

474. What would be the difference? If a house here has a branch house in England, to save commissions, it can import the lighter articles of boots and shoes for 5 or 6 per cent.

475. I am speaking of the cost of importation from the manufacturer until they arrive at the store here, with the original cost? That is a question I cannot answer; you would have to take one particular article, as there is a great difference in the expense of importing different articles.

476. Take any articles—say £100 worth of boots and shoes, or of saddles;—suppose it cost you £100 to make thirty saddles in New South Wales,—what would the same number and the same description of goods cost you if imported from England? If they were to make the same description of goods the difference would not be great.

477. What would the difference be between the importer and the manufacturer? I should say 10 per cent.

478. Suppose a duty were placed upon goods, what amount of duty would put you in a fair position to come in competition with the importer? I calculate from 10 to 20 per cent. would give us a fair chance of competing with the commoner description of articles, because I think it is nonsense to attempt to make the very fine quality of goods yet; it would be the means of giving us a very large quantity of goods to make here which we hardly make at all at present. It is where there is a large amount of labour required in the production of an article that England has the advantage over us. For instance, as regards leather—we take the raw hide and turn it into leather, and we can produce sole leather cheaper here than they can in England, because the raw material is generally lower in price here, and the amount of labour required in its production is small. It is an evident proof that we can

produce

W. M.
Alderson, Esq.
22 Oct., 1862.

produce it here more cheaply than in England, as there is none comes here; but if you take that sole and upper leather, and make it into boots and shoes, then they have a better chance of competing with us, because of the larger amount of labour required, and the higher price we have to pay for it. Then, again, in cart harness we use a large quantity of heavy leather, and the amount of labour employed in its manufacture is comparatively small, so that we can compete with the importer; but in the case of carriage harness, where the material is light, and the amount of labour considerable, we have no chance of competing with the importer. If a gentleman comes to me for carriage harness, I advise him to purchase imported harness.

479. Then, at the present time, you can compete with England in rough work, where only a small amount of labour is required? Yes, if they would send out the same quality of goods that we make.

480. That is because you have the raw material cheaper, which makes up for the greater price of labour? Yes, we have both the hide and bark cheaper; the bark is not more than half the cost here that it is in England. In labour they have the advantage of us, and they have also superior machinery. If we were to introduce improved machinery here, it would cost money, and we should still have to pay higher wages for working that machinery, so that they would still have the advantage.

481. There are persons in England and America who consign largely to this Colony without having any perfect knowledge as to its supply and demand? Yes, that is another view to take of the matter. The principal thing we want to be protected against is this: If the Legislature could devise anything to stop these gluts in the market, we, as manufacturers, would have a better chance of competing with the English and American manufacturers, but no one can compete with a glut of goods. Persons in England, and in other parts of the world, on speculation, ship a quantity of goods; they then go to the banks, get large advances upon them, they are then sent out to this Colony, and when they come here they must be sold at any sacrifice, and there is a glut in the market. My notion is, that to put a stop to this we should have a duty of from 10 to 20 per cent. upon these goods, not to be bonded but the duty to be paid in cash on landing. If the importation were to be left in the hands of the colonial merchants, as it used to be at one time here, in the event of a glut they would hold the goods and ease off their orders to England.

482. The merchant could do that, but the manufacturer could scarcely do it when he has to keep a large number of men employed? No.

483. So that this unsteady market does more injury to the manufacturer than to the merchant? Yes.

484. For the whole of his means are directed to the production of one article, and he has to pay large sums for labour, and to keep a number of men employed? Yes, it is an awkward thing for a manufacturer to discharge his staff.

485. Is it not the fact, that a great many persons in England who are engaged in business, when they have an old stock that is out of fashion, pack it up, send it to such places as New South Wales, and draw large advances from the banks—care very little what price the goods realize when they get here? I think that has been the case often.

486. Do you think the consumer derives any benefit from these gluts;—is it not the case, when there is a glut and things fall below a fair paying price, that after the glut is over, the price rises as much above as it was before below the fair price? Very often it is so.

487. Then the consumer gains nothing by these gluts? Not in the long run; in fact, the consumer loses a great deal, because it injures business in all its different branches, and he suffers along with the rest. Business is always bad when people are selling at a loss.

488. Supposing you were to shut up your factory, could these persons whom you employ get employment elsewhere—are they suitable for other work? Yes, a great many of them are labouring men, and they could go as shepherds or get work in the bush.

489. Boot and shoemakers, tanners, and curriers—are they suitable for any other employment? They might be suitable for looking after a few sheep, or doing labouring work—they are strong enough.

490. You say you have employed 190, and that you now have 160,—what has become of the other thirty? A great many of the boot and shoemakers have sat down and got little jobs on their own account, or work for shops, but they can hardly make a living of it, there is not enough of that for them to do. A man who had formerly been in my employ came to me and wished me to take him on again; he had been trying to make up for the shops, but he said he could hardly earn a living, and would rather work as a journeyman.

491. You say about £300,000 worth of boots and shoes are imported into this Colony annually? Yes.

492. And the labour which could manufacture these boots and shoes is now unemployed? A great deal of the labour now unemployed in the Colony would be employed, but it would be foolish to suppose that we could at once make all the boots and shoes required; it would take years before we could do that. The principal thing required is to hold out an inducement to the capitalist to enter into these manufactures; he would, in the first instance, engage in the rougher sorts of work; he would then gradually teach lads the trade, get men from England, and eventually, in the course of years, we might be able to make all the boots and shoes required here, but it would be a long time first.

493. Is it not the fact, that before 1843 and 1844, the whole of the boots and shoes used in the Colony were manufactured here? There were more manufactured here then than now, comparatively.

494. If the number then in the Colony were capable of manufacturing for their own consumption, why can they not do so now? At that time we could compete better with the English market, for wages were much lower. I had, at the time you speak of, labouring

men

men working for me at £1 a week, and mechanics were paid proportionately. At that time we were selling kip bluchers at 4s. and 5s. a pair; so that the English market was completely shut out. That was owing to the general depression.

W. M.
Alderson, Esq.
22 Oct., 1862.

495. The question I asked you was, if the parties who were in the country eighteen or nineteen years ago were able to manufacture for their own consumption then, can you see any reason why they should not be able to manufacture so as to meet the consumption now, if boys were apprenticed to learn the trade as they were formerly? Certainly they ought to be able, if you gave them time.

496. From your experience, you say boys are very desirous to learn the trade? Yes, I can get plenty of lads—hundreds of them. I should not like to put an advertisement in the paper for them to-night.

497. Why? I would have my place swarming with them to-morrow.

498. I have heard it asserted, in many places, that boys in the city of Sydney will not be bound to learn trades? All I have come across seem very anxious to learn a trade. We have turned out from twenty to thirty apprentices since we have been in business, of whom many are now employed in the establishment as journeymen.

499. I think you say you have now thirty apprentices? Yes.

500. And parties who take work out of doors also have apprentices? Yes, either members of their own families, or lads under them whom they teach the trade. If any encouragement were given to men to go into business largely, they would then take lads as apprentices, and thus the number of persons who would be competent to perform the business would largely increase.

501. If there were encouragement given to manufacturers in the country, no doubt the whole of the rising generation could be fully employed? I think as new manufactories were established, it would be the means of employing a number of other trades; for instance, masons and others in the building trade, engineers, and others. It would also cause a large demand for clerical labour, for manufacturers require many clerks to look after the business.

502. They would give employment to the general public? Yes; clerks and educated men would not be tied up as they are at present to Government offices and merchants' offices, but would be able to get other employment, where, I think, they would be better paid than they are now.

503. *By Mr. Forster*: You are in favour of a protective tariff? I am for this country, and for all new countries.

504. You call this a new country? Yes, a young country.

505. Do you consider a young country and a new country to be identical? I think so.

506. What do you mean by a young country? One newly established or found out or explored.

507. Do you found it upon the fact of the land being new? Newly populated.

508. Newly taken up? Yes, by the English, or any other European nation.

509. Do you think in that way there is any analogy at all between this country and a new country, in the sense of a savage country, such as England was in the time of the ancient Romans and Saxons? You are going too far back now.

510. You are using phrases I do not quite understand, and I want to know what you mean by a young country? We will call it a young manufacturing country.

511. A young manufacturing country—what do you mean by that? I understood this was a Committee appointed to inquire into the state of manufactures in this Colony, and the best means of encouraging them, and I am not prepared to enter into an argument of this kind.

512. Did you not, when you spoke of this as a young country, say that no country had ever got on without tariffs? Yes, I think so.

513. Do you not infer an analogy between this and other countries which were young in quite another sense? I compared this country with England.

514. Do you call England a new country? No.

515. Do you mean that England became great by her tariff? Yes, in manufactures.

516. Then you mean to say, that when she was a young country, tariffs were established and made her great? I think so.

517. Do you mean that England was a young country in the same sense that this is a young country at this time? No, perhaps not.

518. Is the comparison at all capable of being sustained;—England, you say, was young, but in a very different sense from which this is young? Yes, but it is known that England established her manufactures by a protective tariff.

519. She established manufactures? Yes, by a protective tariff. But I did not come here to argue as to protection or free trade; if I had thought I should have had to do that, I would have come here better prepared for it, for we might go on with the argument to the end of the week, and neither of us be able to satisfy the other. I do not think I should be able to satisfy you, if you are a free trader, that protection is right; and I do not think you would be able to satisfy me that free trade is right.

520. Do you not think your own views are reasonable? I think they are.

521. Do you not think, if they are reasonable, that they are capable of impressing themselves on the reason of other people? Yes, but still there are times and places for these things to be argued, and I had no idea that it was to be done in this Committee room.

522. I suppose you came here to —? I came here to give what information I could as to manufactures, but not to enter into an argument.

523. I am in the hands of the Chairman; if I put any questions that are improper, the Chairman will correct me. I only want an answer to my question. You used a term I did not think a very fortunate one, and on my asking you to define it, it appears you mean a different

W. M.
Alderson, Esq.
22 Oct., 1862.

different thing from what I do? I know there is a great difference between this country and such a country as England for age, as regards being civilized.

524. If I understood you rightly, you stated as a fact, that the manufactures of this country have declined for some time? I did not state it as a fact, but I said I thought so.

525. I want to know what is the cause to which you attribute it—that is, if you feel able to attribute it to any cause? I think it is in consequence of goods being sent here so cheaply from other parts of the world, and having labour so dear here we are not able to compete with them.

526. Then, in fact, the decline of manufactures you attribute to the high price of labour? Yes, to a great extent.

527. You do not attribute it to any alteration of the tariff? No, certainly not, but I would look to an alteration of the tariff to revive manufactures again. I think it is the only thing to revive manufactures. My idea is, that in a new country—we will call it a new country, or a young country—a working man has no right to be brought 16,000 miles from Home, to get the same or a smaller amount for his labour. I think he ought to get more, or he had better stay at Home. We want, then, to alter the tariff (according to my notion, which may not be right), to bring the wages of the working classes in England up to ours, so that our manufacturers may have a chance of competing with the English or American manufacturer.

528. Then your object in establishing a protective tariff is to raise the price of labour in England? No, merely to strike the difference; for instance, if we wanted 20 per cent. upon an article, to bring us on a level to compete with the English manufacturer we ought to have that imposed as an import duty; if only 5 per cent., then we ought to have that.

529. What good do you anticipate will arise out of this levelling of wages? The increasing of the investment of capital with the employment of labour—the capital and labour must go hand in hand with each other.

530. Will not high profits increase the investment of capital anywhere? Yes but where do we get it?

531. Is there no capital invested in this country in anything? Yes, high profits increase the investment of capital; but sometimes profits though large may be uncertain, and when a man sinks fifty, sixty, or a hundred thousand pounds in an undertaking he wants to have something certain, and to feel that he will be paid interest for his outlay.

532. I do not understand the object you have in view, for you say the decline of manufactures is owing to high wages and to competition—to these two causes combined;—you do not want to lower wages, do you? No.

533. Do you want to do away with competition? No; I do not want to lower wages at present.

534. What is your object? To be able to compete with the English market.

535. That is to say, that in order to enable you to compete with the English market, you want the public to pay you the difference between what you do get and what you think you ought to get? The principal thing we want is a regulated tariff, to put a stop to these extraordinary gluts of goods that come from other parts of the world.

536. These extraordinary gluts? Yes.

537. You propose, by a preventive tariff, to prevent gluts? Yes. I do not want to lower wages to the level of those received by the starving population of England.

538. You would not like to lower them at all, I think I understood you? In some cases we would.

539. If one of the causes of the decline of manufactures is the high rate of wages, the way to restore them is to lower wages? What would be the use?—I do not think the people could live.

540. Do you mean that they cannot live upon lower wages than they at present get? Yes, many could not.

541. What do you mean by calling wages high, if those who receive them cannot live upon less? I mean as compared with England.

542. You say wages are high, and yet you say people can barely live upon them, that is a curious definition? You misunderstand me altogether; I say if we were to lower wages any more, in a great many cases people could not live; for instance, if the wages of a labouring man were reduced below £2 a week, how do you think he could live?—Boot and shoe makers are not, generally speaking, earning more than 35s. a week, and if their wages were lower how could they live?

543. You say you consider men can barely live upon their present wages? Yes, I think so.

544. In that case would you consider the wages high? I do not think they are very high wages.

545. You said you consider the decline of manufactures was owing to the high rate of wages? To gluts principally.

546. Do I understand you to abandon what you said about high wages—you do not think they are high? In some cases they are.

547. If they are high ought they not to be lowered? No, they ought not to be lowered; I wish the tariff to strike the difference, so that we might be able to go into the production of many things which we do not produce here at present.

548. You would not advocate immigration? Yes, I would.

549. Would not immigration lower the rate of wages? It might, but I think it would increase the total amount paid for wages, as there would then be plenty of work to be done.

550. You would not advocate the payment of the people's money for immigration? No, for people would find their way where good wages were to be had, if there were plenty of employment for them. For three years before I determined to come out here I was thinking

over

- over the matter. As a working man I knew there were good wages paid out here, but a mechanic looks at the matter in this way: Supposing he gets work in Sydney, he will receive good wages, but if he should be thrown out of employment after he gets there, where else is he to look for it? The mechanic in England likes to have something to fall back upon.
551. I presume the rate of wages would determine the mechanic in such a case—if he had a very high offer made to him he would go anywhere? If they were certain, or if he were engaged for three years. I have brought men out myself, but they would not come out without my entering into an engagement for that time. If I had said, "I will give you work," without specifying a time, they would not have come out.
552. Because they could not depend upon their engagement as certain, they would think, according to the old adage, "A bird in the hand is worth two in the bush"? Yes.
553. Your object in establishing protection, you say, would be principally directed against those gluts that occur in the market? Yes, I do not go to that extent with regard to protection that you imagine.
554. I do not accuse you—I only want to know what it is you aim at? All I aim at is the encouragement of manufactures, industry, and the bringing out of the resources of the Colony; and this is a plan which I think would encourage these things.
555. These gluts, you say, are injurious both to the manufacturer and to the consumer? Yes.
556. How do you arrive at the conclusion that these gluts are caused by a particular state of the tariff? I do not say that; I merely say it is my opinion that if we had a duty of 10 or 20 per cent. upon goods coming into the harbour, it would have a tendency to put a stop to this rash speculation on the other side.
557. Would there be no other way of preventing this? I do not know any other way. There is another way—if we could bring wages here to the same level as in England, and had the same machinery, we could then put a stop to it.
558. I think you said that you did not advocate a reduction of wages? I do not say I do, but that is the only other way.
559. One of the objects of this protective tariff would be to prevent these gluts in the market? Yes.
560. Has it never struck you that these gluts have been more frequent since the gold discovery than before? I think they have, although in 1842 and 1843 there were gluts.
561. Is it not, after all, one of those evils which prevails, generally, under our commercial system all over the world—this evil of gluts and uncertain markets? It is, where there is nothing to check it.
562. Do you not find that exists everywhere, under all tariffs, and even without tariffs? I dare say it does.
563. Does it not, then, arise from our system of competition, without reference to protective tariffs? Sometimes there are panics in trade that we cannot help.
564. Is not this an inevitable state of things in a gold country, so far as we can see at present? There is a great tendency to it, no doubt, in a gold country.
565. The production of gold itself being uncertain, must it not produce an uncertainty in the state of the market? The production of gold has this effect, that we do not relieve ourselves of a glut so soon as we did in 1842 and 1843. The way we relieved ourselves then was by wages coming down to a very low ebb.
566. Wages are now kept up by the gold diggings? Yes; I remember when masons were working for half-a-crown a day.
567. How did they manage to live then? I do not know—they only existed; but beef was 1d. a pound, and bread was very low at the same time; all these things have changed since the gold discovery, so that there is more need for an alteration in the tariff now than there was then; in fact, we never used to think about it then. Then, again, the apportioning of assigned servants was a protection to the manufactures of the Colony, for employers could get the labour of these men for a few rations.
568. I should like you to explain in what way you come to the conclusion that the gluts you speak of, which you have shown to be connected with the gold discovery, and also connected with our commercial system generally, would be prevented by fixing a tariff at from 10 to 20 per cent.? Because I think rash speculators in other parts of the world would not be able to get so large an advance upon their goods.
569. The price would not tempt them so much? They would know that this 10 or 20 per cent. would have to be prepaid.
570. Would it not have the effect of stopping English goods from coming here? Yes.
571. Then your object is to prevent the importation of English goods? No, to leave the importation of English goods to our own merchants, who know the wants of the Colony. It is the legitimate business of the merchant to study the wants of the country he is in, and to import accordingly. If that system were adopted here trade would go on more regularly, and every man would be able to make a fair and reasonable profit. Sometimes the place might be glutted by several merchants importing the same goods; but in that case they would have to hold their goods two or three months, till the market eased itself off.
572. You think a tariff would prevent goods being sent out on speculation? I think it would, in part.
573. Do you think people would send goods without they could get a profit upon them? Not without the expectation of profit; but there are many people who make wild speculations, who deceive parties, and get large advances upon their goods. Sometimes these goods happen to meet a good market, and sometimes they are a great loss to the importer.
574. You say these gluts do not do much good to the consumer in the long run? No, because they injure business here in the long run.

W. M.
Alderson, Esq.
22 Oct., 1862.

- W. M. Alderson, Esq.
22 Oct., 1862.
575. In fixing a tariff, you would not propose to stop importation altogether? No.
576. You intend to leave a certain margin of profit to the importer? Yes; I am more opposed to prohibition than I am to free trade.
577. You would allow a certain margin of profit? Yes, as much as they could get.
578. If you put a protective duty on, that would be so much against the profit? The consumer would pay that.
579. If you raised the tariff to a certain height you would stop importation altogether, but your object would be to leave a margin that would still tempt the importer? Yes. I wish to have a tariff here that will put the manufacturer and workmen to compete with the manufacturer on the other side with the same description of goods.
580. You propose 10 or 20 per cent.—I presume you fix that from your own experience? Yes; we calculate the expense of importation and the original cost, and then we strike the difference.
581. You would settle this tariff by the votes of persons interested in manufactures in this country—you would not consult importers as to the amount to be laid on? In England, certainly not; we have no right to legislate for England.
582. You propose to legislate for the manufacturers of this country, for their benefit? Yes.
583. But the consumers, the people who buy these articles, if they were consulted, would they not think it desirable to get them as cheap as possible? I think it would be to their benefit; for if we could find employment for everyone in the country, even supposing they had to pay a little extra for the few things they were using, they would be better able to pay it from being constantly in employment.
584. What would be the effect upon the man whose capital was engaged in a different trade from manufacture,—would not his profit be diminished in so far as he would have to pay more for the articles consumed by him? He would make it up in other ways.
585. In what way—supposing he were engaged in raising an exportable production, the price of that would not be altered in any way? Suppose we were to manufacture our own woollen goods, I think it would have a tendency to increase the price of wool.
586. Do you think it would affect the foreign price? I do not think it would affect the foreign price, but the local price.
587. Does the foreign price affect the local price? Yes, in some degree; for instance, if I see a lot of good hides I may perhaps pay more than the seller would realize if he sent them Home.
588. If I am shipping hides, and you do not give me a good price, I may send them Home to get a better? Yes; but you must recollect that the production of leather here requires no protection.
589. How is that? Because it is such a small remove from the raw material, so that I can afford to give more for the hides than the English manufacturer can.
590. Do you not want to encourage all manufactures? Yes, I would encourage every one.
591. But you have not explained how you would make it up to the producer, the man who produces wool, I will say, or tallow,—is it not clear that his profit is diminished by the amount he has to pay to you for the increased price of the manufactured article? He certainly loses to a certain extent.
592. How do you make it up to him? By giving him a superior article.
593. Is he not the best judge of what is superior,—supposing he thinks the English article is superior, would you compel him to purchase the colonial at a higher price? No, he still has his option, he can buy English goods.
594. If your tariff shuts out English goods he must buy colonial, whether good or bad? I do not want to shut out English goods.
595. I do not know how the rate is to be fixed, if it is to be left entirely at the option of the manufacturer? No, we are asking the Legislature to do that.
596. You fix yourself what the rate of tariff ought to be, you will not allow the producers to have a voice, for the producers, if you ask them, will say they do not want anything? I say they do.
597. How is the question to be settled—is the opinion of the manufacturers to be taken in opposition to all the rest of the people who employ manufacturers? I do not say it is.
598. Have you ever calculated what is the proportion of manufacturers and persons employed by them, in comparison with the rest of the community? The proportion is very small now, but we have an idea that they would increase wonderfully.
599. Suppose there were to be any increase you like, they would still be a small proportion? By the alteration of the tariff my idea is that new manufactories would be encouraged to start, and eventually, in the course of a few years, we should be able to produce a better and cheaper article for the raw producer than he gets now.
600. What do you mean by a cheaper article—an article that costs less? That costs less.
601. Including the tariff? In ten or twenty years we might be able to do without the tariff.
602. If you make your article cheaper—? We cannot at present, because our business is not on a sufficiently large scale. If you tell a man to make a single table he will have a large price; but if there is a large establishment engaged exclusively in the making of tables, they will be produced at a much lower price; and if manufactures were encouraged here and manufacturers had some certainty, there would be a greater division of labour, and many improvements would be introduced.
603. Could not that all be effected by the possession of capital—is it not effected by the possession of capital? In other countries it is, because manufactories are established, but it is not so here; people who have capital here will not risk it in things of that sort. When they can go upon stations, buy shares in banks, and various other things, they are satisfied with smaller profits.
604. If people are satisfied with smaller profits, and the rate of wages would not be lowered, what end do you propose—? My end is to bring out the resources of the Colony, and to make use of the raw material.
- 605.

605. Do we not bring out the resources of the Colony by producing the raw material? Yes. Another grand object is to make use of the lads and young men of the Colony, and not to bring them up as vagabonds, which many of them, I am sorry to say, are about our streets.
606. Then, if I understand you, you are coming to another point;—you first of all propose to encourage manufactures—you have not pointed out exactly what sort of selection you would make with regard to them,—for although you say you would encourage all, you would not, I presume, encourage the manufacture of articles we do not make here at all? No.
607. How would you make your selection? We would first begin with plain things, and gradually pass to the manufacture of the superior class of articles, as they have done in England; one thing would lead on to another.
608. Do you think the general interests of the community are benefited because a good article is made in this Colony in preference to its being made in England,—is not the great object to get the thing well made? Yes.
609. Then if it is better made in England, and is sold here at as cheap or at a cheaper rate than it would be if made in the Colony, what does it matter to the consumer where it is made? Certainly, it is a very selfish and immoral view to take of it; if you only make it a pounds shillings and pence affair, perhaps it is better to get all the goods we can from England; but I am taking another view of it.
610. Is it not a selfish view for the manufacturer to take, if he wants his particular manufacture to be encouraged at the expense of a much larger class of consumers? A large class of those consumers are the very persons who would get employment from his manufactures.
611. Does not the production of the raw material employ people? Not so much as we would employ other people.
612. Do you mean to say that, under the system you propose, manufacturers, or the manufacturing class generally, would outnumber all the other part of the population, consumers and all? I do not say so.
613. Is it not clear, then, that it is a class interest? No, it would be the means of encouraging agriculture, because it would bring customers for the produce into the country.
614. Suppose they were getting customers for their produce in other countries, or at better prices? But they cannot.
615. Then they can go to something else? What can they go to?
616. You talk of the necessity or advantage of encouraging manufactures, and you say a pounds shillings and pence view is a selfish view to take of the matter—we will admit that—but do you think the interest of the manufacturer is to be considered in preference to that of the consumer? I never said that.
617. I do not see what grounds you advance why the consumer and producer ought not to be consulted in the matter; and if you ask any consumer or producer whether he would prefer paying 10s. or £1 for a pair of boots, he will prefer giving 10s.? It is a matter of doubt whether he would. If you could prove to him that by paying 20s. he would get double the amount of work and constant employment, he would rather give 20s. than 10s.
618. That is with regard to the working classes? Yes, and as regards all other kinds of business. When there is plenty of employment everyone in the Colony is doing well.
619. Is it the want of employment you desire to remedy—is there any great want of employment? A great many are out of employment.
620. How comes it that a great many are out of employment if wages are so high? Wages are not so very high.
621. Is there no moral cause—is it no fault of the men—that they will not take employment? It may be in some cases, or in a great many, but generally speaking it is not their fault. I know many mechanics who are forced to go to the diggings, who would never think of it if they could get employment at their own particular trade.
622. What matter whether they go to the diggings or to any other kind of labour, so long as they get employment? They have only partial employment at the diggings—it is very uncertain; but what are they to do?—They must go there.
623. You think the effect of an alteration of the tariff would be to provide more constant employment for mechanics? I think it would give more varied means of employment.
624. After all, would not your system operate in a very narrow circle as compared with the population—take manufacturers, men employed in manufactures in a direct way,—is not their number very small in proportion to the large number of labouring men employed at the gold diggings, and in various other ways as producers? It is at present.
625. Admitting any kind of beneficial result you may look for from your proposed alteration in the tariff, must not the number of those engaged in manufactures be much smaller than of those who are not so employed? I dare say it would be.
626. Then if you legislate for the benefit of those who are employed in manufactures, you legislate for a small class in comparison with the great mass of the people? My impression is that you benefit all.
627. I should like to know how you prove that? A great many mechanics now come into competition with the labouring class.
628. Did you not begin by saying that wages were high? So they are, for this particular class. When I say wages are high, I mean as compared with those paid in England and in other parts of the world.
629. You do not consider that wages are too low now? There are some men, I dare say, have as much as they can do to keep their families.
630. To take the case of a man with a large family is not a fair means of testing the rate of wages—men with large families must have greater difficulty to live than men with none? I have seen men with large families better off than men with none.
631. I suppose a good wife makes some difference to a man? Yes.

W. M.
Alderson, Esq.
22 Oct., 1862.

FRIDAY, 24 OCTOBER, 1862.

Present:—

MR. DALGLEISH, | MR. LUCAS,
MR. STEWART.

JOHN LUCAS, ESQ., IN THE CHAIR.

Enoch William Rudder, Esq., called in and examined:—

E. W. Rudder, Esq.
24 Oct., 1862.

632. *By the Chairman:* Having heard that you have given some attention to the preparation of colonial dyes, the Committee have requested you to attend, and you will oblige them by giving any information you may possess on the subject. Have you been engaged in manufactures in this country? I have only been engaged in the construction of a machine for the amalgamation of gold.

633. Have you been engaged in manufactures in England? Yes, I was so engaged for fourteen years.

634. In what kind of manufacture? In brass-founding. I had some little to do with the construction of machinery.

635. Have you given your attention to brass-founding in this Colony? Not at all.

636. You have given some attention to colonial dyes, have you not? I have.

637. What description of dyes have you discovered? The dyes of this Colony we may divide into insect, mineral, and vegetable. The insect, so far as my observation goes, is a species of cochineal. The mineral dyes are applicable both to the diffusion of colour through metallic or earthy substances, such as glass and earthenware, and also to linen, silk, and woollen fabrics. These are comprehended under the minerals cobalt, manganese, chrome, and a mineral of my own discovery, of which the precise properties have not yet been determined; it is before the Mint at the present moment; I have tested it myself, and, so far as I know, it is an entirely new product. Vegetable dyes: Under these I class the gums, including bloodwood, ironbark, grey gum, and turpentine, yellow cedar, fastic, a yellow wood of the Labernamontana species; logwood has also been discovered and brought to Sydney.

638. Where has it been discovered? In the interior, and brought to Sydney. There are some others equally valuable, but I cannot give either the botanical or bush names. One of these yields a bright yellow, and others various shades of red. Some of these are, I believe, very nearly approaching in their value to some of the Brazil. I would also mention the phytolacca and the indigo. Two of the minerals I have named are useful as pigments—the chrome and this new mineral; the latter would also be useful as a good water-colour, it is equal to a London water-colour of the same description. Then we have all the mordants used, such as iron, tin, antimony, soda, &c. All these are procurable in the Colony. I have produced from the various substances I have mentioned about 335 different tints, besides some distinct and primitive colours that belong to the products themselves. I wish to draw the particular attention of the Committee to cobalt, as being of high commercial value for the purpose of colouring glass, porcelain, and the finer class of ornamental works of that description. Manganese is also used in the manufacture of glass and the production of oxygen gas; the chrome also is exceedingly useful. Perhaps it is not a matter of inquiry at the present time as to any other properties that attach to these products.

639. The Committee will be happy to receive any information respecting their properties? I would call attention particularly to the qualities of the bloodwood gum; it is highly medicinal; in cases of diarrhoea it is an exceedingly useful medicine, and is a styptic. That is independent of its dyeing properties, but it is very useful as a dye. I have had occasion to test the quality of bloodwood gum as a medicine, both here and abroad, and I understand that, at the present moment, in the East Indies, it is considered the best specific they have ever met with for diarrhoea. Ironbark gum will make a very fine varnish. The phytolacca is useful also in medicine; the root of it produces a species of ipecacuanha; in some respects it stands higher in the pharmacopœia than ipecacuanha itself. It is useful also as an esculent. With regard to one of the trees that produces a very fine yellow dye, it appears also to be well worth examination as to its medical qualities; I have very little doubt that it possesses considerable value.

640. What sort of tree is it? A large tree—a brush tree; it grows about eight or ten miles from the sea coast.

641. *By Mr. Stewart:* In what district? It is not confined to our district; I think it will be found to extend further.

642. *By the Chairman:* When you speak of “our district,” what district do you allude to? The Macleay.

643. Will you state what is the cost of the production of these dyes? That must be considered, at present, as merely nominal. Of course their value will depend very much upon the facility of export. Now, all those I have mentioned to you are capable of being shipped at once; they are all contiguous to water, and are available for market at any time, without any considerable cost in the carriage. I would observe, that all I have mentioned produce permanent, fixed dyes. None that I have mentioned, and none that I will show, but have been submitted to a test. Will it be deviating too much from the object of the Committee to mention anything with regard to vegetable fibre?

644. The Committee will be glad to receive information respecting any natural products of the Colony which may be used in manufacture? I would mention, then, that I believe the nettle-tree is capable of being made use of to very great advantage in the production of textile fabrics; the value of our kurrajong, also, has not been sufficiently appreciated—it makes

most

most beautiful cordage. We have too, indigenous to the country, flax. To return to the subject of dyes—I have brought with me a few specimens, to show what has been produced from them. (*The witness produced a number of specimens of silk, woollen, and other fabrics, dyed in various colours.*) There are none of these but have been submitted to the test of washing with soap and water, and a severe rubbing with the hand.

E. W.
Rudder, Esq.
24 Oct., 1862.

645. What description of plant does the cochineal insect feed upon? As far as I have observed, it is found only on the nut-bush, which it covers very extensively without destroying the plant.

646. Are the plants numerous? It is an English plant, but if it were cultivated the bushes might be planted as closely as you pleased. The dyed wools I now produce have been subjected to various tests, both alkaline and acid. (*The witness produced several specimens of wools dyed blue and other colours.*) The blue wool remained steeped in acid the whole of last night.

647. *By Mr. Stewart:* Could the greater part of these dyes be supplied to the manufacturer at as low a rate as they could obtain them from England? From inquiries I have made, I believe they could be procured here much cheaper than they could at Home, to obtain the same colours; for instance the mauve colour, I have been informed that it has never been produced as a fast colour, on wool, in this Colony. According to the last price current from London, the price there stated for that colour was 25s. a pound.

648. And it could be produced here at much less? Yes.

649. I suppose the price would depend a great deal upon the demand; if the demand were increased it would be cheaper in proportion? Yes. What I have been exhibiting are merely the results of experiments as to colour, but how far the colouring matter would bear reducing I cannot tell.

650. You believe that generally they might be supplied to the manufacturer at as low a rate as they could if imported from England? Yes, I think, so far as I am able to learn, they could be supplied at a cheaper rate.

651. *By the Chairman:* Do you think it would pay to collect these dyes for exportation to England? I have no doubt of it. The yellow cedar, for instance, is easily procurable; indeed all that I have now mentioned are easily to be got at.

652. And they would pay to export? No doubt of it.

653. Of course, taking into consideration the cost of freight to England, they would extract the dyes from the wood, and send the extracts? I think not; it is not usual to do so. The dye might be extracted, but I do not think there would be any advantage in that; in fact, I think there would be a great disadvantage, as the wood contains a greater quantity of dyeing matter in less weight and less bulk than it would in a fluid state.

654. The dyes, specimens of which you have exhibited to the Committee, are all permanent? All permanent, so far as I have been able to test them yet. Some of them have been dyed since September last.

655. And some of them are of a very valuable description? They are.

656. Some of them of a similar character cost 25s. a pound in England you say? Yes.

657. They are to be procured here at much less? Yes.

658. Have you any idea how much less? I should say, at least, at half the cost.

659. That is, to use in the Colony? To use in the Colony.

660. I see, from memoranda on the envelopes containing some of these specimens, that they have been tested by Mr. Eldridge? Yes, one in particular has been submitted to a very severe test, first alkaline and then acid.

661. Some also have been tested by Messrs. Byrnes, of Parramatta, and have stood the test? They have. One of the specimens of blue has been submitted to all the processes they could possibly submit it to that was calculated to remove the colour—such as washing in soap and water, and so on. I understand that in dyeing in the wool, when submitted to the severe processes of milling, a portion of the dye is removed, and that, consequently, it is better to dye in the piece than in the wool.

662. Can you state how many specimens you have exhibited here to-day? 180.

663. You have tested the whole of these yourself? Yes; they have all been tested as severely, and, I believe, more severely than usual.

664. All with soap and water? Yes.

665. With hot water? No, cold water, but they have been severely rubbed between the hands.

666. Some have been tested with acids? Yes, the woollens.

667. Some of those you have produced here you had in a solution last night? Some of them—the blue colour.

668. How long have you been giving your attention to colonial dyes? Not more than about twelve months.

669. And you have succeeded in producing about 300 tints from colonial dyes merely—mineral, vegetable, and animal? I think I may say 400.

670. Do you think we can produce all the different known tints and colours from dyes in this Colony? That is my opinion; I do not think we have occasion to go out of the Colony for anything of the kind; we have all within ourselves.

671. That is to dye or colour glass, woollen, or silk? Decidedly. One of these specimens was exhibited in Paris, and approved, and I received a diploma of merit. Those in the book have been sent to the Exhibition of this year in London, with the gums, and there has been a medal awarded to me for them.

672. *By Mr. Dalgleish:* At what date did you receive the diploma of merit from Paris? I forget the date of the Paris Exhibition.

673. Then you must have turned your attention to this subject previous to the period you have mentioned? I simply sent the material to the Paris Exhibition; since that period I have given my attention to it.

674.

E. W.
Rudder, Esq.
24 Oct., 1862.

674. Then the subject of dyeing and of colonial woods is one of which you have had but little experience until within the last twelve months, although you had previously directed some attention to it? Yes; I may say that for years my attention has been drawn to the subject.
675. *By the Chairman*: How long have you been in the country? Since 1834.
676. Have you been living in the same district, the Clarence, ever since? Yes, on the Macleay, excepting about twelve months.
677. Have you had an opportunity of noticing the different trees in other districts of the country? Some few in the neighbourhood of Port Macquarie.
678. All in the northern district? All in the northern district.
679. *By Mr. Dalgleish*: Many of these dyes are dependent upon care in the production, I think? Yes, certainly.
680. For instance, what you call the insect dyes, the quantity that can be obtained will depend upon the abundance of the particular plant upon which the insect feeds? Upon the production of the plant.
681. Have you named that particular plant? It is the common English nut-bush.
682. Is this bush grown in abundance? It may be cultivated in any quantity. I have it simply as a plant in my garden.
683. You have cultivated it? It can be cultivated, but I have kept only a single bush.
684. Does this cochineal plant exist in the bush? No; I have found the insect only on the nut-bush, and it is very abundant upon it.
685. Then you think the mere cultivation of the nut-bush would ensure the presence and propagation of the insect? No doubt of it.
686. What is the species of the insect? I believe it to be of the same species as the cochineal.
687. Is it similar in appearance? Very similar; it is a variety of it I believe.
688. Have you formed an opinion of its value relatively to the imported cochineal? It is not of equal dyeing property to the imported, though I have had no full opportunity of testing it, as it is a dye which requires considerable knowledge as to the mode of treatment, and I may not have sufficient knowledge to test it properly.
689. Have the confectioners of the Colony tried it in any way? No, it has not been submitted to them in any way.
690. They use cochineal largely? Yes.
691. This is one of the most expensive dyes, I believe? No; cochineal is now, I think from 2s. 6d. to 5s. a pound. It was at one period very expensive, but is not now, as many other dyes have interfered with it, and the production is much larger.
692. The next you mentioned are the mineral dyes;—can you inform the Committee as to the abundance of these minerals, and the ease with which they may be obtained—are they of easy access, and of great abundance? Yes, all. With regard to chrome, it depends entirely upon the cost of transit. I discovered a vein of chromic iron, from which chrome is derived, on the Peel River, of immense magnitude. I suppose the first I met with was ten tons in a single block.
693. Of what value is this chrome in its native state? I believe in that state it is worth £16 a ton.
694. That would pay the expense of land transit, and leave a large margin for export? If it could be brought by return drays, at a reasonable cost, to Maitland, it would pay for export; but I believe it may be obtained much nearer to water carriage in various parts of the Colony.
695. You have mentioned cobalt—what is its value? From 5s. 6d. to 6s. per lb. for the metal contained, its value being regulated according to the per centage found in the ore.
696. Have you found an abundance of that? I have found some with indications of abundance.
697. What is the per centage of the cobalt in the ore? It varies in various tests that have been given. The Mint assay upon some that was submitted by Sir William Denison for examination produced 6 per cent. of cobalt—six pounds of cobalt to the hundred pounds.
698. What is the average per centage of cobalt obtained in other countries? It will pay well at 5 per cent.
699. This is a very large per centage? Yes, sufficiently so to be remunerative. The ore at present discovered is called earthy cobalt. There are several species, some that yield a very large per centage, the greater portion of the mineral being cobalt itself. We have not discovered that yet in this country; the only kind at present known here is the earthy cobalt, and I believe none have found that but myself.
700. That which you have discovered yourself, from the average per centage it yields, would be a source of wealth to the country? Yes.
701. And could be a source of constant employment? I have no doubt of it. This has not been sunk or mined into, and it will depend upon what may yet be the result of mining operations; but as far as external appearances go, I have reason to believe it is abundant.
702. With the imperfect means at your command you had no difficulty in finding large samples? No.
703. You mentioned manganese? It abounds in various parts of the Colony, and is also associated with earthy cobalt. In the earthy cobalt is a large per centage of manganese, amounting to as much as 22 per cent.
704. When these two substances are found in the same stratum are they easily separated from each other? It is a chemical process attended with some expense.
705. Have you a knowledge of this process? Not a perfect one.
706. From the imperfect knowledge you have, would it be a line of industry likely to yield a good remuneration to those employed in it? I think so; it would be a branch of manufacture at Home, where cobalt is used in the manufacture of smalt.
- 707.

707. You think it would be of value chiefly as a raw material? Yes.
708. Have you mentioned any other minerals of which I have not asked you the particulars? You have not asked me respecting the new mineral—that to which I have not given a name, and which is to be found in great abundance.
709. To that, as a dye, you attribute great value? Yes.
710. You mention chrome and this new mineral as of great value as pigments? Yes, this new mineral can be used as a black paint.
711. What tint of dye do you obtain from this new mineral? The yellow, and also brown.
712. Is the brown obtained by admixture? By admixture it yields a great variety of tints, and when manufactured into a pigment it is black.
713. You have spoken of vegetable dyes and gums—is it the gum of the wood of the bloodwood that is valuable? The gum.
714. The tree itself is valueless as a dye? Yes, so far as I know.
715. Is it the gum of the grey gum that is valuable? The grey gum is not its proper name—it is a mottled gum; it is the gum that is used.
716. Can this gum be extracted from the tree, or should the wood be prepared as logwood, in chips? The gum would have to be extracted from the tree at a certain time of the year, by making incisions in the bark.
717. So that that would be a useful pursuit for the settlers? I have no doubt that if incisions were made in the bark of these trees, at a proper period of the year, a considerable quantity of this gum might be collected, as the trees are very numerous.
718. The same process is followed in America with regard to the sugar maple? Yes.
719. Are the whole of these vegetable dyes obtained from the gums? No, both the wood and the gum of the turpentine tree yield the dye.
720. The yellow cedar—is it from the gum or the wood itself that the dye is obtained? From the whole of the timber.
721. Fustic? The whole of it.
722. Logwood? The whole of it.
723. Is fustic a common production? It grows abundantly here, but it is completely rooted up wherever the settler goes.
724. Does it attain a large growth—is it a shrub or tree? It is rather a clematis or climbing plant, from four to six inches in thickness. This would be used in chips as logwood, but would be sent Home in the log, as occupying less bulk.
725. Yellow cedar—in what quantity is that to be obtained? Considerable.
726. Is it also of easy access? Yes, to water.
727. To what size does it attain? It is a large tree.
728. Logwood? That I cannot speak of.
729. That is what you have only heard of? Yes, but from the best authority. I cannot doubt that it is to be obtained here, although I have not seen it myself.
730. Indigo? Is indigenous to the Colony, but whether it would answer to the same extent as the Indian I am not prepared to say.
731. *By the Chairman*: Does it not grow something like the spirea? No, it is more in the leaf like acacia; it has a beautiful purple flower.
732. How high does it grow from the ground? About four feet.
733. Is not the leaf of a bluish cast? Yes, a bluish green.
734. *By Mr. Dalgleish*: Phytolacca—is that a plant or tree? A plant.
735. Of what size? It depends altogether upon the richness of the soil. It grows from eighteen inches up to five, six, or ten feet.
736. Is it indigenous? I am inclined to think it is not; I believe it has been introduced into the Colony from South America; it has now become a troublesome weed.
737. To what family does it belong—what is its species? That I cannot give.
738. It is now very common? It is now very common.
739. Is the dye it yields very valuable? Very valuable.
740. What colour? Mauve and blue.
741. Is this dye obtained from the plant itself or the fruit? It is the production of the fruit of the plant.
742. The berry? Yes.
743. Is it the berry commonly called the dye berry? The berries grow in bunches on a stem.
744. You do not know the common name? Some call it "Parramatta weed."
745. It grows upon a very fibrous stem? Yes, and has a long broad leaf.
746. You spoke of the minerals cobalt and manganese as very valuable for colouring glass? Yes.
747. There are very few minerals that enter easily into combination with glass and give it a colour? Very few indeed.
748. So that, I suppose, they have a separate and individual value on that account? Yes.
749. What colours do they produce? A beautiful blue called "Queen's blue."
750. That is from cobalt? Yes.
751. Manganese? A sort of violet colour.
752. Have we the other requisites for the manufacture of glass in the Colony in great abundance? I believe we have, and kaolin in abundance, for the manufacture of porcelain.
753. Will the same substance answer for the colouring of earthenware as for glass? Yes.
754. So that the manufacture of glass, with these special advantages, might be carried on, you think, with benefit to the Colony? Yes, but that is merely a matter of pounds shillings and pence.
755. You have spoken of the gum of the bloodwood as being useful in medicine? Yes, decidedly so.

E. W.
Rudder, Esq.
24 Oct., 1862.

E. W.
Rudder, Esq.

24 Oct., 1862.

756. Are you a medical man? I have had considerable experience, although I am not a medical man.
757. You have obtained your knowledge of the value of the gum as a medicine from actual experience? Yes.
758. Have you had the opportunity of learning the opinion of medical men as to the quality of this gum? Yes, it may be called gum pine.
759. Ironbark gum you have found useful as a varnish? Yes.
760. Have you tried that to any extent? I have tried it, but not to any extent; its properties I have no doubt about. I sent a specimen of the varnish to the Exhibition.
761. Can you state what is the cost of the manufacture of this varnish from ironbark gum as compared with other? I imagine it would be about equal; it dissolves readily in spirits of wine.
762. There is no special advantage in ironbark gum? No farther than that, as a home manufacture.
763. Is it a superior varnish? It is very good.
764. Does it give a harder surface when dry than other varnishes? The surface is quite hard.
765. It is not at all sticky or clammy when finished? Not at all.
766. You have mentioned that this phytolacca is also a vegetable for the table? Yes, it may be used very safely in the spring, when it is from a foot to eighteen inches from the ground, and snaps off readily like asparagus.
767. Before the strong fibre is formed in the plant? Yes.
768. In this condition it is palatable and wholesome? Quite so; we have used it in my family to some extent, finding we could not cultivate the cabbage for the insect now so fatal to its growth in the Colony, and we found it perfectly wholesome, as well as being very palatable.
769. Is there any peculiarity in the mode of preparing it? It is simply boiled in two waters, the first being thrown away.
770. It is very easy of propagation? There is no difficulty at all about it, it is very prolific.
771. You have mentioned the nettle tree—to what size does that attain? It grows to an altitude varying from 100 to 150 feet; its diameter varies from six inches to seven or eight feet.
772. What portion of the tree is valuable for its fibrous quality? The whole substance of the tree.
773. Not merely the bark? Not merely the bark; but the bark I have special reference to.
774. Is it a fine fibre? The bark yields a tolerably fine fibre, but not particularly so; but it may be made fine by passing through the manufacturing process.
775. Have you experimented on the fibre of the bark to any extent? I sent some Home to England, but I did not hear the result.
776. The value of vegetable productions that are fibrous in their nature depends upon the ease and rapidity with which the other matter can be separated from the fibre—have you reason to suppose that this can be quickly and easily separated? Very easily.
777. Are you aware whether the fibre of this nettle tree is used by the aborigines of the Colony for their purposes? They do use it.
778. What do they make from it? They chiefly use it as a sponge for dipping into honey and conveying it about; they do not use it as kurrajong, for their cords or nets.
779. I have observed the aborigines, in using what they call bull, from a wooden bowl, manufactured apparently from timber, and hollowed out,—into this receptacle they dip a piece of fibrous material, and then convey it to the mouth and suck it—is that the same thing? Yes.
780. It has the appearance of a bunch of thread tied to a stick—this is the material to which you allude? Yes. I would just mention that I believe the fibre of the nettle tree would be of advantage in the manufacture of paper, that is the fabric I have supposed it to be best suited for.
781. Is it very strong? It is not very long in its fibre, but tolerably strong; by concussion or blows it separates into fine particles, which would render it suitable for the production of the pulpy matter from which paper is made.
782. What description of plant is the kurrajong? It bears more the character of a shrub than of a tree; it is, I believe, a species of hibiscus.
783. Is the bark or the wood of the tree valuable? The bark.
784. What length is the fibre of the bark? You can run it off to almost any length you like.
785. This would be very valuable for rope or cord? I have seen excellent rope made from it.
786. Is the fibre fine? It is fine and silky.
787. Do the aborigines use it in any way? Yes, for their dillies and their nets.
788. Those nets are sometimes very fine? They are both fine and strong. I doubt if it could be made as fine as flax, although it is a very fine fibre.
789. Is it as fine as hemp? It is not quite so coarse as some of our hemp.
790. A fabric equal to linen could be made from it? I think so; I could not speak positively, but I think it is capable of reduction into as fine a fabric as is requisite.
791. Is there a large quantity of it to be obtained? I have no doubt, if it were thought worth while to cultivate it, it could be grown to a large extent.
792. Is the fibrous part of the bark easily separable from the vegetable? Very easily.
793. This would be another advantage? I think so. During the time that the late Major Sullivan

Sullivan was commanding at Port Macquarie, he employed the prisoners in manufacturing rope from kurradjong, and I have seen of their manufacture very fine specimens of cord.

E. W.
Rudder, Esq.

794. As an article to be used in the employment of prison labour, you think the bark of the kurradjong could be very usefully and economically employed? If there were a sufficient quantity.

24 Oct., 1862.

795. I understood you to say that it was easily obtainable? I think it is a plant easily propagated; it grows very rapidly indeed.

796. You have also spoken of flax—is the flax you have spoken of indigenous to the Colony? It is.

797. Is this a very prolific plant? I think not; but I think if it were cultivated here as in England the result would be equally satisfactory. It appears to grow best in moist situations.

798. In swamps? On the borders of swamps.

799. There are immense tracts in this country called swamp lands? Yes.

800. The borders of these are more particularly suitable to its production? It grows better in what may be termed intermediate land, not precisely swampy, but on the margin of swamps.

801. Is this particular land valuable for other farm purposes? No, it would not be saleable at all.

802. So that if it were utilized by the growth of this flax, that would be an additional source of wealth to this Colony? Yes, I imagine flax could be grown upon land where you could grow nothing else now to advantage.

803. Is this of the same nature as the flax of Britain? I see no difference at all between the plants. I have grown the English flax as a flower in my garden, and I could see no difference between the plant thus grown, from seed brought from England, and that which is a native of the Colony.

804. Have you seen the New Zealand flax? Yes.

805. Is there any difference between that and the English flax? They are different plants altogether.

806. This is not related to the New Zealand flax? Not at all.

807. It would be a great addition to the wealth of the Colony if this vegetable production were cultivated? Yes.

808. And would bring into use land that is at present valueless? Yes.

809. Have you examined the plant yourself with respect to its fibre? I can see no difference between the texture of the plant, or its external characteristics, and those of the English production.

810. Had you known that this plant had been indigenous, it would not have been necessary to have sent to England for seed? Yes, it would be necessary, because the cost of collecting the seed here would be greater than of getting it from England.

811. I think I have seen your name in connection with the production of gold in this Colony? Yes.

812. I think you claim to be one of the original discoverers of the gold fields of this Colony? Yes.

813. I think, in a pamphlet published by you, you lay claim to be one of the earliest discoverers of alluvial gold? I was the first to announce it to the Colony at all.

814. Your attention was called to it from having been engaged in the manufacture of machinery for separating or amalgamating gold? Yes, exactly.

815. Was the machine you made in the Colony at that time brought into extensive use? It was not; it was not found suitable to the kind of gold washing in this Colony.

816. As a branch of manufactures that would not tend to develop the resources of this Colony? I think not.

817. *By Mr. Stewart:* Can flax be produced without any considerable amount of labour? That is a question I am not prepared to answer, for I have never cultivated flax.

818. Then it would be a question whether the cultivation of flax would be as profitable as the procuring the dyes you have alluded to? Yes; it all depends upon the cheapness at which these articles could be procured, whether it would be profitable to undertake their cultivation.

819. You have stated that you have resided near Port Macquarie? Yes.

820. Tobacco was grown for some years in that locality? Yes, I grew it myself.

821. Are you aware whether tobacco can be grown in large quantities there, equal in quality to a great deal that is used? Quite so, I am satisfied. I grew some, some years ago, which came into the hands of Mr. Dixon, a tobacconist in Sydney, and his report upon it was that it was some of the finest quality tobacco that ever came into the market.

822. Can you account for the bad character colonial tobacco has generally—do you conceive that it arises from neglect in the manufacture, or some defect in the quality of the soil? I believe there has not been sufficient care observed in procuring the right seed, and it is also very probable that there has not been sufficient care taken as to the character of the soil upon which tobacco has been grown.

823. You think tobacco could be grown, and of the best quality? I have not the least doubt of it—in fact, I have given particular attention to it.

824. Have you manufactured it for your own use? No; I do not smoke now, although I did some years since.

825. Have you ever twisted and pressed it? Yes, and it seemed quite equal to foreign tobacco.

826. *By Mr. Dalgleish:* In what way did you press it? I prepared it in flat cakes by simple pressure.

- E. W. Rudder, Esq.
24 Oct., 1862.
827. *By Mr. Stewart*: Considerable care is necessary in the growth, to keep the leaf up to the proper quality? Yes, it requires considerable care.
828. And also in the process of drying and sweating? Yes.
829. Any neglect in any part of the preparation would injure the flavour? Very materially.
830. You believe that it is attributable to neglect in some of these particulars that the bad character colonial tobacco may have obtained is caused? I think it is owing in a great measure to the want of skill in the preparation.
831. You think if there were a greater consumption of colonial tobacco, a larger demand would ensure the production of the best class? I imagine so; I do not see anything whatever to prevent it. About six or seven and twenty years ago, I wrote some letters in the *Commercial Journal*, upon the production of tobacco, and I have always had reason to believe that the want of a good article in this market originated from the want of skill both on the part of the grower and of the manufacturer.
832. Your attention has been principally directed to the growth? I have given attention to both, but only in the way of experiment.
833. And you have proved that it can be grown of the first quality? I have not the least doubt of it.
834. Can you account for the falling off in quality of the tobacco produced of late years? I believe, judging from myself and from those of my own district, that it has been owing to the lowness of the price; we could not get more than 3d. a pound for it when I grew it. But I believe if the price were sufficient to pay the cultivator a superior article would be grown.
835. Do you think there is a prejudice against it on account of its being colonial, rather than on the ground of its actual quality? At one time I thought so, but latterly I have had reason to believe that there is a defect in the article itself. I place a great deal of dependence upon the character of the seed made use of.

| MR. SUTHERLAND. | |

JOHN LUCAS, ESQ., IN THE CHAIR.

Mr. John Fletcher called in and examined:—

- Mr. J. Fletcher.
28 Oct., 1862.
836. *By the Chairman*: You have been engaged in business as a manufacturer for many years in this Colony? Yes.
837. You are now in business in George-street? Yes.
838. As a boot and shoe maker? Yes.
839. When you commenced business, were not most of the boots and shoes that were used here manufactured in the Colony? Yes.
840. There was very little imported work, I believe? Very little at that period, and for many years after.
841. In what year did the importation of boots and shoes largely commence? Shortly after the discovery of gold took place; previous to that there was a very small quantity imported.
842. How many men were the most you ever employed? Some fourteen or fifteen years ago I used to employ about thirty-two, sometimes thirty-five.
843. How many apprentices were the most you ever had? I never had above two at the same time.
844. The men who worked for you generally took their work home, and worked piece work? Yes.
845. And they had apprentices? Very rarely; I recollect in two instances that my workmen had apprentices.
846. Had they not often children of their own who were so employed? If you calculate them as apprentices, nearly the whole of them had.
847. How many men have you at work for you now? Not above seven.
848. Do you sell more boots and shoes at the present time than you used to do when you had so many men employed? Yes, I sell a much greater quantity.
849. But not nearly so many of colonial manufacture? Nothing approaching to it.
850. The seven or eight men you now employ, are they engaged chiefly in making or in mending? In making; I have only one whom I employ in repairing.
851. The imported boots and shoes do not stand mending? Yes, they do stand it, for they very soon want it.
852. I suppose your business is one in which you could employ a great number of young people? Yes, we could, provided we could get employment for them.
853. Do you think, considering that the population has increased threefold, that there are more boots and shoes manufactured in the Colony than there were twenty years ago? I believe not, although the population has increased to such a wonderful extent.
854. Then you think the manufacture of boots and shoes has fallen off? Yes.
855. Notwithstanding that we have the raw material, in the shape of hides? Yes.
856. And all the labour? And all the labour.
857. Do you notice a large number of youths in the streets in apparent vagrancy? I am sorry to say I do.
- 858.

858. Have you found any difficulty in getting apprentices? None whatever; I am besieged by applications. If I advertise for a lad, my place is besieged by applicants, to come at any wages, even as errand boy.

Mr.
J. Fletcher.

859. Then you do not believe there is any indisposition on the part of children to learn trades, or of parents to have them taught? Not at all, for it appears to me that parents are most anxious to get them into any situations to keep them out of the streets.

28 Oct., 1862.

860. Have you any idea of the proportion of boots and shoes manufactured in the Colony as compared with those imported? I have never turned my attention to it. I should say, to make a rough guess at the matter, that for every *£100 worth manufactured in New South Wales there are probably £10,000 worth imported.

861. At the same time, youths and others who might be employed in manufacturing them are running about the town idle? A great number.

862. There really is no occupation for the rising generation? It has often occurred to me, what is to become of the 25,000 or 30,000 young men springing into manhood?—I do not see any prospect of employment for them.

863. It has been stated that the youth of the Colony are not at all disposed to learn any trade? I entirely disagree with that opinion, for I have never found it the case. I have had a great many apprenticed to me, and I never found more industrious and willing people in any part of the world.

864. Suppose a parcel of goods which it costs you £100 to manufacture in the Colony, what would the same quantity of goods, of the same quality, manufactured in England, cost, including the charges of freight, brokerage, agency, and so on? I hardly understand the question.

865. How much would it cost you to import the same quantity and quality of goods that it would cost you £100 to manufacture in this Colony? I suppose a pair of boots that would cost me 12s. to make could be bought in England for about 6s.; but then they would not be of the same quality, because all the goods made for this Colony are what we consider slops; although, if you went into a manufacturer's in England to have a pair of boots made for you, you would get a good article, but it would cost you nearly as much as it does here. But this latter description of goods is never imported here. If you take slops, what I pay 12s. for putting a pair of bottoms to, you would pay about 6s. for there; but then they are most inferior, both as regards material and workmanship.

866. How much would it cost you to import them? About 25 per cent.

867. Do you mean that a pair of boots which would cost you 6s. in England would cost 1s. 6d. for importing? I am thinking of the cost supposing you gave an indent to a merchant.

868. So that the boots when delivered in your shop would cost 7s. 6d. a pair? Yes.

869. But then they would be much inferior to your own manufacture? Decidedly, because they are all slop manufacture we get out here.

870. Can you tell us what has become of the persons who used to be employed in boot making? Nearly all have turned their attention to other pursuits.

871. Do you know of any young men or lads learning the business now? Very few. I have had many applications, but I have refused to take them.

872. Why? Because I could see no prospect of future employment for them after serving their time.

873. You mean that they would be driven from their occupation by the importation of goods? Yes, and a man cannot earn so much at any other occupation as at his legitimate trade, if fully employed.

874. Do you think there is a disposition on the part of the people to buy colonial manufactures if they could get them? If they could get them at a reasonable price.

875. If they could get them even paying something more? —

876. What do you think would put you in a position to compete with imported goods? I hardly know. I think, to make a rough guess, about 15 per cent., or perhaps 20.

877. You say you now employ about seven persons in your establishment? Yes.

878. Suppose you manufactured the whole of the boots and shoes you sell, how many persons do you think you could employ? I think very little short of 120,† at the very lowest calculation, if I manufactured the whole of the boots and shoes that go through my establishment.

879. Where you now only employ seven? Yes, and cannot give them full employment.

880. At the same time the labour—for instance, youths—you could employ in manufacturing these goods remains idle about the streets? To a certain extent it is, no doubt; that is, they would render a good deal of assistance.

881. You say there is no occupation for the youth of the country? I do not see any.

882. If you were to take eight or ten apprentices, in the course of twelve or eighteen months you might employ a still larger number, and thus you might ultimately give employment to 120 persons who are now unemployed? Yes, if there were employment for them.

883. What do you consider the raw material of a pair of boots to be worth—I am speaking of it before it is manufactured into leather? I have not the slightest idea.

884. Do you think it is worth 1s.? I could give no answer to that question.

885. Suppose you manufactured £100 worth of goods, how much of that £100 do you calculate it would cost you for leather? That would all depend upon the description of goods; some would be dearer, some cheaper.

886. You could not give any idea of the average;—of course you have to include profit to yourself, the cost of wages, leather, thread, &c.? We do not find the latter. I may mention,

* Revised:—£500.

† Revised:—Eighty or ninety.

Mr.
J. Fletcher.

25 Oct., 1862.

mention, that this morning I had sixty pairs of boots brought in, which cost me 9s. 6d. a pair.

887. What would the material cost out of that? I think the material would come to about 3s. 6d.

888. Then the labour would come to 6s.? Yes; I am not including the hemp and other nick-nacks.

889. You think the labour would be fully 60 per cent. upon the value of the goods? Yes, I think so.

890. Then, by importing the articles which you now sell in your shop, and which could be manufactured by the labour now unemployed, the country loses 60 per cent.? As a matter of course it does. I think I made an error in stating 7s. 6d. I think the same goods that would cost me 12s. could be imported for 8s. 3d., but then they would be inferior to my own manufacture.

891. Then the country, although it obtains inferior goods, saves only 15 per cent. by importing instead of manufacturing? Yes.

892. You say you think 15 or 20 per cent. would put you in a position to compete with the English manufacturer? I think even less than that would, in time, because it would encourage manufactures, and in course of time a less duty upon foreign manufactures would be sufficient. All manufactures here have almost ceased; there is nothing going on in comparison with what there was fourteen or fifteen years ago.

893. You say that if there were a duty of 15 per cent. put upon imported goods it would place the manufacturer here in a position to compete with the foreign manufacturer? I think so.

894. And that the country would only lose 15 per cent. by importing, without reference to the inferiority of the goods imported to those produced by home manufacture? I do not think it would lose at all, for I think it would be the greatest benefit to the Colony.

895. What wages do you pay your men? We pay for piece work, we never pay by day labour.

896. If the whole of the goods which are now imported were manufactured in the Colony, I suppose you would bring machinery generally into use? I am not an advocate for machinery. I do not know what improvements may be made, but at present it does not answer.

897. It does not turn out such good work as the hand? No; if you look at ladies' goods from England you will see that. They are all done by machinery, and the work is easily disturbed; if one stitch goes—it is like a knitted stocking—the whole work goes.

898. If you had the manufacture of the whole of the boots and shoes used in the country there would be some who would manufacture very largely, and who would, therefore, be able to produce them at a cheaper rate than they can at present—if you manufactured a hundred pair of boots where you now make only one, you could supply them cheaper? Yes, it is in that way that the English manufacturer can sell his goods so cheaply.

899. If there were a duty put upon boots and shoes, do you think it would tend, after four or five years, by which time the youth of the country could have learned the trade, to increase the price of boots and shoes? Quite the reverse.

900. There is a large quantity of goods consigned by merchants and others in England, which is sold really below the market value? During the last two or three years I question whether there has been a sale that has left a margin of profit (I mean at auction, where nearly all the goods are disposed of) to the importer, and more particularly at the present period.

901. Then, in that case, you have more to contend with from consignments than you have from legitimate importers? No doubt.

902. Is it not the fact, that large houses in England consign and get off their shelves a large quantity of old stock, that they then draw upon the invoices, and are satisfied even if they sell at a loss? They are not particular how they sell them—a great part of the goods are hypothecated.

903. That system interferes materially with manufacturers? That is the thing that does interfere.

904. That is one great reason why manufacturers in this country do not take apprentices? There is no inducement for a young man to be put to skilled labour or mechanical business, because after he has learned it there is no employment for him.

905. Have you yourself known persons who have been brought up to your business leave that business? Yes, nearly the whole of those I formerly knew to be engaged in the business. There is no employment for them, except for a few who are employed in making settlers' strong boots for stations; but in the finer descriptions of work there is no employment, and those who do stick to the business cannot get full work.

906. *By Mr. Allen:* You think £10,000 worth of imported boots and shoes are sold in the Colony for every £100 worth made? That is my opinion; I may be wrong. For instance, the importation to Sydney two years ago was, I think, £780,000—that was for one year; that is what I read in some statistical account.

907. Do you think it would employ 120 men to furnish the goods you sell in your shop? Yes; I think the whole that pass through my hands, wholesale and retail.

908. Suppose these 120 men were employed at the average present rate of wages, how much would they earn per week? I think, if I could manufacture the whole of the goods that pass through my hands, the wages would be something considerably lower than they are at the present time. I think it would be the means of wages decreasing instead of increasing.

909. Supposing they earned the present rate of wages? I think, on the average, these men would not be able to earn above £2 or £2 5s. a week; but if you take the whole establishment, there are a number of young people who would not earn above 5s., 6s., or 10s. a week.

910. Do you think, upon the average—some earning more, some less—they would earn £2

a week? Not the whole; for you would not require first-class men, for a great deal of the work would be performed by persons unconnected with the trade.

911. Do you think they would average 30s. a week? No, I do not; that is, if you take the whole establishment; for instance, there would be a great many errand boys and others.

912. You said you would require 120 men—do you think they would average £1 a week, some more, some less? I could not state. I have never carried on such an establishment. I was speaking merely of the number that would be employed.

913. At any rate you would pay a large amount of wages weekly? No doubt about it.

914. This amount of wages would go in circulation among the different tradespeople? Yes.

915. By having these goods manufactured in England instead of here, our shopkeepers and other tradesmen are robbed of the wages which would be spent among them? Yes; at present we are employed only in opening and nailing up cases.

916. The tailor would get a little, the cabinet-maker or furniture dealer, and other tradespeople would get a little of that wage that would be sent into circulation, provided you made the goods you now import? Yes.

917. By importing these goods instead of making them, all these wages are circulated among the tradespeople where the workmen who make them reside? Yes.

918. And the Colony loses that? Yes.

919. That would be at least £120 a week for 120 men? Yes, more than that.

920. Suppose there were 15, 20, or 25 per cent. placed upon imported goods, would that have the effect of keeping up the rate of wages? I think it would act as a stimulus for parties to engage in manufactures; at present there is none—there is no hope.

921. What effect would it have upon immigration? I am not prepared to give an opinion upon that.

922. Do you not think, if there were a field of steady labour open to the people at Home, it would promote immigration? I imagine it would be an inducement for people to come to the Colony when they found they could get regular employment; as it is, I do not see any inducement for mechanics to come to New South Wales, for the very goods come in the vessels in which they immigrate that they ought to be engaged in manufacturing when they arrive here. I have heard a number of my own mechanics say, that they were better employed, and on the average could earn more money—that is, first-rate mechanics—in their own country than they can in New South Wales.

923. If the Government would extend the protective policy, generally speaking, to all classes of tradesmen—to leather-workers, wood-workers, and iron-workers—do you think it would be beneficial to all classes? I do; it is my belief, and has been my thorough conviction for years past, that nothing would tend so much to the benefit of all classes in New South Wales as a protective duty.

924. Do you think if there were a duty of 25 per cent. laid upon leather goods, upon cabinet-work and iron-work, that the people who would consume those goods would require to labour more hours to purchase them than they do now? I know this, that seventeen or eighteen years ago, when we manufactured the whole of our goods—that was cabinet-ware, cooper's-ware, clothing, boots, and shoes, and so on—that all classes of the people were better off and more satisfied than they now are, although they had to pay higher prices for colonial articles.

925. They had to pay a little more, and they earned a little more? Yes. I will take as an instance one of my journeymen, a first class-mechanic: Some seventeen or eighteen years ago I could give him more work than he could do, and he could earn £3 10s. a week; now he is not fully employed, and, taking the year round, he does not earn above two guineas. I come to the conclusion, that if a man got £3 10s. a week formerly, he was then better able to buy, and to pay more for his goods, than he is to buy now that goods are cheaper.

926. Do you think that example would apply generally? I do think it would apply to every man, woman, and child in New South Wales.

927. *By Mr. Dalgleish:* I think you complained of the gluts to which this market was subject from being overstocked with refuse goods? There are a great quantity of old and inferior articles sent to this Colony, but that is not the principal evil we have to contend with. Speculators go into the market, hit or miss, and risk any amount of goods, so long as they can keep their credit up; we know it makes no difference to them what quantity they sell, for they have only to do what a great many others have done, to wipe their old liabilities off and start again. I believe if we had a protective duty it would stop this reckless importation.

928. When you say 15 or 20 per cent.—? When I say 15 per cent., I have not studied the matter, but I think 15 per cent. would stimulate people to commence manufacturing; but as it is, there is no inducement.

929. If 15 per cent. were placed upon goods as an import duty, would that have the effect of raising the price of the commodity to the general consumer? As a matter of course it would be the means of raising the price of imported goods, but I do not think it would raise the price of colonial manufactured goods.

930. What am I to understand by your answer? Probably I do not understand your question—you asked me if an import duty of 15 per cent. would be the means of raising the price of English goods.

931. And you say that the price of English goods would be raised? Yes.

932. Would not the speculator then have the same inducement to speculate that he has now? Decidedly not.

933. If the goods produced this 15 per cent. extra, would not the speculator receive the same return? But he would have no inducement to bring these goods out here, for we should be in a position to compete with him.

Mr.
J. Fletcher.
28 Oct., 1862.

- Mr. J. Fletcher.
28 Oct., 1862.
934. You think 15 per cent. would enable you to compete with the English manufacturer? I think so; it is a rough guess—it might be 20.
935. *By the Chairman*: Perhaps 10 might do? Perhaps 10 might do.
936. *By Mr. Dalgleish*: Have you followed any trade in England? No.
937. Do you know anything of the rate of wages in England? Yes.
938. What rate of wages does a journeyman in England receive? In England, the same as here, he is paid by piece work. If a man can get full employment in England at respectable shops—I am not speaking of such houses as Homan and Hearne's, or Davis', or Bostock's, for there wages are nominal—if they go to a first class shop like Duncan's in Edinburgh, or other shops in London, they could earn 5s. a day.
939. Do you know the Edinburgh prices? I know Duncan's prices.
940. About what rate is a first class mechanic in other trades paid in Edinburgh? I do not know; but I have a journeyman, who at one time was working for Duncan, and he has told me that he could earn 5s. a day.
941. You do not know of your own knowledge what wages are paid there? I speak from what I was informed by my journeyman.
942. If a first class joiner is paid only £1 a week, do you think it probable that a shoemaker would receive 5s. a day? I know Duncan's prices are very high; he charges 24s. a pair for ladies' cloth boots, which is more than we could get here.
943. This is a shop, by your own showing, where extraordinary prices are given and taken? Yes, I believe it is.
944. Then you acknowledge that that is not an average rate? I am speaking only of the wages men get who are working for a first-class establishment.
945. Beyond that you know nothing of the wages given to an average tradesman? No, I never was there, and cannot give an answer to that question.
946. Have you heard what are the average wages? I have not.
947. What wages does an average tradesman get here? I cannot say; I know what wages my men get.
948. Are they paid by piece work? Yes, all boot and shoe makers are paid by piece work—by the pair.
949. *By Mr. Stewart*: I think you said you have been engaged in trade the last thirty years? Yes.
950. Have you any reason to doubt the capability of the Colony to supply its own consumers? I think in the course of time it will be able; at the present time there would be a difficulty.
951. If an import duty of 20 per cent. were enforced upon goods in your business, do you think that would stimulate those engaged in the business to a sufficient extent to enable them to supply a great part of the demand? I think even 10 per cent. would have an effect; of course 20 per cent. would have a better effect.
952. Do you think with a duty of 20 per cent. you would be able to compete with the importer? I am quite certain of it.
953. Is it not possible for a very large portion of the labour to be supplied by the youth of the country, both male and female? Yes, a great deal of the work might be done by them.
954. The more the demand for goods in your trade of colonial manufacture, the greater would be the proportion of that description of labour which would be taken in? No doubt, and which is perfectly useless at the present time.
955. Do you think the want of sufficient employment by trained mechanics causes them to perform work which if there were full occupation for them would be done by this untrained labour? Yes.
956. If your demand were increased, employment would be extended to the untrained? No doubt, and it would bring them into training, so that in the course of time they would be qualified to follow the occupation.
957. In your trade, I suppose, like others, the greater the demand the cheaper can you supply? Not the slightest doubt about that; it is the quantity that pays, and not the extra price we get for a few articles.
958. If you have to make one article to order, the cost to you is perhaps 20 per cent. beyond what it would be if you had an unlimited number to produce? Yes; if I could manufacture the whole of the goods that pass through my establishment I could reduce the prices of colonial manufactured goods 20 per cent. at the least, and make a very handsome profit. It is because we make only a few colonial goods that we have to charge higher, and pay a higher rates of wages.
959. Then, in fact, the present price is not a fair guide as to the cost, if we had an unlimited consumption? No; if we could fully employ our people, I think we could reduce the prices considerably.
960. Do you think if there were an import duty the trade would be more likely to be limited to regular importers? Yes; as it is, it is almost in the hands of reckless speculators.
961. If it could be so regulated as that you had only the regular importers to compete with, the market would not be glutted? No, we should have the prices more regular.
962. You think the tariff would have that effect? Yes.
963. I think you said that there are not so many mechanics employed in your trade now as there were some years ago? That is my opinion.
964. Although the population of the country has more than doubled, and of course the number of mechanics in proportion has increased, the demand has been reduced? Yes. I am speaking of actual mechanics, not of those who sell boots and shoes, for half of them were not brought up to the trade. I believe there are not half the men now working at the prices there were twenty years ago.

965. Are apprentices equally reduced? I do not know of any apprentices; I have had applications made to me, but I have not taken apprentices for the last three or four years, and I have persuaded parents who have applied to me not to apprentice them. There is no inducement held out to them; there is no occupation for them.

966. Even with the present unlimited supply, do you think, taking into account the differences in the quality of the article, the imported article is much cheaper to the consumer? I think quite the reverse; so much so, that I have no hesitation in saying, that if I were out of the trade and had a large family, by buying colonial goods I could save £4 or £5 a year, even at the present low price of English goods. All the goods that come to New South Wales are slop, even the very best.

967. You think the goods in the market are got up principally for export, or that they are the clearing off of old stock? I do not think they are the clearing off of old stock, but they are goods made up for export. It does not pay the manufacturer to get up the best description of goods for export.

968. Are they used in the Home trade? I believe they have establishments in London for the sale of these goods.

969. Manufacturers' or dealers? Dealers.

970. They are sold as cheap goods, without any manufacturer being responsible for their quality? There is no responsibility about it.

971. Some fifteen or twenty years ago you employed more than double the number of men you now employ? Five times; I used to employ thirty-two—I now do not fully employ seven.

972. You found it necessary, in order to compete with the trade, to buy imported goods? Yes; where I sell £10 worth of colonial manufactured goods, I think I sell £50 of English.

973. Do you suppose if an import duty were put upon boots and shoes, these articles produced in the Colony would be much dearer after the first twelve months? I think not; I think it would be the means of reducing the price.

974. It might in the first instance affect the price for a time? I think it would not even at first increase the price of colonial manufactured goods.

975. Have you ever given your attention to the manufactures of America—how they were established? No, I never paid any attention to that. I know they send a large quantity of goods here.

976. You are not aware that in all cases where the tariff was imposed, within two years the goods were sold in America at a cheaper rate than previously? I have heard, and I believe it is perfectly correct, that when America took off the tariff she got into bad ground, and that the moment she put it on she rose again. My opinion is that nothing will benefit New South Wales so much as that.

977. You think a tariff would not have the effect of raising the prices of home productions, but that it would rather reduce them? That is my opinion.

978. *By Mr. Harpur*: Are there many shoemakers out of employ in the Colony? Yes; when I say so, I mean that they are obliged to turn their attention to some other occupation.

979. They are not fully employed? No.

980. How much would a good shoemaker, fully employed, be able to earn in a week? It all depends upon the class of mechanic. It would take one man as long to make a pair of boots as another to make a pair and a half. I have one man who works short hours—that is short hours for a shoemaker, from sunrise to sunset—and he can earn £3 10s. a week; but he is an exception to the rule. I dare say an average workman, if he got full employment, could earn from £2 5s. to £2 10s. a week.

981. Do shoemakers leave Sydney and go to the gold fields, for want of employment at their trade? They do go to the gold diggings; there is no employment for good mechanics.

982. Parents are not much disposed to bind their children apprentice to shoemaking? No, nor to any other trade, because there is no inducement.

983. You attribute that to the excessive importation of cheap goods from abroad? Yes.

THURSDAY, 30 OCTOBER, 1862.

Present:—

| | |
|-----------------|--------------|
| MR. ALLEN, | MR. HARPUR, |
| MR. FORSTER, | MR. STEWART, |
| MR. SUTHERLAND. | |

JOHN LUCAS, ESQ., IN THE CHAIR.

Mr. Richard Cooke called in and examined:—

984. *By the Chairman*: You reside in George-street, in this city? I do.

985. You have been engaged in manufacture in this city? Yes.

986. What description of goods do you manufacture? Boots and shoes.

987. Were you so engaged before you came to this Colony? No. I have been here three and twenty years, and served my apprenticeship before I came to the country.

988. Have you been so engaged since you have been in the country? Yes, with the exception of some six or seven months.

989. How many men do you now employ in the manufacture of boots and shoes? Eighteen.

990. In making colonial work? Yes.

Mr.
J. Fletcher.

28 Oct., 1862.

Mr. R. Cooke.

30 Oct., 1862.

Mr. R. Cooke. 991. What is the largest number of men you have employed? Eighteen or twenty—the average is about eighteen. Sometimes a man or two leaves me, and then I have less than that number, and at other times I employ a man or two extra.

30 Oct., 1862.

992. Eighteen then is the largest number you employ? That is the average number.

993. Can you give the Committee any idea of the relative quantity of imported goods that are sold in your trade, as compared with those manufactured in the Colony? I can only speak for myself, and I have paid from £8,000 to £10,000 a year for goods imported that have passed through my hands. This is only a rough guess. If I had known that I should have been asked this question, I would have taken from my books the exact quantity of imported goods that have passed through my hands.

994. And what may be about the value of the goods you manufacture in the course of a year? I could not tell exactly without looking over my books.

995. We only want a rough guess, just to give us an idea of the comparative amounts of the two kinds of goods? You may reckon the twenty men's wages for the year; but then a great many of them do not work regularly all the week through, and then again some of them work for other people as well as for me. The wages average about 50s. a week.

996. Can you find full employment for the eighteen or twenty men who work for you? I can.

997. And they are fully employed either by you or others? Yes.

998. Have you any apprentices? No; I have had none since the gold diggings. Before the gold fields were opened I had three or four boys as apprentices, that I used to clothe and feed, and treat like myself; but since the gold diggings there has been so large an importation of goods that we cannot take boys on as apprentices.

999. There is no work for them? There is no trade to give them occupation. The importation of goods has completely ruined the trade now, and there are not above half-a-dozen manufacturers in the city—not regular tradesmen. The greater part of those now in the trade are what I call pedlers and not bootmakers.

1000. Have you any difficulty in getting boys as apprentices? No, I could get them, but I would not take them; and the reason why I would not take them is just this, that I would be too conscientious to do so; and I should say to any father who brought his boy to me as an apprentice, not to do anything of the kind, because now-a-days everything that can be imported from England is brought out here, and he would be only bringing his boy up to a trade in which there would be no occupation for him.

1001. But supposing you were inclined to take apprentices, and were to put an advertisement in the papers to that effect, do you think you would have many applications? I dare say I might get one or two. I could get shop boys in any quantity at from 9s. to 10s. per week, but I do not think there would be many apprentices.

1002. And why? Because everything that can be made is brought out to the Colony ready made; and it is no use having an apprentice in any trade, because there is no work for him.

1003. Can you give the Committee any idea of how many men you would be able to employ if the whole of the work you now sell were manufactured by yourself? I think, at the very least, I could employ a hundred men.

1004. Have you ever noticed a large number of the youth of this city running about the streets in a state of vagrancy? Yes, I am very sorry to say that I have—a very large number. Whenever there is a fire in the city, I see as many boys running to it as would make all the boots and shoes required in the whole country.

1005. Do you know of any occupation that these boys can turn to? No, without they go as 'bus boys; that is the only game they can be put to, unless the parents are well off, and then they make lawyers of them. But there is such a number of young men now being made lawyers of that I do not know what they are going to do to get a living—especially now that 'Torrens' Act is likely to be passed, that will cut off a great deal of their business; and yet they keep on making them, as I see by the papers, at the rate of about seven a month.

1006. Is the manufacture of boots and shoes a description of labour that would be likely to give employment to a large number of young persons? It is.

1007. It is an employment, also, very suitable for young persons? Yes; it would give immediate employment to the youth of the city; and afterwards, when they came to be men, there would be employment for a great number of them here. There is a very great deal of shoe leather worn in this Colony, and the supplying it would find work for a large number of persons.

1008. Have you ever given your attention to the fact, that there is now a large number of young persons growing up without occupation, because of the inutility of apprenticing them to a trade at which they cannot get employment? Yes, I have children of my own, and I really do not know what to put them to; and yet I am in a different position from those who work for me and have not the same chance that I have of doing well for their sons.

1009. Then if manufactures were largely carried on in this country, the benefits would not be confined solely to the working classes, but capitalists would be able to send their children to learn a trade, previous to setting them up in business for themselves as masters? Yes. I am not a very great man, certainly, but I cannot conceive how anyone can think it a disgrace for an employer to be put to a trade, in order to learn it before he goes into it. It is no disgrace to any man, whoever he is, to have a trade to his hands.

1010. And these remarks apply not only to shoemaking but to all other occupations? Yes; for instance, I would put one of my sons apprentice to a cabinet-maker, if I saw any chance of his being able to get a living; but everything in the shape of cabinet-work is now sent out from England, and I know it is no use.

1011. Then, though you wish to apprentice him to a cabinet-maker, under the present state of

of things you will not do so? No; I would sooner put a pick and a spade in his hands, and Mr. R. Cooke. tell him to go to the diggings.

1012. Is there now no occupation to which young people can be put? None that I am aware of; at all events, none that I would put my sons to. 30 Oct., 1862.

1013. Then, according to your computation, reckoning a man's wages at 50s. a week, you now pay between £40 and £50 a week for wages? Say from £30 to £40.

1014. You pay now from £30 to £40 a week for wages, whereas, if all the goods you sell were manufactured in your shop, you would have to pay in wages from £200 to £250? No, not so much—say £150 a week.

1015. I want you now to give me the relative value of imported and colonial manufactured goods. Taking £100 worth of boots manufactured in the Colony, and taking into consideration the difference in the rate of wages here and in England, as well as the difference in the value of capital by reason of the higher rate of interest paid here, and also the cost of importing and paying all charges upon the importation up to the time of delivery at your shop,—what would it cost you to import from England the same quantity and class of goods which cost you £100 to manufacture in the Colony? There is a little more money probably paid for what is manufactured here than for that imported from England; but it is mostly great rubbish that is sent out here—old stock, or articles made expressly for exportation. People who do not understand the business, and do not know a good article from a bad one, think they get the goods very cheap because they are low priced; but they do not do anything of the kind, as the goods are worth nothing. The only argument that ever I have heard against encouraging colonial manufactures is just this—if you have protection, you will have to pay more for every article protected. Now that I deny. In the first place, I employ eighteen men now; with these few men I have to get out of the work of each of them 2s. 6d. per day in order to cover expenses; if I had 100 men at work, 6d. a day out of each would pay my expenses, and in fact give me more money; so that if we had protection, in my opinion the competition would soon be so keen, that before very long you would have articles produced in the Colony at a cheaper rate than they are now imported. Eighteen men at 2s. 6d. would give me £2 5s. per day; whilst 100 at 6d. would turn in £2 10s. The greater number of men employed, the less it requires on each man's work to cover expenses.

1016. So that where a large quantity of any article has to be manufactured, it can always be produced at a cheaper rate to the public? Yes; and not only cheaper, but better.

1017. Then you believe, that though it would be apparently injurious to the consumer to place a small import duty of from 10 to 15 per cent. on articles brought into the Colony, yet in a short time, by the competition that would be called forth, the consumer would actually receive his goods cheaper than he now does under present circumstances? Yes, I do.

1018. You have not, however, answered the question I put to you, as to the relative value of imported and manufactured goods. Suppose we take 100 pairs of Wellington boots, manufactured in the Colony, and that they cost you £100 to make here;—taking into consideration the rate of wages, the value of capital, and the cost of importation, what difference would it make to you to import instead of to manufacture them—in other words, how much cheaper could you import them than you could manufacture them? That requires a great deal of explanation, and it is useless to mention to those not accustomed to the trade all that has to be taken into account.

1019. But I speak of the actual cost? Those made here will cost more money than those imported, but you will find that by using the imported article it will not cost you less for boots and shoes at the end of the year. There is a difference in the price, certainly, but that difference is not so great when all things are taken into account. And then there are so many different qualities of goods that it is very hard to say.

1020. But taking one particular class of goods,—supposing a lot of boots, of a particular kind and quality, to cost you £100 to make here, what would it cost you to import boots of the same particular kind and quality? There are, as I say, so many different things to be considered that I cannot answer this question directly. It depends upon the kind of boot, as well as upon other things. As an instance I may state, that I could manufacture 100 pairs of shepherds' boots at as cheap a rate as they could be imported from England, and a better boot into the bargain.

1021. *By Mr. Allen:* Taking the general trade, and without confining the question to any particular article, could you import from England for £75 the same quantity and quality of boots as cost you £100 to produce in the Colony? Yes. You might get what they would call boots and shoes, but it would not be anything like so good as the colonial production.

1022. *By the Chairman:* This £75 would include the whole of the costs and charges—freight, insurance, and everything? Yes, but they would not be half so good. I could import for £75 what would cost me £100 to make here, but the imported goods would not be half so good as those made in the Colony.

1023. In your opinion they would not be worth £50 to the consumer here, as compared with the colonial made article? No; and perhaps the very boots you get out here will be made of colonial leather, tanned in this country and sent Home. There will be freight paid on the leather going to England and freight on the boots coming back.

1024. Suppose the Parliament were to sanction the imposition of an import duty, how much per cent. would it require to put you, as a manufacturer, in a position to compete in price with the manufacturer of England? I think, with the costs and charges, that 10 or 15 per cent. would do it.

1025. Then you think that by being driven to use the colonial manufactures instead of the imported article, the consumer would apparently lose 15 per cent., or the amount of the duty? No, I deny that he would; he would be a gainer by the better quality of the article.

Mr. R. Cooke. 1026. But I say apparently—apparently he would be a loser to the extent of the import duty, by being driven to use the manufactured instead of the imported article? He might fancy he was paying more. And even if he did pay more for a single pair of boots, he would find that his boots cost him less in a year.

30 Oct., 1862.

1027. And you say that if such a duty were imposed, a great quantity of labour that is now unemployed, or only partially employed, could be remuneratively engaged upon this work? Yes; and not only that, but all the boys who are now running wild about the streets for the want of occupation would have something to keep them out of mischief.

1028. According to your evidence, as there are no apprentices now taken there are none learning the trade, so that in a short time, when the present generation dies out, there will really be no practical shoemakers in the Colony? None.

1029. And now those who may go into the trade, and in a few years become competent workmen, together with those who come casually into the country, will, if the whole of the articles required continue to be imported, be left entirely unemployed? Yes. I had three or four apprentices before I was married, and these are now competent workmen. There was a great call to learn the trade at that time, but now I have not had an apprentice for the last ten years.

1030. Can you give the Committee an idea of the cost of the labour required in the production of your goods;—taking a quantity of manufactured goods of the value of £100, how much of that will go for labour, and how much for material; or rather—supposing the goods to cost you £100,—how much out of that will you have to pay for labour? It would depend upon the kind of goods.

1031. Well, suppose them to be 1,000 pairs of strong boots? Good boots, such as would sell at 12s. per pair. That would be £600 for the 1,000.

1032. How much out of that would you have to pay for labour? I can get them made at 5s. per pair.

1033. Then out of the £600, £250 would go for labour? Yes, exactly.

1034. So that about 40 per cent. of the cost of the article goes for the labour necessary to produce it? Yes.

1035. So that by importing the article, instead of making it in the country, 40 per cent. is lost to the community, because the persons in the country who can produce it if they had the opportunity, are forced to allow their labour to remain idle and unproductive? Yes, I think so.

1036. Consequently, though the country may apparently lose the 15 per cent. duty on the imported article, it really gains 40 per cent., in consequence of the labour that is now unproductive being employed and made remunerative? Exactly.

1037. But you have no doubt that if the whole of the goods you sell were manufactured by yourself, you could then, in consequence of the large quantity you would produce, be able to give them to the public much cheaper than you do now? I do not say much cheaper, but certainly cheaper.

1038. But you say it would pay you to get 6d. a day out of your men's labour then, instead of 2s. 6d. now, by reason of the larger number you would employ? Yes.

1039. That would enable you to sell 2s. cheaper to the public, and 2s. on a pair of boots is a considerable saving? Yes, I may say much cheaper.

1040. And there can be no question about the article you produce being a much superior article to that imported? No question at all. I state this confidently, as a practical man and a tradesman who has served his time to the business.

1041. And you think that an import duty of 10 or 15 per cent. would put you in such a position that you would be enabled to compete with the foreign manufacturer? Yes.

1042. Do you know that there are persons in England who consign goods to this country on speculation, without having any order for them? They do.

1043. Is it not a fact, that there are persons in England who when they are short of ready money, collect the goods that have been lying idle on their shelves, old stock and unsaleable articles, and send them out to this Colony on speculation, for a purpose of getting an advance from the banks on their consignments? I have heard so. I have been engaged on several surveys of goods which have been as great rubbish as one could well see. They have been sent out by the parties without any care of what they may fetch here, but solely to get the 75 per cent. which the bank advances on the invoice.

1044. And when the goods come out here they sell at a very low price? Very low; they just go for what they will bring.

1045. And the goods are quite useless—great rubbish, I think you say? Yes, they are of no use to anyone; they fetch nothing in fact.

1046. Not even the 75 per cent. advanced on them? No, they are not worth that in the first instance.

1047. Does not this species of consignment interfere with the manufacturer much more than the regular import trade does? Most certainly it does; it brings into the trade a lot of men that I call peddlers, and not tradesmen; they have not been brought up to the trade, and do not know what a good article is, and they buy up this rubbish and bring it into consumption. They are dealers more than anything else; and that is just what I complain of, that the trade has been made into a system of dealing instead of bootmaking.

1048. As regards these importations—they are much more injurious to the manufacturer than the regular and legitimate importations are? Certainly. I am not at all afraid of the legitimate import trade. If a fair and open import trade were carried on, I could compete with it with my own manufacture. It is these parties who are hard up, and, in order to get the 75 per cent. advance from the banks, send out all their old and worthless stock, that injure the manufacturer. After they get the 75 per cent. advance they do not care

what

what becomes of the goods, for they know they are not worth half the advance they have received. I have seen these goods sold here in Sydney at 50 per cent. reduction on the invoice price. Mr. R. Cooke.

30 Oct., 1862.

1049. Would not a small import duty of 10 or 15 per cent. serve to check this unwholesome speculation? I am sure it would.

1050. And manufacturers complain of these speculative consignments more than they do of the legitimate importations by regular merchants? They do. If these parties had to pay a duty of 15 per cent. before they could bring their goods into the market, there would not be anything like so many consignments of this kind as there are now. Now they get 75 per cent. advance from the banks, and the goods come in here duty free, and the parties having already had more than the value advanced on them, do not care what becomes of them here. If they had to pay 15 per cent. in cash before they could be brought into the market, they would think twice over it, because they know that would be about as much as they would get for them by auction, after paying expenses.

1051. I suppose you would have no objection to get rid of some of your old stock that has been lying on your hands idle, even at something less than prime cost? Yes, or even at 30 per cent. reduction on prime cost.

1052. And tradesmen in England adopt that course in some of the consignments made to this Colony? No doubt.

1053. *By Mr. Sutherland:* If the Parliament were to impose a fiscal duty of 10 or 15 per cent. upon all articles imported into the Colony, would that be calculated to much increase the manufactures of this country? Yes, I am sure it would.

1054. And consequently it would tend to advance the country, and to cause a great deal of machinery requisite in many manufactures to be erected in different parts of the country? I have no doubt it would; but I may say that I should not like to see this done at once—I should wish a notice of twelve months or so to be given. I am saying now only what I think in the matter, and I hope the Committee will not consider that I am trespassing on their time and attention. I should like to have twelve months' notice given of the intention to impose this duty, so as to give some of the manufacturers in England an opportunity of knowing some time beforehand of what was going to be done. If that was done, I am sure you would have plenty of manufacturers coming to this country to carry on their business. I believe myself, that if you put on a 15 per cent. duty, that some of the manufacturers of Northampton and other places would be only too glad of the opportunity to send out machinery to the country, with men to work it, and everything requisite, without any expense to the country for immigration. They would send out a lot of people and machinery, and you would have manufactories starting up all round Sydney, at Liverpool, and Parramatta, and Campbelltown, and such like places, where a man may go now and fire through the main streets without shooting anyone; and you will have plenty and abundance where now you have nothing but pinching and contriving to get money to make up remittances. Now, if you go to a man to pay you an account, the answer always is, "You must wait till after the mail has gone." Everybody is making up money for transmission by the mail; all the money of the Colony goes Home.

1055. This sending money Home to pay for articles that might have been produced here is inflicting a great injury on the country? A very great injury. To me it seems a sin and a shame that it should be so, when there is so much that we can produce ourselves. I especially think it so when I see the number of boys that are running about the streets idling and vagabonding, and often thieving. There is no occupation for them, and they roam about the streets till they fall into bad company, and then they get to thieving. Our goals are crowded with them—boys who, from having nothing to do, have fallen into bad courses, when if manufactures could have been carried on, they would have learnt a trade, and have been able to have supported themselves instead of being thrown a burden upon the country.

1056. Then, as I understand you, it is not in the present alone that the Colony would benefit, but in the future also, by reason of these lads who are now growing up in idleness and crime being provided with useful and remunerative occupations, through the manufactures that would be established? Yes. Now these boys are vagabonding about the streets, and there is not a thing that they can lay their hands on that they will not steal, if they get the chance; in fact, they are actually being reared up as criminals, and as occupants of our goals, instead of having a legitimate and honest employment.

1057. From your knowledge of this city, and of the country generally, does what you state apply equally to other branches of manufacture as to your own? It does. For instance, we have the credit of having the best wood in the world for cabinet-making purposes, and yet all our articles of cabinet-work are imported from England, although we have excellent workmen in the country. We have the best wool in the world, and yet we do not use it, but send it Home to England, and get back in its place a lot of rubbish—soldiers' old coats, and rags of every description, torn up and made into cloth. If we began manufacturing our own wools here, you would soon find that the manufacturers of England would send out and establish themselves here. And if they did not, and if we could not procure as good machinery as they have in England, we might not perhaps be able to produce so good-looking an article as they do, but we should, at all events, have a much better one. But if this duty was imposed, we should soon have some of the manufacturers of England sending out men and machinery, as they would be only too glad of finding an opening for establishing their sons, or of investing their capital that is now lying idle. There are plenty of places round Sydney—at Parramatta, Liverpool, and Campbelltown—with everything ready to hand for the establishment of factories. And then, again, look at the Nepean, the finest river in the country, and much larger than some of the rivers in England on which factories are established,

Mr. R. Cooke. lished, and yet there is not a single manufactory on it that I have ever heard of. There is not a river in England like it that has not manufactories on its banks, making the stream serviceable for various descriptions of industry.

30 Oct., 1862.

1058. *By Mr. Harpur:* Is there much labour in the shoemaking trade which at present is not fully employed? There is.

1059. I suppose it is almost impossible to arrive at an approximate estimate of the value of the labour that is said to be thus lost to the country? Any man now who works from eight in the morning until six in the evening can earn 50s. a week, if not more, at shoemaking.

1060. That is as regards those who are fully employed—but with respect to those who are not fully employed, or who are not employed at all, does their want of employment arise from their not being able procure suitable work at their trade? The fact is this, that when the diggings were opened, a good many of these men left the trade and went to work upon the wharves or in stores, where they got higher wages than in their trade, and regular work.

1061. But in ordinary times—for those were not ordinary times that you allude to—a tradesman surely cannot make so much money as a labourer upon a wharf or in a store, as at the trade to which he has been brought up? No; a tradesman generally makes a bad labourer, particularly a shoemaker.

1062. However, there are some of these men who are only half employed? Yes, a great many.

1063. And thus, to a great extent, they are burdens on the community? Yes.

1064. Is that owing to the large importations of manufactured articles from abroad, or to a disinclination on their parts to keep steadily at work? As to the importations, I am sure that there are more boots and shoes imported into the Colony in a year than the people could wear if they wore nothing else but imported articles. And the half of the goods that are thus imported are never paid for. Just look at the consignments in the course of twelve months, and you will see that they speak for themselves.

1065. Do you think that if an import duty were imposed, employment would be given to all those tradesmen who are now either wholly or partially without it, and that the country would consequently grow rich? I do; and I am sure, moreover, that it would benefit the country in this way—that it would give employment to thousands of boys who are now knocking about the streets, learning nothing but evils. It would be the means of giving them a trade, and preventing them from being a burden upon their father or mother, who now has to support them. They would, at all events, be trained to work, which now they do not do, except maybe it is thieving; and then they are caught and sent to gaol, where the country has to pay for their maintenance.

1066. Then, according to your showing, under the present system of free trade there is a great deal of skilled labour in the country that is not employed? There is.

1067. In all trades? I speak of my own trade particularly; but I have been a long time in the Colony, and am a good deal about town. I know many men in other businesses, and I have heard them complain of the very same thing that I have stated here to the Committee.

1068. These persons, although unemployed, are still consumers; and being unproductive, they are thus a charge upon the community? They are.

1069. Whilst the country benefits nothing by their labour? Nothing.

1070. *By Mr. Sutherland:* If manufactories were started to such an extent as to give employment to the large number of persons who want it, would not other trades be benefited by the increased employment they would have in consequence of the others being fully employed? Yes, certainly. For instance, they would want houses, and bricklayers, masons, and carpenters would get additional work.

1071. In fact, one trade is so intimately connected with the other that one cannot be benefited without the benefit being felt through the whole of them? Exactly; as I say, they would want houses to live in, and then they would give increased trade to butchers and bakers and others, even to publicans.

1072. Then if a protective duty were imposed upon boots and shoes, it would not be the shoemakers alone who would benefit by the increased work they would get? No. I may perhaps be permitted to state here, that I am not exclusively a manufacturer, but that the greater part of my business is in imported boots and shoes; therefore, if I was to study my own interests alone, I should give evidence against the imposition of an import duty. But I see this,—that I have a family of my own rising up round me, and that I have no occupation to put them to; I do not wish them to be pedlers—for, in my opinion, I am nothing more than a pedler myself. It is nothing more than a pedlery business, to get your goods as cheap as you can, and to sell them at as high a price as you can get for them. It is not a fair and honest trade, such as a regular trade ought to be; for I confess it, we have often to tell lies in order to get our goods off. And when I say we are obliged to tell lies, it is just this, that I can see when an article is good, because it is my business and I have been brought up to it, but you cannot do so; and therefore if I sell you an article that is not so good as it ought to be, I consider that I am telling you a lie in recommending you to take it.

1073. *By Mr. Stewart:* Were you engaged in the trade before the diggings opened in the Colony? Yes; I am now sixteen years carrying on business on my own account. I worked at my trade as a journeyman before that.

1074. How long is it since you went to the trade first? It is twenty-six years since I first went to the trade. I served my apprenticeship before I came to the Colony.

1075. During that period have you ever known workmen at your trade involving themselves in criminal cases to any extent? I do not know of any. I know of one apprentice who committed a criminal act.

1076. But I speak of those who have served their apprenticeship and become regular tradesmen—have any great number of them committed criminal acts? No, they have not.

1077.

1077. You recollect no instance of the kind? I do not.

Mr. R. Cooke.

1078. Then, after a man has served his apprenticeship, it is a kind of guarantee to the community that he will continue to be a good member of society? Yes. I believe that if these Sydney boys, these street Arabs, could be bound to a trade, it would be fifty times better than allowing them to knock about the streets as they now do, blackguarding and thieving. 30 Oct., 1862.

1079. Then you think that there would be some advantage to society at large if the youth who are now unoccupied were trained to a trade, and that if they passed through the term of their apprenticeship it would be almost a guarantee to society that their future conduct would be better than it would have been had they learnt no trade? I do not say anything about their future conduct—that I can know nothing about; but I know this, that they would be better members of society, for it must be better for them and for society that they should work than that they should probably become robbers and vagabonds.

1080. Did you find any difficulty in keeping up the supply of boots and shoes to meet the demand of the public, before the diggings disturbed the ordinary labour of the country? None whatever. I had enough of men and boys to do all the work I required, and I could earn about £12 a week, without buying a single English article; in fact, at that time I had none in stock. And now, since I have taken to this peddling business, I sometimes find myself losing as much as £10 a week on the sale of these English manufactures.

1081. Would the consumers have to pay more for an article of your own make than for an imported article? No, they would have to pay a great deal less than they do now.

1082. That is because your article was more durable than the English one? Yes; it would be dearer in first cost, but would last longer than the English one.

1083. Then, consumers are now paying more for a year's wear of boots and shoes than they had to pay when they purchased articles of colonial manufacture? Yes, much more.

1084. How did it happen that the trade fell off;—had the advance in wages consequent upon the gold diggings much to do with it? Yes; the advance in wages was very great at that time, and since then wages have kept up rather high.

1085. Are wages higher now than they were before the gold diggings? Yes; but the trade is fast dying out in face of the importations that beat it out of the market.

1086. Do you think that the system of importation, such as you have described in answer to the Chairman, tends to encourage frauds upon the consumer, by bringing into the market goods that the regular tradesmen would never think of offering? Yes, I do; I consider it as much a fraud as those cases that the Inspector of Nuisances has to look after. It has come to such a pitch that it would almost require to have a man to go round and see and condemn the goods that are unfit for sale. I consider myself to be a conscientious man, and yet I am obliged to do what I feel is wrong; but others, who have no such scruples, carry on most glaringly and improperly. I consider in my own conscience that it is just as bad to sell to a customer a spurious article for a good one, as it is to sell with false weights and measures, and yet those cases are prosecuted at the Police Court.

1087. It is as bad as a jeweller selling a second-hand article for a new one, or a gold-washed article for one that is all gold? Yes.

1088. And there being no test for the value of boots and shoes, as there is for gold, parties are often deceived? Yes, very often.

1089. *By Mr. Forster:* You have paid great attention to this subject, I believe? Not practically; but I am a man of the world, and of course have considered this amongst other questions. In fact, I have been forced to do so, for I am now rearing a family of my own, and I am entirely at a loss as to what to do with them, or what to put them to.

1090. You wish to have protective duties imposed? Yes, I think the Parliament would do well to consider the question.

1091. Do you propose that that system should be carried out through all articles imported? Yes, I would have it applied to everything that can be manufactured in the Colony.

1092. Is there any limit to what can be manufactured in the Colony—may we not manufacture anything, if only a sufficient duty be imposed to protect the article against foreign competition? There is a limit; for instance, you cannot manufacture paper in the Colony.

1093. Yet if there were a duty on imported paper sufficiently high to be prohibitive, I presume it would pay even to make paper in the Colony, and that paper would be made? Yes, possibly it would under those circumstances.

1094. And you would like to see these protective duties established? I should, certainly.

1095. And would you put no limit to them? Not on the articles; anything that could be manufactured in the Colony should pay the import duty. But the amount of duty I would limit; about 15 per cent. is my idea—that is, 15 per cent. on the declared value of the goods when landed here.

1096. And how are we to find that value out? That is easy enough done.

1097. In what way—would you allow the manufacturer to settle the value? No, but the Legislature might do it.

1098. And suppose the Legislature declined to interfere in the matter? Then the people would have to decide it.

1099. But the Legislature, who represent the people, would have declined to interfere? It would then have to be seen which party were in the majority amongst the people.

1100. On what principle do you fix upon 15 per cent. as the amount of duty to be imposed? On this principle, that it would bring the article manufactured here just about to a balance with the imported article, so that the tradespeople would be able to get a living.

1101. Do they not get a living now? They exist, but as to living, that is another question; and with regard to the children who are now growing, you will see in twenty years time what kind of a population you will have.

1102. Then you consider that, to prevent all these evils, it is necessary to encourage manufactures, by the imposition of an import duty? Yes.

1103.

- Mr. R. Cooke. 1103. And you are of opinion that if such a duty be imposed it will be for the benefit of the whole community? I am.
- 30 Oct., 1862. 1104. And that the consumer will benefit as well as the manufacturer? Yes.
1105. But the manufacturer always looks for a profit? Of course.
1106. Would you be inclined to limit that profit? No, the competition will soon settle that. If the manufacturer makes large profits there will soon be others come in to share them with him, and the competition will reduce the price of the article to a reasonable rate.
1107. But are not your views opposed to the principle of competition—for instance, you will not allow the English manufacturer to compete on an equal footing with you? I do not look at it in that way. The thing is this: There is a man with six or seven children growing up; what is he to do with them? He cannot make anything of them, even with free selection; he cannot find them occupation, for he can only take up his 320 acres, and no more; and with the expenses he will be put to, he has no more money to buy land. Well, then, he naturally looks round to put some of them to a trade;—I will not say anything of my own business in particular, because there are various trades, for instance, cabinet-making, or some other legitimate trade. He naturally likes to have his children brought up respectably,—and I look upon the legitimate tradesman as being as respectable a man as any in the community, and I know that is the general feeling.
1108. You speak of free selection;—might not these men who had made money by free selection, send out their sons to free select in their turn? Yes, but he wants money to give them a start, and free selection is of no use without capital to begin with.
1109. But the man has made a fortune for himself by free selection—why should not his boys do the same for themselves? Because he has not capital enough to start them.
1110. You believe in free selection, I imagine? Yes, I do.
1111. Do you not think that it enables a man to start for himself, and in time to make a fortune, even though the quantity of land is limited to 320 acres? I do not—not free selection of itself. It wants money to begin with. A man must have capital or he can do nothing with the land.
1112. Then would you recommend the Legislature to give money to persons settling on land, as well as the right of selecting the land where they chose? No; and although free selection does not do all that some people thought it would, I am happy to say that it does this much—that it enables a man to go and take up 320 acres of land by paying down a fourth part only of the cost, instead of having to pay it all as he had to do formerly, besides the difficulty of getting the land at all.
1113. What benefit would the free selector derive from the imposition of these import duties? It would give him this advantage, that if he had six or seven boys he would be able to put them all to a trade, instead of having them on his hands as he now has, with nothing for them to do.
1114. But if he can get on so well under free selection as to be able to maintain himself and to rear a large family, why should not the boys, in their turn, be able to do the same? It does not always follow that a man would wish to apprentice his children to the same occupation as that which he himself follows. I have six or seven boys, and if I was making a fortune at my business I would not put them apprentice to the shoemaking business.
1115. Yet surely, if a fortune is made in any particular trade or calling, that must be an encouragement to others to follow that calling;—thus, if the country is opened up by the free selectors, and they make large fortunes by farming pursuits, it must surely be an inducement to them to put their children to follow the same occupation? I speak for myself, and I would not put my children to my business. And yet if I was a selfish man I should not ask for protection, as my trade lies principally with imported articles. But I do not think of my own individual gains, for I look at the large number of children that are now running about thieving and blackguarding upon the wharves, and I ask myself, what is to become of the country if this is allowed to continue?
1116. Then, as I understand what you now say, you do not desire this import duty merely for the purpose of securing a profit to the manufacturer? No.
1117. So that I assume from that, that you think it quite possible that the manufacturer can now make sufficient profit without this duty? No, I do not think that; as I say, he may exist—he will not make a fortune, that is clear; and when any little difficulty occurs that he cannot meet his bills, he has only to take a walk up to the top of King-street, and that settles everything.
1118. I do not understand you;—what do you mean by taking a walk up King-street? Going insolvent—that wipes off all accounts.
1119. Is that the effect of the present situation of affairs? It is.
1120. That it leads men to incur debts that they can never hope to pay, and then, when those debts are demanded, causes them to relieve themselves by means of the Insolvent Court? That is the way a great deal of the business is done now-a-days.
1121. So that, from what you say, it would appear that the Colony is not in a prosperous state? Not in our line, certainly.
1122. Then if the Legislature imposes an import duty on boots and shoes, and so makes the shoemakers of the Colony prosperous, it will at the same time make the whole Colony prosperous? No, I do not say that; but what I say is, that the advantage will not be confined to the shoemakers alone, but will be distributed amongst the community at large.
1123. Do you advocate this import duty in order that tradesmen may make more profit than they do now? No, I do not.
1124. As a matter of fact, would not import duties give the tradesmen and manufacturers of the Colony larger profits than they now have? No. They might at first, as I have already said, but the competition would soon bring that down. 1125.

1125. Then you leave the consideration of profit to the manufacturer entirely out of the question? Yes; I do not look at the question of profit at all; I put it upon this ground only, that by having manufactures in the country we should be able to give employment to the large number of youths, who are not merely unproductive, but are a source of absolute loss to the country, by the expense that their thieving brings upon it. Mr. R. Cooke.
30 Oct., 1862.

1126. And you attribute these vagrant thieving habits of the youth of this city to the absence of protective duties? I do, because there is no employment they can be put to.

1127. It is entirely upon moral grounds, then, that you advocate these protective duties, those grounds being the benefits that would be conferred upon the rising generation? Yes, entirely upon that account, as I can just as well sell English goods as manufactured.

1128. Then other tradesmen, in other trades besides shoemaking, can do the same? Yes, just the same. Cabinet-makers or others can sell English goods as well as colonial, and get their profit out of them.

1129. I think I understood you to say that the present system compels men to tell lies? Yes, it does; I am bound to acknowledge it.

1130. Is that a practice in all trades, under this system, to tell lies? There are very few in our line that are tradesmen; there are not above one dozen or so real tradesmen in the city, the rest are all jobbers and dealers.

1131. Because I thought that, probably, if men were compelled to tell lies in the way of business—that it was, in fact, a custom of the trade to do so—that those youths who were put to them to learn the trade would learn to tell lies also? If they are put to learn the trade they will have nothing to do with the shop. It is what takes place in the shop that I speak of, and the apprentices are all away in the work-room, and are never in the shop. Where you have boys about the place, as we have now, as messengers to run of errands or do odd jobs, they may learn something of what is going on, for the young rascals have always got their ears cocked for any mischief.

1132. Do you think the Legislature could establish protective duties in such a way as to give employment to all the youth of the Colony who are now without occupation? Yes, I am sure of it.

1133. But suppose that, after the Legislature had done this, these boys would not avail themselves of the opportunity offered, and would not take to any settled occupation, what would you do then? I do not imagine that. I think, if the opportunity was given them, that 75 per cent. of them, at the least, would be glad to go to work of any kind if they had it.

1134. Do you mean to say that these boys cannot get employment of any kind? There is a little employment to be had as 'bus boys, or to run of errands, or to sell newspapers, but that is about all, and it does not employ many of them. The rest run about the streets half naked, and are of no use whatever to the community.

1135. Do you think any of these boys would take wages to go up the country, or even in Sydney, to do small jobs, and make themselves useful about a place or on a farm? Some of them might, but these are not all that I allude to. It is principally amongst the sons of respectable men in business that the want of employment is felt; and I do not think that any respectable man would wish to see his son going to wash out a kitchen, or doing such like work, with no chance of learning a business.

1136. Then a respectable tradesman would object to see his son occupied in this way rather than remain idle? Certainly he would.

1137. Do you think that respectability consists in following any particular occupation? I think there is a greater degree of respectability attaching to some occupations than to others. I know I should not like to put my children apprentice to a sweep.

1138. Then, according to your view, the labouring man who works honestly, and brings up his family in decency, is not so respectable as the tradesman who has a large shop and makes a good income? I do not say that—I think he is quite as respectable.

1139. Then it is possible that a man may be respectable, whatever the occupation he may follow, even though it be that to which you have alluded—a sweep? Yes, he may.

1140. So that if a lad is put to any occupation at which he can obtain an honest living by his work, he will be a respectable man, even though he may have to wash out the kitchen of a settler? He may; but I would sooner see my children drowned than have them compelled to do work of that kind.

1141. Why so, seeing that by working honestly for his living, he is being brought up to be a respectable man? I do not say that he is not, but that is not what I look for for my children. Let me ask you how you would like to send your son to be a 'bus-boy?

1142. What I wish to know is not with regard to your boys, but to those for whose moral welfare you require the imposition of protective duties, and I ask you whether they could not be got to engage themselves in such occupations as offer. According to your account, they and their parents prefer that they should go vagabonding and thieving about the streets, as you express it, rather than avail themselves of occupations which you say are not respectable? No, because the Legislature will not allow them to go to trades that might suit them, and it is not every boy that would choose to go as servant to a settler.

1143. What do you mean by that, that the Legislature will not allow them—in what way does the Legislature interfere to prevent them? By allowing goods to come in duty free and beat them out of the market.

1144. And do you mean to say that there is no work to be had—can they not go to the diggings? They are mostly children and boys of from eight to twelve years old, and I certainly would not recommend that children of that age should be sent to work on the diggings.

1145. Then, as I gather it, what you say is this—that it would be so unprofitable to the boy in

Mr. R. Cooke. in after life to learn the trade that his father follows, that you do not think it advisable to put him to it, notwithstanding the moral effect of occupation upon the boy? Yes.

30 Oct., 1862. 1146. Are there not occupations of another kind, plenty of which are open to the parent to select from for his boys—is not the country open, for instance? You may possibly know more about what chances there are for occupation in the country than I do; but I have seen a good deal of the country myself, and only lately I was down in the Illawarra District, and there were plenty of men there that did not know what to do with their boys, and asked me what trade they should put them to.

1147. Then your wish is, first to put your boys to a trade, and then that the Legislature should interfere to make that trade profitable? Yes, I think so.

1148. So that, in point of fact, it is not so much the moral effect that you look to, as that some trades should be made more profitable than they now are? No, it is the moral effect only that I look to, and I would have the trades made more profitable only that a living may be made at them. Now these boys are growing up in idleness and crime solely because they can get no work to do, and I wish to give them work that they can get a living at.

1149. But if you look only to the moral effect of giving a boy occupation, you will put him to a trade whether he can support himself at it or not? That is all very well; but who is to keep him afterwards, when he has served his time?

1150. There you come to the pecuniary advantage again, and I thought it was the moral effect only that you looked at? I speak for myself, and I say that it is the moral effect only that I look to. I am astonished and grieved at the large number of boys I see going about the streets doing nothing, whilst we are sending home to England for articles that they could be taught in a few years to produce in the Colony.

1151. And you would wish to see all these boys brought up as tradesmen or mechanics? Yes, I would. In a Colony like this I would have every boy taught a trade, that he might turn his hand to if it was required.

1152. Have you considered what proportion the tradesmen and manufacturers ought to bear to the rest of the community—would it be possible for a nation to exist if the population consisted of nothing but tradesmen and manufacturers? I do not know; on the Continent of Europe they call England a nation of shopkeepers.

1153. As a matter of fact is it so—is it a nation of shopkeepers exclusively, or is there not rather a large and wealthy class by which the shopkeepers are supported? You will tell better than me about that, if you look at the returns that I dare say you have before you, of all that is produced in England. Taking this Colony alone, they send out here so much of their manufactured goods, that even with all our gold, we cannot send Home money enough to pay for them; and whilst we are doing this we have thousands of boys running about our streets idle, consequently useless to the Colony.

1154. Do you not think that many of them might find employment upon the gold fields of the Colony, if they were sent into the interior? No, I do not.

1155. Do they not offer plenty of employment for many more persons than are now on them? I do not know, but you would not surely wish to send boys of twelve years of age to seek their fortunes upon the diggings.

1156. What necessity is there for sending them at that age? If you do not, it must cost their parents something to keep them in idleness up to the age at which it would be fit to send them.

1157. Then you come to the profits again, and lose sight of the moral question. As it appears to me, you want a trade to be so profitable that it will enable you to keep your children, and in order to do this, you want the Legislature to impose a duty upon imported articles that come into competition with you in your trade, so that it may be made more profitable than it is at present? What I want is this—I want a man to be put in such a position that he will be relieved of the great burden of maintaining the whole of a large family in idleness; I want to see manufactures established here, so that if he has six children, he may be able to take three of them and apprentice them to a trade at which they would be able to get plenty to eat, and good clothes to wear, instead of being half naked as they now are, and where they would soon earn wages to assist their parents in bringing up the others. But now, if a man has six children he has to keep them all in idleness, because there is no trade that he can put them to.

1158. Is there absolutely no occupation here? None; you cannot even go for a soldier here.

1159. Supposing the system you advocate would give employment to all the boys in the city who are now running about the streets, might it not possibly happen that a lot of boys might be brought in from the interior of the country, who would still be beyond the number you could provide work for; or could you, under your system, employ all the boys in the country as well as in the city? Yes, in the different trades we could employ them all. If you look at the amount of money that goes home to England to pay for the articles we import here, you will see that the amount would afford profitable employment to a very large number of persons; or if you take our population, and then take the different commodities that could be manufactured here for their consumption, you will find that there would be plenty of employment for all the boys in the Colony. I am sure, if you look into the matter in this way, that you will say the same.

1160. But if you put protective duties upon manufactured goods coming into the country, would not the farmer, or the free selector, as you have spoken of him, who does not produce a manufactured article, be placed at a disadvantage by having to pay something more than he now does for the manufactured articles he consumes; or would those articles, as I think you have said they would, be produced cheaper and better under a system of protection? Yes, I think they would; they would obtain them at a lower price, and have better.

1161. That you consider to be the effect of protection—to produce a better article at a lower price? Yes.

1162. Would you be inclined to advocate a protective duty upon flour? My notion about flour is just this—that when wheat was selling at over 6s. or 7s. a bushel, I would allow flour to come in duty free; because 7s. is the price that pays the farmer to grow wheat. Mr. R. Cooke.
30 Oct., 1862.
1163. But if the effect of protection is to make the articles protected cheaper and better, would you not have wheat cheaper and better under a high protective duty? But then there would be so much competition, and so much wheat would be grown, that the farmer would not be able to pay the money he owed to his tradesman if the price went too low.
1164. The effect of protection being to make articles cheaper and better, surely it must apply to corn the same as to all other articles? Not exactly. There are men now who will not put corn into their ground, because they pretend that it will not pay at the present price. If they were sure of getting 7s. a bushel for their wheat there would be plenty put in. And as to the capability of the country to grow corn, Mr. James Macarthur, who is a good authority, has declared that in one district of the Colony alone, I think the Camden district, they could grow enough corn to feed the whole Colony.
1165. Then you would advocate such a scale of duty on wheat as would give the colonial grower 7s. a bushel? Yes.
1166. Thus, if the effect of protective duties be to make the articles protected cheaper and better —? When I say that, I speak only of the effect it will have in my own line of business.
1167. Yet, if that is a principle of protection, as I think you have said it is, surely that principle must apply equally to all articles? It is the competition that would ensue in my trade that would cause the articles to be produced cheaper and better.
1168. Is there no competition in your business now? No regular competition, such as I refer to; our business now is nothing more than dealing and peddling.
1169. Then protection would make this regular competition that you now say is wanting? Yes. If you had a 15 per cent. duty you would have parties sending out men and steam engines and machinery, and establishing manufactures in all the towns round Sydney.
1170. And the effect of all this would be to give better and cheaper articles to the public? Yes, it would tend to do so, though they might be a little dearer at first.
1171. And this would be the effect in all cases, the principle being a general one, and applicable to all trades and occupations? Yes, I think it would.
1172. Then, of course, that being the principle, the higher the duty imposed, the better and cheaper will be the article? No, I do not say that.
1173. That being the principle, where is the limit to be drawn? I think that it ought to be drawn at 15 per cent., but of course that is my own private opinion, and is open to correction.
1174. Then you would stick to that duty, no matter what the article might be, or what the probability of our producing it in this country? No, I would impose it only on articles that can be manufactured in this country.
1175. Suppose we take the flour that is produced in this Colony, and that a 15 per cent. duty is placed upon every article imported, then if we can grow flour as cheap as they can send it from Valparaiso, with the 15 per cent. duty added, we shall of course keep the market, but if not, the Valparaiso farmers will still undersell us. Supposing the latter to be the case, and that even with the 15 per cent. duty, Valparaiso flour can be brought in here cheaper than we can grow it, would you advocate the imposition of a still higher duty? My experience is that they cannot do so. I do not think that any article can be imported to undersell our own manufacture, if it bears a 15 per cent. duty—not unless somebody is robbed, and the goods are not paid for. They cannot supply us here 15 per cent. cheaper than we can produce ourselves—that is, not by a legitimate trade.
1176. With regard to these boys, do you not think that the want of education has something to do with their vagabond habits? No, I think not. The boys here are educated as well as I see them educated in the old country. A great many of them go to school, and then afterwards they ramble about the streets, and get up to all manner of devilment.
1177. And protective duties, you think, would stop this devilment? If they were bound apprentice to a trade, they would have the eye of the master always on them.
1178. They cannot get any work now? Not unless they get into Darlinghurst Gaol, and then they are made to work, picking old ropes and making mats.
1179. But there is really no employment to keep them out of gaol? No.
1180. Can you assert positively that there is no employment of any kind for them? There are plenty of them employed selling newspapers about the streets, or running of errands through the city, but there is no regular employment. If I put an advertisement in the newspaper saying I want a boy, I should have fifty applications for the situation the same morning.
1181. How then does it happen that the settler who wants a few boys to work on his place cannot get them? I will tell you about that. I went down to the southward in a steamer the other day, and the captain had two boys on board that were going down with him to Eden to look for work. One of them was twelve years old and the other ten. The captain took a good deal of interest in them, and asked the passengers if they could do something for them. There were five or six settlers amongst the passengers, and they could neither themselves employ the boys nor tell them where to go to get employment. That is only about six weeks ago, and the fact came under my own observation. The boys had given the captain £1 for their passage to Eden, and they had got the money from their mother, in order to try their fortunes and relieve her from the charge of supporting them. It does not seem from this that there is much employment for boys to be had amongst the settlers.
1182. If there is any great want of employment, to such an extent as to become a great social question, might not employment be very properly found by the Government? No, I think

Mr. R. Cooke. think not. The Government have got too many of those kinds of things on hand already. They have the Randwick Asylum and the two orphan schools, all full of children, and what do they do with them?—just keep them all doing nothing. I never hear of any of them being sent out to work, or being apprenticed to a trade.

30 Oct., 1862.

1183. Is there not a large class of persons who, although they want employment, will not take any at a rate of wages lower than what they consider to be the regular wages that they ought to receive; for instance, will men employ themselves now under £30 a year and the regular rations? No; but if you take a case of that kind, I do not see why one man should be asked to take less wages than another.

1184. Not even if he is starving? That I will not say; of course it is a different matter if the man is really so bad off as that.

1185. But as a general rule, will not a man, even though he professes to be starving, refuse to accept occupation at a less rate than £30 a year and rations? A lot of them are fools, and do not know what they are doing half their time, or what is for their own interest.

1186. But will learning a trade make them know their own interest better than they do now? If you make them tradesmen I think it will. It is very seldom that you see good tradesmen fools.

1187. Then is our whole population to be converted into tradesmen? A great many of them would be, under the system I propose.

1188. If the whole of these boys you speak of are to be employed, is it by converting them all into tradesmen? No, I would not wish that; but what I wish is, that every parent should have an opportunity of doing something for his children, by either putting them to a trade or sending them up the country. Now he can do nothing; there is no opening anywhere.

1189. However, there is a certain number of boys now employed? Yes, a few; but nothing like so many as there used to be before the diggings opened. I used to have three or four boys as apprentices, and now I only keep one in the shop to run of errands and messages.

1190. And you wish to see the rising generation employed, without any reference to the profits of your trade? Yes.

1191. Must there not always be an immense proportion of the population that you cannot make productive, in the way you describe, in trade? I have answered that question before. If you take the amount of money that is sent out of the country to pay for articles imported into it, you will find that it is more than sufficient to pay all that can be employed good wages.

1192. But I am speaking of a large class of persons that must be employed upon productive operations other than those you advocate;—for instance, your protective duties would not beneficially affect the large producing classes up the country? The country, by the inducements it holds out to them, brings out these men to work for it, and it is their children that I wish to provide for. The most valuable class of men that come out here are those who go up the country, and work in different ways in developing its resources. In six years these men are generally able to get a piece of land of their own, and have farms, and a family soon springs up round them. It is for that family that I would provide the employment that they cannot get now.

1193. What would you do, then, with the children of the interior? Bring them down to Sydney to learn trades.

1194. Are all the young children in the country to be brought down to Sydney, and to be made tradesmen in the city? No, certainly not.

1195. Then how is your plan to affect the children of those classes whose employment lies in the interior? In this way: They all want boots and shoes in the interior as well as they do in Sydney. Well, they send their boys down to Sydney to learn a trade, say, shoemaking, and he goes back into the country, when he has served his apprenticeship, and sets up in business there.

1196. Would you make them all shoemakers then? No; there are other things wanted besides shoes—there are clothes, and furniture, and many other things.

1197. And are none to be employed as labourers? Some would be, as a matter of course. It would be the same as in England—men would go to what they found suited them best.

1198. Did you ever hear of any great distress amongst the manufacturing classes in England? I have.

1199. What, in your opinion has been the cause of it? Over-population, and we shall not have that complaint to make here for many years to come.

1200. How do you know that the same causes may not operate here as have operated in England to bring about a re-action against protection? I do not think it, at all events, not for a long time to come. It took England a very long time to consider before she took protection off one article alone—corn, and even then she had to pay for it by the distress that followed on it. And since then they have had to pass a Bill for the sale of encumbered estates in Ireland, to send those people who owned property and could not pay their debts into the Courts.

1201. You say that one of the effects of the present system is, to produce inferior articles which are sold to the consumer as good, and he is deceived? Yes, I am sure that such is the case.

1202. Did you ever hear of bad milk being sold in Sydney? Yes, I have.

1203. How is it with regard to that article, which is not affected by competition with the imported article—that cannot be the cause of the bad milk? There is milk imported into the Colony, but that has nothing to do with this. The Corporation ought to look after that, for I believe they pay a man to go round and see that all the articles that are offered for food are such as ought to be eaten. He will go into a butcher's shop in the market and take away meat

meat that ought not to be sold; but he will not go into tradesmen's shops and prevent the public from being robbed in other ways, by having articles sold to them that are not worth wearing. I can sell cotton for wool if I choose to do so, and there is no one to look after me and bring me to account, though I perpetrate a greater swindle than the man who waters his milk. And yet no man is allowed to sell milk with more than a certain quantity of water in it.

1204. Take the article of cheese;—if foreign cheese were altogether excluded from our market, do you think we should make better cheese here and sell it at a lower price? I do not know about that.

1205. Do you know the difference between the two? I do.

1206. You can tell English cheese from colonial? Yes.

1207. And which do you prefer? Well, I like the colonial best; but I am no cheese-eater, and perhaps I may not be considered to be a judge of cheese.

1208. Would you like to have to pay the same price for the two articles? I hardly know how to answer that question. I am told by judges that the English is the best article, but I prefer the colonial.

1209. *By Mr. Allen:* Suppose that a large number of boys were offered to be apprenticed to different trades, would masters be found to take them? Yes, and very glad to take them upon terms.

1210. As things are now? No, but if the 15 per cent. duty were imposed. I would not take a boy now as an apprentice. If you get a boy now, he wants 12s. a week, and nothing less will suit. I used to have boys at £5 a year, with board and lodging, and then I used to teach him the trade, or if I was too busy I used to pay a man to do it for me.

1211. In the event of a protective policy being established, with a moderate duty of, as you suggest, about 15 per cent. on imported articles, would full employment be given to all the tradesmen now in the Colony? Yes.

1212. What would then be the effect upon the general prosperity of the country, on the trading portion of the community, if all the workmen were earning good wages? I think that his Honor the Commissioner of the Insolvent Court would not have so much to do as at present —

1213. Then the occupation of the industry of the country would be sufficient to keep the trading community in a state of solvency? Yes, I think so.

1214. And with respect to manufacturers—the competition amongst the manufacturers would be likely to keep the prices as low as, under all considerations, it would be possible to have them? Yes; but as I said, I should not like to see a new system come into operation before twelve months had elapsed, so as to let the manufacturers of the world know what we were going to do. Because in the crowded parts of the world it is a great object with capitalists to find an opening for their children to set up in business, and I believe there are many of them who will send out machinery and men to give a start here to their children. Those who are now exporters of goods to this Colony would, instead of sending out the goods, send out men and machinery to make them in this country.

1215. With reference to some questions asked you by the Honorable Member for Sydney East, allow me to ask you what you call productive operations—do you not call a tradesman who makes his own goods a producer? Certainly I do; but I understood the honorable gentleman, in his remarks, to refer to the country people or farmers.

1216. *By the Chairman:* With reference to the degree of respectability, I suppose there are various degrees of respectability, ranging through all shades, from the Governor down to the sweep? Yes, there is considered to be some difference; but, for my part, I have Burns' notion on the subject, that "a man's a man for a' that."

1217. Speaking generally, however, I suppose the Governor would not like a son of his to learn your trade? No, I suppose not.

1218. Nor would you like your son to learn the trade of a sweep? No, that is about the feeling.

1219. Every person has his own particular notion or feeling as to his standing in society, and it is consequently only natural for a parent to look upwards for his child, and instead of apprenticing him to something beneath him, to put him to something better? Yes, that is generally the feeling amongst men in business; and if a man happens not to be particular in that respect, the wife has always to be consulted, and she would no doubt be averse to any lower occupation.

1220. When a youth is brought up to a particular trade, as suggested by Mr. Forster, merely to keep him out of harm's way, he would be unfit for any other occupation than that which he has learnt, after having served five or six years to that trade? Yes, he would certainly not make so good a labourer after having learnt the trade as he would have made before.

1221. Then, bringing a boy up to a trade would, in effect, spoil him for a labourer? Yes; there are some trades—such as shoemakers, and weavers, and tailors—that are never fit for anything else. They always laugh at tailors, or shoemakers, or shopmen, when they see them going off to the diggings, because it is known that they are not fit for hard work.

1222. Speaking of reduced wages and reduced profits, is it not the case in every business, that the person selling expects to get a certain price, and a certain profit on what he has to sell—and if he is a producer he likes to get as high a price as he can, and if he thinks the price offered is beneath what the article is worth, he will not sell? Yes.

1223. Tradesmen and shopkeepers have generally a certain fixed rate of profit, below which they will not sell their goods? They ought to have, but in Sydney they do not stick to that rule.

1224. As a rule, such ought to be the case? Yes, if tradesmen are honest and wish to pay their debts.

Mr. B. Cooke. 1225. And as regards the mechanic or the labourer, the only article he has to sell is his labour? Yes.

30 Oct., 1862. 1226. Do you think that the mechanic or labourer has less right to sell his labour at what he conceives to be its fair remuneration, than the tradesman or shopkeeper has to receive the full value of the goods he offers for sale? Certainly not; he has quite as much right as they have to get full value for his labour.

1227. And to exact whatever price he can get for it? Yes.

1228. With reference to the employment of youth, do you think it possible to find employment for the whole youth of the Colony? Yes.

1229. Under the present system? No, not under the present system.

1230. Yet if there was such an import duty as 10 or 15 per cent., that would place you in a position to compete with the foreign manufacturer of goods, and enable you, in your establishment, to give employment to at least 100 boys? In my own establishment?

1231. Yes? I can hardly say what would be the effect of it.

1232. But you have said that 100 persons would be required to produce the boots and shoes you now sell? Yes.

1233. And you could employ that number? Yes.

1234. Twenty years ago, I believe, the whole of the boots and shoes worn in the Colony were manufactured here? A great portion of them.

1235. In fact, there was very little imported? Not much.

1236. The population then was not a third of what it is now? No; and I remember that the first sale of imported boots in Sydney, was held by Mr. Lloyd twenty-one years ago.

1237. Then, if with a population of 80,000 we could manufacture all the boots and shoes we required, which we did, I believe? Yes.

1238. I suppose you can see no reason why, when we have increased our population to 350,000, we should not manufacture for ourselves just the same? No; but in those days people were not so particular as they are now; but there were plenty of men who could do good work, even in those days, and everybody almost wore colonial boots and shoes.

1239. So that, if it was possible for a population of 80,000 to manufacture for themselves, it must also be possible for a population of 350,000 to do the same thing? I should think so.

1240. Great Britain manufactures not only for her own population, but also for three times her own population? If you only look at the amount of money sent Home for boots and shoes, you will soon see what will be required here.

1241. And with reference to the question of bringing boys from the country to learn trades, even if they did not learn trades they would be benefited by the employment of the Sydney youth? What I look at is this: They will learn a trade in Sydney, and then go up the country and work at it, and so save the carriage of the articles from Sydney to the interior. The cost of carriage to the interior brings up the price of the goods very high, especially in bad seasons; and if there were tradesmen scattered over the country all this would be saved. They have plenty of hides and bark, and could make their own leather, and use it up. As things are now, I have seen a man go seven or eight miles just to get a piece put on his boots.

1242. *By Mr. Stewart:* And you think that if a protective duty were imposed, people in the interior would get supplied with manufactured articles as cheaply as at present? Yes, and cheaper, because they would save the cost of carriage. They send bullock hides and bark down the country to Sydney, whereas if they had tradesmen on the spot they could tan their own leather, instead of sending the hides and bark to Sydney and fetching back the tanned leather, and, as well as this, they would save the cost of carriage for the manufactured article.

1243. *By Mr. Forster:* You would not protect one class of producers only, so as to give them an advantage over others? No.

1244. Because you speak of shoemakers, and the advantage it would be to them? I give them as an instance, because I am better acquainted with that trade than with the others.

1245. Would you, then, put an import duty upon all articles, generally? I would put it upon everything that could be manufactured in the Colony.

1246. Then I suppose you would also put a duty upon imported bulls? I do not think you could manufacture imported bulls in the Colony.

1247. *By the Chairman:* With reference to the employment of the boys of the interior, of course your great object in recommending an import duty is to employ the boys of the city, who are now running about in idleness, in the manufacture of some useful article? Yes. I have no interest of my own to serve, but when I look at these boys I cannot help saying to myself, what a pity it is that they should be allowed to run about idle, when so many of them might be employed in providing for the wants of the community.

1248. You would also put a duty on wheat, on a sliding scale, so as to cease when the price reached 6s. or 7s. a bushel? Yes.

1249. And such a system as that you recommend would give employment to all the boys in the country? Yes.

1250. To the children of the free selector as well as to the children of others? Yes.

1251. So that it would not only be a benefit to boys in the town, but also to those in the country? Yes.

1252. Because it would open up for them a number of pursuits that they have not now? Yes; the people of the interior would get orders for wheat, and oats, and corn, and other produce that they will not grow now, because there is no market for them.

1253. *By Mr. Stewart:* You have been asked about cheese; let me now ask you if you have seen any colonial bacon? I have.

1254. And used it? Yes.

1255.

1255. Do you consider it to be equal to the English? Yes, I do.
 1256. And there would be no difficulty in supplying the whole Colony with bacon of our own production? No.
 1257. And of a quality equal to that which is imported? Yes, and better. I would sooner have the colonial.
 1258. If there were an import duty could it be supplied at as low a rate as at present? Yes, lower; because more would be produced. It would be worth a man's while to do so when he had a market for it.
 1259. Can you account for how it is that so large a quantity of bacon should be imported from England in the face of the large supply we can produce in the Colony? It is just as I say in my own trade, over-done by speculation. Parties send out the goods on speculation. If they make money by the venture, then it is all right; but if they do not they have the advance from the bank, and do not care twopence about the goods.
 1260. Having got, as an advance from the banks, as much as the goods are worth, they do not care what becomes of them afterwards? Exactly.
 1261. Then, if a duty of 15 per cent. were imposed upon imports, would it tend to regulate the supply of articles, and cause the trade to be carried on more equally than at present? Yes, I am sure it would.
 1262. It would have the same effect upon these and other goods, as what you have alluded to in reference to your case? Yes, precisely the same.
 1263. And of course it would be the same as regards bacon and other farm produce? Yes. And there is another thing to be considered, that if the farmer knows he can get a price for his goods that will pay him, he would rear pigs in much larger quantity than he does now, for where you have one pig now you would have a thousand then. Colonial produce is always considered to be sold for cash, and there is no great amount of speculation in it.

Mr. R. Cooke.

30 Oct., 1862.

TUESDAY, 4 NOVEMBER, 1862.

Present:—

MR. DALGLEISH, | MR. STEWART,
 MR. SUTHERLAND.

JOHN LUCAS, ESQ., IN THE CHAIR.

Mr. James Vickery called in and examined:—

1264. *By the Chairman:* Are you a native of the Colony? No.
 1265. You have been here many years? Yes, twenty-nine years.
 1266. You are engaged in manufactures in the Colony? I am.
 1267. Of what description? Boots and shoes.
 1268. How long have you been so engaged? On my own account about ten years.
 1269. I believe you were engaged with your father previous to that? Yes, I was.
 1270. Do you manufacture many boots and shoes now? I do.
 1271. How many men have you employed? In making boots and shoes, thirteen men and fifteen apprentices.
 1272. Do you sell any imported goods? I do.
 1273. Any large quantity? Yes.
 1274. Could you give the Committee any idea as to the proportion of imported work you sell with that you manufacture yourself? I think I sell about three times as many imported as I do colonial manufactures.
 1275. How long is it since you first turned your attention to the manufacture of boots and shoes? I have been at it more or less for three or four and twenty years.
 1276. Was there much imported work in those days? No, very little.
 1277. I suppose the imported work, as compared with the colonial work, was very small? The imported work in those days was not above a fourth.
 1278. The people in the Colony could manufacture for their own consumption in those days? They could.
 1279. Do you know any reason why they could not manufacture for their own consumption now? No; I could easily manufacture twenty times the quantity I do.
 1280. If you had the manufacture of a larger quantity, I presume you could produce them somewhat cheaper? Yes.
 1281. Can you give us any idea of the number of men and boys it would require to manufacture the whole of the boots and shoes you now sell? Boys and men, I could employ a hundred readily.
 1282. Have you noticed a number of children in the street in apparent vagrancy? I have.
 1283. Do you think if the whole of the boots and shoes now consumed in the Colony were manufactured here, it would tend to give employment to a large number of these children? I am sure it would, for I have many applications from parents who wish to put their children apprentice to me; but I cannot take them, as I have not employment for them.
 1284. You find a disposition, both among parents and children, to learn a trade, if they had an opportunity? Yes; I do not doubt that I could get a hundred boys in a fortnight, if I wanted them.
 1285. Have you ever turned your attention to the probable future employment of the youth of this country? I can see little probability of the majority of them being employed, except

Mr.
J. Vickery.

4 Nov., 1862.

Mr.
J. Vickery.
4 Nov., 1862.

as shepherds, or in occupations of a similar kind; there does not seem to be much chance of manufactures extending or increasing at present.

1286. The persons whom you could give employment to, if you had facilities for extending your manufacture, are now idle? Yes, unemployed.

1287. Suppose the Parliament were inclined to place an import duty upon goods, can you give the Committee any idea as to the amount of duty you would require to put you in a position to compete with imported goods? I should speak of my own manufacture. the manufacture of what are called rivet goods (in making which we are aided by machines.) In all articles that consume a good deal of leather, such as men's heavy kip boots, bluchers, long boots, and knee boots, 10 per cent., I think, would enable us to compete with any English goods.

1288. Where they do not take up a great quantity of leather? They have not been tried in the Colony, to any extent; I could hardly say—perhaps 20 or 25 per cent.

1289. Then it all depends upon the quantity of labour bestowed upon the article? Yes.

1290. In anything where but little labour was required, you think 10 per cent. would enable you to compete? Yes.

1291. And where a great quantity of labour was required, you think it would take 20 per cent.? It would take quite 20 per cent.

1292. Do you think colonial manufactured goods are superior to the imported goods? Yes.

1293. Then, although imported goods are apparently cheaper, if the public were to pay even 20 per cent. more for colonial made goods they would be gainers, inasmuch as they would obtain a better article? They would be cheaper than English goods, because the English goods are made of very common leather, such leather as we would not think of using, except to put in as lining or inside where it was not exposed to wear.

1294. Could you give the Committee any idea of the rate of wages you pay? The average of my men's earnings is about £2 7s. a week.

1295. Boys? Boys are apprenticed for five years, and the parents find everything; I give them 8s. a week the first year; 10s. the second; 12s. 6d. the third; 15s. the fourth, and £1 the fifth.

1296. If you were to manufacture the whole of the goods you dispose, I suppose you could give employment to fifty or sixty apprentices? Quite that number.

1297. And you say you have no doubt you could get a hundred boys in a fortnight? Yes; if I were to advertise for an errand-boy to-night, I should get fifty applications in the morning.

1298. And if you were to advertise for an apprentice, you would get as many? I should get as many. I think I should be able to employ, say about sixty boys and forty men if I did not sell imported goods and sold the same quantity of colonial.

1299. And by manufacturing large quantities, you would reduce your own profits? Yes.

1300. Which would give the goods to the public so much cheaper? Yes; the more I could get to make, the cheaper I could make them; for instance, in the last three months, by an alteration of my plan, and making the shoe pass through five or six different hands, I have been able to save 25 per cent. upon the labour.

1301. By the division of labour? Yes; formerly one man began and finished every article.

1302. Are there not a large quantity of goods consigned to this Colony? Yes, large quantities.

1303. They are sold very often much below the cost price? They are.

1304. Generally they are the old stock of manufacturers and tradesmen in England? Very often they clear out their old stocks, take them to a merchant, ship them, and get an advance upon them; and directly they come here they are sold for whatever they will fetch.

1305. And very often they do not bring the amount advanced? Very often.

1306. That causes a glut in the market, does it not? Yes, it does.

1307. Do these gluts interfere with the manufacturer more than with the merchant or importer? They do, to a great extent, because, as a rule, it is not the importer's loss; he is simply the agent for the parties at Home.

1308. The manufacturer has his men to employ, and his boys to teach their trade, and if they are idle for any time it is ruinous to him? Yes.

1309. Whereas the merchant needs only to store his goods until there is a rise in the market? Yes.

1310. Is it not the fact, that after a glut, which causes goods to fall below their fair value, there is a corresponding high price caused by a scarcity? Yes, that was particularly the case in one article two years ago—children's boots, when we were able to make them at a lower price than the English goods were selling at.

1311. Then the public generally are not gainers by these temporary reductions in price? Not in the long run.

1312. But they interfere materially with manufacturers? Very much.

1313. You have no doubt that in a short time you could get sufficient labour of boys and men to manufacture the whole of the boots which you dispose of? I could; a large number of shoemakers are now out of employment in Sydney.

1314. What do they generally engage in when they cannot get employment in their own business? They turn to any kind of employment; at present many of them are engaged in making up boots very cheap, and in going about selling them. Some work on the roads.

1315. There they interfere with the labourer? Yes. I have known some to turn bricklayers or plasterers.

1316. There they interfere with bricklayers and plasterers? Yes.

1317. I presume very few shoemakers would turn stonebreakers, or bricklayers and plasterers, if they could get full employment at their own business? I think not.

1318. *By Mr. Stewart:* The principal part of the selling trade is carried on by persons who have not been brought up to the business, is it not? Yes.
1319. You think that in many cases these persons dispose of goods very much inferior to what a manufacturer would produce? Very much.
1320. No tradesman would manufacture and dispose of goods of so inferior a quality? If we did for a short time we could not sell them afterwards.
1321. Though apparently these goods are supplied to the customer cheaper than the average price of colonial goods, do you think, even at the present rate, there is much saving by buying imported goods? I think there is none.
1322. It is a mere apparent saving in price? It is simply an apparent saving.
1323. The goods being of so inferior a quality are not durable? They are not.
1324. The heavier goods you have spoken of—are not they the description of goods most generally used in the Colony? They are used to a large extent by mechanics, labourers, and people in the country.
1325. With an import duty of 10 per cent. you would be able to supply a superior article of this description, of colonial manufacture, and could compete with the importer? I could. This, perhaps, would not apply to sewn work; but I believe sewn work would be entirely superseded by rivet work.
1326. You are assuming that the manufacturer would take advantage of the new appliances such as are now occasionally used here? Yes.
1327. Is the importation here chiefly from trade orders—indents—or is it speculative? I think principally speculative; very few indents are sent Home now.
1328. And these speculative importations are sold without reference to the cost to the English purchaser? Yes; I should say half the goods that come here are consignments from Home to be sold as they arrive.
1329. Do you think an import duty of 10 per cent. would check that casual importation? I think it would; the fact of having to pay £10 cash down upon every £100 worth of goods when they arrived would, I think, tend materially to check it.
1330. Are there many American goods imported? A large quantity at one time, but not many since the war commenced.
1331. Do the Americans use machinery to a great extent in manufacturing? They do.
1332. To a greater extent than the English? I am not prepared to say; latterly it has been used to a much greater extent in England.
1333. It was generally used by Americans before it was resorted to by England? Yes.
1334. Are you aware that colonial goods are not allowed to be imported into America free of duty? I am, but I am not aware what the duty is.
1335. Are you aware whether leather goods, indiscriminately, would be admitted into England? I am not sure whether England would charge a duty upon colonial goods, but she would upon foreign.
1336. If there is a distinction, it is a discrimination in favour of the Colonies—but there is a duty? I think there is.
1337. You think there would be no difficulty, if the Colony were thrown back upon its own resources, in a short time of securing sufficient labour to supply the demand? I think not.
1338. At a moderate rate? Yes, for within twelve months boys might be taught to do almost everything in plain work.
1339. Could not a large number of women and children be employed upon light work? Yes, in closing.
1340. Is that labour now lost to the Colony? To a great extent it is lost.
1341. There is no permanent occupation that will fully engage women and children? Not that I know of.
1342. In addition to training the boys, increased demand would give employment to women and girls to a great extent? It would.
1343. Have you ever known men in your trade go wandering about the country, digging and engaging in other pursuits, because they could not secure permanent employment at their own trade? Yes, I have known many.
1344. Do you think, on the average, men could earn higher wages by following other occupations than those to which they have been brought up—for instance, could a shoemaker permanently secure equal wages at any other employment to those he could earn at his own trade? I can scarcely say; it would take him some time to get into any other kind of work; he would be employed only when skilled men could not be obtained.
1345. That would necessarily reduce the value of his labour? Yes.
1346. He would not be able to work so well as a common labourer? No.
1347. Then, although a trained mechanic, his services to the Colony would not be equal in value to those of an ordinary labourer? No.
1348. Do you think that can be an advantage, that a trained mechanic should not be of so much value to the Colony as an ordinary labourer? It ought to be of greater value, else of what use is it to learn a trade?
1349. It is the fact, that some of the men in your trade are not worth so much to the Colony as ordinary labourers? Yes, it used to be the case till lately, that an ordinary labourer would earn more than a shoemaker would.
1350. That was assuming that the shoemaker had full employment? Yes.
1351. Then a trained mechanic would do well, in such a case, to give up his business and to fall back upon ordinary labour? It was so some time back, but at present there is a difficulty in getting employment at ordinary labour in Sydney.
1352. Do you think there are now a number of persons who are unable to obtain employment for the rising youth of the Colony? A very large number.

Mr.
J. Vickery.
4 Nov., 1862.

- Mr. J. Vickery.
4 Nov., 1862.
1353. In your business a quantity of work is taken by the men, and done at their own houses? Not in my particular business—the work is done on my premises, but it is generally done in the trade.
1354. In those cases where workmen had large families, their children could assist them? Yes, they could.
1355. The want of employment in his business to the father would prevent his being able to employ his children? Of course if he has no work he will have nothing for his children to do in his trade.
1356. Do you not think it would be much better for boys growing up, after school, to be employed in that way, in preference to their being allowed to wander about the streets in the loose way they do at present? No doubt of it.
1357. Do not many fill up their time now in that way? Yes.
1358. And many of these would be employed if permanent employment were given to their parents? Yes.
1359. And they would be trained to business? Yes. Shoemakers who work at home would not earn the wages my men make, and would have to work a much longer time. My men begin at half past 7, and leave off at half-past 6, with an hour for their dinner.
1360. Are your workmen employed by day, or by piece work? By piece work; in the first instance we employed them by day work, but latterly it has been all by piece work.
1361. It is usual for those mechanics who work at home to work for very long hours? Yes, they work from 7 in the morning till 9 or 10 at night.
1362. That will make fourteen hours a day? Yes.
1363. At the present rate an ordinary workman would not be able to earn more than how much? £2 a week; that is a man who takes work home, and he would have to work longer hours than my workmen.
1364. Then you do not conceive that the wages are extremely high? Looking to the prices of provisions, and taking into consideration the rate of wages of other mechanics, and other things, I think shoemakers' wages are low.
1365. Could they, if they had four or five children, subsist upon less? No.
1366. They could not maintain and give schooling to four or five children, and save a penny out of that? No, they could not.
1367. When children are grown up a little, after they are ten years of age, they are an incumbrance if the father cannot employ them in his trade? Of course, if he cannot employ them in some way.
1368. They are a trouble to him? Yes.
1369. If they were employed they would be an advantage to their parents and to the whole of the community, from their labour being made available? Yes.
1370. *By Mr. Sutherland*: You say there is little to employ the youth of the Colony at present, except in shepherding? Yes, I do not think there is much to employ them at present.
1371. Do you think that is likely to be a profitable or proper occupation for a large number of the youth of the Colony? If they were all sent there I fancy there would be too many of them.
1372. Are there not a large number of respectable citizens who would be glad to put their sons apprentice to you? Yes. I said before, that if I wanted them, I had no doubt I could get a hundred respectable lads as apprentices.
1373. Their parents are in a position almost to maintain them—all they want is to keep them out of the streets? Yes; of course they would want something to pay for their clothes; as I say, I give 8s. a week the first year, and increase the amount afterwards.
1374. *By Mr. Dalgleish*: How long have you employed machinery at your establishment? About two years and a half, but not so much as I have now. I may say I have been eighteen months in full work.
1375. Are you in a better position to compete with the English market now than you were previously? Yes; as I have stated, I have been able to reduce the price nearly 25 per cent.
1376. Would the introduction of machinery generally tend to place the Colony in a better position to compete with England? It would; it would tend to give the men shorter hours, better wages, and more employment.
1377. Are there many men in your trade who employ machinery? No, only one other.
1378. Does he employ it to so large an extent as you? I cannot be certain; I think not; I could not speak positively.
1379. Is that in the city of Sydney? Messrs. Alderson and Sons; I am speaking of their shoe business.
1380. You say closing could be done by women and children? Yes.
1381. That is performed by machinery? Yes.
1382. By the sewing machine? By the sewing machine.
1383. So that if the manufacturers of Sydney were to turn their attention to improving the means they have at their disposal, they would be in a better position to compete with English imported goods than they are now? Much better.
1384. Do you think it would be right for any Act of legislation to be passed to prevent the importation of English goods to this market? I would not say prevent, but I would certainly say, put a duty upon them. We want a larger revenue for various purposes, and I think it might advantageously be obtained in this way.
1385. If the duty that were put upon these goods would have the effect of preventing their importation, would you still think it necessary to have that duty imposed? Yes, I think it would, for it would enable us to sell more of our colonial work. English work would be sure

sure to be imported for a certain time, to a greater or lesser extent, and a revenue would be derived from it for that time.

1386. I think you stated that the great cause of distress to the manufacturer here was the gluts in the market? Yes.

1387. In what way would you legislate to prevent those gluts? I do not know that you could prevent them altogether, but I fancy if the parties consigning them understood that they were to make cash payments of 10, 15, or 20 per cent. directly the goods were landed, they would not be so ready to send them, and I do not think merchants would be so ready to advance upon them.

1388. Are not gluts at times experienced in the English markets—do you not see accounts of great slackness in business in consequence of the accumulation of goods, which affects the whole trade? Yes.

1389. These gluts are experienced in England as well as here—what is the effect in England, to reduce prices? To reduce prices; and then the goods are shipped off to the Colonies, because they will realize more here than they would at Home.

1390. If this duty of 10 per cent. were placed upon English goods, would it have the effect of increasing the price of colonial goods 10 per cent.? It would act in this way—it would raise the price of English goods 10 per cent., and bring it close to the price of colonial goods.

1391. Would it not have the effect of increasing the prices you now obtain for your goods? I think not, but I should sell more. I do not want to increase the price; if I can get a larger consumption, I can sell cheaper.

1392. What is the tendency of a large demand? Naturally to raise prices.

1393. Have you the means at present of increasing your business to a great extent? Yes; in six months I could increase my colonial manufacture to ten times the present amount. The principal thing I should want would be extra labour, which I could get; and in twelve months I could bring boys to work well for ordinary purposes.

1394. Do you think the branch of business in which you are engaged is at present pushed as much as it could be with advantage to yourself? Of course I am trying to sell all the goods I can at as low a profit as I can afford to do.

1395. Could you sell more than you at present manufacture? No; I generally have a full stock on hand.

1396. Do you think it would be possible for other people to start with advantage when you are unable to dispose of more than you at present manufacture? Yes, if English goods were not admitted so freely.

1397. What is the difference between the price of English goods and yours at the present time? Certainly not above 10 or 15 per cent., if you take quality into consideration.

1398. Without taking quality into consideration? You cannot make a comparison if you do not take quality into consideration.

1399. Take a pair of strong blucher boots, which are the kind, as I understand you, that you especially make, sold in England at 8s. a pair, what would be the price of colonial made boots of a similar description, which you know to be better, but which to the casual purchaser would not seem to be so? The Home price wholesale of such boots would be about 8s., and I could manufacture them to cost me about 8s.

1400. Then you could sell them at the same price as a merchant could sell English goods? Yes; if he got a fair profit on them, and they were not forced into the market, I could sell them within a trifle of the price of his. That is an article which, in proportion to its value, has not very much labour bestowed upon it.

1401. Have you been in England? When I was seven years old—not since.

1402. Then you do not know of your own knowledge the English prices, except from invoices? And from what I have heard.

1403. Do you know of your own knowledge the condition of shoemakers in England, and as to whether they can earn more there than here? Only from letters and from what I can learn from others. My brother was in England a year or two since, and he informs me that the average wages of shoemakers there is 15s. a week.

1404. And here? About £2.

1405. How much per cent. difference is that? About 170.

1406. What is the price of leather in England and the price here? The price of sole leather here is from 9d. to 10d. per lb.; in England, from 8d. to 18d., according to quality; kip here is worth from 16d. to 20d.

1407. The leather from which these strong boots are made? Yes; in England it is from 18d. to 2s. 2d.

1408. Calf and other leather in proportion? Calf is as cheap in England as here. We do not get so much calf here, and it is imported to some extent. I do not know whether there is any need for importation.

1409. So that leather of an average quality is as cheap in England as here? Light leather, but not heavy leather; leather suitable for strong boots is cheaper here than in England.

1410. Then if you take the average price of leather, it will be about equal in both places? Yes.

1411. In England they use machinery to the best advantage and to a great extent? Yes.

1412. That has the effect of cheapening the article in what ratio? I save almost half in wages.

1413. That would be 50 per cent.? Yes; for instance, I used to give 12s. for making bottoms of wellingtons—I now get them done by machines for 5s.

1414. So that, at the present time, there is in England a clear gain in the wages of operatives of 170 per cent., and, by the application of machinery, of labour 50 per cent., and you suppose

Mr.
J. Vickery.
4 Nov., 1862.

that an import duty of 10 per cent. would enable you to compete with the English manufacturer? I do not understand your way of putting it.

1415. You have stated that an import duty of 10 per cent. would enable you to compete with the English manufacturer? Yes.

1416. You state that the wages of journeymen in England are 15s. a week, and here are £2? Yes.

1417. Then there is a difference of 170 per cent. in favour of England? Yes.

1418. Then, by the general employment of machinery in the production of these goods, there is a saving of 50 per cent.? Yes.

1419. In New South Wales, with the exception of those made by yourself and another manufacturer, boots and shoes are made by hand labour? Yes.

1420. Consequently there is a disadvantage to the extent of 50 per cent. by the employment of that labour in New South Wales? Yes.

1421. If hand labour were done away with, and the whole of the work were performed by machinery, there would still be a difference of 170 per cent. in the cost of labour, and the price of leather on the average is the same in both places? I am speaking of 10 per cent. upon heavy goods, and I say that, leather for that kind of work being cheaper here than in England, it would nearly counterbalance the difference in the price of labour.

1422. You have stated, with regard to leather, that taking the average of the heavy and the light, the price in England is about the same as here? Yes; but there are light goods where a great deal of Cashmere and cloth are used, and a great deal of work, and I said 10 per cent. would not enable us to compete with that class of goods.

1423. What would enable you to compete with them? I could scarcely tell—it would require 20 or 25 per cent.

1424. If 25 per cent. were placed upon them, would it have the effect of increasing the price of that description of goods in the Colony? It would have the effect of increasing the price of English goods in the Colony.

1425. Consequently, upon that class of goods that are not now manufactured in the Colony, it would increase the price to the consumer? I do not think it would, for people would then say, "If the English cost so nearly the price of the colonial I will take colonial, for I know they are the best."

1426. What is the difference between English and colonial? The fact is, I have made very few Cashmere or fancy goods, except in rare cases.

1427. Then it will increase the price to the consumer of English goods? Yes, and then, as a natural consequence, colonial goods will be made of that class. I would rather sell colonial than English goods, for if I did so, what I made one week I should sell the next, instead of having ten, fifteen, or twenty thousand pounds worth of goods on hand.

1428. Do you know, on an average, how many pairs of boots a working man's wife, if she wore boots, would wear out in a year? If she took the common description of English boots sent out, she would want a pair every fortnight—what they call light Cashmere boots.

1429. What is the price of such an article? From 3s. 6d. to 6s. or 7s.

1430. Would these from 3s. 6d. to 7s. last only a fortnight? I suppose not longer—they might last three weeks.

1431. With the duty you propose, the cost of these would be increased 25 per cent. at least? Yes.

1432. Do you think a colonial workman could manufacture these goods at the same price? At the increased price.

1433. That would be about 12s. 6d. for the higher priced goods? There would be scarcely any women's heavy colonial boots so high as 12s. 6d.

1434. Would they last more than a month? Yes, I believe they would wear out two pairs of any of the English that are sent out here, as a rule. If you go to a respectable shop in London, and give an order for a pair of boots, you will be charged the colonial price for them.

1435. To what do you attribute the increased length of time that the colonial made boots will last over the English? Because better leather is put in.

1436. Is the English sole leather inferior to colonial? No, it is not.

1437. Is it not considered superior? Yes, generally.

1438. If you make a superior pair of colonial boots, do you put in English or colonial leather? All colonial.

1439. Does English sole leather bring a higher or a lower price than colonial? It is not imported, I have not seen it the last three or four years, for we send leather Home; but in the goods sent out here the manufacturers do not put the best leather, they put the commonest they can, to manufacture them at a low price, to get them as cheap as possible.

1440. Do you think the people of the Colony should be forced by the Legislature into buying colonial goods, even though they may wear longer? I do not know that they have a right to force them, but the Government want a revenue, and they might as well derive it from these goods as from anything else. Then there is another question that has been a long time in agitation, the taking off the tea and sugar duty; if that were to be taken off, I, as a total abstainer, should not contribute anything directly to the revenue.

1441. You think the country has a right to expect these duties to be taken off? If I had a vote in the matter I should vote against it, unless they put it on something else to make up for it.

1442. Have manufactures in this Colony, during the last ten years, decreased or increased? I do not think they have increased; certainly they have not increased in proportion to the population.

1443. Was any boot and shoe making done by machinery in 1852? No, I was the first to introduce it.

1444.

1444. The effect of your introducing it has been to decrease the cost of goods manufactured by yourself 25 per cent. ? Fully 25 per cent.

1445. Are there many English goods imported of the same quality as those you manufacture at the present time ? There are a large quantity of goods imported that answer a similar purpose.

1446. What am I to understand by answering a similar purpose ? I cannot say that English boots would be of exactly the same quality, but they are made for the same purpose—as for instance, shooting boots, and boots of a stout description.

1447. You mean boots of the same name, or of a similar description ? Yes.

1448. Are they as readily saleable as they were before you commenced the manufacture by machinery ? I do not think they are quite ; I have been able to sell more since I reduced the price.

1449. You have been able to reduce the price of colonial manufactured goods 25 per cent. ? Yes.

1450. And you think if 25 per cent. import duty were imposed, you would be able to secure the whole trade to the colonial manufacturer ? Yes on heavy goods 10 per cent. would do.

1451. Have you any idea how many men could be employed in the manufacture of the boots and shoes used in the Colony ? I rather think £300,000 or £350,000 worth are imported ; say half that amount is the cost of leather and materials, that would give £8,000 a week, which at £2 a week would employ 1,500 men.

1452. And the revenue that would be derived from the consumption of dutiable articles by those men is now lost to the country ? Yes.

1453. I presume that this Colony pays the taxation which is levied upon those 1,500 men in England at the present moment ? Yes.

1454. To that extent we are paying taxation, or contributing to the revenue of the English Government ? Yes.

1455. Do you think, looking at the question in this light, we should be justified in passing a law to put an import duty on articles of this description ? I think so.

1456. Would you look upon the question in the same light if it were to embrace other trades ;—for instance, do you think that the same or a proportionate rate of duty should be levied upon all articles — ? All articles that could be possibly manufactured here.

1457. Not all that are manufactured here, but all that could be ? Yes.

1458. For instance, what are called slop articles of clothing—woollen goods ? Yes.

1459. You think it would be no injustice to levy a duty of 25 per cent. on them ? I think not.

1460. You think the public generally would have no reason to complain ? No. I think the country would be benefited ; far more men would be employed, a greater number would come out here ; many men would come out here if they thought they could get regular employment at a rate of wages that would keep them properly.

1461. You have stated that a great number of boot and shoe makers are employed in the Colony ? Yes.

1462. A great number, I suppose, are recent arrivals ? I think not ; I have not met with many recent arrivals.

1463. Do you know whether, as a rule, they are persons likely to have connections in England, or who carry on correspondence with England ? I cannot speak as to that.

1464. If it were so, and they were to write Home that they could not get employment, would not that injure the Colony ? It would injure the Colony, and tend to check immigration. My father, twenty years ago, employed more men than I do.

1465. Was any duty then levied upon imported goods ? No ; there was not then that rush of consignments—in fact, there were scarcely any consignments. Two or three years ago I had not above half the hands employed I have now.

1466. It is only since that period, since you have had machinery, that you have been able more successfully to compete with the English market ? Yes ; there is a class of shoes required for the prisons and public institutions, and for the police, that I am sure I could manufacture as cheaply as they are imported ; but the Government are so stringent in their regulations that the manufacturer hardly has a chance ; for instance, a short time ago tenders were called for for 1,000 pairs of Napoleons for the police, and it was required that the top lining should be red, they must not be blue, and if samples were not exactly like the pair exhibited it was of no use sending ; they must not be pegged boots, they must not be riveted, they must be sewed ; and the consequence was that they had to pay one-third more for what they purchased than they would have had to pay for a boot that would have answered equally well.

1467. From your knowledge is a sewn or a riveted boot the most durable and profitable to the wearer ? A riveted.

1468. Is a riveted boot as easily mended as a sewn one ? No, not so easily ; but it can be mended, and at the same price, but not quite so easily.

1469. Can it be mended as effectually as a sewn boot ? Quite so.

1470. So that the Government could not have been influenced either by a consideration of the durability of the article, or of the ease with which it might be repaired ? No ; I take it that it is the Government routine.

1471. Could these boots be easily repaired in country districts ? Yes, by anyone who chose to keep an iron last ; of course it could not be sewn.

1472. You are speaking of the sole ? Yes ; the inside of the boot being already secured need not be interfered with.

1473. Is there any welting ? No ; the in-sole is first put on the last, and the upper drawn over the edge of it and tacked on with small-headed tacks, then the middle solé (if for stout work),

Mr.
J. Vickery.

4 Nov., 1862.

Mr.
J. Vickery.
4 Nov., 1862.

work), and the outer sole placed over all, and the rivet nails pass right through the whole, and clench inside on the iron last. The nails used are brass, or copper and zinc, made on purpose for this work.

1474. It is equally as neat as a sewn boot? Yes.

1475. So that it was the true interest of the Government to use the riveted boot? Yes. I offer to give persons a guarantee if the work comes undone to repair it, or else to give a new pair of boots in exchange.

1476. And you would be prepared to give the Government a similar guarantee? Yes; I did so the other day. I sent some samples to the Asylum at Parramatta; they wanted some shoes of enormous size for men with gouty feet, and I sent them some at 7s. a pair, offering to guarantee them, and recommending that the Asylum should be supplied generally with goods of a similar description. I have not heard since how they have turned out, but I shall perhaps by-and-by. They had previously paid 6s. 9d. and 7s. 3d. a pair for imported shoes, which they complained had come to pieces.

1477. You could supply them at lower prices than they could be imported at? Yes; they had previously had bluchers, and I sent them high front laced shoes, which I think more suitable for old people. I made these few shoes and sent them at 7s. a pair; they pay me fairly at that price, and are rather lower than the ordinary English blucher, which I could not send under 7s. 6d.

1478. Do you know what the Government pay at present for boots for the police—the contract price? No, I do not.

1479. Still you are convinced that you could supply boots for the police force at a cheaper rate than that at which they are imported from England? Yes. My brother, who has not long returned from England, told me that while he was in England a man named Manfield showed him boots, and said, "These are for your Government," at 15s. or 16s. a pair, and at the same time the same kind of boots could be bought here at about 11s. 3d. I could make similar boots and supply them at from 13s. to 14s. a pair.

1480. *By the Chairman:* Which you would warrant? Yes, I would give a guarantee.

1481. *By Mr. Dalgleish:* Is your brother in Sydney at the present moment? Yes.

1482. He has, I presume, been through the large workshops in England? Yes, about twelve months since.

1483. He would be able to give the Committee some information respecting the state of the business there? Yes.

1484. *By the Chairman:* You say the labour costs about 50 per cent. and the material about 50 per cent? Yes.

1485. Of course, we have to derive our revenue from some source? We must have a revenue I suppose.

1486. It matters not to the public generally how they contribute to the revenue, whether by a duty upon tea and sugar or upon boots and shoes? No.

1487. It would be an advantage to the public generally if the revenue were collected from the importation of those articles the manufacture of which would tend to employ people? I think so. We cannot, or do not, grow tea, and I therefore do not see why the duty should not be removed from it and placed upon those articles which we can produce—boots and shoes or anything else.

1488. It would be a great advantage to the manufacturer if the revenue were so collected as to give an impetus to manufactures? Yes, I think we should put it on things that we can manufacture and take it off things we cannot.

1489. In a question of Mr. Dalgleish, with reference to the rate of wages and the cost of production in New South Wales, he omitted to ask the cost of importing English goods? The cost of importing boots and shoes is not great. It is an established rule with manufacturers at Home to allow a discount of 5 per cent. for cash, and that covers the interest of money while the goods are on the voyage, and 5 per cent. would meet the expenses of freight, insurance, brokerage, &c.

1490. With reference to the saving caused by the application of machinery, there is nothing to prevent the manufacturer here from employing machinery to save the cost of labour? Nothing.

1491. Supposing there were two families, each consisting of the same number of individuals, of about the same ages, one using English manufactured boots and shoes, and the other colonial, even at the present high price of colonial goods, which would it cost most for boots and shoes? If I had to contract to supply a family with boots and shoes I would supply them with colonial.

1492. Supposing we went so far as to prohibit the importation of English boots and shoes, do you believe that in less than twelve months there would be plenty of competition among colonial manufacturers? I am sure there would be people engaged in business who would reduce the prices to the lowest remunerating point.

1493. Which would be the more likely to tend to monopoly—the prevention of importation or the prevention of colonial manufacture? The prohibition of colonial manufacture, because two or three large merchants could club together and buy up all the boots and shoes in the market; but if there were fifty or sixty boot and shoe manufacturers in the country they could not buy them all up.

1494. So that free trade is more likely to create monopoly than a small duty and competition? We have an example before us lately, where a few merchants in Sydney and Melbourne bought up all the tobacco in the Colonies.

1495. Do you remember an attempt to do the same thing with flour and rice on two or three occasions? Yes, I do.

1496. And it was effectually carried out? Yes; it is not everyone who can import, but every man in the trade can produce.

1497.

1497. *By Mr. Sutherland:* With reference to the monopoly of tobacco, is it not the fact, that the colonial manufactory of tobacco that was started has prevented the speculators from getting the enormous price they had expected? I think so; I do not know much of tobacco or of the tobacco market.

Mr.
J. Vickery.
4 Nov., 1862.

1498. Is it not the fact, that since there was that attempt at monopoly in tobacco, two or three tobacco manufactories have been started? Yes.

1499. And that they have reduced the price, or prevented the monopolists getting the price they expected? Yes, I believe so.

1500. Is it not also the fact, that since flour mills and manufactories have been started, speculators have not been able to monopolize that article? It has not been done much lately—not as it used to be.

1501. Then would it not be the same with the manufacturers of boots and shoes, or any other article—if a number of manufactories were started would it not prevent monopoly? Yes; if you depend upon imports it is possible for a number of merchants to club together and buy up an article, but if manufactories spread all over the country you cannot buy them up; the manufacturer will say, “I have my regular customers to serve, and must supply them.”

1502. Was it not the case, that the merchants clubbed together and bought up all the tobacco in Sydney and Melbourne? I believe so.

1503. *By Mr. Dalgleish:* Did the Government interfere at all with the tobacco duty in favour of the colonial manufacturer? No.

1504. You are not aware that Government reduced the duty upon the raw leaf 50 per cent.? I remember that now.

1505. That was the same, in effect, as putting a duty upon the manufactured article? Yes.

1506. If, as a matter of fact, the manufacture of tobacco has been so greatly increased by this slight protection, or differential duty, on tobacco, you argue that the same result would be obtained, and the necessary revenue would be derived for the purposes of Government, by imposing a duty upon articles that could be manufactured in the Colony? I think so; I am certain if 10 per cent. were put upon boots and shoes, say what we call heavy boots and shoes, in twelve months none of these would be imported, for the importer would not be able to sell them as cheap as we could.

1507. *By the Chairman:* And it would give employment to a number of people who are now unemployed? Yes.

1508. *By Mr. Sutherland:* By encouraging people to come to this country, and by the increase of our manufactures, would not the whole of the people of the country be benefited? Yes, they would be benefited in many ways. The shoemaker who is now idle, who cannot get work, of course has no money to spend; if he had £2 a week coming in, he would be able to pay his baker, his butcher, and grocer, and to get a coat to his back.

1509. He is not able now to educate his children, and to bring them up as they ought to be brought up, and as they would be if he were employed? No.

1510. When he is not employed he has not the means of paying for their food and clothing, or of giving them education? Of course not.

1511. Then the country benefits morally, as well as in other ways, by giving employment to these people? Yes, the country benefits in every way by having the people fully employed.

1512. You have made reference to the Government importing boots and shoes for the police and for paupers in this country, and you have stated that you think you could make them cheaper here than they are supplied from England? Cheaper than the cost of them laid down here.

1513. Do you mean including the cost of agency, shipment, storage, and all other charges? I say I would supply the Government with an article as good, and at as cheap a rate, as the imported article when laid down here with all charges.

1514. Is it not known to you that the principal part of the boots and shoes imported here from England is made from the worst leather—leather that they could not use for the manufacture of boots and shoes for home consumption, as it would not stand the wet of the English climate? The manufacturers buy up all the cheap kinds of leather to make up goods for exportation. In England a working man, when he has a pair of boots made for him, expects them to last twelve months; but in this country there is a taste for cheap boots and shoes, and these goods are made up to suit it.

1515. If colonial goods were supplied to the Government, they would have better articles at cheaper prices? They would be better than any they get.

1516. They would require no stores for keeping these goods in? No.

1517. They would have in quantities as they required them for use? Yes.

1518. They would require no clerks for looking after these goods? No.

1519. The goods would not be depreciated in value, as they now are, by lying in a store for years? No.

1520. You would be able, from your knowledge, to give them a more suitable article—an article that would mend? Yes; twenty years ago my father supplied the prisoners with about 4,000 pairs of boots in six weeks.

1521. Would not, in your opinion, the imposition of a duty of 10 or 20 per cent. upon imported goods be the means of encouraging the more general application of machinery to manufactures in the Colony? I think so; people would then say, “There is some chance of competing with the English manufacturer, and we will try.”

1522. Is it likely that capitalists would employ their capital in manufactures when they had to compete with reckless speculators, as at present? Of course people would not go into it under such circumstances. I would not have entered into it had I not, in connection with
my

Mr. J. Vickery. my own trade, had a certain sale for colonial goods, and found there was a cheaper way of making them than that previously followed by me. This led me to send for the machines; but no person would think of entering upon the manufacture of colonial boots and shoes, excepting in connection with an established trade, because a sudden influx of goods must upset his sale.

4 Nov., 1862.

1523. *By the Chairman*: It might ruin him, and throw all his men out of employment? Yes.

1524. *By Mr. Sutherland*: Then you think, by the imposition of a certain import duty, you would encourage the capitalist to invest his capital in machinery and the necessary buildings for manufacture? Yes, for they would then be induced to enter into colonial manufactures.

1525. By the encouragement of colonial manufactures in your trade and others, would it not lead to the employment of children from the Destitute Children's Asylum, and other institutions of a like nature, in these manufactures? Yes; as I said before, if we employed a hundred hands we could employ sixty boys to forty men.

1526. Then, instead of keeping the children in these institutions, they would be apprenticed at an early age to various kinds of business? Yes.

1527. Would it be to the benefit of the country to reduce labour to the price paid for it in England? No; if it were, a man could not live upon his wages here.

1528. He could not exist here? No.

1529. Can we induce people to come to this Colony if the rate of wages is not higher here than in England? Of course not; they would say—"If we cannot get higher wages there than here we will stay at home, because we can live cheaper here than in Australia."

1530. Has it not come to your knowledge that many tradesmen in your business have been forced to go to the diggings, and to other branches of industry in the country, in consequence of not being able to get employment at their own trade? Yes, scores have been obliged to leave their trade.

1531. Has it not also come to your knowledge that these persons, not being well suited to their new business, have not been able to earn a living at it? Where a person has been brought up to a business he is not so well able to earn his living at another.

1532. Has it not also come to your knowledge that many of these persons have left large families in Sydney, and have not been able to supply them with the means of living? Yes, I have known many such cases.

1533. In many of these instances have not the families been forced to follow occupations degrading to themselves and to society? Of course the children have been allowed to run about the streets, and have fallen into crime.

1534. *By Mr. Stewart*: Are you aware that twenty-nine years ago, manufacturers of furniture and other goods in the Colony were able to supply the demands of the Colony for those goods? To a great extent; but wages were then very much lower than they are now.

1535. The gold diggings interfered with the usual manufactures, and broke up the various establishments? Yes.

1536. Since then we have been dependent upon imports for many articles? Yes.

1537. Do you think, now that labour has become more regular, a moderate import duty would lead to the re-establishment of those manufactures? I think it would.

1538. You think a large amount of labour is available? Yes.

1539. You think an import duty would have an effect not only upon the manufactures in which you are immediately concerned, but upon other manufactures? I think it would have an effect upon all the manufactures we could carry on here.

1540. Have you, in your experience among persons of your trade, found trained mechanics as subject to fall into crime as other men employed in casual work? I do not think they are more so; in fact, I do not think it is often shoemakers are taken up for particular crimes.

1541. Do you not think that generally those who fall into crime are those who have not served their time to any trade? I think, taking shoemakers as a rule, very few tradesmen have been punished for crime.

1542. You almost take it as a guarantee for the conduct of a man, that he has been brought up to a trade? Yes, I think so.

TUESDAY, 25 NOVEMBER, 1862.

Present:—

MR. HARPUR, | MR. STEWART,
MR. SUTHERLAND.

JOHN LUCAS, ESQ., IN THE CHAIR.

Edward Hunt, Esq., called in and examined:—

E. Hunt, Esq. 1543. *By the Chairman*: You have been in the Colony a great many years, have you not? I have.

25 Nov., 1862. 1544. At what time did you arrive here? In 1814.

1545. You were engaged in manufacturing, were you not? Yes.

1546. In cabinet manufacturing? Yes, in manufacturing cabinet-work.

1547. Were you so engaged immediately after your arrival? No, I was engaged partly as a joiner in fitting up houses.

1548. How long after you arrived here did you engage in cabinet manufacturing? About two years, I think.

1549.

1549. You have retired from business, I believe? I have.
1550. How long? About fifteen years, I think.
1551. Then you were engaged as a cabinet manufacturer about thirty-two years? Near 25 Nov., 1862.
upon it.
1552. How many men were the most you ever employed—have you any idea? I think about twenty; from fifteen to twenty—less than that in my early days. I had a number of apprentices; I began with apprentices, in fact.
1553. How many apprentices used you to employ? I have had five or six at a time, perhaps seven. I think, altogether, I have had about twenty-eight apprentices.
1554. Do you mean during the whole of the time you were engaged as a cabinet-manufacturer? Yes.
1555. You taught twenty-eight young men your business? Yes.
1556. Of course, as you were engaged in business, you had an opportunity of knowing how the young men behaved themselves as apprentices? Yes. I was apprenticed in England, in London.
1557. From your experience in England, and your experience in New South Wales, do you think there is any greater difficulty in the youth of this Colony learning your trade than in the youth of England? I think the youth of this Colony learn it in a shorter time.
1558. They make as good mechanics? Equally so, no doubt.
1559. And as to their moral and general character, do you think it stands as highly as the character of the youth of England? I think it stood as high at the time I took them as apprentices, especially in the early times of the Colony. I recollect only one youth who turned out badly; but generally speaking, they were free from the vices of drunkenness and pilfering. I always found them honestly and soberly inclined.
1560. Temperance is somewhat characteristic of the youth of this Colony, is it not? Yes, I think so.
1561. What was the character of the work then performed in the country—was it equal to the English work of that date? I think it was, excepting the higher works which were executed in London, and which it was impossible for us to do here. However, we had to make furniture to suit the tastes and likewise the pockets of the colonists.
1562. Has your attention been directed latterly to the employment of the youth of this Colony—since you left business have you given attention to it? Yes, I have; I have seen there is no such occasion for the youth of this Colony to be apprenticed; that is to say, I do not think there is the same prospect for them—there are so many mechanics in the trade that I do not think there is the same chance; although I observe that there are a great many apprentices about, still not so many in proportion to the population as there were in those times.
1563. Do you not think there is a great want of employment for the youth of the country at the present time? I can hardly say.
1564. Has your attention been directed to the numbers of the youth of both sexes wandering about the streets in a state of apparent vagrancy? There is a want of employment in the towns for them, but in the country parts I think there is sufficient for them.
1565. Have you been residing in the country? No, not what I should call the country; I was living at Parramatta for some time.
1566. Then your knowledge of the employment for youth in the country is derived merely from what you have heard? From general observation.
1567. What you have gathered from hearsay? And reading.
1568. Not from practical knowledge? Not from practical knowledge.
1569. Do you think there are as many youths, taking into consideration the population of the country, who are learning trades of skill now, as there were twenty or five-and-twenty years ago? No, I think there was a greater desire in the youth of the Colony to learn trades then than there is now.
1570. Do you think that is caused by the want of suitable work for the youth, or merely the want of inclination on the part of youth to learn trades? The want of suitable work and of suitable masters. I think the same inclination exists in youth now as did then, and that there is the same desire to learn trades, and to be independent, but there are not the same facilities.
1571. During the time you were manufacturing, twenty or thirty years ago, was it a general thing among parents to have their children apprenticed to a trade? They were most anxious.
1572. In the majority of instances the young men were learning trades? Yes, in the towns.
1573. The exceptions were very few indeed? Yes, very few.
1574. I believe now, if you walk the streets you will see in them, on the wharfs, and in the back-yards, a large number of boys and girls lounging about, who should be learning trades? I am sorry to say I have seen more in London than I have seen in Sydney.
1575. How long is it since you returned from London? Five or six years.
1576. Still, there are great numbers of the youth of both sexes in a state of vagrancy, who might be profitably employed in manufacturing? I believe so; if manufactories were established I believe these youths would be found to have a desire to learn.
1577. Have you ever thought of the future condition of the people of this country, with reference to the employment of the rising generation? I have thought they might be usefully employed in production. We have many useful productions in the country, such as copper, iron, coal, and vine-growing.
1578. Do you think such employments as these would be suitable for children? Not for very young children.
1579. Say from fourteen years of age—do you not think they would be more profitably employed in boot and shoe making, in woollen manufacture, or in cabinet-making? I think it

E. Hunt, Esq.

Near 25 Nov., 1862.

E. Hunt, Esq. it would be more profitable to the Colony if they were employed in the production of the raw material, so far as they could be employed.

25 Nov., 1862. 1580. Yes, so far as they could be employed; but do you think there is full employment for youth in these mining pursuits? No, I should not think there is full employment for any large number of persons at present, for we are in a state of stagnation; we have not the means, we have not the same facilities as the old country—as our fatherland; if we had such means we could develop the natural resources of the country, and should be in a position to supply all the world, figuratively, with our native productions.

1581. Could you give us any idea of the cost of manufacturing in this Colony general furniture that, imported from England, with all the expenses of importation, would cost £100? No, I cannot.

1582. Your nephew succeeded you in your business? Yes, he did.

1583. *By Mr. Harpur*: You think we have mines of various kinds, which, if we had labour and capital, would enable us to supply the world? To supply the raw material.

1584. Of which do you think we are most deficient—capital or labour? We are deficient in labour.

1585. But would not our having large capital to be invested in this pursuit draw labour to us, or how could the country be proved to be deficient in labour if the wages of labour are not at a very high rate—is it not capital of which we are deficient? I think there is sufficient capital; but, of course, that will only be applied where there is a prospect of a return; and suitable labour is scarce, because it is dear labour. I do not mean to say that it is overpaid, probably not; but it is so dear, and other things are so against us—as, for instance, we have no roads—that we cannot compete with other countries in manufactures.

1586. You observe that mining speculations prevail very much at present—for instance, we are continually passing Bills for new coal mining companies? Yes, coal mining is succeeding; there is a demand for coal, and also for iron.

1587. Do you think the turning of our labour into this channel would be more profitable to the country than engaging in manufactures generally? I do think so.

1588. Do you think there is a sufficient opening at present in this way for the employment of our idle population? I am not aware that capitalists would advance capital without seeing a prospect of a return, unless we had an abundance of cheap and willing labour. Now, if we look at our fatherland, we see labourers crowded there, and they work willingly, and work at a moderate rate of wages—such wages as they can live upon—and there are facilities for mining purposes we do not possess; large capitals have been acquired, so that they have mounted the high horse, and they ride on. This question, I perceive, has a bearing upon protection.

1589. Do you not think, if a want of labour were felt, and a profit could be made by capitalists, that labour would be brought into the country by capitalists—do you think they could not make calculations to know whether they would gain or lose by the importation of labour? I think they might do so after a little practical knowledge; they would ascertain first.

1590. You think the importation of labour, with the assistance of Government, would be beneficial to the country? I think the importation of labour would be beneficial to the country.

1591. Notwithstanding that we want to stimulate the trade of manufacturers by protection, or other means, so as to find employment for the idle population at present, you believe that the importation of new labour would be beneficial to the country? I think the importation of miners would be beneficial to the country.

1592. Do you think we should introduce miners at the expense of the public? I do not see why miners should not be introduced as well as other labour, because they would give employment to other labourers and mechanics.

1593. At whose expense do you suppose they would be introduced, supposing their passages were paid out of the general revenue—would it not be at the expense of the community at large? I see other countries offering premiums in land.

1594. Do you know any country that introduces labour? Yes, Queensland.

1595. Exactly, British Colonies, they are founded by a number of capitalists for their own benefit? Yes; in Canada also they give largely.

1596. Does it not strike you as being a rather anomalous proceeding, that we should recommend protection with the view of giving employment to labour, and yet should pay large sums of money for the purpose of introducing fresh supplies of labour into the country? I do not understand the question.

1597. A large sum of money is being voted for the introduction of labour into the country, and yet the object of many of our Members is, to show that some encouragement, either by the imposition of duties upon imported goods, or in some other way, is necessary, is requisite in order that people may find employment here? Unless you make things here equal with those of other Colonies you cannot expect people to come here; they would sooner go to Canada, for that is a short voyage, and they offer a hundred acres of land to an immigrant.

1598. Are you aware whether there is much unemployed labour at present in the Colony? I find there is less application for labour—there are fewer persons inquiring for labour.

1599. Is there any distress, do you know, in Sydney, among the poor people, from want of employment? I do not hear of it.

1600. Not at present? No, except that, as is always the case in large cities, there are a number of very indigent people, who are lame and almost worn out.

1601. Able-bodied persons, able and willing to work, you think, are pretty fully employed at present? I think so.

1602. Is the rate of wages high or otherwise? Rather high, both for males and females—I speak of servants.

1603. For labourers? For labourers, not so high as they were; I believe you can obtain *E. Hunt, Esq.* labourers for about 6s. a day.
1604. A labourer with a wife and children, might generally be supposed to be at the head of a family of four? Yes. *25 Nov., 1862.*
1605. Do you think 6s. a day a sum sufficient to enable him to live in moderate comfort, and to educate his family? Not unless his wife assisted him. It would depend upon the number in family; for if there were a large family, the wife would be fully occupied in attending to them, and it would be very hard for the man to keep them. When I speak of a labourer, I refer to unskilled labour.
1606. So that whoever might benefit by coming to New South Wales, a person in that situation could scarcely hope to benefit by it? It would depend upon circumstances a great deal.
1607. He, as one of a class, could not hope to benefit by coming to this new country? Perhaps he might manage to live here as well as he had done in England.
1608. But after having broken up the ties of family and of old associations, do you not think he should have some prospect of better success here to compensate him? I think people generally ship with that idea.
1609. Do you not think that a just expectation? I think it is.
1610. Do you think it is an idea we should endeavour to dispel, or that we should make use of it in order to induce labourers to come here? There is a certain class of labour—I do not speak of unskilled, but of skilled labour, such as that of a miner—that I think might be introduced with benefit to the Colony.
1611. For whose benefit—the benefit of the labouring portion of the people, which I suppose includes the greater number? I think ultimately.
1612. Ultimately—can you point out reasonable grounds? It might be for capitalists in the first instance.
1613. Why not in the last also? If they did not see a return for their capital they would not lay it out; but if they could obtain labour, such as mining labour, that would give rise to persons coming here who would be employed in other ways, because a number of merchant vessels would be employed in carrying coals, and these would give work to a number of men on the wharves in loading and unloading.
1614. If people cannot engage in any kind of trade or manufacture at a profit unless the Government enter into the business of supplying labour to the country, there is very little prospect for a labouring man to come to this country at all? I think there should be some little encouragement held out, and that if people could have their passages paid there would be an abundance of labour here, both skilled and unskilled.
1615. That is, paid by the public out of the general revenue? To be paid by land.
1616. In effect it is the same? Yes. The capitalist would come here as well as anywhere else, if he could bring his servants and labourers with him with their passages paid; and they did do so formerly; persons who arrived here brought out servants or large families of children with their passages paid.
1617. By the State? Yes.
1618. In other words, their passages were paid out of the general revenue, mainly contributed by the taxation of the labouring population? Principally by the British Government at that time.
1619. I think not? In the very early days of the Colony, yes.
1620. *By Mr. Stewart:* You spoke of the want of labour to give a sufficient return for capital invested in manufacture? I think we do not stand upon equal terms with England; I think if the mines we have were in England they would make her very wealthy; from the facilities she has, and the abundance of labour at her command she would be enabled to employ any amount of capital in this way.
1621. Do you know the comparative rate of wages given to miners in England and to miners here? No.
1622. Do you think the wages are double here? I cannot say; I have no experience of miners' wages.
1623. Does the capitalist here expect double the return for his capital that the English capitalist does? I should think not.
1624. Do you know what a capitalist would expect here? I think he would expect 10 per cent.
1625. Is not that more than double what the English capitalist would expect? Yes.
1626. If the capitalist is entitled to expect double the rate of interest, do you not think the labourer is entitled to double the wages? Yes.
1627. Do you know whether he gets double? I do not think he does.
1628. Labour being considered the first movement in capital, is there any reason why the labour should not get the same proportion of profit as the capitalist? We have seen strikes occasioned by the want of a sufficient amount of skilled labour, which prevents capitalists embarking their capital in undertakings where labour is involved.
1629. Have you not seen strikes in England continued for a number of months, which shows that they may take place in a thickly populated country, where there is no want of labour? Yes.
1630. You have stated that you employed to the number of twenty persons; that did not include the whole number employed in your establishment—you were alluding, I presume, to some particular branch of your trade? I was speaking generally.
1631. During the time you were in business did you not give employment to a larger number than twenty? I might have done, but I think not generally. There was no very great demand in those days.

- E. Hunt, Esq. 1632. Are you limiting your remarks to those engaged in mechanical employments? Yes, principally.
 25 Nov., 1862. 1633. Had you not in your establishment a larger number than that—nearly double? Taking males and females, probably so. I do not think double—still, of course, they sometimes exceeded that number.
1634. During the time you were in business did you ever find a deficiency in the mechanical capabilities of your men to turn out any description of wood work? Yes, in the higher kinds of work.
1635. At the earlier period? Yes.
1636. Did you find that that difficulty was removed at the latter period? Yes, the demand was so small, comparatively, that a few overdid it.
1637. Are you aware that a number of trades, which do not now exist in the Colony, were carried on a few years ago—such as coopering, boat-building? Yes, I am aware of that. There used formerly to be a large number of whaling vessels out of the port, and of course they required whaleboats and other appliances.
1638. There is scarcely employment for those branches of trade now? No, we cannot manage to send out whalers to fish off our own coast, but vessels come from America and other parts of the world, and engage in this business before our face.
1639. Did that give employment to various branches of trade that do not exist now—rope-making for instance? Yes, we cannot compete with the older countries.
1640. How do you account for our not being able to compete with America—a young country? As far as the principal furniture is concerned we do, but they still send out chairs; we cannot compete with them in that respect, but other furniture can be imported from England. With regard to chairs, they are made of pine, which is as plentiful in America as sandstone is with us, and convicts are employed in making them. Shippers take them and send them at their own hazard to find a market. The first quantity of American furniture that was brought here was offered to me by the captain, who was surprised when I told him that the duty was only 5 per cent. *ad valorem*, and said he had expected to have paid 20 per cent. He sold what he had, was encouraged, and went and fetched more, and we were supplied with these goods until we were able to compete with them. They have now given up supplying us with general furniture, and confine themselves to chairs.
1641. Do you recollect by what means the country competed with American furniture and kept them out of the market? I think the country has competed with them, except as regards chairs.
1642. You stated that other countries had imported cheaper than they could? I am not aware I said that—I said England had.
1643. Then we did not compete with them; it was England that put them out of the market? Yes.
1644. They found that goods could be imported from England at a less rate? Yes; I think we can compete with them in furniture, from the prices at which I have seen furniture selling.
1645. Why, then, is furniture still imported? The taste of parties is improved; the people now require the best of furniture—they cannot get it too good.
1646. A great deal is imported of a character that could be made here? Yes.
1647. Quite equal to that imported? Yes.
1648. And more suited to the climate? Yes, and many persons prefer it.
1649. Is not the cedar equal to any other wood for furniture? Not equal to mahogany.
1650. With that exception you think no wood is more durable? I think what we manufacture is quite as durable as that made in England. What we make is more solid; for instance, this table is pretty well solid; if it had been made in England it would have been veneered. The articles made in the Colony would be more durable, but they would not please the taste of many persons. There are many things we have not the same facilities for getting up that they have in England; for instance, drawing-room suites in rosewood and walnut. They have superior skill in abundance, and have also facilities for importing woods from France and other countries to suit the public taste.
1651. That is the higher class of fancy furniture? Yes.
1652. How do you account for the Americans beating us in the way of business? I account for it in this way—that their naval men are much superior to ours; they go as partners in adventures; they are men who have their homes and wives, and they leave these in America while they go to accomplish a certain work, and return to their wives and families. Our sailors are a different sort of people—they live from hand to mouth, and have neither wives nor families, the majority of them; they have not the same subordination among them—they have not the same laws to keep them in order; they mutiny, and are fond of grog, and will not work while there is any in the hold.
1653. Then you think the American mercantile marine are superior to the English? Yes.
1654. *By the Chairman*: Are you an advocate for low wages? Not particularly so; I am an advocate for what is fair. I make a calculation that a working man should pay for his rent only one-sixth or one-seventh of what he obtains; if he obtains £2 2s. a week, he should not pay more than 7s. a week for rent.
1655. Taking the rate of rents in New South Wales, do you think, according to your own standard, mechanics in New South Wales are overpaid? I do not.
1656. A mechanic with a wife and three or four children, I suppose, would require a house with at least three rooms? Yes.
1657. Can he get such a house, in any place fit to live in, for less than 12s. a week? No, not for less than from 10s. to 12s.
1658. Then, according to your theory, a mechanic in this country should get 72s. a week? Yes, 10s. a day; and I dare say they do get it, or perhaps 72s. a week. 1659.

1659. Then you think they are fairly paid, according to your own theory? Yes.
1660. Do you not think the great want of New South Wales is population? It always has been, no doubt of it.
1661. Do you think, taking the rate of wages in England and the rate of wages here for mechanics, they are better off here than in England? Yes, if they get 10s. a day here they are equally as well off here as they are in England at 5s.
1662. Taking the mechanic in England who gets 5s. a day, what would it cost him for the rent of three rooms? I cannot say.
1663. It is not likely, I presume, that people will come to a new country, and leave their friends and home, without trying to better their own position? No doubt they do; here they have no frosty weather, while in England during frosty weather, the bricklayer, the carpenter, and the gardener are thrown out of employment.
1664. Is the cabinet-maker? Yes, he suffers a little, but not so much as others.
1665. In a builder's yard there is always work kept for a certain time? Yes, for a certain class of men; the rest are discharged.
1666. With reference to strikes—there are strikes in England as well as in New South Wales—have you not heard of men in England striking for many months? Yes, I have, on account of wages, but very little satisfies them.
1667. Masters have been ruined in consequence of strikes? Yes.
1668. There is another system of interrupting trade, what are called “lock-outs,” where masters lock-out their men? Yes.
1669. Many masters have ruined themselves by these lock-outs? Yes.
1670. With regard to the chairs which are introduced from America here, made in American prisons—are you aware that these are not allowed to be sold in America because they interfere with free labour? Yes, I believe so.
1671. Do you think it fair that we should tolerate the importation of these goods to throw our men out of work, when the Americans will not allow them to be sold at home? The captain I mentioned was surprised that they should be allowed to come in under a duty of 20 per cent.
1672. Supposing we were to send a cargo of chairs from New South Wales to America, have you any idea what they would charge as duty? In Peru and other parts of South America they charge a very heavy duty.
1673. Something like 100 per cent.? I believe it is very large indeed. Many persons took down houses ready to put up, and the duty was so high that they had to let them lie on the beach at California.
1674. To throw them overboard? Yes. With respect to North America, I do not know.
1675. Do you know whether England would charge any duty upon a cargo of furniture if it were sent from here? I am not aware of that.
1676. Would you believe that a person living in New South Wales, who sent a chest of drawers made of colonial wood as a present to his mother in England, had to pay £2 5s. duty on it? When I went to England from here we took two chests of drawers, and they were passed as passengers' luggage—they were in use.
1677. They contained your wearing apparel? Yes.
1678. Nevertheless, they would not have passed them unless they were passengers' luggage? Perhaps not.
1679. As they passed them as passengers' luggage, that implies that there was a duty upon articles of this kind? I hardly know; they were new chests of drawers, made on purpose. They were wrapped and tied up, and addressed as passengers' luggage; they asked no questions about them, but merely passed them. I am not aware whether they charge duty or not.
1680. *By Mr. Stewart:* Are you aware that in California duty was charged upon goods sent from here? Yes.
1681. A very high duty? Yes.
1682. You are not aware that that is the case in the old States? No.

E. Hunt, Esq.
25 Nov., 1862.

Mr. John Hill called in and examined:—

1683. *By the Chairman:* You belong to the firm of Hill, Son, and Co.? Yes.
1684. You are engaged as a cabinet manufacturer and upholsterer? I am.
1685. How long have you been so engaged? Twenty-two years.
1686. Are you a native of the Colony? No.
1687. You learned your trade in the Colony? Yes.
1688. You were apprenticed to Charles and Thomas Roberts? Yes.
1689. You import very largely? I do.
1690. How many men do you employ in the various branches of your trade, from the sawyer up to the polisher, including women and all? I think I have about sixty or sixty-one persons.
1691. How many apprentices have you? Altogether, I think, twenty-four; eighteen at the cabinet business, and six at the upholstering.
1692. Are these included in the sixty? They are.
1693. Do you find any difficulty in obtaining apprentices? None whatever.
1694. If you were to advertise in one of the daily papers to-morrow that you wanted apprentices, would you have many applications? No doubt I should have half-a-dozen.
1695. Have you ever tried that means? Some time back—not lately.

Mr. J. Hill.
25 Nov., 1862.

- Mr. J. Hill. 1696. Do you know how many applications you had? I could not tell you exactly. I have had as many as five or six at a time, after inserting the advertisement in the paper.
- 25 Nov., 1862. 1697. So that there is no difficulty in obtaining apprentices? None whatever.
1698. Do you find the moral character of the young men of this Colony generally good? Generally speaking; I have had some little difficulty occasionally.
1699. That is always the case with young men? Yes.
1700. Do they generally acquire the trade as readily as the same class of youth in the Mother Country? From what I have seen in England during the short time I was there—and I have been there twice within the last six years—I should say our boys are quite as quick as any I have seen there.
1701. You say you employ somewhere about sixty persons; now suppose you were to manufacture the whole of the goods you sell in your establishment—I refer to cabinet-ware and upholstery—I do not speak of carpeting, rugs, and so forth—to how many persons could you give employment? I should think at least ten or twelve more; but we cannot do it in the Colony.
1702. Then you sell much more colonial-manufactured furniture than you do imported? I think we do rather more; I can tell from what business we do—I can get at it pretty nearly.
1703. You say you employ about sixty persons, and that if you were to manufacture all you sell you could employ about twelve more, therefore you must manufacture five times as much as you import? I allude principally to cabinet-making; if I manufactured the whole of the frames that we stuff here I should require about half as many more men.
1704. I want to know how many extra sawyers, upholsterers, frame-makers and polishers you would require if all the goods you sell were manufactured in the country? I do not think I could employ more than ten or twelve more cabinet-makers, for there are many goods we could not make here.
1705. Why could you not? For instance, carpets and articles of that kind, they belong to the upholstery trade.
1706. I am not speaking of the material you use up—of carpets, silk, gimp—but of the labour you would require to put these things together? The material, in a great measure, forms the piece of furniture, which we could not make at all.
1707. Why could you not make it? We could not make the material; I think we could employ twelve men, but we must still import the drawing-room furniture.
1708. You have no doubt of the capability of the workmen in this country, or of the youth of this country to acquire the trade? Not at all.
1709. You think we have workmen in this country that could manufacture these articles? I think so; in fact, I am sure they could.
1710. The youth of the Colony are quite as capable of learning as those of England? Quite as capable, and generally speaking they are quicker.
1711. Do you notice the large number of the youth of the country who are wandering about the streets in apparent vagrancy? I have seen a great number of idle youth and children in some of the lower parts of Sydney.
1712. Would it not be much better for society if they were engaged in some kind of manufacture—I am not alluding especially to your particular class of manufacture, but to shoemaking, tailoring, woollen manufacturing—would it not be better for the youth and for society at large if they were employed? Yes. It would perhaps be as well for me to state that I was six months in London, during which time I was travelling up and down the lower part of that place, and I saw much larger numbers of children unemployed there than here.
1713. Although that may be the case in an old country like England, it does not follow that it should be the case here? Certainly not.
1714. Have you ever given your attention to the probable future condition of society in this country, in consequence of the want of employment for the rising generation? To a certain extent, having employed so many lads—I have never been without seven or eight. During the time I have been in business I have always studied the boys' interests in every sense of the word; so much so, that when I have hired a boy, and have found that he would not turn out well, I have parted with him rather than have any bother with the Courts.
1715. You say there are certain works you import in frame from England;—now we require a revenue; suppose the Parliament thought it right to look to the future employment of the people of the country, what duty do you think would put you in a fair position to manufacture these articles you now import—I allude to these frames—to come in competition with imported goods? I am afraid no duty you could impose would put us in a position to do so; the only means by which we could compete with them would be by doubling the men's wages in England. Even if you were to put 20 per cent. upon them the buyer would suffer, but we could not compete with them, and I do not believe we shall be able to do so in my lifetime—I speak with reference to drawing-room furniture.
1716. Nevertheless, you say we have tradesmen who are equal to the performance of this work, or if not we have youth who could soon acquire the art? I do not think we could get any men to make that class of work by piece work, and to give it them by day work would cost more than double what we can import them for. Even at the present day we have a great many men who are working at 50s. a week and a great many at £3, and if I were to attempt to take off a shilling they would go to the diggings—they say they can get £3 a week there.
1717. *By Mr. Stewart:* Have you seen any of the better class of American work? I have not of late years seen it here; some twelve or fifteen years ago there was a good deal of American furniture sent here; it was a very good class of furniture.
1718. Have you any reason to doubt their capability of getting up furniture equal to English?

- English? I have seen in England some very beautiful work from America, and I have also seen in the Colonies some very passable work, but not so good as I have seen in England. Mr. J. Hill.
1719. Have you seen their iron-ware work? Yes, quite equal to the iron-ware from England. 25 Nov., 1862.
1720. Are you aware that some five-and-thirty years ago their manufactures were not upon an equality with those of Sydney? Yes, at the time I was apprenticed, about seven-and-twenty years ago, when Mr. Hunt was the leading man here. I went there the first place after I had served my apprenticeship, and he had some very good workmen there at that time. Since then I have found some American workmen quite as good as the workmen are in England.
1721. Are you aware that the iron-work brought here from America has been manufactured there only since an import duty was imposed upon goods, not above twenty years ago? I cannot say that I have paid any particular attention to that.
1722. If America could rise to such a state of perfection in so short a time, can you see why, under similar circumstances, we should not? I do not see why we should not, if we had sufficient immigration.
1723. If a man could manufacture in England these superior articles, could he not, if he came to the Colony, manufacture the same description of goods here? The increased wages would make the difference.
1724. Are you aware what is the rate of wages in the better shops in London? I went through nearly all the large shops in London, Birmingham, and Wolverhampton.
1725. I wish you at present to confine yourself to London? About 24s. a week, day wages.
1726. The same class of workmen as that to which you pay 50s. here? Yes.
1727. What would be the difference between the value of mahogany in England and of cedar here? To the best of my recollection—I am not positive—mahogany is about double the price of cedar.
1728. If furniture were made of solid mahogany in England, it would be almost as high in England as furniture made of cedar is here? Yes, very nearly; it is the labour in England that makes things cheaper there.
1729. Labour is about half the price there that it is here? Rather less.
1730. What proportion does it cost to import packages of furniture? If you take the thing upon the bulk, it is about 30 per cent.
1731. *By the Chairman:* That covers all charges? We allow that upon everything that comes. We import about £12,000 worth in the year, and we charge that upon the bulk; that is as nearly as we can arrive at it.
1732. *By Mr. Stewart:* Do you think a better class of workmen would be induced to come to the Colony if there were an import duty upon goods? Nothing would induce them but higher wages.
1733. That, to some extent, could be met by the amount you have had to pay for the expense of importing? Yes, it might; however, people are not satisfied here. I brought out a man here who was getting very small wages indeed in England, and ever since he has been getting £4 a week, and he now complains that he does not get enough; he says he cannot do so well here as he did in England with less than half.
1734. Are you aware, from your long connection with business in the Colony, that there are trades which do not exist now which formerly flourished? Yes, there are some.
1735. Rope-making? Yes; and anyone who has been long in the Colony will recollect that some thirty years ago there were boat-builders all round the harbour when we used to fit out whalers.
1736. That used to give employment to a number of lads? Yes; that seems now to be shut up entirely.
1737. In proportion to the population, do you think there are now so many openings for lads to be put to trades as there were formerly? I think so.
1738. For the same number? Yes.
1739. In what trades? Builders, cabinet-makers, blacksmiths, wheelwrights; I think it is rather better now than it was in our time.
1740. Do you think there is so much employment, in proportion to the population, as there was at that period? I think there is more.
1741. Do you think, with the exception of your own establishment, there is one in Sydney, at the present time, where there are so many men employed as there were in the establishment were you were apprenticed? I suppose Mr. Lenehan comes next to me in the number of hands he employs.
1742. Excepting your own place and Lenehan's, do you think there is any establishment so large as the one the Robertses were carrying on for a number of years? Not as manufacturers, I do not think there is.
1743. Are you aware whether there were also several others larger than any now existing, with the exceptions you have named? Yes, there was Mr. Bell, Mr. Hunt, and the one next to Bell in George-street. There were three or four.
1744. Then there were as many as four or five large establishments? Yes.
1745. With the exception of your own and Mr. Lenehan's, there are not so many large establishments as there were some five-and-twenty or thirty years ago? There are a good many shops in Pitt-street—I do not know how many men they employ.
1746. From the appearance of those shops, should you form an idea that they were carrying on so large a business with respect to the training of the youth of the Colony to the trade? I do not think there is one. So far as the training of youth is concerned, I do not think there is one in Pitt-street that has more than two or three lads.
1747. When the population of Sydney was 20,000 we had double the number of establishments,

- Mr. J. Hill. 1748. And youths had the opportunity to learn their trade in a fair way? In Roberts' and Hunt's they had every opportunity of learning their trade.
- 25 Nov., 1862. 1749. *By the Chairman:* The style of work in those days—the description of work then—was even better than it is at the present time? The boys in those days were encouraged to put as much work as they could into a job.
1750. *By Mr. Stewart:* From the general character of the work that was then turned out, a workman, trained in one of those shops at that period would be suitable to go into any kind of employment now? Yes, a man could always make a plain article if he could make a better.
1751. Then, from five-and-twenty to thirty years ago, with the exception of two of the present establishments, there were a larger number of manufactories, and a larger number of apprentices being trained, than there are at the present day? I think there were; Bell had eight or ten apprentices in those days.
1752. How do you account for the falling off? Really I cannot; I do not see how it is to be accounted for.
1753. All these appeared to be fully employed at that time? Yes.
1754. You are aware that the population is now fivefold the number it was then, and fivefold as wealthy? Yes, I should imagine that to be the case.
1755. As a matter of fact, population has increased in that proportion, and wealth in that proportion, and it is reasonable to suppose the consumption of furniture in the same proportion? Yes.
1756. And the employment of youth is less? Not in all cases. I should say there are now more apprentices, taking the town through, than there ever were before.
1757. There is only one establishment besides your own where a large number of persons are employed? I am sure we are the largest employers of labour.
1758. *By Mr. Sutherland:* Suppose you were sending furniture from this to England, would it be admitted free of duty? Yes, I think so.
1759. *By the Chairman:* Are you sure of that? Yes, if it were sent Home as cargo. I must answer your question in two ways. If I took a lot of furniture in my cabin, and attempted to take it on shore in the docks, I should have to pay duty for it; but if I took it Home in the ship as cargo I should pay nothing for it.
1760. If you were to send a cargo of furniture from your establishment to England for sale, do not you believe you would have to pay duty on it? I think not. I am not sure of that; I have never tried. I have heard of a gentleman who sent Home some little samples of furniture, and when it got there he had to pay duty. I thought they did not charge duty in London for cargo.
1761. Have you paid duty for anything you have taken Home? Yes; all I had in my cabin was a chest of drawers, and I think I had to pay 17s. 6d.
1762. That was all the furniture you took Home with you? Yes.

Mr. Charles Hunt called in and examined:—

- Mr. C. Hunt. 1763. *By the Chairman:* You are engaged as a cabinet-maker and undertaker? Yes.
- 25 Nov., 1862. 1764. Have you taken up the business of Mr. Edward Hunt, who has just been examined before this Committee? Yes.
1765. How long have you had the business? I think I have had his business about sixteen years, but I have been in the business about thirty years.
1766. Were you manufacturing upon your own account previous to taking up his business? No, I was merely under my uncle for some time, acting as his foreman.
1767. Have you any apprentices? No actual apprentices, though you might call them so; they are a kind of improvers; they are not indentured, but could leave at any time.
1768. You have no indentured apprentices? No.
1769. How many improvers have you? I have only five.
1770. These are persons who have picked up a smattering of the business elsewhere, and have come to you to finish learning the trade? Yes, they have learned the rudiments as it were.
1771. Have you never advertised for apprentices? No.
1772. What is your reason for not advertising—it is usual in large establishments in the old country to employ a number of apprentices? It answers my purpose better to take improvers—young men who have learned the rudiments; it is the least trouble.
1773. Do you import furniture? Not a great deal; it is necessary to import chairs and drawing-room furniture. We cannot make up drawing-room furniture to compete with English.
1774. How many men have you employed? Three men and five young men—eight hands altogether.
1775. In the same business—we have it on the evidence of your uncle—there were formerly employed, pretty regularly, twenty hands? Yes, we used then to make chairs and drawing-room furniture.
1776. Why do you not now make chairs and drawing-room furniture? We can import them cheaper.
1777. Have we not tradesmen competent to make drawing-room furniture? Yes, we can do it, no doubt of it.
- 1778.

1778. We have the skill? As far as the woodwork is concerned, we have the skill in the Colony to do it. Mr. C. Hunt.
1779. And according to the evidence given by your uncle and by Mr. Hill, the youth of the Colony are very sharp? Yes. 25 Nov., 1862.
1780. And acquire the skill very readily? Yes, they pick it up very fast here.
1781. Are not our colonial woods equal to any others for manufacturing purposes? Yes; I have recently had a wood brought to me admirably adapted for drawing-room furniture. I have brought a specimen. (*The witness produced the same.*)
1782. What wood is that? I cannot find out the name.
1783. *By Mr. Stewart:* It can be procured if there is any demand for it? Yes, there is a large quantity up the country.
1784. It is something like walnut? Yes, but it is gayer; a lighter wood.
1785. It would look quite as well as walnut? Yes, it would put our walnut-tree drawing-room furniture into the shade.
1786. *By the Chairman:* You mean to say that it is superior to walnut? That is a matter of taste; it is quite equal.
1787. You said it would put your walnut-tree furniture into the shade? Yes, that is the opinion of manufacturers. I had a person who had been with Messrs. Broadwood and Sons, and he said they would value it highly for pianoforte cases.
1788. That can be obtained for a reasonable price? Yes; there is plenty of it up the country.
1789. That could be obtained in this country cheaper than the woods for drawing-room furniture could be obtained in England? I think we ought to get it as cheap; the only difficulty is the rate of wages.
1790. Do you agree with Mr. Hill, that the cost of importation is about 30 per cent.? I think he is right.
1791. Then a lot of furniture which would cost £100 in England, would cost £130 here when landed? Yes, no doubt.
1792. How much would it cost you to manufacture the same quantity and quality of furniture in New South Wales, taking into consideration the price of the wood, which you say could be obtained here as cheaply as in England? Marble and glass are always connected with drawing-room furniture, and these we must always import, I think.
1793. At any rate, for some time to come; but taking into consideration those things that it would be absolutely necessary to import—as silk, satins, gimp, and so on—what would it cost you to manufacture this quantity of goods in the Colony? I have no doubt 25 per cent. on the price would cover it.
1794. That would be about £155? Yes.
1795. That would be upon the whole about 16 per cent.? Yes.
1796. You have no doubt you could always get plenty of boys to learn the trade? I could always get as many as I want.
1797. *By Mr. Stewart:* Would there be any difficulty in your manufacturing the wood part of any description of work that is now imported? No.
1798. You could find workmen equal to any description of work, if a better price were paid for it than the ordinary wages? I find no difficulty in that respect.
1799. The difficulty is the matter of wages? Yes.
1800. You have been importing for some time, and have seen a quantity of furniture imported and sold by auction? Yes, but we are fast driving it out.
1801. Do you think the quality of that furniture equal to what you would manufacture? No; the larger portion is inferior, and not so cheap to the consumer.
1802. It is not so sound? It is not so sound.
1803. For an advance of 25 per cent. you could make a sounder article, better suited to the climate? Yes, but I have been speaking of drawing-room furniture.
1804. *By the Chairman:* Which would in reality be 25 per cent. better and sounder? Yes.
1805. Then the consumer—the purchaser—would lose nothing? No, I do not think he would.
1806. *By Mr. Stewart:* You think cedar is adapted for the purposes of furniture generally? I cannot say that cedar is a good wood for chairs—I never did think so.
1807. What wood do you think is better? Mahogany.
1808. You think cedar would come next to mahogany? Yes.
1809. In the general description of furniture made in this Colony there is no deficiency of mechanical skill? I do not think there is.
1810. Do you not think there is a large amount of mechanical skill, in the branches of trade with which you are connected, unemployed or turned off to other trades? I know there are many carvers who are doing very little.
1811. Competent workmen? Yes.
1812. Have you had any experience of London? Yes, I was apprenticed in London.
1813. Have you not met with workmen here who are pretty nearly on an equality with those of London? I think the class of men here are generally fully equal to those you get in England; besides, I consider that it is easier to carry on our business here than in England.
1814. From what you have seen of our youth, should you say they could be made equally good workmen? No doubt. I have a great opinion of our youth.
1815. If you had an increased demand for a better class of work, you could train a larger number of youth? Yes.
1816. And give employment to men who are now employed in other ways, or not employed at all? Yes.

- Mr. C. Hunt. 1817. Those of a better description—such as carvers? Yes; at present we import our higher class of carved furniture.
- 25 Nov., 1862. 1818. The present position of the better class of workmen is, that they cannot get employment because they cannot work at a rate of wages to compete with these imported goods? Yes.
1819. Where is this wood obtained? In the neighbourhood of Albury; it is about twenty-two or twenty-four inches in diameter.

TUESDAY, 2 DECEMBER, 1862.

Present:—

MR. STEWART,

MR. SUTHERLAND.

JOHN LUCAS, ESQ., IN THE CHAIR.

Mr. Edward Arthur called in and examined:—

- Mr. E. Arthur.
2 Dec., 1862.
1820. *By the Chairman:* You are a coach builder? I am.
1821. How long have you been so engaged in this Colony? Nineteen years.
1822. Were you so engaged in England? Yes, all my life.
1823. Were you carrying on business in England on your own account? Yes.
1824. Have you ever had any apprentices in England? Several.
1825. Have you also had some here? Yes.
1826. Do you find the colonial youth ready at learning the trade? Some are very quick, and others altogether the other way. Taking them generally they are pretty quick at learning it.
1827. Equally quick as in England? Far quicker.
1828. What is their behaviour generally? Some are very well-behaved, others not.
1829. Would they bear a favourable comparison with lads in England? Yes.
1830. Have you ever found any difficulty in obtaining apprentices if you wanted them? Not the least; I could get as many as I liked; but I object to have them because I have not sufficient room.
1831. Have you sufficient work? Yes, plenty.
1832. Do you think the timber of this Colony is as good for your business as the English timber? Quite as good, only it requires more seasoning—for a greater length of time.
1833. Is colonial ironbark as good for shafts as lancewood? Equally as good.
1834. And also for spokes? It is superior to oak.
1835. Is it equally as good for all other parts? Yes, it is equal to any English timber; it is more durable considerably.
1836. Do you manufacture carriages and every description of vehicles of a light kind? Yes.
1837. Could you give the Committee any idea of the quantity of carriages and other vehicles imported, compared with the quantity made in this Colony? No, I could not indeed.
1838. Do you think there are as many made in the Colony as are imported? No, nothing like it.
1839. Are there one-tenth as many made in the Colony? There may be one-tenth as many.
1840. You think that is about the proportion? That is about it.
1841. Then there are nine carriages imported for one made here? Yes, at the present time. At one time there were more made in the Colony, considerably—nearly the whole of them, until within the last few years. Importation was entirely stopped until latterly.
1842. How do you account for the change? In consequence of wages getting up with the gold.
1843. Before that most of the carriages used in the Colony were manufactured in the Colony? Yes, most of them.
1844. Taking the quantity imported against the quantity made in the Colony, I suppose there were eight or ten manufactured to one imported? I should say a dozen to one.
1845. Do you think we have the mechanical skill in the Colony to produce the best class of work? We can make anything, it does not matter what.
1846. Then we have the workmen? We have workmen capable of doing anything in the trade.
1847. And the raw material? And the raw material, no question about it. There was a carriage built here for the late Mr. Hyndes that cost five hundred guineas, equal to the most expensive carriages built at Home. Mr. Tooth drives it at the present time.
1848. How long since was that? Just before Mr. Hyndes died—about seven years ago.
1849. Do you think there are as many men engaged in the manufacturing business now as there were seven or eight years ago? No, many have turned their hands to other branches, wheelwrighting for instance.
1850. Can they earn as much money at wheelwrighting? More.
1851. Then they have not been thrown out of work? No.
1852. But by turning themselves to the wheelwright business they interfere with men of that class? Yes, of course.
1853. And also prevent many youths from going into that business? Yes. There is no importation to any extent of waggons, drays, and those things—they are mostly manufactured in the Colony.

1854.

1854. Could you give us any idea of the comparative cost of a carriage manufactured in England and one manufactured in this Colony, both being of equal quality;—say a carriage costs £150 to make in this Colony—what could the same carriage be made for in England? For about £135.

Mr.
E. Arthur.

2 Dec., 1862.

1855. What would it cost to import it? With case and all together, about £20.

1856. Then it would cost more to manufacture it in England and import it, than to make it here? Certainly. There is no advantage gained by getting it from England. You can get cheaper carriages here than imported ones.

1857. How do you account for the importations then? In this way: Gentlemen who want carriages like to see the article they buy before their eyes, but it would not answer our purpose here to manufacture at our own risk. We cannot afford to keep a large stock, because of the competition with a lot of inferior English carriages that are sent out. People also have an idea that an English-made carriage must be superior to a colonial one, though that is a great mistake.

1858. Then you have no doubt that carriages can be manufactured in this Colony as cheap as they can be imported? I am certain of it. What I term good carriages, I mean; I do not mean to say we can compete with carriages of inferior quality.

1859. But the importation of inferior carriages decreases the value of your good carriages? Yes; very few good carriages come here from England; they are nearly all what we term "job" carriages, done up again, with fresh tires and fresh lined.

1860. *By Mr. Stewart:* It is the exception to have new carriages come out? Yes; indeed I have relations myself who send out these "job" carriages. Gentlemen in England hire them and use them for a time, and they are done up, and shipped out to the Colony.

1861. *By the Chairman:* Has your attention been drawn to the number of youth in the Colony who are without occupation? It has, considerably.

1862. Do you know of any occupations suitable for the growing youth of the Colony, sufficient to keep them employed? There would be plenty, provided manufacturing establishments were encouraged, such as nail-making, boat-building, carriage-making, and so on.

1863. In your own branch, I suppose, if the whole of the vehicles which are used in the country were manufactured in the country, it would give employment to an immense number? I dare say it would give employment to two or three hundred youths. There is a constant stream of different things required in the different branches of the business, which might all be manufactured in the Colony. For instance, the making of nuts and roller bolts is a trade alone, the making of springs, joints, steps, and fifty different things are all so many different trades; and if there were sufficient encouragement, men would follow each branch separately, and then they could be manufactured much cheaper than they can be by a man going all through the business himself.

1864. Then what interferes with your business in this country, and of course prevents a great number of the youth of the Colony being employed, is the importation of inferior articles? It is.

1865. Second-hand carriages, nicely lined and done up, are sold at much less than you can make good ones for? Yes; I have an imported one now in my yard that has been a second-hand carriage.

1866. You find a disposition existing amongst gentlemen in the Colony to purchase imported carriages, although you, as a mechanic, know they are much inferior to colonial? Yes, and they find it out too, after a time. There is a general idea that colonial-made articles are not so good as English. They fancy the timber is not so good, but it is a great mistake; for even ash shafts, if you keep them too long, get the grub in them, and when you come to cut them they are all powder; iron-bark you may keep for twenty years.

1867. How would you stop this importation? By putting on a duty to a certain extent, in proportion to the difference of wages in the Colony.

1868. What amount of duty would prevent the importation of inferior articles? I should say about 20 per cent.

1869. Do you think a duty of 10 or 15 per cent. would be of any benefit? No, I do not think it would.

1870. There are large numbers of American carriages coming here now? Yes, almost every week; they are coming in continually.

1871. *By Mr. Stewart:* There is no description of carriage imported of a quality that you could not get up in the Colony if you had the order? Not one of any description.

1872. Then you attribute the ready sale of these carriages more to the fact of their being placed before the eye of the customer, than to any superiority over those of colonial workmanship? Yes.

1873. In addition to the advantage in sending out second-hand carriages, as you state is the usual description of carriages imported, capital can be obtained at a lower rate of interest in England? Decidedly.

1874. Money can be got at 4 per cent. in England? Less than that.

1875. So that a carriage kept twelve months, and the interest of money, would not be as much as it would be here by keeping it four months? Nothing like it.

1876. Then, in fact, the period occupied in importing a carriage is not so much against the capitalist as merely manufacturing and keeping it here three or four months? Not one quarter of it.

1877. Many of these carriages could not be so readily sold in the places they originally came from? No, they would be kept on hand.

1878. Or broken up for other purposes? Yes, and altered.

1879. If an import duty of 20 per cent. was levied on carriages, would that be an inducement for you and other manufacturers to keep carriages in stock? It would, decidedly, because then we could compete with the Home market, and entirely shut them out.

Mr.
E. Arthur.

2 Dec., 1862.

1880. That would induce you also to extend your business? Yes, certainly, and to take apprentices.
1881. You think there would be no difficulty in increasing the number of your apprentices? Not in the least; I could get twenty in a day.
1882. And there is no difficulty in getting efficient workmen? None.
1883. What rate of wages just now, on the average, would a good workman receive? I am just now paying superior workmen about £3 10s. per week.
1884. And from that downwards? Yes.
1885. The man you speak of must be a man who has served some years to the trade? Yes, he must be a good workman.
1886. Such a man as would be able to get employment in any coachbuilder's establishment in England? Yes. I have some as fine workmen, as I have met with in England. We have had some workmen out here, who, after emigrating to this country, have gone Home again, in consequence of not getting sufficient employment.
1887. Would not that operate as a check upon lads endeavouring to gain a knowledge of the higher qualities of work, if they could not afterwards obtain sufficient employment in the better branches? No; boys learn here more than they do at Home; they get a general knowledge of the work, in consequence of the different branches not being so separated here as in England.
1888. Is it not a fact, in your trade, that rougher workmen, capable of getting through more work, can earn better wages? No.
1889. The best workmen can get the highest wages? Yes.
1890. But there is a limit to the number required? Yes.
1891. Then it becomes necessary for a workman, in order to secure constant employment, to lower himself in the scale of quality? Yes, because there is not sufficient good work to keep him.
1892. You think there are workmen enough in the country to supply to a considerable extent beyond the present demand? Yes, there are workmen to supply all that is required.
1893. What would be the proportion of the finishing portions of carriages that you would require to import—some of the trimmings, for instance? We made that out here about eight years ago, but the man could not get a demand for his labour, and went into the police.
1894. Are there any portions of carriages that would require to be imported if a duty were imposed on imported carriages? There is not a single article that ought to be imported.
1895. You think a duty of 20 per cent. would be sufficient to establish manufacturers in the different branches of your trade? Yes.
1896. It would be worth your while, as a practical man, to train lads to the business, if security was given you for a market? Certainly; indeed I have had four apprentices myself, and they turned out as fine workmen as ever took a tool in hand. One was a smith, two painters, and one a wood-worker. However, they could not get sufficient employment in the trade, and one kept a public-house in Market-street, one went to Ballarat, and the others shifted about.
1897. *By the Chairman:* The whole cost of the imported vehicles is a direct loss to the Colony, in consequence of their not being manufactured in the Colony, considering that the labour that would be employed in manufacturing these vehicles is now unemployed? Yes; for instance, the quantity of iron that is thrown away and destroyed in this Colony is immense, whereas if encouragement were given to manufacturers, parties would start rolling mills and puddling mills, and this would be worked up into bar iron of the best quality, and that would give employment to a great number of hands.
1898. *By Mr. Stewart:* Have you met with many good workmen who are men of bad character? There are a few exceptions amongst the smiths; they are fond of what they call a spree for a day or two.
1899. I am speaking of thieving, or anything of a criminal character? I never knew one.
1900. Do you think, as a rule, a man trained to any business becomes a permanently good member of society? I do.
1901. Is it not an exception for a man to serve a regular apprenticeship to afterwards become a criminal? I never knew but one in my life that had served his regular time in the trade and afterwards became a criminal.
1902. Then in the event of encouragement being given to manufactures, the amount of crime in the Colony would be reduced? No question of it; not one-sixth part of the depositions would be committed that there is at the present time.
1903. To that extent there would be a saving to the State? Yes, no doubt. We are making the American carriages now, and we can do it within, I believe, about £5 of what they are imported here for.
1904. Then an import duty would enable you to compete with importations from any country, even America? Yes, taking freight and everything into consideration.
1905. Are you aware what you would have to pay for sending a carriage into America similar to those imported here? No, but I know they charge very high.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

REPORT FROM THE SELECT COMMITTEE

ON THE

TANNERS AND CURRIERS BILL OF 1859-60;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

AND CERTAIN

MINUTES OF EVIDENCE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
19 *September*, 1862.

SYDNEY:

THOMAS RICHARDS, GOVERNMENT PRINTER, PHILLIP-STREET.

1862.

[*Price*, 11d.]

580 (511)—A

1859-60.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 68. TUESDAY, 28 FEBRUARY, 1860.

34. Tanners and Carriers Bill:—Mr. Parkes moved, That this Bill “be” now read a second time.

Debate ensued.

Mr. Byrnes moved, That the Question be amended by the omission of all the words following the word “be,” with a view to the insertion in their place of the words, “referred to a Select Committee, consisting of Mr. Atkinson, Mr. Broughton, Mr. Byrnes, Sir Daniel Cooper, Mr. Dickson, Mr. Jenkins, Mr. Lucas, Mr. Nott, Mr. Parkes, and Mr. Pemell.”

Debate continued.

And the Committee continuing to sit till after Midnight,—

WEDNESDAY, 29 FEBRUARY, 1860, A.M.

Question,—That the words proposed to be omitted stand part of the Question,—put and negatived.

Question,—That the words proposed to be inserted in the place of the words omitted, be so inserted,—put and passed.

Whereupon Question,—That this Bill be referred to a Select Committee consisting of Mr. Atkinson, Mr. Broughton, Mr. Byrnes, Sir Daniel Cooper, Mr. Dickson, Mr. Jenkins, Mr. Lucas, Mr. Nott, Mr. Parkes, and Mr. Pemell,—put and passed.

VOTES, No. 79. FRIDAY, 13 APRIL, 1860.

5. Tanners and Carriers Bill:—Mr. Byrnes, *with the concurrence of the House*, moved, *without previous notice*, That the several Petitions from certain Tanners and Carriers, presented to this House, respectively, on 29th November, 1859, 25th January, and 28th February last; from certain Inhabitants of Sydney and Suburbs, praying for the removal of Slaughter-houses and other Nuisances from the precincts of the City, presented, respectively, on 24th and 31st January last; and the Petition from Owen Joseph Caraher, presented on 13th December, 1859; be referred to the Select Committee now sitting on the Tanners and Carriers Bill.

Question put and passed.

6. Member of Legislative Council as Witness:—Mr. Byrnes moved, That the following Message be carried to the Legislative Council:—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into the Tanners and Carriers Bill, and that Committee being desirous to examine the Honorable James Robert Wilshire, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

Legislative Assembly Chamber,

Sydney, 13th April, 1860.

Speaker.

Question put and passed.

VOTES, No. 81. WEDNESDAY, 18 APRIL, 1860.

10. Member of Legislative Council as Witness:—Mr. Parkes moved, That the following Message be carried to the Legislative Council:—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into Tanners and Carriers Bill, and that Committee being desirous to examine the Honorable W. Bland, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

Legislative Assembly Chamber,

Sydney, 18th April, 1860.

Speaker.

Question put and passed.

VOTES,

VOTES, No. 82. THURSDAY, 19 APRIL, 1860.

1. * * * * *
 Members of Legislative Council as Witnesses:—The Speaker reported the following Messages from the Legislative Council:—

(1.) MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 13th instant, requesting leave for the Honorable James Robert Wilshire, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly, on the Tanners and Curriers Bill, the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

Legislative Council Chamber,
 Sydney, 18th April, 1860.

W. W. BURTON,
 President.

(2.) MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 18th instant, requesting leave for the Honorable William Bland, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly, on the Tanners and Curriers Bill, the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

Legislative Council Chamber,
 Sydney, 18th April, 1860.

W. W. BURTON,
 President.

[Further Proceedings stopped by Prorogation.]

1860.

VOTES, No. 16. FRIDAY, 19 OCTOBER, 1860.

10. Tanners and Curriers:—Mr. Byrnes moved, pursuant to notice,—
 (1.) That a Select Committee be appointed to consider and report upon the expediency of amending the Act 13 Vict., No. 42, so far as the same relates to Tanners and Curriers, and that the several Petitions in favour of, and in opposition to, the Tanners and Curriers Bill of last Session be referred to the said Committee.
 (2.) That such Committee consist of Mr. Atkinson, Mr. Broughton, Mr. Egan, Mr. Farnell, Mr. Jenkins, Mr. Laycock, Mr. Lucas, Mr. Lyons, Mr. Parkes, and the Mover.
 Debate ensued.
 Question put and passed.
 Mr. Byrnes then moved, That the Minutes of Proceedings of, and the Evidence taken before, the Select Committee on the Tanners and Curriers Bill of last Session, be laid before the House.
 Question put and passed.
 And the Clerk of Select Committees having presented the same at the Bar of the House,—
 Mr. Byrnes moved, That the said Minutes of Proceedings and Evidence be referred to the Select Committee now appointed.
 Question put and passed.
 [Further Proceedings stopped by Dissolution.]

1861.

VOTES, No. 43. TUESDAY, 26 MARCH, 1861.

27. Tanners and Curriers Bill:—Mr. Lucas moved, pursuant to notice,—
 (1.) That a Select Committee be appointed to consider and report upon the Evidence taken before a Select Committee of the Legislative Assembly, appointed on the 29th of February, 1860, on the Tanners and Curriers Bill.
 (2.) That such Committee consist of the following Members, Mr. Atkinson, Mr. Dickson, Mr. Parkes, Mr. Sutherland, Mr. Egan, Mr. Love, Mr. Flett, Mr. Driver, and the Mover.
 Question put and passed.
 [Further Proceedings stopped by Prorogation.]

1862.

1862.

VOTES, No. 41. TUESDAY, 5 AUGUST, 1862.

12. Tanners and Curriers Bill of 1859-60:—Mr. Lucas moved, pursuant to *amended* notice,—
- (1.) That a Select Committee be appointed to consider and report upon the Evidence taken before a Select Committee of the Legislative Assembly, appointed on the 29th of February, 1860, on the "Tanners and Curriers Bill."
- (2.) That such Committee consist of Mr. W. Forster, Mr. Sutherland, Mr. Love, Mr. Dalgleish, Mr. Bell, Mr. Cunneen, Mr. Harpur, and the Mover.
- (3.) That the Petition from Mr. Hercules Watt, presented on the 16th of April, 1861; the Petition from Mr. John Page, presented on the 23rd of April, 1861; the Petition from Mrs. M. L. Watt, presented on the 13th of September, 1861; and the Evidence and Proceedings of the Committee appointed on 29 February, 1860; be referred to such Committee.
- Question put and passed.

VOTES, No. 68. FRIDAY, 19 SEPTEMBER, 1862.

2. Tanners and Curriers Bill of 1859-60:—Mr. Lucas, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, the Select Committee to whom this subject was referred on the 5th August, 1862, together with certain Minutes of Evidence.
- Ordered to be printed.

TANNERS AND CURRIERS BILL OF 1859-60.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 5th August, 1862, “to consider and report upon the Evidence taken before a Select Committee of the Legislative Assembly, appointed on the 29th of February, 1860, on the ‘Tanners and Curriers Bill,’” and to whom at the same time were referred the Petition from Mr. Hercules Watt, presented on the 16th of April, 1861; the Petition from Mr. John Page, presented on the 23rd of April, 1861; the Petition from Mrs. M. L. Watt, presented on the 13th of September, 1861; and the Evidence and Proceedings of the Committee appointed on 29th February, 1860,—have agreed to the following Report:—

Your Committee have carefully considered the Evidence taken before a Select Committee of the Legislative Assembly, appointed on the 29th day of February, 1860, on the “Tanners and Curriers Bill.”

Your Committee have also considered the Petitions of Hercules Watt, John Page, and Mary Louisa Watt—referred to your Committee.

Your Committee are of opinion that it is undesirable to have the business of Tanners and Curriers carried on within the limits of the City of Sydney; and are, therefore, not prepared to recommend any relaxation of the provisions of the Act 13 Vic., No. 42.

JOHN LUCAS,

Chairman.

*Legislative Assembly Chamber,
Sydney, 18 September, 1862.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 11 APRIL, 1860.

MEMBERS PRESENT:—

| | | |
|-------------|--|--------------|
| Mr. Byrnes, | | Mr. Lucas, |
| Mr. Parkes, | | Mr. Jenkins, |
| Mr. Pemell. | | |

Mr. Byrnes called to the Chair.

Order of the House, dated the 29th February last, appointing the Committee, read. Committee deliberated as to their course of procedure.

Motion made (*Mr. Parkes*) and *Question*,—That the Chairman do move in the House, that the several Petitions relative to the Bill before them, be referred to this Committee,—*agreed to*.

Committee further deliberated, and decided to receive the evidence of certain parties as well among those in favour of as those opposed to the measure.

The following witnesses were suggested, whom it would be desirable to examine in the course of the inquiry, viz.:—

Mr. Hercules Watt,
 Mr. W. Pawley, Mr. R. Cavanough (Windsor),
 Mr. A. F. Wilshire,
 Honble. J. R. Wilshire, Esq., M.L.C.,
 Mr. W. M. Alderson,
 Honble. Wm. Bland, Esq., M.L.C.,
 I. Aaron, Esq., M.R.C.S.L.,
 H. Graham, Esq., M.R.C.S.L.,

Committee *Resolved*, That summonses be issued in the four first names of the above list, for their next sitting, and that the usual steps be taken to procure the attendance of the Honorable J. R. Wilshire, Esq., a Member of the Legislative Council.[Adjourned to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 17 APRIL, 1860.

MEMBERS PRESENT:—

| | | |
|----------------|--|-------------|
| Mr. Broughton, | | Mr. Lucas, |
| Mr. Jenkins, | | Mr. Parkes, |
| Mr. Pemell. | | |

In the absence of Mr. Byrnes, Mr. Jenkins called to the Chair.

Order of the House, dated 13th instant, referring to the Committee the several Petitions relating to the Tanners and Curriers Bill—read.

Petitions produced, and laid before Committee.

Mr. H. Watt called in and examined.

Witness withdrew.

Mr. W. Pawley called in and examined.

Witness withdrew.

Mr. R. Cavanough called in and examined.

Witness withdrew.

Mr. A. F. Wilshire called in and examined.

Witness withdrew.

The Honorable J. R. Wilshire, Esq., M.L.C., was not in attendance, in consequence of indisposition.

Committee deliberated.

It was Resolved, That Mr. W. M. Alderson, I. Aaron, Esq., and H. Graham, Esq., be summoned to give evidence at the next sitting, and that the usual steps be taken to procure the attendance of the Honorable W. Bland, Esq., a Member of the Legislative Council.[Adjourned to Friday next, at *Eleven o'clock*.]

FRIDAY, 20 APRIL, 1860.

MEMBERS PRESENT:—

| | | |
|----------------|--|-------------|
| Mr. Broughton, | | Mr. Lucas, |
| Mr. Jenkins, | | Mr. Parkes, |
| Mr. Pemell. | | |

In the absence of Mr. Byrnes, Mr. Jenkins called to the Chair.

I. Aaron, Esq., M.R.C.S.L., called in and examined.

Witness withdrew.

Mr. W. M. Alderson called in and examined.

Witness withdrew.

H. Graham, Esq., M.R.C.S.L., *Health Officer for the City*, called in and examined.

Witness withdrew.

Committee

Committee deliberated, and Resolved, That the attendance of the Honorable W. Bland, M.L.C., be again invited, and that Messrs. J. E. Begg and R. A. Hunt be summoned to give evidence at the next meeting.

[Adjourned to Wednesday next, at *Eleven o'clock.*]

WEDNESDAY, 25 APRIL, 1860.

MEMBERS PRESENT :—

| | | |
|----------------|--|-------------|
| Mr. Broughton, | | Mr. Lucas, |
| Mr. Jenkins, | | Mr. Pemell. |

In the absence of Mr. Byrnes, Mr. Jenkins called to the Chair.

R. A. Hunt, Esq., called in and examined.

Witness withdrew.

Mr. J. E. Begg called in and examined.

Witness withdrew.

The Chairman brought under the notice of the Committee, certain substantive alterations made in the evidence of Mr. W. Pawley, the same having been transmitted to witness with the usual letter permitting verbal or grammatical corrections.

Alterations proposed in answers Nos. 248 and 249 read, and ordered to be noted separately, with a reference from the text.

The Honorable W. Bland, Esq., M.L.C., attending by permission of the Legislative Council, examined.

Witness withdrew.

[Adjourned to Friday, 4th proximo, at *Eleven o'clock.*]

FRIDAY, 4 MAY, 1860.

MEMBERS PRESENT :—

| | | |
|----------------|--|-------------|
| Mr. Broughton, | | Mr. Lucas, |
| Mr. Jenkins, | | Mr. Parkes, |

Mr. Pemell.

In the absence of the Chairman, Mr. Jenkins called to the Chair.

The Honorable J. R. Wilshire, Esq., M.L.C., attending by permission of the Legislative Council, examined.

Witness withdrew.

The Chairman drew the attention of the Committee to certain alterations and additions made, in his evidence, by Mr. R. Cavanaugh, whilst in his hands for revision in the usual course.

Corrected answer to Question No. 300, further reply to Question No. 310, additions to certain answers and concluding *addendum*—read.

Addendum and further reply (310) ordered to be *appended* to the Evidence. (*Vide Appendix A. B.*)

Remaining corrections and insertions allowed.

Committee deliberated.

[Adjourned to Friday next, at *Eleven o'clock.*]

FRIDAY, 11 MAY, 1860.

MEMBERS PRESENT :—

| | | |
|----------------|--|-------------|
| Mr. Broughton, | | Mr. Parkes, |
| Mr. Lucas, | | Mr. Pemell. |

In the absence of the Chairman, Mr. Broughton called to the Chair.

The Chairman brought under the notice of the Committee, the MS. Evidence of the Honorable W. Bland, a witness examined on the 25th ultimo, in which when transmitted to that gentleman for revision, each several answer as taken down by the Short-hand Writer, was proposed to be omitted and in lieu thereof, the answers as re-written by witness, to be inserted.

Committee deliberated, and deeming such extensive alterations inadmissible, unless regularly presented to the Committee upon a re-examination of the witness ;—

Motion made (*Mr. Lucas*) and *Question*,—That at the next sitting of the Committee the Honorable W. Bland be examined, in order to afford that gentleman the opportunity of amending his former evidence—*agreed to.*

[Adjourned to Wednesday next, at *Eleven o'clock.*]

WEDNESDAY, 16 MAY, 1860.

MEMBERS PRESENT :—

| | | |
|----------------|--|--------------|
| Mr. Broughton, | | Mr. Jenkins, |
| | | Mr. Parkes. |

Mr. Byrnes in the Chair.

The Honorable W. Bland, Esq., M.L.C., attending by permission of the Legislative Council, re-examined.

The

The Honorable W. Bland, Esq., M.L.C., further examined.

Witness withdrew.

Committee deliberated.

(The Witness (Dr. Bland), upon his re-examination, having amended the former Evidence given by him on the 25th ultimo, the Committee allowed the several answers, on that day, as so revised.)

[Adjourned.]

FRIDAY, 18 MAY, 1860.

MEMBERS PRESENT:—

| | | |
|------------|--------------------------|-----------|
| | Mr. Byrnes in the Chair. | |
| Mr. Lucas, | | Mr. Nott, |
| | Mr. Parkes. | |

Committee deliberated.

[Adjourned to Wednesday next, at *Eleven o'clock.*]

WEDNESDAY, 23 MAY, 1860.

MEMBERS PRESENT:—

None.

A Quorum of the Committee not being present, the meeting called for this day *lapsed.*

[*Further proceedings stopped by Prorogation.*]

1862.

THURSDAY, 7 AUGUST, 1862.

MEMBERS PRESENT:—

| | | |
|-----------------|-----------|-----------------|
| Mr. Lucas, | | Mr. W. Forster, |
| Mr. Sutherland, | | Mr. Dalgleish, |
| | Mr. Bell. | |

Mr. Lucas called to the Chair.

Order of the House appointing the Committee,—on the Table.

Committee deliberated.

Ordered,—That printed copies of the Minutes of Evidence taken before the Select Committee on the Tanners and Carriers Bill, in the Session of 1859–60, together with copies of the three Petitions referred, be circulated amongst the Members prior to next meeting.

Chairman to prepare Draft Report.

WEDNESDAY, 17 SEPTEMBER, 1862.

MEMBERS PRESENT:—

| | | |
|-----------------|-------------------------|-------------|
| | Mr. Lucas in the Chair. | |
| Mr. Sutherland, | | Mr. Harpur, |
| | Mr. W. Forster. | |

Printed copies of Minutes of Evidence and Petitions referred to the Committee, *circulated* during the interval of adjournment.

Motion made (*Mr. W. Forster*) and *Question*,—That the proceedings referred be adopted as the Proceedings of this Committee,—*agreed to.*

The Chairman laid before the Committee a Draft Report.

The same read, amended, and agreed to.

Chairman to report.

Legislative Assembly.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

TANNERS AND CURRIERS BILL.

TUESDAY, 17 APRIL, 1860.

Present:—

| | | |
|----------------|--|-------------|
| MR. BROUGHTON, | | MR. LUCAS, |
| MR. JENKINS, | | MR. PARKES, |
| | | MR. PEMELL. |

RICHARD LEWIS JENKINS, ESQ., IN THE CHAIR.

Mr. Hercules Watt called in and examined:—

1. *By the Chairman*: What are you? I am a tanner and currier.
2. Will you state where you reside, and where your tanyard is? In Phillip-street.
3. *By Mr. Parkes*: Did you petition the Legislative Assembly? I did.
4. *By the Chairman*: Is that your petition [*handing a petition to the witness*]? It is.
5. How long have you been a tanner in Sydney? About forty-five or forty-six years.
6. How long have you occupied the premises in Phillip-street? Upwards of forty years.
7. During the whole of this time you have been surrounded by population, and have had houses close up to your yard? Close up to the yard all round.
8. Will you state the process of your business from the time of your receiving the hides? When the animals are slaughtered the hides are taken off and sent to us by the butchers, and they are then thrown into water.
9. Immediately they are slaughtered? Immediately we get them.
10. Do you receive them in a fresh state? Sometimes they do not come exactly in a fresh state, but generally they come fresh.
11. Sometimes they do not? Sometimes, but very seldom.
12. You take them in, in whatever state they are sent, whether they are fresh or otherwise? Yes, we take them; but those that are not fresh, of course we are interested to put them to work at once, to prevent any smell from them.
13. How long do you allow them to remain before you begin to work them? We never allow them to remain, we put them to work as soon as we get them.
14. Are they not first of all allowed to remain dry,—are they not thrown one upon another? No, we put them to work as soon as we get them, and the sooner we do so the better they are preserved.
15. You put them immediately into water? Yes.
16. What water do you put them into? Into clean water, and then into lime water.
17. How long do they remain in the water without lime? Perhaps they may remain all night, or if they come in in the morning they might remain till after dinner; we then brush them over, and put them into lime water.
18. During this time does any smell arise from them? There cannot be much smell from them, for as soon as they are put into the lime the smell is taken away.

Mr. H. Watt.

17 April, 1860.

- Mr. H. Watt.** 19. Previously to being put into the lime, have they any smell? Very slight; we take out the hides and throw away the water, and as the water passes away the smell goes away also.
- 17 April, 1860.** 20. What becomes of the water they are first thrown into? We throw it away, and it passes through the yard, and into the common sewer.
21. What color is that water when it leaves the pit? The alteration of color may be small; but it does not cause any smell to any disagreeable extent if it is put away at once.
22. But some of the hides you receive are not in a fresh state? Sometimes; we cannot at all times get them fresh.
23. Is there no smell arising from the tanyard? No smell to have any effect upon any person. I have never had any complaint since I have been in that place of a disagreeable smell, and I have been there a great number of years; and as for the healthy part of the subject I think I am a pretty good sample; and I was born in a tanyard, and have been in one ever since I was born.
24. Are your workmen in a pretty good state of health? I never heard them complain.
25. *By Mr. Parkes:* What is your age? 65.
26. Have you enjoyed uninterrupted health? I have never had any ailment except the gout, and that may have been my own fault—I may have been a little lazy, perhaps.
27. *By the Chairman:* From having been born in a tanyard perhaps you do not notice the particular smells which other persons do? If other persons had been in any way affected by my yard I think they would have complained of it.
28. But you do not think that you, having been born in a tanyard, and lived in one so many years, would be so likely to notice these smells as others would who had not been accustomed to them? Perhaps not, but I have felt no disagreeable smell.
29. *By Mr. Parkes:* How far is your tanyard from Mr. Jenkins's back premises? I do not think it is more than eighty or ninety feet.
30. *By the Chairman:* You say you have never had any complaints from your neighbors? No, not at any time.
31. Are you aware that an Act was passed in 1849 to amend the law relating to the licensing of slaughter-houses? Yes; I have read it, and I considered it was a very oppressive Act. My opinion is that that was done purely out of malice to some individual—I thought so then.
32. *By Mr. Parkes:* When you say it was done out of malice, you mean the introduction of the words "tanners and curriers" into the report of the Committee? Yes.
33. What your observation refers to is, not the Act itself, but to the including of tanners and curriers among the other descriptions of trades objected to? Just so.
34. *By the Chairman:* Did you at the time protest against it? No, I did not, except by speech; I never made any written application.
35. *By Mr. Parkes:* There was a petition against it I believe? I do not recollect signing any petition at that time; I might have done so, but I cannot recollect it.
36. *By the Chairman:* You are aware that the time has now arrived for that Act to take effect? Yes.
37. Do you complain of that Act? I do.
38. Do you consider that it will be an injustice to you if that Act be brought into operation? It will be a great sacrifice to me, so much as to deprive me of my living. The rent of my yard brings me in £7 a week, and it would deprive me of the whole of that.
39. While you consider that it would be depriving you personally of a living, it would not, in your opinion, be conferring any great benefit upon the city to remove the yard? I do not think it would confer any great benefit upon the city.
40. You are aware that it is a trade which some persons consider to be offensive? I have heard some people say they felt vexed about it, but I never heard any complain of me.
41. *By Mr. Parkes:* In your intercourse with other residents of the city, do you often hear the opinion expressed that these tanneries ought to be removed? I have heard one or two parties say so; but generally speaking I never heard any complaints. I have heard only two persons say so.
42. Now the matter has been before the Legislature some time, probably attention must have been attracted to the subject—have you heard any opinions expressed respecting it within the last few months? Only by two persons.
43. Have you heard contrary opinions expressed? Yes, I have heard my own neighbors say they were not dissatisfied with my business being carried on there.
44. Are you aware that a number of your neighbors signed a petition? Yes; and I do not know that one of my neighbors refused to sign that petition.
45. *By the Chairman:* I suppose you do not deny that some offensive odour arises from the practice of the business of a tanner? It may be unpleasant to some, but I do not think it is generally.
46. When hides are brought into the yard in a putrescent state there must be something offensive? It may be disagreeable for a time, but as soon as they go into work no smell can arise.
47. *By Mr. Parkes:* Is it a fact that the hides are ever in course of putrefaction in a tanyard—if the business is properly managed does putrefaction ever set in? Not when it is in the lime; the lime saves the hide, it opens the pores, and loosens the hair. The lime entirely destroys all unpleasant smell.
48. If putrefaction commences, does it not damage the leather. Where it has set in is the hide in a fit condition for being made into leather? No.
49. So that it is one great care in your business to see that the hide does not become putrid, that it is immersed in the tanning liquid before putrefaction sets in? Decidedly; were putrefaction to set in it would spoil the leather.

50. *By the Chairman:* I suppose you will allow that the best test as to whether putrefaction has set in or not is by the odour arising from the tan-yard? We can tell as soon as we put our hands on the hide the state it is in; and if anything is the matter with it, we preserve it at once. Mr. H. Watt.
17 April, 1860.

51. What offensive odour arises from the tan-yard must arise from the decomposition of the hides? If any such thing takes place at all.

52. You take care, as soon as you get the hides, to stop the putrefaction? Yes, for our own interest; for if the hide becomes putrid it reduces its weight and value.

53. What odour does arise from the hides must arise from the submersion of them in fresh water in the first instance? Yes; if there was any thing wrong it would take place then.

54. It is at that time they do give off those unpleasant odours? Yes, if any.

55. *By Mr. Lucas:* What time transpires from the receipt of the hide until it is put into the lime? We do not let it remain any longer than we can possibly help. We put the hide into the water in the first instance, to get it into its natural state; we then throw it over the beam, and rub a brush over it to take any disagreeable matter from it, and then we put it in lime.

56. Then, if there be anything disagreeable in the trade of a tanner it is that portion which precedes the putting the hide into the tan-pits? Yes, I think so; I do not think any one would complain much of anything after that.

57. Is the process of liming and preparing for the lime pit carried on in your yard? No.

58. Where is that done? Out of town.

59. Then if that process be carried on out of town, there can be no nuisance to the city arise from that? No; and, in fact, when the liming was done there I never heard any one complain.

60. Still there is some disagreeable smell arises from the hair and other matter when you remove it from the hide, before you put the hide in the tan-pit? Yes.

61. That is not now carried on in your yard? No.

62. I suppose, then, it would not interfere with your business to require the liming business to be carried on out of town, while the other portion was carried on in the city? It would interfere with the business, because it would be an extra expense, as a man carrying on business has a difficulty in looking after two establishments, and this requires a great deal of attention.

63. Then has this liming process been carried on out of the city in connection with your business? Yes, since I have left the business; and the reason of it is, that the man who took my yard had also a small yard out of town, the lease of which had not expired, and he has therefore used both yards.

64. *By the Chairman:* Will you state the date when he took your yard? I think he has been there three or four years.

65. Have you not lately had a lot of hides in a fresh state taken into your yard? The hides come every day in a fresh state into the yard, but they are sent out to this other yard, or are salted in the yard.

66. *By Mr. Lucas:* The hides salted are for exportation? Yes.

67. Are you aware of any tan-yards in the city where the liming portion of the business is done? I am not in the habit of visiting the yards, and do not know how the process is carried on in any of them with the exception of Mr. William Pawley's.

68. How is the process conducted there? Both operations are conducted together.

69. *By Mr. Broughton:* Does the refuse liquor from your tannery escape over the surface of your yard to the street drainage? Out of the yard to the street drainage.

70. Through the yard and then on to the surface drainage, immediately along the street? Yes, and then into the main sewer.

71. Where does it enter the main sewer? I think at the corner of Phillip and Bent streets.

72. What distance is it from your establishment to where the stream enters the main sewer? I should think perhaps two hundred feet.

73. What is the length of its course over your yard? The depth of my tannery is about a hundred feet; so that the water would pass over about eighty feet.

74. Then, altogether, the refuse from the tannery goes over the surface for a distance of from 280 to 300 feet? Yes.

75. There is no immediate connection with the sewers from your tannery? Not nearer than Bent-street.

76. Do you not think that this refuse water lying on the surface of the soil would be injurious to health, or offensive? I do not know, I never had any complaint about it; some people might complain about it, but I do not think I look very unhealthy, and I am there every day.

77. I understand you that you do not carry on the business yourself, but let the premises to some other person who does? It has been let before, and is let now; altogether it has been let to one person or other about ten years.

78. You have been living on the premises although you do not carry on the business? Yes.

79. Has your establishment ever been the subject of inquiry in the Law Courts as a nuisance? No.

80. Neither during the time you carried on business nor since? No.

81. Is the business of salting hides carried on at that establishment? Yes.

82. Is that business less or more offensive than tanning? I should myself think if there is any offence at all it would be more likely to arise from the salting than from tanning.

83. Do you think any unpleasant smell arises from the process of salting? Not after salting.

84. When you commence the process? That depends upon the state of the hide when it comes in.

- Mr ^v Watt. 85. *By Mr. Parkes*: Have you read the Act 13 Victoria No. 42? No.
86. You are not aware whether the salting of hides is included in the list of businesses prohibited within the city? No.
- 17 April, 1860. 87. Have you heard that it has not been included, and that it could be carried on to any extent? I cannot say I have heard any thing of it.
88. *By Mr. Lucas*: You spoke of the salting of hides as being a greater nuisance than the process of tanning—I presume you mean the process of tanning itself, not that of preparing the hides? I think the only nuisance is at the time the hide comes in, whether it is salted or tanned.
89. I believe if the hide is at all gone you cannot save it by salting? You may save it by plenty of salt, but it is very seldom; they are generally put in to work.
90. *By Mr. Pemell*: Are not most of the hides sent to England salted on the wharfs? No; the hide is cured before it goes to the wharf.
91. *By Mr. Parkes*: At many of the butchers' shops they are salted, are they not? Yes. When the hide is taken on board ship it is generally opened out in order that it may be packed more closely, and salt is then thrown over it.
92. *By Mr. Broughton*: Do you admit that offensive odours do arise from tanneries? It would depend entirely upon peoples' feeling; I do not think so myself.
93. *By the Chairman*: It would depend upon the nicety of the olfactory nerves? Yes.
94. *By Mr. Broughton*: Do you admit that unpleasant smells arise from a tannery? Not to me.
95. And if they do arise, do you consider them injurious to health? I do not consider them so.
96. Do you admit the first question? I say they are not offensive to me, they might be to you.
97. *By Mr. Parkes*: Are there not many kinds of business carried on in Sydney which are attended by unpleasant smells,—is not a druggist's shop, for instance, a very unpleasant place? Yes; I should think so; I should think it a far greater nuisance than my own yard.
98. Is not a butcher's shop an offensive place? Yes, very frequently.
99. Is not frequently the smell from a common butcher's shop so strong as to be really painful, and to make one glad to get away from it, where cleanly habits are not observed on the part of the butcher? I have often felt it.
100. Is it not the case that an ordinary provision store, if the proprietor is not cleanly in his arrangements, is frequently very offensive? Yes; and I one day went into the stores in the Custom House and was glad to get out.
101. With regard to the tanneries—suppose the tanneries were kept in a cleanly state, in such a state as the law, if it were put in force, would compel the proprietors to keep them, would they then be offensive? I think there would be no offensive smell if they were properly kept clean; there would be nothing to injure the finest feeling.
102. What I want to arrive at is, whether the smell does not arise from the want of due care in keeping the place clean? There is a great deal in that.
103. Whether it arises in the necessary process or from neglect in allowing filth to accumulate? There is a good deal in the neglect of keeping the yard clean.
104. You are aware that for any nuisance a person can be indicted by the common law of England? Yes; and I thought the law was in my favor, never having been called forward to answer any complaint of that kind since I have been there.
105. What age were you when you arrived in the Colony? Eighteen.
106. Your experience in the Mother Country then was very limited? I knew as much of the yard then as I do now.
107. What part are you from? The North of Ireland—from Coleraine, a large town as large as this.
108. What was the number of inhabitants? I do not remember; but it was as large or larger than Sydney is now.
109. Was your yard in the centre of the town? Yes.
110. Were there others in the centre of the town? There were three yards. I may say I was born in the centre yard of them, and there were eight or nine in the town.
111. Will your recollection serve to tell you whether the persons employed in these tanneries were healthy persons? I never heard any complaint from persons brought up in a tan-yard.
112. Have you learned, from reading or conversation, anything respecting tanneries in the large cities of Europe—in London or Paris? Yes.
113. You are aware that Paris is a city remarkable for its cleanliness—that a great deal has been done of late years for promoting its sanitary condition? Yes.
114. Are you aware that there are still tanneries in the heart of Paris? Yes, I have heard so; and also in London; and I have read that, in Liverpool, during the cholera, not a single tanner died, nor any person in the neighborhood of the tanneries.
115. Have you heard, in the course of your long life, of any instance of tanneries being forcibly removed from any city? I never heard of one.
116. You have heard of many other nuisances having been removed? Yes.
117. Is the business of a currier in any respect offensive? I should think the business of a currier is just as inoffensive as this room.
118. Is it more offensive than the business of a saddler or shoemaker? No.
119. Do you not, as a man of the world, think, that if the business of a currier has been included in this Act for removing nuisances, that business being as inoffensive as any, and much more inoffensive than that of a baker—do you not think the including this business of a currier shews that those who included it either knew nothing about what they were doing, or else that they acted from some very improper motive? I could only imagine from the first that it was from a malicious motive.

120. According to your notion of the law of England, if any Act of this kind stepped in and interfered with the proper operations of persons engaged in the trade of a currier, without establishing the slightest ground of nuisance, or injury to the public health, do you not think it would be a gross spoliation of property? Yes. Mr. H. Watt,
17 April, 1860.
121. Would it not, unless some injury or nuisance to the public could be established, be contrary to the spirit of the law? It certainly would. No nuisance can arise from carrying on the business of a currier.
122. *By the Chairman:* You make a wide difference between the business of a currier and that of a tanner? I certainly do, because when the hide comes out of the pit it is so perfectly cured that there can be no nuisance from it.
123. When you first receive hides into your yard you admit that some give off offensive smells? Yes; some of them may.
124. It is from those hides the offensive smells of the tan-yard arise? Yes, if any, as I said before.
125. Some of your hides are used for the purpose of being salted? Yes.
126. From the heaps of hides you keep for that purpose offensive smells arise? I do not keep them.
127. During the process of salting offensive smells arise? When hides come into the yard the tanner looks at them to see their state; he does not allow them to remain any time—it would be against his interest.
128. *By Mr. Broughton:* In your native town of Coleraine, where there are so many tanneries, is there an abundant supply of water? There is a river called the Bann, which runs through the centre of the town.
129. Then it is supplied with plenty of water, and the river runs through the centre of the town? Yes.
130. Do you know any instance in the town of Coleraine where the refuse matter is allowed to escape over the surface of the soil? The offensive matter is carried away in carts.
131. I mean the liquid? The liquid is carried away in carts from the yards.
132. All the offensive matter? Yes; sometimes it lies in the yard for a week or a fortnight.
133. Was the refuse liquor allowed to escape through the yard and under the water channels of the street? No, I do not know of any that was in that state; still, the yard was in the centre of the town; I suppose there were a thousand houses round the yard.

Mr. William Pawley called in and examined:—

134. *By the Chairman:* What are you? A tanner and currier.
135. Do you carry on business within the precincts of the city? Yes, just inside the boundary at Bourke-street, Surrey Hills. Mr. W.
Pawley.
17 April, 1860.
136. Have you petitioned the Assembly against enforcing an Act passed in 1849 for the removal of the business of tanner and currier out of the precincts of the city? Yes.
137. How long have you carried on business in your present premises? Between seven and eight and twenty years.
138. Are you in the immediate neighborhood of human habitations? Yes. The place was very thinly populated when we moved there. I do not think there was a house within half a mile.
139. At the present time are there many houses there? Not many.
140. Can you give us some idea of the number in your immediate neighborhood? I do not think there is one within sixty or seventy yards of our work.
141. Within an area of say five hundred yards how many do you suppose there are? There might be forty or fifty; but on two sides, the east and south, I do not think there would be above three or four within that distance.
142. In what state do you receive your hides? When we get them from the butcher we get them fresh, but we tan a great many salted ones.
143. Do you receive any hides from any other persons besides butchers? Yes, from people up the country; and sometimes we buy at auction.
144. In what state are the hides generally when you get them? They must be pretty good or we would not buy them, they would not be fit for tanning.
145. For what time must the unsalted hides you receive be off the animal before they come into your hands and are put into the pit? Sometimes not more than three or four hours, sometimes they remain till the next morning, that may be twelve hours, and if the beasts are killed on Saturday evening the hides do not come in till Monday.
146. Do any of the hides arrive at your yard with any offensive smell about them? No.
147. You do not recognise any offensive smell about those you receive, whether salted or otherwise? Sometimes we may get one or two that may smell a little.
148. *By Mr. Parkes:* They do not smell like roses? No, but good salted hides smell sweet enough.
149. *By the Chairman:* How long do the hides you receive remain before they are put into lime? They are put in directly they are rinsed in water.
150. How long do they remain in the first water? Not long.
151. Do they sometimes remain all night? Sometimes they do if they are taken in in the evening. They are then put into the lime, and remain there until they are sufficiently limed to take the hair off.
152. Does no smell arise previous to putting the hide into the lime? No, none, unless it is when they are first soaked; if they are allowed to remain any time in the water that will smell a little.

Mr. W.
Pawley.

17 April, 1860.

153. Perhaps you do not recognise any smell in any part of the tanning process? The first water, if allowed to remain, has not a very pleasant smell, but I am used to it.
154. Have any of your neighbors complained at all? Never.
155. *By Mr. Parkes*: Did not your neighbors sign a petition to the House the other day, stating that they did not consider your tannery a nuisance? Yes.
156. *By the Chairman*: Where does the refuse water from the process of your manufacture empty itself? Into a large hole, where the old bark is thrown, it runs into that.
157. Does it run on the surface? No; it runs into a large hole, perhaps a quarter of an acre in extent, where the old bark is thrown, and it goes into that and dries up directly.
158. Does anything besides this refuse water go into that hole, any lime water? Yes.
159. You think that lime water might correct the offensive smell of the first water in which you soak your hides? It might do so.
160. You say the water soaks through the ground? Yes; through the old tan bark.
161. You have no sewerage there? No; but if there comes a heavy rain, our yard is all filled, and everything is swept away.
162. Where then would the drift go? It would go into the street.
163. You distinctly say that none of your neighbors have ever complained of you, and that you do not recognise any offensive smell in the tanyard? Yes.
164. *By Mr. Parkes*: You live in the tanyard do you not? Yes.
165. How long have you lived there? For about forty-five years.
166. Are you a-sickly man? No; I never had a day's sickness in my life.
167. You never had a doctor? Never one.
168. Are your work-people sickly? No; and I have brought up a family in the tannery.
169. With regard to the Act, 13 Victoria, No. 42, are you aware how that Act originated? Yes.
170. There was a Committee of Inquiry in 1848 or 1849, as to the propriety of removing certain nuisances from Sydney? Yes.
171. Were you examined before that Committee? I was not.
172. Have you ever looked over the proceedings of that Committee? Yes.
173. Have you noticed whether there was anything given in evidence as to tanneries being nuisances? No; there never was anything of the kind stated.
174. Can you state from your recollection whether there is anything in the evidence against tanneries? Not a syllable.
175. The Act, which was recommended by the Report of that Committee, does include tanning among the businesses to be removed after ten years? Yes.
176. Have you ever heard how the words were introduced so as to bring you within the meaning of the Act? No.
177. Have you never heard that they were introduced out of personal ill-feeling for a particular person engaged in the trade? Yes; I do recollect something about that.
178. That they were suggested after the inquiry was closed, and the report was ready for adoption; that they were suggested at the last moment, have you ever heard that? Yes.
179. Have you reason to think that was the case? Yes, I think it was through Hall and Alderson allowing their filth and dirty water to run into the street—in fact, I know it was.
180. A member of the Committee living near? Yes, he told me so himself.
181. That is the member of the Committee told you so? Yes.
182. Have you any knowledge of the regulations of other cities in his respect, either in the Colonies or in England? Only from what I have heard.
183. I believe you are a native of the Colony? Yes.
184. Have you ever heard that tanneries were excluded from other towns of the Colony or of England? No.
185. With regard to the business of currier, is that business in any sense offensive? In none.
186. Is it more offensive than that of a saddler, shoemaker, or any other whatever? I think you might as well object to a shoemaker's shop as to a currier.
187. With regard to the tanning business—if a tannery is kept clean, is it more offensive than many other businesses—a butcher's, for instance? No.
188. If a person carrying on the tanning, the butchering, or provision business, be so filthy as to create a nuisance, cannot he be indicted at common law—have you not heard that that is the state of the law? Yes.
189. Does not this very Act make provision for any person who may feel aggrieved, without banishing such kinds of business from the city? Yes; if I were any annoyance to my neighbor he could indict me.
190. Have you ever been indicted? Yes, when I carried on my business in Sydney.
191. You mean when you conducted it more in the centre of the city? Yes.
192. Who lodged the information against you? Mr. Chambers.
193. Was he a near neighbor? Yes, my next neighbor.
194. What was the result? He could not prove it a nuisance; other neighbors came forward to state that they did not feel it to be an annoyance, and so the case was dismissed.
195. With regard to this process of salting hides—is it not the fact that one large tanning establishment which has removed its tanning operations outside the city still carries on within the city, at the town establishment, the salting of hides? Yes.
196. Have you read the Act 13 Victoria, No. 42? Yes.
197. That Act does not provide for salting hides? No.
198. Is not the salting of hides, which is carried on at various places—at some butchers' shops and at merchants' stores—more offensive than the business of tanning, and more calculated to produce an ill effect upon the health? I think a greater nuisance arises from the salting of hides than from any part of the business of tanning.

199. Would you think it equitable to be forced to remove your establishment from Sydney, if a gas manufactory were to be allowed to remain? No.

200. Do you think the various smells that proceed from a drug shop are less offensive or injurious to health? No. I would prefer the smell of a tannery.

201. Do you think you would have as good health as you enjoy at present if you lived in a drug store? I am sure I would not.

202. *By Mr. Lucas:* I believe the portion of the business for which you were indicted by Mr. Chambers was the liming process? Yes.

203. And then you removed the liming portion of your business out of Sydney? Yes, long before the boundaries of the city were defined.

204. After you removed that portion out of the city there was no further complaint? No.

205. You have spoken of rinsing the hide in water—is not that for the purpose of removing the blood and filth from the hide? Getting the blood from it.

206. And other matter that might be on it? Nothing but the blood.

207. You have spoken of a member of the Committee of the late Legislative Council telling you that he had introduced the words "tanners and curriers" into the Bill in consequence of filth from Hall and Alderson's yard finding its way into the street? Yes.

208. I believe that place was kept by you for many years? Yes.

209. You were in occupation of that place when Mr. Chambers indicted you? Yes.

210. And you then removed to your present place? Yes.

211. You believe if there be any nuisance connected with tanning and currying it is that portion of the business which relates to preparing the hides for the tan liquor? Yes, if any.

212. But you removed your lime-pits out of the centre of the city? Yes.

213. *By the Chairman:* Are you aware that there are other tanners who conduct that portion of their business out of Sydney now? Yes.

214. Influenced by the same reasons? It may be so.

215. *By Mr. Lucas:* Do you know how many tanneries there are in Sydney now? Yes, three, I believe.

216. Are there any of them carrying on the liming process now in the city? Yes.

217. Can you name them? Mr. Wilshire and myself.

218. You are just on the boundary of the city? Yes.

219. Would it be any great loss to persons in your business if they were required to carry on the liming process in the country? I think it would be an inconvenience to them.

220. How do you account for persons who have establishments in Sydney doing that portion of their business in the country now? I think it may be for want of room; it requires a great deal of room to do that.

221. *By Mr. Broughton:* How long have you been carrying on the business of a tanner and currier in the city? Since 1822.

222. Where did you commence business? In Castlereagh-street.

223. Was there more than one legal proceeding on the part of Mr. Chambers against you when he was your next neighbor? Only one; the case was tried twice.

224. Was it the subject of inquiry at the Police Office? Yes, only once; when it failed he said he would try it at the Supreme Court.

225. Was not the decision come to, that as the nuisance had existed there before Mr. Chambers went there he had no remedy—that in fact he had gone to the nuisance and not the nuisance to him? I will not be certain about that.

226. Was there any decision at all come to in the Court as to whether it was a nuisance or not? I cannot recollect; I know I got a verdict.

227. Because he went to the nuisance? He came there I know.

228. You were in possession of the property long before he came to live there? Yes, some years before.

229. Does the so-called refuse liquid from Hall and Alderson's tannery run into the street and along the surface drains? Yes, it did.

230. Does it now? I do not think they are tanning there now. I have seen it from Castlereagh-street down as far as Market-street, and I have often wondered that the authorities allowed it.

231. Do you think the smell from that would be offensive? Yes.

232. Is it injurious to health? I do not think it is; but it is not a pleasant smell.

233. You consider this might be prevented if there were proper drainage and sufficient water to cleanse the premises? Yes, if the premises were well cleansed I do not think there would be any nuisance.

234. Do you think it possible to keep the premises so cleansed that they would not produce offensive smells, nor be injurious to health? I do.

235. *By Mr. Parkes:* The nuisance described, caused by the running of this refuse water along the surface of the ground, could be put down by the ordinary law against nuisances as in any other case? Yes, the inspector could go on the premises when he thought proper.

236. *By the Chairman:* The atmosphere is a little contaminated, I suppose, by the smells arising from the tanyard? Not from the tanyard.

237. From the decomposed hides—the hides previous to their being put into the tan water? Very little from them.

238. From what does the smell of the tanyards arise? From the rinsing of the hides. If the soak is allowed to remain till it gets old.

239. It is owing to the bloody fluid remaining in the first water? Yes.

240. From whatever source, the tanyards are not supposed to be very sweet smelling? To some.

241. Although you yourself do not feel any offensive smell from them? Nor do I think you would in a tanyard.

Mr. W.
Eawley.

17 April, 1860.

- Mr. W. Pawley.
- 17 April, 1860.
242. If others think it offensive would you think it right that you should be allowed to contaminate the atmosphere? No.
243. That you should interfere with the natural rights of your neighbor? Certainly not.
244. *By Mr. Parkes*: But do you admit that you do contaminate the atmosphere? No, I do not.
245. *By Mr. Broughton*: What is the distance from Hall and Alderson's to Market-street—four or five hundred yards? I should think it is.
246. And you have seen the soak flowing on the surface drain four or five hundred yards from Hall and Alderson's tannery? Yes.
247. You believe that it was owing to that circumstance that the member of the Committee of whom you spoke made the recommendation to exclude tanners and curriers? Yes; he told me so himself more than once.
248. Would it pay any tanner to carry on the business of tanning separately, that is, to have two separate establishments, one for tanning and the other for currying? Yes, I think so; for curriers want a great deal of room—a great deal of shed room.*
249. You think it would pay to have the establishments separate? Yes.†
250. *By Mr. Lucas*: Are you particularly alluding to the tanning or to the liming process? To the liming.
251. Does not the offensive smell arise from the hair and ears when taken off? No, I think not; for that is saved by the lime. When that is taken off it is put out on the grass and dried.
252. Is there any grass about the tanneries in Sydney? I am speaking of my own place.
253. In a close and thickly populated place, do you not think an offensive smell arises from this? No, I do not think so, for the lime would preserve it.
254. *By Mr. Parkes*: You are a family man I believe? Yes.
255. Your family is very large is it not,—how many children have you? I think nearly thirty children and grandchildren in my own domestic establishment.
256. Your domestic establishment is a large one? Yes.
257. As a family man, and of great experience of that kind, is it not within your knowledge that in ordinary cases in a family, filth may be accumulated of a much worse description than any that could arise in a tannery, by leaving mixed vegetable and animal matter to ferment and become in a state of putrefaction? Yes.
258. So that from a private house, an infectious poison might arise, unless habits of cleanliness were enforced, of a much worse character than could arise from a tannery? Yes.
259. *By the Chairman*: Do you believe that with every possible care you could prevent offensive smells being given out by some of the hides you receive to manufacture into leather? If you take proper care there will be no smell from them.
260. Do not some of the hides you receive come into the yard having an offensive smell? There may be some, but they are put into work directly.
261. Some of them arrive in an offensive state? Some of those we receive from the country might.
262. No possible care could prevent those giving out an offensive smell? If care were taken the smell could soon be stopped.
263. *By Mr. Broughton*: Have you any other means of carrying off the liquid refuse from the tannery other than soakage and evaporation? No; but then the tan liquor is never thrown away, only what you call the soak.

Mr. Richard Cavanaugh called in and examined:—

- Mr. R. Cavanaugh.
- 17 April, 1860.
264. *By the Chairman*: What are you? A tanner and currier.
265. Where do you carry on your business? In Windsor.
266. In what part of the town? In Macquarie-street.
267. Are you surrounded by neighbors? Yes.
268. Who live close to you? Yes.
269. Are there many houses near you? Yes, with only a fence between on one side; and there is a little distance between on the other side, and the street in front.
270. How long have you carried on business there? Twenty years in Windsor.
271. *By Mr. Parkes*: Have you petitioned the Legislative Assembly? Yes.
272. Is that petition signed by your neighbors as well as by yourself? Yes.
273. Is that your petition? (*Handing a petition to the witness.*) Yes.
274. That petition was signed by seventy-two persons, I believe? Yes.
275. Are those all persons residing near your tanyard? Not exactly; some are a little distance off.
276. Does it include all those who do reside near it? Yes, except where there were only female residents.
277. Does it include all the male residents near your tanyard? Yes, with no exception. It is signed by seventy-two persons, including all in the immediate neighborhood.
278. The petition states that the tanyard, in petitioners' opinion, is not a public nuisance, and that they have felt no inconvenience arising from it? Yes.
279. *By the Chairman*: In what state do you receive hides? In various states; sometimes fresh from the butcher, sometimes salted from the country.

280.

* Corrected by witness upon revision thus:—It would not pay to separate tanning and currying.

† Corrected by witness upon revision thus:—No.

280. How long elapses from the time they are taken from the carcase until you get them? I cannot tell.
281. Generally speaking? Those that have been salted may have been taken off for months.
282. I refer to fresh hides? Sometimes one day, sometimes two, and sometimes more.
283. In what state are the hides you receive, which have been forty-eight hours off the carcase? It depends upon the weather, whether it is winter or summer.
284. Do any of the hides arrive in a partially putrid state? Sometimes when they come in the hair will slip off.
285. When that arises, does it not take place from the skin being partially decomposed? No, the hair will come off before the hide decomposes; all hides that the hair will come off are not partially decomposed, they have lain in pickle, and then the hair will come off, and the hide be perfectly sound.
286. But the other portion of the skin, that portion in which the hair is fixed, the cuticle, is not that decomposed? When it is decomposed more or less it is called damaged.
287. Some hides arrive in such a state that the hair will come off? Yes.
288. From such hides, do you not perceive any offensive smell? From some there may be an offensive smell, that is, when they are folded together, there will be a smell from the heat of the hide; that is, any hide thrown in a heap without salt will heat, and that hide must smell when opened; but no one would get the smell of it except he was over it, not a passer by.
289. Are the hides washed before you receive them, or do they arrive with the blood on them? We wash them, and put them into the pit directly.
290. What proportion do you receive in this partially decomposed state? Sometimes more, sometimes less; it depends upon the quantity we can get from the butchers; sometimes we get a greater quantity from the butchers than we do at other times.
291. What do you do with the hides you receive in that state? Put them in soak.
292. Into fresh water first of all? Yes.
293. What becomes of that water? We throw it away.
294. Into a what? We have a place in the ground to receive it, covered over with bark.
295. And then it soaks into the ground? Yes.
296. It evaporates and soaks? We throw the bark over the yard, and the water runs into a hole.
297. Does any offensive smell arise from that place? No, I do not observe any.
298. How long do you keep hides in that first water? Sometimes two or three days; if it is a hard hide it requires to soak longer.
299. From these hard hides there is no smell? No.
300. It is from fresh hides that the smell arises? Fresh hides cannot smell, it is hides that are kept until they heat, and then lime soon stops all that may be any way offensive.
301. What is the next step? We put the hides into lime.
302. After the hides have been in lime do they smell? No, it prevents the further progress of decomposition.
303. Then any offensive smell there may be arises from the first operation? Yes; if you allow the soak to be too long it will become offensive; but if you remove it at once it is not offensive.
304. Then you have no smell from the curing portion of your business? There would be no smell in the currying.
305. *By Mr. Lucas:* The only offensive smell in your business is from preparing the hides for the tanpit? If once we get the hide into the lime then all offensive smell is stopped, and if you do not allow the water in which the hide is soaked to stand too long that is not offensive.
306. *By Mr. Parkes:* In other words, if a tannery is kept clean it will not be offensive? No.
307. If you allow the water to stand it will smell whether hides are in it or not? Yes.
308. *By Mr. Lucas:* You say you have a hole into which you throw the water, and that it is covered over with bark; what bark is it covered with? The tan bark—the waste bark.
309. You say you yourself find no offensive smell from it? I find none.
310. Have you ever heard your neighbors complain of an offensive smell from your tannery? There is a place to which the water flows from the yard; it is a hole in the hollow of a street, and the water there becomes offensive, for it lies there some time; and of course any water, even soapsuds, if you allow it to stand, will smell. (*Vide Appendix B.*)
311. *By Mr. Parkes:* The Act 13 Victoria, No. 42, does not affect you in any way? Not at present.
312. You are aware of that? Yes.
313. How is it, then, that you petition the Legislature in the matter? I thought probably if it became law our town might ultimately become incorporated, and then probably it would affect me. I, therefore, thought prevention was better than cure.
314. Do you enjoy good health yourself? Yes. I was brought up as a farmer in the early part of my life, and during the last twenty years I have been following tanning pursuits.
315. Have you enjoyed better health of late years than formerly? Yes.
316. Have your men generally good health? I never had a man about me who complained of sickness from tanning pursuits; sometimes they get drunk.
317. The business of a currier is in no way offensive, is it? I think if one branch of the trade is more injurious to the health than the other it is currying.
318. How so? From using oil and lampblack. I would rather be among the tanning than the currying.
319. Is it offensive to strangers? No.

Mr. R.
Cavanaugh.
17 April, 1860.

Mr. R.
Cavanaugh.
17 April, 1860.

320. You mean the process is more injurious to the workpeople? Yes.
321. *By Mr. Lucas*: How many residents are there in Windsor? Some hundreds.
322. I see in this petition the names of a number of people living in Richmond? Yes, it is a petition from the people of Windsor and Richmond; and there is tanning carried on in Richmond as well as in Windsor.
323. *By Mr. Broughton*: I suppose it was thought the Act might ultimately effect the tanners of Richmond as well as those of Windsor, and, therefore, signatures were obtained from both places? Yes.
324. *By Mr. Parkes*: You consider such an Act would be an unjust interference with your private business? Yes, for I have laid out my capital in a tannery.
325. *By the Chairman*: Would you consider it unjust if it were felt to be a nuisance to your neighbor? Without compensation I should, for my neighbors came to me, I did not go to them.
326. If you had gone to your neighbor would you think it unjust? I should think it a hardship to my neighbors for me to settle down and pursue any business annoying to them; but if my neighbor sees me pursuing a certain business, and chooses to come and settle down beside me, I do not think he has any right to complain. I do not think my business is either offensive or unhealthy.
327. *By Mr. Broughton*: You think that if it is deemed desirable or necessary that your business should be removed, you would be entitled to compensation? Yes.
328. *By the Chairman*: Inasmuch as your neighbor has come to you? Yes; I see that the Government made provision for slaughter-houses, and I think tanners are at a far greater outlay in preparing places to carry on their business than butchers. A tannery cannot be commenced without considerable capital, but a butcher can settle down anywhere and put up a place suitable for slaughtering purposes at a very small expense. I know it would be ruinous to many families if this law were carried into effect.
329. You do not think you have any right to poison the atmosphere you breathe in common with your neighbors? I think if the atmosphere were poisoned, I should not enjoy such health as I do.
330. You do not look a very stout man? I have never been, but I have enjoyed much better health since I have been a tanner than I did when I was a farmer.

APPENDIX A.

If hides that come to a tanner having any smell were taken to a salting establishment, would there be any complaint, and would they be any less offensive or less injurious to health? My Petition was signed by one doctor and three chemists, who live immediately in the neighborhood of tanyards, who are pretty good judges of the business, if evidence is required in favor of tanning being healthy. The lime will stop or prevent any taint or bad smell, the tan will do the same; and none having ever been unhealthy in a tannery should be a good standing evidence, while none can be brought to the contrary. Medical men often send to me for tan water for various complaints, both external and internal.

Windsor, 28th April, 1860.

RICHARD CAVANOUGH.

APPENDIX B.

Question 340.—This place is a hole in the paddock at the bottom of the street in which I live, into which hole all the water from this part of the town runs and stands and stagnates, and sometimes passers-by think it comes from my yard, but there is no water runs into the street from my tannery.

Mr. Austin Ferrest Wilshire called in and examined:—

Mr. A. F.
Wilshire.
17 April, 1860.

331. *By the Chairman*: Do you carry on the business of a tanner and currier? Yes.
332. Within the city of Sydney? Yes, on Brickfield Hill, George-street.
333. Is your tannery surrounded by a large population? It is.
334. Have you petitioned the Legislature against the enforcement of an Act passed in the year 1849—"An Act to amend the Law relating to the licensing of Slaughter-houses within the City and Suburbs of Sydney, and for the prevention of other Nuisances within the same"? Yes.
335. How long have you carried on business in your present premises? It has been carried on by my father before us, and by my brother and myself, since 1805.
336. Long before there was any population in that neighborhood? Yes.
337. Then what population you have in that neighborhood have come to you? Nearly all; within my recollection there were very few houses there.
338. Do you carry on the business of tanning as well as of currying? Both.
339. In what state do you receive hides—I refer to them being offensive or otherwise? Sometimes they are offensive, if they are not properly cured.
340. I presume you take them to convert them into leather,—are any of the hides when they are received by you in a partially putrid state? Yes, partly so.
341. In such a state as that the hair would come out? Yes.
342. I suppose you are aware that the outer skin is called the epidermis or cuticle, to which the hair is attached,—do any of the hides arrive in such a state as that the hair may be easily removed from that outer skin? Yes.
343. When hides are in that state will they not give rise to an unpleasant smell? Undoubtedly.

344.

- 344. What do you do with those hides when you receive them? The first process is to put them into water to cleanse them.
- 345. To cleanse the blood from them? Yes, to cleanse them; for they are generally partially salted, and the salt requires to be extracted from the hides.
- 346. Partially salted hides you receive from the country are more offensive than those you receive from the butchers? Yes; those from the butchers we receive daily.
- 347. With regard to the first, or cleansing process—how long do the hides remain in the water? An hour or two perhaps.
- 348. What becomes of the water—is the water in which they have been cleansed, is it in a very turbid state? It is in a filthy, dirty state.
- 349. In a bloody, filthy state? Yes. The hides that come in fresh undergo a somewhat different process from those that come in the salt. The salted hides require to be reduced to the same state as the fresh to make them lissom.
- 350. What becomes of this dirty fluid? It is thrown away immediately.
- 351. How do you get rid of it? It passes into the drainage of that end of the city.
- 352. Have you a common sewer there? Not on the new system.
- 353. Does this water run under ground? Under Liverpool-street; I do not know how far it is covered over, but there is a natural watercourse midway between George and Pitt streets.
- 354. Is it in part an open drain? Part of the way I think it must be. It flows through our premises in a covered drain to Pitt-street, and I think it must empty itself at a distance of a hundred yards or more into an open watercourse.
- 355. Where does that watercourse empty itself? It is open as far as Goulburn-street; it there runs under a bridge through other premises under the market, and then into a drain that passes by the burial ground, and empties itself into Darling Harbor.
- 356. Along the side of this open drain are there any residences? They are chiefly the back premises of the houses in Pitt-street and George-street. There is a great space between those two streets.
- 357. Have any of your neighbors along the course of the drainage complained of your place as a nuisance? We were once indicted by Mr. Roger Murphy, but that was in consequence of a rather cantankerous neighbor who would not allow us to open this covered drain between our premises and Liverpool-street, and as it was stopped up the drainage overflowed. The magistrates at the time, when we stated we could not abate the nuisance unless the drain were opened, required this man to allow us to go upon his premises for that purpose, and the proceeding was quashed.
- 358. Do your neighbors complain? I have never heard of a complaint but that once, and that is some fifteen or twenty years ago.
- 359. Do you reside near the tanyard? Not now, I did formerly, from my youth up, until I was twenty-eight years old.
- 360. You were born there, were you not? Yes.
- 361. Are you aware to what distance the smells arising from your tanyard extend? No, I am not.
- 362. Do they at all to your knowledge? Not to my knowledge.
- 363. Do you not think if the atmosphere were laden with effluvium arising from your premises, it would extend to your neighbors? No doubt, and I think it very possible an unpleasant smell may at times be experienced by my neighbors.
- 364. You are not aware whether it is of such a character as to be considered a nuisance by them? I am not.
- 365. *By Mr. Parkes*: Do your tenants complain, those who live in the houses in front of your tannery? No.
- 366. *By the Chairman*: I presume you would not consider it an interference with your personal rights, supposing your neighbors regarded your business as a nuisance, that such nuisance should be abolished? I rather think I should.
- 367. Would you not rather think it an interference with the personal rights of your neighbors that they should be inconvenienced by offensive smells for your personal benefit? Certainly not, when they come to it.
- 368. Do you think you have a right to poison the atmosphere which others, in common with yourself, imbibe? I have no right to do it, and I do not think I do.
- 369. Supposing your neighbors find a smell arise from a tanyard, is not that *good prima facie* evidence that you do? I suppose it would be, but they never have that I am aware of.
- 370. Your establishment I presume is very extensive? It was at one time, but in consequence of this law, we have denuded it of everything almost. We have almost given it up in fact.
- 371. Would it interfere much with your private business if the first process of tanning were carried on outside the boundaries of the city, confining the business in Sydney to currying? It is quite a mistake to suppose that currying is any more a nuisance than the business of a shoemaker. There is nothing offensive used by curriers.
- 372. You are quite certain that premises where currying is carried on are not a nuisance? Yes.
- 373. But you are not certain that it is so in the case of tanning? The process is as simple as possible. There is no necessity to use the filth that is used in England.
- 374. But there is the bloody fluid which is thrown away, and the partial decomposition of the hides, which cause unpleasant smells? You might prevent the carriage of the hides, for they are a nuisance wherever they go.
- 375. You are aware that all nuisances must be sources of contamination to the atmosphere to some extent? Yes.
- 376. *By Mr. Parkes*: You are aware that an Act was passed in 1849, 13 Victoria, No. 42, providing

Mr. A. F. Wilshire.
17 April, 1860.

- Mr. A. F. Wilshire.
17 April, 1860.
- providing for the removal of certain nuisances after the expiration of ten years, and that that Act ought to have been put in force, according to the time proscribed, on the first of this year? Yes.
377. Have you ever had your attention directed to the manner in which that Act originated—to the proceedings of the Select Committee appointed to inquire into various nuisances, slaughter-houses, &c., in the city? Not particularly.
378. Are you aware that the Act originated in a recommendation by that Committee? Yes, I have seen the Act.
379. Are you aware personally, or have you heard that, in the course of that inquiry, no evidence was given affecting tanners and curriers? I have heard so, but I have never read the evidence.
380. Have you ever heard that the business of tanner and currier were introduced into the Report at the last by a member of that Committee from some personal feeling he had against some person engaged in the trade? Yes, I have always understood so.
381. You are aware of the fact that it was so introduced at the last moment? I believe it was.
382. Did you not petition the Legislative Council against the passing of the Act at the time, and was not that petition presented by Mr. Lowe, then Member for Sydney? Yes.
383. As far as your experience and means of information go, are you aware whether the business of a tanner is prohibited in any large city of Europe, or in any part of the world? Not that I am aware of.
384. Should you consider that the stepping in of the law to interfere with you as to the manner in which you should carry on your private business a most unjustifiable interference, unless good grounds could be shewn, such as that you were injuring the public health? I do.
385. And you assert positively that the business of a currier can in no way be injurious? It cannot.
386. Do you not think, as a man of the world, that the circumstance of this harmless business of currier being included in such an Act proves that those who drew it up knew nothing of the matter or had some improper motive,—might they not as well have included shoemakers, carpenters, or any other business? Certainly the business of shoemaker is more offensive.
387. Is not that one circumstance a reason why the Act should be reviewed—the circumstance that there is one harmless business included among the nuisances which are to be excluded from the city? I think it is one very good reason.
388. As a citizen of Sydney are you not aware that there are many businesses carried on in the city than those of tanner and currier,—for instance, if proper cleanliness were not observed in a butcher's shop would there not be the same accumulation of putrid animal matter as in a tanyard, without the counteracting influence of the tanning matter? No doubt.
389. What do you think of gas-works,—do you not think them as offensive as tanyards? Yes, and sugar-works, nothing I think can be more offensive than sugar-works; and I believe the slaughter-houses have come in for a great share of the blame which should have been laid to the sugar-works.
390. Is not a common provision store, if not kept clean, very offensive? No doubt.
391. *By Mr. Lucas:* From your evidence it appears that whatever is offensive in your business is before the liming process? Yes.
392. You consider that whatever is offensive is before the hides are put into the tan liquor? Certainly, there is nothing offensive after they are put into the tan liquor—there cannot be.
393. In answer to Mr. Parkes' question you said there was a personal ill feeling on the part of a member of the Committee—was it a feeling against the individual or against his manner of conducting the tanyard? I do not know.
394. Supposing tanners and curriers were compelled to carry on the first processes of preparing the hides out of town, would that be a great interference with their profits? No doubt.
395. *By Mr. Broughton:* Has your business been injured by the passing of the Act 13 Victoria, No. 42? It has been neglected, in preparation for abandoning it.
396. That must have been an injury to other persons? No doubt.
397. Do you carry on your business so largely now as you did before the passing of the Act? Nothing like it; instead of employing thirty or forty men, we now employ in the tannery only about four.
398. Are your premises extensive—what area do they cover? I do not know exactly—I suppose about three quarters of an acre; but the quantity of land occupied gives no idea of the extent of a tannery.
399. Are there any expensive buildings upon the land? Not very expensive.
400. Will you sustain any serious loss by having these tanneries removed from the city? No doubt; the buildings are quite suitable for that purpose and for no other, and the expense of laying down a tannery is very considerable.
401. *By Mr. Parkes:* Your loss in reality would be just in proportion to the expense of laying down a new tannery and constructing new pits? Yes; the actual loss, of course, and the loss of position. In town the market is at our doors—if we were driven out of town we lose that advantage.
402. *By the Chairman:* If this business were removed, probably the land would become more valuable for building purposes? As it is situated I do not think so, for it is at the back of the houses in Pitt and George streets.
403. *By Mr. Broughton:* You think, with an abundance of water, and underground drainage, the business of a tanner and currier may be carried on without proving offensive to any one? Yes; perhaps not to any one.

404. Generally? Not so offensive as to be considered a nuisance.
405. Do you consider the business of a tanner and currier injurious to health? Certainly not.
406. *By Mr. Parkes*: Did you enjoy good health during the time you resided on the premises? Yes; neither myself nor my brother have been ill.
407. Your brother lived on the premises till lately? Yes; until lately he lived close by.
408. His premises communicated with the tannery? Yes.
409. *By the Chairman*: Are you aware of any modern changes that have taken place in the sanitary arrangements of the cities of Europe? I occasionally read some of the reports.
410. Do you read the reports of the health officer of the City of London? I do not think I have read them all. I do not remember, if you allude to anything in connection with tanneries, having seen anything on that subject.
411. The reports referring to sewerage and offensive trades? I have glanced over them.
412. Are you aware that there is a tendency of late years to remove all trades at all connected with the decomposition of organic matter from towns? Yes, I am aware of that.
413. *By Mr. Parkes*: Are you aware whether any sanitary provisions have ever excluded tanneries from towns? I am not.
414. *By the Chairman*: Would you not include among those trades that of tanner, as tanners have something to do with the decomposition of organic matter if, as you state, organic matter becomes decomposed in your tanyard? I would not. I think most people have very erroneous ideas with reference to the nature of our business. If tanning were conducted properly it might be carried on under the windows of this room without offence to the Legislature.
415. Do you not think if cart loads of hides were received within the precincts of these premises we should have a very unpleasant smell? Not a bit more so than from a cart load of beef when left in a butcher's shop. A tanner will not receive hides in a putrid state; if they are ever offensive they are only partially so. The meat we eat may be sometimes partially decomposed, and so may hides, but not in such a state as to pollute the atmosphere, though sufficient to cause a smell. If there be any offensive smell it is after the process commences.
416. *By Mr. Lucas*: During the washing of the hide and clearing off the hair? Yes.
417. *By Mr. Parkes*: If you should be compelled to remove you would, in accordance with the terms of this petition, consider yourself entitled to compensation? Yes.

Mr. A. F.
Wilshire.
17 April, 1860.

FRIDAY, 20 APRIL, 1860.

Present:—

MR. BROUGHTON,
MR. PARKES,

MR. LUCAS,
MR. PEMELL.

RICHARD LEWIS JENKINS, ESQ., IN THE CHAIR.

Isaac Aaron, Esq., M.R.C.S.L., called in and examined:—

418. *By the Chairman*: You are a medical practitioner in Sydney? I am.
419. And held office for some years as Health Officer to Sydney? Yes, for two years.
420. How long have you practised your profession in Sydney? For fifteen or sixteen years.
421. During the latter period of which time you have been acting as Health Officer? For two years, up to this time last year; I have also been upwards of ten years district surgeon to the Dispensary.
422. This Committee is here for the purpose of making inquiries as to whether it is necessary to carry out, in its integrity, an Act passed in 1849, "To amend the Law relating to the licensing of Slaughter-houses within the City and Suburbs of Sydney, and for the prevention of other nuisances within the same." We are desirous of obtaining evidence from you whether the businesses of tanner and currier are offensive, so as to be a nuisance, or prejudicial to the health of the city? I understand that is the object of the inquiry.
423. Perhaps you will be good enough to favor the Committee with your opinion upon that subject? My opinion is, that they are prejudicial to health; not that I believe, or that any one would say, that they produce any specific disease, but that they are prejudicial to health by being offensive. That the emanations from these places produce in those not accustomed to them, disgust, nausea, sometimes vomiting, loss of appetite, headache, and so on, and thereby interfere with the general health of those who live in the neighborhood; and in addition to that these other results operate again by reducing the vitality—the tone of the system—of those subject to these causes, and render them less able to resist the effect of epidemics or contagious diseases when they occur; so that I have no hesitation in expressing my opinion, that they ought to be removed. I look upon the matter in this light, that there are sanitary disadvantages enough inseparable from the aggregation of a large number of people in towns and cities; it is, therefore, in my opinion, the duty of Government to take care that there are no unnecessary disadvantages added to those which are inseparable from those conditions. I consider that these trades are not necessary to be carried on in towns, and therefore, I say the people who are obliged to live in large towns and cities have a right to look to the Government to secure them from those nuisances, and to take care that they have—what they have a perfect right to have—as much pure air as possible. I wish distinctly to be understood that I do not attribute to these places the origin of any specific diseases

I. Aaron, Esq.,
M.R.C.S.L.
20 April, 1860.

I. Aaron, Esq.,
M.R.C.S.L.
20 April, 1860.

diseases in themselves, but I may add, that the debility or want of tone produced by them may render persons who have any weak organ more liable to have disease lighted up in it than otherwise they would be. The people in towns want as much oxygen as they can procure, and if anything interferes with a sufficient supply of it it must be injurious. That is my opinion as briefly as I can express it, and I think it expresses what I mean.

424. Have you been accustomed to visit these tanyards? Not accustomed; but I have been to them, and I know theoretically the process.

425. In passing these tanyards, have you noticed any particularly offensive effluvia? Always more or less. In passing the tanyard in Elizabeth-street, which I have occasion frequently to do, I have noticed that the effluvia is particularly offensive. From cursorily looking in, it appears to me to arise from a number of hides lying there—some in a semi-decomposed state; or, at all events, the fluid from them being allowed to remain is sure to produce an offensive smell.

426. Would it be your duty, as Health Officer, to inquire into the sanitary state of these places? Yes; and I reported upon the necessity of their being removed in conjunction with all other nuisances—slaughter-houses, and so on.

427. Are you sufficiently acquainted with the process of the manufacture of hides to be able to separate the business of tanner from that of currier? No, I cannot say that I am. I only know what the process is from cursory observation. I have never seen it carried out thoroughly.

428. As a pathologist of many years' experience, I would ask you whether the organic refuse matter, which is necessarily the result of the process of manufacture of these green hides into leather, is not the cause of the effluvia you have referred to, and is not a prolific source of disease according to the amount of this refuse matter accumulated? No doubt, if there is any accumulation of refuse animal matter in a state of decomposition, it must be injurious in its effects, particularly in such a climate as this; but I do not think the exhalations from animal matter so injurious as those from vegetable, or as when both are combined.

429. As a pathologist, you would consider the effluvia arising from the decay of either unwholesome—prejudicial to health? No doubt about it.

430. I presume it is in consequence of the decomposed fluid which comes from these places, as well as from the decomposed organic matter connected with this manufacture, that you form the opinion you have expressed of the unhealthiness of the tanneries? Decidedly.

431. We have it in evidence that all the offensive part of the effluvia arises from the first process—that of tanning—and that, after the hides have been steeped in the lime-pits, all effluvia ceases; in your opinion, supposing that to be the case, do you think it necessary that the business of a currier, as well as that of a tanner, should be removed? Taking the statement for granted I should say not, that is, if it be true, but I confess that I have no practical experience; but if it be true, that there is no decomposition after the hides pass into the hands of the currier, there is no necessity for the removal of that business. I am not, however, prepared to give evidence upon that subject.

432. We have it in evidence that all the decomposition takes place in the preparatory steps, before the hides go to the currier? *A priori* I should think that is likely to be the case.

433. You think the business of a tanner should not be tolerated in the city? I do, and I believe the two businesses are generally combined.

434. Supposing that the trades may be separated, might not the currier on that supposition remain in town, although the tanner should be obliged to remove? I am quite satisfied that the latter should be removed.

435. *By Mr. Broughton:* Supposing the wash from a tannery to flow over the surface of the ground for a distance of some sixty yards, into the surface drainage of the city, and to pass over that in the street for two or three hundred yards, would that be prejudicial to health? No doubt of it.

436. Prejudicial in any great degree? In the same degree as I have already stated. You could not separate the effluvia from this fluid, and wherever it went it would be likely to produce the results I mentioned before. The flowing over the streets ought, under any circumstances, to be prevented.

437. Is it particularly objectionable that it should flow on the surface? Yes.

438. If the business were carried on at all should not this wash, or soak as it is called, be taken away by underground drainage? The premises should be drained by sewers, of course. There is a tanyard in Philip-street which I have noticed repeatedly.

439. Did you ever notice this matter flowing from Elizabeth-street into Castlereagh-street? No; I do not know that I have observed that.

440. In the course of your practice, have you ever had to attend patients in the vicinity of these tanneries? I cannot call to mind that I have ever. I cannot call to mind any specific cases. My dispensary district extends down from Dawes' Point along the eastern side of George-street to Liverpool-street, and includes Messrs. Wilshire's tannery. I have had patients in that neighborhood; but I cannot call to mind that I can trace any direct connection between these cases and the tanyard.

441. Have you found sickness to exist in any greater degree in the neighborhood of these tanneries than in any other district? I could not undertake to say that positively unless we had an epidemic, then I should expect naturally to find a large number of cases in such neighborhoods.

442. *By the Chairman:* Such as cholera? Such as cholera, or any other epidemic—but more particularly cholera. The diseases, or rather the complaints likely to be induced by these effluvia, are not such as cause persons to apply to a medical man. The parties themselves in such cases generally take a little medicine which they think likely to relieve them, and the symptoms may be attributed by them to other causes.

443. Have you found persons engaged in the business of tanning or currying less healthy than other individuals? That I cannot say, for I do not know that I have ever had any of them under my care. I. Aaron, Esq.,
M.R.C.S.E.
444. *By Mr. Parkes:* Is not that some evidence that they are a healthy set of men that they never fall into your hands? I do not know that it is. Most medical men have a sort of specialty in their practice. One may have an immense number of cases of a particular kind, and others none at all of that kind. 20 April, 1860.
445. Have you seen this petition from the neighbors of a respectable tanner in Phillip-street (*a petition was handed to the witness*)? No.
446. That petition is signed by the whole of his neighbors, with one exception—Mr. Hunt, of the Post Office—it is signed by the whole of the residents in the immediate neighborhood of the tannery? I should place very little reliance upon that; you can get people to sign anything.
447. *By Mr. Lucas:* By drainage or other sanitary arrangement, do you think it possible to make tanneries unobjectionable? There must always in such a business be a large accumulation of refuse matter, solid and fluid, and unless there are very stringent regulations adopted for compelling the people to carry this away daily I do not think it desirable that they should remain.
448. Taking the climate into consideration, even supposing this matter were removed daily, do you think it possible to keep these places in such a state as not to injure the health of the city? It would require very close superintendence and an enormous supply of fresh water.
449. I understood you to say that you know nothing of the practical arrangements of a tannery? I have seen portions of the operations. I have gone into the yards repeatedly.
450. We have it in evidence that the whole of the offensive smell which arises from the tannery is caused by the first process, that of washing the filth and blood from the hides directly they arrive in the yard, and of allowing the water to remain until it becomes foetid? I do not think that argument will stand good, because in the very process of tanning odours arise from the tan-pit itself which are offensive.
451. Do you think the smell of the tan-bark itself is offensive? To many people it is, decidedly.
452. You think the whole business until the hides are thoroughly cured is offensive? Yes.
453. *By the Chairman:* Till the process of decomposition is stopped? Yes, decidedly so.
454. Have you read the petition which was handed to you just now? Yes.
455. Does it alter your opinion in any way? No, not in the least.
456. *By Mr. Parkes:* You have paid attention to sanitary questions for some years past, I believe? I have.
457. Not only with reference to their bearing in this Colony, but as to what is going on in England? Yes.
458. Is it within your knowledge that the manufactories of tanners and curriers have been excluded from any town in the Mother Country? It is not—I am quite aware that in the last Act passed—the Health of Towns Act—these trades are omitted from the prohibitory clauses.
459. You are aware that in Bermondsey nearly all the tanners of London are gathered together? Yes.
460. Do you not know as an historical fact that during the great plague, that part of London was more free from disease than any other? I know that it has been so stated, but there might have been other causes to which that circumstance should have been attributed. We have heard many such statements, but I think they all require to be taken *cum grano salis*.
461. Your knowledge of what has been going on in Europe for the last few years informs you that great efforts have been made in the city of Paris with reference to sanitary arrangements, and that they have there been brought almost to perfection? Except as to sewerage.
462. Do you know that the business of tanner is carried on almost in the heart of Paris? I am not aware.
463. You rest your objection to the business of a tanner chiefly on the ground of the offensive smell caused by it? I have stated that offensive smells of any kind are apt to produce various kinds of indisposition.
464. What part of the inhabitants of the city would these influences arising from the smell affect—only the residents in the immediate neighborhood of a tannery? Yes.
465. Taking the case of Sydney where there are three tanneries, the persons resident in the neighborhood of which have all testified against feeling any annoyance—how can it in that case affect the general public health? I mean within the range—it is the same with regard to the slaughter-houses.
466. The present case is very peculiar—quite different from that of the slaughter-houses—in Sydney the whole of the neighbors of the tanneries, almost without exception, have testified to the absence of any complaint, while in Windsor, the residents in the neighborhood of a tannery have voluntarily come forward and testified to the same thing. The evidence given before the Committee shews that the persons engaged in the business themselves enjoy uninterrupted good health? We have it also in evidence that the men engaged at Montfaucon, the enormous knackerie in the neighborhood of Paris, are upon the whole longer lived than many other classes of people; but that after all proves nothing with regard to the general question.
467. But you have not in evidence that persons resident in the neighborhood are satisfied with the business, and do not desire its removal, which we have here—persons who have no pecuniary interest, who live contiguous, and who testify that the removal of this business would be a wanton injury to the proprietors? It is removed from the city there.

I. Aaron, Esq.,
M.R.C.S.L.
20 April, 1860.

468. Here you have the testimony of very respectable persons, who could not be supposed to be influenced by improper motives? I do not suppose they are; but I can attribute their signing such a document to a want of knowledge. It is a difficult matter to judge how much of the indisposition they suffer is attributable to this cause. I contend that, as the inhabitants of a city have enough sanitary evils to contend with inseparable from their collecting together in large numbers, it is the duty of Government to protect them from those which may be avoided.

469. But it must be the duty of the Government to ascertain beyond doubt that it is necessary to remove places of business before they do remove them? Of course. It is my opinion that it is so still, in spite of the evidence of these petitioners.

470. And the evidence of the good health of the persons immediately concerned? Yes.

471. With regard to other businesses, such as that of a common fletcher's—a common butcher's shop,—is it not within your knowledge, as a practical man, that if these places are allowed to remain in a filthy state, that a mass of matter will be accumulated which will be a source of nuisance, and poison the atmosphere around? No doubt; but inspection is much more easy with regard to these places, and the removal of the offensive matter is much more easily managed.

472. With reference to that under the Act 13th Victoria, No. 42, the Act passed in 1849, which provides for the removal of slaughter-houses, tanneries, and currieries, within ten years, there is a clause that the magistrates can give notice that unless persons keep them in a state of cleanliness, the evil may be remedied by process of law? I am aware of that state of the law, and while Health Officer I endeavored to carry it out with regard to certain nuisances; but I found much trouble and annoyance in doing so, and so much indisposition on the part of the magistrates to convict, that I gave it up.

473. You are aware that any person creating a nuisance can be indicted at common law? Any private person may indict.

474. Any person complaining—filing an information—it is a principle of common law? People are generally unwilling to incur the trouble, expense, and annoyance necessary.

475. With regard to this Act, are you acquainted at all with its history? No.

476. Perhaps you will allow me to state briefly the history of the Act. A Committee was appointed, of which Mr. John Lamb, a nominee of the Crown, was chairman, to inquire into the desirableness of removing slaughter-houses from the city. Before this Committee as many as twenty-five witnesses were examined, but in the course of the examination not a single word was said with respect to the business of tanner or currier. When the report was brought up, I am given to understand—but there is no record as to whether it was so or not—that there was no word said about these businesses, but it was suggested by a member of the Committee that the words "tanner and currier" should be inserted, and these words were interpolated in the report without being based in any way whatever upon the evidence. Now, the evidence received before this Committee proves, and every Englishman well informed as to his native manufactures knows, that the business of a currier is as harmless as that of a shoemaker, or saddler, or any other handicraft whatever—that it can be in no way hurtful to any body unless it may be to the person who bends over the article in the process of manufacture —? That is to say the process of decomposition is stopped after the tanning, and nothing remains to be injurious?

477. Just so, like any other working in leather. Now, I ask you, does not the including this business of a currier in the Act operate unjustly,—is a business such as this to be ruthlessly interfered with, to be removed wherever the law thinks fit—is it not quite contrary to our notion of an Englishman's privilege—does it not shew a great deal of inconsiderateness or wantonness? I can only conceive that it has arisen from the simple fact that the businesses of tanner and currier are generally carried on in conjunction.

478. That will not the less shew a great want of care and consideration,—there ought to be a good case made out as to the necessity for the benefit of the public that a business should be removed before such removal should be insisted upon? If two businesses are carried on in conjunction it can scarcely be desirable for the proprietor of them that they should be separated. You were asking me about the Health of Towns Act; in that Act fellmongering is one of the prohibited trades.

479. Have you read Mr. Chadwick's sanitary report? No.

480. I believe you are a native of Birmingham? Yes.

481. Have you read his report upon the condition of Birmingham? No, I do not think I have, unless I met with it in a volume I found in the Town Hall, in which there were various reports of sanitary Committees, of one of which Mr. Chadwick was a member.

482. His inquiry was instituted about ten years ago; and the report contains a complete mass of information upon the subject, and the result of the most thorough inquiry. Do you remember Cheapside in Birmingham? Yes.

483. There is a large knackery near the Beardworth's Depository? Yes.

484. That is alluded to in the reports presented by Mr. Chadwick to the Government; and the report states (I am quoting from memory) that there is pretty good evidence that this establishment is not detrimental to health, but grounds the desirableness of its removal upon its extreme loathsomeness? Upon that I found the removal of the tannery.

485. But a knackery is much more offensive than a tannery.—I allude to that as shewing that it is doubtful whether it is detrimental to health. It is on account of its extreme offensiveness that he recommends its removal? Mr. Chadwick is not a medical man.

486. Do you remember the Pershore road or street—was that a populous place when you left Birmingham? Not very.

487. There are a number of catgut and similar establishments there, which I should think are very much of a similar nature to those of the tanner, without the counteracting influence of

of the tanning process, and they are distinctly stated in these reports not to be injurious to the public health? That is altogether contrary to what I have understood, or read, or believed before. I understood these to be among the worst businesses.

488. You find it stated in Mr. Chadwick's reports upon the town? I do not feel myself bound to believe every thing Mr. Chadwick may state, although he is a superior authority in your opinion.

489. You think the tanneries ought to be removed? I think so.

490. And persons who live in the immediate neighborhood ought to have no voice in the matter? Not if scientific opinion is against them.

491. With regard to the separation of the business of tanner and currier, are you aware that Messrs. Hall and Alderson have carried on those businesses separately for some years past? All I can say is, that I have frequently occasion to pass his yard, and my nose is very frequently offended by the odours from it.

492. He carries on only the business of a currier in connection with his original business of a tanner, but he is extensively engaged in the exportation of hides, and the smell you are offended by arises from the immense quantity of hides he receives for exportation? That is precisely what I said.

493. That business is in no way interfered with by the Act, so that if you banish tanneries to-morrow this business may still be carried on. At present many butchers and merchants, who are engaged in a miscellaneous trade, do carry on the process of salting hides, which I imagine you would think much more detrimental to health than even tanneries? Quite as bad, probably more so.

494. *By the Chairman:* You do not think it any argument because fellmongering is allowed in the City, that therefore tanning should be? Certainly not; two bads do not make one good.

495. The Act is defective in not including fellmongering? Yes; that is decidedly included in the Expurgatorial Act in England—the last Act passed there included fellmongering.

496. Do the smells arise from the decomposition of organic matter, whether animal or vegetable? Yes.

497. So that so far the air is tainted with the effluvia from animal matter, even in the tannery? Yes.

498. With regard to effluvia from the slaughter-houses, is it not the fact that persons engaged in those places have generally good health? I believe it is so stated; I doubt the fact, however, to a certain extent. I think the assertion must be taken with some limitation. Butchers pass a large portion of their life away from that immediate occupation; they have a great amount of exercise in the open air, and the business itself is carried on in open sheds; they are, therefore, not so likely to have their health injuriously affected as the people who live in the immediate neighborhood.

499. You consider that the counteracting causes of exercise and living are sufficient to prevent the injury which might otherwise arise to them? Yes. Yes; but there is another point which seems to have been overlooked in regard to this matter. When these men receive mechanical injuries, no doubt from their living a considerable portion of their time surrounded by this effluvia, those injuries are more serious with them than with other classes of persons.

500. Tracing the effect to a cause, I ask you, as a pathologist, is it not a difficult thing to trace the immediate effect to a cause in case of malaria? Yes.

501. Is it not the fact that armies in travelling, if they camp on low ground, will become subject to fever of all kinds, whereas, if they find a ridge only a few feet higher, the fever ceases? Yes, there are many cases of that kind on record; one of the most remarkable is that of Lieutenant Kennedy, who, having to take charge of a detachment of troops from either Calcutta or Bombay into the interior, found repeatedly, during the journey, a number of men attacked with cholera in one portion of his camp only, and that on the march no cases occurred.

502. So that it is difficult, in cases of malaria, to trace the effect to the cause, although we know from an accumulation of facts what is the cause? We may in the case of ague, which we know is the result of dwelling in a fenny, marshy, district, because the disease does not occur elsewhere.

503. So that, applying what I have said to the present case, although you cannot immediately trace disease to the offensive odours with which the atmosphere is charged, still you consider that they are often the cause of disease? Precisely; in accordance with the statement I have first made—that it does interfere with the bodily health of persons living in the neighborhood, by depriving them of a portion of the pure air they ought to have, renders the tone of the system low, and less able to resist attacks of disease from other causes.

504. *By Mr. Broughton:* Would not persons in the immediate vicinity of a tannery consider it an unkind and unneighborly act to be the cause, or in any way to contribute to the injury of their neighbor the tanner? I think that is very likely; a great amount of feeling of that kind very often exists, and that prevents people proceeding in cases of most palpable nuisance.

505. Do you think the existence of that feeling would account for neighbors signing a petition in favor of the continuance of tanneries in the city? Yes.

506. *By Mr. Parkes:* Is it not within your knowledge that it is a very difficult thing to find all your neighbors without exception well affected towards you? No doubt.

507. *By Mr. Broughton:* Is the town of Sydney as well supplied with water as Birmingham or Bermondsey, where tanneries are carried on in England? So far as I can judge, not.

508. Is it as well provided with underground drainage for the purpose of cleansing those tanneries as either of those places? Certainly not.

509. Do you consider it to be more objectionable to have tanneries in the City of Sydney than

I. Aaron, Esq.,
M.R.C.S. &c.
20 April, 1860.

than it would be in any of the towns referred to? Yes, and for another reason, namely, the greater rapidity with which decomposition goes on in this climate, especially in such a season as we have had lately, the heat having been intense and the atmosphere loaded with moisture.

510. *By Mr. Lucas*: I understand you to say, that what may not be a nuisance in London may in consequence of the climate be so in Sydney? Yes; you may go so far as to say that what may be comparatively harmless in England may, by change of climate, be exceedingly objectionable.

511. Is not the indictment of individuals at common law an expensive process? It is expensive, troublesome, and annoying; and I have frequently known difficulty in getting a conviction. The difficulty is felt to be so great that this remedy is only adopted at the very last extremity.

512. *By Mr. Parkes*: What do you think of the manufacture of gas in Sydney? I think it ought to be prohibited too.

513. *By Mr. Lucas*: Because the manufacture of gas is not prohibited, is that any reason why tanneries should not be? I can answer all Mr. Parkes' questions of that kind by referring to my first answer.

514. Although butchers appear to be remarkably healthy people, do you not think slaughter-houses an intolerable nuisance? Yes.

515. And although tanners may appear healthy, may not tanneries be nuisances as well as slaughter-houses? Yes. I will refer to the Registrar General's last report, for the first quarter of 1860, from which it appears that the mortality has been as high as 28 or 29 per thousand; comparing that with the corresponding quarter in towns in the Mother Country, excepting Glasgow, that is excessive—as much as eight or nine, and in some cases more, in excess of the towns in Great Britain.

516. *By Mr. Parkes*: You are pretty well acquainted with the city? Yes.

517. In perambulating the city in the prosecution of your professional duties, have you never noticed in the low parts of Woolloomooloo masses of decaying vegetable matter—pools covered with green slime—do you not think it would be much better for the authorities to look after the curing of such places as these than to banish tanneries from the city? I would not say that one thing ought to be done more than another. I think both ought to be done.

518. Do you not think places of that kind in the low parts of the city contribute much more to the ill-health of the inhabitants than tanneries? When I was Health Officer, I reported in a comprehensive form upon the necessity of surface drainage, but no attention was paid to my reports by the Municipal authorities; but I was told by one of the officers that I might as well save myself the trouble, for they were treated as so much waste paper.

519. *By the Chairman*: The sanitary arrangements of Sydney are defective? They are as bad as they well can be; in fact, there are scarcely any, and the sewerage is very limited in its operation, and for want of a proper supply of water to flush the sewers you cannot pass any of the gully holes without observing the offensive smell which arises from them.

Mr. William Maddison Alderson called in and examined:—

Mr. W. M.
Alderson.

20 April, 1860.

520. *By the Chairman*: You carry on the business of a tanner and currier in the City of Sydney? Not in the City of Sydney, but just outside.

521. How long have you carried on that business on your present premises? About six or seven years, I think.

522. Where is your tannery established? In Bourke-street, in the Redfern district, just opposite Baptist's garden.

523. Are you aware that an Act was passed in the year 1849 to prevent tanners and curriers from carrying on business in the City of Sydney? Yes, after the year 1860. That was the reason I removed, I thought I might as well remove at first as at last.

524. Previous to your removing some six years ago you carried on business within the city? Yes, in Elizabeth-street, where it had been carried on for many years before by Mr. Pawley.

525. How many years did you carry on business in the city? I think about seven.

526. During that time were there any complaints made as to the offensiveness or injuriousness of your business? The only complaint made was by Mr. Nichols. He used to feel an unpleasant smell I suppose to him, and sent the Inspector of Nuisances into the yard and two doctors, but they never could find anything that they could say was injurious to health.

527. What was the result of the inspector's visit to your establishment? That he could find nothing. He merely told me to keep the place clean, and he used to come afterwards to see that we did keep it clean, and remove all the offal, which we were very particular in doing.

528. In what state did you receive your hides? We received them fresh from the butchers.

529. Were they washed previous to their arrival in your establishment? No, that would have made them worse. As soon as the butcher had done killing he sent up the hides to the yard.

530. Do you receive hides from any other source? Yes; from all parts of the country, some dry, some salted.

531. Are any of the hides you receive in a state of offensiveness when they arrive in the yard? Sometimes they are—that is a thing we cannot help, but we very soon put a stop to that.

532. How soon do you put a stop to this offensive smell? As soon as ever the hides are put into work.

533. Within what time from the arrival of a load of hides? An hour or two, that is all.
534. You are constantly receiving hides? Yes.
535. Which keep up a constant smell? We receive our hides in the same way as they do for sale at auction, and as they do upon the wharfs, in the town. That it is impossible to remedy unless you debar these things from coming into the city at all to be turned into cash. We cannot guarantee all the people in the country to cure their hides well.
536. What is the color of the water after washing hides in it? The color of any other water, after you have washed any dirty thing in it.
537. Is it of a thick bloody nature? No.
538. Is there no blood on the hides? There is blood on the fresh hides.
539. Then the water in which they are washed becomes bloody? To a certain extent, but there is a large quantity of water and when the water becomes dirty it is thrown away.
540. Will you state what becomes of the water on its leaving your yard? A stream of water runs down, which drains all Surry Hills, which empties itself into Shea's Creek, Cook's River, and there is a drain from our yard which runs into that.
541. Are there any persons residing in your neighborhood? Yes.
542. Are there many houses within reach? Yes; Mr. Richardson, the late Member for Brisbane, lives next door to us.
543. Have any complaints been made by any of your neighbors? None, except by Mr. McGill, and it is only very lately that he has found any fault. The reason of his finding fault, so far as we can judge, was, because a child of his died lately of scarlatina, and he thought it was the smell of the yard which caused it. The doctor ordered him to remove at once, but I believe that was because there were too many living in one house, which was only a little skillion.
544. *By Mr. Parkes*: You believe that the ill-health arose in consequence of the insufficient accommodation of his own place? Yes. Mr. Parkes was in error in stating in the House that I was indicted. Mr. McGill was mistaken in the Act; he thought I had to remove two miles out of town, and sent me a letter to that effect. After that he found he was wrong, and that I was where the Act told me to be. Then he sent a letter to the Redfern Council, to see if they could interfere; they sent a letter to me stating the case, and I invited them to come over and inspect the place, to see that it was kept clean. They promised to come in a body, but they never came, as they saw it was a mere petty annoyance.
545. How far was the residence of this sick child from your yard? I suppose 150 or 200 yards from my yard.
546. Is that the only complaint you have had made? Yes, since I have been out there; and Mr. Nichols was the only one when I was in town. I many times asked Dr. Bennett, out of curiosity, as he was my next door neighbor, if it was a nuisance to him, and he said it was not.
547. Do you carry on any business within the city now in connection with hides? Yes; we receive hides in Sydney in the same way as they are received at the auction yards. There must be a place of reception for them, but we are very particular in sending them out as soon as possible, and all offal.
548. Do you manufacture? Yes; we both manufacture and ship hides.
549. Do you fellmonger within the precincts of Sydney? No; on the Waterloo Estate.
550. Do you salt hides? Yes.
551. Is there a very offensive smell connected with that process? There is sometimes—may be it is offensive to some people, not to others.
552. Have you had any complaints since you have salted hides? No.
553. *By Mr. Broughton*: Is there any connection with the underground drainage from the premises you occupy in Elizabeth-street? Yes.
554. How long has that been the case? Since the sewers were finished in Elizabeth-street. I connected it with the sewer at first, as soon as the sewer was done.
555. Previous to the connection, how did the wash escape from the pits? It used to run out into the street.
556. Over the surface drains? Yes; into Castlereagh-street.
557. Have you an abundant supply of water there? Yes; we always had the water laid on—not always, I used to lead it in from the pipes once.
558. Then you have the means of cleansing your yard with water? Yes; in fact, I have always been very particular about keeping every place clean.
559. What do you consider the most offensive part of your business? The soak where you put the hides first; it is that water which you throw away when it gets very dirty.
560. If that were allowed to flow over a tannery and on to the surface drainage of the street, would it not be likely to be injurious to health? It would be offensive; I do not think it would be right to let it flow over the surface and to be exposed, but I do not think it would be injurious to health.
561. Have you ever seen that offensive state of things? There are some dirty places in the city.
562. Connected with the tanneries? I do not know now, formerly they were.
563. Having removed your tannery and currying business out of the city, in obedience to the Act, you will not be further affected by it? No, I should say not.
564. You being outside the limits of the city the Act cannot interfere with you at all? No.
565. Do you consider it desirable that all tanneries should be removed out of the city? I think in justice to those who have gone out the others ought to go out; but still I maintain that it was not right legislation to put them out in the beginning.
566. But, as you and others have gone outside the city in obedience to the Act, should we not be doing an injustice to you if the others were not compelled to go out also? Yes; and when

Mr. W. M.
Alderson.

20 April, 1860.

Mr. W. M.
Alderson.
20 April, 1860.

when the other Ministers were in, I had an interview with Mr. Black, and stated to him that if they were allowed to remain I would come on the Government for compensation.

567. *By Mr. Lucas:* Suppose cattle are slaughtered on Saturday, when do you put the hides to work? If we get them up in the morning we put them to work at once, but if they come up too late for that we salt them.

568. But supposing, which is generally the case, that a great number of cattle are killed in the afternoon, when are the hides put in to work? We do not put them in to-work until Monday morning.

569. Do they always come up to you? Yes, and I keep the men at night, who put them into salt as soon as they come into the yard.

570. Do you believe that the business of a currier is offensive in any way? The business of a currier is not offensive in any way, it is the same as the business of a shoemaker or harness-maker.

571. Do you think there is any nuisance in the actual tanning after the process of liming—after the hides have passed through the first stage and are ready to go into the tan-pits? No, it is rather the other thing, it is disinfecting.

572. Are there not pieces of flesh, cuttings, and hair taken off after they come out of the lime-pits? No; after the hides have been put in water they are thrown over a beam, and all the loose flesh is cut off with a knife; after they do that the hide is put into lime. These fleshings, of course, if allowed to remain will stink the same as any other meat, but they are removed. I believe my men take away these fleshings every night to feed their pigs.

Henry Graham, Esq., M.R.C.S.L., called in and examined:—

H. Graham,
Esq.,
M.R.C.S.L.,
20 April, 1860.

573. *By the Chairman:* You are Health Officer for the city of Sydney? I am.

574. This Committee is appointed to inquire as to the offensiveness or otherwise of the business of tanner and currier—will you be kind enough to state whether in your official or in any other capacity you have been accustomed to visit the tanyards? I have been accustomed to visit the various tanyards in the city, and some short time back I expressed my views in writing to the Municipal Council with reference to the injurious effects they were calculated to have upon the health of the citizens. They are embodied in this report. (*The witness read the same. Vide Appendix A.*)

575. Have you had any reason since writing that to alter your opinion? On the contrary, from inquiries I have since made as to the condition in which the hides are received into the tanyards, I believe they are taken there in all stages of putrefaction—I have myself seen them taken in in that state.

576. The report you have just read refers chiefly to tanyards, does it not? Yes.

577. It has no reference whatever to curriers? I see nothing in the business of a currier calculated to be injurious to health—I think if you send curriers away you might also send saddlers, harnessmakers, and shoemakers, for there is no further decomposition after the hide leaves the hands of the tanner, and as far as the tanning goes it is only the first process that is injurious; but I know that there is a very offensive, nauseous smell arising from tanyards. I happened on one occasion when in the public service to be called upon to report on one which existed in a penal settlement to which I was attached as senior medical officer in Van Diemen's Land. I know that the smell from that at all times was anything but agreeable, but I did not see that it caused ill-health; still, when the matter was referred to Dr. Dawson, he represented to the Government that it should be removed; and it was removed in consequence of its being likely to be injurious to the prison population. It was situated at the back of a large penitentiary.

578. Is it not the fact that it is the present tendency of all sanitary legislation to remove from all cities those businesses in which the decomposition of organic matter takes place? From which there is an exhalation of the gases carbonic acid and nitrogen. They are considered, if inhaled, to produce sickness and fever, and where slight disease exists they are calculated to produce typhoid, or a malignant type of fever—to convert simple disease into one of great danger and malignity.

579. You mean to say that a number of persons living in the neighborhood of these yards would, if an epidemic were to break out in the city, be likely to suffer much more than they would if those places were removed? I am not prepared to say that in Sydney any injurious effects have arisen from the present tanyards, but I look forward to the time when houses will be more crowded together and filled with people, and if these tanyards are allowed to exist they are likely to injure the persons who live in these houses. If small-pox or cholera were to break out these exhalations would be likely to increase the disease, and to cause a malignant type of fever, which would be very fatal.

580. Is it not considered an indisputable fact that the decomposition of organic matter is a fertile source of fever and epidemic disease? The exhalations from decomposed animal and vegetable matter are most injurious to health. I think those from the decomposition of animal matter, far more so than those from vegetable.

581. You think that any business which causes the accumulation of putrid refuse matter should not be tolerated in a city? I think not, and I believe that is the opinion of one of the most eminent sanitary writers, and a lecturer on medical jurisprudence. I think Dr. Andrew Thomson makes use of the same observation. Dr. Ryan, also a lecturer, also Dr. Southwood Smith, and others, condemn tanyards.

582. Have you read the report of Dr. ———, Health Officer of the City of London? I have not in reference to that particular. I fancy there is no such thing as a tanyard in the

the City of London. The neighborhood of London, Bermondsey, where tanning and fell-mongering are carried on, is considered a very unhealthy district in consequence of it.

583. You would include all other occupations of a similar character? All that give forth exhalations such as I have mentioned—deleterious gases injurious to health, all trades which give forth those gases are considered by writers on medical jurisprudence injurious to the public health, and ought not to be allowed in cities. I think in Paris all such occupations are sent out of the city.

584. That is only within the last few years? Since the outbreaks of cholera more attention has been paid to sanitary arrangements than was the case twenty or thirty years.

585. What is your opinion of the sanitary state of Sydney? My opinion is, that the sanitary condition is good, taking it as a whole; I simply refer to the lists of mortality which week by week are registered in the office, there are no cases of an epidemic or contagious nature spreading. But in the absence of sanitary regulations we are liable to great danger if an epidemic such as scarlet fever were to prevail. I believe in such a case the people about the lower part of Sussex-street—all at the back of Darling Harbor, would be in great danger. I think a type of fever might break out there that would be very fatal. At low water there is at the head of Darling Harbor an immense mass of putrid matter exposed to the air from the sewers and slaughter-houses, in fact, the refuse of the town, which sends forth the most poisonous exhalations. At Woolloomooloo there is a flat of much the same character.

586. Have you, under the present Act, sufficient power as Health Officer to enforce the sanitary regulations? No.

587. *By Mr. Lucas:* In the capacity of Health Officer have you had to prosecute persons for nuisances? I have—soap-boilers, since the passing of that Act.

588. Do you find it difficult to get persons in the neighborhood to become witnesses? We have never required them. The inspectors and myself have seen the nuisances, and have given information. A little time back I directed an information to be filed against Mr. Allen.

589. Did you find a difficulty in getting a conviction in this case? Yes, very great. No doubt it was the intention of the law that in such a case there should have been a conviction, but there was some misunderstanding, and it was contended that fat was not tallow, and that the carrying on the business of a candlemaker was not prohibited.

590. Is not the prosecution of a person at common law very expensive? We have done it through the Municipality. I have no doubt it is; anything in the shape of going to law must be expensive.

591. Do you not think the expense and difficulty in such cases deter persons from entering actions? Yes.

592. May not such a business as that of a tanner be carried on in London with little objection, which in this city, in consequence of the difference of climate, might be a very great nuisance? Of course the climate has a great affect in hastening, or otherwise, the decomposition of animal matter.

593. Therefore, better sanitary regulations are more necessary here than in London? Therefore, sanitary regulations in a semi-tropical climate require to be far more stringent than in London or in the North of Europe.

594. Because animal matter may remain three or four days without producing any injurious effect there, while here it could not remain three or four hours without being offensive? Yes.

595. Although persons may have a very healthy appearance, and really be healthy, who work in a factory, that factory may be a great nuisance? Yes; I do not think it any argument because a tanner or a butcher is a strong healthy man, therefore the business is not injurious. We know that tanners and butchers are out a great deal in the open air, and it is to that and the exercise they enjoy that their health may be attributed. We might say that a draper's was an unhealthy business from seeing the unhealthy cadaverous faces we meet in going down Pitt-street, but this appearance is caused by being confined indoors, and inhaling a foul atmosphere.

596. *By the Chairman:* Is the number of cases of preventible disease very large in the City? Yes; I think many, that might by proper rules and regulations be very much relieved if not removed entirely.

597. Such diseases as scarlatina? Scarlatina in its simple form is not dangerous, but from foul atmosphere and ill ventilation it becomes altered, and in consequence assumes a malignant type.

598. All these diseases might be much diminished by having judicious sanitary arrangements? We find it is so in those countries where proper sanitary arrangements have been enforced.

599. In the zymotic class of diseases? Yes.

600. *By Mr. Parkes:* I judge from your report as Health Officer that you think tanneries should be removed as a sanitary precaution? Yes.

601. In your experience have you ever known tanneries to be excluded from a town? I have read that their removal from Paris has been recommended.

602. Do you not know, as a matter of fact, that they have not been removed? I know an effort was made to remove them. Generally all writers upon medical jurisprudence are of opinion that such businesses ought to be removed.

603. Can you quote from one writer on medical jurisprudence who thinks the business of a currier should be removed? No.

604. Of a tanner? Dr. Thomson, the Professor of Medical Jurisprudence at—

605. Can you mention the ground upon which he objects? That incipient decomposition takes place in the first place, and certain gases are evolved, which being inhaled are calculated to produce injurious results. His lecture was published some years back in the *Lancet*.

606. You cannot give the Committee the date? I think the quotation I have read from my paper

H. Graham,
Esq.,
M.R.C.S.L.

20 April, 1860.

H. Graham,
Esq.
M.R.C.S.L.

20 April, 1860.

paper is almost word for word what was said by Dr. Thomson. I find also that Dr. Ryan, in his work on medical jurisprudence, makes use of almost the same words as Dr. Thomson.

607. Who is Dr. Ryan? His book is an ordinary class book, generally used by medical students.

608. Does he mention tanneries in his work? He does.

609. Are you aware that in particular cases in Sydney the neighbors of tanners have gone to the trouble to send petitions to the Legislature, expressing their opinion that the tanneries are no source of annoyance to them? I have heard so; but, on the contrary, I have heard people who have been living close to Mr. Wilshire's tannery say just the reverse—that it is most offensive.

610. Have you any objection to state the names of the parties? I was told in confidence by a patient.

611. Can you mention the name of any person whom you think it desirable to summon before the Committee? Not any. I believe the persons who sent in that petition were many of them Mr. Wilshire's tenants.

612. I believe the people in the immediate neighborhood of Mr. Wilshire's tannery have not petitioned? Mr. Wilshire has been carrying on for many years past only a small amount of tanning; in fact, his place of business could hardly be recognised as a tannery. I recollect in old Mr. Wilshire's time, twenty years back, the business was very large.

613. Does he not carry on business as a fellmonger? No. Mr. Wilshire has a large quantity of dry hides.

614. He salts hides? Yes; but I think, so far as tanning goes, for many years past he has been holding back. In fact, I am at liberty to say so, for he told me so himself. He said they were doing little or nothing—I suppose pending the passing of this law.

APPENDIX A.

EXTRACT from Quarterly Report, March 8, on Sanitary Condition of the City.

"An attempt is now made to retain in the city the existing tanyards, on the supposition that such are not injurious to public health. On this subject I beg to state, that in the process of tanning hides incipient putrefaction takes place, for the purpose of removing the hair and other extraneous matter. Animal substances, when deprived of vitality, supplied with moisture, exposed to air of a high temperature, undergo putrefactive fermentation, the products of which are certain deleterious gases and offensive effluvia; and there are numerous instances in the records of medicine of diseases being produced by such gases acting on the human body. The waste water from tanyards is also most offensive—that in which the hides are first saturated. All occupations, therefore, as tanners, soap-boilers, tallow-melters, which engender these gases and effluvia, are considered by writers on medical jurisprudence, as nuisances injurious to public health, and should not be allowed within cities or towns.

"H. GRAHAM,
"Health Officer."

WEDNESDAY, 25 APRIL, 1860.

Present:—

MR. PEMELL, | MR. BROUGHTON,
MR. LUCAS.

RICHARD LEWIS JENKINS, ESQ., IN THE CHAIR.

Mr. R. A. Hunt called in and examined:—

Mr. R. A.
Hunt.

25 April, 1860.

615. *By the Chairman:* What are you, Mr. Hunt? I am Superintendent of the General Post Office.

616. Where do you reside? My residence is in Phillip-street, where I have resided for about seventeen years, on my wife's property.

617. The object of this Committee, Mr. Hunt, is to inquire into the working of the Act for the removal of certain trades, including those of tanners and curriers, from the city, and to ascertain whether the trades I have mentioned are a nuisance, or offensive and injurious to the public health of the metropolis? Speaking from my own experience, I think they are a nuisance.

618. Do you reside in the neighborhood of a tannery? Within three or four doors of Mr. Watt's tannery.

619. Speaking from your own experience you believe the carrying on of these trades to be offensive and injurious to health? I have been frequently compelled to shut up the front of my house on account of the smell which came from the water which flowed from the tanyard down the surface drain opposite to the house; and on account of the smoke from the chimney of the tannery, which often filled the whole premises.

620. How far do you reside from the tannery? There are three or four cottages between—about forty or fifty feet.

621. Do you find anything offensive from the tannery, or from the filthy fluid flowing from it by your house? Yes; both from the fluid flowing down the surface drain in front of the house, and from the chimney, which is very low, the smoke from which blows into the house.

622.

622. Both are a nuisance to you—the smoke from the tannery, and the filthy fluid flowing therefrom? Yes.
623. You believe it to be injurious to health? Speaking from my own experience, I do. I have often felt sick, and could not eat my dinner in consequence of the stench.
624. I understand there is no underground drainage at that tannery? No. Although the main sewer is in Phillip-street the drains from the tannery have not been connected with it.
625. Suppose they had connected their drainage from the tanyard with the main sewer, so as to prevent the filthy fluid from overflowing the surface drain, would the existence of this establishment then be offensive or injurious to you? Yes, I think it would still be injurious and offensive; we should still have the smoke from the chimney.
626. Have you ever visited the tanyard? Never further than the gate of the yard.
627. Are you acquainted with the business of tannery? I am not.
628. You would not be able to say whether the business of a currier was offensive? I cannot speak of it.
629. You consider the tannery to be a nuisance to you and all your neighbors? I do.
630. And should not be carried on within the precincts of the City? No.
631. *By Mr. Broughton:* Is the fluid you speak of always flowing from the yard? Not always.
632. Is this tanyard always offensive, or only when the fluid flows over the gutter on to the street? I am not aware of that.
633. The fluid or wash flows right down the surface from the yard? Yes, right across the footpath, by a covered drain, into the street.
634. Where does it flow to in the street? There is a trap at the corner of Bent-street into which it drips.
635. Is your complaint of the fluid matter flowing over into the street, or of the nuisance at the tanyard generally? The fluid, the smoke, and the tannery are offensive.
636. Do you consider the tanning in itself offensive? I cannot speak to that.
637. From your long residence there, and from your personal experience, can you say whether this tanyard is offensive at other times than when this fluid is escaping to the street? When the tanning is going on I believe it is offensive.
638. Have you heard the neighbors complain of it at any time? Yes, I have heard my next-door neighbor complain, and also Mr. Richard Hill of Bent-street.
639. Are you aware whether any of the neighbors in the immediate vicinity of the tannery have petitioned the Legislature on the subject? Yes; I was myself asked by Mr. Watt to sign a petition, but I said I could not think of doing so.
640. Are the persons whose signatures appear on the petition permanent residents in the neighborhood? There may be some who are. Some of the neighbors derive an advantage from the tannery, as they have the refuse bark given to them, which they use as firewood.
641. Do any of the persons whose signatures are attached to the petition derive that advantage from the tannery? Some of them receive the bark, which they burn in their houses as fuel.
642. You believe that almost all the persons signing that petition receive an advantage from the tannery in the shape of the refuse bark, which they use as firewood? Yes; I have seen it on Mr. Rice's premises, and in different other places in the neighborhood.
643. Generally speaking, are these persons permanent residents in the vicinity, or holders of property? A few of them are owners of property. Mr. Mulhall has now left and has gone to Pymont.
644. How many names attached to that petition are permanent residents in the street? I cannot exactly say. Some of them reside a good distance from the tannery.
645. Some of the persons who signed that petition live at a considerable distance from the place altogether? Yes; for instance, Mr. Kellick lives opposite Wentworth-place, Mr. Mulhall has removed to Pymont, and Mr. Clinton, butcher, resides in Hunter-street.

Mr. R. A.
Hunt.

25 April, 1860.

Mr. John E. Begg called in and examined:—

646. *By the Chairman:* You are a tanner and currier? Yes.
647. Your tannery is in Phillip-street? In Phillip-street; and I have a place at Paddington.
648. Did you send in a petition to the Legislature, praying that the Act 30 Vict., No. 42, should be repealed, so far as tanners and curriers were concerned? Yes.
649. How long have you carried on the business in the Colony? About six years.
650. How long in Phillip-street? About five years.
651. Is it your own business, or do you rent it? I rent it from Mr. Watt.
652. Who carried on the business before you,—Mr. Hayman? I believe so.
653. Have you heard any complaints as to your business being considered a nuisance by your neighbors? No.
654. Are you aware that complaints are made by neighbors? Not that I am aware of, though there may have been complaints of which I have not heard.
655. Will you be kind enough to state what is the process carried on in your business? The hides come from the butchers are not washed in the yard; they are then sent to Paddington to prepare by cleaning them with lime; they are afterwards brought back and put into the tan liquor. My liming and tanning yards are separate.
656. You receive the hides in Phillip-street in a filthy state? Yes, as they come from the butchers. Those which are for export I salt on the premises; the others I send to Paddington to be limed.
657. You do not follow the process of curing hides? No.

Mr. J. E. Begg.

25 April, 1860.

Mr. J.E.Begg. 658. You carry on the salting of hides? Yes.

25 April, 1860. 659. Suppose you ceased to carry on the salting of hides do you think there would be anything offensive in the other branch of the business carried on in Phillip-street? There is no nuisance in salting hides, but there may be from hides coming from the country unsalted. The hides are generally salted before the meat is consumed. I sometimes receive hides from the country only partially salted.

660. These are offensive? Yes, very frequently. When I get hides from the country in that state I send them to Paddington. All that I do with them in Phillip-street is to receive them and send them away.

661. From what, then, does the offensiveness of your tanyard arise? I am not aware of any offensive odours coming from it, because there is nothing in my yard but what people might readily swallow. Bark liquor will cure some diseases, and has been prescribed by some medical men. I give a good deal of it away to veterinary surgeons, who cure diseases of horses with it.

662. Where is this other yard you refer to? Outside the city.

663. Are there any neighbors residing near it? No, it is away from habitations altogether. But there is no offensiveness that I find arising from the liming of the hides.

664. In your yard in Phillip-street do you wash hides at all? No; there is nothing but the pits full of liquor.

665. We have it in evidence that the liquor which flows out of the yard is offensive? That must be wrong, as a tanner never empties his pits; liquor is never emptied at all. I am not accountable for the water that comes out of the yard, and in very rainy weather the liquor may be driven by the rain out of the pits; that is the only way in which it can take place.

666. You never empty the water out of the pits? No; on the contrary, it will keep for many years if supplied with fresh bark.

667. The water would become offensive by remaining so long? Not if fresh bark is constantly put into it,—it would then never become offensive. There may be an offensive smell in Phillip-street occasioned by the burning of the bark which people take for fuel. It is strange how anything could arise from a tanwork, when there was one of the largest establishments of this kind in the city of Edinburgh.

668. Are the hides you receive in an offensive state from the country sent to your place at Paddington? If I buy any at Mort's and find that they are not right or what they ought to be I send them out of the yard.

669. Do you receive any green hides from the butchers? Yes.

670. Are they washed previous to your receiving them? No; you do not wash hides if you salt them.

671. You salt the hides with the blood on them? Yes, just as other people salt them. Hides are salted at Campbell's Wharf.

672. Is there anything offensive in the process of curing hides? Not if it is properly done.

673. The only hides that are offensive are those which come from the country partly cured? Partly cured, and damp from the rain.

674. Some of these you get into your yard? Yes.

675. And does any offensiveness arise from them? Yes.

676. You do not carry on the preparatory process for currying leather at your establishment in Phillip-street? No.

677. Have your premises any connection with the underground sewerage? No.

678. Is there not frequently fluid matter flowing from your yard into the street? Yes.

679. Flowing down the centre of your yard? Yes; that is, when we draw out the hides some of the liquor may fall from them.

680. Is there not always something flowing? No. And some of the fluid is clean water in which the hides have been washed after they have been taken out of the pits.

681. You say there is no communication between your premises and the underground drainage? No.

682. How do you extract the lime from the hides? You first brush it over them, and in making sole leather you extract no lime.

683. You do not ferment the hide? For upper leather.

684. You do not ferment hides in Phillip-street? I do not prepare hides there at all.

685. You know that some tanners do that? Yes.

686. This is the most offensive part of the process? Yes; but it depends upon what they do it with. Some do it with bran, some with vitriol. If it is done with bran it smells.

687. Do you consider it desirable to have tanners in a large city, in a warm climate, without underground drainage? Tanning is carried on much more quickly in hot countries than in cool countries, and the danger could not be greater or the process more noxious.

688. Do you not think the gases would exist to a greater extent in a hot than in a cool country? I do not see where the gases can come from, if the hides are salted. It is strange that a tannery should be considered injurious to health when medical men have sent children into tanneries when they had hooping cough.

689. Did you procure the signatures to this petition, or did anyone else? I procured them myself.

690. I see there the name of John Kellick—does he live in Phillip-street or at Pymont? In Phillip-street.

691. He has an establishment there, but does not reside there? He resides there.

692. How near to your tannery? Within four or five hundred yards; his house being near the Presbyterian Church, and about the same distance from my tannery as the Assembly Chambers are.

693. Would he be affected by the smells from the tannery if they were bad? No.

694. Is the Mr. Rice who signed that petition still living? Yes; there are three Rices living there. Old Mr. Rice is dead, and had lived there for forty years. They are all live names on the petition. Mr. J. E. Begg.
25 April, 1860.
695. I understand that most of the parties whose names are attached to the petition receive the refuse bark from your yard? Some of them do. Mr. Leatham and others do not.
696. Most of the others do? Some of them use the bark, and many come all the distance from the Rocks to get it.
697. Were you constrained to erect your establishment outside the city in consequence of this Bill to prevent the establishment of tanners and curriers within the city of Sydney? I had the place at Paddington before I came to Phillip-street.
698. That has been established since the passing of the Act? Yes, but it is out of the city.
699. You were aware of the existence of the Act when you commenced tanning there? Yes.
700. Would it be an injury to yourself and other parties who have removed out of the city if tanners and curriers indiscriminately were allowed to carry on business within the city? I do not know any one, except Messrs. Hall and Alderson, who have removed; but I do not know that it would be an injury to them, because they reaped a profit from the removal. They might look upon it as right, as they could not carry on much business where they were.
701. *By Mr. Lucas:* Are you aware that there is a nuisance—or have you heard it complained of as a nuisance—that people burn the refuse bark as firewood? I never heard it complained of before. I can feel the smell of burned bark myself.
702. Do you think the process of preparing hides for tanning is not offensive? The preparing of the hide is not offensive.
703. The process from first soaking, then liming, and preparing it for the tan—is there not something offensive in that? Some people may find it not pleasant, but when the hide goes into the lime everything is killed. The water in which they are washed is thrown away.
704. Then there is nothing offensive in the slightest degree, in the business you carry on in Phillip-street? No; except that if the yard were kept dirty it would become offensive.
705. Suppose you had no yard out of town, what would you do with the hides that become offensive from not being properly salted before you receive them? I should have to do as Mr. Mort does, keep them on the premises in the city.
706. They would be offensive? Yes.
707. And in keeping the yard out of town you prevent that offensiveness? Yes, with regard to the country hides, not in tanning.
708. You say you wash the hides—is not the washing water offensive? No; the matter in it is pure clean blood.
709. We have before heard in the evidence of a practical man that this was offensive? There is nothing offensive in washing fresh hides; but if you put in dry hides to soak there is an offensive smell.
710. You believe that having your yard out of town, where you take offensive hides, you prevent the existence of nuisances at your establishment in town, where they would be very offensive? They would become very offensive.
711. I suppose there is a difference of opinion as to what is offensive and as to what is not? Of course.
712. What other persons may consider offensive you, from being accustomed to it in business, would not consider offensive? Yes. Some may think the business offensive, but I do not.
713. *By Mr. Pemell:* Not more offensive than the business of a butcher? I do not think a butcher's business offensive at all, unless the place where it is carried on is not kept clean.
714. How many fires do you keep? No fires.
715. We have it in evidence that the smoke from your establishment in Phillip-street is offensive to the neighborhood? We have no fires in my place. All the fire that I have is when I have to melt tallow or glue.
716. *By Mr. Lucas:* There is no fire kept connected with your tanyard in Phillip-street? No.
717. *By Mr. Pemell:* What fuel do you use? Wood and coal.
718. *By Mr. Lucas:* Do you burn the refuse bark? No; some of the neighbors use it for fuel in their houses.
719. *By the Chairman:* I think you state that you sometimes melt tallow or glue? Yes.
720. What do you melt tallow for? For making dubbing; we use pure tallow.
721. Is there any offensive smell arising from that? No.
722. How much tallow do you melt in the course of a week, or how often do you melt it? Not once in three months; I make this dubbing but two or three times a season. I make a good deal at a time. I formerly had a steam boiler to steam my bark, for which bark was consumed, but now I use nothing but wood and coal.

The Honorable W. Bland, Esq., M. L. C., called in and examined:—

The Hon.
W. Bland,
Esq., M.L.C.

25 April, 1860.

723. *By the Chairman:* How long have you been a medical practitioner in this Colony?
Upwards of forty-five years.

724. The object of this Committee, Dr. Bland, is to procure information as to whether or not the business of tanners and curriers is of that offensive nature as to be injurious to public health, and such as ought not to be retained within the precincts of the city? They are, in my opinion, likely to be very injurious, and even dangerous, particularly the preparatory branch—that of the tanner.

725. I may just state, that in the year 1849 an Act was passed by the Legislative Council of the Colony, which enacted that, on the first of January in this present year, the businesses of tanners, curriers, and some other offensive trades, should not be carried on within the precincts of the city? I think very properly, perhaps as to both branches of the trade in question; being each of them offensive, and likely, even with the best management, to be injurious.

726. The Committee would wish to have your opinion, as a medical practitioner of long experience in the city, as to the effects of these establishments upon public health? I infer that they are highly dangerous, and most probably always more or less injurious to health, from their being intimately connected with the existence of putrescent organic matters; but I recollect only two instances in which actual disease in this city was, in my opinion, fairly attributable to the decomposition of organic substances—cases, in both instances, of *typhus gravior* or malignant typhus. These occurred about the year 1820, and again about 1832, at Mr. Wilshire's tannery in George-street, and in 1832, also, in the family of Mr. Philips, in O'Connell-street; the back of whose premises was contiguous to the tanks (or rather, open sewers) in Spring-street.

727. I hold in my hand a petition which was sent to the Legislative Assembly, and received on the 24th January, 1856, to which I find your name attached, as also the names of Dr. Aaron, Dr. Robertson, Mr. Kemp, and also the names of other gentlemen. The petitioners, referring to the sanitary state of the city, asked for the removal of soap boilers, tallow melters, tripe boilers, tanners and curriers, from the city? I am of the same opinion now as I was then. I beg, however, to repeat, that I can bring to my recollection only the few instances above-mentioned, in which, in my opinion, malignant disease was attributable, almost beyond doubt, to putrescent causes. I allude to the two instances in Mr. Wilshire's family; in which, in the first instance (in 1820), there were several cases of malignant typhus of the worst description, though no deaths; and in the second instance (about the year 1832), only one case in the same family, which, although not fatal, was evidently of the most malignant tendency; and which latter was exclusive of the six simultaneous cases in the family of Mr. Philips, in O'Connell-street—all fatal; the last two of which cases I can testify to as being cases of *typhus gravior*, from my having been called in to them, though only just immediately before the death of the patients.

728. The decomposition of animal matter is a fruitful source of disease? Yes. This has been, I believe, long since amply proved.

729. You connect the cases of typhus you have referred to with the existence of putrifying organic matter? Yes; and more especially as no cases of malignant typhus had appeared in any other part of the city than the two localities above-mentioned.

730. Have you, in your long experience, seen much fever of a typhoid character? No; not in this Colony. I recollect only the above few cases of *typhus gravior* in this Colony. Of the milder species of typhus—*typhus mitior*—I have from time to time met with cases, in different parts of the city; though I think almost invariably in ill-ventilated, ill-drained localities. The last case of *typhus gravior* that I attended was at Mr. Wilshire's.

731. Did this case occur in the vicinity of these tanks? No, at Mr. Wilshire's tannery.

732. In hot climates, is it not necessary to be more particular with regard to the drainage, so as to prevent the effects of the decomposition of organic matter? Yes.

733. Are you practically acquainted with the business of tanners and curriers? No. I never till lately knew there was a tannery in Phillip-street belonging to a person named Watt, nor have I heard of any mischief resulting from it; very probably because the ventilation and drainage are both very much better than that at Mr. Wilshire's; the ground is high and the air superior to that of most parts of the city.

734. *By Mr. Lucas:* The natural drainage would no doubt be good? Yes.

735. We have it in evidence that the offensive smells arise from the preparatory process of preparing the hide for the business for the currier—washing off the hides the bloody matter, and scraping them. If that part of the business were performed out of town, do you think the remaining part of the business (that of the currier), after all decomposition has ceased, could be safely carried on within the precincts of the city? Probably. The tanning used in the finishing of the first stage of the operation is a powerful antiseptic. I would, however, utterly exclude the formation of any new tanning establishments, or the continuation of those, if any, which have sprung up since the notice was given, within the precincts of the city; and as to those tanning establishments which existed before the notice of 1849, they ought, in my opinion, to be put under strict inspection, in respect to the manner as to cleanliness in which they are conducted; but should it notwithstanding become necessary that they should be removed, I think their proprietors would—all circumstances being considered, and among these the care taken to prevent their being injurious—be entitled to a fair remuneration.

736. In the petition, you say that curriers ought to be put out of town as well as tanners? Perhaps I went rather too far in saying so, in respect to the currier's branch of the business.

737. I now ask you, as an old political economist and legislator, whether you think it would be an infraction of the liberties of the subject, if tanners were to be prohibited from carrying

on business at these offensive establishments within the city? Certainly not, under the indemnity system above explained.

738. You do not consider the tanners and curriers have a prescriptive right to contaminate the atmosphere? No one ought to be allowed to do what would be offensive to the public, or injure the public health; and the business of the tanner in particular is both offensive and dangerous.

739. The Act when passed gave them ten years' notice? Yes.

740. It is now 1860? Yes.

741. *By Mr. Broughton*: Supposing the wash from the tanneries to flow over the surface of the soil in the yard into the open guttering of the street, would that be injurious or prejudicial to public health? It would be both offensive and dangerous.

742. And should not exist in the city? Yes. The tanneries, in their dangerous effects, resemble the abattoirs, though the latter are no doubt infinitely worse. These, however, have been removed to a spot (the Glebe), where they will be a much greater nuisance than ever in every respect.

743. In the event of having no means of drainage, if this wash were allowed to escape by passing over the soil, would not the stench accompanying the evaporation be dangerous? Yes, both dangerous and offensive.

744. Do you remember the residence of Mr. Charles Henry Chambers in Elizabeth-street? Yes.

745. Do you remember where Mr. Pawley lives? Yes, at the back of the late Mr. C. Chambers's residence.

746. Did not Mr. Chambers complain of annoyance from the effects of that tannery? I do not recollect that Mr. Pawley's tannery was particularly offensive, or that Mr. Chambers complained of it, though no doubt it must at times have been both offensive and dangerous. But the larger portion of the sanitary mischief that occurred in the city at different times had its origin at the southern quarters, near Mr. Wilshire's, where there existed a concentration of injurious and offensive effluvia—though emanating almost entirely from the abattoirs in that vicinity.

747. You conceive, as a medical practitioner, that as a precautionary measure tanneries should be excluded from the city altogether? Yes.

748. *By Mr. Lucas*: With reference to your last answer, you make it on account of the health of the city being an object of consideration? Yes, on the ground that they are not only offensive, but highly injurious to health, and even dangerous; that, however carefully managed and conducted, they ought to be looked at with great suspicion, as liable to render the air more or less impure, and, therefore, unhealthy; as well as to be productive of some of the most dangerous diseases of a putrid character.

749. *By the Chairman*: I understand you to state that you do not trace any direct communication between disease and tanyards; but that being a business in carrying on which those engaged in it have to deal with putrid matter it is likely to become offensive and is liable to cause disease? I think I have mentioned two instances in which I had no doubt that the malignant diseases to which I referred had taken their origin from the putrescent emanations from a tannery. But I have stated that I had no reason to think that tanneries were all equally injurious. I have attended at Mr. Watt's as well as Mr. Pawley's establishment, and did not find anything particularly offensive in either, which I considered principally attributable to their being both better drained and better ventilated, in consequence most probably of the advantages they enjoyed from the respective localities in which they were placed; the one of them on high ground near the Domain, the other on high ground near Hyde Park.

750. We have it in evidence from neighbors that it is offensive? Neighbors must have been more competent to speak on this subject than myself.

751. Do you remember signing this petition? This is my signature.

752. Would you be kind enough to state the number of signatures to it? Seven hundred and forty.

753. Will you be kind enough to state whether it includes tanners and curriers with other trades—and will you say that, having perused the petition, it asks for the immediate removal of tanners and curriers from the city? It does.

754. Were you a Member of the Legislative Council at the time this Bill passed—and do you remember the Bill passing? No.

755. Do you think the tanners and curriers were included among the other offensive trades named in the Bill from any other motive than an impression that they also were offensive and injurious to public health? I have no doubt it was done in compliance with the expressed wishes of the petitioners, and with a conviction that it would be for the benefit of the community, and from no other motive.

756. You do not think it was done with malice by members of the House at that time against any particular tanners and curriers; but most probably in compliance with the expressed wishes of the petitioners? I see no circumstance to justify such a suspicion, and I should, therefore, presume that it was done in compliance with the wishes of the people, and as necessary for health.

757. Do you not think the salting of hides should be included with the offensive trades, and not be carried on within the precincts of the city? Yes.

758. Any business dealing with organic matters liable to decomposition? Yes; and I hope the time will soon arrive when the Legislature will initiate and commence the carrying out of some comprehensive system of sanitary reform, both in respect to those towns and cities which already exist, as well as all towns and cities that may be built hereafter throughout the Colony—but for the present, for obvious reasons, more particularly with reference to the City

The Hon.
W. Bland,
Esq., M.L.C.

25 April, 1860.

The Hon.
W. Bland,
Esq., M.L.C.
25 April, 1860.

City of Sydney—which, if any longer neglected, will become every year more and more difficult of reform; the plans at present acted upon being themselves, in my opinion, for the most part of a highly injurious, rather than a beneficial tendency; while the immense peculiar advantages which the site of Sydney possesses, as it came originally from the hands of the Creator, for sanitary as well as every other desirable purpose, are not only being lost sight of altogether, but converted into the most injurious and dangerous nuisances. Thus things which are utterly repudiated and are being, as rapidly as circumstances permit, rejected at Home, we are laboring, at an enormous outlay, to imitate in their worst forms, and introduce here. For instance, while at Home they have, at a vast cost, removed the shambles from Smithfield, we, at an enormous outlay, by the Government, are laboring to force down the abattoirs at Liverpool, established solely by private enterprise, to Glebe Island; and while, at the same time, not a particle of sewage ought to enter the harbor, particularly such a harbor as ours, with scarcely any tide, and no river current, and in such a climate; but, on the contrary, the whole of the sewage of this city ought to be conveyed away, and, together with the offal from the abattoirs, restored to the soil, whence it was originally derived, for the benefit of agriculture; we, at an enormous expense, have been laboring to fill up the harbor with the offal of our abattoirs, and the putrescent contents of our sewers.

759. You believe that many of the sanitary evils arise from preventible causes? Yes.

760. How do you compare Sydney with other parts of the World in a sanitary point of view? Sydney may possibly bear a comparison, in respect to sanitary matters, with most other cities, but not a remote comparison with what it might be made even now, and infinitely less would it bear a comparison with what, by merely a little attention in the laying out of the ground plot on which it stands, it might have been rendered.

FRIDAY, 4 MAY, 1860.

Present:—

MR. JENKINS,
MR. LUCAS,

MR. PARKES,
MR. PEMELL.

RICHARD LEWIS JENKINS, ESQ., IN THE CHAIR.

The Honorable James Robert Wilshire, M.L.C. (attending by permission of the Legislative Council), examined:—

The Hon. J. R. Wilshire, M.L.C.
4 May, 1860.

761. *By the Chairman:* You have a tannery? I carry on the business of leather manufacturing.

762. In the City of Sydney? In the City of Sydney, in the same place where it was carried on by my father upwards of half a century ago. I wish particularly to bring under the notice of the Committee that the ground was granted, for the special purpose of extending the manufacture of leather in that situation, to my father by the Governor at the time.

763. Will you state the name of the Governor? The Governor who granted the land for the extension of the manufacture of leather was Macquarie. The original establishment was before the time of Governor Macquarie, in 1803 or 1805. My father at the time was in the Commissariat Department; and in 1813 or 1814—I am not quite sure as to the year—the time of his service under the Government that would have entitled him to a pension would have expired. Shortly before that time an order was issued by the head of the Commissariat in England that no civil officer employed by Government should be engaged in any private business, and my father then retired from the Government service. He had been at that time thirteen years and nine months in the Commissariat Department, and had he remained fourteen years he would have been entitled to a pension. He retired in consequence of that order.

764. Then the land was given to your father for the express purpose of enabling him to manufacture leather? To extend the manufacture; it was being manufactured on the premises he had purchased before. I may state that I have heard my father say that when he commenced there was no house within a considerable distance—none nearer than the corner of King-street. Since that period we have expended vast sums of money in extending the manufactories.

765. And you have carried on the business uninterruptedly since that period? We carried on the business uninterruptedly until this Act passed for the removal of slaughter-houses and the prevention of other nuisances. I wish to state the circumstances that were brought under my notice at the time I was examined before the Committee to which the Bill was referred, and I believe there was nothing in the evidence given before that Committee that proved or touched at all upon tanneries or currieries being a nuisance; and Mr. Nichols, who was a Member of the Legislature at the time, finding that the Bill would pass with a clause which he had introduced himself, sent for me and told me that it would pass unless I took some measures to prevent it—that he himself had introduced the clause to remove tanneries and currieries, in consequence of some neighbor of his that he was at enmity with about a nuisance, and that he had subsequently found out that it was not occasioned by the tannery opposite to him, but by a butcher's establishment, two or three doors from him, where there was boiling down carried on.

766. Where was that? At the corner of Park and Castlereagh Streets. I asked him what I could do to prevent the passing of the Act, and he told me I could do nothing at that time

time—as he was certain it would pass that evening—but petition the Legislature at once. I asked him what I could say in the petition, and he dictated to me something that I was to say. I went home, wrote the petition, and afterwards went to the Town Hall, where I got Mr. Woolcott, the present Town Clerk, to write it out fair. It was presented by Mr. Lowe, and, I think, the Bill was passed the very same day.

The Hon.
J. R. Wilshire,
M.L.C.
4 May, 1860.

767. The third reading? Not only the third reading, but, I think, it was passed through at once. It was at the latter end of the Session, and, I know, it was all done in a very great hurry—in such haste that no one but my brother and myself petitioned against that clause of the Bill. I had not time to get the signature of anyone else.

768. Since that period, have you ever had any complaints made by any of your neighbors as to the business being a nuisance, or otherwise? None whatever. No complaint has ever been made of its being a nuisance either before or since—during that period of fifty-five years of the tannery or curriery being a nuisance.

769. Will you be kind enough to describe to the Committee the state in which you generally receive your hides into your yard? We sometimes receive hides from the butchers direct, quite fresh—they only smell as meat smells. Sometimes we receive them from establishments in the country, partially salted, and sometimes they come in in a bad state with maggots and smell upon them. In that state they are a temporary nuisance; but they are immediately washed in clean water, and brushed over with a knife on what we call a beam; and they are then put into lime, in order to swell the pores of the skin that we may extract the hair.

770. What becomes of the dirty water in which the hides are washed? It is thrown away directly and runs into the sewer. I may state that our tannery, at the time it was established, was at the head of what we call a blind creek or chain of ponds which empty themselves into Darling Harbor, and there is a natural incline all the way now; and all the unpleasantness that arises from the washing of the hides is taken away by the sewer to the head of Darling Harbor.

771. What distance is that? I suppose it must be upwards of a thousand feet.

772. Does it run in a culvert, or in an open sewer? Some part of the way through a culvert, and part through an open sewer. Where the land is low it is open.

773. Are there any residences where it is open? Yes, there are a few. The back privies empty themselves into it. It carries away the nuisance from the cesspools in the same way as the Tank Stream.

774. The water in which the hides have been cleansed, in the first instance, preparatory to the process of liming—what state is that in; is it in a filthy and offensive state? Yes, sometimes it is—not when fresh hides are washed in it. These country hides which come in partially cured are not very numerous.

775. The water in which they are washed is offensive? Yes, just as offensive, for a time, as the scent from a cesspool; but it is not continuous, it is removed.

776. This offensive water flows in the direction you have indicated? Yes.

777. Have you never had any complaints from your neighbors along the course of that sewage matter? I never had any complaint except that which has been alluded to by my brother, from Mr. Roger Murphy, and that was caused, not by the overflowing of the water which I say is offensive, but by the spent lees from the soap manufactory which we carried on at that time.

778. All the offensive smell which arises from the hides is in the first part of the process? Yes, in the first part. I may state that after the hides are washed they are what we call fleshed; the fleshings are the superfluous meat left upon the hide. If these fleshings are left about no doubt they will occasion a nuisance; but they are always removed from the premises immediately; they are never allowed to remain one day, but are removed from our tannery to the place where they are allowed to deposit night soil.

779. Are you of opinion that, if the fleshing and liming of the hides were carried on out of the city, the remaining process would occasion any offensive smell at all? There is no offensive smell at all after the liming process, nor would there, as I say, be any before if ordinary care were taken in removing the parts that decompose.

780. We have it in evidence, from a medical gentleman of very large experience in this town, that what cases of typhus fever he has met with in Sydney have been in the neighborhood of your tannery and of the Tank Stream? With respect to that I should like the statistics of the time to be examined. I am quite certain that when there was typhus fever in our family it raged all over the country as well as over the city. I can recollect perfectly well that when the typhus fever was first introduced into this country that two or three of our family were laid down with it in the city, and also some of our family who were living at Parramatta, some at Goulburn, and some at Windsor.

781. *By Mr. Lucas:* Do you remember the year—this gentleman says it was as far back as 1818? I think it must have been 1818. I may state that there have been periodical times when certain diseases have raged in this country. I remember, perfectly well, that the influenza raged at a particular season, and that several of our family were ill with the influenza at the same time.

782. Have you any other information that you would wish to give to the Committee? I wish to refer the Committee to the 53rd and 54th sections of the Municipal Act, by which they will see what is declared to be a nuisance by Legislative enactment.

783. Will you state your reason? I think if you declare tanneries a nuisance they cannot be established in the country at all where there is any Municipality, by that Act.

784. "The word 'nuisance' in this Act shall include the following matters—Any premises "in such a state as to be a nuisance or injurious to health; any pool, ditch, gutter, water-course, privy, urinal, cesspool, drain, or ashpit, so foul as to be a nuisance or injurious to health;

The Hon. J. R. Wilshire, M.L.C.
4 May, 1860.

"health; any animal, or the carcass of any animal, or any part thereof, in such a state or so kept or left as to be a nuisance or injurious to health; and any accumulation or deposit which is a nuisance or injurious to health?" That is the clause I refer to—"Any accumulation" I suppose must be a continuous thing to create a nuisance; but anything that is removed and cannot occasion a nuisance, cannot be a nuisance; it is only unpleasant for a short time.

785. In that case the deposit would be a nuisance for a short time? Yes.

786. Are you not in the constant habit of receiving these hides from the country which are in a partly decomposed state? Not in the constant habit; they are mostly received by the auctioneers and sold by auction.

787. From whom you buy them? We sometimes buy them from the auctioneers, but we have not bought them of late.

788. You have not been carrying on the business of late—not this year? Not of late.

789. The 54th clause, to which you have referred, evidently defines what is a nuisance—would you consider that an improper definition? No; but every cesspool, in my opinion, is a much greater nuisance than any tannery in the City of Sydney. I am satisfied that there is a greater nuisance within a hundred feet of where we are than any tannery can be. If you stand opposite Mrs. Burdekin's in Macquarie-street, over a sewer, the smell arising from it, which is continuous day and night, is worse a thousand times than any smell that can arise from any portion of the manufacture of leather.

790. Do you not think that every attempt should be made to remove all nuisances? Yes, every attempt should be made for the benefit of the health of the people. That is one reason why we keep our establishment so clean.

791. *By Mr. Pemell:* From a former part of your evidence, are the Committee to understand that your father waived all right to a pension, preferring to follow his business to retaining the situation he held? Yes.

792. Had he remained three months' longer, if I understand you rightly, he would have been entitled to a pension? Yes, I have heard him say, that a service of fourteen years under Government at the time entitled him to a pension of either a guinea or half a guinea a day.

793. *By the Chairman:* Do you carry on the business of salting hides on your present premises in George-street? Yes.

794. Since the 1st of January you have ceased to carry on the tanning business? We ceased, in a great measure, and are selling out what we have got.

795. Would not the process of salting give rise to an equally offensive effluvia as that of preparing hides for tanning? Precisely the same. Salted hides on any place will give quite as offensive effluvia; and, I believe, in salting meat offensive effluvia arise in a very short time. Sometimes—in certain seasons of the year—the meat is quite putrid.

796. Perhaps it would be hardly fair to ask you whether the salting of hides should not have been prohibited at the same time as tanning? I think you ought to prohibit everything that is a nuisance, and by that means you will get rid of all the manufactories from Sydney, not only tanning and currying, but carpentering and joinery, for these are also nuisances; and I may mention one nuisance that is a thousand time more offensive than a tannery, the sugar manufactory. There is one of these in our neighborhood, and I believe that the blame bestowed upon the slaughter-houses properly belongs to that.

797. *By Mr. Lucas:* Is there not one part of your process which is called "beaming"? It is called "beating."

WEDNESDAY, 16 MAY, 1860.

Present:—

MR. JENKINS, | MR. BROUGHTON,
MR. PARKES.

JAMES BYRNES, ESQ., IN THE CHAIR.

The Honorable W. Bland called in and further examined:—

The Hon. W. Bland.
16 May, 1860.

798. *By the Chairman:* You were examined here, before this Committee, on the 25th of April last? I was.

799. Since that period you have had your manuscript evidence laid before you? I have.

800. And in looking over that evidence you have seen reasons to justify you in putting it before the Committee in another shape, although without substantial alteration of any portion of it? I have.

801. And this is the evidence you now wish to put in? Yes. (*Revised Evidence, ante 25 April.*)

802. *By Mr. Broughton:* Have you ever visited the abattoirs? I have not; but nothing can be done with them to make them compatible with public health.

803. How do you come to the conclusion that they will be a nuisance, having never seen them? The offal must be removed; it is not intended, I believe, to retain it there, and if so it is quite clear that the offal would go where the sewage goes—namely, into the harbor; thus assisting to fill up the harbor, as well as tending to render the harbor putrid. That also

also would be an exceedingly barbarous system, as it would be depriving agriculture of one of the main means by which it ought to flourish.

804. But without ever having seen the abattoirs, or knowing anything of the regulations, how do you draw the conclusion that they will not be kept clean and wholesome? My answer to that is given in my evidence, and I think is a conclusive explanation. It is a barbarism to bring cattle into the town, and was considered so in London before I left. Children and other persons are liable to serious accident; but exclusive of this there is the destruction to roads, the inconvenience to commerce, and an obstruction to little tours for health. At the same time we have an excellent means of getting rid of that nuisance, without extra expense, by means of the railway from Liverpool, where the country might be made a complete garden if it had the benefit of the abattoirs. Besides, the cattle ought not to be killed with their blood heated by driving into town, but after they had become cool, calm, and in a proper state for slaughtering. They could have a thousand acres of land for paddocks, with plenty of water, in the neighborhood of Liverpool. It is so well suited for the purpose, and so close to the train. The animals, having been kept in the paddocks until they were in a fit condition, could then be slaughtered, and the meat brought down by a night train, without shocking the feelings of anyone, and without the inconvenience of carting it from Glebe Island. There is the nuisance of cattle being driven through the streets, and the nuisance of bad smells which must arise from the offal, and that must go somewhere or into the sea.

The Hon.
W. Bland.

16 May, 1860.

805. *By Mr. Jenkins*: Suppose arrangements were made so as to prevent the nuisance from entering the harbor, as by a plan of deodorisation, which would allow of the offal matter being taken into the country, to give it the desirable sustenance of which you speak—would there then be any danger to health from the abattoirs? There would then be the inconvenience of getting the cattle through the streets; and they would be in a heated rather than the necessary cool state for butchering; neither could they have the requisite supplies of water.

806. As far as the health of Sydney was concerned, it would be sufficient for the impurities to be deodorised, so that they could be taken back into the country instead of being allowed to flow into the harbor? It seems to me an extraordinary way of obtaining the object. And there is a question in the evidence which interferes with it. Speaking politically, I decidedly think it would be a strange thing to bring the refuse and offal to Sydney in order to take it back after it had gone through a dubious process of purification, to take away the stenches and offensive smells which ought never to exist near a city. Besides, we have had no assurance at all that that was intended. I know there is a proposition of that kind with respect to the sewage, but it is a very dubious experiment. It is done, I believe, by means of charcoal, lime, and other preparations, so as to prevent putrescency. There are great doubts as to the success of this process even in London, where it has been tried.

GIBSON'S ESTATE BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 2nd September, "*Gibson's Estate Bill*," beg leave to report to your Honorable House,—

That they have examined the witnesses* named in the margin (whose respective evidence will be found appended hereto), and that the Preamble having been satisfactorily proved by their evidence, they proceeded with the enacting part of the Bill, in which they found it unnecessary to make any amendment.

*Mr. A. Lenehan
Mrs. C. A. Gibson
Mr. R. Harnett.

And your Committee now beg to lay the Bill before your Honorable House.

J. BOWIE WILSON,
Chairman.

Legislative Assembly Chamber,

Sydney, 4 September, 1862.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 4 SEPTEMBER, 1862.

MEMBERS PRESENT :—

| | | |
|--------------|--|--------------|
| Mr. Wilson, | | Mr. Leary, |
| Mr. Garrett, | | Mr. Cunneen. |

Mr. Wilson called to the Chair.

Printed copies of Gibson's Estate Bill, and original Petition for leave to bring it in—before the Committee.

Present :—

Mr. Andrew Lenchan,
Mr. Richard Harnett,
Mrs. C. A. Gibson.

Mr. Andrew Lenchan, *one of the Trustees of the Settlement*, examined.

Original Indenture referred to in the Preamble of the Bill, *produced*.

Witness withdrew.

Mrs. Catherine Anne Gibson examined.

Mr. Richard Harnett, *one of the Trustees of the Settlement*, examined.

Committee then proceeded to consider the Preamble of the Bill.

Motion made (*Chairman*), and *Question*,—that this Preamble stand part of the Bill,—*agreed to*.

The several Clauses then read and agreed to without amendment.

The Chairman read Draft Report.

Motion made (*Mr. Garrett*), and *Question*,—that the Report, as read, be the Report of the Committee,—*agreed to*.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

GIBSON'S ESTATE BILL.

THURSDAY, 4 SEPTEMBER, 1862.

Present:—

MR. LEARY, | MR. CUNNEEN,
MR. GARRETT.

JOHN, BOWIE WILSON, ESQ., IN THE CHAIR.

A. Lenehan, Esq., called in and examined:—

1. *By the Chairman*: Your name is Andrew Lenehan, I believe? It is.
2. And you live in the city of Sydney? Properly speaking, I reside in the city of Sydney.
3. You are one of the trustees under the deed of marriage settlement between John Dickson Gibson and Catherine Ann Leary? I am one of the two trustees under that deed.
4. This deed does not give you power to sell the land? No, and I presume that was the reason why application was made for an Act of Parliament.
5. It would appear that you are anxious to sell some of the land under this trust, with a view to invest the proceeds from such sale more profitably for the family? That is the object of the petition.
6. Where is this land situated? At the corner of Castlereagh-street and Campbell-street.
7. In its present condition it is unprofitable to the family? Yes, it has been so for some time. A large sum of money was laid out upon it, and it is still unprofitable.
8. You think that by selling it the sum of money obtained might be profitably invested for the benefit of Mrs. Gibson and her family? Yes. There is no return from the property as it stands at present, and the sooner it is disposed of the better.
9. Such sale of the land and reinvestment of the money would be advantageous to all parties concerned? Very much so.
10. You are one of the petitioners who applied to the Legislative Assembly for leave to introduce this Bill to authorize the sale of the land under this trust? I am, sir.
11. There is a Mr. Wyld mentioned as one of the trustees—has he executed the trust? I think not.
12. He has not acted with you? No; no one but Mr. Harnett.
13. You have read the preamble to this Bill, Mr. Lenehan? I have.
14. Do you find the statements therein contained to be correct? Perfectly correct.
15. *By Mr. Garrett*: You have not the power to sell the land? No, or I presume we should not have sought that power from the Legislature.
16. *By the Chairman*: The document here produced is the original indenture? Yes.
17. Is that your signature at the bottom of it? That is my signature, and I recognize this as the signature of Mr. Gibson. The other signature is Mr. Harnett's. That is the original deed of indenture.

A. Lenehan,
Esq.
4 Sept., 1862.

Mrs. Catherine Ann Gibson called in and examined:—

- Mrs. C. A. Gibson.
4 Sept., 1862.
18. *By the Chairman*: Your name is Catherine Ann Gibson, I believe? It is.
 19. This Committee is appointed to consider and report upon a Bill introduced into the Legislative Assembly, on the petition of Mr. Andrew Lenehan and Mr. Richard Harnett, as trustees in your behalf, asking power to sell certain property under trust—are you aware of that? Yes, sir.
 20. The document produced is, I believe, the original trust deed? Yes.
 21. Will you tell us whether this signature at the bottom of it is your signature? It is.
 22. You are the widow of the deceased John Dickson Gibson, who joined with you in the execution of this deed? I am.
 23. This deed gives the trustees no power to sell the property? No, that is what we want.
 24. Is the property under that trust in an unprofitable state? Yes.
 25. Where is it situated? At the corner of Castlereagh and Campbell streets, and at Woolloomooloo.
 26. Do you desire that it may be sold, and the proceeds invested for the benefit of yourself and family? Yes.
 27. And you think it would be beneficial to you and your family if the property were sold and the money reinvested? Yes.
 28. You desire that Mr. Lenehan and Mr. Harnett should be empowered to sell the property, and reinvest the money for the benefit of yourself and family? Yes.
 29. Have you read the preamble to this Bill? Yes.
 30. Do you find the statements therein to be correct? Yes, quite correct.
 31. *By Mr. Leary*: This property causes you a great deal of expense? Yes.
 32. And is of very little value to yourself and children? Hardly any benefit at present. That is the reason why I wish to sell it and reinvest the money.

R. Harnett, Esq., called in and examined:—

- R. Harnett, Esq.
4 Sept., 1862.
33. *By the Chairman*: Your name is Richard Harnett? It is.
 34. Will you be kind enough to look at this deed, and say whether it is the deed of settlement between John Dickson Gibson and Catherine Ann Leary, under which you are a trustee? Yes, it is.
 35. Is that your signature at the end? Yes, that is my signature.
 36. Is that the signature of Mr. Gibson? Yes, I believe so.
 37. Power has not been given you under this deed to sell the land and reinvest the money? No.
 38. And you, with Mr. Lenehan, have petitioned the Legislative Assembly for power to sell the land and reinvest the money, for the benefit of Mrs. Gibson and her family? Yes.
 39. Where is the land situated? At the corner of Castlereagh and Campbell streets.
 40. Does it return anything for its value? It has not done so for a considerable time.
 41. And for the benefit of the family, you wish to sell the land and reinvest the proceeds? Yes, it would be greatly for their advantage.
 42. Have you read the preamble to this Bill? Yes.
 43. Are all the allegations contained therein true? I believe them to be so.

1862.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SYDNEY BURIAL GROUNDS.

(RETURN, IN PART, RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 5 December, 1862.

RETURN (in part) to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 24 June, 1862, That there be laid upon the Table of this House,—

“ A Return embracing the following particulars in reference to the various Sydney Burial Grounds, viz. :—

“ (1.) Names of all Trustees who have been appointed under the various deeds of grant.

“ (2.) Dates of the appointments of such Trustees, and the dates of resignation or removal of such Trustees, if any.

“ (3.) Names of the present Trustees of each of the several Burial Grounds.

“ (4.) An account of the Moneys levied in name of fees, or other charges, in each year, by the Trustees in connection with each of the several Burial Grounds.

“ (5.) A statement of the various sources whence such fees or charges are usually derived.

“ (6.) A statement of the Disbursements in each case, in each year.”

(Mr. Windeyer.)

RETURN of the Names of Trustees of the various Sydney Burial Grounds.

| DATE OF GRANT. | DENOMINATION. | NAMES OF TRUSTEES. |

BLANKETS FOR THE ABORIGINES.

(RETURNS RELATIVE TO THE DISTRIBUTION OF.)

Ordered by the Legislative Assembly to be Printed, 3 June, 1862.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 27 September, 1861, That there be laid upon the Table of this House,—

“ (1.) A Return of the number of Blankets issued annually
“ by the Government, for the use of the Aborigines of this
“ Colony, for the last five years.

“ (2.) The names of the Police Districts, the number of
“ Blankets annually distributed in each for five years,
“ giving dates, and when despatched from Sydney each year,
“ with date of arrival at their destination.

“ (3.) Return of the Blankets purchased in the Colony, or
“ imported, for the Aborigines, for the last five years, stating
“ the cost in each case.”

(*Mr. Dangar.*)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

COLONIAL TOBACCO.

(EXTRACT OF LETTER FROM EDWARD HAMILTON, ESQ., RELATIVE TO CULTIVATION OF.)

Ordered by the Legislative Assembly to be Printed, 20 November, 1862.

EXTRACT of a Letter from Edward Hamilton, Esq., dated London, 25 September, 1862, to the Colonial Secretary, Sydney.

I WISH to call your attention to the importance of reviving the cultivation of tobacco in New South Wales. The sample sent home for exhibition was quite equal to the best American negrohead, and fully proves that the climate and soil of the Colony are specially suited to this plant. As in the case of cotton, so in this, the cultivation of it as an article of commerce must depend on the cost of production. Market prices are now exceptionally high, but it is not to be expected that existing rates can be long maintained. It has always appeared to me a great drawback to the attractions of the Australian Colonies, that the occupations of labour were not more diversified, and I should feel that the introduction of a new industry, or the revival of one which was very general some thirty years ago, would be a great gain in adding to the happiness of the working classes.

1862.

NEW SOUTH WALES.

SUPPLY OF COTTON SEED.

(FURTHER CORRESPONDENCE RESPECTING.)

Presented to both Houses of Parliament, by Command.

CONTINUATION of Correspondence respecting a Supply of Cotton Seed.

SCHEDULE.

SUPPLY OF COTTON SEED.

No. 1.

COLONIAL SECRETARY to EDWARD HAMILTON, ESQ.

*Colonial Secretary's Office,
Sydney, New South Wales,
21 January, 1862.*

Sir,

I have the honor to acknowledge the receipt of your letter of the 26th of November last, communicating the steps which you have taken for the purpose of obtaining a supply of American cotton seed for this Colony.

2. The course which you have pursued for meeting the wish of this Government on this subject appears to be the one best calculated to effect it; and whilst tendering my thanks to yourself, I request that you will express the acknowledgments of the Government of this Colony to Mr. Bazley for the service which he has rendered in this matter, and also to the "Cotton Supply Association" for the liberality with which they have granted a donation of cotton seed and gins.

I have, &c.,

CHARLES COWPER.

No. 2.

EDWARD HAMILTON, ESQ., to COLONIAL SECRETARY.

*5 Cannon-street, London, E. C.,
26 December, 1861*

(Extract.)

Sir,

I have the honor to forward copies of further correspondence between Mr. Bazley, M.P., and myself, with reference to the purchase of cotton seed ordered. By next mail I hope to be able to report that it is on its way to New South Wales.

* * * * *

I have, &c.,

EDWARD HAMILTON.

[Enclosures in No. 2.]

*New Bridge Mills, Manchester,
26 Nov., 1861.*

My dear Sir,

I will take care that the wishes and instructions of the New South Wales Government are correctly carried out; and beyond the free grant of the Cotton Supply Association, I will see to the judicious application and investment of the £200 sent to you. The seed sent shall be of proved vitality, but fresh or new American seed cannot at this juncture be obtained. I believe that Egyptian seed would best flourish in New South Wales, and would also yield the most profitable and marketable crop. Shortly I will write to you again.

Yours faithfully,

THOS. BAZLEY.

Edward Hamilton, Esq.

*5, Cannon-street,
London, 29 Nov., 1861.*

My dear Sir,

Pray understand that my instructions are to expend the £200 in the purchase of cotton seed of this year's growth, to be shipped direct from New York to Sydney; and I was advised to seek the assistance of yourself and the Cotton Supply Association in the execution of this commission. Unless, therefore, I am informed on good authority (*e.g.*, your own or that of the Cotton Supply Association) that under existing circumstances the commission could not be executed in New York by your agent there, I should hardly feel at liberty to sanction any appropriation of the £200 not authorized by my instructions. You will not, I hope, misunderstand me or think me punctilious in a case in which I ought to express nothing but the warmest acknowledgments for the liberality of the Cotton Supply Association; but the gift may stand, and will not be the less appreciated because an attempt is made to execute the commission. If you tell me that there are insuperable difficulties in the way at the present moment, I shall be quite satisfied, and take no further steps in the matter, leaving you unfettered to do what you think best with the £200.

I am, &c.,

EDWD. HAMILTON.

T. Bazley, Esq., M.P.

New Bridge Mills, Manchester,
30 November, 1861.

My dear Sir,

At present neither cotton nor its seed can be obtained from the States of America. In a very short time a supply of new or this year's growth seed will be received from Egypt. We have on hand some "American" or "New Orleans" seed of last year's crop, 1860, some of which we intended to have sent to New South Wales as part of the grant made to you, its vitality having now been proved; but as your orders or instructions are to procure seed of this year's growth, I think it will be more satisfactory to send Egyptian instead. I need not remark that cotton seed cannot be obtained in any of the ports of the States of America of the growth of the current year. Irrespective of these considerations, I believe that it would be safer and ultimately more profitable to send Egyptian seed to New South Wales than New Orleans seed. Usually New Orleans cotton is worth 6d. per lb., Egyptian 9d., and Sea Island 1s. to 2s. 6d. My conviction is that New South Wales would produce as large a quantity of cotton per acre from Egyptian seed as from the seed of New Orleans, and the result would probably be a pecuniary advantage of 50 per cent. in favour of the Egyptian. I think that New South Wales ought to yield a class of cotton in the range of value of 9d. to 1s. 6d. per lb. I will complete the free grant as best I can, and wait your decision as to the rest.

Yours faithfully,

THOS. BAZLEY.

E. Hamilton, Esq.

To-day's, or the speculative prices:—

| | |
|-----------------------------|----------------------|
| New Orleans cotton are..... | 1s. to 1s. 1½d. |
| Egyptian | 1s. 1½d. to 1s. 4½d. |
| Sea Island | 1s. 8d. to 3s. 6d. |

5, Cannon-street, London,
2 December, 1861.

My dear Sir,

I am in receipt of your letter of the 30th ult. The opinion therein expressed will justify me in accepting, under existing circumstances, Egyptian seed of this year's growth, in lieu of American seed of this year's growth. I will therefore authorize you to apply the £200 in the following way:—

1st. To defray charges of package, freight, and insurance, on the donation from the Cotton Supply Association.

2nd. To purchase a certain quantity of Egyptian seed of this year's growth, and to defray the charges of package, freight, and insurance. As to freight and insurance, that can be arranged for here in London, by Messrs. Devitt and Moore, and to meet this charge it will be as well that you should leave me a small balance of £20.

With renewed thanks,
I am, &c.,

EDWD. HAMILTON.

T. Bazley, Esq.

No. 3.

EDWARD HAMILTON, ESQ., to COLONIAL SECRETARY.

Cannon-street, London,
27 January, 1862.

SIR,

I have the honor to enclose some further correspondence with the Secretary of the Cotton Supply Association, with reference to the order which I have been requested to execute. The delay, however vexatious, appears to be unavoidable.

I have, &c.,

EDWD. HAMILTON.

[Enclosures in No. 3.]

5, Cannon-street, London,
2 January, 1862.

Sir,

You will much oblige me by informing me whether any progress has been made in the execution of the order of the New South Wales Government for the purchase of cotton seed of this year's growth.

You will not, I hope, deem me troublesome in pressing upon your attention a matter in which you have acted with so much courtesy towards the Colony, but I am very anxious to be able to write out by the mail which leaves on the 20th instant, as the Government will expect to be informed of the probable time when the seed will be forwarded from this country.

I am, &c.,

EDWD. HAMILTON.

To the Secretary of the
Cotton Supply Association.

Manchester, 3 January, 1862.

Sir,

I have duly received your letter of yesterday's date. I regret that any delay has taken place in your receiving the seed for the Government of New South Wales. The delay has arisen from the fact that we were awaiting the arrival of some fresh Egyptian seed, which has now arrived in Liverpool per steamer, and is being landed; that granted you, will be immediately packed in tin cases and forwarded as you request, as well also the New Orleans seed. The latter is not of the growth of 1861, as of course none of that has reached England. It is, however, quite fresh, having only left New Orleans a few days before the closing of that port.

On

SUPPLY OF COTTON SEED.

On receipt of your letter of 25th November, urging the importance of your having a quantity of Sea Island seed, the Committee doubled their grant of that kind, making it 100lb instead of 50lb. The gins have not been received from the maker at present, but I hope that you will receive the whole grant in a very short time.

To E. Hamilton, Esq.

I am, &c.,
S. O. SUTTON.

No. 4.

EDWARD HAMILTON, ESQ., to COLONIAL SECRETARY

5, Cannon-street, E. C.,
London, 25 February, 1862.

SIR,

I have the honor to enclose bill of lading for two packages shipped on board the "Brierly Hill," and containing 20 tin cases of cotton seed, as described in the accompanying letter from Messrs. Moseley, Hunt, & Co., of Liverpool. The cotton gins have not yet come to hand. This parcel of cotton seed is the donation to the Colony from the Manchester Cotton Supply Association. That which I was instructed to purchase has not yet been forwarded to me.

I have, &c.,
EDWD. HAMILTON.

[Enclosure in No. 4.]

Liverpool, 20 January, 1862.

Dear Sir,

By the instructions of the Cotton Supply Association of Manchester, we forward to your address this day, per London and North-western Railway, 10 tin cases, each containing 50 lbs. of New Orleans, and 10 tin cases, containing 50 lbs. of Egyptian seed, which we hope will arrive in good order. For their disposal we beg to refer you to the Cotton Supply Association of Manchester.

We remain, &c.,

MOSELEY, HUNT, & Co.,
(per J. D. F.)

Messrs. Devitt & Moore,
9, Billiter-street,
London, E. C.

P.S.—For your guidance, the large cases contain New Orleans, the small ones Egyptian seed—the value of the former 25s., the latter 12s. 6d. per cwt.

No. 5.

EDWARD HAMILTON, ESQ., to COLONIAL SECRETARY.

(Extract.)

5, Cannon-street, London, E. C.,
26 March, 1862.

SIR,

* * * * *
I enclose further correspondence with the Secretary of the Manchester Cotton Supply Association, and regret that the remainder of the articles promised as a donation, and the seed ordered, are not yet to hand.
* * * * *

I have, &c.,
EDWD. HAMILTON.

[Enclosures in No 5.]

5, Cannon-street, London, E. C.,
18 March, 1862.

Sir,

I shall feel obliged if you will let me know when I may expect the cotton seed, which I was instructed by the Government of New South Wales to forward to that Colony. The boxes containing the donation of your Association are already on their way out, but the gins have not yet been received.

I hope you will not consider me importunate in pressing this matter upon your attention. The colonists are, I know, anxious to try their hands at cotton growing, and very probably underrate the difficulties of obtaining fresh seed under present circumstances. The Australian mail goes out on the 26th, and I should be glad to report progress by that opportunity.

I am, &c.,

EDWD. HAMILTON.

The Secretary of the
Cotton Supply Association.

Manchester,

Dear Sir,

Manchester, 21 March, 1862.

Your favour of the 18th instant is to hand. I am sorry to have to inform you that the cotton gins for New South Wales are not yet ready; the order for them was duly handed to the maker, Mr. Platt of Oldham, whose machines, from what we have seen of them, appear to be the most efficient yet produced. For some reason which he has not explained to our satisfaction, he has not yet executed our various orders, including the gins appropriated to your service for New South Wales.

I will however press it upon his attention, and unless our orders can be completed during next week we will transfer them to his competitor, Mr. Dunlop, whose machinery for cleaning cotton has had a pre-eminence for utility for many years.

The 100 lbs. of Sea Island seed, which we sent to Oldham for enclosure with the gins, shall be recalled and forwarded to you without loss of time.

E. Hamilton, Esq.

I am, &c.,
S. O. SUTTON,
Interim Secretary.

No. 6.

COLONIAL SECRETARY to EDWARD HAMILTON, ESQ.

Colonial Secretary's Office,
Sydney, New South Wales,
21 May, 1862.

SIR,

I have the honor to acknowledge the receipt of your letter of the 25th February last, enclosing a bill of lading for two packages shipped on board the "Brierly Hill," and containing twenty tin cases of cotton seed, being the donation to this Colony from the Manchester Cotton Supply Association.

I have, &c.

CHARLES COWPER.

1862.

NEW SOUTH WALES.

LANCASHIRE RELIEF FUND.

Presented to both Houses of Parliament, by Command.

SECRETARY OF STATE FOR THE COLONIES to GOVERNOR SIR JOHN YOUNG.

Downing-street,

21 September, 1862.

SIR,

I have received your despatch, No. 67, of the 21st July, in which you report the steps which have been taken in New South Wales, in order to raise funds for the relief of the Lancashire operatives now suffering from the stoppage of their supplies of cotton.

I have read that despatch with the greatest possible gratification. The funds thus raised will afford the means of alleviating very severe distress, borne with a calm and reasonable fortitude, which, considering the multitudes affected by it, the circumstances by which it is produced, the length of time during which it has already continued, and the prospect, unhappily, of its further continuance, I may almost call unexampled. Any accession to our means of relieving such misfortunes, so endured, is highly valuable; but the contributions from the New South Wales Colonists are doubly impressive, from the warmth and promptitude with which they are proffered, and from the evidence which they afford of the quick and brotherly interest with which the Colonists of Australia regard the fortunes of their Mother Country.

I particularly desire that you will take the earliest opportunity of informing the inhabitants of New South Wales how much pleasure Her Majesty's Government have derived from their immediate and generous action in this matter.

I have, &c.,

NEWCASTLE.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GEOLOGICAL SURVEY.

(MR. W. KEENE'S REPORT ON.)

Ordered by the Legislative Assembly to be Printed, 31 October, 1862.

EXAMINATION of the succession of the Strata from the Carboniferous to the Auriferous deposits; the workings for Gold near Bungonia; Fossil Flora at Wesley Vale; Coal Seam near Paddy's River.

EXAMINER OF COAL FIELDS to UNDER SECRETARY FOR LANDS.

*Paddy's River,
5 September, 1861.*

SIR,

I left Bungonia yesterday, having gone there for the purpose of tracking out the succession of the strata from the coal field to the gold field—from the carboniferous to the auriferous deposits—for the section I am preparing, in compliance with instructions from the Honorable the Minister for Lands, to accompany the series of geological specimens collected by me, and about to be sent to the London Exhibition.

2. I have not only been much gratified but much instructed by this examination.

3. The Bungonia Gold Field is the nearest to Sydney, from whence it may be easily reached in twenty-four hours.

4. There was, at most, a dozen men at work, in what is called the Washed-away Creek. The day before my visit a nugget of two and a half ounces was found, and on the second day after another of greater weight was picked up in prospecting. I purchased the first to serve to illustrate the rock specimens which I have collected in connection with the gold deposits.

5. After examination of the locality, I was satisfied that the gold comes from a very coarse conglomerate, which forms high and steep ridges bounding the creek on either side; and is not derived from the creek bed in which the prospecting and digging is mainly carried on; the course of the creek merely serves as a trough to catch the gold as it weathers out and is dislodged from the conglomerate.

6. The bed rock, or the rock on which the waters run, is a shale on edge, probably auriferous, and on this shale the conglomerate is bedded; but it is from the ruin and breaking down, and waste of the conglomerate hills that the gold is derived, and this natural waste may be sufficient to supply and excite the research of the present number of workers for any indefinite period.

7. Gold specks can be found in any part of the creek. I washed my first pan of stuff, and my awkwardness lost me, in all probability, half the contents, but I had many specks remaining, and there was no dish of dirt washed before me which did not leave some specks of gold.

8. I saw many small nuggets in possession of the diggers, and though the conglomerate is composed of a great variety of quartzite rocks, I observed, and the testimony of the diggers confirmed this observation, that the white quartz is chiefly the *contentant* of the precious metal. I did not see any speck of gold in any trenchant colour of pebble, black, red, brown, or grey, but always in the white, or pale rosy white quartz; so that, in this locality at least, I should choose the drift in which the white quartz is most abundant. The whole mass of these conglomerate ridges would probably pay for the application of appropriate machinery to break them up, and perform with rapidity what is now effected only very intermittently, and by slow degrees, from the operation of natural causes. The white quartz could then be separated and crushed apart.

9. Whence came this conglomerate? What is its age? It is older than the coal. If it came from beyond the Shoalhaven gulleys it could not have crossed them; yet it appears from the lay of the drift to have come in that direction. Then the Shoalhaven gulleys are the younger, and the deposit of this quartz drift must have preceded the terrible convulsions which produced the chasms, 2,000 feet deep of the Shoalhaven, and threw up the lowest limestone rocks to the surface. These are questions of geological interest which may be usefully investigated at a future opportunity.

10. I have been able to track the shales which form the bed rock of the Washed-away Creek from the very margin of the Coal Field at Paddy's River, to the Shoalhaven gulleys, and the drift also seems to extend far beyond the locality of the researches in the Washed-away Creek.

11. I was informed that a creek running parallel to the Washed-away, and at some distance, called Spring Creek, presented at least equal prospects, and is bounded by like conglomerate ridges, but as the object of my visit was attained, and being tied to time for my return, I did not push my researches further.

12. I have thought it my duty to report to you, for the information of the Honorable the Minister for Lands, that I had, for the reasons given, extended my examination beyond the Coal Field.

13. I have also been to Wesley Vale, about ten miles west from Gunning, where I found some specimens of peculiar geological interest; and after passing a couple of days here to verify the thickness of the coal seam outcropping in the vicinity of Paddy's River, and which I already know to be six feet in thickness of solid coal, I shall cross the country to Belambi and Wollongong on my return to Sydney, and hope to arrive there by the 16th instant.

I have, &c.,

W. KEENE,

Examiner of Coal Fields.

1862.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CULTURE OF FISH.

(PETITION OF ALEXANDER BLACK.)

Received by the Legislative Assembly, 4 November, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Alexander Black,—

RESPECTFULLY SHEWETH:—

That he has had long experience in the rearing, taking, and preservation of fish in Great Britain and in other countries, and he is desirous of attempting the culture of fish in this Colony, and to that end has surveyed various pieces of unoccupied water and swamp in the vicinity of this city, with a view of making them available for this purpose.

That he has found a certain swamp and pool of water, which are situated about two miles south-east of the Township of Randwick, and about three-quarters of a mile west of Long Bay.

That this swamp and pool of water do not in any way interfere with the Sydney water supply, and are not at present used for any purpose whatsoever.

That your Petitioner having applied to the Government for a lease of the said waters, received a letter, dated 18th ultimo, intimating that his application would not be complied with.

Your Petitioner, therefore, humbly prays that your Honorable House will take such steps as will enable him to carry out his intentions.

And your Petitioner, as in duty bound, will ever pray, &c., &c.

ALEX. BLACK.

Sydney, 3rd November, 1862.

NEW SOUTH WALES.

PROPAGATION OF SALMON.

(INHABITANTS OF EASTERN COAST OF AUSTRALIA.—No. 1.)

Ordered by the Legislative Assembly to be Printed, 17 July, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The Memorial of the undersigned Inhabitants of the Eastern Coast of Australia,—

HUMBLY SHEWETH:—

1stly. That your Memorialists feel it a matter of deep congratulation that your Honorable House voted during the last Session of Parliament a sum of money to defray the expense of a survey of the Shoalhaven and Snowy Rivers, for the purpose of ascertaining how far they were adapted for the propagation of the Salmon Fish.

2ndly. That your Memorialists are satisfied not only of the adaptability of these rivers, but of the superior advantages of other streams on the East Coast, viz. :—the Clyde, Moruya, Tuross, and Bega Rivers, each having all the requirements necessary for the propagation of this invaluable fish—rapid current, clear stream, gravelly bottom, deep pools and shallow streams alternating, with a temperature highly favourable.

3rdly. That your Memorialists believe firmly in the practicability of the introduction of the Salmon Ova. The transactions of the Government Piscatorial Society of France, under the immediate patronage of the present enlightened Emperor of that Territory, and the late attempt of the Tasmanian Government, afford incontestible proof of the practicability of the scheme.

4thly. That your Memorialists respectfully submit, that a matter which has been the subject of legislation in Britain for hundreds of years, has been before Select Committees of the House of Commons time after time, and has been thought worthy of inquiry by a Royal Commission, commends itself to the attention of your Honorable House.

5thly. That your Memorialists respectfully quote from the Parliamentary Blue Book of 1836, wherein it is shewn that the annual rental of the rivers of Scotland approaches £1,000,000. That some recent returns shew the enormous value of the Salmon as an article of commerce, as well as a luxury and a necessary to the local inhabitants.

6thly. That your Memorialists believe that some fifty thousand pounds is annually spent in the importation of fish, which, seen as interest, would represent a capital of £625,000; and your Memorialists are assured the Salmon might be introduced into this Colony by the outlay of a sum insignificant when compared with the certain results.

7thly. That your Memorialists beg respectfully to urge your Honorable House, that with all the advantages nature has so eminently endowed this Colony, it is its province to take the lead of the other British Settlements in this Hemisphere, in bringing about this most desirable end. And your Memorialists earnestly and respectfully pray your Honorable House to take the subject into your early and favourable consideration.

And your Memorialists will, as in duty bound, ever pray.

NEW SOUTH WALES.

OYSTER FISHERIES BILL.

(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 3 June, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker, and to the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, being engaged in the Oyster trade in Sydney,—

RESPECTFULLY SHEWETH :—

That your Petitioners have heard with regret that a Bill is about to be passed in your Honorable House to regulate the Oyster Fisheries of New South Wales.

That before such a measure meets the sanction of Parliament, the following facts may be taken into your honorable consideration :—

The very wide difference between the Oysters taken from the coast of New South Wales and those taken either from the Oyster beds of England, or those of the adjacent Colonies.

Your Petitioners also beg to lay the fact of the Oysters from the various beds of New South Wales having no particular time to spawn, and that they spawn at quite different seasons, and at different places, on the coast, and are therefore never altogether out of season, and that your Petitioners have invariably found the Oysters taken from the Clyde, Hunter, and Port Stephens, and Manning Rivers, to be better during the months of October, November, and December, than at any other time of the year; and we are quite confident that to prohibit the taking of Oysters from these places, at this time of the year, would, so far from being beneficial to the Oysters, be injurious to them, as these Oysters having spawned during the months of June and July, the young fry have not room to grow by themselves, but form in clusters, and never come to either their proper shape or size.

Your Petitioners beg to suggest that the appointment of a competent person to report when the Oysters were fit for gathering, would be the means of rendering it quite unnecessary to stay the taking of the Oysters altogether at any particular season.

Your Petitioners beg to call your attention to the various amounts of destitution which the passing of this Act will cause to some hundreds of persons engaged in, and altogether dependent on this branch of trade, more particularly as during the months of October, November, December, and January, the greater part of the trade is done in these months, being the busiest of any in the year, and also to the fact of such an Act depriving the people of Sydney, at a time when very little meat is consumed, of one of the best substitutes besides sick persons, to whom all medical gentlemen recommend Oysters, as being the most nutritious of all food.

Your Petitioners beg respectfully to state that they are prepared to shew to your Honorable House, that there are no grounds for supposing that any scarcity of Oysters need be apprehended for a great number of years; in proof of which your Petitioners beg to call the attention of your Honorable House to the fact of Port Hunter—one port alone—having supplied both the Sydney and Melbourne markets with the greater part of the Oysters used during the period of twelve years, and notwithstanding continues to afford an inexhaustible supply.

Your Petitioners therefore suppose all the rivers from Twofold Bay to the Richmond contain equally as many as at the Hunter, and that one newly-discovered place alone, Cape Hawke, contains Oysters enough to supply Sydney for at least ten years.

That the formation of artificial Oyster beds, in the humble opinion of your Petitioners, is a matter of great difficulty, as at different times it has been proved that the Oysters of this coast will not bear removing from their original bed or rock, and that as soon as removed to an artificial bed, invariably die after a few months.

Your Petitioners, therefore, humbly pray that your Honorable House will give due consideration to this your Petitioners' humble Petition, and that you will be pleased to appoint a Committee to inquire into this particular branch of trade.

And your Petitioners, as in duty bound, will ever pray, &c.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WOOLLOOMOOLOO BAY LAND RECLAMATION BILL.
(PETITION OF THOMAS BUCKLAND.)

Received by the Legislative Assembly, 4 June, 1862, and Printed under the Sessional Order of that day.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Thomas Buckland, of the City of Sydney, merchant,—

RESPECTFULLY SHEWETH :—

That the Government of the said Colony, deeming it desirable that the mud flat at the head of Woolloomooloo Bay, in the City of Sydney, should be reclaimed and improved, and a public wharf formed, having frontage to the said Bay, on the 10th October, 1851, by Proclamation in the *Government Gazette*, invited the co-operation of the owners of the lands fronting the Bay, offering to permit such owners as should fill in and reclaim the space between their lands and the proposed public wharf, to retain and have the land so formed as compensation for the expense they would thereby be put to, and for the loss of their water frontage by the formation of the said public wharf.

That, upon the faith of this offer being adhered to by the Government, your Petitioner purchased lands having frontage to the Bay, paying a high price for the same, in consequence of the advantages conferred by the said Proclamation.

That your Petitioner applied to be allowed, in the manner required by the Proclamation, to reclaim the portion of the flat between the lands so purchased by him and the proposed wharf, which was granted to him.

That your Petitioner commenced reclaiming the said portion of the flat, and was engaged in so doing, when, in the month of February, 1856, he was ordered by the Government not to proceed with such reclamation; that your Petitioner submitted to the said order, at the same time protesting that he did not relinquish in any way the rights he had acquired under the permission granted to him, and by his having acted thereunder.

That your Petitioner has repeatedly made application to Government to determine the question as to the compensation to which he claims to be entitled, by reason of his having been prevented proceeding with the said reclamation.

That, for the purpose of providing materials for filling in the land he proposed reclaiming, your Petitioner purchased land, which by reason of the said work having been stopped is of very little value to him; and that, since the time the said works were so stopped, the last-mentioned land and the lands having water frontage, purchased as above mentioned, have remained unproductive, and have become, and are now, unsaleable and of little value.

That your Petitioner would not have commenced reclaiming the said lands if he had not believed the permission granted to him was an irrevocable license; and your Petitioner would respectfully submit to your Honorable House that such in reality was its effect, and in support of his claim that it should be so considered, your Petitioner would respectfully refer to the opinion of the Attorney General, J. H. Plunkett, Esq., and the Solicitor General, Sir W. M. Manning, in their letter to the Honorable the Colonial Secretary, of date 7th June, 1851 (published in a Return to an Address of your Honorable House, dated 28th November, 1856), in which they state,—“ They are of opinion the contemplated arrangements “ can be legally made with the proprietors of land having a frontage to Woolloomooloo Bay, “ and that there will be no practical difficulty in enforcing the fulfilment of the engagement “ which it is proposed that the proprietors should enter into. The permissive extension of “ the frontages of proprietors would not confer upon them a strictly legal title, but they will “ probably be content to accept, as an equivalent for the stipulated work, the really irrevocable “ license which they would receive from the Government.”

That your Petitioner is advised, and believes, that the Bill now before your Honorable House, intituled "The Woolloomooloo Bay Land Reclamation Bill," did not provide for the settlement of your Petitioner's claim, inasmuch as it only provides for compensation to persons who, having the ordinary right to water frontage, may hereafter be deprived of it.

Your Petitioner therefore humbly prays that your Honorable House will be pleased to take the premises into consideration, and afford to your Petitioner such relief, by providing in the said Bill for the settlement of your Petitioner's claim for compensation, on account of his being deprived of the advantage of reclaiming the said land, and of the losses he has sustained by the delay, loss of interest upon the capital expended by him, the deterioration of his property, occasioned by the Government preventing him proceeding with the said works; or that your Honorable House will afford to your Petitioner such other relief as to your Honorable House may seem meet.

And your Petitioner, as in duty bound, will ever pray.

THOS. BUCKLAND.

WATER SUPPLY FOR CAMPBELLTOWN.
(DISTRICT OF CAMPBELLTOWN.)

Received by the Legislative Assembly, 30 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The respectful Petition of the Inhabitants of the District of Campbelltown,—

SHEWETH :—

That in consequence of the long continuance of dry weather, the only available supply of water for the use of your Petitioners and their cattle, viz., the Campbelltown Reservoir, is already nearly exhausted.

That most of your Petitioners are individually unable to procure a supply of water from Menangle, a distance of five miles, and are apprehensive, if some prompt means are not adopted to ensure a supply, in a very short time your Petitioners will be subject to one of the most calamitous afflictions to which they can be possibly liable,—a total want of that necessary article of subsistence.

That your Petitioners would respectfully draw your attention to facility with which water may be brought by railway line, through iron pipes or otherwise, from Menangle, and they earnestly pray the humane consideration of the premises by your Honorable House.

And your Petitioners, as in duty bound, will ever pray.

INTOXICATING DRINKS.

(PETITION RELATIVE TO.)

Received by the Legislative Assembly, 10 September, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Inhabitants of the Town of Bathurst,—

SHEWETH:—

That drunkenness and crime, disease, accidents, and death, are produced in this Colony to an awful extent, by the sale of Intoxicating Drinks.

Your Petitioners therefore humbly pray your Honorable House to pass an Act prohibiting the sale of these drinks.

And your Petitioners, as in duty bound, will ever pray, &c, &c.

CARRIERS LICENSING BILL.

(MERCHANTS, TRADERS, AND OTHERS, OF THE CITY OF SYDNEY.)

Received by the Legislative Assembly, 11 July, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Legislative Assembly, in Council assembled.

The humble Petition of the undersigned Merchants, Traders, and others, of the City of Sydney,—

SHEWETH:—

That they have learned with pleasure, that a Bill to license Carriers and Carriers' Agents has been introduced to your Honorable House.

That your Petitioners have for many years felt the necessity for a measure of this nature; for under the present system, property exceeding in value a million pounds sterling is entrusted to the uncontrolled possession (often for months at a time) of unknown persons.

That your Petitioners believe the proposed Bill will be a great boon to the trading community throughout the Colony.

Your Petitioners therefore pray that your Honorable House will pass the said Bill.

And your Petitioners, as in duty bound, will ever pray, &c., &c., &c.

[Here follow 30 Signatures.]

HAWKERS' LICENSES.

(CERTAIN LICENSED HAWKERS AND OTHERS.)

Received by the Legislative Assembly, 29 May, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

HUMBLY SHEWETH:—

That your Petitioners are for the most part Licensed Hawkers. That they respectfully call the attention of Parliament to the state of the law with reference to their licenses.

As the law stands at present, they are required to make application for a fresh license upon entering any new district; this they humbly submit is a great grievance, occasioning them serious loss of time, and entailing upon them infinite trouble.

In some districts they have to travel twenty or thirty miles to a Magistrate to make the application to, and if he happens to be from home, they are put to great inconvenience thereby.

Under any circumstances, as the law stands at present, the delay, loss of time, inconvenience, and pecuniary loss, are most disastrous to your Petitioners.

They therefore humbly pray that your Honorable House will amend the law, so that any license issued shall have a general application to the Colony of New South Wales.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 90 Signatures.]

AMENDED SECRET BILLS OF SALE PREVENTION BILL.

(CHAIRMAN AND COMMITTEE OF THE NEW SOUTH WALES TRADE PROTECTION SOCIETY.)

Received by the Legislative Assembly, 27 June, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The Petition of the Chairman and Committee of the New South Wales Trade Protection Society,—

HUMBLY SHEWETH :—

That, to provide against the recurrence of the losses sustained by the Merchants and Traders of New South Wales, which have arisen by means of persons obtaining from them large credits by the possession and apparent ownership of chattels and merchandise, but which have been secured to one creditor by Bill of Sale, your Petitioners have hitherto been enabled, by the Act nineteenth Victoria, No. 2, intituled "*An Act for preventing Frauds upon Creditors by Secret Bills of Sale of personal Chattels*," to search in the Prothonotary's Office the record of such Bills of Sale, and to guard against such losses accordingly.

There is now before your Honorable House a Bill, intituled "A Bill to amend the Act 19 Vic., No. 2," to prevent such search.

Your Petitioners therefore pray that the third clause of the Bill to amend the before-mentioned Act, be so far altered as to continue to the public the right of search at present granted by the Act of Council 19 Vic., No. 2.

And your Petitioners will ever pray, &c.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

AMENDED SECRET BILLS OF SALE PREVENTION BILL.
(BANKERS, MERCHANTS, AND TRADERS, IN SYDNEY.)

Received by the Legislative Assembly, 27 June, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Bankers, Merchants, and Traders, in Sydney, in the Colony of New South Wales,—

HUMBLY SHEWETH:—

That your Petitioners have observed with much regret, that a Member of your Honorable House has introduced a Bill, intituled, "*An Act to Amend the Act nineteenth Victoria (No. 2) relating to Secret Bills of Sale of Chattel Property,*" the principal clause of which (No. 3) will have the effect of throwing obstacles in the way of free search of the recorded copies of Bills of Sale registered in the Prothonotary's Office.

Those documents having been found highly detrimental, in most instances, to the interests of creditors generally, inasmuch as they provided a security for one creditor only, (whose claim might or might not be merely nominal), at the expense of all the rest, the Act now in force was passed expressly to render invalid the operation of Secret Bills of Sale, and allows a right of search on payment of a small fee.

Believing that any restriction of the said right of search would be highly prejudicial to the mercantile community, and would also be repugnant to the principles of liberal institutions,—

Your Petitioners pray that your Honorable House will allow no alteration of the Act 19th Victoria, No. 2, particularly of the nature proposed in clause No. 3 of the Bill now under consideration.

And your Petitioners will ever pray, &c., &c.

[Here follow 53 Signatures.]

SALE OF COLONIAL WINES REGULATION BILL.
(LICENSED VICTUALLERS, BALMAIN.)

*Received by the Legislative Assembly, 2 October, 1862, and Printed under the Sessional
Order of 4 June, 1862.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Licensed Victuallers, residing in the
Hamlet of Balmain,—

SHEWETH :—

That a Bill “to regulate the sale by retail of Wine Cider and Perry produced
in the Colony” has lately been introduced into your Honorable House, and has been read a
second time.

That in the opinion of your Petitioners, the said Bill will, if passed into law, inflict
very great injustice upon the publicans, whose license fees in the aggregate amount to
upwards of sixty thousand pounds annually.

That a number of licensed victuallers have for some years past, by constantly
keeping on hand a supply of Colonial Wines, endeavoured to encourage the consumption
thereof, and that in the opinion of your Petitioners, sufficient facilities already exist for
meeting the requirements of the public in that respect.

That the said Bill would also, if passed into law, inevitably lead to the establishment
of sly grog shops, especially in the country districts, to such an extent as would necessarily
involve a large increase to the police force of the Colony.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased
to withhold your assent to the said Bill.

And your Petitioners will ever pray, &c.

SALE OF COLONIAL WINES REGULATION BILL.
(LICENSED VICTUALLERS, ALBURY.)

Received by the Legislative Assembly, 21 October, 1862, and Printed under the Sessional Order of 4 June, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Licensed Victuallers of the District of Albury,—

HUMBLY SHEWETH:—

That your Memorialists have each invested, and have now at stake, a large amount of capital in connection with their respective businesses as licensed victuallers.

That your Memorialists view with concern a measure now before your Honorable House, whereby it is proposed to sanction the sale of Colonial Wine in single bottles, by storekeepers and other unlicensed persons, throughout the Colony.

That your Memorialists are under numerous penalties imposed upon them by law, and have to pay a large sum annually for the privilege of selling wines and spirits in retail quantities.

That your Memorialists have paid for such licenses upon the understanding that they thereby obtained a privilege which was not to be accorded to others who did not do so.

That should the proposed measure pass into law, the interests of your Memorialists will be greatly prejudiced and injured, by the permission given to others to vend Colonial Wines by the single bottle, in stores, tents, and unlicensed places generally.

That your Memorialists all sell Colonial Wine by the bottle or glass at the present moment, and they do not believe that there is any difficulty in obtaining it in that manner throughout the Colony.

That your Memorialists are confident by according the privilege to unlicensed persons it would be greatly abused, that spirits of the worst quality would be sold largely under the name of Colonial Wine, and that drunkenness and crime would greatly increase, and that there would be no means of preventing such an injury to the principles of morality generally.

For these and numerous other reasons, your Petitioners humbly pray that your Honorable House will be pleased to reject the measure now under your consideration entitled the Colonial Wines Bill.

And your Petitioners, as in duty bound, will ever pray.
