pro Tramway Engineer.

No. 59.

Messrs. Topham, Angus, & Co., to The Tramway Engineer.

Sir, We herewith enclose you a copy of report received by us last evening from our foreman platelayer, Moore Park, it is in every particular substantially correct. We have done our very utmost to complete the works ready for opening on the September, but of course if we are to be again delayed for rails, all our efforts will be rendered futile and accomplishment of the works will be impossible. Tramway Contractors' Office, 61, Botany-street, Sydney, 21 August, 1880.
Yours, &c.,
TOPHAM, ANGUS & CO.

[Enclosure to No. 59.]

Mr. J. Cook to Mr. Angus.

Sir, There has been no one carting rails to-day, I have all rails in that are on the ground, and if you do not get them in faster I shall be all behind with the road, I have three days work to straight road, and five days to points and crossings. I am also short of fish-bolt plates. 20 August, 1880.

JOHN COOK,
Foreman Platelayer.

Inform Messrs. Topham, Angus, & Co., that 21 tons of T rails were dispatched from the Eskbank Iron Works on the 21st instant, and will probably be available to-day. Telegraph to Mr. Hughes requesting him to forward fish-plates and bolts immediately.—E.G., 23/8/80.

No. 60.

16

No. 60.

Telegram from Tramway Engineer to Mr. Hughes.

Lithgow, 23 August, 1880.

THE contractors are waiting for fish-bolts, please forward as soon as possible.

No. 61.

Tramway Engineer to Commissioner for Railways.

Contract No. 3 for Permanent-way Materials, Government Tramways.

The Commissioner,

I have to call the Commissioner's attention to that the Eskbank Company, which was the successful tender for the supply of 700 tons of rails besides fastenings under contract No. 3, has not yet signed the necessary bond.

As these materials are urgently required for contract No. 2 E for which tender has been accepted I shall be glad if the Commissioner will please say what steps are to be taken.

E.G., 6/9/80.

Whose tender was accepted? Let me have particulars in full at once.—CH.A.G., 8/9/80. Mr. Gjedsted,—Very urgent.

The tender of Enoch Hughes was accepted for rails and fastenings. The dates of delivery were as under:—

25 % within four weeks after date of acceptance of tender; 25% on or before the 17th day of August, 1880; 25% on or before the 31st day of August, 1880; 25% on or before the 14th September, 1880; so that consequently 75% should have been supplied before now, and the total quantity within four days from date. The total quantities are:—700 tons rails; 28½ tons fastenings.—E.G., 10/9/80.

Write to Mr. Hughes requesting him to say whether he intends proceeding with the work, and within what time delivery will take place; request reply not later than Saturday.—CH.A.G., 13/9/80.

No. 62.

The Commissioner for Railways to Mr. Hughes.

Sir, Department of Public Works, Railway Branch, Sydney, 14 September, 1880.

Adverting to your tender which was accepted for the supply of 700 tons of rails and 28½ tons of fastenings for the Government Tramways, Contract No. 3, I have the honor to inform you that it has been reported to me that up to the present time you have not delivered any of the material required, although the specification provides that the whole of the quantity contracted for should have been delivered on or before this day. I have therefore to request that I may be informed not later than Saturday next, the 18th instant, whether it is your intention to proceed with the work, and within what time delivery of the material will take place.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 63.

Mr. Hughes to The Commissioner for Railways.

Sir, Eskbank Iron Works, Lithgow, 21 September, 1880.

In answer to your letter having reference to the supply of 700 tons rails, and 28½ tons of fastenings for contract No. 3, Government Tramways, and requiring to know when they will be delivered, I have the honor to inform you that about one-sixth of the fastenings have been made and delivered, and if the ordinary facilities had been afforded us, we would have had 50 tons of the rails delivered before the receipt of your letter. I took out our rolls last Friday to have them redressed, and I am now engaged making a pair of new ones so that I may be able to turn out a cleaner rail, so that when these rolls are ready (which I think will be in about fourteen days), I can deliver from 90 to 100 tons of rails per week, with the requisite fastenings until the contract is completed. I have now on hand about 900 tons pig iron, and am making over 100 tons per week to select from which iron of the best quality for rail making.

I have informed our Managing Director in writing, on the 28th August last, of the dates on which I would be prepared to deliver quantities of contract No. 3, and I understand that he had informed the Engineer for Tramways, and the contractor of the same.

I have great confidence that I will be able to deliver contract No. 3, as now stated.

I am, &c.,

ENOCH HUGHES,
Manager, *per* R.M.N.

Tramway Engineer for Report.—CH.A.G., B.C., 22/9/80. Neither contract No. 1 nor 2, is as yet completed. It is to be hoped as Mr. Hughes says that a cleaner rail will be supplied in future.—E.G., 23/9/80. The Engineer has visited the works, perhaps he can say if there is any prospect of the undertaking to supply being fulfilled.—CH.A.G., 29/9/80. From what I saw at the works, I do not believe that we will receive any rails before the 11th proximo. I think Mr. Hughes now sees the necessity of keeping us constantly supplied so that the road contractors shall not be delayed.—E.G., 29/9/80. Commissioner. Seen.—CH.A.G., 3/10/80.

No. 64.

Telegram from Tramway Engineer to Inspector Bladen.

6 September, 1880.

WHEN will street rails and fastenings, under contract No. 2, be forwarded. Contractors require them urgently.

No. 65.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow Station, 6 September, 1880.

Your telegram of to-day was duly received, but as Mr. Hughes is in Sydney I could not get a definite reply. I may, however, say that forty street rails were loaded on the 3rd instant and eighty to-day. About 200 more are rolled ready for straightening, and I have no doubt they will be sent away this week. I will see Mr. Hughes about the matter as soon as he returns and report to you.

Yours, &c.,

THOS. BLADEN.

Seen.—E.G., 8/9/80.

7 September, 1880.

CAN you forward some cotters and spikes by to-night's mail. Urgently required.

No. 67.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow, 8 September, 1880.

I received your telegram to-day, but could not get an answer immediately to reply by wire.

Mr. Hughes says he will send some cotter-pins and cotters to-morrow, and that Mr. Sutherland is seeing to the supply of spikes.

Yours, &c.,

THOS. BLADEN.

Seen.—E.G., 9/9/80.

No. 68.

Memorandum from Tramway Engineer to Inspector Bladen.

10 September, 1880.

As we have now received sufficient rails to enable us to complete the line from Hunter-street to Randwick, the urgency of which work necessitated us to receive some rails which were not exactly in accordance with specification, and as this urgency does no longer exist, I have to request that you will be most stringent in seeing that the terms of specification are carried out to the very letter. I shall, from this date, hold you responsible for the good quality of the materials, as no excuse can on any account be allowed; and I also desire you to refuse to pass any rails which are not fully in accordance with the approved template.

You will please communicate this to the manager of the Eskbank Iron Company.

E. GJEDSTED.

No. 69.

Memorandum from Tramway Engineer to Inspector Bladen.

17 September, 1880.

I ENCLOSE tracing showing section of altered pattern of rail; you will notice that it will require only a little taken out of the rail so that no new rolls will be necessary for this purpose.

There is no necessity for any corrugation on the inner top table.

I have arranged with Mr. Sutherland that the alteration is to be carried out, and trust it will be done at once.

J. P. F.,

pro. Engineer for Railways.

No. 70.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow, 20 September, 1880.

I asked Mr. Hughes to-day if he had received any communication from you with regard to the alteration in the section of street rails, and he said no.

May I ask if you wish me to instruct him to make the alteration.

I presume he had been instructed by you, and the tracing sent to me was for my own guidance.

Yours, &c.,

THOS. BLADEN.

Seen. Mr. Hughes communicated with.—E.G., 22/9/80.

No. 71.

No. 71.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow, 21 September, 1880.

I received the enclosed note from Mr. Hughes this morning, and I immediately went and saw Mr. Hughes and Mr. Sutherland and explained that I was under the impression that they had been instructed in the matter, and that as in previous contracts the tracing sent to me was for my own use and guidance, because your minute says, "I have arranged with Mr. Sutherland that the alteration is to be carried out, and trust it will be done at once."

However I at once took the tracing to the office for Mr. Hughes, and also read from minute to Mr. Sutherland for his satisfaction.

Yours, &c.,

THOS. BLADEN.

Seen. Tracing forwarded to Mr. Hughes.—E.G., 23/9/80.

No. 72.

The Tramway Engineer to Mr. Hughes.

Sir,

Tramway Engineers Office, Sydney, 23 September, 1880.

I forward herewith tracing showing altered section of street rail, which is a copy of one forwarded to Inspector Bladen.

I shall be glad if you will have this work put in hand immediately, as the rails are urgently required.

I have, &c.,

E. GJEDSTED.

Tramway Engineer.

No. 73.

Mr. Hughes to The Tramway Engineer.

Sir,

Eskbank Iron Works, 25 September, 1880.

I have the honor to inform you, in answer to your inquiry respecting the supply of (50) fifty tons tram rails of the same pattern as the present Elizabeth-street tram rail, that I have referred the matter to my roll turner. I find one of the old rails has been altered to admit of us making the steel point. I will therefore require to return one roll. This will enable me to commence delivery of the said 50 tons rails on the Thursday morning following, and complete the delivery of the same on Saturday next.

Please furnish all information as to fastenings as early as possible, to enable me to complete them at the same time.

I have, &c.,

ENOCH HUGHES,

Manager, per R. M'N.

Seen.—Mr. Bladen, to sec.—E.G., 25/9/80. Seen.—THOS. BLADEN. The Commr. to sec. I have since been informed that the rolls have broken down when only 8 tons of rails were rolled.—E.G., 30/9/80.

No. 74.

The Tramway Engineer to Mr. Hughes.

Sir,

Tramway Department, Sydney, 28 September, 1880.

I forward herewith, as requested, tracings of those articles which were included in your contract No. 2, but for which you did not provide yourself with copies of the contract drawings. I trust you will supply the materials as soon as possible, and also forward the rails on the date named in your letter of 25th instant.

Yours, &c.,

E. GJEDSTED.

No. 75.

Messrs. Topham, Angus, & Co., to The Tramway Engineer.

Sir,

Contractors' Office, 25 September, 1880.

To-day Mr. Greenwood has verbally refused to peg out any more work, which brings contract No. 1 E. to a standstill on Monday morning, 27th instant. We have no choice but to suspend the works, and this is a course of action which we are very unwilling to pursue, particularly so seeing that in the course of a few days we could finish this contract. For us to keep our staff, gangers, horses, and plant idle is a matter of no small moment, and is the more aggravated by the many stoppages which have occurred during the progress of the contract for the want of permanent-way material.

Trusting that you will give such instructions as will enable us to finish contract No. 1 E. without further delay.

We have, &c.,

TOPHAM, ANGUS, & CO.

We are waiting for P.W. materials. The Commissioner to see.—E.G., 30/9/80.

Write to contractors for permanent-way materials, and inform them that if any claim to compensation is set up in consequence of this delay the department will enforce penalties.—CH.A.G., 4/10/80.

In the meantime the Engineer should give the contractors notice that with the other works they have on hand, and which should be proceeded with, they cannot be subjected to much (if any) loss.—CH.A.G., 4/10/80.

Seen.—W.M., 26/10/80.

Commissioner, 28/10/80.

No. 76.

The Commissioner for Railways to Mr. Hughes.

Sir, Department of Public Works, Railway Branch, Sydney, 6 October, 1880.
I have the honor to inform you that I am in receipt of a communication from Messrs. Topham, Angus, & Co., contractors for the construction of tramway contract No. 1 E, stating that they are at a standstill for the want of permanent-way materials.

I have therefore to intimate to you that if any claim for compensation be set up in consequence of this delay, the department will enforce the penalties provided for in the bond.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 77.

Telegram from Inspector Bladen to The Tramway Engineer.

Lithgow, 29 September, 1880.

STILL rolling the rails. Will sample section sent do. Please reply by wire.

No. 78.

Telegram from Tramway Engineer to Inspector Bladen.

29 September, 1880.

BOTH flanges must be rolled full depth, otherwise no room for holes. Instruct Manager to this effect.

No. 79.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow, 29 September, 1880.

I duly received your message to-day, and gave Mr. Hughes a memo. to the same effect.

Soon after sending the telegram to you to-day the roll with which the rails were being rolled broke, and it will be some time before any more rails can be rolled.

Yours, &c.,

THOS. BLADEN.

About forty rails were rolled, but as they are not in accordance with the template I cannot pass them without an order authorizing me to do so.—T.B.

No. 80.

Mr. Hughes to The Tramway Engineer.

Sir,

Eskbank Iron Works, Lithgow, 29 September, 1880.

I have the honor to inform you that we had rolled about 8 tons of the old street rails when the collar of the roll broke. We will now have to set about casting and turning up a new roll.

We will start on the new stalk-rails on Saturday next, and will endeavour to make the bottom roll do.

I have, &c.,

ENOCH HUGHES,

Manager, *per* R. M'N.

The Commissioner to see. This will cause another delay.—E.G., 30/9/80.

No. 81.

Memorandum from Mr. Hughes to Inspector Bladen.

Lithgow, 29 September, 1880.

I HAVE to inform you that as during the remainder of this week this Company will be working for merchant iron, and not on Government work or for Government purposes, your presence will not be required on the works. I will advise you when we resume Government work.

Yours, &c.,

E. HUGHES,

Manager, *per* R. M'N.

This appears to me to be a most extraordinary proceeding. On the 30th ultimo I received a letter from Mr. Hughes, in which he stated that he would make a start on the new stalk-rail on the following Saturday (the 2nd instant). This letter was dated the 29th September, same as above memo. I do not know if Mr. Hughes wanted to get Mr. Bladen out of the way on last Saturday or what other object he may have had in view, but it appears to me to be hopeless to expect to get the work carried out satisfactorily under the present management. The letter referred to was forwarded to the Commissioner on the 30th ultimo.—E.G., 4/10/80. The Commissioner.

No. 82.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow, 4 October, 1880.

Referring to Mr. Hughes's memo. of the 29th September, forwarded for your information, I beg to inform you I attended the work as usual the remainder of the week and found they were working on Government tram rails, straightening and punching them and also making fastenings for the same.

Yours, &c.,

THOS. BLADEN.

Seen.

Seen. Attach this to memo. received from Mr. Bladen this day, and forward for the Commissioner's information.—E.G., 4/10/80. Will Mr. Mason give directions to Mr. Bladen not to relax the care and attention he has shown in superintending on behalf of the department the manufacture of these rails.—CH.A.G., 9/10/80. Seen.—W.M., 13/10/80. Commissioner.

No. 83.

Telegram from Tramway Engineer to Mr. Hughes.

4 October, 1880.

SEND down the best of the Larsen rails, on approbation.

No. 84.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow, 5 October, 1880.

In obedience to your request I have to inform you that the rolls for the new section stalk-rails were tried to-day, but the result was not satisfactory.

They have taken the rolls to the lathe again.

Yours, &c.,

THOS. BLADEN.

Seen. The Commissioner to see.—E.G., 6/10/80. Seen.—CH.A.G., 9/10/80.

No. 85.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow, 6 October, 1880.

I have to report to you that the rolls for new section stalk-rails were tried again to-day, but, as Mr. Sutherland will doubtless inform you, without any very satisfactory result.

I am informed they intend to make a new roll before they try again.

Yours, &c.,

THOS. BLADEN.

The Commissioner to see.—E.G., 7/10/80. Seen.—CH.A.G., 9/10/80.

Where is the authority for ordering 50 tons of the Larsen rails? This rail is not designed to carry the heavy rolling loads which pass over it between Hunter-street and Redfern; it has been rolled to a section calculated to be sufficient for a horse tramway, and I understand the inventor or designer of this rail (Mr. Larsen) has abandoned its use for steam tramways. If required for renewals the question of substituting other rails for the Larsen rail will have to be considered. Will Mr. Mason report on the matter?—CH.A.G., 9/10/80.

I have found no record to show on whose authority these rails were ordered. Some of these will be required for renewals until it has been decided what other design of rail it is intended to replace them with.—W.M., 21/10/80. Commissioner.

Inform contractor that I can only recognize orders given by myself, and request that in future he will undertake no work for the tramway without my written authority.—CH.A.G., 24/10/80.

No. 86.

The Commissioner for Railways to Mr. Hughes.

Sir,

Department of Public Works, Railway Branch, Sydney, 26 October, 1880.

In referring to the materials which you have from time to time supplied for the Tramway Branch, I have the honor to inform you that I can only recognize orders given by myself, and in future I have to request that you will undertake no work for the tramway without my written authority.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 87.

The Storekeeper to The Engineer for Existing Lines.

TRAMWAY material received from Eskbank Iron Company, for which vouchers have not yet been passed. To 22 October, 1880.

					Tons.	cwt.	qrs.	lbs.
Grooved rails	20	11	1	0
$\frac{3}{4}$ -inch spikes	1	11	2	2
Dog-spikes	0	0	2	0

A. RICHARDSON,

22/10/80.

I think it desirable that the storekeeper should certify for all materials delivered from the Eskbank Company as they go into store. I wish it to be understood that I certify only to the fact that the materials have been done in accordance with contract.—W.M., 26/10/80. Commissioner.

Instruct Eskbank Company to consign all material to the storekeeper.—D.V. Storekeeper.—G.B., B.C., 8/11/80. Noted.—A.R., 10/11/80. Secretary.

For Mr. Mason's information.—D.V., 26/10/80. Seen.—W.M., 27/10/80. Commissioner.

No. 90.

Memorandum from The Engineer for Existing Lines to Inspector Bladen.

30 October, 1880.

THE tramway rails can be punched as before with the exception of making the holes a little longer as we arranged in Sydney, as I have decided not to make any alteration in the joints.

W. MASON.

No. 91.

Inspector Bladen to The Tramway Engineer.

Sir,

Lithgow, 30 October, 1880.

I have to report to you that the finish of many of the central-webbed grooved rails rolled up to the present time is not all satisfactory. I have called Mr. Hughes's attention to the matter several times, and have now sent a sample piece to Sydney for your information. You will observe that the surface is cracked all along the inner side of the running edge; many of them are worse than the sample. They are closing the cracks with a calking tool.

I have told Mr. Hughes that I cannot take the responsibility of passing such rails, as the 14th clause of the specification says "The surface of the rails and the edges of the flanges must be free from cracks, burrs, or other defects, and no patching or hammering will be allowed."

He says it is because the iron is so hard, and as for the specification he had never had or seen one.

I had a rail broken and tested, but the iron does not appear from the fracture to be very hard, and the trial piece showed a little permanent set after the removal of the test weight.

Yours, &c.,

THOS. BLADEN.

I examined these rails and reported verbally to Commissioner.—W.M., 18/11/80.

No. 92.

The Engineer for Existing Lines to Inspector Bladen.

Mr. Bladen,

Sydney, 30 October, 1880.

Herewith I forward copy of specification for the manufacture and supply of 700 tons grooved central-webbed rails and 28 tons 10 cwt. fastenings for Government tramways for your guidance.

W. MASON,

pro GEO. LANDERS.

See Appendix.

No. 93.

Memorandum from Engineer for Existing Lines to Inspector Bladen.

Engineer for Existing Lines Office, Sydney, 1 November, 1880.

HEREWITH I forward tracing of wood-screws, cotters, and pins (tramway fastenings). Have some of these forwarded to Sydney as early as possible.

Please acknowledge receipt of tracing.

W. MASON,

pro GEO. LANDERS.

Tracings of fastenings duly received. Mr. Hughes has promised to have some sent to Sydney at once.—THOS. BLADEN, 2 Nov., 1880.

No. 94.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 2 November, 1880.

I beg to inform you that I noticed to-day that the contractors are making the heads of the wood-screws about $\frac{1}{8}$ " larger in the square than the drawing, and as they are also a little longer and not pointed

pointed it makes each screw weigh nearly 2 ozs. heavier than the given weight. As Mr. Hughes does not think it will matter, I thought it best to inform you at once, as it will make a great difference in the weight of the number required.

Yours, &c.,
THOS. BLADEN.

P.S.—Of course I called Mr. Hughes's attention to it, and he said he would consult you about it before altering the dies.—T.B.

No more required of this size.—W.M., 18/11/80.

No. 95.

Mount Victoria, 2 November, 1880.

WILL you kindly come to Iron Works. Cannot forward any tram rails until you have seen them.

I will go to Lithgow to-morrow, as the rails are urgently required.—W.M., 3/11/80. Commissioner.
Seen.—CH. A.G., 4/11/80.

No. 98.

Memorandum from Engineer for Existing Lines to Inspector Bladen.

Sydney, 10 November, 1880.

I WISH you to come to Sydney by mail train to-night, and also see Mr. Hughes, and ask him to accompany you, as I wish to see you both at my office to-morrow morning with reference to rolling of tramway rails.

WM. MASON.

No. 99.

The Engineer for Existing Lines to The Commissioner for Railways.

Proposed alteration of rails for Tramway.

Railway Branch, Engineer for Existing Lines Office, Sydney, 10 November, 1880.

THE heavy section of rail, about 82 lbs. per yard, proposed to be laid down under contract No. 2 E, I consider very unsuitable, and propose to supersede it by a rail of the T pattern, about 40 lbs. per yard.

The Eskbank Iron Company, who have the contract for rolling those heavy rails and supplying fastenings for contract No. 2 E, would, I believe, have no objections to roll instead the form of rail and fastenings I now propose.

I have spoken to Mr. Angus, one of the firm of the contractors for laying the tramway, and he says they will be glad to agree to the alteration I now propose.

As I have already explained to the Commissioner, verbally, my reason for making this alteration, it is unnecessary to repeat it; but as the matter of supplying the rails, &c., to the contractors is most urgent, I now submit this for the Commissioner's decision.

WM. MASON.

No. 100.

Minute of Commissioner for Railways.

10 November, 1880.

MR. MASON says that by the adoption of the T rails, with a side iron built up alongside of it to form a groove for the wheel flange, he will construct a line which will offer no impediment to the ordinary wheel traffic and be cheaper, as it will be lighter, and consequently the ton of rails will cover a larger area. As Mr. Mason strongly advocates this form of rail, and will see that it is made out of the best colonial mine iron, which will make a rail almost if not quite as durable as any steel rails we are likely to get from England, I recommend that the form of rails suggested by him be approved. They can be rolled without delay, and the change of rail will not necessitate any postponement (or at all events for only a very short period) of the time for completing the line for traffic.

I would also recommend that the order sent to England for steel rails rolled to the section now abandoned be cancelled by cablegram, and that rails of the pattern suggested by Mr. Mason be ordered in their stead.

CH. A.G.

Approved.

Approved.—J.G., 10/11/80. Mr. Mason to see. Please return early for the countermanding of the order sent to England.—CH.A.G., 10/11/80. Should a lower price be obtained from Lithgow Company in consideration of lighter rail?—CH.A.G.

I do not think a lower price could be obtained, as the same amount of labour, &c., will be required for the new rail as for the original one, and the former is about two-thirds the weight. I expected an increase in price would have been asked on this account by the contractors.—W.M., 17/11/80. Commissioner.

Send cablegram to Agent General requesting him to abandon proposal to obtain steel rails to the pattern enclosed in our letter to him of 5th October.—CH.A.G., 19/11/80.

No. 101.

Cablegram from Secretary for Public Works to Agent General.

22 November, 1880.

CANCEL order tramway rails sent letter fifth October. Design abandoned.

No. 102.

Mr. Hughes to The Commissioner for Railways.

Sir,

Eskbank Iron Works, Lithgow, 19 November, 1880.

I have the honor to inform you that the rolls for the new 42-lb. tram rail, T pattern, are completed, and I am now in a position to push on with the manufacture of the rails; but referring to your letter, No. 80/1,934, I find that before doing so it will be necessary for me to obtain your written authority.

Will you be pleased to furnish the required permission at your earliest convenience.

I have, &c.,

ENOCH HUGHES,

Manager, *per* R. M'N.

As soon as Mr. Hughes informs me that he is prepared to roll the T rail, with guards complete and fastenings according to the drawing, at the same price and under the same conditions as the existing contract and for the balance thereof, I shall be prepared to give him an order to proceed, subject to the approval of the engineer.—CH.A.G., 20/11/80.

Mr. Mason to see.—G.B., 22/11/80.

No. 103.

The Commissioner for Railways to Mr. Hughes.

Sir,

Department of Public Works, Railway Branch, Sydney, November 20, 1880.

In acknowledging the receipt of your letter of yesterday's date, stating that you are in a position to proceed with the manufacture of the new 40-lb. tram rail of the T pattern, and asking that authority for your doing so may be given, I have the honor to inform you that as soon as you assure me that you are prepared to roll the T rails with guards complete and fastenings according to the enclosed drawing, at the same price and under the same conditions as the existing contract and for the balance thereof, I shall be prepared to give you an order to proceed, subject to the approval of the engineer.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 104.

The Engineer for Existing Lines to The Commissioner for Railways.

New Tramway Rail.

Sydney, November 20, 1880.

I FORWARD herewith tracing of new tramway rail, which has already been approved to supersede those now in use for the purpose of being forwarded to the contractor by the Commissioner.

I saw Mr. Hughes, the contractor for supplying rails of the original pattern, and he has agreed to roll this pattern, including guards and fastenings, at his existing contract price.

I would however suggest that he should be requested to state so in writing.

WM. MASON.

On another paper I directed a letter to be sent to Mr. Hughes to-day.—CH.A.G., 20/11/80.

No. 105.

Mr. Hughes to The Commissioner for Railways.

Sir,

Lithgow, November 27, 1880.

In answer to yours of the 20th instant, No. 80/3,797, informing me that so soon as I could assure you that I was prepared to roll the 40-lb. T rail for tramways with guards complete and fastenings according to the enclosed drawing, at the same price and under the same conditions as the existing contract, and for the balance thereof, you would be prepared to give me an order to proceed subject to the approval of the Engineer, I have the honor to inform you that I have the rolls, iron, and tools for fastenings, and will be prepared to commence on Tuesday next, the 30th instant, with the rails and fastenings,

fastenings, and the guard rails in about fourteen days, and supply you with about 100 tons per week or more if required, and at the prices in the contract referred to (some of the conditions of former contract cannot apply to this), but the materials and workmanship will be completed to the satisfaction of the Engineer for Existing Lines.

I have, &c.,

ENOCH HUGHES.

Manager, Eskbank Iron Co.

Mr. Mason.—CH.A.G., B.C., 29/11/80. This seems sufficient. I expect specimen of rail in Sydney to-night, and if Commissioner will please to give the order for rolling as soon as I inform Mr. Hughes that the pattern they submit is right time will be saved.—W.M., 29/11/80. Commissioner.
Give order directly, Mr. Mason is satisfied.—CH.A.G., 29/11/80.

No. 106.

Mr. Hughes to The Engineer for Existing Lines.

Sir,

I have to inform you that new rail rolls were tried to-day. The rail does not weigh more than 40 lbs. per yard. I cannot send you section as the rolls have got to go back into the lathe.

Lithgow, 18 November, 1880.

Yours, &c.,

E. HUGHES,

Manager, *per* R. M'N.

Seen.—W.M., 20/11/80.

No. 107.

Telegram from Mr. Sutherland to Engineer for Existing Lines.

Eskbank, 27 November, 1880.

MRX idle for two days; elections; altering rolls a little, will send sample by mid-day train on Monday; will be ready to commence rolling on Tuesday morning; everything ready for commencing the fastenings at once.

Seen.—W.M., 27/11/80.

No. 108.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

The rolls for the new tram rails were tried again on Thursday I am told, but they had to put them in the lathe again. I expect they will try them again on Monday or Tuesday, I will advise you of the result as soon as possible.

Lithgow, 27 November, 1880.

Yours, &c.,

THOS. BLADEN.

Telegram from Inspector Bladen to Engineer for Existing Lines.

Lithgow, 27 November, 1880.

AM not certain; rolls are right; tried on Thursday, and have to be tried again.

Telegram from Inspector Bladen to Engineer for Existing Lines.

Lithgow, 30 November, 1880.

TRIED rolls again and taken them back to the lathe; cannot get any decided information from Mr. Hughes.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

I have to report to you that the rolls for new tram rails were tried again this morning. As Mr. Hughes did not say anything to me about the result or submit a sample of the section, I asked him in writing if they were ready, or if not, when I might tell you to expect they would be. His answer was "that he had already telegraphed you on the subject."

Lithgow, 30 November, 1880.

They were tried again to-night, and as Mr. Hughes did not show the section to me, I asked him if I might take one of the short pieces that were cut off; he said, "No, there is no order for them yet." I then told him I did not wish to take it away, I simply wished to compare it with the drawing; he then said, "No, it is the company's property; we have no order for them yet."

As far as I had opportunity of judging, it seemed to me, not in accordance with the drawing, the head being larger on one side than the other.

I am, &c.,

THOS. BLADEN.

No. 109.

Telegram from Mr. Hughes to Engineer for Existing Lines.

Lithgow, 30 November, 1880.

RAIL all right; sample to-day, ready to go on rolling.

No. 110.

Mr. Hughes to The Engineer for Existing Lines.

Sir,

I have the honor to inform you that the rolls now act well, and I forward you 1 yard of rails and two cast-iron blocks. You will find the section rather under the template; this we had to do to bring it to 40 lbs. per yard.

Eskbank Iron Works, Lithgow, 30 November, 1880.

I will have pleasure in commencing to roll so soon as you signify your satisfaction of rail, and the necessary order is forwarded.

I am, &c.,

E. HUGHES,

Manager, *per* R. M'N.

RAIL head higher on one side than the other; must be made uniform or it will not reverse in laying. Other parts all right; may start to roll as soon as head is put right. Letter by mail to-night.

No. 113.

The Engineer for Existing Lines to Mr. Hughes.

Sydney, 1 December, 1880.

Sir, The pattern of rail sent is higher on one side of the head than the other; this must be altered or the rails would not reverse, the heads must be uniform. The alteration, I perceive, can easily be made by taking a little more out of the rolls on the low side. I do not object to the weight of the rail exceeding 40 lbs. per yard.

When this is done rolling can be commenced, as the rail in other respects is right.

Tracing herewith showing in red the alteration.

I am, &c.,

WM. MASON.

No. 114.

Mr. Hughes to The Engineer for Existing Lines.

Eskbank Iron Works, Lithgow, 1 December, 1880.

Sir,

I have the honor to acknowledge receipt of your telegram, and have carefully looked at the drawing and section of the rail.

There is an almost imperceptible difference, which can only be noted by reversing and carefully examining them both, and I presume this has come about by drawing the rail down to keep it the required weight.

I am, &c.,

E. HUGHES,

Manager, *per* R. M'N.

P.S.—I have put rolls in lathe to do the alteration, and will be ready for to-morrow.—E.H.

RAIL all right. Section by mail train. Waiting for orders.

No. 118.

Telegram from Engineer for Existing Lines to Mr. Hughes.

44, Phillip-street, Sydney, 2 December, 1880.

No section of rail received as per your telegram.

No. 119.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 2 December, 1880.

I duly received your memorandum, with drawing of section of rail and guard, this morning, and communicated your remarks about the rail to Mr. Hughes in writing.

I have now to report to you that after rolling seventy-five rails yesterday the rolls were taken out again before I received your telegram. After being altered again they commenced to work upon them this morning, and they appeared, as far as I could judge without being allowed to compare the section with the drawing, to be about right now.

As Mr. Hughes persistently refuses to submit the work to my inspection, I thought it my duty to make a formal request in writing. I beg to enclose a copy of my memo. and his reply for your information.

Yours, &c.,

THOS. BLADEN.

[Enclosure No. 1 to No. 119.]

Memorandum from Inspector Bladen to Mr. Hughes.

Lithgow, 2 December, 1880.

I HAVE to request that before rolling the tram rails you will submit a sample of the section, as well as fractured samples of the material from which you intend to make them, for my inspection.

THOS. BLADEN,

Inspector.

[Enclosure No. 2 to No. 119.]

Mr. Hughes to Inspector Bladen.

Sir,

Eskbank Iron Works, Lithgow, 2 December, 1880.

In answer to your memo. of even date I have to inform you that in my tender for the new tram rails I agree to perform the work to the satisfaction of the Engineer for Existing Lines.

I shall therefore require the authority of the Commissioner for Railways before executing any order or submitting any material to you.

E. HUGHES,

Manager, per R.M.N.

No. 122.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 4 December, 1880.

I have to report to you that the rolls for new tram rails have been altered twice since Mr. Waring was at Lithgow, on Friday last, but the rails are not yet satisfactory, or a sample would have been sent to Sydney by to-night's train for your approval.

I am informed that it is intended to put the rolls in the lathe and alter them again to-morrow so as to have them ready to try again on Monday morning.

I am, &c.,

THOS. BLADEN.

Seen.—W.M., 13/12/80.

No. 123.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 6 December, 1880.

I am sorry to have to report that the rolls for new tram rails are not yet ready for another trial. It is expected they will be ready to-morrow.

I think it right to inform you that Mr. Sutherland asked me this morning to examine a number of D.H. rails, which he was given to understand I had not examined before, but which I had good reason for believing had been rejected by me, and had been patched and made to appear perfect. At his request I went over them again, and there was not one of them fit to pass. I afterwards pointed out the defects to Mr. Sutherland, and, in his presence, picked out the putty from the holes in some of the rails. He seemed surprised, and said it was not his wish that such things should be done.

I am, &c.,

THOS. BLADEN.

RECEIVED telegram. Let rolling be proceeded with.

No. 126.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 8 December, 1880.

I beg to send the enclosed for your information. I need scarcely say that if it is conceded that an inspector must be constantly in attendance at the presses, to see that the straighteners do their work properly, I should require some assistance.

Yours, &c.,

THOS. BLADEN.

[Enclosure No. 1 to No. 126.]

Mr. Hughes to Inspector Bladen.

Sir,

Eskbank Iron Works, Lithgow, 8 December, 1880.

A number of stalk-rails having been returned to be re-straightened, I would thank you to inspect them at the press as they are being straightened, so as to prevent expense in handling and turning them over.

Yours, &c.,

E. HUGHES,

Manager, per R. M'N.

[Enclosure No. 2 to No. 126.]

Mr. Hughes to Inspector Bladen.

Sir,

Eskbank Iron Works, Lithgow, 8 December, 1880.

Having commenced to roll and straighten the new tram rails, I would feel obliged if you would inspect and pass all rails when they are being straightened at the press. At this point they are frequently turned over and every facility afforded for a thorough inspection, whereas leaving them later puts the Company to the extra expense of labour to unload and turn over. If this cannot be acceded to I cannot go on with the manufacture.

E. HUGHES.

[Enclosure No. 3 to No. 126.]

Inspector Bladen to Mr. Hughes.

Sir,

Lithgow, 8 December, 1880.

In reply to your memo. of to-day, I beg to say that, as I understand my duties, I have to pass rails only when they are presented for delivery, and in the meantime to inspect the rails in all the stages of manufacture.

If you have any complaint to make about the way in which I perform my duty, I think it would be better for you to communicate with Mr. Mason, the chief of my department.

Yours, &c.,

THOS. BLADEN.

Get what assistance you require in the way of labourers, but do not let us have the work delayed.—W.M., 9/12/80. Mr. Bladen. I got a man from Mr. Hollis, this morning, to see to this straightening; his name is George Cook.—THOS. BLADEN, 10/12/80. Appd.—W.M., 13/12/80. Mr. Bladen. Noted.—THOS. BLADEN, 14/12/80.

127.

Mr. Hughes to The Commissioner for Railways.

Sir,

Eskbank Iron Works, Lithgow, 8 December, 1880.

Having now commenced to roll the new 40 lbs. T tram rails, and being desirous of carrying out the contract with all possible speed, I would like the inspector to inspect and pass all rails when at the straightening-press. When at the press the rails are turned over repeatedly; they are then stacked, and have to be turned over and sorted at an extra expense to the company, which can be avoided by the first-named method, of inspecting at the press.

I may also mention that the press will be worked from 6 a.m. to 6 p.m.

Asking for your favourable consideration.

I have, &c.,

E. HUGHES,

Manager, per R. M'N.

Will Mr. Mason decide?—CH. A. G., B.C., 9/12/80. I have instructed Mr. Bladen to get what extra assistance he requires to inspect rails at the press.—W.M., 9/12/80. Commissioner.

Inform.—CH. A. G., 12/12/80.

No. 128.

The Commissioner for Railways to Mr. Hughes.

Sir,

Department of Public Works, Railway Branch, Sydney, 13 December, 1880.

In reply to your letter of the 8th instant, asking that the new 42 lbs. T tram rails now being rolled at your company's works may be inspected and passed when at the straightening-press, I have the honor to inform you that your request is complied with, and the necessary arrangements will be made accordingly.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 129.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 9 December, 1880.

I have to report that I have passed forty-nine 21 feet and one 18 feet new section tram rails for delivery; they are to leave by early train to-morrow morning for Sydney.

Although I have passed these rails, as they are so urgently required, they are not altogether satisfactory. They have not been cutting them to the exact length; and as the holes are punched exactly

exactly to gauge until they get to the fish-bolt holes at the last end, the excess in length occurs always between the fish-bolt holes and the first stud-hole. I have had a good many put on one side till I hear from you about them. I called Mr. Hughes attention to it as soon as they commenced punching this morning, and he had the gauge altered, so that I trust they will get them right now. In the meantime I should be glad if you would advise me by wire what to do about these that are rolled, some of them are as much as an inch too long. Mr. Hughes wishes me to suggest to you that the holes in the guard rail be made longer, to allow for this variation in the distances between the holes in the rail; but this would not remedy the defect when a rail was reversed.

I am, &c.,

THOS. BLADEN.

We will take the rails already rolled, which there is any difficulty about punching to gauge, as they will answer for laying down where guards are not required; but in such a case the end holes for first plates only will require to be punched. All the new rails yet to be rolled must be of such length as to admit of being punched to gauge, any little difference there may be must be between the end and the first stud bolt, that is at 18 inches from the end. A few rails may be rolled 20' 3", and 17' 3" for curves. Give me early notice of all rails sent to Sydney, so as I may know when to expect them.—W.M., 10/12/80. Mr. Bladen.

Noted and communicated to Mr. Hughes.—THOS. BLADEN, 11/12/80. Seen.—W.M., 13/12/80.

No. 130.

Telegram from Engineer for Existing Lines to Inspector Bladen.

44, Phillip-street, Sydney, 10 December, 1880.

RAILS that cannot be punched to proper gauge will suit where guards are not used, if they can keep us going with new rolled rails; those you have put aside will do to use without guards. Will write you to night.

No. 131.

Memorandum from Engineer for Existing Lines to Inspector Bladen.

Sydney, 13 December, 1880.

REFERRING to your letter of the 9th instant, in which you state that you passed forty-nine 21 feet and one 18 feet new section tram rails, I wish you to forward a separate report of the passing of these rails.

Similar returns to those you forward for re-rolled rails must be sent for all tramway materials you pass.

W. MASON,

pro GEO. LANDERS.

No. 132.

Mr. Inspector Bladen to The Engineer for Existing Lines.

Lithgow Station, 10 December, 1880.

Sir,

I have to report that they have been rolling tram rails again all day, and the lengths are running much nearer the proper length, but very few of these have yet been punched.

Mr. Hughes has promised me positively he will get another pair of bolster trucks loaded to-morrow, and that next week he will have three straighteners at work to push on the work as quickly as possible.

From what I can see now of the difficulty there will be in getting the lengths of the rails and guard so exactly to match that the bolts will lead straight through the holes of both, I think if you see no objection to it, it would be advisable to allow a little more margin in the length of the holes in the guard and studs.

I received your telegram this afternoon.

Yours, &c.,

THOS. BLADEN.

No. 138.

Mr. Hughes to The Engineer for Existing Lines.

Sir,

Eskbank Iron Works, Lithgow, 13 December, 1880.

A number of T rails of various lengths are lying at our Sydney yard; also a number of the same class of rails of 12 feet lengths are lying at the Government Stores, Redfern. They are the same style and pattern as those laid in the Moore Park tramway, and form part of a fifty-ton order handed to our company on the 16th August last by Mr. Bladen. The then Engineer for Tramways on the 16th August agreed to take a number of short length rails, and a quantity of 15 feet rails were shortly afterwards sent. On the 7th September Mr. Bladen passed thirty rails 12 feet long, which were also forwarded to the Tramway Department, and both lots have been returned, and are now lying useless on our hands. As they were accepted by the Tramway Department, and sent by us in good faith, I would feel obliged if you could see your way clear to take them.

I may add that this company is prepared to make a reduction of 10s. per ton on them below the price named in contract,—that is to charge them at £10 10s. per ton.

Trusting to receive favourable consideration,— I am, &c.,

ENOCH HUGHES,

Manager, per R. M'N.

Were these rails passed by you; if so, give me the particulars.—W.M., 15/12/80. Mr. Bladen. I did not pass the rails referred to by Mr. Hughes as being passed by me on the 7th September. Other T rails were sent away that I did not pass; one set of bolsters loaded on the 9th August I did not pass.—THOS. BLADEN, 16/12/80. Inform Mr. Hughes that rails cannot be accepted unless passed by Mr. Bladen.—W.M., 18/12/80.

No. 139.

The Engineer for Existing Lines to Mr. Hughes.

Sir,

Sydney, 20 December, 1880.

In reply to your letter of the 13th instant, relative to a quantity of T rails of various lengths lying at your Sydney yard and Railway stores, Redfern, and stated to be a portion of a fifty-ton order given to you by Mr. Bladen, on 16th August last, I have to inform you that as these rails have not been passed by Mr. Bladen, they cannot be accepted.

MEMO.—No. 3 contract.—36 stalk-rails, each 21 feet, 9 ton 4 cwt. 2 qrs.

No. 145.

Inspector Bladen to The Engineer for Existing Lines.

Sir, Lithgow, 21 December, 1880.
 I have to report to you that Mr. Hughes is making better progress with straightening and punching the rails; he has had three presses at work to-day, but the rolls for guard are being turned at a very slow rate. From what I can see I do not think the first roll will be finished this week.

I asked Mr. Hughes what progress was being made with the studs, and he said he was just grinding up the patterns to send them to Sydney. He was going to get fifty tons of them cast in Sydney; one firm was going to do twenty-five tons, and another the same quantity; and he said with regard to the wood-screws he was now having the tools made to point them in the lathe.

I am, &c.,

THOS. BLADEN.

What about the fish-plates? Does Mr. Hughes intend altering the rolls so as to make the plates fit the rails? Mr. Sutherland has just called at my office and has promised that the guards will be ready about the 2nd January, and that all the other fastenings are in hand, and will be supplied at the same time. Let me know what probability there is of this being carried out.—W.M., 22/12/80. Mr. Bladen. I see no probability whatever; the first of the two rolls is not yet ready, and Mr. Hughes said they would both be ready by the 21st instant. With regard to the fish-plates I had spoken to Mr. Hughes about altering the rolls and could get no satisfactory answer from him, he merely said they were according to the drawing, and he could do no more. I have asked him in writing about the matter to-day, and enclose copies of the memos. for your information.—THOS. BLADEN, 23/12/80. Seen.—W.M.

No. 146.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 22 December, 1880.

With regard to the enclosed memo. which I send for your information, I beg to remark that the man sent to me by Mr. Hollis is in constant attendance at the presses to see that the rails are properly straightened, thus saving the contractors the expense and trouble which it was alleged they were put to through having to turn rails over and having them sent back to be re-straightened. Now this is not enough, he wishes me to be constantly there too and not to see what is put in the rails, how they are made or how they are patched; a great many rails are turning out bad through raw iron or some foreign matter getting in during the puddling process.

The consequence is they break up in small holes along the head, and if I were to pass them I am confident they would not wear well; a great many rails too are cracked in the flanges, which I cannot pass.

All the specifications I have or ever saw for this kind of work provide for inspection during all the stages of manufacture, which I beg respectfully to submit is a most important and necessary provision in order that good rails may be obtained.

I am, &c.,

THOS. BLADEN.

[Enclosure to No. 146.]

Mr. Hughes to Inspector Bladen.

Sir,

Eskbank Iron Co., Lithgow, 22 December, 1880.

By letter under date December 13th, 1880, the Commissioner for Railways informs me that he has "made the necessary arrangements to have the T tram rails passed and inspected when at the straightening press."

I will therefore thank you to inspect them at that point and not to interfere with them during any of the preliminary stages.

Yours, &c.,

E. HUGHES,

per R. M'N.

I will receive no rails of any kind that Mr. Bladen has not inspected in all their processes of manufacture and passed.—W.M., 5/1/81. Mr. Bladen. Noted.—THOS. BLADEN, 6/1/81.

No. 147.

Inspector Bladen to Mr. Hughes.

Sir,

Lithgow, 23 December, 1880.

Please let me know for Mr. Mason's information if you intend to alter the fish-plate rolls so as to make the plates fit the rails.

Yours, &c.,

THOS. BLADEN.

No. 148.

Mr. Hughes to Inspector Bladen.

Sir,

Lithgow, 23 December, 1880.

In answer to your letter of even date I will thank you to let me know if there is any alteration from the plan received from Mr. Mason on the 2nd instant. If there is, I must have a new plan and specification before turning the roll.

Yours, &c.,

E. HUGHES,

Manager, *per* R. M'N.

No. 149.

Inspector Bladen to Mr. Hughes.

Sir,

Lithgow, 23 December, 1880.

I do not know of any alteration of plan for fish-plates, but as you seemed to have some difficulty in getting the rail true to the drawing, it may be that there is a little deviation from the drawing in the section of the rails, and of course the plates must be made to fit.

Yours, &c.,

THOS. BLADEN.

No. 150.

Commissioner for Railways to Mr. Hughes.

24 December, 1880.

SEND telegram from me as under:—

In reference to your note to Mr. Inspector Bladen you will please make fish-plates to fit rails in accordance with plan.

Sent.—D.V., 24/12/80.

CH.A.G.

No. 151.

Mr. Hughes to The Commissioner for Railways.

Sir,

Eskbank Iron Works, Lithgow, 25 December, 1880.

I have to acknowledge the receipt of your telegram of yesterday, and in reply to same I regret to know that your valuable time is taken up and annoyed with so small a matter of detail. If Mr. Inspector Bladen had condescended to say what alteration he required from those already passed and sent to Sydney, it would have been at once attended to, but to have altered the rolls without knowing what was wrong would most likely have destroyed them and further delayed the work. It will now be necessary

necessary for me to let you know what has already been done in this matter, to enable you to judge fairly of the present case, as in my opinion it would not have been sent to you if there was not something more said or written than appears on these papers.

So soon as the present rails were approved of, to forward the work I had fish-plates fitted in the presence of Mr. Mason, Engineer for Existing Lines, who was on the ground. Inspector Bladen inspected and approved of same. I then had a quantity rolled in the same rolls as those approved. I had some punched and straightened, inspected by Mr. Inspector Bladen, and some sent to Sydney. I continued making until I received from Inspector Bladen the enclosed telegram, marked No. 1, on the receipt of which I stopped making any more until I should hear further from Inspector Bladen, who arrived here on the 21st instant, when I enquired what was the matter with the fish-plates. I was answered in a most offensive manner, as I have already been by this gentleman, "Make them in accordance with the plan and to fit the rails." I said I thought I had done that already, but if he put in writing what alteration he wanted, or what was wrong in those already done, it should be attended to. His only answer was more offensive remarks. I had heard from another source that the fish-plates were required to be larger, so as to have $\frac{1}{8}$ " of space between the plate and the stalk of the rail, the plan only showing $\frac{1}{16}$ ". If he had said so it would have been done; but if I had altered the rolls without written instructions or saying what alteration he required, I know from past experience that the fish-plates would have been condemned for being too large; the rolls would then be useless and the work further delayed. I only asked to be informed what space was required between the fish-plate and the stalk of the rail. I should then have altered the rolls with safety; but instead of that, the memo. marked No. 2, and answered it by memo. No. 3, and in reply received, memo. No. 4, which you will see gives me no information whatever to guide me as to what alteration is required from those already approved of. I have tried the fish-plates nowhere on the rails, and they seem to me to come up to the requirements of your telegram; but if I were informed of what I first asked for, what space was required to be left between the fish-plate and the stalk of the rail, a simple question, I could at once have done the rest. You would then have been spared the trouble and annoyance, and I the humiliation caused by the base insinuations daily cast upon me by a man who has said and done all in his power to destroy my character and that of the company, and to wilfully and maliciously cause the company's money to be wasted to an extent that cannot last much longer, or would not have been endured if my advice had been taken by my directors. I have thus in the midst of troubles and anxiety in establishing a new and large industry such as this, and wishing to give satisfaction to those who patronize us. I have considered it necessary to say this much. I will see that your telegram is attended to.

I have, &c.,
ENOCH HUGHES,
 Manager, Eskbank Iron Works.

[Enclosure No. 1 to No. 151.]

Telegram from Inspector Bladen to Mr. Hughes.

Redfern, 20 December, 1880.

FISH-PLATES do not fit. Do not send any more till I return.

[Enclosure No. 2 to No. 151.]

Inspector Bladen to Mr. Hughes.

Sir,
 Will you please let me know for Mr. Mason's information if you intend altering the fish-plate rolls so as to make the plates fit the rails.

Lithgow, 23 December, 1880.

I have, &c.,
THOS. BLADEN,
 Inspector.

[Enclosure No. 3 to No. 151.]

Mr. Hughes to Inspector Bladen.

Sir,
 In answer to your letter of even date, I will thank you to let me know if there is any alteration from the plan received from Mr. Mason on the 2nd instant. If there is I must have a new plan and specification before turning the roll.

Lithgow, 23 December, 1880.

I have, &c.,
ENOCH HUGHES,
 Manager, per R. M'N.

[Enclosure No. 4 to No. 151.]

Inspector Bladen to Mr. Hughes.

Sir,
 I do not know of any alteration of plan for fish-plates, but as you seemed to have some difficulty in getting the rails true to the drawing, it may be there is a little deviation from the drawing in the section of the rails, and of course the plates must be made to fit.

Lithgow, 23 December, 1880.

Yours, &c.,
THOS. BLADEN.

Mr. Mason.—G.B., B.C., 29/12/80. The fish-plates fitted were *old ones*, and not from the new rolls. It would only be a waste of time to reply to Mr. Hughes's misrepresentations.—W.M., 30/12/80. Commissioner. Seen.—CH.A.G., 11/1/81.

No. 152.

Inspector Bladen to Mr. Mason.

Sir,
 I am glad to be able to report that they are getting on much better with rolls for guard; they have got the second roll partly turned, and I see no reason why they should not have some ready some time next week if they push on with them as they have the last few days, and if they work properly when they are done.

Lithgow, 29 December, 1880.

I have, &c.,
THOS. BLADEN.

Let me know as soon as they are ready to roll the guards.—W.M., 3/1/81. Mr. Bladen. They have tried the rolls for guard once, and they have taken them back to the lathe again. I will inform you as soon as possible when they are ready to roll.—THOS. BLADEN, 4/1/81. Seen.—W.M.

Telegram from Inspector Bladen to Engineer for Existing Lines.

7 January, 1881.

GUARD-ROLLS a bungling job, tried fourth time not right. Fear you will have to accept a modification of section to get them made in these rolls.

Seen.—W.M., *per* G.L.

No. 154.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 29 December, 1880.

I beg leave to lay before you the following report of the vile abuse I received from Mr. Hughes on Friday last:—

I was passing rails with the assistance of George Cook, when he came to me and said he would not allow me to mark the rails with chalk, and if I marked another rail he would put me out of the yard. I told him I was justified in marking the bad rails and should do my duty without being afraid of his threats. He then said, "Well, you just mark another rail, and I will show you whether you will take notice of what I say or not." I told him that he knew well enough that I did not condemn the rails for any other reason but because they were bad, and if he would see that the rails were made good there would be no bother, and there would be no rails rejected. He then began to abuse me. He said, "You had better see if you can make rails; you never could make iron; you have ruined everything you ever had anything to do with. You ruined the man you had with you in Sydney, and I know what brought you out here, you left your country for your country's good." I asked him what he meant by such a statement, and he replied, "Why, you did not leave England with a clean sheet." I then told George Cook to take notice of what he had said about my character, and he then repeated it in a loud voice, so that all the workmen round could hear what he said. I would beg respectfully to say I am prepared to prove that all these malicious aspersions upon my character are utterly false.

Yours, &c.,

THOS. BLADEN.

See Mr. Bladen's report of same date.—W.M., 3/1/81.

No. 155.

Inspector Bladen to The Engineer for Existing Lines.

Sir,

Lithgow, 29 December, 1880.

I have been passing rails to-day and received the enclosed memo. from Mr. Hughes to-night. I have defaced no rails but merely what is harmless, necessary, and approved by your minute, dated 9th August, that is, I have simply put a × with chalk on the end of rails rejected, to show they are rejected; this at least is necessary, and I shall feel it my duty to continue the practice until otherwise directed by you.

Yours, &c.,

THOS. BLADEN.

[Enclosure to No. 155.]

Mr. Hughes to Inspector Bladen.

Sir,

Lithgow, 29 December, 1880.

I find that you still continue to chalk and deface rails which you condemn. I must again protest against this course; if you will not pass the rails, kindly refrain from marking them in any way, or I must stop my straighteners and punchers till the matter is settled.

Yours, &c.,

E. HUGHES,
pro R. M'N.

I again strongly urge the Commissioner to take some decisive steps to put a stop to Mr. Hughes's insulting conduct to the Inspector.—W.M., 3/1/81. I am informed that Mr. Mason, with Mr. Sutherland's assistance, has been able to smooth away the differences which have existed between Mr. Hughes and Mr. Bladen. I am glad of this, as the disputes that have taken place seem to have arisen from personal animosity.—CH.A.G.

No. 156.

Mr. Hughes to The Engineer for Existing Lines.

Sir,

Lithgow, 29 December, 1880.

I regret to have to inform you that it is impossible for me to supply you with the quantity of rails as I promised, say 100 tons per week or more if required, not from the want of being able to manufacture the quantity named, but from the want of getting them passed by Inspector Bladen, although it was clearly understood that the inspector was to approve or disapprove of the rails when on the plate so soon as cold, when the rails can be seen all round and before they are touched by the company's man, who files, punches, and straightens them, and he or his assistant could then see these being straightened and sent away; as it is now, and has been from the first, Mr. Inspector Bladen expressed determination to destroy my character and that of the company, worrying me by every means in his power by causing a wilful and unnecessary waste of the company's money by the extra labour in attending on him in turning the rails over and over, and in waiting for his appearance at the post of duty; and until very lately, when he was informed that his time of attendance at the works was being kept; when he did come to the works his time there never averaged three hours per day, and often the company's men's time was wasted on that account. I after pointed this out to my directors, but they begged me to have patience. I told them all that patience would do would be to ease them of their money. Some time after three of them met Mr. Bladen on the ground, and after seeing for themselves the waste of time, they pointed this out and

as a special favour requested him to condemn what in his opinion was not right, but to do it before so much labour was wasted upon them by punching, &c., and making them unsaleable to private customers. A useless waste of over £2 per ton, on every ton of new rails supplied to the Government up to this time has been the result, and for instance, last Thursday I was anxious, before the holidays commenced, to get away as many rails as possible; I was there with two inspectors and six men, with over 40 tons of rails to choose from, that were neither approved nor rejected; all we could manage to get passed in five hours were seventeen rails, or about 2 tons. I requested him to pass or reject them on the plate, or at the press, to save such a waste of time and money in turning them over in heaps, and then returning them five or six times before getting them away. He said he would pass them where he liked, and when he liked, and how he liked, and would not acknowledge me as having anything to do with them or the management of the works, and would not have his nose fixed at the press for any one. Under these extraordinary circumstances I appeal to you to be released from the power of this man, who never has had any experience in the manufacture of rails, it being a specialty in the trade; and from his power and interference in the manufacture the Government have not got a permanent rail, and the company's money and character is being destroyed by a man whose every act and expression, public and private, has been made with the view of destroying this company. In a previous communication to you on this subject, which by the misunderstanding of the clerk was sent to the Commissioner, I brought this same matter under notice, and when I agreed to a complete alteration of the plan of rails and fastenings under your management I clearly understood that I, as a practical rail manufacturer, was to be permitted to manufacture from materials and workmanship rails that would be a permanent benefit to the Government, and a credit to this company, submitting the rail when manufactured to any reasonable test that may be required by you. In no other way that I can see should this company be held answerable for the wear of the rail. I have the honor to request you to give this matter your earliest attention, so as to facilitate the work being carried through as early as possible.

I have, &c.,

ENOCH HUGHES,
Manager, Eskbank Iron Works.

No. 157.

Mr. Hughes to Inspector Bladen.

Sir,

Eskbank Iron Works, Lithgow, 3 January, 1881.

As I shall not be working on Government orders this afternoon, only in trying the guard-rail rolls, a sample of which rail must be approved of by Mr. Mason before my continuing to roll for the Government, your presence at the works will not be required until I hear from Mr. Mason.

Yours truly,

E. HUGHES,

Manager, *per* R. M'N.

Forwarded for Mr. Mason's information.—THOS. BLADEN, 3/1/81.

It will be no use Mr. Hughes rolling guard-rails without your being present to see what they are composed of, as I will not have anything to do with materials which have not passed your inspection. If he intends you to be absent whilst he rolls one as a sample, he probably thinks to get me to approve of it, and then he would take that as a pattern both as to form and quality; if he thinks to do this he will be greatly deceived, as I will approve of nothing that has not been inspected by you and passed, if we never get the rails.—W.M., 5/1/81. Mr. Bladen.

Noted.—THOS. BLADEN, 6/1/81.

No. 158.

Mr. Hughes to Inspector Bladen.

Sir,

Eskbank Iron Works, Lithgow, 5 January, 1881.

I would feel obliged to you if you would pass the tram rails before they are punched, as if they are condemned after being punched they are not saleable to private individuals. An answer would oblige.

Yours, &c.,

E. HUGHES,

Manager, *per* R. M'N.

Copy of reply sent:—

Inspector Bladen to Mr. Hughes.

Sir,

Lithgow, 6 January, 1881.

In reply to your memo. of last night, I have simply to say that you ought to know that it is contrary to all precedent, and altogether outside of my discretion, to pass any material till it is finished and ready for delivery.

Yours, &c.,

THOS. BLADEN.

Forwarded for Mr. Mason's information.—THOS. BLADEN, 6/1/81.

Seen.—W.M.

No. 159.

Memorandum from Engineer for Existing Lines to Inspector Bladen.

Sydney, 12 January, 1881.

THE screws sent are too much rounded on the head, which causes the spanner to slip. Ask Mr. Hughes to be kind enough to make them square throughout their depth.

No. 160.

Memorandum from Engineer for Existing Lines to Inspector Bladen.

Sydney, 13 January, 1881.

In forwarding your returns of tramway materials supplied by the Eskbank Iron Company, I wish you, if possible, to give the weight of fish-plates as well as the number, to enable me to check the accounts forwarded by Mr. Hughes.

I also wish you to give the numbers of the trucks in which the material is loaded, and the dates on which they are forwarded to Sydney.

WM. MASON,
pro GEO. LANDER.

No. 161.

Memorandum from Engineer for Existing Lines to Inspector Bladen.

Sydney, 17 January, 1881.

I wish you to be very particular that the studs now being cast by the Eskbank Iron Company be of the proper thickness, as some of those already forwarded to Sydney were rejected for not being sufficiently thick.

WM. MASON.

APPENDIX A.

GOVERNMENT TRAMWAYS.

CONTRACT No. 1. FORM OF TENDER.

I HEREBY agree to provide all necessary labour, tools, and materials of every description, and to execute the whole of the works required in the supply of—

250 tons rails
10½ „ fish-plates
3 „ 8 cwt. fish-bolts
6 „ 18 „ dog-spikes

as described, and in strict accordance with the specification and drawing, and to the entire satisfaction of the Superintending Engineer, for the sums herein specified:—

Rails	£11 0 0 per ton, or a total of	£2,750 0 0
Fish-plates	12 10 0 „ „	131 5 0
Fish-bolts	42 0 0 „ „	138 0 0
Dog-spikes	20 10 0 „ „	141 9 0
Making a sum total for the whole contract...				£3,160 14 0

ENOCH HUGHES,
Eskbank Iron Works.

I further agree to supply any quantity (not exceeding 10 per cent.) of the materials specified in this contract that may be required over the quantities specified, at the following prices, viz:—

Rails at £11 per ton.
Fish-plates at £12 „
Fish-bolts „ £42 „
Dog-spikes „ £20 „

NOTE.—A sum of £20 (twenty pounds sterling) has been deposited with the Colonial Treasurer, which sum I agree to forfeit to the Commissioner for Railways should I fail to find the necessary security and complete the bond at the time specified below.

ENOCH HUGHES,
Eskbank Iron Works.

Should the foregoing tender be accepted, we, the undersigned, do hereby agree to be responsible for the due performance of the contract, and we hereby undertake, within seven days from the date of the notification of the acceptance of the tender, jointly and severally to execute and deliver, at the office of the Crown Solicitor in Sydney, a bond to the Commissioner for Railways in the penal sum of £300 (three hundred pounds sterling) for securing such performance.

JOHN SUTHERLAND,
84, Abercrombie-street, Sydney.

ROBERT KELLY,
Newtown Road.

This is the tender referred to in our annexed bond to the Commissioner for Railways, dated the thirtieth day of June, A.D. 1880.

Witness—M. S. HARTE.

ENOCH HUGHES,
JOHN SUTHERLAND,
ROBERT KELLY.

APPENDIX B.

GOVERNMENT TRAMWAYS OF NEW SOUTH WALES.

SPECIFICATION for the manufacture and supply of Permanent-way Materials, to be delivered at the Tramway Yard, Belmore Gardens, Sydney.

1. This contract comprises the manufacture of the following Permanent-way Materials for the Government Tramways, viz :—

250 tons rails,
3 „ 8 cwt. fish-bolts,
6 „ 18 „ dog-spikes,
10½ „ fish-plates,

together with the finding of all tools, implements, and labour requisite for the full and proper completion of the contract to the entire satisfaction of the Engineer in charge.

2. The drawings accompanying this specification, and which is hereafter referred to as drawing No. 1, shows the design, arrangement, and detail of the work to be executed.

3. The whole of the workmanship and materials used under this contract to be of the best description and quality of their respective kinds. The whole of the work must be executed according to the forms and dimensions shown on the drawings and described in this specification.

4. All the dimensions given are net measurements of the finished work, and must be strictly adhered to.

5. The different materials specified under this contract must be supplied at the following dates, as under :—

25	per cent.	of each kind	within four weeks	after date of acceptance	of tender.
25	„	„	on or before	1st June,	1880.
25	„	„	„	15th „	„
25	„	„	„	1st July	„

RAILS.

1. The sections of the rails are shown on plan. The weight to be 42 lbs. per lineal yard. Before commencing to roll, the contractor must make template according to the drawing, which must be approved of in writing by the Superintending Engineer; no rail weighing more than (1) one per cent. lighter than the weight specified will be received, nor will any allowance be made for any excess of weight beyond (1) one per cent. above that specified. Within these limits the rails will be paid for by their actual weight.

2. The length of the rails to be as under, viz :—

90	per cent.	; 21 feet long.
10	„	18 „

No deviation from these lengths will be allowed.

3. The pile from which these rails are to be made to be not less than 7 in. by 8 in. (seven by eight) and of such a length as will make it weigh at least (25) twenty-five per cent. more than the finished rail, or such other length as may be necessary to have a sufficient extra quantity of iron to secure perfect soundness at the ends of the rails.

4. The slab for forming the head of rail to be made of the best mine iron No. 2 and 3, specially selected for hardness and toughness, and made into a bloom thoroughly and closely worked together on all sides under the hammer, then reheated to a welding heat, and rolled into a bar 7 in. wide, and 1½ in. thick. This slab must in all cases be the full length and width of the pile.

5. The slab for forming the bottom flange to be of the same quality of iron as the top slab, but worked in a different manner, so as to produce a strong tough fibrous iron. This slab to be ½ inch thick, and the full length and width of the pile.

6. The intermediate bars are to be made of the best mine iron No. 1, as shall produce a good, strong, tough, fibrous iron of the best quality for the purpose, not exceeding 1½ in. in thickness, and of such widths as to properly break joints.

7. This pile, 7 in. by 8 in. (seven by eight) is to be heated to a welding heat, and rolled into a bloom about 5½ inches square, which is to be reheated to a welding heat, and rolled into a finished rail.

8. If preferred by the contractor the rails may be made without piling, that is to say of an uniform quality of iron throughout. In this case the iron used will have to be of such a quality as will produce a good, strong, hard, tough, and fibrous iron of the best quality for the purpose, say a mixture of No. 1 and 3 mine iron. The bloom to be of the same dimensions as the piled one, and to be reheated and reworked three times before being rolled into a rail.

9. The rails are to have two holes punched at each end for fishing, the exact position and size of which are shown on drawing. Any variation therefrom, exceeding ⅜ inch, will subject the rails to rejection.

10. Each rail is to be marked on the side with the maker's name, year, and month of manufacture.

11. The contractor will not be permitted under any circumstances to sublet any portion of the contract, or to make the rails at any other works than his own without first obtaining the written consent of the Superintending Engineer.

CONDITIONS.

12. Before commencing to roll the rails samples of the quality of the iron the contractor proposes and will guarantee to use, must be sent to the Superintending Engineer, and his approval in writing obtained.

13. The rails are to be perfectly straight, of an uniform section throughout, and in strict accordance with the approved template; the ends sawn off true and square, free from roughness at the edges, and the straightening must be done without hammering.

14. The surface of the rails and the edges of the flanges must be free from cracks, burrs, or other defects; no patching or hammering will be allowed.

15. The holes for fishing must be without burrs, square through the rails, and exactly in accordance with the sizes and positions shown on drawings.

16. The rails must be subject to the inspection of the Superintending Engineer or his assistant during all the stages of manufacture. The bars for forming the pile will be rigidly tested in such manner as he shall decide, and certain finished rails shall be selected to be broken under varying conditions. The expense of these tests must be borne by the contractor, who, when requested, is to furnish labour to assist, and afford every facility for examination during the manufacture, testing, and inspection of the work.

17. The tests for each kind of rail will be the same, whether the rails are piled or not, and will be applied as follows:—The rails to be stacked in batches of one or two days' rolling, and kept separate and distinct, so that they may be readily identified by the Superintending Engineer or his assistant, who shall select from these batches certain rails, which shall be subjected to the following tests:—

- (a) The rail to be placed with the head upward, on two solidly-bedded iron supports, placed three feet apart in the clear, and to support in the centre, for a space of five minutes, a weight of 8 tons, without showing any permanent deflection after removal of the weight; the rail must then, under the same conditions, support a weight of 15 tons without fracture.
- (b) The rail to be then nicked round, and broken in the straightening press, with the head downwards. The fracture thus obtained must, if the rails are piled, show a fine, granular, homogeneous texture in the head, down to the shoulder. The head and flange must exhibit a clean, fibrous fracture, and there must not be any signs of imperfect welding or any other defects. If the rails are not piled, the fracture must show a fine uniform clean fibrous texture throughout.
- (c) One of the two portions of the rail to be then laid with the head upwards on the iron supports 3 feet apart in the clear, and fixed on solid foundation, then subjected to one blow of an iron weight $7\frac{1}{2}$ cwt. falling from a height of 9 feet. The rail must not show any signs of fracture after this test.

18. If the results of the test do not show compliance with the abovenamed requirements the Inspector shall make further tests, and if more than 10 (ten) per cent. of the rails tested do not stand the prescribed tests the whole of the batch of rails from which the rails have been taken for testing shall be subject to rejection.

19. The inspection as regards sections, length, punching for fish-bolts, and general finish of the rail will be most strict.

20. The rails approved are to be stamped at the two ends, in the presence of the Superintending Engineer or his assistant; the stamp to be in the possession of the Superintending Engineer or his assistant when not used.

FISH-PLATES.

1. The fish-plates are to be of wrought iron of the best and strongest quality of No. 3 (three) iron, which shall have been so piled and rolled as to produce the soundest and best bars for the purpose.

2. The plates are to be rolled uniformly and accurately, of the dimensions and to the section shown on the drawing herewith, and according to templates to be submitted to the Superintending Engineer, and approved by him previous to commencing to manufacture; they are to be sawn off square at the ends, and are to be perfectly true and fair in surface after cutting and punching, without any burr on the edges.

3. Each fish-plate is to have four holes punched in it; these holes must correspond exactly with the form, size, and positions shown on the drawing, and must truly answer to the gauges, which must be submitted to the Superintending Engineer for his approval previous to commencing manufacture.

4. The fish-plates are to weigh about 12 (twelve) lbs. per pair; the exact weight of the plates to be carefully ascertained from those first rolled, true to template and specified dimensions, and this weight must be adhered to as closely as possible.

FASTENINGS.

1. The fastenings are shown on drawing herewith, and are to be manufactured in exact accordance thereto. They are to be made from the finest quality of close fibrous iron; the bars from which the fastenings are made will be tested by bending, when cold, to an angle of 45 (forty-five) degrees out of straight line; they are then to be re-straightened; if after this test they should show any signs of fracture they will be rejected.

2. The fish-bolts are to have capped heads forged out of the solid; they are to be formed at the neck, as shown, to prevent them from turning round while being screwed up.

3. They are to be $\frac{3}{4}$ (three quarters) of an inch in diameter, and all bolts which vary more than $\frac{1}{32}$ (one thirty-second) part of an inch from this specified diameter will be rejected. The manufacturer must provide himself with some of the approved fish-plates, and daily try the bolts to see that they fit properly in the plates; the screwed portion of the bolts to be of the exact length shown; the thread to be of "Whitworth's" standard gauge.

4. The spikes or dogs are to have the heads forged out of the solid, and of the exact form and dimensions shown in the drawing.

5. Samples of each of the different fastenings to be submitted to the Superintending Engineer for his approval as soon as possible after the acceptance of the tender, so that if any alterations are necessary they may be made before the manufacture of the bulk is commenced.

6. The weight of each of these fastenings will be as under, viz.:—

Fish-bolts, about 89 lbs. each.

Dog-spikes, about 54 lbs. each.

The exact weight will be carefully ascertained from those first manufactured true to given dimensions, and these must be established as a standard, which must be adhered to as closely as possible.

GENERAL CONDITIONS.

1. The contract is to be executed under the direction and to the entire satisfaction of the Superintending Engineer, who will himself, or his assistant, examine and thoroughly test the material, reserving to himself the power of rejecting all materials which have not fulfilled the requirements of this specification. The manufacturer must also give every facility and labour for such inspection and testing.

2. The decision of the Superintending Engineer as to the quality of materials, workmanship, and general compliance with this specification shall be final. 3.

3. No advantage shall be taken of any omission in this specification or in the drawing of any particular work which may be necessary to make the materials complete, the intention of this contract being that the whole shall be carried out in a satisfactory manner notwithstanding any omission which may have been made of matters obviously necessary for the proper completion of the contract.

4. Should a dispute of any kind whatsoever arise out of this contract, the matter shall be determined in the manner set forth in the Railway Act, 22 Victoria No. 19, in regard to disputed land claims.

5. Should the contractor fail to deliver the materials as specified on the dates named in this specification, he shall forfeit and pay to the Commissioner for Railways the sum of £50 sterling per week or for every part of a week that shall elapse after such specified time until their delivery, such sum or sums may be deducted from any money payable under this or any other contract. No certificate will be given after the date specified for the completion of the contract until the whole of the work shall have been properly completed to the entire satisfaction of the Superintending Engineer.

6. The contractor will be required to provide two approved persons to enter as sureties, with himself, into a bond to the Commissioner for Railways in the penal sum of £300 sterling, for the proper performance and completion of the contract; the names of the persons proposed by him as sureties must be stated in his tender, the Commissioner for Railways reserving to himself the power of rejecting such proposed sureties should he deem it advisable to do so.

Payments.

7. Payments will be made once in every month (unless same shall become not payable by reason of anything contained in these conditions) up to the date specified for the completion of the contract, on the certificate of the Superintending Engineer, as the work proceeds, in the proportion of 90 per cent. of the value of the work satisfactorily executed, and the remaining 10 per cent. will be paid after the Superintending Engineer has certified that the whole of the work has been completed to his entire satisfaction. And it is expressly declared that the obtaining of a certificate from the Superintending Engineer that the work done by the contractor has been satisfactorily executed or completed to his satisfaction shall be a condition precedent to the contractor having any right or cause of action or claim to the payments from time to time to be made hereafter, as well as to the final payment upon the whole of the work being finished.

Sydney, 9th day of April, 1880.

E. GJEDSTED,
Engineer.

APPENDIX C.

BOND.

Know all men by these presents that we, Enoch Hughes, of Eskbank, in the Colony of New South Wales, contractor, John Sutherland, of Sydney, in the Colony aforesaid, Esquire, and Robert Kelly, of Newtown Road, in the Colony aforesaid, householder, are jointly and severally held and firmly bound unto the Commissioner for Railways, a Corporation Sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same*," in the penal sum of £300 sterling, to be paid to the Commissioner for Railways aforesaid and his successors, for which payment, well and truly to be made, we bind ourselves and each of us, our and each and every one of our heirs, executors, and administrators, jointly and severally, firmly by these presents. Sealed with our seals, dated the 30th day of June, in the year of our Lord 1880.

WHEREAS the above-bounded Enoch Hughes made the tender hereunto annexed under the terms and conditions of a Notice, dated the 8th day of April now last past, and published in the New South Wales Government Gazette of the 13th day of April last (of which notice a copy, signed by the said Enoch Hughes, John Sutherland, and Robert Kelly, is also hereunto annexed), to find and provide all the labour, tools, implements, material, and every other thing requisite and necessary for, and do and perform all the works required in and about the manufacture, completion, supply, and delivery of 250 tons rails, 10½ tons fish-plates, 8 tons 8 cwt. fish-bolts, and 6 tons 18 cwt. dog-spikes, in accordance in all things with the terms and stipulations of the specification, conditions, and general conditions hereunto annexed and marked "A," and the plan or drawing relating thereto in the office of the Superintending Engineer and marked "No. 1," at or for the rates or prices mentioned and set out in the said tender, and to supply and deliver the said various articles or materials at the Tramway Yard, Belmore Gardens, at the dates or times mentioned and provided in the said specification. And whereas the above-bounded John Sutherland and Robert Kelly have severally offered to become and be bound to the Commissioner for Railways aforesaid and his successors for the due performance and fulfilment of the said tender within the time mentioned in that behalf, according to the terms and conditions of the said Notice: And whereas the said tender has been fully accepted by the Commissioner for Railways aforesaid, on condition that this bond should be entered into by them the said Enoch Hughes, John Sutherland, and Robert Kelly. Now the condition of the above written bond and obligation is such, that if the said Enoch Hughes do and shall well and truly perform and fulfil the said tender, and the contract arising out of such tender, and the acceptance thereof as aforesaid, and all and every the terms, conditions, and stipulations thereof within the time hereinbefore in that behalf mentioned, then this obligation will be void and of none effect; otherwise to remain in full force and virtue.

Signed, sealed, and delivered by the abovenamed Enoch Hughes, in the presence of,—

M. S. HARTE.

JOHN SUTHERLAND.

Signed, sealed, and delivered by the abovenamed John Sutherland, in the presence of,—

Government

Government Tramways.

Department of Public Works, Railway Branch, Sydney, 8 April, 1880.

TENDERS will be received at this Office until 11 o'clock a.m. on Tuesday, the 20th April, 1880, for the supply of the following permanent-way materials for the Government Tramways, viz. :—

250 tons rails
10½ tons fish-plates
3 tons 8 cwt. fish-bolts.
6 tons 18 cwt. dog-spikes.

Plans, specification, and form of tender may be seen and further particulars obtained at the office of the Superintending Engineer, Elizabeth-street, Sydney.

The Commissioner does not bind himself to accept the lowest or any tender.

CHAS. A. GOODCHAP,

Commissioner for Railways.

ENOCH HUGHES.
JOHN SUTHERLAND.
ROBERT KELLY.

Witness to signatures—M. S. HARTE.

APPENDIX D.

TENDER FOR 700 TONS TRAM RAILS.

To the Commissioner for Railways,

I HEREBY tender to supply 700 tons of tram rails according to plan and specification, for the sum of eleven pounds five shillings per ton (£11 5s.) per ton.

I also tender to supply 28 tons 10 cwt., of fastenings for the sum of thirty-two pounds per ton. (£32 per ton.)

Sureties :—

John Sutherland, Sydney.
Robt. Kelly, Newtown.

ENOCH HUGHES,
Eskbank Iron Works.

This is the tender referred to in our annexed bond to the Commissioner for Railways, dated the 18th day of September, A.D. 1880.

Witness—M. S. HARTE.

ENOCH HUGHES,
JOHN SUTHERLAND,
ROBERT KELLY.

APPENDIX E.

“A.”

GOVERNMENT TRAMWAYS OF NEW SOUTH WALES.

PERMANENT-WAY MATERIALS. CONTRACT NO.

SPECIFICATION for the manufacture and supply of Permanent-way Materials, to be delivered at the Tramway Yard, Belmore Gardens, Sydney.

1. This contract comprises the manufacture of the following Permanent-way materials for the Government Tramways, viz. :—

700 tons grooved central-webbed rails,
28 „ 10 cwt. fastenings,

together with the finding of all tools, implements, and labour requisite for the full and proper completion of the contract to the entire satisfaction of the Superintending Engineer.

2. The drawings accompanying this specification, and which is hereafter referred to as drawings No. 1, show the designs, arrangements, and details of the work to be executed.

3. The whole of the workmanship and materials used under this contract to be of the best description and quality of their respective kinds. The whole of the work must be executed according to the forms and dimensions shown on the drawings and described in this specification.

4. All the dimensions given are net measurements of the finished work, and must be strictly adhered to.

5. The different materials specified under this contract must be supplied at the following dates as under :—

25	per cent.	of each kind	within (4) four weeks	after date of acceptance	of tender.
25	„	„	on or before	17th August,	1880.
25	„	„	„	31st „	„
25	„	„	„	14th September,	1880.

RAILS.

1. The section of the rail is shown on drawing No. 1.

The weight of the rail to be (82) eighty-two pounds per lineal yard. Before commencing to roll, the contractor must make template according to the drawing, which must be approved of in writing by the Superintending Engineer; no rail weighing more than (1) one per cent. lighter than the weight specified will be received, nor will any allowance be made for any excess of weight beyond (1) one per cent. above that specified. Within these limits the rails will be paid for by their actual weight.

2. The lengths of the rails to be as under, viz. :—

90 per cent. 21 (twenty-one) feet long.
10 „ 18 (eighteen) „

No deviation from these lengths will be allowed.

3. The piles from which these rails are to be made must be built up in such manner as will give the strongest and best sections of rails. They are to be not less than 9 inches by 10 inches, and of such a length as will make it weigh at least (25) twenty-five per cent. more than the finished rail, or such other length as may be necessary to have a sufficient extra quantity of iron to secure perfect soundness at the ends of the rails.

4. The slab for forming the head of the rail to be made of the best mine iron No. 2 or 3, specially selected for hardness or toughness, and made into a bloom thoroughly and closely worked together on all sides under the hammer, then reheated to a welding heat, and rolled into a bar 9 inches wide and 2 inches thick. This slab must in all cases be the full length and width of the pile.

5. If a horizontal bottom slab is used for any of the piles, such slab must not be less than 1½ inch thick, and the full length and width of the pile.

6. The remaining bars are to be made of the best mine iron No. 1, as shall produce a good, strong, tough, fibrous iron of the best quality for the purpose, not exceeding ¾ inch in thickness, and of such widths as to properly break joints.

7. This pile, 9 inches by 10 inches is to be heated to a welding heat and rolled into a bloom about 7 inches square, which is to be reheated to a welding heat, and rolled into a finished rail.

8. If preferred by the contractor the rails may be made of an uniform quality of iron throughout. In this case the iron used will have to be of such quality as will produce a good strong, hard, tough, and fibrous iron of the best quality for the purpose, say a mixture of Nos. 1 and 3 mine iron. The pile or bloom to be of the same dimensions as specified in clauses Nos. 3 and 7, and to be reheated and reworked three times before being rolled into a rail.

9. The rails are to have holes punched in the web for fastening them to the chairs, the exact position and size of which are shown on drawing No. 1, which must be strictly adhered to. Any variation therefrom will subject the rails to rejection.

10. Each rail is to be marked on the side with the maker's name and year of manufacture.

11. The contractor will not be permitted under any circumstances to sublet any portion of the contract, or to make the rails at any other works than his own without first obtaining the written consent of the Superintending Engineer.

12. Before commencing to roll the rails samples of the quality of the iron the contractor proposes and will guarantee to use, together with a tracing showing the mode of piling he intends to use, must be sent to the Superintending Engineer, and his approval in writing obtained.

13. The rails are to be perfectly straight, of an uniform section throughout, and in strict accordance with the approved template; the ends sawn off true and square, free from roughness at the edges, and the straightening must be done without hammering.

14. The surface of the rails and edges of the flanges must be free from cracks, burrs, or other defects; no patching or hammering will be allowed.

15. All the holes must be without burrs, square through the rails, and exactly in accordance with the sizes and positions shown on drawings.

16. The rails must be subject to the inspection of the Superintending Engineer or his assistant during all the stages of manufacture. The bars for forming the pile will be rigidly tested in such manner as he shall decide, and certain finished rails shall be selected to be broken under varying conditions. The expense of these tests must be borne by the contractor, who, when requested, is to furnish labour to assist, and afford every facility for examination during the manufacture, testing, and inspection of the work.

17. The tests for the rails will be the same, whether they are made of an uniform quality of iron or not, and will be applied as follows:—The rails to be stacked in batches of one or two days' rolling, and kept separate and distinct, so that they may be readily identified by the Superintending Engineer or his assistant, who shall select from these batches certain rails, which shall be subjected to the following tests:—

(a) The rail to be placed with the head upwards, on two solidly-bedded iron supports, shaped to receive the rail, and placed 3 feet apart in the clear, and to support in the centre, for a space of five minutes, a weight of 8 tons, without showing any permanent deflection after removal of the weight; the rail must then, under the same condition, support a weight of 15 tons without fracture.

(b) The rail to be then nicked round, and broken in the straightening press, with the head downwards. The fracture thus obtained must, if the rails are piled of different qualities of iron, show a fine, granular, homogeneous texture, about ½ inch down from top of the head. The remainder of the head and web must exhibit a clean fibrous fracture, and there must not be any signs of imperfect welding or any other defects. If the rails are not piled of different qualities of iron the fracture must show a fine uniform clean fibrous texture throughout.

(c) One of the two portions of the rail to be then laid with the head upwards on the iron supports used in test "a," placed 3 feet apart in the clear, and fixed on solid foundation, then subjected to one blow of an iron weight 7½ cwt., falling from a height of 9 feet. The rail must not show any signs of fracture after this test.

18. If the results of the test do not show compliance with the abovenamed requirements the Inspector shall make further tests, and if more than 10 (ten) per cent. of the rails tested do not stand the prescribed tests the whole of the batch of rails from which the rails have been taken for testing shall be subject to rejection.

19. The inspection as regards sections, length, punching, and drilling of holes, and general finish of the rails will be most strict.

20. The rails approved are to be stamped at the two ends, in the presence of the Superintending Engineer or his assistant; the stamp to be in the possession of the Superintending Engineer or his assistant when not used.

FASTENINGS AND FISH-PLATES.

1. The fastenings are shown on drawing No. 1, and will be classified as under, viz.:—

Fastenings or cotters.
Wood-screws.

They are all to be made from the finest quality of close fibrous iron; the bars from which they are made will be tested by bending, when cold, to an angle of (45) forty-five degrees out of straight line; they are then to be re-straightened; if after this test they should show any signs of fracture they will be rejected.

2. Each fastening consists of a round tapered cotter pin, and a flat check cotter, as shown. They are to be made exactly to the forms and dimensions shown, no deviation from which will be allowed, and the contractor must daily try them to the approved rails and chairs to see that they fit properly in their place.

3. The wood-screws are to be made to the form and dimensions shown, not varying more than ($\frac{1}{32}$) one thirty-second part of an inch therefrom, and must fit properly in the chairs; the screwed portion to be cut to the standard thread for wood-screws, and tapered as shown.

4. Samples of each of the different fastenings to be submitted to the Superintending Engineer for his approval as soon as possible after the acceptance of the tender, so that if any alterations are necessary they may be made before the manufacture of the bulk is commenced.

5. The weight of each of these fastenings will be as under, viz. :—

Cotter-pins, about '68 lbs. each.
Check cotter for do., about '06 lbs. each.
Wood-screws, about 1'08 lbs. each.

The exact weight will be carefully ascertained from those first manufactured true to given dimensions, and these must be established as a standard, which must be adhered to as closely as possible.

6. The quantity required of each of the different kinds of fastenings will be as under :—

Cotter pins and cotters...	7 tons 4 cwt.
Wood-screws	4 ,, 6 ,,
Total	28 ,, 10 ,,

GENERAL CONDITIONS.

1. The contract is to be executed under the direction and to the entire satisfaction of the Superintending Engineer, who will himself, or by his assistant, examine and thoroughly test the material, reserving to himself the power of rejecting all materials which have not fulfilled the requirements of this specification. The manufacturer must also give every facility and labour for such inspection and testing.

2. The decision of the Superintending Engineer as to the quality of materials, workmanship, and general compliance with this specification shall be final.

3. No advantage shall be taken of any omissions in this specification or in the drawing of any particular work which may be necessary to make the materials complete, the intention of this contract being that the whole shall be carried out in a satisfactory manner, notwithstanding any omission which may have been made of matters obviously necessary for the proper completion of the contract.

4. Should a dispute of any kind whatsoever arise out of this contract, the matter shall be determined in the manner set forth in the Railway Act, 22 Victoria No. 19, in regard to disputed land claims.

5. Should the contractor fail to deliver the materials as specified on the dates named in this specification, he shall forfeit and pay to the Commissioner for Railways the sum of £30 sterling per week, or for every part of a week that shall elapse after such specified time until their delivery, such sum or sums may be deducted from any money payable under this or any other contract. No certificate will be given after the date specified for the completion of the contract until the whole of the work shall have been properly completed to the entire satisfaction of the Superintending Engineer.

6. The contractor will be required to provide two approved persons to enter as sureties, with himself, into a bond to the Commissioner for Railways in the penal sum of £850 sterling, for the proper performance and completion of the contract; the names of the persons proposed by him as sureties must be stated in his tender, the Commissioner for Railways reserving to himself the power of rejecting such proposed sureties should he deem it advisable to do so.

Payments.

7. Payments will be made once in every month (unless same shall become not payable by reason of anything contained in these conditions) up to the date specified for the completion of the contract, on the certificate of the Superintending Engineer, as the work proceeds, in the proportion of 90 per cent. of the value of the work satisfactorily executed, and the remaining 10 per cent. will be paid after the Superintending Engineer has certified that the whole of the work has been completed to his entire satisfaction. And it is expressly declared that the obtaining of a certificate from the Superintending Engineer that the work done by the contractor has been satisfactorily executed or completed to his satisfaction, shall be a condition precedent to the contractor having any right or cause of action or claim to the payments from time to time to be made hereafter, as well as to the final payment upon the whole of the work being finished.

E. GJEDSTED,
Engineer.

Sydney, the 25th day of June, 1880.

This is the specification and general conditions, marked A, referred to in our annexed bond to the Commissioner for Railways, dated 18th September, 1880.

ENOCH HUGHES,
JOHN SUTHERLAND,
ROBERT KELLY.

Witness—M. S. HARTE.

APPENDIX F.

Know all men by these Presents, that we, Enoch Hughes, of Eskbank, in the Colony of New South Wales, contractor, John Sutherland, of Sydney, in the Colony aforesaid, Esquire, and Robert Kelly, of Newtown, in the Colony aforesaid, Esquire, are jointly and severally held and firmly bound unto the Commissioner for Railways, a Corporation Sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" in the penal sum of £850 sterling, to be paid to the Commissioner for Railways aforesaid and his Successors, for which payment, well and truly to be made, we bind ourselves, and each of us, our and each and every of our heirs, executors, and administrators, jointly and severally, firmly by these presents. Sealed with our seals, dated the 18th day of September, in the year of our Lord 1880.

WHEREAS the above-bounden Enoch Hughes made the tender hereunto annexed, under the terms and conditions of a notice dated the 25th day of June now last past, and published in the New South Wales

Government Gazette of the 29th day of June now last past (of which notice a copy, signed by the said Enoch Hughes, John Sutherland, and Robert Kelly is also hereunto annexed), to find and provide all the materials, labour, tools, implements, and every other thing requisite and necessary for and do and perform the various works required in and about the manufacture, supply, and delivery of the following permanent-way materials for the Government tramways; that is to say, 700 tons of grooved central-webbed rails, and 28 tons and 10 cwt. of fastenings, in accordance in all things with the specification and general conditions hereunto annexed and marked "A," and with the plan or drawing relating thereto in the office of the Superintending-Engineer, marked No. 1, to supply the said rails at or for the rate or price of £11 5s. per ton, and the said fastenings at or for the rate or price of £32 per ton. And to deliver the whole of the said rails and fastenings complete at the Tramway Yard, Belmore Gardens, Sydney, at the times or dates specified and set out in the said specification. And whereas the above-bounden John Sutherland and Robert Kelly have severally offered to become and be bound to the Commissioner for Railways aforesaid and his Successors, for the due performance and fulfilment of the said tender within the time mentioned in that behalf, according to the terms and conditions of the said notice. And whereas the said tender has been duly accepted by the Commissioner for Railways aforesaid, on condition that this Bond should be entered into by them the said Enoch Hughes, John Sutherland, and Robert Kelly. Now the condition of the above written bond and obligation is such, that if the said Enoch Hughes do and shall well and truly perform and fulfil the said tender, and the contract arising out of such tender, and the acceptance thereof as aforesaid, and all and every the terms, conditions, and stipulations thereof, within the time hereinbefore in that behalf mentioned, then this obligation will be void and of none effect; otherwise to remain in full force and virtue.

Department of Public Works, Railway Branch, Sydney, 25 June, 1880.

To Iron Founders and others.

TENDERS will be received at this office, until 11 o'clock on Tuesday, the 6th July, from persons willing to contract for the supply of the following permanent-way material for the Government Tramways, viz. :—

700 tons rails.

28 tons 10 cwt. of fastenings.

Contractors may tender for the supply of the whole of the abovenamed material or for the cast-iron only.

Plans, specification, and form of tender may be seen, and further particulars obtained, at the office of the Engineer for Tramways, Sydney.

Tenders are to be endorsed "*Tender for the supply of permanent-way material for Government Tramways, Contract No. 3.*"

The Commissioner does not bind himself to accept the lowest or any tender.

APPENDIX H.

"A."

GOVERNMENT TRAMWAYS OF NEW SOUTH WALES.

PERMANENT-WAY MATERIALS. CONTRACT No.

SPECIFICATION for the manufacture and supply of Permanent-way materials, to be delivered at the Tramway Yard, Belmore Gardens, Sydney.

1. This contract comprises the manufacture of the following Permanent-way Materials for the Government Tramways, viz. :—

370 tons grooved central-webbed rails,

50 " side-webbed rails,

18 " 13 cwt. fastenings and fish-plates,

together

together with the finding of all tools, implements, and labour requisite for the full and proper completion of the contract to the entire satisfaction of the Superintending Engineer.

2. The drawings accompanying this specification, and which is hereafter referred to as drawings Nos. 1 to 5, show the designs, arrangements, and details of the work to be executed.

3. The whole of the workmanship and materials used under this contract to be of the best description and quality of their respective kinds. The whole of the work must be executed according to the forms and dimensions shown on the drawings and described in this specification.

4. All the dimensions given are net measurements of the finished work, and must be strictly adhered to.

5. The different materials specified under this contract must be supplied at the following dates, as under:—

25	per cent.	of each kind	within four weeks	after date of acceptance	of tender.
25	"	"	on or before	1st July,	1880.
50	"	"	"	15th July,	1880.

RAILS.

1. The section of the rails are shown on drawings Nos. 1 and 3. The weight of the central-web rail to be (82) eighty-two pounds per lineal yard, and of the side-web rail (75) seventy-five pounds per lineal yard. Before commencing to roll, the contractor must make templates according to the drawings, which must be approved of in writing by the Superintending Engineer; no rail weighing more than (1) one per cent. lighter than the weight specified will be received, nor will any allowance be made for any excess of weight beyond (1) one per cent. above that specified. Within these limits the rails will be paid for by their actual weight.

2. The lengths of the rails to be as under, viz. :—

90	per cent.	of each kind	21 feet long.
10	"	"	18 "

No deviation from these lengths will be allowed.

3. The piles from which these rails are to be made must be built up in such manner as will give the strongest and best section of rails. They are to be not less than 9 inches by 10 inches, and of such a length as will make it weigh at least (25) twenty-five per cent. more than the finished rail, or such other length as may be necessary to have a sufficient extra quantity of iron to secure perfect soundness at the ends of the rails.

4. The slab for forming the head of the rail to be made of the best mine iron No. 2 or 3 specially selected for hardness and toughness, and made into a bloom thoroughly and closely worked together on all sides under the hammer, then reheated to a welding heat, and rolled into a bar 9 inches wide and 2 inches thick. This slab must in all cases be the full length and width of the pile.

5. If a horizontal bottom slab is used for any of the piles, such slab must not be less than $1\frac{1}{2}$ inch thick, and the full length and width of the pile.

6. The remaining bars are to be made of the best mine iron No. 1 as shall produce a good, strong, tough, fibrous iron of the best quality for the purpose, not exceeding $\frac{3}{4}$ inch in thickness, and of such widths as to properly break joints.

7. This pile, 9 inches by 10 inches, to be heated to a welding heat and rolled into a bloom about 7 inches square, which is to be reheated to a welding heat, and rolled into a finished rail.

8. If preferred by the contractor the rails may be made of an uniform quality of iron throughout. In this case the iron used will have to be of such a quality as will produce a good strong, hard, tough, and fibrous iron of the best quality for the purpose, say a mixture of No. 1 and 3 mine iron. The pile or bloom to be of the same dimensions as specified in clauses Nos. 3 and 7, and to be reheated and reworked three times before being rolled into a rail.

9. The central-webbed rails are to have holes punched in the web for fastening to the chairs, the exact position and size of which are shown on drawing No. , which must be strictly adhered to. Any variation therefrom will subject the rails to rejection.

10. The side-webbed rails are to have holes drilled in the webs for the dog fastenings, also vertical holes at the ends through the groove for fish-bolts, the exact position and size of which are shown on drawing No. 3. Any variation therefrom exceeding ($\frac{1}{32}$) one thirty-second part of an inch will subject the rails to rejection.

11. Each rail is to be marked on the side with the maker's name, year, and month of manufacture.

12. The contractor will not be permitted under any circumstances to sublet any portion of the contract, or to make the rails at any other works than his own without first obtaining the written consent of the Superintending Engineer.

13. Before commencing to roll the rails samples of the quality of the iron the contractor proposes and will guarantee to use, together with a tracing showing the mode of piling he intends to use, must be sent to the Superintending Engineer, and his approval in writing obtained.

14. The rails are to be perfectly straight, of an uniform section throughout, and in strict accordance with the approved template; the ends sawn off true and square, free from roughness at the edges, and the straightening must be done without hammering.

15. The surface of the rails and the edges of the flanges must be free from cracks, burrs, or other defects; no patching or hammering will be allowed.

16. All the holes must be without burrs, square through the rails, and exactly in accordance with the sizes and positions shown on drawings.

17. The rails must be subject to the inspection of the Superintending Engineer or his assistant during all the stages of manufacture. The bars for forming the pile will be rigidly tested in such manner as he shall decide, and certain finished rails shall be selected to be broken under varying conditions. The expense of these tests must be borne by the contractor, who, when requested, is to furnish labour to assist, and afford every facility for examination during the manufacture, testing, and inspection of the work.

18. The tests for each kind of rail will be the same, whether they are made of an uniform quality of iron or not, and will be applied as follows :—The rails to be stacked in batches of one or two days' rolling, and kept separate and distinct, so that they may be readily identified by the Superintending Engineer or his assistant, who shall select from these batches certain rails, which shall be subjected to the following tests :—

(a)

- (a) The rail to be placed with the head upwards, on two solidly-bedded iron supports, shaped to receive the rail, and for either kind placed three feet apart in the clear, and to support in the centre, for a space of five minutes, a weight of side-webbed rails 6 tons, and central webbed rails 8 tons without showing any permanent deflection after removal of the weight: the rail must then, under the same conditions, support a weight of side-webbed rails 10 tons, and central-webbed rails 15 tons without fracture.
- (b) The rail to be then nicked round, and broken in the straightening press, with the head downwards. The fracture thus obtained must, if the rails are piled of different qualities of iron, show a fine, granular, homogeneous texture, about $\frac{1}{2}$ an inch down from top of the head. The remainder of the head and the web must exhibit a clean, fibrous fracture, and there must not be any signs of imperfect welding or any other defects. If the rails are not piled of different qualities of iron the fracture must show a fine uniform clean fibrous texture throughout.
- (c) One of the two portions of the rail to be then laid with the head upwards on the iron supports used in test "a," for either kind, placed 3 feet apart in the clear, and fixed on the solid foundation, then subjected to one blow of an iron weight of side-webbed rails 6 cwt., and central-webbed rails $7\frac{1}{2}$ cwt. falling from a height of 9 feet. The rails must not show any signs of fracture after this test.

19. If the results of the test do not show compliance with the abovenamed requirements the Inspector shall make further tests, and if more than 10 (ten) per cent. of the rails tested do not stand the prescribed tests the whole of the batch of rails from which the rails have been taken for testing shall be subject to rejection.

20. The inspection as regards sections, length, punching, and drilling of holes, and general finish of the rails will be most strict.

21. The rails approved are to be stamped at the two ends, in the presence of the Superintending Engineer or his assistant; the stamp to be in the possession of the Superintending Engineer or his assistant when not used.

FASTENINGS AND FISH-PLATES.

1. The fastenings are shown on drawings 2, 3, 4, and 5, and will be classified as under, viz. :—
 Fastenings or cotters for central-webbed rails.
 Fish-bolts and nuts „ side „
 Fish-bolts and cotters „ „ „
 Wood-screws.
 Bracket-spikes.

They are all to be made from the finest quality of close fibrous iron; the bars from which they are made will be tested by bending, when cold, to an angle of (45) forty-five degrees out of straight line; they are then to be re-straightened; if after this test they should show any signs of fracture, they will be rejected.

2. The fastenings for central webbed rails are shown on drawing No. 2. Each fastening consists of a round tapered cotter pin, and a flat cheek cotter, as shown. They are to be made exactly to the forms and dimensions shown, no deviation from which will be allowed, and the contractor must daily try them to the approved rails and chairs to see that they fit properly in their place.

3. The dog-fastenings are shown on drawing No. 3. They are to be forged out of one piece of iron, true to the given forms and dimensions, and to be jagged as shown. No deviation from the given forms and dimensions will be allowed, and they must be tried daily to see that they fit properly in the holes in the rails.

4. The fish-bolts are shown on drawings Nos. 3 and 4, and they are to be made exactly to the forms and dimensions shown, no deviation from which will be allowed. They are daily to be tried to the rails and chairs to see that they fit properly in their place. The nuts and threads of the screwed bolts to be made to "Whitworth's" standard.

5. The wood-screws are shown on drawing No. 2. They are to be made to the form and dimensions shown, not varying more than ($\frac{1}{32}$) one thirty-second part of an inch therefrom, and must fit properly in the chairs; the screwed portion to be cut to the standard thread for wood-screws, and tapered, as shown.

6. The bracket-spikes are shown on drawing No. 5; to be made to the forms and sizes shown not varying more than ($\frac{1}{32}$) one thirty-second part of an inch therefrom, and must fit properly in the brackets.

7. The fish-plates are shown on drawing No. 3. They are to be made out of the best "Staffordshire iron," or equal quality, true to the given form and dimensions; the holes to be of the exact forms and positions shown, any variation from the given dimensions exceeding ($\frac{1}{32}$) one thirty-second part of an inch subjecting them to rejection. They are to be sawn off square at the ends, and to be perfectly true and fair in surface after cutting and punching, without any burr on the edges.

8. Samples of each of the different fastenings and fish-plates to be submitted to the Superintending Engineer for his approval as soon as possible after the acceptance of the tender, so that if any alterations are necessary they may be made before the manufacture of the bulk is commenced.

9. The weight of each of these fastenings and fish-plates will be as under, viz. :—

Cotter-pins, about .68 lbs. each.
 Check cotter for do., about .06 lbs. each.
 Dog-fastenings, about .69 lbs. each.
 Screw fish-bolts and nuts, about 1.5 lbs. each.
 Cotter do. and cotter, about .93 lbs. each.
 Wood-screws, about 1.08 lbs. each.
 Bracket-spikes, about .21 lbs. each.
 Fish-plates, about 4.3 lbs. each.

The exact weight will be carefully ascertained from those first manufactured true to given dimensions, and these must be established as a standard, which must be adhered to as closely as possible.

10. The quantity required of the different fastenings and fish-plates will be as under :—

	tons.	cwt.
Cotter-pins and cotters	4	0
Dog-fastenings	1	0
Screwed fish-bolts	0	12
Cotter do.	0	1
Wood-screws	11	12
Bracket-spikes	1	0
Fish-plates	0	8
	18	13

GENERAL CONDITIONS.

1. The contract is to be executed under the direction and to the entire satisfaction of the Superintending Engineer, who will himself, or his assistant, examine and thoroughly test the material, reserving to himself the power of rejecting all materials which have not fulfilled the requirements of this specification. The manufacturer must also give every facility and labour for such inspection and testing.

2. The decision of the Superintending Engineer as to the quality of the materials, workmanship, and general compliance with this specification shall be final.

3. No advantage shall be taken of any omissions in this specification or in the drawing of any particular work which may be necessary to make the materials complete, the intention of this contract being that the whole shall be carried out in a satisfactory manner notwithstanding any omission which may have been made of matters obviously necessary for the proper completion of the contract.

4. Should a dispute of any kind whatsoever arise out of this contract, the matter shall be determined in the manner set forth in the Railway Act, 22 Victoria No. 19, in regard to disputed land claims.

5. Should the contractor fail to deliver the materials as specified on the dates named in this specification, he shall forfeit and pay to the Commissioner for Railways the sum of £30 sterling per week or for every part of a week that shall elapse after such specified time until their delivery; such sum or sums may be deducted from any money payable under this or any other contract. No certificate will be given after the date specified for the completion of the contract until the whole of the work shall have been properly completed to the entire satisfaction of the Superintending Engineer.

6. The contractor will be required to provide two approved persons to enter as sureties, with himself, into a bond to the Commissioner for Railways in the penal sum of £500 sterling, for the proper performance and completion of the contract; the names of the persons proposed by him as sureties must be stated in his tender, the Commissioner for railways reserving to himself the power of rejecting such proposed sureties should he deem it advisable to do so.

Payments.

7. Payments will be made once in every month (unless same shall become not payable by reason of anything contained in these conditions) up to the date specified for the completion of the contract, on the certificate of the Superintending Engineer, as the work proceeds, in the proportion of 90 per cent. of the value of the work satisfactorily executed, and the remaining 10 per cent. will be paid after the Superintending Engineer has certified that the whole of the work has been completed to his entire satisfaction. And it is expressly declared that the obtaining of a certificate from the Superintending Engineer that the work done by the contractor has been satisfactorily executed or completed to his satisfaction shall be a condition precedent to the contractor having any right or cause of action or claim to the payments from time to time to be made hereafter, as well as to the final payment upon the whole of the work being finished.

Sydney, the day of May, 1880.

E. GJEDSTED,
Engineer.

NOTE.—Contractors tendering for the castings only will be required to provide a bond for the penal sum of pounds sterling.

The specification and general conditions, marked A, referred to in annexed bond to the Commissioner for Railways, dated 30 June, 1880.

ENOCH HUGHES,
JOHN SUTHERLAND,
ROBERT KELLY.

Witness—M. S. HARTE.

APPENDIX I.

BOND.

KNOW all men by these presents, that we, Enoch Hughes, of Eskbank, in the Colony of New South Wales, contractor, John Sutherland, of Sydney, in the Colony aforesaid, Esquire, and Robert Kelly, of Newtown Road, in the Colony aforesaid, householder, are jointly and severally held and firmly bound unto the Commissioner for Railways, a Corporation Sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same*," in the penal sum of five hundred pounds, sterling to be paid to the Commissioner for Railways aforesaid and his successors, for which payment, well and truly to be made, we bind ourselves, and each of us, our and each and every of our heirs, executors, and administrators, jointly and severally, firmly by these presents. Sealed with our seals, dated the 30th day of June in the year of our Lord 1880.

WHEREAS the above-bounden Enoch Hughes made the tender hereunto annexed, under the terms and conditions of a Notice dated the 11th day of May now last past, and published in the New South Wales Government Gazette of the 14th day of May last past (of which notice a copy, signed by the said Enoch Hughes, John Sutherland, and Robert Kelly, is also hereunto annexed), to find and provide all the labour, tools, implements, materials, and every other thing requisite and necessary for and do and perform all the works required in and about the manufacture, supply, completion, and delivery of 370 tons of grooved central-webbed rails, 50 tons of side-webbed rails, and 18 tons 13 cwt. of fastenings and fish-plates, in accordance in all things with the terms and stipulations of the specifications and general conditions hereunto

hereunto annexed and marked "A" and the plans or drawings relating thereto in the office of the Superintending Engineer and marked "No. 1," "No. 2," "No. 3," "No. 4," and "No. 5" respectively, at or for the rates or prices mentioned and set out in the said tender, and to supply and deliver the said various articles at the Tramway Yard, Belmore Gardens, Sydney aforesaid, at the dates or times mentioned and provided in the said specification. And whereas the above-bounded John Sutherland and Robert Kelly have severally offered to become and be bound to the Commissioner for Railways aforesaid and his successors, for the due performance and fulfilment of the said tender within the time mentioned in that behalf, according to the terms and conditions of the said Notice: And whereas the said tender has been duly accepted by the Commissioner for Railways aforesaid, on condition that this bond should be entered into by them the said Enoch Hughes, John Sutherland, and Robert Kelly. Now the condition of the above-written bond and obligation is such, that if the said Enoch Hughes do and shall well and truly perform and fulfil the said tender, and the contract arising out of such tender, and the acceptance thereof as aforesaid, and all and every the terms, conditions, and stipulations thereof, within the time hereinbefore in that behalf mentioned, then this obligation will be void and of none effect; otherwise to remain in full force and virtue.

ENOCH HUGHES.

Signed, sealed, and delivered by the abovenamed Enoch Hughes, in the presence of,—

M. S. HARTE.

JOHN SUTHERLAND.

Signed, sealed, and delivered by the abovenamed John Sutherland, in the presence of,—

M. S. HARTE.

ROBERT KELLY.

Signed, sealed, and delivered by the abovenamed Robert Kelly, in the presence of,—

M. S. HARTE.

Department of Public Works, Railway Branch, Sydney, 11 May, 1880.

TENDERS will be received at this Office until 11 o'clock on Tuesday, the 18th May, 1880, from persons willing to contract for the supply of the following permanent-way material for the Government Tramways, viz. :—

370 tons central-webbed rails.

50 „ side-webbed rails.

18 „ 13 cwt. fastenings and fish-plates.

Contractors may tender for the supply of the whole or abovenamed materials or for the cast-iron only.

Plan and specifications may be seen, and further particulars obtained, at the Office of the Superintending Engineer, Elizabeth-street, Sydney.

Tenders are to be endorsed, "*Tender for the supply of Permanent-way Materials for Government Tramways, Contract No. 2.*"

The Commissioner does not bind himself to accept the lowest or any tender.

CHAS. A. GOODCHAP,

Commissioner for Railways.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

OXFORD-STREET TRAMWAY.

(PETITION AGAINST—PROPERTY-OWNERS, TRADESMEN, RESIDENTS OF OXFORD-ST., AND CITIZENS.)

Received by the Legislative Assembly, 8 July, 1881.

Legislative Assembly of New South Wales.

Oxford-street Tramway Petition. For its removal altogether, because of the present narrowness of the street, or otherwise the widening of the aforesaid street, for the reasons hereunder given :—

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, Property-owners, Tradesmen, Residents of Oxford-street, and Citizens,—

RESPECTFULLY SHOWETH :—

That there will be only 11 feet available upon each side of the Tramway for the immense number of vehicles which pass through our street, averaging from 2,500 to 3,000 daily.

That such an overcrowded street is certain to be the scene of some terrible accidents, involving the loss of many valuable lives and maiming of limbs.

That the incessant thundering noise of heavy trains and screaming motors rushing by with terrific speed within such narrow limits renders conversation impossible, business has become a wearisome bore, and a fearful loss of time is now involved whilst waiting the passage of about 200 Railway Trains per day, and when this number is increased to 300 or more, existence in our street will be intolerable.

That property has depreciated in value considerably, and rents have been largely reduced.

That business has already declined in many instances from 25 to 50 per cent., and there is a fearful probability of its continuance whilst our street is being used simply as a railway.

That the most effective and only just remedy to the tradesmen of this street, also to ensure the safety of the public, and to meet the enormous amount of traffic of all kinds which will have to force its way through this the only outlet to the eastern suburbs, is to *widen it*.

That our Parliament has apportioned £8,500,000 for railways to the interior, and we hope such a necessary improvement to the metropolis of this great country, which can be secured at comparatively small cost, will therefore be granted.

Your Petitioners therefore humbly pray that your Honorable House will take the matter into your earnest and immediate consideration.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 4,604 signatures.]

COOKBUNDOON SLATE QUARRY TRAMWAY BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 24th November, 1881,—“*The Cookbundoon Slate Quarry Tramway Bill*,”—beg to report to your Honorable House:—

That they have examined the witness* named in the margin (whose evidence will be found appended hereto); and that the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the several Clauses and the Schedule of the Bill, in which it was not deemed necessary to make any amendment.

Your Committee now beg to lay before your Honorable House the Bill without amendment.

No. 3 Committee Room,
Sydney, 30th November, 1881.

WM. TEECE, JUNR,
Chairman.

PROCEEDINGS OF THE COMMITTEE.

MONDAY, 28 NOVEMBER, 1881.

MEMBER PRESENT:—

Mr. Teece.

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 30 NOVEMBER, 1881.

MEMBERS PRESENT:—

Mr. Teece,
Mr. Holborow,

Mr. Byrnes,
Mr. Beyers.

Mr. Teece called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerk.

Printed copies of the Bill referred, together with original Petition to introduce the same, before the Committee.

Present,—Augustine M. Betts, Esq. (*Solicitor for the Bill*).

Augustine M. Betts, Esq., sworn, and examined.

Witness handed in a certified copy of the Certificate of Registration of the Company, which was ordered to be appended. (*See Appendix*.)

Room cleared.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Solicitor called in and informed.

Clauses 1 to 40 read and agreed to.

Schedule read and agreed to.

Title read and agreed to.

Chairman to report the Bill, without amendment, to the House.

1881.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

COOKBUNDOON SLATE QUARRY TRAMWAY BILL.

WEDNESDAY, 30 NOVEMBER, 1881.

Present:—

MR. BEYERS,
MR. BYRNES,

MR. HOLBOROW,
MR. TEECE.

WILLIAM TEECE, JUN., ESQ., IN THE CHAIR.

Augustine Matthew Betts, Esq., having been sworn, was examined:—

1. *Chairman.*] You are connected with the Cookbundoon Slate Company I believe? I am the Solicitor for A. M. Betts, Esq.
2. Then you are connected with it in a double capacity? Yes.
3. Is this a registered Company? It is. I produce a certified copy of the certificate of registration of the Company. [The witness handed in the same. Vide Appendix.] 30 Nov., 1881.
4. Does your Company own certain land near Mannafield, in the county of Argyle? They do.
5. Is that land freehold? Eighty acres freehold, and forty acres held as a conditional purchase.
6. You believe it is necessary for the beneficial working of this land that this Bill should be passed? It is necessary; the Company cannot carry on the works unless an Act of this kind be passed.
7. Do you know, or have you heard, of any objections to the passing of this Bill? None whatever, from no person whomsoever.
8. Is it proposed that your tramway should join the Great Southern Railway? It is so proposed, subject to the provisions of the Railway Act, which regulates any junction with the railways.
9. Do you know whether the Engineer-in-Chief for Railways has any objection to this junction? I believe not. I do not speak from my own knowledge, but from statements made by Directors.
10. You believe it is essential for the proper development of these quarries that this Bill should pass? It is. We have to cross one parish road and another road which is not important, still the tramway could not be formed without this Act.
11. Do you think the public would derive any benefit from the construction of this tramway? I believe they would. There is an increasing demand for the slate for flagging and building purposes, and the great difficulty is the means of transit from the quarry to the railway, as the road in winter is almost impassable. It is only three miles from the railway.
12. What is the composition of the Company? It is a registered Company under the Companies Liabilities' Act, with limited liability. The capital is £3,000 fully paid up; power to increase the capital is provided for in the Articles of Association.
13. *Mr. Beyers.*] Have you made any intimation to the Engineer-in-Chief upon the subject? The Directors have communicated with him, I believe; I do not know that of my own knowledge, but from their statement to me.
14. Have you any documents intimating the approval of the Engineer-in-Chief? No; but the 119th section of the Railway Act expressly provides that leave shall be obtained from the Engineer-in-Chief for Railways before any private lines can be connected with the main railway.

- A. M. Betts Esq.
30 Nov., 1881
15. *Chairman.*] The length of the tramway, I think you say, will be three miles? Yes.
16. *Mr. Beyers.*] And will not interfere with any roads? No, it will be a level crossing; but provision is made for gate and gatekeeper, so that the public traffic will not be interfered with.
17. *Mr. Byrnes.*] Is there a road from this quarry to the railway? There is a road, or more properly a track, for it has not been proclaimed, made by the Company. This passes partly through Government and partly through private land; but the difficulty of getting the slates to the train by this road is the real reason for the construction of this tramway.
18. *Mr. Beyers.*] Has any petition been signed against it? None whatever. I am aware from my own personal knowledge that there is no objection to the Bill among the residents in the locality, even those through whose land the tramway will pass. Some of these are shareholders in the Company, and others approve of it because it will help forward the district, subject of course to their getting compensation which is provided for in the Bill.
19. *Chairman.*] This Bill is almost a copy of the Berrima Coal-mining Company's Bill which has already passed the Legislature? Yes, it is almost a transcript, with some alterations to meet the altered circumstances of the case.

APPENDIX.

[To the Evidence of A. M. Betts, Esq., 30 November, 1881.]

A.

New South Wales }
to wit. }

In the matter of the Cookbundoon Slate Company (Limited), and in the matter of the Companies Act.
I CERTIFY that the Company styled the Cookbundoon Slate Company (Limited) is incorporated, and that the said Company is a Limited Company.

Dated, at Sydney, this twenty-eighth day of November, in the year of our Lord one thousand eight hundred and eighty-one.

E. G. WARD,
Registrar General,
Acting as Registrar of Joint Stock Companies.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BINDA AND FISH RIVER ROAD.

(CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 16 December, 1881.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, made on the 13th September, 1881, That there be laid upon the Table of this House,—

“Copies of all correspondence, surveyor’s reports, minutes, documents, and
“other papers having reference to the Binda and Fish River Road, and
“any proposed deviation therein.”

(Mr. Teece.)

SCHEDULE.

Of papers to date of Order of the Legislative Assembly.

NO.	PAGE.
1. Mr. Harold Brce to the Secretary for Mines, applying on behalf of Messrs. Frederick Shepherd and others for the opening of a road from the Binda Road through Ferris’s conditional purchase, parish of Romner, J. Shepherd’s conditional purchase, S. Lord’s grant, to a village reserve, parish of Wheeo, then to the Fish River. 8 February, 1881	2
2. Messrs. Blomfield and Dickson on behalf of Alexander Ferris to the Secretary for Mines, applying for opening of above road, and minute. 11 February, 1881	2
3. Petition from selectors, landowners, &c., in the district of Wheeo, to the Secretary for Mines, praying for opening of road as described in No. 1. 15 February, 1881	2
4. Mr. A. Henderson to the Secretary for Mines, that road as petitioned for be laid out. 13 June, 1881	3
5. Petition from landowners, &c., district of Wheeo, to the Secretary for Mines, protesting against any other road than the above being opened, with minute thereon. 15 June, 1881	3
6. Mr. Frederick Shepherd to the Secretary for Mines, urging opening of road as petitioned for in No. 1. 29 June, 1881	4
7. Mr. Surveyor Atchison to the Surveyor General, reporting upon the letters and petitions in connection with the opening of the road. 30 July, 1881	4
8. Minute of the Surveyor General, that the matter be referred to the Chief Commissioner and Engineer for Roads for report. 17 August, 1881	7
<i>Of additional information subsequently received to date of Order.</i>	
9. Mr. Isaac Shepherd to the Secretary for Mines, that a more practicable and better road has been surveyed by Mr. Surveyor Atchison than the one applied for (see No. 1). 22 September, 1881	7
10. Petition from Residents of Wheeo and Fish River District, stating that the road surveyed by Mr. Atchison is better than the one petitioned for (see No. 1). 22 September, 1881	7
11. Mr. Assistant Engineer for Roads A. P. Wood to the Commissioner for Roads, reporting (with tracing) on road, and strongly advising the adoption of the line marked AB thereon instead of the line applied for by Petitioners (No. 1). 26 September, 1881	8
12. Under Secretary for Mines to Mr. Isaac Shepherd in reply to No. 9. 26 September, 1881	8

BINDA AND FISH RIVER ROAD.

No. 1.

Mr. H. Brees to The Secretary for Mines.

Sir,

338, George-street, Sydney, 8 February, 1881.

I have the honor to apply, on behalf of Frederick Shepherd and others, that the road now in use and herein mentioned and described may be caused to be opened for public traffic and public use. The road starts from the Binda Road, goes through Ferris's selection, parish of Romner, on through Isaac Shepherd's selection, then on through S. Lord's grant down to another village reserve, parish of Wheco, then down to the Fish River.

The above described road has been a thoroughfare for the past thirty years, and is also marked upon the maps as a road, but the lessee and selectors now prohibit any person travelling along the road; I therefore solicit your favour to have the road proclaimed as soon as possible.

I have, &c.,

HAROLD BREES,

Agent for Frederick Shepherd and others.

The Surveyor General.—G.E.H., *pro* U.S., B.C., 8/2/81.

No. 2.

Messrs. Blomfield & Dickson to The Secretary for Mines.

Sir,

139, Pitt-street, Sydney, 11 February, 1881.

We have been instructed by Mr. Alexander Ferris to apply to have a road from the Binda Road to the Fish River proclaimed without delay.

This road commences at the Binda Road, and passes through Fryer's selection, parish of Romner, county of King, and thence through J. Shepherd's selection, S. Lord's grant, along the main road to village reserve, parish of Wheco, and thence to the Fish River. This road has been in use for the last twenty-five years, and it is a matter of great importance to the selectors, and especially those on the Fish River, that this road should not be closed, as it is the most direct and convenient way for them.

We therefore beg that you will be pleased to call for report on this road without delay, and would point out that application has already been made by some other settlers down in that district to have this road proclaimed.

We have, &c.,

BLOMFIELD & DICKSON.

The Surveyor General.—G.E.H., *pro* U.S., B.C., 14/2/81. Forwarded to Mr. District-Surveyor Twynam for report.—A. J. STOPPS (for Surveyor General), 17 February, 1881, No. 78. To Mr. Surveyor Atchison, for inspection and report as soon as possible.—E. TWYNAM, D.S., 23 February, 1881. Report herewith.—JAMES L. ATCHISON, Surveyor, 30 July, 1881.

No. 3.

Petition from Selectors, &c., District of Wheco, to The Secretary for Mines.

Sir,

Wheco, 15 February, 1881.

We, the undersigned selectors, landowners, carriers, travellers, and others interested, beg most respectfully to petition that you will cause to have thrown open and proclaimed for public use the road that joins the Binda, Crookwell, Goulburn, and Gunning Roads, at the Winduella Village Reserve, county of King, parish of Romner; thence through Fryer's selection (taken up by A. Ferris in 1879); through Isaac Shepherd's selection, crossing the Wheco Creek at the old crossing; through Simeon Lord's grant down along Burrawanda Creek, the old road to the village reserve, parish of Wheco; thence down to the Fish River, along the old road that joins the main road up and down the Fish River, and which leads to Reid's Flat, Cowra, and other places.

This road, besides being traced on the Government maps as near as possible as described, has been used by the public for the last thirty years or more.

As a public benefit we can thoroughly recommend it, as it runs through a large scope of Government land, thickly inhabited by selectors and other settlers who, if that road is stopped, would have to go miles and miles round to get on the main Burrowa and Goulburn Road to get an outlet to any town, besides it connects several very valuable village reserves which we feel certain, if inducement with good roads offers, are bound to be settled on. As a road for travelling stock it cannot be surpassed; there is plenty of water and grass in all seasons, and only about 3 miles of freehold land to go through from the Fish River to the Winduella Reserve, and there being reserves at equal distances for camping places for stock right through.

There is the old road quite plain that has been used for the time mentioned in this petition, and slip-rails left all through each property, therefore we hold we have a legal claim upon the said road for it being allowed to be used as a thoroughfare for such a number of years, even if there were no other claim, and we assume besides that right that there is a road left according to the tracing on the Government

maps.

maps. A village reserve would never be left without a right-of-way being left to them. We feel confident that no Government will be so unjust as to allow the interest of two or three individuals to interfere with such a public benefit.

We, your humble petitioners, therefore beg and pray that you will give this petition your wise consideration and grant our request as soon as possible.

We have, &c.,
FREDERICK SHEPHERD,
DENIS O'BRIEN,

And 134 others signing petition.

Forwarded to Mr. District-Surveyor Twynam for report in connection with previous instructions.—
A. J. STOPPS (for Surveyor General), 23 March, 1881, No. 162.

Mr. Surveyor Atchison for inspection and report.—E. TWYNAM, D.S., 13 May, 1881. Report herewith.—JAMES L. ATCHISON, Surveyor, 30 July, 1881.

No. 4.

Mr. A. Henderson to The Secretary for Mines.

Sir,

Wheeo, 13 June, 1881.

I beg to call your attention to what seems to me the absurd and unjust way to the public in which Mr. Surveyor Atchison is acting in the case with reference to the road that has been petitioned for and signed by 136 inhabitants of this district, from the Winduella Village Reserve to the Fish River; instead of inspecting and reporting upon the road petitioned for, he goes searching about the bush to see if he can find another road, and what seems to me the most absurd thing of all, he asks Mr. Isaac Shepherd to mark him out a line, I suppose for the road. I may mention the road petitioned for goes along an old road that has been used for years through an old grant of Mr. I. Shepherd's, and Mr. Shepherd is the only one that objects to the road petitioned for, and Mr. Atchison knows it. I need not say the line Mr. Shepherd marked goes any where near the road petitioned for, and would be useless to the public, not even a horseman can get along it for the creeks and gullies. I am certain five hundred pounds (£500) would have to be spent before a dray could travel it—it would have to be all cleared and bridged. There is no water on it at all—missing the reserve that would be such a public benefit to travellers on the road petitioned for, besides being much longer. It is plain to every one that the road Mr. Shepherd has marked is to suit his own interests and not the public benefit, as can be proved by every one in the district. I as a selector, and with an interest to the public, protest against the line marked by Mr. Shepherd instead of the road petitioned for, for it seems to me that the country is coming to a pretty state if the interest of one private individual is to be considered before a petition of the public. I am writing to protest against such an unjust thing, if Mr. Surveyor Atchison does not recommend the road petitioned for but the other road Mr. Shepherd has marked, for you to hold an inquiry whether the road petitioned for is not the best road, and will be the most public benefit. It is beyond doubt Mr. Atchison thinks a road is required, and now it rests whether we get a road that will require hundreds of pounds spent on it before it can be used, and then it will be of no benefit to the public, or whether we get a road that if thrown open it is made nearly all the way, and the public can travel on it at once without one sixpence spent on it, and about the best road in this part for water and grass for travelling stock, and will be an everlasting public benefit.

Knowing and praying that you will consider the public interest before that of a private individual.

I have, &c.,
A. HENDERSON.

No. 5.

Petition from Landowners, &c., District of Wheeo, to The Secretary for Mines.

Wheeo, 15 June, 1881.

WE, the undersigned landowners, free selectors, carriers, and others that are interested, beg to protest against any other road than the one that has been petitioned for by 136 of the most influential and interested inhabitants of this district, viz., the road to start from the Winduella Village Reserve through Ferris's selection, along the old road through Isaac Shepherd's conditional purchase, crossing the Wheeo Creek at the old crossing of the old road, thence along the old road through Simcon Lord's grant down Burronanda Creek, still along the old road to the Wheeo Village Reserve, through the reserve along the old road to the Fish River or the best road. There is no other line of road that can be got other than the one mentioned and petitioned for that will be any service whatever to the public; in fact, there is no line without hundreds of pounds being spent upon bridges and clearing, can be travelled on with an empty dray, and then it will be useless for the want of water to carriers and travelling stock.

The road petitioned for is an old made road, it having been used for years, and would not want a shilling spent on it before drays could travel it, and it is the shortest, best, and most direct road from the Fish River, Hovel's Creek, Reid's Flat, and Cowra (besides having a good supply of water on it); to the townships of Binda, Crookwell, and Goulburn, and we are positive it would be a great feeder to the tramway at Crookwell, where we feel sure a tramway must come in a very short time. Besides being a route that will afford selectors an opportunity of mail communication with the advantage of the shortest and most direct way for the mail to run through to Reid's Flat and Cowra from Wheeo.

We, the undersigned humble petitioners, beg most respectfully to urge the necessity of at once opening the said road petitioned for, and can confidently state that with only one exception the public are unanimous, that the necessity and great public benefit the road would be, that we have every reason and right to expect that the interest of the public will be considered before the wish of one private individual.

Praying you will give the matter your wise consideration and deal with the matter as soon as possible.

We have, &c.,
FREDERICK SHEPHERD,
JOHN CUMMINGS,

And 226 others signing the petition.

The

The Surveyor General, B.C., 15/7/81.—G.E.H., *pro* U.S.
 Forwarded to Mr. Surveyor Atchison, in connection with former instructions to him. Letters from Messrs. A. Henderson and F. Shepherd are also herewith for Mr. Atchison's consideration.—A. J. STORRS (for Surveyor General), 18 July, 1881, No. 81. Urgent.
 Report herewith.—JAMES L. ATCHISON, Surveyor, 30 July, 1881.

No. 6.

Mr. F. Shepherd to The Secretary for Mines.

Sir,

Wheoo, 29 June, 1881.

I beg to call your attention to what seems to me a great injustice as well as an injury to this district and the public at large, and feel sure it will never repay if you give your sanction.

A petition has been presented to you praying that a road from the Winduella Village Reserve to the Fish River, county of King, might be proclaimed and thrown open to public use; first, because it is required by the public; second, because we have a right to it by usage. A surveyor is sent up to report and inspect the road petitioned for, but before he inspects the whole of the road and sees whether it is practicable, he goes looking about to see if he can get another one that will do, and while he is away in Goulburn he asks the only person (I say the only person because we can prove it), that is opposed to the road petitioned for, to mark a line out (I should say a queer thing for a person to do that is sent up by the Government) which he does, and strange to say, exactly the same way that person took the surveyor the day before. Now, sir, I ask if it is justice or to the interest of the public to allow the only person that is opposed to the petition of 136 of the most influential and interested inhabitants to be asked to do such a thing, for the public are unanimous as to which is the shortest and best road, and which route would be the most public benefit. One road can be travelled on at once without one shilling being spent on it, it being an old road used for years nearly all the way, a splendid road with plenty of water for travelling stock, and a Government reserve about midway between Fish River and the Winduella Reserve. The other line that is marked out for the surveyor a horseman cannot travel it, and would cost hundreds of pounds for bridges and clearing, before even an empty dray could travel, and then it would be of no use to the public, as there is not a drink of water on it for miles. In fact, one road would be an everlasting public benefit, and which would be an outlet to the Wheoo Village Reserve, the other road would be of no use at all to any one, and would take so much money to make it so that a horseman could travel it. We ask for a road that does not want any money spent on it. I mention two roads because there is the one that is petitioned for, and the other is the one that the only person that is opposed to the one petitioned for marked out. I think I hardly need ask which one ought to be granted, the one that is the shortest, the best, and petitioned for by 136 inhabitants, or the one that will suit the convenience and wish of one single individual, and no use to the public.

The surveyor made the objection that the road petitioned for comes partly through freehold land, and there is not sufficient traffic to warrant it, although the road would go through a grant for about a mile, it goes along an old road that has been used between twenty, thirty years, or more, and that road has the mile trees numbered from Burrowa to Wheoo, and I presume it was surveyed by Mr. Government Surveyor Townsend. It is many years since it was done, but the marked trees are there now.

It hardly seems feasible, there being sufficient traffic to warrant a road being made that will cost hundreds of pounds, and then be of no public benefit, and at the same time not sufficient traffic to take the road, that is the unanimous wish of the public, and that would be of great public benefit. I hold there is sufficient traffic to warrant the Government, considering the wants and requirements of the public before one single individual, and take the road that will be the best, shortest, and most direct road to our nearest townships of Binda, Crookwell, and Goulburn, even if it does interfere, and is against the wish of the single person.

I am writing to protest against such an injustice, if the report is against the public interest, and petition and pray if it is so, for a surveyor from Sydney to be sent up to report upon the road petitioned for.

Feeling confident you will give the matter your wise and careful consideration.

I am, &c.,

FREDERICK SHEPHERD.

The Surveyor General, B.C., 1/7/81.—G.E.H., *pro* U.S.

No. 7.

Mr. Surveyor Atchison to The Surveyor General.

Sir,

Goulburn, 30 July, 1881.

1. Referring to your B.C. instructions herewith, as noted in margin, to report upon certain letters and petitions from inhabitants and others, praying for the survey and opening of a road from the Goulburn and Burrowa Road, at the Winduella Village Reserve through part of the Wheoo Estate to the settlement in the neighbourhood of the Fish River, in the county of King, I do myself the honor to state that in accordance with instructions from Mr. Twynam, district surveyor, I have made a comprehensive inspection of the locality with respect to means of thoroughfare, and have now the honor to report as follows:—

2. On the accompanying tracing I have shown by red and blue tinting the enclosed lands held under lease from the Crown, and in fee simple, &c., by Messrs. Isaac and Frederick Shepherd respectively, the former being shown by light, and the latter by deep tinting; I have also shown the settlement to the west of these properties likely to be interested in the road desired, which is shown by a firm blue band.

3. It will be observed on reference to the tracing that the proposed road passes for a considerable distance through the portion of the Old Wheoo Estate held by Mr. Isaac Shepherd, who would strongly object to any such severance of his enclosed freehold property, and as I understand there would be no objection to the opening of the remainder of the road desired, which passes principally through Crown
Lands,

Lands, the main question in this case appears to be the policy or necessity for such severance, having in view the present and probable future traffic, which may be the result of increased settlement in the neighbourhood.

4. Many years ago, before fencing became general in this locality, and when the quantity of land alienated was insignificant, the country for miles around being held by comparatively few settlers, principally under lease from the Crown, several tracks (shown approximately by black dotted lines on tracing) were in use from Old Wheeo, the late Mr. Isaac Shepherd's head station, leading to Narrawa, Goulburn, Binda, &c., and it is now desired by the petitioners to open for public thoroughfare a road from the Fish River and along a portion of one of these old tracks leading through the village reserve on Burrawinda Creek, and thence through Simeon Lord's, now Isaac Shepherd's, 2,045 acres, and past his homestead on portion No. 21, parish of Romner, to the Binda and Wheeo Road, for the purpose, it is stated, of providing direct means of access to Goulburn, Crookwell, and Binda, from a large settlement; and also a road which would be of general public utility as a road or thoroughfare for the whole district. It is moreover alleged by the petitioners that by right of user they can claim thoroughfare in the direction of the road desired.

5. As far as right of user is concerned through the Wheeo Estate from the Wheeo and Binda Road to the village reserve on Burrawinda Creek, it is very difficult to obtain satisfactory evidence. Mr. Frederick Shepherd, on behalf of the petitioners, on the one hand alleges that there has been a track in continuous use through this portion of the estate in the direction desired, for a sufficient time to give them right of user, whereas the proprietor, Mr. Isaac Shepherd, asserts that the track in question for many years past, in fact since the alienated lands in this locality were enclosed, has been used only for station purposes, and that the petitioners have not had undisputed thoroughfare for a sufficient time to give them the right they claim. I have inspected this track, which from the village reserve leads to the selections of Messrs. Cartwright and Scotson, on Burrawinda Creek (who have been, I understand, in the employment of the Shepherd family for many years past), and though it appears to have been in use for a considerable period, the wheel traffic latterly has apparently been of the most casual and insignificant description. The continuation of this old track (shown by black dotted lines) leading through the village reserve towards Narrawa was obstructed about twenty years ago by the erection of a fence within the reserve which is still in existence. It has also been obstructed by the settlement in the parish of Narrawa, and it will be observed that it has not been reserved in any of the numerous measurements in that locality, showing that for many years past it has not been considered necessary for the public convenience. Tracks upon which the wheel traffic appears to be so casual that they are apparently used principally by horsemen, have been in existence I understand for years past, from Messrs. Cartwright and Scotson's selections towards Narrawa, and from Callaba Creek, in the direction of the road petitioned for crossing the Bramah Creek and the Fish or Lachlan River to the settlement, parish of Narrawa, as shown approximately by Crown Lands on tracing; but there never appears to have been a thoroughfare towards Goulburn in the position of the road desired, nor has there apparently been any thoroughfare through the Wheeo Estate since fencing became general, though the track from Cartwright's to the head station through Simeon Lord's grant may have been used occasionally on sufferance by others than those employed on the work of the station; and though the evidence which I have been able to gather is very conflicting in this respect, the appearance of the tracks which I have mentioned would lead me to suppose that the petitioners would have very much difficulty in proving their claim to right of user.

6. A road has lately been surveyed in the position shown by a blue dotted line on tracing from the settlement, parish of Narrawa to Dalton and Gunning, which will carry the traffic from the greater number of portions located between it and the river, and form the scope of country held by the Messrs. Shepherd; it will be seen that the settlement at present mainly interested in the provision of direct means of access to Goulburn, &c., is situated on the left bank of the Fish or Lachlan River, in the vicinity of Dryburgh, Nimby, Reid's Flat, Hovell's Creek, &c. The settlers located on these portions are engaged in agricultural and pastoral pursuits, and appear to have been rather awkwardly situated for years past in respect of direct means of thoroughfare. They have been obliged to use several tracks from their lands to the main Goulburn and Burrowa Road, which have been altered at different times, as circumstances such as the washing out of creek crossings and the erection of new fences have rendered necessary, and at present the greater number of them use a track to the main road on sufferance, in places as shown approximately by a vermilion band on tracing which is a considerable way round; they are therefore naturally anxious to have a direct road defined for their requirements, so that in time funds may be appropriated for its improvement and maintenance.

7. I am of opinion that were a practicable and direct means of thoroughfare provided by the Government in the direction of the road petitioned for, traffic would in time become of some importance, as a road in the direction desired would provide a much more direct means of access to Goulburn, Crookwell, and Binda, than at present exists from the settlement beforementioned, and it would also, I believe, be the means of settling to a great extent the large amount of unalienated lands along its course.

8. With regard to the relative importance of the townships beforementioned, having in view the position of any road in the direction desired, Goulburn being on the railway line, and of great commercial importance, will always be the main outlet from this part of the country; and as far as Binda and Crookwell are concerned it appears to me that even the provision of practicable means of thoroughfare would not be the means of drawing the bulk of the traffic to the former place, which has been at a standstill for years past, and is likely to remain so; whereas Crookwell, though more distant, is at present a township of considerable importance and is gradually improving, and thus provides a better market for produce; moreover, the road from Wheeo to Binda in its natural condition is not to be compared to the road from Wheeo to Crookwell, which has lately been much improved by the Works Department and is now in a very fair state of repair. It is also probable that at some distant date it may be considered advisable by the Government, in the interests of the large agricultural settlement around Crookwell, to construct a tramway from that township to Goulburn.

9. I have therefore considered the possibility of providing with as little severance of freehold estate as possible a direct and practicable means of thoroughfare towards Goulburn and Crookwell, which undoubtedly are the main townships in this locality; and, after a careful inspection of the country, I find that instead of continuing the proposed road from the village reserve on Burrawinda Creek through the Wheeo Estate, which would cause considerable injury to enclosed freehold property by severance for a prospective traffic, a much better road is to be obtained to the west of the freehold, as shown on tracing by
double

double red lines. This road would pass along a comparatively level range dividing the waters of Burrawinda and Stoney Creeks, and thence either through the corners of J. Shepherd's and J. Cartwright's 820 and 1,920 acres respectively, or along the boundaries of those grants to the main road from Goulburn to Burrowa. With regard to these alternative routes, the former is the shortest and best and is naturally practicable, whereas the latter would cross two washed-out gullies, shown on tracing, which would require an immediate expenditure of between £50 and £60 to make them practicable for wheel traffic; and, therefore, if severance is not considered objectionable, the first mentioned line should probably be adopted as being the shortest and least expensive. The portions of Messrs. Shepherd's and Cartwright's grants which would be severed by the proposed road are now the property of Mr. Frederick Shepherd, and are within an enclosure containing Crown Lands; they would not, therefore, be considered as enclosed under the practice of the department in opening parish roads.

10. It is proposed by the Government to subdivide a considerable area of land in this district in anticipation of demand; and in accordance with instructions from Mr. Twynam, District Surveyor, I have designed for such a purpose certain lands, parishes of Wheeo and Narrawa. The form of such subdivision, which will shortly be carried out, is shown by red lines on tracing; and it will be observed that the road which I propose will not only provide access to the main Goulburn and Burrowa Road from these portions (which would be necessary in any case), but it reaches this main road in the shortest possible distance, and would be quite as short a road from the Fish River to Goulburn and Crookwell as the road petitioned for; moreover, the latter is objectionable in an engineering point of view, as it crosses the Wheeo Creek twice and the Lost River once, which is entirely avoided on the road which I propose.

11. As far as direct means of access to the township of Binda is concerned, it will be observed that a road has been left in the proposed subdivision to the boundary of the freehold lands of Messrs. Isaac and Frederick Shepherd, from whence a practicable road is to be obtained along this boundary to the Wheeo Creek, and thence through portion 41 to the road reserved between portions 99, 100, and 112, and thence through Crown Lands to the Wheeo and Binda Road, as shown on tracing by a dotted vermilion line; and should the proposed subdivision cause a larger settlement in this neighbourhood, or should the present conditions of traffic alter to any extent, it might be advisable to have this proposed road, which does the least possible injury by severance, opened for public thoroughfare; but the possibility of much traffic in this direction appears to me to be so remote that at present I cannot advise even this slight severance of private estate.

12. Referring to Messrs. F. Shepherd's and A. Henderson's letters herewith objecting to the road which I have proposed, I would state that the latter is a youth in the employment of Mr. Shepherd, and as the letters contain substantially the same statements they may be dealt with as one. It is alleged that the alternative line which I have proposed is impracticable on account of creeks and gullies for even a horseman to travel, and that at least £500 would have to be expended to make it fit for traffic of any kind. It is also stated that it would be useless for travelling stock and teamsters, as access would not be provided to any water along its course, and that it is naturally unfitted for a means of thoroughfare. These statements are without the slightest foundation, in fact the alternative road proposed by me passes along a comparatively level range for the greater part of the way and does not cross any creeks though it is close to permanent water, and were the scrub cleared in a few places it would be quite practicable for wheel traffic without any further expenditure. Being through new country it would undoubtedly be a little soft in the winter months until beaten by traffic, but this also applies to a considerable portion of the road petitioned for and is always to be expected for a few seasons in any new country. In this case however the inconvenience would not be felt, as I have been informed it is the practice of the settlers in the neighbourhood to travel with their heavy loading during the summer months. It will also be observed on reference to the tracing that ample access has been provided to all the reserves along its course.

13. In conclusion I would state that the advantages offered by the alternative line are:—That following a level range it is naturally good; that it would provide access from the proposed subdivision to the main road, which, as I have before stated, would be necessary in any case; it does the least injury by severance, and reaches the main road, which has been maintained by the Government for many years past, in the shortest possible distance, and thus makes a portion of this road available for the traffic to Goulburn and Crookwell, whereas this portion of the road petitioned for would follow the course of Burrawinda Creek, causing considerable injury to enclosed freehold estate by severance. It would not provide the necessary access to proposed subdivision of unalienated lands in this locality, and as before stated it would cross the Wheeo Creek twice and the Lost River once, which is entirely avoided on the line which I have proposed, and which, though it may be objected to by a few from different motives, would I am sure be acceptable to those resident on the left bank of the Lachlan River, who are, as I have before shown, the most interested in the matter; and whose only desire is that a direct and practicable road should be provided for their requirements without insisting on any particular line. I would also point out that the opening of the road desired by the petitioners past Mr. Isaac Shepherd's homestead on portion 21 could be successfully resisted by him under the provisions of the 2nd section of the Act, 4 William IV No. 11.

14. Under the circumstances of this case, and having in view the interests of all concerned, I would beg to recommend the survey for opening under the provisions of the Parish Roads Act of the line marked ABC on tracing.

I have, &c.,

JAS. T. ATCHISON,

Surveyor.

On the part of those concerned there has been much local feeling imported into this matter, and it is not probable that any arrangement of roads would afford satisfaction to all. The case has received careful consideration, and the line of road recommended to be adopted and undoubtedly is the best to be obtained in respect of natural conditions and general public convenience, whilst it has the manifest advantage of avoiding so large a severance of alienated land as would be necessary in the opening of the road applied for.

Under all the circumstances I would advise that authority be conveyed to me for the survey of the road proposed by Mr. Surveyor Atchison (ABC on sketch herewith), a part of which intersecting freehold land must be resumed under the provisions of the Parish Roads Act. Touching the suggested branch road towards Binda, any such road must evidently intersect alienated land, and the route indicated (red dotted line) is that which will cause least damage to proprietary interests and will at the same time meet probable local requirements.

At

At present there is little or no traffic in direction of Binda, certainly not sufficient to justify the interference with private estate involved in the opening of this road, neither is there probability of alteration in the conditions of traffic in this locality; therefore I do not advise survey of this branch road. There is no necessity for immediate action, and the question may await the progress of settlement.

Submitted.—E. TWYNAM, D.S., 5 August, 1881. The Surveyor General.

No. 8.

Minute of Surveyor General.

17 August, 1881.

As in the event of either of the two roads being adopted the Works Department will probably be asked to expend money upon it. The Chief Commissioner and Engineer of Roads should now be referred to, perhaps, and requested to obtain from his local officer a report as to the merits of the two roads, in view of the cost relatively of their construction and maintenance.

The road recommended by Mr. District-Surveyor Twynam and Mr. Surveyor James T. Atchison is for the greater part being laid out in the subdivision of the Crown estate now being made.

A. J. STOPPS,
(For Surveyor General.)

Submitted.—H. W., 23/8/81. Approved.—F. B. S., 23/8/81. The Under Secretary for Public Works, B. C., 24/8/81.—G. E. H., *pro* U. S. Roads, B. C., 24/8/81.—J. R. Mr. Wood, for report.—F. W., 25/8/81. Report herewith.—A. P. WOOD, 26/9/81, Commissioner for Roads, B. C.

No. 9.

Mr. I. Shepherd to The Secretary for Mines.

Sir,

Wheoo, 22 September, 1881.

Seeing that Mr. Teece has moved in the House that all papers in reference to the proposed Fish River and Wheoo Road should be laid upon the Table, I do myself the honor of drawing your attention to the following facts in connection with the case:—

1. That the petitioners state that the road asked for has been used by the public for over thirty years, this statement is totally untrue. The track has been obliterated in many places, and no traffic beyond that appertaining to station work has passed over it for thirty-two years to my individual knowledge; the track has also been fenced across for twenty-five years, and no attempt has ever been made by any one to use it. The present agitation having arisen by two persons, viz., Mr. F. Shepherd and Mr. A. Ferris, who got up the petitions and obtained a number of signatures from persons, four-fifths of whom have no interest whatever in the road and live in places altogether away from and unlikely ever to use it; and this was done with a view of injuring that portion of my property through which it was proposed to pass.

2. That a more practicable and better road in every way has been surveyed by and at the instance of Mr. Surveyor Atchison; and many of the persons interested have inspected this survey and expressed themselves perfectly satisfied with it, and are ready to accept the road as recommended by the surveyor in preference to that asked for by the petitioners, these persons being many of the same who signed the former petitions and whose names will be found attached to that now forwarded under cover with this letter.

I therefore have the honor respectfully to request that the prayer of the petition now herewith may be granted and the survey completed forthwith, so that the road may be opened for traffic with as little delay as possible.

I have, &c.,
ISAAC SHEPHERD.

Acknowledge and inform no action will be taken until after papers have been laid upon the Table of the House.—G. E. H., *pro* U. S., 24/9/81.

No. 10.

Petition from Residents of Wheoo and Fish River Districts to The Secretary for Mines.

RESPECTFULLY SHOWETH,—

22 September, 1881.

1. That your petitioners are residents of Wheoo and Fish River, county of King, and are interested in the question of the proposed road from Wheoo to Fish River which your petitioners understand has been applied for, along a line of route passing through the private lands of Mr. Isaac Shepherd.

2. That your petitioners are informed that certain representations have been made to you alleging that the road as asked for by the applicants has been used by the public for upwards of thirty years, which statement your petitioners know to be incorrect as regards the part of the road which passes through Mr. Shepherd's property, the truth being that the road or track referred to has only been used by the owners of the property for station purposes, and by persons having business in some way or other in connection therewith.

3. That your petitioners believe that most of the persons who have signed the petition in favour of the line of road above mentioned are persons who are not interested in the matter, and who would scarcely ever (if at all) have occasion to use it.

4. That your petitioners are acquainted with the line of road as proposed by Mr. Surveyor Atchison, and your petitioners have no hesitation in asserting that such line of road is better than the line asked for by the applicants. The distance is no longer, the road is more practicable, and it passes for the most part through Crown Lands.

Your petitioners therefore pray that you will be good enough not to sanction the opening of the road as asked for through the freehold lands of Mr. Isaac Shepherd, but that such road may be according to the deviation proposed by the Government Surveyor.

H. SELMES,
S. SELMES,

And thirty-three others signing petition.

22 September, 1881.

WE, the undersigned residents of the Fish River, having been appointed by the landowners in that locality to examine the road as recommended by Mr. Surveyor Atchison, and if we approve of it to sign this petition on their behalf (we having also signed the former petitions in respect of this matter), beg to say that we have now done so, and being satisfied in the matter, fully endorse the Surveyor's report, and request that the road as recommended by him should be open as soon as possible for public traffic.

J. CUMMINGS.
W. BALGOWAN.
J. PUGSLEY.

No. 11.

Mr. Assistant Engineer for Roads A. P. Wood to The Commissioner for Roads.

Sir,

Road Office, Goulburn, 26 September, 1881.

In pursuance of your instructions, I have to forward the following report on the road referred to in the accompanying papers, which is intended to give the settlers on Callaba Creek, Fish River, and the intermediate and adjacent country, a more direct outlet to the Crookwell and Goulburn markets.

From Callaba Creek to the point "B" shown on tracing attached, the proposed survey is common to both the lines referred to, viz., to that recommended by Mr. Surveyor Atchison in his exhaustive report, and to that petitioned for by Mr. F. Shepherd and others.

From "B," the road proposed by the Survey Department follows the crest of Baxter's Range to near its junction with the Wheeo and Burrowa Road at "A." The gradients along this line are easy, with good natural drainage, while the soil is of a sounder nature than that on the greater portion of the line applied for by the petitioners.

The distance by this route from "B" to the junction with the other line at the Winduella Village Reserve is 8 miles, and if this $2\frac{3}{4}$ miles is common to the Wheeo and Burrowa Road. From the junction with this latter road to "B" about 5 miles passes through Crown Lands, and will under any circumstances be left in the subdivision of same, which is now being carried out; the balance of the length, about 1 mile, passes through Mr. F. Shepherd's property, and does but little injury to the owner by severance, &c.

Clearing will be the chief, if not the only work, that will be required on this road for many years, and I estimate the cost of carrying this out at £150.

The road applied for by the petitioners, shown by blue line on attached tracing, is claimed by them on the ground of "right of user;" consequently, in making my report, my views regarding this route will be confined to the actual track without reference to any deviations therefrom by which the general line could be improved. This course is the more advisable as I feel well assured that unless the petitioners can establish the claim they set up ("right of user") the Lands Department will not survey and open a road by this route, involving, as it will do, such sacrifice of private interests in the severance, &c., of Mr. Isaac Shepherd's property, while there is another and much better line available to meet the present and future requirements of the district.

This road crosses the Wheeo Creek on the boundary of the Winduella Village Reserve, and within that reserve crosses the Lost River, thence passes over some rotten flats east of A. Ferris's selection, over broken country within that selection, and again crosses the Wheeo Creek near Mr. Isaac Shepherd's homestead. This last crossing is a very bad one, as in flood time about 8 or 9 chains of the flat is under water and, judging by the drift timber, impassable. After crossing a sound ridge west of this creek the road follows the Burrowinda Waters, and would cost a large sum of money to construct and maintain.

The three crossings mentioned would eventually have to be bridged, and very considerable lengths of metalling would be more immediately necessary to make this road as suitable for traffic as the line recommended by the Survey Department is naturally.

There is no saving of distance by this line as between the points of junction, but in estimating the ultimate cost of construction there will be, after deducting the $2\frac{1}{2}$ miles common to the Burrowa Road by the other route, an actual loss by this line equivalent to the cost of constructing that $2\frac{1}{2}$ miles of road and the cost of maintaining same in perpetuity.

Under these circumstances I have no hesitation in fully endorsing Mr. Surveyor Atchison's recommendations, and would strongly advise the adoption of the "AB" line as a portion of the road from Winduella to the Fish River, instead of the line applied for by the petitioners.

I have, &c.,

ARTHUR P. WOOD,

Assistant Engineer, Roads and Bridges.

After studying these reports I strongly recommend the adoption of the road as recommended by Messrs. Wood, Twynam, and Atchison, and that the petitioners for the other line be so informed.—F.W., 15/10/81. Under Secretary, B.C.—Inform J.L., 20/10/81. The Under Secretary for Mines, B.C., 21/10/81.—J.R. The Surveyor General, B.C., 22/10/81.—G.E.H., *pro* U.S. The Surveyor's reports being thoroughly borne out by this report from the local Road Superintendent it is recommended that the line of road advocated by them be laid out with a view to its proclamation, &c.—A. J. STORRS (for Surveyor General), 22 October, 1881.

No. 12.

The Under Secretary for Mines to I. Shepherd, Esq.

Sir,

Department of Mines, Sydney, 26 September, 1881.

With reference to your letter of the 22nd instant, enclosing a petition from certain residents of Wheeo and Fish River respecting a road between those places, I have the honor to inform you that no action will be taken in the matter until after the Return called for by Mr. Teece, M.P., has been laid upon the Table of the Legislative Assembly.

I have, &c.,

HARRIE WOOD,

Under Secretary.

See No. 9.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROADS FROM GUNNEDAH TO BARRABA.
(CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 5 July, 1881.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 22nd February, 1881, That there be laid upon the Table of this House,—

“Copies of all Correspondence, with tracings (if any), that has taken place between the Government, the District or any other Surveyors, or other person, respecting the opening up of Roads from Gunnedah to Barraba, since the Order of this House of the 4th November, 1879, to the present time.”

(*Mr. Joseph P. Abbott.*)

SCHEDULE.

NO.	PAGE.
1. Mr. District-Surveyor Dewhurst to the Surveyor General, stating that he intends to carefully inspect the country between the proposed bridge over the Numoi and Barraba. 6 March, 1880.....	9
2. T. G. G. Dangar, Esq., M.P., to the Secretary for Mines, enclosing extract of letter addressed to him by the Rev. A. Brown, resident clergyman at Barraba. Mr. District-Surveyor Dewhurst's memo. thereon. 18 May, 1880....	9
3. The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P., acknowledging receipt of above. 19 May, 1880....	9
4. T. G. G. Dangar, Esq., M.P., to the Secretary for Mines, calling attention to Mr. Staff-Surveyor M'Master's report respecting the use of the word "unalienated" instead of "alienated." 24 May, 1880.	9
5. The Rev. A. Brown to T. G. G. Dangar, Esq., M.P. (and by him submitted to the Secretary for Mines), respecting the roads. 1 June, 1880.	10
6. Questions asked in the Legislative Assembly by Mr. Dangar, with respect to above roads, and replies thereto. 2 June, 1880.	10
7. The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P., informing him that the Rev. A. Brown's letter, with other papers, has been forwarded to the Surveyor General for a further report. 8 June, 1880.	10
8. The Rev. A. Brown to the Colonial Secretary, requesting that two disinterested persons should report on the roads; minutes thereon. 8 June, 1880.	10
9. Mr. District-Surveyor Dewhurst to the Surveyor General, reporting on track from Gunnedah, <i>via</i> Burburgate, Wean, and Connor's Gap, to Barraba, and enclosing his letters to, and replies from, Messrs. Licensed-Surveyors Dowe and Loder, and Mr. Goodwin. 30 June, 1880.	11
10. The Under Secretary for Mines to the Rev. A. Brown, in reply to his letter of the 8th instant. 30 June, 1880. ...	13
11. Mr. Irving Winter to the Secretary for Mines, requesting that decision regarding the proclamation of a road may be withheld until the report of the District-Surveyor comes to hand; minutes thereon. 1 July, 1880.	13
12. J. P. Abbott, Esq., M.P., to the Under Secretary for Mines, asking for a tracing of the proposed road between Gunnedah and Barraba; minute thereon. 10 February, 1881.	13

1879-80.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROAD FROM BARRABA TO GUNNEDAH.

(FURTHER CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 2 June, 1880.

FURTHER RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 6 May, 1879, That there be laid upon the Table of this House,—

“Copies of all Correspondence (with tracings, if any) that has taken place between the Government, the District or any other Surveyors, or any other person, including Surveyor M'Master's Report, respecting the opening up of the road from Barraba to Gunnedah, including both the one *via* Weetalibah to Rangira and Borah and the one *via* Carroll and the Peel and Namoi Crossings.”

(Mr. Dangar.)

SCHEDULE.

NO.	PAGE.
1. Questions asked in the Legislative Assembly by Mr. Cameron, for Mr. Dangar, with respect to the road Barraba to Gunnedah. Replies thereto; minutes, &c., thereon. 23 April, 1879	3
2. Question asked in the Legislative Assembly by Mr. Bennett—"When will tenders be invited for bridge over River Namoi and new line of road Gunnedah to Barraba, be notified in Government Gazette, &c.?" Reply thereto. 6 November, 1879	3
3. Mr. Irving Winter to the Honorable the Minister for Mines (presented by T. G. G. Dangar, Esq., M.P.), advocating old road <i>via</i> Carroll, and objecting to proposed new road which passes through his run and freehold land, Talcumbah Station, and enclosing tracing; minute thereon. 21 November, 1879	3
4. Mr. District-Surveyor Dewhurst to the Surveyor General, reporting in compliance with memo. of 20th instant, with tracing; minute thereon. 29 November, 1879	4
5. T. G. G. Dangar, Esq., M.P., to the Honorable the Minister for Mines, with respect to above road, and <i>précis</i> of action taken. 9 December, 1879	4
6. The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P., acknowledging receipt of Mr. Irving Winter's letter (see No. 3), and informing him that action on proposed new line of road will be stayed until a report upon the "pencil line" (see plan), shall have been obtained. 9 December, 1879	5
7. Same to same, returning tracing. (See No. 3.) 22 December, 1879	5
8. T. G. G. Dangar, Esq., M.P., to the Honorable the Minister for Mines, asking name of surveyor who had been charged to report on the roads. 22 December, 1879	5
9. The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P., in reply to above, informing him Mr. District-Surveyor Dewhurst has been so instructed. 23 December, 1879	5
10. Memorial from residents of Barraba, Bingera, and Gwydir Districts, requesting that a survey of the road may be ordered, and that Mr. Goodwin, a local surveyor, may be instructed to make such survey, presented by T. G. G. Dangar, Esq., M.P. 5 January, 1880	6
11. Extract from letter, Mr. Irving Winter to T. G. G. Dangar, Esq., M.P., objecting to road marked in pencil (see plan), as it is, in his opinion, quite impracticable. 18 January, 1880	6
12. Memo. of the Under Secretary for Mines. 4 February, 1880	6
13. The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P., acknowledging receipt of memorial presented by him on 5th January, 1880 (see No. 10), also extract from letter of Mr. Irving Winter's (see No. 11), and informing him matter shall receive immediate attention. 6 February, 1880	6
14. Mr. A. G. Martin to the Honorable the Minister for Mines, objecting, on behalf of Mr. E. Vickery, to the proposed road, as if carried out it must pass through his alienated land and fenced paddocks; minute thereon. 23 February, 1880	6
15. Question asked in the Legislative Assembly by Mr. Dangar, with respect to above road, and replies thereto. 27 February, 1880	7
16. Questions asked in the Legislative Assembly by Mr. Coonan, for Mr. Dangar, to the same effect, and also if there is not more correspondence connected with this matter not included in previous Return, such as petition from Barraba residents, asking for opening of road, &c. (see No. 10); and if so, will the same be produced and printed? Replies thereto. 16 March, 1880	7
17. Questions asked in the Legislative Assembly by Mr. Barbour, for Mr. Dangar, with respect to above road, and replies thereto. 31 March, 1880	7
18. Questions asked in the Legislative Assembly by Mr. Dangar with respect to the above road, and replies thereto; minutes thereon. 31 March, 1880	8

ROAD FROM BARRABA TO GUNNEDAH.

No. 1.

Legislative Assembly.—Questions and Answers.

Question.

ROAD from Barraba to Gunnedah :—*Mr. Cameron*, for *Mr. Dangar*, asked the Secretary for Mines,—

1. In view of the speedy opening of the Railway to Gunnedah, which is 20 miles nearer Barraba than Tamworth, and money having been voted to expend on this road—Have any instructions been issued; and if so, when, and to what surveyor, and the date of such, for marking and surveying a road from Barraba to Gunnedah?

2. Has the work been commenced; if so, what progress has been made; if not, when will it be?

Mr. Baker answered:—

1. Yes; to *Mr. Licensed-Surveyor Loder*, in October, 1878.

2. Yes; the road has been laid out through measured portions in the county of Nandewar.

Date of question, 23/4/79; date of answer, 23/4/79.

Mr. Landers,—Obtain papers by telegram.—*R.D.F.*, 25/9/79.

Telegram from the Surveyor General to *Mr. Licensed-Surveyor G. Loder*, Tamworth.

Return paper, Roads 78/159, transferred by *Mr. Dist.-Sur. Dewhurst* to you at once.—*J. F. LANDERS*, Secretary and Cashier (for Surveyor General), 25/9/79.

Reply :—Papers 78/159 were transferred by me to district surveyor in April last; they will be transmitted to you to-morrow.—*GEORGE LODER*.

No. 2.

Legislative Assembly.—Question and Answer.

Question 3.

Mr. Bennett to ask the Secretary for Public Works,—When will tenders be invited for the erection of a bridge over the River Namoi, at Gunnedah; and the new line of road from Gunnedah to Barraba be notified in the Government Gazette, and opened for general traffic.

Mr. Lackey answered:—

Tenders for the bridge over the Namoi, at Gunnedah, will be invited in about a month from this date.

Date of question, 6th November, 1879; date of answer, 6th November, 1879.

No. 3.

Mr. I. Winter to The Secretary for Mines.

Sir,

Sydney, 21 November, 1879.

I have the honor to place before you the following case, which I respectfully ask be dealt with as I suggest, if, upon reference to the proper officer, the matter be found to be as I herein state.

The facts are as follows :—

A main road has been in existence for many years from Gunnedah to Barraba, by way of Carroll; it is also a stock road, and is freely used.

Recently a road has been surveyed from Gunnedah to Barraba, and which passes through my run and freehold land, "Tulcumbah" Station.

The late survey, if carried out, will be only about two miles shorter, but it passes through no settlement or population, and will do me an injury without benefiting the public, whereas the road by way of Carroll is fairly peopled by small farmers, who have there a ready market for their produce to carriers and others on the road. I therefore ask that only the old road be allowed. Of course I am writing in my own interest, and I do not wish my unsupported statement to be believed without due inquiry.

I therefore respectfully urge that no further steps be taken until after report on the subject be received.

I may add that the new proposed road will be more expensive to keep in order, and in time of floods is impassable for many miles; this also can be proved.

I have, &c.,

IRVING WINTER.

The Minister wishes a copy of the enclosed tracing to be made, showing the position of the line of road marked thereon in pencil, in order that the enclosed tracing may be returned to *Mr. Dangar*, M.P. The Minister also wishes action in respect to the line of road marked on the tracing as "Proposed new line of road" to be stayed till a report upon the pencil line shall have been obtained, and that such report be obtained with the least possible delay.—*The Surveyor General*, B.C., 8/12/79.—*H.W.*

The Surveyor General, B.C., 10/12/79.—*G.E.H.* (p. U.S.)

Tracing now to be sent to *Mr. Dangar*, M.P., as directed by the Minister for Mines, copy having been made and placed with papers.—*A. J. Storps*, 19/12/79,

Please return for further action.

It

It is recommended that Mr. Winter be informed that there is no intention of closing the road *via* Carroll; also that the road shown on the tracing accompanying his letter, and described thereon as "proposed new line of road," is in fact a road in existence provided in the subdivision of Crown Estate, and forming boundaries of alienated lands in some cases, and reserved through them in others, the continuity of which it has been considered necessary to complete recently by survey of a road through a few portions of land where it did not previously exist.—ROBERT D. FITZGERALD (for Surveyor General), 22 January, 1880.

No. 4.

Mr. District-Surveyor Dewhurst to The Surveyor General.

Sir,

Tamworth, 29 November, 1879.

In compliance with your memorandum dated 20th November, 1879, I have carefully considered the questions asked in the Assembly, that appear on Paper, Roads 79/1,481, the Ministerial replies to which are strictly in accordance with fact.

Referring however to question 4, which appears to require special notice, I have to report that a road from Gunnedah, *via* Burburgate to Barraba, could be obtained suitable for traffic of all kinds, but that it would, equally with that from Gunnedah direct to Rangari, be far inferior to the road *via* Carroll, as the line is so very badly watered.

Tracing.

2. The statement that this line would be shorter than the one previously applied for by the residents of Gunnedah is obviously incorrect, as you will readily perceive by inspection of the tracing I now enclose, for with Gunnedah as a starting point the road would be taken to Burburgate or the reserve near it 7 miles (a "board" in which about 1 mile of direct distance would be made), thence to portion No. 20, parish of Vickery; thence to portions 92, 91, parish of Mihi; and thence along the track leading to Rangari, where it meets the road previously petitioned for with such apparent force, but now condemned by the petitioners with equal reason.

3. I may observe, however, that care will be taken in all future surveys not to close the track from Burburgate to Rangari, so that it may always be available for future traffic, if any should arise.

You have been pleased to draw my attention to the petition on Roads 79/1,481. The statements there advanced are substantially correct. There is positively no public expression to be found in the numerous letters that have been written on this subject. There is at present no traffic between Barraba and Gunnedah of any consequence, nor is it at all likely that it will increase to any great extent. The natural outlet for Barraba produce is by the main road to Tamworth, which as I have before observed is suitable and convenient from every point of view, while a branch road exists leading from the main road at Oakey Creek *via* Keepit and Carroll to Gunnedah that promises advantages as to extensive reservations, soil, and water, no other route can offer.

4. In conclusion, it is my duty to submit that, in my opinion, a survey from Burburgate towards Barraba would be an utter waste of time and public money, so far as present public convenience is concerned and in view of action proposed in paragraph 3 of this letter. I have, &c.,

A. DEWHURST.

Under this report I cannot recommend the survey of a road from Gunnedah towards Barraba *via* Burburgate. A travelling stock route *via* Carroll has been established, and there is another road in existence, *viz.*, that which has been left in the subdivision of the Crown Estate (now alienated) in the parishes of Wectalibah, Yarrari, Tulcumbah, Willuri, Rangari, &c., the continuity of which has recently been completed by survey in some five (5) places of a road through portions where it had not previously been reserved.—ROBT. D. FITZGERALD (for Surveyor General), 22 January, 1880.

No. 5.

T. G. G. Dangar, Esq., M.P., to The Secretary for Mines.

Re making and proclaiming of road from Gunnedah to Barraba.

Sir,

Sydney, 9 December, 1879.

Respecting our interview a few evenings ago at Assembly with reference to above subject, and my handing you various papers connected therewith, I will feel obliged if you will kindly have made in the office a copy of Mr. Winter's map which I handed you, and cause his to be returned to me, as I wish to return the same to Mr. Winter, as it bears a record of his purchased land.

I feel sure this subject will receive your earliest attention, as the opening up and marking of this road is much desired by Gunnedah and Barraba people, and will prove much nearer than Tamworth.

I may state that the people wish for and have every confidence in Mr. Surveyor Goodwin to do this work, and would wish you to instruct him to perform it, first examining all the proposed routes and determining the best and most practicable way, the nearest and well-watered, and route for stock. Mr. Goodwin is acquainted with the country, and can make a road less than 30 miles; a stock route should also be proclaimed on this road when decided, passing through Crown and unalienated land, otherwise it will only be a fenced lane.

Parliament has voted money for a bridge over Namoi River at Gunnedah, but site cannot be determined until Barraba and Gunnedah road marked.

I shall be glad to hear from you Mr. L.-S. Goodwin has been specially instructed in the matter.

Yours faithfully,

THOS. G. G. DANGAR.

Road from Barraba to Gunnedah.

30/6/77.—T. G. Dangar applied to have above opened to the public.

Reply received Lands, No. 77/1,316. Sept. 27th, 1877, referred to District-Surveyor Dewhurst for report.

See Votes and Proceedings of Assembly, 1878. Report received. Instructions issued to lay out road through alienated land.

F.

F. Bacon, Gunnedah, May 2nd, 1879.—The present proposed Barraba road is no good, as it is only 7 miles shorter than going round by Carroll, and goes through 30 miles of alienated land. A good road could be made by going down 3 or 4 miles, and striking out by Mick's dam, Bell's selection, and Connor's Gap to Barraba, through Crown Lands, and water at several places, and about 46 miles, would not injure Mr. Wills Allen who is objecting to the present road.

Wants proclaiming half-a-mile on each side, and withdrawn from lease for travelling stock road Gunnedah to Barraba, and then scheduled as a 3rd class road and cleared. Road has been marked through measured portions; it is through Crown Lands it is wanted. A mistake is made bringing road as intended. The road is at present being surveyed mostly through alienated land, and therefore cannot be availed as a stock route. Distance by proposed route is 55 miles, and the first and only water on it after leaving Gunnedah is 35½ miles, and this a tank on purchased land of Irving Winters, which he intends closing. No available water on the whole line.

The distances are as follows:—

Gunnedah to Weetalibah...	3 miles.
Weetalibah to Rangari	22 "
Rangari to Borah	10½ "
Borah to Barraba	20 "
Total	55½ "

First water at Borah.

Route suggested by "Prudence" is objected to; would necessitate two bridges, one over Namoi, one over Peel, and not reduce distance. The main object is to make the distance from Barraba to Gunnedah less than to Tamworth.

It is proposed to adopt the route Gunnedah to Burburgate; then to Ween; then to Mihi Creek; then to Connor's Gap; then to Barraba, 45 miles; and all the way after leaving Burburgate, 8 miles from Gunnedah is Crown Lands, well watered, and in flood time the bridge at Gunnedah will be approachable; the other route, it is said, will not be so. This way is shorter and preferable, and nature of country better for road and smoother. The road at present being surveyed is almost useless, except for a horseman. Survey of parts of this road were made by Surveyor Loder, but only through alienated land.

No. 6.

The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P.

Sir,

9 December, 1879.

With reference to the letter of Mr. I. Winter, presented by you, in which he objects to the road recently surveyed from Gunnedah to Barraba, which passes through his Tulcumbah Station, I am directed to inform you that the Minister for Mines has requested that a copy of the tracing be made showing the position of a line of road marked thereon in pencil, so that your tracing may be returned, and also that the action on the line of road marked as "Proposed New Line of Road" be stayed until a report upon the pencil line shall have been obtained. Such report has been requested to be furnished with the least possible delay.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 7.

The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P.

Sir,

22 December, 1879.

Referring to my letter of the 9th instant, respecting Mr. I. Winter's objection to the road recently surveyed from Gunnedah to Barraba, which passes through his Tulcumbah Station, I have the honor to return you the tracing as stated therein.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 8.

T. G. G. Dangar, Esq., M.P., to The Secretary for Mines.

Sir,

22 December, 1879.

You will recollect making a note in the House, and kindly promising to inform me the name of surveyor who had been charged to report upon roads Barraba to Gunnedah, and if it was Mr. L.-S. Goodwin. I shall be thankful for the information.

Yours faithfully,

THOS. G. G. DANGAR.

Urgent. Let Mr. Dangar, M.P., be informed to-day.—H.W., 23/12/79.

No. 9.

The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P.

Sir,

23 December, 1879.

With reference to your letter of the 22nd instant, requesting to be apprised if Mr. Licensed-Surveyor Goodwin has been charged to report on the road Barraba to Gunnedah, I have the honor to inform you that Mr. District-Surveyor Dewhurst has been instructed to report on the road in question.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 10.

No. 10.

Messrs. A. Brown and others to The Secretary for Mines.

The Memorial of the undersigned residents of Barraba, Bingera, and Gwydir Districts,—
Respectfully sheweth:—

1. That your memorialists are persons residing in the Liverpool Plains and Gwydir Districts.
2. That they have several times expressed their anxiety to have a road opened from Gunnedah to Barraba. As yet but little notice has been taken of their requests.
3. That they believe that a good road could be surveyed without interfering much with alienated lands.
4. That the advantages derivable from this road being opened would be greatly felt by your memorialists and residents of the above-named districts, inasmuch as it would bring the railway traffic some 20 miles nearer, and over a country not much settled. It would tend to open up the country, and teamsters and travelling stock would avail themselves of the advantages of this road, as the present road to Tamworth is nearly all fenced in. This alone would be a great consideration to travellers, and again the mails would have a quicker transit.
5. Your memorialists would respectfully request that a survey may be ordered, and that Mr. Goodwin, a local surveyor, who has a thorough knowledge of the country, may be instructed to make a survey of said road without delay.

And your memorialists will ever pray, &c.

A. BROWN,
WM. ETHERIDGE,
JOSEPH ARCHIBALD,

And 121 others.

Presented by T. G. G. Dangar, Esq., M.P., 5/1/80.

No. 11.

Extract from letter, Mr. I. Winter to T. G. G. Dangar, Esq., M.P.

Dear Sir,

Tulcumbah, 18 January, 1880.

I am in receipt of your favour of 24th ultimo, referring to the Gunnedah-Barraba Road, and have to thank you for the interest you have taken in the matter in placing the same in a proper light before the Minister for Mines.

I note the proposed road marked in pencil on the plan, and must inform you that in my opinion that route is quite impracticable, as it runs the greater part of the distance along and over a range of mountains with cliffs averaging 100 to 150 feet in height, and so steep that they are almost impassable on horseback, and there being no water except in the low-lying country, and there only in flood-times when the road would be impassable.

I have not the least doubt but that the surveyor's report, when sent in, will confirm my statement in every particular.

No. 12.

Memo. of Under Secretary for Mines.

RETURN papers to the Deputy Surveyor General.

Sir John Robertson, M.P., will see the Deputy Surveyor General on the subject.

H.W., 4/2/80.

No. 13.

The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P.

Sir,

6 February, 1880.

I have the honor to acknowledge the receipt of the memorial from certain residents of Barraba, Bingera, and Gwydir Districts, for the opening of a road from Gunnedah to Barraba, and also a letter from Irving Winter, Esq., respecting the same road, and to inform you the matter shall receive immediate attention.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 14.

Mr. A. G. Martin to The Secretary for Mines.

Sir,

23 February, 1880.

Mr. E. Vickery has informed me that instructions have been issued for the survey of a road from Gunnedah to Barraba, which road would, if carried out, pass through his alienated land and his fenced paddocks. I beg first to call your attention to the fact that some few months since a road was marked from Gunnedah to Barraba about eight (8) miles easterly of the route now proposed and nearly parallel to it. It appears to be the desire and intention, not of the department, but of some persons pecuniarily interested in the opening of a road to Barraba, to separate the existing road from Barraba to Tamworth,—a road which is in every respect superior to either of the proposed roads, and the character and position of which is naturally more suitable for the connecting of Barraba with Tamworth railway terminus. In the northern extension of the railway from Tamworth, it is certainly very probable that Barraba will be tapped by this extension to our northern border. If this should occur, as it probably will within a few years, neither one or the other of the roads so proposed to connect Gunnedah with Barraba would be required, and should they ever by any mischance obtain an existence they would be rendered useless and unnecessary by the aforesaid extension.

The route of the proposed road herein specially referred to is some 8 miles westerly of the previously marked road, and for some considerable distance parallel to it, and would pass through Mr. Vickery's

See No. 10

See No. 11

Vickery's Burburgate Run, at the back of which there is a range between Gunnedah and Barraba almost impassable. It may safely be asserted that this proposed road would be impracticable, and in every respect inferior to the previously marked road. If the road formerly marked has been found to be unsuitable and impracticable unless by the expenditure of unreasonable amounts of money, and if its position was such that it would not attract a large traffic, how much less justifiable would be the making of a road under less favourable circumstances, and in a position less likely to attract traffic because further removed from a settled population, and because there is but a small number of persons settled between the townships of Gunnedah and Barraba on the proposed line of road.

I therefore have the honor to request, on behalf of Mr. E. Vickery, that you will not only not open the road referred to, but that you will stay all preliminary proceedings in the matter.

The Surveyor General, B.C., 24/2/80—G.E.H. (p. U.S.)

I have, &c.,

A. G. MARTIN.

It is recommended that applicant be informed that at present there is no intention of opening a road from Gunnedah to Barraba, *via* Burburgate. The district surveyor has reported most favourably of the existing road *via* Carroll, and shortly a road will be available through the parishes of Boorobil, Gunnenbene, Yarrari, Tulcumbah, Willuri, and Rangari, between and through alienated lands, when a few short pieces which have recently been surveyed through alienated land (where no road previously existed) have been proclaimed.—ROBT. D. FITZGERALD (for Surveyor General), 10 March, 1880.

Submitted.—H.W., 12/3/80.

No. 15.

Legislative Assembly.—Questions and Answers.

Department of Mines, Parish Roads Branch, 27 February, 1880.

Question No. 4.

ROAD from Barraba to Gunnedah:—Mr. Dangar asked the Secretary for Mines,—

1. Has the district or any other surveyor's report been received upon the several suggested lines of road from Barraba to Gunnedah; if so, the nature thereof; and if not, when is it likely to be, and will the report be expedited?

2. Has (or will) the district surveyor, or other surveyor deputed by him, personally inspected and travelled over these routes?

Mr. Baker answered:—

1. Yes; Mr. District-Surveyor Dewhurst has reported favourably of the line *via* Carroll.

2. Yes.

Answer, 27/2/80.

No. 16.

Legislative Assembly.—Questions and Answers.

Question No. 2.

ROAD from Barraba to Gunnedah:—*Mr. Coonan*, for Mr. Dangar, asked the Secretary for Mines,—

1. With reference to Papers, "Road Barraba to Gunnedah," ordered by this House to be printed 4th November, 1879,—Will there be any objection to place upon the Table of this House, and have printed, a copy of the whole of the original document marked No. 5, therein alluded to?

2. Are not the words "100,000 alienated" in the fourth paragraph of Mr. Surveyor M'Master's report meant for "100,000 unalienated," and printed wrongly?

3. Is there not more correspondence connected with this road matter not included in this Return in Mines or Works Department, such as Petition from Barraba residents, asking for the opening of this road, &c.; if so, will the same be produced and printed? See No. 11.

Mr. Baker answered:—

1. The original document (No. 5) is the general report of the Road Superintendent for the month of August, 1878, and includes the whole of the roads and bridges in his charge. The extract given respecting the Barraba and Gunnedah road is complete, and the report contains no other reference to it.

2. The words in Mr. Surveyor M'Master's report have been correctly printed—they are "one hundred thousand alienated."

3. There are papers of a later date than the printed Return, and with them is a Petition of the residents of Barraba, Bingera, and the Gwydir Districts, asking for a road between Barraba and Gunnedah, the precise route of which they do not indicate. They will be laid upon the Table of the House.

Date of question, 16/3/80; date of answer, 16/3/80.

No. 17.

Legislative Assembly.—Questions and Answers.

Question.

ROAD from Barraba to Gunnedah:—Mr. Barbour, for Mr. Dangar, asked the Secretary for Mines,—

1. The dates of the several instructions given by the Mines, Works, or Survey Departments (see Votes and Proceedings No. 59, of 27th ultimo, question No. 4, and reply thereto), calling for reports on the different suggested roads from Barraba to Gunnedah, and to what Surveyor issued, particularly the date of the latest instructions so issued.

2. Was District-Surveyor Dewhurst's favourable report upon the road *via* Carroll made previous or subsequent to the date of last instructions for a special report upon the several lines suggested for road Barraba to Bingera?

3. Has the district or any other surveyor reported upon the three suggested roads since they were last instructed; if so, name of surveyor, and date of inspection?

4. Have not three routes been suggested—one "*via* Carroll," one by Burburgate, and an intermediate one—does the reply infer these three routes have been travelled over and reported upon by the district

district or other surveyors appointed by him, with a view to deciding the best road; and, if so, has the whole length of lines being gone over, or merely parts; and if so what portions. If not, will instructions issue to make a thorough inspection of all these lines before deciding the one to be surveyed and opened to the public, having in view a travelling stock road and water for public use.

Mr. Baker answered:—

1. Instructions were sent from the Surveyor General's Office as follows:—District-Surveyor Dewhurst, 22nd August, 1877, transferred to Surveyor M'Master, 28th August, 1877; District-Surveyor Dewhurst, 29th July, 1878, transferred to Licensed-Surveyor Loder; District-Surveyor Dewhurst, 24th April, 1879; District-Surveyor Dewhurst, 28th June, 1879; and the last instructions to District-Surveyor Dewhurst on 20th November, 1879. On the 8th December, 1879, instructions were issued by me to the Surveyor General, but were not sent to the district-surveyor, because he had already reported under date 29th November, 1879.

2. The report referred to was made subsequent to the latest instructions on the subject sent to Mr. District-Surveyor Dewhurst (namely that of 20th November, 1879), which was in connection with a previous instruction to him, issued 28th June, 1879, in compliance with a reply given in Parliament to question asked by Mr. Dangar on 20th June, 1879, relative to road Barraba to Gunnedah, to which questions and the replies thereto Mr. Dewhurst's attention was especially directed, but was prior to my instruction to the Surveyor General of the 8th December last.

3. No report has been received from the district surveyor since 29th November last.

4. The three routes named have been suggested. I am not in a position to state that all the lines have been inspected throughout, but will cause an inquiry to be made, and if not already completely inspected, I will cause a complete inspection to be made.

Date of question, 16 March, 1880; date of answer, 31 March, 1880.

No. 18.

Legislative Assembly—Questions and Answers.

Question 1.

Mr. Dangar to ask the Secretary for Mines,—

1. The dates of the several instructions given by the Mines, Works, or Survey Departments (see Votes and Proceedings, No. 59, of 27th ultimo, Question No. 4, and reply thereto), calling for reports on the different suggested roads from Barraba to Gunnedah, and to what surveyor issued, particularly the date of the latest instructions so issued?

2. Was District-Surveyor Dewhurst's favourable report upon the road *via* Carroll made previous or subsequent to the date of last instructions for a special report upon the several lines suggested for road Barraba to Bingera?

3. Has the district or any other surveyor reported upon the three suggested roads since they were last instructed; if so, name of surveyor, and date of inspection?

4. Have not three routes been suggested—one *via* Carroll, one by Burburgate, and an intermediate one; does the reply infer these three routes have been travelled over and reported upon by the district or other surveyors appointed by him, with a view to deciding the best road; and if so, has the whole length of lines been gone over, or merely parts; and if so, what portions; if not, will instructions issue to make a thorough inspection of all these lines before deciding the one to be surveyed and opened to the public, having in view a travelling stock road and water for public use?

Referring to Mr. Dangar's question No. 1 to be asked on the 31st instant, will the Surveyor General be good enough to obtain from Mr. District-Surveyor Dewhurst, if necessary, the information requisite to answer that part of paragraph 4 as to whether the whole or what portions of the three routes referred to have been travelled over and inspected by the district or other surveyor.

The Surveyor General, B.C., 25/3/80, H.W. Received 3 o'clock, Thursday, 25th March.

Such information as the office materials afford was supplied to Mines a week since, copies of which can be made if necessary. Should anything further be desired, a telegram might be sent to Mr. District-Surveyor Dewhurst.—A. J. STORRS, for Surveyor General (in absence of Surveyor General and Deputy Surveyor General).

Please supply copy and send telegram.—H.W., 25/3/80. Copy of replies sent to Mines, and telegram sent 3.55 p.m.—A.J.S., 25 Mar.

Replies to questions have been previously supplied; the following reply to question No. 4 should however, be substituted for that given some days since:—4. Three routes have been discussed, viz.: The present travelling stock route *via* Carroll, a proposed route *via* Burburgate, and an intermediate route through and between alienated lands. This last road was visited and reported on by Mr. Surveyor M'Master, and portions of it that remained unsurveyed have lately been laid out by Mr. Licensed-Surveyor Loder. Mr. District-Surveyor Dewhurst reports that he has inspected throughout the road Barraba to Gunnedah, *via* Borah and Tulcumbah; also the road *via* Borah, Keepit, and Carroll; only partly the road *via* Connor's Gap, but sufficient to justify his report. He is about to inspect the short length through Connor's Gap, over which he has not yet ridden; but the sudden rise of altitude indicated by Mr. Licensed-Surveyor Loder's survey of the Nandewar range shows its impracticability. Licensed-Surveyors Loder and Dove know the country well and agree with Mr. District-Surveyor Dewhurst.—ROBT. D. FITZGERALD (for Surveyor General), 31st March, 1880.

The Surveyor General may be asked to cause a complete inspection of the routes to be made, and the results to be reported fully.—E.A.B., 31/3/80. The Surveyor General, B.C., 31/3/80.—G.E.H. (p. U.S.)

It will be observed on reference to the amended reply to question 4 (see above) that two of the routes have been thoroughly inspected, the third only partly, a short length of it *via* Connor's Gap, being about to be inspected by the district surveyor, who has this day been instructed to carry out the proposed inspection.—ROBT. D. FITZGERALD (for Surveyor General), 2nd April, 1880.

Seen.—W.H., 3/4/80.

ROAD FROM GUNNEDAH TO BARRABA.

No. 1.

Mr. District-Surveyor Dewhurst to The Surveyor General.

Sir,

Tamworth, 6 March, 1880.

As I understand that the site for the proposed bridge over the Namoi, which will connect the counties of Pottinger and Nandewar, is now definitely fixed, I propose to inspect most carefully the country between it and Barraba, in a few weeks time, in order to get a loop line, that may be available for traffic, and possibly for the passage of stock in wet seasons.

There will then be three roads leading into the town of Gunnedah from the north-east.

I have, &c.,

A. DEWHURST.

No. 2.

T. G. G. Dangar, Esq., M.P., to The Secretary for Mines.

Sir,

Sydney, 18 May, 1880.

I have the honor to enclose for your information extract of letter addressed to me, dated 12th instant, from the Reverend A. Brown, resident clergyman of Barraba, respecting the road from that place to Gunnedah. See enclosures.

I have, &c.,

T. G. G. DANGAR.

[Enclosure to No. 2.]

Extract of letter from Rev. A. Brown, resident clergyman at Barraba, dated 12th May, to T. G. G. Dangar, Esq., M.P.

Another matter is the Gunnedah road. I asked Mr. Stillwell, surveyor, why he reported against the proposed short road. He said that his guide took him over the district, and he found the length 55 miles without water. This guide, however, on being asked said that they went 8 miles round owing to fences, and then lost themselves in the dark; also that the proper road was 42 miles, with water. The people in these districts do not object to a disinterested opinion, but protest against this matter being decided by those who have property in Tamworth; for there is no fighting in the long run against an argument of 18 miles, and it is easy to see who will suffer for the general good.

Hoping that I have not been tedious in these most necessary references.

I am, &c.,

A. BROWN,

Resident Clergyman.

Memo.—Mr. District-Surveyor Dewhurst to The Surveyor General.

With reference to this letter from the clergyman of the Church of England stationed at Barraba, the Rev. A. Brown, be pleased to see the plan I transmit with my report. If the "other matters" referred to in another sheet of his letter are set forth with as little regard to truth, they will scarcely be of much value.

See also Mr. Licensed-Surveyor Dowe's report appended to my own.

A. DEWHURST.

21 June, 1880.

No. 3.

The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P.

Sir,

Department of Mines, Sydney, 19 May, 1880.

I have the honor to acknowledge the receipt of your letter of the 18th instant, enclosing an extract from a letter of the Reverend A. Brown, respecting the road from Barraba to Gunnedah and to inform you that the matter shall receive immediate attention. See No. 2.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 4.

T. G. G. Dangar, Esq., M.P., to The Secretary for Mines.

Sir,

Sydney, 24 May, 1880.

Referring to Mr. Staff-surveyor M'Master's report on the road from Barraba to Gunnedah, in which the words "100,000 unalienated acres" are used, I find on reference to that officer these words should be as I anticipated "100,000 alienated" (see my question in Assembly relating thereto), this being an important point as regards the way the road Barraba to Gunnedah should go, it should be kept in recollection or noted. All the country at the back of Gunnedah and all near Barraba is purchased.

I have, &c.,

T. G. G. DANGAR.

The Surveyor General.—H.W., B.C., 27/5/80.

No. 5.

The Rev. A. Brown to T. G. G. Dangar, Esq., M.P., and by him submitted to The Secretary for Mines.

Dear Sir,

Barraba, 1 June, 1880.

I must write again to say how very much indebted we are to your promptness, and also to state what should have been stated before.

Several persons of credit affirm that the proper road to Gunnedah lies not far to the west of Budge's selection, and from thence through the run beyond. There is permanent water in three places, and no very great obstacle. This, as far as I know, has not been surveyed, and so overpowering is the influence against it, that the people have no hope of it. Reports have gone in from those who have property in Tamworth as to other roads altogether. However, excepting to have no permanent interest here, but considering what the loss of this 18 miles saving means in time and money in fifty years, and so many may easily elapse before a railway is seen here, I have thus written.

And remain, &c.,

A. BROWN.

The Surveyor General.—H.W., B.C., 5/6/80.

No. 6.

Questions asked by T. G. G. Dangar, Esq., M.P.

Legislative Assembly.—Questions and Answers.

Question: Road from Barraba to Gunnedah:—Mr. Dangar asked the Secretary for Mines,—

(1.) Referring to Votes and Proceedings of 31st of March, 1880, No. 75, and to the questions and replies thereto.—Did he, as therein promised, direct a complete inspection of the three suggested routes from Barraba to Gunnedah; and if so, to what officer, and has his report on such been received; if not, will it be expedited?

(2.) If so, will there be any objection to place a copy of the report upon the Table of this House for printing?

(3.) When is it likely the shortest, best, and most practicable road between these places, having in view a travelling stock route, will be surveyed and proclaimed for public use; and is such likely to be done before the approaching wool season?

Mr. Baker answered,—

(1.) Inspection of the three routes has been made by the district surveyor. A short time since he reported on the only part of the three routes that remained to be inspected, viz., a short length *via* Connor's Gap, which he declares to be impracticable.

(2.) No; a copy will be laid upon the Table of the House at once.

(3.) The question as to the best and most practicable road is now under consideration, and shall be dealt with as speedily as possible. The question as to additional reservation for the purposes of travelling stock route will be now considered.

Date of question, 2nd June, 1880; date of answer, 2nd June, 1880.

Mr. G. Lewis,—Urgent as to stock route.—R.D.F., 3 June, 1880.

No. 7.

The Under Secretary for Mines to T. G. G. Dangar, Esq., M.P.

Sir,

Department of Mines, Sydney, 8 June, 1880.

With reference to the letter of Mr. A. Brown (presented by you), respecting the road from Barraba to Gunnedah, I have the honor to inform you that the letter in question has been forwarded to the Surveyor General, with other papers in the matter, for a further report.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 8.

The Rev. A. Brown to The Colonial Secretary.

Sir,

Bingera, 8 June, 1880.

I hope that I shall not be considered presumptuous in calling your attention to a matter of simple justice, having no permanent pecuniary interest in this district. Some time ago Mr. Matheson, surveyor, pointed out to me that he had seen a very practicable line of road from Barraba to Gunnedah, some 43 miles in length. This is known and can be pointed out by several residents in the former district. Mr. Newton, well known in Barraba, goes so far as to say that people could go by it now, were £5 spent in marking the line.

Now the decision of this question has been left mainly to those having property in Tamworth—it is not fair to make a man a judge against his own interest—and the guide of another, who reported against the road, informed me that they had to go 8 miles round on account of fences, and that they then lost themselves in the dark. The people will be satisfied if an impartial judge should pronounce this short road to be impracticable, and by no other decision. It is suggested that Mr. Goodwin, surveyor, who used to go from Barraba to Gunnedah at all hours of the night should along with some well-known resident, such as Mr. Newton, go over the disputed ground, and make a report. I must ask you to consider that the loss of this

this

this 17 miles saving may amount to a great deal for the many years that may elapse before the railway comes this way, that many good judges still consider that this district had no slight claims to a line, and that the Member for Tamworth and Barraba is believed to be entirely for the interest of the former. The influence against this short road is said to be overwhelming, and resistance to be hopeless, but, nevertheless, it is always allowable to make a protest against injustice.

I have, &c.,
A. BROWN,
Resident Clergyman.

The Secretary for Mines.—H.P., 14/6/80. The Under Secretary for Mines.—C.W., B.C., 15/6/80. The Surveyor General.—G.E.H. (p. U.S.), B.C., 16/6/80.
It is recommended that applicant be informed that the department will shortly be in possession of an exhaustive report of the several roads proposed between Barraba and Gunnedah, and the subject will then be fully considered.—ROBT. D. FITZGERALD (for Surveyor General), 24th June, 1880.
Inform.—H.W., 30/6/80.

No. 9.

Mr. District-Surveyor Dewhurst to The Surveyor General.

Sir,

Tamworth, 30 June, 1880.

In reply to your memorandum, dated June 3rd, 1880, in which you desire me to report in detail on the track stated to exist from Gunnedah *via* Burburgate, Wean, and Connor's Gap, to Barraba, I have now the honor to state for your information that I have visited the place known as Connor's Gap; that the "Gap" is not one through the Nandewar Range, but that it is among the Bollol Mountains, and that it opens a way from Mihi Creek to Coolah Station, but *none* towards Barraba.

In describing the track leading from Gunnedah that has been so strongly recommended, I must report that from that town to Burburgate the country is subject to inundation. From the last-named place to "Wean," the soil for about 3 miles is very heavy, soft, black soil, while the remainder is light and sandy. From "Wean" (where there is a small spring) to "Barney's Springs," the soil is light, and there the tracks turns sharp off to the right and leads away to "Rangari," skirting the foot of the mountains, and crossing three creeks that require bridging.

Up to this point (Barney's Springs) the country offers no obstruction to traffic, although it is deficient in water; but beyond it, in the direction of Mihi, no defined track exists, and from Mihi, Connor's Gap is reached by ascending the creek and then skirting off in a northerly direction to portion shown on the enclosed plans as No.

A line of road could be made without any great expense as far as Connor's Gap, and the latter is in a fairly direct line for Barraba, which ends however in a "*cul de sac*," barred by tremendous spurs from the main range, over which a traffic road would be utterly impracticable.

Appendix.

In explanation of the plan I have the honor to transmit to you herewith, I may state for your information that the most westerly track, or the one crossing the range at "Brady's Downfall," is only passable for horsemen, and that it is so steep that persons generally dismount when ascending or descending. That shown as crossing at the "red camp" is also only a horseman's track, but a road could, at very considerable expense, be cut, graded and formed for traffic between it and the present crossing, which would however lessen the distance between the towns so little that the undertaking would not be recommended by any officer of experience.

In my letter of the 29th April, 1879, I have described the road from Barraba, *via* Rangari and Tulcumbah Plain, as an "impossible" route. I may explain that I consider it "impossible" to force wheeled traffic along a bad road, which is also comparatively waterless, when it can be taken along a good road abundantly supplied with water and extensive reservations for camping.

You will observe, on reference to the map, that the distance *via* Rangari to Gunnedah is 53½ miles, while that from Barraba to Tamworth is 56 measured miles—a difference of 2¾ miles; also that the distance by rail from Gunnedah to Newcastle is 196 miles, as against a distance of 182 miles from Tamworth. I believe, therefore, I was, and am justified in resting on the conclusion that the "through" traffic will continue along the best and shortest route, namely that *via* Tamworth, and that every effort made to divert it will prove futile.

With regard to the "local" traffic, I have already expressed my opinion that although there is at present little or none between Barraba and Gunnedah, the best road should be adopted in view of possible future requirements, and that road is undoubtedly the one shown by a black line, joining the Tamworth road at Oaky Creek.

Owing to the extensive alienations that have been made, a stock road could not be reserved along it, but one could be provided, as shown by the yellow band, which, under certain favourable conditions might be used occasionally in the winter months, when sheep and cattle could be travelled about 31½ miles without a drink, while in summer the old established road *via* Keepit and Carroll, which was selected by stockowners more than 30 years ago, when the whole country was open and available for traffic of all sorts, would continue to be travelled.

That this report may have some additional weight, I have written to each of the surveyors who have been professionally engaged in the counties of Nandewar and Darling, and also to Mr. Goodwin, who has been quoted by the editor of the Gunnedah newspaper, as being thoroughly conversant with all the routes and the country generally, and their replies, with my letters, I have the honor to append.

See enclosures Nos. 1, 2, 3, 4, 5, 6.

The plan I have transmitted has been prepared at a great sacrifice of time. It gives, I believe, all the information that can possibly be required. It shows, on reference to the papers in this case, what gross misstatements have been made by those who could, if they had desired to do so, have arrived at facts, and it will, I trust, so illustrate my report that a decision may be at once made that cannot reasonably be challenged.

I have, &c.,
A. DEWHURST,
District Surveyor.

[Enclosure

[Enclosure No. 1 to No. 9.]

Mr. District-Surveyor Dewhurst to Mr. Licensed-Surveyor Dowe.

District Office, Tamworth, 14 June, 1880.

Sir,
As I am about to report conclusively on the various roads and tracks leading from Gunnedah to Barraba, I must ask your valuable assistance, in order that the correspondence that has already been too voluminous and contradictory may be closed.

1. Will you be good enough, therefore, to inform me how long you have had charge of the counties of Nandewar and Darling, or those parts of them that lie between the towns named.
2. The opportunities you have had of becoming personally acquainted with that country.
3. Of the three routes mentioned, viz., Barraba to Gunnedah, *via* Borah, Keepit, and Carroll, that has been in use to my knowledge for 23 years as a stock route; Barraba to Gunnedah, *via* Borah, Rangari and Tulcumbah Plain, that has been in use as a traffic road for same time; Gunnedah to Barraba, *via* Wean, Mihi, and Connor's Creek (not in use). Will you be kind enough to say which in your opinion is best suited for travelling stock, and which other is best fitted for wheeled traffic, or whether either one of these routes is adapted for both purposes? Further, are you acquainted with any other route that could be surveyed more direct or more suitable than those mentioned.

I have, &c.,
A. DEWHURST.

[Enclosure No. 2 to No. 9.]

Mr. District-Surveyor Dewhurst to Mr. Thomas H. B. Goodwin.

District Office, Tamworth, 14 June, 1880.

Sir,
As your name has been very freely mentioned in connection with a proposed traffic and stock road from Gunnedah to Barraba as that of a professional man who reports himself to be "thoroughly conversant with all the country lying between the towns," in view of a report that I am now about to submit to the Surveyor General I must request that you will be good enough to supply me with your valuable aid in order that it may be thoroughly exhaustive and conclusive.

Judging from the letters that have been written to Mr. Dangar by the editor of the local newspaper, and other correspondence forming part of the papers under reference, that have been laid before the Honorable the Secretary for Lands, together with statements made in the *Gunnedah Independent*, it must be inferred that you have travelled over and critically inspected at least the three routes mentioned:—

- 1st. Barraba, *via* Borah, Keepit, and Carroll, that has been the stock road for more than twenty-four years.
- 2nd. Barraba, *via* Borah, Rangari, and down Tulcumbah Plain to Gunnedah, which has been the traffic road for same time.
- 3rd. Gunnedah, *via* Wean, Mihi, and Connor's Gap to Barraba, with which you are said to be specially conversant.

Will you therefore do me the favour of stating how you derived your knowledge and the time spent in obtaining it, and at the same time oblige me by showing on the enclosed plan what you consider to be the route that for traffic and the passage of stock would be of the greatest advantage to the towns of Gunnedah and Barraba and the farmers and stockowners residing at both ends of the line.

Requesting an early reply.—

I have, &c.,
A. DEWHURST.

[Enclosure No. 3 to No. 9.]

Mr. District-Surveyor Dewhurst to Mr. Licensed-Surveyor Loder.

District Office, Tamworth, 14 June, 1880.

Sir,
As I am about to report on the various roads and tracks leading from Gunnedah to Barraba, I beg you will inform me,—how long you have had charge of the county of Nandewar and whether you have a knowledge of that part of the county of Darling embracing the country in that line as far as Borah Creek, and how much further towards Barraba?

2. Whether you consider a practicable road for wheeled vehicles and travelling stock could be got *via* Burburgate, Wean, Mihi, and Connor's Gap; and if not, what is the nature of the obstructions?
3. Whether the road *via* Tulcumbah and Rangari could be advantageously made more direct by crossing the Nandewar range more to the west; and if so, how far? The nature of the obstructions that compel a circuit to the east at present after crossing the range and having to pass by way of Borah Old Station?

Requesting your early reply,—

I have, &c.,
A. DEWHURST.

[Enclosure No. 4 to No. 9.]

Mr. Licensed-Surveyor Dowe to Mr. District Surveyor Dewhurst.

Keepit, *via* Somerton, 18 June, 1880.

Sir,
In reply to your letter of June 14th, I do myself the honor to answer your questions concerning the roads from Gunnedah to Barraba.

1. I have been working in the counties of Nandewar and Darling for over fourteen years.
2. I have been constantly travelling and measuring lands in proximity to the different tracks, and am well acquainted with nearly every bit of country between Barraba and Gunnedah.
3. The road to Barraba from Gunnedah *via* Keepit Carroll is the best route I know for stock, and I may point out to you that when the whole of the country was open, the drovers and others travelling with stock, who were well acquainted with the country, chose the route at present used *via* Keepit, and Carroll as there was water along the line, when the whole country was open to them, and they could go which ever road they desired.

The road from Barraba to Gunnedah *via* Borah, Rangari, and which has been in use for over twenty years, is the best route I know for wheeled traffic, but in its present state is unsuitable for travelling stock unless tanks or dams are constructed along the line of road.

The road by Wean, Mihi, and Connor's Creek, is impracticable for either wheeled traffic or for travelling stock. I need not point out to you that it is impossible without very great expense to get any sort of a road over the range between the counties of Nandewar and Darling, without taking the road through the head of Borah Creek, as the range west of the head of Borah Creek is so steep that it is almost impossible to cross it on a saddle horse without getting off and leading him.

I have, &c.,
GEORGE L. DOWE.

I have been living within a mile of the stock road from Barraba to Gunnedah for over seven years, and about midway between the two places, so ought to know the country well.—G. L. DOWE.

[Enclosure No. 5 to No. 9.]

Mr. T. H. B. Goodwin to Mr. District-Surveyor Dewhurst.

Gunnedah, 29 June, 1880.

Sir,
Referring to your communication of the 14th instant, asking for my opinion as to the best possible stock and traffic road from Barraba to Gunnedah, I have the honor to inform you that although I have a good general knowledge of the country lying between these towns, I would not care to pass an opinion in so important a matter without first making a thorough examination, for notwithstanding a person may derive a good general knowledge of country from having repeatedly travelled over it, still when the merits of the different routes are in question, such knowledge as this may be found wanting in detail.

My knowledge of the routes mentioned by you was derived from having lived on a station at Barraba for three years, and from having worked in the counties of Darling and Nandewar with Mr. Licensed-Surveyor Dowe for a like period.

From what I know I should pronounce the Connor's Gap route to be impracticable without a moments hesitation, but think that one from Rangari nearly direct to Barraba could be found undoubtedly shorter, but perhaps rougher, still suiting the requirements of the public better than those now in use.

A better road than the one now in use from Rangari to Gunnedah could not be found.

I have, &c.,
THOMAS H. B. GOODWIN.

[Enclosure

[Enclosure No. 6 to No. 9.]

Mr. Licensed-Surveyor Loder to Mr. District-Surveyor Dewhurst.

Sir, Camp, 30 June, 1880.
 In compliance with your letter of 14th June, I have the honor most respectfully to state that the county of Nandewar was allotted to me in December, 1877, but I had been previously working in and had charge of it for some three years before. I also beg to state that I have a knowledge of the county of Darling, adjoining Nandewar, and extending to Borah Creek; but I have not a knowledge of the range between Borah Creek and Barraba in a direct line, only by the road as at present used, from Old Borah Station to the main road leading from Tamworth to Barraba, about where Tarpolly Creek crosses said road.

2. In reply to paragraph 2 of your letter, I do not consider that a practicable road for vehicles could be got from Gunnedah to Barraba *via* Burburgate, Wean, Mihi, and Connor's Gap, on account of the mountainous nature of the country intervening between Mihi and Barraba.

3. In reply to paragraph 3 of your letter, I do not think a road could advantageously be made more direct by crossing the Nandewar Range more to the west, on account of the mountainous nature of the country.

I have, &c.,
 GEORGE LODER.

No. 10.

The Under Secretary for Mines to The Rev. A. Brown.

Reverend Sir, Department of Mines, Sydney, 30 June, 1880.
 With reference to your letter of the 8th instant, respecting a road from Barraba to Gunnedah, I have the honor to inform you that this department will shortly be in possession of an exhaustive report of the several roads proposed between Barraba and Gunnedah, and the subject will then be fully considered. See No. 8.

I have, &c.,
 HARRIE WOOD,
 Under Secretary.

No. 11.

Mr. Irving Winter to The Secretary for Mines.

Sir, 129, Pitt-street, 1 July, 1880.
 I have the honor to request that you will be good enough to withhold your decision regarding the proclamation of a road from Barraba to Gunnedah, which it is proposed to run through my "Tulcumbah" run, until the report of the district surveyor comes to hand. See No. 9.

I have &c.,
 IRVING WINTER.

Under the report of the district surveyor confirmation is recommended (notwithstanding objections) of the several parts of a road necessary to make a continuous route between Rangari and Gunnedah, such being part of the road from Barraba to Gunnedah; and in event of approval of this course, it is further recommended that action be carried out on the several papers quoted; and Mr. District-Surveyor Dewhurst's report detached and returned to this department as speedily as possible, with the object of consideration being given to the proposal of a travelling stock reserve recommended therein.—ROBT. D. FITZGERALD (for Surveyor General), 24 Novr., 1880. See No. 9.

Submitted.—H.W., 9/12/80. Approved.—E.A.B., 10/12/80. The Surveyor General.—G.E.H. (p. U.S.), B.C., 10/12/80.

To lay out a road between Barraba and Gunnedah *via* Burburgate, that would be shorter to anything like the extent that has been represented to be possible, would necessitate crossing the Nandewar Range, which is almost impracticable in places, and generally is so steep that to make a road fit for traffic would be so costly as to prohibit a recommendation that such a course be adopted.—A. J. STOPPS (for Surveyor General), 23 February, 1881.

No. 12.

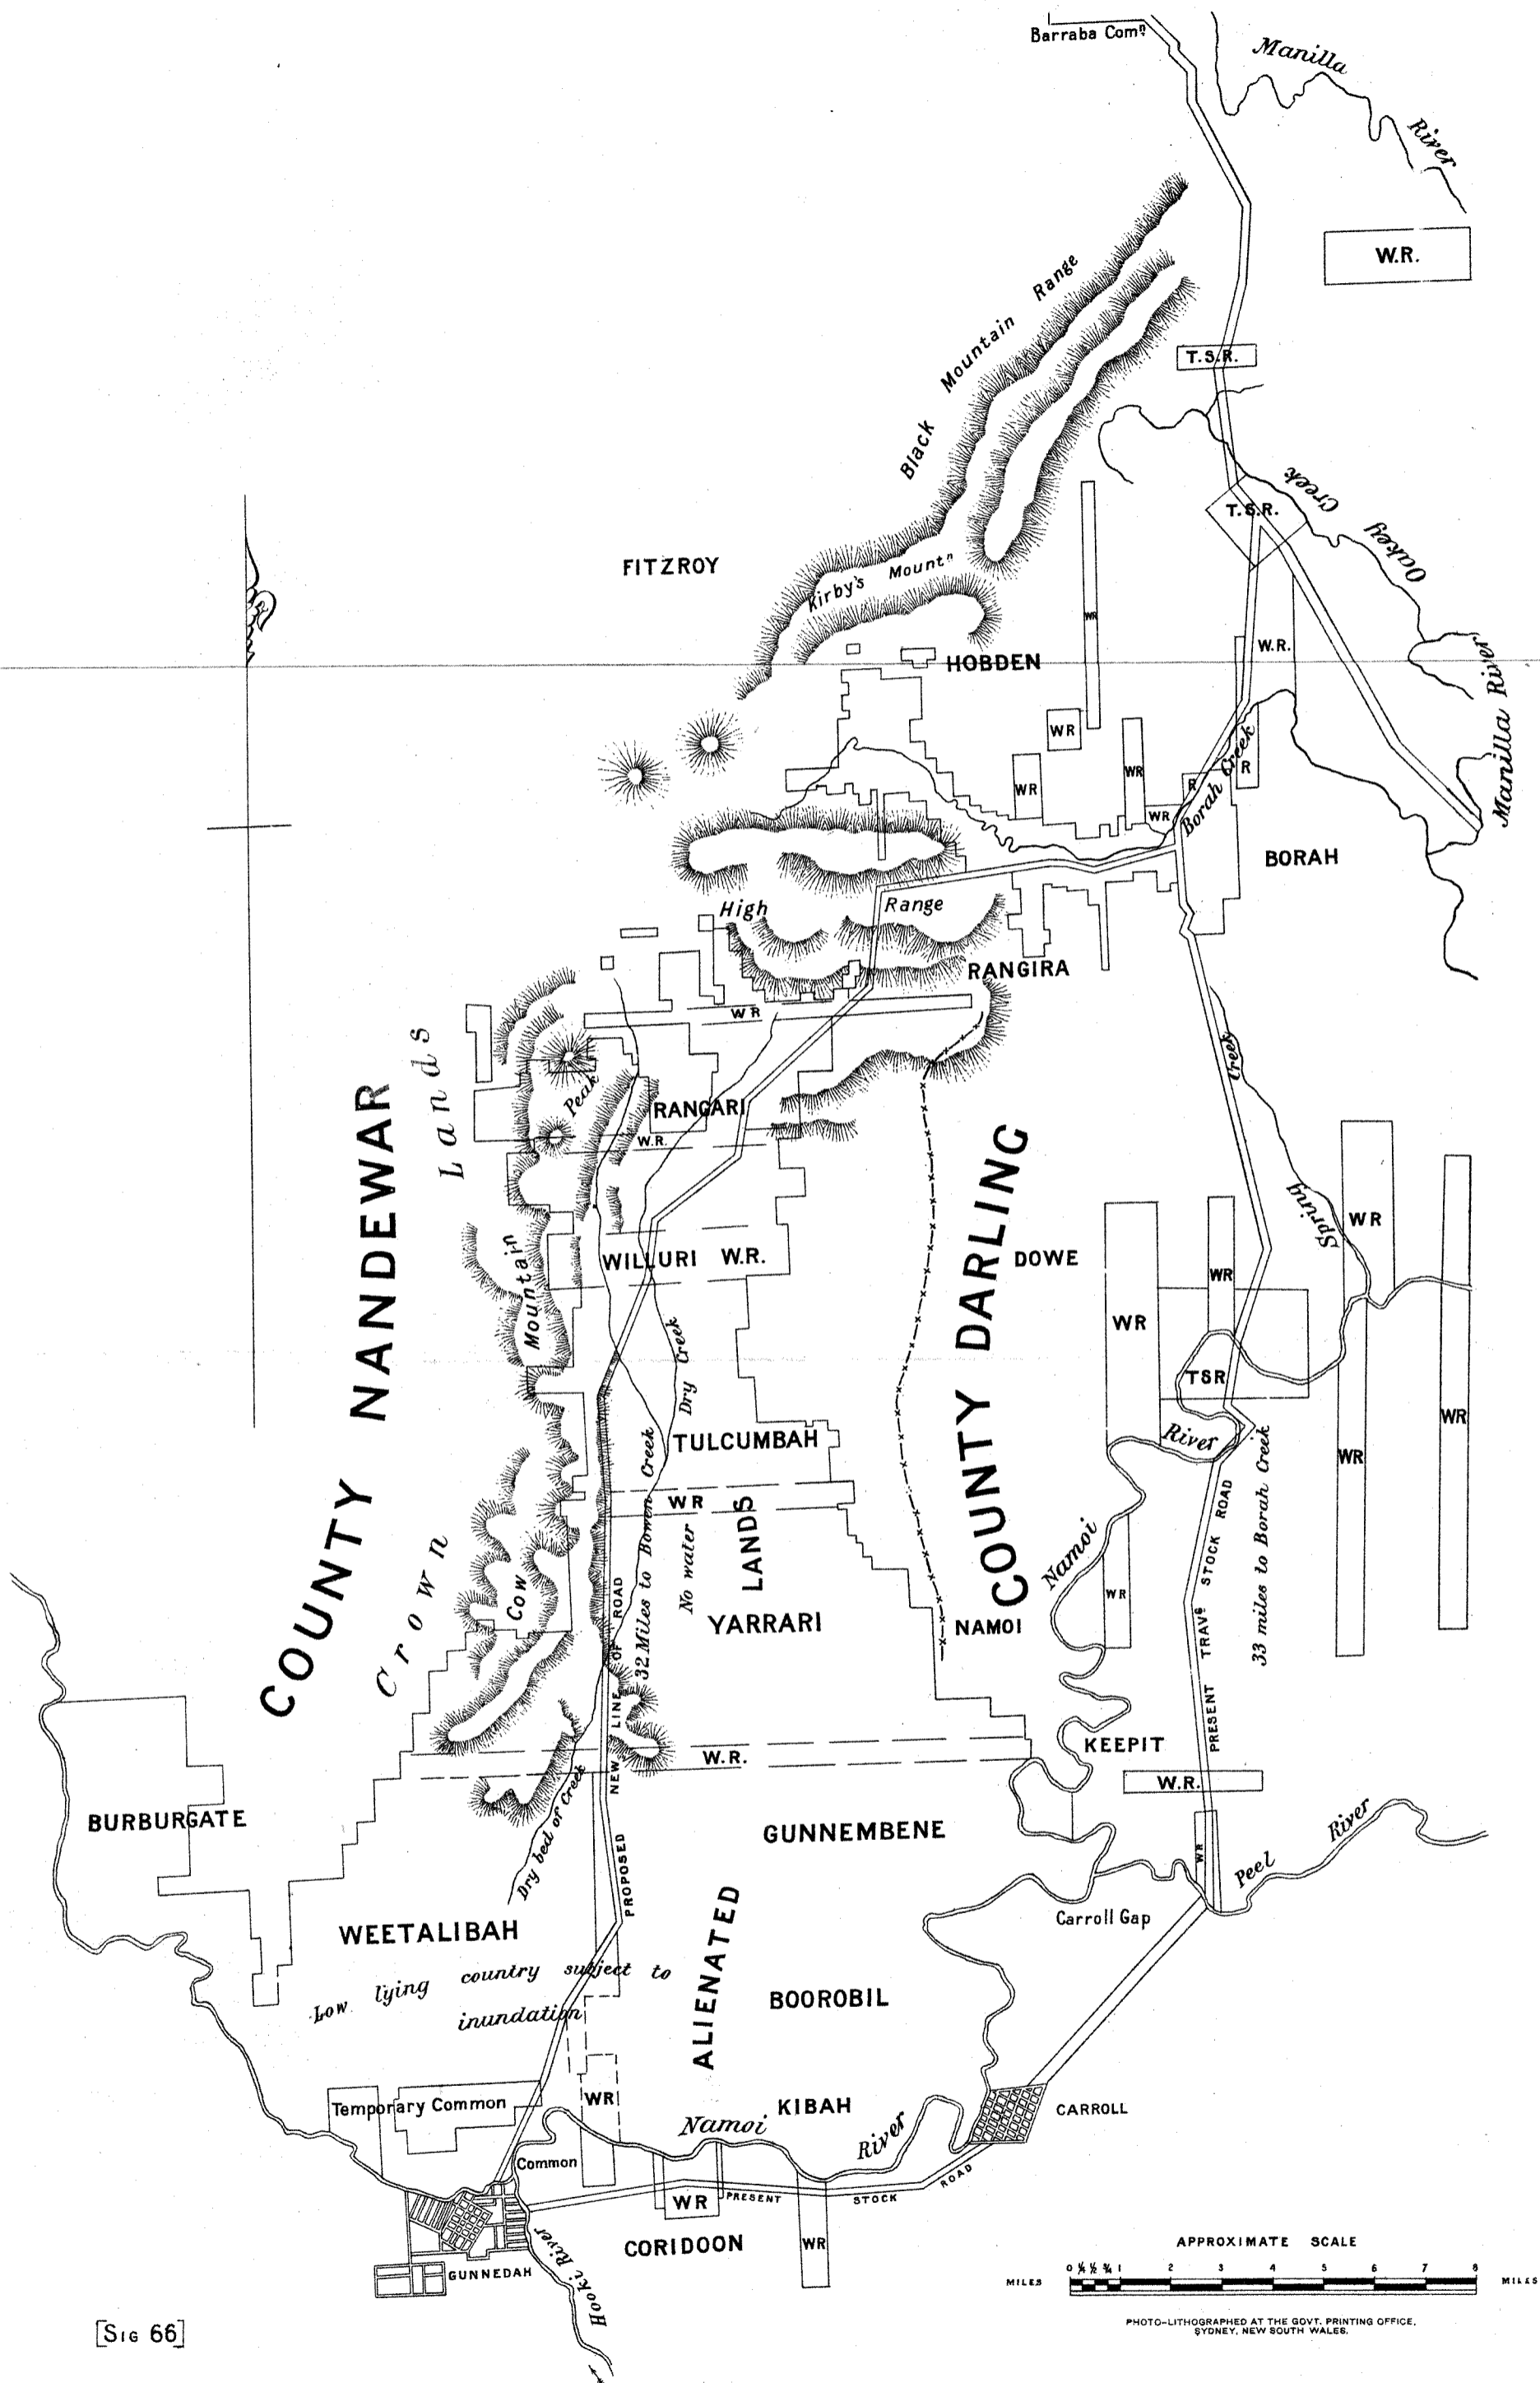

J. P. Abbott, Esq., M.P., to The Under Secretary for Mines.

Sir, 6 & 7, Wentworth-place, Elizabeth-street, Sydney, 10 February, 1881.
 Will you favour me with a tracing showing the proposed road from the town of Gunnedah to that of Barraba? See No. 9.

I have, &c.,
 J. P. ABBOTT.

The Surveyor General.—G.E.H. (p. U.S.), B.C., 11/2/81. It is not quite clear which road Mr. Abbott means by the "proposed road." If it be the one *via* Burburgate, that route has been reported against and virtually abandoned. Mr. Abbott in Parliament has moved for copies of plans and papers in the Barraba and Gunnedah road case; and as these will doubtless be supplied, probably further action with reference to this request may not now be necessary.—A. J. STOPPS (for Surveyor General), 23 February, 1881. Submitted.—H.W., 26/2/81.

NEW SOUTH WALES.

ROAD BETWEEN ROUND SWAMP AND THE TURON RIVER.
(PETITION FROM RESIDENTS OF SOFALA, &c.)

Received by the Legislative Assembly, 30 November, 1881.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned residents of Sofala, Turon River District, Mudgee Road, and others interested,—

HUMBLY SHOWETH:—

That your Petitioners learn, with much satisfaction, that the railway now being constructed between Wallerawang and Mudgee will afford better facilities for communication between the Turon River and the Metropolis. That the station to be established at or near Capertee will involve but (say) twenty-two miles of ordinary road carriage and one hundred and thirty miles of railway, as contrasted with the present route *via* Bathurst, of (say) thirty miles by road and one hundred and forty-five miles by rail; an important saving of eight miles by road and fifteen miles by rail.

That the reformation of the original road from the Running Stream on the Mudgee Road, *via* the Sugarloaf, to the Turon River, a distance of only twelve miles, will open up the desired communication, beside forming an important connecting link between the various main roads of these important districts.

That the formation of the said road will require about three miles of grading at the Sugarloaf, and it has been estimated that, under the care of a judicious trust, the work would be done for a sum not exceeding three hundred pounds, and would require but a moderate annual charge for its maintenance.

Your Petitioners therefore pray your favourable consideration of these premises, and the formation of the said road between Round Swamp and Turon River.

And your Petitioners will ever pray, as in duty bound.

[Here follow 180 signatures.]

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MESSRS. MUNFORD AND BLOMFIELD.

(PETITION OF.)

Received by the Legislative Assembly 17 August, 1881.

To the Honorable the Speaker and the Members of the Legislative Assembly, in Parliament assembled.

The Petition of Edward Merigold Munford and Matthew Blomfield, of Sydney, in the Colony of New South Wales,—

HUMBLY SHOWETH :—

1. That your Petitioners, in or about the months of July and August, in the year of our Lord one thousand eight hundred and seventy-two, entered into certain contracts with the Government of the Colony of New South Wales for the clearing, draining, culverting, making, forming, et cetera, of certain roads between Tambaroora and Hill End, at Monkey Hill, at Sally's Flat, and from Stander's Flat to Clark-street, Hill End, in the said Colony.

2. That your Petitioners accordingly entered upon the works under the said contracts, and with the exception of certain small portions thereof, fully and duly completed the same.

3. That your Petitioners were, and always have been, ready and willing to complete such small portions of the said works so remaining incomplete as aforesaid, but were, and have been, improperly and wrongfully prevented from so doing.

4. That there remains due to your Petitioners from the said Government, in respect of the work actually done by them under the said contracts, and in respect of payments of cash by your Petitioners in relation thereto, at the request and on behalf of the said Government, the sum of three thousand two hundred and eleven pounds.

5. That your Petitioners are advised that their cause of action in respect of their said claim accrued upwards of eight years ago.

6. Your Petitioners have repeatedly applied to the said Government for payment of their said claim without avail, and as long back as six years ago, to wit, in the year one thousand eight hundred and seventy-five, a Select Committee of the Honorable the Legislative Assembly was appointed to inquire into your Petitioners' said claim, by and before which said Committee witnesses were examined, amongst whom were your Petitioners, Edward Merigold Munford and Matthew Blomfield. The then existing Assembly was prorogued before the said Committee brought in its reports, and the said inquiry thereupon lapsed, and was not renewed, inasmuch as your Petitioners' expenses in connection with the said inquiry (it having extended over two or three months) exhausted all your Petitioners' then available means.

7. That since the time of the meetings of the said Committee your Petitioners have again and again applied to the said Government for a settlement of their account, but uselessly.

8. That a great deal of correspondence has ensued between your Petitioners and the said Government in relation to the said contracts and claim, and in the month of July, one thousand eight hundred and eighty, at your Petitioners' instance, copies of such correspondence, et cetera, were, upon motion, ordered to be, and were accordingly, laid upon the Table of the Honorable the Legislative Assembly.

9. Your Petitioners, after having endeavoured by every possible means in their power to induce the said Government to settle their said claims, they, on the eleventh day of September, one thousand eight hundred and seventy-nine, under advice, caused a writ of summons to be issued out of the Supreme Court in respect thereof, and in which said writ the Honorable John Lackey was named as nominal defendant. The defendant duly caused an appearance to be entered to the said writ, and on the 30th day of January, one thousand eight hundred and eighty, your Petitioners filed their declaration in the said action. The Honorable John Lackey, as the defendant therein, thereupon, to wit, on the tenth day of February, one thousand eight hundred and eighty, pleaded to the said declaration the following (amongst other) pleas :—

“ And for a sixth plea the defendant as to the whole declaration says that the alleged causes of action did not, nor did any of them, accrue within six years before this suit.”

10. Your Petitioners are advised that by reason of the said defendant having pleaded the Statute of Limitations to their said claims, as set out in the last paragraph hereof, it is quite impossible for them to proceed further with the prosecution of the said claim, as such a plea is an absolute bar thereto.

11. Your Petitioners are not aware of any reason why a plea of so purely technical a kind as "The Statute of Limitations" should be advanced by the Government against their said action, as it is through no fault of theirs that their said claims remain so long unadjusted, and they would respectfully point out that they have used every available means, and resorted to every possible method (notably by the appointment of the said Committee, in the year one thousand eight hundred and seventy-five) to have the same settled, and further, that the Government cannot be in anywise prejudiced by the delay (unavoidable on your Petitioners' part) that has taken place.

12. Your Petitioners respectfully desire to remind this Honorable House that in the year one thousand eight hundred and sixty-six, the Honorable John Sutherland having a claim against the said Government (which claim was then of some twelve years standing) in respect of certain contract work which the said Honorable John Sutherland had carried out, applied to the said Government to be permitted to prosecute his said claim in a Court of Law on its merits, and requesting that no advantage be taken by the Government of the time that had elapsed, to the end that the Statute of Limitations should not be pleaded thereto. The application and request were at once granted, and an intimation was conveyed to the said Honorable John Sutherland that every facility would be afforded him by the said Government in the prosecution of such claim.

Accordingly the Statute of Limitations was not pleaded, and the action proceeded at the suit of the Honorable John Sutherland on its merits.

13. Your Petitioners' said claim was not barred by the Statute of Limitations when the said Committee was appointed, nor was it barred during the several times when they were endeavouring to get it settled, and the period fixed by the said statute, namely six years, had only expired six months before the issuing of the said writ of summons by them.

14. Your Petitioners beg respectively to state that in fulfilling the said contracts they expended of their own moneys for wages, material, and in paying sub-contractors for work in respect of the said contracts the sum of two thousand seven hundred and seventy-eight pounds two shillings and sixpence. The value of the work actually done by your Petitioners amounted to the sum of three thousand eight hundred pounds, as your Petitioners are prepared to prove, and your Petitioners only received from the said Government on account thereof the sum of five hundred and eighty-nine pounds.

15. In conclusion, your Petitioners beg to state that in the months of October and November, one thousand eight hundred and seventy-two, and immediately after the Government prevented your Petitioners from completing their said contracts, your Petitioners had the work done by them thereunder surveyed and measured by Messrs. Cowdery Brothers, a firm of practical engineers, one of which said firm (Mr. George Cowdery) is now Engineer-in-Chief of Existing Lines of Railways in this Colony.

Messrs. Cowdery Brothers reported in a highly satisfactory manner on the said work, stating in their report as to the Monkey Hill contracts:—

"That the whole of the works on these contracts could easily be completed in two or three weeks * * * * And we cannot see the justice of this contract being cancelled, particularly when so near completion." They also report as to the Tambaroora, Hill End, and Sally's Flat contract:—

"We think that with regard to this contract sufficient has been said to convince any unprejudiced mind you have been badly treated; besides we do not consider you have been paid at the rate you are entitled to have been paid, and this would tend to retard the progress of the work with men of only limited means* * * * In the present case we think the cancellation very arbitrary, as the time for completion was only expired some few days, there being only about a fortnight's work for four or five men to complete formation, and a similar number for culverts. We consider the nineteenth clause of the conditions amply provides for a few weeks' delay in completing these contracts, and we feel satisfied if you had been allowed to carry out these works, as stated above, you could have completed them within the contract time."

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take the foregoing facts into your favorable consideration, and grant such relief to your Petitioners as it may in its judgment think fit.

And your Petitioners, as in duty bound, will ever pray, &c.

E. M. MUNFORD.
M. BLOMFIELD.

Dated this twenty-seventh day of July, in the year of our Lord one thousand eight hundred and eighty-one.

1881.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GIRDER-BRIDGE ACROSS ULTIMO-STREET.
(CORRESPONDENCE, REPORTS, &c.)

Ordered by the Legislative Assembly to be printed, 5 July, 1881.

RETURN to an Order made by the Honorable the Legislative Assembly of New South Wales, dated 18th March, 1881, That there be laid upon the Table of this House,—

“Copies of all Letters, Reports, and other Correspondence, having reference
“to the construction of a Girder-bridge across Ultimo-street, Sydney.”

(Mr. Garrard.)

NO.	SCHEDULE.	PAGE.
1.	John Harris to the Secretary for Public Works, suggesting the desirability of widening the Ultimo Road Bridge, and minutes thereon. 22 July, 1874.....	2
2.	Commissioner to John Harris, stating that the work cannot be undertaken by the Government. 7 August, 1874	2
3.	John Harris again suggesting that the bridge should be widened, and that a level crossing should be granted near the same place. 22 April, 1875.....	2
4.	Commissioner to John Harris, intimating that crossing cannot be granted, and referring him to previous letter re widening of the bridge. 21 May, 1875.....	3
5.	Petition from residents of Ultimo, Pyrmont, Glebe, and Balmain, praying that the bridge may be widened, and that crossings be made at Quarry, William, M'Arthur, and Ann streets. 22 June, 1876.....	3
6.	Minute of Mr. Secretary Lackey, endorsing statements made by petitioners, and directing attention to be given to the matter with a view to the carrying out of the improvements, and minutes thereon. 23 August, 1876	3
7.	Minute of Engineer for Existing Lines, that it will be necessary to lower the road before work can be commenced, and correspondence on subject. 9 February, 1877	4
8.	Minute of Mr. Secretary Combes, that footway should be made at the same time as the widening of the bridge, and minutes thereon. 11 October, 1877	5
9.	Minute of Mr. Secretary Lackey, that the work at the Ultimo Bridge should be completed as early as possible, and minutes thereon. 30 January, 1879	5
10.	Engineer for Existing Lines to Commissioner, forwarding draft advertisement inviting tenders. 2 April, 1879 ...	5
11.	Letter to Messrs. G. H. Royce & Co., accepting their tender for the wrought-iron girders, and correspondence respecting same. 5 May, 1879	6
12.	Minute of Commissioner, and correspondence respecting arrangements made with Messrs. Royce & Co. for carrying out the contract. 20 May, 1879.	6
13.	Letter from Messrs. Royce & Co., asking that instructions may be sent to Mr. Fowler to inspect girders at Messrs. Appleby Brothers instead of the Horsley Company's works, and minutes thereon. 5 August, 1879	7
14.	Letter from Messrs. Royce & Co. representing that the delay in inspecting the girders has not been caused by them, and asking that this may be borne in mind when contract is completed, and Commissioner's reply thereto. 30 September, 1879	7
15.	Engineer for Existing Lines to Messrs. Royce & Co., intimating that penalties are to be enforced, reply from Messrs. Royce & Co., and minutes thereon. 21 September, 1879	8
16.	Agent General to Secretary for Public Works, enclosing Mr. Fowler's account for inspection, and particulars of the shipment of the girders. 6 November, 1879.	9
17.	Engineer for Existing Lines to Commissioner, reporting that the designs for the girders have been altered without his knowledge or consent, and that the workmanship is inferior, and minutes thereon. 16 January, 1880	9
18.	Messrs. G. H. Royce & Co. to Engineer for Existing Lines, asking for certificate for completion of the work. 26 February, 1880	11
19.	Examiner of Accounts to Secretary, asking whether the penalties are to be enforced, and minutes thereon. 13 April, 1880	11
20.	J. D. Baldry to Engineer for Existing Lines, stating that the original plans were not adhered to, because the contractors' tracings were unintelligible, and the figured demensions in many cases obviously wrong. 20 May, 1880	12
21.	Agent General to Secretary for Public Works, forwarding report from Mr. Fowler respecting the alterations made on the plans sent from the colony, and Engineer for Existing Lines reply thereto. 17 June, 1880.....	12

GIRDER-BRIDGE ACROSS ULTIMO-STREET.

No. 1.

J. Harris, Esq., to The Secretary for Public Works.

Sir,

Ultimo, 22 July, 1874.

I have the honor to direct your attention to the narrowness of the Ultimo Road Bridge, under the Darling Harbour line of railway, and to the great inconvenience resulting therefrom.

The Ultimo Road is 66 feet wide and the bridge is only about 16 feet, it is therefore a serious inconvenience to the traffic as well as being in wet weather a nuisance to the neighbourhood on account of the bridge being situated on the skew, it stops the natural course of the water and causing it to overflow the roadway, and thus preventing foot passengers from passing through the bridge.

I have the honor to suggest the widening of the bridge, if not the full width, at least to about 40 feet, and by doing so, it would make a great public inconvenience a great public convenience.

I have, &c.,

JOHN HARRIS,

Alderman for Denison Ward.

Mr. Whitton for report.—J.S., 24/7/74.

I cannot recommend the widening of this bridge at the cost of the Railway Department, and if it be widened I think the municipality should be at the expense of doing so. For all railway purposes the bridge is sufficient. To widen this bridge as suggested would cost from £1,500 to £2,000, and no additional roadway could be given, and it is now, I understand, only about 13 feet.—J.W., 29/7/74.

Inform compensation paid for land with this narrow bridge and it would cost from £1,500 to £2,000.—J.R., 4/8/74.

No. 2.

The Commissioner for Railways to J. Harris, Esq.

Sir,

Department of Public Works, Railway Branch, Sydney, 7 August, 1874.

In reply to your letter of the 22nd ultimo, suggesting that the Ultimo Road Bridge should be widened, I have the honor to inform you that to widen the bridge in question would cost a sum from £1,500 to £2,000, and that as the work would in no way benefit the railway, the expenditure is one which the Government cannot incur.

I have, &c.,

CHAS. A. GOODCHAP,

pro Commissioner for Railways.

No. 3.

J. Harris, Esq., to The Secretary for Public Works.

Sir,

Ultimo, 22 April, 1875.

I have the honor to bring under your notice the fact that extensive alterations are now being made on the Darling Harbour branch railway line, and with the view of suggesting an improvement that might be made without any great inconvenience to the Railway Department, and which would be esteemed a most beneficial boon by the public as well as the property-holders resident in the immediate vicinity where the same is required.

The bridges under the line (about 15 feet wide each) left for the accommodation of the public for egress and ingress to the city are totally inadequate for the large and growing increase of traffic and highly dangerous to the lives of those who have to pass through them, and will become more so when the line is in general use; at present one of them has private property on both sides, and no roadway except on sufferance.

I do most respectfully suggest, that as the timbers of both bridges are now undergoing a general renovation, the present time as being a most opportune one for widening the same, for by so doing it can in no way interfere with the traffic of the line, but will anticipate a future public demand, that I am certain of. The lines of streets on the Ultimo Estate running to the railway and blocked are all 66 feet wide, Ultimo-street being the only one near a bridge.

The bridge that stood over the line having been taken away lately, the convenience of a level crossing should be granted near the same place.

Trusting for consideration.

I have, &c.,

JOHN HARRIS.

See Mr. Whitton's report on a previous application for widening this bridge.—4/5/75. This will require Mr. Whitton's report.—4/5/75. See my opinion on accompanying paper dated 29/7/74.—J.W., 7/5/75. It was the last paragraph of Mr. Harris' letter of 22/4/75 upon which Mr. Whitton's report was required.—J.R., 8/5/75. The land on both sides of the railway belongs to the Commissioner, consequently a level crossing *should not be granted*.—J.W., 15th May, 1875. Inform.—J.R., 20/5/75.

No. 4.

The Commissioner for Railways to J. Harris, Esq.

Sir, Department of Public Works, Railway Branch, Sydney, 21 May, 1875.

In acknowledging the receipt of your letter of the 22nd ultimo, suggesting that in order to provide for the large and growing increase of traffic anticipated on the Darling Harbour branch line of railway, a level crossing should be made at the spot where the bridge was erected, but which has lately been taken down, I have the honor to inform you that as the land on both sides of the railway belongs to the Government, it is not considered desirable to construct a level crossing at the place indicated by you. As regards the widening of the bridge alluded to in your communication, I have to refer you to my letter of the 6th August last on the subject.

I have, &c.,

CHAS. A. GOODCHAP,
pro Commissioner for Railways.

No. 5.

Petition from Residents of Ultimo, Pyrmont, Glebe, and Balmain.

To the Honorable the Secretary for Public Works.

The petition of the undersigned freeholders, leaseholders, and other residents of Ultimo, Pyrmont, Glebe, and Balmain.

Respectfully sheweth,—

That the accommodation provided for the crossing of the line of railway (Darling Harbour extension) by foot passengers as well as by carts and other vehicles is insufficient for the daily increasing traffic of the suburbs above named with Sydney, and occasional accidents happen and much peril arises from the deficient means of access.

That there is only one opening of about 15 feet width opposite Ultimo Road (a road a chain wide) existing under the half-mile of railway line extending from Parramatta-street to the new wharf reserve—a space as long as from Hunter-street to Park-street.

That many of your petitioners are daily passengers to and from Sydney, and experience great inconvenience by reason of this opening and its narrow accommodation, and are frequently delayed by a string of carts, which it is dangerous to attempt to pass on foot and impossible to pass with a vehicle.

That the traffic requires additional openings in continuation of Quarry-street, William-street, M'Arthur-street, and Ann-street across the railway line.

Your petitioners therefore humbly pray that you will be pleased to order the opening opposite Ultimo Road to be increased in width to at least 40 feet, and such further openings to be made, with the least possible delay, as may afford your petitioners the means of crossing the railway line by at least four streets.

And your petitioners will ever pray, &c.

Signed by—William Ball, Messrs. W. Ball & Son, William H. Harris, and 189 others.
Sydney, 22 June, 1876.

No. 6.

Minute of Mr. Secretary Lackey.

Petition from Ultimo, Glebe, and Balmain.

THE petitioners ask that the opening under the railway approaching Sydney from Ultimo, Pyrmont, and the Glebe be widened, and that provision at either side be made for foot passengers. I had occasion to pass this place a few days ago, and can endorse the statement of petitioners as to the necessity of the work; indeed the present arch is altogether insufficient for the requirements of traffic. Serious accidents are also common here, having, I am informed, resulted on more than one occasion in the loss of life. I would be glad, therefore, if the Engineer-in-Chief would be good enough to give his early attention to this matter with the view to the improvement the petitioners seek.

J.L.,
23/8/76.

Mr. Mason for report and estimate of cost. Is there sufficient headway in each case for the four additional bridges asked for.—J.W., 28/8/76.

It will be seen from the accompanying rough section that bridge communication under the Darling Harbour branch is impracticable. The Ultimo Road is the chief and only thoroughfare; the bridge at B takes the drainage, and is impracticable for traffic.

The road at A could be lowered about 5 feet, so as to give a clear headway of 15 feet under the present bridge, but this would increase the gradients of the approaches. The cost of a new bridge 40 feet span would be, as near as I can estimate, £1,800.

An inspection of the spot will, I think, convince anyone that the other communications across the line are unnecessary.—W.M., 29/8/76.

For the information of the Commissioner.—J.W., 31/8/76.

Engineer for Permanent Way will have the bridge at the Ultimo Road widened and lowered to meet the increasing traffic of the neighbourhood.—J.L., 13/12/76.

Will be carried out as early as practicable.—W.M., 14/12/76

No. 7.

Memorandum to Commissioner.

Government Railways, Existing Lines, Engineer's Branch, 9 February, 1877.

In carrying out the alterations to the bridge on the Ultimo Road passing under the Darling Harbour branch, it will be necessary to lower the road, which will require the authority of the Sydney Corporation before the work can be commenced.

*Appended.

I forward herewith* plan and section showing the proposed alterations in the street, and recommend it be forwarded to the Corporation for their approval.

W. MASON.

Write, forwarding plan, and ask for approval.—CHAS. A.G., 20/2/77.

The Commissioner for Railways to The Town Clerk, Sydney.

Sir, Department of Public Works, Railway Branch, Sydney, 20 February, 1877.

The Engineer for Existing Lines reports that in order to carry out the necessary alterations to the Railway Bridge on the Ultimo Road which passes under the Darling Harbour branch, it will be necessary to lower the said road, and that the approval of the Sydney Corporation will have to be obtained before the work can be commenced, I have the honor to forward herewith plan and section showing the proposed alterations, and to request that you will bring the matter under the attention of the Right Worshipful the Mayor, and obtain his approval thereto.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

The Commissioner for Railways to The Town Clerk, Sydney.

Sir, Department of Public Works, Railway Branch, Sydney, 29 March, 1877.

I have the honor to remind you that I have received no reply to my letter of the 20th ultimo, writing that in order to carry out the necessary alterations to the Railway Bridge on the Ultimo Road, which passes under the Darling Harbour branch, the approval of the Sydney Corporation would have to be obtained, and to request that you will bring this matter under the attention of the Right Worshipful the Mayor and obtain his approval which I should be glad to receive as early as possible, so as to permit the alterations alluded to being carried out without further delay.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

The Town Clerk, Sydney, to The Commissioner for Railways.

Sir, Town Clerk's Office, Sydney, 5 April, 1877.

Referring to your letters of the 20th February and 29th ultimo respecting the proposed alterations to the Railway Bridge on Ultimo Road, I have the honor, by direction of the Right Worshipful the Mayor, to state that the necessary survey of the road in connection with the drainage is now being made, and that a further communication will be made to you as soon as it is completed.

I have, &c.,
CHAS. H. WOOLCOTT,
Town Clerk.

It is over two months since the survey was said to be in hand—I think a reminder ought to be sent.—CHAS. A.G., 8/6/77.

The Commissioner for Railways to The Town Clerk, Sydney.

Sir, Department of Public Works, Railway Branch, Sydney, 12 June, 1877.

In reference to your letter of the 5th April last relative to the proposed alterations to the Railway Bridge on the Ultimo Road, and stating that the necessary survey is now being made, I have the honor to point out that it is now over two months since this survey was said to be in hand; may I therefore request that you will favour me with the approval of the Corporation to the proposed alterations to this bridge, in order that the work may be carried out without further delay.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

The Town Clerk, Sydney, to The Commissioner for Railways.

Sir, Town Clerk's Office, Sydney, 4 July, 1877.

Referring to correspondence on the subject of the proposed alterations to the Railway Bridge at Ultimo Road, I have the honor, by direction of the Right Worshipful the Mayor, to forward herewith a tracing showing the permanent level of the roadway of the portion of Ultimo Road in question, which has been adopted by the City Council after the usual notice being given.

I have, &c.,
CHAS. H. WOOLCOTT,
Town Clerk.

Mr. Mason, B.C.—J.R., 16/7/77. Drawings are now being prepared for this bridge. I think a vote should be obtained for it as it will cost about £1,600.—W.M., 2/10/77. Place on next Estimates.—E.C., 12/10/77. Mr. Mason to see.—CHAS. A.G., 12/10/77.

No. 8.

Minute of Mr. Secretary Combes.

Bridge, Darling Harbour Branch—Roadway under the Line.

This bridge is at present only about 12 feet in width, and Mr. Mason proposes to widen it to 40 feet. In addition to this the residents ask for a separate footway.

Captain Charles, M.P., represented the matter to me on the part of the inhabitants and others interested, and it seems to me, that while the bridge is being widened a footway should at the same time be made.

E.C., 11/10/77.

I propose to put a separate footway to this bridge of 5 feet wide, leaving a clear span of 35 feet roadway.—W.M., 16/10/77. How does Mr. Mason propose to separate the footway from the road?—E.C., 19/10/77.

By a raised footpath thus :—

W.M., 26/10/77.

Approved.—E.C., 15/11/77. How does the matter now stand.—J.R., 16/11/77. Drawings are now being prepared, and I propose to put a sum on the Estimates for this work as already stated in my minute, 2/10/77.—W.M., 19/11/77. Approved.—E.C., 3/12/77.

No. 9.

Minute of Mr. Secretary Lackey.

Railway Bridge—Road leading to Ultimo.

It has been pointed out that great inconvenience has been suffered by the residents in this neighbourhood through the delay that has occurred in the erection of this bridge, the money for which has been voted since the Estimates of 1876. I would be glad if the Engineer for Existing Lines would give his attention to this with a view to the work being completed with as little delay as possible.

J.L., 30/1/79.

This work would have commenced some time ago but Mr. Sutherland directed the span of the bridge to be made 66 feet instead of 40 feet, which necessitated a fresh set of drawings to be made. The drawings are now sufficiently advanced to allow of the work being commenced in a few days. This will be done and completed as early as possible.—W.M., 5/2/79.

No. 10.

The Engineer for Existing Lines to The Commissioner for Railways.

Department of Public Works, Railway Branch, Existing Lines,

Engineer's Office, Sydney, 2 April, 1879.

I FORWARD herewith a draft advertisement, inviting tenders for supplying wrought-iron girders for Ultimo Road Bridge, for insertion in the *Government Gazette*, &c.

W. MASON.

Approved. Insert early.—CHAS. A.G., 3/4/79. Too late for to-day's *Gazette*.—D.C. McL. Advertisement sent to *Herald*, *Evening News*, *Government Gazette*, and Public Works.—D.C. McL., 4/4/79. Mr. Mason to sec, B.C., 15/4/79.—G.B. Secn.—W.M., 18/4/79.

Gerald Halligan, Esq., to The Commissioner for Railways.

Sir,

Department of Public Works, Sydney, 15 April, 1879.

The tenders, four in number, for the work specified in the margin, are referred to you for report, and you will have the goodness, as early as possible, to return them to me direct, for submission to the Minister.

I have, &c.,

GERALD HALLIGAN,

Acting Under Secretary.

Supplying wrought-iron girders, Ultimo Road Bridge, Darling Harbour.

Mr. Mason, B.C., 15/4/79.—CHAS. A. G.

The tender of G. H. Royce & Co. is the lowest, but it will be seen they require until the 30th September next to complete the contract, which is specified to be completed on the 30th June. It will also be seen that the other tenderers require a similar extension of time on account of having to obtain the iron plates from England. As it is not a pressing necessity to have the girders delivered on the 30th June, I recommend that G. H. Royce & Co.'s tender be accepted.—W.M., 21/4/79.

Approved.—J.L., 30/4/79.

ANALYSIS of Tenders for supplying Girders for Ultimo Road Bridge.

Name of Firm.	Amount.
Mort's Dock and Engineering Company	£ 1,360 0 0

G. H. Royce & Co.	980 0 0
Chapman & Co.	1,570 0 0

No. 11.

The Commissioner for Railways to Messrs. G. H. Royce & Co.

Gentlemen, Department of Public Works, Railway Branch, Sydney, 5 May, 1879.

I have the honor to accept your tender dated the 14th ultimo to construct three wrought-iron main girders and forty-two cross-girders, and deliver the same complete and finished in a workmanlike manner in trucks alongside Darling Harbour Wharf in accordance with plans and specification and to the satisfaction of the Engineer for Existing Lines, for the sum of £980.

I have to request that you will at once wait upon the Crown Solicitor with your sureties for the purpose of executing the necessary bond which must be signed within ten days from the date of acceptance of tender or the contract will be withdrawn from you.

I have, &c.,
CHAS. A. GOODCHAP,
Commissioner for Railways.

Messrs. G. H. Royce & Co. to The Commissioner for Railways.

Sir, 305, George-street, Sydney, 8 May, 1879.

We have the honor to acknowledge your letter dated 5th instant, intimating that our tender for the three main girders and forty-two cross-girders for the Ultimo Bridge is accepted, and directing us to call on the Crown Solicitor to execute the necessary bond.

In reply, we beg to say that we have to-day waited on the Crown Solicitor as directed, but he informs us that he is without any instructions on the subject, but that so soon as the bond is ready for signature he will advise us to that effect.

We have, &c.,
G. H. ROYCE & CO.

Messrs. G. H. Royce & Co. to The Commissioner for Railways.

Sir, 305, George-street, Sydney, 14 May, 1879.

Referring to our accepted tender for the girders for the Ultimo Road Bridge and our subsequent interview with you on the subject of inspection in England by the inspecting engineer of the Government, we beg leave to accept the terms you offered for such inspection, and also for part payment in England to the extent of 85 per cent. of the contract sum, such terms, as we understood them, being that we were to refund to the Government the 2½ per cent. inspection charges of Mr. Fowler, and also pay interest for the amount so advanced us at the rate of 5 per cent. per annum from the date of the payment to us in England until the delivery of the girders in the colony.

We are telegraphing our London office to-day to put the work in hand immediately so as to get it shipped as early as possible. We shall therefore be glad if you will cause Mr. Fowler to be instructed to inspect the work as early as convenient.

We have, &c.,
G. H. ROYCE & CO.

No. 12.

Minute of Commissioner.

Contract for Supply of Wrought-iron Girders for Ultimo Road Bridge.

WHEN the specification was made for the girders it was anticipated that they would be made in the colony, but owing to the sizes of scantling not being available in the colony, all the tenderers proposed to import them.

Messrs. G. H. Royce & Co.'s tender for £980 has been accepted.

It is important that the girders should be inspected during the progress of manufacture, and upon Messrs. Royce being communicated with on the subject the following arrangement was made:—

Mr. Fowler, the Inspecting Engineer in England, to inspect the girders, and to be paid 2½ per cent., £24 10s., to be paid ultimately by the contractor.

The contractor to be allowed payment in England to the extent of 85 per cent. on the contract sum, £833, less 5 per cent. interest from date of payment until the delivery of the goods in the colony, say four months.

It will be necessary to send telegram to Agent General to instruct Mr. Fowler to inspect, as the girders have been ordered by telegram.

The Agent General to be fully informed by letter, and Treasury requested to make provisions for the payment on the terms stated.

CHAS. A.G.,
20/5/79.

Approved.—J. L., 28/5/79.

Write to Agent General and also Treasurer. The deduction of 5 per cent. interest on advance in London, and the Engineer's fee for inspection can be deducted from the balance of the contract money to be paid in the colony.—CHAS. A.G., 28/5/79.

The Secretary for Public Works to The Agent General.

Sir, Department of Public Works, Railway Branch, Sydney, 6 June, 1879.

Referring to my cablegram of the 29th ultimo (as per margin), I have the honor to inform you that Messrs. G. H. Royce & Co.'s tender was accepted for the supply of these girders, but owing to the sizes of scantling not being available in the colony, all the tenderers proposed to import them, and it was arranged with Messrs. Royce & Co. that Mr. Fowler, the Inspecting Engineer, was to inspect the girders during

Fowler to inspect
girders ordered
from Horsley
Company,
Staffordshire.

during the progress of manufacture, and to be paid 2½ per cent. on the cost of same, which is ultimately to be paid by the contractor.

Messrs. Royce & Co. are to be allowed payment in England to the extent of 85 per cent. on the contract sum—£833.

I have, &c.,

JOHN LACKEY,

Secretary for Public Works.

Memorandum to Under Secretary.

I have to inform you that a tender of Messrs. G. H. Royce & Co. has been accepted by this department for the supply of wrought-iron girders for the Ultimo Road Bridge for the sum of £980; 85 per cent. of which is to be paid in London on the shipment of goods. The Agent General has been informed, and I have to request that you will be good enough to instruct the Treasury Department to have the necessary provision made to meet the payment of this amount, which is to be charged to the "Vote for the Bridge."—CHAS. A.G., B.C., 9/6/79.

Write to Treasury accordingly.—G.H., 16/6/79. Treasury written to, 17/6/79.

The Crown Solicitor to The Commissioner for Railways.

Sir,

Sydney, 7 July, 1879.

In compliance with the instructions contained in your minute paper, B.C., 12/6/79, I have had prepared and forward herewith the agreement bond, executed by Mr. G. H. Royce and his sureties, for girders, &c., for Ultimo Road Bridge, Darling Harbour. Alfred Bennet
J. Hennicker
Heaton.

The plans, specifications, and all other documents herein are returned herewith.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

No. 13.

Messrs. G. H. Royce & Co. to The Commissioner for Railways.

Sir,

305, George-street, Sydney, 5 August, 1879.

By the English mail of 19th June, just to hand, we are in receipt of letter from our London office in which they say, speaking of the girders for the Ultimo Road Bridge—"This work was put in hand directly on receipt of your telegram and is well forward, as it could not be turned out to time at Tipton at the Horsley Company's works, we arranged with Messrs. Appleby Brothers to put it in hand for immediate delivery. On seeing Mr. Fowler as to the inspection, he however informed us that his instructions were to inspect the work at the Horsley Company's works, and although he was perfectly satisfied with the quality of the work turned out by Messrs. Appleby Brothers, which was quite equal to the Horsley Company's, he regretted that he had no power to depart from the letter of his instructions." The work at the time of our letter leaving was being pushed on, and probably the Agent General on receipt of your letter of instructions on the subject, would see that so long as the work was of the first quality and to the satisfaction of Mr. Fowler, that it was of no consequence where it was carried out; but in order to remove any possibility of delay we would respectfully ask that you would cause a telegram to be sent to the Agent General to the effect that "instructions respecting Royce's Ultimo girders apply wherever built," the cost of such telegram we will pay if required, as we are anxious that no delay whatever should occur in the carrying out of our contract. We may remark that Mr. Fowler is well acquainted with the class of work turned out by Messrs. Appleby Brothers, and at the present time is inspecting the work being carried on there for your Government for the Parramatta and Iron Cove Bridges, as well as several other contracts for Egypt, &c., and he expressed himself as satisfied that we had placed the girders in such good hands; and as our contract contains no stipulation as to place of manufacture, but is most strict as to the quality of the work, we trust that you will favour us by giving the instructions asked.

We are, &c.,

G. H. ROYCE, & CO.

Mr. Mason.—CHAS. A.G., 5/8/79. I recommend Mr. Fowler be instructed through the Agent General to inspect girders as required by Mr. Royce.—W.M., 7/8/79. Write out cablegram.—CHAS. A.G., 11/8/79. Cablegram forwarded, 14/8/79. Write to Messrs. Royce & Co.—CHAS. A.G., 17/8/79.

The Commissioner for Railways to Messrs. G. H. Royce & Co.

Gentlemen,

Department of Public Works, Railway Branch, Sydney, 19 August, 1879.

I have the honor to inform you in reply to your letter of the 5th instant, that, under the circumstances therein stated, a cablegram has been sent to the Agent General to direct Mr. Fowler to inspect the girders for the Ultimo Bridge at the establishment at which they are being made.

The cost of this telegram will be debited to you.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 14.

Messrs. G. H. Royce & Co. to The Commissioner for Railways.

Sir,

305, George-street, Sydney, 30 September, 1879.

We have the honor to inform you, that by the English mail of the 14th August, to hand, this morning, our London office advise us, that Mr. Fowler still declined to take official knowledge of the girders we are constructing for the Ultimo Road Bridge, as up to the date of the mail leaving he had received no instructions other than that the Horsley Company were to make them, we presume that the telegram that

you

you directed to be sent him on the subject had not reached London at that date, but we would respectfully draw your attention to the fact that this continued delay is not being caused by us, which we trust will be borne in mind on the completion of the contract.

We have, &c.,
G. H. ROYCE, & CO.

Inform that I can in no way recognize that the delay is attributable to anybody but themselves.—
CHAS. A. G., 3/10/79.

The Commissioner for Railways to Messrs. G. H. Royce & Co.

Gentlemen, Department of Public Lands, Railway Branch, 6 October, 1879.

In acknowledging receipt of your letter of the 30th ultimo, stating that by the mail of the 14th August last, you were advised by your London office that Mr. Fowler still declined to take official knowledge of the girders you are constructing for the Ultimo Bridge as he had received no instructions other than that the Horsley Company were to make them, and drawing attention to this continuous delay, which you state is not caused by you, and which you hope will be borne in mind on the completion of the contract, I have the honor to inform you that I can in no way recognize that the delay represented is attributable to anybody but yourselves.

I have, &c.,
CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 15.

The Engineer for Existing Lines to Messrs G. H. Royce & Co.

Gentlemen, Sydney, 21 September, 1880.

The time for the completion of your contract for the supply and delivery of the whole of the principals, ventilators, beams, and columns, for iron roofs, for blacksmiths' shops, Honeysuckle Point, Great Northern Railway, having expired on the 15th instant, and none of the material being yet delivered, I have to inform you that the penalties provided for in the general conditions attached to the specification will be enforced.

I am, &c.,
WILLIAM MASON.

Messrs. G. H. Royce & Co. to The Engineer for Existing Lines.

Sir, 305, George-street, Sydney, 27 October, 1879.

We have the honor to acknowledge receipt of your communication, dated 24th instant, directing our attention to the fact that the contract time for the completion of the girders for the Ultimo Road Bridge had expired, and intimating that the penalties provided for in the contract would be enforced.

In acknowledging receipt of said communication we would respectfully point out that the delay complained of has in no way been caused by default on our part, but is entirely owing to Mr. Fowler waiting instructions as to the inspection. On the 14th May the Commissioner for Railways arranged with us that Mr. Fowler should be instructed by cablegram to inspect the work, and we wired our London office to that effect, but on their placing themselves in communication with Mr. Fowler, he declined to act on the telegram he received as we were building the girders in London, and the cablegram, named the Horsley Company, Tipton, as the makers, although no special makers were stipulated for in our contract. So late as the 14th August, as we advised the Commissioner for Railways on 30th ultimo, Mr. Fowler was still waiting instructions, but we have since been advised from London that the inspection has been made and the girders shipped.

On their arrival not a moment shall be lost in completing the contract, but we respectfully submit that under the abovenamed circumstances we should not be held liable for the penalties to which you refer.

We have, &c.,
G. H. ROYCE & CO.

Forwarded for Commissioner's information.—W.M., 31/10/79.

Has the department sustained any loss by the delay? I cannot admit that the department is responsible. Messrs. Royce & Company named the house they proposed to get the girders made by, and the inspecting engineer was instructed accordingly. If the contractors afterwards got them made elsewhere, as was the case, it is absurd to charge the department with delay arising from the change made.—CHAS. A. G., 6/11/79. Mr. Mason, B.C.

The department has not sustained any loss by the non-delivery of the girders up to the present time.—W.M., 7/11/79. Commissioner.

Secn. Inform that the ground advanced by them is untenable and cannot be recognized.—CHAS. A. G., 26/11/79.

The Commissioner for Railways to Messrs. G. H. Royce & Co.

Gentlemen, Department of Public Works, Railway Branch, 29 November, 1879.

In reply to your letter of the 27th ultimo, setting forth the circumstances which led to the delay in completing the girders for the Ultimo Road Bridge, and stating that under the circumstances you should not be held liable for the enforcement of the penalties as provided for in contract, I have the honor to inform you that I have given this matter every consideration, but the ground advanced by you is untenable, and cannot be recognized.

I have, &c.,
CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 16.

The Agent General to The Secretary for Public Works.

Sir, 3, Westminster Chambers, Victoria-street, S.W., 6 November, 1879.
 Referring to your telegram 30th May last, stating that Mr. J. Fowler was to inspect the girders of the Ultimo Road Bridge, supplied by Messrs. Royce & Co., I have the honor to inform you that I have received Mr. Fowler's account of the expenses for such professional services, and I enclose a copy for your information. I propose to pay this claim (£20 15s.) in the course of this week, and I apprehend that a like amount will be claimed by you from Messrs. Royce & Co.

I have, &c.,
 WILLIAM FORSTER.

THE Government of New South Wales, debtor to John Fowler, 2, Queen Square Place, Westminster.
 25 October, 1879. Public Works.

To professional charges for duties performed in the inspection of the iron work of the Ultimo Road Bridge, supplied under Messrs. G. H. Royce & Company's contract—

2½ per cent. on contract amount, £980	£24 10 0
Deduct estimated cost of freight and 150	3 15 0
		£20 15 0

The Agent General to The Secretary for Public Works.

Sir, 3, Westminster Chambers, Victoria-street, S.W., 31 October, 1879.
 I have the honor to transmit herewith, in continuation of my letter No. 129-79, of the 9th instant, the remaining documents, viz. (copy of engineer's certificate and bill of lading, per s.s. "Atalanta"), with reference to the shipment by Messrs. G. H. Royce & Co. of the girders for the Ultimo Road Bridge.

I have, &c.,
 WILLIAM FORSTER.

Bill of lading for girders per s.s. "Atalanta" herewith. Storekeeper please call on Royce & Co. and arrange for unloading.—D.V., pro Commissioner, 5/1/80. Arrangements have been made. Bill of lading received.—A.K., 10/1/81. Secretary. Mr. Mason to see.—CHAS. A.G., B.C., 14/1/80. Seen.—W.M., 17/1/80.

J. Fowler, Esq., to The Agent General.
 Ultimo Road Bridge.

2, Queen Square Place, Westminster, S.W., 25 October, 1879.
 I HEREBY certify that the whole of the ironwork for this bridge has been properly manufactured and marked, that the weights have been ascertained, and that the same has been shipped per s.s. "Hankow" and "Atalanta" for Sydney, N. S. Wales, and that Messrs. Royce & Co. are accordingly entitled under their contract to receive the sum of £833, being 85 per cent. of the invoice value of £980.

JOHN FOWLER,
 pro J. D. BALDRY.

No. 17.

The Engineer for Existing Lines to The Commissioner for Railways.

Defective Girders for Ultimo Road Bridge—Alterations of Design.

Department of Public Works, Railway Branch, Existing Lines,
 Engineer's Office, Sydney, 16 January, 1880.

THE girders referred to in the accompanying letter from Mr. Baldry (Mr. Fowler's representative) have arrived, and have been landed on the Darling Harbour Wharf, where I inspected them this morning in company with Mr. Royce, the contractor.

It will be seen that the designs for the girders have been considerably altered by Mr. Fowler, for the reasons stated in Mr. Baldry's letter without my knowledge or consent. Such alterations being in no way required or beneficial; but on the contrary, they have, in my opinion, reduced the immediate and permanent strength of the general superstructure.

Not only have the dimensions of plates, angle-irons, &c., been in various instances altered, but rolled cross-girders have been substituted for the girders specified, which are vastly inferior in their mode of connection with the main girders.

	Tons	cwt.	qrs.	lbs.
Computed weight of girders as originally designed by me, and specified	43	9	3	17
Computed weight of girders as altered by Mr. Fowler, and as sent out	40	8	2	10
Showing a difference of	3	1	1	7
Weight of girders per contractor's invoice	40	4	3	14

Therefore, it will be seen the difference in weight between girders as contracted for and as supplied cannot be less than 3 tons 1 cwt. 1 qr. 7 lbs., as stated above.

Any such failure of cross-girders, as that referred to by Mr. Baldry, is more likely to happen to those sent out, than those in my design. The design was very carefully prepared, and all the strains computed by myself, and I am certain if the girders had been faithfully built to that design their strength and utility would have been beyond question.

The workmanship in the girders is very inferior; out of twenty-four vertical joints, now as they are in section, there are only six which are in close contact according to the specification; the remainder being as much apart as shown on the enclosed sketch.

This is a very important and serious matter as it throws a considerable "shearing" strain on the rivets, which would never exist if the joints had butted close and tight as specified, and will lessen to a very serious extent the ultimate strength of the girders.

The rivetting is very inferior, several of them being loose, and the head not brought into close contact throughout its diameter with the plates.

Taken altogether the work is of such a nature as to prevent me from accepting the girders in their present state, and much as I regret to say it, does not reflect credit on the inspection.

I will take this opportunity to protest against any alterations being made in my designs without my consent, where any responsibility of a serious nature is involved in the result.

WILLIAM MASON.

[Enclosure to Mr. Mason's minute of 16 January, 1880.]

J. D. Baldry, Esq., to The Engineer for Existing Lines.

Dear Mr. Mason,

2, Queen Square Place, 6 November, 1879.

Ever since I received your letter of March, 1878, I have from time to time been expecting to hear of your arrival in England, and I am quite glad to seize an opportunity of writing.

We have had to inspect a bridge for you—the Ultimo Road Bridge, under contract to Messrs. Royce & Co. I thought this bridge was for Mr. Bennett, until he told me it was yours, and I had wondered what railway bridges would be in his department.

I now enclose for your information tracings of the bridge as it has been constructed. You will notice some deviations from the original design. The contractors for the ironwork could not interpret the drawings; when they came home they were torn and very indistinct and badly figured, and there were no official drawings to refer to. As several doubtful points had to be settled, it was easier to make the drawings over again, retaining the same maximum strength as before, and strengthening the weaker portions without increasing the weight of the bridge.

To facilitate the shipment and the erection of the work in the colony the positions of the joints in the flanges were modified as shown.

Heavy rolled joists were substituted for rivetted cross-girders, because when the latter are light and placed close together, as in the present case, the rivets of the work sometimes loosen under the rolling load; and not very long ago we had to substitute rolled joists for rivetted cross-girders which had failed in a bridge similar to the Ultimo Road Bridge.

I trust the bridge as sent out will be to your satisfaction, and with kind regards.

I am, &c.,
J. D. BALDRY.

See my report herewith.—W. MASON, 17/1/80. Commissioner.

Are the scantlings to which the girders are now made, of a size to have admitted of their being made in the colony. See my minute of 20/5/79 on 79/8,746 herewith. What does Mr. Mason propose to do to make as effective as possible the girders, the imperfections of which he has pointed out? I will submit the case for the consideration of the Minister on receiving Mr. Mason's reply to the above queries.—CHAS. A.G., 23/1/80.

1. Yes, but the plates would have had to be imported. 2. I propose that all the joints which do not butt close, the space between the plates should be packed with strips of steel and re-rivetted. All loose or defective rivets cut out and properly replaced. This will remedy to a great extent these faults. But as the attachments of the cross-girders to the plates of the main girders has been so completely altered by Mr. Fowler, I do not think it would be fair to ask the contractor to alter them, after they were done to Mr. Fowler's satisfaction. As 85 per cent. has been paid on these girders in London, I see no alternative but to accept them after the contractor has made the alterations I have named, otherwise had they not been passed by Mr. Fowler, I should have considered it my duty to reject them.—W.M., 27/1/80. Commissioner.

Memorandum to Mr. Purton.

Sir,

Darling Harbour Station, 5 February, 1880.

We have some iron girders at our wharf loaded on to bolster trucks, by Royce and Co., for your department for some time, and as the trucks are urgently required, Traffic Manager will not allow them to remain on the trucks any longer. Kindly advise me at once what I shall do with them, and oblige,

CHAS. PAULL.

The Engineer for Existing Lines.—Y. PURTON, 5/2/80. I see no alternative but to accept these girders. If the Commissioner will advise, I will get them taken to the Ultimo Bridge at once.—W.M., 5/2/80. Commissioner. The girders will be accepted, but the Agent General will be advised that no departure of any moment from the plans forwarded from the Engineer here can be allowed.—J.L., 11/2/80. Mr. Mason please return early.—CHAS. A.G., 12/2/80. Noted.—W.M., 16/2/80. Write fully to Agent General, and request him to direct the attention of the Inspecting Engineer to the Minister's minute.—CHAS. A.G., 23/2/80.

The Secretary for Public Works to The Agent General.

Sir,

Department of Public Works, Railway Branch, Sydney, 25 February, 1880.

In adverting to my letter to you of the 6th June last, relative to the iron girders, to be imported by Messrs. Royce and Co., for the Ultimo Road Bridge, I have the honor to inform you that the girders were inspected by the Engineer for Existing Lines immediately they were landed here, and he has reported that the design forwarded to England has been considerably altered, and that such alterations were in no way required or beneficial; but on the contrary, they have, in his opinion, reduced the immediate and permanent strength of the general superstructure, &c.

Not only have the dimensions of plates, angle-irons, &c., been in various instances altered, but rolled cross-girders have been substituted for the girders specified, which are vastly inferior in their mode of connection with the main girders.

The computed weight of girders as originally designed and specified was 43 tons 9 cwt. 3 qrs. 17 lbs. The computed weight of girders as altered by Mr. Fowler, and as sent out was 40 tons 8 cwt. 2 qrs. 10 lbs., showing a difference of 3 tons 1 cwt. 1 qr. 7 lbs. Weight of girders per contractor's invoice 40 tons 4 cwt. 3 qrs. 14 lbs. It will therefore be seen, the difference in weight between the girders as contracted for and as supplied cannot be less than 3 tons 1 cwt. 1 qr. 7 lbs. as stated above.

The

The workmanship in the girders is very inferior: out of twenty-four vertical joints now as they are in section, there are only six which are in close contact according to the specification, the remainder being as much apart as shown on the enclosed sketch. This is a very important and serious matter, as it throws a considerable "shearing" strain on the rivets, which would never exist if the joints had butted close and tight as specified, and will lessen to a very serious extent the ultimate strength of the girders. The rivetting is also very inferior, several of them being loose, and the head not brought into close contact throughout its diameter with the plates.

It will be seen from the foregoing that the work is of such a nature as to prevent strictly its acceptance by the department, but as the girders were passed by Mr. Fowler, in England, they will of course be accepted in this instance, but in all future contracts where any responsibility of a serious nature is involved in the result, the work cannot be accepted if any departure of any moment is made in the drawing, &c., forwarded from this colony.

I have, &c.,
JOHN LACKEY,
Secretary for Public Works.

No. 18.

Messrs. G. H. Royce & Co. to The Engineer for Existing Lines.

Ultimo Bridge Girders.

Sir,

Sydney, 26 February, 1880.

The two girders for above bridge have been loaded up since last Friday, but the Traffic Department cannot find us waggons to load the third one; we have been waiting all the week for them, and as we understand to-day that they may not be able to let us have them for some time, we have the honor to ask for your certificate for the completion of the work, we will, of course, load the third girder at any time when called on to do so.

We beg to enclose copy of account for certificate, and are, sir,

Yours, &c.,

G. H. ROYCE & CO.

Mr. Purton to report when the whole of the girders, loose plates, and rivets have been delivered.—W.M., 28/2/80.

The rivets and loose plates, &c., have now been handed over to this department. Two of the girders are on bolster trucks, and one is on the wharf ready to be loaded.—J.P., 5/3/80.

Geo. H. Royce & Co., Engineers and Contractors, to Chas. A. Goodchap, Esq., Commissioner for Railways.
Sydney, 26 February, 1880.

22 February, 1880.		£	s.	d.
To girders, cross-girders, and bearing plates for Ultimo Road Bridge, as per contract		980	0	0
CR.				
By amount paid in England by Agent General		833	0	0
„ Mr. Fowler's inspection charges, at 2½ per cent.		20	16	6

This contract is now completed. The girders, &c., have been received from Mr. Royce.—W.M., 8/3/80. Commissioner. Seen.—CHAS. A.G., 9/3/80.

No. 19.

The Examiner of Accounts to The Secretary.

Vouchers for signature—Messrs. G. H. Royce & Co., £117 2s. 3d.

THIS voucher is made out in accordance with accountant's statement, but I would point out that the contract stipulates that for each and every day the girders are not delivered complete beyond the time specified, a penalty of £5 will be enforced.

I shall be glad if you will inform me if the penalties are to be enforced, and if so to what date.

R.J.S., 13/4/80.

Mr. Mason to say what fines (if any) are due.—CHAS. A.G., 14/4/80.

The girders were specified to be delivered on the 30th September, 1879, but were not delivered complete until 5th March, 1880, owing chiefly to the delay caused by having to prepare fresh drawings, as those sent to England arrived there in such a mutilated condition, they were unintelligible. Some little delay was also caused by some defective workmanship in the girders having to be remedied after their arrival in Sydney. I believe Mr. Royce did his utmost to supply the girders at the time specified, and probably would have succeeded in doing so only for the accident to the drawings abovenamed. Taking all the circumstances of the case into consideration I think the penalties ought to be remitted, seeing that the Government have not lost anything by the delay. Full penalties, 157 days, at £5—£785.—W.M., 3/5/80. Commissioner.

Approved.—J.L., 7/5/80. Voucher for £117 2s. 3d. forwarded for payment.—R.J.S., 10/5/80.

No. 20.

No. 20.

J. D. Baldry, Esq., to The Engineer for Existing Lines.

Dear Mr. Mason, 2, Queen Square Place, Westminster, S.W., 20 May, 1880.

I have not had the pleasure of hearing from you since I wrote on the subject of the Ultimo Road Bridge, but a communication has come from the Government complaining that the work was imperfect and that the original plans were not adhered to. This shall be answered officially next mail. The explanation is that the contractors' tracings were unintelligible, and the figured dimensions in many instances obviously wrong * * * * *

Yours, &c.,
J. D. BALDRY.

Put by till reply referred to comes to hand.—CHAS. A.G., 22/7/80.

No. 21.

Agent General to The Secretary for Public Works.

Girders for Ultimo Road Bridge.

Sir, 5, Westminster Chambers, Victoria-street, S.W., 17 June, 1880.

With reference to your letter, No. $\frac{80}{25}$, of the 25th February last, containing certain complaints as to the probable results of the colonial specification not having been strictly adhered to in the matter of the girders recently supplied by Messrs. G. H. Royce and Co., for the "Ultimo Road Bridge," I have the honor to inform you that having communicated the purport of your letter above quoted to Mr. John Fowler, C.E., I have received from that gentleman the report, dated 10th instant, of which a copy is herewith enclosed, and which I trust, after careful consideration of all the circumstances therein set forth, will be regarded as satisfactory.

I desire specially to invite your attention to, and to express my concurrence in, the concluding paragraph of Mr. Fowler's report, in which he points out the necessity of the Agent General being furnished with the fullest official documents, drawings, &c., not only for the guidance of this department, but also for that of the Engineer, in place of being dependent upon the contractors for information, as in the present instance, which you will doubtless perceive from the accompanying report, has led to inconvenience.

I had the honor some years ago to draw your attention to the desirableness of dealing with contractors and others through the Agent General, and I venture again to impress it upon your notice.

I have, &c.,

DANIEL COOPER.

Mr. Mason.—B.C., 8/9/80.—CHAS. A.G. See my reply herewith and also remarks on the margin of Mr. Fowler's letter.—W. MASON, 23/9/80.

[Enclosure to Agent General's letter.]

Girders for Ultimo Road Bridge.

Sir, 2, Queen Square Place, Westminster, S.W., 10 June, 1880.

I beg to acknowledge receipt of your letter of the 12th May, enclosing a copy of a communication, dated Sydney, 25th February, received from the Secretary for Public Works, containing certain complaints as to the probable results of the Colonial specification not having been strictly adhered to, and requesting me to furnish a report thereon.

In accordance with the above instructions I have to report as follows:—

I received no official instruction with respect to the above bridge until the work was nearly completed by the contractor, nor any tracing of the same even then.

The matter was brought to my notice in the following manner:—In June, 1879, the contractor, to whom the ironwork had been sub-let in this country, called upon me with some carelessly made tracings of the girders and requested me to advise him upon them as they were in many essential points conflicting and unintelligible.

I went through the traces with him very carefully and found that the same plate or angle-iron was frequently figured of two and sometimes three different sizes, and as it was impossible to say which was the size intended to be adopted, it appeared to me that the only alternative to delaying the work some months was to calculate the strength of the girders as indicated on the tracings, so far as was possible with the discrepancies, and to redraw the same, giving a slightly increased strength. The manufacturer of the ironwork accepted the responsibility of this suggestion, and the girders were redrawn accordingly, adhering as closely as possible to the original tracings.

Some of the chief discrepancies and apparent errors in the tracing submitted to me by the manufacturer were as follows:—

$\frac{1}{2}$ and $\frac{5}{8}$ elevation, $\frac{1}{2}$ and $\frac{5}{8}$ cross section.

The $\frac{1}{2}$ and $\frac{5}{8}$ refer to one section and the $\frac{1}{2}$ and $\frac{5}{8}$ to another, and both are correct as per my drawing.

This refers to another section.

Not centre-plate section.

Centre section is shown with $\frac{5}{8}$ plate.

There are joint-plates figured $3\frac{1}{2} \times \frac{5}{8}$, $3\frac{1}{2} \times \frac{1}{2}$, and $3\frac{1}{2} \times \frac{3}{8}$; the only angle-iron shown in upper section is $5 \times 5 \times \frac{5}{8}$.

I do not consider $\frac{1}{2}$ plate insufficient in the form used.

The plates forming the web are $\frac{1}{2}$, $\frac{5}{8}$, and $\frac{1}{2}$, no other thickness given.

The joint-plates are figured $\frac{1}{2}$ for $\frac{1}{2}$ web, $\frac{3}{8}$ for $\frac{5}{8}$ web, and $\frac{1}{2}$ for $\frac{1}{2}$ web, $\frac{5}{8}$ is not mentioned.

The top flange at the centre of the middle girder was marked on the drawing, on the elevation, as one $\frac{1}{2}$ and one $\frac{5}{8}$ plate, and on the cross section as one $\frac{1}{2}$ and one $\frac{5}{8}$ plate. As constructed it consists of three $\frac{1}{2}$ plates, thus giving an increased thickness of $\frac{1}{2}$ beyond the larger of the two different dimensions figured on the tracing.

Intermediate, between the centre of the span and the pier, the same flange, according to one set of figures was shown to be $\frac{1}{2}$ and one $\frac{5}{8}$ plate, and according to another set of figures one $\frac{1}{2}$ and one $\frac{5}{8}$ plate. As constructed it consists of two $\frac{1}{2}$ plates, an increase on the smaller dimensions.

The top flange near the centre of the outside girder appeared on the tracing with the conflicting dimensions of one $\frac{1}{2}$ and one $\frac{5}{8}$ plate, and of one $\frac{1}{2}$ and one $\frac{5}{8}$ plate. As constructed it consists of two $\frac{5}{8}$ plates.

The angle-iron is figured $5\frac{1}{2} \times \frac{5}{8}$ in one place, $5 \times 5 \times \frac{5}{8}$ in another, and $3\frac{1}{2} \times 3\frac{1}{2} \times \frac{5}{8}$ in a third place. Such heavy angle-iron as $5 \times 5 \times \frac{5}{8}$ and upwards is certainly used in girders of 150 feet to 200 feet span, but never in such small girders as the present (66 feet), and it was assumed therefore to be a clerical error in the contractors' tracing, and corrected accordingly.

The top flange at the end of the outside girder is figured $\frac{1}{2}$ thick, which again is an obvious clerical error, as such thin plates are never used in compression even in the smallest girders. As constructed the thickness is $\frac{5}{8}$, or nearly three times the figured thickness.

The web at the centre of the same girder is figured in two places $\frac{1}{2}$ thick, and in others $\frac{1}{2}$. As constructed it is made $\frac{1}{2}$, or the larger of the two dimensions.

The joint-plates to the web are figured $\frac{5}{8}$ thick where the web is $\frac{1}{2}$ thick, and only $\frac{5}{8}$ thick where the thicker web is used, which could not have been intended. As constructed the joint-plates are dispensed with (as they are in the original design in the instance of the more heavily loaded middle girder) and the T iron stiffeners covers the joints. This accounts for some saving in weight. This

This is entirely at variance with my experience. Cross-girders properly made of my design were erected on our Great Southern line, and have been subjected to exceedingly heavy rolling loads for the last twelve years, and are now in excellent condition, never having had any repairs beyond once painting done to them during that time; they were made in England under Mr. Fowler's supervision.

The sketch given is from Mr. Fowler's drawing, but not executed when received here, for the filling pieces are flush with top of cross-girders, not above as shown, consequently only four rivets secure them to main girders, instead of six as on tracing of the T iron on girders is shown 6 x 3, but on the girders as sent here only 5 x 3.

No, the attachment is not the same nor the same number of rivets.—W.M., 23/9/80.

With reference to this allegation, I must remark, firstly:—That it is not usual to insist upon the web-joints being strictly "in close contact," and not having seen the specification, I was not aware that the present case was desired to be an exception.

Secondly:—With reference to the increased shearing strain which, it is feared will come upon the rivets, I think it will be seen on reconsideration that it is a matter of fact, and capable of rigorous mathematical demonstration that no such increased strain can result from the web-plates not being in strict contact.

Thirdly:—The shearing strain on the rivets in the web-joints, as arranged on the contractors' tracing would have been just 50 per cent. greater than that on the rivets in the girder as constructed.

On the former tracings the rivets are shown to be 6 inches pitch, and knowing that no Government Inspector would pass the girders in this country if so arranged as the strain would exceed the authorized limits, I assumed that the 6 inches was a clerical error for 4 inches and pitched the rivets accordingly.

It is unnecessary for me to dwell further upon the discrepancies in the tracings brought to me by the contractor for the ironwork.

If it had been possible for him to have constructed the bridge according to the tracings, I should not have advised their being redrawn, but it was absolutely necessary to do so before the work could be even commenced.

I would respectfully draw the attention of the Secretary of Public Works to the necessity of official documents being sent over to England to the Agent General so that I may not have to depend on information received from contractors, as I have had in this, and also in a more recent case (the Darling Harbour foot-bridge), for which I have received no official drawing or specification whatever.

I have &c.,
JOHN FOWLER.

Mr. W. Mason's reply to Mr. Fowler's letter dated 10 June, 1880.

Wrought-iron Girders for Ultimo Road Bridge.

TRACINGS of the girders were sent from Sydney by the contractors on the 9th April, and arrived in England, I am informed by Mr. Royce, on the 19th May, 1879.

On my recommendation Mr. Fowler was instructed by cablegram on the 29th May to inspect their manufacture.

Mr. Fowler in his letter of explanation, dated 10th June, 1880, says he received no official instructions about inspecting them until the work was *nearly completed*; and further on he says the work could not be *commenced* until the tracings sent by the contractor were redrawn.

If it was necessary to redraw the girders before the work could be commenced, how was it possible that the work could be "nearly completed" before the drawings were made?

The tracings of the girders were received in England on the 19th May, and Mr. Fowler was instructed on the 29th May, by cablegram, to inspect their construction.

He says the matter was brought to his notice by the contractors, to whom the work had been sub-let, in June, 1879, when he advised the redrawing of the tracings.

Now it is very clear that Mr. Fowler received official instructions *before* the redrawing of the tracings was made, so how is it possible that the work could have been "nearly completed" before he received official instructions?

Supposing it to have been possible that the contractors could have made the girders in the few days intervening between the receipt of the tracings and Mr. Fowler's instructions to inspect their manufacture, they would have made them according to the tracings sent, and not to Mr. Fowler's design. I think the matter is so clear that any further remarks from me on this point are unnecessary.

I am in no way responsible for the alleged errors in the contractors' tracings sent to England.

From my remarks in the margin of Mr. Fowler's letter, it will be seen they are at variance with the contract drawings. Mr. Fowler says "that it is not usual to insist upon the web-joints being strictly in close contact," and "that no increased strain can result from the web-plates not being in strict contact."

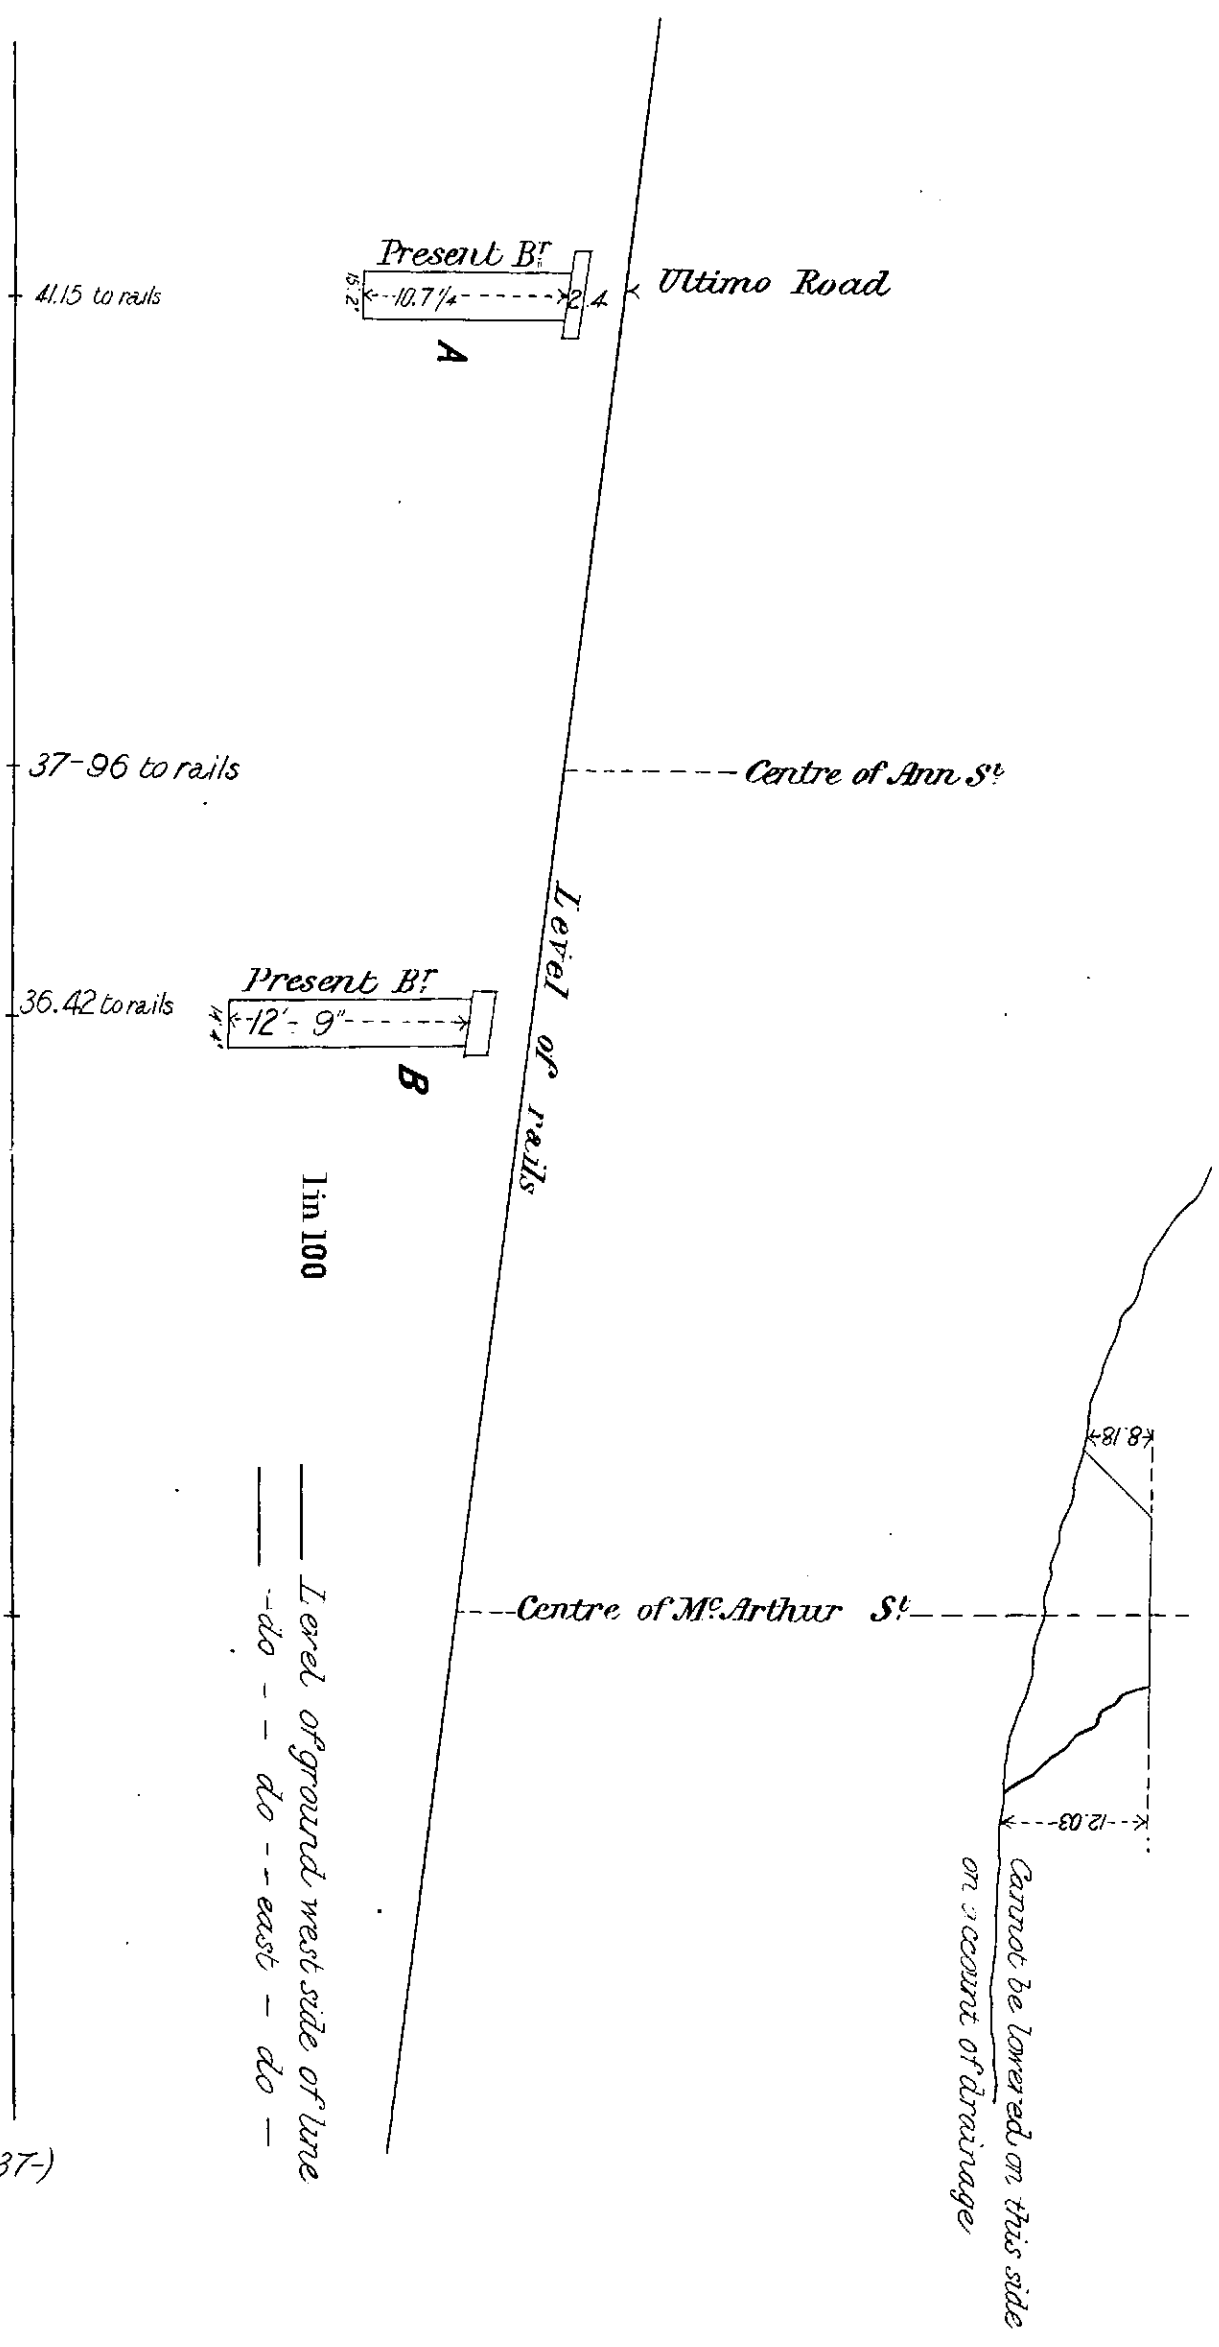

The opposite of this is so well known that I am astonished Mr. Fowler should have made such a confutable assertion.

It would be desirable to know why the circumstances which rendered it necessary for Mr. Fowler to make fresh drawings were not reported to this Government until I complained about the inferior workmanship and alteration in the design of the girders.

Mr. Fowler's explanation does not satisfy the complaints I made about the manufacture of the girders.

W. MASON,
23/9/80.

Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved,—

The Honourable Sir JAMES MARTIN, Knight, Chief Justice of Our Supreme Court of Our Colony of New South Wales, President; Colonel WILLIAM AGLAND ANDERSON, C.M.G., Commandant of the Local Forces of Our Colony of Victoria; Colonel PETER HENRY SCRATCHLEY, C.M.G., R.E.; Colonel MAJOR FRANCIS DOWNES, R.A., Commanding the Auxiliary Forces in Our Province of South Australia; JAMES BARNET, Esquire, Colonial Architect; EDWARD KNOX, Esquire, J.P.; Colonel JOHN SOAME RICHARDSON, Commandant of the Permanent and Volunteer Military Forces of Our said Colony of New South Wales; The Honourable JOHN BROWN WATT, M.L.C.; and The Honourable FREDERICK MATTHEW DARLEY, Q.C., M.L.C.—

Greeting :

Know ye that We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorize and appoint you, or any three or more of you, as hereinafter mentioned, to make a diligent and full inquiry into the working of the laws and regulations, and the arrangements made from time to time for the establishment and maintenance of the Military Forces of Our said Colony of New South Wales, including the system of examination adopted for appointments and promotions therein, and to suggest improvements with the view to economy in expenditure and efficiency in organization, and generally to report upon the whole subject of the Military Defences of Our said last-named Colony: And We do by these presents give and grant to you, or any three or more of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And Our further will and pleasure is that you, or any three or more of you, after due examination of the premises, do and shall within the space of two months after the date of this Our Commission, or sooner if the same can reasonably be, certify to Us, in the office of Our Colonial Secretary, under your or any three or more of your Hands and Seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony of New South Wales, that they be assistant to you and each of you in the execution of these presents: And We appoint you, the said Sir JAMES MARTIN, to be President of this Our Commission.

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony to be hereunto affixed.

Witness, Our right trusty and well-beloved Councillor, Sir AUGUSTUS WILLIAM FREDERICK SPENCER LOFTUS (commonly called Lord AUGUSTUS LOFTUS), Knight Grand Cross of Our Most Honorable Order of the Bath, Our Governor and Commander-in-Chief of Our said Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this sixteenth day of February, in the year of Our Lord One thousand eight hundred and eighty-one, and in the forty-fourth year of Our Reign.

AUGUSTUS LOFTUS.

By His Excellency's Command,
HENRY PARKES.

Entered on record by me, in REGISTER OF PATENTS, No. 11, pages 298-9, this eighteenth day of February, one thousand eight hundred and eighty-one.

For the Colonial Secretary and Registrar of Records,
CRITCHETT WALKER,
Principal Under Secretary.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,
Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

Colonel CHARLES FISCHE ROBERTS, Commanding the Artillery Forces of Our Colony of New
South Wales,—

Greeting:

WHEREAS by Our Commission, passed under the Great Seal of Our said Colony, bearing date the sixteenth day of February instant, We did appoint certain Gentlemen therein named to be Our Commissioners, to make a diligent and full inquiry into the working of the laws and regulations, and the arrangements made from time to time for the establishment and maintenance of the Military Forces of Our said Colony, including the system of examination adopted for appointments and promotions therein, and to suggest improvements with the view to economy in expenditure and efficiency in organization, and generally to report upon the whole subject of the Military Defences of Our said Colony: And whereas it has been represented to Us to be expedient to appoint an additional Member of such Commission: Now know Ye, that We do by these presents authorize and appoint you, the said Colonel Charles Fysche Roberts, to be a Member of such Commission accordingly.

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony to be hereunto affixed.

Witness Our right Trusty and Well-beloved Councillor, SIE AUGUSTUS WILLIAM FREDERICK SPENCER LOFTUS (commonly called LORD AUGUSTUS LOFTUS), Knight, Grand Cross of Our Most Honourable Order of the Bath, Our Governor and Commander-in-Chief of Our said Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twenty-fifth day of February, in the year of Our Lord one thousand eight hundred and eighty-one, and in the forty-fourth year of Our Reign.

AUGUSTUS LOFTUS.

By His Excellency's Command,
HENRY PARKES.

Entered on record by me, in REGISTER OF PATENTS, No. 11, pages 302-3, this twenty-eighth day of February, one thousand eight hundred and eighty-one.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
Principal Under Secretary.

WHEREAS it is necessary to extend the time by which the Commissioners are to make their Report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such Report to and for the period of three months beyond the time in and by the said Commission appointed for such purpose.

Given under my hand at Government House, Sydney, this nineteenth day of April, one thousand eight hundred and eighty-one.

AUGUSTUS LOFTUS.

By his Excellency's Command,
HENRY PARKES.

Entered on record by me, this twentieth day of April, one thousand eight hundred and eighty-one.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,
Principal Under Secretary.

MILITARY DEFENCES INQUIRY COMMISSION.

MINUTES OF PROCEEDINGS.

WEDNESDAY, 2 MARCH, 1881.

The Commission met at the Supreme Court.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

James Barnet, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel John Soame Richardson.

The President stated that he had conversed with Colonel Richardson upon the subject of the preliminary matter which it was necessary that the Commission should make itself acquainted with, and that Colonel Richardson had undertaken to prepare a short history of the Military movements in this Colony from the beginning of the Volunteer movement, together with the cost each year, and a statement of the present organization and condition of the Force.

Colonel Richardson said he had this ready for the printer, and that the return would show the average numbers per annum, and the total cost.

The Commission discussed the subject of the Volunteer Land Orders, the number of orders issued, and the position of those persons who had received them, with a view to ascertain the number of persons who became efficient under the Volunteer Land Order system.

The subjects of the position of the volunteers and their liability to be called out for active service, the number of artillerymen required to man the batteries, the number and condition of the men necessary to form the nucleus of a force sufficient to defend all the points where an enemy could land and approach Sydney, together with the question whether it would be necessary to reorganize a permanent infantry force, and the propriety of obtaining a report from some one who could point out the places where a force might be landed and marched to Sydney, were also considered.

Colonel Richardson promised to obtain all the reports upon these subjects available, and to circulate them among the members of the Commission.

The Commission decide to hold their meetings in the office of the President, at the Supreme Court, the hour of meeting to be 3 o'clock in the afternoon.

THURSDAY, 10 MARCH, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

James Barnet, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel Peter Henry Scratchley, C.M.G., R.E.,

Colonel William Acland Anderson, C.M.G.,

Colonel John Soame Richardson,

Colonel Charles Fysche Roberts.

The Commission was read by the President.

The meeting discussed the desirability of appointing a Committee to take evidence, and it was resolved that such Committee should be formed of the Military Members of the Commission, with the right to exercise the general powers of the Commission.

On the motion of Colonel Roberts, Colonel Scratchley was appointed Vice-President of the Commission.

Mr. Charles Lyne was formally appointed Secretary and Shorthand-writer to the Commission.

Colonel Richardson laid before the Commission the following books and documents:—

- 2 copies : Army Discipline and Regulation Act.
- 2 " Queen's Regulations.
- 2 " Pay and Promotion Warrant.
- 4 " Military and Naval Forces Regulation Act, 1871.
- 1 " Volunteer Act, 1854.
- 10 " Volunteer Act, 1867.
- 10 " Regulations for New Organization.
- 10 " Regulations for Old Organization (obsolete).
- 10 " Sir William Jervois' Report.
- 10 " Commandant's Memoranda, 21/4/75 and 10/12/76.
- 10 " Colonel Scratchley and Commandant's letter to Governor, 13/12/77 and 26/12/77.
- 10 " Estimates, 1881.

- 10 copies : Return of Pay and Service of Officers.
 10 " Tables of Establishment, Volunteer Force.
 10 " Volunteer Pay Schedules.
 1 copy : Standing Orders for the Conduct of Business and Duties generally as applied to the Volunteer Force.
 1 copy : Map of Military Survey of Country around Botany.
 10 copies : Memorandum of Commandant on Maintenance, &c., of Military Forces of Colony.
 1 copy : Annual Returns for the year 1880 rendered to the War Office for the Intelligence Branch of that Department, viz. :—
 A. Return of Fortifications in the Colony.
 B. Return of Ordnance, Arms, Ammunition, &c.
 C. Return of Barracks, Huts, &c.
 D. Return of Colonial Naval Forces.
 E. Return of Railways and Telegraphs.
 10 copies : Memorandum, submitted for the information of the Royal Commission on Defences, with reference to the maintenance from time to time of the Military Forces of the Colony, and more especially to certain points bearing on the organization, discipline, training, pay, &c., of the existing Forces.

The Commission deliberated with reference to the order of their proceedings; and the subjects of the defence of Sydney, and the number and position of the men required to resist attack, naval organization in connection with the military defences, torpedo defence, the status of the Naval Brigade, the necessity or otherwise for obtaining more arms, and for the establishment of armouries, and the existing arrangements in relation to the Military Store Department and the Ordnance Storekeeper, were considered.

Colonel Richardson informed the Commission that he had called for reports from the Officers Commanding Regiments and would lay them on the table.

FRIDAY, 25 MARCH, 1881.

MEMBERS PRESENT :—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel William Acland Anderson, C.M.G.,

Colonel Major Francis Downes, R.A.,

Colonel John Soame Richardson.,

Colonel Charles Fysche Roberts.

The minutes of the two previous meetings were read and confirmed; and signed by the Vice-President who occupied the chair in the absence of the President during the early part of the meeting.

The Secretary read the following Progress Report from the Military Committee :—

THE Committee, composed of the Military Members of the Royal Commission, appointed at a General Meeting of the Commission, held on the tenth day of March, have the honor to submit the following Progress Report :—

The Committee, although they have not completed their labours, have thought it advisable to inform the President of the Royal Commission that they are prepared to submit a statement of the work done by them up to date.

Being fully impressed with the gravity and responsibility of the task entrusted to them, the Committee have inquired, in minute detail, into the several questions referred to the Commission for report. They have examined each other on all points, and have had before them the gentlemen at the heads of the Departments of the Post Office, Telegraphs, Railways, Police, Penal Establishments, and Lunatic Asylums. They have also examined the Ordnance Storekeeper and Barrack Master, and the Officer commanding the Naval Brigade.

They are now considering their report, and hope to lay it before the Commission at an early date.

The report of the Committee will comprise a brief recapitulation of the opinions of the military members of the Commission upon the principal points referred to the Royal Commission for inquiry. It will be accompanied by the evidence taken before the Committee.

The

The Committee trust that the report will be found to contain sufficient information to assist the Commission in arriving at conclusions upon the matters referred to them by the Government for inquiry and report.

The Committee have reason to hope that it will be found there is not much material divergence of opinion amongst the members on essential points.

There are two subjects, however, to which the Committee desire to lose no time in directing the particular attention of the Commission—as affecting the general question of economy and efficiency—viz., the consideration of the position of the Volunteer Naval Brigade in the Defence organization of the Colony, and the relations existing between the Colonial Military Authorities and the Ordnance Storekeeper.

Each member of the Military Committee has been examined upon the following subjects:—

1. Necessity of Permanent Force.
2. Permanent Force and Reserve—organization and constitution.
3. Organization and constitution of Volunteer Force.
4. Composition and strength of Field Force.
5. Strength of Permanent Force and Garrisons required to man Harbour Defences.
6. Ordnance Store Department.
7. Examinations—First Appointments and Promotions.
8. Expenditure, &c.

The Heads of Departments already referred to were examined upon subjects connected with the formation of a Reserve, so far as they might affect their respective Departments.

The Committee met on the following dates, the average duration of the sittings being six hours:—March 11th, 12th, 14th, 15th, 16th, 17th, 18th, 21st, 22nd, 23rd, and 24th.

P. H. SCRATCHLEY,
COLONEL, R.E.,
Vice-President.

W. A. D. ANDERSON,
COLONEL.

M. F. DOWNES,
COLONEL, R.A.

J. S. RICHARDSON,
COLONEL.

C. F. ROBERTS,
COLONEL.

Sydney, 25th March, 1881.

On the motion of the Hon. J. B. WATT, seconded by Mr. EDWARD KNOX, it was resolved that the Progress Report of the Military Committee be received, passed, and entered upon the Minutes of Proceedings.

As several members of the Commission were about to leave Sydney the Commission deliberated upon the question of adjourning until the Final Report of the Military Committee, and the evidence taken before them, were ready for distribution, and it was moved by the Hon. J. B. WATT, and seconded by Mr. EDWARD KNOX,—

“That the Royal Commission, at its rising this day, adjourn until Thursday, 5th May next; the Military Committee in the meantime to continue their labours as they may find necessary.”

The motion was agreed to, and the Commission adjourned accordingly.

WEDNESDAY, 11 MAY, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,
Edward Knox, Esq., J.P.,
Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,
Colonel John Soame Richardson,
Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

Two letters from John Cooper, Captain, 1st Regiment, Volunteer Rifles, expressing a desire to give evidence before the Military Committee, were laid before the Commission, and it was resolved that no evidence of the kind referred to in the letters should be taken.

Colonel Scratchley informed the Commission that the final Report of the Military Committee would be ready for distribution at the next meeting, and that the only difference between the final Report and a Draft Report which had been distributed would be the introduction of some verbal amendments necessary in consequence of communications with Colonel Downes, who had returned to Adelaide.

The Commission considered the Draft Report and evidence received from the Military Committee, and discussed various questions referred to in the Report, and afterwards adjourned until 3 p.m. on Monday, 16 May.

MONDAY, 16 MAY, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,
Edward Knox, Esq., J.P.,
Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,
Colonel John Soame Richardson,
Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Final Report to the Royal Commission from the Military Committee, together with the Minutes of Evidence taken before the Committee, and Appendices, was laid upon the table.

On the motion of Hon. F. M. DARLEY, seconded by Hon. J. B. WATT, the Report was received, and the Commission proceeded to consider the recommendations made in the Report.

Hon. F. M. DARLEY moved:—

“That the Permanent Artillery Force should consist of 500 officers and men.”

Discussion ensued, and the Commission divided.

Ayes, 3.
Hon. F. M. Darley,
Mr. James Barnet,
Colonel Roberts.

Noes, 4.
Hon. J. B. Watt,
Mr. Edward Knox,
Colonel Richardson,
Colonel Scratchley.

The motion was therefore negatived.

Mr. EDWARD KNOX moved:—

“That the Permanent Artillery Force should consist of 440 officers and men.”

The Commission divided.

Ayes, 5.
Hon. J. B. Watt,
Hon. F. M. Darley,
Mr. James Barnet,
Mr. Edward Knox,
Colonel Roberts.

Noes, 2.
Colonel Richardson,
Colonel Scratchley.

The motion was therefore passed.

Hon. F. M. DARLEY moved:—

“That the Artillery Reserve should consist of 560 men.”

Discussion ensued, and the Commission divided.

Ayes, 5.
Hon. F. M. Darley,
Hon. J. B. Watt,

Colonel Scratchley.

Mr. James Barnet,
Mr. Edward Knox,

Colonel Richardson and Colonel Roberts did not vote.

The motion was therefore passed.

Mr. EDWARD KNOX moved:—

“That the Volunteer Militia Artillery should consist of 300 officers and men.”

Discussion ensued, and the Commission divided.

Ayes, 4.
Hon. F. M. Darley,
Colonel Richardson,
Mr. James Barnet,
Mr. Edward Knox.

Noes, 3.
Hon. J. B. Watt,
Colonel Roberts,
Colonel Scratchley.

The motion was therefore passed.

Mr.

Mr. EDWARD KNOX moved :—

“That in addition to the 300 Volunteer Militia Artillery there should be a force of 1,500 officers and men, consisting of Engineers, Torpedo Corps, and Infantry.”

The motion was passed unanimously.

Mr. JAMES BARNET moved :—

“That the Volunteer Reserve should consist of 1,200 men.”

Discussion ensued, and the Commission divided.

Ayes, 6.

Hon. J. B. Watt,
Hon. F. M. Darley,
Colonel Richardson,
Mr. James Barnett,
Mr. Edward Knox,
Colonel Roberts.

Noes, 1.

Colonel Scratchley.

The motion was therefore passed.

Section 9 of the Military Committee's recapitulation of their opinions and recommendations, referring to the establishment of Rifle Companies, was negatived.

Colonel SCRATCHLEY moved :—

“That in addition to the available force of 300 Mounted Police, there should be a Mounted Rifle Corps consisting of 100 officers and men.”

The motion was passed unanimously.

Section 12 of the Military Committee's recapitulation of their opinions and recommendations, relating to the appointment, promotion, and education of Officers for the local Forces, and section 13, referring to the appointment of a Military Adviser and Inspecting Officer for the local Forces in Australia, were passed unanimously.

The Commission decided to meet on Monday, Wednesday, and Friday in each week, and then adjourned until 3 p.m. on Wednesday, 18th May.

WEDNESDAY, 18 MAY, 1881.

MEMBERS PRESENT :—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnett, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel John Soame Richardson,

Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

A letter was read from the Honourable the Colonial Secretary, enclosing a minute from His Excellency the Governor with reference to the position of the Governor as Commander-in-Chief, in regard to the local Forces; and also to the relative position of the Governor and Commander-in-Chief, of the Colonial Secretary, and of the Executive Council, in regard to the general administration of Military affairs.

The letter and minute were received.

The Commission further considered the Final Report of the Military Committee.

Colonel RICHARDSON moved :—

“That it is undesirable to make any alteration in the annual rate of pay and allowances granted to the Volunteer Militia, provided that increased training be insisted upon.”

Discussion ensued, and the Commission divided.

Ayes, 3.

Hon. J. B. Watt,
Colonel Richardson,
Mr. Edward Knox.

Noes, 2.

Mr. James Barnett,
Colonel Roberts.

Hon. F. M. Darley and Colonel Scratchley did not vote.

The motion was therefore passed.

Colonel SCRATCHLEY moved :—

“That the men of the Permanent Artillery Reserve receive a retaining fee of £6 per annum, and payment at the rate of 10s. for each of twelve daylight drills necessary for them to attend, and of a duration to be fixed by the Military Authorities.”

The motion was passed unanimously.

Colonel RICHARDSON moved :—

“That the necessary provision be made for the expenditure connected with the maintenance of the Volunteers—referred to in the resolution passed by the Commission on the 16th instant as Volunteer Reserve—such expenditure to be limited to instruction, arms, ammunition, equipment, clothing, &c.; this Force to be affiliated, as far as practicable, to the Volunteer Militia.”

The motion was passed unanimously.

Hon,

Hon. F. M. DARLEY moved:—

“That it is desirable to direct attention to the holding of a general camp during Easter week of 1882, to the supply of ammunition during time of war, to the supply and distribution of ammunition and water to troops in the field, and to the organization of ambulances, &c.”

The motion was passed unanimously.

Hon. F. M. DARLEY moved:—

“That the Commission recommend the re-organization of the Ordnance Store Department, so far as relates to the Military Stores, and the transfer of the control of those stores to the Commandant.”

The motion was passed unanimously.

The Commission adjourned until 3 p.m. on Friday, 20 May.

FRIDAY, 20 MAY, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C

Colonel John Soame Richardson,

Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

Colonel SCRATCHLEY explained that he and Hon. F. M. Darley had abstained from voting on the resolution, moved at the last meeting of the Commission by Colonel Richardson, with respect to the rate of pay and allowances to the Volunteer Militia, because they did not clearly understand the large expenditure proposed, and that he should like to move a resolution for a return in detail of that expenditure.

Colonel RICHARDSON promised to have the return prepared.

The Commission further considered the Final Report of the Military Committee.

Hon. F. M. DARLEY moved:—

- (1.) That, in the opinion of the Commission, the Permanent Artillery Force should be organized, constituted, and governed by a military code, similar to that of the Imperial Service, subject to such modified conditions as the Colonial Service may require; and that, for the purpose of bringing moral influence in aid of the maintenance of discipline, the Commandant should have the power of dismissal, and certain Government employments should be open to the members retiring from the Force.
- (2.) That the Commission are also of opinion that the Officer commanding the Artillery should possess the powers vested in the Officers Commanding Regiments in the Imperial Service by the ‘Army Discipline Act.’ ”

The motion was passed unanimously.

Mr. EDWARD KNOX moved:—

“That the Commission approve of the recommendation of the Committee with reference to the employment of men of good character in the Government departments.”

The motion was passed unanimously.

Hon. F. M. DARLEY suggested that there should be in the Report of the Commission a short clause recommending that, so far as was consistent with their efficiency as artillerymen, the Permanent Artillery should be trained to act as infantry.

Discussion ensued, and the question was deferred.

Mr. EDWARD KNOX moved:—

“That, in the opinion of the Commission, the recommendation of the Committee that the present Volunteer paid force be called a Volunteer Militia, should be adopted.”

The motion was passed unanimously.

Hon. F. M. DARLEY moved:—

“That it is the opinion of the Commission that the members of the Volunteer Militia should be enrolled for one year, with leave to retire at any time on giving one month’s notice and paying for uniform, &c., in accordance with the existing regulations, and a penalty of £2.”

The motion was passed unanimously.

The Commission adjourned until 3 p.m. on Monday, 23 May, 1881.

MONDAY,

MONDAY, 23 MAY, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,
Edward Knox, Esq., J.P.
Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,
Colonel John Soame Richardson,
Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Commission further considered the Final Report of the Military Committee.

Hon. F. M. DARLEY moved:—

“That the Torpedo Corps be affiliated to the Permanent Artillery, and that in time of action the Officer in Command of the Torpedo Corps be under the direction of the Officer Commanding the Artillery.”

Discussion ensued, and the Commission divided.

Ayes, 6.

Hon. J. B. Watt,
Colonel Scratchley,
Colonel Roberts,
Mr. James Barnet,
Hon. F. M. Darley,
Mr. Edward Knox.

Noes, 1.

* Colonel Richardson.

* (For reasons referred to on page 104 of the printed evidence taken before the Military Committee.)

Hon. J. B. WATT moved:—

“That the Commandant or Officer administering the command of the local forces should at all times be an officer who has had a military training and education in the Imperial Service.”

The motion was passed unanimously.

Mr. EDWARD KNOX moved:—

“That the Officer commanding the Permanent Artillery should at all times be in command of the whole of the Permanent and Volunteer Artillery Forces, including the Torpedo Corps; rank being conferred for this purpose when necessary.”

Discussion ensued, and the Commission divided.

Ayes, 6.

Mr. Edward Knox,
Mr. James Barnet,
Hon. J. B. Watt,
Hon. F. M. Darley,
Colonel Scratchley,
Colonel Roberts.

Noes, 1.

Colonel Richardson.

The motion was therefore passed.

The Commission discussed the subject of compulsory retirement of officers.

Mr. EDWARD KNOX moved:—

“That the Commission agree to the recommendation in paragraph 1, section I, of the Military Committee's Report.”

The motion was passed unanimously.

Hon. J. B. WATT moved:—

“That the Commission adopt paragraph 2, section I, of the Military Committee's Report.”

The motion was passed unanimously.

Mr. JAMES BARNET moved:—

“That the Commission adopt paragraphs 3 & 4, section I, of the Military Committee's Report.”

The motion was passed unanimously.

The Commission adjourned until 3 p.m., on Wednesday, 25 May.

WEDNESDAY, 25 MAY, 1881.

MEMBERS PRESENT.—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,
Edward Knox, Esq., J.P.,
Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,
Colonel John Soame Richardson,
Colonel Charles Fysche Roberts.

The Minutes of the previous meeting were read and confirmed, and signed by the Vice-President, who occupied the Chair in the absence of the President during the early part of the meeting.

The Commission further considered the Final Report of the Military Committee.

Mr. EDWARD KNOX moved:—

“That the Commission adopt section J of the Military Committee's Report, and that the rank of the Inspecting Officer of the Australian Local Forces be superior to that of full Colonel.”

The motion was passed unanimously.

Hon.

Hon. J. B. WATT moved:—

“That the first four lines of section I, of the Military Committee's Report be negatived, and that the remainder of the section be adopted, the subjects referred to therein having been already dealt with.”

The motion was passed unanimously.

Mr. EDWARD KNOX moved:—

“That the Commission adopt section M of the Military Committee's Report, the subjects referred to therein having been already dealt with.”

The motion was passed unanimously.

Hon. F. M. DARLEY moved:—

“That before considering Section N of the Military Committee's Report, the Commission invite Commodore Wilson to attend before them for the purpose of giving his views upon the subject of the constitution, organization, and training of the Naval Brigade, and their proper place in any scheme for the Defence of the Colony.”

The motion was passed unanimously.

The Commission considered the letter from the Honourable the Colonial Secretary and the minute of His Excellency the Governor, received on 18th inst.

Hon. J. B. WATT moved:—

“That, in the opinion of the Commission, the Governor should be Commander-in-Chief of the local Forces; that all applications for and proceedings of Courts-Martial and Courts of Inquiry having reference to questions of purely military discipline should be reported to him direct by the senior military Officer; and that all other matters connected with the Forces should be communicated to him through the Colonial Secretary.”

Ayes, 6.

Hon. J. B. Watt,
Hon. F. M. Darley,
Mr. Edward Knox,

Mr. James Barnett,
Colonel Scratchley,
Colonel Roberts.

Colonel Richardson abstained from voting.

The motion was therefore passed.

The Commission adjourned until 3 p.m. on Wednesday, 8 June.

WEDNESDAY, 8 JUNE, 1881.

MEMBERS PRESENT:—

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel John Soame Richardson,

Colonel Charles Fyche Roberts.

Commodore J. C. Wilson was examined.

The Commission adjourned until 3 p.m. on Monday, 13 June.

MONDAY, 13 JUNE, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnett, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel John Soame Richardson,

Colonel Charles Fyche Roberts.

The minutes of the two previous meetings were read and confirmed.

Colonel Roberts explained with reference to the motion of the Hon. F. M. Darley, on the 10th May, “That the Artillery Reserve should consist of 500 men,”—that although he did not vote for this motion, it was not because he was opposed to having a reserve, but because he considered the number 500 excessive.

Colonel Scratchley was examined, and read a memorandum in reply to the evidence given by Commodore Wilson.

Colonel Richardson read for the information of the Commission a memorandum received from Colonel Downes.

The Commission adjourned until 3 p.m. on Wednesday, 22 June.

WEDNESDAY,

WEDNESDAY, 22 JUNE, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

James Barnet, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel Major Francis Downes, R.A.,

Colonel John Soame Richardson,

Colonel Charles Fysche Roberts.

Colonel Downes stated that he dissented from several points which had been agreed to by the Commission, and suggested that some understanding should be arrived at before the Report was finally adopted, in order that he should not be compelled to formally record his dissent. He mentioned particularly the resolutions relative to the number of Permanent Artillery and Reserve, and also the question of provision of officers for the Reserve, on which subjects he explained his views.

Colonel DOWNES moved,—

“That it is the opinion of the Commission that it would be desirable to establish a central Military School, on a plan somewhat similar to that in Canada, for the instruction of the officers of the Australian Local Forces.”

The motion was passed unanimously.

Colonel DOWNES moved,—

“That it is the opinion of the Commission, having regard to the great difficulties with which in time of war military supplies could be obtained from England, that a central depôt should be established for all the Australian Colonies, at which depôt gunpowder, small-arm ammunition especially, friction tubes, fuzes, shell, and also other minor articles could be manufactured.”

The motion was passed unanimously.

Colonel RICHARDSON moved,—

“That the Volunteer Reserve, alluded to in the Report of the Military Committee, be composed of persons desirous of serving in a purely voluntary capacity, and that the aim should be, while providing such a force, to so organize it that, for the purposes of instruction, training, and discipline, advantage may be taken of the services of the paid Regimental Staff of the Volunteer Militia, and of the more complete knowledge of their duties and greater discipline which the officers and non-commissioned officers of the Volunteer Militia necessarily possess, by reason of the extended and systematic curriculum of work they are required to go through annually. That the Reserve, in short, should be composed as far as practicable of *men*, the Volunteer Militia providing the means of training, officering, and disciplining the same. That by this affiliation, the changes now being brought about in the administration and tactical organization of regiments at Home may be prepared for, and ultimately carried out in this Colony.

“That the Reserve should serve under the same Act and Regulations as the Volunteer Militia, with such modified conditions as circumstances may seem to warrant.

“That the enrolment of Reserve men should be confined to places either on the line of railway or of easy access to the defensive centres.

“That officers at present on the roll of the Volunteer Force (old organization) shall be permitted on application, to continue their services with the Reserve, and shall thereupon be placed on an unattached list, and detailed to do duty with such Corps as the Commandant may deem most advantageous for the Service.

“That on notice in the Government Gazette of the formation of the Reserve, the various Corps nominally existing under the old organization shall be disbanded.”

The motion was passed unanimously.

Colonel RICHARDSON moved a resolution respecting pay and allowances.

Discussion ensued, and the motion was withdrawn.

Colonel RICHARDSON moved a resolution with regard to sending officers to England for the purpose of studying the military profession.

Discussion ensued, and the motion was withdrawn.

Colonel RICHARDSON moved the reconsideration of the resolution moved by Mr. Edward Knox, on 23 May, with respect to the Officer Commanding the Permanent Artillery being at all times in command of the whole of the Permanent and Volunteer Artillery Forces, including the Torpedo Corps.

Discussion ensued, and the motion was withdrawn.

Colonel DOWNES drew attention to the resolution moved by the Hon. J. B. Watt, on 25 May, with respect to the position of the Governor as Commander-in-Chief of the Local Forces, as being inconsistent with the spirit of the Imperial Regulations.

The Commission adjourned until 3 p.m. on Wednesday, 29 June.

WEDNESDAY, 29 JUNE, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel Major Francis Downes, R.A.,

Colonel John Soame Richardson,

Colonel Charles Fysche Roberts.

The minutes of the two previous meetings were read and confirmed.

A letter was read from Colonel William Acland Anderson, informing the Commission that through severe illness he was prevented from attending the meetings of the Commission.

The President submitted to the meeting a draft of the Report to be made by the Commission to His Excellency the Governor, and it was decided that the Report should be taken into consideration at a meeting of the Commission to be held on the following day.

Colonel Downes read a memorandum dissenting from resolutions adopted by the Commission with reference to the proposal for a permanent Artillery Force of 440 officers and men and a permanent Artillery Reserve Force of 560 men without officers.

The Commission adjourned until 2 p.m. on Thursday, 30 June.

THURSDAY, 30 JUNE, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel Major Francis Downes, R.A.,

Colonel John Soame Richardson,

Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Committee considered their Report as it was submitted by the President at the meeting on the previous day.

The following amendment was agreed to, with reference to the number of men required to guard and keep in order the guns, ammunition, and stores connected with the batteries:—

“The majority of the Commission are of opinion that for this purpose the present number of the Permanent Artillery is not sufficient, and that it would be prudent to increase this force to 440 men, officers included, without delay.”

Colonel Downes said he felt it incumbent upon him to dissent from the number 440, in accordance with the evidence he had given before the Military Committee.

After some verbal amendments the Hon. F. M. DARLEY moved with reference to the force of Permanent Artillerymen:—

“That the majority of the Commission recommend that so soon as in the opinion of the Commanding Officer these men have become efficient artillerymen, they should be trained to act as efficient infantry.”

The Commission divided.

Ayes, 4.
Hon. F. M. Darley,
Colonel Scratchley,
Colonel Roberts,
Mr. James Barnet.

Noes, 3.
Colonel Downes,
Colonel Richardson,
Mr. Edward Knox.

Hon. J. B. Watt did not vote.

The resolution was introduced into the Report.

The following amendment was agreed to with reference to the Volunteer Militia:—

“The majority of the Commission recommend that these forces be remunerated in the same manner as they are now remunerated, but be subject to much more frequent drill than at present, and that more stringent regulations, under legislative sanction if necessary, be adopted to ensure discipline in the force.”

It was also agreed that the expenditure upon the purely Volunteer Force recommended by the Commission should be confined to instruction, arms, and ammunition; and that on the formation of this force the Volunteer Corps nominally existing under the old organization should be disbanded.

Colonel DOWNES moved the omission from the Report, of the words “these Colonies are not likely to be made the subject of attack by a large land force.”

Discussion ensued, and the Commission divided.

Ayes, 4.
Mr. Edward Knox,
Colonel Richardson,
Colonel Downes,
Hon. J. B. Watt.

Noes, 4.
Mr. James Barnet,
Colonel Scratchley,
Hon. F. M. Darley,
Colonel Roberts.

The votes being equal the President gave his casting vote with the Noes.

Hon.

Hon. F. M. DARLEY moved that this portion of the Report read as follows:—

“Commodore Wilson in the valuable information which he gave to the Commission has expressed the opinion that these Colonies are not likely to be made the subject of attack by a large land force. Whether this be so or not we are of opinion that we ought to be prepared in all available ways for a raid upon our commerce along our coasts, and possibly for an attempt to overpower our defences should an opportunity present itself.”

The Commission divided.

Ayes, 7.

Hon. F. M. Darley,
Hon. J. B. Watt,
Colonel Downes,
Colonel Richardson,
Colonel Roberts,
Mr. James Barnet,
Mr. Edward Knox.

Noes, 1.

Colonel Scratchley.

The motion was therefore passed.

Colonel RICHARDSON moved that the following clause be introduced into the Report:—

“The Commission are of opinion that, in addition to the recommendations before mentioned, as to the officers of the other branch of the local forces, a scheme of compulsory retirement on account of age should be adopted as regards officers of the Militia and the Reserve.”

The motion was passed unanimously, and the clause was embodied in the Report.

The Commission adjourned until 2 p.m. on Friday, 1 July.

FRIDAY, 1 JULY, 1881.

MEMBERS PRESENT:—

The Honourable Sir James Martin, Knight, Chief Justice, President.

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

James Barnet, Esq.,

Edward Knox, Esq., J.P.,

Hon. John Brown Watt, M.L.C.,

Hon. Frederick Matthew Darley, Q.C., M.L.C.,

Colonel Major Francis Downes, R.A.,

Colonel John Soame Richardson,

Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Commission further considered their Report.

Hon. F. M. DARLEY moved, with reference to the clause relating to remuneration to the Volunteer Militia, that the clause be further amended, so that it should read as follows:—

“The majority of the Commission recommend that these forces receive the same amount of pay in the aggregate as at present, but be subject to at least thirty daylight drills in each year, and that more stringent regulations—under legislative sanction if necessary—be adopted to ensure discipline in the Force.”

The motion was passed unanimously.

Colonel SCRATCHLEY moved the following addition to the first clause on page 3 of the Report, after the words “efficient infantry”:—

“The Commission recommend that this force be employed on the military works of the Colony, subject to proper control.”

The motion was passed unanimously.

Colonel RICHARDSON moved that the following be substituted for the first clause on page 4, with reference to the formation of a purely Volunteer Force:—

“In addition to these paid forces the Commission are of opinion that opportunity should be given for the formation of a purely Volunteer Force not exceeding 1,200 men, this reserve to be affiliated to the Volunteer Militia, and to serve under the same Act and Regulations with such modified conditions as circumstances may seem to warrant. The Commission recommend that the means of training, officering, and disciplining this force, should be furnished by the Volunteer Militia. At the same time officers at present on the roll of the Volunteer Forces (old organization) might be permitted on application to continue their services, for which purpose they should be placed upon an unattached list, and detailed to do duty with such corps as the Commandant may deem most advantageous for this service. The expenditure on this body of men should be confined to provision of instruction, arms, and ammunition. The Commission also recommend that on the formation of the Reserve the various corps nominally existing under the old system should be disbanded.”

The motion was passed unanimously.

Hon. F. M. DARLEY moved, that the following be introduced into the clause referring to the Naval Brigade:—

“And the Commission are of opinion that this force should be organized, drilled, and exercised in some such way as that indicated by Commodore Wilson.”

The motion was passed unanimously.

The Commission adjourned *sine die*.

REPORT.

To His Excellency the Right Honorable LORD AUGUSTUS WILLIAM FREDERICK SPENCER LOFTUS, Knight, Grand Cross, of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

THE COMMISSION appointed to inquire into the working of the laws, regulations, and arrangements made for the establishment and maintenance of the Military Force of the Colony, including the system of examination for appointments and promotions therein, and to suggest improvements with a view to economy in expenditure and efficiency in organization,—and generally to report upon the whole subject of the Military Defences of the Colony,—have agreed to the following Report:—

A general meeting, at which all the members of the Commission attended, was held on the 10th of March, and after full preliminary discussion, it was thought expedient to refer the purely military questions involved in the inquiry in the first instance to the military members, in order that they might collect information, and submit their opinions to the general body to aid in the preparation of the final report. This Committee sat twenty-three days, from the 11th March to the 7th April, both days inclusive, and the sittings averaged about six hours each day. The care, promptitude, and ability displayed by these experienced officers have been such as to demand the cordial thanks of their non-military colleagues, whose shoulders they have relieved from the chief burthen of the Commission.

Before the first general meeting was held, Colonel Richardson, at the suggestion of the President, prepared and circulated a paper giving a complete account of the Military affairs of the Colony, from the commencement of the Volunteer movement in 1854 down to the present time. By means of this paper (Schedule A), and of the evidence taken by the Committee, together with the report based on that evidence, the Commission were enabled to discuss much more satisfactorily than would otherwise have been possible the many important matters falling within the range of their inquiry. As might be expected, on some points the members of the Committee have

have not entirely agreed. This disagreement may to some extent impair the force of opinions from which skilled and able men have felt themselves compelled to dissent. Upon the whole, however, it is hoped that the result arrived at is such as to commend itself to those by whom our system of military defence must be finally determined.

With the scheme of coast fortification and defence, recommended by that eminent authority, Sir William Jervois, the Commission of course did not feel it within their province in any way to interfere. What the various local Governments have adopted on the recommendation of this distinguished officer may well be left to the test of actual experience whenever the occasion shall arise. How the forces for the working of these defences are to be raised and managed, and what should be the number, distribution, and description, are the questions to which the Commission have directed their attention.

The batteries already constructed, and in course of erection, will of necessity require the presence at all times of a considerable number of skilled men to guard and keep the guns, ammunition, and stores in order. The majority of the Commission are of opinion that for this purpose the present number of Permanent Artillery is not sufficient, and that it would be prudent to increase this force to 440 men, officers included, without delay. When the whole scheme of defence is completed, there will be in the harbour of Port Jackson (omitting all mention of Dawes Battery, Fort Macquarie, and Fort Denison, which are mere saluting and exercising batteries) twelve distinct batteries, viz., five at South Head, two at Middle Head, three at George's Head, one at Bradley's Head, and one at Steel Point. In these twelve batteries there are mounted forty-five guns, the distribution and character of which will be found in Appendix D of the Report of the Military Committee. For these and the saluting and exercising batteries not less than 320 artillerymen, officers included, ought, in the opinion of the Commission, to be provided. The other 120 to make up the force to the number recommended would, it is thought, be little enough to guard the five guns about to be put in position at the entrance to Botany Bay, and the seven guns with which the battery now being erected on the Flagstaff Hill at Newcastle is to be armed.

When the extent and dispersion of these defensive works are considered, the majority of the Commission, notwithstanding the dissent of some of the Military members, are clearly of opinion that the increase here recommended is a matter of necessity. In time of peace, the care and guarding of the guns, magazines, and appliances demand the presence at all times of a skilled and disciplined body of men, and at the outbreak of hostilities, however efficient and numerous the reserve or Volunteer Force may be, a large percentage of thoroughly competent and highly-drilled soldiers is necessary for the working of each gun. In a matter of this kind an error on the side of false economy might be fatal. Nature has favoured the construction of some very formidable batteries at a moderate cost, but it must never be forgotten that the artillery placed in position will not answer the purpose intended unless handled with the utmost skill and precision attainable. Universal experience has shown that this skill and precision can be secured only by careful and continued drill as a business, and not by occasional exercise, differing very little from a pastime. The fully instructed artilleryman is in reality an artisan of a high order, and time, habit, and systematic teaching are necessary to make him thoroughly competent. For a prosperous
and

and rapidly advancing Colony like New South Wales the commercial interests of which are extensive, and in the capital of which wealth is so largely accumulated, the maintenance of so small a permanent force as 440 men ought not to be regarded as a burden, and the Commission feel themselves constrained to urge most strongly the inexpediency of curtailing this force by a single man. The majority of the Commission recommend that, so soon as in the opinion of the commanding officer these men have become efficient artillerymen, they should be trained to act as efficient infantry. The Commission recommend that this force be employed on the military works of the Colony, subject to proper control.

As to the organization, constitution, and government of this force the Commission are of opinion that it should be governed by a military code similar to that of the Imperial Service, subject to such modified conditions as the Colonial Service may require. They at the same time recommend that, for the purpose of bringing moral influence in aid of the maintenance of discipline, the Commandant should have the power of dismissal, and that certain Government employments should be open to members retiring from the force. They are further of opinion that the officer commanding the Artillery should possess the powers vested in the officers commanding regiments in the Imperial Service by the Army Discipline Act. The Commission do not think that it would be advisable to make any change in either the period of service or the rate of pay. The five years during which the artillery are now engaged for is probably the shortest term for which soldiers of any arm ought to be bound to serve, having regard to the time necessary to make them really efficient, and to imbue them with that military spirit and habit of association without which the bravest and most intelligent men in the heat of conflict are apt to lose the steadiness so essential to success.

As the members of the permanent force retire from actual service on the termination of their engagements, being then well disciplined and instructed artillerymen, it is of the utmost importance that means should be adopted to secure their services for a further period of five years in case of emergency. The Commission therefore recommend the formation of a reserve force, to be composed of those who have passed through the regular force, and of such other equally fit and approved artillerymen as may present themselves for enrolment, to a number not exceeding 560 men. A considerable period must elapse before this limit can be reached, but this reserve force would be a constantly growing body, and would be as efficient as the permanent force. It is thought that by a retaining fee of £6, and a payment of 10s. for each of twelve daylight drills, coupled with the prospect of employment in the Railway or some other department of the Public Service, the ranks of this reserve force would fill up with reasonable rapidity.

Besides these two bodies of permanent and reserve artillerymen, the Commission recommend the retention of the present force of Volunteer Artillerymen to the extent of 300 officers and men, under the designation of a "Volunteer Militia Artillery," and that the Engineers, Torpedo Corps, and Infantry, to a number not exceeding 1,500 officers and men, be embodied under their present organization as a Volunteer Militia.

The majority of the Commission recommend that these forces receive the same amount of pay in the aggregate as at present, but be subject to at least thirty daylight drills in each year, exclusive of continuous training, and that more stringent regulations—under legislative sanction if necessary—be adopted to ensure discipline in the force.

In

In addition to these paid forces, the Commission are of opinion that opportunity should be given for the formation of a purely Volunteer force not exceeding 1,200 men, this reserve to be affiliated to the Volunteer Militia and to serve under the same Act and Regulations with such modified conditions as circumstances may seem to warrant. The Commission recommend that the means of training, officering, and disciplining this force should be furnished as far as practicable by the Volunteer Militia; at the same time officers at present on the roll of the Volunteer force (old organization) might be permitted on application to continue their services, for which purpose they should be placed upon an unattached list, and detailed to go duty with such Corps as the Commandant may deem most advantageous for the service. The expenditure on this body of men should be confined to provision of instruction, arms, and ammunition. The Commission also recommend that on the formation of this reserve, the various Corps nominally existing under the old organization should be disbanded.

For vidette and outpost duty the Inspector General of Police has informed the Commission that, in case of emergency, 300 mounted men of the force under his control could be made available. The Commission have reason to believe that a purely voluntary corps of Mounted Rifles, consisting of 100 officers and men, could be readily formed, equipped, and maintained, without any cost to the Country, other than that of instruction, arms, and ammunition. It would be expedient, under these circumstances, for the Government to avail itself of the patriotism of the gentlemen thus stated to be willing to place their time and money gratuitously at the service of their fellow-citizens. Should the corps be raised in this manner, a valuable body would be at the command of the Military Authorities in case of an attempt to land at some part of the coast remote from batteries or field works.

The Commission are of opinion that the members of the Volunteer Militia should be enrolled for one year with leave to retire at any time, on giving one month's notice and complying with the regulations, and submitting further to a penalty of two pounds.

The majority of the Commission recommend as follows :—

1. That the Torpedo Corps be affiliated to the Permanent Artillery, and that in time of action the officer in command of that corps be under the direction of the officer commanding the Artillery.
2. That the Commandant or officer commanding the local forces shall at all times be an officer who has had a military training and education in the Imperial Service.
3. That the officer commanding the Permanent Artillery should at all times be in command of the whole of the Permanent and Volunteer Artillery Forces, including the Torpedo Corps, rank being conferred for this purpose when necessary.
4. That the Governor should be Commander-in-Chief of the local forces; that all applications for and proceedings of Courts Martial and Courts of Inquiry having reference to questions of purely military discipline should be reported to him direct by the senior military officer; and that all other matters connected with the forces should, when necessary, be communicated to him through the Colonial Secretary.

The

The Commission adopted the following opinions and recommendations of the Military Committee:—

“ OFFICERS FOR THE LOCAL FORCES—THEIR APPOINTMENT, PROMOTION, AND EDUCATION.

“ (1.) With regard to the Permanent Artillery officers, the Committee are of opinion that preference of appointment should be given to officers who have served in the Royal Artillery, but that the junior grades should be open to ex-Imperial officers of other branches of the Service, and especially to candidates identified with the Colonies. The Committee submit these proposals on the understanding that the regulations in regard to qualifying examinations, with limit as to time, are strictly carried out.”

“ As to the education of officers, the Committee are unanimous in recommending that a school for instruction with the necessary instructors be formed, in order that officers may attain a defined standard of military knowledge. Instruction to be conducted by qualified officers, and to include such subjects as reconnaissance, field-sketching, surveying, field fortification, minor tactics, elementary chemistry, and mathematics.

“ (2.) With respect to the officers of the other branches of the Local Forces the Committee recommend:—

“ (a) That the nomination or elective principle for the appointment of commissioned officers be abolished, and that the present laws, as to candidates being obliged to produce a certificate of having passed either the Civil Service test examination or one of a higher degree, should continue in force.

“ (b) That, prior to promotion, officers should, as at present, pass an examination as to fitness for higher command; but that some knowledge of field fortification, reconnaissance, and minor tactics be required.

“ (3.) Whilst the Committee, with a view to economy, recommend, for the present, one school of instruction, they consider that all officers of the Local Forces should be required to go through a course suitable to the branch in which they are serving, embracing such subjects as minor tactics, field-fortifications, surveying, and reconnaissance; and for which they should be granted certificates of proficiency.

“ (4.) The Committee strongly recommend that a Military Library and a Reading and Lecture Room, should be established in some convenient position in Sydney, subject to the control of the Commandant, and that an annual grant should be made for the purchase of books and the expenses of the reading-room. In the opinion of the Committee much good would result if lectures and discussions on military subjects were encouraged.

“ MILITARY ADVISER AND INSPECTING OFFICER FOR THE LOCAL FORCES IN AUSTRALIA.

“ The Committee are unanimous in recommending the appointment of an Imperial officer as Inspecting Officer of the Australian local forces, and Military Adviser to the several Governments. This appointment to be held from three to five years, subject to renewal. The duties of this officer should be to conduct periodical inspections of the local forces and the military defences and establishments of the Australian Colonies, and advise the Governments on all subjects connected with the maintenance of the local defences. In time of peace this officer would not exercise any executive command, but in time of war, should there be combined or federal arrangements for defence, he would assume supreme direction. The Committee, in making this recommendation, desire not to lessen the authority or full responsibility of the local Commandants, but rather to strengthen their position.

“ SPECIAL SUBJECTS.

“ The Committee desire to allude to a proposal which has been brought before the Committee by Colonel Anderson, to the effect that a general assembly of the Australian local Forces should take place at some convenient place during Easter week of 1882. It is believed that there would be no difficulty in assembling from five to six thousand men for general manœuvres. It is scarcely possible to exaggerate on military grounds alone the importance of such a muster, as affording an opportunity

tunity for showing the military training and mobility of the several local forces of Her Majesty's Governments in Australia. The effect of demonstrating the military strength available for the defence of any one Colony attacked is not to be overlooked, as a powerful argument in favour of the proposal.

“Supply of Ammunition.—The supply of ammunition in time of war is a subject which the Committee consider should not be overlooked by the Royal Commission, and the majority recommend that steps should be taken to purchase a plant for the purpose of making up small arm ammunition. Colonel Downes suggests the establishment of a Central Arsenal for all the Colonies.

“Supply and distribution of Water and Ammunition in the field and Ambulances.—The supply and distribution of water and ammunition to troops in the field, and the establishment of ambulances, are matters of the highest importance, which should engage the attention of the Colonial military authorities.

“Commissariat Supplies.—The Committee see no difficulty in arranging for the Commissariat supplies to troops in the field, and consider it unnecessary to make any recommendation on the subject.

“ORDNANCE STORE DEPARTMENT.

“The Committee in their Progress Report of the 25th March invited the attention of the Royal Commission to the Ordnance Store Department, and are unanimous in recommending its re-organization. At present this department is in no way under the control of the military authorities. In fact if, in time of war, a deficient supply of munitions of war were found to exist, the Commandant could not be held in the slightest degree responsible, inasmuch as the Committee find that supplies are drawn from store without due provision being made for their being replaced. Further, that officer is not furnished with the periodical returns which are absolutely necessary to enable him to recommend to the Government the replacement of warlike stores used for reviews, ordinary military training, &c.

“The Committee are informed that a Board, designated the ‘Warlike Stores Board,’ exists for the ordering of stores; but this Board, whilst it might afford excuses to the military authorities for insufficient supplies, has no responsible functions. The Committee therefore recommend that this department be placed under the control and orders of the Commandant, subject to such instructions as he may receive from time to time from Government, and that when practicable the men of the Permanent Artillery should be utilized for working parties. If these recommendations be adopted a reduction in the expense of the Ordnance Store Department may be anticipated. It, moreover, appears to be unjust to the Military Department that it should be debited with the total cost of a staff, one half of which at least is required for the performance of duties connected with the management and custody of the mercantile explosives.”

The Commission are of opinion that, in addition to the recommendations before mentioned, a scheme of compulsory retirement on account of age should be adopted as regards officers of the Militia and the Reserve.

The Commission are of opinion that it would be desirable to establish a central military school on a plan somewhat similar to that in Canada, for the instruction of the officers of the Australian local forces. They recommend that, having regard to the great difficulty with which in time of war military supplies could be obtained from England, a central depôt should be established for all the Australian Colonies, at which depôt gunpowder, small-arm ammunition especially, friction-tubes, fuzes, shell, and other minor articles, should be manufactured.

Hitherto no mention has been made of the Naval Brigade. The Commission agree with the Committee in the opinion that that corps is not at present on a satisfactory footing. It consists, it is believed, of a fine body of men, but their proper place is afloat, either in gun-boats, launches, or boats for patrol and observation, as urgency may demand, and the Commission are of opinion that this force should be organized, drilled, and exercised in some such way as that indicated by

Commodore

Commodore Wilson. That officer, in the valuable information which he gave to the Commission, has expressed the opinion that these Colonies are not likely to be made the subject of attack by a large land force. Whether this be so or not, the Commission are of opinion that the Colony ought to be prepared in all available ways for a raid upon the commerce along its coasts, and possibly for an attempt to overpower the defences, should an opportunity appear to present itself. At least two gun-boats, in addition to well-designed torpedo boats of great speed, ought to be procured in England, and in these vessels the Naval Brigade would find their proper vocation. The Commodore impressed upon the Commission the value of having a ship of war like the "Wolverene" as a store and exercising ship, and they are of opinion that the suggestion of that able and experienced officer is worthy of the greatest consideration. It is supposed that the Imperial authorities if applied to would have no difficulty in transferring the "Wolverene" from the control of Her Majesty's Government in England to that of Her Majesty's Government in New South Wales, the more especially as that vessel will otherwise be broken up on her return to the Mother Country. The cost of maintaining this vessel would, the Commission think, be a wise expenditure.

In Schedule B appended to this Report will be found a detailed account of the annual expenditure consequent on the adoption of the recommendations herein contained, exclusive of the cost of the Naval Brigade.

Certified under our hands and seals, this 1st day of July, 1881.

SCHEDULE A.

MEMORANDUM submitted for the information of the Royal Commission on Defences, with reference to the maintenance from time to time of the Military Forces of the Colony, and more especially to certain points bearing on the organization, discipline, training, pay, &c., of the existing Forces.

The first Volunteer Force was enrolled in Sydney in 1854, under an Act of Council, 18th Victoria No. 8, and consisted of one battery of Artillery, one troop of Cavalry, and six companies of Rifles, numbering on the 30th June, 1855, 316 of all ranks. This Force was under the command of Colonel Bloomfield, of Her Majesty's 11th Regiment, and practically ceased to exist in 1856, having cost about £2,603.

In 1860 a second Volunteer Force was enrolled under the Act above quoted, supplemented by Regulations and Corps rules, and consisted, in the first instance, of two batteries of Artillery in Sydney and one battery in Newcastle, one troop of Mounted Rifles and fourteen companies of Rifles in Sydney and suburbs, and six companies of Rifles in the country districts, numbering, on the 1st January, 1861, 1,696 of all ranks. The whole was under the command of Lieut.-Colonel Kempt, of Her Majesty's 12th Regiment. In 1862 Lieut.-Colonel Hamilton, of that Regiment, took command as senior officer in the Colony, and was again succeeded by Lieut.-Colonel Kempt in 1863, on the occasion of the Head Quarters of the Regiment proceeding to New Zealand. The present Commandant (Colonel Richardson) was appointed to the command in February, 1865.

To the end of 1867 the establishment and strength of the Force varied to some extent. The Mounted Rifles had ceased to exist in 1862, and four additional batteries of Artillery were raised in Sydney in 1867, and the companies of Rifles at Head Quarters were organized as two regiments.

No standard of efficiency appears to have existed up to this point.

Here ended, in 1867, the purely Volunteer system, or that in which State-aid was confined to the provision of instruction, arms, clothing, equipment, rifle ranges, ammunition, &c., and for this reason, as also for the purpose of comparison, I shall here show the cost of the Force from 1860 to 1867 inclusive. The average annual strength for this period appears to have been 1,787 of all ranks, and was maintained at a total cost of £55,181, or at the rate of £4 8s. 2d. per head per annum.

At this juncture the Force was in danger of extinction, but was resuscitated by the introduction of an Act of Parliament, entitled the Volunteer Regulation Act of 1867, and Regulations thereunder, which held out inducement in the shape of grants of land, to be issued as payment to such Volunteers as might serve continuously and efficiently for five years. The standard of efficiency consisted of an annual attendance at sixteen drills and shot practice by Artillery, and fourteen drills with musketry (every second year) by Infantry, which exercises were for the most part performed at night.

It may be here remarked that the Imperial troops were withdrawn from New South Wales in 1870, and in the following year Colonial regulars were raised, consisting of one battery of Artillery and two companies of Infantry. The latter were disbanded in 1872. In 1876 the Artillery was increased by a second, and in 1877 by a third battery, at which establishment it now remains.

The Volunteer Force, resuscitated under the land order system, attained its maximum establishment and strength in 1874, consisting in Sydney of ten batteries of Artillery, one corps of Engineers, two Rifle regiments of seven and eight companies respectively. In the Western, Northern, and Southern districts, were one Battery of Artillery, and three Rifle Regiments of eight, four, and five companies respectively.

For various reasons it was determined in 1874, that no liability should be incurred in regard to payment by grants of land beyond that already undertaken and to be anticipated in the prospective issue to Volunteers then in the Force, and maturing service towards such orders. Accordingly, by the stoppage of recruiting, this further liability was avoided.

The Staff maintained latterly under this system differed but little either in cost or personnel from the present Staff, except that three additional officers, acting as fully paid Adjutants to regiments, have since been added to meet the altered and more stringent conditions of service obtaining under the new organization.

After

After deduction on account of absence, death, incapacity by age, infirmity, &c., there may be said to be possibly 2,000 men of the old Force remaining in the Colony trained to the use of heavy guns, and possessed of certain skill in the use of the rifle, who could be utilized for defensive purposes, provided their services could be secured.

Since the introduction of the land order system 3,439 orders have been issued, and the cost otherwise of the Force from 1868 to 1878 inclusive has been £148,123, for an annual average of 2,884 of all ranks. It will thus be seen that for the period abovenamed, and calculating each land order to cost the country £60 (Government upset price of land, with departmental expenses for surveying, &c.), the total expenditure equalled £354,463, or £11 3s. 5d. per head per annum.

After the cessation of the land order system, the Volunteer Force, for the third time, commenced to wane, and considerable difficulty was experienced in getting together sufficient numbers for drill, as may be seen by letters addressed to His Excellency the Governor by Colonel Scratchley and myself, under date 26th and 13th December, 1877. This, in conjunction with the frequent references to Parliament by members of the Force, and the publication of a mass of correspondence, disclosed the existence of a litigious and insubordinate spirit, incompatible with the usefulness of the Force as a military body. Added to this, Parliament itself, over and over again, demanded its re-organization on such a basis as would secure increased discipline and efficiency. So urgent indeed had the matter become, that Sir John Robertson, the then Colonial Secretary, directed me to submit recommendations for the improvement of the Military Forces, which I accordingly did, by memoranda dated April 21st, 1875, and December 16th, 1876. In submitting my views, I could not ignore the fact that the requirements of the Colony urgently demanded that the small body of regulars, as represented by the Permanent Artillery, should be supplemented by a Force possessed of such an organization, and undergoing such a training during peace time, as would enable it to assume the exceptionally prominent position (as compared with the English Volunteer Force) it might be called upon suddenly to occupy in time of war. The re-organization of the Volunteer Force was commenced in the latter part of 1878, the system of training being in accordance with the principles advocated by Sir William Jervois and Colonel Scratchley, and as embodied for the most part in the memoranda above quoted.

The principal causes of these successive failures to maintain the purely Volunteer Force in an efficient state for any considerable period is not, I think, difficult to arrive at, viz., that men as a rule are not willing to make considerable inroads on their business and leisure hours; to go through a monotonous and troublesome curriculum of military duties, and to submit themselves to, it may be, unpalatable discipline for nothing.

The present strength of the Permanent and Volunteer Military Forces of New South Wales is as follows:—

General Staff	All ranks.
									9
3 Batteries of Permanent Artillery	320
									VOLUNTEERS.
Permanent Staff, unattached	8
Medical Staff	3
6 Batteries of Artillery	300
1 Corps of Engineers	60
1 Torpedo and Signalling Corps	100
3 Regiments of 4 Companies each and 2 detached Companies of Infantry	1,228
									<hr/> 2,028

The distribution is as follows:—

The Permanent Artillery occupies the Victoria and Dawes Battery Barracks in Sydney, with detachments at South, Middle, George, and Bradley's Heads, Steel Point, and Newcastle.

The Volunteer Force has four batteries of Artillery, the Engineer and Torpedo Corps, and two Regiments of Infantry in *Sydney*; one Regiment of Infantry, consisting of Companies formed at Windsor, Parramatta, Bathurst, and Goulburn, in the *Western District*; one Battery of Artillery and one Company of Infantry at Newcastle, and one Company of Infantry at West Maitland, in the *Northern District*; one Battery of Artillery at Wollongong, in the *Southern District*.

The General Staff for the above Forces consists of a Commandant (an ex-Imperial officer), of the rank of Colonel, a Major of Brigade (also an ex-Imperial officer), who performs duties analogous to those appertaining to the departments of Adjutant-General and Military Secretary combined, a Brigade Pay and

and Quarter Master, and an Officer Instructor of Musketry. Included in the above return are non-commissioned officers and persons employed as clerks, &c.

The Permanent Artillery (as also the Volunteer Artillery) are under the command of an ex-Imperial officer, of the rank of Colonel.

The officers of the General Staff, and the Permanent Artillery generally, are subject to the Army Discipline and Regulation Act for the time in force, the Articles of War, Queen's Regulations, and to such other orders, regulations, and rules of whatever nature or kind to which Her Majesty's Army is for the time being subject, so far as the same are not inconsistent with the provisions of the Local Military and Naval Forces Regulation Act of 1871, and the Regulations thereunder, to which the Force above quoted is also subject.

The officers of the Artillery are appointed and promoted by the Governor in Council, and the non-commissioned officers by the Governor, on the recommendation of responsible officers. The examination of officers for promotion is carried out under modified conditions as compared with those in force in the Imperial Service, and necessarily so, as, with the exception of the officer in command, none have had the advantage of the usual preliminary artillery education at Woolwich, or of the scientific training which obtains with Imperial Artillery officers.

The pay of the various ranks is embodied in the Estimates, and it is to be noted that no such rewards for service accrue as in the Imperial Army, in the shape of gratuities, pensions, half-pay, and retirements on full pay, except in case of persons killed or wounded in action or on duty.

Men between the ages of 18 and 40 are enlisted in the Permanent Artillery for five years, and may re-engage for a further period of two or five years. The lowest rate of pay is 2s. 3d. for gunners, in addition to which is granted, free rations of bread, meat, and groceries, free kits on joining, annual issue of uniform, barrack accommodation, fuel and light, and medical attendance. Special rates of working pay are issued, as also increased rate of pay for re-engagement. Rewards are given for good conduct, as in the Imperial Service, but no pensions.

The annual cost of this corps, inclusive of proportion for Staff, is about £94 per head.

The Volunteer Force is subject to the Volunteer Regulation Act of 1867, and the Regulations thereunder. The Governor is Commander-in-Chief, and, with the advice of the Executive Council, may accept the services of persons desirous of being formed into a Volunteer Corps, which are thereupon organized as regiments or individual corps, as the necessities of the service may indicate. Regiments and corps at Head Quarters are consolidated, as also those in the country districts, as far as practicable, and each possesses a proper Regimental Staff. The Governor may disband corps. He may appoint officers to the Permanent Staff, for the command, inspection, drill, exercise, training, instruction, and equipment of the Force. The officers generally are appointed by the Governor in Council, but any Volunteer Corps may recommend to the Governor any enrolled members thereof to be officers of such corps of a rank not higher than captain of a troop, battery, or company, provided that no corps may so recommend any persons to be officers of the Volunteer Permanent Staff. Candidates for commissions must, prior to appointment, have passed the Civil Service Examination of the Colony, or an examination of a higher degree. The appointment and promotion of officers is also regulated by stringent test examinations on military subjects. Promotions up to the rank of captain are made by seniority, subject to examination, beyond that grade by selection and examination. Non-commissioned officers are appointed by officers commanding regiments and corps, subject to the approval of the officer commanding Volunteer Force, and test examinations.

The Governor has power to order the assembly of courts of inquiry with reference to an officer, and composed exclusively of officers of the Volunteer Force. The officer commanding the Volunteer Force may assemble a court of inquiry, composed of officers or Volunteers, or both combined, to inquire into any matter relative to any corps or Volunteer or non-commissioned officer of the Permanent Staff, but such Courts have no power to pronounce any judgment as to the course to be taken by the convening authority.

A Volunteer enrolls for an indefinite period of service, and, *except when called out for actual military service*, may quit his corps under the following conditions:—

- (1.) Giving to the commanding officer of his corps fourteen days' notice in writing of his intention to quit his corps.
- (2.) Delivering up in good order, fair wear and tear only excepted, all arms, clothing, and appointments, being public property, or the property of his corps, issued to him, or placed under his charge.
- (3.) Paying all moneys due or becoming due by him under the rules of his corps, either before or at the time or by reason of his quitting it.

Persons are not enrolled in the Force under the age of 18 years or above 45, except in the case of trumpeters and buglers. They are subjected to a standard as regards height, chest measurement, sight, and physique generally, to be determined by the examination of a medical officer of the Force. Means exist for getting rid of men who have become incapacitated for the performance of their military duties by reason of age or other infirmity.

The Governor may direct the Officer Commanding the Volunteer Force to call out such Force, or any portion thereof, for actual military service, in case of actual or apprehended invasion of the Colony, or of hostile or predatory attack, or of imminent danger thereof.

When called out for actual military service, the Volunteer Force (except as regards the infliction of corporal punishment) is subject to the Army Discipline and Regulation Act, and the Articles of War made in pursuance thereof. When *not* on actual military service, the officer commanding a corps has power to reduce a non-commissioned officer, subject to the approval of the Officer Commanding Volunteer Force, and to summarily discharge a Volunteer for misconduct. Officers are subject to arrest, and non-commissioned officers and others to custody, provided they are not so retained longer than whilst the corps is under arms. Volunteers are subject to suspension from military duty pending settlement of the case for which suspended; to fines for minor irregularities and offences against discipline, the same being deducted from pay due, or which may become due. Volunteers are also subject to fines, or, in default, imprisonment for non-delivery of arms, clothing, and accoutrements to commanding officer, as also fines for pawning, destroying, damaging, or selling public property issued to them as Volunteers; for not keeping uniform in proper order, or wearing it contrary to orders; and finally, for neglecting to pay fines and subscriptions.

Recruits on an average drill four nights a week for three months before they are passed into the ranks. The annual training of the Volunteer Force consists of six days continuously in camp at Easter, and twenty half-days at detached periods. In addition to which, the artillery attends shot practice, the engineers and torpedo corps lectures, and the infantry a course of musketry. Officers and non-commissioned officers also attend classes of instruction apart from the above. To be entitled to be deemed an efficient, a Volunteer must have attended during the year six days' continuous training and sixteen out of the twenty half-days; also shot practice, lectures, or musketry, as the case may be.

Recruits receive neither pay nor clothing until passed into the ranks. Pay is granted to all ranks as per Estimate. To illustrate, however, the system on which pay is granted, I will quote the case of a private:—

(a) 10s. for each day's attendance at continuous training in camp. (b) 5s. for each half-day's attendance at detached periods of training. (c) Bonus of £4 at end of year in consideration of having qualified as an efficient. Thus, although a Volunteer failing to qualify as an efficient will not receive the £4 which goes with efficiency, he will still receive pay at the rates indicated in (a) and (b) for such attendance as he may actually have given; but no pay is granted for non-attendance, neither is pay issued specially for shot practice, lectures, or musketry, beyond that granted for efficiency, on which it is therefore dependent.

From the foregoing it may be gathered that radical and important improvements have been effected in the military system as applied to the re-organized Volunteer Force. By the consolidation of regiments the responsibility and command is now vested in the regimental commanding officer, instead of, as hitherto, in the various captains of batteries and companies comprising the regiment, consequently unity in the administration of discipline and command is secured, together with a more complete and exacting chain of responsibility throughout the various ranks, and the practice in peace time of a system of regimental interior economy such as would of necessity have to be observed in time of war, and which indeed is in conformity with the fundamental principles of all military organizations. By the appointment of professionally trained military men to the Staff of regiments and corps, to act as adjutants, sergeant-majors, and quartermaster-sergeants, and paid to devote the whole of their time to the performance of regimental duties, to afford the requisite instruction, and generally to assist their immediate commanding officers, such prompt attention is given to matters of regimental business as could not be rendered by commanding officers engaged in civil avocations. It is also worthy of note that the principles upon which the re-organization was effected in 1878 accord in almost every important particular with the recommendations subsequently made by the Committee appointed to inquire into and report upon the state of the Volunteer Forces of Great Britain.

The disciplinary code, whilst more severe than that appertaining to a purely Volunteer Force, is yet not equal to that of the Imperial Militia, inasmuch that *during peace* the Volunteer Force is not subject to the Army Discipline and Regulation Act, &c., but to the local enactments and penalties before specified. Judging, however, by the extremely rare occasions on which any irregularities have been committed,

committed, these penalties, when combined with a money payment for services performed, seem sufficient to preserve discipline. As a matter of fact the Force is under control and governed with ease. I also judge that the service is popular by reason of the absence of complaints and the facility with which the numbers could be increased if necessary.

The period of continuous training has especially proved of material advantage in facilitating the acquirement of habits of order, regularity, and discipline, in affording an opportunity for the practise of interior economy, and in bringing the various ranks into real military association with each other. This training is assuredly the backbone of the system, and should, if possible, be of longer duration; yet, when combined with the almost fortnightly trainings on half-days, it is, I am inclined to think, as much time as men can be reasonably expected to sacrifice. That the training should be thus distributed over the year, instead of confined to one period (as with the Imperial Militia), I look upon as of service in keeping up a military spirit as well as proficiency in drill.

The number of efficient who have qualified during the past year exceeded 5-6ths of the entire Force.

The rates of pay may not be deemed excessive when it is taken into consideration that most men have either to neglect their business or provide substitutes for two if not three days during continuous training, and that their military exercises throughout the year actually absorb the greater portion of the only time available to them for recreation. It is also to be noted that such rates are almost identical with those of the Naval Brigade, also serving under the Volunteer Act of 1867, and to which exception has never been taken, either on the score of economy or of the Naval Brigade being a Volunteer Corps.

The annual cost, inclusive of proportion of Staff, does not exceed £18 per head.

The documents alluded to in this memorandum are laid before the Commission.

In conclusion, I take this opportunity of again adverting to the desirability of organizing reserves in connection with both the Permanent and Volunteer Military Forces. In the former case it would be advisable that such Civil Departments in the Government Service as represented by the Police, Gaols, Railway, &c., should be open as fields of advancement and employment to artillerymen of good character, provided they engaged to enter the reserve for a certain number of years. Men of exceptionally good character might be permitted to enter such service one or two years prior to the termination of their limited engagement. The cost of such a Force to be confined to the issue of clothing, arms, accoutrements, and ammunition, with a small annual retaining fee in consideration of mustering for drill at certain periods of the year. The Volunteer Reserve might be open to persons after two or three years service in the existing Force, as also to those Volunteers who had served efficiently for five years under the old organization; and in consideration of attending say ten drills per annum might be entitled to be deemed efficient. The Force to be provided with clothing, arms, accoutrements, ammunition, and the means of instruction as a military body. In order, however, to work this reserve in the most economical and efficient manner, it should be affiliated to the present Volunteer Force, and have the advantage and assistance of the paid Staff of the several regiments and corps.

JOHN S. RICHARDSON,
Col., Comdt.

Sydney, March 2nd, 1881.

SCHEDULE B.

ESTIMATE of Approximate Cost of Maintenance of Military Forces recommended by the Commission, and prepared on basis of Estimate of 1881. This Estimate, whilst furnishing a guide to such cost, would probably require minor amendments when brought under the consideration of the Government for embodiment with Estimates-in-Chief.

Designation.	Rate.	Amount.
(a) GENERAL STAFF.		
		Per annum.

JOHN S. RICHARDSON,
Col., Comdt.

2nd June, 1881.

MILITARY DEFENCES INQUIRY COMMISSION.

MINUTES OF EVIDENCE.

WEDNESDAY, 7 JUNE, 1881.

Members Present:—

THE HONOURABLE SIR JAMES MARTIN, Knight, Chief Justice, President.

COLONEL PETER HENRY SCRATCHLEY, C.M.G.,
R.E., Vice-President.
JAMES BARNET, Esq.
HON. FREDERICK MATTHEW DARLEY, Q.C.,
M.L.C.

EDWARD KNOX, Esq., J.P.
HON. JOHN BROWN WATT, M.L.C.
COLONEL JOHN SOAME RICHARDSON.
COLONEL CHARLES FYSCH ROBERTS.

Commodore J. C. Wilson examined:—

1. We have sent for you to ask if you are able to give us any information, or make any suggestions to us with respect to the naval part of our defences, and more particularly with regard to the Naval Brigade? I have here a Memorandum which I think will give you the information you desire.

The Secretary to the Commodore read the following Memorandum:—

Commodore J. C. Wilson.

7 June, 1881.

BEFORE attempting to discuss this very important subject, it is necessary to examine and consider well what enemy's forces these Colonies are likely at any time to encounter, and the style and power of the ships pertaining thereto. It is almost superfluous to say that this paper is written under the supposition that England retains her command of the seas, for were she to lose it, as a matter of course the Colonies would go too, and the defence and force required to maintain independence of a Foreign Power would necessarily be totally different to what under present conditions is required.

It has been suggested as possible that during war a squadron of fast frigates, including even an ironclad, might escape the vigilance of our fleet, and make a descent on the Australian Coast; there is no doubt that such is possible, but I cannot allow that it is reasonably probable, and it appears to me that we have to deal with probabilities more than possibilities.

My reason for arriving at this conclusion is that no regular war-ship has yet been built which can steam 2,500 miles at full speed, except some light steel vessels; and it is but reasonable to conclude that enemies' vessels attacking these Colonies could only hope for success by dealing a sharp unexpected blow; therefore speed is an essential element in the calculation.

Another point is that, although coal is abundant in Australia, no judicious commander would attempt such an expedition as we are now contemplating on the chance of picking up a coal-ship at sea, or of being able to get it by capture from the shore.

Thus we find that a war-ship could not, with a reasonable hope of success, make a descent on an enemy's coast at a greater distance from a coal depot than is represented by (say) two-thirds of her full speed coal power.

If my hypothesis be correct, an examination of the chart will show that there are few places within the limits prescribed from which cruisers could be sent. The three nearest possible enemies' ports, belonging to first-rate Powers, from which ships of war could be despatched, are:—

Petropauloski, distant from Melbourne	5,900 miles.
San Francisco, " " "	6,800 "
New Caledonia, " " "	1,550 "

The last-named place need hardly be included, as no armament of any strength could be prepared or assembled there without the knowledge of the Colonies.

It might be argued that war ships would be preceded by coal ships, and replenish at one of the numerous islands in the Pacific; but against such a premise must be set the delay it would entail, and the amount of arrangement and preparation, which would seriously diminish the chances of the attacking force, whilst it would give ample time for places likely to be the scene of attack to prepare.

The class of vessel which I think the Colonies should be prepared to meet, and which might, if well commanded, do immeasurable damage, both to shipping and exposed ports, is the armed merchant vessel, possessing great speed and coal vitality. Such ships could more easily evade the watchful eye of our cruisers and Consuls abroad, and from their coal capacity and fitted out at remote ports, pass unobserved, disguised as traders, over half the world.

In new Countries, such as Australia and New Zealand, where all are hard-working men, struggling with nature for a livelihood, the presence of a permanent armed force supported out of their earnings, is always distasteful, not from any lack of military ardour, but from the feeling that such forces are living in comparative idleness, and not adding by their labours to the common weal. Such being the case, it is as well, in my opinion, whatever may be argued on the other side, at once to bow to and recognise as a fact, "that a Permanent Military or Naval Force cannot under the present circumstances and condition of these Colonies, flourish."

It will be seen by the accompanying table that already very large sums are spent by these Colonies on armament and men, and it will be one of my objects to show how such sums of money could be better expended, at any rate in so far as Naval Defence is concerned.

TABLE showing Annual Expenditure in several Colonies for maintenance of Land and Naval Forces.

Colony.	Annual Expenditure.			
	Land Forces.	Standing Navy.	Naval Brigade.	Totals.
	£	£	£	£
Victoria	40,683	38,390	1,140	80,213
South Australia	25,212	25,212
New South Wales	68,059	5,817	73,876

It

Commodore
J. C. Wilson.
7 June, 1881.

It is obvious that were all the Colonies on this Station confederated, or even those belonging to Australia, including Tasmania, on the subject before us, an enormous saving would be the result, whilst even greater would be the advantages in efficiency and power.

It is therefore of first importance, when introducing any scheme of Colonial defence, to establish some system which, whilst leaving to each all patronage and administrative power, would place the united forces in case of war under one head, and in time of peace one system of discipline and inspection. In the formation of a Naval Defence Force there will no doubt be many objections and difficulties in the way of confederation, and unity of action in case of war; but I will attempt to show how it may be possible to do so, while suggesting such a scheme as may be workable, even if such a desirable consummation cannot be arrived at.

Less difficulty would be experienced in drawing up a universal code of regulations, which are essential in view of united action.

The respective Colonial Governments might also be expected to realise the advantage to be derived from the stimulus which competition undoubtedly engenders, and this to a great extent makes up for the drawbacks inherent in small newly raised services.

The uniting medium should be the instructors from the Royal Service, and an inspecting officer of high rank, who should advise the Ministers of the different Colonies on service matters, and furnish periodical reports for their information and guidance, such reports to be general, covering the entire intercolonial marine.

The naval defences of these Colonies must be divided into two heads—the one for the defence of harbours, and the other for the defence of trade and exposed towns on the sea-coast. I strongly advocate the employment of gunboats carrying guns of moderate calibre (say 10-in.), in preference to ironclads, which are too costly in the first place, and also to keep up, whilst centralizing too much the defensive power, and are quite out of place for the purpose of resisting the style of attack which I have pointed out as the one most likely. "It is unnecessary to use a Nasmyth's hammer to break a walnut." Gunboats of the "Staunch" class, and armed like that vessel, are most suitable, not only to those who would have to man them, but in most cases to the harbours to be defended.

Besides gunboats, I recommend a certain number of torpedo boats, and also the registering of all steam launches with a speed of over 10 knots, to be used as improvised torpedo boats.

The Colonial Seagoing Defence Force should consist exclusively of armed merchant vessels. These vessels should be specially selected for their speed and strength, suitably armed, and be required to act in concert with the Royal Naval Squadron. As an auxiliary to the Royal Service they would be exceedingly valuable, capable as they would be of keeping up communication between the regular Navy and the head-quarters of the different Squadrons, or looking out for and overhauling strange sails.

As I have before remarked, the instincts of the people are opposed to standing forces, but they appear, on the other hand, to be singularly partial to the semi-military, such as their volunteers. I propose that each Colony should raise a Naval Militia by voluntary enlistment, in proportion to its requirements; and that this force should be instructed by a staff of officers and seamen-gunners drawn from the Royal Service, to be changed at the expiration of three years, so as to ensure thorough efficiency in both officers and instructors.

The men composing such a force might be of two classes—boatmen and long-shore men to man gunboats and torpedo boats, and regular seamen from local trading vessels for the armed merchant ships. There is nothing better than a hulk in which to drill seamen, but when one is not available a shed could be constructed on shore for that purpose, the gunboats being used for firing purposes.

As this force ought not to contain a man more than would be necessary in war, all should be thoroughly efficient. To ensure that I think each volunteer on first entry in the force ought to be put through a three months' course of drill, and where there is a ship, kept under regular discipline; at the end of that time his worth will be known, and whether he is a desirable man to retain or not.

Note.—If three months is thought unnecessarily long, the time might be reduced to six weeks.

If he be so, he should be entered as a Naval Reserve man for a period of ten years, and be required to put in a month's drill annually. The pay of these men will materially differ according to the market value of labour at the different ports; but whilst undergoing their preliminary and also their periodical drill they should get good pay, besides being supplied with a suit of uniform and a working dress annually. The expense of such a force would not be great, except whilst embodied; but the cheapest article is expensive unless it be useful and necessary, and to ensure that, only those worth having should be entered.

Note.—It must be remembered that the month's drill for the Naval Brigade does not necessitate calling out all the men, or even a large portion of them, at one time. They should be able to get in their drill at such times as best suited their convenience, and after the first period there is no great reason why they should not be allowed to put in a week at a time.

Instruction and inspection by properly appointed naval officers, being quite independent, would ensure at any rate the exact value of the corps being known, and it would be the fault of the Government if it did not reach the requisite standard of efficiency.

In the event of war with a first-rate Power, New South Wales should furnish at least two armed ships with torpedo and gun boats, viz. :—

	Gun-boats.	Torpedo-boats.	Improvised Torpedo Launches.
New South Wales...	2	2	6

The gun-boats and torpedo-boats must of course be specially built; the latter for the Whitehead, if possible; but the improvised boats, which ought to play an important part in the Harbour Defence system, should be such local steam-boats as, from their speed and strength, were best suited for the purpose; the fittings for these boats, I, of course, contemplate being kept in store ready for use.

The armament of the gun-boats to be one 18-ton 10-inch gun, with a crew of three officers (including a naval gunner) and twenty-two men. They should also have two or more machine guns on swivels. Speed about 8 knots.

The torpedo vessels to be of great speed, and fitted with either the Spar or Whitehead torpedo; all these vessels to be hauled up on rails and kept in sheds, out of the water when not in use. The merchant vessels should be strengthened under their decks to carry five or seven guns—four 64-pounders and a light 7-inch gun on a pivot as a chaser for the smaller class, and a crew of twelve officers and 160 men; the larger class to carry six 64-pounders with a pivot gun, and to have fourteen officers and 180 men. All the men and officers for these vessels should be seamen proper and not boatmen.

The personnel required for the New South Wales Naval Contingent would be :—

Colony or Town.	Gun and Torpedo Boats.		Armed Steamers.		Total.	
	Officers of all grades.	P. Officers and men of all grades.	Officers.	Men.	Officers.	Men.
New South Wales.....	14	68	26	340	40	408

I have sketched out what appears to me a suitable and sufficient Naval Force, both in matériel and personnel, and I now come to that which is to inspire the whole, and give to the service that vitality and stimulus so imperatively necessary to any high standard of excellence, but which, from the lack of tradition, or competition, I hold to be wanting in small local services, resulting too often in mere outward show and parade. It is through the system of instruction and supervision that I propose to introduce this wanting leaven. Royal Naval Officers and seamen-gunners must be drawn from home in the proportion shown in the accompanying table. Each Colony to have a Gunnery Lieutenant or a Commander at the head of their Naval Establishments, according to the size of the corps. The entire instructing staff to be rigidly changed every three years. I place importance on this point, for instructing is, in itself, such a strain on the mind that change is necessary; but besides, it is advisable to ensure that all improvements in drill and arms used afloat are properly taught.

Twice

Twice a year the Naval Force in each Colony should be carefully inspected and reviewed by an officer of high rank, but who should belong to no special Colony. This officer should make a minute report on each corps, drawing inferences from, and making comparisons between, those of the different Colonies, thus stimulating both instructors and instructed to the utmost. How such an officer should be appointed and what rank he should hold are questions not for me to suggest, but it would undoubtedly add to his independence were he both paid and appointed as "Inspector of Colonial Navies" from home, and the higher the rank held the greater would be his influence.

With the exception of the Inspecting Officer, all the officers and men drawn from the Navy ought to be paid by the Colony.

Comodoro
J. C. Wilson.
7 June, 1881.

INSTRUCTING STAFF.
Inspecting Captain or Admiral Superintendent.
New South Wales ... 1 Commander
2 Gunnery lieutenants
2 Gunners
2 Chief gunners' mates
6 Gunners' mates.

	Sydney... ..	6,240
	Newcastle	6,220

The accompanying Chart shows the proposed general disposition of the Naval Defending Forces throughout the Australian Naval Station.

NOTE on "Staunch" class of Gun-boat.—Extract from a work known as "The War Ships of Europe"—"This peculiar type of vessel was invented by Mr. Rendell, the 'Staunch,' built in 1867, being the original. She cost £13,500. Since then about thirty have been added to the Navy."

2. With reference to the torpedo-boats and gun-boats you recommend, would it not be advisable for us to procure them from England? I think so; because, in the first place, you would pay very much more for them here, and then they would probably be inferior to those you could obtain at home.

3. Are you able to state whether the Home Government have any torpedo-boats and gun-boats which they could spare to the Colonies? I think you would have to get them built.

4. You recommend a certain type of gun-boat? Yes; "Staunch" gun-boats. They cost, I think, between £13,000 and £14,000 each, carrying an 18-ton gun, and a crew all told of twenty-five men. About twenty-five of these gunboats we have hauled up on rails in Haslar Creek, where they are launched as required, and used for firing purposes in connection with the "Excellent."

5. What is their tonnage? About 250 tons.

6. Are they better than the Alpha-Beta class of gun-boats, which were built for the Chinese Government? No; but those are a much more expensive kind of vessel.

7. Do you not think the "Staunch" gun-boats cost about £11,000? No; I think about £13,000 or £14,000, at the outside.

8. Does that include ammunition? No. I think it includes the gun, with gun-carriage and fittings. Ammunition is put on board afterwards. I should say that the vessel fitted out would cost approximately £14,000. The Alpha-Beta class of vessels are very much larger; they are regular sea-going vessels, and cost much more.

9. I think the Imperial Government have a large number of gun-boats, built some years ago—they had no particular use for them? Yes, but they are all worn out, and perfectly useless. There were about 300 or 360 built for the Russian war, but they are all worn out.

10. They were slop-built, were they not, and fell to pieces? Yes; but the new gun-boats are iron vessels, and though some of them have been built for twenty years, they are still good.

11. Were these gun-boats built by the Government, or in private ship-yards? In private ship-yards.

12. Where are the torpedo-boats built? Yarrow, on the Thames, and Thornycroft are builders. I had two of Yarrow's torpedo-boats attached to me at a review, and one of them steamed 21 and the other 20½ knots.

13. What about the launches that accompany these gun-boats; would they have to be built in England? When I speak in the memorandum just read of improvised launches, I mean that they should be local launches. By a system of registering the best boats in the harbour you would know exactly where they were, and afterwards be able to call upon them in time of war.

14. I think you speak of a number of launches in addition to the torpedo-boats? Yes, but those would be local boats improvised for the purpose required by means of spar-torpedoes.

15. Suppose a declaration of war came upon us suddenly, that we received information of it by telegram, and that we had to make preparations immediately, would it be necessary or advisable to send guard vessels along the coast to look after the enemy? I think the lighthouses or traders on the coast would report strange vessels, but besides that you would immediately arm your cruisers and place them at the best points. It would be no harm to employ smart vessels for that purpose as well.

16. You speak of an enemy's ship getting inside the harbour before her presence is known? Yes.

17. And by the presence of a cruiser outside the character of a strange vessel would be known? Yes; you would have to board her outside.

18. And if she were a vessel of that class she would not allow you to board her? Well, she would try to evade you in some way or another, and you would suspect her character in that way.

19. The proper course in time of war would be not to allow any vessel into the harbour without knowing what she was? It would be difficult to do so at night, and it would interfere very much with your trade.

Commodore
J. C. Wilson,
7 June, 1881.

20. Is it not usual in time of war to extinguish the lights at night? Yes, but to make that necessary the war must come very close to your doors. A war in Europe would not affect you to that extent out here. Even supposing England were at war with two first-rate Powers, the effect on these Colonies would be hardly such as to cause you to put out your lights.
21. On the last occasion when war was imminent with England it was understood that preparations were being made for an attack on these Colonies? Yes, but any preparations of that kind would be always checkmated by a sufficient number of vessels being sent to meet the enemy.
22. Have you seen that article in the "Nineteenth Century" written by an Austrian Officer? I have read some portion of it.
23. That writer seems to consider the probability of England losing her command of the seas? That is a matter of opinion: I do not think it is probable. When war was threatened I was in command of the "Thunderer," and though I was not in the secret of the preparations that were being made, I know that there were sixty vessels ready to hoist the pendant the day the ultimatum was sent from London, and that there were forty merchant ships ready to be commissioned at the same time; and during the winter it was the duty of my crew to fit a very large portion of the gun-gear for those merchant ships. There were thus 100 vessels, in addition to the fleet, and twenty-five ironclads as a reserve fleet. We had eighteen ironclads lying at Portland, in addition to the Channel and Mediterranean fleets. Twenty-five ships were reviewed at Spithead by the Queen.
24. How long ago was that? That was about three years ago. There were the Mediterranean fleet, the Channel fleet, the Particular Service squadron, consisting of eighteen ironclads, and six or eight other vessels—twenty-five altogether, ranging from the "Hercules" to the "Cormorant." Then there were, as I say, ready to hoist the pendant, sixty other vessels of different classes, not including gun-boats, and some forty merchant ships, all ready to be taken up at once, and be armed as cruisers; such vessels I think would be most efficient for covering our carrying trade. And if that had not been enough we could have multiplied them indefinitely. For every cruiser that Russia could have sent to sea we could send fifty. There is no such thing as want of vessels in England.
26. You are aware that we have at the present time here a force called the Naval Brigade. What do you think would be the best means of training those men? In the first place, you should have a vessel afloat to drill them in. If, for instance, I were Captain of the Naval Reserve, I would first of all get a ship—an old man-of-war—and she should be the guard-ship here. She would be useful in a thousand different ways, and on board of her all your Naval Reserve men should pass through a three months' course of training, being kept there in order to be trained to the guns, and to acquire a little discipline; in fact to be taught how to obey, and to prove whether they were good or bad seamen, and good or bad characters. Pay them for the three months, and if the result be satisfactory at the end of that time they should be engaged for five or ten years as Naval Reserve men. Then once a month or once a week each quarter I should have them out. I think they ought to have about a month or five weeks drill in the year. For that kind of drill they should be taken in the gun-boats outside the Heads. They should be required to fire a certain amount of ammunition at a target at sea. They should handle torpedo-boats, spar-torpedoes, fish-torpedoes, &c., and they should be required to learn the use of a rifle, and fire so many rounds from it—just the same as is taught the men-of-war seamen—and I would give them a small retaining fee.
26. Would you also accustom them to the use of torpedo-boats? Yes; the working of spar and fish torpedoes.
27. I do not think you speak about fish-torpedoes in your paper? Yes, I do.
28. At the present time, with the Naval Brigade as it is now constituted, we have nothing more than a land force? They may be very good men, but they are only used as a land force. No man in such a corps as that here should be under the grade of able seamen, and therefore men who have served at sea seven or eight years. If he is not an able seaman he has no right to be in the corps. Your number of able seamen here is very limited, for at the utmost you could not raise, I suppose, 1,000 men, and therefore you should be very careful to train these men to the work they are best fitted for. You could raise any number of volunteers in the prospect of war, but you could not get the men with the necessary knowledge to man your fighting ships or gun-boats.
29. The Naval Brigade here are hardly what they appear to be? That I have no means of judging. I only say that by having an inspecting officer perfectly independent of the Colonies you would be able to know really what they were. The inspecting officer I would recommend would be an officer of the Royal service, who should be paid by England, not by the Colonies, and therefore independent. He should inspect the navies of the Colonies, and report upon them perfectly independent of either of the Colonies. He could then act with perfect freedom, and when inspecting would inquire into the antecedents of every man, and if he found any of them professionally or otherwise unfit they would be taken out of the corps.
30. You never inspected this Naval Brigade afloat? No.
31. You inspected them ashore? Yes, on one occasion. They are very good as far as they go, but you can hardly tell what a sailor is until you get him afloat.
32. Physically the material in the Naval Brigade is very good? If they are what they look to be they are a very valuable corps. They are very steady men, and a large proportion of them apparently are seamen.
33. But still they ought to be trained together in boats? You can never have them a reliable corps unless they can go afloat and work the big guns.
34. Do you think it possible for Russia, from the Amoor, or for America, from San Francisco, to send here speedily a force large enough to land 5,000 men? Perfectly impossible, because the vessels could not carry coal. I doubt whether the Orient steamers could steam here, with ordinary bunkers, 6,000 miles, at full speed.
35. How many vessels would be required to land a force of 5,000 men—bearing in mind the large transports nations have? It depends entirely upon circumstances. France would send them over in three ships. One of our Indian troop-ships carries 1,200 men.
36. Five of those, then, would be required? Yes; but that has no reference to artillery and cavalry. I think they could not possibly be carried in less than ten ships, and then you must have a covering squadron.
37. Suppose they did not care about cavalry or artillery; say that they wanted to make a dash at Sydney, that they landed at Botany or at Broken Bay and made a rapid march to Sydney—could it be done? All kinds of things could be done, but I think it would be as difficult as storming the moon. How could it be done without a covering fleet to protect them? If I knew that troopships were outside without a covering

covering fleet, and you gave me a vessel like the "Rotumahama," I would go and ram the lot of them without the necessity of firing a shot. There is no regular man-of-war that can steam 2,500 miles at full speed, the consumption of coals is so enormous; and that is the ground-work upon which I say that as long as England retains command of the seas attacks in force on these Colonies are impracticable. If you put six or eight inches of plate on a ship's side she cannot carry coal. She cannot carry the weights inside and outside too.

Commodore
J. C. Wilson.
7 June, 1881.

38. Ships of the Orient class are now being built under the superintendence of Admiralty surveyors so that they may be able to carry guns? I expected that would be done.

39. You think it necessary, I suppose, to have well-armed batteries to which you could retire in case of necessity? Certainly. I myself am not against a certain percentage of permanent force, especially of permanent artillery. You must always have a nucleus of good gunners in your valuable fortifications, and also take care of plant in peace time. But what we have to recognize is this—and it has occurred in Victoria lately—that in these colonies we are so very far removed from European complications that a tendency will always be shown to cut down the standing force, especially when there is a calm for a few years. While that tendency exists, and the tenure of service is uncertain, there will always be a difficulty in the way of good officers remaining with you. I would rather see a well-drilled militia, thoroughly organized, ready to meet all requirements, always to be depended upon, and always what it was represented to be, than a nominal permanent corps which at any time might be disbanded.

40. You think the one would command the sympathies of the people, while the other would not? Yes.

41. By a militia force you mean one on the English principle? No, not necessarily. A force such as you have here—whether it be good, bad, or indifferent I do not know—but I do not see why it should not consist of a body of men as good up to a certain point as ordinary troops at home.

42. What do you call ordinary troops at home? An ordinary regiment.

43. You mean the regulars? Yes; I do not see why it should not be. Certainly it might be if the force were annually embodied for a month. Then if there were any prospect of war you must have the power to call them out and put them under martial law. I think that is imperative, not only with the force I speak of, but also with the Naval Brigade. When the men are called out for their month's drill they should be under martial law.

44. With regard to the month's drill you speak of, you mean a month's drill for the militia every year? I intended in what I said to refer more particularly to the Naval Reserve, but what you want in the one corps you want in the other. I think a military corps should have a month's training in the year.

45. Do you not think that taking men away for a month's training would interfere with the working of the civil institutions here? Well, it is a question of pounds, shillings, and pence.

46. Is continuous training necessary? Yes; it instils discipline into the men.

47. Would not thirty or forty drills have the same effect? Drill is only half the thing. It is all the minutiae of ship or barrack life which breaks a man in. Handling arms is a very small part of a fighting man's training.

48. I suppose you do not think that six days' continuous drill in the year is enough? I should not think so.

49. With reference to Gatling guns, would there be any difficulty in getting them at a moment's notice? No; but I should have called them machine guns instead of Gatling guns. The Nordenfeldt gun is the best, and you can get those from the factory.

50. Where is the factory? I do not know exactly, but I know you can get them there.

51. Should we not require a place for naval stores, or for stores of all kinds, in case of war? I think so.

52. So as to have them always ready? If you had a guard ship it would be best to have everything on board of her. You might make that vessel your torpedo depôt, the depôt for stores, the gear for improvised boats, and for other stores; they are a great deal more handy at any time when taken from a vessel than when taken from the shore. It would be an easy matter to get a suitable vessel from the English Government. There is, for instance, the "Wolverene," useless for anything else, though she is a strong ship, and would last for twenty years. Probably she will be broken up when she goes home.

53. They might give us the vessel if we asked for her? Very likely.

54. Have you any idea as to what the carrying out of the suggestions you have made for New South Wales would cost? Approximately as follows:—

Estimate of Expense of *personnel* of Naval Reserve and Instructing Staff for Sydney:—

	Annual income.
1 Royal Naval Reserve Captain	£100
6 " Commanders, @ £80... ..	480
10 " Lieutenants, @ £50	500
10 " Sub-Lieuts., @ £40	400
8 Warrant and other officers, @ £40	320
	1,800
408 Seamen, R.N.R., @ £20	8,160
Royal Naval Instructing Staff—	
Officers	2,200
Seamen	1,020
Total	£13,180

55. I mean your suggestions with regard to the defence of the Colony? I was not requested to make any estimate of cost; I was only instructed to say what I would recommend. Nor am I in the slightest degree wedded to the figures. It is entirely for the Government to determine what number of ships, what number of torpedo-boats, and what number of gun-boats you require for your defences. But if you accept the style of vessels I recommend, I think you would require the crews I recommend to man them.

MONDAY, 13 JUNE, 1881.

Members Present:—

THE HONOURABLE SIR JAMES MARTIN, Knight, Chief Justice, President.

COLONEL PETER HENRY SCRATCHLEY, C.M.G., R.E., Vice-President.	EDWARD KNOX, Esq., J.P.
JAMES BARNET, Esq.	HON. JOHN BROWN WATT, M.L.C.
HON. FREDERICK MATTHEW DARLEY, Q.C., M.L.C.	COLONEL JOHN SOAME RICHARDSON. COLONEL CHARLES FYSCHIE ROBERTS.

Colonel Peter Henry Scratchley, C.M.G., R.E., examined:—

Colonel P. H. Scratchley, C.M.G., R.E.
56. Have you prepared any observations on the evidence of Commodore Wilson, which you would like to submit to the Commission? With the permission of the President I will read the following memorandum:—

13 June, 1881. The opinions and information given by Commodore Wilson, R.N., to the Royal Commission, require serious attention, as they affect the consideration of the matters referred to the Commission for report.

The following points suggest themselves for notice:—

- (1.) The idea which prevails in the minds of some people, to the effect that the Australian Colonies are liable to be attacked by a large expeditionary force, is not founded on any practical basis, but upon improbable, if not impossible, premises.
- (2.) The opinions on the subject, of such a high naval authority as Commodore Wilson, must carry very great weight; in my opinion they are conclusive.
- (3.) Consequently, the necessity for maintaining large military forces and establishments of a costly character, for the purpose of resisting improbable attacks in force on land, is shown not to exist.
- (4.) Commodore Wilson's evidence raises the question whether, if we are to have a military militia, it should not be a *real militia* with a sufficient training, instead of the present Volunteer Militia, which is nothing more than a compromise between a purely volunteer force and a regular militia; a compromise *costing the Country as much for its annual maintenance as a regular militia*.
- (5.) Commodore Wilson explains the manner in which we can complete our present defence organization by establishing a reliable Colonial naval defence, which, in conjunction with the Imperial Navy, will provide for the protection of Australian commerce within certain limits, whilst at the same time it will furnish the means at present wanting to complete our preparations for harbour defence.
- (6.) He indicates the direction in which changes are required to render the existing Naval Brigade of practical value for defence purposes as a Colonial naval defence force.
- (7.) In making his recommendations, the Commodore observes that the extent of Colonial naval defences, recommended by him, may be reduced or altered without prejudice to the general principles laid down.

The value of Commodore Wilson's report on Australian Naval Defences, of which extracts were read to the Commission, cannot be over-rated. It supplies the great want, which has been felt for some time past, of an opinion from a naval officer of high rank as to the measures which will have to be taken, in time of war, for the protection of Australian commerce and the exposed towns on the sea-board; and it lays down the principles upon which preparations should be made in time of peace.

It is necessary to point out, in passing, that Commodore Wilson's evidence entirely endorses the views expressed by me in reply to questions 361, 375, 376, 396, 397, and 398 in the evidence taken before the Military Committee; and that, in these replies, I dissent entirely from the opinion expressed by Colonel Downes in his answer to question 66. It will also be seen that, although Colonel Richardson agrees with Colonel Downes (*vide* question 306), Colonel Roberts differs from both these officers (*vide* question 184); and I may add that Colonel Anderson, who was not examined on the point, has referred me to several of his reports on Victorian defences, wherein he combats the idea that Australia is exposed to invasion.

It may be urged that the consideration of the question of naval defence is outside of the instructions issued for the guidance of the Royal Commission, and that it is the organization necessary for working the scheme of land defences, and for providing a field force in connection with them, which has been specially referred to the Commission, on account of the doubt which has been felt as to whether the organization is what it should be, and we are not paying too much for it as at present established. I admit that the Commission is not directed to report upon the measures necessary for the "defence of trade and exposed towns on the sea-coast," but I contend that a satisfactory settlement of the matters referred to the Commission cannot be arrived at without looking into the defence question as a whole, and without taking into account the naval arrangements for harbour defence as well as the naval measures for the protection of commerce. It should further be remembered that the advice of Commodore Wilson was sought, in consequence of the Military Committee having reported to the Commission that the Naval Brigade had no place in the defence organization of the Colony, although ostensibly maintained as part of its defences.

The Commodore considers the naval defences under two heads, first under the head of "the defence of harbours," and secondly under the head of "the defence of trade and exposed towns on the sea-coast." It would appear that the second head need not be reported upon by the Commission, although any recommendations they may make under the first head, *i.e.*, defence of harbours, will doubtless be such as will admit of their working in with any naval defences that may be adopted in the future for the defence of trade, &c.

The Commission need be under no apprehension that the naval arrangements, in connection with the harbour defences, will interfere with the scheme of land defence recommended by Sir W. Jervois, which is now approaching completion; on the contrary, the scheme will be strengthened and rendered more complete.

There is nothing in Commodore Wilson's proposals, under the head of harbour defences, that will in the slightest degree affect or render unnecessary any single thing that has already been determined on with regard to the land defences, comprising batteries, guns, and torpedoes. If Parliament will vote the money

money for the two gun-boats recommended by Commodore Wilson—and I am in favour of the expenditure—it stands to reason that there will be an increase in the power of resistance of the land defences for Port Jackson. Colonel P. H. Scratchley, C.M.G., R.E.

It must, however, be clearly understood that the gun-boats recommended are only intended by Commodore Wilson for harbour defence, and could not be relied upon for service outside Port Jackson. It was for that reason that Sir W. Jervois did not propose gun-boats for Port Jackson; he was of opinion—and I entirely concurred—that the first step to be taken was to establish batteries, which, once constructed, would cost an insignificant sum to maintain; and he left gun-boats to be added hereafter, if required, on the grounds that they can only be considered as accessories to batteries; and that, from their absolute vulnerability, they can never be considered to be as reliable as guns mounted in properly constructed works on shore. An unarmoured gun-boat is not only liable to be sunk by a single well-planted shot, but she may be disabled by accidents to her machinery, screw, or steering gear.

Again, the provision of torpedo boats and improvised torpedo launches would only be an extension of a commencement, already made by the purchase of the two boats now available, and is a measure which has repeatedly been recommended by Sir W. Jervois and myself.

Thus, by adopting the Commodore's recommendations, Port Jackson, as the head quarters of the Imperial Navy in Australian waters, will be rendered more secure as a place of refuge, and as a Naval Arsenal, capable of resisting a formidable attack, and of providing means sufficient for fitting out and repairing a fleet of war vessels. In other words, Port Jackson, thus adequately protected, becomes a secure base for the operations of the Imperial Navy, and directly strengthens the defensive power of the British Empire in time of war.

To sum up, the Commission, in drawing attention to that part of Commodore Wilson's suggestions, under the head of "Defence of Harbours," might confine themselves to recommending—

1. The purchase of two gun-boats, and additional torpedo-boats, if required, in addition to the two now available.
2. The fitting up of suitable steam-launches, belonging to the Government, or to be found in the port, as improvised torpedo-launches.
3. The reorganization of the present Naval Brigade upon the lines laid down by Commodore Wilson.

Commodore Wilson's evidence points to the conclusion, which I have already noticed, that there is no necessity for the maintenance of costly military forces and establishments to meet improbable attacks in force on land. *The majority of the Military Committee have expressed that opinion.* It will be seen, on reference to their report, that they lay great stress on the maintenance of a Permanent Artillery Force as being of the first importance, *provided it is organized with a Reserve*, and the continuance of the present Volunteer Militia, *provided its cost is largely reduced.* The Permanent Artillery to provide a body of highly trained men, immediately available for the efficient working of the guns in the batteries; and the reserve of trained Artillerymen to be also readily available on the outbreak of war, and to be established in order that the annual expenditure on the Artillery Force in the ranks may bear fruit by adding to the defensive resources of the Colony year by year. A reduction in the pay of the officers and men of the Volunteer Militia is advocated by the majority of the Committee, on the grounds that the present expenditure is excessive, and that the results obtained are not commensurate with the cost.

Further consideration of the subject, consequent upon the strong opinion expressed by Commodore Wilson as to the improbability of any landing in force, confirms me in the opinion that the cost of the Volunteer Militia must be reduced.

In my evidence I have fixed the limit at £10 per man. I am absolutely opposed to an expenditure of £20 per man, or £34,000 for 1,700 men* in order to provide against a problematical danger. I can not consent to perpetuate an expensive system because it exists. (*Vide question 377.*) The £17,000 saved by the proposed reduction in the cost of the Militia can be more profitably laid out.

Either the Permanent Artillery could be increased,† or a regular Militia maintained—recruited by volunteer enlistment, and called out once a year for twenty-eight days continuous training—or the proposed Colonial naval defences paid for.

Colonel Downes, Commandant in South Australia, has stated (*vide questions 67, 68, 69*) that a Volunteer Militia force can be maintained on the South Australian plan—a plan introduced by the Government before he assumed command (*vide question 89*)—at a cost of £8 per man; but it is to be understood that he only pays his men 2s. 6d. for half day drills and 5s. for whole day drills, all drills being in daylight, and that there is no compulsory continuous training. Again, his captives only get 10s. for whole day drills and 5s. for half days,—the rates of pay we give the privates in the New South Wales Volunteer Militia Force.

Colonel Downes is quite satisfied with the results obtained under the South Australian system.

Again, with regard to continuous training: although Colonel Downes attaches great importance to continuous training, he thinks it a decided mistake to make that training compulsory. (*Vide question 71.*)

I am prepared to admit the great value of continuous training (*vide question 366 and note*), but I cannot reconcile to myself that it is worth the large extra expenditure which it costs in New South Wales under the present rates of pay. Considering the danger to be met is only problematical, I see no reason why this continuous training should not be given to the force on the outbreak of war.

Another

* These remarks do not apply to the Torpedo Corps, which must be considered apart from the field force. Colonel Richardson's estimate for 1,800 militia amounts to £36,546, of which £2,421 is for the Torpedo Corps—100 strong, leaving £34,125 as representing the cost of 1,700 officers and men for the field force, composed of Artillery Engineers and Infantry.

† Any step that will expedite the formation of a reserve will be supported by me. (*Vide question 370.*) For that reason I do not oppose the increase in the strength of the Permanent Artillery, proposed by some members of the Commission. I look upon a reserve as the backbone of a properly constituted military system, as it provides a force of trained men at a moderate cost, who are available at any time or on the outbreak of war. This is the opinion held by all recognized military authorities in England. Admitting that, with a large reserve, there would be more gunners available than were required for the batteries, the excess could be utilized as infantry for the garrisons of the defence works, thus setting free a portion of the field force. I do not share the objections urged against the proposal, brought before the Commission, to the effect that the artillery should be taught infantry drill. It would be easy to ascertain by actual trial how long it would take to teach a certain portion of the artillery force infantry movements in close and extended order. We should endeavour to make the officers and men of the Permanent Artillery good "all round" soldiers, and thus get full value for their cost. In my opinion nothing can be more unsatisfactory than the present expensive organization of the permanent artillery force, whereby a large annual expenditure is incurred without in any way adding to the defensive resources of the country. (*Vide questions 370, &c.*)

13 June, 1881.

Colonel P. H.
Scratchley,
C.M.G., R.E.

13 June, 1881.

Another matter requires brief notice. In the opinion of Colonels Downes and Richardson, Botany Bay is the weak point of the system of defence, even when protected by the powerful fort, now in course of erection on shore, and torpedoes at the entrance. Granted that this opinion is correct—although it is not shared by myself or the majority of the Military Committee—the true strategy does not consist in providing costly military forces to meet the enemy when he has landed. The proper course would be either to increase the permanent defences†, or construct additional batteries on the outbreak of war, so as to render a landing impracticable; to provide naval means afloat with which the enemy could be attacked at sea, or whilst he was attempting to land; and to maintain a small field force, under an inexpensive organization, similar to that adopted for South Australia. The cost of the additional defences would probably be covered by one year's saving on the proposed expenditure for the military forces; and a portion of this annual saving would suffice, as already stated, to provide yearly for the Colonial naval forces recommended by Commodore Wilson, for the protection of trade and the exposed towns on the sea-board of New South Wales, as well as the naval arrangements in connection with the harbour defences.

Thus, without increasing the present annual expenditure, provision would be made for a considerable force of permanent artillery, for a reserve of trained men, for a fairly trained Volunteer Force, for Colonial naval defences and a Naval Brigade, and for all the improvements found to be requisite in the defence organization of New South Wales.

57. Do you desire to add anything to those printed remarks? No.

† There is nothing new in this suggestion, as will be seen on reference to the recommendations made by a former Defence Commission, presided over by Sir James Martin.

REPORT
TO THE
ROYAL COMMISSION

FROM THE
MILITARY COMMITTEE,
APPOINTED AT A GENERAL MEETING OF THE COMMISSION, HELD ON THE 10TH
MARCH, 1881, TO CONSIDER THE MILITARY QUESTIONS
INVOLVED IN THE INQUIRY;

TOGETHER WITH THE
MINUTES OF EVIDENCE TAKEN BEFORE THE COMMITTEE,
AND
APPENDICES.

MILITARY DEFENCES INQUIRY COMMISSION.

Sydney, 14 May, 1881.

SIR,

The Committee, composed of the Military members of the Royal Commission, appointed at the General Meeting held on the 10th of March, 1881, having completed the duties assigned to them, I have the honor to forward their Report, for the consideration of the Royal Commission.

I have the honor to be,

Sir,

Your obedient servant,

P. H. SCRATCHLEY,

COLONEL, R.E., *Vice-President.*

The Honorable

SIR JAMES MARTIN, C.J.,

&c., &c., &c.,

President, Royal Commission.

MILITARY DEFENCES INQUIRY COMMISSION.

MINUTES OF PROCEEDINGS OF MILITARY COMMITTEE.

FRIDAY, 11 MARCH, 1881.

The Committee appointed at the General Meeting of the Commission, held on the 10th instant, met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

Colonel William Acland Anderson, C.M.G.,
Colonel Major Francis Downes, R.A.,

Colonel John Soame Richardson,
Colonel Charles Fysche Roberts.

On the motion of Colonel Anderson, seconded by Colonel Richardson, it was decided that the first business of the Committee was to ascertain the opinions of Members of the Committee as to the necessity or otherwise for having a Permanent Force.

Colonel Downes and Colonel Roberts examined.

The Committee adjourned at 5.20 p.m.

SATURDAY, 12 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 10.30 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

Colonel William Acland Anderson, C.M.G.,

Colonel Major Francis Downes, R.A.,

Colonel Richardson.

The minutes of the previous meeting were read and confirmed.

A letter from John Cooper, Captain 1st Regiment Volunteer Rifles, was read, and it was decided to refer the letter to a general meeting of the Members of the Commission.

Colonel Anderson and Colonel Richardson examined.

The Committee adjourned at 5.10 p.m.

MONDAY, 14 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 10.30 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

Colonel William Acland Anderson, C.M.G.,
Colonel Major Francis Downes, R.A.,

Colonel John Soame Richardson,
Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Vice-President stated that with the consent of the President, it was considered desirable that a general meeting of the Commission should not be held until the Committee had completed their labours and prepared their report.

The Committee deliberated upon the order of their proceedings, and decided upon the names of certain witnesses to be examined.

Colonel Richardson, Colonel Downes, and Colonel Anderson, further examined.

Colonel Scratchley, examined.

The Committee adjourned at 5.25 p.m.

TUESDAY, 15 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.

Colonel William Acland Anderson, C.M.G.,
Colonel Major Francis Downes, R.A.,

Colonel John Soame Richardson,
Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

Colonel Roberts, Colonel Richardson, Colonel Anderson, and Colonel Downes, further examined.

The Committee adjourned at 5.20 p.m.

WEDNESDAY,

WEDNESDAY, 16 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Major Francis Downes, R.A., | Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.
 Dr. F. N. Manning, Mr. Harold Maclean, Mr. Edmund Fosbery, Mr. Stephen Harbord Lambton,
 and Mr. Charles A. Goodchap, examined.
 The Committee adjourned at 4.15 p.m.

THURSDAY, 17 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 10 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, | Colonel John Soame Richardson,
 Colonel Major Francis Downes, R.A., | Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.
 The Committee decided to summon Captain Hixson, commanding the Naval Brigade, for examination.
 Colonel Scratchley, Colonel Roberts, Colonel Richardson, Colonel Anderson, and Colonel Downes,
 further examined.
 Mr. Edward Charles Cracknell and Mr. Julien Thomas Blanchard, examined.
 The Committee adjourned at 5.15 p.m.

FRIDAY, 18 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Major Francis Downes, R.A., | Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.
 The Committee deliberated upon the order of their proceedings, and decided that the members
 should write a *précis* of their opinions on the following subjects :—
 1st.—Permanent Force alone.
 2nd.—Permanent Force with Reserve.
 3rd.—Organization and constitution of Military and Volunteer Forces.
 4th.—Composition and number of Field Force.
 5th.—Ordnance store department.
 6th.—Strength of Permanent Force and force required to man the batteries and harbour
 defences generally.
 7th.—Principle of examination.
 8th.—Expenditure and organization as regards pay.
 Colonel Richardson, Colonel Downes, Colonel Anderson, Colonel Roberts, and Colonel Scratchley,
 further examined.
 The Committee adjourned at 5 p.m.

MONDAY, 21 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 2 p.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Major Francis Downes, R.A., | Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.
 Colonel Anderson, Colonel Richardson, and Colonel Scratchley, further examined.
 The Committee adjourned at 4.25 p.m.

TUESDAY,

TUESDAY, 22 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 10.30 a.m.

MEMBERS PRESENT:—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.	
Colonel William Acland Anderson, C.M.G.,	Colonel John Soame Richardson,
Colonel Major Francis Downes, R.A.,	Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Committee decided to meet the Royal Commission, on Friday, 25th instant, and to inform the President accordingly.

Colonel Anderson, by direction of the Committee, inspected the Ordnance Store Department and Magazines, with Mr. J. T. Blanchard.

It was resolved that the members of the Committee should visit the district around Botany, for the purpose of inspecting the ground.

Captain Hixson, examined.

Colonel Downes, further examined.

The Committee adjourned at 1 p.m.

WEDNESDAY, 23 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 10.30 a.m.

MEMBERS PRESENT:—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.	
Colonel William Acland Anderson, C.M.G.,	Colonel John Soame Richardson,
Colonel Major Francis Downes, R.A.,	Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

In accordance with the resolution at the previous meeting, Colonel Downes, Colonel Richardson, and Colonel Roberts paid a visit of inspection to the district around Botany.

Colonel Scratchley and Colonel Anderson considered a draft progress report.

The Committee adjourned at 4.30 p.m.

THURSDAY, 24 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 10.30 a.m.

MEMBERS PRESENT:—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.	
Colonel William Acland Anderson, C.M.G.,	Colonel John Soame Richardson,
Colonel Major Francis Downes, R.A.,	Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

Colonel Anderson submitted a report upon his visit to the magazines and the Ordnance Store department.

The Committee considered their draft progress report, and the report was adopted.

Colonel Downes, Colonel Scratchley, Colonel Roberts, and Colonel Anderson further examined.

The Committee adjourned at 4.20 p.m.

FRIDAY, 25 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT:—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.	
Colonel William Acland Anderson, C.M.G.,	Colonel John Soame Richardson,
Colonel Major Francis Downes, R.A.,	Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Committee considered the subject of their report to the Commission, and Colonel Richardson and Colonel Downes were appointed a sub-committee to draft the report.

Colonel Richardson and Colonel Downes were further examined.

The Committee adjourned at 1 p.m. in order to meet the Royal Commission and present the Committee's Progress Report.

SATURDAY,

SATURDAY, 26 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 10 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Major Francis Downes, R.A., | Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Sub-Committee appointed at the previous meeting were engaged in drafting the Committee's report; the remaining members were employed in the general business of the Committee.

The Committee adjourned at 1 p.m.

MONDAY, 28 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Major Francis Downes, R.A., | Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Committee considered the draft report of the Sub-committee.

The Committee deliberated as to whether the reports of commanding officers, called for by Colonel Richardson, should be appended to the report or merely laid upon the table, and it was decided that they should be laid upon the table.

The Committee deliberated as to whether the subject of the defence of Wollongong should be considered, and it was resolved to refer that subject to the Royal Commission.

Colonel Downes, Colonel Anderson, and Colonel Richardson, were further examined.

The Committee adjourned at 4 p.m.

TUESDAY, 29 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 3 p.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Committee further considered their report, and took additional evidence.

Colonel Downes left Sydney, on his return to Adelaide, on Monday evening.

The Committee adjourned at 4 p.m.

WEDNESDAY, 30 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 10-30 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Committee further considered their report, and took additional evidence.

The Committee adjourned at 4-30 p.m.

THURSDAY, 31 MARCH, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Committee further considered their report, and took additional evidence.

As the time allotted to the Commission for making their inquiry and reporting to the Government would expire on 15th April, the Committee decided that application should be made by the Vice-President to the Honorable the Colonial Secretary for an extension of three months' time—from 15th April to 15th July,—and that the President of the Commission should be informed accordingly.

The Committee adjourned at 5 p.m.

FRIDAY,

FRIDAY, 1 APRIL, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.
 The Committee further considered their Report, and took additional evidence.
 The Committee adjourned at 5.15 p.m.

SATURDAY, 2 APRIL, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson.

The minutes of the previous meeting were read and confirmed.
 The Committee further considered their Report, and took additional evidence.
 The Committee adjourned at 1 p.m.

MONDAY, 4 APRIL, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.
 The Committee further considered their Report, and took additional evidence.
 The Committee adjourned at 5.30 p.m.

TUESDAY, 5 APRIL, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.
 The Committee further considered their Report, and took additional evidence.
 The Committee adjourned at 5.30 p.m.

WEDNESDAY, 6 APRIL, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, | Colonel John Soame Richardson,
 Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.
 The Committee resolved that a draft Report as agreed to by the members of the Committee, in the absence of Colonel Downes at Adelaide, should be submitted to the Royal Commission, with the Evidence and Appendices, and that a final Report should be laid before the Commission as soon as possible after the draft Report had been considered by Colonel Downes.
 The Committee adjourned at 4 p.m.

THURSDAY,

THURSDAY, 7 APRIL, 1881.

The Committee met at the Brigade Office, O'Connell-street, at 11 a.m.

MEMBERS PRESENT :—

Colonel Peter Henry Scratchley, C.M.G., R.E., Vice-President.
 Colonel William Acland Anderson, C.M.G., | Colonel John Soame Richardson,
 Colonel Charles Fysche Roberts.

The minutes of the previous meeting were read and confirmed.

The Committee finally considered their Report, and instructions were given to the Secretary with regard to its distribution.

The Committee adjourned at 6 p.m. *sine die*.

MILITARY DEFENCES INQUIRY COMMISSION.

REPORT TO THE ROYAL COMMISSION FROM THE MILITARY COMMITTEE.

Vice-President :

COLONEL PETER HENRY SCRATCHLEY, C.M.G., Royal Engineers.

Members :

COLONEL WILLIAM ACLAND ANDERSON, C.M.G., Commanding Local Forces, Victoria.

COLONEL MAJOR FRANCIS DOWNES, R.A., Commanding Local Forces, South Australia.

COLONEL JOHN SOAME RICHARDSON, Commanding Local Forces, New South Wales.

COLONEL CHARLES FYSCH ROBERTS, Commanding Artillery Forces, New South Wales.

Secretary :

CHARLES LYNE, Esquire.

THE COMMITTEE, composed of the Military Members of the Royal Commission, appointed at a General Meeting of the Commission, held on the 10th day of March, have the honor to submit the following Report :—

THE Committee were instructed by the Royal Commission to consider the military questions involved in the inquiry, and report their opinions for the information of the Commission. The course of procedure has been :—(1) They have examined each member of the Committee; (2) they have questioned the Heads of the Police, Prisons, Post Office, Lunacy, and Railway Departments on various points, but especially as to the practicability of giving subordinate situations in these departments to men, who, having served in the Permanent Artillery, were willing to join a reserve affiliated to that force; (3) they have examined Captain Hixson, Commanding the Naval Brigade, in reference to the constitution and organization of that force; (4) and Mr. Blanchard, Ordnance Storekeeper and Barrack-master, respecting the Department for the management and custody of Warlike Stores.

The questions, addressed to the military members of the Commission, embraced the following points :—

1. The necessity for a Permanent Artillery Force; whether it should be formed with or without a reserve; and what its strength should be.
2. The strength of the Volunteer Garrison Artillery.
3. The desirableness of maintaining a body of Permanent Infantry, and if so, of what strength.
4. The Torpedo Corps, and the changes (if any) necessary in its constitution and organization.
5. The Field Force, its composition, organization, and constitution; whether to be composed of Volunteer Militia, of unpaid Volunteers, or of both combined.
6. The necessity for a Cavalry Force.
7. The strength and duties of the Engineer Corps.
8. The formation of Rifle Companies in the Country Districts.
9. The number of field guns, and the strength of officers and men required for their service, as part of the Field Force.
10. The laws and regulations relating to the local Forces of New South Wales, and the changes, if any, required.

11. The instruction and military education of Permanent and Volunteer officers, and the appointment of instructors for that purpose.
12. The examination of Permanent and Volunteer Officers for first appointments and subsequent promotion.
13. The course of instruction to be undergone by Officers.
14. The establishment of a Military Library and a Reading and Lecture-room.
15. The Ordnance Store Department, as to re-organization and transfer, so far as military matters are involved, to the control of the military authorities.
16. The question of the appointment of a Military Adviser and Inspecting Officer for the local Forces of Australia.
17. The position of the Naval Brigade in the defence organization of the Colony, its constitution and organization.

The Committee, having before them the scheme of defence recommended by Sir William Jervois, and adopted by the Government of New South Wales, recapitulate its main features, which may be briefly stated as follows :—

- (1.) Port Jackson and Sydney to be defended against naval attack, by coast batteries and torpedoes in the channels of the harbour.
- (2.) Sydney to be defended against attack, by an enemy landing a body of men on any part of the adjacent coast, by a field force and by a fort and torpedoes at the entrance to Botany Bay.
- (3.) Newcastle to be defended by a fort and torpedoes.

Sir William Jervois lays down that there is no probability of an expedition on any extensive scale being despatched against Australia so long as Great Britain holds command of the seas, but is of opinion that, whilst the bulk of the naval forces of the enemy might be elsewhere occupied, he might despatch one or more cruisers to operate against the maritime commerce, and make a descent upon one of the Australian Colonies. The squadron intended for such a purpose might consist of some three or four vessels, one or two of which might probably be armoured. This squadron, eluding the British cruisers and appearing suddenly before Sydney, Newcastle, or some other port, might capture the merchant vessels lying in those ports, intercept some of the numerous vessels conveying valuable shipments of gold, and, under threat of bombardment, or by actually firing into the capital, demand and obtain the payment of many millions of money. Or this object might possibly be obtained by an enemy landing a small force in the vicinity of Sydney.

The military forces recommended by Sir William Jervois were :—

Permanent Force—

Three batteries of Artillery	375
------------------------------	-----	-----	-----	-----	-----

Militia Force—

Two batteries of Field Artillery	100
Three batteries of Garrison Artillery	200
One company of Engineers	60
Torpedo and Signalling Corps	100
Two battalions of Infantry	1,340
					1,800

Total officers and men	2,175
------------------------	-----	-----	-----	-----	-------

Part of the garrison at Newcastle was to be provided by a Naval Militia Force, to the extent of 50 officers and men.

The Committee, having carefully weighed and considered the evidence laid before them, proceed to submit the result of their deliberations under the following heads :—

- a. General Staff and Permanent Artillery Force—Constitution, organization, and strength of the latter, together with the formation of a Reserve.
- b. Permanent Infantry—Its constitution, organization, and strength.

c.

- c. Volunteer Militia, or Volunteers, and the formation of a reserve for the Force.
- d. Organization and constitution of Volunteer Force under the present system—Changes recommended.
- e. Volunteer Militia and Volunteer Reserve—Their composition and strength.
- f. Rifle Companies or Volunteer Corps as an auxiliary force to the Volunteer Militia.
- g. Cavalry.
- h. Torpedo Corps—Its constitution, organization, and strength.
- i. Officers for the Local Forces—Their appointment, promotion, and education.
- j. Military Adviser and Inspecting Officer for the Local Forces in Australia.
- k. Estimates and Expenditure.
- l. Special subjects.
- m. Ordnance Store Department.
- n. Naval Brigade.

(a) GENERAL STAFF AND PERMANENT ARTILLERY FORCE—CONSTITUTION, ORGANIZATION, AND STRENGTH OF THE LATTER, TOGETHER WITH THE FORMATION OF A RESERVE.

The General Staff consists of a Commandant (an ex-Imperial officer) of the rank of Colonel, a Major of Brigade (also an ex-Imperial officer), who performs duties analogous to those appertaining to the departments of Adjutant-General and Military Secretary combined, a Brigade Pay and Quarter Master, an Officer Instructor of Musketry, and five clerks, &c., in all nine.

The present strength of the Permanent Artillery is as follows:—

3 Batteries..... 320 of all ranks.

The Permanent Artillery (as also the Volunteer Artillery) are under the command of an ex-Imperial Artillery officer, of the rank of Colonel.

The officers of the General Staff and the officers and men of the Permanent Artillery are subject to the Army Discipline and Regulation Act, the Articles of War, Queen's Regulations, and to such other orders, regulations, and rules as may be issued for Her Majesty's Army, so far as the same are not inconsistent with the provisions of the New South Wales Military and Naval Forces Regulation Act of 1871, and the Regulations thereunder, to which the Staff and Permanent Artillery are also subject.

The officers of the Permanent Artillery are appointed and promoted by the Governor in Council, and the non-commissioned officers by the Governor, on the recommendation of responsible officers. The examination of these officers for promotion has heretofore been carried out under conditions modified from those in force in the Imperial Service, and necessarily so, as, with the exception of the officer in command, none have had the advantage of the preliminary artillery education at Woolwich, or of the scientific training which Imperial Artillery officers subsequently undergo.

Men between the ages of 18 and 40 are enlisted in the Permanent Artillery for five years, and may re-engage for a further period of two or five years. The lowest rate of pay is 2s. 3d. for gunners, in addition to free rations of bread, meat, and groceries, free kits on joining, annual issue of uniforms, barrack accommodation, fuel and light, and medical attendance. Special rates of working pay are issued, and an increased rate of pay for re-engagement. Rewards are given for good conduct, as in the Imperial Service, but no pensions.

The Committee are unanimous in recommending the maintenance of a Permanent Force of Artillery as an absolute necessity. The force is required, in time of peace, for the care and management of stores, guns, batteries, and warlike *matériel* generally; to form a nucleus for the Volunteer Militia or Volunteer Artillery Force; to be available for the school of instruction; and to assist in carrying out the annual course

course of training of the Artillery branch of the Local Forces. In addition to the above, the Permanent Artillery Force would, in time of war, furnish a body of highly trained Artillerymen, immediately available for the efficient working of the guns in the coast batteries, a condition impossible of achievement by other than regular troops, in consequence of the frequent changes and improvements in ordnance and its appliances.

The Committee, however, are not agreed as to the best organization for the Permanent Artillery Force. Colonels Downes, Richardson, and Roberts, are in favour of the Force being organized, constituted, and governed as at present, viz. :— By a military code similar to that of the Imperial Service, subject however to such modified conditions as the Colonial Service may require. On the other hand Colonels Anderson and Scratchley prefer a different organization, based upon the principle that discipline can be maintained by moral influence, together with the prospect of Government employment, rather than by the system of punishments in force in the Imperial army, and that dismissal should be regarded as the chief punishment for misconduct. Colonels Anderson and Scratchley are absolutely opposed to long service in the ranks, except in the case of non-commissioned officers. The Committee are united in recommending that the Commandant should be vested with the power of dismissal; reference to higher authority or the machinery of courts-martial to be resorted to only in special cases. Colonel Roberts further represents that he, as officer commanding the Artillery, should possess the powers vested in commanding officers of regiments in the Imperial service.

The number of Permanent Artillery to be maintained is a point on which there is some difference of opinion, as the estimate for the strength to be kept in the ranks will depend mainly on the formation of a reserve affiliated to the force, whilst the total strength must be governed by the number of guns in the coast batteries.

The Committee are unanimous in recommending the establishment of a reserve as an essential part of the defensive organization of the Colony. The proposal is made on grounds of economy, so that the annual expenditure on the force may bear fruit by adding to the defensive resources of the Colony year by year. It is intended that the reserve should be composed of men of good character, who have served for not less than three years, and that on leaving the force they should receive employment in such of the Government departments as would be willing to open subordinate appointments for "reserve" men. It is probable that, in addition to the State departments, "reserve" men would find employment in minor offices of trust in merchants' offices, banks, houses of business and public companies generally.

The amount of remuneration to be paid to the men whilst in the reserve, in return for which they would have to undergo a certain amount of annual training, is a matter upon which the Committee are not prepared to give a definite opinion; but they are in favour of paying liberal retaining fees, as they consider that every possible inducement should be held out to the men to join and remain in the reserve.

The Committee see no reason to anticipate any difficulty in keeping up the training of the men in the reserve, for inasmuch as the reserve would be affiliated to the force in the ranks it would be practicable to arrange for the annual training in such a manner as not to interfere with the men's employment. The Committee think it unnecessary to go into the details of the training and pay, as these are questions which will have to be carefully considered hereafter, should the formation of a reserve be supported by the Commission.

Although the Committee are not agreed as to the actual numbers of the Permanent Artillery that should be maintained, they are unanimously of opinion that, if a reserve should not be formed, a larger number would have to be kept in the ranks than if a reserve were formed.

Colonels Anderson and Scratchley recommend a strength of 400 officers and men, if no reserve be formed, but they consider that the numbers in the ranks could be reduced to 200 whenever a reserve of about 200 men was formed. Colonel
Downes

Downes proposes 300 without a reserve, and 200 to 250 men with a reserve. Colonel Richardson recommends 300 without a reserve and 200 as the minimum, when the reserve is formed, and thinks it unnecessary at this time to increase the vote for the Permanent Artillery, more especially as in his opinion a sufficient reserve could be formed by the time the fortifications at Newcastle and Botany are completed. Colonel Roberts, however, is in favour of maintaining a strength of 440 officers and men without a reserve, and 340 with a reserve, this latter strength being reduced to 250 whenever the reserve numbers at least 300 men.

This difference in the strength as above stated is accounted for by the greater number of guns assumed to come into action in the one case than in the other, and, in the opinion of the Committee, does not affect the general question at issue. Some of the Committee attach great importance to ensuring sufficient guns to guard the torpedo defences, which are mainly dependent for success upon the protection afforded by artillery fire.

(b) PERMANENT INFANTRY—ITS CONSTITUTION, ORGANIZATION, AND STRENGTH.

Colonels Downes and Roberts are in favour of a small nucleus of Permanent Infantry, but the majority of the Committee do not recommend the establishment of such a Force unless it be from 200 to 300 strong, as they consider that a smaller strength would not be of any practical value. Two to three hundred permanent infantry would entail a cost of from £18,000 to £27,000 per annum, and, as a large body of infantry is required for the scheme of defence, the strength necessary will have to be provided by the maintenance of another description of force as hereafter explained. It should be understood that the establishment of a Permanent Infantry Force would not affect the question of strength to any appreciable extent. The majority fully recognise the utility of such a force to serve as a model and example, and to afford a valuable nucleus for the rest of the Infantry Forces; but they could not advocate its establishment on the military grounds which have led the Committee to insist upon the necessity for a Permanent Artillery Force. Should a Permanent Infantry Force, however, be recommended by the Royal Commission, the Committee are of opinion that its organization and constitution should closely follow that of the Permanent Artillery Force.

(c) VOLUNTEER MILITIA OR VOLUNTEERS AND THE FORMATION OF A RESERVE.

Before entering upon this subject the Committee desire to draw a distinction between a purely Volunteer Force—such as is maintained in Great Britain, and some of the Australian Colonies, without personal remuneration, and only assisted by capitation grants to meet the expenses of clothing, drill-sheds, &c.—and a force such as that existing in New South Wales. The latter is practically a Volunteer Militia, for both officers and men are serving under stringent regulations, and receiving pay for attendance at drill and continuous training. The Committee are decidedly of opinion that this distinction should be officially recognized, and that if the New South Wales Volunteer Force be retained with the present organization it should be called a Volunteer Militia, under which designation it will hereafter be alluded to, as far as practicable, in this report, in order to avoid misconception. This change in the designation of the Force, however unimportant it may appear at first sight, would at once place it on a recognized footing, and settle many vexed questions in connection with the maintenance of a suitable force for the Colony.

Two points are involved in the consideration of the subject viz.,—those of expenditure and efficiency, and they cannot be separated. On purely military grounds Permanent Forces with reserves would be the best, but the cost places the idea of maintaining such forces in sufficient numbers out of the question. A Militia Force, from the extra training which it undergoes for military purposes, should be superior to a purely Volunteer Force.

The choice lies between a Volunteer Militia, as at present established, serving under stringent regulations, and a purely Volunteer Force, or a combination of both. Reference to the evidence will show the views held by the members of the Committee

on

on these points. The majority of the Committee recommend the continuance of the present Volunteer Militia, on the condition that its cost be largely reduced, and that its present strength be not exceeded. Colonel Roberts, on the other hand, prefers a purely Volunteer Force. The majority have arrived at these conclusions after due inquiry into the working of the present system, which has now been in force for nearly three years, with satisfactory results, and they see no grounds for making any radical change. The Committee must point out, however, that if a Volunteer Militia be not maintained a greater strength of Volunteers would be required to take its place. In the opinion of Colonels Anderson, Scratchley, and Roberts it is impossible to ignore the fact that superior numbers, and a thorough knowledge of the ground to be operated upon, would largely counterbalance the superiority claimed for the better drilled but numerically weaker force.

The Committee suggest the formation of a reserve on a purely Volunteer basis, to be affiliated to the Volunteer Militia, as they consider that such a reserve would add materially to the defensive resources of the Colony. The reserve to be composed of men who have served not less than two years in the Militia; of Volunteers who have served as efficient for not less than five years under the old system; and of others desirous of joining a purely Volunteer Force. This reserve to serve without pay, to be clothed, armed, and instructed at the expense of the State, and to take part in the drill and training of the Militia. Colonel Downes considers that the reserve should be paid.

(d) ORGANIZATION AND CONSTITUTION OF VOLUNTEER FORCE [MILITIA] UNDER THE PRESENT SYSTEM—CHANGES RECOMMENDED.

The Volunteer Force is subject to the Volunteer Regulation Act of 1867, and the Regulations thereunder. The Governor is Commander-in-Chief, and, with the advice of the Executive Council, may accept the services of persons desirous of being formed into Volunteer Corps. Provision exists for the organization of corps as regiments or individual corps, as the requirements of the service may indicate. Regiments and corps at Head Quarters are consolidated, and those in the country districts as far as practicable, and as in the case of the Imperial Militia, a paid Regimental Staff is provided. The Governor may disband corps, appoint officers to the Permanent Staff, for command, inspection, drill, exercise, training, instruction, and equipment of the Force. Officers of the Volunteer Force generally are appointed by the Governor in Council, but Volunteer Corps may recommend to the Governor any enrolled member to be an officer of such corps of rank not higher than captain. Candidates for commissions in the Volunteer Force must, prior to appointment, have passed the Civil Service Examination of the Colony, or an examination of a higher degree. The appointment and promotion of officers are further controlled by stringent test examinations on military subjects. Promotions up to the rank of captain are made by seniority, subject to examination; beyond that grade by selection and examination. Non-commissioned officers are appointed by officers commanding regiments and corps, subject to the approval of the officer commanding Volunteer Force, after test examinations.

The Governor has power to order the assembly of courts of inquiry, with reference to an officer, composed exclusively of officers of the Volunteer Force. The officer commanding the Volunteer Force may assemble a court of inquiry, composed of officers or Volunteers, or both combined, to inquire into any matter relative to any corps or Volunteer or non-commissioned officer of the Permanent Staff. These Courts have no power to inflict penalties.

A Volunteer enrolls for an indefinite period of service, and, *except when called out for actual military service*, may quit his corps under the following conditions:—

- (1.) Giving to the commanding officer of his corps fourteen days' notice in writing of his intention to quit his corps.
- (2.) Delivering up in good order, fair wear and tear only excepted, all arms, clothing, and appointments, being public property, or the property of his corps, issued to him, or placed under his charge.
- (3.) Paying all moneys due or becoming due by him under the rules of his corps, either before or at the time or by reason of his quitting it.

Persons

Persons are not enrolled in the Force under the age of 18 years or above 45, except in the case of trumpeters and buglers. They are subjected to a standard with regard to height, chest measurement, sight, and physique generally, to be determined by the examination of a medical officer of the Force. Means exist for getting rid of men who have become incapacitated for the performance of their military duties by reason of age or other infirmity.

The Governor may direct the Officer Commanding the Volunteer Force to call out such Force, or any portion thereof, for actual military service, in case of actual or apprehended invasion of the Colony, or of hostile or predatory attack, or of imminent danger thereof.

When called out for actual military service, the Volunteer Force (except as regards the infliction of corporal punishment) is subject to the Army Discipline and Regulation Act, and the Articles of War made in pursuance thereof. When not on actual military service, the officer commanding a corps has power to reduce a non-commissioned officer, subject to the approval of the Officer Commanding Volunteer Force, and to summarily discharge a Volunteer for misconduct. Officers are subject to arrest, and non-commissioned officers and others to custody, provided they are not so retained longer than whilst the corps is under arms. Volunteers are subject to suspension from military duty pending settlement of the case for which suspended; to fines for minor irregularities and offences against discipline, the same being deducted from pay due, or which may become due. Volunteers are also subject to fines, or in default imprisonment, for non-delivery of arms, clothing, and accoutrements to commanding officer; for pawning, destroying, damaging, or selling public property issued to them as Volunteers; for not keeping uniform in proper order, or wearing it contrary to orders; and finally, for neglecting to pay fines and subscriptions.

The majority of the Committee generally approve of the organization and constitution of the Volunteer Militia, as at present established, under the limits and conditions already prescribed. They have taken into consideration the desirability of giving the force an organization more closely resembling that of the Imperial Militia, and are of opinion that no change is necessary in the enrolment system; that the time has not yet arrived for general service in Australia; and that no necessity exists for placing the force under the Army Discipline Act in time of peace. Colonel Downes advocates an enrolment for one to three years. The Committee, however, view the election of officers by the rank and file as open to the most serious objections. They also advise that the power of summary discharge of Volunteers, within the meaning of the Volunteer Act of 1867, be vested in the officer commanding the Volunteer Force, in common with officers commanding corps.

It is further recommended that such alterations may be effected in the Volunteer Act of 1867 as shall provide for the classification of the forces to be maintained as Volunteer Militia and Volunteer Reserve, together with the affiliation of the latter to the former. The Committee are of opinion that both classes should also serve under the same regulations, modified as regards the Volunteer Reserve in such a manner as may be suitable to the conditions of service.

(e) VOLUNTEER MILITIA AND VOLUNTEER RESERVE—THEIR COMPOSITION AND STRENGTH.

With reference to the composition and strength of the Volunteer Militia and Volunteer Reserve, the Committee have carefully considered the following requirements:—(1) The provision of an auxiliary Artillery Force to supplement the Permanent Artillery in the coast batteries; (2) the field force—comprising Artillery, Engineers, and Infantry—required for the protection of Sydney against the attack of an enemy landed in Broken Bay or at Botany; (3) the Infantry garrisons for the defensive enclosures connected with the coast batteries; (4) the detached Infantry force required at Newcastle; (5) the Torpedo corps for the submarine defences.

So far as the Volunteer Militia is concerned, the Committee do not propose to depart from the strength laid down by Sir William Jervois, which corresponds with the present establishment, and is as follows:—

6 Batteries of Artillery	300
1 Corps of Engineers	60
1 Torpedo and Signalling Corps	100
3 Regiments of 4 Companies each and 2 detached Companies of Infantry	1,255
					<u>1,715</u>
Authorized but not formed, 1 Company of Infantry					85
					<u>1,800</u>

With regard to the Volunteer Reserve the majority of the Committee recommend a strength of 1,200, to be composed of:—

(1) Garrison Artillery	200
(2) Field Artillery	150
(3) Engineers	25
(4) Infantry	825
					<u>1,200</u>

The total strength, therefore, of the Militia and its reserve would amount to 3,000 officers and men, whilst the present Militia is 1,715 strong.

The Militia and Reserve would be distributed as follows:—

(a) At Sydney—					
Field Artillery—Militia	50
Reserve	150
Garrison Artillery—Militia	150
Reserve	150
					<u>500</u>
Engineers—Militia	60
Reserve	25
					<u>85</u>
Torpedo Corps for Botany Bay and Port Jackson					
—Militia	75
					<u>75</u>
Infantry—Militia	1,170
Reserve	655
					<u>1,825</u>
(b) At Newcastle—					
Garrison Artillery—Militia	50
Reserve	25
					<u>75</u>
Torpedo Corps—Militia	25
					<u>25</u>
Infantry—Militia	170
Reserve	85
					<u>255</u>
(c) At Wollongong—					
Garrison Artillery—Militia	50
Reserve	25
					<u>75</u>
(d) In Southern District—					
Infantry—Reserve	85
					<u>85</u>
					<u>3,000</u>

Colonel Downes is of opinion that all the field Artillery should be provided by the Militia, but this opinion is not shared by the other members of the Committee.

(f)

(f) RIFLE COMPANIES OR VOLUNTEER CORPS AS AN AUXILIARY FORCE TO THE
VOLUNTEER MILITIA AND RESERVE.

The Committee are unanimous as to the advisability of establishing Volunteer Corps throughout the Colony for military and social reasons. Whether such bodies are to be designated Rifle Companies or Volunteer Corps seems to be immaterial, provided it is distinctly understood that they are to be raised on a purely patriotic basis, and without pay or emolument, and that they are to be directly under the control of the Commandant. The Committee advise that the Government expenditure on these corps should be confined to the provision of arms and ammunition for annual practice, the men having the privilege of purchasing extra ammunition at cost or reduced prices. Some members of the Committee are of opinion that a capitation grant should be given in addition to provide uniforms, instructors, and drill-sheds. Others deem it important to avoid the expenditure which would thus be entailed.

(g) CAVALRY.

The majority of the Committee, being fully impressed with the necessity for a force of Cavalry in connection with the defences of New South Wales, attach great importance to the statement made by the Inspector General of Police, viz., that he could place at the disposal of the Commandant in time of war some 300 Mounted Police. Colonels Anderson and Scratchley desire, in addition, to establish a Volunteer Mounted Rifle Corps, and so enlist the co-operation and sympathies of a body of men having a stake in the Country, who will not only volunteer their own services but also those of their horses. The strength of the Corps recommended is about 100, to be raised in and about Sydney, on the purely self-supporting principle. Colonel Anderson goes further and advocates the formation of a regiment of Volunteer cavalry. The majority of the Committee are not prepared at present to recommend this increase in the military expenditure of the Colony. Colonel Downes considers that the proposed corps should be paid and form part of the Militia, and does not place much reliance on the Mounted Police if required to act as mounted riflemen. Colonels Richardson and Roberts are prepared to rely upon the Mounted Police alone.

(h) TORPEDO CORPS—ITS CONSTITUTION, ORGANIZATION, AND STRENGTH.

The Committee are unanimous in recommending that the Torpedo Corps should be maintained at a total strength of 100 officers and men, for the management of the torpedo defences at Sydney, Botany, and Newcastle. Colonels Anderson and Roberts are of opinion that a change in the organization of the corps is needed, viz., by the formation of a permanent nucleus, for the proper charge of stores, observing, and firing stations. Colonels Anderson, Scratchley, and Roberts wish to place the corps on a different footing from the rest of the local forces, on account of its duties being of a special character; and, should it be decided that the Volunteer Militia is not to be continued on its present organization, they recommend that this change should not affect the Torpedo Corps. Colonel Scratchley urges in support of this proposition that in England the Volunteer Submarine Mining Companies were recognized by a recent Committee on the Volunteer Forces of Great Britain as special companies, requiring a different organization from a purely Volunteer Force. The officers named propose that the pay should be kept at the present rates, but the number of parades and drills for instruction in submarine mining should be increased to forty per annum, or double the present number.

(i) OFFICERS FOR THE LOCAL FORCES—THEIR APPOINTMENT, PROMOTION, AND
EDUCATION.

(1.) With regard to the Permanent Artillery officers, the Committee are of opinion that preference of appointment should be given to officers who have served in the Royal Artillery, but that the junior grades should be open to ex-Imperial officers of other branches of the service, and especially to candidates identified with the Colonies. The Committee submit these proposals on the understanding that the regulations in regard to qualifying examinations, with limit as to time, are strictly carried out.

As to the education of officers, the Committee are unanimous in recommending that a school for instruction with the necessary instructors be formed, in order that officers may attain a defined standard of military knowledge. Instruction to be
conducted

conducted by qualified officers, and to include such subjects as reconnaissance, field-sketching, surveying, field fortification, minor tactics, elementary chemistry, and mathematics.

(2.) With respect to the officers of the other branches of the Local Forces the Committee recommend:—

(a) That the nomination or elective principle for the appointment of commissioned officers be abolished, and that the present laws, as to candidates being obliged to produce a certificate of having passed either the Civil Service test examination or one of a higher degree, should continue in force.

(b) That, prior to promotion, officers should, as at present, pass an examination as to fitness for higher command; but that some knowledge of field fortification, reconnaissance, and minor tactics, be required.

(3.) Whilst the Committee, with a view to economy, recommend, for the present, one school of instruction, they consider that all officers of the Local Forces should be required to go through a course suitable to the branch in which they are serving, embracing such subjects as minor tactics, field-fortification, surveying, and reconnaissance; and for which they should be granted certificates of proficiency.

(4.) The Committee strongly recommend that a Military Library and a Reading and Lecture Room, should be established in some convenient position in Sydney, subject to the control of the Commandant, and that an annual grant should be made for the purchase of books and the expenses of the reading room. In the opinion of the Committee much good would result if lectures and discussions on military subjects were encouraged.

(j) MILITARY ADVISER AND INSPECTING OFFICER FOR THE LOCAL FORCES IN AUSTRALIA.

The Committee are unanimous in recommending the appointment of an Imperial officer as Inspecting Officer of the Australian local forces, and Military Adviser to the several Governments. This appointment to be held from three to five years, subject to renewal. The duties of this officer should be to conduct periodical inspections of the local forces and the military defences and establishments of the Australian Colonies, and advise the Governments on all subjects connected with the maintenance of the local defences. In time of peace this officer would not exercise any executive command, but, in time of war, should there be combined or federal arrangements for defence, he would assume supreme direction. The Committee in making this recommendation desire not to lessen the authority or full responsibility of the local Commandants, but rather to strengthen their position.

(k) ESTIMATES AND EXPENDITURE.

The Committee are unanimously of opinion that a reduction can be made in the military expenditure of New South Wales. This possible decrease in the expenditure could be brought about by reducing the pay granted to the Volunteer Militia, by the ultimate reduction to be effected in the number of Permanent Artillery resulting from the establishment of its reserve, and by the elimination from the military estimates of items referred to in the succeeding paragraph. The amounts voted by Parliament for the year 1881, under the following heads, are:—

(a) Head-quarter Staff	£2,995
(b) Permanent Artillery Force	31,186
(c) Volunteer Militia	37,165
(d) Public School Cadet Corps	450
(e) Repairs to Military Buildings, lighting lamps, chimney sweeping, &c.	1,900
(f) Works and Defence	6,706
(g) Special Supply of Warlike Stores	2,500
(h) Ordnance Store Department	6,521
(i) Naval Brigade...	5,815
Total	£95,238

The

The Committee consider that an erroneous impression, as to the military expenditure of the Colony, must result from the undermentioned items being included in the military estimates :—

- (1.) Item (*d*) for Public School Cadet Corps (£450) which is chargeable to the estimate for Public Instruction rather than to the military vote.
- (2.) Item (*f*) for Works of Defence (£6,706) which is an amount that will not recur annually.
- (3.) Item (*h*) (£6,521) for the Ordnance Store Department which should be divided between the Military and Civil Branches of that Department.
- (4.) Item (*i*) for the Naval Brigade (£5,815) which is not chargeable to the Military Defences.

If the opinion of the Committee be correct the total of £95,238 is capable of reduction by the sum of £16,221*, being the total of the four items referred to. The balance (£79,017) represents the amount available during the year 1881 for the Military Forces and establishments of the Colony, with a strength of 2,035 officers and men, subject however to savings on account of stoppage of pay, &c., which revert to the public revenue.

*£	
(<i>d</i>)	450
(<i>f</i>)	6,706
(<i>h</i>)	6,521
(<i>i</i>)	5,815
	£16,221

At the request of the Committee Colonel Richardson has prepared an estimate, which will be found in the appendix to this report, of the cost of maintaining forces, inclusive of staff, in conformity with the recommendations of the Committee.

Permanent Artillery	300
Permanent Artillery Reserve	100
Volunteer Militia	1,800
Volunteer Reserve	1,200
	3,400
Total officers and men	3,400

The composition and strength of these Forces are framed in accordance with the views of the majority of the Committee. Colonel Richardson's estimate also includes provision for warlike stores and a school of instruction in addition to the ordinary military expenditure.

The expenditure proposed is subject to reduction as the reserve of trained Artillerymen is being formed, although at the same time there will be an increase in the item for this reserve. Again, should it be decided to establish rifle companies or Volunteer Corps in the country districts due provision will have to be made for them.

Without going into details, which cannot be settled until the Royal Commission have completed their deliberations, the Committee believe that a sum of from £60,000 to £65,000 a year will be found to be sufficient to provide for the military forces and establishments, necessary to be maintained in New South Wales, exclusive of Rifles Companies or Volunteer Corps. The Committee, however, deem it their imperative duty to point out that any reduction in the present rate of pay of the Volunteer Militia could hardly be acceptable or effected, unless to the prejudice of the force, were not a corresponding reduction carried out in the pay of the Volunteer Naval Brigade, which serves under the Volunteer Act of 1867, and performs duties of a less exacting character than those required of the Volunteer Militia.

(l) SPECIAL SUBJECTS.

Federal Regiment of Artillery.—The Committee direct particular attention to the unanimous opinion expressed by the members in favour of the formation of a federal regiment of Artillery. They are aware of the difficulties which will have to be overcome, and the time which must elapse before such an idea can be carried out. They desire to allude to a proposal which has been brought before the Committee by Colonel Anderson, to the effect that a general assembly of the Australian local Forces should take place at some convenient place during Easter week of 1882. It is believed that there would be no difficulty in assembling from five to six thousand men for general manoeuvres. It is scarcely possible to exaggerate on military grounds alone the importance of such a muster, as affording an opportunity for showing the military training and mobility of the several local forces of Her Majesty's Govern-
ments

ments in Australia. The effect of demonstrating the military strength available for the defence of any one Colony attacked is not to be overlooked as a powerful argument in favour of the proposal.

Supply of Ammunition.—The supply of ammunition in time of war is a subject which the Committee consider should not be overlooked by the Royal Commission, and the majority recommend that steps should be taken to purchase a plant for the purpose of making up small arm ammunition. Colonel Downes suggests the establishment of a Central Arsenal for all the Colonies.

Supply and distribution of Water and Ammunition in the field and Ambulances.—The supply and distribution of water and ammunition to troops in the field, and the establishment of ambulances, are matters of the highest importance which should engage the attention of the Colonial military authorities.

Supply of Cannon Powder.—Whilst the supply of small arm ammunition can be readily provided for in the manner indicated, the Committee have not failed to recognize the difficulties attending the supply of cannon powder. The question is, however, of too complex a character to be included in this report.

Commissariat Supplies.—The Committee see no difficulty in arranging for the Commissariat supplies to troops in the field, and consider it unnecessary to make any recommendation on the subject.

(m) ORDNANCE STORE DEPARTMENT.

The Committee in their Progress Report of the 25th March invited the attention of the Royal Commission to the Ordnance Store Department, and are unanimous in recommending its re-organization. At present this department is in no way under the control of the military authorities. In fact if, in time of war, a deficient supply of munitions of war were found to exist, the Commandant could not be held in the slightest degree responsible, inasmuch as the Committee find that supplies are drawn from store without due provision being made for their being replaced. Further, that officer is not furnished with the periodical returns which are absolutely necessary to enable him to recommend to the Government the *replacement* of warlike stores used for reviews, ordinary military training, &c.

The Committee are informed that a Board, designated the "Warlike Stores Board," exists for the ordering of stores; but this Board, whilst it might afford excuses to the military authorities for insufficient supplies, has no responsible functions. The Committee therefore recommend that this department be placed under the control and orders of the Commandant, subject to such instructions as he may receive from time to time from Government, and that when practicable the men of the Permanent Artillery should be utilized for working parties. If these recommendations be adopted a reduction in the expense of the Ordnance Store Department may be anticipated. It, moreover, appears to be unjust to the Military Department that it should be debited with the total cost of a staff, one half of which at least is required for the performance of duties connected with the management and custody of the mercantile explosives.

(n) NAVAL BRIGADE.

Whilst disclaiming any intention to pronounce an opinion on naval matters, and taking into consideration the minutes of the meeting of the Royal Commission held on the 10th of March, the Committee feel bound to report upon the relative position of the Volunteer Naval Brigade, as affecting the rest of the Forces raised and serving under one and the same Act.

The Committee deem it necessary to point out that the present Volunteer Naval Brigade, though composed of a fine body of men, is not established in accordance with the regulations under which it serves, and has practically no place in the defence organization of New South Wales. The Committee find, on referring to Captain Hixson, that the corps has not performed one drill afloat since its formation. As the Volunteer Naval Brigade is established under the Volunteer Act, the Committee fail to perceive that this Volunteer corps is entitled to any distinction over the rest of the Forces serving under the Act; such a procedure is most discouraging to the other Volunteers who are called upon to perform duties greatly in excess of those which qualify a volunteer, belonging to the Naval Brigade, to receive pay.

The

The Committee direct attention to a statement, laid before the Commission by the Commandant, showing the number of daylight drills and the continuous training which the Volunteer Militia have to undergo, and the fines and stoppages of pay to which they are subjected for non-attendance. These deductions revert to the public revenue, whilst the Committee are informed by Captain Hixson that any member of the Naval Brigade may absent himself for one month without attending a single parade, and yet receive his minimum pay of £1; and that, although he may be fined ten shillings or more for absence, such fine does not revert to the general revenue, but is placed to the credit of a corps fund. The Committee, therefore, recommend that whatever organization may be adopted, the Naval Brigade should have to comply with the requirements laid down for the Royal Naval Reserve, so far as they may be made applicable to New South Wales. If, owing to local circumstances, this should be found to be impracticable, a corresponding amount of training should be exacted from the Naval Brigade as from the Volunteer Militia; and no man should be enrolled except as provided in the regulations under which the corps was formed.

In conclusion, the Committee briefly recapitulate their opinions and recommendations:—

- (1.) They unanimously recommend the maintenance of a permanent force of Artillery, and the formation of a reserve to be affiliated to it, but they are not agreed as to its organization and constitution.
- (2.) They unanimously advise that subordinate situations in the Government Departments should be given to the men when leaving the Permanent Force, on condition of their joining the Reserve, and provided they are qualified for such employment.
- (3.) If no reserve be formed, they are united in the opinion that 100 additional men should be maintained in the ranks of the Permanent Artillery.
- (4.) The majority (three members) do not recommend the establishment of a Permanent Infantry Force, whilst the minority (two members) suggest a nucleus of 60 to 100 men.
- (5.) The majority (four members) are in favour of continuing the present Volunteer Militia, and of establishing a Volunteer Reserve in connection with it; one member prefers a purely Volunteer Force.
- (6.) The majority approve of the present organization and constitution of the Volunteer Militia, subject to certain modifications.
- (7.) They recommend the maintenance of a force of 3,400 officers and men for the defence of Sydney, Newcastle, Wollongong, &c., to be composed as follows:—

Permanent Artillery	300	
„ „ Reserve	100	
	400	
Militia Field Artillery	50	
Volunteer Reserve	150	
	200	
Militia Garrison Artillery	250	
Volunteer Reserve	200	
	450	
Militia Engineers	60	
Volunteer Reserve	25	
	85	
Militia Torpedo Corps	100	
	100	
Militia Infantry...	1,340	
Volunteer Reserve	825	
	2,165	
Total	3,400	

(8.)

- (8.) The majority of the Committee advise a reduction in the numbers of the Permanent Artillery to a minimum of 200 men, whenever the reserve reaches a strength of 200 men.
- (9.) The Committee favour the establishment of Rifle Companies on a purely Volunteer basis; some members advocate a capitation grant, whilst the others are opposed to any expenditure beyond that necessary for the purchase and maintenance of arms and accoutrements, and the provision of ammunition for annual practice.
- (10.) The majority propose the formation of a Mounted Rifle Corps for Sydney, the minority rely for Cavalry on the Mounted Police of the Colony. One member recommends a regiment of Volunteer Cavalry for the Colony.
- (11.) The Committee are united in retaining the Torpedo Corps, at its present strength of 100 officers and men. Three members wish the corps to be placed on a special footing.
- (12.) The Committee are unanimously of opinion that a high standard of military knowledge should be exacted from officers of the Permanent Artillery; that all officers of the local forces should be required to go through courses of instruction; that a school of instruction should be formed; that a military library and a reading and lecture room should be established; that the procedure in the appointment and promotion of officers should be maintained, subject to increased knowledge being required of them; and that the election of Militia and Volunteer Officers by corps should be abolished.
- (13.) The Committee unanimously recommend the appointment of an Imperial Officer to act as Military Adviser and Inspecting Officer of the Australian Local Forces.
- (14.) The majority recommend that the military expenditure of the Colony be diminished by a reduction in the pay granted to the Volunteer Militia, and in the number of men to be kept in the ranks of the Permanent Artillery, provided a reserve of trained artillerymen is formed. At the same time they advise that provision be made for the expenditure necessary for the reserves of Permanent Artillery and Volunteers, for a school of instruction and instructors, &c.
- (15.) They direct attention to the subjects of forming a federal regiment of artillery, of holding a general camp during Easter week of 1882, of the supply of ammunition during time of war, of the supply and distribution of ammunition and water to troops in the field, and the organization of ambulances, &c.
- (16.) They urge the re-organization of the Ordnance Store Department, and its transfer to the control of the Commandant.
- (17.) They recommend that the Volunteer Naval Brigade be placed on a proper footing, as at present it has no recognized position in the defence organization of New South Wales.

Sydney, 14 May, 1881.

MILITARY DEFENCES INQUIRY COMMISSION.

MINUTES OF EVIDENCE TAKEN BEFORE MILITARY COMMITTEE.

FRIDAY, 11 MARCH, 1881.

Colonel Major Francis Downes, R.A., examined:—

1. How long have you been in command of the forces in South Australia? Three and a-half years, or rather more.
2. What is your official designation in South Australia, how long have you been in the service, and were you not at one time instructor of a school for volunteer and militia officers? Commanding the local forces. I was the Instructor at the School of Artillery at Woolwich for five years, during which period from 400 to 500 volunteer and militia officers passed through my hands—that is irrespective of the usual garrison instruction.
3. Have you a permanent force at present established in South Australia? Not any actually established, but some money has been voted by Parliament, and I am simply waiting for an order from the Ministry to commence.
4. Do you consider that a permanent or regular force as a nucleus for the rest of the defence force is absolutely necessary? I consider a force of artillery absolutely necessary, and I think it ought to be assisted by a small force of infantry.
5. Or supplemented? Yes, supplemented by a small body of infantry.
6. What do you consider should be the organization and general constitution of such a force? For South Australia I should want as a permanent force one battery; I propose 100 men. I should say there should be a battery of artillery and one small company of infantry. The enrolment should be for five years, subject to re-enrolment for another term of five years with deferred pay, provided the men were of good character; and in order to encourage men coming in for, comparatively speaking, small pay, there should be some rule by which they—and especially non-commissioned officers—should be allowed, if they wished it, the privilege of entering the Government service at the end of their five years or of their term of re-enrolment. The age at which I would enlist men for a permanent force would be 18 to 25, allowing the Commandant the privilege of enlisting discharged soldiers from the Royal Artillery at greater ages if he deemed it expedient.
7. Have you considered in connection with the establishment of a force of the character you describe the formation of a reserve from men who have passed through that force? No, I have not. I think the permanent force that we should deal with in these Colonies for some time to come would be so small that the formation of a reserve from them would be more a reserve of paper strength than anything else. The few that might go into the Government offices would, if they were required, naturally be available. They would be a reserve, but I think their strength would be practically unimportant for some little time.
8. You mean to say that before the men took service in the force the Government should undertake to employ them in the departments after good service of a certain number of years? Yes.
9. Then it would be possible to form a reserve? Those men who received employment should be in a reserve; they would belong to a reserve up to a certain age.
10. Do you think a measure of that kind would be desirable? Yes, but it is not a force I would place much reliance upon yet, as for some time its efficient strength would be small.
11. Assuming, for the sake of argument, that there was a force in existence of 300 men, enrolled for three years, and every year 100 of the men went into a reserve, at the end of five years there would be a force of 300 men in barracks and 500 in reserve, and allowing 20 per cent. for casualties you would be backed by a larger reserve than the force in barracks? Yes, but in this country, from the great number of men going into the interior, many of those on the strength of the reserve might not be available when required. You would have a reserve, but I would not lay much stress upon it.
12. Take the case of the Railway Department. A large number of porters are employed along the railway. Why should not a large percentage of those men be in a reserve? The railways would not be able to spare those men.
13. But when the reserves in England were called out, in the year 1877, 2,000 men or more left the railways? I was not aware of that.
14. The fact is that hundreds of men left their employment, and did so cheerfully; and the idea of those who advocate the formation of a reserve—which appears to some of the Committee a most important point in connection with a permanent force—is that in time of war these railway porters could be replaced at once by substitutes, their duties not being of such a character as to make exceptional abilities necessary? My idea of the source from which the main reserve would be found is the volunteer force. This would be an infantry reserve principally, to be affiliated to the active regiments. As the reserve increased the number of paid volunteers might be somewhat diminished.

Col. M. F.
Downes, R.A.
11 Mar., 1881.

- Col. M. F. Downes, R.A.
11 Mar., 1881.
15. With reference to the organization and constitution of a permanent or regular force, does your proposal mean the enlistment and enrolment of the men as regular soldiers for a period of not less than five years, with a compulsory extension of service if required for a further period of five years? Not compulsory; I would offer to such men as I deemed advisable the option of re-enlisting for a further term of five years with deferred pay.
16. Explain the meaning of the term "deferred pay," as used by you for the second period of service? I mean this: that in order to induce men to re-enrol for the second period of service, they should receive an increase of pay. This increase of pay is not to be given to the man in the ordinary way, but put to his credit, and paid to him in a lump sum at the conclusion of the second period of his engagement, or to his heirs at his death, unless forfeited by felony or something of that kind.
17. As there is no material difference between the wages paid in the several Colonies, at what rate do you think you could enrol men for service in the force you indicate? In my estimate—which was accepted—I proposed 3s. per diem, in addition to food, clothing, fuel, light, &c.—the ordinary things given to a soldier; but I fancy that men would enrol for 2s. 6d. per diem. The rate of wages in South Australia is higher than elsewhere.
18. At what rate do you consider the total cost per man would be, including pay, allowances, and every thing? £80 per annum, exclusive of officers.
19. Do you consider that this amount could be reduced if at the time of enrolment the Governments of all the Colonies held out the inducement of employment in the Public Service, to be given by seniority, and conditional on good behaviour, education, &c.? I do consider it could be reduced, but I do not think the holding out of such an inducement is a practical thing for the Governments to do. It would cause so much jealousy on the part of the civilian element of each Colony that I think any Government would take exception to filling up certain offices, and I do not think the plan would work. If it did, the result would be that the day would arrive when the permanent force would become highly unpopular and be disbanded.
20. Can you give the Commission any idea of the number of men annually required by the foot Police, Railway, and Post Office departments in South Australia? I cannot; they are ever increasing.
21. Is it wise in your opinion to withdraw men for long service in barracks from the general industries of the Colonies, and do you not consider that if kept in barracks for even five years they would from want of change and relief deteriorate and become more or less unfit to earn their own living on discharge? With reference to the first part of the question, it would not be wise, upon the ground of political economy, but as regards the everyday experience of the world it is shown to be more or less a matter of necessity. Of course we know that every soldier withdrawn from industrial pursuits is so much out of the pocket of the country. With regard to the second part of the question, I think the interior economy of the force should be such that every man should be assisted as far as possible in carrying out any trade in which he may have been occupied before his enrolment, and if he have not learned any particular trade that he should be induced to try and learn. But I am strongly of opinion that the only way by which to really keep up the efficiency, and to prevent men and officers from getting rusty, and belonging too much to the people of one place, is for the various Governments to agree to allow their permanent forces to relieve garrisons with one another. Of course that would necessitate a slight alteration in the Acts of Parliament throughout Australia.
22. Would you recommend that in a permanent or regular force men should be allowed to marry? For the first five years certainly not.
23. Would you enrol married men? No, not as a rule; that, like everything else, is open to exception.
24. Would you propose increased allowances to married men, such as lodgings, if quarters are not available in barracks? I would have no married men living out of barracks; they should live in married quarters under military discipline, and the women would then be useful in washing.
25. For all practical purposes your scheme of organization would be similar to that of the Imperial regular army? Very much so; as far as it could be carried out with colonial rules.
26. Assuming that the Governments of all the Australian Colonies agreed to the formation of a force upon the principle that the men should be enrolled for a certain term of years, on the distinct understanding that they would be given employment after good service during that term of years, would you approve of the formation of such a force for Australia generally? Certainly.
27. Do you not think that if a force similar to what you propose, and on the English Army system, were established in these Colonies, it must inevitably deteriorate, as containing from the very first step of its formation the seeds of deterioration? I think the five years' service is not so long as to disqualify a man from taking up his civil pursuits. I think, however, that any colonial force, from the very circumstance of its being entirely in one place, must be more or less liable to get rusty. But the very fact of making the change I propose, that is, changing the garrisons, if adopted, would tend to counteract that to a great extent.
28. Then, in point of fact, you would advocate the formation of an Australian federal regiment of artillery? Yes, an Australian regiment of artillery. I think that the five years' service is not too long. If you extended it too much you would be apt to deteriorate by getting the old soldier principle. I advocate the formation of an Australian regiment without any great hope of getting it, because I consider it better than the intercolonial permanent forces; but at the same time I would have the intercolonial forces rather than nothing. I do not want to do away with those if you cannot get the other. In order to carry out my system, I think it is absolutely necessary there should be some officer who would be superior to all the local Commandants. That officer—call him Inspector General or whatever you choose—should have the right to inspect the colonial forces of each country and report to the several Governments. He should not interfere with the local Commandants, as regards disposition or anything of that sort, but should war arise he should be the supreme commander of all the Australian forces, and should be the confidential adviser in military matters to each of the Governments in the Australasian Colonies. You would have then the Australian regiment and one supreme head.
29. Assuming that you had not the Australian federal regiment would you still have the head? Yes, anyhow.
30. With regard to the term of service for five years, how long do you consider it would require to form a good artilleryman, and also a good infantry man? I think to make a really good garrison artilleryman, a practically trained man that you could rely upon, it would take from a year to eighteen months at the least. An infantry man ought to be made a good soldier in from nine months to a year. I do not mean only the actual knowledge of drill, but the hundred-and-one things that a man picks up by being daily under discipline, accustomed to do what he is told, to exercise judgment, and at times to be self-dependent. A volunteer artilleryman can be rendered quit fit to take many of the numbers of a gun detachment in three or four months.

31. How long would it take for a field artilleryman? For a field artilleryman, simply to manipulate a field gun, about the time of an infantry man—eight or nine months; but for a field driver to work his horses on service, eighteen months or two years would be required, and then out of every thirty drivers you would not get more than half-a-dozen thoroughly reliable men across broken country.
32. Would you advocate their remaining longer than the time you stated in any force that was formed? Yes.
33. What is the minimum time? Three years—not less than that. Of course when I take five years it is a matter of convenience; one has to name a distinct time. I would have it not less than three nor more than five. I consider the periods for the engagement of a permanent force should be not less than three and not more than five years, except for well trained men of good character who are allowed to enrol.
34. Under what sort of disciplinary code should a permanent force be governed? As far as possible the Discipline Act should be assimilated to that of the English army; but I should strongly recommend great powers to be vested in the hands of the Commandant so as far as possible to do away with the necessity of courts-martial.
35. How would you propose to supply the officers for a force of this description? That is a point of great difficulty. The senior officer in actual command—not the commandant—we will say the captain or major of the battery, should be obtained from England, lent from the Imperial army, for a certain term. The other officers should, if possible, be obtained from the Colony, if fit men—men who would subject themselves to a special course of instruction, or, from being in the service, had previously had that instruction—could be found.
36. Do you mean in any branch of the service? Yes. The very fact that a man has been in the infantry goes a long way towards training him.
37. Are you aware that, as regards the permanent artillery of this Colony, no inducement is held out to officers to make it a profession? No, I am not aware of that.
38. Do you not think that the service would be much benefited if inducements were held out such as obtain in the Imperial Service, namely, half-pay retiring allowance, and pensions in certain cases, to lead officers to look upon it as a permanent profession? Undoubtedly. If you do not offer an officer some strong reason to look upon the army as a profession, and cause him to take an extreme interest in it, he is, being surrounded by business men and business connections, sure to be dropping his military profession and more or less playing with commercial matters.
39. Do you not think that if an officer had these inducements it would have a very marked effect on discipline and efficiency? Certainly.
40. With regard to the deferred pay you mentioned, you would not grant it until the second term of service? No. Five years' pay, at 2s. 6d. per day we will say, and increased pay of 6d. per day extra to men who would re-enrol after five years.
41. Do you not think that a proportion of married men would be advisable? Yes, if you have quarters into which you can put them; but on no account if any have to live outside in lodgings, as the wives and families are liable to the worst of deterioration.
42. Would you subject officers on appointment to an entrance examination? No, not on appointment, because I consider they have no means of obtaining the knowledge; but I would give probationary commissions, and at the end of twelve or eighteen months—whatever time may be decided upon—the officers should be subjected to a *bona fide* examination on their branch of artillery or infantry. If they did not pass that their commissions should be forfeited.
43. In the interchange of forces would the New South Wales force, for instance, go to the next Colony, or wherever it was ordered to, under the immediate command of its own officers? They would take their own regimental officers; and their final Court of Appeal, in case of redress being required, would be the Inspector-General, whom I look upon as one who would have the supreme control of the Australian forces.
44. In estimating the number of artillery, would you frame it on any particular number per gun as an absolute requirement? You must to a certain extent take the number of guns into account, but you must also take into account the fact that all the guns in a fort cannot be brought into action at one time, and therefore every Colony must estimate for itself.
45. But in estimating you would take a rough average per gun? Yes—suppose twenty guns could be brought into action at one time, they would require so many artillerymen, but not the full detachment permanent artillery, because I should always depend on a certain number of volunteer artillery or infantry to do unimportant parts of the work. Take a certain number of guns, and allow a certain number of men; then allow in addition to that a reserve for other purposes. If I wanted 200 men to be on the guns that could be placed in action at one time, then I should require fifty or sixty additional men to fill up casualties.
46. Roughly estimating a detachment for each gun at 12 men—what proportion of that number would you consider it necessary to have permanently enrolled as regular artillerymen? From three-fifths to four-fifths of each detachment should be regular artillerymen. I do not intend by stating this proportion to intimate that it is for the actual fighting of such guns, but merely as a basis upon which to determine the total strength of permanent artillery to be maintained. I am of opinion that actually to fight each gun in action one half the detachment might consist of permanent artillery, the other half, if well trained, of volunteer artillery. The balance of the permanent artillery would be required in many other places where guns might have, and would most likely have, to come into action—in the magazines, the shell and cartridge rooms, and to fill up casualties, &c.
47. In making this computation are you taking any credit for volunteer or militia artillery? Yes, those are the very men I am taking credit for. I should make up my numbers from volunteer artillerymen. One-fifth to a fourth would be volunteer artillerymen, provided you had them, and if you had not you would take the infantry. This is reckoning on basis in reply to question 44.
48. Then you consider it is absolutely essential to have four-fifths of the number of men in each detachment of a gun regular artillerymen? For heavy rifled guns certainly, from $\frac{3}{4}$ ths to $\frac{4}{5}$ ths, but with smaller guns quite half might be well-trained volunteer artillery.*
49. Taking a 10-inch gun, how many men would you require? Fourteen or fifteen, and of those nine or ten would be regular artillerymen.
50. So that the proportion of the volunteer artillery to the regular artillery would be as one to five? Yes—one to four or one to five for such guns, namely 10-inch.
51. Would there be any objection to the proportion of regular artillerymen being made up of men in actual

* Say $\frac{3}{4}$ ths permanent artillery and $\frac{1}{4}$ ths from reserve and volunteer garrison artillery.

- Col. M. F. Downes, R.A.
11 Mar., 1881.
- actual service and reserve men who have been trained? Certainly not; reserve men would be *bona fide* regular artillerymen.
52. What proportion of trained gunners and drivers would you recommend in a field-battery? The drivers should all be trained, and from a third to a half of the gunners should be regularly trained.
53. In the case of a volunteer field-battery, do you consider it necessary that the drivers should be taken from the regular artillery, or would it be possible to train volunteer field-artillerymen to act as drivers? In Australia, which, as far as my knowledge goes, is, comparatively speaking, where you can move at all, a smooth country, with no hedges and ditches, or walls to break down and jump your horses and guns over, I think that as a rule the field guns could be driven by the volunteer field artillery. I think volunteers could with steady horses bring their guns up to any position which might be required in this country. If you were in the presence of any enemy, moving over a country like those of Europe, or like India, where there are ravines and difficult driving, then the drivers must be thoroughly trained men.
54. Then assuming that the volunteer field artilleryman would make a good driver, would you consider it necessary that he should be specially instructed by association possibly with a permanent field artillery battery that might be established? Undoubtedly, if opportunity offered, in order to give him knowledge of his harness; that is where he would fail most. He should be instructed so as to get a thorough knowledge of his harness and a knowledge of his horses.
55. And as to the actual driving? For that he could be trained in his own volunteer battery.
56. In your opinion he would require to be more highly trained than his brother soldiers? Yes.
57. Would you recommend the keeping of any horses permanently for the use of the artillery, but which might be used also for other Government purposes? Certainly, if used for other Government purposes, otherwise the expense would be against it. I think if it were possible to keep twenty or thirty horses and use them for other Government purposes it would be a great saving of expense. I should like to say, with reference to a former question, that one reason why I consider a permanent force most particularly necessary is, that in my mind the weak point of a volunteer force must be necessarily in the officers and the non-commissioned officers, from want of means by which they could have real instruction. Having a permanent force, you have at hand a trained body of men who are always ready for any service that is required, and having them you are able to form a school of instruction to which officers and non-commissioned officers should be sent for a certain period regularly to qualify themselves for their duties. I think that is one of the strongest reasons for having a permanent force in this Colony. In the volunteers you cannot lay your hands on men to instruct officers.
58. What do you think the probable cost would be of a small school of gunnery for our requirements? From three to four hundred pounds per annum at the outside.
59. For how long would it be necessary for an artillery officer and a non-commissioned officer to attend this school of instruction? I can only answer that by telling you the practice in England. Here you must adapt yourself to the necessities of the case, to the business employments of your officers. In England an artillery officer has to attend a school for two months. He may attend one month in 1881 and one month in 1882; and at the end of the two months, if he does not get his certificate, he is done for—he gets no promotion. The infantry man has to attend a school for one month, and in his case also, if he does not get his certificate, he has to go. Here you could not apply such a severe test as that. You would have to be content with a week this time and a week at another time.
60. Then you think that to a certain extent a week's training in camp meets the purpose of these schools? No; though camp training is of immense utility to the force.
61. But it would not entirely meet the training in a school of instruction? No; the training school should be theoretical as well as practical. There are many things that you would do at school which you would not do in camp; but at the same time I consider the camp of immense importance.

MONDAY, 14 MARCH, 1881.

Colonel Major Francis Downes, R.A., further examined:—

- Col. M. F. Downes, R.A.
14 Mar., 1881.
62. You have heard what Colonel Richardson has said with reference to the supply of officers for the permanent force: are you of opinion that they should be induced to leave the Imperial Service and take service with the colonial force, or do you think that the better plan would be to obtain the loan of them from the Imperial authorities? I see the full strength of Colonel Richardson's objections to getting them on loan, though I think the force would be better officered provided they were obtained on loan. Taking Colonel Richardson's objection into account, namely, that difficulties might arise between the officers so lent and the Commandant of the whole force, it might perhaps be desirable to adopt his plan—to try and induce officers to leave the Imperial service for the Colonial service. This, however, would become more expensive, and very great care would have to be taken in the selection of officers to serve; otherwise you might have men whom you would be only too glad to get rid of when it was too late. With regard to Colonel Richardson's suggestion that some of these officers should be sent periodically to England, to work up their knowledge of artillery matters to the present date, it is undoubtedly very good, but would be very expensive.

Colonel Major Francis Downes, R.A., further examined:—

- Col. M. F. Downes, R.A.
14 Mar., 1881.
63. Are you in favour of a purely volunteer force on the English model, or of a volunteer paid force? I am in favour of a combination of both; a paid force to take the place of the English regulars, and an unpaid force to take the place of the English volunteers.
64. Do you think it expedient to call men receiving pay volunteers? I make the distinction—volunteers paid and unpaid. The term "volunteer" has got into use; it may not be the best, but I am always against changing terms that have a well-known acceptation.
65. Will you explain in detail the system in force in South Australia? In the first instance there is a paid volunteer force enrolled under a special Act, each man being enrolled for a term of three years, and discipline being maintained by certain rules and regulations made under the provisions of such Act. In the event of being called out for active service on account of liability to invasion from a foreign enemy, or from rebellion, the whole of this force will come under the Army Discipline Act, with the exception of exemption from corporal punishment and loss of life or limb. There is likewise a stringent regulation by which any man who neglects to turn out for service is liable to a penalty of £50 or forty-

forty-two days imprisonment. A reserve force may likewise be formed, from all men and officers who have completed a term of three years' service in the volunteer force. The officers are in the first instance appointed upon the recommendation of the Commandant. The non-commissioned officers are appointed by the Commandant, on the recommendation of the officers commanding corps and companies. The men on first joining must have twenty recruit drills before entering the ranks or being supplied with arms or clothing. The regulations allow the Commandant to parade the infantry thirty-six whole or seventy-two half days in the course of the year; the artillery, forty-eight whole days or ninety-six half-days in the year. In the first year of the formation of the force there was an average attendance of fifty drills in the year; now, as the men are more trained, the average number of drills, exclusive of class firing, and exclusive of voluntary drills instituted by commanding officers for various purposes, would be about thirty per annum. There is no provision whatever for continuous training; continuous training could not be carried out without a special vote from Parliament. Discipline is preserved by a system of fines or imprisonment. The charge has simply to be proved, and a magistrate has no option but to convict and pass the punishment according to the rules and regulations for the particular breach of discipline upon which the volunteer is arraigned. Any officer in command of a party has the power to order a volunteer summarily to twenty-four hours' arrest in a guard-house officially appointed for such purpose by the Governor in Council. The Commandant can at any time reduce a non-commissioned officer to the ranks, or dismiss any member of the force, or recommend the withdrawal of the officer's commission. All paid drills are daylight drills; voluntary drills only are sometimes carried on by moonlight. The paid volunteers are practically all concentrated in Adelaide. In addition to the above force, during the last two years, a force answering almost entirely to that of the English volunteers has been instituted, under the name of rifle companies of the South Australian National Rifle Association. The formation of the rifle companies is thus:—Any twenty or more men may form themselves into a company in any part of the Colony and are so gazetted by the Inspecting Officer. They can elect their own officers, subject to the approval of the Governor in Council. An inspecting officer is appointed under Act of Parliament, to be the medium of communication between the rifle companies and the Government. This inspecting officer naturally is the Commandant. Men of the rifle companies receive from Government, under certain conditions to be mentioned hereafter, a Martini-Henry rifle on loan, also 100 rounds of ammunition per annum. The conditions are that they should drill ten drills per annum; that they should, independently of the drills, go through the regulation musketry course of class firing; that they should provide their own uniform, and that in the event of probability of invasion or rebellion, they should turn out for active service. They would then, like the paid volunteers, be under the immediate orders of the Commandant, and likewise under the Army Discipline Act, similarly to the paid volunteers. Any member of the rifle companies when called out for active service neglecting to come is liable to a penalty of £50 and imprisonment for three months. Each company has to turn out for inspection by the inspecting officer twice a year in its own district; and any member absent from such inspection is liable to a fine not exceeding £5, unless the reasons for his being absent are satisfactory to the inspecting officer. The Association is governed by a Council of nine members, the inspecting officer being an additional member of the Council *ex officio*. The Council is elected annually by a meeting of delegates, one from each company, convened by the inspecting officer. This Council has the power to make rules for the discipline and interior economy of all the rifle companies. These rules, upon being confirmed by the President, pass through the hands of the inspecting officer, by whom they are recommended or otherwise for confirmation by the Executive Council. They are published in the Gazette and become law. The Governor in Council has the power to make regulations for the better government of this force, and has the power to cancel or annul any rule passed by the Council, to dissolve any company, to dismiss any officer, or to dissolve the whole Association if need be. This force first came into existence early in 1879, and companies were formed from 200 miles to the north to 250 miles to the south of Adelaide—all over the province, especially at the principal seaports. At the end of the first year the total strength of the Association numbered nearly 500 men—that is, on the 31st December, 1879. At the end of the second year, 31st December 1880, fourteen additional companies had been formed, and there was an increase to the strength of the Association of 360 men, making its total strength upwards of 800 men. At the time of my leaving Adelaide two extra large companies had been formed, and some forty new members had joined in addition. These men are all to a certain extent trained, and have all learned a considerable amount of discipline. The number of drills compulsory by the Act is ten per annum. The average number of drills that each man does during the year is upwards of twenty, exclusive of class firing. At the present time there is no system of examination for officers—the force is too young, but in the course of time officers will doubtless be examined, and the Inspecting Officer has the power through Government of compulsorily getting rid of any officer who shows that he has not been making the best of his opportunities to gain a certain amount of military duties. The force is very popular, and I believe is tending to a very great extent to develop a martial spirit of defence, not offence, throughout the whole of the Colony. It will eventually induce the youth of the Colony to enter its ranks largely, and it is doing a considerable amount of moral good in many of the up-country townships. Where men had nothing on earth to do in their leisure hours but frequent public-houses they now take their rifle to the practice ground. *However popular this force may become it should never be considered otherwise than as an auxiliary to the paid volunteer force, who from their better opportunities of training, from their being associated together in larger numbers, and from their always being under the eye of the Commandant and experienced officers, answer the purpose of the regular force of the Colony.* There is no doubt whatever, apart from all moral good, apart from the benefit to the community at large, that this force as now described, if really kept up to the mark, would be a most useful auxiliary in the case of invasion, particularly as the majority of its numbers are far better rifle shots than the majority of the paid volunteers, owing to their being men of more independent means—farmers, and others following country pursuits—thus having much more time to practice rifle-shooting. I may mention, to show how much rifle-shooting is practiced by this force, that during the year 1880 I paid to the South Australian Government upwards of £1,300 for rifle ammunition purchased, of which sum about £1,000 was contributed by members of rifle companies. I have omitted to mention that the Government provides targets for each company, and grants to the rifle companies £200 per annum for prize money. This amount is in addition to the £300 per annum granted for a similar purpose to the paid volunteer force. Independent of this, each member of a rifle company only costs Government 10s. per annum. I think, however, it is possible—and I would advocate it—that a capitation grant of £1 10s. per annum may be given to effectives, under conditions somewhat similar to those which obtain with the home volunteers. Each member of a

Col. M. F.

Downes, R. A. The Council can expel any member for misconduct, but in such a case three weeks are allowed for appeal
14 Mar., 1881. to the Governor in Council. To the general fund under the management of the Council every member has to subscribe 10s. annually, and to their own company fund a similar amount.

TUESDAY, 15 MARCH, 1881.

Colonel Major Francis Downes, R.A., further examined:—

Col. M. F. 66. Would you state your views with regard to the composition and strength of the field force required to
Downes, R.A. resist attacks by land? Before giving my views as to the actual strength required I must give some
15 Mar., 1881. reasons, or rather my opinions, upon what I consider are the dangers to which Sydney is exposed from the attack of land forces. There are only two nations by which Australia is in any way likely to be attacked, namely France and Russia. The former will have her base of operations at Saigon, the latter at Vladivostock and other ports in the same seas. I have observed in the papers during the last two or three years that Russia has been largely augmenting her powers of attack both as regards men and ships in these seas. We know for certain that during the last twelve or eighteen months, ostensibly in order to be prepared for hostilities with China, she has been sending out to her naval stations in the Pacific vessels which have been purposely made to accommodate from 1,000 to 1,200 men, with steam power calculated to give considerable speed. I see also that quite recently the Russian Government are undertaking to form what is called a Pacific Commercial Steam Company, somewhat similar to a company of like nature in the Black Sea. These steamers are to go at the rate of sixteen knots per hour, they are to be constructed so that if necessary they can carry heavy guns; naturally they will carry a large number of men, and they are built of steel. Likewise I believe, from information that one has been enabled to gather, that Russia has for some years past, and especially during the last two or three years, endeavoured in every way to get military and naval settlers in considerable numbers on these settlements in the China Seas. With such means at her command, Russia, in the event of war, will be able to prepare with her usual secrecy, and schemes fully worked out beforehand, a powerful force to attack these Colonies; and in my opinion our first intimation of such an attack, after declaration of war, would be by the arrival of such a force on our shores. I therefore am strongly of opinion that the forces of these Colonies must be prepared at any instant to meet a serious attack, and I apply this more particularly to Sydney, a position of such immense value, and one from which an enemy would gain in money and in other ways such great advantages. I assume, therefore, that the force despatched to make such a land attack would consist of from 2,000 to 3,000 thoroughly trained men—probably the latter number would be more correct. The numbers would be made up principally of infantry and partially of naval brigade, and they would probably have, and be able to land with them, not more than from six to eight guns. From this I propose the least numbers that I consider should be at command to meet such an attack. At Sydney and in its immediate proximity I should propose a force to consist of 3,000 paid volunteers, 100 cavalry (mounted rifles), an engineer corps of 100, and 210, or three batteries of field artillery, each battery to be composed of six guns. I am aware that this proportion of artillery is far in excess of the ordinary proportion as ruled in European armies. The reasons why artillery has to be reduced in continental armies are many, but will not apply to the particular instances that are met with here. The field force will not be required to march any great distance, and the ground is pretty open, and it will therefore be no great disadvantage to encumber the roads by more than the ordinary allowance of artillery, and the moral strength gained by having this additional number of guns will far more than compensate for the very slight disadvantage that in this case would be found by the extra number of carriages. Further, as regards the increased amount of artillery that I wish for, as there is no establishment of horses to be kept up, the consequent expense will be no greater than the actual supply of the guns and equipment. I do not consider that these 3,000 infantry would be of themselves sufficient to meet an equal or nearly equal number of the thoroughly trained and disciplined troops that would be brought against them; but if a purely volunteer force, such as rifle companies, are instituted, a considerable number of these might be brought to their aid before action took place. Newcastle, likewise, has to be considered, but I am not in a position, from want of knowledge of the locality, to state what attack would have to be met in that particular place—I understand that the fort to be erected will effectually prevent a landing. The question will naturally be asked, "Do you take no account of the English navy?" In reply to this, I should say that such vessels of the English navy as might be on the coast would in all probability be drawn away either by false rumour or by false attack made upon some other point of the Colonies, or looking after cruisers. I do not propose to have paid volunteers anywhere but in Sydney or its proximity, for I do not consider that the full value of the money spent would be gained unless the paid volunteers are immediately under the eye of the Commandant.

67. Taking the lowest average cost of the present paid volunteer force here, have you taken into consideration the annual cost of the volunteer force you recommend, irrespective of all outside expenditure? No, because I consider the force here costs far more than it ought to do. I believe a paid volunteer force is to be obtained at a very greatly decreased expenditure. A paid volunteer force might be kept up, as regards the actual pay, at (I should say) from £5 to £6 per man per annum. That is not including camp of instruction.

68. Will you favour the Commission with details as to how a paid volunteer force could be obtained, not to cost more than £6 per man for pay annually? I can only state my own experience. I get now an average of thirty daylight drills per annum, and those drills are paid for per man or private at 2s 6d. a drill. Thirty half-crowns are £3 15s. There will be some few drills for which the men get a whole day's pay, and that will increase the amount to from £5 to £6. The men receive a suit of clothing, which has to last three years. The contract price for this clothing, taking infantry, artillery, and cavalry together, averages £3. The clothing lasting 3 years or £1 per annum. The officers receive rates of pay far below what are given in Sydney. A captain, for instance, receives 5s. for each half-day, or 10s. for a whole day's drill.

69. What would be the total cost per man per annum, including all expenses but equipment, of a force of 3,500 men of all arms? The cost of that force as regards pay and clothing, allowing that the clothing lasts for three years, would be, in round numbers, £23,000 per annum or £6 10s. per man; say from £23,000 to £24,000 to bring in the officers. That is as regards the pay and clothing.

70. Would you add the cost of instruction and staff? I think the instruction and the staff would amply be covered by another £4,000; making a total of £27,000, or, to allow a still greater margin, £28,000 or £8 per man.

Col. M. F.
Downes, R.A.
15 Mar., 1881.

71. Assuming that these men went into camp for six days' continuous training in the year, what do you estimate roughly would be the total cost? In the first place, attaching the great importance I do to continuous training in the camp of instruction, I think, with the volunteer element, it is a decided mistake to make that training compulsory. Many men cannot go into camp, however willing, without great sacrifice; if it were made voluntary, from the known spirit of these volunteers, every man who fairly could do so would be sure to go, and by taking Easter-time or Christmas-time, or some other time of holiday, the camp might be so formed as to take men for only one or two days away from their occupations. I therefore would not propose extra pay while in camp, except sufficient to cover the expense of rationing, fuel, &c., whatever that might be—as stated by Colonel Anderson, half a crown per diem per man, exclusive of pay, which would be 5s. per diem.

72. Then, assuming that 2,000 men attended the camp for six days, the cost would be £4,500? Yes, but I think five days would be sufficient, as it is necessary to consult economy.

THURSDAY, 17 MARCH, 1881.

Colonel Major Francis Downes, R.A., further examined:—

73 Will you state what strength you recommend for the working of the guns in the coast defences provided at Sydney, Botany Bay, and Newcastle, including the garrisons to man the defensive works in case of attack? Before I enter into any definite statement, I wish to say that as regards Newcastle, from want of knowledge of the locality, I cannot give any particular numbers. But the defence of Newcastle I consider one of most paramount importance, not only to New South Wales, but to the whole group of Australian Colonies, as from thence an enemy could obtain most ample supplies of coal. I should, therefore, say no further about Newcastle than that I should recommend a force—purely volunteer—to be raised there in addition to some permanent artillery, and, if it is in contemplation to do so, a railway completed from Sydney to Newcastle. The defence of Botany Bay I consider can be taken generally with that of Sydney. The principle upon which I base my numbers of men required is the number of guns which might be in action at any one time, or likely to be called into action as an enemy advances closer. Reckoning these, exclusive of Botany Bay—for I do not think there is the slightest probability of a serious attack by land and by sea being contemplated at the same time, though an attack by land would probably be accompanied by a false attack by sea on the batteries, or *vice versa*—I assume that twenty-eight guns might be in action, or are so situated that men should be handy to fight them at any instant. Going upon the number I have already laid down, that a basis should be formed by taking from three-fifths to four-fifths of the detachments from the permanent artillery, I recommend for the permanent artillery a force of 200 men, to be supplemented by two well-trained batteries of volunteer garrison artillery. For infantry to man the defences actually guarding these batteries, it appears to me there should be at the Middle Head 100 infantry; at the redoubt, which I understand is in contemplation near George's Head, fifty infantry; at the South Head, fifty infantry. These men, I consider, might all be taken from the numbers I have advised for the field force; and further, as I have already stated, I do not consider it possible that so great a naval flotilla could be assembled as at the same time to attack the harbour defences of Sydney and also to land a field force at Botany Bay or elsewhere. The numbers that I have now advised as a minimum garrison for these defences could be largely supplemented by the other infantry in the hands of the Commandant. As regards the torpedo force, I recommend from eighty to 100 men, paid volunteers. As regards the Naval Brigade, I propose, unless gun-boats and torpedo-boats are provided, to abolish it altogether, with the exception of some few real seamen, who might be employed for the purpose of rowing guard-boats, they likewise being paid volunteers. In estimating the strength for the permanent artillery, I have put it at what I consider the very lowest rate, in order to economise expenditure as much as possible, and also bearing in mind that as probably a reserve will be formed from the artillery force, in the course of at least twelve months there will be some men from that source available to assist in the manning of the batteries.

Col. M. F.
Downes, R.A.
17 Mar., 1881.

FRIDAY, 18 MARCH, 1881.

Colonel Major Francis Downes, R.A., further examined.

74. Will you state your views on the subject of the system of examination which you recommend should be adopted for appointments and promotions in the military forces of the Australian Colonies—first, under the head of permanent force; secondly, volunteer force? As regards the officers of the permanent force, who may be selected locally, I think their commissions should be, in the first place, probationary, and that afterwards they should be examined both theoretically and practically, laying particular stress upon the latter in all matters connected with the artillery of the fortifications. They should possess a knowledge of reconnaissance and of field fortification, and they should be able to drill their men in company and carbine drill. With regard to volunteer officers, I should prefer them rising on a regular gradation from the ranks, provided they are such men, socially and educationally, that the Commandant may consider qualified to hold commissions. Before receiving their commissions these candidates should pass an examination, or rather should show that they are able to drill and instruct a company of infantry, and that they have a theoretical knowledge of the principles of extended order, of the duties of advance and rear guards, and infantry outposts. Before further promotion to the rank of captain they should have been taught and be examined in elementary reconnaissance, field fortification, and elementary tactics. They should likewise show that they are able to drill a battalion and thoroughly understand the principles of the present system of fighting in the field. I consider that the only way of imparting such instruction, both to officers of the permanent force and of the volunteer force, is by means of having a school of instruction at which such officers could go for such periods of training as may be found convenient, under the superintendence and teaching of an officer specially attached to conduct the education given in this school.*

Col. M. F.
Downes, R.A.
18 Mar., 1881.

Colonel

* Reason for not wishing to enforce higher standard of examination in the case of Volunteer Officers.—My reason is this, that I consider the examination that these officers have to pass, as explained by Colonel Richardson, to be quite as much as can be expected from men who have their ordinary business avocations to pursue. I have a great aversion to put on paper an order which cannot be carried out in practice, and such, I think, would be the case if the syllabus of examination for Volunteer Officers were made stiffer than at present. Probably some might be encouraged to go further, but it is as much as the majority can be expected to do.

Colonel Major Francis Downes, R.A., further examined :—

Col. M. F. Downes, R.A. 75. What are the various rates of pay for the several ranks, and what amount of work is got out of the force in South Australia for the pay? The principle upon which pay is given is simply this: no work, no pay; whatever work is to be done is paid for, so that as long as I do not exceed the number of days' drill which I am authorized to exact by Act of Parliament, the work done by the force depends entirely upon the orders I may think it judicious to give as regards calling them out for purposes of training. By the Act of Parliament pay is allotted at a daily rate. In order to earn a full day's pay the drill must be five hours or upwards; to earn half a day's pay the drill must be not less than two hours and not exceeding four hours. On the first formation of the force their average attendance for the year was from forty-five to fifty half-days. The force having now been in existence for nearly four years, and as the men are enrolled for three years, and having now acquired a certain amount of training, I have, so as not to be too rigorous and create disgust by taking up all their half-holidays, decreased the number of drills per annum to about thirty, this being exclusive of class attendance for class-firing, and two holidays entirely taken up for field days. The daily rates of pay are as follows :—Lieut.-Colonel, 15s.; major, 12s. 6d.; captain, 10s.; lieutenant, 9s.; sergeant, 10s.; sergeant-major, 8s.; sergeant, 7s. 6d.; corporal, 6s. 6d.; private, 5s.; drummer, 5s. The rates of pay for artillery are on the average for each rank 1s. per diem in addition. If a volunteer officer or trooper has to turn out mounted he receives in addition, to cover the expense of the horse, the sum of 6s. daily rate, or 3s. for the half-day that this horse is used at drill. In the event of a parade being ordered, if a man is absent without leave, he not only loses the pay to which he would have been entitled if he had been present, but is also fined a sum equivalent thereto, which is returned to the Government; also, if a man is absent from five consecutive drills without leave, he is liable to a fine not exceeding £5, or ten days' imprisonment.

76. In calculating the number of hours necessary to complete the half day or full day, at what time do you commence to make your calculation? From the time the parade is ordered until the men are broken off.

77. Then, in the force under your command, a man volunteering for mounted duty does not volunteer the services of his horse—that is, if he belongs to the cavalry he receives pay at the rate of 6s. per day for his horse extra to the allowance for himself? Yes, at 6s. for the day that the horse is absolutely used at drill.

78. You informed the Committee that the volunteers under your command are enrolled for three years: would you state how you provide for their release from service under the indispensable necessities connected with private life? I never allow resignations. When a man is once enrolled for three years I keep him to his colours; but, as must happen frequently in a new country, a man from want of occupation, or from his ordinary occupation failing at Adelaide, or other private reasons, may require to seek work elsewhere. If only for a short time, such as three or four months, he has to return his rifle and gets leave; if, however, the time is longer than that, or apparently indefinite, he brings his uniform accoutrements, &c., to the staff office, where they are labelled and put aside, and he pays the sum of £1, which is returned to him on his rejoining, and he is put on permanent leave. I have instituted this method so that, in the event of a turn-out for service, I could recall to the ranks all the men who have left Adelaide in this manner. The number of men we have on permanent leave varies from eighty to 100. Many men who in the first instance went away for an indefinite period have returned to Adelaide, and have reported themselves, rejoined their companies, and their money has been returned to them.

79. Do you consider that the regulations under which your volunteer force is serving in South Australia are too stringent, and what is the number of men who re-enrolled after three years' service? I do not; on the contrary, I believe that the stringency of the rules adds greatly to the efficiency and discipline of the force. At the same time if this power, which is a far greater power than an officer in a similar position in the English army would hold, were put into the hands of a commanding officer who used them indiscreetly, they might cause disgust. In answer to the latter part of the question, I can give, not in exact figures but approximately very close, the numbers of men who re-enrolled from those whose time expired during the year 1880. The number in 1880 whose time expired, or who had finished their service of three years, was about 400; of this number, all excepting seventy-two, re-enrolled into the volunteer force or into the reserve force for a further period of three years. During the same year over 360 recruits joined.

TUESDAY, 22 MARCH, 1881.

Colonel Major Francis Downes, R.A., further examined :—

Col. M. F. Downes, R.A. 80. Do you think the permanent artillery should have charge of the maintenance of warlike stores? Yes, entire charge of those allotted for immediate service of the batteries. The Commandant of the forces should be held entirely responsible for the maintenance of proper reserves of warlike stores,—in fact, the whole Ordnance Store Department, as it at present exists, should be placed under him.

81. Do you think it would be wise to reduce the strength of the permanent artillery below 300 officers and men at the present time? I think that, provided there are from 200 to 300 men (paid volunteers), garrison artillerymen, thoroughly well trained, the permanent force might be reduced to from 200 to 250, exclusive of officers; provided also that the reserve from the above force could be maintained; taking the wants of Newcastle and Botany Bay into consideration, I would not reduce the present force unless a certain number of that force were prepared to pass into the reserve, so as to make up the total number of the permanent force, plus the reserve, equal to 300 non-commissioned officers and men.

82. By the paid system do you not limit the number of men who are anxious to join the volunteer force, especially in the country? I advocate the paid system of volunteers for Sydney and its immediate proximity only; I advocate the formation of a purely volunteer force throughout the whole country.

83. Do you consider it advisable to extend the system of drilling boys in the public schools of the Colony? I think it most desirable that boys in the public schools of the Colony should be trained by a certain amount of drill; provided that the drill is taken out of the time allotted to school hours, and not taken out of the time given to recreation. In the one case the boys will like the drill as an agreeable change; in the other case, they will resent it as an interference with their lawful play-hours.

84. What should be the duties and term of office of the Imperial officer you recommend should be engaged by the Australian Colonies? I think his duties should be primarily to act as military adviser to all the colonial Governments through whom he has been engaged; that he should have the power of inspecting the colonial

colonial forces at least once, and possibly twice a year if thought advisable by the respective Governments; that he should consult and advise the colonial Governments especially upon the numbers and quantities of warlike stores to be kept in reserve; that he should, in conjunction with the Commandant of the local forces, draw up and prepare general schemes to resist attack; that beyond his power and right to inspect the forces of each Colony, he should not in time of peace interfere in any way whatever with the local Commandant, unless directly asked to do so by the local Government; that in time of war he should have supreme command of the forces of all the Colonies which concur in his appointment. I think the term of office should be not less than five years—the ordinary period for staff employment. Similarly to the ordinary conditions of staff employment, such term could be renewed if the Governments by whom such officer was employed were agreeable to do so. I further add that I think it desirable that general schemes for examinations of officers, schools of instruction, &c., should be submitted to him for his consideration and advice. Lastly, that he should constitute a final court of appeal in the event of differences arising between Commandants and their officers.

Col. M. F.
Downes, R.A.
22 Mar., 1881.

85. Do you think the permanent artillery force should have charge of the maintenance of the coast defences? Yes; I think it would be better to put them in entire charge, as there will be amongst such a body of men a certain number of artificers, who could repair damages, &c., at a cheaper rate than if done by contract.

86. What do you consider should be the number of officers in the permanent force, consisting (say) of three batteries? I would prefer to leave the actual number for the Commandant of the forces to settle, but in consequence of the dispersion of the batteries, the number would necessarily be larger than as a general rule would be required in other places.

THURSDAY, 24 MARCH, 1881.

Colonel Major Francis Downes, R.A., further examined:—

87. Do you think that a reduction in the annual military expenditure could be effected, having due regard to the efficiency of the military force, and without material injury to the service? Yes.

Col. M. F.
Downes, R.A.
24 Mar., 1881.

FRIDAY, 25 MARCH, 1881.

Colonel Major Francis Downes, R.A., further examined:—

88. What is your opinion of the annual expenditure necessary for the maintenance of a defence organization suitable for the requirements of New South Wales? The force that I have proposed could, I estimate, be maintained for an annual expense of £65,000 per annum; this is exclusive of any permanent infantry forces, viz. :—

Col. M. F.
Downes, R.A.
25 Mar., 1881.

Permanent Force	£18,000
Field Force	28,000
Staff—Instruction, &c., &c.	4,000
* For maintenance of warlike stores, per annum	5,000
Margin for extras, camp, &c.	10,000
		<u>£65,000</u>

MONDAY, 28 MARCH, 1881.

Colonel Major Francis Downes, R.A., further examined:—

89. Can you state what Acts relating to the military forces were in existence in South Australia before you took command of the local forces in that Colony; also what modifications you have considered necessary to make in those Acts? There is a Militia Act still in force, but which has never been acted upon, and there is a Volunteer Act of 1865, which is the basis of the present volunteer paid force. Rules and regulations were framed, founded upon this Act, before my arrival. A few of the rules were changed on my recommendation, and a few additional ones added. The Rifle Companies Act and Permanent Force Act were prepared by me.

Col. M. F.
Downes, R.A.
28 Mar., 1881.

90. Why do you consider that the field force reserve should receive pay? My reasons for recommending that a small pay should be given to the field force reserve are—1st. I consider the formation of a reserve to be very important. 2nd. Unless a gratuity is given to a man enrolling in the reserve and a small annual pay guaranteed, I think that comparatively few men would join. This pay being given annually in arrears would ensure the men in the reserve keeping the authorities cognizant of their address, and render them less likely to leave the reserve. 3rd. They would be more likely to attend the especial drills ordered for the reserve if they knew that pay was attached to them.

91. What system is in force in the Colony of South Australia in regard to the drilling of boys in the Government Public Schools? Briefly it is as follows:—All schoolmasters have to obtain a certificate of proficiency

* I assume that there is sufficient reserve in hand, and estimate £5,000 will be an adequate annual sum to replace expenditure caused by infantry and artillery practice, and wear and tear.

Col. M. F. Downes, R.A.
28 Mar., 1881.

proficiency of drill at the Training College, Adelaide. At every school all boys are instructed in drill; this instruction is given in the school hours, not during the recreation time, and consequently is popular with the boys. The head of the Training College periodically inspects the schools as regards progress in drill and capacity of schoolmaster to teach. Most of the private schools give instruction in drill.

92. What number of rounds should be held in reserve for the 9-inch and 10-inch M. L. R. guns, the 80-pounder guns and 16-pounder guns—assuming 100 per gun in artillery charge? As in the event of a war in which Australia was likely to be attacked, it may be assumed that, even if the ocean highways were not blocked, the resources of England would be so strained for her own immediate wants that there would be great difficulty, if not impossibility, in obtaining supplies,—I therefore recommend far greater reserves than laid down in the Imperial Blue-book,—viz., for 9-inch and 10-inch guns, 100 rounds per gun, for 80-pounder guns, 150 rounds per gun, for 16-pounder guns, 400 rounds per gun—assuming 100 rounds for each gun to be in charge of the artillery in addition to the above. Australia ought not to be dependent upon England for minor munitions of war, but should have, in some inland spot, such as Wentworth, a federal arsenal in which such as the above and gunpowder—small-arm ammunition especially—should be manufactured and kept in stock.

93. Will you now sum up your evidence, and give a brief outline of your recommendations upon the matters referred to the Commission for report?

1. *Necessity of Permanent Force.*

I consider a permanent force of artillery to be absolutely essential. From such force I recommend a reserve of well-trained artillerymen should be formed.

To induce men to join such reserve, they should be as far as possible offered situations in the Government departments on entering reserve.

2. *Permanent Force and Reserve—organization and constitution.*

Men of the permanent force should be enlisted for at least three years—not more than five. Men of good conduct to be allowed to re-enrol for a further term of five years.

Force to be sub-divided into three batteries, the whole to be commanded by an ex-Royal Artillery officer or one lent from the Imperial service for a fixed term.*

Remaining officers to be obtained locally, and educated professionally by means of military schools of instruction.

To induce officers to make such service a profession, they should be well paid and have the prospect of pensions or bonuses on retirement, according to the custom which obtains in the Civil Service.

Discipline to be maintained by Army Discipline Act as far as applicable to this Colony, but very enlarged powers to be given to the Commandant of the Forces.

Reserve to be enrolled from men of good character who have completed three years' service. Each member to receive a small annual gratuity paid in arrear; to turn out for drill a certain number of times each year.

I consider that the establishment of a federal regiment of artillery for the whole of the Australian Colonies would be the best means of obtaining efficiency.

3. *Organization and Constitution of Volunteer Force.*

A paid volunteer force for Sydney and its immediate neighbourhood.

The purely volunteer system to be developed and encouraged throughout the Colony.

The Acts of Parliament of this and all Colonies to be so amended that volunteers enrolled under such Acts be liable, in the event of actual service, to be employed in Australia or Tasmania.

I strongly advocate the appointment of an officer as Inspector-General to inspect the forces of all the Australian Colonies; to be the military adviser of each Colonial Government, and in the event of war to exercise the supreme command.

4. *Composition and number of Field Force.*

From 2,500 to 3,000 paid volunteer infantry.

Field artillery, eighteen guns, three batteries seventy men each. Cavalry (mounted rifles), eighty to 100 men. Engineers, eighty to 100 men.

The above, with the exception of some few infantry at Newcastle, to be raised in or near Sydney.

5. *Strength of Permanent Force and Force required to man Harbour Defences.*

Permanent artillery, from 200 to 250 men. Paid volunteers:—garrison artillery from 200 to 300 men; paid volunteers, torpedo corps, eighty to 100 men. As the Reserve is formed less volunteer artillery will be required.

As it is highly improbable that a serious attack both by land and sea could be conducted at the same time, the infantry garrison for the entrenchments protecting the batteries could be furnished from the field force.

Unless the Colonial Government proposes to provide gun-boats or torpedo-boats, I should recommend the naval brigade to be abolished, except perhaps a few men kept for rowing guard-boats.

6. *Ordnance Store Department.*

By placing this entirely under the Commandant much economy might be effected, as many of the duties might be performed by the permanent artillery. The Commandant would then be solely responsible to the Government for the maintenance of proper reserves, also for the efficiency and proper care of the warlike stores in hand.

* N.B.—Title of such officer to be "Officer Commanding Artillery."

7. *Principle of Examination.*

A school of instruction should be established for the professional education of all officers of the permanent force.

Officers of volunteers should, as far as compatible with their professions, be encouraged to attend such schools.

I strongly advocate that for Australia generally a military school, similar to that lately formed in the Dominion of Canada, be established. The benefit derived from such school would be most valuable and important—far in excess of any local training that could be obtained.

Col. M. F.
Downes, R.A.
28 Mar., 1881.

8. *Expenditure, &c.*

I believe that a far more economical system of paid volunteers might have been advantageously established than now obtains in New South Wales, but whether it would now be desirable to establish such a system in this Colony I am not in a position to give an opinion.

Supplementary Evidence received by the Military Committee.

From Colonel Downes, R.A., 3 May, 1881 :—

(1.) What do you consider should be done to ensure a supply of ammunition in time of war? No reliance could then be placed upon obtaining supplies from England. A central arsenal at a place like Wentworth should be established. I name Wentworth on account of its position at the junction of the Darling and the Murray, and because it seems that in all probability, ere many years are past, the railway systems of New South Wales, Victoria, and South Australia will meet at that point. The expense of this arsenal should be borne by the federating Colonies. Small-arm ammunition, shell, fuzes, tubes, transport-carriages, and gunpowder should be manufactured there. In the meanwhile, each Colony should year by year vote a sum of money by which a small reserve of the above could gradually be accumulated. This reserve should on no account be trenched upon for the annual practice either of artillery or infantry.

Col. M. F.
Downes, R.A.
3 May, 1881.

(2.) What is your general idea of colonial naval defence? I do not think that any local colonial naval defence will ever repay its cost. From the very nature of the problem, unless enormous expense is incurred, it is impossible that it should do so. The ships both in design and armament will become obsolete. The officers and men cannot possibly acquire that training and experience so absolutely necessary for the naval man at the present day, when science and the knowledge of continually changing weapons, machinery, and modes of attack are far more important than seamanship in deciding the issue of naval engagements. I therefore propose the adoption of some such plan as the following :—The federating Governments of Australia to decide upon the sum of money they would each annually contribute—this sum would undoubtedly be supplemented by the Imperial Government. With the sum total hire, from the Imperial Government, ships, officers, and men—these ships to be an addition to the active strength of the present British Navy, and to be called the Australian Squadron; but with the proviso that they should never leave Australian waters, except by and with the consent of the federating Governments. Subject to such proviso, their disposition, &c., to be entirely in the hands of an English Admiral or Commodore, appointed for a fixed period. The officers and crews to be regularly relieved from England, as with the Pacific, China Squadrons, &c. The ships to be changed or sent Home for overhauling, as is customary with other vessels of Her Majesty's Navy. I think it is only by some such plan that the naval defence of the Australian Colonies can ever be placed upon a satisfactory footing; while at the same time the strength of the British Navy will be increased. I think also that, apart from all questions of efficiency, this method would be far more economical than if the various Colonies provided in detail their own naval defence.

(3.) As to term of enrolment for Volunteer Militia? I cannot agree "that no change is necessary in the enrolment system," as I do not think it can be conducive to the interests of the service if men can retire at fourteen days' notice, according to the present system. This allows a man to retire for a whim of the moment, or on account of a fit of ill-temper. Expense to Government will likewise accrue unless he has to pay for his uniform. I am of opinion that every man should be enrolled for at least one year—still better for three years. Volunteers in South Australia are enrolled for the latter period, and I have no reason to think that any hardship or discontent has been caused thereby, as men are placed on leave if their occupations necessitate their leaving Head Quarters. Should war arise, their services are available, and while on leave they have been no cost to the country.

(4.) As to strength of field artillery? I am of opinion that the whole of the field artillery (200) should be in the militia force, instead of 50 in the militia and 150 in the reserve. The field artillery should be kept up to the highest state of efficiency and training compatible with a volunteer field artillery. From the very nature of the case, those in the reserve could not be so regularly trained and drilled as those in the militia.

(5.) As to the proposed mounted corps for Sydney? In the Volunteer Militia I would recommend from 80 to 100 cavalry (mounted rifles). I do not believe in the self-supporting system for cavalry (page 19), as no men require higher or more intelligent training; and although quite possible that a small body of pure volunteer cavalry might be so trained, I think it highly doubtful; it certainly could not be done unless the training was conducted by some man thoroughly conversant with the duties of cavalry. Neither do I attach much importance to the mounted police, as I am under the impression that they do not work together in bodies of any size, and have no training as mounted rifles.

(6.) As to the supply of ammunition in time of war? As already stated in my evidence, it appears to me that this is an Australian question, and that no one Colony should have to go to the expense of the necessary plant, but that an arsenal for the manufacture of small-arm ammunition, gunpowder, fuzes, shell, tubes, transport-carriages, &c., should be established in some central position, at the expense of the various Governments.

Observations with regard to Military Committee's Report.

Col. M. F.
Downes, R. A.

29 June, 1881.

Supplementary Evidence given before the Royal Commission.

Sydney, 29 June, 1881.

For the armament of fifty-seven guns, as given in Appendix of Report, I should propose a force of garrison artillery (permanent and militia) of 700 men. These numbers are thus arrived at:—

8 10-inch guns, 15 men a detachment	120 men.
7 9-inch " 10 "	"	"	"	"	70 "
42 80-pounders and smaller guns, at 9 men each	378 "
Total					568

This total of 568 represents the actual number of men required to work the whole of the guns, taking the detachments at the full strength allowed by the Royal Artillery drill book.

In order to allow for all possible contingencies—for the extra strain thrown upon the detachments working the heavy guns by the distance the shell rooms are from the guns, also for the distance of the batteries from one another—I have assumed that every gun mounted would be in action, and require its complete detachment,—an improbable contingency.

Calculating upon such basis, a total of 568 men would be required.

As, however, provision has to be made to meet casualties from sickness or absence, for men required for cooks, lamp-lighters, water-carriers, &c., I propose a total of 700 officers and men to constitute the force of garrison artillery to furnish the defences of New South Wales, the force to be thus apportioned:—

Permanent Artillery	300 officers and men.
"	"	(Reserve)	...	200 men.
Volunteer Militia Garrison Artillery	200 officers and men.

This would give $\frac{2}{3}$ to $\frac{1}{3}$ Permanent Artillery and from $\frac{1}{3}$ to $\frac{2}{3}$ Militia Artillery for each gun detachment. The Volunteer Militia Artillery would have their own officers to assist in the batteries; the Reserve Artillery could be officered by those of the Permanent Artillery.

N.B.—The above to be in addition to the three field batteries of 210 men of Volunteer Militia Artillery for the field force.

M. F. DOWNES,
Col., R. A.

FRIDAY, 11 MARCH, 1881.

Colonel Charles Fysche Roberts examined:—

Col. C. F.
Roberts.
11 Mar., 1881.

94. How long have you been in command of the Artillery Forces of New South Wales? Four years and seven months.
95. How long have you been in the Imperial service? Sixteen years in the Royal Artillery.
96. Have you a permanent force in New South Wales? Yes.
97. Will you state what the permanent force is? It consists of three batteries of artillery, numbering, with officers and all, 320.
98. Is that the strength authorized by Parliament according to the provision in the Estimates? Yes.
99. Has there been a reduction of late years? There have been two reductions.
100. State them? First, from 375 to 350; then from 350 to 320, of all ranks.
101. In what ranks was the reduction? Gunners chiefly.
102. Could you readily make up the strength? Yes; by enlistment we could do it very easily.
103. Have you at present any applicants for service in the force? We have frequent applications; men apply almost daily.
104. Do you consider a permanent or regular force as a nucleus for the rest of the defence force absolutely necessary? I do.
105. Have you considered the organization advisable for such a force of both artillery and infantry? With regard to artillery, I have. With regard to infantry, I should strongly recommend a company, consisting chiefly of a body of non-commissioned officers.
106. What would be the best constitution and organization of the artillery force you would recommend? Men should be enlisted to serve for a term of at least three years with the permanent force, and to be passed after that time into a reserve; these men to be subject to the Imperial Army Discipline Act, so far as it applies, and under a local Act; the powers of the Commanding Officer to be more extended; the force to be kept as little as possible in Sydney, and the men to be employed as much as possible on all public military works; the force to be divided into garrison and field artillery in the proportion of three in garrison to one of field, and to pass out men to a reserve—annually if possible, and getting them into the Government employment; these reserve men to attend the annual camp-training affiliated to that portion of the force to which they originally belonged; as soon as the reserve reaches a sufficient number the permanent portion to be reduced to a certain limit; the reserve when out with the permanent force to be under the same rules and regulations.
107. With reference to your recommendation that the permanent force should be reduced when the reserve reached a certain strength, do you not think that would be a dangerous precedent to establish—to reduce a certainty, in a country where people spread themselves about so much, for an uncertainty? Yes; but I should only do so on the score of economy.
108. As the wages are almost the same in all the colonies, at what rate do you think you can enrol men for the services you indicate? We are able now to get men at 2s. 3d. a day.
109. At what rate do you consider the total cost per man to be, including pay, allowances, and everything? About £94. This includes share of staff necessary.
110. Do you consider that this amount could be reduced? Not very materially.

111. Do you consider that this amount could be reduced if, at the time of enrolment, there were held out as inducements promises from the various Governments of employment in the public service, to be given by seniority conditionally on good behaviour? It might be modified slightly.
112. Would you not by such a system induce a very much superior class of men to enter the ranks? Most probably. Col. C. F. Roberts.
11 Mar., 1881.
113. Can you give the Commission any idea of the number of men annually required by the Foot Police, the Railway, and the Post Office Departments of New South Wales? No.
114. Is it in your opinion wise to withdraw men for long service in the barracks from the general industries of the colonies? I do not think it unwise if they are employed on the public military works.
115. If men are employed on public military works do they not receive extra working pay? Yes, they receive the ordinary working pay, which is intended to cover wear and tear of clothes.
116. Do you not consider that if kept for even five years in barracks, men would from want of change and relief deteriorate and become more or less unfit for earning their own living on discharge? I do not think so, provided that term is not exceeded, and they are employed as stated before.
117. Would you recommend that in a permanent force men should be allowed to marry? A certain proportion ought to be married, for the purpose of doing the necessary soldiers' washing, and being placed possibly in charge of works where only one man would be required, and it would be too lonely for him to be by himself as a caretaker.
118. Would you enrol married men? If the provision made by Government would allow of it, yes; and provided that the man and his wife are excellent characters; also they should live in barracks under military control.
119. At what age would you propose to enlist? I would suggest from 20 to 40.
120. Do you think that in a system of short service, seeing that the enlistment would be for only three years, it would be in every sense undesirable to encourage marriage, as it would increase all the expenses connected with the maintenance of the force? I do not consider it undesirable, provided it does not exceed the Government provision.
121. Provided the Government increase the accommodation for married men, would you increase the number of married men? I would, but not to an unlimited extent.
122. Do you consider it is the slightest use to enlist the raw material, or a man over 30 years of age, as an extreme limit? No, I do not, but the balance of years between 30 and 40 is for the purpose of obtaining old soldiers of good character.
123. Would you propose increased allowances to married men, such as lodgings, if quarters are not available in barracks? To a certain extent, yes.
124. Assuming that the Governments of the Australian colonies agreed to the formation of a force upon the principle that the men should be enrolled for a certain term of years on the distinct understanding that they would be given employment after good service during that term of years, would you approve of the formation of such a force for Australia generally? Yes, I would; that is, a universal federated force, subject to the inspection of a senior Imperial officer.
125. Do you advocate the formation of an Australian federal regiment of artillery? Yes, provided the regulations are similar.
126. How long do you consider it would take to form a good artilleryman, and a good infantryman? Certainly from two to two and a-half years for the artilleryman; for the infantry soldier, a year or fifteen months.
127. How long would it take for a field artilleryman? I should say it would take three years, as I should endeavour to get a man who would be both gunner and driver. It would take fully three years.
128. Under what sort of disciplinary code should the permanent artillery force be? Under the Imperial Acts, modified if necessary to meet local circumstances.
129. How would you propose to supply the officers for a force of this description? I would get the best I could, obtaining them from Home if possible.
130. Is there any source from which you could get officers in these Colonies fitted to be artillery officers? Occasionally I should take an ex-Imperial officer if I could get him, provided his certificates were good and he was capable of passing an entrance examination.
131. Would you take a volunteer officer if you could? Provided he passed the necessary examination, if he were efficient.
132. Assuming the Government sanctioned the employment of officers for a term of years, to be borrowed from the Imperial Artillery, would you be in favour of their being appointed in preference to officers from any other source? I should prefer them by all means, because of their later scientific knowledge.
133. Do you not think that if inducements were held out such as obtain in the Imperial service, namely, by half-pay, retiring allowances, and pensions in certain cases, to induce officers to look upon it as a permanent profession, the service would be much benefited? I do.
134. Do you think that if an officer had this inducement it would have a very marked effect on discipline and efficiency? Yes.
135. In estimating the number of artillery, would you base it on any particular number per gun as an absolute requirement? Yes; from three-fifths to four-fifths.
136. In making this computation are you taking into consideration the volunteer artillery or militia artillery? Yes—all reserves.
137. Would there be any objection to the regular artillerymen, that is four-fifths of the detachment, being made up of men in actual service, and reserve men who have been trained? Certainly there is no objection.
138. What proportion of gunners and drivers would you recommend in a field battery? Gunners, about one-third, and drivers, two.
139. In the case of a volunteer field battery, do you consider it necessary that the drivers should be taken from the regular artillery? Not absolutely necessary, but they should be trained.
140. Would it be possible to train volunteer field artillerymen to act as drivers? With a large amount of training it would be possible.
141. And how would you conduct their training? By drilling them entirely with a regular field battery.
142. Do you recommend any number of permanent horses that could be kept, and might be used for other Government purposes? Yes, I do; about thirty or forty.

- Col. C. F. Roberts.
11 Mar., 1881.
143. In an artillery force what do you consider of first importance? The garrison artillery, and, if provision is made, then the field artillery.
144. In what respect and how far do you think the powers of the commanding-officer should be extended beyond those at present exercised by him? To the full power given by the Army Discipline Act, with the power of dismissal in gross cases.
145. In what respects are you limited from exercising the powers granted under the Army Discipline Regulation Act? In imprisonment, and power of convening regimental courts-martial.

TUESDAY, 15 MARCH, 1881.

Colonel Charles Fysche Roberts further examined:—

- Col. C. F. Roberts.
15 Mar., 1881.
146. Are you in favour of a purely volunteer force or of a paid volunteer force? A pure volunteer force, on the English model.
147. Will you explain in detail your views on the subject? My reason for recommending a pure volunteer force is that I consider the formation of a reserve, which will really become the second line, will cause a volunteer paid force to become unnecessary. The force under the present rules permits attendance to be to a certain extent optional, thereby preventing the regular personal attendance of individuals. I should strongly recommend that this pure volunteer force, in addition to certain drills called for in daylight, should of necessity attend the annual camps of instruction; that they should be, as far as possible, officered by ex-Imperial officers or officers who may have left the permanent service of this or other Colonies, if duly qualified; that attached to each regiment there should be a paid staff of instruction, namely, adjutant, sergeant-major, and quartermaster-sergeant; that there should be at least three country regiments raised at centres most convenient on the lines of railway; that this force should receive Government assistance to the extent of instruction, arms, and clothing, with full provision during the camp exercises. This would necessitate a small capitation allowance—the expenditure of this to be administered by proper authority—and in my opinion this course would enable the volunteer force to be nearly if not quite doubled. From the experience I gained in my visit to the neighbouring Colonies during last year, I feel convinced that, with the aid of the training in camps as above recommended, a pure volunteer can be made almost as efficient as the present paid volunteer is. Instruction should be furnished to this force as much as possible from the permanently enrolled force. To encourage the formation of a purely volunteer force I would extend certain rights to members, such as exemption from juries, &c.
148. You have stated that, when in camp, this purely volunteer force should have full provision made for them: do you mean this to include any individual money payment? No individual money payment, but that they should be under no pecuniary responsibility for proceeding to and from the camp; everything to be found, but no daily pay given.
149. Do you think, in the interests of justice, that volunteers, except when on duty, should be withdrawn from jury service? As I only propose extending this privilege to efficient volunteers, and the total number of volunteers would bear a small proportion to the population, I cannot see that it would affect the jury list so much.
150. Can you state the reasons why the land grants for five years' efficient service broke down in this Colony? Owing to the abuse of the said land orders in the following way: although an individual volunteer might earn a land grant for 50 acres, he is able at the present time to dispose of it for any amount of money he can obtain to any individual, thereby defeating what was believed to be the original intention, namely, of settling individuals on small holdings. I believe the sale and use of volunteer land orders by persons who have really not earned them has caused a large loss to the land revenue, for the difference of value between £60 and the selling price is actually a loss to the land revenue.
151. Under what regulations did a man earn a land order? The volunteer was obliged to be reported for five consecutive years efficient; and thus arises the fact that men even at the present time are actually qualifying for volunteer land orders, although the further issue of the orders was abolished in 1874, by having allowed the lapse of some years to occur during which they were non-efficient.
152. You have stated that you do not recommend a paid volunteer force, because your reserve will take their place: what do you estimate would be the strength of your reserve in (say) five years' time from the commencement of its formation? I should say that the reserve would reach 250, allowing for percentage loss. Of course this would depend entirely on the number of men from which I can start to form the reserve.
153. Your reserve, I believe, would be formed entirely from artillery? Principally from artillery.
154. Do you consider that men who have been trained as artillerymen will, during the short time that they can have for instruction in the reserve, be able to acquire such knowledge as will enable them to take the place and perform the duties of infantry in the field, especially as regards the most important and most difficult duty of fighting in the present system of extended order with its supports and reserves, &c.? As there would be very few of the reserve actually to spare for infantry in case of war, and as I consider that the unpaid volunteers could be trained sufficiently well to act as infantry, this would hardly apply.
155. How do you arrive at your estimate of 250 men in the five years? Starting from the number which I would probably recommend, I consider I should be able to do it. Assuming that 400 men are allowed to start with, I should be able to form a reserve of 250 in five years.
156. But assuming that the employment open to men who have passed through the force was largely extended over every civil department, and also in companies and banks generally, is it not probable, taking a force of 400 men, and the men in that force serving only three years, that in five years you would have a reserve of 500 men? I do not think it would reach that number in the time.
157. Will you state your reasons why? Assuming that I started with 400 men, I do not consider I should be able to draft more than eighty a year into the reserve. From this there would be a probable falling off of from twenty-five to thirty who might not be fit medically, or from absence from the Colony, or from various other reasons, to join the reserve. This would leave me a balance of fifty.

158. Will not the field force be required to act in the first line? Under certain circumstances it would—on a land attack it would.

Col. C. F.
Roberts.

159. In that case do you not think they ought to be trained in a higher degree than the English volunteer force, which, under the English Volunteer mobilization scheme, is relegated to the third line and treated as a purely reserve force? As I consider a land attack would only take place after a very considerable warning, I am of opinion that the volunteers could be sufficiently trained by being called out for active service in time to attain that amount of efficiency which would be necessary.

15 Mar., 1881.

160. How long does it take regular infantry, non-commissioned officers and privates, to learn their respective duties? I should say, a private, from nine months to a year; a non-commissioned officer about six months longer, and an intelligent officer two years, but much depends on the individual.

161. Do you think it advisable that the volunteer force should be subjected to a period of continuous training? I do. I should say fourteen consecutive days should be the least amount of training, in short terms, these terms being consecutive, as opposed to detached drills.

162. How do you propose to induce volunteers to undergo fourteen days annual continuous training for nothing? I have already stated that the only remuneration that would be offered to them would be all expenses paid—I would offer no direct money inducement; I should trust to the purely volunteer spirit.

163. Do you consider it possible for any considerable body of men, either officers, non-commissioned officers, or privates, to give this time gratuitously to the State? I think it is possible, as above stated, and provided conveyance to and from camps was found.

164. What other training do you propose for the unpaid volunteer force during the other portion of the year? Five-and-twenty daylight parades.

THURSDAY, 17 MARCH, 1881.

Colonel Charles Fysche Roberts further examined:—

165. Will you state your views with regard to the composition and strength of the field force required to resist attacks by land? My opinion is that the field force should consist, taking all numbers into account, of about 3,000 men. They would be composed of cavalry, five regiments of infantry, artillery, either one large company or two medium-sized companies of engineers, and a small portion of a signalling corps. The infantry would be divided into five regiments, two belonging entirely to Sydney and the immediate neighbourhood, and the three others from the three country districts—southern, western, and northern. The Sydney regiments should consist of at least 600 men, the southern and western of 400, and the northern of 500. Three (3) Field batteries would be composed of volunteer artillery, and a portion of the reserve, that portion to consist chiefly of drivers, with a few highly-trained non-commissioned officers. As regards cavalry, mentioned previously, I should depend entirely upon the police, as I believe great difficulty would be found in maintaining an independent force, and if a paid force the expense of horses would be very great. The reason why I should trust so much to the mounted police for cavalry is, from their intimate knowledge of the country they would certainly form the best kind of scouts. As far as I understand, they are chiefly trained, during the early part of their enrolment, in Sydney. In making this statement it is to be understood that I do not take into consideration such men as would be required for the garrisons at Sydney, Newcastle, and Botany. I am speaking of a purely movable field force. I would further add that, if possible, my first endeavour would be to prevent a landing; after that I should await attacks in certain previously prepared positions. By prepared positions I mean the erection of earthworks, rifle-pits, and the placing of all sorts of impediments to prevent attack. As the Sydney contingent (if I may use that term) would be best acquainted with the probable localities of attack, that portion of the force should take the field first, the country contingent being utilised for supports and reserves as might be required.

Col. C. F.
Roberts.

17 Mar., 1881.

Colonel Charles Fysche Roberts further examined:—

166. Will you state what strength you recommend for the working of the guns in the coast defences provided at Sydney, Botany Bay, and Newcastle, including the garrisons to man the defensive works in case of attack? My estimate is based upon the natural assumption that if an attack is to be made on these Colonies, Newcastle, Sydney, and Botany are liable to be threatened at the same time. As we are at present separated from Newcastle by at least six hours' sea journey, which actually cuts off Newcastle for the time being from any support from Sydney, I consider that the guns mounted at Newcastle and the garrison should be as well prepared as both Sydney and Botany; and as it is not probable that railway communication between Newcastle and Sydney can be established for three or four years, I must base my estimate of the requisite number on what at present seems a large number, but which might ultimately, when proper communication is established, be reduced. I am of opinion that it would be necessary to have nearly all the guns, which under the present scheme will be mounted, properly manned, and taking the three places before-mentioned into calculation, we shall require fifty-two guns to be manned. I consider that the number of permanent artillery required would be something over 400, supplemented by the proposed reserve (formed, as I have already recommended, from the artillery) and volunteer artillery to the number of 130 or 140; that the garrisons for Sydney and Botany would take 300 infantry, and at Newcastle 75. These I should propose supplying by utilizing one of the country regiments; and at Newcastle drawing a company from their country regiment. It would be further necessary to have a torpedo force, consisting of at least 100 men—50 in Sydney, and 50 between Newcastle and Botany. In addition to this force I rely upon some considerable assistance from the naval brigade, amounting to at least 200 men

Col. C. F.
Roberts.

17 Mar., 1881.

Col. C. F. Roberts.
17 Mar., 1881.

men afloat, in different capacities, for I consider that the defences of each place must be composed of such parts as to make it independent. To what extent assistance would be granted by the naval brigade I am at present unable to give any evidence.

FRIDAY, 18 MARCH, 1881.

Colonel Charles Fysche Roberts further examined :—

Col. C. F. Roberts.
18 Mar., 1881.

167. Would you state your views on the subject of the system of examination which you recommend should be adopted for appointment and promotion in the permanent force, and in the volunteer force? I concur in the generally expressed opinion, that the selection by volunteers of officers is most undesirable. I consider it most desirable that immediately after, or very soon after the appointment, and while these officers are on probation, an examination should take place; this is under the head of volunteers. I also am of opinion that high social position is most desirable in all officers, as most probably with this you would attain a higher educational standard. All officers of the volunteer force should attend schools of instruction, which should be established for the distinct arms of the force, namely, one at Victoria Barracks, or the most convenient position for the infantry, and one at Dawes Point. My reason for separating the schools under two heads is this: That it is absolutely necessary for the senior officer of the artillery forces, if possible, to be near his men and the forces under his command is much as possible. Dawes Battery, as far as I can see, is the most convenient for that, it is in closer communication with the batteries, and in fact the general work of the artillery defence, which Victoria Barracks is not, being removed some 2 miles from even the water's edge. To maintain these schools it will be necessary to obtain regular qualified instructors, who, in my opinion, could be got from England at very little trouble, and, comparatively speaking, small expense, considering what the probable result would be; that each officer, after certainly not more than a year's service, should again be examined as to his fitness to remain in the defence force. I may say that this will apply just as strongly to the permanent artillery, and I am also of opinion that the systems of examination established already should be rigorously carried out. With regard to the permanent portion of the defence force, I should insist upon examination on entrance, or, if I may use the word, first appointment; that a subsequent examination should take place at the end of the first year. Speaking of the artillery, this should be in artillery drills; in company and carbine drills, or what I should call company duties; that for all further promotions stricter examinations should be held; that it should be necessary for all officers joining the permanent and volunteer forces to pass in riding; and certainly they must have a fair knowledge of placing houses and villages in a proper state of defence. This knowledge must be acquired within two years at the longest from the date of their first appointment. For subsequent promotion to the higher ranks they must have attained a fair knowledge of minor tactics; that in this force, as well as in the previously constituted volunteer forces, schools of gunnery and instruction should be established, with certified instructors from England, and changing if possible every two or three years; that any officer displaying a decided carelessness in qualifying himself for his duties should be called upon to pass a test examination, and, failing this, and subject to the decision of the Commandant, to be called upon to resign.

TUESDAY, 22 MARCH, 1881.

Colonel Charles Fysche Roberts further examined :—

Col. C. F. Roberts.
22 Mar., 1881.

168. Do you think the Permanent Artillery Force should have charge of the maintenance of the coast defences? Yes, as by this means very considerable expense could be saved in the minor repairs to batteries, barracks, and defences generally, more especially if a staff of duly qualified artificers was maintained: further, the alterations and repairs would be most probably carried out with less delay than at present exists.

169. Would you employ them in connection with the custody and management of warlike stores? Most certainly; as, from a reduction in the staff of the department at present in charge, a very large saving of expense would be effected; it is also the work for which such a force is especially adapted; and the issue &c., would be much facilitated.

170. Do you think it would be wise to reduce the strength of the permanent artillery force below 300 officers and men at the present time? I think it would be most unwise until, at all events, the working of a reserve had been fully tested to create a sufficient supply of men to fill up the necessary numbers required to man the guns fully, as well as to supply the reserve field battery for employment with the field force. It must further be taken into consideration that men will be required to work the Gatling and field guns in the lines of defence at South Head, Middle and George's Head, Newcastle and Botany.

171. Do you consider a permanent infantry force necessary? Only as a small company, for purely purposes of instruction in connection with the various corps requiring it. This force, by being called in to head quarters at certain intervals would be kept up to all the latest changes in drill, &c.; thus the forces generally would be kept up in all the changes in details.

172. What additional inducement would you offer volunteer officers and men to become more efficient? I would grant them efficiency badges in all subjects connected with the various branches of the service to which they belong. Possibly it would be well to remove from officers who proved themselves highly efficient the obligation of passing the necessary examinations for promotion; this, however, to be subject to the approval of the proper authorities.

173. By a paid system do you not limit the number of men trained to arms? Certainly; for the annual vote only meets the payment of a limited number; and, without some definite term of engagement, persons can remain as long as they like, providing they prove themselves efficient, thus leaving no vacancies. Moreover, many persons of independent means have a reluctance in joining a force under such a system.

Col. C. F.
Roberts.
22 Mar., 1881.

174. How would you meet the case of men who are anxious to join the volunteer force, especially in the country districts? From country regiments where it is possible; and encourage the formation of rifle companies as well as artillery companies (at various ports on the coast)—these companies to be under supervision and general direction of the senior military authority, and to be found in arms and ammunition and necessary instruction; being encouraged by prizes for proficiency.

175. Do you consider it advisable to extend the system of drilling boys in the schools of the Colony? Yes, provided this becomes a portion of the course of instruction, and is not taken out of play-hours. Drill with arms to be carried out near some armoury, to which the arms must be returned directly the drill is over.

176. What are your views with regard to the management and custody of the warlike stores in the Colony? The department in charge of these stores should be placed under the direct superintendence of the Commandant or senior officer present—that as much as possible the work should be carried out by the paid military forces, and that the civil portion of the work connected with the storage, &c., of merchants' powder should be separated from the warlike portion of the stores. I am of opinion that, by this course being adopted, very considerable expense would be saved, and the result would be greater efficiency.

177. What do you consider should be done to ensure the supply of ammunition in time of war? Make the reserves to be kept up at least to 200 rounds per gun for the most important guns; for the field guns and guns of position to 400 rounds per gun. Annually to provide for such ammunition as is used in practice, in order to keep up the supply to proper standard. If possible, to establish a factory for the manufacture of small-arm ammunition: this could be done on Biloela Island, where also it might be possible to make shot and shell if urgently required. I would further advise that the manufacture of gunpowder should either be tried, or encouragement given to private firms to manufacture.

TUESDAY, 22 MARCH, 1881.

Colonel Charles Fysche Roberts, further examined:—

178. Do you consider a reserve force of artillery, composed of men who have passed through the permanent force, desirable? Yes; for when formed, and consisting of a sufficient number of men, a reduction could be made in the permanent artillery, reducing them to a certain number, below which they should not go under any circumstances. These men should receive a retaining fee or allowance in form of deferred pay; also receive a regulated amount of pay sufficient to induce them to remain in the reserve for a fixed period of at least five years. I would further recommend that these men joining the reserve should as much as possible be found employment either under Government or in civil employ. The employment of the reserve in civil establishments would to a certain extent form a corps similar to that of the Commissionaires in London, which now numbers over 500; and these men have undoubtedly proved the falsity of the statement "that an old soldier is no good," as they honestly perform their duties, and are known to be trusted most thoroughly—the training of a soldier leads him to obedience, and ingrains in him a feeling of honor which possibly did not exist prior to his enlistment. It might be well to pay those men who entered the force with an undertaking to join the reserve for a fixed term a higher rate of daily pay from those who only joined for the first term of engagement—the difference of this daily rate to be accumulative as deferred pay, and paid half on completion of regular service, and half on completion of reserve service. The remuneration I would recommend for the reserve force would be about £12 per annum, and allowing for extra cost of instruction, clothing, &c., the annual expense to the country per head would be about £16. If this is compared with the present cost per head for Volunteer Force, viz., £18, and the difference in efficiency is considered, there is no doubt in my mind but that the reserve force would give better results. The drills could take place after office hours or on holidays; and as they could be drilled in small numbers with the permanent artillery force there would be no loss of parades for want of sufficient men.

Col. C. F.
Roberts.
22 Mar., 1881.

179. What do you consider should be the number of officers in a permanent force consisting (say) of three batteries? As I should propose to work the reserve in connection with the permanent force, and undertake that the pay and quarter-master's work should be performed by the officers of this force, I do not consider that less than twelve battery officers and two staff officers, including the officer commanding the artillery forces, should be maintained. The working of certain necessary field and Gatling guns in connection with the proper defence of the different works would not justify a smaller number being maintained, when it is considered that the training must be thorough, and high efficiency will be expected. Possibly after some years, should any of these officers join the reserve and enter into some arrangement with the authorities, the number above stated might be reduced. I consider these officers should take precedence, according to rank, of other officers of the forces. As a further reason why these officers should not be reduced in number, the authorities would expect to find from this force officers upon whom they could rely in time of war, and unless the officers were allowed to retire upon pensions with an understanding to serve in the reserve or volunteer militia.

180. What should be the duty and term of office of the imperial officer you recommend should be engaged by the Australian Governments? The inspection at various periods of the different colonial forces; adviser to the different Governments on maintenance of warlike stores and defences generally; general direction of operations in time of war, assisted by colonial commandants; referee in cases of dispute. About three years, under agreement with the Governments.

Col. C. F. Roberts. 181. What is your opinion of the annual expenditure necessary for the maintenance of a defence organization suitable for New South Wales?

22 Mar., 1881.

PROPOSED ORGANIZATION.

5	General staff	£2,300	
340	Permanent Artillery	32,000	
*	Permanent Artillery Reserve	1,000	
						35,300
100	Torpedo Corps...	4,000	
300	Volunteer Artillery	1,550	
150	„ Engineers	900	
2,500	„ Infantry	7,500	
						13,950
500	Rifle Companies	1,000	
	Store Department	3,000	
						4,000
60	Permanent Infantry	5,000
	Warlike Stores	5,000	
	Camp expenses	2,000	
	Schools of Instruction	1,000	
						8,000
	A force of—	3,955				£66,250

THURSDAY, 24 MARCH, 1881.

Colonel Charles Fysche Roberts further examined :—

Col. C. F. Roberts. 182. Do you think that a reduction in the annual military expenditure could be effected, having due regard to the efficiency of the military force, and without material injury to the service? Yes, provided the expenditure on the other portion of the defence forces is also reduced.

24 Mar., 1881

FRIDAY, 25 MARCH, 1881.

Colonel Charles Fysche Roberts further examined :—

Col. C. F. Roberts. 183. How would you give the torpedo corps a special organization? The special organisation I would suggest for this corps is :—The corps to consist of at least 100 all told, part of whom should be permanently maintained and paid as regular troops, the remainder should be paid at least as highly as the reserve from permanent force. The permanently enrolled portion should consist of one sergeant-major or staff instructor one sergeant, and two junior N.C. officers, and twenty men. The officers, considering the high intellectual attainments they should possess, should not in my opinion receive less than they do at present, viz major, £200; captain, £100; lieutenants, £60; 2nd lieutenants, £40. The total cost of this corps would be about £4,000 on this organization; and when this amount is considered, as compared with the value of the stores and torpedo boats, which must represent some £40,000, it does not appear too much for the extra security it would afford. The corps to be trained in military exercises only so far as would be necessary to enable them to march properly and possibly perform company drill. They should also be instructed in the use of the rifle, sufficient to ensure self-defence. Beyond the training as above stated in military manœuvres I would not go, as the time allowed for drills, &c., would be better employed in lectures and experiments, as well as instruction in the more important duties connected with the torpedo defences, and if required at inspections and field days, the corps could be better employed in transmitting signals of the different manœuvres. The proper care and maintenance of the different stations, together with the stores, would be entrusted to the permanently enrolled portion. The number of the force may seem large, but when it is considered that some attention must be paid to the defence of the waters of Broken Bay or the Hawkesbury, as well as Newcastle, Sydney, and Botany, I feel sure that the estimate is not excessive.

184. You have heard the evidence given by Colonel Downes with reference to an attack in force. What are your views on this subject? The idea of an attack as stated by Colonel Downes, and consisting of the force he mentions, appears to me very improbable. The number of the attacking force stated, viz :—3,000, together with supplies and the necessary convoy, would require a very large flotilla, and it would be quite impossible for an expedition such as this would necessarily be to start from any port without its movements were known, and I have no doubt but that timely warning would be sent to the Colonies. When the great distances between the ports of any nation likely to make an attack and Australia are considered, it becomes evident that unless the expedition was to be of a most reckless nature, that stores and supplies must be carried, both for the outward and homeward journeys, as calling at any place *en route* to replenish stores would at once give notice of the expedition. Further, the fleets in the North Pacific and China Seas would doubtless be able to harass an expedition of this character. Further, I am confident that no direct

* This item would increase annually at £1,000 per annum, but for 4th year there would be a reduction of 90 Permanent Artillery, saving £8,400. The difference would be, for Permanent Artillery Force—

1st year would cost, say	£35,000
4th year, with reserves	28,400

direct attack of this sort would be made on Sydney, or even Botany; the only possible places would be either further north, or to the south, and then very broken country would be met with. Some base of operations would have to be established; all of these would take considerable time, and preparations could be made to concentrate troops to resist the attack, more especially when the new lines of railway are completed both to the north and south of this city.

185. Will you hand in a statement of the guns that will be mounted in the coast batteries when Sir W. Jervois' scheme of defence has been completed? In the Appendix will be found a tabulated statement of the guns mounted and the purposes for which they are intended, which has been drawn up by Colonel Scratchley and myself.

Col. C. F.
Roberts.
25 Mar., 1881.

MONDAY, 4 APRIL, 1881.

Colonel Charles Fysche Roberts further examined:—

186. Will you now sum up your evidence, and give a brief outline of your recommendations upon the matters referred to the Commission for report? Taking as an outline the opinions expressed in the tabulated statement of the evidence I have given, I suggest as follows:—

Col. C. F.
Roberts.
4 April, 1881.

Military Adviser.—That an adviser on all military matters, and as an inspecting officer of the Colonial troops in the various Colonies, be appointed, to have supreme direction in time of war.

Permanent Artillery Force.—That a permanent artillery force of from 440 to 250 be maintained. These numbers would vary, as the artillery reserve, which would be formed from this force, would supply the necessary number of men gradually reduced. The *cadre* of the (3) three batteries to be kept up even when the lowest figure stated is reached. The maintenance, in constant readiness, of the coast defences of this Colony would necessitate the presence of a proper proportion of officers, non-commissioned officers, and men, and as the extra numbers at the guns would be made up from the reserve, the detachments could thus be properly maintained.

With Reserve.—This permanent artillery and reserve force would form the principal part of the garrisons required for the coast defences of Sydney, Botany, and Newcastle, supplemented by garrison artillery from a *pure* volunteer force numbering about 150. In order to make up the numbers required to work the guns properly to the necessary strength, as one naturally supposes that no continuous siege operations can be made on the batteries, and that the probable duration of the action would not be long, only sufficient men have been estimated for as one relief. This has been done with a view to economy. As my estimate of numbers appears higher than those of the rest of the Committee, I wish to point out that, in my opinion, nearly all the guns at present mounted must be sufficiently manned to come into action—1st, from the probability that a *rush* past the batteries, together with operations by boats, would be the form of attack adopted; also, that, from the scattered nature of the defences, it would be quite impossible to utilize the detachment of one gun for the working of another when it was called upon to come into action. From a return of the armament of the coast batteries attached in the appendix, it becomes evident that from fifty-one to fifty-four guns should be ready for action in case of an attack on the coast defences; and when casualties are considered I feel certain my estimated number is not too high. Moreover, the proper service of the field and gatling guns for the entrenchments must also be estimated for.

Permanent Infantry.—The permanent infantry I recommend is a small company for purposes of instruction, as it is advisable to keep the instructors well up to the mark prior to sending them out for instruction of other corps; this force also would be able to perform many of the clerical duties connected with the defence forces. I consider this small nucleus advisable.

Torpedo Corps.—The torpedo corps, as being in my opinion an absolute necessity for the defence of the coast batteries as well as a part of the artillery portion of any system of defence, should be maintained on almost a permanent basis. A portion certainly of this corps should be permanently kept up and have charge of the different stations and stores; the remainder, being called upon to devote a very large proportion of their leisure time to fulfil the duties in connection with this class of defence, should receive remuneration at the rate of the proposed reserve. The officers also should receive a fair rate of pay; and the corps, as far as infantry movements are concerned, should only be able to act as a company; when intricate manoeuvres are to be performed they should constitute the signalling parties. They should, however, be able to handle a carbine or rifle in self-defence.

Field Force, Pure Volunteers.—The force I would recommend to act in the field should be purely volunteers, viz.:—a force receiving no direct pay, but found by the Government in all necessary instruction, ammunition, arms, clothing, &c., being franked to and from the continuous camps of instruction, at which everything should be found. The number I would maintain would be about 3,000, not counting the local rifle companies, but including the garrison volunteer artillery, which would be drawn from this force. The composition of the force would be:—

Cavalry to be furnished by the Mounted Police		
Artillery—150 garrison; 150 field (2 field batteries)	...	300
Engineers, 150	...	150
Infantry, 2 regiments, Sydney, of 600	...	1,200
„ 1 regiment Northern, Newcastle, of 500	...	500
„ 2 regiments, 1 Southern, 400; 1 Western, 400	...	800
		2,500
Making a total of all told	...	2,950

My reason for recommending a purely volunteer in preference to a *paid* volunteer force is, that the saving in expense would be the difference per man of £18 the present cost, and £6, an estimated cost, affording the possibility of obtaining for a similar amount per annum three times, if necessary the number of men. During the past year I have been able to judge to what state of proficiency the volunteer force can be brought in two of the neighbouring Colonies; and I feel sure that if these pure volunteers had the advantage of the instruction given in camp of continuous training that they would fulfil all that could be required of them. A *paid* force deters many persons of social position from joining, as well as limits the possible number to be enrolled.

Volunteer

Col. C. F. Roberts.
4 April, 1881.

Volunteer Militia Force.—A paid volunteer militia force at a small cost say of about £13 or £14 is I understand suggested, but I do not think it possible to carry out the *à la milite* principle in this Colony, and the cost would still be double that of the pure volunteer, without the certainty of double the efficiency.

Rifle Companies.—The rifle companies would form an excellent auxiliary to the defence forces, as they would be under instruction and discipline (to a certain extent) as well as direction of the military authorities. The cost, considering the amount to cover ammunition, as well as prizes, for shooting and efficiency would not reach probably more than £2 per head; further, they would be established in various districts where possibly it would be impossible to keep up a large number of men in a regiment, and induce a military spirit among the people.

Ordnance Department.—The Ordnance Department as at present worked does not afford the military departments sufficient control over the supply of stores, and although the senior military officer would be held responsible in case of any shortness of supply in war time, he has little or no voice at present in the working of this department. I am of opinion that it should be transferred to the control of the military authorities, subject to the ministerial head of the department, as very considerable saving could be effected in the annual cost of this department by employment of military labour, both clerical and manual.

Law and Regulations.—With regard to any alterations in the law and regulations relating to the local forces some changes are desirable, chiefly to increase the power of the commanding officers, and to do away as much as possible with Courts Martial; in the volunteer force to do away with the election of officers by corps.

Instruction of Officers, Schools, &c.—As in a small defence force the officers should be all thoroughly acquainted with their duties and have a general knowledge of other subjects beyond that connected with their individual corps, it is most desirable that a school or schools of instruction should be established for the purpose of lectures, and instruction in field-sketching, reconnaissance, tactics, as well as other scientific subjects.

Course of Instruction.—For especial instruction of the artillery officers, non-commissioned officers, and men, I consider a school should be established at Dawes Battery, as most convenient, when the distribution of the artillery is considered, and being the head-quarters of the artillery force is a special reason for recommending this spot; that instructors should be obtained from England, being changed about every (3) three years, if necessary, until such duties could be undertaken by locally trained officers.

Library.—In connection with these schools, that a good military library be established, to which also it would be well to attach a large room for general lectures on various subjects.

Supply of Officers.—It would be advisable to induce officers who may from length of service in the Imperial Army have been obliged to retire, and whose practical military knowledge would be of a high standard, to enter the permanent service and thus incite the other officers to increase in knowledge of their profession; this is most desirable, as owing to the small number of officers the chief reliance in case of active service would be placed in them.

It therefore becomes necessary, in the first instance, to obtain the best possible officers, and thus save the expense and trouble of continually changing, by establishing a thorough system of examination after the first term of probationary service on appointment has expired, and causing those who show little inclination or aptitude for their work to leave the service; a higher standard will be the result. I would extend the system of probationary service, subject to examination, as well as severe test examinations for promotions, to the officers of the Volunteer Force, who should be very highly trained, as they must, to a very great extent, furnish the instruction to their men. With regard to the position of the officers, I am certain that the higher in social scale the better will be the tone throughout the force.

I have no doubt that if a system of retirements or pensions was established it would induce good men to enter the force, as well as produce a stream of promotion in the different corps thus giving some encouragement to the juniors.

Any officer who attained high-class certificates in the various schools should, in my opinion, subject to the approval of the senior military officer, be excused the obligation of undergoing the examination for promotion.

Field Guns, number of.—With regard to the number of field guns recommended, the number may appear large, but as it would be most desirable to be superior in this arm to the attacking force, the number twelve to eighteen is mentioned; a battery of these I would furnish from the Permanent Artillery reserve, as steadiness in the handling of field guns and accuracy of fire are most important in field operations, and to these qualities the success of a defence may often be attributed.

SATURDAY, 12 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., examined:—

Col. W. A. Anderson, C.M.G.
12 Mar., 1881.

187. How long have you been in command of the Victorian local forces? Nineteen years—last ten of which under the "Discipline Act." My present commission under that Act is Officer Commanding the Local Forces of H.M. Government in Victoria—rank of Colonel. I served in the Imperial Service as Adjutant, extra A.D.C., and left as a Captain. I organised and commanded as a Volunteer Colonel the first Volunteer Force raised by a Government in the Australian Colonies.

188. Have you a permanent force at the present time established in Victoria? No; only one officer and twelve men left out of the late battery, the twelve men being employed as labourers in the Ordnance Stores.

189. Do you consider that a permanent, or regular force, as a nucleus for the rest of the defence forces, is absolutely necessary? Yes.

190. What are your views as to the organization and general constitution of such a force? I think that any force so maintained by the Governments of these Colonies should not be enrolled for any long period; that is, that their services should not extend beyond (say) three years. I think that to secure men of good physique and character and intelligence, before enlistment a definite promise should be held out to them of employment, as vacancies occur, in Government departments where discipline is essential to a greater or less extent, such as the Police, the railways, the Penal department, and Post Office. I am inclined to think it will be found that the Customs and other departments might also be open to such an

an arrangement. I allude distinctly to the employments in the subordinate positions as a commencement; that is, I do not contemplate men being taken from the permanent force to be made officers, or placed in any of the higher grades at first. For example, the men drafted should commence as constables, warders, letter-carriers, porters, &c. I think if this system were adopted two important and several minor ends would be gained. The important ones are, first—men accepting a lower rate of pay with the hope of gaining by good service, in a comparatively short time, a higher position; next, as their transfer to the other departments would depend entirely upon good behaviour, experience shows me that almost a total absence of military crime results, men regarding dismissal at the will and power of their commanding officer as the highest punishment they could receive. During ten years that the Victorian artillery were in barracks I had occasion for only six courts-martial. On each of those occasions the culprits on undergoing sentence were dismissed the force the day they left gaol. I have a great objection in these colonies, where no system of relief exists, for men to take up the profession of a soldier as it were for life or for years. It withdraws them unnecessarily from the industrial capital of the country, and I consider they would deteriorate, however carefully managed by the routine and mode of life inseparable to barracks. Opening of the Government departments to men who have undergone training would enable the Government in the course of a short time to possess a reserve force, the services of which might be made by law available both for occasional drills and for actual service, and this should be one of the conditions on which men should be enrolled. It is only right to state that when the corps upon which I base my remarks was first formed it consisted of 100 men, intended to be drafted into only two departments—the Police and the Penal department. The calculation made by the Chief Commissioner of Police and the Inspector General of Penal Establishments was that their united establishments would absorb about 100 men in three years; but unfortunately for the experiment, owing to a Superannuation Bill being passed for the police, numbers of men were drafted before they had been properly disciplined or properly trained. This gave the impression that but few months' training resulted; but at the time the corps was disbanded it was an absolute fact that no man could be drafted out of the service under three years. I am of opinion that the selection of men on the above basis should be by a Board, of which the permanent heads of the departments for which they are ultimately intended should be members, under the presidency of the commandant. Probably the physique and requirements would differ for the several departments; hence a standard would have to be laid down of size, age, and educational requirements, &c. If this were done, the result no doubt would be that the Board would assemble to examine the candidates under the arrangement which would lead to suitable men being ultimately drafted to them. The proceedings of the Board should be that the candidates having been beforehand duly measured, heights, weights, age, &c., recorded, each candidate having been made to write a short sentence or two from dictation, under the supervision of a trustworthy non-commissioned officer, to examine each candidate chiefly with a view of ascertaining his intelligence, general fitness, previous history, and as far as possible to verify the age stated by him. After this, medical examination would ensue for those approved of by the Board, and those passed by the doctor would then be handed over to the military authorities, with whom there should be no interference, until one of the departments requisition for men, on which the military authorities would select probably according to seniority, good character, and the peculiar qualifications required for each of the Civil Service branches. Men should be enlisted for the permanent force between the ages of eighteen and twenty-seven, with the exception of ex-Imperial artillerymen, who, if enlisted after that age, should not be eligible for the Civil Service.

Col. W. A.
Anderson,
C.M.G.
12 Mar., 1881.

191. As the wages are pretty much the same in all the Colonies, there being no material difference, at what rate do you think you could enrol men for service in the force you indicate? I can only go by the Victorian rate. The men received 2s. a day and all found. It is better to give the total cost, including everything. When the force consisted of two officers and 139 men, the total cost per head per annum was £86, including everything. The corps was under-officered.

192. Do you consider that if these men are kept for five years in barracks they would deteriorate from want of change and relief, and become more or less unfit for earning their own living on discharge? I think it too long according to the scheme I advocate, but not too long if the men are to be considered as soldiers and not to pass into the Government service. I exclude non-commissioned officers, who should be engaged on a different footing.

193. Would you recommend that in a permanent or regular force men should be allowed to marry? Certainly, in these colonies. I consider that where population is so much required men should be allowed to marry, but not allowed to live out of barracks, except as an indulgence. From my experience I did not find that the proportion of marriages became too great. I attribute this to the reason that as the married men only received 1s. extra a day, and no rations for their wives or family, they could not afford to marry as a general rule.

194. Then you do not propose increased allowances to married men, nor provision of any kind as to quarters in barracks? No, not except the 1s. a day.

195. Are you in favour of the formation of an Australian federal regiment of artillery, for service throughout Australia? I should be greatly in favour of such a regiment if the difficulties attending its formation could be got over, and the reciprocity required from the various colonies obtained. I understand the formation of such a regiment is proposed for the relief of detachments from one colony to another, under the direction of some general head who does not belong to any one of the commands.

196. How long do you think it would be required to form a good artilleryman, and also a good infantry man? If the class of men indicated by me be enrolled, that is, men possessing a certain amount of education and intelligence, I think eighteen months for artillery, provided they are not too much engaged outside, and infantry eight months.

197. Under what sort of disciplinary code should such a permanent or regular artillery force as you describe be placed? In reply to this question I am not speaking of the Federal Regiment alluded to, but to a permanent force. I think that it will be found quite sufficient to allow the Commandant to assemble Courts-martial with the power of inflicting imprisonment with or without hard labour for a period not exceeding twelve months; the power of dismissal at will; the power of minor punishments, such as stoppage of pay, cells, &c. I may state that my reason for not recommending the Imperial Army Discipline Act, is that I feel certain no severe punishment such as death, or a long period of penal servitude, would ever be carried out in time of peace; in war the forces pass under the Imperial Act.

198. Then what would you propose for minor punishments, and what was your practice in Melbourne? The minor punishments authorized by the Military and Naval Discipline Act of Victoria were stoppages of

Col. W. A.
Anderson,
C.M.G.
12 Mar., 1881.

of pay, &c., when in confinement under the sentence of any Court, absence from duty without leave, or under any charge of which a man would be afterwards convicted by any Court of criminal jurisdiction. The commanding officer had power to fine to the amount of 20s., with the alternative of solitary confinement not exceeding twenty-four hours. The other punishments used were confinement to barracks, extra guards, fatigue duty, &c., and stoppage of all indulgences, for an unlimited period.

199. How would you propose to supply the officers for the force you have described? I propose that as a rule all the non-commissioned officers should be, or should have been, in the Royal Artillery, and that the Permanent Artillery should be under the control of an officer who has been, or is, in the Royal Artillery. But I decidedly advise that local officers having the necessary qualifications be encouraged to enter.

200. Do you not consider that some inducement should be held out to officers serving in colonial permanent or regular forces to make the service a profession? Unless this be done, officers will naturally seek to obtain better remunerated employment. This could be easily accomplished in colonies where Civil Service retirements are provided by putting officers on the same footing, both in regard to themselves and their widows. In other colonies suitable provision should be made for the like purpose.

201. Would you subject the officers on first appointment to an entrance examination? In the case of artillery officers the Commandant should use his discretion, but provisional commissions should be issued to enable aspirants to qualify.

202. In estimating the total number of garrison artillery required for the system of defence, would you calculate it on any particular basis, such as the number of men that would be required to man the greatest number of guns that could be in action at any particular time? The estimate should be based upon the number per gun, and on an average twelve men per gun would be required.

203. What proportion out of that number per gun do you consider should be taken from the permanent or regular force? I should take two-thirds from the permanent artillery and the reserves, and the remainder from volunteer artillery, with the exception of the field batteries, which should be worked by the volunteer artillery; the garrison guns to be worked in the proportion named.

204. In the case of a volunteer field-battery, do you consider it necessary that the drivers should be taken from the regular artillery? No; not in these colonies, where competent drivers are so easily obtained for such services as are required in this Colony.

205. Is it not possible to train the volunteer field artillerymen to act as drivers? There is no difficulty whatever in the way of training them as drivers for such services as would be required.

206. Is it necessary that the permanent artillery should instruct the drivers? No, provided there are competent instructors attached to the volunteers.

207. Do you recommend that horses should be kept for the field batteries, to be utilized, when not required for drill, for other Government purposes? No; I do not think that plan would work.

208. With reference to the maintenance of a permanent force, do you consider that a portion of it should be composed of infantry? I do not, provided there is a sufficient militia or volunteer force properly kept up in drill and strength.

MONDAY, 14 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., further examined:—

Col. W. A.
Anderson,
C.M.G.
14 Mar., 1881.

209. Do you think officers of the Royal Artillery should be induced to leave the Imperial service and take service with the Colonial force? I object to holding out inducements to officers to leave the Imperial service. I consider the employment in these Colonies too precarious for that responsibility to be assumed. I think it would be safer to notify the authorities at home the probabilities of employment, and to let officers make their own applications, accompanied with certificates of their qualifications.

210. How would you prevent colonial officers from rusting, and how are they to be kept conversant with the changes in military matters generally? The co-operation of the Imperial Government may be assumed on this point; in fact it has promised to give facilities to colonial officers going home for study. I therefore quite agree with Colonel Richardson as to the expediency of sending home from time to time such officers as the Commandant may select.

TUESDAY, 15 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., further examined:—

Col. W. A.
Anderson,
C.M.G.
15 Mar., 1881.

211. Are you in favour of a purely volunteer force on the English model, or of a paid volunteer force? I am in favour of an extended volunteer force throughout the Colony of New South Wales, and that no difference should be made as to the allowances, &c., given to one portion thereof more than another. If the interests of the Colony require a certain body of more highly trained men outside of the permanent force, it should be of different designation, such as militia. I think that it would never answer, for various reasons, to give emoluments to one portion of the volunteer force and not to others; nor do I consider that any volunteer officer should receive any greater allowance than the men under his command, and this is one of the reasons why I suggest the adoption of the word "militia" to those men who are subjected to more severe discipline, and who derive an actual money benefit from their services. I further consider that the position of gentlemen holding commissions should entail a certain amount of expense, which they should be able to defray out of their own pockets before they place themselves in a position which is inevitably attended with expenditure. I do not mean in this to include horse allowance for mounted duties. I am unquestionably of opinion that no attendance at drill, camps, &c., should entail the necessity of personal expenditure, but I am equally against anything like profit being derived from the services of a volunteer. I use the word "volunteer" in contradistinction to militia.

212. What is the constitution of the purely volunteer force you recommend? It is impossible to answer this question without knowing whether a permanent force, and perhaps a militia force, is to be maintained, but looking solely to the volunteer question, both as a valuable aid in time of war and as developing and maintaining a proper martial spirit in these Colonies, with a knowledge of the use of arms and the benefits which result from discipline more or less applied, I think that all centres of population connected with the

the metropolis by rail should have some form or other of a purely volunteer force, whether it take the form of rifle companies under proper control or volunteers on the model of the English system. Unless such step be taken, I fear that the native portion of the population will in the course of a few years lose all the martial instincts inherent to our race, and further that they will not attain the advantages which are proved to result in Great Britain and in these Colonies from giving young men an interest in some object which withdraws them from the idleness of disengaged hours. I attach particular importance, from my long experience, to the good resulting from such an organization as bringing class together with class, and thus leading to the abolition of class prejudices. I thus, as an old colonist, give my views as much from a social as from a military point of view.

Col. W. A.
Anderson,
C.M.G.

15 Mar., 1881.

213. Will you state the expenses connected with the encampments held in Victoria? The greatest number of men that I have known at any of these camps has been from 2,500 to 2,700. These encampments have invariably been held at a distance of not less than 25 miles from the metropolis, sites being selected as central. At such camps the commanding officers of all such men have been allowed to draw at the rate of 2s. 6d. per diem for sustenance, &c., and in addition to this, the Government have provided tents, straw, fuel, and transport by rail. The total expenses, counting everything except railways, have always been nearly £2,000. When country volunteers are brought to head-quarters for parade in the vicinity of the town, the up country corps have been allowed 2s. 6d. a day for expenses, and the men of the home district 1s., but on these occasions the men have not camped out.

THURSDAY, 17 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., further examined:—

214. Will you state your views with regard to the composition and strength of a field force required to resist land attacks? From the information I have been able to gather, chiefly from the Commandant of New South Wales and the other officers questioned, I infer that some 3,000 men are required in addition to the permanent force of artillery, which the officers of that arm deem necessary, not only for the preservation of guns, and artillery and torpedo material of war, in time of peace, but also for the manning of the guns in time of war. I observe that stress is laid by the artillery officers forming part of the sub-committee upon the point that they recommend a system by which the permanent artillery force can be assisted by men from a reserve, if established. I therefore feel free to speak about the field force. With my limited knowledge of the Colony of New South Wales, and being greatly guided by the opinions of the local officers, I presume that a force of at least 3,000 men should be available for the field force. I think it will be for the Commandant to decide as to the proportions of each branch—cavalry, volunteer artillery, engineers, and infantry; always presuming that the Commandant would surely direct at his discretion such signal parties as were necessary to be provided for the use of the field force, from the forces under his command. The exigencies of this Colony seem to point out that a militia force of infantry should be provided and maintained. I consider the present organization of infantry as *de facto* a militia force, and I cannot reconcile to myself that it should bear the designation of a volunteer force, inasmuch as it is perfectly clear to me that the members thereof, officers included, are serving in consideration of the emoluments they receive. I therefore, individually, should prefer that such a force should not be called a volunteer force. I have no objection to the term "volunteer militia." I am most strongly of opinion, irrespective of a permanent force, that the only way of maintaining the absolutely required martial spirit throughout these colonies is by a provision for either a purely volunteer force or some such system as I understand prevails in South Australia, under the designation of rifle companies. But I am equally clear that those companies should be definitely under the control of the Commandant, and that there should be no intervening power between them and the Commandant. In fact I regard the proposition of rifle companies as another name for pure volunteers, and admitting that the Government provide these rifle companies with any Government assistance, such as arms, &c., no Rifle Association should have the slightest power to interfere as to their military organization. As to the constitution of the field force, and irrespective of the infantry force which may be considered necessary to be maintained on a militia system, I am strongly in favour—for reasons I have already set forth—defensive and social—of a volunteer force being encouraged throughout the Colony. I find, taking the statistics from the year 1871 to the year 1880, that the average attendance of the purely volunteer force in Victoria at camps and general parades is from 78 per cent. down to 59 per cent. It must be remembered that this average is greatly reduced by the fact of the long distances at which many of the country corps reside, and that it is still further reduced by the fact that the 300 artillerymen maintained in the western district cannot attend on these occasions. When such a percentage as this has been reached in face of the general want of co-operation on the part of the employers of labour, I am of opinion that the enrolment of such a force, not only for the reasons I have adduced, but from a practical and defensive point of view, is not to be under-estimated. I therefore say that, whilst agreeing with the previous evidence of my brother Commissioners as to the general numbers of the force, and always subject to the recommendations of the Commandant, who must be the best judge as to the requirements of the force under his command for the defence of the colony, and for which he will undoubtedly be held responsible—subject always to superior control, if that be provided for—I abstain from giving any definite division of the forces which are to compose the said 3,000 men. Generally speaking, I should recommend first a regiment of cavalry,—one troop to be raised in the immediate vicinity of the metropolis (Sydney), trained entirely to the duties of mounted riflemen, scouts, &c.; and six troops raised in such districts as the Commandant may point out as being easily available for his purpose of defence, the number of each troop not to exceed for the capitation allowance more than thirty effectives, unless when a troop has provided horses for a gun at its own expense, when twelve extra to be allowed. I found, during fourteen years' experience of this system—that is, allowing a gun to each troop of cavalry—that not only does the artillery drill afford an interesting break in the routine of training, but the system has never failed at any general muster of the force under my command, to the extent that I could obtain from the cavalry a battery full-horsed without a farthing's expense to the Government, and it has crossed the roughest country that we have ever had troops mustered upon in Victoria. I do not presume for a moment to say that a battery so formed can be in the least degree supposed to equal horse artillery; but I will say that, inasmuch as all the members of the gun detachment are mounted, I have found great celerity of movement over the field batteries, the men of which, necessarily in our Colonies, cannot all be mounted,

Col. W. A.
Anderson,
C.M.G.

17 Mar., 1881.

Col. W. A. Anderson, C.M.G.
17 Mar., 1881.

mounted, and I think I have had but one accident over the roughest ground from the upsetting of a gun-carriage. With regard to the only class from which a cavalry force from these Colonies can be procured, inasmuch as the volunteer not only gives his own services but also those of his horse, for his military obligations—the yeoman class settled upon the land—I consider the introduction of that class of the greatest importance to any Colonial force. I have heard the remarks of the other members of the Commission as to a preponderance of the field artillery element being required in these Colonies—a proportion above that in Her Majesty's army—and I quite appreciate the reasons given for this by Colonel Downes, Colonel Scratchley, and Colonel Roberts. So much has this been felt by me heretofore that I have no less than three batteries of field artillery, and one formed from the cavalry, in the force of, say, 3,800 men maintained by the Colony of Victoria. My experience goes to show that the militia infantry force should be restricted to the lowest number of men the Commandant may think fit to provide for, but that the volunteer force generally throughout the Colonies should be extended as far as possible in the centres of population. But I would not allow a single man—officer or private—outside of the permanent or militia force, to have it said of him that he derives the slightest personal emolument for coming forward to do his duty as a citizen in the defence of his country. I think the capitulation allowance in Victoria too low, as I know the straits that commanding officers have been put to to provide what, to my mind, is a most essential requirement, namely, drill-sheds, &c., and other expenses outside the mere question of providing uniform. I further consider that all permanently paid officers, whether on the staff or belonging to the permanent establishment, should be available for "all round" duties at the discretion of the Commandant, and that it would be wise to avoid the institution of special appointments for any duties which the Commandant may see his way to provide for by assigning them to the paid officers. I repeat that gentlemen proffering their services and accepting their commissions as volunteer officers should be in a position to meet the expenses which are inevitably incidental to their rank.

Colonel William Acland Anderson, C.M.G., further examined :—

Col. W. A. Anderson, C.M.G.
17 Mar., 1881.

215. Will you state what strength you recommend for the working of the guns in the coast defences provided at Sydney, Botany Bay, and Newcastle, including the garrisons, to man the defensive works in case of attack? On a subject of this kind I defer entirely to the opinion of the artillery officers present on the Commission, and to that of the Commandant commanding the forces. It is impossible, except for an officer thoroughly acquainted with the country, guided by the advice of engineer and artillery officers, to express an opinion; but I do know this, and wish most forcibly to express my opinion that,—inasmuch as coal is one of the most important munitions of war in the present day, Newcastle and Tasmania may be regarded as points which inevitably affect the whole of the defences of the Australias.

FRIDAY, 18 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., further examined :—

Col. W. A. Anderson, C.M.G.
18 Mar., 1881.

216. Will you state your views on the subject of the system of examination which you recommend should be adopted for appointments and promotions in the military forces of the Australian Colonies; first, in the permanent force; secondly, in the volunteer force? For the permanent force I think that the previous evidence of the military officers of the sub-committee tends to show the nature of the examination, and the exemptions therefrom on behalf of ex-imperial officers, on first appointment. I do not think it possible to carry out in its strict integrity the examination laid down for Her Majesty's service for promotions in the corresponding branch of the imperial service—that is, artillery. I am rather inclined to think it will be found of use if the officers of the permanent force should be required as a matter of duty to make reconnaissances, rough military sketches, and to give their ideas in writing of their views as to the defence and practicability of roads, approaches, &c., for all branches of the service, and that these said reports, sketches, &c., should be examined by the Commandant from time to time, so that he might be enabled to form an opinion of the capabilities of each individual officer; that most certainly no such officer should receive promotion until he had passed a course of examination modified by the Commandant from the imperial system. The exigencies of these colonies do not require the very high standard demanded from the scientific branches of her Majesty's army, which are more calculated with regard to the probability of their serving in foreign lands than for merely their drill duties with their own arm. I therefore consider in the examination for promotion of the permanent artillery officers greater stress should be laid upon a knowledge of artillery work, pure and simple; of their guns, and of the appliances and appurtenances directly or indirectly connected therewith. With respect to the officers seeking to be made field officers I think that a knowledge of tactics, strategy, and the support which the three arms of the service are expected to give one to the other, should be in addition required. For a volunteer force I am of opinion that in many cases it is very desirable to give commissions in the first instance without any examination whatever. It is impossible to avoid the element of personal and local influence; in the formation of a new corps men in any locality naturally look up to some one in whom they have confidence as a leading citizen. It is not here out of place to say that whilst I hold very strong opinions as to the practice of nomination by volunteers for any rank above that of non-commissioned officer, I most emphatically declare that it is destructive to all discipline if volunteers have any voice in the selection of officers of superior rank, such as captains, &c. I think the examination for officers of the volunteer force, in the first instance, should be more of an educational one, so that illiterate men may not obtain commissions. I have tried this system for a number of years, and I have had the advice of some of the leading professors and men connected with the University and the large public schools in Victoria, and they all advised me that the first step was to make candidates for commissions in the volunteer force pass an examination in what is commonly called the three R's. Prior to the institution of this step many illiterate men, perfectly unfit to hold commissions, and by their want of education utterly unable to follow up the course of the knowledge to be imparted by lectures and by study of military books, were admitted into the force. I am happy to say these have been got rid of. Following on a volunteer having passed the educational test which makes him eligible for a commission, and his name being duly registered as such, I am then in favour of one of two courses, and I could not say which will work best—either that before he obtains his commission

commission he should be able to pass a technical examination in military matters, not made too severe, for his first grade as officer, subsequent examinations being required for advancement; or the other course is, that he should be merely given, in the first instance, an acting appointment; and the conferring of acting appointments should, in my opinion, entirely rest with the Commandant, as it does with me under the Act under which I serve. The officer so appointed to an acting commission should be subject to passing an examination both on parade and by set questions; but I am very much of opinion that a practical examination on parade will be found the best. The officer so passing should then have his acting commission converted into a substantive one. I have seen many gentlemen who could answer written questions, and who knew the drill book from one end to the other by rote, and who yet could not "size" a company, or "march off a corporal's guard."

Col. W. A.
Anderson,
C.M.G.

18 Mar., 1881.

MONDAY, 21 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., further examined:—

217. What amount of compensation is given to volunteers in Victoria, and what amount of work do you get out of them for that compensation? The total strength of the volunteer force of Victoria—of all arms, including cavalry, field artillery, garrison artillery, engineers, torpedo, signalling and rifle corps—has averaged for the past fourteen years about 3,480 men. There has been a singular regularity in the number of men who have been passed from the force, but who may have enlisted in other corps. Those who have retired from the force, and have been replaced by an equivalent number, have amounted to 700 per annum. On the 1st July last 238 men only out of the 3,480 were returned as non-effective. It is to be understood that the term "non-effective" applies to any volunteer who fails to attend one or more of the allotted number of drills for his year's qualification; but it does not mean that any such volunteer is necessarily inefficient, inasmuch as, from sickness, absence, &c., some of the best men fail to classify as effective. The Government grant is absolutely nothing for those classified as non-effective. None of the volunteers under my command receive any personal allowance whatever, unless it be considered that three officers per battalion of infantry, the three field batteries considered as a brigade, and the garrison artillery, draw horse allowance. I am not including the charge for railway transport of troops, as the custom has sometimes been to charge the military department with the fares for such troops and sometimes to write them off. From a return in my hand, I find that in 1859 a general augmentation was authorized under my predecessor, Colonel Pitt, and at the end of that year he had only 1,600 men. From 1860 to 1880—the financial year of Victoria ending on the 30th June—the average strength of the force during twenty-one years ranged from 4,535 men to 3,306; but it must be remembered that prior to 1863 the effective system had not been introduced. I wish it to be clearly understood that I do not think the same amount of efficiency could be procured from volunteers as exists under the militia system. In fact the whole thing comes to a consideration as to cost and numbers, and the application, for various reasons, as stated in my previous evidence, of the necessity for extending the volunteer principle throughout the Colonies. It is also to be noted that no system exists, as far as I am aware, in any Colony but South Australia, as to the formation of what is there termed rifle companies. I take these rifle companies to mean purely volunteers, the only assistance granted to them by the Government being the supply of arms and a fixed quantity of ammunition per annum for practice; the members of such companies finding their own uniform, and being to a great extent under the Commandant of the Colony at all times, and certainly so when called out for military exercises, or when brigaded with the other portions of the force under his command. This distinctly leads up to the formation, as far as infantry is concerned, of two distinct bodies outside of a permanent force,—one disciplined on a more or less stringent militia principle, and one on a volunteer system, let it be called either by the name of volunteers or of rifle companies. I do not think that any bad result would accrue if such portions as the Commandants of the several Colonies might think it necessary to be maintained at a higher standard of drill and discipline were designated by some such title as should absolutely disconnect them from the term volunteers, as I hold that volunteers should not receive any personal remuneration whatever. Taking the infantry as an illustration, what is required for the infantry to become effective and thereby acquire the capitation grant is as follows:—An infantry man has to attend (1) two battalion parades; (2), pass two parades for official inspection by the Commandant, or some other officer deputed by him; (3), attend thirteen other parades; and (4) he must have attended seven other parades or drills, in addition to a course of musketry. But no officer commanding a corps is allowed to return in any one month more than eight parades or drills ordered by himself. This qualification is exclusive of general musters for camps, parades, &c.

Col. W. A.
Anderson,
C.M.G.

21 Mar., 1881.

218. Would you state whether those drills are performed in the day-time or at night? I regret to say that unless at Easter, or on the Queen's Birthday, the Prince of Wales' Birthday, and similar holidays, it is really impossible to assemble any large number of the force under my command in daylight, more particularly in the home district. In the country districts, where a Wednesday half-holiday prevails to a great extent, and where there is an absence of those amusements which naturally attract young men—such as football, cricket, &c., I do not find this difficulty; and if the Commission will take the trouble to refer to the reports I have made to my Government from time to time, they will find I have pointed out in the clearest possible language the impossibility of imparting knowledge in essential field-training, such as extended order, shelter-trench work, &c., to the Victorian forces.

219. Do you think that the capitation allowance is a sufficient fund under your system? I do not. It certainly is not sufficient for the artillery and the engineers, and in the case of the infantry the commanding officers have frequently to burden themselves with great personal responsibility to provide uniforms and drill-sheds for their men. Indeed I may say the excellent drill-sheds existing in Victoria are provided in a great measure from personal subscriptions from the corporations and civilian members of the district. As to the provision of uniforms I have already stated that, taking the last year as an example, out of 3,480 men 238 men were returned as non-efficient, and 700 men passed through the ranks. This leads to commanding-officers keeping men on their rolls from the time they have qualified as efficient until they have drawn their allowances, consequently the utmost care has to be taken of the uniforms of the men leaving, and they are no doubt cleaned, pressed, &c., and re-issued. This involves great care and management on the part of commanding officers, which I do not think they should be obliged to incur. As the Ordnance war-

Col. W. A.
Anderson,
C.M.G.
21 Mar., 1881

like stores and Barrack department would have to be maintained, whatever description of force may be employed in the Colony, it becomes necessary to separate the cost from what is the proper expenditure of the volunteer force, namely, volunteer forces (3,480 men) including four staff-officers and drill instructors, effective allowances, and incidental expenses, £17,105; average cost per man, £4 18s. 3d.

220. What was your experience as regards the working of the land warrant system? I can only speak from my experience in Victoria. Without any consultation whatever with the military authorities, and very suddenly by an amendment of the Land Bill sent to the Upper House by the Legislative Assembly, a clause was introduced granting land-warrants to volunteers for five years' efficient service; hence this including services before the effective system was introduced, was retrospective. The result was that this having been passed into law, many of the very best men of the force did not receive a warrant. So much did I foresee that this would be the result that I asked the Government to appoint a Board outside of me altogether, of which only one of my staff should be a member, to consider the claims. This Board was formed under the presidency of the Surveyor-General and other heads of departments, the late Captain Stubbs being the only military member. I am sure this Board did their very best, but the result was not satisfactory. The total cost of the land warrants to the State was up to the time it was abolished in 1869, £139,683. This increased the average cost of the whole force from 1863 to 1869 by about £7 per head per annum.

221. In addition to your £4 18s? An addition of £2 2s. Not the slightest good resulted from it, and on its abolition it in no way affected the strength of the force, nor has it done so since. As a rule the men obtaining the warrants sold them in the market to speculators; and as to leading to any settlement on the land, I need not say it was an utter failure. Although I should in any case have resisted the principle, it would have been far better to have given the men the £50 in money than to have put them in possession of these warrants.

TUESDAY, 22 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., further examined :—

Col. W. A.
Anderson,
C.M.G.
22 Mar., 1881.

222. Do you consider a reserve force of artillery, composed of men who have passed through the permanent force, desirable? Yes.

223. Do you think the permanent artillery force should have charge of the maintenance of the coast defences? Unquestionably.

224. Would you employ them in connection with the custody and management of warlike stores? Certainly, and not only as a necessity, but with a view to economy.

225. Do you think it would be wise to reduce the strength of the permanent artillery force below 300 officers and men at the present time? I have already recommended a force of between 300 and 400 men until time permits of the formation of a reserve.

226. Do you consider a permanent infantry force necessary? No.

227. By a paid system do you not limit the number of men trained to arms? A paid system must necessarily limit the number of men under arms. Whilst I have testified to maintaining in the Colony of New South Wales a permanent force and some 1,500 to 1,800 militia, I have also recommended the extension of the purely volunteer element throughout the Colony, up to the extent of 4,000 men, inclusive of militia.

228. How would you meet the case of men who are anxious to join the volunteer force, especially in the country districts? I would not permit the formation of any volunteer corps except its services could be immediately available by railway or other speedy communication with the metropolis. I have no objection whatever to urge against the formation of rifle companies, provided always that they are under the control of the officer commanding the local forces, but I see very clearly that great waste of money will be the inevitable result of providing such companies with arms and accoutrements. These rifle companies will not be content, however they may have commenced, without finally obtaining the modern arm of the British Army. This may be taken to cost in this Colony about £4 15s. per rifle, and it is impossible to suppose but that with a shifting population great loss would be sustained by the issue of such arms without proper discipline and supervision.

229. What do you consider should be done to ensure the supply of ammunition in time of war? Owing to the prevalent use of other explosives than gunpowder for mining and other commercial purposes, I think it would be very unwise to establish a powder factory in these colonies, even for general purposes, every ingredient for the manufacture of which would have to be imported, with the exception of, perhaps, sulphur from New Zealand. On the other hand, every military man knows that the special ammunition required for the Martini-Henry rifle, with which all the forces are armed, would be difficult to obtain from the War Department in a case of emergency. I am aware that the local forces, who take much interest in rifle shooting, would prefer to carry on their matches for many reasons with the imported ammunition, but it is absurd to suppose that given the necessary machinery, small arms ammunition fit for all war purposes could not be manufactured in the colonies. The lead-rolling factories exist for the production of the required bullets, and the other minor points, as I am advised by an expert, should not cost much. I have recommended to my Government to maintain a reserve of 1,000 rounds per rifle, and I am rather inclined to think, all things considered, that I have under estimated the requirements. Be that as it may, any actuary will inform the Commission of the gain which would accrue to the Governments of these colonies by being saved the necessity of investing money for the reserve ammunition in question. All that is required is to provide the annual expenditure for match purposes, and for which all the volunteers in these colonies pay themselves, and to establish a factory which would guard against two evils—first, the probability of supplies being cut off in time of war; and secondly, the loss of interest on capital expended, and the inevitable deterioration of ammunition kept long in store.

230. What should be the duty and term of office of the Imperial officer you recommend should be engaged by the Australian Governments? If it is distinctly understood that my recommendation goes to the employment of a superior officer unconnected with any of the Governments of these colonies, but who would be available as an adviser, I can give my recommendation. I do not think it is possible to exaggerate the advantages which would arise from an appointment of this nature; not only would it afford means of deciding many military points, but it would give great relief to any Government from the pressure which is invariably brought to bear when the interests of any individual in the military forces, volunteer or otherwise, are under consideration.

231. What are your views with regard to the management and custody of the warlike stores in the Colony? The officer commanding the forces should be held responsible to his Government for the management and custody of the warlike stores belonging to the Colonial Government. At present it is manifest that he has neither the power nor the supervision, nor can he in any way be chargeable with neglect of duty as to the maintenance of the supplies. The evidence shows that he neither receives proper periodical returns of expenditure and supply, nor has he at his disposal any safeguard but the so-called Military Store Board.

Col. W. A.
Anderson,
C.M.G.
22 Mar., 1881.

THURSDAY, 24 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., further examined:—

232. Do you think that a reduction in the annual military expenditure could be effected, having due regard to the efficiency of the military force, and without material injury to the service? I consider it impossible that the Commandant can entertain this question until that portion of the volunteer force, the Naval Brigade, is by law made to conform to the same standard of drill and efficiency (including the giving up of time during working hours) to which the trained and paid volunteer forces are subject. It is beyond question that the men serving in that corps are placed at a great advantage over the rest of the volunteer force of which they are members, inasmuch, as shown by the evidence received by the Commission, they are not called upon to make any sacrifice of their working hours. However, I consider that, given the fact that the Government will place them in the same category and condition as their brother volunteers, the Commandant could make reductions. I observe by the study of the estimates of expenditure that a larger expenditure is shown than actually exists, inasmuch as, for the year 1880, no less a sum than £10,000 has lapsed to the revenue, but which still remains as a charge on the military department in the public view generally. I am of opinion that a reduction could be made also in the Ordnance Department; and I refer to my evidence, there showing that, to my mind, the Commandant will see his way to make a reduction on the annual cost per man of his trained and paid volunteer force.

Col. W. A.
Anderson,
C.M.G.
24 Mar., 1881.

MONDAY, 28 MARCH, 1881.

Colonel William Acland Anderson, C.M.G., further examined:—

233. What system is in force in the Colony of Victoria in regard to the drilling of boys in public schools? In Victoria the system is that all State school teachers under the Education Act receive increased emolument for the drilling of the boys of the State schools, after having a certificate of proficiency from an officer appointed by the Commandant, and in such places as there are volunteer corps the drill instructors of such corps are made available. I have always opposed, and shall continue to do so, the issue of arms to the boys of the State schools, inasmuch as the boys are, as a rule, too young and too small to be entrusted with arms, and could only be supplied with those of obsolete and useless patterns. Special care is taken by the Rifle Association to provide for matches for Public schools, and prior to the Association matches teams selected by the masters are provided with arms, and a drill instructor sent to teach and coach them. I have seen over 1,000 boys of the State schools drilling without arms, and drilling extremely well.

Col. W. A.
Anderson,
C.M.G.
28 Mar., 1881.

SATURDAY, 12 MARCH, 1881.

Colonel John Soame Richardson examined:—

234. How long have you been in command of the New South Wales local forces, and how long have you been in the service? In command of the local forces from February, 1865, and in the Imperial and Colonial military service from 1864 inclusive.

Col. J. S.
Richardson.
12 Mar., 1881.

235. Have you a permanent or regular force at present established in New South Wales? Yes.

236. Do you consider that a permanent or regular force, as a nucleus for the rest of the defence force, is absolutely necessary? Yes.

237. What are your views as to the general organization and constitution of such a force? The organization, as a general rule, should, I think, agree with that of the Imperial system, inasmuch as that is a system matured and perfected, after an experience of almost centuries, and consequently to be regarded as the most suitable for a perfectly efficient military force, *i.e.*, according to English requirements.

238. Have you considered, in connection with the establishment of a force of the character described, the formation of a reserve from men who have passed through that force? I have, on two or three previous occasions, and I have since more latterly alluded to it in my memorandum of the 2nd instant, submitting certain information to this Commission, in which I say that it is advisable "that such Civil departments in the Government service as represented by the police, gaols, railway, &c., should be open as fields of advancement and employment to artillerymen of good character, provided they engaged to enter the reserve for a certain number of years. Men of exceptionally good character might be permitted to enter such service one or two years prior to the termination of their limited engagements in the artillery. The cost of such a force to be confined to the issue of clothing, arms, accoutrements, and ammunition, with a small annual retaining fee in consideration of mustering for drill at certain periods of the year."

239. What would be the term of service in the permanent force you propose? Five years, and, as I have pointed out, reduced to three in certain cases.

240. As no material difference exists between the wages of the several Colonies, at what rate per diem could you enrol men for service in the force you indicate? If the Civil departments were open to artillerymen of good character, I think 2s. a day, with the usual allowances granted to soldiers, would be sufficient to secure a desirable class of men.

241. What do you consider, under such circumstances, would be the total cost per man per annum, including pay, allowances, and all contingencies? About £90 a year.

242. Is it in your opinion wise to withdraw men for long service in barracks from the general industries of the Colonies, and do you consider that if kept for even five years in barracks they would from want of change and relief deteriorate, and become more or less unfit for earning their living on discharge? I think,

Col. J. S.
Richardson.
12 Mar., 1881.

think, in the first instance, that the usefulness of the force as a fighting body should be considered, such being the primary condition of its existence. I do not think that the retention of men in barracks for five years would have any prejudicial effect in regard to their taking to civil avocations after discharge, and I also think that their military training could not but make them better citizens. I am of course speaking of our present small force. With a large force there might be some such objection.

243. Between what limits of age would you enlist men for the permanent force? I would commence at 18, because in these colonies the youth are more advanced than in the old country, and as to the maximum, which has been fixed here at 40, that was adopted principally to secure ex-artillerymen, but I think that this age might be much reduced with benefit to the service.

244. Would you recommend that in a permanent or regular force men should be allowed to marry? I see no particular objection, inasmuch as the conditions of service in the Colony do not press so heavily as they do in the Imperial service on the married men. Had we rejected married men, we should have failed to secure the services of valuable non-commissioned officers and others. Our artillery is not subject to be moved about in the same way as Imperial regiments. But were it under the same conditions as obtain in the Imperial service, I think marriage should then be restricted to very small limits.

245. Would you enrol married men? No; only to a comparatively limited extent, and provided they were from previous training likely to form valuable non-commissioned officers.

246. Would you propose increased allowances to married men, such as lodgings, if quarters were not available in barracks? I would.

247. Assuming that the Governments of the other Australian Colonies agreed to the formation of a force upon the principle that the men should be enrolled for a certain number of years, on the distinct understanding that they should be given employment after good service during that term of years, would you approve of the formation of such a force for Australia generally? Certainly. It would be far more effective than the system of disjointed local corps.

248. In fact you would advocate the formation of an Australian federal regiment of artillery? Certainly.

249. How long do you consider it would take to form a good artilleryman, and also a good infantryman? The artilleryman about eighteen months, and the infantry soldier, twelve.

250. Under what sort of disciplinary code should a permanent artillery force be governed? As I before stated, I think the system, as applied to the permanent artillery, should be as far as practicable in consonance with that in the Imperial service, subject, however, to such modified conditions as would be possible and appropriate were certain civil departments open to the employment of artillerymen of good character after discharge.

251. How would you propose to supply the officers for this permanent or regular force? If I were to be called upon to organize an artillery force, I should recommend that application be made to the Home authorities to invite a certain proportion of officers serving in the Royal Artillery (who might be desirable, if sufficient inducement were offered) to retire from the Royal Artillery and take service with the Colony. Other officers might be supplied from those who have retired from the service, and whose previous training might fit them for the resumption of military duty. I should also encourage the sons of leading colonists to enter the force as a profession.

252. Do you not think that inducements should be held out to the officers, such as those which obtain in the Imperial service, to induce them to take service and look upon it as a permanent profession? I do not think, except under some such system as would secure a permanency of employment, with a prospect of some provision at the end of their military service, that the best stamp of officers could be secured, as otherwise officers are liable to regard their present employment as temporary, and from the absence of such provision they are continually on the look-out for employment of a more lucrative nature. By making these officers regard the service as a profession, increased discipline, efficiency, and satisfaction with the service must result.

253. With regard to the first appointment of officers, would you subject them to an entrance examination? Not in the case of ex-Imperial artillery officers, but in the case of others it would be desirable that their commissions should be of a probationary nature, subject to ultimate examination, for I see no way by which their services could be secured if dependent upon passing an artillery examination prior to entering into the service, as of necessity they must be profoundly ignorant of artillery subjects.

254. In assuming the total number of garrison artillery required for a system of defence, on what basis would you form the estimate? It seems to me that the basis already laid down by other witnesses would be correct.

255. In the case of a volunteer field battery do you consider it is necessary that the drivers should be taken from the regular artillery, or would it be possible to train volunteer field artillery men to act as drivers? No; as the movements of field-artillery in this Colony would not be of the complicated and mobile nature necessarily practised in the Imperial service. The volunteer artillery has hitherto satisfactorily trained its own drivers.

256. Do you recommend that any horses should be kept for field-artillery? I think if we kept sufficient horses (say twelve), to man a couple of light field guns for drill purposes and instruction generally, it would be as much as we have a right to expect. These horses could be supplemented with good effect from the carriers' horses sufficient to horse a battery of four guns and to perform the necessary movements with safety and moderate celerity. These permanent horses could no doubt be utilized in the performance of certain Government work in connection with the ordnance stores and barrack service.

257. With reference to the maintenance of a permanent force, do you consider that a portion of it should be composed of infantry? I am inclined to adopt the view expressed by Sir William Jervois and Colonel Scratchley as implied in their report, that a permanent infantry corps is unnecessary, as I consider that a sufficient body of volunteer infantry organized and trained on a militia principle will be ample for all purposes. I also think that the permanent force, both on the score of economy and the withdrawal of able-bodied men from industrial pursuits, should be as small as possible compatible with the efficiency of the service; and to raise a body of permanent infantry would in all probability prejudice the permanency of a like body of artillery which are indispensable to the requirements of the Colony. A stringent examination and continuous training in camp will to some extent compensate for the want of a permanent infantry corps as a school of instruction.

MONDAY, 14 MARCH, 1881.

Colonel John Soame Richardson, further examined :—

258. With regard to the supply of officers, you indicate that officers of the Royal Artillery should be induced to leave the Imperial Service and take service in the colonial forces ; do you think that is a better plan than getting the loan of officers from the Imperial service ? Generally speaking I do, for I have practically found that the subordinate officers of the Imperial service may become impatient of colonial control ; their position is comparatively independent, inasmuch as, if the worst comes to the worst, they can revert to the Imperial service. When relations become strained between the military authorities and those officers the service suffers, and there is moreover a great difficulty in getting rid of them before the term of their engagement is completed.

259. How would you prevent these colonial officers from rusting, and how are they to be kept *au courant* with the changes in military matters generally ? The more responsible officers should be periodically sent home for a year, and required to occupy half the time spent in England in the study of their profession. If one officer a year exclusive of the staff were thus sent the service would be materially benefited without any appreciable additional cost.

260. Is there any other matter which you desire to bring before the Commission, having for its object the improvement of the status of officers ? Yes, the desirability of codification, as formal regulations, such as obtain in the Imperial service, of the pay and allowances of all officers serving under the Army Discipline Act.

Col. J. S.
Richardson.
14 Mar., 1881.

Colonel John Soame Richardson, further examined :—

261. Are you in favour of a pure volunteer force on the English model, or of a paid volunteer force ? Of a volunteer paid force, because I consider that the requirements of the Colony point to a system of training and organization superior to that possessed and practiced by the English volunteers, inasmuch as the position of the volunteer force here demands that they should take the field with only that amount of preparedness which they might gain during peace time ; and having in view the fact of the very small body of regulars, and of there being no militia. The English volunteer force, under the new mobilization scheme, is relegated merely to the defence of garrisons ; here they would have to take the field.

262. Do you think it expedient to call men receiving pay volunteers ? No ; I should prefer calling them a volunteer militia, as the system of training with pay approximates somewhat to the English militia.

263. Will you explain in detail the system now in force in New South Wales, as regards the discipline, training, and pay ? When called out for actual military service, the volunteer force, except as regards the infliction of corporal punishment, is subject to the Army Discipline and Regulation Act, and the articles of war made in pursuance thereof ; when not on actual military service, the officer commanding a corps has power to reduce a non-commissioned officer, subject to the approval of the officer commanding volunteer force, and to summarily discharge a volunteer for misconduct. Officers are subject to arrest, and non-commissioned officers and others to custody, provided they are not so retained longer than whilst the corps is under arms. Volunteers are subject to suspension from military duty pending settlement of the case for which suspended, to fines for minor irregularities and offences against discipline, the same being deducted from pay due, or which may become due. Volunteers are also subject to fines, or in default imprisonment, for non-delivery of arms, clothing, and accoutrements to commanding officer, as also fines for pawning, destroying, damaging, or selling public property issued to them as volunteers ; for not keeping uniform in proper order, or wearing it contrary to orders ; and finally, for neglecting to pay fines and subscriptions. Persons are not enrolled in the force under the age of 18 years, or above 45, except in the case of trumpeters and buglers. They are subject to a standard as regards height, chest-measurement, sight, and physique generally, to be determined by the examination of a medical officer of the force. Means exist of getting rid of men who have become incapacitated for the performance of their military duties by reason of age or other infirmity. As regards training, recruits on an average drill four nights a week for three months before they are passed into the ranks. The annual training of the Volunteer Force consists of six days continuously in camp at Easter, and twenty half-days at detached periods, in addition to which the artillery attend shot practice, the engineers and torpedo corps lectures, and the infantry a course of musketry instruction. Officers and non-commissioned officers also attend classes of instruction apart from the above. To be entitled to be deemed efficient a volunteer must have attended during the year six days' continuous training and sixteen out of the twenty half-days, also shot practice, lectures, or musketry, as the case may be. The period of continuous training has especially proved of material advantage in facilitating the acquirements of habits of order, regularity, and discipline, in affording an opportunity for the practice of interior economy, and in bringing the various ranks into real military association with each other. This training is assuredly the backbone of the system, and should if possible be of longer duration ; yet, when combined with the almost fortnightly training on half-days, it is I think as much time as men can be reasonably expected to sacrifice. That the training should be thus distributed over the year, instead of confined to one period, as with the Imperial Militia, I look upon as of service in keeping up a military spirit, as well as proficiency in drill. Recruits receive neither pay nor clothing until passed into the ranks. Pay is granted to all ranks as per estimate. To illustrate, however, the system on which pay is granted, I will quote the case of a private (a) :—10s. for each day's attendance at continuous training in camp, (b) 5s. for each half-day's attendance at detached periods of training, (c) bonus of £4 at end of year in consideration of having qualified as an efficient. Thus, although a volunteer failing to qualify as an efficient will not receive the £4 which goes with efficiency, he will still receive pay at the rates indicated in (a) 10s. and (b) 5s. per day for such attendance as he may actually have given ; but no pay is granted for non-attendance, neither is pay issued specially for shot practice, lectures, or musketry, beyond that granted for efficiency, on which it is therefore dependent. I may here be permitted to observe that radical and important improvements have been effected in the military system as applied to the re-organised Volunteer Force. By the consolidation of regiments, the responsibility and command is now vested in the regimental commanding officer, instead of, as hitherto, in the various captains of batteries and companies comprising the regiment ; consequently unity in the administration of discipline and command is secured, together with a more complete and exacting chain of responsibility throughout the various ranks, and the practice in peace times of a system of regimental interior

Col. J. S.
Richardson.
14 Mar., 1881.

Col. J. S.
Richardson.
14 Mar., 1881.

interior economy such as would of necessity have to be observed in time of war, and which is indeed in conformity with the fundamental principles of all military organizations. By the appointment of professionally trained military men to the staff or regiments and corps to act as adjutants, sergeant-majors, and quartermaster sergeants, and paid to devote the whole of their time to the performance of regimental duties, to afford the requisite instruction, and generally to assist their immediate commanding officers, such prompt attention is given to matters of regimental business as could not be rendered by commanding officers engaged in civil avocations. It is also worthy of note that the principles upon which the re-organization was effected in 1878, accord in almost every important particular with the recommendations made some months subsequent to the colonial re-organization by the Committee appointed to inquire into and report upon the state of the Volunteer Forces of Great Britain. The disciplinary code, whilst more severe than that appertaining to a purely Volunteer Force, is yet not equal to that of the Imperial Militia, inasmuch that during peace the Volunteer Force is not subject to the Army Discipline and Regulation Act, but to the local enactments and penalties before specified. Judging, however, by the extremely rare occasions on which any irregularities have been committed, these penalties, when combined with a money payment for services performed, seem sufficient to preserve discipline. As a matter of fact, the force is under control and governed with comparative ease. I also judge that the service is popular, by reason of the absence of complaints, and the facility with which the numbers could be increased if necessary. The officers generally are appointed by the Governor in Council, but any volunteer corps may recommend to the Governor any enrolled members thereof to be officers of such corps, of a rank not higher than captain of a troop, battery, or company, provided that no corps may so recommend any persons to be officers of the volunteer permanent staff. Candidates for commissions must prior to appointment have passed the Civil Service examination of the colony, or an examination of a higher degree. The appointment and promotion of officers is also regulated by stringent test examinations on military subjects. Promotions up to the rank of captain are made by seniority, subject to examination; beyond that grade by selection and examination. Non-commissioned officers are appointed by officers commanding regiments and corps, subject to the approval of the officer commanding volunteer force, and test examinations.

264. Are there any changes or improvements that you think desirable? I should recommend an alteration in the Act with a view to a change in the designation, namely, to that of a volunteer militia, and that the election of officers by corps be done away with. Exception has been taken that volunteers can leave by giving fourteen days' notice. If therefore it is considered by the Commission that they should be enrolled for a fixed period, it might be carried out by an alteration in the Act. But I do not think such a course necessary, as from my experience of volunteers and Englishmen generally, I am sure that on the approach of danger, instead of attempting to quit their corps, they would remain. Exception has also been taken that during peace time this force is not under the Army Discipline Act, but for the reasons above given I hardly think it a necessity; however, I am ready to be guided by the views of the Commission. A retirement scheme for officers is necessary to prevent stagnation of promotion, &c.

265. Referring to your memorandum of the 2nd instant, it would appear that a purely volunteer system has scarcely been tried in New South Wales for any length of time. Can you give reasons for this? The first purely volunteer force failed in 1855, but for what reason I am not able to say; the second in 1867, and the third in 1878. The principal causes of these successive failures to maintain a purely volunteer force in a sufficient state of efficiency for any considerable period are, I think, that men as a rule are not willing to make considerable inroads on their business and leisure hours to go through a monotonous and troublesome curriculum of military duties, and to submit themselves to what may be to unpalatable discipline for nothing. The interest of the movement gradually dies out.

266. You are aware that in Great Britain the volunteer force has in successive years improved in efficiency, and that the stringency of the regulations has also been increased: why should there be greater difficulty in Australia in raising a purely volunteer force on the English model? The limited population and the greater severity of the training as compared with the English training; and possibly the Naval Brigade, also a volunteer corps, being in receipt of pay, made other volunteer corps unwilling to serve on an inferior and obviously inequitable footing.

267. Is it the case that there are numbers of men who are willing to join a purely volunteer force at this present moment? There may be many who would join, but I do not think with the intention of continuing their services, if the training were at all severe.

268. Do you not think the system of payment shuts out the more independent classes among the population; in fact, is there a marked difference between the rank and file under the old system and the present system? The commanding officers have informed me that the force has improved in this respect from that which existed in 1878.

269. Supposing your force were increased by doubling the number, would you have any difficulty in filling it up from Sydney and its environs? I do not think there would be any difficulty. In the country districts we could raise them three times over.

270. You do not think there is any difficulty in the compulsory attendance at camp? No; I meet it in this way,—by making the efficiency money, which equals one-third of the whole, dependent upon their doing that training. If there were not rather a high sum given for each continuous day there must be something in the shape of deferred pay or bonus to make them come.

271. That 10s. a day is quite as much as the average wage would be? I think quite; taking the average it is a little above.

272. Do you think the employers of labour object to their men being taken away for this attendance in camp? I have known that volunteers have had to leave the force, but as a rule they are enabled by the rate of pay we give them to make arrangements, either by paying substitutes or forfeiting wages. The fact that last year the number of efficient exceeded five-sixths of the whole force speaks to the point.

273. What is the actual time that the men are under drill for the sixteen out of the twenty drills? Generally speaking the drill is for two hours or two hours and a half on an average, but they are under arms from four to five hours sometimes.

274. How do you make up the six days' continuous training? The corps are on the Brigade parade at 10 o'clock on the morning of Good Friday; and they leave after afternoon parade on the following Wednesday. That gives the six days for training.

275. What indulgences do you give them in the way of leave during the continuous training? Men off duty may leave camp after the evening drill, and they must be in before last post.

276.

Col. J. S.
Richardson.
14 Mar., 1881.

276. Supposing you held this encampment at any considerable distance, do you think it would alter the attendance? In nowise. We hold the encampment of the artillery at Middle Head, because of its proximity to the guns, and the infantry at the Victoria Barracks in consequence of its proximity to the various drill grounds.
277. Would it not be an important thing to bring the two encampments together in future? This could not be done without bringing the artillery away from their guns, and if the infantry were moved to Middle Head there is no ground available for manœuvring.
278. What about South Head? There is no available ground there—it is very broken; you could not drill there.
279. Where does the volunteer artillery encamp? At Middle Head, under Colonel Roberts.
280. Could not part of the field batteries be encamped with the infantry and engineers? I intend when the field battery is trained that it shall encamp with the infantry.
281. Would it not be preferable to take them out in the country, between Botany Bay and Sydney? In organizing and training a new force I deem it of great benefit having it within the barrack walls. After this third training, shortly to commence, I shall be prepared to take it into the country. There are so many matters of small details connected with interior economy, the practice of which is much facilitated by its being inside the barracks and removed from the disturbing influence of visitors, &c.
282. What proportion of old volunteers have you in the present force, both officers and men? Most of the officers, some of the non-commissioned officers, and may be one-third of the men.
283. Do you not by paying the men induce a mercenary feeling in the force? Not more than with the militia or regular service. They are paid for services actually rendered, and which would not and could not be rendered unless they were recompensed. No purely volunteer force is prepared to undergo six days' continuous training and almost fortnightly drills on Saturday afternoons. It would be hopeless to expect a purely volunteer force to submit themselves to a training which I consider absolutely necessary in the absence of a sufficient number of regulars or a purely militia force.
284. You are aware that there is a feeling to extend the purely volunteer system in New South Wales: how would you propose to do so? I would extend it by the formation of a volunteer reserve, open to persons after two or three years' service in the existing force, or perhaps less as also to those volunteers who have served efficiently for five years under the old organization, and in consideration of doing (say) ten drills per annum might be deemed efficient. The force to be provided with clothing, arms, accoutrements, ammunition, and the means of instruction as a military body. In order, however, to work this reserve in the most economical and efficient manner, it should be affiliated to the present volunteer force and have the advantage of the assistance of the paid staff of the several regiments and corps.
285. How would that system apply to places in New South Wales where there are no paid volunteers? They might in the same way be affiliated and have the advantages of the paid staff; for instance, corps in the Western district might be affiliated with the regiment in that district, and the officers of the staff could periodically visit them to train them. Instead of four company regiments, the regiments might then be increased to eight with comparative economy.
286. Assuming that your present force were doubled in numbers and made into a purely volunteer force, do you consider that the increase in numbers would make up for the deficiency in training? Certainly not, because the purely volunteer force cannot undergo such an amount of continuous training as is necessary to inculcate habits of order, regularity, and real discipline, its training being confined to mere routine of drill. Home aptly observes, in effect, that drill is a means to discipline, but drill is not that discipline which alone confers on bodies of men the power of manœuvring in the presence of an enemy.
287. Would you give any reasons? Simply they would not submit to such a training as I consider under the circumstances is positively necessary. The training they would submit to simply gives them a knowledge of drill, but all the practice of interior economy must be neglected from the want of opportunity continuous training, which as I have before said I consider to be the back-bone of the whole system. If troops could be sufficiently trained without this continuous association, then the maintenance of standing armies by the European powers is a mistake.
288. Do you take on in your present force men in the Government employ? Yes.
289. Do you make any exception for men detained on Government duty, sick, or urgent private affairs? We make no allowance between one man and other men; he simply does not get paid for what he does not do. Under certain circumstances a man may get leave, but he does not get pay.
290. What percentage of men are employed on cooking duties in camp? Two men to a company—cook and cook's mate.
291. Do you recognise a good effect on the population of this Colony, socially or morally, from the formation of volunteer corps? I think it must do good; the same as the formation of any body representing order and properly constituted power.
292. Do you think that the martial spirit of this Colony will suffer unless provision be made for country volunteer corps, or some similar organization? I doubt very much, judging from experience, if any volunteer corps would long prosper on a purely volunteer system. Whilst the excitement exists it is all right, but after a certain time they all drop off from want of interest.
293. Have you experienced that the great difficulty lies between the employers and the men employed? I have found no such difficulty under the existing system.
294. Does the present system practically mean that the men enrolled are masters more or less of their own time, to whom the pay is a matter of consideration? I think so.
295. Is the oath of allegiance that the men take to serve in New South Wales only, or in Australia? It is only in the Colony.
296. Do you not consider it would be for the public good if volunteers were enrolled to serve in Australia or Tasmania if required in case of actual service? I think it would be advantageous, if the other Colonies reciprocated.
297. Do you imagine if the oath of allegiance were so altered as to cause volunteers in the event of actual service to serve in Australia and Tasmania that it would prevent men from joining? No, I think not; I think it would raise the status of the forces.
298. Was there any reason for your having no standard of efficiency before 1867? Efficiency was not contemplated under the Order in Council which governed the Force prior to the Act of 1867.
299. Is not the old system practically still in vogue? No.

Col. J. S. Richardson. 300. If land orders ceased in 1874, how is it that some men have been qualifying for them up to the present time? Men who joined previous to the land order system being stopped are maturing their service.

14 Mar., 1881.

301. If the present force fills up so well, would you not be able to form a volunteer reserve by limiting the first term of service and then allowing others to join the force? I have already suggested that after two or three years, or a lesser time, those volunteers who wish to join the reserve should be allowed to do so.

302. Upon any remuneration? No, as a purely volunteer force.

303. Do you find that the recruits complete their whole term of drills? No; before the expiration of their three months many leave. This I look upon in a favourable point of view, inasmuch as it guarantees the ultimate completion of the ranks with zealous men, and a recruit costs nothing to the Government until he is passed into the ranks.

TUESDAY, 15 MARCH, 1881.

Colonel John Soame Richardson, further examined:—

Col. J. S. Richardson. 304. Can you state the reasons why the land grants for five years efficient service broke down in this Colony? I do not think they broke down in any way. The system could have been continued to this time, but Parliament considered that the issue of land orders militated against the prosperity of the Colony in regard to the administration of lands, and therefore they determined to stop the issue of fresh land orders after 1874.

15 Mar., 1881.

305. Under what regulations did the men earn their land orders? Under the Volunteer Act and Regulations of 1867, which defined the annual efficiency for artillery to consist of sixteen drills, inspection and shot practice, and for infantry fourteen drills, inspection, and musketry every second year.

THURSDAY, 17 MARCH, 1881.

Colonel John Soame Richardson further examined:—

Col. J. S. Richardson. 306. Will you state your views with regard to the composition and strength of the field force required to resist land attacks? I quite agree with the evidence given by Colonel Downes as to the practicability of an extensive organisation for an attack by land, and I have to express the opinion, as I have done on former occasions, that the objective point would be Botany or thereabouts, for I do not think any enemy would be weak enough to select for attack the strongest point of the position, namely the harbour batteries. Holding this opinion, I conceive the efficiency of the field force is almost equal in point of importance with the maintenance of the permanent artillery. As to relying on the navy to defend any particular position, I think it will be found that its duty will be to protect the commerce of Australia generally, and therefore it might happen that the services of the navy would not be available for the defence of this particular position. Neither do I think that we should depend solely upon fixed works to offer all that is necessary for a successful defence. In regard therefore to the composition of the field force, I think as economy must be studied, it should in the first place be composed of 1,525 of a paid force possessing a militia organisation, as recommended by Sir William Jervois and Colonel Scratchley, the remainder to be made up of an unpaid volunteer force, furnished by the reserve and otherwise. This field force should be composed of 100 artillery, 60 engineers, 25 signalling corps, 1,340 infantry all militia, supplemented by 200 mounted police and 1,200 militia reserve and volunteer force, giving a total of 2,925. I take this opportunity of informing the Commission that I have no wish to discourage the formation of a purely volunteer force, but in strongly supporting the system of a paid force, I merely wish to be assured that the Colony possesses a body which has during peace received such a training as will facilitate its taking the field without delay, and that the various ranks possess such a knowledge of their duties as is incident to their position therein, and also capable of being satisfactorily handled in the presence of an enemy. That it must be up to this standard is patent, it being a matter of primary importance that it must be able to perform or meet, for instance, flank movements under fire, and to do this the men must be thoroughly in hand and disciplined. The opportunity to arrive at such a standard is denied, for various reasons, to the purely volunteer force, chiefly by reason of the want of sufficient and proper training. That the purely volunteer force of this Colony has not been in a position to work up to this required standard of discipline and efficiency has, I think, been amply demonstrated by the fact of the successive failures to maintain such a force without a system of compensation for services performed. I do not think it is true economy or wise to place sole reliance on the maintenance at a considerable cost of a force which does not in itself possess the necessary elements of success. If the Colony wants a superior standard of discipline and efficiency it must be content to pay for it. If such could be secured without expense, then there would be no necessity for the maintenance of a regular force.

17 Mar., 1881.

Colonel John Soame Richardson further examined:—

Col. J. S. Richardson. 307. Would you see any objection to the torpedo corps being affiliated to the artillery force? Yes. To place the torpedo corps directly under the orders of an officer other than the one directly in command of the garrison and responsible for the conduct of its duties would be to violate the fundamental rule of command as laid down in the Queen's Regulations, wherein it is ordered that when regiments or corps are together in camp or garrison they shall come under the immediate authority of their own commanders, receiving powers and orders from, and solely under the command of the senior officer present. To place an intervening authority between the officer commanding the garrison and the officer commanding the several corps or arms composing it is a practice not sanctioned by the regulations or the practice of the Imperial Army. An intimate relation exists in the Imperial Service between the engineers and the artillery, but it has not been found necessary to place the one arm under the other, or to make either subject to an authority between the officer in supreme command and it. The Queen's Regulations hold officers in command of garrisons responsible for the immediate and advantageous disposal of every description of force under their command, thereby indicating that the control of each arm is to be a direct control. Again, if in the English service the duties of engineers and artillery can be carried on in harmony and without hindrance to the public service, both arms reporting direct to the general in command, why should it not be so here? Is not also such a change of principle in connection with the administration likely to prevent an officer in command being prepared, as he is required to be at all times, with information of the discipline and efficiency

17 Mar., 1881.

efficiency of each of the corps under him. To be possessed of this information he must be in direct and continual communication with it, otherwise he cannot know its actual state. Such a change would at once interfere with the direct responsibility of the officer in chief command, lower his position, lessen his authority, and lead, I respectfully submit, to unnecessary red tape. It would be most subversive to discipline and efficiency, inasmuch as his command of the assistance which he derives in the exercise of such command by his direct intercourse with the commanding officers, and his authority within his district, would cease to be supreme. Unity is laid down as very essential to military command. Is the setting up of an *imperium in imperio* conducive to it? To permit the officer in command of the torpedo corps to act as subordinate to the officer commanding artillery would be to enable him to evade his responsibility for that portion of the defences which has been entrusted to him, and he would also, leaning on another, probably cease to exercise his command in the independent manner he ought to do. Whilst fully recognizing the necessity of an intimate and harmonious action between the officers commanding artillery and torpedo corps, I have hitherto arranged for both forces being camped together during the annual continuous training under the officer commanding artillery, and have given facilities for having torpedo stores looked after at the various points by the New South Wales Artillery. At the same time I am not prepared to acquiesce in a violation of the fundamental rules of command. Under the above circumstances, I should oppose any such transfer of command, for if it was carried out, I could not be held responsible for the proper administration of command.

Col. J. S.
Richardson.
17 Mar., 1881.

Colonel John Soame Richardson, further examined :—

308. Will you state what strength you recommend for the working of the guns in the coast defences provided at Sydney, Botany Bay, and Newcastle, including the garrisons to man the defensive works in case of attack? The number of men of the permanent artillery and its reserve, as indicated by the evidence of the artillery officers, are to be confined to three-fifths or four-fifths of the number required to work the guns simultaneously in action. It will therefore be necessary, before one can make a statement as to the number of men, to learn the precise number of guns which would be so situated. I should apply this principle, not only to the harbour batteries, but also to Newcastle and Botany. The permanent artillery would also be supplemented by a proportion of volunteer militia artillery and volunteer reserves, which in my opinion would give sufficient margin for the efficient service of those guns in time of war. Twenty-five of the torpedo corps should be detached in time of war for service at Newcastle. The infantry required for Newcastle would be furnished by two companies of volunteer militia, supplemented by volunteer reserves. At Botany ten of the torpedo corps would be detached and a small garrison of infantry supplied from the field force. In the harbour batteries the permanent artillery would be supplemented by two garrison batteries of volunteer militia and volunteer reserves and infantry detailed from the field force.

Col. J. S.
Richardson.
17 Mar., 1881.

FRIDAY, 18 MARCH, 1881.

Colonel John Soame Richardson, further examined :—

309. Will you explain the system at present in force for the appointment and promotion of the officers in the military forces of the Colony; first the permanent officers, and secondly the Volunteers? As regards the examination of officers for entrance into the permanent artillery, I may state there has hitherto been none, as it would have been absurd to call upon officers who had received no previous training in artillery matters to undergo any examination therein. The examinations for promotion have been conducted as far as possible in accordance with the instructions laid down in the Queen's regulations; but, under modified conditions, inasmuch as with the exception of the officer in command of the artillery, none have had the advantage of the usual preliminary education at Woolwich, or of the scientific training which obtains with imperial artillery officers. The subjects of examination have hitherto been confined to regimental duties, military law, and drill. They have not been examined in such matters as referred to in the foot-note to paragraph 33 of the Queen's regulations, as I consider they have not received, up to the present time, the instruction necessary to enable them to pass such examination. Neither do I consider that the new regulations in regard to the examination in higher subjects could be carried out. For instance, duties in the field which embrace field fortifications, military topography, and tactics to any great extent, can hardly be expected from officers who have not received that scientific and preliminary education necessary to enable them to pass the high standard of examination required in the imperial artillery. In regard to the examination of officers in the volunteer force, I have to point out that, as a preliminary condition of a person holding a Commission, he must have passed the Civil Service examination of the Colony, or an examination of a higher degree. In addition to the above, a subaltern appointed direct must, within one year from the date of his appointment, and a candidate for a commission from the ranks, must, prior to his appointment, pass an examination before a Board of Officers on certain military subjects which, as also for subsequent promotion, are set forth in paragraph 25 of the Volunteer regulations. In addition, all officers are expected to be practically acquainted with the exercises in which they may have been theoretically examined. If any officer appointed direct fails to pass an examination in the subjects laid down he must be examined again within six months, and in the event of a second failure be required to resign his commission. In estimating the eligibility of officers for promotion the examinations passed are considered in conjunction with the reports made by their commanding officers to the officer commanding the volunteer force. In special cases the Governor may waive the examination of any officer appointed to, or promoted in the volunteer force, and I may explain that this last provision is intended to meet the case of officers who have served for a certain period in the Imperial forces.

Col. J. S.
Richardson.
18 Mar., 1881.

MONDAY, 21 MARCH, 1881.

Colonel John Soame Richardson, further examined :—

310. What amount of compensation is given to volunteers, and what amount of work do you get out of them for that compensation? A private may earn as much as £12 per annum, that is, provided he attends six days' continuous training in camp, twenty half-days' training, in addition to shot practice for artillery, lectures for torpedo force and engineers, and musketry for infantry. He only receives pay for the actual duties he performs. The pay of the other ranks is graduated upwards, according to a scale on the same principle.

Col. J. S.
Richardson.
21 Mar., 1881.

Col. J. S. Richardson. 311. Then, exclusive of warlike stores, barracks, &c., and excluding the pay of your officers, staff, and provision for instruction, and the pay or allowances given to volunteer officers, what is the annual cost per man of your paid volunteer force? Between £17 and £18 per head per annum, which includes everything except provision of stores and maintenance of Barrack buildings.

21 Mar., 1881.

312. Is it to be understood that under the division of command in your paid volunteer force, such as batteries, battalions, &c., you provide a cadre of paid volunteer officers, adjutants, and instructors, which would be sufficient for the increase of this body should it be deemed necessary in time of war? Yes. I have endeavoured to organise the various corps and regiments on as complete a system as possible, for I attach the highest importance to the training of officers and non-commissioned officers, they being the most difficult to produce on an emergency. If my views are carried out with reference to the formation of a volunteer reserve and extending that principle to purely volunteer corps by the affiliation of such corps to the paid volunteer force, the regiments would be completed to eight companies, worked in an economical and efficient manner, and have the advantage and assistance of the paid staff of these regiments and corps with a very little additional expense.

313. About how much of the amount of £17 or £18, the annual cost per man, do you estimate is due to the camp of instruction, and do you include in your estimate the £500 guaranteed to the Rifle Association for prizes? Of this amount nearly £1 per head is due to the camp of instruction, and the total of £500 is included in the estimate I have already given you. This would reduce the estimate by about 25s. per head.

314. These figures do not correspond with the military grant by Parliament; it is therefore to be inferred that a large sum must have lapsed. Would you explain this? As a matter of fact over £10,000 lapsed to the public purse during the year 1880 in the shape of unexpended balances from the volunteer vote alone.

TUESDAY, 22 MARCH, 1881.

Colonel John Soame Richardson, further examined:—

Col. J. S. Richardson. 315. Do you consider a reserve force of artillery, composed of men who have passed through the permanent force, desirable? Yes, but not actually indispensable, as I consider its place could, if necessary, be filled by the volunteer militia.

22 Mar., 1881.

316. What do you consider should be the number of officers in a permanent force consisting (say) of three batteries? I think that the number of officers should remain much as at present, unless the establishment of gunners is considerably reduced, it being of the greatest importance to maintain a proper and sufficient cadre, as the training and education of officers can only be effected through the agency of laborious study and practical experience extending over a considerable period. In addition to which, the corps is so much scattered in detachments as to require a comparatively large proportion of officers.

317. Do you think the permanent artillery force should have charge of the maintenance of the coast defences? I see no reason why ordinary repairs should not be effected by artificers, &c., of the artillery, but, as a matter of business, under the superintendence of an officer of the Works Department, who, from his professional knowledge, would be enabled to exercise a check over both work and expenditure. I am further of opinion that this supervision should extend to all works effected by the artillery. Such an official would perform duties analogous to those of an engineer officer in the Imperial Service.

318. Would you employ them in connection with the custody and management of warlike stores? As the issue of all stores is to a great extent made on account of the artillery, I think, for the purpose of check over issues of the public property, wear and tear, and loss of same, that the custody and management of the reserve warlike stores should be vested in persons unconnected with the corps, in order that the check may be other than a regimental one. I am, however, decidedly of opinion that more use could be made of artillery labour than has hitherto been the case, and with a more economical result.

319. Do you think it would be wise to reduce the strength of the permanent artillery force below 300 officers and men at the present time? This depends entirely upon circumstances. If retrenchment is urgently needed, the formation of the permanent artillery reserve could be at once commenced, and the corps gradually reduced to 200 officers and men.

320. Do you consider a permanent infantry force necessary? No.

321. What additional inducement would you offer volunteer officers and men to become more efficient? As regards the volunteer officers, I think if their status in the military forces was better recognised they would be induced to take more pride in their position. This, I am aware, can only be hoped for when the public generally shall have appreciated the real and intimate association which the force possesses in the general scheme of defence. As regards the men, I am of opinion that the issue of badges for proficiency, combined with a judicious system of prizes for shot practice and skill with the rifle, &c., would be advantageous.

322. By a paid system do you not limit the number of men trained to arms? No, nor do I see any good reason why it should. The fact of maintaining a system of defensive *personnel* with its component parts, approximating not only to that of England in her regulars, militia, and volunteers, but to that of all European nations desirous of numbers, without the comparatively enormous expenditure of maintaining such numbers in the shape of regulars alone, should not prevent the introduction of the purely volunteer element. In point of fact, there are persons desirous of serving in that capacity.

323. How would you meet the case of men who are anxious to join the volunteer force, especially in the country districts? Affiliate them to the volunteer militia.

324. Do you consider it advisable to extend the system of drilling boys in the schools of the Colony? In my opinion it is an admirable system as regards aid to school discipline, familiarising youth to the use of arms and military exercises to a certain point, as also generally improving the physique, &c. But I do not think the system helps to feed the ranks of the volunteer force in any appreciable degree, inasmuch that the drill interferes to a certain extent with play-hours, and thus gives the boys a disinclination to enter the service afterwards.

325. What are your views with regard to the management and custody of the warlike stores in the Colony? I purpose giving my views on this subject in reply to a later question.

326. What do you consider should be done to ensure the supply of ammunition in time of war? Gradually increase the reserve supply by annual indents.

327. What should be the duty and term of office of the imperial officer you recommend should be engaged by the Australian Governments? Five years as inspecting officer and military adviser to the several Governments.

FRIDAY,

FRIDAY, 25 MARCH, 1881.

Colonel John Soame Richardson, further examined :—

328. Do you think that a reduction in the annual military expenditure could be effected, having due regard to the efficiency of the military force and without material injury to the service? In submitting any measure of economy such as is likely to be acceptable to the forces in general and to the public, in being founded on principles of equity, I am of opinion that if a reduction must be carried out it should extend to both the permanent and volunteer branches of the service. In reducing expenditure connected with the permanent force it should not be effected by the curtailment of a fair rate of pay and allowances to individuals, but rather by a reduction in numbers, inasmuch as the professional soldier is precluded from engaging in, and receiving compensation for, any civil employment. As regards the paid volunteer force this consideration does not obtain in the same degree, inasmuch as the members of that force possess the means of livelihood outside any remuneration they may receive for their military services. Under such circumstances and if reduction is inevitable it seems to me that such must be effected in the permanent artillery by a curtailment of numbers, and, in the other branch, by a reduction in pay, combined with less exacting conditions of service. The number of guns which could be simultaneously brought into action is forty, and, judging by the percentage of regular gunners required, it seems to me that 300 permanent artillery without its reserve, or 200 with its reserve, should be the minimum force to be maintained. I should moreover recommend that the necessary reserve should be organized at once from men who have left the force, and that the artillery should be reduced to the minimum number. As regards the paid volunteer force, I should propose to modify the conditions of service, by which some reduction in the rates of pay might possibly be justified. The annual training to consist of six days' continuous training, twelve half-days' training, and sixteen night drills, amongst which would be included the necessary shot practices, lectures, and musketry. The standard of efficiency to be fixed at attendance during the whole of the continuous training—nine half-days out of the twelve, and twelve night drills out of the sixteen. This training would equal about forty-two drills per annum, in addition to affording the opportunity for the practice of interior economy and the acquirement by officers, non-commissioned officers, and others, of a knowledge of their duties in the field, &c.

Col. J. S.
Richardson.
25 Mar., 1881.

MONDAY, 28 MARCH, 1881.

Colonel John Soame Richardson, further examined :—

329. What system is in force in the Colony of New South Wales with regard to the drilling of boys in the Public Schools? All candidates in training for the office of teacher undergo a course of instruction in military drill for six months—twice weekly at the training school. They are taught from the 1st to the 48th section squad drill. If found competent after examination, they receive a certificate showing that they thoroughly understand and are able to instruct in same when appointed to schools. Hitherto, the instructor has signed the certificate; in future the examination, practically and theoretically, will be conducted by Captain Strong, who will sign the certificate. 2. Every school teacher throughout the Colony is required to instruct his pupils once or twice, weekly, for forty-five minutes in squad drill. 3. At most of the principal Public and Denominational Schools in the city and suburbs, two duly qualified drill instructors visit the schools once or twice weekly, and instruct the boys. 4. At ten of the principal Public Schools the upper classes are drilled to the use of arms by the military instructors. 5. The whole system is under Captain Strong's superintendence, who has to visit the schools and report if the instruction is properly carried out. 6. Cadet corps are formed of boys from the various schools and are paraded by Captain Strong once or twice monthly for drill, and twice monthly for target practice. They are drilled once a week by Captain Strong, or by some person appointed by him. They provide their own uniform.

Col. J. S.
Richardson.
28 Mar., 1881.

WEDNESDAY, 30 MARCH, 1881.

Colonel John Soame Richardson, further examined :—

330. Would you state the cost of such a parade as that held on Saturday, 26th instant, so far as the pay of the officers and men of the Volunteers is concerned? £245 16s. 2d. for 829 officers and men.

331. Would you also state the total cost of one of the annual camps for six days' continuous training, so far as the pay of the officers and men of the volunteers (infantry, engineers, and artillery) are concerned? 1880 camp, £4,731.

332. Will you now sum up your evidence, and give a brief outline of your recommendations upon the matters referred to the Commission for report?

Permanent Force.—In regard to the organization and constitution of the permanent force, I am of opinion that it should consist as at present of three garrison batteries of artillery serving under the Army Discipline Act, &c., with enlistment for a period of five years, giving men of good character an opportunity to enter the Civil Service of the Colony. I do not consider the establishment of a permanent infantry force advisable, *i. e.*, provided a paid volunteer militia is maintained, as the latter would be of more service than an insignificant body of regulars, which however highly trained, could neither be ubiquitous nor influence in any appreciable degree in time of war the power of manœuvre of partially trained forces. If it is considered necessary to maintain permanent infantry the number should not be less than 300. I recognize the fact that a small body of infantry would be useful as a school of instruction; but having in view all the circumstances surrounding the defence question, I think it would be best to rely on the artillery school to furnish theoretical instruction to all branches of the force, and on camps to furnish that of a practical nature. In order to improve the status of all officers serving under the Army Discipline Act there should, as in the Imperial Service, be permanency of employment, provision at end of military service; a codification of pay and allowances; and the more responsible officers should from time to time be sent to England to study.

Permanent Force and Reserve.—The permanent force, in combination with a reserve, might be reduced in numbers by permitting men of good character to leave the permanent artillery after three years service, on condition of joining the reserve for a period of five years. Such reserve to receive clothing, arms, accoutrements, and ammunition, with a small retaining fee or pay, in consideration of drilling a few times in the

Col. J. S.
Richardson.
30 Mar., 1881.

Col. J. S.
Richardson.
30 Mar., 1881.

the year with the permanent artillery, to which corps it should be affiliated. From the evidence received by the Committee, I do not think any appreciable number of men of good character who might have been transferred to the Civil Service could be counted on to swell this reserve, by reason of their not being available either for periodical drill or service in time of war, consequently to include such men in any scheme of a reserve would be to admit of so much paper strength which is to be avoided. At the same time I think that the fact of opening the Civil Service to artillerymen of good character would no doubt prove a high incentive to men to conduct themselves well whilst serving in the permanent artillery. The necessary legal provisions for the formation of a reserve could be effected by a slight addition to the local Act, with such regulations as might be deemed proper.

Volunteer Force.—The organization and constitution of the volunteer force should remain very much as at present with such alterations in the "Volunteer Act of 1867" as will provide for a classification of the force as volunteer militia and volunteer reserve and the affiliation of the latter to the former; the abolition of the system of election of officers by corps, as also of finance committees. Both branches of this force should also serve under the same regulations, but modified as regards the reserve in such respects as may seem to be appropriate. Under this system the reserve might be economically and efficiently worked, and be required to attend a certain number of parades per annum, for which it should receive Government support in the shape of arms, accoutrements, uniform, and ammunition.

Composition and numbers of Field Force.—This force should be constituted as follows:—

Field artillery	100
Engineers	60
Signalling corps	25
Infantry	1,340
	<hr/>
	1,525
Supplemented by Volunteer Reserve	1,000
And in time of war by four troops of Mounted Police...	200
	<hr/>
Total.....	2,725

I deem it of immense importance that the training of the volunteer militia should in no degree be neglected, for notwithstanding the great importance of field works, yet in themselves they are not sufficient to make up for any deficiency in discipline and manœuvring power of both an offensive and defensive character. To support this view I take the liberty of quoting a very high authority, viz., Colonel Home, who lays down as follows:—"Field fortification can never be a panacea for weakness, and it never ought to be viewed otherwise than in its tactical relation to the general action of the troops fighting. By judiciously using it it becomes an important and valuable auxiliary. The true key to all such questions is to be found by keeping steadily in view that *the passive defence of any position by an army is an absurdity.*" It may be thus gathered that if we are to have an efficient field force, a comparatively large body of regulars, or a volunteer militia of superior training to that of a purely volunteer force, must enter largely into its composition. I prefer the militia as affording a superior number of fairly trained and disciplined troops, possessing a prospect of permanent establishment, such as would hardly be enjoyed if a large body of men is withdrawn from industrial pursuits and maintained as a standing army in the shape of both artillery and infantry.

Ordnance Stores.—The Ordnance Department might remain as now, under the Ordnance Storekeeper, provided that officer was instructed to render returns of all stores when required to the military department, and periodically reporting to the commandant when called on *direct*, verbally or in writing, as to all store services, &c. To carry out all repairs of *matériel* as required by the military department. The Ordnance Storekeeper should also be directed to carry out all requisitions of commandant, if required, without assent of higher authority; placing protests on record, should such grounds as are indicated in the Imperial Instructions for the War Department seem to warrant it. The Ordnance Storekeeper should generally be instructed to facilitate all business connected with stores, with which the officer in command is directly or indirectly concerned, and to regard himself as bound, though not actually on the staff of the military department, to render that department every facility for rapid supply or the taking in charge of stores, repair of *matériel*. He should hold all reserve military stores. The Brigade Pay and Quartermaster might take all pay and barrack business with additional barrack staff, and have charge of the barrack supply stores, camp equipage, &c., the Ordnance Storekeeper being indented on from time to time as holding reserve stores. The Brigade Quartermaster would so replace all stores and be responsible for all matters connected with occupation of barrack buildings, their repairs, &c., &c. To be in short, "Commissary of Military Finance and Supply." All camp stores should be equally issued by him. He should have his supply *depôt* at the Victoria Barracks. The Brigade Quartermaster should be able to perform these duties with proper arrangements as the appointment and intervention of regimental staff for the volunteer force should have relieved him of much quartermaster's work. There would great gain in economy, in rapidity of supply, in the facility of transacting military business by such a transfer to the Brigade Pay and Quartermaster, as he has an experience of military requirements which cannot properly be performed by or be expected from the Ordnance Storekeeper. Much correspondence would also be saved by the former officer always being available for direct conference on matters of supply, &c., &c. As it is the general staff performs a great deal of work connected with the barrack duties, I think the military and civil departments should be separated, as the Ordnance Store department spends much money on and undertakes a great deal of business connected with purely civil work. Much economy would result by the fusion of the Barrack and Ordnance Store department with the Military department, and utilization of military labour in a higher degree.

Strength of the Permanent and other Forces to man Batteries and Harbour Defences generally.—Accepting the principle already laid down that the strength of the permanent artillery with its reserve is to be determined by the number of guns which can be brought simultaneously into action, it would appear that 300 permanent artillery without its reserve, or 200 with its reserve, is all that is absolutely required.

I am, moreover, of opinion that if the necessity of economy is urgent the formation of the reserve could be commenced at once, the above force to be supplemented by 200 volunteer militia garrison artillery, and 200 volunteer reserve.

Col. J. S.
Richardson.
30 Mar., 1881.

In estimating the number of permanent artillery I presume that the batteries practically condemned by Sir William Jervois, such as Bradley's Head, Steel Point, and that intermediate between Middle and George's Head, were not taken into consideration, as the authority above quoted did not consider the maintenance of regular artillery essential on account of these works, which if necessary, could be manned by volunteer artillery.

Seventy-five of the torpedo corps would be necessary for this portion of the defences, as also a body of infantry to be detailed from the field force, as circumstances may seem to warrant.

Principle of Examination.—The principle upon which such examination should be conducted are similar to those obtaining in the Imperial service, with such modification as common sense dictates.

333. What is your opinion in regard to the annual expenditure necessary for maintaining the military forces in an efficient condition? As I have before pointed out, I think that, if retrenchment is inevitable it must be effected: By a reduction in the number of the permanent artillery concurrent with the formation of its reserve; by a reduction in the emoluments of the paid volunteer force, to be justified by the imposition of less exacting conditions of service, such as I have already indicated; by a fusion as far as practicable of the Ordnance, Store, and Barrack Department with the Military Department; by the utilization of artillery labour in a higher degree; by the elimination from the military estimates of expenditure other than that of a purely military character, such as those under the head of Ordnance Store Department for charges on account of storage, &c., of civil powder, rifle association and public school cadet corps; by debiting to the naval brigade instead of the military department, the cost of warlike and other stores expended by that corps; and lastly, by the separation of expenditure on account of fortifications from that required for the military *personnel*. It should also be borne in mind that a proportion of the annual vote lapses to the public by reason of forfeitures of pay, &c.

The following may be taken as an approximate estimate for the maintenance of 3,400 of all ranks, as under:—

General staff	2,995
300 permanent artillery	27,000*
100 permanent artillery reserve	900
1,800 volunteer militia	25,000
1,200 volunteer reserve	6,000
School of Instruction	1,000
Warlike stores	5,000
						67,895
*This item ultimately reduced on completion of artillery reserve to 200, and reduction of Permanent Artillery to 200 by ...						8,000
						59,895

334. How would you give the torpedo corps a special organization? I do not quite understand the question, but I am sure that it is very undesirable that a corps serving under the same Act and regulations as the paid volunteer force should possess any special organization different from that which applies to the force generally. I am assured that such would not work well, and, moreover, it would be likely to cause dissatisfaction and engender jealousy.

MONDAY, 14 MARCH, 1881.

Colonel Peter Henry Scratchley, C.M.G., R.E., examined:—

335. Do you consider that a permanent or regular force, as a nucleus for the rest of the defence force, is absolutely necessary? Absolutely necessary for the maintenance of the system of defence during peace and for working it during war, and in order to have a force immediately available on the outbreak of war. This is not a question which admits of doubt, the necessity for a permanent force being obvious. No paid or unpaid volunteer force or militia could take its place.

Col. P. H.
Scratchley,
C.M.G., R.E.
14 Mar., 1881.

336. What do you consider should be the organization and general constitution of such a force? I think it essential that the force should be organized with a reserve. The men entering the force should have before them a distinct opening on their leaving it, either of employment in the Civil Departments of the State or in civil life generally, consequent upon the training they have undergone in the force. By introducing this system a superior class of recruits will be obtained. The object should be to attract to the ranks a superior class of men. After serving for two to three years in the force the men should pass into a reserve for ten years, when they would undergo annual training, for which they would receive a retaining fee. The age of men enlisting should be from 18 to 25.

337. Do you mean to say that, before the men took service in the force, the Government should undertake to employ them in the departments after good service of a certain number of years? Yes.

338. As there is no material difference between the wages paid in the several Colonies, at what rate do you think you could enrol men in the force you indicate? Judging from the pay which is given to the New South Wales force and was given to the Victorian force, I do not think a material reduction could be made in the pay, but I am satisfied that a superior class of recruits would come forward; about 2s. a day and everything found would probably be sufficient pay for privates.

339. Is it wise, in your opinion, to withdraw men for long service in barracks from the general industries of the Colonies, and do you not consider that if kept in barracks for even five years they would, from want of change and relief, deteriorate, and become more or less unfit to earn their own living on discharge? I think it most undesirable to withdraw men from civil life for long military service, especially in the Colonies, and I am satisfied that a service of even five years is objectionable; for this reason: assuming

Col. P. H.
Scratchley,
C.M.G., R.E.
14 Mar., 1881.

a man at 18 or 20 joins the ranks—just at the time that he is entering life—by keeping him in barracks for five years you place him at a disadvantage on his leaving the force. This disadvantage would not be counterbalanced by the improvement in the man, due to the discipline and training and possibly to a trade which he may have learned while in the force. If the man re-engaged for a further term of five years—that is ten years in all—I am satisfied he would thereby be placed at a further disadvantage. I agree with the proposal, that as far as practicable the men in barracks should be employed at, or taught certain trades, and this more especially if the men are to be retained in the service longer than three years; but I altogether object to long service except for non-commissioned officers.

340. Would you recommend that in a permanent or regular force men should be allowed to marry? No. I see no hardship in soldiers serving for three years being prevented from marrying; on the contrary, I believe that they would be in a better position to make desirable marriages after leaving the force.

341. Would you enrol married men? Rarely, and, as a rule, only when it was considered desirable to introduce into the force some old soldiers from the Royal Artillery. These men would have to be carefully selected and of a superior class.

342. Would you propose increased allowances to married men, such as lodgings, if quarters were not available in barracks? Certainly.

343. Assuming that the Governments of all the Australian Colonies agreed to the formation of a force, upon the principle that the men should be enrolled for a certain term of years—and on the distinct understanding that they would be given employment after good service during that term of years—would you approve of the formation of such a force for Australia generally? Certainly; for I believe that by the creation of such a regiment you would increase efficiency very largely and establish an *esprit de corps*, which must be wanting more or less in small isolated bodies.

344. Do you advocate the formation of an Australian federal regiment of artillery? Yes, decidedly.

345. Do you not think that if separate forces were established under the English army system they would inevitably deteriorate, as containing from the very first step of their formation the seeds of deterioration? I think this deterioration inevitable. Nothing would counteract it except the passing of the men rapidly through the ranks, and thus infusing new blood in the force. I do not think the Imperial Army system in any way suited to these Colonies. The Imperial Army has to work over a vast Empire, and numbers, with its reserves, hundreds of thousands of men. In these Colonies the conditions of service are very simple, the numbers of highly trained men required very small, and I hold a strong opinion that, whether each Colony establishes its own force, or whether these forces are federated, a special organization and constitution should be adopted of the simplest character possible.

346. With regard to the term of service of five years,—how long do you consider it would take to form a good artilleryman, and also a good infantryman? For these Colonies an artilleryman twelve to eighteen months, infantry soldier nine to fifteen months—so far as mere skill in military exercises is concerned. By the system which I have proposed a superior class of recruits would be obtained, and a hard and fast line should not be laid down as to the term of service. For instance, it would be found that men of superior intelligence would easily qualify for leaving the force in two years. This might be allowed under certain restrictions, and if the men agreed to enter the reserve. I am in favour of their remaining the full term of three years, in order to attain a high standard of military efficiency.

347. Under what sort of disciplinary code should a permanent force be governed? I am opposed to the introduction of the Army Discipline Act and the Queen's Regulations in their entirety in these Colonies. This is a matter that will require very careful consideration, when a decision has been come to as to the nature of the force to be established. Generally speaking, with a superior class of recruits, discipline should be maintained by moral influence rather than by the system of punishments at present in force in the Imperial Army. The Commandant of the force should have the fullest powers over the men, and not be compelled to resort to the machinery of courts-martial. Dismissal from the force should be the punishment for continued misconduct. A man after imprisonment in a civil prison should invariably be discharged.

348. How would you propose to supply the officers for the force described by you? I am in favour of the senior officer, and possibly the adjutant, being obtained from the Imperial service, but I consider that the remainder of the officers should, if practicable, be procured from local sources, in order to identify the force with the people of the Colony. Some difficulty will be experienced at first, but with proper arrangements and examinations local candidates would be able to compete for admission.

349. Do you mean that in course of time officers derived from local sources, who may not have been in the Imperial service, might by diligence and qualifications—obtained either by a visit to England or otherwise—rise eventually to regimental commands? Certainly. Every inducement should be offered to local officers to rise in their profession. Promotion should be by merit. A careful system of examinations not only on entrance but for every step would be necessary. Moreover, every precaution should be taken to prevent political influence being brought to bear upon the appointment or promotion of officers.

350. Do you think the service would be much benefited if inducements were held out such as obtain in the Imperial service;—namely, half-pay, retiring allowances, and pensions in certain cases, to lead officers to look upon the service as a permanent profession? Undoubtedly. You must offer some inducement to the officers to remain efficient, and without some provision of the kind stated you will not be able to obtain or retain really good officers.

351. Do you not think that if an officer had these inducements it would have a very marked effect on discipline and efficiency? Certainly;

352. Would you subject officers on appointment to an entrance examination? I would not lay down any fixed rule. I would not submit ex-Imperial officers, with the necessary qualifications and *references*, to an examination, unless they had been a long time out of service. I would not take any old officers for the junior ranks. With regard to ex-Imperial officers, who have not served in the Royal Artillery, I would not oppose their entry into the force, but would only grant probationary commissions. As to officers appointed from local sources, I would insist on candidates possessing a good education, and encourage those who had passed through the local Universities. I am in favour of all first appointments being on probation.

353. How would you prevent political influences acting in cases like these? By the appointment of an Imperial officer to act as military adviser to the Australian Governments and inspecting officer of the local forces. On all questions of this character the Minister, in charge of the military department, would no doubt consult this adviser.

354. In estimating the number of artillery required for the system of defence, would you frame it on any particular number per gun as an absolute requirement? About three-fifths to four-fifths of the number per gun should be composed of men serving in the ranks and reserve, and the remainder might be volunteers. Detachments need not necessarily be provided for every gun, but it will be found on inquiry that nearly all the guns in the coast defences of New South Wales will require full detachments.

Col. P. H. Scratchley,
C.M.G., R.E.
14 Mar., 1881.

355. Do you consider it absolutely essential to have from three-fifths to four-fifths of the number of men in each detachment of a gun regular artillerymen? Yes, artillery and reserve.

356. If a permanent force be kept, do you consider it advisable to have a small nucleus of infantry? I am opposed to infantry, because it will increase the cost of the maintenance of the system of defence, and it is not required. In giving my evidence on the organization of a field force I will go more fully into the subject.

357. With regard to the supply of officers for a permanent force, are you of opinion that they should be induced to leave the Imperial service and take service with the colonial force, or do you think that a better plan would be to obtain the loan of them from the Imperial authorities? I think the time has come for placing the Australian forces on a permanent footing, and not to rely more than is necessary upon the mother-country: I am therefore in favour of any measure that will make the Colony self-reliant; and in this matter I would prefer to obtain one or more of the superior officers from home, on loan or otherwise, and endeavour to supply the places of the junior ranks from local sources. I am not in favour of inducing Imperial officers to take service, as there is great uncertainty in all the military arrangements of these Colonies. I consider if officers come out here, they must do so entirely on their own responsibility.

358. How would you prevent colonial officers from rusting, and how are they to be kept *au courant* with the changes in military matters generally? This can best be done by arranging that officers on the staff, or in the permanent military employ of the Colony, should be sent home periodically to acquire fresh knowledge. Without some such arrangement it will be utterly impossible to keep the defensive organizations of the Australian Colonies up with the times.

359. Do you think it would benefit the service if regulations governing the pay and allowances of officers were fixed on the system adopted in the Imperial service? I think a measure of this sort very necessary. If good officers are to be retained in the colonial military service, they must have not only security of tenure of office and pay, but also something to look forward to. The present system of annual votes—under which an officer is uncertain whether his pay will be reduced or not, or even struck out altogether—is prejudicial to efficiency.

TUESDAY, 15 MARCH, 1881.

Colonel Peter Henry Scratchley, C.M.G., R.E., further examined:—

360. Are you in favour of a purely volunteer force on the English model, or of a paid volunteer force? This is a question of money and efficiency. These two considerations cannot be separated, and it is idle to discuss the defence organization without taking the cost into account. It is obvious that a force, organised as it is in New South Wales, under stringent regulations, should produce a better class of volunteer soldiers than a force receiving no pay. The drills of a paid volunteer force are conducted in daylight, and in the case of New South Wales there is continuous training. If a force can be obtained in New South Wales at the cost stated by Colonel Downes—viz., £8 per man—I decide in favour of a paid force, but then I prefer to call it a volunteer militia. If, however, the cost of the New South Wales force cannot be reduced to about the South Australian estimate, I condemn it as not giving the country sufficient for the outlay, and I recommend a purely volunteer force instead.

Col. P. H. Scratchley,
C.M.G., R.E.
15 Mar., 1881.

361. What is the constitution and organization of the force you propose? As regards a paid volunteer force, I would revise the New South Wales Act and Regulations, on the basis of the South Australian Act and Regulations. For a purely volunteer force I would follow the English model, for I see no reason why volunteers in Australia should not subject themselves to the same stringent regulations and the same amount of training as those in Great Britain. A marked feature in the English volunteer system is that men do turn out during daylight, and go into camp for instruction without pay; at the same time much of the drill and training is conducted at night. The Australian Colonies are exposed to sudden attacks by sea, but not to sudden attacks in the nature of invasions or landings in force. For this reason I contend that the first consideration is to provide a thoroughly trained artillery force to meet the attacks by sea, and I do not believe in the necessity of incurring a larger expenditure than the Colonies can afford in maintaining a thoroughly trained force to resist *improbable* attacks by land. Attacks in the shape of invasions must be met by the naval defences of the Colonies, acting in conjunction with the Imperial navy and under the control of the Imperial Naval commander. In these remarks I do not refer to the attacks of small bodies of men landed for the purpose of rushing the batteries. As these batteries will be enclosed, very few men will be required to meet these minor attacks.

362. Would you recommend a continuous training for a purely volunteer force? Certainly. This continuous training I would endeavour to obtain by annual encampments. It is useless attempting or expecting, in a purely volunteer force, to get more than a certain amount of efficiency. Taking my view, that attacks by land will not be sudden—in the sense that ample warning will be received—I believe that it will be practicable, on the outbreak of war, to make proper arrangements with regard to encampments, established for continuous training, whereby a purely volunteer force could be given the additional training requisite; in fact, I believe it is necessary in Australia to run a certain amount of risk in order to meet the point of economy. Until the amount to be expended annually upon defences is stated, it is difficult to arrive at a final conclusion as to whether you should maintain a paid or unpaid field force.

363. In what order would you consider the different forces comprising the defences should be taken, as regards the first and second lines? There are two distinct things to be done by the local forces of these Colonies: first, to meet the attacks by sea, for which a permanent force, with its reserves and auxiliary body of volunteer artillery, is provided; secondly, to resist landings in force, which must be met by the field force; consequently, in my opinion, there are neither first nor second lines of defence to be dealt with. The conditions which govern the consideration of the defence of Great Britain are totally different from the conditions which exist in Australia.

Col. P. H. Scratchley, C.M.G., R.E.
15 Mar., 1881.

364. Do you consider that a purely volunteer force could be trained to be sufficiently efficient to act as infantry? Considering that I do not believe in *sudden* attacks by landings in force, I am satisfied that it would be possible, on the outbreak of war, to give a purely volunteer force the efficiency requisite to meet the enemy on land, provided there were *trained and energetic officers* available to take command, and that the volunteers outnumbered the enemy. These conditions could be readily secured.

365. You have said that the unpaid volunteer force could be sufficiently trained: will you state what that training should consist of? In a purely volunteer force the object should be to make the men good marksmen, accustomed to act in bodies, easily handled, and with a certain amount of knowledge of moving in extended order. In defending Sydney against a land attack, it would be possible on the outbreak of war to prepare defensive positions which the volunteer force would occupy, and thus establish at once a superiority over the enemy. We need not anticipate in Australia any extensive operations in the field. As regards the number of days' training and so forth, for a purely volunteer force, I consider that the men should attend, besides night drills, not less than nine daylight drills of two to three hours duration, and two or three field days on public holidays. If to this, annual encampments could be added, a very respectable amount of training would be obtained. For a paid volunteer force I would recommend, besides night drills, twenty half-days' and three or four whole days' drill; continuous training in camp to be optional.

366. Are you aware whether the Committee appointed to inquire into the volunteer system in England have recommended continuous training in camp? Yes; and every one recognizes the immense importance of this continuous training. I entirely agree with Colonel Richardson on the point. I will quote from the report of the Committee as follows: "Commanding officers are almost unanimous in attaching the highest importance to camps, as offering the only means available to volunteers for acquiring the knowledge and the habits of military life: they consider generally that a week in camp equals in the amount of instruction acquired that obtained otherwise throughout the whole of the year." *

THURSDAY, 17 MARCH, 1881.

Colonel Peter Henry Scratchley, C.M.G., R.E., further examined:—

Col. P. H. Scratchley, C.M.G., R.E.
17 Mar., 1881.

367. Will you state your views with regard to the composition and strength of the field force required to resist attacks by land? I have already stated that I think attacks by land are improbable, and also that if attacks in great force were apprehended they should be met by naval means. According to this view, if an attack of the nature of an invasion were to be made upon these Colonies, the true strategy would be to meet the enemy's fleet at sea; failing that, to endeavour to attack him, on land and at sea, as he was effecting a landing. As regards the strength and composition of the field force—to meet ordinary land attacks at Sydney and Newcastle—if it is to be a paid volunteer force, in the shape of a militia, I would adhere to Sir William Jervois' figures—1,700 men exclusive of cavalry; if it is to be a purely volunteer force I would make up for the want of quality by quantity, and I would have a force of 3,000 men available for the defence of the approaches to Sydney and Newcastle by land. Newcastle has to be separately considered for the present, as there is not rapid communication by land between it and Sydney. When a railway between the two places has been constructed, measures adopted for the defence of Sydney would be available to a certain extent for the protection of Newcastle in case of a serious land attack. It is well to bear in mind that when the fortifications at Newcastle are completed the place will be very strongly defended, and an enemy would find great difficulty in selecting a point from which to conduct an operation on land against the town and harbour. Sydney, on the south side, will, in the opinion of Sir William Jervois and myself, be well protected by the construction of a powerful fort and the provision of torpedoes in Botany Bay; consequently an enemy would have to silence this fort in order to enter Botany Bay, and then effect a landing in the face of the opposition of the field force. It has been urged that he might select some other bay situated on the Pacific, and in favourable weather effect a landing: in my opinion a landing in great force in these bays is not an operation that would be undertaken. These bays—Bondi, Nelson, and Long Bay—are within a short distance of Sydney. Considering the nature of the country between Botany Bay and Sydney, I see no reason why a partially trained force should not meet an enemy with success—if the ground be carefully examined and considered in time of peace, and fortified defensive positions were prepared on the outbreak of war. On the northern side of Sydney the country is simply impracticable, except along the roads, and granted a body of 2,000 men, even if only partially trained, an enemy could be met on even terms; in fact, the very worst step an enemy could take, in my opinion, would be to land in Broken Bay. I leave out of consideration the co-operation of the colonial naval defences. With regard to the composition of the force, I recommend that a larger number of field guns should be provided than is the rule in European armies. It will be of paramount importance to bring a large force of artillery into action to repel a landing—to fire at the enemy's ships as well as at his troops. I therefore advise from twelve to eighteen field guns, in three batteries, a company of engineers, and the remainder infantry, in three regiments. Cavalry, also, is essential. Sir William Jervois, in his report, stated that the mounted police would be available in time of war as cavalry. I recommend in addition the formation of a small corps of mounted riflemen, to be enrolled on the purely volunteer principle from the independent classes in Sydney and its neighbourhood. The members of this corps should be trained to be good marksmen as well as good horsemen. The police should also be trained in the same direction.

Colonel

*NOTE (on revision):—I wish to explain my views more fully with regard to continuous training. If it be intended that much of the time of the officers and men should be taken up in learning the mere details of military life, then I am entirely opposed to continuous training. When I recommended continuous training, I wished to afford opportunities for putting the officers and men through the practical operations of war which they would have to undertake in the event of an attack, on the ground upon which an enemy would operate. This cannot be done on detached days, for want of time. In other words, several days in camp give the Commandant a longer time for drill, away from Sydney, at Botany, at Middle or South Head. We cannot attempt in Australia to do more than make the Volunteer Forces—whether volunteer militia or pure volunteers—good irregular troops. I oppose all attempts at copying regular troops in all the details of military life, which are not required, considering the conditions under which we shall have to fight. It will only result in a waste of valuable time. I wish to see the whole of the men's time on detached days, and in camp, given up to drill and drill only. More than this should not be attempted. I decline positively to recommend a large expenditure for such a purpose.

Colonel Peter Henry Scratchley, R.E., C.M.G., further examined :—

368. Will you state what strength you recommend for the working of the guns in the coast defences provided at Sydney, Botany Bay, and Newcastle, including the garrisons to man the defensive works in connection with the batteries in case of boat attacks? It will be found that nearly all the guns in the batteries will have to be fully manned. Let us consider them in detail. (1.) At Botany there is to be a work armed with three 9-inch and two 80-pounders. Considering this work is completely isolated, and that it must meet the sudden attack of ships at sea, and possibly an attack on the torpedo defences, all the guns must be fully manned. I should therefore have 60 gunners, and provide a garrison of 40 infantry. It would be extremely dangerous to leave Botany under-manned. (2.) In Port Jackson, there are three 10-inch and two 80-pounders at South Head, and two 10-inch at Middle Head, which would come into action at once with ships lying outside the Heads. Provision must at the same time be made for manning the guns to resist an attack upon the torpedo defences, in both channels, by steam launches or gun-boats, whilst the enemy engages the attention of the heavy guns with their ships. I therefore take into account the 80-pounders on inner South Head, Middle Head, George's Head, and inner Middle Head. Again, it would be very difficult to transfer men from Middle Head to the other batteries, owing to the excessive dispersion of the guns. This remark applies equally to the south side. Further, we have two casemated batteries on George's Head, which represent the key of the defensive position—and unless these batteries were properly manned an enterprising enemy might be successful in overcoming the torpedo defences. (It is an axiom that torpedo defences insufficiently protected by artillery fire are not of much value.) Taking the foregoing into consideration, and that without the inner batteries on Steel Point and Bradley's Head there are 35 guns, we shall require for Port Jackson at least 350 gunners. For the garrison of the entrenchments on South Head 50 infantry would be required; and the same number for the defensive enclosure at Middle Head, and 50 for the redoubt at George's Head. Total, 200 infantry for Port Jackson. (3.) Newcastle is another instance of an isolated fort; and as this work has to perform two duties—to fight ships lying off the entrance, and protect the torpedoes, all the guns—three 9-inch and four 80-pounders—must be fully manned. I recommend therefore 76 gunners, and a garrison of infantry, 50 men. The total, therefore, for Botany Bay, Newcastle, and Port Jackson, will be 486 artillery besides 290 infantry. Without reliefs I estimate the artillery force should be 500 officers and men. The number of infantry required, being small, can come out of any proposed field force. As to the composition of the artillery force, 200 should be permanent artillery, 150 reserve artillery if formed (and if this reserve be not formed then the permanent artillery will have to be increased), and the balance 150 volunteer artillery. I wish to lay particular stress on the necessity of providing, in the most complete manner, for the most powerful artillery defence of the torpedo defences, and I again direct attention to the great dispersion of the guns as the reason why so large a force of artillery is required.

Col. P. H.
Scratchley,

FRIDAY, 18 MARCH, 1881.

Colonel Peter Henry Scratchley, R.E., C.M.G., further examined :—

369. Would you state your views on the subject of the system of examination which you recommend should be adopted for appointment and promotion of officers, first in the permanent force and secondly in the volunteer force? The state of affairs, as regards the standard of education and the arrangements for examination, is, in my opinion, very unsatisfactory. (1.) As to the permanent force: I think an effort should be made to raise the standard of military education of the officers, and insist upon their knowing something more than their military exercises. I contend that every officer of artillery in New South Wales should have a fair knowledge of field fortification, tactics, field sketching, and reconnaissance. A knowledge of these subjects can be obtained by the study of three small books. At present the examination of officers is restricted to their military exercises and a knowledge of military routine; and is wholly insufficient to test the efficiency for war purposes of these officers. This should at once be rectified. I wish to see the Permanent Artillery officers good "all round" men, fit to take command in time of war. I admit that there is a vast difference between artillery officers in the Imperial Service and artillery officers in the colonial forces, but it is hopeless to expect efficiency if these matters are left as they now are. (2.) With regard to volunteer officers, it is admitted that, owing to the comparative inefficiency of their men, more knowledge should be expected from them almost than from regular officers. I believe if a serious effort were made, by the establishment of the necessary schools of instruction, and the appointment of officers whose special duty would be, under the direction of the Commandant, to impart instruction to volunteer officers, that no difficulty whatever would be experienced in inducing officers to learn something beyond their military exercises. My experience in Australia points to the fact that volunteer officers are as a rule only too anxious to learn; I am convinced that it is only necessary to afford them facilities for doing so, and the results would be highly satisfactory. The argument that they have no time is unsound. They should find time for their self-imposed duties. I concur generally in the views expressed by the other members of the Committee on the subject of first appointments and promotions, and they should be closely looked into by the Committee. I am decidedly in favour of an educational test on first appointment and of probationary commissions. I entirely support Colonel Roberts's proposal to establish a school of artillery instruction at Dawes battery, as I think it is advisable to concentrate the artillery establishments in Sydney.

MONDAY, 21 MARCH, 1881.

Colonel Peter Henry Scratchley, R.E., C.M.G., further examined :—

370. Do you consider a reserve force of artillery, composed of men who have passed through the permanent force desirable? Absolutely essential. I entirely dissent from the objections raised against the proposal to form this reserve. I go so far as to say that if the permanent force should be continued on the present system I would advocate its abolition. Of all military organisations, that under which men are merely trained for a term of years and then allowed to leave is the most objectionable and the most costly. A large expense goes on from year to year without adding to the defensive resources of the country. As a rule an inferior class of men enters such a force, and there is stagnation and want of progress. It is

Col. P. H.
Scratchley,

doubtful whether such a force would be of much value in time of war. On the other hand, a force, established on the plan I propose—with men serving from two to three years, and then passing into the reserve—would yearly be adding to the defensive power of the country. The money invested in the training of the men for two or three years would bear interest when the men were in the reserve. "It is the truest economy to make a man a perfect soldier while we are about it, and send him home practically a free man except in time of war." It would be necessary to pay the reserve men certain annual fees, in return for which they would have to undergo annual training. If necessary, I would increase the amount of fees in those cases where men did not go into the Government departments. Some of the objections to the reserve should be noticed. (1.) There is a dread that the system of passing the men from the force into the State departments would be made compulsory; such is not my intention. It would be optional for the heads of departments to take the men or not, after they had served. I would, by means of a Board, place the enlistment of the men under the joint control of the military and departmental authorities. The heads of the Civil Departments would have a direct voice in the selection of the proper class of candidates. By throwing open employment *in subordinate capacities* in all the departments there would be plenty of room for selection. Moreover, I would endeavour to persuade merchants and private establishments, banks, companies of all sorts, large houses of business, &c., to give these reserve men a fair trial. The plan only requires a trial to prove that it is founded on correct principles. It is only necessary to refer to the success of the corps of Commissionaires in England, composed of old soldiers of *proved* good character. The number of men to be absorbed annually would not exceed from sixty to eighty—an insignificant number. That these reserve men would be of immense value in time of war, and could be made readily available, is so obvious as not to require explanation. (2.) It is urged that the difficulties of training the men would be very great. These difficulties are purely imaginary. The men being affiliated to the permanent force in the ranks could be called up for training—singly, in twos and threes, &c.—and in such a manner as would not in any way interfere with their employment either in the State departments or in civil situations. The training would be going on throughout the year, and it stands to reason that a man receiving an annual retaining fee would be quite prepared to sacrifice some of his holiday time in order to earn the money, as an addition to his income. As regards the State departments, substitutes could in certain cases be provided from the men in the ranks. The whole matter only needs looking into in order to give it a fair trial, and the superficial objections, which are raised against a new idea, will disappear. Military routine must not be allowed to block the road to improvements in military affairs in Australia. I should be inclined to increase the fee to even £20, if £10 or £12 were found insufficient. It is worth considering whether the term of ten years service might not be divided into two portions of six and four years, in order not to tie down the reserve men too much. Part of the annual fees should be deferred until completion of service. I think, however, that if the fees are high, there need be no fear of the men leaving the country. There should be a system whereby a man could purchase his discharge from the reserve. Even admitting that £20 a man had to be paid annually, the thoroughly trained £20 reserve man would be worth more for military purposes than the volunteer militiaman, with his very partial training, costing the State £12 to £15. If the plan of a reserve were adopted I would withdraw my objection to the formation of a permanent infantry force, for then it would be possible to form the volunteer militia force from these reserve men. Financially considered, 500 men in the prime of life and well trained, costing the State even the large sum of £10,000, would be more valuable than 500 volunteer militiamen only partly trained. I have every reason to believe that £6,000 would provide such a force. Further, if the reserve of artillerymen be not established, it will be necessary to maintain 400 artillerymen in the ranks. Now, 400 artillerymen at £94 a man (the present cost) would cost £37,600, whilst 200 men in the ranks and 200 men in the reserve would only require an expenditure of £21,200, allowing £12 for each reserve man. At any rate the saving anticipated would be so large as to justify a trial, bearing also in mind that the defensive power of the country would be steadily increased year by year. An office should be established at head-quarters where applications from public companies for men, who were leaving the force, could be registered.

371. How would your proposal work, and how long would it take to form a reserve of 300 men? About four or five years, and I would proceed as follows: First, I would discharge from the present force all men of bad character. Secondly, I would fill subordinate Government situations with those men who were qualified and had served three or more years, provided they agreed to enter the reserve with a retaining fee. Thirdly, I would allow good men, who desired to take private situations, to leave the force if they agreed to go into the reserve, and if they had served two to three years. Fourthly, I would recruit men on the understanding that a percentage would be entitled to receive Government employment on quitting the force, and thus restore the corps to the strength of 300 men,—the number I consider should be retained in the ranks for the next few years, until the reserve of 200 men is formed. In 1885, when I expect the reserve of 200 men would be formed, I would reduce the strength of the corps to 200 officers and men. In 1891, the reserve men having served ten years, would commence to leave the reserve. The financial and other results would probably be as follows:—Allowing for casualties, in 1885 or 1886, when the strength in the ranks would be reduced to 200 officers and men, there would be about 200 men in the reserve, and the country would be paying £21,200 (200 at £94 = £18,800 + 200 at £12 = £2,400), instead of £37,600 (400 at £94); in 1891, when the reserve men who joined in 1882 would leave, the figures would be thus:—200 men in ranks, £18,800 + about 400 to 500 men in reserve, say £6,000; or an expenditure of £24,800 for a force of 600 to 700 men. From this year forward the reserve would probably maintain an average strength of 400 men. The saving resulting from the proposal, in the course of ten years, would amount to close upon £120,000, or at the rate of £12,000 a year, whilst adding to the defensive power of the country in trained men, and giving the permanent force all the advantages necessary to make it a highly efficient military body.

372. What do you consider should be the number of officers in the permanent force? I consider the number of *regimental* officers now with the force, unnecessarily large, and they can scarcely be fully employed at present. I would reduce the number as opportunity offered, and endeavour to re-arrange the establishment of the force as follows:—One commanding officer; one adjutant; three majors; three captains; three lieutenants; in all eleven officers. The present number is thirteen, exclusive of medical officers. I would make the adjutant act as instructor, and employ the three majors in looking after the reserve artillery. It is fair to explain that the coast batteries for the defence of Port Jackson are so scattered that it is necessary to maintain more men and more officers than would have been required for a more concentrated scheme of defence. Again, there are two important detached stations—Newcastle and Botany Bay.

Consequently,

Consequently, it is necessary to maintain a much larger number of officers than would otherwise be required. It is possible that, when the reserve is fairly organized, it would be practicable to induce officers to go into the reserve, and so reduce the number permanently attached to the corps. On the other hand, I am distinctly opposed to the idea which prevails generally in Australia of reducing the number of trained officers on the staff of the local forces. The number of paid officers appears to be the favourite object of attack when the estimates are discussed. The volunteers themselves oppose their employment, utterly ignoring the fact that the great want on the outbreak of war would be the want of trained officers: the great weakness in a volunteer force, whether militia or unpaid, is "the want of men who know how to command." It is also an axiom, "that the less trained the rank and file, the better trained should the officers be." Consequently, for years to come, until the local officers attain a far higher standard of military efficiency, it will be false economy, and indeed foolish, to attempt to manage the local forces with a small number of officers.

373. Do you think the permanent artillery force should have charge of the construction and maintenance of the coast defences? To a certain extent. As regards the maintenance of the defensive works, I see no reason why the whole of them, as well as the military roads, barracks, &c., should not be kept in repair by the artillery, under the control of the Colonial Architect. In this manner another step will be taken towards obtaining full value out of the expenditure incurred in maintaining the permanent force. Employment should, whenever possible, be given to the men on new military defence works, a small rate of working pay being guaranteed. This arrangement has been in force at the Heads for more than a year, and excellent work has been done.

374. Would you employ them in connection with the custody and management of warlike stores? Certainly; it would lead to economy and efficiency.

375. Do you think it would be wise to reduce the strength of the permanent artillery force below 300 men and officers at the present time? It would be folly to do so until the reserve has been established. Sir W. Jervois recommended 375 officers and men. If there be no reserve I think the strength should be 400. As I have already stated, neither a paid nor an unpaid volunteer force can take the place of the permanent force. The military organization of the Colony must be such that, immediately on the outbreak of war, the batteries could be manned and placed in a thorough state to resist attack. The great danger will be during the first few months of war, when the enemy would have made all his preparations before declaring war. He would make a sudden attack upon some point in Australia, hoping to find it unprepared to resist him. The proposal to reduce the artillery force, in order to meet the requirements of economy, cannot be defended upon military grounds. In reply to the question about the strength of the force, I gave in detail the number of men required. Again, it cannot be too often stated that the first thing to be done is to guard against attacks on the coast batteries, for which purpose a force of highly trained men—over present and immediately available—is required. If economy be insisted on, the expenditure on the field force should be reduced, because it is only maintained to meet a problematical danger. To go further: if it be feared that an enemy could land in one of the bays on the coast between Botany and the Heads—I certainly do not think so—it would be preferable and far cheaper to spend money in fortifying these points, or to provide a proper colonial naval defence. Fortification is merely a form of economy. A defensive work once constructed costs very little to maintain, and, in time of war, it enables a very small force to defend itself against great odds.

376. Do you consider a permanent infantry force necessary? No. If expense were no object I would be in favour of a permanent nucleus, as I fully recognise the great advantage of having a good model for the volunteer force. But you may pay too much for this advantage, and I do not see what the men could be employed upon in peace. Having already fully explained my views upon the subject of the field force, and the work which it would have to perform, I do not recommend the maintenance of any permanent infantry. With a volunteer militia force numbering 1,700 men, an infantry force, to be of real value in time of war, and something more than a model in time of peace, would have to be 200 to 300 strong. Its cost would be from £18,000 to £27,000 a year. We must prepare to meet attack with a moderately trained force, fighting from defensive positions, as already pointed out; more is not needed. If more money is to be spent on defence preparations, let it be laid out on the much needed colonial naval defences.

377. Did you not advise the Government of New South Wales to adopt the system of payment for the volunteer force? I did; but it is necessary that I should briefly explain the circumstances under which I tendered that advice. Sir William Jervois, in his report on the defences of New South Wales, recommended the establishment of a volunteer militia upon the lines laid down by the Commandant, Colonel Richardson. That officer brought under Sir William's notice the fact that, for all practical purposes, there was no force in existence in the Colony capable of resisting the attack of an enemy by land. He reported that several attempts had been made to obtain an unpaid volunteer force, but without success. The land order system had been tried and failed, consequently Sir William Jervois accepted Colonel Richardson's recommendations, as will be seen in his report, and advised the establishment of a volunteer militia. Some time after, I undertook the charge and execution of the schemes of defence, recommended by Sir William Jervois for the Australian Colonies, and in my capacity of consulting military engineer I recommended the Government to give a trial to Colonel Richardson's proposals. The results, so far as I can judge, have fully borne out Colonel Richardson's anticipations, but I must say that I think we are paying too dearly for the force now in existence. I looked upon the matter as a valuable experiment—one that would help us to decide ultimately what description of force was best suited to the defence requirements of New South Wales. I am now better acquainted with the subject. I see very clearly that, if any permanence is to be attained in the defence organizations of Australia, it must be by establishing them upon a strictly economical basis. If economy be disregarded, and the mere question of military efficiency taken into account, an organization will be adopted, which will either be swept away, or be emasculated immediately the necessity for retrenchment arises. Nothing is so much to be deprecated in Australia as the yearly attacks made upon the defence vote. The number of critics may be small, but their criticisms, however unjust, induce in the minds of the public a feeling of distrust in the military arrangements and a belief that everything is wrong. The responsible military authorities are debarred from reply, and the Minister does not possess the knowledge requisite to enable him to give full information. Much of the criticism is misdirected, and serves no good purpose, mainly owing to the insufficient acquaintance with the subject on the part of the critics. As this Commission affords the opportunity of examining carefully into the different systems in force in the other Australian Colonies, and we are informed by Colonel Downes that it is possible in South Australia to give a fair amount of training at a cost of £8 per man per annum, I feel bound to reconsider the whole question. An explanation has been given by Colonel Richardson as to the reason why the present high rate

Col. P. H. Scratchley,
C.M.G., R.E.
21 Mar., 1881.

Col. P. H.
Scratchley,
C.M.G., R.E.
21 Mar., 1881.

rate of pay (£12) was granted to the volunteers. The fact that the men in the naval brigade in Sydney and Newcastle were receiving £12 per year, whilst serving under a much less stringent organization than the volunteer militia, necessitated a similar rate for the volunteer militia. I am also aware that Colonel Richardson contemplated at first a much lower rate of pay, and is prepared to reduce the scale of remuneration for officers and men. The small cost in South Australia is accounted for by the fact that the privates only receive 2s. 6d. for half-days and 5s. for whole days, whilst in New South Wales they receive 5s. and 10s. Again, the officers in New South Wales are very highly paid, and in South Australia they are only paid for actual work done. (*Vide* Colonel Downes' evidence.) This is worth looking into.

378. What additional inducement would you offer volunteer officers and men to become more efficient? Prizes should be given, not only for good shooting with ordnance and small arms, but for proficiency in the performance of military duties. I think something of the sort is much wanted in order to distinguish the superior non-commissioned officer and private from his less efficient comrade. Prize essays should be established for officers to compete in theoretical and practical knowledge, in drill, in reconnaissance, in surveying, tactics, field fortification. Certificates of proficiency should be granted to the officers and non-commissioned officers attending the artillery and infantry schools.

379. Will you explain in detail the measures you would recommend for increasing the efficiency of the volunteer force on the outbreak of war? In order to meet the want of training—more or less inevitable with volunteer forces—on the outbreak of war, I would at once establish standing camps in convenient situations, and bring the volunteer force under a paid system. I would then pay the men for actual services rendered in camp. I would place in charge of this camp officers of energy and efficiency and would arrange for conducting the drills and exercises in such a manner as to meet the convenience of the volunteers. I think it is almost impossible that an enemy could land a large force without some warning; consequently I am satisfied that the additional training, which should be made as continuous as possible, would quickly bring partially trained men into a fairly efficient condition.

380. You have said that well-trained and efficient officers are necessary to take command in time of war: how are they to be procured? This is the most difficult point connected with the defence organization of these Colonies, and it is the weak point which must be fairly faced. It can only be met by the establishment of schools of instruction on as complete a scale as possible, in order to bring to the front officers who prove themselves worthy of being placed in positions of responsibility. If the officers attached to the permanent force were highly educated in a military sense—and I see no reason why they should not be—it would be practicable to attach some of them to the staff, their places being taken by reserve, or other officers belonging to the other local forces. *At the present time I view the want of officers, who are competent to command, with absolute alarm, and I cannot urge too strongly that immediate steps should be taken for the establishment of schools of instruction. It will probably be necessary for that purpose to procure a good instructing officer from England. All the Colonies might combine for the engagement of such an officer. If the idea of placing an imperial officer at the head of the defence organizations of the Australian Colonies were carried out, this instructing officer might be on his staff merely for convenience in regard to the performance of his duties. The instructing officer would train local officers to act under his supervision in each Colony, and after two or three years, some of the local officers might become instructors without outside assistance.*

381. By the paid system do you not limit the number of men trained to arms? Undoubtedly; you practically shut out the more independent classes—the men to whom the small payment for attendance at parade can be no object. I confess, therefore, that, if I saw my way to establish volunteer forces in these Colonies on the purely voluntary principle—excepting of course the payment of capitation allowances and the provision of funds for encampments, musketry and artillery practice—I would prefer to have a purely volunteer force. “The system of paying volunteers for attendance is a compromise with the militia system, and it is inconsistent with the object of a volunteer force, which aims at partial training of the largest proportion of the inhabitants capable of bearing arms; for many men will join and remain in the force, on account of the remuneration, who would otherwise after a period leave, and thus, the ranks once filled, young men who would otherwise have their turn in the ranks would be excluded, and instruction in military exercises restricted to only a small proportion of the inhabitants. Again, were their services to be directly remunerated by money payment, many who would join in the hope of distinguishing themselves, and from a real interest in military exercises, would be deterred from doing so, lest it should be assumed that they have joined for the sake of the small pay attached, and thus the ranks would be filled more with the class that would join a militia than with the higher and more independent class desirable to obtain among the volunteers. The success attending the payment of the Victorian naval reserve cannot be adduced in favour of payment of the land force, for the former must of necessity be drawn from a very limited local population, specially brought up to one mode of life, whilst the latter is open to any able-bodied man in the country, without reference to his occupation in life.” “Comparing the two systems (volunteer and volunteer militia), without reference to the expenditure, it must be conceded that the advantage of being able to depend upon periodical gatherings of the whole force is very considerable, and enables a much more uniform efficiency to be attained than is possible under a system by which the same members are not necessarily exercised together at each muster; but still as it cannot be sustained that, even under such a system, the men can ever become trained soldiers, actually fit for service, the question arises as to whether this increased efficiency is not dearly bought, for it cannot but mean a certain longer period of preliminary drill when the regiments are embodied for service to render the men trained under the one system equally efficient with those trained under the other. If the men remain in the force a sufficient number of years to become well trained, it is evident that the training to arms must be limited to a very small proportion of the people; whilst if they do not remain such a length of time their proficiency will be little better than that of the unpaid force.” The foregoing remarks have been extracted from a paper read by Major R. H. Shakespear, commanding the Victorian volunteer engineers, before the Social Science Congress at Melbourne, and in my opinion he puts the case very clearly.

382. How would you meet the case of men who were anxious to join the volunteer force, especially in the country districts? By the establishment of rifle companies somewhat on the South Australian system, which appears admirably suited to a scattered population. Of course such an organization would be in the light of an experiment, but we are bound to make this further experiment in order to arrive at the best organization suited for New South Wales. I am convinced that the best results would be obtained from training as large a proportion of the population as possible in elementary drill and rifle-shooting. Mounted corps might be organized on the same conditions. The main advantage of these rifle companies is their excessively small expenditure

expenditure per man, which has been stated by Colonel Downes to be as low as 10s. I would be prepared to expend £1 per man to cover cost of ammunition, repair of arms, instruction, and inspection. The companies should clothe themselves, maintain rifle ranges, and drill sheds. Arms would have to be provided by the State, and special arrangements devised for keeping a strict supervision over them. This will be found to be one of the difficult points connected with the formation of these companies. The cost of arms and accoutrements would amount to about £6 per man.

Col. P. H.
Scratchley,
C.M.G., R.E.
21 Mar., 1881.

383. Will you state your views with regard to the torpedo corps; are there any changes you would recommend? The torpedo volunteer corps stands in a different category from other volunteer corps, not even excepting the engineers; for the reason that the majority of the corps has practically to be recruited from the Telegraph Department. The nature of the work to be done is exceptional. More training is required than for the ordinary military exercises. I think, therefore, that whilst maintaining the character of the corps as a military body—entirely under the control of the Commandant of the local forces—its organization should be of a special character. The commanding officer of the torpedo corps, Major Cracknell, in his report to the Commandant, considers that “the number of parades is nothing like sufficient to ensure the efficiency of a corps like the torpedo and signalling corps, which, in addition to the duties peculiarly its own, has to be as well up in military drill as any other corps.” This efficiency in military drill appears to me unnecessary. In the case of a torpedo corps all that is necessary is that the men should be fair marksmen, and able to go through a few movements for general inspection. It is evident that much of the training of this corps can be conducted in the evenings.

384. Do you think that the strength of the torpedo corps could be reduced? Decidedly not. The strength of the corps was very carefully considered by Sir William Jervois, and I have since looked into the matter. The torpedo defences being of equal importance with the artillery defences, the corps for working them must be kept up fully manned and fully trained in time of peace. The attack on the torpedo defences would probably be conducted simultaneously with the attack on the batteries. In torpedo defences everything must be prepared in time of peace, as much as the guns in the coast batteries. The corps will be distributed as follows:—25 at Newcastle, 25 at Botany Bay, and 50 at Port Jackson. These figures are much below the authorized home establishment for such extensive submarine defences as we must maintain, in consequence of the Harbours and Rivers Department being relied upon in New South Wales to assist with boats, barges, &c., which would be manned with hired labour. The corps being composed entirely of volunteers is an additional argument against reduction. *The torpedo corps and the artillery stand in the same category.—they are of the first importance in the scheme of defence.*

385. Do you recommend that the torpedo corps should be affiliated with the artillery force? I do; but I wish it to be clearly understood that I do not propose this affiliation in any sense as withdrawing the corps from the entire and complete supervision and control of the Commandant. To understand the reason why I make this recommendation, I should give the outline of the scheme of defences as it has been planned by Sir William Jervois. In the first place, the defence is divided into two distinct parts—the defence to resist sea attacks, and the defence to resist land attacks. Although both parts will be worked absolutely under the control of the Commandant, once fighting has commenced the senior artillery officer, in charge of the coast defences, becomes responsible to the Commandant for the conduct of the operations by the artillery and the torpedo corps. And, as it is an admitted axiom that military forces should be organized for peace and war on one and the same system, I advocate this affiliation in order to guard against possible misunderstanding in so extensive a system of defence as that provided for New South Wales. For a long time past I have thought this affiliation necessary. I wish to see the defence organization of the Colony so arranged that, on the outbreak of war, no orders will have to be issued except those authorizing the execution of plans carefully matured in peace. What, therefore, will be the position of the artillery officers in Port Jackson, at Botany and Newcastle, if my proposal be not carried out? Instead of the two corps being familiar with each other, officers with the officers and men with the men—and each understanding the work to be done by the other—there is imminent risk of confusion and misunderstandings, the cause of nearly all military disasters. In England, and at Imperial foreign stations, the engineer officer controls the torpedo defences, acting in concert with the artillery officer who commands the artillery of the defence. As there are no regular engineer officers, and only volunteer engineers, who are required with the field force, the next best thing, to ensure unity of action, is to affiliate the torpedo corps to the permanent artillery. It appears to me that the only considerations which prevent the carrying out of my proposal are of a routine character. In no sense will the Commandant lose the complete control over the operations of the corps, or be relieved of his full responsibility, either during peace or war. The officer commanding the torpedo corps would report through the officer commanding the artillery forces.

386. How would you give the torpedo corps a special organization? I would follow the practice of the Imperial Service and recognize the speciality of the torpedo defences. It will be seen that Colonels Anderson and Roberts both advocate a permanent nucleus for the torpedo corps. I do not concur at present in the recommendation, because I wish the present system of paying the officers and men for attendance at torpedo drill and practice continued; but there must be very much more practising at the legitimate work of the corps than at present, and only military drill sufficient to enable the men to parade and march past at inspections and nothing more. The time of the corps should not be wasted in learning drill which it would not be required to perform in time of war. Whatever decision may be come to in regard to the field force should in no way affect the torpedo corps. *Any reduction of pay in the former must not be carried out in the latter.* But in return I would insist on more work. In this manner only will the necessity for a larger expenditure in the maintenance of the corps be avoided. As to the officers, I consider that Major Cracknell should be appointed director of torpedo defences and be paid as such, in order to remove him from comparison with the officers commanding infantry regiments, whose duties being purely military and not professional are entirely different from his. The other officers, if qualified and competent to direct torpedo operations without Major Cracknell's immediate supervision, should also be remunerated for their professional services. I may mention that in England the Committee on the Volunteer force recognized the necessity for specially considering the position of volunteer companies employed in connection with the torpedo defences of the commercial ports of Great Britain. General Sir Lintern Simmons, the Inspector-General of Fortifications, recommended the formation of submarine mining companies, which are evidently analogous to the Australian torpedo corps. He urged the very great importance of forming these companies, and stated that he did not see “how you can possibly expect men of that class, who alone are fitted for the work, to undertake it unless you are prepared to remunerate them for

Col. P. H.
Scratchley,
C.M.G., R.E.
21 Mar., 1881.

for the great length of time, fifty days (which to a working man is a very considerable time), which they would have to devote to instruction in the art." The Committee, in recommending that the proposal should be tried at one of the commercial ports, acknowledged the necessity for a special organization, similar to that I have insisted on.

387. Do you consider it advisable to extend the system of drilling boys in the schools of the Colony? I do, but not for the purpose of providing recruits for the local forces. The question need not be considered in connection with the defences, although the military staff can be utilized. It is desirable to impart a certain amount of knowledge in military exercises to the youth undergoing instruction in the schools. It is, however, to be borne in mind that drill is not of primary importance. The object should be to train boys to habits of obedience and self-control, and to accustom them to the restraints of discipline. I wish therefore a well-considered scheme to be adopted, extending the drill to both public and private schools of a certain size throughout the Colony, the masters to act as instructors, receiving small fees, under the supervision and with the assistance of the military authorities.

388. What are your views with regard to the custody of warlike stores in the Colony? I think the present arrangements very unsatisfactory—they appear to be costly and un-businesslike. In making this remark I wish to be understood that I am not reflecting in any way on the Ordnance Storekeeper. I know Mr. Blanchard to be a most painstaking and zealous officer: it is the system I find fault with. If one thing more than another has hindered good and economical administration in military affairs, it has been the separation of the Store Department from the absolute control of the military commander. In all the other Australian Colonies the Commandant of the local forces is directly responsible to the Government for the military stores required by him; he is at the same time entirely subject to the check and control of the Audit Department. Thus there is no circumlocution, there is a complete check, and above all things there is great economy in the management. In the case of New South Wales a large reduction could be effected by the employment of men of the permanent artillery to work under the control of the store officer. So far as I can see, the reform needed in this department could be effected at once by transferring the present Ordnance Storekeeper and Barrack-master to the staff of the Commandant. It is only necessary to look at the estimates for this department to see how unfairly the expenditure upon it is brought in as increasing the total military expenditure of the country. Half the work done by it is for civil magazines. The Ordnance Storekeeper could continue to look after these magazines without interfering with his military duties.

389. What do you consider should be done to ensure a supply of ammunition in time of war? This is a very important question, which must not be lost sight of. I believe in time of war, it would be impracticable to obtain supplies of ammunition from England, either for guns or small arms. The stock of ammunition for guns is satisfactory, provided it is kept up. No doubt in a time of pressure the engineering factories in Sydney could manufacture shot and shell, but at a greatly increased cost. With regard to small arm ammunition, it would be advisable to procure a small plant for making up ammunition in the Colony. The services of the permanent artillery officers and men might be utilized in connection with the working of such a plant. The subject should be looked into, and information obtained from the Agent General in London. I would here draw attention to the paramount necessity of voting sufficient money regularly every year for the practice ammunition required for the ordnance and small arms, and thus keep the reserves intact. This robbing of the reserves of ammunition for practice purposes is one of the dangers ever present in Australia.

390. What should be the duties and term of office of the Imperial officer you recommend should be engaged by the Australian Governments? I advocate this appointment on the following grounds: (1.) It is essential, for the maintenance of efficiency in military forces that there should be periodical and searching inspections into everything connected with the administration of those forces. These inspections to be of any value must be conducted by an impartial and independent officer, whose only aim would be to rectify what appeared to be wrong. (2.) At present the several Australian Governments have no *recognized* officer outside of the local forces, to consult on countless military questions and details, about which the ministers in charge of the defences can know very little. The appointment of a military adviser would relieve the ministers of this difficulty, and he would be their acknowledged referee; and on him would rest the responsibility of tendering proper advice. (3.) This officer would, moreover, be a guarantee to the several Governments that they were getting adequate results for the money spent upon the defence preparations. (4.) He would be the means of introducing the necessary changes and all modern improvements in order to keep the defence organisations thoroughly up to the times. (5.) He would strengthen the hands of the commandants by his counsel. He would bring together the local forces of the several Colonies, institute comparisons, produce emulation between them. (6.) Lastly, every Commandant in Australia—I include five Colonies—has assured me that he wished to see a military head appointed for Australia, as such an officer would be able to report to the several Governments whether good or bad work was being done by the Commandants. Holding these views, I would appoint the officer for a term of three to five years,—reserving to the associated Governments the power of terminating the agreement by mutual consent. I would give the officer the rank of Brigadier-General, but I would not go to the expense of providing him with a staff, as I am opposed to any considerable expenditure upon the office to be created. An allowance for a clerk should be granted. Arrangements could be made in each Colony for an officer to act as orderly officer to the inspecting officer whenever he visited the Colony.

391. What should be the duties of this officer? The duties would be as follows:—(a) To conduct periodical inspections as frequently as he desired of the local forces, and of all the military establishments and arrangements in each Colony. (b) To advise and act as the referee of the several Governments in all military questions; to be the final court of appeal, subject to the approval of the Governments, in all questions of military discipline. (c) In time of peace not to perform any act of executive command, and in no way to interfere with the Commandants in their executive functions. (d) In time of war the inspecting officer would assume supreme direction of the military affairs of the Colonies concerned, but he would not lessen the entire responsibility of the several Commandants. The expenditure involved in creating such an appointment would be small if all the Colonies, including New Zealand, were to join,—probably under 2 per cent. of the military expenditure. The head quarters of the inspecting officer could be made shifting. Lastly, the appointment of such an officer would have the effect of giving permanence to the defence organization of Australia, and would lead to a more satisfactory recognition from England of the defence preparations now being made by the Australian Colonies.

392. What is your opinion of the annual expenditure necessary for the maintenance of a defence organisation suitable to the requirements of New South Wales? The so-called military expenditure sanctioned by Parliament for the year 1881 is as follows:—

Col. P. H. Scratchley, C.M.G., R.E.
21 Mar., 1881.

(1.) General staff	2,995	
(2.) Permanent artillery	31,186	
(3.) Volunteer force		
		{ Torpedo Corps ... 2,421		
		{ Field force ... 34,544	37,515	
		{ Public School Cadet Corps 550		
				£
	Total for Military forces	...	71,696	
(4.) Naval Brigade	5,815	
				5,815
(5.) Ordnance and branch department—one half of £6,521, as representing expenditure on account of military stores, say	3,250	
				3,250
(6.) Repairs to military and volunteer buildings	1,500	
(7.) Lighting lamps, sweeping chimneys, &c., Victoria barracks	400	
				1,900
(8.) Warlike store, special supply	2,500	
				2,500
(9.) Works of defence	6,706	
				6,706
				91,867

Items marked (1) (2) (3) (5) (6) (7) (8) represent the actual expenditure for the year on military forces, and amount to £79,346. The expenditure on naval brigade (4) (£5,815) should not be taken into account, as the corps is not wanted for the military defences. The expenditure upon it should be charged to the Colonial naval defences—a matter I have fully discussed. It would then be a wise expenditure: at present it is an expenditure producing no results. The item (9) £6,706, for works of defence, represents a special expenditure not recurring every year. If my views prevailed I would reduce the military expenditure to £66,000, thus:—

£71,696
3,250
2,500
1,900
79,346

(1) General staff	at present	£2,995	Keep at	...	£2,995
(2) Permanent artillery	at present	31,186	Reduce to	...	27,000
(3) Volunteer force—							
Torpedo corps	at present	2,421	Keep at	...	2,421
Field force	at present	34,544	Reduce to	...	18,000
(4) Drilling in public schools	at present	550	Increase to	...	1,000
(5) Ordnance store Department (to include working pay for the maintenance of warlike stores)		3,250	Reduce ultimately to	...	2,000
(6) Warlike stores to replace worn out stores and practice of ammunition for small arms and ordnance, to be voted every year regularly		2,500	Increase to	...	4,000
(7) Repairs to military buildings, sweeping chimneys, lighting lamps (I would execute most of the work with the permanent artillery)		1,900	Reduce to	...	1,200
	Present expenditure	£79,346			
	Proposed expenditure	£58,616
(8) Add for maintenance of rifle companies, Artillery reserve, volunteer reserve, share of pay of inspecting officer, school of instruction, instructors (all of which I recommend)							
Say for the year 1882	7,000
	Total proposed expenditure	£66,616

This shows a saving of £13,000. The saving is greater because one item of this year's expenditure is too low, viz., that for the supply of ammunition for practice, which should be not less than £4,000. Again, I provide for increased expenditure (1) public schools, (2) practice ammunition (an item which should not be starved), (3) maintenance of rifle companies, (4) artillery reserve, (5) volunteer reserve, (6) inspecting officer, (7) school of instruction and instructor. Moreover, if the plan be adopted of reducing the strength of the artillery in the ranks to 200 officers and men whenever the reserve reaches 200 men, there will be a further saving, even allowing for the necessary increased expenditure on account of the artillery and volunteer reserves and the rifle companies to be established throughout the Colony.

To recapitulate: assuming that the future military expenditure of the Colony (exclusive of Naval Brigade, which has throughout been omitted) is fixed at £66,000 a year instead of £79,000 at present, the country would obtain very much more for the money spent and be more fully prepared to meet attack than at present, inasmuch as it would have at its disposal a military force of 3,600 men;—permanent artillery, 200; reserve, 400; torpedo corps, 100; volunteer militia, 1,700; volunteer reserve, 1,200. At present it only has about 2,035 men. Besides this force there would be rifle companies in the country districts, the public school boys would be drilled, the supply of practice ammunition would be fully provided for, the ordnance store department would be economically managed, and the expenditure on the military works laid out partly in the finding employment and teaching trades to the artillery force in barracks. But to carry out the reforms I recommend much firmness will be required, as it is unfortunately the rule to throw discredit on and disparage attempts at reform.

THURSDAY, 24 MARCH, 1881.

Colonel Peter Henry Scratchley, R.E., C.M.G., further examined:—

Col. P. H.
Scratchley,
C.M.G., R.E.
24 Mar., 1881.

393. Do you think that a reduction in the annual military expenditure could be effected, having due regard to the efficiency of the military force, and without material injury to the service? Certainly, without impairing complete efficiency as already explained in my evidence. It must, however, be borne in mind that, so long as the men in the naval brigade receive £12 per annum pay—without performing the duties, and undergoing the training, of a naval reserve—there will be a difficulty in reducing the expenditure on the volunteer militia.

TUESDAY, 29 MARCH, 1881.

Colonel Peter Henry Scratchley, R.E., C.M.G., further examined:—

Col. P. H.
Scratchley,
C.M.G., R.E.
29 Mar., 1881.

394. Will you hand in a statement of the guns that will be mounted in the coast batteries when Sir William Jervois' scheme of defence has been completed? I hand in the statement required, signed by Colonel Roberts and myself. From the statement it will be seen that there will be 45 guns mounted in the batteries for the defence of Port Jackson, 5 guns at Botany Bay, and 7 guns at Newcastle; total, 57 guns. I would direct attention to the remarks which appear in the statement, as they bear upon the question of the number of guns, for which full detachments of gunners should be provided.

395. What do you consider would be the duties of the engineer corps in time of war, and are you of opinion that they should have anything to do with the permanent works of defence? Considering that a large force of permanent and volunteer artillery is to be maintained for manning the guns in the batteries, and that they are to be supplemented by small garrisons of infantry, it will be unnecessary for the engineer corps to have anything to do with the maintenance of the coast defences. No difficulty would be experienced in instructing the permanent artillery officers, to enable them to undertake the charge of the engineer duties connected with these works in time of war. These would include the construction of additional earthworks and obstructions in the batteries, for defensive purposes against boat attacks; also of extra bomb-proof accommodation, as well as the repairs to the works during or after an attack. For these purposes, therefore, tools, materials and other appliances should form part of the equipment of the coast batteries. The primary object, which Sir William Jervois had in view in recommending the maintenance of an engineer corps was that of associating it with a field force, provided for the defence of Sydney against land attacks. The corps at its present strength is only sufficient to undertake the engineering duties connected with the field force; if more than this were proposed it would be necessary to increase the corps largely. I suggest a small increase in the strength of the engineers, in order that the corps may provide signalling parties for the field force without drawing upon the torpedo corps, which will have enough to do in attending to the submarine defences. In my previous evidence I have laid considerable stress upon the necessity for providing, on the outbreak of war, defensive positions to the north and south of Sydney, in which the field force would be posted to resist the attacks of the enemy. These positions would be commenced from the points at which landings were anticipated, and would be succeeded by others to which the force could retire in the event of its meeting with a reverse. Thus a succession of defensive positions should be established to cover the approaches to the capital. To carry this plan into effect it will be necessary that the engineer officers should study and examine the country to the north and south of Sydney, and prepare careful reconnaissances of all the roads and tracks leading to the capital. In this duty the engineers should be assisted by such officers of the artillery and militia forces as are competent to undertake the work. I am inclined to think that it would be well to increase the number of officers attached to the engineer corps, provided suitable candidates can be found; for there can be no doubt that the duties of this corps in time of war would be very onerous. It will further be necessary to train both the officers and men to act as superintendents of military and civil working parties.

Colonel Peter Henry Scratchley, R.E., C.M.G., further examined:—

Col. P. H.
Scratchley,
C.M.G., R.E.
29 Mar., 1881.

396. You have heard the evidence given by Colonel Downes in reference to a landing in force. What are your views on the subject? I do not concur with Colonel Downes. Although the question is one that would best be dealt with by the naval authorities, as being connected with the naval defence of the Colony, I will state my views. In the first place, the Admiralty in London knows the position of every war ship of foreign nations, and is kept fully informed of all their proceedings. As war became imminent, there would be increased vigilance on the part of the Admiralty. On the outbreak of war, no doubt arrangements would be made to watch every port and ship of the enemy. I, therefore, do not believe it would be practicable for any foreign power to make preparations on the scale, stated by Colonel Downes, and despatch such a large expedition, as he contemplates, without ample warning being sent to Australia. The expedition would have to be large indeed, for not only must it convey the invading forces but it must be accompanied by a sufficient naval force to protect the expedition. The whole idea is, to my mind, most improbable, if not impracticable. Any such expedition could only be undertaken in the absence of the Imperial navy, and in the contingency of Great Britain having lost for a time the command of the seas. But admitting all these points—and I am a strong advocate for adopting all reasonable precautionary measures for defence—I contend that the only way to meet such an attack would be with Colonial naval defences, auxiliary to the Imperial naval force in Australian waters. It would be bad strategy to let the enemy land, and the Australian defence preparations should be such that the enemy would be resisted not only on shore as he was landing, but at the same time be attacked by sea, either before or during the landing. Again, Colonel Downes does not mention where the landing is to be effected. Now, there is only one landing-place near Sydney—Broken Bay—where an enemy could find a base from which to launch an expedition against the capital. The bays between South Head and Botany Bay need not be taken into account, as an enemy would not risk such a large expedition, with the sea as a base, being liable at any moment to be cut off from communication with the shore by bad weather. Botany Bay would be denied to the enemy not only by the fort on Bare Island, but by the field forces on shore. With the large number of field pieces and guns of position, which could be

be made available, there would be no difficulty in keeping unarmoured ships out of Botany Bay. On the other hand, admitting an enemy had landed in Broken Bay, a glance at the map of the country between it and Sydney will enable any one to understand how easy it would be to resist with success an advance from any point in Broken Bay, even without any local defences. Extemporized local defences would no doubt be established when warning was obtained of the probability of an attack of the nature described being made on Australia. Attacks of the nature pointed out by Colonel Downes must be met by naval means, while the probable attacks by armed merchant vessels of great speed, sent to deal a sudden and unexpected blow, and the less probable attacks of war vessels, must be resisted by coast batteries, and the defence organization recommended by Sir William Jervois.

Col. P. H.
Scratchley,
C.M.G., R.E.
29 Mar., 1881.

397. In your evidence you have frequently referred to the primary importance of colonial naval defences: will you explain what you consider these defences should be? The colonial naval defences to which I refer have yet to be created. They are required to complete the defence organization of New South Wales, and indeed of all the Australian Colonies. A commencement has been made in Victoria in the matter, but in the wrong direction. The Victorian naval defences are too costly, and the ships are not of the class required. Moreover there are no guarantees that efficiency can be maintained. Whatever naval defences may be established for New South Wales they should be of an economical character, and, whilst being entirely under colonial control, should be subject to the periodical inspection of a searching character by an imperial naval officer of superior rank—the Commodore or other Imperial officer in command in Australian waters. The arguments advanced for the appointment of a military officer, to act as inspecting officer of the local forces apply equally to this Naval Inspector. The duties of the colonial naval defences, in time of war, have already been explained by me. Immediately you establish these naval defences, all scares as to invasion disappear, and you need only maintain local land forces sufficient to meet the contingency of the naval defences not meeting the enemy at sea. If the colonial naval defences be established on a correct basis at the beginning, they admit of indefinite development and expansion as the importance of the interests at stake increases. Colonial naval defences would undoubtedly solve the difficult question as to how the numerous ports and coal depots on the coast of New South Wales are to be protected from predatory attacks by armed merchant vessels or cruisers. So far as *personnel* is concerned, New South Wales has already in existence a force which can be immediately utilized for the colonial naval defences. I refer to the Naval Brigade, a force which should be converted into a naval reserve, under proper regulations, and should be composed of as many sea-faring men and officers as possible. The Victorian naval reserve regulations might be referred to in framing regulations for the New South Wales naval reserve. The duties of this reserve would be to man all floating defences provided for the defence of the Colony,* which might comprise (1) gunboats, armed with one heavy gun, and intended to co-operate with the shore batteries and work in the harbour only; (2) armed merchant or Government vessels which in time of war would become improvised men-of-war; (3) guard-boats, whether row-boats, steam-launches, or steamers armed with machine guns; (4) spar torpedo boats. The naval reserve would have nothing to do with the shore batteries or the fixed defensive torpedoes; they would only protect them as far as possible against attack by water. An operation which an enterprising enemy might undertake would be to open up a passage, by countermining, through the torpedo defences by means of gunboats, launches, &c. This must be met by artillery fire, and by the defenders' steam launches and other floating defences, manned by the naval reserve. The next point to consider is what should be the appliances provided for training the reserve. (1.) A gun-boat would be a source of additional strength for the defence of Port Jackson, but there is no need for one at present, as the coast batteries, recommended by Sir William Jervois, are amply sufficient to meet any attack likely to be made on Port Jackson. (2.) A few light rifled guns (6-inch breech-loaders, new pattern, of 4 tons weight, or guns of less weight and power) might be provided, with all the necessary ammunition and fittings suitable for placing the guns on board merchant vessels, which, on the outbreak of war, would be commissioned. One of the Government steamers might be fitted in time of peace to train the naval reserve in their duties without much expense. (3.) Some of the Government steamers and steam launches might be utilised in time of peace to teach the officers and men their duties in connection with guarding the entrance to the port. (4.) One or two of these steam launches might, if found suitable, be fitted with spar torpedoes, and the men trained to their use. The foregoing proposals would only lead to a small additional expense, and they would place the Naval Brigade of the Colony in its proper position, and make it of actual value for defensive purposes in time of war. It cannot be said that at the present time it is of any value, as it has no place in the defensive organization of the Colony. I do no more than give a bare outline of the idea; the details will have to be filled in hereafter. As I have already stated, it is an inexpensive organization, which admits of indefinite expansion as required, and it would provide a colonial naval defence, which is now wanted to complete the defence organization of the Colony. I believe it has been proposed that a naval torpedo corps should be formed. I am entirely opposed to such a measure and to such an unnecessary expenditure. The defensive torpedoes of the port are looked after by a special torpedo corps. There is no place nor need for a naval torpedo corps: all that is required is that a portion of the Naval Brigade should be instructed in the use of the spar torpedo, and in the fitting of steam launches with the same; also, as to the best mode of protecting ships against the attacks of aggressive torpedoes. More than this should not be attempted. In England, in the United States, and most foreign countries, there is a distinct line drawn between the two classes of torpedoes.

The War Office, in a letter dated 24th August, 1880, informed me that *defensive* submarine mines are in charge of the military, and *offensive* torpedoes in charge of the navy, because the defensive mines being made up on shore, the testing and observing arrangements being from shore, and the mines themselves being fired from shore, by command of the officer conducting the military defence; whereas offensive torpedoes are at present employed only from ships and launches forming portions of the naval defence. Submarine mines must be as ready for action as guns, and the two should come into action conjointly.

I do not attempt to touch upon the question of a federal naval defence for Australia. It will grow out of my proposal if it should be adopted by each Colony, on a scale suited to its defensive requirements and resources. At any rate the example set by New South Wales would soon be followed by the other Colonies.

4—Q

Colonel

* *Vide* Colonel Scratchley's explanatory memorandum relating to Scheme of Defence in Appendix.

Colonel Peter Henry Scratchley R.E., C.M.G., further examined :—

Col P. H. Scratchley,
C.M.G., R.E.
29 Mar., 1881.

398. Will you explain the part assigned to the naval brigade by Sir William Jervois in his scheme of defence? Sir William Jervois, in his report, recommends that the naval brigade should be reduced from 320 to 200 officers and men; that 150 should be detailed to form part of the crew of the iron-clad proposed by him, and fifty should be allotted to the garrison of the fort at Newcastle. The proposal to purchase an iron-clad not having been approved by the Legislature there is no place assigned in the defence organization for the naval brigade, excepting so far as the garrison at Newcastle is concerned. An infantry force is now maintained at Newcastle consequently the Naval Brigade will not be wanted for the fort. Notwithstanding this fact, the naval brigade has been increased in strength, and is now 328 strong, costing the country £5,815 per annum. A reference to Captain Hixson's evidence will show the unsatisfactory position occupied by his corps; it is neither a land force nor a naval force. The time has arrived for a decision to be come to in the matter. I am entirely opposed to the abolition of the corps, but I contend it should be given its proper place, and converted into a naval reserve, under a special Act, and trained for service afloat. The corps would then take charge of any floating defences that may be provided in the future—these defences being intended for work inside and outside the harbour, in the manner indicated by me in reply to a previous question. If the corps is to remain as it is, it is nothing but a volunteer naval corps, and should be placed under the Commandant. It is contrary to common sense, and every military principle, that there should be an independent corps, for defensive purposes on land, not under the control of the officer responsible for the military defences.

WEDNESDAY, 30 MARCH, 1881.

Colonel Peter Henry Scratchley, R.E., C.M.G., further examined :—

Col. P. H. Scratchley,
C.M.G., R.E.
30 Mar., 1881.

399. Will you give the Committee a memorandum explanatory of the scheme of defence which has been adopted for New South Wales? I hand in the statement asked for, and may remark that, if the works are proceeded with vigorously, the coast defences should be completed in 1882.

MONDAY, 4 APRIL, 1881.

Colonel Peter Henry Scratchley, R.E., C.M.G., further examined :—

Col. P. H. Scratchley,
C.M.G., R.E.
4 April, 1881.

400. Will you now sum up your evidence, and give a brief outline of your recommendations on the matters referred to the Commission for report?

I. Briefly my evidence is to the effect—

- (a) That there are grave defects in the defence organization of New South Wales that can be readily remedied.
- (b) That the organization is incomplete in many important respects.
- (c) That colonial naval defences are required to complete the defence preparations of the Colony.
- (d) That the present military expenditure is too large and can be reduced.
- (e) That full value is not obtained for the expense incurred.

II. The defects pointed out are as follows :—

- (f) In the permanent artillery corps the organization and constitution are radically bad, owing to a blind adherence to the Imperial army system, which is, in my opinion, unsuited in many important respects to a new country. Also, that no attempt is made to retain the services of the trained men, after they have left the force, by forming a paid reserve.
- (g) The expenditure on the volunteer militia is excessive, owing to the high rates of pay granted to officers and men, and it is doubtful whether the extra training is worth the extra cost.
- (h) In consequence of the system of paying the men for attendance at drill, the number of men being trained to arms is limited by the great cost.
- (i) The military education of officers, permanent and volunteer, excepting in military routine and exercises, is entirely neglected.
- (j) In the permanent artillery the officers are not compelled to know anything outside of these subjects, and the standard of examination for these officers is altogether too low.
- (k) The torpedo corps is insufficiently trained in professional duties, owing to the limited number of parades.
- (l) The Ordnance Store Department is managed at an unnecessary cost, and is entirely withdrawn from the control of the Commandant, thereby introducing a divided responsibility in one of the most important branches of the military service.

III. The organization is incomplete, for the following reasons :—

- (m) The naval brigade does not form part of the military defences, and yet it is not utilized for naval defences.
- (n) There is no reserve formed of trained men from the permanent artillery.
- (o) Nor a reserve formed from the men who have served in the volunteer militia.
- (p) No encouragement is given to the volunteer movement in New South Wales generally.
- (q) There are no mounted corps.

IV. My recommendations may be recapitulated as follows :—

- (1.) Colonial naval defences to be provided. The naval brigade to be converted into a naval reserve, for the purpose of manning any floating and other naval defences that may be provided for New South Wales. The system and regulations of the Victorian naval reserve to be adopted.*
- (2.) A military adviser and inspecting officer for the local forces of Australia to be appointed. The officer appointed not to be of high rank, and the expenses connected with the office to be kept as low as possible, no staff being necessary.
- (3.) The permanent artillery force to be reorganised for short service, and to be now reduced to 300 officers and men. The formation of a reserve of trained men, who have served not less than three years, to be at once commenced. The corps to be increased to 400 men if the reserve be not formed. Retaining fees ranging from £12 to £20, if necessary, to be given to the men in the reserve, according to the time they engage to serve; a portion of the fees to be in the shape of deferred pay, to be paid on completion of service. Subordinate situations in the Government

* Vide Appendix for Victorian Naval Reserve Regulations.

Government departments to be opened to the men, as an inducement to go into the reserve. An office to be established at head quarters, at which applications from public companies, &c., for men who are leaving the force may be registered.

Col. P. H. Scratchley,
C.M.G., R.E.

- 4 April, 1881.
- (4.) When the reserve is 200 strong, the number in the ranks to be reduced to 200 officers and men, but no further reduction to be made. The reserve to be fixed at 400 to 500 men.
 - (5.) There is no necessity for a permanent infantry force, and even if there were, the cost of maintenance would be too great; a large field force being required for defence against land attacks.
 - (6.) Two batteries of garrison militia artillery required, 150 strong.
 - (7.) A change is required in the torpedo corps to render it more efficient; more exercise in the professional work of the corps, less infantry drill; no reduction in pay admissible, but more work to be insisted on.
 - (8.) Affiliation of the corps to the artillery force, in order to place under one head the coast defences of Port Jackson, Botany, and Newcastle. Strength of corps to be as at present, 100 officers and men.
 - (9.) Preference to be given to a volunteer militia, as at present constituted, on the condition that the cost is reduced to £10 per man, or about £18,000 for 1,700 officers and men. Men not to remain longer than five years in the ranks.
 - (10.) Undue importance not to be given to continuous training, if much time be taken up in learning the details of military life.
 - (11.) Volunteer reserve to be formed without pay from men who have served in volunteer militia and in the old volunteer force. Strength to be limited to 1,200 men.
 - (12.) Rifle companies to be formed in the country districts of New South Wales, with an inexpensive organization; arms and accoutrements to be supplied to the men by the State; £1 per officer and man per annum to be the authorised expenditure for ammunition, instruction, inspection, and contingencies; clothing, drill-sheds, rifle-ranges, &c., to be provided at the cost of the companies.
 - (13.) A corps of mounted rifles to be formed in and around Sydney on a purely volunteer organization, the State granting no personal remuneration, and only arms, ammunition, and instruction.
 - (14.) Corps of mounted rifles, on the same basis as the rifle companies, to be formed in the country districts, if there should be a demand for them.
 - (15.) The strength and composition of the militia field force to be as follows:—

Field artillery	200	officers and men.
Engineers	60	" "
Infantry	1,450	" "
						1,700	" "

Besides the volunteer militia there should be a reserve force of volunteers, of from 1,000 to 1,200 men, distributed in the same proportion as above amongst the several arms; the volunteers to be affiliated to the volunteer militia. In this manner a total strength of about 2,900 officers and men would be available for the defence of Sydney and Newcastle; this force to be quite irrespective of any volunteer corps or rifle companies which may be raised in the country districts.

- (16.) The field artillery should be composed of three batteries of six guns each—total, eighteen guns. If guns of position were available, they would be in addition to the eighteen field guns, and would have to be worked by special detachments told off for the purpose. The guns of position would form part of the defensive positions established to the north and south of Sydney.
- (17.) As to the changes in the laws and regulations, they should be left for the Commandant to decide, whenever the organization and composition of the several forces had been settled by the Government.
- (18.) The Ordnance Store Department should be re-organised and transferred to the entire control of the Commandant. Men in the permanent artillery should be employed as far as practicable with the object of reducing the expenses. Arrangements should also be made by which all necessary repairs to ordnance, carriages, arms, and other military equipments could be executed by the department.
- (19.) Changes should be made in the system of examination for appointment and promotion, with a view to introducing a higher standard of military knowledge for the officers of both the permanent and volunteer forces.
- (20.) Military schools for the instruction of the officers of all arms should be established, and the necessary instructors appointed.
- (21.) It should be compulsory for the permanent officers to attend the schools and go through a course of instruction in field engineering, tactics, surveying, and reconnoissance. The officers of the volunteer militia and volunteer reserve should be induced to attend this course by granting them certificates of proficiency.
- (22.) A military library and reading-room to be established for the officers of the local forces, in some convenient position in Sydney—not at Victoria Barracks—for the encouragement of lectures and discussions on military matters, subject to the control of the Commandant.
- (23.) The boys in the public and private schools in the Colony to be drilled,—not for the purpose of attempting to make soldiers of them, but with the object of teaching them obedience, self-control, and respect for authority.
- (24.) The military estimates, exclusive of Naval Brigade, to be reduced to about £66,000 a year, due provision being made for additional expenditure in connection with rifle companies, reserves, ammunition, instruction of officers, military adviser, public schools, &c., as recommended in my evidence.

WEDNESDAY,

WEDNESDAY, 16 MARCH, 1881

Frederic Norton Manning, Esq., M.D., Inspector General of the Insane, examined :—

Dr. F. N.
Manning.
16 Mar., 1881.

401. The Sub-Committee have under consideration the question of forming a Reserve, composed of men who have served for about three years in the permanent force of the Colony. They are further considering whether these reserve men could, on leaving the permanent force, be taken into the employ of certain civil departments of the State. Would you give the Sub-committee your opinion as to the practicability of such an arrangement being introduced in the department under your charge? I presume that you would wish to call for the services of these reserve men at certain times.

402. It is probable they would have to parade once a quarter, perhaps for an afternoon, and say a few days consecutive training during the year, but so arranged as not to interfere with their duties. That is to say all the men would not be taken away at once, and substitutes would be provided? I am afraid that would be quite inapplicable to my department. I cannot see how it would be possible to spare men from duty for any parade. I have always, so far, objected even to take a volunteer on the staff. The question appears to be the practicability or advisability of receiving into the department a number of trained soldiers.

403. Assuming you had the distinct responsibility and right of sitting on the Board which admitted these men in the first instance into the permanent force if established? I should have no objection to receiving a certain number of men, but I should not like to be restricted to taking these men alone. In the first place because I do not think that a military training is of any help in my department. I think that strict ideas of discipline would stand in the way of a man's getting on with the patients; and what I want is rather nurses—trained men in the Army Hospital Corps and in the best Public Hospitals, and men with considerable command of temper and with tact rather than with strict ideas of discipline. Then, too, if a scheme of this kind is once enforced I should be bound almost to take the whole of my men from the defence force, and my choice would be limited considerably. Again I should be at a disadvantage with regard to other departments. Mine is possibly the least popular branch of the Public Service. The men—certainly some of the smarter men—would very much rather enter the police, or the gaol service, and I should be left with such as would not be taken by the other departments. There is a further objection: The men would regard an appointment of this kind as a sort of pension. They would come there as a kind of right, and would feel being discharged by me as being wronged. I hold in my department that a man shall not continue in the service for an hour if I consider he is unfit for his work. If it is understood that I have the right of discharge in case of unfitness, that does away with the objection of the men regarding the appointment as a permanent one.

404. Then at all events you would be disposed to accept certain appointments, such as gate-keepers and persons of that sort? I should be glad to get men from the artillery as gate-keepers and for certain other appointments for the special service. I do not think I ever refused to take a man from the defence force, but I should think it necessary to see these men before appointment, and have full power to reject them if from physiognomy or personal peculiarity I considered them objectionable. But the applicants have been very few. I have on several occasions asked the officers of the permanent defence force if they had men who wanted appointments to send them to me, and I have had only a very few applications. I would not wish my choice to be restricted, but I would be willing to take men from the defence force for certain employments.

405. Excluding all special appointments? Yes.

406. Would you inform the Committee as to the probable number of subordinate positions which annually become vacant in your department? There would be possibly twelve appointments annually, and of these I think that perhaps from one-third to a half might be thrown open.

407. Possibly you would be able to take six every year? Possibly.

408. Is it probable that, from age and other causes, a sudden increase may occur in the retirements from your department, which would create vacancies exceeding the average annual number you have stated? I do not foresee any changes. My staff at present is composed of very young men. I have not for ten years admitted anybody over thirty years of age, and I prefer taking them, and have taken them, at from twenty to twenty-three and twenty-four—at twenty if possible. So the staff is now composed of young men. On the question of calling out the men for drill it could not be done in my department, I think, without some increase of the staff. The department is worked now with the lowest possible staff, and if men were spared from their duties for drill—even in limited numbers—I should require some further assistance than I get at present, such as substitutes for the time being, or a larger permanent staff. My rule now is to give everybody one day a month and every other Sunday, and they would want that for personal purposes—it could hardly be devoted to drill. If I had to spare them at other times I should require a larger general staff. Another point is it would be almost impossible to take my men in case of any outbreak of war; I cannot get efficient substitutes in a special service of that kind.

409. What is the average rate of pay of your subordinates? They commence at £72 a year, with food, lodging, uniform, washing, and everything found them, and they go up to £102 a year.

WEDNESDAY, 16 MARCH, 1881.

Harold Maclean, Esq., Comptroller General of Prisons, examined :—

H. Maclean,
Esq.
16 Mar., 1881.

410. The Sub-Committee have under consideration the question of forming a reserve, composed of men who have served for about three years in the permanent force of the Colony. They are further considering whether these reserve men could, on leaving the permanent force, be taken into the employ of certain Civil Departments of the State. Would you give the Sub-Committee your opinion as to the practicability of such an arrangement being introduced in the department under your charge? I do not think the proposal could be advantageously adopted in its entirety for my department. I think that a strong leaven of the military element is desirable in it; but I do not think it should prevail entirely. A man has to be selected more on his individuality than because of his having joined the ranks. The conditions of his duties are different. The man is at once probably placed in charge of thirty or forty men subject in some degree to his temper and his caprice, and I think it requires almost more care in his selection than even for a policeman or any other man I know of, in order to obtain a really effective prison warder. At the same time I think the

the military training is in many respects a great advantage, and I should be quite willing at any time to give a preference to applicants from the force, but I do not think it would answer for my department to have it the rule. I think it would have to be left to the head of the department to judge from physiognomy and in other respects, as to whether a man should be taken on, rather than from the standard required for military service. I imagine that usually recruiting is made entirely from physique and fair decent character, but that is not all that is required in exercising the charge they have to exercise in this department.

H. Maclean,
Esq.
16 Mar., 1881.

411. What is your present mode of appointing warders? The applicant fills up an application form, giving me full information concerning him. He sees me personally, and having a large number to choose from, I select those that seem most fitted. I at one time made it almost an absolute rule to take none but trained soldiers. I have since had occasion to modify my views to a certain extent with regard to that, and I have found that some of the young natives untrained, and civilians, but brought into training in establishments of this kind, have made the very best prison officers I have.

412. It seems to the Committee that you are basing your objections principally on the idea that the men, proposed to be taken from the permanent force, are to be selected simply from the qualifications necessary to make soldiers. Do you recognize the fact that, on the contrary, the men are to be selected by a board composed of heads of departments, not only from their physique but from their educational qualifications and intelligence? I hardly so understand it. But it appears to me that, in the case of a recruit offering himself, the military authorities might be glad to get a man that I might think would not be suitable for a prison officer. The arrangement that men entering the reserve force should be passed by the heads of the departments to which it is proposed to draft them modifies in a considerable degree my objections.

413. Do you understand that the proposal is that men should pass from the permanent force to the different departments in the subordinate positions only, and that from the moment they are so drafted they would be entirely at the disposal of the heads of departments without any inchoate or prescriptive rights whatever? I quite understand that. One thing I should like to add is that, in such a service as the prisons it is advantageous, though I am not generally in favour of such promotion, to let men enter at the lower stages, with a view to their taking higher positions in the service afterwards. I doubt very much whether the sort of men qualified to rise to the charge of establishments would be likely to offer themselves as candidates for the permanent force.

414. Would you inform the Committee as to the probable number of subordinate positions which annually become vacant in your department? About twenty-five.

415. Is it probable that, from age and other causes, a sudden increase may occur in the retirements from your department, which would create vacancies exceeding the average annual number you have stated? I think there will be a considerable increase, from the great age of some of my officers, and also from other causes, such as the establishment of additional prisons.

416. Would the men that you would get from the artillery be available to actively serve in the reserve? There would be considerable difficulty in it, because substitutes would have to be provided for them, and those substitutes probably would be inefficient.

417. Leaving the question of substitutes out of consideration, except on a great emergency, such as actual war, could not arrangements be made by which a few men at a time—say two at a time—could be spared to drill with some corps established in their neighbourhood, and so keep up their training? I think it could be done if the force would furnish men to take their places.

WEDNESDAY, 16 MARCH, 1881.

Edmund Fosbery, Esq., Inspector-General of Police, examined:—

418. The Sub-Committee have under consideration the question of forming a reserve, composed of men who have served for about three years in the permanent force of the colony. They are further considering whether these reserve men could, on leaving the permanent force, be taken into the employ of certain Civil departments of the State. Would you give the sub-committee your opinion as to the practicability of such an arrangement being introduced in the department under your charge? I think that an inducement of civil employment could with advantage be held out to the permanent force; and as far as regards the police, such men as are suitable for police employment should most certainly obtain it. But I do not think that the head of the police should be hampered by a regulation preventing him from employing men exceptionally suitable who apply to him for employment at any time. For instance, in the case of the mounted police bushmen would have to be appointed; and it would not do, in my opinion, to confine even the appointments for foot police entirely to the military.

Ed. Fosbery,
Esq.
16 Mar., 1881.

419. Has it been fully explained to you by the committee that for the permanent force, which may be proposed, it is not suggested that men be enlisted because they may possess qualifications which would merely fit them for soldiers, but that they should be passed by a Board consisting of the heads of departments, whose duty it would be to ascertain if they were suitable, not only as to physique but as to intelligence and educational requirements? I understand perfectly that that is the intention; but considering the extreme difficulty experienced in obtaining the services of suitable men for the police force at 6s. 6d. a day, I do not see how you are to get an equally good class at 2s. a day; and one of the chief qualifications you have not referred to—that is the man's previous character.

420. Do you also understand that the proposal is to draft these men in the first instance for subordinate positions only, and that from the moment they are drafted into any department they are entirely at the disposal of the head of the department, and possess no inchoate or prescriptive rights? I thoroughly understand that, but I should like to hear something further about the liability of these men to be called upon for military duties.

421. Provided that these men are drafted into your department under the denomination of a reserve, would it be practicable for them to act in certain periods of the year in their military service as reserve men? It would be entirely impracticable.

422. Is the force under your command trained to the use of arms and drill, and to what extent? Yes. Since writing a report upon the subject the Government have placed me in a position to completely arm the mounted force with Henry's breech-loading carbines and Adams' revolvers, and the foot police will be armed with Colt's revolvers and Terry's carbines. These were formerly used by the mounted police,

- Ed. Fosbery, Esq.
16 Mar., 1881.
- police, and are now issued to the foot police. I said in the report I have alluded to that the men were drilled, and I say now that they are very partially drilled—very incompletely drilled—at the police dépôt, before they are transferred to their regular duties. The drill is not such as to make them fit to move in bodies without further instruction.
423. Is there any obligation on the police force to turn out in time of war? It is purely a civil engagement; there is no such obligation.
424. Suppose the case of a serious and pressing emergency could it not be arranged for a large body of the police to assemble to meet the enemy, special constables and other arrangements being made to supply their places from the citizens? Most certainly; I have no doubt that upon an emergency of the kind the police force would volunteer to a man, and their duties could be taken by the citizens.
425. Would there be any difficulty in getting a troop of, say, 100 sabres from the mounted police in time of war? I do not think there would be any difficulty in getting 300.
426. Would there be any objection at some future time, say when imminent danger of war arises, to organise and train such a troop? On the contrary I think it would be very proper.
427. Would you inform the Committee as to the probable number of *subordinate* positions which annually become vacant in your department? I should say about 150, on an average, annually.
428. How many mounted, and how many foot? About half of each, I should say,—or perhaps more mounted than foot.
429. Is it probable that, from age and other causes, a sudden increase may occur in the retirements from your department, which would create vacancies exceeding the average annual number you have stated? It is very uncertain, although the number of vacancies varies from year to year. You cannot state a certain average; it varies owing to outside influences.

WEDNESDAY, 16 MARCH, 1881.

Stephen Harbord Lambton, Esq., Secretary of the Postal Department, examined:—

- S. H. Lambton, Esq.
16 Mar., 1881.
430. Of what department are you the permanent head? The Post Office.
431. The sub-Committee have under consideration the question of forming a reserve, composed of men who have served for about three years in the permanent force of the Colony. They are further considering whether these reserve men could, on leaving the permanent force, be taken into the employ of certain Civil departments of the State. Would you give the sub-Committee your opinion as to the practicability of such an arrangement being introduced in the department under your charge? I see no objection; no doubt they would be eligible or they would not be in the permanent force. The vacancies, however, for men of that kind in the Post Office would not be frequent. In our department we find it to our interest, and to the interest of the public, to take on lads and train them. We find from experience that our own trained lads always make the best letter-carriers, &c., and that they make better employes of the department in every way. As we generally act upon that plan the vacancies in the postal department to which outsiders would be appointed are very rare, and the young men referred to look for promotion whenever a vacancy occurs in a higher position than that which they occupy, such as the position of a letter-sorter, stamper, or railway-guard, in all cases. To introduce a rule that the permanent force men should come in as letter-carriers would not only cause dissatisfaction, but would imperil the efficiency of the department.
432. Do you understand that in the admission of men into the proposed permanent force, it is not contemplated to enrol men as hitherto, merely for their qualifications to make good soldiers, but that they shall be required to pass a Board composed of the heads of the departments to which they may be ultimately drafted, and whose duty it will be to see that the men possess not only sufficient physique but the required amount of education and intelligence? I was not aware that was the case, but even if it is so it does not affect anything I have said in my previous answer.
433. Do you also understand the scheme to be that from the moment a man is drafted into any one of the Civil departments he is to be entirely at the disposal of the head of that department; that he is not to be in possession of or seized with any inchoate or prospective rights on account of previous military service; and that it is only proposed, in the first instance, to draft the men into subordinate positions? Yes, I understand that.
434. Would you inform the Committee as to the probable number of *subordinate* positions which annually become vacant in your department? I do not think, in the course of the year, we have more than twenty such vacancies. I am merely stating this approximately, and subject to correction from the actual records. There are three causes which operate to create vacancies,—deaths, dismissals, and new appointments rendered necessary by the growth of the department, and combined I do not think we have more than twenty appointments of the class you refer to during the whole twelve months.* For those vacancies we have applicants in the large staff of mail boys who are always looking for promotion; and to introduce a system of filling these vacancies by appointments from outside the department would completely block these boys, by removing from them all chances of promotion.
435. Of course you speak not only of Sydney? I speak of the whole establishment, subject of course to correction in the actual numbers that I may have referred to.
436. Is there any provision made by Government for the superannuation of employes in your department? None whatever. They continue the performance of their duties until they are actually invalidated or until they die. As there is no superannuation fund we have to make the best provision we can for the old employes, and when they get worn out or infirm we give them leave of absence for as long a period as possible on half-pay. In many cases we hear of their death within a comparatively short time of their relief from actual service, whilst as regards those who do resume work we endeavour to put them to lighter duty.
437. Is it probable that, from age and other causes, a sudden increase may occur in the retirements from your department, which would create vacancies exceeding the average annual number you have stated? The work in our department is very trying to the men in consequence of their being compelled to remain on their feet for long hours in the performance of their duties, and my answer to the question would be: Not unless some provision is made for superannuating old or worn-out men.

438.

* NOTE (on revision):—The actual number of vacancies during last year of the kind mentioned was twenty-five.

438. Part of the scheme is the drafting of men of the artillery into the departments and forming a military reserve; that these men should be available in time of war; that once a quarter they should attend drill; and that they should undergo three or four days continuous drill at some period during the year in order that they may be rendered the more readily available as a military body; could these men, if taken into the Post Office, be spared to perform such duty? No, not with any degree of regularity. The men are entitled to one week in each year. In the head office we have perhaps sixty letter-carriers who are entitled to that period of leave in each year, and yet we seldom have more than two or three away at one time, and even then those who are entitled to their holiday are called upon to forego it in the event of their services being required in consequence of sickness among the other men. About 100 men altogether are employed in the head office, and if twenty of these were permanent force men we could not spare those twenty at the one time.
439. Take, for instance, the great centre of New South Wales, Sydney, where some hundred employes are engaged in the Post Office;—do you not find that you have to call for an amount of discipline in the department—that you require habits of order and discipline amongst your men? Yes.
440. You have informed the Commission that it would be impossible for you to spare, without detriment to the Public Service, any large body of these men at one time for drill purposes, but do you not think it possible that a few at a time might be spared to enable them to obtain the benefits held out to them as reserve men, to attend drill on convenient occasions, and with corps such as the Commandant might point out, such drills to be by no means compulsory, as far as the discretion of the head of the department was concerned? Yes, I think that that could be arranged.
441. In time of great emergency, such as the actual presence of the enemy, could you not provide substitutes for the mail servants and relays of reserve men so that they might go to the front? If such an unfortunate emergency arose, I think the inhabitants would be only too glad to go to the Post-office and get their own letters. There could be no objection to such an arrangement in such a case, as I have no doubt the public would be content to call at or send to the Post-office for their letters.
442. Do you see no way of deriving assistance from this system in the actual labour of your department—such as on the arrival of heavy mails from Europe—by obtaining from a permanent force, such as that now suggested, assistance in the sorting or delivery of mails? We already obtain some such assistance as that. Upon the arrival of mails we obtain from the Commandant the services of, usually, about twelve men belonging to the permanent force, and we find that assistance advantageous.

S. H.
Lambton,
Esq.
16 Mar., 1881.

WEDNESDAY, 16 MARCH, 1881.

Charles A. Goodchap, Esq., Commissioner for Railways, examined:—

443. Of what Department are you the permanent head? The Railway Department.
444. The Sub-Committee have under consideration the question of forming a reserve, composed of men who have served for about three years in the permanent force of the Colony. They are further considering whether these reserve men could, on leaving the permanent force, be taken into the employ of certain Civil departments of the State. Do you thoroughly understand that, in answering the questions that have been forwarded to you in reference to this subject, you are not to consider men enrolled for military service only, but men selected for their education and intelligence by a Board composed of the heads of the departments? Yes, I understand that.
445. Would you give the Sub-Committee your opinion as to the practicability of such an arrangement being introduced in the department under your charge? There are already regulations for the admission of men into the railway service, and the conditions of those regulations have to be complied with before they enter into certain classes—the classes for which men engaged in this military service would be eligible. It is required that they should be able to read and write, that they should pass a medical examination to ensure the possession of physical health, and also to prove that they are free from colour-blindness and in possession of good eye-sight. The limit of age for employment in that class is 35 years. I can see no objection whatever to the suggestion, so long as these conditions are observed in the admission of men into the military force.
446. Would you have any objection to take these men in preference to others? No; on the contrary, I think the services of such men would be more valuable than those of the ordinary applicants, inasmuch as they would already be possessed of some qualifications for the positions to which they might be appointed, in regard to habits of obedience, subordination, and punctuality.
447. In the admission of men into the proposed military force, are you aware that it is not contemplated to enrol them as hitherto merely for their qualifications as soldiers, but they will be required to pass a Board composed of the heads of the departments to which they may be ultimately drafted, and whose duty it would be to see that the men possessed not only sufficient physique, but the required amount of education and intelligence? I was not aware that that was the intention, but I think it a very desirable course to follow.
448. Do you also understand the scheme to be that from the moment a man is drafted into any one of the Civil departments he is to be entirely at the disposal of the head of that department; that he is not to be in possession of or seized with any inchoate or prescriptive rights on account of previous military service; and that it is proposed, in the first instance, to draft these men into subordinate positions only? Yes; I understand that.
449. Would you inform the Committee as to the probable number of *subordinate* positions which annually become vacant in your department? The Railway is a growing department, and as our railways extend we must necessarily employ a larger number of men. Of course a great number of vacancies do occur through men leaving the service. Approximately that number may be stated to be ninety annually.
450. Have you any provision in your department for superannuating the employes? There is no such provision at present.
451. Is it probable that, from age and other causes, a sudden increase may occur in the retirements from your department, which would create vacancies exceeding the average annual number you have stated? Not until some superannuation provision is made.
452. Is it the case in the Railway Department that old men, whose services have ceased to be effective, are retained owing to an unwillingness to discharge them? That has been the case certainly, but its continuance in the future has been qualified by the regulation that men above the age of 35 years are not to be admitted into the service in certain branches. Of course when men below 35 years of age are taken on, it will be a long time before they have to retire through being too old.

Goodchap,
Esq.
16 Mar., 1881.

C. A.
Goodchap,
Esq.
16 Mar., 1881.

453. Could you spare a body of these men for drill purposes, &c.? They could be spared only with very great difficulty. We experience something of that difficulty even at the present time, in consequence of some of the men who are volunteers having to leave their duties at times to perform volunteer service. I do not think the department would be able to spare the men for such service even individually.
454. Do you understand that part of the scheme is dependent upon this, and that it is proposed to form a military reserve, readily available in time of war, by drafting artillery men into the departments and maintaining the efficiency of this military body by occasional drill—say once a quarter—and continuous drill for three or four days at some convenient period of the year? I understand that plan.
455. Could you not, then, spare the men, even individually, to perform the duties mentioned in order to maintain their efficiency? They could not be spared even individually if any degree of regularity in the performance of those duties was required.
456. Do you not find in your department that order and discipline are necessary for the proper conduct of the business of the department? Undoubtedly,—in fact they are indispensable.
457. In time of emergency, such as actual war, would you not be able to find substitutes for some of your subordinates? Unquestionably we would do so in such an emergency as that.
458. Are the men in your department allowed a certain period of leave each year? They are allowed the proclaimed holidays, but as in regard to many of the men those days are invariably the periods at which their services are most required, the holidays are allowed to accumulate, and the men are permitted to take leave of absence for a period equivalent to the accumulated proclaimed holidays.

THURSDAY, 17 MARCH, 1881.

Edward Charles Cracknell, Esq., Superintendent of Telegraphs, examined:—

E. C.
Cracknell,
Esq.
17 Mar., 1881.

459. What is the value of the torpedo stores under your control? I think about £30,000; but that does not include the boats and explosives.
460. How are those stores cared for and kept in order? We have a caretaker at Berry's Bay, who is not a member of the corps, and we have a sergeant-major also permanently in charge of the stores.
461. Are these two men sufficient to keep those stores in order, to your satisfaction? Quite so, as far as the stores are at present.
462. While they are in store? Yes.
463. Then, in fact, you require no further permanent assistance for the good order and maintenance of your stores? In times of peace two men are sufficient.
464. What are the component parts of your corps? They are chiefly made up of signallers and electricians connected with the Telegraph Department. We have some of the mechanical men employed in the workshop, who are very useful.
465. Does your department experience any inconvenience by the withdrawal of these men from the Government work for their torpedo duties? Not at present. For the ordinary drills we are able to spare them. We make such arrangements on Saturday afternoons that they can get away. We have a double staff in Sydney, and the morning staff are kept on for a few hours on Saturday afternoons to enable the others to go away.
466. Is this double staff in any way created or augmented by the existence of the Torpedo Corps? No. It is absolutely necessary for carrying on the ordinary work of the department.
467. In the event of your being ordered by the Commandant to place your torpedoes in position, are you relying for assistance outside your own corps, or otherwise? Yes, it would be necessary to call in the assistance of the Harbours and Rivers Department, because they have steamers, punts, and everything requisite, fitted with crab winches, dericks and cranes.
468. The torpedo defences being fixed defences, do you contemplate calling in the assistance of the Naval Brigade? Certainly not.
469. Generally speaking, do you advocate a change in the organization of the corps, in order to separate the professional training from the military training? I think it would be very desirable.
470. Could you state in what respect? I would have say twenty parades in the year for professional purposes, and the balance—bringing them up to thirty-five altogether—for military purposes.
471. In fact you consider your corps to be essentially professional? Quite so.
472. Would you see any objection to the Torpedo Corps being affiliated to the artillery force? I see no objection to that.
473. Do you think the Permanent Artillery in time of war would be able to afford you assistance, provided the men could be spared, in connection with the purely mechanical part of the torpedo defences? The two corps would work better together. They would really in time of war have to work together.
474. Are not the whole of the resources of your department available in time of war to supplement any deficiency that may exist in the torpedo defences of New South Wales? Yes, as regards signallers, electricians, and mechanics, the whole available force of the department could be brought to strengthen the Torpedo Corps if necessary.
475. And as regards material? That would also be available.
476. Would the mechanics in your department be also available, although they might not belong to the Torpedo Corps? Yes.
477. Assuming the torpedoes were laid down, and an attack was considered to be imminent, how many men would be required for the actual working of the torpedo system during attack? About fifty for Sydney, twenty-five for Botany, and twenty-five for Newcastle.
478. Are the two men at present sufficient to look after the steamers and the portable engines required for the electric light? With the assistance of a labourer occasionally for cleaning the engines when not in active use.
479. In fact you endeavour, as far as practicable, to work your Torpedo Corps in connection with your own department? As nearly as we possibly can. We have other mechanics who are employed at the Australian Steam Navigation Company's and other engineering works.
480. You further consider that the direct connection between your corps and the Electric Telegraph Department is of immense advantage? Very great. In fact I do not see how we could work it otherwise, only at an increase of cost.

THURSDAY,

THURSDAY, 17 MARCH, 1881.

Julien Thomas Blanchard, Esq., Ordnance Storekeeper, examined :—

481. What is your official designation? Ordnance Storekeeper and Barrack-master.
482. Your department is under the Treasury? It is. I was appointed by the Governor and Executive Council, through the Colonial Treasurer, but I received notice of my appointment of Barrack-master from the Colonial Secretary.
483. Then you are partly under the Colonial Secretary and partly under the Treasurer? I assume that I am.
484. What are your duties in relation to the Commandant? I am not aware of any regulations authorized by the Government bearing upon my duties in relation to the Commandant, with whom I endeavour to act in accordance with the rules laid down in the Queen's Regulations for the Imperial forces. Correspondence has hitherto been conducted through the Treasury, including requisitions for stores, often containing articles for purchase, for which the Audit Act requires ministerial authority.
485. What is the actual routine for communication? Through the Treasury; but it appears to me the official routine should include the Colonial Secretary's Department as well. This course is sometimes adopted.
486. Are you in any way responsible to the Commandant? I have no official instructions to consider myself so.
487. You describe one of your appointments as Barrack-master? I do.
488. Taking the ordinary acceptation of the word, do you not take your orders direct from the Commandant in all matters appertaining to that office? I have never received any orders from the Commandant and I am only occasionally referred to on such matters.
489. If you did get any, would you feel justified in obeying them without reference to the Minister? I certainly would give effect to them, provided there was no occasion for ministerial instructions.
490. Are you in charge of the stores of powder for mercantile purposes as well as military purposes? I am, by virtue of my appointment.
491. Have you magazines in the country districts which are available for civil as well as military explosives and explosive substances? There are only two districts in which there are magazines where they are connected, but there are various premises throughout New South Wales registered under the Gunpowder Act, 40 Vic. No. 1, authorizing private individuals to store explosives.
492. How do you receive the military explosive stores—are they consigned to you? These goods are not consigned to me. The vessels by which they are imported are compelled by law to anchor down the harbour at a certain station, where I have to take delivery in the department boats in which they are conveyed to the magazines for storage. The same course is pursued with mercantile explosives and small-arm cartridges.
493. They come consigned to the Commandant? No, to the Colonial Treasurer. The bills of lading are handed over to me because the indents are invariably prepared by me.
494. Do you inspect the registered magazines? There are inspectors specially appointed for that purpose under my control.
495. Supposing that the Commandant required powder and ammunition out of your stores, as we understand it he has to apply through the Minister before you issue? The Commandant forwards the requisitions for stores (which could be sent to me direct) to the Treasury, and when they reach me delivery is made without delay; and this work is performed so as not to clash with the daily deliveries required by the merchants.
496. The Commandant has no power to draw stores from you without the ministerial approval? That is the rule laid down in order to check supplies, but I have no doubt in time of war special power would be vested in the military authorities, not considered necessary in time of peace.
497. Then, in fact, you are acting as Ordnance Storekeeper so far as the military is concerned, and yet you are not under the direction of the Commandant? So far as the military is concerned it might be termed so.
498. Would you be able to employ a considerable number of good-conduct reserve soldiers in working your department? I have a permanent staff appointed by the Minister, and as vacancies only occur periodically through death, resignation, or dismissal, I have no employment for good-conduct reserve soldiers. Should there be a pressure of work at either the magazines or store, all the warders and labourers under my control are transferred to meet this contingency. There are no working parties taken on.
499. You employ a certain number of foremen, warders, labourers, &c., to the extent, roughly speaking, of about twenty-nine or thirty? Yes about thirty.
500. Do you consider that soldiers would be utterly unfit to perform the warders and armourers' work? I object to take them—being unreliable.
501. Then you consider it impossible to effect any economy in your department? From the magnitude of the work to be done, it is impossible to do so.
502. Could you give us the approximate cost of the military working and the civil working of your department? The working expenses would be equitably shown at half the amount voted for the Ordnance and Barrack Department, excluding any sum granted for purchase of war material. The expenditure on account of the civil working is generally recouped by the revenue accruing from charges levied under the Gunpowder Act.
503. What is the civil work? The storage and custody of explosives, and the receipt and delivery of the same both by land and water.
504. Are your explosives and explosive substances subject to any inspection by a Board on receipt? The Government explosives and explosive substances are.
505. And how is this Board composed? It is purely a Military Board which I apply to have appointed for this purpose.
506. With regard to civil explosives and explosive substances, are they inspected at all? That depends upon the state they are received in. If they are damaged, there is a Board of Survey appointed by the persons concerned.
507. Who is responsible for keeping up a proper reserve of warlike stores? That duty I believe devolves upon me. I submit a list of stores required to the Warlike Stores Board for its consideration, as the stock decreases.

J. T.
Blanchard,
Esq.

17 Mar., 1881.

- J. T. Blanchard, Esq.
17 Mar., 1881.
508. Then you are responsible? Yes, indirectly, as the Store Board has to confirm my recommendation before any action is taken by the Government.
509. The Board does not assemble without this order—without some reason? No; the Board usually assembles when applied for by me. My application is made through the official routine.
510. The initiative depends upon you? Yes, provided I have any matters for its consideration.
511. And not upon the Commandant? I understand it to be within the power of the President to convene a meeting if required to do so by the Government, or at the request of any member.
512. Then you are responsible for keeping up the reserve of warlike stores? I consider I am responsible to Warlike Store Board.
513. And not the commandant? I do not think he is personally responsible.
514. Do you refer a quarterly or periodical return of the stores to the Commandant? There is no regular return furnished, but on receiving a request from the Commandant any information respecting stores is given.
515. You do not furnish any quarterly or periodical return to the commandant of the stores in hand? It has never been the custom to furnish such a return, either before my charge of the department or since. There is a return prepared at the request of the Commandant for the Intelligence Committee, and for the Statistical Register annually.
516. There is no relative position defined between yourself as the Ordnance Storekeeper and the Officer Commanding the Forces? There is no defined relative position between the Officer Commanding the Forces and myself.
517. Do you in any way obtain or take charge of stores connected with the torpedo force? Excepting the gun-cotton, dynamite, and lithofracteur, none. Major Cracknell I believe is the responsible officer for that duty.

TUESDAY, 22 MARCH, 1881.

Captain Hixson, commanding the Naval Brigade, examined :—

- Capt. Hixson
22 Mar., 1881.
518. The sub-committee wish to inform you that their object in asking you to attend and give evidence is not to be regarded as interfering with the naval defences of this Colony, but to guide them in their recommendations as to the strength, pay, and allowances of the land forces to be maintained by New South Wales? I shall be very glad to answer any questions that the committee may put to me.
519. You are in command of the naval brigade force—your command serves under the Volunteer Act? Yes.
520. And therefore are to be considered volunteers in contradistinction to men serving under the same Act. Are you under the orders of any superior naval officer, or directly or indirectly under the Commandant when on shore? I am under the orders of no superior officer, but when I act with the land forces I follow out the regulations on such occasions; that is to say, I put myself under the command of whoever may be on the field at the time.
521. But the Commandant has no power to order your men out? No.
522. Would you state the average number of men composing the force under your command? 328 is my present strength.
523. What is the cost of this force per man, counting pay and allowances? The cost of the naval brigade is something between £17 and £18 per man per year, or a total of £5,815.
524. Will you state to the Committee the number of drills, &c., which it is compulsory for your force to go through in order to obtain the Government grant? I have them out about fifty times during the year. The prescribed number of drills is four per month, and there are four quarterly inspections. I should think on the average I have them out fifty times in the year.
525. Are any of those drills afloat? No, I have no means of drilling them afloat.
526. Then the men are simply trained as infantry ashore? They are utilised in precisely the same manner as sailors would be, landed from the ships of war.
527. That is, they are exercised in infantry drill? Precisely.
528. And gun drill? Yes.
529. Are any of those drills in daylight? Very few; in fact the drills, I may say, are not in daylight at all, except when shot practice and rifle-shooting is carried on.
530. It is observed that, under the Orders in Council, framed under clause 50 of the Act under which your men serve, that the brigade has been established for the purpose of securing a body of sea-faring men available for the defence of the Colony, either afloat or ashore. Is the Commission to understand that the 328 men are either sea-faring men or men engaged in kindred occupations, such as boatmen, fishermen, &c., and such as are laid down in the regulations respecting the English naval reserves? They are sea-faring men and such as you describe. The only difference between my men and the men of the English naval reserves, I take it, is that my men will never be called on except to defend the Colony, whilst the Royal naval reserve men in England will have to go to sea.
531. Allow me to read to you a clause based upon the English Act, and applied to the naval reserve in a neighbouring Colony. It is as follows: "Every applicant must have served afloat, either as a seaman, waterman, fisherman, boatman, shipwright, or sailmaker, or be now engaged as a ballast craftsman, or in some occupation directly connected with shipping." Does the constitution of your force fulfil these requirements? Scarcely, though I may mention that the inhabitants of Sydney perhaps are different from the inhabitants of the Colony to which you refer, inasmuch as the Sydney youth as a rule are very expert in handling boats. They have such facilities that you may almost say the Sydney population is a boating population, and hence the men I have might be put in such a category as you describe; in fact, they are all I think, born sailors to a certain extent.
532. It is right to explain to a certain extent the object of this question, and that is, it is necessary to ascertain if landsmen are taken into the naval brigade, inasmuch as if that be the case it must materially affect the power of recruiting for the land forces, and create a certain amount of difficulty as regards those forces. Would a man be taken into the naval brigade without any nautical examination? The recruiting of the naval brigade has lately been confined to seafaring men. I gave out an order a year or two ago that none but seafaring men should be taken on.
533. Have you any objection to furnish the Commission with a tabulated return, showing the nautical qualifications as distinguished from those of the landsmen in your force? I have no objection. It will take

- take some little time to do it, but I can do so. The Commission may take my word for it, however, that a majority of the men are sea-faring men, and none but sea-faring men are now enrolled.
534. Can your men do the work required of them aboard ship? Certainly, so long as the work is confined to the purposes for which the men are enrolled. Capt. Hixson.
22 Mar., 1881.
535. Is it necessary that the officers should hold any master's certificate from some recognized Marine Board? Yes—all the commissioned officers, not the midshipmen or cadets. Those officers who do not hold commissions in the navy like myself, and one or two others, or those who do not hold any commissions at all, have to pass before the Marine Board in Sydney.
536. Upon whom do you depend for the provision of such warlike stores as you require? Upon the Ordnance Store Department.
537. Direct? No; a requisition is sent to the Colonial Treasurer.
538. Then no responsibility devolves upon you with regard to seeing that a proper supply of ammunition is kept up for the force under your command? No, not in my position as captain of the naval brigade.
539. I see that the pay of officers is put down at so much per diem. Do those officers draw that pay irrespective of any particular work they may do? Yes; subject to fines, &c.
540. The naval brigade does not turn out for a week's consecutive training? No. I have drill-sheds fitted with lighting appliances, and, as I have said before, the drill is a steady strain all the year round.
541. Then in point of fact the men under your command are receiving the same allowances as the paid volunteers of the Colony, without the same sacrifice of time? Without the sacrifice of continuous time.
542. And their drills are conducted as a rule after working hours? Quite so.
543. Can they perform-guard boat duties in case of attack? They are quite competent to do so.
544. Have the naval brigade any fund or allowances from which to supplement the ammunition necessary for the annual practice? None.
545. Then this ammunition is supplied from the military vote? No; from the warlike store vote.
546. Do you pay your men whether they attend drill or not? I pay them their regulation pay, but if they do not attend they are fined.
547. Are they subject to any penalty for non-attendance? Certainly. They are subject to a penalty of 2s. 6d. for non-attendance at drill, and 5s. for non-attendance at special muster. But I must say that the attendance of the naval brigade as a rule is exceedingly satisfactory.
548. Suppose a man was absent a month, what would be the amount of pay that he would receive, and the amount of fines that he would be subjected to? He would receive £1 for pay, but he would have 10s. or more taken away for fines and subject himself to dismissal.
549. Then actually for non-attendance during the month he would receive 10s. pay? Yes.
550. A doctor's certificate would entitle him to his full pay? In the event of a man asking leave, and presenting a doctor's certificate, he is not then fined.
551. Do you think that a period of continuous training would be beneficial? I have had eighteen years' experience now with the naval brigade, and I have tried different schemes, and my experience is that the frequent musters, and the ordinary drills that we have, maintain a better discipline and form than the little continuous training would do, and then a long holiday or recess.
552. Would you advocate continuous training on board ship? If I had a ship or gun-boat I should take the men to Botany, Broken Bay, and the neighbouring harbours occasionally.
553. In time of war under whose command would you likely be? Under the command of the Governor as Commander-in-Chief.
554. Would it not be advisable to get the use of the Government pilot or other steamer for occasionally training the naval brigade? I have thought that matter over, but the fact is I think the training we could get there would be of no use, I do not see at the present day that any other sort of gun-boat than that of the "Alpha" and "Beta" class, sent to China lately, would be any use to the naval brigade.
555. Do the fines or stoppage of pay from the men of the naval brigade revert to the public revenue; if not, will you state the system in existence as to the disposal of them? They do not; they are paid into the fund for supporting the band, and other incidental expenses in connection with the brigade.

APPENDIX A.

DEFENCES OF NEW SOUTH WALES.

EXPLANATORY MEMORANDUM BY COLONEL SCRATCHLEY, R.E., RELATING TO SIR WILLIAM JERVOIS' SCHEME OF DEFENCE.

OUTLINE OF SCHEME.

THE scheme of defence is intended—

- (a) To defend Port Jackson and Sydney against naval attack by coast batteries and torpedoes laid in the channels of the harbour.
- (b) To defend Sydney against attack, by an enemy landing a body of men on any part of the adjacent coast, by a field force and by a fort and torpedoes at the entrance to Botany Bay.
- (c) To defend Newcastle by a fort and torpedoes.

Sir William Jervois bases the plan of defence upon the following arguments :—

- (1.) That there is no probability of an expedition on any extensive scale being despatched against Australia, so long as Great Britain holds command of the seas.
- (2.) That, in the event of Great Britain being engaged in hostilities with any great maritime Power, a sufficient watch would be kept by the Imperial Navy to intercept or follow an expedition directed against Australia.
- (3.) But the enemy might, no doubt, despatch one or more cruisers to make a descent upon Australia or operate against her commerce. A squadron intended for such an operation might consist of three or four vessels, one or two of which would probably be ironclads, Eluding our cruisers, and appearing suddenly before Sydney or Newcastle, it might, if those places were not defended, capture the merchant vessels lying in the harbours, intercept any of the numerous vessels conveying valuable shipments of gold, or, under the threat of bombardment, or after actually firing into Sydney, demand and obtain a payment of many millions of money.
- (4.) Or this object might be attained by an enemy landing in force in Broken Bay or at Botany, to march upon Sydney.
- (5.) Again, the enemy might occupy any of the large ports on the coast with a view to ulterior operations, or he might obtain small supplies of coal from Wollongong and Kiama.

The armament for the coast batteries in Port Jackson, at Botany Bay, and Newcastle, will be found in a return annexed. (*Vide* Appendix D.)

The forces recommended to be maintained for this scheme of defence are as follows :—

<i>Permanent Force.</i>				
Military—Three batteries of artillery	Officers and men. 375
				— 375
<i>Militia Force.</i>				
<i>Military.</i>				
Two batteries of field artillery	100
Three batteries of garrison artillery	200
One company of engineers	60
Torpedo corps	100
Two battalions of infantry	1,340
				— 1,800
<i>Naval.</i>				
Part of garrison at Newcastle	50
				—
Total officers and men	2,225
				—

No mention is here made of the ironclad recommended for the general defence of the harbours along the coast, and for the protection of local commerce, also to defend Sydney against bombardment, because the proposal was rejected by the Legislature.

OBSERVATIONS ON THE SCHEME.

As regards Newcastle, the fort on Signal Hill—armed with three 9-inch, four 80-pounder rifled guns—and the torpedoes in the channel at the entrance to the port, may be accepted as sufficient protection against a moderate attack. The completion of the railway from Sydney to Newcastle would render very hazardous the occupation of the harbour and town, in the event of the fort being silenced. This fort would not prevent a blockade of the port, and for that reason it is advisable that the railway should be completed.

With respect to Sydney—with its “back door” at Botany, securely closed by the powerful fort on Bare Island, and torpedoes—the system of coast batteries and torpedoes is so complete as to render any attack by sea a very difficult operation, and to offer but a remote chance of success. So long as the work at the entrance to Botany Bay holds out, and there is a moderate field force to cover the approaches to Sydney from the south, the enemy could only land in bays which are open to the Pacific or in Broken Bay. Again, although Broken Bay is left undefended, a small expedition would have no chance of success, owing to the difficult character of the country between it and Sydney. The roads could easily be blocked and defended by a small field force.

If, in addition to the means of defence recommended by Sir W. Jervois, colonial naval defences were organized, in the manner I have suggested in my evidence, a good substitute would be found for the ironclad, the system of coast batteries would be greatly reinforced, and provision would be made for the protection of the sea-board.

It will be seen that the scheme of defence divides itself into two parts—(1) the coast batteries and torpedoes to repel the attack of ships; and (2) the field force to resist landings. At Newcastle and Botany the batteries will be enclosed and self-defensible by their garrisons against boat attacks. Similar precautions exist on both sides of Port Jackson; an entrenchment enclosing Middle Head, a redoubt commanding George's Head, and two lines of entrenchments securing South Head. This is an especial feature of the scheme, as it sets free the field force to devote its entire attention to repelling a landing. The torpedo firing and observing stations will also be secured against a *coup de main*.

Considerations as to the probable mode of attack upon the Coast Defences, and the measures to be taken to repel attack.

It is improbable that the enemy will be in sufficient force to attempt the two operations of silencing the batteries and at the same time landing a large force. Should he do so, however, I think the defensive measures adopted would be amply sufficient, provided colonial naval defences were added.

There are four modes of attack open to the enemy:—

- (1.) He may endeavour to force an entrance in order to take up a position inside the harbour, from which he will command the town and shipping.
- (2.) He may attempt to land a body of men with the object of overcoming the resistance of the local troops assembled to resist his advance; and, if successful, he might levy a contribution and retire, or attempt to capture the batteries with a view to the permanent occupation of the city and harbour.
- (3.) He may attempt to bombard Sydney from the open sea.
- (4.) He may blockade the entrance to the port.

Although the first and second modes of attack can be met by the defences provided, the third and fourth operations would be best dealt with by naval means. These naval means, so far as the Colony could provide them, should comprise gunboats, armed merchant or government vessels, guard-boats, and spar torpedo boats.

The enemy, if carrying out the first mode of attack, would probably engage the attention of the coast batteries and at the same time send in gun-boats, launches, &c., for the purpose of opening up a passage through the torpedo defences by countermining. During the day such an operation has very little chance of success in the face of the heavy artillery fire which has been provided for guarding the torpedo defences. At night, however, an enterprising enemy would have some chance, if the defence were feebly conducted or inadequate for repelling such an attack. It is here that the guard-boats, some of them carrying machine guns, and spar torpedo boats, would be most useful.

At all times these boats are necessary to prevent any interference with the defences, and to harass the enemy's vessels and boats when preparing for the attack.

Again,

Again, to meet the other modes of attack, the armed vessels and spar torpedo boats would be of great value, especially if the latter were in sufficient numbers. Arrangements might also be made to convey such of the torpedo boats, as were of a convenient size, on board of a powerful steamer, to a convenient point, from which to launch them against the enemy's vessels.

Besides the arrangements on the water, there would be the arrangements on land; and thus the defence would be resolved into three distinct parts, each complete in itself, and each co-operating with the other:—(1) the coast batteries and *defensive* torpedoes for repelling the attack by the enemy's ships, (2) the naval defences, as already described, (3) the field force to resist landings. At the head of each part there would be a responsible officer, and the three officers would act under the orders of the Commandant, as the supreme director of the defence.

P. H. SCRATCHLEY,

Colonel, R.E.

30 March, 1881.

APPENDIX B.

REPORT by COLONEL ANDERSON, C.M.G., upon the Ordnance Stores and Magazines.

I HAVE the honor to report that, in accordance with the request of the Military Committee, I proceeded yesterday with Mr. J. T. Blanchard, the Ordnance Storekeeper, to inspect the Magazines on Spectacle and Goat Islands, and the Depôt at the Circular Quay.

I found the arrangements at Spectacle and Goat Islands for the custody of the military and civil powder excellent. The Magazines, though constructed upon an obsolete principle, afford reasonable precautions against accident. By "obsolete" I mean that the Magazines are not built upon modern principles which, by provision of heavy walls, intervening traverses, and light roofs, prevent an accident in one compartment involving the destruction of the whole. Such accidents, however improbable, may occur either by lightning or from unforeseen circumstances. The fact remains, that any such accident at either Spectacle or Goat Island would involve the destruction of the whole of the powder contained in either of these Magazines.

I found that provision had been made for storing dynamite and other mercantile explosives in places remote from the main Magazine, and no doubt exists in my mind that should any accident happen to them where they are stored it would not affect the powder Magazines. In fact nothing could be better than Mr. Blanchard's arrangements, except in some minor, though not unimportant, details.

The gun-cotton for military purposes is stored in a hulk moored off Spectacle Island. The maintenance of such a hulk not only entails expense, but is not to be compared to the "tank" system.

I have now to speak of the Ordnance Depôt at the Circular Quay. I consider this place as utterly unfit for the preservation and observation of most of the stores therein kept, not only from the fact of a large quantity of stores being placed in a non-defensible position, but also because there is no proper space at the disposal of the Ordnance Storekeeper; the result being that scores of cases of arms, &c., remain in the packing-cases in which they are imported. I am aware that these stores, including the small arms, are supposed, when packed, to have been covered with some unguent, to prevent corrosion, &c., but I do not consider that this is a sufficient safeguard.

By consent of the Commandant, I next visited the Victoria Barracks, and was shown over the military store arrangements, under the charge of Captain Compton. I found the means at his disposal wholly insufficient. He has no armoury nor proper workshops for the repair of arms. I may here remark that I found both the Ordnance Depôt and Captain Compton's stores crowded with useless and obsolete stores; and I wish to record my opinion, that all obsolete arms bearing the Government mark should be broken up, and never sold in a condition in which they could be used as arms. The sale of Government arms, however old they may be, leads to two bad results—first, these arms finding their way into the hands of purchasers living in the Colonies, the necessary check required by the military authorities or by the police to trace rifles is destroyed; secondly, there is the probability of their being purchased for the purpose of sale amongst the natives of the groups of islands in the vicinity of Australia.

As far as I can gather, the Commandant has no ordnance-fitter to place at the disposal of the officer commanding the artillery. A man qualified to take this position can only be trained in the Royal arsenals, and the peculiar repairs necessary for ordnance, such as re-venting, &c., imperatively require an artisan of this description in such a garrison as that of Sydney.

I wish further to mention that the shed accommodation, so essentially necessary for the preservation of gun-carriages, limbers, waggons, &c.—particularly in a climate such as that of Australia—has not been provided for, although I learn from the questions I have asked that the military authorities have not failed to call the attention of the Government to this want.

APPENDIX C.

EXTRACT FROM REGULATIONS UNDER THE DISCIPLINE ACT 1870, VICTORIA.

69.—VICTORIAN NAVAL RESERVE.

(1.) The persons whose services are engaged as naval forces in the services of Her Majesty's Government in Victoria to be occasionally employed shall, subject to the provisions of the said Act and to the following regulations, be formed into a corps to be called the Victorian Naval Reserve.

(2.) The Victorian Naval Reserve shall consist of such commissioned, warrant, or petty officers and seamen as may from time to time be duly appointed or engaged under the provisions of the said Act, and who shall be entitled, subject to these regulations, each to receive an annual allowance or retainer of sixteen pounds for 1st class petty officers, fourteen pounds 2nd class petty officers, twelve pounds A.B. seamen.

(3.)

(3.) All members of the Naval Reserve, when called out by proclamation for actual service, shall be entitled to receive during such period of actual service pay and allowances: the commissioned officers at such rates as the Governor in Council may from time to time direct, and the warrant or petty officers and seamen according to the average rates ruling in the port of Melbourne for petty officers and A.B. seamen during the three months preceding such proclamation.

(4.) All members of the Naval Reserve, when called out by proclamation for actual service, will be appointed to such ship or service as the Governor in Council may direct, and if serving beyond the actual limits of Victoria in company with any of Her Majesty's ships of war, will be subject to the orders of the commissioned officer commanding such ship or ships: Provided always that such orders shall not extend to impressment into any other service, or removal of any member of the Reserve from the ship or service of Her Majesty's Government in Victoria.

(5.) No person is to be accepted who is under five feet five inches in height, or above forty years of age, nor unless he is a British subject, free from physical defect, and in health, character, and every other respect eligible.

(6.) Every applicant must have served afloat either as a scaman, waterman, fisherman, boatman, shipwright, sailmaker, or be now engaged as a ballast craftsman, or in some occupation directly connected with shipping.

(7.) The applicant must produce certificates of good character, or must otherwise satisfy the commanding officer that his character and conduct have been good.

(8.) Any member of the Naval Reserve who, after being enrolled, is discovered to have been at the time of enrolment laboring under disease, or to have sustained injury which incapacitates him, and who has concealed such disease or injury, or who is discovered to have made any false representation or to have produced any false papers on the occasion of enrolment, will at once be struck off the list, and will forfeit all claim to retainer or other advantages of the service.

(9.) No member of the Naval Reserve may, so long as he remains in the Reserve, be enrolled in any other corps.

(10.) When any person is enrolled in the Naval Reserve, a certificate of his enrolment will be delivered to him by the commanding officer who enrolls him. This certificate must be taken care of, as it will constitute the proof of his title to the retainer and other advantages of the service. It must be produced every time he appears at drill, in order that the requisite entries may be made.

(11.) All entries on certificates must be made or countersigned by a commissioned officer of the Naval Reserve, and by such officer only.

(12.) If any member of the Naval Reserve accidentally loses his certificate, he should make application to his commanding officer.

(13.) With the exception hereinafter mentioned, no express restriction is laid on the occupation of a member of the Naval Reserve, whilst belonging to the Reserve, provided that he complies with the conditions mentioned below, and especially with that condition which requires him to appear before some commissioned officer, once every three months, unless he obtain leave of absence for a longer period.

(14.) Every member of the Naval Reserve must present himself to some commissioned officer of the Reserve in the Colony of Victoria, and must produce his certificate to that officer at intervals not exceeding three months each; consequently, no member of the Reserve may expect to obtain leave of absence (unless under special circumstances) to be away from the Colony of Victoria on any voyage which there is reason to expect will exceed three months. Commanding officers will be informed from time to time under what conditions, and in what manner, this leave can be given.

(15.) Before leave is given, a member of the Naval Reserve must satisfy his commanding officer that he is not in arrears for drill, and his arms, accoutrements, and uniform must be returned into store.

(15A.) Any member of the Naval Reserve who is absent from drill for more than two months without leave renders himself liable to be dismissed, and when called upon by his commanding officer will immediately return his arms, accoutrements, and uniform, any deficiency or damage thereto to be made good at his expense.

(16.) The Government of Victoria reserve to themselves full discretion to withhold leave of absence at any time when an emergency arises.

(17.) It will be the duty of every member of the Naval Reserve, on every fresh engagement he may make for service at sea, to appear before his commanding officer, produce his certificate, and give notice of the nature and length of the proposed voyage or employment, which notice must be repeated on every fresh engagement or change of ship or employment. But where such member of the Naval Reserve is engaged under the same agreement, in a succession of short voyages in a coasting ship or steamer, he need not give such notice each voyage.

(18.) It will also be the duty of every member of the Naval Reserve to give notice to his commanding officer of any change of residence, or of the place to which letters and notices are addressed for him. Such notice must be given on the first opportunity subsequent to the change.

(19.) The commanding officer will enter and sign the particulars of the engagement in his certificate, and will, if he has obtained permission to be absent more than three months, note the fact in his certificate.

(20.) If any member of the Naval Reserve, without special leave, engages for a voyage away from the Colony of Victoria which will probably last more than three months, he will be liable to forfeit all claim to his retainers and to the benefits of the service; and if he breaks the conditions as to quarterly appearance, or fails to give notice to his commanding officer of his intended employment, or of his change of abode or address, whenever it occurs, as required by the above regulations, he will have his retainers stopped, and cannot have them restored except on special application made through his commanding officer to the officer commanding the naval force in the service of Her Majesty's Government in Victoria.

(21.) In event of the Naval Reserve being called out by proclamation, every member of the Naval Reserve is bound to serve ashore or in any vessel belonging to or employed by the Government of Victoria, under penalty of being treated as a deserter and forfeiting all claim on the Government.

(22.) The special object of the Naval Reserve being to obtain the services of a picked body of seamen and others, "trained to the use of arms," it is essential that every member shall be drilled so as to obtain a thorough practical knowledge of the mode of using great guns and small arms.

(23.) The drill will comprise great gun, rifle, pistol, and cutlass exercises, and naval duties generally.

(24.)

(24.) The time for which each member of the Naval Reserve will be required to drill in each year is twenty-five days, to be made up of one hundred and fifty hours, exclusive of reviews. Time occupied in travelling or being transported to and from the place of drill will be allowed, at the discretion of the commanding officer.

(25.) All members of the Naval Reserve who, without satisfactory cause, neglect to attend drill, or who during drill absent themselves without leave, are liable to the loss of the retainer in addition to such penalty as the Act provides.

(26.) Each member of the Naval Reserve may be allowed to make up two days' continuous drill, which will be reckoned as twelve hours and a half, or six days, should the nature of his employment require it. This will enable him to make up his time, should he, without any negligence on his own part, have fallen in arrear.

(27.) The time during which a member of the Naval Reserve is absent from drill on account of sickness or accident, unless caused at drill, does not count as part of the drill. On his being removed from the sick list, he must perform the proper term of drill required by the regulations. The period of drill to be entered in the certificate is not to include the time during which he is on the sick list, unless from accident or injury caused at drill.

(28.) The place of drill will either be some ship, battery, or drill-ground ashore.

(29.) The entire number of shore drills will not be allowed, unless by special authority, to count for more than one hundred hours. The remaining number of hours required for drill must be afloat, either in boats or vessels belonging to the Government of the Colony of Victoria. The officer commanding the Naval Force in the service of Her Majesty's Government in Victoria may at his discretion alter the details of drills, either afloat or ashore, as circumstances may require.

(29A.) Four general musters for inspection of the Naval Reserve will be held each year, and every attested member on the roll on the 1st of January each year, or who may have joined the Reserve during the first quarter of the year must attend at least three (3) inspections; members joining during the second quarter must attend at least two (2) inspections; members joining during the third quarter must attend one (1) inspection; and all members in addition must go through the musketry instruction and target practice, otherwise they will not be entitled to claim the four quarterly retainer.

(30.) When the Naval Reserve is called out for drill afloat, no day's drill will be counted for more than eight hours.

(31.) Notices will be posted in conspicuous places in the different Naval Reserve divisions, naming the hours of mustering for drill either afloat or shore.

(32.) Arrangements will be made to transport members of the Naval Reserve to and from the drill ship free of expense. The time of drills afloat will count from the time they first embark until they are again landed.

(33.) Members of the Naval Reserve when on drill will be rated as able seamen, commissioned, warrant, or petty officers excepted, who will rate according to their grade and distinctions.

(34.) Members of the Naval Reserve when being drilled, afloat for one entire day or days, will be victualled according to the same scale as seamen in the Government vessels.

(35.) They will each be supplied with uniform, which must be kept in good condition.

(36.) Drills ashore not to exceed two hours, drills afloat not to exceed three hours, unless upon occasions which will be previously notified.

(37.) Any member of the Naval Reserve injured at drill may be sent for treatment into hospital, or medical aid may be procured by his commanding officer.

(38.) A list of defaulters will from time to time be prepared, showing those members of the Naval Reserve who have not completed their drill. It will be the duty of officers to warn them of the effect of neglect. But if no such personal notice is given, they will, notwithstanding, be held responsible for non-attendance.

(39.) The annual retainer will be paid in four quarterly instalments when required. The quarters are to be considered as commencing on the 1st January, 1st April, 1st July, and 1st October in each year. A proportionate reduction will be made in the retainer on account of the first broken quarter.

(39A.) All members of the Naval Reserve must attend twenty-four hours' drill on shore and twelve and a half hours' afloat during each quarter to entitle them to that quarter's retainer; but should they have passed out of part I. truck gun exercise, they will then be allowed to make up their time for two quarters' retainer any time during each consecutive six months. Members who have passed out of both parts of the truck gun exercise and musketry instruction will have the words "trained man" noted in their books, and will be selected for promotion according to their seniority. The captain commanding the Naval Reserve to notify on which days these examinations will take place.

(40.) When a member of the Naval Reserve applies for payment of retainer he must produce his certificate, and satisfy the commanding officer by the entries in his certificate that he has complied with the conditions as to drill, leave of absence, and appearance before some commissioned officer; and if it should appear to such officer that the conditions of the Reserve have been broken, he will forward the certificate to the officer commanding the naval force in the service of Her Majesty's Government in Victoria.

(41.) If he can show that his absence was unavoidable, or any other conditions or rule of the service have been broken through unavoidable circumstances, he may make a special application to have his retainer renewed. Payment of the retainer will not be allowed for the time of absence.

(42.) In the event of the death of a member of the Naval Reserve, the balance of any retainer which may be due to him will be paid to his widow or children (if any). Application for payment of the balance of retainers due to the deceased should be made through the commanding officer.

(43.) When a member of the Naval Reserve, after being called out by proclamation, is released from actual service, his certificate will be returned to him, with the requisite entries of service made therein.

(44.) After the termination of one year, reckoned from the date of certificate, any member of the Naval Reserve will, on giving three months' notice in writing, be entitled to his discharge; provided he is not at the time required by proclamation for actual service, and that no apprehension of danger to the Colony exists, of which the Governor in Council is to be the sole judge.

(45.) The Naval Reserve will be continuously maintained unless disbanded or broken up by proclamation in the Government Gazette.

(46.)

(46.) Any member of the Naval Reserve, when not called out for actual service; may, under special circumstances, with the consent of the officer commanding the naval force of Her Majesty's Government in Victoria, obtain his discharge from the Reserve on payment of the sum of £2, if required to replace his uniform.

(47.) Any member of the Naval Reserve may be discharged from the Reserve after fifty-five years of age or for inefficiency or physical inability to serve, or may be dismissed for misconduct in addition to loss of retainer and such other penalty as the Act provides.

(48.) A member of the Naval Reserve, if wounded or injured on service or on drill, will be entitled to the same pension to which any other seaman in the Colonial Navy of Victoria would be entitled for a similar wound or injury; but such pension cannot, except by special permission, be paid in any place not within the Colony of Victoria.

70.—ENGAGEMENT OF PERSONS REGULARLY EMPLOYED.

The period for which all persons regularly employed under the Act will be sworn in will be for one year, after the expiration of which period any such person can obtain his discharge on giving three months' notice of his intention to apply for the same: Provided always, that at the time no apprehension of danger to the Colony exists, of which the Governor in Council is to be the sole judge.

AMENDED REGULATIONS UNDER THE DISCIPLINE ACT 1870.

Clause (24.) The time for which each member of the Naval Reserve will be required to drill in each year is one hundred and forty-four (144) hours, exclusive of reviews. Time occupied in travelling or being transported to and from the place of drill will be allowed at the discretion of the commanding officer.

Clause (26.) Each member of the Naval Reserve may, if the exigencies of the service admit, be allowed to drill in different districts.

Clause (29A.) Any member who cannot satisfy his commanding officer that he has made fair progress in his drills will not be entitled to his retainer.

Clause (36.) Drills on shore not to exceed two (2) hours, drills afloat not to exceed five (5) hours; unless upon occasions which will be previously notified.

Clause (39A.) All members of the Naval Reserve must attend twenty-five (25) hours drill on shore and eleven (11) hours afloat during each successive quarter to entitle them to that quarter's retainer, except those members who have passed out of both parts of truck gun exercise, musketry, and cutlass exercise; they will have the words "trained men" noted in their books, and will only have to drill nineteen (19) hours on shore each quarter; they will also be selected for promotion according to their seniority. The officer commanding the Naval Reserve to notify on which days these examinations will take place.

EXAMINATION OF CANDIDATES FOR APPOINTMENTS IN THE VICTORIAN NAVAL RESERVE.

1.—For Lieutenant.

To hold a master's certificate from some recognized Marine Board, or to pass before the "above Board" (viz., the officer commanding Naval Forces of the Colony, the officer commanding the Naval Reserve, and the senior lieutenant of the Naval Force) the same examination as required for a master in the merchant service.

To have a good knowledge of the following portions of naval gunnery:—

Heavy rifled gun exercise.

Revolving gun exercise.

Truck gun exercise.

Field exercise—Parts I, II, III.

Field piece exercise.

Cutlass, pistol, and sword-bayonet exercise.

Weight of charges and bursting charges.

To be able to drill a division of guns efficiently.

To have a general knowledge of the use and practice of torpedoes, and also all the information contained in the miscellaneous chapter of the Naval Gunnery Book.

2.—For Sub-Lieutenants.

To hold a first mate's certificate from some recognised Marine Board, or to pass before the above Board the same examination as required for a first mate in the merchant service, and to have a general knowledge of the subjects above mentioned.

3.—For First Class Petty Officer.

To have a good knowledge of great gun exercise; also cutlass, pistol, sword-bayonet, and rifle exercises, and to have a good knowledge of a petty officer's duty generally.

4.—For Second Class Petty Officer.

To have a fair knowledge of great gun, cutlass, pistol, sword-bayonet, and rifle exercises.

APPENDIX D.

ARMAMENT of Coast Batteries (when completed) in Port Jackson, Botany, and Newcastle.

Position of Battery.	10-inch M.L. rifled.	9-inch M.L. rifled.	80-pounders M.L. rifled.	8-inch and 10-inch Shell Guns, smooth-bores.	68-pounders, smooth-bores.	Total Guns.	Remarks.
PORT JACKSON (SOUTH SIDE)—							
South Head (Sea face)	3	2	5 (1)	(1) These guns being in four detached batteries have separate magazines, and require distinct detachments to work them. The guns fire both to seaward and into the harbour.
Green Point (Inside entrance).....	3 (2)	2 (3)	5	(2) The three 80-pounders overlook the entrance of harbour, as well as the Torpedo Defences.
Shark or Steel Point (Inner Battery)	3 (4)	3	(3) The two 8-inch smooth-bore shell guns sweep the beach of Camp Cove and Watson's Bay.
PORT JACKSON (NORTH SIDE)—							
Inner Middle Head and Cobbler's Beach	1 (5) to be purchased.	4 (6)	2 (7)	7	(4) The three 80-pounders bear upon the east and west Channels divided by the Sow and Pigs Shoal and across to Bradley's Head; range, about 2,000 yards.
Middle Head (facing entrance)	2 (8)	3 (9)	2 (10)	7	(5) One 9-inch M.L.R. gun is required to look into the bays of Middle Harbour as far as the Spit, as well as the road from Manly, on the opposite side of Middle Harbour.
Lower Casemate	3 (11)	3	(6) The four 80-pounders fire on the entrance and round to Middle Harbour.
Upper Casemate (Iron-fronted)	3 (12)	3	(7) The two 68-pounders are intended to resist boat attacks.
George's Head	4 (13)	1	5	(8) The two 10-inch M.L.R. guns fire on the entrance and inside the Harbour.
Batteries on Heights	4 (14)	4	(9) The three 80-pounders fire on the entrance inside of South Head and guard the Torpedo Defences round to George's Head.
Bradley's Head (Inner Battery)	2	1	3 (15)	(10) The two 68-pounders cover the water towards Dobroyd Point, &c.
TOTAL, PORT JACKSON ...	8	1	19	7	10	45	(11) The three 10-inch smooth-bore shell guns are required for protection of Torpedo Defences.
BOTANY BAY—							
Bare Island	3 (16)	2 (17)	5	(12) The three 10-inch M.L.R. guns constitute the key of the defensive position and face entrance; also guard the Torpedo Defences.
NEWCASTLE—							
Signal Hill	3 (18)	4 (19)	7	(13) The 80-pounders protect the Torpedo Defences and George's Beach on north side and look into the bays on the opposite side.
GRAND TOTAL	8	7	25	7	10	57	(14) The four 68-pounders are intended to fire over the entrance of Harbour and Torpedo Defences.

a.—The above table shows the armament proposed by Sir William Jervois, with a few modifications, which have received his approval.
 b.—The guns, marked (3) on Green Point, (4) on Steel Point, (10) on Middle Head, (13) George's Head, and (15) Bradley's Head, will not require full detachments.
 c.—Bradley's and Steel Point Batteries, although considered as inner batteries, cannot be left unmanned, in case of attack.
 d.—It is necessary to bear in mind that field and machine guns will have to be provided in the defensive enclosures and redoubts at South, Middle, and George's Heads, as well as at Botany and Newcastle; consequently an allowance must be made for the necessary gunners, in the event of boat attacks being undertaken simultaneously with the ships' attack upon the batteries.
 e.—In estimating the number of officers and men required for the batteries, due regard must be had to the excessive dispersion of the guns; also to the fact that for the same reason, gun detachments could not be transferred from one battery to another.
 f.—During an action, at least 35 guns would have to be fully manned in Port Jackson, and all the guns at Botany and Newcastle.

30 March, 1880.

P. H. SCRATCHLEY,
 Colonel, R.E.
 C. F. ROBERTS,
 Colonel.

APPENDIX E.

MILITARY DEFENCES INQUIRY COMMISSION.

TABULATED STATEMENT of the Opinions of the Five Members of the Military Committee appointed to consider the Military Questions involved in the Inquiry.

Questions.	Colonel Anderson.	Colonel Scratchley.	Colonel Downes.	Colonel Richardson.	Colonel Roberts.	Conclusions.
1. <i>Military Adviser and Inspecting Officer of Local Forces for Australia generally.</i> —Do you recommend appointment?	Yes, provided that he is not serving in any particular Colony.	Yes.	Yes.	Yes.	Yes.	Committee unanimous for Adviser and Inspecting Officer.
2. <i>Permanent Artillery Force.</i> —Is it necessary?	Essential both in peace and war time.	Yes.	Yes.	Yes.	Yes.	Committee unanimous for Permanent Artillery.
3. <i>Permanent Artillery Force.</i> —Should it be organised <i>with</i> a reserve or <i>without</i> a reserve?	Yes, with a reserve.	With a reserve.	With a reserve.	With reserve, if possible.	With a reserve.	Committee unanimous for a reserve to Permanent Artillery.
4. <i>Permanent Artillery Force.</i> —What strength should be kept of all ranks for the batteries at Newcastle, Port Jackson, and Botany, <i>if no reserve be formed</i> , and assuming that Volunteer Garrison Artillery is available?	About 400.	400 officers and men, at all times and for the future, <i>if reserve be not formed</i> .	300 N.-C. officers and men.	300.	440.	Committee divided in opinion as to strength of Permanent Artillery, if without reserve.
5. <i>Permanent Artillery Force.</i> —What strength should be kept of all ranks for batteries at Newcastle, Port Jackson, and Botany, <i>if a reserve be formed</i> , and assuming that Volunteer Garrison Artillery is available?	300.	300 officers and men, until reserve of 200 is formed, then reduce to 200 officers and men.	200 to 250 N.-C. officers and men.	200 to be the minimum when reserve is formed.	340, to be reduced to 250, as soon as reserve reaches 300.	Majority for a minimum of 200 officers and men, when reserve is formed; minority in favour of larger force.
6. <i>Volunteer Garrison Artillery.</i> —What strength do you recommend for Newcastle, Port Jackson, and Botany Bay, in addition to Permanent Artillery?	150 if a Militia, 300 if purely Volunteer.	150, Volunteer Militia, exclusive of Volunteer Reserve.	200 to 300 men, paid Volunteers, to be decreased as the reserve is formed.	200 paid Volunteer Militia, 200 unpaid Volunteer Force.	About 150 Garrison Artillery.	Majority (three members) in favour of 150 men; two members in favour of larger number.
7. <i>Permanent Infantry.</i> —Do you recommend; if so, what strength?	No.	No; not considered necessary.	Yes, putting aside the question of expense—one strong company to serve as a standard of efficiency—and to assist in the training of officers.	No.	Yes; small number, say 60, for instruction.	Majority (three members) against infantry; two members for infantry, but of smaller strength.
8. <i>Torpedo Corps.</i> —Do you recommend any change in existing corps?	Yes, a portion permanent	Yes. This corps should have a special organization.	No.	No.	Yes; to be partly a Permanent Force.	Committee divided; members holding different views.

TABULATED STATEMENT of Opinions—*continued.*

Questions.	Colonel Anderson.	Colonel Scratchley.	Colonel Downes.	Colonel Richardson.	Colonel Roberts.	Conclusions.
9. <i>Torpedo Corps.</i> —What total strength do you recommend for Torpedo Defences at Newcastle, Port Jackson, and Botany?	100, if signalling for field force is otherwise provided for.	Newcastle 20 Botany 25 Port Jackson 50 Total 100	80 to 100 men.	100, provided slight increase is permitted to Engineers to provide signallers for field force.	100.	Committee unanimous for a Corps of 100.
10. <i>Field Force.</i> —Which do you recommend, paid Volunteer Militia, or unpaid Volunteer Force?	Unpaid, with exception of those trained as Militia.	Paid Volunteer Militia, if cost be kept down to £10 per officer and man, all expenses included.	Paid Volunteer Militia enrolled for a period of three years; unpaid Volunteer Force in country districts.	Paid and unpaid.	Unpaid Volunteer Force.	Majority (four members) in favour of a paid Volunteer Militia, supplemented by unpaid Volunteers; one member for unpaid Volunteers only.
11. <i>Field Force.</i> —What organization and constitution for the paid Volunteer Militia do you recommend,—that of New South Wales, South Australia, or otherwise?	N.S. Wales modified.	New South Wales, improved by incorporation of provisions in South Australian Acts.	That of South Australia, provided that it could be carried out in this Colony.	New South Wales.	If one is formed a modified New South Wales one, enforcing attendance.	Majority (three members) in favour of N. S. Wales organization and constitution with modifications; one member for New South Wales organization, one for South Australian.
12. <i>Field Force.</i> —What organization and constitution for the unpaid Volunteer Force do you recommend,—that of Great Britain or otherwise?	That of Victoria, which is modified from and based on English system; but in which Colonial requirements have been considered.	Great Britain, modified to suit local circumstances.	Something similar to the Rifle Companies of South Australia.	Similar to that of the Volunteer Militia, but modified, &c., as may seem necessary.	Great Britain as near as possible.	Committee divided; members holding different views as to organization of purely Volunteer Force.
13. <i>Field Force Reserve.</i> —Do you recommend formation of a Reserve in connection with the Volunteer Militia?	Certainly.	Yes.	Yes.	Yes.	If Volunteer Militia is formed; yes.	Committee unanimous for a Reserve to Volunteer Militia.
14. <i>Field Force Reserve.</i> —If so, what organization and constitution—with pay or otherwise?	Volunteer organization. No pay.	Without pay—English Volunteer organization.	Enrolled for a period of three years from time—expired Volunteers; small annual pay in arrears.	Similar to that of the Volunteer Militia, but modified, &c., as circumstances may seem to warrant, and without pay.	By affiliation to the Volunteer Militia, if formed, and without pay.	Majority (four members) against pay; one member for pay for Field Force Reserve.
15. <i>Field Force.</i> —What should be the strength of the Volunteer Force, if unpaid, for the defence of Sydney, if a Volunteer Militia be not maintained?	From 4,000 to 5,000 men.	3,000 officers and men instead of the 1,700 militia.	5,000 at Sydney, but I consider that it would be most unwise to trust to unpaid Volunteers only.	5,000 at least, with a Permanent Infantry Corps of not less than 300.	At least 3,000.	Majority (three members) in favour of 5,000 men; two members for 3,000 men for Field Force.
16. <i>Field Force.</i> —What should be the strength of the paid Volunteer Militia?	1,500 to 1,800 for Home District.	1,500 officers and men, as at present, for Sydney and Newcastle, exclusive of Garrison Artillery and Torpedo Corps. Total, 1,800.	For defence of Sydney, Botany Bay, Newcastle, Infantry 2,500 to 3,000 Cavalry 80 to 100 Artillery 210 Engineers 80 to 100	1,525 officers and men, exclusive of 200 Garrison Artillery and 75 Torpedo Corps = 1,800.	If formed, exclusive Torpedo Corps and Garrison Artillery, about 2,000 Militia.	Majority (three members) for a strength of 1,500, Volunteer Militia, for Field Force; two members in favour of larger Field Force.

Tabulated Statement of Opinions—continued.

Questions.	Colonel Anderson.	Colonel Scratchley.	Colonel Downes.	Colonel Richardson.	Colonel Roberts.	Conclusions.
17. <i>Field Guns.</i> —What should be the number of field guns, and how many batteries of officers and men?	18 guns, three field batteries, and one battery of 6 guns should regiment of Cavalry be raised.	18 guns; 3 batteries.	18 rifled guns, 3 batteries of 70 men each.	18 field guns, 3 batteries.	From 12 to 18; 3 Batteries (1 Reserve, 2 Volunteer).	Unanimous for 18 guns and three batteries; one member for additional 6 guns with Cavalry Regiment.
18. <i>Cavalry.</i> —Do you recommend a body of Cavalry as part of the Field Force, and if so of what strength, not taking into account Mounted Police?	Yes; a regiment for the Colony.	Yes; 100 officers and men in and around Sydney as mounted Rifles, unpaid.	Yes; 80 to 100, trained as mounted Rifles.	No. I should depend on 4 troops of Mounted Police, numbering 200.	300 Mounted Police.	Majority (three members) for Cavalry, and two members for Mounted Police only.
19. <i>Engineers.</i> —What should be the strength of the Engineer Corps attached to the Field Force?	150 to 175.	75 officers and men, Volunteer Militia, as at present, besides Volunteers in reserve.	80 to 100.	75 Volunteer Militia and 25 Volunteer Force.	150.	Majority in favor of 100 Engineers.
20. <i>Rifle Companies.</i> —Do you recommend the formation of Rifle Companies, without capitation, in the country districts of New South Wales?	I recommend a purely Volunteer Force.	Yes, throughout the Colony.	Yes.	Yes, as Volunteer Corps with provision for instruction.	Yes.	Majority (three members) in favour of Rifle Companies, pure and simple; two members preferring Volunteers without personal emolument.
21. <i>Rifle Companies.</i> —If so, how would you organize them?	If such be formed, to be entirely under supervision and command of Commandant.	I would take the South Australian system as a model, and modify to suit local requirements.	I would take the South Australian system as a model, and modify to suit local requirements.	As Volunteer Corps entirely apart from civil control or interference.	On a distinct Company organization; arms, ammunition, and necessary instruction found.	Committee divided in opinion, as to organization of Rifle Companies.
22. <i>Ordnance Store Department.</i> —Do you recommend re-organization and transfer to control of Commandant?	Certainly. See my report.	Absolutely necessary.	Absolutely necessary.	Not entirely.	Yes.	Majority (four members) for re-organization and transfer; one member in favour of re-organization only.
23. <i>Laws and Regulations.</i> —Are any changes required in the existing Laws and Regulations relating to the Local Forces of New South Wales?	Yes.	Yes.	Think that Volunteers should be enrolled for three years and for service in Australia and Tasmania. That the rates of pay for Volunteer Officers and men are too high. That a system should be established by which Officers of the Permanent Force could look to obtaining some recompense after good and long service. Abolish election of officers.	For staff and Permanent Artillery codification of pay and allowances. Paid Volunteer Force to be termed Volunteer Militia. Election of Officers to be done away with. Introduction of a retirement scheme for Permanent and Volunteer Officers. Provision of central drill sheds. Change in administration of supply. Periodical despatch of the more responsible Officers to England to acquire information &c.	Yes; more power to Commanding Officer of Permanent Artillery; a prospect held out to the men of certain employment under Government and formation of a Reserve. With regard to the present Volunteer Paid System, a greater hold upon the continuous service of the men. No election of officers by corps.	Committee unanimous for the necessary changes in Laws and Regulations.

TABULATED STATEMENT of Opinions—*continued.*

Questions	Colonel Anderson.	Colonel Scratchley.	Colonel Downes.	Colonel Richardson.	Colonel Roberts.	Conclusions
24. <i>Instruction of Officers.</i> —Should not steps be taken for the establishment of Schools of Artillery and Infantry for the instruction of the Officers of the Local Forces of New South Wales?	Yes, most desirable.	Yes.	Yes, consider there should be one school for Australia generally.	Yes.	Yes.	Committee unanimous for Schools of Instruction.
25. <i>Instructors.</i> —Do you recommend appointment of Officers for this purpose?	Yes, but from paid forces.	Yes, to be supplied from paid forces.	Yes; but I think it might be combined with the duty of adjutant.	Yes.	Yes; from England if possible.	Committee unanimous for Officer Instructors.
26. <i>Military Education of Permanent Artillery Officers.</i> —Should not a higher standard of practical military knowledge be insisted on for first appointments and promotions?	Yes, generally.	Yes, the present standard altogether insufficient.	Yes; but for first appointments give probationary commissions, and examine in a year's time.	As far as practicable.	Yes.	Committee unanimous for higher standard of instruction.
27. <i>Examination of Volunteer Officers, whether paid or unpaid.</i> —Do you recommend any change in the system of examination for first appointments and promotions?	Yes, generally.	Yes, to ensure higher standard of military knowledge.	No.	No.	Yes.	Majority (three members) in favour of change, two members against.
28. <i>Education of Volunteer Officers, whether paid or unpaid.</i> —Do you recommend a higher standard of military knowledge?	Yes, generally.	Yes.	No; the present system if carried out in its integrity appears sufficient. (<i>Vide</i> note on page 79.)	As far as practicable.	Yes.	Majority (four members) for higher standard; one member against.
29. <i>Military Library.</i> —Do you recommend establishment of a Library and Reading-room for the Officers of the Local Forces, for the encouragement of lectures and discussions on Military subjects amongst them, subject to the control of the Commandant?	Certainly.	Yes.	Certainly.	Yes.	Yes.	Committee unanimous for Libraries and Reading Rooms.
30. <i>Course of Instruction.</i> —Should not the Permanent Officers of the Local Forces be required to go through a course of instruction in field engineering, tactics, surveying, and reconnaissance?	Yes.	Yes.	Yes.	Yes.	Yes.	Committee unanimous for Permanent Force Officers to undergo course of instruction.
31. <i>Course of Instruction.</i> —Should not this course be open to Officers of the Volunteer Force, and certificates granted to those who attended the course and passed a qualifying examination?	Yes.	Yes.	Yes.	Yes.	Yes.	Committee unanimous for Volunteer Officers to undergo course.

APPENDIX F.

APPROXIMATE estimate submitted by Colonel Richardson on account of instruction, training, pay, clothing, and equipment for 3,400 of all ranks as under:—

	£
General staff	2,995
300 permanent artillery	27,000*
100 permanent artillery reserve	900
1,800 volunteer militia... ..	25,000
1,200 volunteer reserve	6,000
School of Instruction	1,000
Warlike stores	5,000

67,895

* This item ultimately reduced on completion of artillery reserve to 200, and reduction of permanent artillery to 200 by 8,000

£59,895

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

THE VOLUNTEER FORCE.
(REPORTS OF THE OFFICERS COMMANDING REGIMENTS OF.)

Ordered by the Legislative Assembly to be printed, 16 November, 1881.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 28th October, 1881, That there be laid upon the Table of this House,—

Copies of the Reports of the Officers Commanding Regiments of the Volunteer Force on the working of the Force under the new Regulations.

(*Mr. Burns.*)

THE VOLUNTEER FORCE.

Colonel Goodlet to Colonel Richardson.

Dear Sir,

Volunteer Office, 11 March, 1881.

In the year 1860 I was elected first Captain of the Glebe Company of Volunteer Rifles, which post I held till April, 1868, when I was promoted to Major of the Suburban Battalion, and which Corps I had the honor to command for ten years, till transferred to my present command in the N.S.W. Volunteer Infantry. I mention these facts merely to show that I ought to be in a position to give an opinion on the relative merits of the two forces, as requested by you.

When the Volunteer Rifle Companies were started England was at war, and the members held well together while the excitement and apparent necessity lasted, but after two or three years, when the novelty wore off, and it became known that the fines could not be enforced, the attendance of many at parades became fitful, but some, I must say conscientiously, attended to their duties to the last, while others, who might have done likewise, got disgusted by coming up time after time without getting a satisfactory drill owing to paucity of attendance.

Thus, when the landorder system was introduced, many joined from mere mercenary considerations, and were satisfied so long as they made up the number of drills required to pass, but which were not sufficient to make them efficient, and, as might be expected, the result was very detrimental to the force.

The organization of the present force, the N.S.W. Volunteer Infantry, I think, well adapted to the circumstances of the Colony, for while not withdrawing labour from the market it provides a force equal to what a young community situated as this requires.

The men, as a rule, feel they are paid a fair equivalent for their services, and desire to do their part well in return, and what with this feeling and the power of inflicting and collecting fines discipline is more easily maintained than in the old force.

The annual period of consecutive training is very beneficial, as the men not only learn camp duties but settle wonderfully down to their drill, and the difference between the steadiness of the men at the end and the commencement of the period of continuous training has to be experienced to be appreciated; and further, all parades must be held by daylight, and are well attended, as officers and men require to be present at not less than sixteen out of twenty to make them efficient, which I think a very good regulation.

From past experience and my knowledge as a large employer of labour (my firm employs more men than there are in 2nd Regiment), I am almost certain that it would be impossible to get an *unpaid* volunteer force to go through the continuous training and steady drill that the present paid force does.

In conclusion, I would suggest calling the force the "Volunteer Militia," as I think that name would better describe what the force really is.

I have, &c.,
JOHN H. GOODLET, Lieut.-Col.,
Commanding 2nd Regiment Volunteer Infantry.

Lieutenant-Colonel Wilson to Colonel Richardson.

Sir,

Sydney, 26 February, 1881.

I have the honor to state with reference to your request calling for my report as to the working of the new system generally of the existing Volunteer Force, that it far exceeds my expectations, and have no hesitation in pronouncing the new force a complete success.

The artillery branch of the force, which I have the honor to command, works admirably, and is very much superior to what the old force was, and better disciplined, less irregularities occur, and very few complaints are heard of, the men nearly in every case, as witness the recent encampments, putting up cheerfully with all inconveniences. The stamp of men are superior and much steadier, and are much more regular in their attendance, as can be proved by referring to parades' states. The officers under my command work harmoniously, and the same may be said of non-commissioned officers. Much credit is due to the adjutants and drill instructors for the appearance of the men on parade, as also their efforts in affording instruction by classes at night, and which are always well attended. In conclusion, I beg to state that in my opinion the force as now organized could scarcely be improved on, and as the men see more service any defects in the ranks can be easily remedied.

I have, &c.,
WATSON WILSON, Lieut.-Col.,
Commanding N.S.W.R.V.A.

Major Wilkinson to Lieutenant-Colonel Christie.

Sir,

West Maitland, 24 February, 1881.

I have the honor, in reply to the Commandant's memo. dated 18th February, requesting the officers commanding regiments and corps to report on the working of the present organization of the Volunteer Force,—

With respect to the organization, sufficient time has hardly elapsed to give the present system a fair trial, but the experience gained so far shows it to be an improvement upon the old, both with regard to training, discipline, and practice of interior economy.

The training is conducted with more system, the instruction being carried on in a progressive manner, and is conducive to implant habits of obedience and regularity of attendance, with more attention to appearance and soldierly bearing, consequently are more amenable to discipline, which can be more strictly enforced than was possible under the old system, where there was little or no check upon irregularity or misconduct, which under the new is enforced by forfeiture of pay or fines.

Training
New
Old.

The

The practice of interior economy is getting better understood and enforced every day, and the officers, non-commissioned officers, and men are gradually being educated into the proper groove of individual responsibility, which, though considered irksome at first, is leading to a proper appreciation of its benefits, everything working smoothly and in order, and I have no hesitation in saying that as the members get more conversant with its working, no difficulty will be experienced in carrying out its provisions. Possibly some of the details in Act and Regulations may require a little amendment.

Comparing the efficiency of the old with the present force, great difficulty was always experienced in getting good musters under the old regulations; there was no hold on the members to compel attendance, and provided they could get the minimum number necessary to constitute a drill, and put in (14) fourteen such attendances during the year, so as to qualify as efficient, they imagined they had done all that was required to constitute a good volunteer.

In consequence of this paucity of attendance officers were unable to improve themselves or to put in practice the theoretical knowledge obtained by study. This applied particularly to country districts, and when called out on periodical occasions for some grand parade with large bodies of men, the officers, from want of practice, were at sea—from no fault of their own, but because by reason of the small attendance were unable to practise their duties.

With respect to rifle practice,—with the exception of (say) 10 per cent. of the old force, very little interest was taken by the members generally. These generally were men who were fond of it—who could afford time, and probably only joined upon account of the shooting. I consider, and I believe it is borne out by experience, that the present force as a whole quite equals the old force, as witness the high scores at the last Rifle Association matches, and the number of marksmen during the last course of musketry, 1880, will compare favourably with previous years. This I consider is accounted for by making the attendance at the annual course of musketry compulsory, and if a slight encouragement were given to marksmen, together with annual issue of efficiency ammunition, the result would be most satisfactory.

There was little or no system of organization in the old force, everything being conducted rather loosely—too much equality, and when occasionally officers carried on their duties strictly much dissatisfaction was the result.

The examination before promotion I heartily agree with, and if the efficiency of the movement generally is to be successful it must be adhered to. Some are sure to grumble at failure, but if there is any *esprit de corps* one or two failures should not discourage any candidate. However, for first commissions I would recommend the first examination to be confined to drill, and to have a second one (say) after twelve or eighteen months' service. The men also take more pride in serving under officers who have passed their examination, and their commands are always more cheerfully obeyed. Under the old system I have seen officers and men arguing about the correctness of a movement or word of command.

I am also in favour of recruits being allowed some compensation for their attendance at preliminary drill. It requires a little enthusiasm to attend these drills three times per week for three months (say) one and a half hour each drill, and it is acknowledged that this is the most irksome time in the Volunteer service. A great many fall out during this training, but payment (say) at the rate of 1s. per drill, payable when dismissed drill, would act as an incentive, and ensure better and more regular attendance. Under the old system the date of a man's joining counted towards his five years' service, practically paying him for his recruit service.

The present system of issuing clothing might be amended. Instead of issuing two complete sets, I would suggest that a period of twelve and eighteen months should elapse between issue.

In favour of the present system, I have it on good authority that in a neighbouring colony a somewhat similar system was in force, but on the score of economy reverted to the old system, and the whole force, I am given to understand, is in a most unsatisfactory state. From my own experience, extending over a number of years (having joined in August, 1860), I believe the present system, with perhaps a few alterations which may be necessary as we gain more experience in the working, will turn out a fine trained body of men, fairly disciplined and acquainted with the arms of defence entrusted to them, and will, if ever called upon to do so, give a good account of themselves; but would, in addition, recommend the formation of at least (say) two companies of permanent infantry, because, in the case of invasion, volunteers in this Colony would be at once called out to the front; they would be a valuable adjunct to the present force.

I have, &c.,

ALEXR. WILKINSON, Major,
Commanding Northern Regiment.

Major Rowe to Colonel Richardson.

Sir,

In compliance with your memo., dated February 18th, I have the honor herewith to append my report on the working of the Volunteer Force new regulations.

From practical experience, I have found the present system to work admirably, and in my opinion requires very little amendment.

The more carefully the system is examined the greater the difficulty to suggest improvement.

At the enrolment I had no difficulty whatever in obtaining suitable professional men and tradesmen of all classes to the number allotted by the establishment, viz., 60.

I have experienced no difficulty in securing discipline under the new regulations.

At the parades, working or otherwise, the men have been scrupulously punctual in their attendance. They have worked together cheerfully in their duties as engineers. The corps I have the honor to command is composed of intelligent tradesmen—young, strong, and healthy, capable of undertaking any mechanical work or undergoing fatigue.

I regard them equal in ability and endurance to any similar body of men.

The officers are professional men; Commanding officer an architect; 1st Lieutenant a first-class trigonometrical surveyor and engineer; 2nd Lieutenant a civil engineer,—all of whom are practical, as well as theoretical, in their knowledge, competent to design and carry out any kind of military work that may be required of them; and further, have the respect and confidence of the men whom they instruct.

The quarterly lectures of the officers, in accordance with the regulations, have been well attended, and may be considered a good school for imparting military instructions.

I am perfecting my plans for competitive examinations for non-commissioned officers' positions, also for prizes and badges, for which you kindly recommended the Government to vote the annual sum of £15, for military modelling, &c. All the models submitted will become the property of the Government, and will be retained in the school of Military Engineering for the instruction of the corps.

The only regret that I have to express is that the parades are not numerous enough for the purpose of instructing an engineer corps, who are expected, when brigaded, to be equal with other branches of the force.

I find if the men are kept at working parades too often they fall off in infantry drill. I could profitably occupy the whole of the parades required by the regulations in teaching engineering duties. In order to provide for remedying this, I would respectfully recommend ten moonlight parades during the year in addition to the day parades already provided for, and that six of the same should be compulsory.

I think the constitution of the force, as regards the Naval Brigade, Torpedo Corps, and Engineers, is capable of being modified with advantage.

The Naval Brigade being a Colonial force, and intended to operate in the immediate defence of the city and adjacent points on the coast, should be under the control of the Commander-in-Chief, and I think should be brought under the same system as that relating to the other branches of the service.

The duties of the Torpedo Corps being confined to one class of work, should I think be numerically weaker than the Engineer Corps, whose duties would, in the event of active service, be much more general. And portions of the corps would be required say at Botany, Newcastle, Port Jackson, and also with field force, which itself might possibly be operating in more than one locality.

For these reasons I think it would be wise to increase strength of the Engineer Corps, which is not up to the strength of the old corps existing eight years back.

I would also point out that the difference in remuneration existing between Torpedo and Engineer Corps, from commanding officer down, is undesirable.

I would also recommend that the mechanics in the infantry regiment, if desirous, should be allowed to obtain transfers to the Engineer Corps. It would be the means of keeping up the strength of the company and obtaining the most intelligent and efficient men.

I am inclined to think that four days only should be compulsory during continuous training; notice to be forwarded to the Commanding Officer before going into camp, so as to regulate the camp duties; and that written notice should be permitted to be received up to 4 p.m. on the evening before the camp, for all that are unable or prevented attending camp duties.

I regard the present force vastly superior in all its branches to the old men.

A few parades at night, in order to fill up the vacuum between the day parades, will make the force perfection, so far as perfection can be arrived at in training citizen soldiers.

The entire force is now working as perfectly as possible. There is no jarring of its machinery that I know of, and it promises to be infinitely superior to anything we have had before. The men, as a body, are young, strong, and vigorous, capable of undergoing fatigue. They are active in duty in the field.

The remuneration I consider reasonable in comparison to the old force, men who I consider obtained 15s. for every parade.

The attendance of the old force in my company averaged twenty-nine drills per man per year.

The average price of land order, £100; therefore each man obtained the sum of nearly 14s. per drill for the period of five years.

In conclusion, is it not necessary that the commanding officers should have an intelligent knowledge of the surrounding country, by having access to all military survey plans, &c., showing the intended defence proposed; or that meetings of commanding officers should be summoned periodically to study such matters. Would not the work of defence be more effectively performed, having a thorough knowledge of what they might have to carry out?

If not competent to be trusted with such information, then such ought not to be in possession of a commission.

I have, &c.,

THOS. ROWE, Major,
Commanding Engineer Corps.

Lieutenant-Colonel Holborow to The Commandant.

Sir,

Head-quarters, 3rd Regiment V.I., 26 February, 1881.

The Government having appointed a Royal Commission for the purpose of considering and reporting upon the working of the Volunteer Force under the new organization, I do myself the honor of expressing my experience as commanding officer of the 3rd Regiment V.I. since its inauguration, with a view of assisting the Commission in its labours.

1st. I have found no difficulty whatever in securing suitable men to fill my regiment to its full strength, and men are always waiting to fill any vacancies that occur by change of residence, these men being nearly all farmers and mechanics, and their ages invariably ranging from 20 to 35 years. A regiment has been formed that has been highly complimented by His Excellency as an exceedingly fine and efficient body of men.

2nd. The system adopted, under which the men are paid according to attendance, has had a most beneficial effect. The men attend the parades most regularly; the result is, a system of drill is carried out that under other circumstances could not be carried into effect, and as a natural consequence the men move and work together in a manner that, until the adoption of the new regulations, was out of the question. The extra pay to the non-commissioned officers has conduced to the success of the movement, for they now betray an interest and anxiety for promotion, thus pay more attention to general efficiency, the general well-being of each corps being thereby attained.

3rd. To continuous training can, in my opinion, be attributed a large portion of the undoubted success of the new system. The men of my regiment look forward to the annual gathering with eagerness, and I find that the few days during which the whole force have an opportunity of working together has a wonderful effect. The men improve rapidly, and I find them more steady and generally more efficient than could be reasonably expected in so short a time; and out of a total of 299, the strength of my regiment, 285 were in attendance at last camp—a fact which speaks for the popularity of the regulations. The strength of my regiment at the present time is 334, the full strength allowed by the regulations being 342, the men required to complete its full strength being now under examination. With

With a view of rendering an excellent system still nearer, in my opinion, perfection, I would, with all due deference to superior experience, offer the following suggestions:—

1st. That the strength of each corps be increased to 100.

2nd. That the continuous training be increased to eight days.

3rd. That having in view the spirit infused by music into military matters, each country corps be allowed a band of ten musicians, and as they now possess the instruments, and men can be readily found to use them, the expense will be inconsiderable.

4th. That the uniform supplied to my regiment having been so slovenly and carelessly made, and the quality of the material indifferent, a man, no matter how tidy, cannot possibly look really well; and I would strongly suggest that, instead of allowing one firm to secure the making of the whole quantity, the officers commanding regiments be allowed to invite and deal with tenders for the supply of their several regiments, or that a Board be appointed, who shall see that all contracts are carried out better and more speedily than has hitherto been the case.

5th. That in future each man should be supplied with one suit of uniform for drill purposes, of the same style as that now used, and also one for inspection and reviews, the tunic of which shall be of cloth, similar to that issued to the old Volunteer Force.

In conclusion, I would express my firm conviction of the utter impossibility of forming and keeping together a purely volunteer force. The attempt has been made upon three several occasions in New South Wales, failure in each instance being the result. It is, in my opinion, out of the question for men to give their spare time to drill without some remuneration, especially when there are so many attractions which absorb it.

I have, &c.,

WM. H. HOLBOROW, Lieut.-Col.,
Commanding 3rd Regt. V.I.

Lieutenant-Colonel Raymond to The Commandant.

Sir,

1st Regiment Volunteer Infantry, Sydney, 28 February, 1881.

In reference to your confidential memo. of 18th instant, I have the honor to state that in my opinion the working of the new system generally is far superior to the former organization; and I need only point, in confirmation of my belief, to the present state of the force as compared with that under the old regulations.

Superior, however, as the present organization is, there is doubtless room for improvement, especially in regard to the officers. In many of them there is not that *esprit de corps* that should exist, and which I attribute in a great measure to the system of election to first commissions, which still stands part of the Act. A partial remedy would, I think, be achieved by direct appointments, on the recommendation of the officer commanding regiments or corps, the nominations to be as far as possible selected from the respective corps. The elimination from the regulations of the term volunteer, all brigade changes, dress regulations, or other matters, to be by general order, not by the votes of the officers; and regimental matters to be similarly worked by the officers commanding, subject, of course, to the general provisions of the Act and regulations. I think such a regulation would have a good effect, by doing away with discussion, as we all know there are some who oppose the majority, often merely for opposition sake.

The present system of training, as carried out in the 1st Regiment, has, I venture to assert, resulted in a marked improvement in the non-commissioned officers and in the steadiness of the men under arms. The improvement in interior economy is the result of the period of continuous training, prior to which most in the service were utterly ignorant of this necessary branch of duty, solely from lack of practical teaching. I believe it would be wise to extend the system farther, by giving to each regiment the control of the clothing, which should be obtained from Home, in the same manner that troops on foreign service are supplied. While on this subject I would call attention to the present dress. The Norfolk jacket is a very good working dress; but when used for shooting, drill, &c., it is not fit for parade purposes. No one will deny that a soldier should appear smart and clean on parade, which they cannot do with the present dress; and I need only point to the different appearance as regards dress between the Permanent and Volunteer Artillery on the parade of last Saturday—the one with gold lace, white belts, and tunics; the other, silver lace, brown belt, and bad fitting Norfolk jacket. I respectfully maintain these distinctions should not be. The whole defence force of the Colony should be treated alike in every way, especially as to equipment, and I venture to assert that a more cordial feeling than at present exists in the force will be the result of such a course.

I should also recommend the formation of a reserve, admitting at once all old volunteers, and hereafter only such as have passed through the ranks of the present force, to appear for inspection once a quarter, at Commandant's Brigade Parade; that full forage should be allowed to all mounted officers; a cavalry corps to be formed in the country districts; and two companies each to be added to the Head Quarter Regiments of Infantry, with two supernumerary officers besides, which would enable these battalions to be drilled as 8-company battalions; a band allowance to each regiment, to be supplemented by a small subscription from the officers; a mess allowance for the formation and maintenance of a brigade mess, in connection with reading room and military library for reference, to be also supplemented by subscription from officers.

Musketry instruction I have always believed should be carried out by the staff of the respective regiment, and see no reason to alter my opinion.

I would also mention for your consideration the advisability of substituting the following arrangement for detached drill, viz.:—Three day drills, and substituting therefor seven night parades (principally company drill); the number of drills for efficiency standing at thirteen day parades and four night drills. This would free the men for three more Saturdays during the year. The extra money required for these seven drills could be obtained from the three day parades struck off, and deducting a pound from the efficiency money at the end of year, making it £3 instead of £4.

It must be obvious to all conversant with the present organization and the old, that without some remuneration it would be impossible to obtain the services of the men for continuous training, or the necessary number of day parades to establish a proper standard of efficiency. At same time, I am induced to make the foregoing suggestions as to substitution of a few night drills for day parades, believing that such a modification, while being acceptable to the general body of the regiment, might be introduced without deterioration to the force.

I trust I have not strayed beyond the intention of your memo. in this short outline of some of the salient points of the new organization, which it has struck me might be improved upon, and which may be summed up as follows:—

Abolishing the system of election.

General and regimental orders to take the place of meetings of officers in matters affecting the brigade and regiment, such as changes of dress, &c.

Regiments to have control of clothing.

Tunics to be supplied, and white belts; and all *distinctions* as to lacc, &c., to be abolished in the force.

Formation of a reserve.

Forage.

Formation of a cavalry corps.

Head Quarter regiments of infantry to be strengthened.

Band allowance to regiments.

Allowance for brigade mess and reading-room, library, &c.

Musketry instruction.

Alteration in detached drills in regard to efficiency.

I have, &c.,

R. PEEL RAYMOND, Lieutenant-Colonel,
Commanding 1st Regiment Volunteer Infantry.

REMARKS in reference to the organization of the Volunteer Force.

Commissioned Officers.

I am of opinion that clause 24, directing that all candidates for a commission must have passed the Junior Civil Service examination or one of a higher degree is unnecessary, as many members of the corps are scientific men, trained to some particular branch of science, in consequence of which they are exempt from the rule relating to clerical appointments in the Civil Service, and are not required to pass the Civil Service examinations; and I think this should also apply to non-commissioned officers or privates whose practical knowledge of the special duties of the corps would otherwise render them eligible.

Discipline.

Clause 86.—The whole system of fines is in my opinion unsatisfactory, because it takes away from commanding officers all discretionary power in inflicting them, leaving out of consideration the opportunity that officer has of knowing the offender's previous conduct or the repeated or aggravated nature of the offence; and I need hardly point out that the fact that if the immediate commander of the corps was invested with a discretionary power as to the amount of the fine it would have a most beneficial effect as regards its discipline.

Clause 104.—In this case I cannot see why buglers should be compelled to go through a *course of musketry instruction*, which is described as consisting of four nights' position drill and sixty rounds target practice.

Clause 105.—I consider that the number of parades ordered is nothing like sufficient to ensure the efficiency of a corps like the Torpedo and Signalling Corps, which, in addition to the duties peculiarly its own (such as a knowledge of electricity, signalling, boating, diving, and other matters essential to its usefulness),* has to be as well up in military drill as any other corps. In my experience at any rate it is expected to perform those duties on brigade parades with the same accuracy as corps whose one and only duty it is to practise the same.

Clause 110.—I cannot see why the inspection (the most important parade of the year, as by it the efficiency of the several branches of the force is tested by the Inspecting Officer) should be the only parade from which absence with leave can be granted, and the person to whom such leave is granted can be returned efficient.

Clause 119.—If a member is taken ill on the morning of the camp, perhaps after he has fallen in to proceed there, and a medical certificate to that effect is given, it cannot alter the case as regards the efficiency of such member. While on this subject of inability to attend parade, I might mention the case of Private J. Miller, of my corps, who was suddenly taken ill on the night of the lecture to the corps in 1879. He had attended every parade and had gone through musketry instruction (for which the lecture had been substituted), but, although the medical certificate was sent in, and the circumstances explained, he was returned non-efficient.

In my opinion, the present organization does not work so satisfactorily as the one the corps served under originally, viz., £1 per month for privates, and a parade weekly, two at night and two at day per month, with power to inflict fines for absence, the amount of such fine to be at the discretion of the commanding officer.

Under that system the corps was far more efficient, especially in their infantry drill and signalling.

Under present arrangements there is no provision made to empower the commanding officer of the corps to insist on its being practised in night duty on the water, a most necessary part of its duties.

In a corps of this sort (formed I may say from the Electric Telegraph Department of the Colony) I consider that the rules laid down for efficiency require great relaxation.

These members of the corps are liable at any moment to be sent on Government duty in the country for periods varying from one or more months, and, although granted leave from their military duties, are mulcted in the amount due for efficiency, when in reality they are already efficient. One instance I may mention is that of Sergeant Corbett, who was sent to Melbourne in October last by the Government to take charge of the electrical exhibits, &c., shown by the Telegraph Department of New South Wales at the International Exhibition.

Corbett left in October last, since which, up to the end of the year, there were five parades that he could not attend, and of course lost his efficiency for 1880.

If he does not return till close of Exhibition he will be unable to attend the continuous training, which will render him non-efficient for this year also—a loss to him of over £17. It would be a great improvement if parades at night by moon or gas-light for drill-purposes in addition to the present day-light parades were allowed, and the commanding officer to have power to fine absentees from such parades.

The

* See attached list of duties A.

The system of paying once a quarter is unsatisfactory. Monthly payments would be a greater incentive to regular attendance than the present system.

In conclusion, I would suggest that, at any rate for this corps, there should be thirty-five parades per annum, twenty of which should be by day and fifteen by night.

That provision be made to pay monthly.

That in cases of absence with leave, on Government duty, or sickness duly certified to, such absence shall not vitiate the efficiency of such men.

That the regulation which orders that a recruit who has joined in the last quarter of any year, and who possibly has not attended a single parade after he was passed into the ranks, provided he does a course of musketry, receives the same pay for efficiency as the man who has attended every duty during the whole year, requires revision.

E. C. CRACKNELL, Major,
Major Commanding Torpedo and Signalling Corps.

According to the last War Office Manual, the following is a complete list of subjects in which a submarine miner should be thoroughly well trained :—

Rowing.	Drying gun-cotton.
Sculling.	Testing detonators.
General handiness in boats.	Adjusting relays.
Taking soundings.	Connecting circuits with relay.
Use of sextant.	Making up primers for ground mines, buoyant, and electro-contact mines.
Knotting and splicing.	Fitting up test table.
Making grummets.	Daily testing.
Making fenders.	Shutter apparatus.
Bending thimbles to wire ropes.	Testing firing battery.
Signalling with flags and lamps.	Testing charges.
Limelight.	Testing electro-contact mines.
Army and Navy code.	Testing galvanometers.
Morse sound reading.	Finding liquid resistance of batteries.
Telephone.	Use of dynamo-electric exploder.
Crowning cables.	Use of reflecting galvanometer.
Soldering and jointing cores.	Use of condenser.
Splicing cables.	Testing cables.
Laying out, picking up, and grappling cables.	Knowledge of principles of electricity and magnetism.
Loading mines.	Working out electric examples.
Connecting up mines and making water- tight joints.	Working electric light.
Lowering mines into boats.	Mechanical mines.
Laying out mines.	Passive obstructions.
Raising mines.	Improvised apparatus.
Work at junction box.	Engine-driving.
Hydraulic testing.	Diving, submarine mining, and general service.
Making up batteries.

1881.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CHARLES AUGUSTUS BLOM CRAWFORD.

(PETITION OF.)

Received by the Legislative Assembly, 15 November, 1881.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.
The Petition of the undersigned, a resident of Sydney,—

HUMBLY SHOWETH :—

That in the year of grace 1874 your Petitioner communicated and made known to the Government two highly valuable discoveries. The communications thus making known the discoveries are dated the 28th June and 25th September respectively of that year.

That the communications thus forwarded to the Government clearly, lucidly, and definitely state what the discoveries were that the Petitioner had made known.

That the Petitioner was induced to adopt this mode of procedure by direct communications for the following reasons :—

- (a) The first-named discovery made known to the Government, under date 28th June, 1874, is an invention "for the protection of ships of war from torpedo attacks," and was expressly intended for conveyance to the British authorities, and for the protection of the whole British Navy.
- (b) It was an invention exclusively for State use in actual warfare.
- (c) It was an invention which required Government aid and appliances, to submit it to a course of experiments for the purpose of testing the validity of the principle as well as the soundness of its (the invention's) arrangements.
- (d) No private citizen, be he ever so wealthy, would have been justified in incurring such heavy expenses involved, attendant on experiments of such a nature and kind, for an idea or invention only to be used by the National Government in emergencies of actual warfare.
- (e) It was an invention eminently befitting the National Government in England to undertake experiments with the Petitioner's invention.

That for the above enumerated reasons, the Petitioner invited Her Majesty's local Government here to become the agency of communicating his discovery to the authorities in England.

That there are evidences, from official and other sources known to the Petitioner, that the said discoveries thus made known to the authorities here have been in particulars or details verily yet surreptitiously abstracted from his (Petitioner's) residence, in the Petitioner's and his wife's absence.

In support of the above belief and full conviction of the Petitioner, the following cardinal evidences, to wit :—

- (1.) That the Petitioner and his wife were the sole occupants residing in the house.
- (2.) That the Petitioner and wife were in the habit of regularly and systematically, at stated hours on nearly every day, leaving the house for three or four hours at a time.
- (3.) That there are fundamental or constitutional evidences unmistakable and distinct, that on divers occasions Petitioner's residence in his absence had been surreptitiously entered into, because it was evident several things had been tampered or disturbed.
- (4.) That there is direct and distinct evidence by Petitioner's wife that on one occasion, in the beginning of the month of July, 1874, she (wife) came home earlier than usual, and quite unexpectedly, and to her surprise found that she could not enter the premises, because of some strange person then being locked inside the house and in full possession of it.
- (5.) There are evidences that on one day in the month of August, 1874, Petitioner came home earlier than was usual, after having stayed from home only about an hour; and in nearing the gate of Petitioner's residence, saw a Government agent coming out, walking fast, from the back of the house, from under the kitchen-shed, where the Petitioner and wife were in the habit of planting the key of the kitchen door, by which door the Petitioner and wife were wont to leave the house.

(6.)

- (6.) There are evidences of Government agents making inquiries of Crawford (the Petitioner) in several places in the neighbourhood.
- (7.) There is evidence of a Government emissary watching in the adjoining yard, waiting opportunities when Crawford and wife had left their residence, and for the purpose of entering Petitioner's domicile.
- (8.) There is evidence by another person who had seen a strange man on Crawford's premises in his absence coming out from the back yard, whence and by which way the Petitioner and wife were in the habit of leaving the house.
- (9.) There is evidence that a Government agent has been watching outside the house, the hour Crawford was in the habit of leaving the house.
- (10.) That further evidences disclose the fact that Government agents were acting in the interest and on behalf of Government.
- (11.) There are direct and distinct statements from persons who resided near by Crawford, and who were in communion and confidence with these Government emissaries, to the effect that Crawford's residence had been entered into and his discoveries robbed.
- (12.) There are direct and distinct statements made by officials in the Government Service to the effect that Crawford's discoveries have been surreptitiously appropriated.
- (13.) There are direct and distinct statements made in the Parliament, by way of spontaneous and virtual acknowledgment, that Government emissaries *have obtained* particulars in a most extraordinary manner of Crawford's invention.
- (14.) That there is direct and corroborative acknowledgment made by Sir John Robertson on 2nd September this year. Crawford called at the Education Department, for the purpose of drawing the attention of Sir John to the statements made by him on 26th May, 1876, in Parliament, and reported in the different journals of the metropolis. Sir John Robertson replied, employing as near as possible the following language—"What's the use of bothering me about it; go to Sir Henry Parkes—he sent the detectives into your house; ask him why he, Sir H., sent them." The just quoted language speaks for itself, and is pregnant with meaning, so that the virtual acknowledgment made by the Government in Parliament on the 26th May, 1876, is thus personally corroborated by Sir John Robertson, and is therefore substantially true (read Parliamentary reports of that date).
- (15.) That there are incidental evidences of a different nature and independent character, yet bearing upon Crawford's discoveries, that have come quite incidentally to Crawford's knowledge, which are convincing proofs (in connection with other evidences) and establish the facts, which will always remain facts—that Crawford's discoveries or inventions as found in his house by Government agents have been forwarded to England.
- (16.) That there are internal evidences in the letters from the Government addressed to the Petitioner Crawford, that the discoveries which found their way to England a few months after Mr. Crawford had announced it here are of *recent date*, and subsequent to Crawford's inventions.
- (17.) That the Petitioner has direct acknowledgment from official source to the effect that Crawford's communications to the Government here, making known his discoveries, had been communicated to the naval authorities.
- (18.) That Mr. Halloran, in May, 1875, made use of the following language in his official room. Addressing Mr. Crawford in a *confidential manner*, Mr. Halloran said, "We know what it is—we know your invention, but the Government will not *wrong* you, at least not the present Ministry—two or three thousand pounds." Here again is a statement by the Principal Secretary, which language is definite in its meaning, namely:—That the Government has acted through their emissaries for the obtainment of Crawford's discoveries.

That the Petitioner now humbly invites your Honorable House to give to the above truthful statements and conscientious facts your honorable consideration.

That furthermore, your Petitioner humbly prays that your Honorable House will grant such relief and extend such redress as your Honorable House in your mature wisdom, consonant with justice, may deem meet.

And your Petitioner, as in duty bound, will ever pray.

CHARLES AUGUSTUS BLOM CRAWFORD.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

POLICE QUARTERS AT WOODBURN.

(CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 11 August, 1881.

RETURN to an Order of the Honorable the Legislative Assembly of New South Wales, dated 5th April, 1881, That there be laid upon the Table of this House,—

“Copies of all petitions, correspondence, and reports relative to the erection of Police Quarters in the Government township of Woodburn, for which the sum of £2,000 was voted by Parliament in 1879.”

(Mr. Fawcett.)

SCHEDULE.

No.	PAGE.
1. T. Bawden, Esq., M.P., to The Colonial Secretary, submitting petition from residents of Richmond River, praying that Woodburn may be appointed a place for holding Courts of Petty Sessions, with minute thereon. 15 June, 1876.	3
2. Inspector-General of Police to the Under Secretary, Colonial Secretary's Department, recommending establishment of Police Station and Petty Sessions at Woodburn, with minutes thereon 20 July, 1876.	3
3. Same to same recommending appropriation of site for Police Buildings. 20 July, 1876.	3
4. Minute of Executive Council appointing Woodburn a place for holding Courts of Petty Sessions. 12 August, 1876.	4
5. The Under Secretary, Colonial Secretary's Department, to the Under Secretary for Lands, intimating approval to the appropriation of sec. 16 in the village of Woodburn as a site for Police buildings. 24 July, 1876.	4
6. The Under Secretary of Justice to Police Magistrate, Lismore, in reference to the holding of regular Courts at Woodburn. 28 August, 1876.	4
7. Same to Inspector General of Police, respecting appointment of Police acting Clerk of Petty Sessions. 28 August, 1876.	4
8. Same to T. Bawden, Esq., M.P., calling attention to appointment of Woodburn as a place of Petty Sessions &c. 28 August, 1876.	4
9. Police Magistrate, Lismore, to Under Secretary of Justice, &c., respecting arrangements for holding regular Courts at Woodburn, with minutes thereon. 7 September, 1876.	5
10. T. Bawden, Esq., M.P., to the Under Secretary, Colonial Secretary's Department, enclosing letter from Mr. Gollan, J.P., in reference to the holding of Courts at Woodburn, with minutes thereon. 16 September, 1876.	5
11. The Under Secretary, Colonial Secretary's Department, to Mr. Bawden, M.P., intimating that his letter had been brought under the notice of the Minister of Justice, &c. 19 September, 1876.	5

65. Same to Under Secretary for Public Works, requesting that plans be prepared, &c., for necessary Government buildings at Woodburn. 4 April, 1881.....	19

POLICE QUARTERS AT WOODBURN.

No. 1.

T. Bawden, Esq., M.P., to The Colonial Secretary.

Sir,

Grafton, 15 June, 1876.

I do myself the honor to transmit herewith a Petition, signed by 103 residents of the Richmond River, praying that Woodburn may be appointed a place for holding Courts of Petty Sessions, and a Police station established there.

Requesting that the prayer of the Petition may receive your early and most favourable consideration.

I have, &c.,

T. BAWDEN.

[Petition referred to.]

To the Honorable The Colonial Secretary, New South Wales,—

The humble petition of the undersigned Sugar-mill Proprietors, Storekeepers, Farmers, and other residents of the town of Woodburn and surrounding districts, Richmond River, New South Wales, humbly sheweth:—

That great inconvenience is experienced by your petitioners on account of the great distance we have to travel to attend to the Courts; the distance to Ballina is about thirty (30) miles, that being the Court assigned to this district, and Lismore Court is distant twenty (20) miles, without any roads to either of the above places, and suitors are placed at great trouble and expense and much loss of time in having to attend the Courts at such a distance.

That the district is growing into importance daily, there being already three sugar-mills established and at work in the district; there are also six stores, and that with the property of the farmer are exposed to great danger for the want of police protection.

That only recently a case of incendiarism has occurred in this district and no clue as to the perpetrators has been discovered on account of no constable being stationed in the neighbourhood.

That as the principal industry of the farmer here is the growth of sugar-cane, and which is of such a flammable nature that it will ignite by night as well as by day, much anxiety is felt for fear of a repetition of the late case of incendiarism.

That, as Woodburn is so centrally situated between Ballina and Lismore, the establishment of a Court of Petty Sessions and Police station here would confer a great benefit upon your petitioners.

Therefore, your petitioners humbly pray that you will be pleased to take the present premises into your most favourable consideration, and cause a Court of Petty Sessions and Police station to be established in the town of Woodburn; and your Petitioners as, in duty bound, will ever pray.

[Here follow signatures.]

Immediate—The Inspector General for report, B.C., 19 June, 1876.—H.H.

No. 2.

The Inspector General of Police to The Principal Under Secretary.

Sir,

Inspector General's Office, Sydney, 20 July, 1876.

Superintendent Orridge reports that he has recently visited the Richmond River, passing through Woodburn. He recommends that a Police station should be at once formed at that place, and that a Court of Petty Sessions should be established there.

Judging from the report I concur in the recommendation, and shall be prepared to send a constable who will be competent to act as Clerk of Petty Sessions.

Fortunately we shall be able to rent a small cottage with the use of a grass paddock for 7s. per week.

In a separate communication I have applied for the reservation of a suitable site for a station, lock-up, and Court-room.

I suggest reference to Department of Justice as regards Petty Sessions.

EDMUND FOSBERY,

Inspector General of Police.

Approved—so far as the police station is concerned. I apprehend that the establishment of a Court of Petty Sessions will require the concurrence of my honourable colleague the Minister of Justice.—JOHN R., 29/7/76. Yes, that was intended.—31/7/76. The Under Secretary of Justice, B.C., 31/7/76.—H.H. Prepare minute.—J.D., 10 Aug., 1876. Minute, 12/8/76.

No. 3.

The Inspector General of Police to The Principal Under Secretary.

Sir,

Inspector General's Office, Sydney, 20 July, 1876.

I have the honor to recommend that the Honorable the Minister for Lands may be moved to appropriate section 16, in the Village of Woodburn, as a site for Police buildings.

I have, &c.,

EDMUND FOSBERY,

Inspector General of Police.

Application may be made for the required site to the Minister for Lands.—22/7/76. Letter to Under Secretary for Lands, 24th July, 1876.

No. 4.

No. 4.

Minute of Executive Council.

Department of Justice and Public Instruction, Sydney, 12 August, 1876.

I RECOMMEND that Woodburn, within the Police District of Richmond, be appointed a place of holding Courts of Petty Sessions, under the Act of the Colonial Legislature, 3rd Will. IV, No. 3.

JOSEPH DOCKER.

The Executive Council advise that Woodburn, Police District of Richmond, be appointed a place for holding Courts of Petty Sessions.—ALEX. C. BUDGE, Clerk of the Council. Minute 76/39, 14/8/76. Confirmed, 21/8/76. Approved.—H.R., 14/8/76. P.M., Lismore, Mr. Bawden, M.P., Inspector General of Police, and Gazette, 28/8/76.

No. 5.

The Principal Under Secretary to The Under Secretary for Lands.

Sir,

Colonial Secretary's Office, Sydney, 24 July, 1876.

In transmitting to you the accompanying copy of a letter [see No. 3 *ante*] that has been received from the Inspector General of Police, I am directed to state, for the information of the Secretary for Lands, that the Colonial Secretary approves of the application therein made for the appropriation of section 16, in the village of Woodburn, as a site for Police buildings.

I have, &c.,

HENRY HALLORAN.

No. 6.

The Under Secretary of Justice, &c., to The Police Magistrate, Lismore.

Sir,

Department of Justice and Public Instruction, Sydney, 28 August, 1876.

I am directed by the Minister of Justice and Public Instruction to invite your attention to a notification appearing in the *Government Gazette* of 29th instant, appointing Woodburn a place for holding Courts of Petty Sessions, and to request that you will have the goodness to suggest what arrangements would be most convenient to secure the attendance of a regular Bench at Woodburn, and how often, in your opinion, Courts should be held, having regard to public convenience.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 7.

The Under Secretary of Justice, &c., to The Inspector General of Police.

Sir,

Department of Justice and Public Instruction, Sydney, 28 August, 1876.

Referring to your memo. of 20th ult., to the Principal Under Secretary, reporting upon petition praying establishment of Courts of Petty Sessions at Woodburn, I am directed by the Minister of Justice and Public Instruction to invite your attention to a notification appearing in the *Government Gazette* of 29th inst., appointing Woodburn a place for holding Petty Sessions.

I am to request that you will have the goodness to suggest the most suitable arrangements for holding Petty Sessions at above place, and submit the name of some member of the Police Force for appointment as Acting Clerk of Petty Sessions there.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 8.

The Under Secretary of Justice, &c., to T. Bawden, Esq., M.P.

Sir,

Department of Justice and Public Instruction, Sydney, 28 August, 1876.

Referring to your letter of 15th June last to the Colonial Secretary's Department, forwarding petition, praying establishment of Courts of Petty Sessions at Woodburn, I am directed by the Minister of Justice and Public Instruction to invite your attention to a notification appearing in the *Government Gazette* of 29th inst., appointing Woodburn a place for holding Petty Sessions.

I am to add that the necessary steps are being taken for the appointment of an Acting Clerk of Petty Sessions at that place.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 9.

The Police Magistrate, Lismore, to The Under Secretary of Justice, &c.

Sir,

Richmond River District, Lismore, 7 September, 1876.

I have the honor to acknowledge the receipt of your letter of the 28th ultimo, respecting the establishment of a Court of Petty Sessions at Woodburn in this district, and in reply beg to state that there is only one magistrate resident there, and that there is at present no one in the neighbourhood whom it would appear to be desirable to appoint. As, however, Woodburn is only distant from Lismore 20 miles by land, and 60 by water, I shall have no difficulty in attending occasionally when more than one magistrate is required to dispose of the business.

With

With reference to the times of holding Courts, I am of opinion that they cannot be held at greater intervals than four weeks without risk in many cases of a denial of justice, as complainants in the Police, and suitors in the small Debts Courts, cannot proceed at any other Bench than the nearest, no matter what the intervals are between the sittings.

I have, &c.,

H. S. ELLIOTT,
Police Magistrate.

Approved. Mr. Elliott to attend when required by the Bench.—J.D., 21st September, 1876.
Inform accordingly.—22/9/76.

Bench, Woodburn, P.M., Lismore, I. G. Police, and Mr. Bawden, M.P., 23/9/76.

No. 10.

T. Bawden, Esq., M.P., to The Principal Under Secretary.

Sir,

Grafton, 16 September, 1876.

Referring to your letter intimating that a Court of Petty Sessions had been established at Woodburn, Richmond River, and requesting information as to the most suitable time for holding such Courts, &c., I do myself the honor to state that upon receipt of that letter I immediately sent it on to Mr. W. Gollan, J.P., of Woodburn, from whom I have just received the accompanying reply.

I might suggest a reference of the matter to Mr. Elliott, P.M., at Casino, in whose district Woodburn is situate. In the dearth of magistrates it might be desirable to so arrange, that for a time at least, Mr. Elliott might visit Woodburn when occasion requires.

I have &c.,

T. BAWDEN.

[Enclosure referred to.]

Mr. W. Gollan to T. Bawden, Esq., M.P.

Dear Sir,

Woodburn, Richmond River, 12 September, 1876.

I am in receipt of your letter in reference to a Court at Woodburn, and how to secure a regular attendance of a Bench of Magistrates.

As I am the only one on the Commission of the Peace in this locality, and as there would be no certainty of magistrates attending from the other parts, I would suggest that two or three gentlemen here should be appointed magistrates, viz., Alexander Meston, of Ullmarra, Clarence River, Alfred Poolman, of Woodburn, and I think a Court held once a month would be quite sufficient for the present.

I suppose the Government will supply the necessary books, forms, &c., which will be required for the use of the court.

I have, &c.,

W. GOLLAN.

Any former papers. None here.—18/9/76. The Under Secretary of Justice, &c., B.C., 18th September, 1876.—H.H. Inform Mr. Bawden.—19/9/76.

No. 11.

The Principal Under Secretary to T. Bawden, Esq., M.P.

Sir,

Colonial Secretary's Office, Sydney, 19 September, 1876.

I am directed by the Colonial Secretary to acknowledge the receipt of your letter of the 16th instant, respecting the time for holding Courts of Petty Sessions at Woodburn, and to inform you that same has been brought under the notice of the Minister of Justice and Public Instruction, to whom the matter properly belongs.

I have, &c.,

HENRY HALLORAN.

No. 12.

The Under Secretary of Justice, &c., to The Police Magistrate, Lismore.

Sir,

Department of Justice and Public Instruction, Sydney, 23 September, 1876.

In reply to your letter of 7th instant, I am directed by the Minister of Justice and Public Instruction to inform you that he approves of your visiting the Court of Petty Sessions at Woodburn upon requisition from the local Bench, for which you will be allowed the usual travelling expenses of 25s. per day when necessarily engaged upon public duty, vouchers for which to be forwarded to this Department.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 13.

The Under Secretary of Justice, &c., to The Bench of Magistrates, Woodburn.

Gentlemen,

Department of Justice and Public Instruction, Sydney, 23 September, 1876.

I am directed by the Minister of Justice and Public Instruction to inform you that the Police Magistrate for the Richmond River has been instructed to visit the Court of Petty Sessions at Woodburn upon requisition from you that his presence is necessary at that place in the interests of the public, of which Mr. Elliott has been duly apprised.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 14.

The Under Secretary of Justice, &c., to The Inspector General of Police.

Sir, Department of Justice and Public Instruction, Sydney, 23 September, 1876.
Referring to my letter of 28th ultimo, I am directed by the Minister of Justice and Public Instruction to inform you that he approves of the Police Magistrate for the Richmond River visiting the Courts of Petty Sessions at Woodburn upon requisition from the local Bench, for which he will be allowed the usual travelling allowance of 25s. per day when necessarily engaged upon public duty.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 15.

The Under Secretary of Justice, &c., to T. Bawden, Esq., M.P.

Sir, Department of Justice and Public Instruction, Sydney, 23 September, 1876.
Referring to your letter of 16th instant, to the Colonial Secretary's Department, respecting the holding of Courts of Petty Sessions at Woodburn, I am directed by the Minister of Justice and Public Instruction to inform you that the Police Magistrate for the Richmond has been instructed to visit Woodburn upon requisition from the local Bench that his services are required, of which Mr. Elliott has been duly apprised.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 16.

The Under Secretary for Lands to The Principal Under Secretary.

Sir, Department of Lands, Sydney, 24 March, 1877.
In reference to your letter of the 24th July last, transmitting an application from the Inspector General of Police for the appropriation of section 16, in the village of Woodburn, as a site for Police buildings, I am directed to inform you that, under a report obtained from the Surveyor General on the subject, it appears that the section in question contains (10) ten half-acre allotments, which is considered in excess of the area necessary for the purpose mentioned.

I am, however, directed to inform you that the Honorable the Minister for Lands has approved of allotments 1, 2; and 3, situated within the section referred to, being appropriated for Police buildings.

I have, &c.,
W. W. STEPHEN.

The Inspector General of Police, B.C., 3rd April, 1877.—H.H. To be returned. Noted and returned.—EDMUND FOSBERY, I.G.P., B.C., 3/4/77.

No. 17.

T. Bawden, Esq., M.P., to The Secretary for Public Works.

Sir, Grafton, 5 April, 1877.
I do myself the honor to transmit herewith a petition signed by 100 inhabitants of Woodburn and neighbourhood, Richmond River, praying that provision may be made upon the ensuing Estimates for the erection of a Court-house and Police Barracks in the Government township of Woodburn.

Requesting that the subject may receive your early and most favorable consideration,

I have, &c.,
T. BAWDEN.

[Petition referred to.]

To the Honorable the Minister for Works, Sydney,—

The petition of the undersigned inhabitants of Woodburn and surrounding district, Richmond River, humbly sheweth:—

That a Court of Petty Sessions was established at Woodburn and police stationed there some time ago.

That your petitioners believe no steps have been taken towards the erection of a Court-house or Police residence at the said place.

That the Court is being held at present in a private room, and the constable residing on private property; hence your petitioners consider it would be both desirable and a public benefit were a Court-house and Police Barracks erected in the Government township of Woodburn.

Your petitioners therefore humbly pray that you will take these premises into favourable consideration and cause a sum of money to be placed upon the next ensuing Estimates for the erection of a Court-house and Police Barracks in the Government township of Woodburn. And your petitioners, as in duty bound, will ever pray.

[Here follow signatures.]

The Under Secretary for Public Works.—W.E.P., B.C., 7 May, 1877. Perhaps the Colonial Architect knows something of this.—J.R., B.C., 9/5/77. I do not know anything of this matter.—J.B., 14/5/77. Under Secretary of Justice, &c.—J.R., B.C., 17/5/77. The Inspector General of Police may perhaps be in a position to obtain information respecting necessity for erection of Court-house at Woodburn.—F.B.S., 21 May, 1877. The Inspector General of Police.—W. E. PLUNKETT, B.C., 21 May, 1877. I think it necessary that a Court-house

Court-house and Police Station should be erected at Woodburn; buildings similar to those at Rockley would in my opinion provide sufficient accommodation, though perhaps the residents may not think so.—EDMUND FOSBERY, I.G.P., 23 May, 1877. B.C., the Under Secretary, Department of Justice, &c. Approved.—F.B.S., 31 May, 1877. *Vide* approval on Mr. Fosbery's suggestion herein.—The Under Secretary for Works, B.C., 2 June, 1877.—W.E.P. Colonial Architect.—J.R., B.C., 7/6/77.

No. 18.

T. Bawden, Esq., M.P., to The Secretary for Public Works.

Sir,

Grafton, 4 September, 1877.

I do myself the honor to transmit herewith a letter from Mr. John Lang, of Woodburn, Richmond River, complaining of the delay in complying with the prayer of a petition sent in some time since relative to a Court-house, &c., at Woodburn.

Requesting the favour of your early consideration of this question and decision thereon,

I have, &c.,

[Enclosure.]

T. BAWDEN.

Mr. J. Lang to T. Bawden, Esq., Grafton, Clarence River.

Sir,

Woodburn, 31 August, 1877.

Some time ago the inhabitants about Woodburn petitioned the Government for a sum of money to be placed on the Estimates for the erection of a Court-house and police residence on the Government township of Woodburn, and we notice several additional estimates have been passed but nothing said regarding the above object. Now it would seem that since the establishment of a public-house in this part of the district the matter of a Court-house and lock-up becomes every day more urgent, although the Court is held at present in one of Mr. Gollan's private rooms, and the policeman resides on his property also. There is no lock-up, neither would it be desirable to have such on private property, as it would be unjust, and much against the interest of those who have already laid out their money on the Government township; and it cannot be said the present place is more convenient to the public, as it is right opposite, only the river between. Would you therefore have the goodness to bring this matter before the proper parties again at your earliest convenience, and oblige,

Sir, &c.,

JOHN LANG.

Colonial Architect, B.C., 7/9/77.—J.R.

No. 19.

The Inspector General of Police to The Principal Under Secretary.

Sir,

Inspector General's Office, Sydney, 14 September, 1877.

In submitting the attached copy of a report received from Superintendent Orridge respecting police accommodation at Woodburn, I have the honor to recommend that the Public Works Department may be moved to cause police buildings to be erected at that place, to contain a room sufficiently large for holding Courts, two cells, and two living rooms, with a detached kitchen.

I have, &c.,

EDMUND FOSBERY.

[Report referred to.]

Superintendent Orridge to The Inspector General of Police.

Sir,

Police Department, Armidale Station, 11 September, 1877.

I have the honor to report that the constable stationed at Woodburn, on the Richmond River, is living in a very poor and out-of-the-way cottage (the only one procurable), for which 7s. rent per week is being paid; and the Court of Petty Sessions is held at the store of a local magistrate, Mr. Gollan.

Allotments 1, 2, and 3 of section 16, village of Woodburn, have been appropriated for police buildings, and I beg to recommend that a Court-house and lock-up, similar to that at Maclean, on the Clarence River, should be built there, the accommodation being Court-room, two rooms for the constable, two cells, detached kitchen, and double-pit closet; the buildings to be of wood, proof against the white ant.

As stone for foundations is very scarce they might be placed on blocks.

It will also be necessary to have the reserve cleared of scrub, with which it is densely covered.

I have, &c.,

J. W. ORRIDGE,

Superintendent, Northern District.

The report of the Colonial Architect is desirable.—15/9/77. The Under Secretary for Public Works, B.C., 15/9/77.—H.H. Colonial Architect, B.C., 17/9/77.—J.R. The cost of a suitable building will be about £2,000.—J.B., 26 November, 1877. Principal Under Secretary, B.C., 29/11/77.—J.R. Are funds available?—H.H., B.C., 3/12/77. May be approved, subject to funds being voted, 3/12/77. Approved.—J.R., 4/12/77. The Under Secretary for Public Works, B.C., 4/12/77.—H.H. Colonial Architect, B.C., 6/12/77.—J.R.

No. 20.

Telegram from Mr. W. Gollan to Inspector General of Police.

Lismore, 21 May, 1878.

WILL I proceed with erection of police station, Woodburn—timber ready—men employed waiting? If it will be taken, I will proceed at once—awaiting reply.

Referred to the Principal Under Secretary in connection with my letter of the 26th ultimo. No. 78/316. See copy herewith.—EDMUND FOSBERY, I.G.P. B.C., 22 May, 1878.

No. 21.

The Inspector General of Police to The Principal Under Secretary.

Sir,

Office of Inspector General of Police, Sydney, 26 April, 1878.

With reference to the accommodation for Police and Petty Sessions at Woodburn on the Richmond River, I have the honor to state that a small cottage is now rented in an unsuitable position, and that prisoners have to be chained to a tree in the absence of any other means for their safe custody.

The

The Government township is on the opposite side of the river to where the principal village now is, and the reserve is a dense scrub. I do not think therefore that it would be advisable for the Government to erect a building, but as timber is cheap and plentiful, a magistrate there, Mr. W. Gollan, will put up a suitable cottage, with hardwood cell and court-room, 24 x 14, and let it to the Government for £52 per annum. There are usually some objections to such a course, but in this instance I recommend it as the most advantageous arrangement, and as Mr. Gollan asks for a prompt reply, I beg to request instructions as early as possible. The rental would be chargeable between the Department of Justice and Police.

I have, &c.,

EDMUND FOSBERY, I.G.P.

Submitted for decision. The original application has been mislaid. 1st June, 1878. Approved.—1/6/78. Inform U.S. Finance and I.G.P., 3/6/78.

No. 22.

The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir,

Colonial Secretary's Office, Sydney, 3 June, 1878.

I am directed by the Colonial Secretary to state, for the information of the Colonial Treasurer, that the Inspector General of Police has been authorised to accept an offer made by Mr. W. Gollan, J.P., to erect at Woodburn a cottage with hardwood cell and court-room attached for use as a police station, for a rental of £52 per annum.

I have, &c.,

M. R. ALLAN.

No. 23.

The Principal Under Secretary to The Inspector General of Police.

Sir,

Colonial Secretary's Office, Sydney, 3 June, 1878.

Referring to your letter of the 26th April last, I am directed to inform you that in accordance with the recommendations therein made the Colonial Secretary approves of your accepting the offer of Mr. W. Gollan, J.P., to erect at Woodburn a cottage with hardwood cell and court-room attached, for a rental of £52 per annum.

I have, &c.,

M. R. ALLAN.

No. 24.

Mr. C. Jackson to The Secretary for Public Works.

Dear Sir,

Woodburn, June 11, 1878.

Having just received a letter from T. Bawden, Esq., stating a temporary Petty Sessions accommodation was being erected upon private land with a view of renting same to Government,—

As the above piece of news created a burst of indignation and petitions are being signed by nearly all in and around Woodburn in protest against the rental by Government of the building, when a proper site is reserved on the plan of township for that special purpose, we would therefore request you will try your best not to allow the building to get far ahead for a week or ten days until you hear from the 200 or more residents of Woodburn and district.

Yours, &c.,

C. JACKSON,

For some 200 or more residents of Woodburn.

Colonial Architect, for report, B.C., 19/6/78—J.R. There has been no previous reference made to me respecting this matter. The Police Magistrate however has called upon me recently; he states the building has been erected, and is in every way suitable for the purposes intended; he also states that the Government Reserve is on the opposite side of the river, its locality is objectionable, besides being liable to floods.—J.B., 23 July, 1878. The Under Secretary for Justice, B.C., 25 July 1878.—J.R. Mr. Jackson may be informed in terms of the Colonial Architect's report.—J.L., 10 August, 1878. Mr. Jackson, 13/8/78.

No. 25.

The Under Secretary for Lands to The Principal Under Secretary.

Sir,

Department of Lands, Sydney, 29 June, 1878.

Adverting to my letter of the 24th March, 1877, informing you that the Secretary for Lands had approved of the appropriation of allotments 1, 2, and 3. of section 16 for police purposes, I am now directed to forward herewith a tracing* showing the said land.

I have, &c.,

W. W. STEPHEN.

Inform the Inspector General of Police—3rd.

* Not printed, as site subsequently altered, about 2 acres in section 12 being substituted, 1st July, 1879.

No. 26.

The Principal Under Secretary to The Inspector General of Police.

Sir, Colonial Secretary's Office, Sydney, 4 July, 1878.
 Referring to the blank cover communication from this office of the 3rd April, 1877, respecting the appropriation of certain land in the village of Woodburn as a site for police buildings, I am now directed by the Colonial Secretary to transmit to you herewith a tracing, which has been received from the Under Secretary for Lands, showing the land appropriated for the purpose.

I have, &c.,
 M. R. ALLAN.

No. 27.

Mr. C. Jackson to The Secretary for Public Works.

Dear Sir, Woodburn, 4 July, 1878.
 I herewith beg to hand you, on behalf of the residents of Woodburn and district, a petition respecting Court-house and Petty Sessions accommodation.

Trusting the same will reach you safely,
 I remain, &c.,
 C. JACKSON.

[Petition referred to.]

To the Honorable the Minister for Public Works, Sydney,—

The petition of the undersigned residents in Woodburn and surrounding districts, humbly sheweth:—

- 1st. That ground was reserved in the village of Woodburn on which to erect Police barracks, Court-house, and other necessary Government buildings some time ago.
 - 2nd. That your petitioners are informed the Government now intends to rent private buildings for said purposes upon the opposite side of the river, thus inducing settlement on private ground in opposition to and in competition with the Government township, thereby causing a corresponding check to its progress and occupation.
 - 3rd. That such a course of action is very detrimental to the Government township, being calculated to deteriorate the value of property in it and is likely to act prejudicially on the sale of the portion yet to be sold, by diverting speculation and capital to the opposite bank of the river.
 - 4th. That your petitioners believe it to be very bad economy to hire buildings for Government purposes on private ground while the ground reserved for that purpose remains uncleared, as six months rent of the private building would suffice to put the Government ground in order to receive those buildings, and as this must be done soon the money expended in rent appears to be wasted.
 - 5th. That your petitioners consider it is not good policy to hold Courts in private houses or to locate the police on private property, as it may in the latter case lead to familiarity and consequent influence and obligation.
- Your petitioners therefore humbly pray that you will take these premises into favourable consideration and cause the necessary steps to be taken towards the immediate erection of the required buildings for Police barracks and a Court-house upon the ground reserved for that special purpose in the Government township of Woodburn.
- And your petitioners, as in duty bound, will ever pray, &c.

(Here follow 110 signatures.)

Perhaps the Colonial Secretary knows something of this matter.—J.S., 10/7/78. The Principal Under Secretary, B.C., 12 July, 1878.—J.R. Inspector General.—M.F., 15/7/78. The Inspector General of Police.—M.R.A., B.C., 16/7/78.

No. 28.

The Inspector General of Police to The Principal Under Secretary.

Inspector General's Office, Sydney 13 August, 1878.
 THE larger portion of the population is now located on the side of the river where the constable is stationed, and the principal part of his duty has to be performed on that side.

I am informed that the site selected in the Government township is subject to flood. I therefore suggest that the Government surveyor be instructed to report upon another site before it is considered whether a large sum (probably £1,200 or more) should be provided for building a Court-house, lock-up, &c.

T. Bawden, Esq., M.P., to The Minister of Justice, &c.

Sir, Grafton, 4 September, 1878.

I do myself the honor to transmit herewith a letter from Mr. C. Jackson, of Woodburn, Richmond River, relative to the choice of site for Court-house at that place.

I have, &c.,
T. BAWDEN.

[Enclosure.]

Mr. C. Jackson to The Minister of Justice, &c.

Dear Sir,

Referring to your letter of 13th instant (No. 78/6890), will you kindly inform me, on behalf of the residents of Woodburn, why the locality chosen as reserve for Court-house is objectionable, it being situated in the township as laid out by Government surveyors and partly sold in allotments, and persons purchasing allotments adjoining it (last week) at prices over £60 per acre relied entirely upon the surveyors judgment in choosing the best position for same. With regard to its liability to floods, I may add, both sides of the river are equally alike in that respect.

I do not like to worry you respecting this matter, but we certainly cannot understand the Court-house being upon private land, encouraging a township in opposition to the Government one. It is acting prejudicially already against the value of allotments still to be put up for sale.

Awaiting your reply,

I remain, &c.,
C. JACKSON.

The Inspector General of Police may perhaps be in a position to obtain some further information upon the subject of this communication and the attached papers.—J.L., 14 September, 1878. The Inspector General of Police, B.C., 17 September, 1878.—W. E. PLUNKETT. Mr. Bawden informed, 19/9/78.

No. 32.

The Inspector General of Police to The Under Secretary of Justice, &c.

THE reserve is in a dense scrub, and the principal business and population are on the side of the river where the station is situated, in rented premises.

When provision is voted for Government buildings they should probably be erected on the township reserve.

B.C., 21 Sept., 1878.

EDMUND FOSBERY I.G.P.

Inform Mr. Bawden, M.P., and request report from the Lands Department on subject of Mr. Jackson's letter.—J.L., 28 September, 1878. Mr. Bawden, M.P., 1/10/78. Sir, Sydney, 29 October, 1878.

I do myself the honor to transmit herewith a letter from Mr. C. Jackson, of Woodburn, dated 14th October, 1878, in reply to your letter 78/8276.

To the contents of Mr. Jackson's letter I would desire to invite your especial attention, and also request that you will please submit that portion of it which refers to matters under other departments to your colleagues having charge of such departments.

I have, &c.,
T. BAWDEN.

[Enclosure referred to.]

C. Jackson to T. Bawden, Esq., M.P.

Dear Sir,

Exchange Store, Woodburn, Richmond River, 14 October, 1878.

In reply to your letter from the Minister of Justice and Public Instruction, No. 78/8276, I beg to say Woodburn must have been widely misrepresented to him. Instead of the principal places of business and otherwise being upon the opposite side of the river, the facts are quite to the contrary; for instance, by far the largest store and decidedly the handsomest building on the river is upon the Government township. We have also the Public School, English Church, Scotch Church, together with nearly forty inhabitants residing now on the township proper; and if Government did their duty by us we would have the Court-house, post and telegraph office also upon this side. The other side of river can only boast of one small store and public-house, exclusive of the temporary building used as Court-house, which was petitioned against by some hundreds of residents but no notice taken of it.

I myself have no property in Woodburn, neither would I purchase any under the present existing state of affairs. I certainly censure the Government for not helping a township forward when there is some £100,000 of land still for sale, and if they are so blind to their own interests as to allow another man to form a township upon private land, costing literally nothing (compared to price Government land is fetching, i.e., from £50 to £60 an acre in the township), when they have so large an issue at stake,—well as far as I am concerned they are quite welcome to do so; I only write thinking they know nothing about us, and are not thoroughly acquainted with facts.

As another instance of private influence I may mention Mr. Gollan's brother has been appointed to work the Government punt opposite his own door, to the exclusion of another man, who has had charge of and done his duty faithfully for six months past, putting Government servants and others across the river free of charge.

If all districts are worked as this one is, Mr. Farnell may well have occasion to say the Government is living beyond its income, and largely upon the capital of the country.

I am sorry to have been of so much trouble to you, and for the future will leave the Government to act as they please, for I find they will have their own way even against their interest.

I have, &c.,
C. JACKSON.

Acknowledged, 1 November, '78. Forwarded for the information of my hon. colleague, the Secretary for Lands, the necessary extracts having been sent to the Post Office and Works Departments.—J.L., 21 November, 1878. The Under Secretary for Lands, B.C., 23 November, 1878.—W. E. PLUNKETT.

No. 37.

Mr. R. Rogers to The Colonial Secretary.

Sir, Woodburn, Richmond River, 12 November, 1878.

I do myself the honor, being a resident of Woodburn, and having seen that £2,000 were placed on the Estimates for the erection of a Court-house and police quarters in the village of Woodburn, and cannot conceive how such a matter was brought about, as there is at present a Court-house and police quarters at Woodburn which is all that is required at present, and to erect public buildings in the village of Woodburn would be waste of Government money for the following reasons:—

The Inspector General of Police having visited Woodburn about nine months ago, and as the Court business was carried on in a private room kindly granted by Mr. W. Gollan, saw the necessity of having proper buildings at once erected, and requested Mr. W. Gollan to erect same, and that they would be taken at a rental by the Government, at which Mr. W. Gollan built suitable premises for that purpose and which are now used as a Court-house, and which give the inhabitants of this district every satisfaction.

As soon as the building was commenced a Mr. Lang and a Mr. Jackson got up a hole and corner petition and took it round the district for signature. A great many of the inhabitants of Woodburn never saw such petition, which was taken to outlying districts for signatures, these persons having no interest whatever in the matter.

That Mr. Lang and Mr. Jackson being the only inhabitants of the village of Woodburn, and the place instead of being inhabited is only standing scrub, and the land likewise being low and subject to any ordinary flood, makes it quite unsuitable for Government buildings to be erected on.

The present Court-house is most suitable, and will be for a number of years to come, as the whole of the business of Woodburn is on the north side of the river and people would be put great inconvenience in having to cross the river should the proposed buildings be erected; therefore the Government should consider well before granting the proposed sum as it will only be a waste of public money.

Hoping

Hoping that you will take the matter into your serious consideration and cause further inquiries to be made to the police authorities as to the suitability of the present place.

The Police Magistrate, H. S. Elliott, Esq., will be able to give valuable information upon the matter.

I have, &c.

ROBERT ROGERS.

For report of the Inspector General of Police.—M.F., 19/11/78. B.C., 19/11/78. To be returned.—M.R.A.

No. 38.

The Inspector General of Police to The Principal Under Secretary.

THE present buildings will meet all requirements for some time to come, though I informed Mr. Gollan that the Government tenancy would be of uncertain duration.

I did not apply for the sum of £2,000 to be placed on the Estimates, indeed I consider such an expenditure in a small village would not be justifiable. Mr. Bawden, M.P., spoke to me on the subject and I understood that he intended to make some representations to the Government.

When it is considered necessary to erect Government buildings they should be placed at the Government township if equally convenient to the public as the present site, and if an eligible allotment can be obtained, which has yet to be reported upon by the Land Department.

EDMUND FOSBERY, I.G.P., 19/11/78.

I do not see the authority for putting any amount on the Estimates.—M.F., 21/11/78. There are no papers here on which the money was authorised to be placed, as has been done, on the Estimates for 1878. Perhaps the authority was given on papers now quoted—77/3134. 21/11/78. Let this statement be seen by the Secretary for Works, who directed the amount to be placed on the Estimates.—M.F., 22/11/78.—The Under Secretary for Public Works.—M.R.A., B.C., 25/11/78. To be returned. Colonial Architect, B.C., 26/11/78.—J.R. The amount was in the first instance submitted for Estimates, 1878, in accordance with approval on P.W., 77/4827 herewith.—J.B. 29 Nov., 1878.

Police Buildings at Woodburn.

This matter was noted for additional Estimates, but the sum was not included in printed lists submitted. Place on Estimates.—J.S., 22/7/78. Colonial Architect, B.C., 22 July, 78.—J.R. The Principal Under Secretary, B.C., 22/11/78.—J.R. To be returned for Estimates.

No. 39.

Mr. E. Keats to Sir John Robertson.

Sir,

Woodburn, Richmond River, 16 November, 1878.

I do myself the honor, being a resident of Woodburn, and having seen that £2,000 are placed on the Estimates for the erection of a Court-house, &c., in the village of Woodburn, cannot comprehend how the matter was brought about, as there is at present a Court-house and Police station at Woodburn, which is all that is required for the present, and to erect public buildings in the village of Woodburn would be a waste of money for the following reasons:—

About nine months ago the Inspector General of Police visited this district, and found that the court business was carried on in a private room, kindly lent by Mr. W. Gollan, and saw the necessity of having proper buildings erected, requesting Mr. W. Gollan at the same time to erect same, and that they would be taken at a rental by the Government; whereupon Mr. W. Gollan built suitable premises for the purpose, and which are now used as a Court-house and Police station, and gives to the majority of the inhabitants of this district every satisfaction.

Shortly after the buildings were commenced a Mr. Lang and a Mr. Jackson got up a hole and corner petition, took it round for signatures, which a great many of the inhabitants of Woodburn never saw, and then carried it to outlying districts to persons for signature, who had no interest whatever in the matter.

That Messrs. Jackson and Lang being the only inhabitants of the village Woodburn, which place instead of being inhabited is standing scrub, and the land being low is subject to any ordinary flood going over it, which makes it quite unsuitable for Government buildings to be erected on.

The present Court-house is most suitable, and will be for a number of years to come; also the whole of the business of Woodburn is carried on on the north side, and should the proposed buildings be erected it would cause the inhabitants much inconvenience in having to cross the river; therefore the Government should consider well before granting the proposed sum, as it would only be a waste of public money.

Hoping you will take into your serious consideration, and cause further inquiries to be made to the police authorities as to the suitability of the present premises, and the Police Magistrate, H. S. Elliott, Esq., would no doubt if asked be able to give valuable information upon the matter.

I have, &c.,

EBENEZER KEATS.

• The Under Secretary to the Colonial Secretary,—Please submit this letter to Mr. Fitzpatrick; and at a convenient time furnish me with information to enable me to reply.—JOHN R., 26th November, 1878.

Works, 28 November.—M.F. The Under Secretary for Public Works, with reference to former papers, B.C., 28/11/78.—M.R.A. To be returned. Colonial Architect, B.C., 5/12/78.—J.R.

PUBLIC WORKS AND BUILDINGS.

Estimates, 1879.

FOR the erection of police buildings at Woodburn, £2,000.—This was included in my draft Estimates, for 1878, but it did not appear in the printed copy. The Inspector General of Police has recommended the erection of these buildings, and that a room sufficiently large for holding courts be included. The sum named is the estimated cost of the work, and the Minister for Works has directed that it be placed on Estimates, P.W., 78/3449.

Colonial Architect's Office, Sydney, 23rd August, 1878. Voted, 20th May, 1879. Colonial Architect, B.C., 23/5/79.—G.H. Objections having been raised to the erection of these buildings, I forward herewith the papers relating thereto, and await further instructions.—J.B., 14 Nov., 1879.

13

No. 40.

The Under Secretary of Justice, &c., to T. Bawden, Esq., M.P.

Sir, Department of Justice and Public Instruction, Sydney, 8 April, 1879.

Referring to my letter of the 1st of October last, respecting site for Court-house at Woodburn, Richmond River, I am directed by the Minister of Justice and Public Instruction to state, for your information, that under report which has been received upon the subject, it appears that allotments 1, 2, and 3 of section No. 16 have been measured, and approved as a site for police buildings, and that a portion of this land will be available for Court-house purposes at Woodburn.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 41.

T. Bawden, Esq., M.P., to The Under Secretary for Public Works.

Sir, Grafton, 13 November, 1879.

I do myself the honor to forward herewith a letter from Mr. John Lang, of Woodburn, dated 8 November, 1879, with reference to the money voted for Court-house and Police Quarters, &c., at Woodburn.

I shall be glad if you will please inform me when tenders are likely to be invited for these works, and what is the cause of delay.

I have, &c.,
T. BAWDEN.

[Enclosure.]

Mr. J. Lang to T. Bawden, Esq., M.P.

Sir, Woodburn, 8 November, 1879.

Some time ago I noticed that the sum of £2,000 was granted for Police barracks and Court-house at Woodburn. Will you kindly inform me when the Government intend expending the money, as the present state of affairs are not satisfactory, the Court-house and Police Quarters being on private property, and against the interests of the Government township.

I have, &c.,
JOHN LANG.

Acknowledged, 7/11/79.

Colonial Architect, B.C., 17/11/79.—G.H.

The Under Secretary for Public Works, with reference to my B.C. minute of 14 November last, on P.W. 79/2792 herewith, asking for instructions, which appears to have been overlooked.—J.B., 27 January, 1880. The Principal Under Secretary, B.C., 29 January, 1880.—G.H.

No. 42.

Mr. H. Dawson to The Secretary for Public Works.

Sir, Woodburn, Richmond River, 22 November, 1879.

Will you kindly inform me when tenders will be called for the erection of Court-house and police quarters in the township of Woodburn, Richmond River. Many are asking the same question through our honorable Member, Mr. Bawden. I am aware that he has written to a friend of mine, Mr. Charles Jackson, stating that the said tenders would be called for on the 1st day of November instant. Now this is the twenty-second (22nd), and yet it is not done. Now, honorable sir, I consider this delay is extremely vexatious. The Government lay out this township and realise a high price for the allotments sold, the purchasers expending heavy amounts in various ways to improve the same, expecting and feeling assured the Government would go on with the buildings as above-mentioned, and in the township laid out by them, the land for the same being, I believe, definitely chosen. Again, speaking for myself and others particularly and immediately interested, we are much disappointed at the action of the Government, who, by the way, are encouraging a private individual to build on his own estate, and they rent from him. Now this is not justice to us, under the circumstances, which you must candidly admit. As I have already stated, they have the land for the purpose, and the erection of these buildings would give the township an ornament, and would enhance the value of all properties in and around the same. This monopoly by any private individual is not in accord with the spirit of fair play, and is an extravagant lavishness of the public money on the part of the Government, on to whom we can lay the charges for the violation of our rights and privileges. I should like (as well as my fellow-townsmen) to know, and trust the grievances referred to will be seen into and immediately abated, and give us as promised the buildings as referred to, and on the sites as we were told they were chosen. Your immediate attention to the matters referred to is sincerely and respectfully requested.

I have, &c.,
HENRY DAWSON.

Colonial Architect, B.C., 1/12/79.—G.H.

No. 43.

T. Bawden, Esq., M.P., to The Under Secretary for Public Works.

Sir, Grafton, 26 December, 1879.

I do myself the honor to forward herewith a telegram from Mr. C. Jackson, of Woodburn, relative to the erection of Court-house at that place.

I shall be glad if you would kindly inform me what is being done in this matter, and urge forward the calling for tenders with as little delay as possible.

Requesting the favour of an early reply,

I have, &c.,
T. BAWDEN.

[Enclosure.]

Telegram from C. Jackson to T. Bawden, Esq., M.P.

December 23, 1879.

KINDLY do all you possibly can for our Court-house. Money being expended, we are all very anxious about it. Reply.

Acknowledged, 31/12/79. Colonial Architect, B.C., 31/12/79.—G.H. See P.W. 79-6468, herewith.—J.B., 27 January, 1880.

No. 44.

T. Bawden, Esq., M.P., to The Under Secretary for Public Works.

Sir,

Grafton, 29 December, 1879.

I do myself the honor to forward herewith a letter addressed to myself, dated 26th December, 1879, from Mr. H. Dawson, of Kilgin, Woodburn, Richmond River. The letter speaks for itself.

Requesting the favour of an early reply,

I have, &c.,

T. BAWDEN.

[Enclosure.]

Mr. H. Dawson to T. Bawden, Esq., M.P.

Sir,

Kilgin, Richmond River, 26 December, 1879.

I shall esteem it a favour by your kindly inquiring of the Honorable the Minister for Works why a certain letter written by me to him, bearing date November 22nd, 1879, has not up to this moment been acknowledged. Your earliest attention to this matter will much oblige

Yours, &c.,

HENRY DAWSON.

P.S.—I have herewith enclosed copy of said letter. Your perusal of same kindly requested, and further ask of you to agitate the matter to a satisfactory termination.—H.D.

Acknowledge and forward to the Colonial Architect for report, B.C., 2/1/80.—G.H. Acknowledged, 2/1/80. See P.W., 79-6,468 herewith, 27th January, 1880.—J.B.

No. 45.

T. Bawden, Esq., M.P., to The Under Secretary for Public Works.

Sir,

Grafton, 8 January, 1880.

Referring to previous correspondence respecting the vote for erection of Court-house, &c., at Woodburn, and to which no reply has yet been received, I do myself the honor to enclose a telegram from Mr. Jackson of that place, to the contents of which I desire to call your especial attention, and to request that you will forward me an early reply upon the subject.

The money has now been voted some time, and certainly some action should be taken to proceed with the work or a reason given for the delay, in reply to so many and urgent inquiries upon the subject.

Requesting your early and favourable attention,

I have, &c.,

T. BAWDEN

[Enclosure.]

Telegram from Mr. C. Jackson, to T. Bawden, Esq., M.P.

January 7, 1880.

KINDLY give me some information respecting Court-house; people are worrying me; they demand the money voted being expended immediately as a right.

Colonial Architect, for report.—G.H., B.C., 13/1/80. Urgent. See P.W. 79/6,468. 27 January, 80.—J.B.

No. 46.

T. Bawden, Esq., M.P., to The Under Secretary for Public Works.

Sir,

Grafton, 24 January, 1880.

I do myself the honor to forward herewith a letter from Mr. John Watt, of Woodburn, asking when the tenders will be invited for the Court-house at that place.

Requesting that you will give me a definite reply on this subject,

I have, &c.,

THOS. BAWDEN.

[Enclosure.]

Mr. J. Watt to T. Bawden, Esq., M.P.

Dear Sir,

Woodburn, 6 January, 1880.

Can you kindly inform me when the tenders will be called for Court and police quarters in the township of Woodburn. I have been anxiously looking for same. Before I go to much expense on my property I must see the Government fulfil their promises; there are many gone to heavy expense through the Government promising those buildings. It seems the township of Woodburn is only a dupe on the part of the Government to get people to purchase land at a high figure—then they are left in the lurch; for the Government are encouraging a private party to form a township on his conditional purchase in opposition to the Government township. I ask our Honorable Minister for Public Works is this justice.

I remain, &c.,

JOHN WATT.

Acknowledged, 29/1/80.

Colonial Architect, B.C., 27 January, 1880.—G.H.

No. 47.

Mr. H. Dawson to The Secretary for Public Works.

Sir,

Woodburn, Richmond River, February 2, 1880.

I am requested by the residents of the township of Woodburn to kindly ask you is it the intention of the Government to fulfil their promise respecting Court-house and Police quarters in the township of Woodburn, or is it the intention of the Government to lead us astray in laying out this township and selling

selling land at a high figure, telling the public that it was your intention to erect a Court-house and Police quarters in said township. You must own that you have broken faith with us in promising us those buildings and not fulfilling your promise when the money was voted for same. It was on the faith of the Government erecting those buildings that we purchased land, and have gone to great expense to improve the same. Now what do we see? Why, the Government encouraging a private individual to erect buildings on his selection, and rent from him in opposition to the township. We ask is this a wise policy on the part of the Government to try and start a private township in opposition to their own? Why, if the Government was to erect those buildings it would enhance the land in the township 50 per cent. I can assure the Government that the township is far more suitable for the Government buildings than where they are getting them put up. If there comes a heavy flood there is no refuge; the township has a splendid hill for refuge in flood time; the other side cannot boast of such. Myself and the other residents of the township would like to know who is the gentleman who is advising the Government to encourage this private individual in opposition to themselves.

I trust, my dear Sir, you will see the force of our letter, and give us as promised the Court-house and Police quarters in the township, not on private property.

I have, &c.,

G. DAWSON.

Principal Under Secretary in reference to previous papers.—G.H., B.C., 6 February, 1880. As an objection has been raised by Mr. G. Keats to the erection of a Court-house and Police quarters at Woodburn, the papers might be referred to the Inspector General of Police for report before any further action is taken in the matter.—9/2/80. Refer accordingly.—H.P. The Inspector General of Police.—C.W., B.C., 9/2/80.

No. 48.

T. Bawden, Esq., M.P., to The Under Secretary for Public Works.

Sir,

Grafton, 11 February, 1880.

I do myself the honor to forward herewith a further communication from a resident at Woodburn, relative to the proposed Court-house and Police quarters at that place, and urging that tenders should be invited for the work.

I should be extremely thankful personally if some decision is arrived at with regard to this matter with as little delay as possible.

The money has been voted, and the public are very urgent in their demands that faith should be kept with them.

I have, &c.,

T. BAWDEN.

[Enclosure.]

Mr. E. Murray to T. Bawden, Esq., M.P.

Sir,

Woodburn, 29 January, 1880.

Can you kindly inform me when tenders will be called for the erection of Court and Police quarters in the township of Woodburn? I have been anxiously looking out for same, but it seems to me there is no faith in Government promises. On the faith of the Government promising us those buildings we purchased land at a high price, and have gone to great expense to improve same; therefore we are justly entitled to those buildings, and I consider there should be no delay. It's a shame on the Government's part to be encouraging a private individual to build on his selection, and then rent from him, when the township is right opposite. I trust, my dear sir, being our representative, you will lose no time in bringing this before the notice of the Government.

I have, &c.,

EDWARD MURRAY.

Acknowledged, 18/2/80.
B.C., 18/2/80.

Principal Under Secretary in reference to previous papers.—G.H.

No. 49.

The Inspector General of Police to The Principal Under Secretary.

Inspector General's Office, Sydney, 18 February, 1880.

I HAVE called for a further report from Superintendent Orridge on the subject of the Woodburn Court-house, which is submitted herewith, for the Colonial Secretary's information.

It would probably be thought improper to erect Government buildings on the opposite side of the river to the place laid out as the Government township; nevertheless, as the public convenience is better met by having the Court and station where they are at present, and where suitable premises are rented, I am inclined to suggest that the erection of new buildings should be deferred for a time, unless the Government is committed to the immediate erection of premises, in which case I think the site on the Government township should be used, although the public convenience may not be so well served by the alteration. The Government township was probably not laid out without due consideration.

B.C., Principal Under Secretary.

EDMUND FOSBERY, I.G.P.

Telegram from Superintendent Orridge, Armidale, to The Inspector General of Police.

SUB-INSPECTOR Creaghe telegrams *re* police station, Woodburn:—"After careful consideration, am of opinion present site most suitable till population increases on Government township side of river. Population north side, where present station is, nearly double that on Government township side. Four out of five sugar-mills are on north side; also, post and telegraph office, and roads from all parts district meet close to present station. From inquiries made, present site of Court-house appears most convenient one for large majority of public, and likely to remain so for considerable time."—18th February, 1880.

No. 50.

Mr. W. Gollan to The Secretary for Public Works.

Sir,

Woodburn, Richmond River, 24 September, 1880.

I do myself the honor, should the Government think it advisable to erect Court House and police buildings in Woodburn, to give an allotment of land free of charge for that purpose.

I am willing to give the land where the present Court-house is erected on, and the buildings now used could be taken at a fair valuation by the Government, and would be suitable for the requirements of the place for years to come.

I make this offer, believing the site to be the most suitable and convenient in the district, and free from floods.

I have, &c.,

WILLIAM GOLLAN.

Presented by Chas. H. Fawcett. Acknowledged, 29/9/80. Minister for Justice.—J.L., 29/9/80. Under Secretary for Justice, B.C., 30/9/80.—J.R. The Inspector General of Police, for such further information as he may be able to obtain hereon.—J.G.L.I., 5 October, 1880. The Inspector General of Police, B.C., 6 October, 1880.—W. E. PLUNKETT.

Police Department, Inspector General's Office, Sydney, 7 October, 1880.

ALTHOUGH I think the public convenience would be met by the acceptance of this offer, yet I am unable to recommend that course, as there is a Government township on the opposite side of the river, where it is proposed to expend the vote for a Court-house.

There are other papers bearing on this subject in the Colonial Secretary's Office or Public Works Department.

The present arrangement for occupying the premises rented would be the best, in my judgment, to be continued for some time.

B.C., The Under Secretary, Department of Justice.

EDMUND FOSBERY, I.G.P.

It would be well to ascertain the nature of the present arrangement as regards the premises now rented, and Mr. Fosbery can perhaps readily supply that information.—J.G.L.I., 15 October, 1880. The Inspector General of Police, B.C., 15 October, 1880.—W. E. PLUNKETT. Premises erected by Mr. Gollan for the purpose, and rented at £52 per annum.—H. ZOUCH (for I.G.P.), 18/10/80. B.C., The Under Secretary of Justice. The present arrangements had better be continued for some time longer.—J.G.L.I., 20 October, 1880.

No. 51.

Petition from Certain Landowners to The Minister of Justice, &c.

Woodburn, 26 October, 1880.

WE the undersigned landowners and others directly interested in the township of Woodburn, having heard that proposal has been made to you to purchase the premises now used as a Police Station and Court-house on the farm of Mr. William Gollan, on the northern side of the river at Woodburn, with the view to permanently establishing these offices there, beg most earnestly, but respectfully to express a hope that you will not sanction anything of the kind.

We desire to remind you that suitable allotments of land, Nos. 1, 2, 3, of section 16, in the township on the southern side of the river have been reserved for public buildings, and that it would be a serious injustice to the owners of town property were Government offices to be placed elsewhere than within the town boundary.

We desire further to draw your attention to the police arrangements now in force here, by which the township is left almost wholly unprotected.

We believe that the convenience of the residents, and the interests of the neighbourhood generally, would be best served by the erection on the township site of the police buildings, for which the sum of £2,000 has been voted by Parliament.

We trust, therefore, that you will cause this work to be proceeded with, and have tenders for the same convened with as little delay as possible.

We have, &c.,

(Here follow twenty-nine signatures.)

Presented by Charles H. Fawcett, Esq., M.P., 17/12/80.

Acknowledged, 18/12/80.

As there is a conflict of opinion as to the most suitable site for the erection of buildings, the Inspector General of Police can perhaps furnish report hereon, as it is understood that he has lately visited this place.—J.G.L.I., 18 December, 1880. The Inspector General of Police, B.C., 20 December, 1880.—W.E.P.

No. 52.

The Inspector General of Police to The Under Secretary of Justice.

Sir,

Police Department, Inspector General's Office, Sydney, 21 December, 1880.

I have not been at Woodburn for two years, but do not think the position of affairs has materially altered in that time.

If the vote for the Court-house is to be expended the Government township ought I suppose to be the site.

The chief portion of the business and population is now on the other side of the river, and the present arrangements (with rented premises) meet the requirements of the district. My own opinion is, therefore, that the erection of a Court-house should be deferred until such time as it becomes more evident which site will be most beneficial to the residents generally.

I have, &c.,

EDMUND FOSBERY.

As present arrangements (with rented premises) meet requirements of the district, the matter as to erection of new Court-house may be deferred for some time longer.—J.G.L.I., 24/12/80. Inform Mr. Fawcett, 3/1/81.

No. 53.

The Under Secretary of Justice to C. H. Fawcett, Esq., M.P.

Sir, Department of Justice, Sydney, 3 January, 1881.

In acknowledging the receipt of petition, forwarded to this department by you from landowners in the township of Woodburn, against the establishment of Police Station and Court-house on northern side of the river at that place, I am directed by the Minister of Justice to state, for your information, that as present arrangements (with rented premises) meet requirements of the district, the matter as to the erection of a new Court-house may be deferred for some time longer.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 54.

Mr. W. Gollan to The Secretary for Public Works.

Sir, Woodburn, Richmond River, 3 January, 1881.

I do myself the honor to call your attention to an offer made by me some time ago of a portion of land for the purpose of erecting a Court-house and Police station on.

If accepted the present building could be taken at a valuation, and would meet the requirements of this district for many years to come.

An early reply will oblige,

Yours, &c.,
WILLIAM GOLLAN.

Presented by Mr. Fawcett, M.P. Under Secretary of Justice, B.C., 8/1/81.—J.R. The Inspector General of Police may be asked whether he has anything to add to what he has already written upon this subject.—J.G.L.I., 11/1/81. The Inspector General of Police, B.C., 12 Jan., 81.—W. E. PLUNKETT. I have nothing to add.—EDMUND FOSBERY, I.G.P., 12 Jan., 81. B.C., The Under Secretary, Department of Justice. There does not appear to be any necessity to alter existing arrangements at the present time.—J.G.L.I., 13 Jan., 81. Mr. Fawcett, M.P., informed, 21/1/81.

No. 55.

The Under Secretary of Justice to C. H. Fawcett, Esq., M.P.

Sir, Department of Justice, Sydney, 21 January, 1881.

Referring to letter from Mr. William Gollan, presented by you at this Department, offering site for Court-house and Police station at Woodburn, I am directed by the Minister of Justice to invite your attention to my letter of the 3rd instant upon this subject, and to state that there does not appear to be any necessity to alter existing arrangements at the present time, of which you will perhaps have the goodness to apprise Mr. Gollan.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 56.

C. H. Fawcett, Esq., M.P., to The Minister of Justice.

Sir, "Eckford's Hotel," 21 February, 1881.

As some gentlemen from my Electorate are anxious to see you respecting the Court-house at Woodburn, and the erection of police quarters at the Government Township of Woodburn, for which latter the sum of £2,000 was voted last session, I do myself the honor to request you will be so good as to name at as early a date as may be convenient a time when it will be possible for you to receive them.

I have, &c.,
CHARLES H. FAWCETT.

The deputation would be glad if they could see the Minister of Justice at half-past 11 a.m. on the 25th February, 1881.—W.E.P., 24/2/81. Make the appointment as requested.—J.G.L.I., 24/2/81.

No. 57.

Mr. F. G. Crouch to The Minister of Justice.

Sir, Woodburn, 14 February, 1881.

I do myself the honor to convey to you the following resolution, which was carried unanimously at a very large and influential public meeting which was held here on Saturday night last, and which was convened by advertisement in the public papers:—

"That in the opinion of this meeting a police officer should be stationed in the township of Woodburn and that the erection of police buildings, for which the sum of £2,000 has been voted by Parliament, should be proceeded with at once. That a copy of the foregoing resolution be forwarded by the chairman to Mr. Fawcett, M.P., for presentation to the Minister of Justice."

Moved by Mr. John Lacey, seconded by Mr. R. Private.

I have, &c.,
F. G. CROUCH,
Chairman.

Presented by Mr. Fawcett, M.P., and Mr. Isbester. The Inspector General for report.—J.G.L.I. Inquire as to lease of present premises, amount of rent and duration of lease, and why the buildings are not on the township side of the river with especial reference to the centres of population.—J.G.L.I., 25/2/81. The Inspector General of Police, B.C., 1 March, 1881.—W.E.P.

No. 58.

The Inspector General of Police to The Under Secretary of Justice.

2 March, 1881.

THE rental now paid for Court-house and Police Station is £58 per annum. The tenancy can be determined on the ordinary notice, six months. The papers in the office of the Department of Justice disclose full particulars. If the vote of £2,000 has lapsed matters might remain as they are without public inconvenience.

EDMUND FOSBERY, I.G.P.

Pending the permanent settlement of the question as to the site upon which the Court-house and other buildings are to be erected, I think the requisite notice for putting an end to the lease of Mr. Gollan's land should be given at once. I should like information as to whether the site of the Government township is so objectionable as to warrant the strong measure of abandoning it as such township.—J.G.L.I., 12/3/81. The Inspector General of Police, for favour of such further report as may be requisite hereon.—W. E. PLUNKETT, B.C., 14 March, 1881.

No. 59.

The Inspector General of Police to The Under Secretary of Justice.

Police Department, Inspector General's Office, Sydney, 15 March, 1881.

THE attached report, written by Superintendent Orridge a year ago, states concisely the comparative condition of the townships on both sides of the river.

If Government buildings are to be erected, I have always been of opinion that they should be placed at the Government township; but considering that we have now convenient premises, where the chief portion of the population and business is located, I suggested deferring further action for a time.

May I be allowed to point out to the Minister that if notice be now given to the landlord we may find ourselves without any accommodation at all in six months time, as the Government buildings could not be completed in less than eighteen months or more.

EDMUND FOSBERY.

B.C., the Under Secretary of Justice.

[Enclosure.]

Telegram from Superintendent Orridge to Inspector General of Police.

Armidale, 18 February, 1880.

"Sub-Inspector Creaghe telegrams re Police Station, Woodburn:—After careful consideration am of opinion present site most suitable till population increases on Government township side of river. Population north side where present station is nearly double that on Government township side; four out of five sugar mills are on north side, also post and telegraph office and roads from all parts district meet close to present station. From inquiries made present site of Court-house appears most convenient one for large majority of public and likely to remain so for considerable time."

Mr. Fawcett, M.P., may be informed of the result of inquiry in terms of annexed copy telegram.—J.G.L.I., 16 March, 1881. Mr. Fawcett, M.P., 17/3/81.

No. 60.

The Under Secretary of Justice to C. H. Fawcett, Esq., M.P.

Sir,

Department of Justice, Sydney, 17 March, 1881.

With reference to your letter of the 21st ultimo, respecting the erection of police quarters in the township of Woodburn, I am directed by the Minister of Justice to inform you that from inquiries made upon the subject the present site would appear to be the most suitable, the population on the north side where the present station is, being nearly double that on the Government township side; four out of five sugar-mills are on the north side, also post and telegraph office, and roads from all parts of the district meet close to the present station.

I am to add that the site now in use for Court-house appears a most convenient one for a large majority of the public and likely to remain so for a considerable time.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 61.

Minute of The Minister of Justice.

RECEIVED a deputation to-day, introduced by Mr. Fawcett—Mr. Crouch, Mayor of Casino, being one, Mr. Barnes, J.P., another. From the information conveyed by them it seems to me steps should be taken without delay for bringing the Government buildings and the Government business on to the site of the Government township. The requisite notices should be given to Mr. Gollan to put an end to the tenancy, and plans should be prepared and tenders called for. I do not think the Government could properly abandon the site of the Government township, and the longer the present state of things continues the greater will be the difficulty.

J.G.L.I., 2/4/81.

Mr. Fawcett, M.P., Bench, Woodburn, I.G.P., and Under Secretary, Works Department, informed, 4/4/81.

No. 62.

The Under Secretary of Justice to C. H. Fawcett, Esq., M.P.

Sir,

Department of Justice, Sydney, 4 April, 1881.

With reference to the deputation introduced by you to the Minister of Justice on the 2nd instant, respecting the site of Court-house and police buildings at Woodburn, I am directed to inform you that from the information conveyed by you and the other members of the deputation, Sir George Innes thinks steps should be taken without delay for bringing the Government buildings and the Government business on to the site of the Government township.

The requisite notices will accordingly be given to Mr. Gollan to put an end to the present tenancy, and the Works Department will be asked to prepare the necessary plans, and call for tenders with the least possible delay.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 63.

The Under Secretary of Justice to The Bench of Magistrates, Woodburn.

Gentlemen.

Department of Justice, Sydney, 4 April, 1881.

With reference to previous correspondence respecting site for Court-house and police buildings at Woodburn, I am directed to inform you that the Minister of Justice thinks steps should be taken without delay for bringing the Government buildings and the Government business on to the site of the Government township. The requisite notices should accordingly be given to Mr. Gollan to put an end to the present tenancy, and the Works Department will be instructed to prepare plans and call for tenders for the necessary buildings with the least possible delay. I am to add that Sir George Innes does not think the Government could properly abandon the site of the Government township, and the longer the present state of things continues the greater will be the difficulty.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 64.

The Under Secretary of Justice to The Inspector General of Police.

Sir,

Department of Justice, Sydney, 4 April, 1881.

With reference to your blank cover report of the 15th ultimo, respecting site for Court-house and police buildings, &c., at Woodburn, I am directed to inform you that the Minister of Justice thinks steps should be taken without delay for bringing the Government buildings on to the site of the Government township.

The requisite notices should accordingly be given to Mr. Gollan to put an end to the present tenancy, and the Works Department will be instructed to prepare plans and call for tenders for the requisite buildings with the least possible delay. I am to add that Sir George Innes does not think the Government could properly abandon the site of the Government township, and the longer the present state of things continues the greater will be the difficulty.

I have, &c.,

Under Secretary.

No. 65.

The Under Secretary of Justice to The Under Secretary for Public Works,

Sir,

Department of Justice, Sydney, 4 April, 1881.

With reference to previous correspondence respecting site for Court-house and Police buildings at Woodburn, I am directed to state that the Minister of Justice thinks steps should be taken without delay for bringing the Government buildings and the Government business on to the site of the Government township, and to request that you will invite the Secretary for Public Works to have the goodness to cause plans to be prepared, and tenders called for the necessary buildings with the least possible delay.

I am to add that instructions have been given to serve the requisite notices upon Mr. Gollan terminating the tenancy of the present temporary Court-house buildings at the expiration of six months from this date.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

1881.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WITHDRAWAL OF POLICE FROM CLARENDON.
(CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 4 November, 1881.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 3rd November, 1881, That there be laid upon the Table of this House,—

“Copies of all correspondence, minutes, reports, and other documents
“having reference to the withdrawal of the Police from Clarendon, in the
“District of Gundagai.”

(Mr. William Forster.)

WITHDRAWAL OF POLICE FROM CLARENDON.

Memo. from Superintendent Battye to The Inspector General of Police.

Police Department, Superintendent's Office, Murray District, Albury, 19 June, 1881.
I AM desirous, with Inspector General's sanction, of doing away with police station Clarendon, as I cannot see the use of a constable there. The population is scattered and small, and the greater part of his time the constable is idle.

Clarendon lies between Junee, Tarcutta, Gundagai, and Bethungra, and only 14 miles I believe from the latter.

Should Inspector General approve, I will order 1st-c. Constable Gorman to relieve Constable Rogers at Reedy Creek.

E. M. BATTYE, Capt.,
Supt.

Police are so urgently required at many places where there is no police protection that I am glad to make any reduction where practicable. As, therefore, Supt. Battye is satisfied that a constable is not required at Clarendon, he may be removed.—E.F., 20 June, 1881. Supt. Battye.

Memo. from Superintendent Battye to Sub-Inspector Casey.

Re Clarendon.

Police Department, Superintendent's Office, Murray District, Albury, 22 June, 1881.
MR. SUB-INSPR. CASEY will inform Mr. Jas. Brabin (owner of premises, Clarendon), and instruct Constable Gorman to hand over said premises prior to his departure to Mr. Brabin, who will receive rent all the same to the 30th Sept., thus giving Mr. Brabin three months' notice.

E. M. BATTYE, Capt.,
Supt.

Memo. from Superintendent Battye to Sergeant Cassin.

Clarendon Police Station discontinued.

Police Department, Superintendent's Office, Murray District, Albury, 22 June, 1881.
SERGT. CASSIN informed that instructions have been sent to Mr. Sub-Inspr. Casey, to order 1st-c. Constable Gorman to proceed to Reedy Flat, to take charge of that station, on or before 1st July (Clarendon station having been done away with). Sergt. Cassin will inform Constable Rootes, who, on being relieved, will return to Adelong, and Constable Rogers then proceeds to Wagga. Sergt. Cassin will inform Mr. S.-Inspr. Casey by telegram when Constable Rogers leaves, who will ride his horse in leisurely, halting first day at Tarcutta.

E. M. BATTYE, Capt.,
Supt.

Instructions will be complied with.—THOS. CASSIN, Sergt., 1676, 26/6/81.

Samuel Bishop, F. J. Clarence, John Crowe, and others, to The Inspector General of Police.

Sir,

Clarendon, 29 June, 1881.

We, the undersigned, being inhabitants of the district, beg most respectfully to inform you that we have to-day heard with much regret and extreme surprise that we shall after the 1st proximo be left without the protection of any member of the police force stationed here, and we would draw your attention to the following facts:—

1. There are at Clarendon two stores, one hotel, and numerous private residents. There is also another hotel at Wantabadgery, and at the diggings known as the "Junee Rush," also one known as the "Little Billabong Hotel," all of which are more than 20 miles both from Wagga Wagga and from Gundagai, the nearest being at least 6 miles from Junee.

2. There is in the immediate neighbourhood a new diggings, upon which there are now at least sixty *bonâ fide* diggers, who are already making dams and erecting machinery; and should these claims turn out as well as they at present promise, there will doubtless be a large influx of diggers thereto.

3. This being a pastoral district, there are in the shearing season many men engaged in the same, and we venture to suggest that this is an additional reason why we should wish to have a member of the police force stationed in our midst, to whom we could apply for assistance in any case of emergency, which so often depends upon the immediate interference of the law.

4. There being no Banks nearer than Gundagai (27 miles from Gundagai), or Wagga Wagga (32 miles from Wagga Wagga), storekeepers, hotelkeepers, and others, are at times under the necessity of keeping large sums in cash on their premises, and often for a considerable time. We

We have the honor, therefore, to beg that you will consider the few suggestions which we offer, together with those which will occur to yourself, and that we may be allowed that protection which we respectfully say we want.

Samuel Bishop, hotelkeeper, Clarendon.	E. G. Kenzie, miner, Clarendon.
F. J. Clarence, storekeeper, on ac. M. Walker & Co.	W. Coventry, miner.

	Henry Blake, Nangus.

Referred for Capt. Battye's further consideration.—E.F., 8/7/81.

C. T. W. M'Donald, Esq., to The Inspector General of Police.

Dear Sir,

Wantabadgery, Wagga Wagga, 2 July, 1881.

The residents of Eurongilly, a township about 7 miles from here, have requested me to call your attention to the fact that the police protection is being withdrawn from that township.

Eurongilly and its neighbourhood supports a population of about 800 inhabitants, and we would request that the matter be taken into consideration.

A petition to that effect is now being prepared, and will no doubt be numerously signed, and we hope to be able to forward it next week.

I have, &c.,

C. T. W. M'DONALD.

Referred to Capt. Battye—I had no idea that the population was so large.—E.F., 4 July.
Referred to Sub-Inspr. Casey for report. Although aware he has not visited this part of the district, I would be glad of his report as to population, and the necessity of Clarendon being continued as a police station of one constable.—E.M.B., Capt., 9/7/81.

Mr. James Brabin to Sub-Inspector Casey.

Dear Sir,

Clarendon, Wagga, 9 July, 1881.

I received your letter to-night, and am so far satisfied as regards the rent, up to the 30th of September, as that is according to our agreement; but what are we to do for police protection,—as there were two applications for miners' rights this week, I sent them on to Junee.

Hoping that something will be done in the matter,—

I have, &c.,

JAMES BRABIN.

Sub-Inspector Casey to Superintendent Battye.

Clarendon Station, Wagga Wagga, 18 July, 1881.

On receipt of your minute, Y 2,620, I proceeded to Clarendon and Wantabadgery, and rode round that portion generally, and I find that the people generally view with disfavour the abolition of the police station at Clarendon.

I found on inquiry that the post office at Clarendon dispatches about 400 letters a quarter, and receives about 500 letters. The population is very scattered, and I feel certain that it does not amount to anything like the number set down by Mr. M'Donald (800).

Clarendon

Clarendon is only 12 miles from Junee, in a direct line, 17 from Bethungra, 28 from Gundagai, and 31 from Wagga. The Wantine diggings, where there is a population of about 100, is only 6 miles from Junee, and it can be worked from that station. In Mr. M'Donald's forest paddock there are about thirty miners at work, but the place has not yet proved payable, as there is no water to wash up. I also find that many of the selectors are selling out their holdings and leaving the district.

If the diggings on Mr. M'Donald's run turn out payable, I have no hesitation in saying that a constable will be required at Clarendon.

I will visit the place in a month's time and report further.

WALTER C. CASEY,
Sub-Inspr.

Memo. from Superintendent Battye to The Inspector General of Police

Police Department, Superintendent's Office, Murray District, Albury, 20 July, 1881.

Re Mr. Sub-Inspector Casey's reports on Clarendon, forwarded.

9 July, 1881.

THE note attached is from James Brabin, the party we rented premises of.

The constable there stationed had nothing to do with issuing miners' rights.

E. M. BATTYE, Capt.,
Supt.

The decision had better remain in abeyance for a month or so, when please report farther.—E.F.,
21 July, 1881.

The Inspector General of Police to C. F. J. M'Donald, Esq.

Sir,

Police Department, Inspector General's Office, 21 July, 1881.

With reference to your letter dated the 2nd instant, respecting the proposed abolition of the police station at Clarendon, I have the honor to inform you that the matter has not been finally decided, and will be further considered.

I have, &c.,

EDMUND FOSBERY,
Inspector General of Police.

The Inspector General of Police to Mr. Samuel Bishop and others.

Gentlemen,

Police Department, Inspector General's Office, Sydney, 21 July, 1881.

In acknowledging the receipt of your letter, dated the 29th ultimo, having reference to the proposed withdrawal of police from Clarendon, I beg to inform you that the matter has not been finally decided, and will be further considered.

I have, &c.,

EDMUND FOSBERY,
Inspector General of Police.

Mr. S. Bishop and others to The Inspector General of Police.

Sir,

Clarendon, 25 August, 1881.

As sufficient time has elapsed since your last communication respecting the police station at Clarendon, will you kindly inform us whether it is your intention to discontinue it or not.

JNO. S. BISHOP,

and others.

Referred to Capt. Battye.—E.F., 30/8/81. Will Mr. Casey be good enough to report farther on this matter.—E. M. BATTYE, Capt., Supt., 1/9/81.

Sub-Inspector Casey to Superintendent Battye.

Police Station, Wagga Wagga, 13 Sept., 1881.

I HAVE again visited Clarendon, Wantabadgery, and the diggings near Junee. I fail to see or hear anything that would lead me to alter my previously expressed opinion, "that a police station is not urgently required at Clarendon at the present time."

I visited the diggings in Mr. M'Donald's paddock. There are about 40 miners at work, getting a little gold. I interviewed the miners, and all state that there was no crime and no disorder. One of the party very significantly remarked, "There is not even a shanty here."

The diggings, 6 miles from Junee, are on the wane, and can be well looked after by the Junee police.

The population round Clarendon is decreasing; many of the selectors are selling out.

In conclusion, I may remark that a constable is much more required at Coolamin, half-way between Junee and Narandera, on the railway and the main road to the Merool and the back country.

WALTER C. CASEY,

Sub-Inspr.

Mr. Casey's report forwarded for the Inspector General's information.—J. L. DALE, S.S., *pro* Supt., 15/9/81. For Capt. Battye's information. Further report should be made regarding Coolamin.—E.F., 16/9/81.

The Inspector General of Police to C. F. J. M'Donald, Esq.

Sir,

Police Department, Inspector General's Office, Sydney, 16 Sept., 1881.

Referring to your letter dated the 2nd July last, written on behalf of the residents of Eurongilly, against the withdrawal of the police from that place, I have the honor to state that, judging from the reports received by me in the matter, I can see no necessity for a police station at Eurongilly, as the required protection can be well afforded from the neighbouring police stations.

I have, &c.,

EDMUND FOSBERY,
Inspector General of Police.

The

The Inspector General of Police to Mr. Samuel Bishop and others.

Gentlemen, Police Department, Inspector General's Office, Sydney, 16 Sept., 1881.

With reference to your letter dated the 29th June last, respecting the withdrawal of the police from Clarendon, I beg to state that, judging from the reports before me, I can see no necessity for police at that place, as the required protection can be well afforded from the contiguous police stations.

I have, &c.,
EDMUND FOSBERY,
Inspector General of Police.

Mr. Wm. Forster, M.P., has called upon me relative to the withdrawal of the constable from Clarendon (which has, I presume, been now effected). Mr. Forster intends to take some action in Parliament. I undertook to make further inquiries, though I am pretty well assured that there is no necessity for stationing a constable at Clarendon.

Will Captn. Battye obtain an estimate of the population within a *radius* of say 6 miles of the village; number of children attending school; number of police cases taken to Court, in detail, by the constable at Clarendon during the past twelve months; and how far it is estimated the population has decreased in that time.—E.F., 19/10/81. Captn. Battye. Will Mr. Casey be pleased to have this matter attended to.—J. L. DALE, S.S., *pro* Supt. S. J. Casey, Wagga.

Senr.-Const. Rowe will supply me with the following information, to the best of his ability. I send Const. Paulding in order that if the S. C. has to go to Clarendon there will be a man at the station.

What is the population of Clarendon within a radius of 6 miles?

How many children attend the school there?

How many police cases were taken to Court (in detail) by constable stationed at Clarendon during the twelve months prior to his removal?

How many selectors sold out and left district?

Has population increased or decreased during last twelve months, and by how many (estimated number)?

Have any cases of crime been reported from Clarendon since Const. Gorman left? Give the particulars of each case, and result.

As this is very urgent, I wish to get S.-C. Rowe's reply to the above questions back by Const. Paulding on Saturday night. Spare no exertion to have it done. Return this with reply.—WALTER C. CASEY, Sub-Inspr., 21/10/81.

Senior-Constable Rowe to Sub-Inspector Casey.

Police Station, Junee, 22 October, 1881.

SENIOR-CONSTABLE ROWE begs to forward to his officer the required information, as per attached memo. :—

1st. The population within a radius of 6 miles of Clarendon is 197, of which about sixty are strangers, who have lately arrived at the new diggings.

2nd. The number of children on the school books is forty-two, with an average attendance of thirty; these include a number of strangers' children lately arrived.

3rd. The senior-const. is only positive of two police cases having been taken to Court from Clarendon district during the last twelve months—one of larceny from a dwelling near Clarendon, and one of horse-stealing from Orange.

4th. Four selectors have sold out and left the district, taking their families with them, during the last twelve months; and three others have sold out, and are to leave in January.

5th. The population has increased during the last twelve months to the number of about forty, the reason being, miners coming to the diggings, which are now turning out to be almost useless, the returns being only about 12 shillings a week per man, no one claim on the diggings yielding payable gold.

6th. No crime whatever has been reported from Clarendon to the Junee police since Constable Gorman left Clarendon.

Senior-Const. Rowe, in forwarding this return, begs to state that he has proceeded to Clarendon and made every possible inquiry, and he can vouch for its being correct, and hopes it is the return his officer requires. Should anything have been omitted, or any further information be required, will the officer be good enough to let the senior-const. know, and it will be forwarded without delay.

GEORGE ROWE,
Senior-Constable, 2372.

Sub-Inspector Casey to The Inspector General of Police.

Police Station, Wagga, 23 October, 1881.

I HAVE to report, for the information of the Inspector General, that it was impossible for me to go over to Clarendon and return in time to reply, I therefore sent Senr.-Const. Rowe to make the inquiry; his report is attached.

Senr.-Const. Rowe, now of Junee (13 miles from Clarendon), was stationed at Clarendon for a long time, and he knew the people and district well. I am quite satisfied that his report is a correct one in every particular, as the senr.-const. went round the district when I made the first house-to-house inquiry.

WALTER C. CASEY, Sub-Inspr.

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE CASE OF CONSTABLE MULQUIN.

(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 22 September, 1881.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 16th September, 1881, That there be laid upon the Table of this House,—

“Copies of all papers connected with the inquiry into the conduct of
“Constable Mulquin towards Sir George Innes, on the occasion of the
“laying of the Foundation-stone of the Queen’s Statue.”

(Mr. Jacob, for Mr. Levien.)

No. 1.

Superintendent Read to The Inspector General of Police.

No. 5 Police Station, 3 August, 1881.

WITH reference to the complaint of Sir George Innes, Constable Thos. Mulquin, No. 2,558, respectfully begs to state, for the information of the Inspector General, that he was stationed on duty at the entrance to Hyde Park Avenue, on the 2nd instant, on the occasion of the laying of the foundation-stone of the Queen’s Statue, which entrance was barricaded against the general public. The constable received orders from Inspector Waters not to allow *any person* over the barricade. About 11:30 a.m. a gentleman in the crowd asked what the barricade was for, the constable said it was placed there to keep back the public, the gentleman again asked the same question, and demanded to get through; the constable replied that he could go round to one of the entrances; again the gentleman in an angry tone of voice said “Why should I be kept a prisoner?”; again the constable told him that he could go round to one of the entrances of the enclosure, the gentleman said “That will do,” repeating the words three times, and said that he would take the constable’s number; the constable gave his number 203, said his name was Mulquin, and was stationed at Newtown; the gentleman replied “You are impertinent”; the constable answered that he was not so, and always knew how to conduct himself; the gentleman again repeated that the constable was *very* impertinent, whereupon the constable replied that his remark was quite uncalled for, and that perhaps he was as well brought up and educated as he was; the gentleman then shifted his position and got over the barricade, whereupon Constable Mulquin walked up to him and said that he was surprised to see a man of his years acting in the manner he had done, and told him the police were stationed there for the express purpose of guarding the enclosure; the gentleman again repeated that the constable was *very* impertinent. Afterwards the constable learned, through the Superintendent of Police, that this gentleman was Sir George Innes. Constable Mulquin whilst in the Police Force has been stationed in the district, and had never an opportunity of knowing Sir George Innes.

Sir George Innes did not make himself known to Constable Mulquin, neither did he say he was a Minister of Justice, or otherwise the constable would gladly have conveyed him to one of the entrances. Constable Agnew, of No. 5 Police Station, Constables M’Dermott and Ryan, of No. 2 Police Station, also G. W. Shelley, J.P., of Mansfield-street, Balmain West, can verify that Sir George Innes never made himself known to Constable Mulquin.

THOS. MULQUIN,
Constable.

Forwarded for the information of Mr. Superintendent Read.—N. LARKINS, Sub-inspector, 3/8/81.
Forwarded to the Inspector General of Police.—C. READ, Supt., 4/8/81.

No. 2.

Minute of the Inspector General of Police.

APART from the consideration of Sir George Innes's representation of the facts, which discloses a very serious case of misconduct against Constable Mulquin, his own report contains admissions of most improper behaviour. It is the duty of the police to be respectful in their demeanour to all citizens, especially so to Ministers of the Crown, Magistrates, and others in position of official authority. I mark my sense of Constable Mulquin's misconduct by reducing him one grade in rank.

E.F.,
5/8/81.

Constable Mulquin informed. Offence entered on defaulter's sheet.—C. READ, Supt., 9/8/81.
The I.G.P.

No. 3.

Sir George Innes to The Inspector General of Police.

Department of Justice, Sydney, 4 August, 1881.

CONSTABLE Mulquin's statement is partly true and partly untrue. I have a very clear recollection of the circumstances, and they were as follows:—

When about 10:30 a.m. (not 11:30 as the constable erroneously states) I came, on my way to my office, to the barricade, which I certainly was surprised to see, I called to the constable and very quietly asked where I could get through. He said—"Oh, the whole city gates are closed, you can't come through." I again asked—"But where *can* I get through? I wish to get to my office." He said—"Oh, you can't get through here." Again I asked if there was no opening, and he at once said in a very offensive manner—"Now, just take yourself out of this; you've been told three times; now, just be off." I then said—"Well, constable, I suppose you do not know who I am, or you would not speak quite like that, but there is no need to be rude to any one." He then *several times*, and in an excited manner, said—"I don't care who you are, you'll be off out of this." Then I said—"Please do not speak to me in that impertinent manner;" and—"I will let your superior officer know of this. I will take your number." He grew very angry, and coming close up to the barricade, called out—"Take my number indeed—you are impertinent yourself—I don't care who you are;" and—"I am as well brought up as you, any day," and so on.

I walked round trying to see where I could get through. On the western side of the same barricade, seeing that it was low, I went up to it, and spoke to another of the constables, stating my name, and that I was the Minister of Justice (not "a" Minister of Justice, as Constable Mulquin puts it), and that I wished to get through to my office.

Notwithstanding this none of them offered to let me through, and so I jumped over. Whereupon Constable Mulquin and another constable, whose manner was if possible even more offensive than Mulquin's, came close up to me, and said—"I don't care who you are—not if you were fifty Ministers of Justice—I am surprised at you—you ought to be ashamed of yourself—a man of the world like you, and a man of your age—you are a pretty fellow;" and other such jeering and rude remarks, in a very offensive manner. This was in the presence and hearing of the people around the barricade, some of whom I dare say enjoyed my apparent discomfiture. I repeatedly said—"I have told you who I am, and my office, and that seems to make no difference, and I shall report you." "Report me if you like—report yourself—I don't care who you are—I am as good as you." They fairly beat me off.

When I afterwards reported the matter to Inspector Read, I asked him to go with me there and then and reprove the two men on the spot where they had so impertinently behaved to me, asking that no further notice should be taken of it, but that I did not like to be treated in that way in the face of all the people. Constable Mulquin's manner to Inspector Read bid fair to be much the same as it had been to me, until the constable was pulled up with a round turn by the Inspector; and the other constable stood by with an insolent and defiant air.

It may very well be that in the first instance I did not mention my name or office, for naturally I do not like to say publicly I am so and so; and constables should be civil to all persons, and not merely to Ministers; but it is abundantly clear from the way in which these two men behaved, even after I repeatedly stated my name and office, that it would have made no difference.

I do not wish any severe punishment to be awarded to these men, but I certainly think their conduct deserves a reprimand.

I very gladly add that this was the only incivility I witnessed on the part of any of the police that day; and as I was looking for some friends I had occasion repeatedly during the morning to be at all the other barricades.

J.G.L.I.,

4/8/81.

No. 4.

Sir George Innes to The Inspector General of Police.

SIR GEORGE INNES hopes that the Inspector General will listen to his intercession on behalf of Constable Mulquin, who has been recently punished for incivility to Sir George Innes.

Sir George Innes would deem it a great personal favour if the Inspector General would restore Mulquin to his former position in the force; and he trusts that the Inspector General can see his way to doing this without impairing discipline, the maintenance of which is no doubt essential to the well-being of the Police Establishment.—17/8/81.

If Mr. Read can (taking into consideration Constable Mulquin's previous good character) recommend his restoration, say next month, to his former rank, I shall be glad to reinstate him.—E.F., 17/8/81. Mulquin has been well conducted during the five years he has been in the Force, with the exception of his misconduct toward Sir George Innes. I recommend that he be reinstated in his position of first class constable from the first proximo.—J. READ, 18/8/81. Approved.—E.F., 18/8/81. Superintendent Read, Sydney.

1881.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FRANCIS O'MEARA.
(PETITION OF.)

Received by the Legislative Assembly, 19 July, 1881.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.
May it please your Honorable House,—

The humble Petition of Francis O'Meara, of 13, Bathurst-street West, in the City of Sydney,—

RESPECTFULLY SHOWETH:—

1. That your Petitioner arrived in this Colony, by an order of the Prince Regent, in the year 1819, to join his father.

2. That your Petitioner entered the Police Force about the year 1825, and served nineteen years, eleven of which he was a conductor in the Force, during which period your Petitioner served under Captain Rossi, Colonel Morrisett, Colonel Wilson, Mr. Myles, Captain Innes, and Mr. Day.

3. That during such service your Petitioner arrested and brought to justice three murderers, several armed desperadoes, for which he was complimented by then Chief Justice, Sir Francis Forbes, Judges Dowling and Stephen, which testimonials were left at the Colonial Secretary's Office, and cannot now be found.

4. That your Petitioner is now eighty years of age and in destitute circumstances, and prays that your Honorable House will take his case into favourable consideration.

And your Petitioner, as in duty bound, will ever pray.

FRANCIS O'MEARA.

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

IMMIGRATION.

(REPORTS FROM IMMIGRATION AGENT AND OTHERS—SHIP "BLAIRGOWRIE.")

Ordered by the Legislative Assembly to be printed, 5 July, 1881.

FURTHER RETURN to an *Address* adopted by the Honorable the Legislative Assembly of New South Wales on the 6th July, 1877, That, in the opinion of this House, there should be laid upon the Table of this House,—

“(1.) Copies of all Reports, since 1875 to date, from the Agent General, the Health Officer, and Agent for Immigration, to the Government, relative to the despatch of Emigrants from England or elsewhere, and after their inspection on arrival in the Colony by each ship.

“(2.) That similar Reports should henceforward be laid upon the Table of the House as soon as practicable after the arrival and inspection of the Immigrants by each ship.

“(3.) That the above Resolutions be communicated by Address to His Excellency the Governor.”

(*Mr. Macintosh.*)

IMMIGRATION.

The Agent for Immigration to The Principal Under Secretary.

Sir,

Immigration Office, Sydney, 11 May, 1881.

I have the honor to report the arrival, on the 28th ultimo, of the ship "Blairgowrie," from Plymouth, with immigrants, having left that port on the 31st January, thus completing the voyage in eighty-seven days.

The contract price, as per charter-party, is at the rate of £12 12s. per statute adult.

2. This vessel is particularly well adapted for the conveyance of immigrants; is very lofty 'tween decks, with good ventilation; she arrived in very good condition. All arrangements for the comfort of the immigrants were most satisfactory.

3. The immigrants by this vessel consisted of 32 married couples (less one wife who died on the voyage), 84 children, 108 single men, and 93 single women.

Their nationality is noted in the margin.

In addition to the amount of £583 paid by depositors in the Colony, a further sum of £106 was paid to the Agent General in London, making a total of £689 paid by the immigrants, or by their friends, towards their cost of passage.

All the immigrants by this vessel (with the exception of two individuals who, being over fifty years of age, paid full cost of passage money, viz., £15 each) were nominated by relatives or friends in this Colony.

4. Herewith is annexed an abstract return of the disposal of the immigrants.

Two deaths and three births occurred during the voyage.

5. On examination, by the Board of Immigration, of the single women at the Depôt, and of the married people and single men on board the ship, all expressed themselves well satisfied both as regards the good quality and the sufficient quantity of all provisions issued to them during the voyage.

6. The single women were received at the Depôt on the day of the ship's arrival. The greater number were discharged on the two following days to their friends, leaving only 28 who were willing to engage as domestic servants; these readily found employment at an average rate of wages of 8s. 4d. per week.

7. Free passes by railway and by coasting steamers were granted to 163 of the immigrants who desired to proceed into the country districts, as per following:—

SUMMARY.

Why proceeding.	Married People.	Children.	Single Men.	Single Women.
Hired	11	2
To or with friends	17	49	38	29
Seeking employment in districts selected by themselves
General Total (163)	17	49	49	31

These proceeded to forty-four different localities in the country districts.

The remainder of the immigrants, viz., 190, left the ship without any notification as to their proposed destination.

8. The surgeon-superintendent, Charles H. Gibson, Esq., appears to have performed his duties in a satisfactory manner; it is therefore recommended that he receive the promised gratuity of 14s. per head for this his sixth voyage in charge of immigrants; also that he receive the usual certificate entitling him to the further sum of £60 towards the cost of his return passage to England.

9. The surgeon-superintendent reports of the matron, Mrs. Kent, that "she performed her duties in an efficient, zealous, and good-natured manner." It is therefore recommended that she receive the promised gratuity of £40; also the usual certificate entitling her to the further sum of £30 towards the cost of her return passage to England.

10. Dr. Gibson reports of the master and officers of the ship that they afforded him every assistance. The usual gratuity of 4s. per head on the immigrants landed alive is recommended to be thus distributed:—To the master, 1s. 6d. per head; to the chief officer, and to the person who served out the provisions, each, 1s. per head; and 6d. per head to the second officer.

11. Other gratuities (as per letter of instructions from the Agent General) are recommended to be paid as follows:—To the schoolmaster, £5; water-closet constable, £5; engineer, £5; cook, £5; cook's assistant, £3; baker, £3; sub-matron, £3; ordinary constables (eight) £24; lamp constable, £3; hospital assistant, £3—total, £59. Also, on the special recommendation of the surgeon-superintendent, the sum of £3 to the nurse whom he found it necessary to appoint.

12. The surgeon-superintendent reports that no serious disease occurred during the voyage.

- “(3.) That the above Resolutions be communicated by address to His Excellency the Governor.”

(*Mr. Macintosh.*)

IMMIGRATION.

The Agent for Immigration to The Principal Under Secretary.

Sir,

Immigration Office, Sydney, April 11, 1881.

I have the honor to report the arrival from Plymouth, on the 28th ultimo, of the ship "Devon," with immigrants, having left that port on the 12th December, 1880, thus completing the voyage in 106 days.

The contract price, as per charter-party, is at the rate of £14 5s. per statute adult.

2. The "Devon" arrived in port in good order; all the arrangements for the comfort and convenience of the immigrants were most satisfactory.

3. The immigrants by this vessel consisted of 38 married couples, 88 children, 116 single men, and 112 single women.

Their nationality is noted in the margin.

English 133
Irish 208

Other coun-tries 15

892

In addition to the sum of £646 paid by depositors in the Colony, a further sum of £76 was paid to the Agent General in London, making a total of £722 paid by the immigrants themselves, or on their account by depositors in the Colony towards the cost of their passage.

All the immigrants by this vessel were nominated by depositors in the Colony, with the exception of one individual, who, being above 50 years of age, was permitted to come with the other members of his family on payment of the full cost of his passage, viz:—£15.

4. Herewith is annexed an abstract return of the disposal of the immigrants. During the voyage there occurred five deaths, and two births.

5. On examination, by the Board of Immigration, of the single women at the Dépôt, and of the married people and single men on board the ship, all expressed themselves well satisfied both in respect of the good quality and of the sufficient quantity of all provisions issued to them during the voyage.

6. The single women were as usual received at the Dépôt, from whence the greater number were discharged to the friends who had sent for them leaving only twenty, who were willing to engage as domestic servants; these readily found engagements from the Dépôt, at an average rate of wages of 8s. 6d. per week.

7. Free passes by railway and by coasting steamers were granted to 183 of the immigrants who wished to proceed into the country districts, as per following:—

SUMMARY.

Why proceeding.	Married.	Children.	Single Men.	Single Women.
Hired...	1
To or with friends	22	63	44	31
Seeking employment in districts selected by themselves...
General Total... .. (183)	22	63	45	31

These proceeded to forty-one different localities in the country.

The remainder of the immigrants, viz., 209, left the ship immediately after arrival, without notifying their proposed destination.

8. The surgeon-superintendent James Smith, Esquire, appears to have given every satisfaction in the discharge of his duties; he is therefore recommended as entitled to receive the promised gratuity as per letter of instructions from the Agent General of 10s. per head on the immigrants landed alive, for this his eighth voyage in charge of immigrants; also to receive the usual certificate entitling him to a further sum of £60 towards the cost of his return passage to England.

9. The surgeon-superintendent reports of the matron, Mrs. Agnes Osborne, that she performed her duties fairly well; it is therefore recommended that she receive the promised gratuity of £30, also the usual certificate entitling her to a further sum of £30 towards the cost of her return passage to England.

10. Dr. Smith reports favourably of the master and officers of the ship. The usual gratuity of 4s. per head on the immigrants landed alive is therefore recommended to be thus distributed. To the master 1s. 6d. per head, to the chief officer, and to the person who served out the provisions, each 1s. per head; and 6d. per head to the second officer.

11. Other gratuities (as per letter of instructions from the Agent General) are recommended to be paid as follows, viz.:—To the schoolmaster, £5; W.-C. constable, £5; engineer, £5; cook, £5; cook's assistant, £3; baker, £3; sub-matrons (3), £9; ordinary constables (9), £27; lamp constables, £3; hospital assistant, £3—total, £68. Also on the special recommendation of the surgeon-superintendent, the sum of £2 to each of the two nurses whom he found it necessary to appoint.

12. The surgeon-superintendent reports that no disease of an infectious or contagious nature occurred during the voyage.

I have, &c.,

IMMIGRATION.

The Agent General to The Colonial Secretary.

5, Westminster Chambers, S.W., 11 February, 1881.

Sir, I have the honor to inform you that the ship "Clyde," of 1,140 tons register, has been chartered for the conveyance of emigrants from Plymouth to Sydney, New South Wales, to be ready to embark passengers on the 7th March next.

The rates are as follows, viz. :—If 250 and under 275, £13 13s. 9d. ; if 275 and under 300, £13 8s. 9d. ; 300 and upwards, £13 3s. 9d.

I have, &c.,
SAUL SAMUEL

The Agent General to The Colonial Secretary.

5, Westminster Chambers, 14 March, 1881.

Sir, With reference to my letter of the 11th February, announcing the engagement of the "Clyde" for the conveyance of the emigrants to Sydney, I have the honor to enclose herewith a copy of the charter-party of that vessel.

The ship will sail from Plymouth with the passengers described in the accompanying list.

The undermentioned gratuities have been promised on condition that the several parties shall have performed their duties to the satisfaction of the Government, viz. :—To the surgeon-superintendent, Mr. William Baly (first voyage), 10s. on each emigrant landed alive ; the master, the first mate, the second mate, the third mate, or person who serves out the provisions, 4s. on each emigrant landed alive, to be divided as the surgeon-superintendent recommends, subject to the approval of the Government ; the schoolmaster, £5 ; the matron, £40 ; sub-matrons, £3 each ; the cook, £5 ; the cook's assistant, £3 ; the baker, £3 ; the men in charge of the distilling apparatus, £5 ; the hospital assistant, £3 ; the water-closet constable, £5 ; the ordinary and female mess constables, each £3.

I have, &c.,
SAUL SAMUEL

The Agent General to The Colonial Secretary.

5, Westminster Chambers, S.W., 24 March, 1881.

Sir, Referring to my despatch of the 11th February last (No. 3-81 Emigration), reporting the chartering of the ship "Clyde," I have now the honor to advise you of the sailing of that vessel on the 19th instant, with 331 emigrants on board, equal to 280 statute adults, and to enclose,—

1st. Alphabetical list of emigrants, giving their names, ages, and occupations, also the total sum received by the Emigration Officer in cases where insufficient or no deposits were made in the Colony for relatives desirous of accompanying their respective families, which amount has been paid into the Bank of New South Wales.

2nd. Return of the emigrants embarked, distinguishing the sexes, adults and children, together with numbers of the various nationalities.

3rd. Certificate of Dr. William Baly, of his examination of the emigrants before embarkation, as well as of the medicine-chest, and provisions and stores for the voyage.

I have, &c.,
SAUL SAMUEL

The Agent for Immigration to The Principal Under Secretary.

Immigration Office, Sydney, 7 July, 1881.

Sir, I have the honor to report the arrival from Plymouth on the 23rd ultimo, of the ship "Clyde," with immigrants, having left that port on the 19th March, thus completing the voyage in ninety-six days.

The contract price, as per charter-party, is at the rate of £13 8s. 9d. per statute adult.

2. The ship arrived in good order ; all arrangements for the comfort and convenience of the immigrants were most satisfactory.

The surgeon-superintendent however reports as follows :—"With respect to the medicines and medical instruments, I would suggest that the list of medicines and surgical appliances should be thoroughly revised and altered, as most of them are very old-fashioned, and might be advantageously changed for others of more modern date."

3. The immigrants by this vessel consisted of 29 married couples, with their 89 children, 85 single men, and 97 single women.

Their nationality is noted in the margin.

English	114
Irish	172
Scotch	85
Other countries	8
		320

In addition to the amount of £518 paid by depositors in the Colony, a further sum of £115 was paid direct to the Agent General in London, making a total of £633 paid by immigrants or by their friends towards the cost of their passage to this Colony. All the immigrants by this vessel were nominated by depositors in the Colony, with the exception of one married couple who, being over fifty years of age, were allowed to accompany the other members of their family on payment of the full cost of passage, viz., £15 each.

4th. Herewith is annexed an abstract return of the disposal of the immigrants. No births occurred during the voyage, but there were two deaths.

5. On examination by the Board of Immigration of the married people and single men on board the ship, and of the single women at the Depot, all expressed themselves well satisfied both as regards the good quality and the sufficient quantity of the provisions issued to them during the voyage.

6. The single women were received at the Depôt, from whence the greater number were discharged to the friends who had nominated them, leaving only ten, who obtained engagements as domestic servants at an average rate of wages of 8s. 5d. per week.

7. Free passes by railway and by coasting steamers were granted to 125 of the immigrants who wished to proceed into the country districts as per following:—

SUMMARY.

Why Proceeding.	Married.	Children.	Single Men.	Single Women.
Hired...	4
To or with friends	13	38	27	30
Seeking employment in districts selected by themselves...
General Total (125)	13	38	31	30

These proceeded to thirty-five different localities in various parts of the Colony.

The remaining portion of the immigrants left the ship on the first day to join their friends in Sydney.

8. The surgeon-superintendent, William Baly, Esquire, appears to have given every satisfaction in the discharge of his duties; he is therefore recommended as entitled to receive the promised gratuity of 10s. per head for this his first voyage in charge of immigrants to New South Wales; also to receive the usual certificate entitling him to the further sum of £60 towards the cost of his return passage to England.

9. The surgeon-superintendent reports of the matron, Miss Mary Jones, that "she performed her duties exceedingly well," and that "the good behaviour of the single women was in a great measure due to her excellent management." It is therefore recommended that she receive the promised gratuity of £40 for this her eighth voyage in charge of female immigrants; also that she receive the usual certificate entitling her to the further sum of £30 towards the cost of her return passage to England.

10. The surgeon-superintendent reports that the master and officers of the ship afforded him every assistance. It is therefore recommended that the usual gratuity of 4s. per head be thus distributed:—To the captain 1s. 6d. per head; to the chief mate, and to the officer who served out the provisions, each 1s. per head; and 6d. per head to the second mate.

11. Other gratuities, as per letter of instructions from the Agent General, are recommended to be paid as follows, viz.:—To the schoolmaster, £5; w.-c. constable, £5; engineer, £5; cook, £5; cook's assistant, £3; baker, £3; sub-matrons (3), £9; ordinary constables (9), £27; lamp constable, £3; hospital assistant, £3;—total, £68.

12. The surgeon-superintendent reports that whooping-cough, diarrhoea, and bronchitis were the principal diseases which occurred during the voyage.

I have, &c.,

IMMIGRATION.

The Agent General to The Colonial Secretary.

Sir,

5, Westminster Chamber, S.W., 24 March, 1881.

I have the honor to inform you that the ship "Peterborough," of 1,680 tons register, has been chartered for the conveyance of emigrants from Plymouth to Sydney, New South Wales, to be ready to embark passengers on the 25th April next.

The rates are as follows, viz. :—

	£	s.	d.
If 250 and under 275	15	7	6
„ 275 „ 300	14	5	0
„ 300 „ 325	13	15	0
„ 325 „	13	10	0

I have, &c.,
SAUL SAMUEL.

The Agent General to The Colonial Secretary.

Sir,

5, Westminster Chambers, 25 April, 1881.

With reference to my letter of the 24th ultimo, announcing the engagement of the "Peterborough" (No. 4) for the conveyance of the emigrants to Sydney, I have the honor to enclose herewith a copy of the charter-party of that vessel.

The ship will sail from Plymouth with the passengers described in the accompanying list.

The undermentioned gratuities have been promised on condition that the several parties shall have performed their duties to the satisfaction of the Government, viz. :—To the surgeon-superintendent, Mr. Richard Dawes, eighth voyage, 16s. on each emigrant landed alive; to the master, the first mate, the second mate, and the person who serves out the provisions, 4s. on each emigrant landed alive—to be divided as the surgeon-superintendent recommends, subject to the approval of the Government; the schoolmaster, £5; the matron, £40; sub-matrons, £3 each; the cook, £5; the cook's assistant, £3; the baker, £3; the men in charge of the distilling apparatus, £5; the hospital assistant, £3; the water-closet constable, £5; the ordinary and female mess constables, each £3.

I have, &c.,
SAUL SAMUEL.

The Agent General to The Colonial Secretary.

Sir,

5, Westminster Chambers, S.W., 6 May, 1881.

Referring to my despatch of the 24th March last (No. 9 Emigration—81), reporting the chartering of the ship "Peterborough," I have now the honor to advise you of the sailing of that vessel on the 29th ultimo, with 395 emigrants on board, equal to 335 statute adults, and to enclose :—

1st. Alphabetical list of emigrants, giving their names, ages, and occupations; also the total sum received by the Emigration Officer, in cases where insufficient or no deposits were made in the Colony for relatives desirous of accompanying their respective families, which amount has been paid into the Bank of New South Wales.

2nd. Return of the emigrants embarked, distinguishing the sexes, adults, and children, together with numbers of the various nationalities.

3rd. Certificate of Dr. Dawes, of his examination of the emigrants before embarkation, as well as of the medicine chest, and provisions and stores for the voyage.

I have, &c.,
SAUL SAMUEL.

The Agent for Immigration to The Principal Under Secretary,

Sir,

Immigration Office, Sydney, 29 July, 1881.

I have the honor to report the arrival from Plymouth, on the 17th instant, of the ship "Peterborough," with immigrants, having left that port on the 29th April, thus completing the voyage in 79 days.

The contract price, as per charter-party, is at the rate of £13 10s. per statute adult.

2. The "Peterborough" arrived in port in a very clean and satisfactory condition. The excellent accommodation for the comfort of the immigrants is a great recommendation in favour of this vessel.

3. The immigrants by this vessel consisted of 30 married couples, 108 children, 101 single men, and 126 single women, all of whom were nominated by friends in this Colony.

Their nationality is noted in the margin.

In addition to the sum of £637 paid by depositors in this Colony, a further sum of £30 was paid to the Agent General in London, making a total of £667 contributed by the immigrants or their friends towards the cost of their passage to this Colony.

4. Herewith is annexed an abstract return of the disposal of the immigrants. Neither birth nor death occurred during the voyage.

5. On examination, by the Board of Immigration, of the single women at the Depôt, and of the married people and single men on board the ship, all expressed themselves well satisfied both as regards the good quality and the sufficient quantity of all provisions issued to them during the voyage.

6. The single women were as usual received at the Depôt, from whence the greater number were discharged to their friends, leaving only 22 for hire as domestic servants; these readily obtained engagements at an average rate of wages of 8s. 6d. per week.

7.

English	99	
Irish	244	
Scotch	34	direct
Other coun- tries	18	friends
	305	

7. A large number of the immigrants left the ship on the first and second day after arrival without notifying their proposed destination; the remainder were provided with passes by railway and by steamers as per following:—

SUMMARY.

Why proceeding.	Married.	Children.	Single Men.	Single Women.
Hired	2
To or with friends	13	52	36	43
Seeking employment in districts selected by themselves...
General Total—Souls ... (159)	13	52	38	43

These were forwarded to 39 localities, situated in various parts of the Colony.

8. The surgeon-superintendent, Richard Dawes, Esquire, appears to have given every satisfaction in the discharge of his duties; he is therefore recommended as entitled to receive the promised gratuity of 16s. per head on the immigrants landed alive, for this his eighth voyage in charge of immigrants; also to receive the usual certificate entitling him to the further sum of £60 towards the cost of his return passage to England.

9. The surgeon-superintendent reports of the matron, Miss Jane Chicken, that she was "anxious, energetic, and kind in promoting the welfare of those under her charge"; it is therefore recommended that she receive the promised gratuity of £40, also the usual certificate entitling her to the further sum of £30 towards the cost of her return passage to England.

10. The surgeon-superintendent reports that every assistance was rendered to him by the master and officers of the ship; it is therefore recommended that the usual gratuity of 4s. per head on the immigrants landed alive should be thus distributed:—To the master, 1s. 6d. per head; to the chief officer, and to the person who served out the provisions, each 1s. per head; and 6d. per head to the second officer.

11. Other gratuities (in accordance with the letter of instructions from the Agent General) are recommended to be paid as follows, viz.:—To the schoolmaster, £5; w.-c. constable, £5; engineer, £5; cook, £5; cook's assistant, £3; baker, £3; sub-matrons (3), £9; ordinary constables (9), £27; lamp constable, £3; hospital assistant, £3—total, £68. Also, on the special recommendation of the surgeon-superintendent, the sum of £3 and of £1 respectively to each of the two nurses whom he found it necessary to appoint.

12. The surgeon-superintendent reports that the immigrants were generally healthy, and "no specific disorders appeared but those of ordinary occurrence, such as bronchitis, rheumatism, and constipation."

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

IMMIGRATION.

(REPORTS FROM IMMIGRATION AGENT AND OTHERS—SHIP "NINEVEH.")

Ordered by the Legislative Assembly to be printed, 20 October, 1881.

FURTHER RETURN to an *Address* adopted by the Honorable the Legislative Assembly of New South Wales, on the 6th July, 1877, That, in the opinion of this House, there should be laid upon the Table of this House,—

- “(1.) Copies of all Reports, since 1875 to date, from the Agent General, the Health Officer, and Agent for Immigration, to the Government, relative to the despatch of Emigrants from England or elsewhere, and after their inspection on arrival in the Colony by each ship.
- “(2.) That similar Reports should henceforward be laid upon the Table of the House as soon as practicable after the arrival and inspection of the Immigrants by each ship.
- “(3.) That the above Resolutions be communicated by Address to His Excellency the Governor.”

(*Mr. Macintosh.*)

IMMIGRATION.

The Agent General to The Colonial Secretary.

Sir, 5, Westminster Chambers, S.W., 1 July, 1881.

Referring to my despatch of the 19th May last (No. 16 Emigration, /81), reporting the chartering of the ship "Nineveh," I have now the honor to advise you of the sailing of that vessel on the 18th ultimo, with 377 emigrants on board, equal to 333½ statute adults, and to enclose:—

1st. Alphabetical list of emigrants, giving their names, ages, and occupations, also the total sum received by the Emigration Officer in cases where insufficient or no deposits were made in the Colony for relatives desirous of accompanying their respective families, including payments for general assisted applicants, which amount has been paid into the Bank of New South Wales.

2nd. Return of the emigrants embarked, distinguishing the nominations made in the Colony, general assisted, sexes, adults and children, together with numbers of the various nationalities.

3rd. Certificate of Dr. C. E. Strutt, of his examination of the emigrants before embarkation, as well as of the medicine-chest, and provisions and stores for the voyage.

I have, &c.,
SAUL SAMUEL.

The Agent General to The Colonial Secretary.

Sir, 5, Westminster Chambers, S.W., 19 May, 1881.

I have the honor to inform you that the ship "Nineveh," of 1,174 tons register, has been chartered for the conveyance of emigrants from Plymouth to Sydney, New South Wales, to be ready to embark passengers on the 13th June next.

The rates are as follows, viz.:—If 275 and under 300, £13 15s.; if 300 and under 325, £13 8s.; 325 and upwards, £13 5s.

I have, &c.,
SAUL SAMUEL.

The Agent General to The Colonial Secretary.

Sir, 5, Westminster Chambers, 13 June, 1881.

With reference to my letter of the 19th ultimo, announcing the engagement of the "Nineveh" (No. 4) for the conveyance of the emigrants to Sydney, I have the honor to enclose herewith a copy of the charter-party of that vessel.

The ship will sail from Plymouth with the passengers described in the accompanying list.

The undermentioned gratuities have been promised on condition that the several parties shall have performed their duties to the satisfaction of the Government, viz.:—To the surgeon-superintendent, Mr. C. E. Strutt (eighth voyage), 16s. on each emigrant landed alive; the master, the first mate, the second mate, the third mate, or person who serves out the provisions, 4s. on each emigrant landed alive, to be divided as the surgeon-superintendent recommends, subject to the approval of the Government; the schoolmaster, £5; the matron, £40; sub-matrons, £3 each; the cook, £5; the cook's assistant, £3; the baker, £3; the men in charge of the distilling apparatus, £5; the hospital assistant, £3; the water-closet constable, £5; the ordinary and female mess constables, each £3.

I have, &c.,
SAUL SAMUEL.

The Agent for Immigration to The Principal Under Secretary.

Sir, Immigration Office, Sydney, 15 October, 1881.

I have the honor to report the arrival on the 22nd ultimo, of the ship "Nineveh," with immigrants, having left Plymouth on the 18th June, thus completing the voyage in ninety-six days.

The contract price, as per charter-party, is at the rate of £13 15s. per statute adult.

The report of the arrival of this ship has been delayed in consequence of the surgeon-superintendent having reported that Mary O'Donoghue and Eliza O'Donnell, two of the female immigrants, were insane. An immediate examination was made by Dr. Goode and Dr. Morgan, on whose certificate it was found necessary that they should be immediately conveyed to the asylum at Gladesville.

The Board of Immigration was summoned with as little delay as possible for the purpose of investigating as to these two several cases of lunacy. Their report thereon was forwarded on the 12th instant.

2. The "Nineveh" arrived in port in a good and cleanly condition. This vessel is well adapted for the conveyance of emigrants, but the surgeon-superintendent reported that "the position of the male hospital rendered it unsuitable during the hot weather for the reception of any sick," and that "the plumbers work in the single women's water-closet was unusually defective."

The attention of the health officer, Dr. Goode, on boarding the ship on arrival was drawn to these matters.

Dr. Goode reports as follows to the Board of Immigration:—"There seems to have been a great deal of trouble experienced during the voyage from the bad plumbing generally, the consequence of which was the bath-room was kept constantly wet, and water escaped from the closets, which is calculated to endanger the health of those on board."

With regard to the ventilation Dr. Goode also reports:—"The hatchways in the single women's compartment were rendered almost entirely useless for the purpose of ventilation, by having perforated zinc fixed across the entire area; this rendered the compartment excessively warm and oppressive." I recommend that in future this perforated zinc be dispensed with.

Referring

Referring to my report dated October 4th, 1877, of the arrival of this same ship, I noted therein the want of sufficient ventilation, and in the same report I stated that the cabin set apart for the matron was most inconveniently placed. The matron, on the present occasion, has made a complaint of a similar inconvenience. The attention of the Agent General might be specially invited to the report herein alluded to.

3. The immigrants by this vessel consisted of 26 married couples, 80 children, 91 single men, and 152 single women.

Their nationality is noted in the margin.

In addition to the sum of £646 paid by depositors in the Colony, a further sum of £97 was paid direct to the Agent General in London, making a total of £743 paid by immigrants or by their friends towards the cost of their passage to this Colony. All the immigrants by this vessel were nominated by depositors in the Colony under the regulations of 19 September, 1876, with the exception of two individuals, who paid the sum of £7 each to the Agent General in London, under the regulations of March 14, 1881.

English	92
Irish	237
Scotch	38
Other countries	8
	<hr/> 375

4. An abstract return of the disposal of the immigrants is herewith annexed. No births occurred during the voyage, but there were two deaths.

5. On examination by the Board of Immigration of the married people and single men on board the ship, and of the single women at the Depôt, all expressed themselves well satisfied both as regards the sufficient quantity and the good quality of the provisions issued to them during the voyage.

6. The single women were as usual received at the Depôt, from whence the greater number were discharged to the friends who had sent for them, leaving only twenty-two, who were readily engaged as domestic servants at an average rate of wages of 8s. 9d. per week.

7. Free passes by railway and by steamer were granted to 144 of the immigrants who proceeded to 36 different parts of the Colony, as per following:—

SUMMARY.

Why Proceeding.	Married.	Children.	Single Men.	Single Women.
Hired...	1	2
To or with friends ...	12	39	29	48
Seeking employment in districts selected by themselves...
General Total ... (144)	13	41	29	48

8. The surgeon-superintendent, Charles C. Strutt, Esquire, appears to have given general satisfaction; it is therefore recommended that he should receive the promised gratuity, as per letter of instructions from the Agent General, of 16s. per head on the immigrants landed alive, for this his eighth voyage in charge of emigrants to New South Wales; also to receive a certificate entitling him to the further sum of £60 towards the cost of his return passage to England.

It must, however, be noted that Dr. Strutt has neglected to notice in his journal the fact of the absence from deck of the master of the ship at frequently recurring intervals for days together during the voyage, and of his consequent neglect of duty. He appeared also to have been somewhat careless as to the carrying out of the Queen's Orders in Council relative to the lighting of the single women's compartment. The Agent General might be specially invited to notice this particular neglect on the part of Dr. Strutt should he again apply for the appointment of surgeon-superintendent.

9. The surgeon-superintendent reports of the matron, Mrs. L. Eagar, that "she discharged her duties very satisfactorily." It is therefore recommended that she receive the promised gratuity of £40; also the usual certificate entitling her to the further sum of £30 towards the cost of her return passage to England.

10. As one result of the investigation held by the Board of Immigration the Board has recommended that no gratuity be paid to the master, John Ross, and further, the Board recommend that Captain Ross be not again employed as master of a ship conveying emigrants to New South Wales. This latter recommendation might be specially notified to the Agent General.

With regard to the other officers of the ship it is recommended that the following gratuities be paid, viz.:—To the chief officer, 1s. 3d. per head; to the second officer, 6d. per head; to the person who served out the provisions, 8d. per head; and 4d. per head to the third officer who assisted in the serving out of the provisions.

11. Other gratuities, as per letter of instructions from the Agent General, are recommended to be paid as follows, viz.:—To the schoolmaster, £5; w.-c. constable, £5; engineer, £5; cook, £5; cook's assistant, £3; baker, £3; sub-matrons (3), £9; ordinary constables (9), £27; lamp constable, £3; hospital assistant, £3;—total, £68. Also, on the special recommendation of the surgeon-superintendent a gratuity of £6 and of £4 5s. to the first and second nurse, whom Dr. Strutt found it necessary specially to appoint.

12. The surgeon-superintendent reports that no contagious diseases occurred during the voyage.

(*Mr. Macintosh.*)

IMMIGRATION.

The Agent General to The Colonial Secretary.

5, Westminster Chambers, S.W., 14 July, 1881.

Sir, I have the honor to inform you that the ship "Northampton," of 1,161 tons register, has been chartered for the conveyance of emigrants from Plymouth to Sydney, New South Wales, to be ready to embark passengers on the 8th August next.

The rates are as follows, viz. :—If 250 and under 275, £14 ; 275 and under 300, £13 17s. 6d. ; 300 and upwards, £12 19s. 6d.

I have, &c.,
SAUL SAMUEL.

The Agent General to The Colonial Secretary.

5, Westminster Chambers, S.W., 8 August, 1881.

Sir, With reference to my letter of the 14th July, announcing the engagement of the "Northampton" for the conveyance of the emigrants to Sydney, I have the honor to enclose herewith a copy of the charter-party of that vessel.

The ship will sail from Plymouth with the passengers described in the accompanying list.

The undermentioned gratuities have been promised on condition that the several parties shall have performed their duties to the satisfaction of the Government, viz. :—To the surgeon-superintendent, C. H. Gibson (seventh voyage), 16s. on each emigrant landed alive; the master, the first mate, the second mate, the person who serves out the provisions, 4s. on each emigrant landed alive, to be divided as the surgeon-superintendent recommends, subject to the approval of the Government; the school-master, £5; the matron, £40; sub-matrons, £3 each; the cook, £5; the cook's assistant, £3; the baker, £3; the men in charge of the distilling apparatus, £5; the hospital assistant, £3; the water-closet constable, £5; the ordinary and female mess constables, each £3.

I have, &c.,
SAUL SAMUEL.

The Agent General to The Colonial Secretary.

5, Westminster Chambers, S.W., 26 August, 1881.

Sir, Referring to my despatch of the 14th July last (No. 25 Emigration, /81), reporting the chartering of the ship "Northampton," I have now the honor to advise you of the sailing of that vessel on the 12th instant, with 361 emigrants on board, equal to 306½ statute adults, and to enclose :—

1st. Alphabetical list of emigrants, giving their names, ages, and occupations, also the total sum received by the Emigration Officer in cases where insufficient or no deposits were made in the Colony for relatives desirous of accompanying their respective families, including payments for general assisted applicants, which amount has been paid into the Bank of New South Wales.

2nd. Return of emigrants embarked, distinguishing the nominations made in the Colony, general assisted, sexes, adults and children, together with numbers of the various nationalities.

3rd. Certificate of Dr. C. H. Gibson, of his examination of the emigrants before embarkation, as well as of the medicine-chest, and provisions and stores for the voyage.

I have, &c.,
SAUL SAMUEL.

The Agent for Immigration to The Principal Under Secretary.

Immigration Office, Sydney, 19 November, 1881.

Sir, I have the honor to report the arrival from Plymouth on the 7th instant of the ship "Northampton" with immigrants, having left that port on the 12th August, thus completing the voyage in eighty-seven days.

The contract price, as per charter-party, is at the rate of £12 19s. 6d. per statute adult.

2. The "Northampton" arrived in port in a cleanly condition, all the arrangements for the comfort and convenience of the immigrants were very satisfactory.

3. The immigrants by this vessel consisted of 46 married couples, 93 children, 70 single men, and 102 single women.

Their nationality is noted in the margin.

In addition to the sum of £367 paid by depositors in the Colony under the regulations of September 19, 1876, the further sum of £895 10s. was paid direct to the Agent General in London, under the Immigration Regulations of March 14, 1881, thus making a total of £1,262 10s. paid towards the cost of their passage either by the immigrants or by their friends in the Colony.

4. Herewith is annexed an abstract account of the disposal of the immigrants. During the voyage there occurred six deaths (infants); there were also two births.

5. On examination by the Board of Immigration of the married people and single men on board the ship, and of the single women at the Dépôt, all expressed themselves well satisfied with their treatment during the voyage.

6. The single women were as usual received at the Dépôt, of whom the greater number were delivered to the friends or relatives who had sent for them, leaving only twenty-three, who on the hiring day were immediately engaged as domestic servants at an average rate of wages of 9s. 7d. per week.

7.

357

7. Free passes by railway and by steamers were granted to 100 of the immigrants who wished to proceed into the country districts, as per following:—

SUMMARY.

Why Proceeding.	Married.	Children.	Single Men.	Single Women.
Hired... ..	1	1
To or with friends	4	18	28	19
Seeking employment in districts selected by themselves...	6	11	1
General Total (100)	11	29	30	19

These proceeded to twenty-six different localities in the country.

The remainder of the immigrants, viz., 257, left the ship immediately after arrival without notifying their proposed destination.

8. The surgeon-superintendent, Charles H. Gibson, Esquire, appears to have given every satisfaction in the discharge of his duties; he is therefore recommended as entitled to receive the promised gratuity, as per letter of instructions from the Agent General, of 16s. per head on the immigrants landed alive, for this his seventh voyage in charge of emigrants; also to receive the usual certificate entitling him to the further sum of £60 towards the cost of his return passage to England.

9. The surgeon-superintendent reports of the matron, Mrs. Eliza Kent, that "she discharged her duties in an efficient manner." It is therefore recommended that she receive the promised gratuity of £40; also the usual certificate entitling her to the further sum of £30 towards the cost of her return passage to England.

10. Dr. Gibson reports favorably of the master and officers of the ship; it is therefore recommended that the promised gratuity of 4s. per head on the immigrants landed alive should be thus distributed, viz.:—To the master, 1s. 6d. per head; to the chief officer, and to the person who served out the provisions, 1s. each per head; and 6d. per head to the second officer.

11. Other gratuities, as per letter of instructions from the Agent General, are recommended to be paid as follows, viz.:—To the schoolmaster, £5; water-closet constable, £5; engineer, £5; cook, £5; cook's assistant, £3; baker, £3; sub-matrons (3), £9; ordinary constables (8), £24; lamp constables, £3; hospital assistant, £3;—total, £65. Also, on the special recommendation of the surgeon-superintendent the sum of £3 to the nurse, and of £2 to the assistant nurse, both of whom he found it necessary to appoint.

12. The surgeon-superintendent reports that scarlet fever, bronchitis, and whooping cough were the principal diseases which occurred during the voyage.

1881.

NEW SOUTH WALES.

CHINESE IMMIGRATION ACT.

(DESPATCH.)

Presented to both Houses of Parliament, by Command.

SECRETARY OF STATE FOR THE COLONIES to GOVERNOR SIR JOHN YOUNG.

(No. 11.)

Downing-street,
26 February, 1862.

SIR,

I have to acknowledge your Despatch of 22nd November last, No. 87, enclosing an Act passed by the Legislature of New South Wales, entitled, "*An Act to regulate and restrict the Immigration of Chinese.*"

By this Act it is provided that no ship shall introduce Chinese into New South Wales in a greater proportion than 1 to every 10 tons of her burthen, and that for each Chinese arriving in the Colony, whether by sea or land, a tax of Ten pounds shall be paid. Those already in the Colony are however exempted, on obtaining a certificate from the nearest Clerk of Petty Sessions or Gold Commissioner, before the 28th of the present month. It is further provided that no certificates of naturalization shall in future be issued to Chinese.

You state that you felt so much doubt as to the policy of this Act that you were at first disposed to reserve it for the signification of Her Majesty's pleasure, but that as similar Acts passed in Victoria had received Her Majesty's assent, and as your Attorney General did not concur in the objections you took to some of the provisions, you decided not to withhold your assent from the Act, or to delay its coming into operation. The provisions which appeared to you specially objectionable, and to which you called the particular attention of the Attorney General, are those which restrict the number to be brought in any ship and prohibit naturalization for the future.

I perfectly understand and appreciate the sentiments which indisposed you to give your assent to this Act without previously submitting it for the consideration of Her Majesty's Government. It cannot be denied that exceptional legislation intended to exclude from any part of Her Majesty's Dominions the subjects of a State at peace with Her Majesty is highly objectionable in principle, and that recent transactions with the Chinese Government render it very inopportune to adopt such a measure towards Chinese subjects at this moment. Nevertheless Her Majesty's Government cannot shut their eyes to the exceptional nature of Chinese Immigration, and the vast moral evil which accompanies it. The entire absence of women among the immigrants, their addiction to the peculiar vices thence arising, their paganism and idolatrous habits must make them, where they bear any considerable proportion to the general population, a misfortune to any Colony situated as are the Australian Colonies. In New South Wales the Chinese Immigrants amount, as I understand, to about 21,000, or about 1 in 16 of the whole population, and they form, of course, a very much larger proportion of the adult males. I am compelled to admit that strong as are the objections, in point of principle, to legislation of this description, I could not advise Her Majesty to refuse her assent to a measure which the Legislature of New South Wales consider necessary to protect the Colony against so undeniable an evil.

But if the principle of such legislation be admitted, there remains the question whether the provisions by which it is proposed to carry it out are open to objection. Those provisions are—first, a restriction of the number to be introduced in proportion to a ship's size; second, a tax; and third, a denial of naturalization. You appear to consider the first and third of these provisions more objectionable than the second. In respect to the first, viz., the restriction of the number to be brought in a ship, it does not appear to me that any interference is required. If the right to obstruct Chinese Immigration be conceded, it is perhaps better that the obstruction should be directed to prevent the arrival of the immigrants than to discourage or harass them after they are arrived. The restriction

does not place the British shipowner at any disadvantage, as compared with others, inasmuch as it applies to all ships indifferently. All that is necessary is, that it should be made known in the Chinese ports from which emigrants are likely to proceed to New South Wales, and this information I shall direct the Governor of Hong Kong to make public.

In respect to the denial of naturalization I cannot but think that such a provision is unnecessary and impolitic. Unnecessary because the great bulk of the Chinese return to their country as soon as they have amassed some money. Impolitic because if any remain they will be the most intelligent of their race, and those most disposed to adopt the Christian religion and habits; and it is unwise to withhold from such persons any inducement to become good subjects. I should be glad, therefore, to hear that the Legislature of New South Wales had been induced to re-consider this provision, which, as it stands, gives an illiberal and harsh appearance to their legislation, which, I am sure, they did not intend.

The great vice of the Chinese Immigration is, as I have observed, its exclusively male character. The Chinese Immigration to the West Indies was formerly the same, and so strongly did Her Majesty's Government at that time feel its evil that they prohibited altogether the importation of Chinese by public funds. But latterly the obstacles to female emigration from China have been overcome by the energy and good management of the agent employed for the West Indian Colonies, and the recent policy of the Chinese Government gives room to hope that no further obstacle will be interposed on their part against such emigration. If a proportion of women could be obtained with the Chinese who proceed to New South Wales, the emigration, so far from being an evil, might become a benefit to the Colony. But as the emigration is spontaneous, and there is no British officer to control or influence it at the port of embarkation, there is no probability that any change in its nature will be made unless some inducement is held out to the Chinese by the legislation of New South Wales. It appears to me that such an inducement might be found in a relaxation of the present Act in favour of Chinese bringing their wives with them into the Colony. It might, for instance, be provided that in such a case the numbers to be allowed in any ship might be increased, or that the women should be admitted over and above the complement that the law allows, or the tax on men accompanied by their wives might be reduced, and no tax be required for the wife, and men so accompanied, if they desired to remain in the Colony, might, on certain conditions, obtain letters of naturalization. Such a measure might have a beneficial effect in China, and it would, at all events, serve to mark the feature in the immigration which constitutes its special objection, and it would divest the law of the imputation to which it might now be exposed—of being dictated by jealousy of the Chinese on the part of those with whom the Chinese might enter into competition as labourers or producers.

I have, &c.,

STRAITS SETTLEMENTS.

Act No. VIII of 1867.

*An Act to Amend the Law for the Naturalization of Aliens. [15th May, 1867.]*HARRY ST. GEORGE ORD,
Governor and Commander-in-Chief.

WHEREAS it is expedient to alter and amend the law relating to the Naturalization of Aliens in this Colony.

It is hereby enacted by His Excellency the Governor of the Straits Settlements, with the advice and consent of the Legislative Council thereof, as follows:—

Repeal.

1. From and after the passing of this Act, the Act of the Legislative Council of India for the Naturalization of Aliens, No. 30 of 1852, shall cease to have any operation in this Colony.

Who may memorialize.

2. Any person whilst actually residing in the Colony may present a memorial to the Governor in Council, praying that the privileges of Naturalization may be conferred upon him.

Contents of Memorial.

3. Such memorial shall state to the best of the knowledge and belief of the memorialist, his age, place of birth, place of residence, profession, trade or occupation, the length of time during which he has resided within the Colony, that he is permanently settled in the Colony, or is residing within the same, with intent to settle therein; and such memorial shall be in writing and signed by the memorialist, and accompanied by an affidavit sworn by him, verifying the truth of the statements contained therein.

Further information.

4. In considering the prayer of any such memorial, the Governor in Council may require such further information and evidence, either by affidavit or otherwise, as may seem proper, in addition to the affidavit of the applicant accompanying his memorial.

Grant to memorialist. Oath of allegiance.

5. If after such enquiry it shall appear expedient, the Governor in Council may grant the prayer of the petitioner's memorial, whereupon he shall be required to appear within 14 days to take the oath of allegiance prescribed by this Act before such person as may be appointed by the Governor for that purpose.

Certificate of Naturalization.

6. When the oath of allegiance shall be so taken, a Certificate of Naturalization shall be drawn up by the Officer who may have administered the oath, setting out such portions of the memorial as may seem material, and stating that the oath of allegiance has been taken, and that all the rights, privileges, and capacities of a Naturalized British Subject have been conferred on the memorialist under this Act, except such rights, privileges, and capacities, (if any), as may be specially excepted.

How signed. Copy filed.

7. The Certificate of Naturalization shall be signed by the Governor and given to the Memorialist, but a copy thereof, together with the Memorial and all documents, affidavits, and evidence annexed thereto, shall be filed in the office of Colonial Secretary.

On obtaining certificate and subscribing oath Memorialist admitted to privileges.

8. Upon obtaining such certificate, and taking and subscribing the oath as hereinbefore prescribed, the memorialist shall, within the said Colony, be deemed a natural born subject of Her Majesty, as if he had been born within the said Colony, and shall be entitled within the said Colony, to all the rights, privileges, and capacities of a subject of Her Majesty born within the said Colony, except such rights, privileges, and capacities, if any, as may be specially excepted in such certificate.

If oath not taken in fourteen days grant to be void.

9. If the memorialist do not appear and take the oath of allegiance within 14 days from the date of service on him of notice to that effect the grant of naturalization shall *ipso facto*, be null and void.

Revocation of grant.

10. If any material statement contained in such memorial shall be false, or if good cause shall otherwise appear therefor, the Governor in Council may, by an order in writing, declare the certificate issued upon such memorial to be null and void to all intents and purposes, and from and after such order, all the rights, privileges, and capacities derived through such certificate, shall cease to exist.

Publication in Gazette.

11. Every certificate issued under this Act, and every order cancelling such certificate shall be published in the Government Gazette of the Colony.

Fees.

12. Such fees shall be payable for the proceedings authorized by this Act, as the Governor in Council may from time to time direct; and all fees received for such proceedings shall be paid into the Treasury, on account of the general revenues of the Colony.

Short title.

13. This Act may be cited as the Naturalization Act, 1867.

SCHEDULE.

I, A. B. of (here state the description of the person) do swear (or being one of the persons allowed by law to affirm in civil cases, do affirm) that I will be faithful and bear true allegiance to Her Majesty Queen Victoria.

(Signed) A. B.

Passed this 15th day of May, 1867.

H. F. PLOW,
Clerk of Councils.

B.

GOVERNMENT OF THE STRAITS SETTLEMENTS.

By His Excellency ARCHIBALD EDWARD HARBORD ANSON, Colonel in Her Majesty's Royal Regiment of Artillery, Companion of the Most Distinguished Order of Saint Michael and Saint George, and Administrator of the Government of the Colony of the Straits Settlements, &c., &c., &c.

WHEREAS a native of _____ has applied to me, the Administrator of the Government. Administrator in Council, stating that he has resided in the Straits Settlements for _____ years, that it is his intention to settle within the said Settlements, and that he is desirous to become naturalized as a British subject, and on inquiry, it appears to me, the Administrator in Council, expedient to grant the prayer of the Memorial.

This is therefore to certify, that the said _____ has taken the oath of allegiance, and that all the rights, privileges, and capacities of a naturalized British subject within the Colony of the Straits Settlements have been conferred upon him, under the Naturalization Act, 1867.

By His Excellency's command,

Colonial Secretary, Straits Settlements.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CHINESE.

PETITION FROM STOREKEEPERS, MINERS, AND OTHERS, RESIDENTS OF VEGETABLE CREEK AND SURROUNDING TIN MINES.)

Received by the Legislative Assembly, 6 July, 1881.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Storekeepers, Miners, and others, Residents of Vegetable Creek, and the surrounding tin mines,—

RESPECTFULLY SHOWETH :—

That your Petitioners view with alarm the great increase in the number of Chinese arriving in this Colony, for the following reasons :—

1st. That it is impossible for them to insure themselves or families from contact with them, as they at present outnumber the male European population on these mines.

2nd. That from their manner of living it is impossible for the white population to compete with them in the labour market.

3rd. That although their labour being cheap, it is profitable to the few, it is not so to the country at large ; and it is manifestly unfair that a race alien in blood, religion, customs, and every way, should be allowed to enter in such numbers as to seriously injure men who are struggling to obtain an honest and respectable living for themselves and families.

For these and other reasons your Petitioners pray that you will cause such steps to be taken as may result in staying, nearly if not altogether, the influx of Chinese into this Colony.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 654 signatures.]

NEW SOUTH WALES.

INFLUX OF CHINESE RESTRICTION BILL.

(PETITION IN FAVOUR OF—JOSHUA SHIPWAY, ON BEHALF OF RESIDENTS OF ST. PETER'S,
COOK'S RIVER ROAD, IN PUBLIC MEETING ASSEMBLED.)

Received by the Legislative Assembly, 14 July, 1881.

To the Honorable the Speaker and Members of the Legislative Assembly.

The humble Petition of the Residents of St. Peter's, Cook's River Road,—

RESPECTFULLY SHOWETH :—

That your Petitioners, alive to the calamitous results of the recent influx of Chinese to our shores, and the introduction of loathsome and incurable diseases among the people, humbly pray your Honorable House to pass a Chinese Bill forthwith, which shall have for its objects—

- 1st. The imposition of a ten-pound poll-tax upon every Chinaman landing upon our shores, and an annual tax of twelve pounds per head.
- 2nd. The disabling of any vessel from bringing to these ports any more than one to every hundred tons of such vessel.
- 3rd. Compelling every vessel having Chinese on board to the strictest quarantine laws.

And your Petitioners, as in duty bound, will ever pray, &c.

Signed on behalf of a Public Meeting held on Thursday evening, 30th June, 1881, at St. Peter's,
Cook's River Road, at which over two hundred persons were present.

JOSHUA SHIPWAY,
Chairman.

CITY OF SYDNEY IMPROVEMENT BOARD.
(SECOND ANNUAL REPORT.)

Ordered by the Legislative Assembly to be printed, 6 October, 1881.

City of Sydney Improvement Board,
Offices, 35, Castlereagh-street,
Sydney, 31st August, 1881.

To the Honorable the Colonial Secretary.

Sir,

We, the undersigned members of the City of Sydney Improvement Board, in presenting our second Annual Report, regret to state that during the past year we have had the same difficulties to contend with which beset us at the outset, arising out of the unworkable character of the Act under which the Board was created.

We have considered it desirable to give as much publicity as possible to the defects in the Act which have prevented us from carrying out the intentions of the Legislature; and, with that object, in January last, we caused to be printed and sent to Members of both Houses of Parliament, and persons interested in the question, a pamphlet containing a reprint of articles which had appeared in the Sydney Press, showing the working of the Act and in what particulars it required amendment, a further copy of which we enclose with this report.

A Bill embodying the suggestions of the Board was introduced by you in the Legislative Assembly on the 24th June, 1880, as mentioned in our first Annual Report, and we hoped that Bill would have become law. Until that measure, or one similar to it is passed, we despair of effecting any reform either in a sanitary direction or in the improvement of street architecture.

As we have already pointed out to you, certain sections of the Act under which the City Improvement Board are empowered to exercise certain functions have become a dead letter, from the fact that similar functions are accorded to the officers of the City Council under other sections. In proof of this, we may mention that during the past twelve months only one report has been made to the Board by the City Building Surveyor under the 29th section of the Act, which relates to buildings "in a ruinous state and dangerous to the public," but the order issued by the Board, although it upheld the action of the officers of the Council, has not been carried into effect. All other cases of this kind have been dealt with by the Mayor and his officers under the 31st section.

As the Act is at present administered, the City Improvement Board have no voice in the decision of these matters unless directly appealed to by owners of property who are dissatisfied with the action of the Council's officers. All questions relating to building and architecture are initiated and virtually decided and carried out by the City Building Surveyor; and it is for the Government to consider whether these questions, involving as they do interests of great importance to the citizens of Sydney, should be left in the hands of one officer of comparatively limited experience, in the pay of the City Council, or referred to the maturer judgment of an independent Board composed of professional men specially appointed to deal with them.

We notice that the officer above-mentioned has prepared a Bill, which has since been adopted by the City Council, which proposes *inter alia* to abolish the City Improvement Board, and to make a Committee of the City Council a body of appeal from the Mayor and his subordinates. We have no comment to offer upon this measure, further than to recommend that the Government should choose between the City Council and the City Improvement Board, and delegate the improvement of the city to that body in which they have the most confidence and which they consider most qualified to discharge the duty.

During the past twelve months we have on several occasions found it necessary to obtain counsel's opinion in respect to the operation of certain sections of the Act, but in consequence of the ambiguity which surrounds it we have failed to receive any assurance that the Board have any power to enforce the orders they issue. As a matter of fact, a number of unsightly structures which we have ordered to be pulled down still remain an eyesore to the city, together with many unhealthy tenements which ought to be condemned, and which have not been dealt with under any section of the Act.

At the commencement of the year (1 Sept., 1880) there was a vacancy in the Board, caused by the resignation of Dr. Roberts, which was filled up on the 3rd September by the appointment of Dr. Craig Dixon.

It having been resolved that the Chairmanship of the Board should be an annual appointment, Mr. Benjamin Backhouse was re-elected Chairman by the unanimous vote of members, on the 12th May, 1881.

The Board has held twenty three meetings during the year, and has received nine appeals, six of which of which were sustained and three dismissed.

Each member of the Board has received fees to the amount of £15 15s.

In conclusion, we have only to express a hope that the long-looked for Amending Bill will be brought in without further delay, so that the Board may become *de facto* as well as nominally a Board of Improvement.

We have the honor to be,

Sir,

Your most obedient Servants,

BENJAMIN BACKHOUSE,
(Chairman).

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

BOROUGH OF NEWCASTLE LEASING AND IMPROVING BILL.

THURSDAY, 27 OCTOBER, 1881.

PRESENT :—

MR. CAMERON, MR. FLETCHER,	 MR. TRICKETT.	MR. LLOYD, MR. MELVILLE,
-------------------------------	-------------------	-----------------------------

JAMES FLETCHER, ESQ., IN THE CHAIR.

George Wallace, Esq., appeared as Solicitor for the Bill.

George Wallace, Esq., examined :—

1. *Chairman.*] You are solicitor for the Bill that has been referred to this Committee? Yes.
2. At the present time has the Borough Council of Newcastle any power to lease or otherwise deal with the several properties mentioned in the Bill? The properties have been dedicated to the Newcastle Borough Council.
3. *Mr. Melville.*] By Act of Parliament? No, by proclamation.
4. *Chairman.*] Has the Borough Council power to lease the market reserve, referred to in the Bill, or any of the other properties? Legally, I do not think they have the power to lease or improve the properties.
5. Several buildings have been erected upon what is known as the Market Reserve? Yes, a great number of buildings. It was let on building leases some years ago, and the tenants erected shops and dwelling-houses on the land.
6. Was the land let upon building leases? It was not let exactly on building leases; the land was let under lease, and the lessees improved it. The leases have expired, and the property is now in the hands of the Council and let by it to various tenants.
7. *Mr. Cameron.*] Then the object of this Bill, I suppose, is to legalise the leases? Yes, and to give the Borough Council fresh power to grant leases. The properties are now let to weekly tenants.
8. *Mr. Melville.*] The persons who erected buildings on the land have no claim upon the Council for improvements? They simply erected buildings on the land, and when the terms of their leases expired, went out of possession. The Council resumed all the land, together with the buildings that had been erected on it during the currency of the leases.
9. *Chairman.*] Are you of opinion that if the Borough Council possessed the power sought to be conferred upon it by this Bill, the property could be turned to better account in the interests of the whole Borough? Most assuredly it could. If the Council had power to grant leases in the way proposed by this Bill, the revenue derived from the property would place the Council in a much better position, financially, and it would be better able to effect improvements in the Borough; and it would be enabled to borrow much larger sums of money for various improvements that are urgently required in the Borough, because the revenue derived from the leased premises could be given as security for a loan, when it was made revenue proper of the Borough. As the matter stands now, the Borough Council, although it is deriving a large revenue from the leases, that revenue cannot be given as security for any loan the Council might wish to obtain.

G. Wallace,
Esq.
27 Oct., 1881.

- G. Wallace, Esq.
27 Oct., 1881.
10. *Mr. Lloyd.*] I presume there is no objection to the powers asked for by this Bill being granted to the Borough Council? I have not heard of any.
11. Are there any objecting parties? I have not heard of any.
12. *Mr. Melville.*] Has the Borough Council power to take down the buildings and erect new ones? The dedication does not affect the buildings at all. It is proposed by the first clause of the Bill that the properties mentioned in the schedule shall be vested in the Borough Council of Newcastle for general municipal purposes. That would give them the same power as if they were owners in fee.
13. *Mr. Trickett.*] Is there anything in the dedication of these properties to the Borough Council adverse to the terms in which it is proposed by this Bill to give additional power to the Council? Simply in so far as it is a dedication of a market reserve, and doubts may, and no doubt do, exist as to what power the Borough Council possesses by virtue of such dedication for a market reserve. The land has not been used as a market reserve, beyond the fact that the Newcastle Borough Council has erected a market building on the land. But that building only occupies a very small portion of the land. It was formerly a waste piece of ground in the centre of the city, a perfect eyesore of a place, and not large enough for a market reserve or for ornamentation as a recreation reserve for the city.
14. *Mr. Melville.*] But the Bill also refers to an allotment of land in Newcomen-street? Yes, that was dedicated for a fire brigade station. It has a fire brigade building erected upon it. That would not be touched by the Bill, because no use could be made of it.
15. And there are some allotments in Watt-street? Yes; the present Municipal Council Chambers are erected upon that land. It may be that the Council might think fit to erect Council Chambers in some other part of the city; and if so, they could lease that portion of the land upon which the present Council Chambers exist upon very advantageous terms to the Council.
16. In other words, the Borough Council is in this position, it cannot, with its present powers, use the land to the best interests of the ratepayers? That is it. There is the boat-harbour and the market wharf—there is considerable doubt as to what the Council could do with that. A considerable revenue might be derived from it if it were let to persons to land their produce. If the Council had power to let it by public competition I think a fair revenue could be obtained from it.
17. What is the water reserve? It was dedicated to the Council for a water reserve, and the Council would not under any circumstances make use of that portion, I fancy, for any other purpose than that for which it is at present used. It is simply an allotment with a few feet frontage to one street. The main object of the Bill is to enable the Council, on behalf of the ratepayers, to make better use of the land described in Schedule I.
18. As a matter of fact that is in the heart of the city, and is now a source of great revenue to the Council? Yes; I think it brings in between £4,000 and £5,000 a year rental.
19. *Chairman.*] At the time the first leases expired were not some of the tenants inclined to resist the Council by refusing to give up possession? They were; and I think that legal opinions were taken upon the matter, and it was decided that inasmuch as they had accepted leases from the Council they could not call into question the landlord's title.
20. Has the Council any accumulated fund from the Market Reserve buildings? Yes; there is a considerable sum of money in the hands of the Council which has been derived from the market reserve during the currency of the leases. That revenue has always been kept as a separate account in the books of the municipality, called the Market Reserve Account.
21. The Council did not feel itself justified in expending that revenue upon the general works of the city? No; at times when a large sum of money has been required the Council has withdrawn a certain sum, as an overdraft, from the Market Reserve Fund, but each sum so drawn has from time to time been refunded.
22. *Mr. Melville.*] Then you wish to have power to pay this money to the general revenue? Yes.

Mr. Edward Scott Holland, called in and examined:—

- E. S. Holland, Esq.
27 Oct., 1881.
23. *Chairman.*] What are you? I am Town Clerk to the Borough of Newcastle.
24. *Mr. Wallace.*] Do you produce the various *Government Gazettes* dedicating the lands mentioned in the Bill now before the Committee? Yes, I have them with me.
25. Will you state the dates upon which the proclamations dedicating the lands to the Borough Council of Newcastle were made? The *Government Gazette* of 5th June, 1866, contains a notification of the dedication of the land for a market reserve, mentioned in Schedule I of the Bill. The *Government Gazette* of the 6th April, 1880, contains a notification of the dedication of the land mentioned in Schedule II of the Bill; that is the allotment in Newcomen-street, containing 4 perches 91 links; that was dedicated as a fire brigade station. The *Government Gazette* of 19th May, 1868, contains a notification of the dedication of the land in Watt-street, described in Schedule III of the Bill; a second Proclamation, dated 7th May, 1880, vests this land in the Borough Council of Newcastle. The boat harbour reserve, mentioned in Schedule IV of the Bill, was vested in the Borough Council on the 25th January, 1877; and the water reserve in Hunter-street was vested in the Council by Gazette notice dated 5th June, 1866.
26. The land mentioned in Schedule I of the Bill was leased by the Newcastle Borough Council for a term of years to various tenants? Yes.
27. And those tenants, I believe, erected some valuable properties upon the leased portions of the land? Yes.
28. The leases have expired? Yes.
29. And the Council is now in possession of the various properties? Yes.
30. And is now receiving rents from them? Yes.
31. Can you state what is the amount of annual rental received from these properties? From £3,500 to £3,600 a year.
32. The moneys derived from these properties are, I understand, kept in a separate account, called the Market Fund Account? Yes.
33. And at various times the Borough Council has thought it desirable to borrow from that fund for general revenue purposes? Yes.
34. But has repaid those various amounts from time to time? Yes, they have always been repaid.
35. There is a considerable sum of money now in suspense on the market account? Yes.
36. Can you give the Committee any idea what the amount is? Yes, there is about £4,000 or £5,000 in hand on account of the market reserve.

37. Would it be a beneficial thing for the ratepayers and the borough generally if the revenues derived from these properties were appropriated to the general municipal revenue? It would.
38. It is contemplated that some system of sewerage and water reticulation should be carried out for the benefit of the borough? Yes.
39. And the revenue proper of the municipality would not be sufficient, as it now stands, to enable the Borough Council to properly carry out those works? No, it would not.
40. Would it materially help the borough to carry out their proposed system of sewerage and water reticulation if the provisions of the Bill now before the Committee were to become law? It would very greatly help them.
41. The Borough Council has passed a resolution affirming the desirability of introducing such a Bill as this? Yes.
42. And has approved of the provisions of this Bill? Yes.
43. *Mr. Melville.*] The land mentioned in the second schedule of the Bill is dedicated for a fire brigade station? Yes.
44. There is a fire brigade station on it now? Yes.
45. Is there more land than is requisite for that station? No, I do not think there is.
46. *Mr. Trickett.*] With regard to the land mentioned in Schedule V, dedicated for a water reserve, what reason is there for the Council wishing to have a leasing power of that? It will be useless for the purpose for which it was dedicated when a water supply to the city is introduced.
47. *Mr. Lloyd.*] What is the total rental the market reserve is producing now? Nearly £3,600 per annum.
48. Are there any other reserves mentioned in the schedules of the Bill producing any rent? No.
49. *Mr. Melville.*] Not the boat-harbour? No.
50. Is it used free now? Yes.
51. It is generally known in Newcastle that a Bill has been before the Borough Council for two years? It is.
52. *Chairman.*] The petition that was presented to Parliament was signed at a duly constituted meeting of the Borough Council, and bears the seal of the Council attached by the Council's authority? Yes.

CUDGEGONG TOWN HALL BILL.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 28th October, 1881,—“*The Cudgegong Town Hall Bill*,”—beg to report to your Honorable House :—

That they have examined the witness named in the margin* (whose evidence will be found appended hereto); and that the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the several Clauses and the Schedule to the Bill, in which it was deemed necessary to make an amendment.

Your Committee now beg to lay before your Honorable House the Bill as amended by them.

SAMUEL HENRY TERRY,
Chairman.

No. 3 Committee Room,
Sydney, 23rd November, 1881.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 22 NOVEMBER, 1881.

MEMBERS PRESENT:—

Mr. Terry,		Mr. Beyers,
Mr. Fawcett,		Mr. Jacob.

Mr. Terry called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, read by the Clerk.

Printed copies of the Bill referred, together with original Petition to introduce the same, before the Committee.

Present:—Thomas O. O'Brien (*Solicitor for the Bill*).

William Wilton, Esq. (*an Alderman of the Borough of Cudgegong*), called in and examined.

Witness *produced* the Government Gazette dated 8 November, 1881, containing the dedication of a parcel of land in the Town of Mudgee to the Borough of Cudgegong; and also *handed in* a plan showing the relative positions of the Boroughs of Mudgee and Cudgegong, and an Opinion of Counsel on certain legal points which may arise out of the building of the Town Hall outside the boundaries of the Borough, which were ordered to be appended. (*See Appendices A and B.*)

Room cleared.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Solicitor called in and informed.

Committee deliberated.

(Adjourned to To-morrow, at half-past *Two* o'clock.)

WEDNESDAY, 23 NOVEMBER, 1881.

MEMBERS PRESENT:—

Mr. Terry in the Chair.		
Mr. Beyers,		Dr. Ross,
		Mr. Jacob.

Present:—Thomas O. O'Brien (*Solicitor for the Bill*).

Clauses 1, 2, and 3 read and agreed to.

Schedule read and omitted, and new Schedule inserted. (*See Schedule of Amendment.*)

Title read and agreed to.

Chairman to report the Bill, with an amendment, to the House.

SCHEDULE OF AMENDMENT.

Page 1. *Omit* Schedule, and *insert* in place thereof the following new Schedule:—

One acre county of Wellington parish of Mudgee town of Mudgee allotment one of section sixty-seven Commencing on the southern side of Short-street at its intersection with the western side of Douro-street and bounded thence on the north by Short-street bearing west two chains on the west by a line bearing south five chains to Market-street on the south by that street bearing east two chains to Douro-street aforesaid and on the east by that street bearing north five chains to the point of commencement.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CUDGEGONG TOWN HALL BILL.

TUESDAY, 22 NOVEMBER, 1881.

Present:—

MR. BEYERS,		MR. JACOB,
MR. FAWCETT,		MR. TERRY.

SAMUEL HENRY TERRY, Esq., IN THE CHAIR.

Thomas Ormond O'Brien, Esq., appeared as Solicitor on behalf of the Promoters of the Bill.

William Wilton, Esq., examined:—

1. *Mr. O'Brien.*] You have been an Alderman of the borough of Cudgegong for many years? Yes.
2. And have also been Mayor of the borough? Yes, I was Mayor during the last year.
3. During the last twenty years have you rented and occupied Council Chambers from the town of Mudgee? Yes.
4. And have held all meetings, received rates, and transacted all the business of the Council in the same place—is that the case? Yes.
5. In the town of Mudgee? Yes.
6. I believe you have received an opinion from Mr. Salomons, Q.C., that such meetings held in the borough of Mudgee were illegal? Yes.
7. And that the ratepayers could refuse to pay their rates there? I do not know that they have refused, but it was a considerable distance for some of the ratepayers to come and was very inconvenient.
8. The counsel's opinion, I believe, was that the ratepayers could if they wished refuse to pay rates? I believe so.
9. Is it the case that application has been made to Government for a parcel of land described in the Schedule to this Bill? Yes. (*The witness referred to the Schedule.*)
10. For what purpose? The erection of a Council Chamber.
11. Was this land on the part of the Government promised to you? Yes, I believe so.
12. Do you produce the Government Gazette? I do. (*The witness produced the Government Gazette, 8th November, 1881, p. 5715.*)
13. Where is the site proposed by Government? In the town of Mudgee.
14. And in the borough of Mudgee? Yes.
15. Can you therefore safely erect Council Chambers there or borrow money upon it? A motion has been tabled for that purpose and carried; and £500 has been set apart for the building fund and deposited in the Bank at interest.
16. Without obtaining an Act of Parliament are you safe in building upon this site, or could you borrow money upon the security? No.
17. Does the borough of Cudgegong surround the town of Mudgee? Yes, entirely.

W. Wilton,
Esq.
22 Nov., 1881.

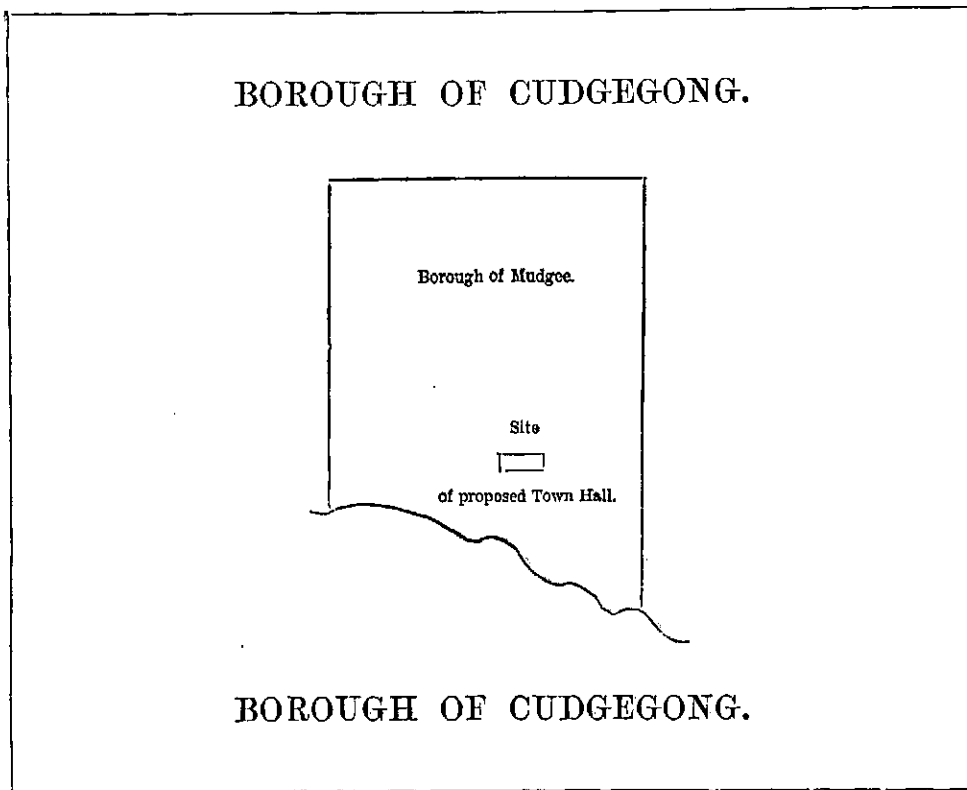

- W. Wilton,
Esq.
22 Nov., 1881.
18. Are there any places of business outside Mudgee, or suitable buildings for holding the meetings of the Council? No, it would be very inconvenient. There are some inns, but no buildings of a suitable nature for a Town Hall.
19. The ratepayers of the borough of Cudgegong, where do they transact their business generally? They have transacted it for the last twenty years in Mudgee.
20. How is the situation of the land dedicated by the Government as to the convenience of the ratepayers? It is very convenient.
21. Would it be convenient for the Aldermen and Mayor? Yes.
22. Are you desirous of erecting buildings on this parcel of land? Yes.
23. You wish to borrow money for that purpose? We have already got the sanction of the Government for that purpose.
24. Have you lodged money in the Bank for the purpose of building? Yes, there is £500 placed at interest.
25. Where has your Council Clerk acted for years past? At his own residence.
26. Not in a public building at all? Not in a public building. It has been very inconvenient.
27. *Chairman.*] Is that the shape of the Cudgegong municipality (*handing a sketch, vide Appendix A, to witness*)? Yes.
28. Then the municipality of Cudgegong surrounds Mudgee for a radius of about seven miles? About eight or nine miles.
29. Do the people generally go into Mudgee to transact their business, as the nearest centre? Yes.
30. *Mr. Jacob.*] Do I understand you to say that it would not be safe to build on this site without an Act of Parliament? That is Mr. Salomon's opinion.
31. Would it be opposed to the Municipalities Act—would that prevent it? That is what Mr. Salomon says.
32. *Mr. Fawcett.*] Is what is now being done with the consent of the whole of the municipality? I do not know whether it is with the consent of the whole.
33. Has there ever been a meeting of the municipality to consider the matter? There has never been a public meeting.
34. Are the whole of the Municipal Council aware of it? It has been before the Council, and the building has been decided upon with only one dissentient, although there were two against the placing the money—they were favourable to borrowing the whole amount.
35. *Mr. Jacob.*] This measure then has received the sanction of the Borough Council? It has received the sanction of the Aldermen, with the exception I have mentioned.
36. *Chairman.*] At the last municipal elections was any mention made of the intention to build a Town Hall? Yes, it was almost made a test question, and there was one candidate returned against the building and two in favour of it.
37. *Mr. Beyers.*] How is it that you propose to erect this building in the township of Mudgee? We thought we were perfectly right, on account of our being entirely surrounded by the municipality.
38. Has any objection been made by the other Council—the Mudgee Council? No. (*Counsel's opinion was handed in. Vide Appendix B.*)
39. *Chairman.*] Would it be more convenient to the ratepayers to go into Mudgee to a Town Hall there than to any other part of Cudgegong? Yes, because we have to ride four or five miles, and want a place where we can put up our horses without the necessity of going to an hotel.
40. *Mr. Fawcett.*] The meetings hitherto have been held at the house of the Town Clerk? The whole of the meetings have been held at the town of Mudgee.
41. *Chairman.*] This Bill is necessary in order to render legal the proceedings of the Council? Yes.

CUDGEGONG TOWN HALL BILL.

APPENDIX.

[To the Evidence of William Wilton, Esq., 22 November, 1881.]

A.

B.

CASE.

In the district of Mudgee there are two municipalities, one the borough of Mudgee, which comprises the actual town of Mudgee, and the other the borough of Cudgegong, which surrounds the borough of Mudgee, and extends for a distance of about 8 miles all round it. The two boroughs are shown on plan herewith.

Some short time since the Borough of Cudgegong being desirous of erecting a Town Hall and Council Chambers for their meetings, &c., applied to the Government for a grant of a piece of land, situate in the town and borough of Mudgee, on which to erect such Town Hall; and the Government granted such piece of land to them accordingly.

In order to build such Town Hall the Council of the Borough of Cudgegong find it will be necessary to borrow a sum of £1,500, under and by virtue of the powers given by section 190 of the Municipalities Act, 31 Vic. No. 12, upon mortgage of their annual revenues; and in accordance with that section, they lately applied to the Governor and Executive Council for authority to borrow such sum; and they have received in reply a letter from the Colonial Secretary enclosing authority for that purpose; copy of which letter and authority are sent herewith.

From a perusal of that letter and authority, and of section 190 of the Municipalities Act, it would appear that the Council can only borrow money for the purpose of making permanent improvements within the Municipality; and as the land on which the Town Hall is proposed to be built is not situate in the municipality of Cudgegong, but is actually in the town and borough of Mudgee (although surrounded by the borough of Cudgegong), Counsel will please advise—

1. Whether the Council of the borough of Cudgegong would be legally justified in building a Town Hall on the piece of land so granted to them out of their own municipality?
2. And if they have such power, would they be enabled to borrow money under section 190 upon the security of their rates for the purpose of building such Hall?
3. Would a lender of money be enabled to take a valid security under such section over the rates, &c. for the money advanced by him for the purpose of building such Hall?
4. If not, would the Council be justified in saving up their rates and then expending same in building a Hall on such land without having to borrow at all for the purpose.

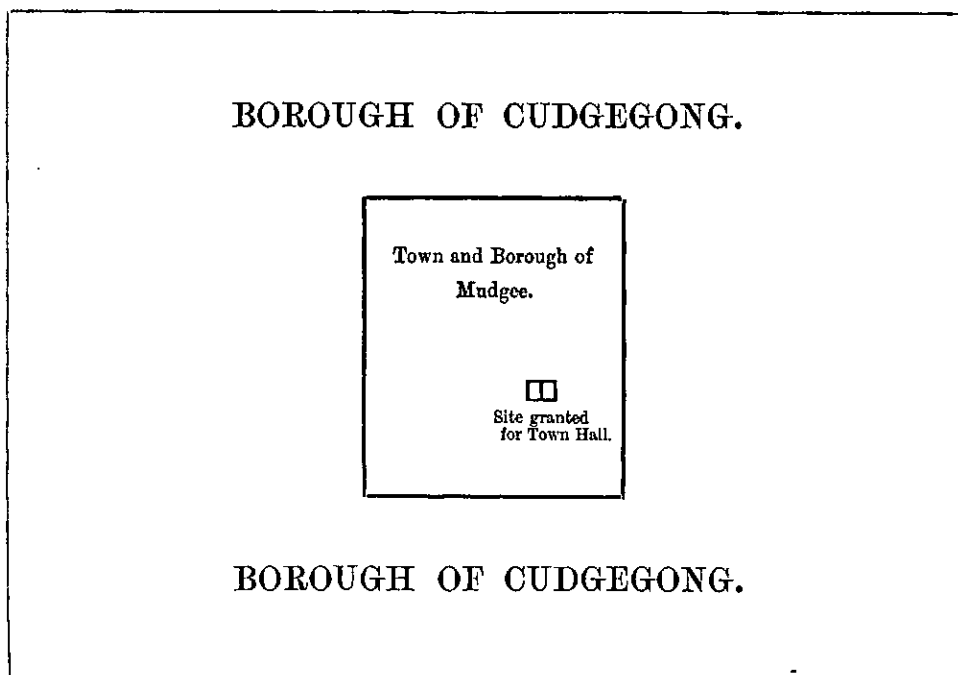

Section 111 of the Municipalities Act provides that the Council shall appoint a place within the municipality, and shall fix certain days and times at and during which the Council Clerk shall attend for purpose of receiving rates, &c.

Counsel will please advise whether under this section the Council could legally have their Town Hall and Council Chambers within another municipality, and not within the actual boundaries of their own municipality; and if in violation of this section they appointed a place in the town of Mudgee, what would be the effect of their so doing; and would it in any way invalidate their rates, or be any bar to their recovering such rates?

Mudgee, 18th May. 1881.

CHAS. D. MEARES,
Solicitor to the Borough of Cudgegong.

BOROUGH

Sir, Colonial Secretary's Office, 16 May, 1881.

Referring to your letter of 18 March, I am directed to inform you that, in compliance with the application therein made, His Excellency the Governor, with the advice of the Executive Council, has been pleased to authorize the Council of the Borough of Cudgegong to borrow the sum of £1,500 for expenditure upon permanent improvements within the municipality. The necessary document under His Excellency's hand, as required by the 190th section of the Municipalities Act of 1867, is transmitted herewith.

I have, &c.,

CRITCHETT WALKER.

The Mayor of the Borough of Cudgegong.

By His Excellency the Right Honorable Lord Loftus, Governor, &c.

To the Mayor and Aldermen of the Borough of Cudgegong.

WHEREAS, by an Act of the Parliament of New South Wales, passed in the thirty-first year of Her present Majesty's reign, intituled "An Act to establish Municipalities," it was amongst other things enacted that every Council might borrow by debentures, mortgage, or otherwise, on the credit of any land, personal estate, annual revenues, actual or prospective, belonging to the body corporate of such municipality, for or towards or incidental to making, carrying on, or completing of any permanent improvements within the municipality, any moneys not exceeding in the whole the estimated revenues thereof for five years, provided that no moneys shall be borrowed except with the sanction of the Governor with the advice of the Executive Council, in writing under his hand: And whereas application has been made by the Mayor and Council of the Borough of Cudgegong for permission to borrow the sum of one thousand five hundred pounds to enable them to make, carry on, and complete certain permanent improvements of the said municipality: And whereas it is represented that the said sum of one thousand five hundred pounds does not exceed the estimated revenue of the said municipality for five years: Now therefore I, Lord Augustus William Frederick Spencer Loftus, as such Governor and Commander-in-Chief as aforesaid, do hereby, with the advice of the Executive Council, authorize the said Mayor and Council of the Borough of Cudgegong to borrow, on the securities of the Corporation as aforesaid, the sum of one thousand five hundred pounds, to be expended upon permanent improvements of the said municipality.

Given under my hand, at Government House, Sydney, this thirteenth day of May, in the year of our Lord one thousand eight hundred and eighty-one, and in the forty-fourth year of Her Majesty's reign.

AUGUSTUS LOFTUS.

By His Excellency's command,
HENRY PARKES.

OPINION.

1. I am of opinion that the Council would not be legally justified in building a Town Hall on the land (granted to them) which is not in the borough of Cudgegong, but which is in the town and borough of Mudgee.
2. And from this it follows that the Council could not borrow money upon the security of their rates for the purpose of building such Town Hall. The "permanent improvements" authorized by section 190 must, according to the express words of that section, be "within the municipality," and the securities referred to in section 191 can only be given for money borrowed which is so expended.
3. A lender of money with notice would certainly not be able to take a valid security over the rates for money lent, to be expended on a building erected outside the boundaries of the borough.
4. I am of opinion, apart altogether from the question of borrowing, that the Council have no power to build a Town Hall outside the borough, and therefore that the application of the rates for such a purpose would be *ultra vires* and unlawful.
5. It will be apparent from what I have already written that the Council cannot legally have the Town Hall and Council Chambers within another municipality, and I am of opinion that ratepayers could lawfully refuse to attend at any such Hall or Chambers to make payment of their rates, and that, assuming no place was appointed within the borough in pursuance of section 111, the enforcement of the payment of such rates by legal process would be impossible. The rate or rates would not be invalid, but the objection under section 111 would be a bar to their recovery. The Act (Municipalities Act of 1867) applies to boroughs or municipalities generally, and, as might be expected, uses in consequence in many sections general terms, but they must be read and their applicability always limited to the boundaries of each particular municipality, unless the contrary is clearly manifest from the context, or from the nature of the subject matter referred to. If the Governor's letter or the authority therein endorsed had been worded so as to include improvements beyond the limits of the borough, it would have violated the law and would have been of no effect. This power to build and borrow is created by the statute, and can only be exercised in strict accordance with its provisions. And independent of that, speaking generally, all the powers of a borough can only be exercised within its own boundaries. If Cudgegong could build a Town Hall in the borough of Mudgee, why not other boroughs also, and then which would be *the* Town Hall of Mudgee?

JULIAN E. SALOMONS.

Chambers, 6th June, 1881.

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CUDGEGONG TOWN HALL BILL.

(PETITION AGAINST—CERTAIN RATEPAYERS OF THE BOROUGH OF CUDGEGONG.)

Received by the Legislative Assembly, 19 October, 1881.

To the Honorable the Members of the Legislative Assembly, in Parliament Assembled.

The Petition of the undersigned Ratepayers of the Borough of Cudgegong,—

RESPECTFULLY SHOWETH :—

That your Petitioners view with alarm the Bill now before Parliament from the Borough Council of Cudgegong, for leave to erect a Town Hall in the adjoining Borough of Mudgee.

That according to the provisions of the Municipalities Act, the Borough Council is compelled to receive the rates within its own Borough, and should this Bill pass they would have a Town Hall in the Mudgee Borough and a Council Chambers in the Cudgegong Borough, thus entailing a large outlay for rent or interest which this Borough is ill able to afford—the roads in the same requiring all the rates to keep them in passable condition.

That your Petitioners humbly submit that in view of the probable passing of the "Local Government Bill," now before Parliament, the Cudgegong Borough Council would be absorbed in the larger Councils provided for under that Act, and the necessity for Council Chambers, other than the large Town Hall at Mudgee, would be obviated, and the powers sought in the Bill your Petitioners protest against will not be required.

And your Petitioners, therefore, humbly pray that the Honorable the Members of the Legislative Assembly will not pass the said Bill.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 189 signatures.]

1881.

 NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF WEST MAITLAND—BY-LAWS.)

 Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.

Colonial Secretary's Office,
Sydney, 14th April, 1881.

THE following By-laws, made by the Council of the Borough of West Maitland, under powers conferred by the Municipalities Act of 1867, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published as required by law.

HENRY PARKES.

Placing Fruit, Skins, &c., on Roadway.

1st. No person shall throw or place upon any crossing or footpath in the Borough, any fruit, fruit-skin, rind, or peel.

Persons not to stand or loiter in Streets.

2nd. All persons standing or loitering upon any of the streets, footways, or other public places in the Borough, to the inconvenience of the passers by, or in any way interrupting the traffic, shall discontinue to do so on being requested by any duly appointed officer of the Council, or by any Police Officer.

Penalty.

3rd. Any person offending against either of the foregoing By-laws, shall for each offence upon conviction forfeit and pay a penalty or sum not exceeding five pounds.

Adopted by the Borough Council of West Maitland, this fifth day of November, in the year of our Lord one thousand eight hundred and eighty.

THOS. HUGHES, Council Clerk.

(L.S) JAMES FULLFORD,
Mayor.

(BOROUGH OF EAST MAITLAND—ADDITIONAL BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.Colonial Secretary's Office,
Sydney, 6th June, 1881.

BOROUGH OF EAST MAITLAND.

ADDITIONAL BY-LAWS.

THE following additional By-laws, made by the Council of the Borough of East Maitland, for regulating the reception and adoption of the Reports of Committees, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

Reception and Adoption of Reports.

No. 36. Every Report of any Standing Committee of the Council shall be made and signed by the Chairman thereof at least three days before the date of the meeting of the Council at which such Report is to be presented for reception, and no matter subsequently added to such Report, or brought up by any later Report, shall be proceeded with beyond its reception, at the next ensuing meeting of the Council; unless by a resolution adopted by the Council this rule shall for that occasion be suspended.

No. 37. Every Report of any Standing Committee made and signed as above provided for, or in respect of which the foregoing rule shall for the occasion be suspended, shall at the same meeting that it is received (provided due notice be given of the business in each Report), stand also for adoption, excepting in so far as any resolution which may be passed at such meeting shall affect its being then wholly or in part adopted.

No. 38. The report of every Select, Special, or other Sub Committee appointed for a definite purpose, whenever the same may be signed, shall at the same meeting that it is received stand also for adoption, excepting in so far as any resolution which may be passed at such meeting shall affect its being then wholly or in part adopted.

Passed by the Council of the Borough of East Maitland, this thirteenth day of April, in the year of our Lord one thousand eight hundred and eighty-one.

NEW SOUTH WALES.

MAITLAND CATTLE DRIVING ACT AMENDMENT ACT, 1880.

(BOROUGH OF EAST MAITLAND—BY-LAWS.)

Presented to Parliament, pursuant to Act 43 Vic. No. 20, sec. 2.

Colonial Secretary's Office,
Sydney, 27th August, 1881.

BOROUGH OF EAST MAITLAND.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of East Maitland, under the "Maitland Cattle Driving Act Amendment Act, 1880," for regulating the passage of cattle for slaughter or shipment, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above cited Act.

HENRY PARKES.

BY-LAWS of the Borough of East Maitland for regulating the passage of Cattle for slaughter or shipment.

WHEREAS it is expedient that provisions should be made for the purpose of regulating, within the boundaries of the Municipality of East Maitland, the passage of cattle intended for sale, slaughter, or shipment, in accordance with a resolution adopted by the Borough Council of East Maitland, on the 16th day of March, 1881: And in virtue of the power and authority vested in them in that behalf, it is ordered that the following By-laws do now take effect, and that they are hereby established for the purposes aforesaid:—

"1st. That no cattle intended for sale, slaughter, or shipment, or conveyance by rail, shall be driven into or through any part of the Municipality of East Maitland, except between the hours of 2 and 4 of the clock in the afternoon, and between the hours of 5 o'clock in the evening and 8 o'clock in the morning, from the 1st day of April to the 30th day of September inclusive, and between the hours of 2 and 4 of the clock in the afternoon, and between the hours of 6 o'clock in the evening and 8 o'clock in the morning, during the other portion of the year. And that the route to be taken by persons driving such cattle through the said Municipality shall be from the Victoria Bridge, along the Great Northern Road, to the junction of Melbourne and Newcastle Streets; and thence along either Newcastle-street to the boundary of the said Municipality, or along Melbourne-street to Narrang-street, and thence by the shortest line to the boundary of the said Municipality. The route to and from the Railway Station for the passage of cattle for conveyance by rail or arriving by rail shall be either from Newcastle-street to Day-street inclusive along William-street, or from William-street to Melbourne-street inclusive along Day-street, and that no such cattle shall be driven into or through any part of the said Municipality without having one or more persons on horseback in front, for the purpose of better controlling and guiding the same. And every person who shall drive or cause to be driven any such-cattle as aforesaid into or through any part of the said Municipality at any other hour or by any other route than hereinbefore provided, and without having one or more persons in front as aforesaid shall, on conviction in a summary way before any two Justices in Petty Sessions, forfeit and pay any sum not exceeding twenty shillings for each and every head of cattle so driven."

Passed by the Council of the Borough of East Maitland, this sixteenth day of March, in the year of our Lord one thousand eight hundred and eighty-one.

(L.S.) C. DELOHERY,
Mayor.

MUNICIPALITIES.
(BOROUGH OF EAST MAITLAND—BY-LAW.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 12th December, 1881.

BOROUGH OF EAST MAITLAND.—BY-LAW.

THE following By-law, made by the Council of the Borough of East Maitland, for the purpose of preventing persons from loitering in the Streets, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

BY-LAW made and passed by the Municipal Council of East Maitland, for the purpose of preventing persons from loitering in the Streets.

WHEREAS it is expedient that provision should be made for the prevention of inconvenience to passengers in the Streets of the Borough of East Maitland, the following By-law is hereby established for the purpose aforesaid, in accordance with a resolution passed by the Council of the said Borough, on the 30th day of March, 1881, in virtue of the power and authority vested in such Council in that behalf.

Any three or more persons in the company of one another standing or loitering upon any of the Streets of the Municipality to the actual inconvenience of any passenger or passengers passing thereon, or in any way interrupting the traffic, who shall not discontinue to do so on being thereto required by an officer of the Council or by any Police Officer, shall be liable to a penalty not exceeding forty shillings, to be recovered in a summary way before any two or more Justices.

BOROUGH OF ALBURY.—ADDITIONAL BY-LAW.

THE following Additional By-law, made by the Council of the Borough of Albury, regulating the driving of cattle through the Borough, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the "Municipalities Act of 1867."

HENRY PARKES.

MUNICIPALITY OF ALBURY.

THE following new By-law has been made by the Borough Council of Albury as to driving cattle :—

From and after the passing of this By-law no cattle, bullocks in use for the purposes of draught, and cows belonging to residents in the Municipality kept for the purpose of being milked, together with any calves, the progeny of such cows, shall be driven through that portion of the Municipality of Albury, the boundaries of which are set out in Schedule A, on Sundays, nor on any other days save only between the hours of 12 p.m. and 8 a.m. during the months from September to February, both inclusive, and between the hours of 12 p.m. and 9 a.m. during the other months of the year, and between the hours of 2.15 p.m. and 3.30 p.m. during all the year: and all cattle save and except as aforesaid driven within the said boundaries during the hours aforesaid shall be driven only through the streets and places and portions of streets and places set out in Schedule B hereto: Provided always that any cattle that are required to be driven to or from any of the sale yards of any of the licensed auctioneers within the said Municipality may be driven off the said streets or places or portions of streets or places by the nearest route, being a public street, road, or place between the said streets or places or portions of streets or places and such sale yards during the hours aforesaid.

SCHEDULE A.

Commencing at the junction of North-street and Young-street, bounded by the east side of Young-street from the said commencing point to the north side of Wilson-street; then bounded by the north side of Wilson-street from Young-street to the east side of Macauley-street, from Wilson-street to the south side of Ebdon-street; then bounded by the south side of Ebdon-street from Macauley to the west side of Wodonga-place; then bounded by the west side of Wodonga-place from Ebdon-street to the north side of Dean-street; then bounded by the north side of Dean-street from Wodonga-place to the west side of Kiewa-street, from Dean-street to the north side of Guinea-street; then bounded by the north side of Guinea-street from Kiewa-street to the west side of David-street; then bounded by the west side of David-street from Guinea-street to the north side of Perry-street; then bounded by the north side of Perry-street from David-street to the west side of Macauley-street, from Perry-street to the north side of North-street; and then bounded by the north side of North-street from Macauley-street, to the point of commencement.

SCHEDULE B.

Macauley-street from North-street to Guinea-street.
Guinea-street from the Sydney Road to Kiewa-street.
Kiewa-street from Guinea-street to Wyc's-lane, Wodonga-place.

Made and passed by the Municipal Council of the Borough of Albury, this fifteenth day of June, in the year of our Lord one thousand eight hundred and eighty-one.

Sydney, 27th August, 1881.

BOROUGH OF PETERSHAM.—AMENDED BY-LAW.

THE following amended By-law, made by the Council of the Borough of Petersham, relating to the erection of houses, &c., having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the "Municipalities Act of 1867."

HENRY PARKES.

AMENDED BY-LAW, No. 24.

Erection of houses, &c — Fee for permission.

No person shall be permitted to erect any fence, house, shop, or other building in any street, lane, or place within the Borough without having first served notice in writing to the Mayor or Council Clerk before commencing the same, stating his intention and describing the proposed situation of the building or erection, and shall, at the time the said notice is given as aforesaid, pay to the Council Clerk a fee of five shillings for permission to erect any such fence, house, shop, or building in any street, lane, or other place within the said Borough, and every owner thereof, and every contractor for such fence, house, shop, or other building, or any part thereof, commencing to build or work thereon without such notice having been given, shall forfeit and pay for every such offence any sum not exceeding forty shillings, nor less than five shillings.

Passed by the Municipal Council of the Borough of Petersham, this sixth day of June, in the year of our Lord one thousand eight hundred and eighty-one.

BOROUGH OF NEWCASTLE.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Newcastle, relating to loitering in the streets, and the management of Burial Grounds, respectively, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

HENRY PARKES.

Persons not to stand or loiter in streets.

1st. All persons standing upon any of the streets or footways, or other public places in the Borough, to the inconvenience of the passers by, or in any way interrupting the traffic, shall discontinue to do so on being requested by any officer or servant of the Council, or by any Police officer.

Penalty.

2nd. Any person offending against the provisions of the foregoing By-law, shall for such offence upon conviction forfeit and pay a penalty or sum not exceeding two pounds.

Bodies not to be interred within certain distances, &c.

3rd. No dead body shall be interred in any existing cemetery now open for burials within the distance of one hundred yards from any public building, place of worship, schoolroom, dwelling-house, public pathway, street, road, or place whatsoever within the Borough; and no body shall be interred in any new cemetery that may be hereafter opened, within the said distance or one hundred yards from any such public building, place of worship, schoolroom, dwelling-house, public pathway, street, road or place whatsoever within the said Borough.

Burials contrary to By-laws, &c.

4th. Any person or persons having the charge of any cemetery, or other person or persons who shall knowingly inter or cause to be interred any body within the Borough contrary to the provisions of these By-laws, or otherwise commit a breach of any of them, shall for every offence be liable to any penalty not exceeding fifty pounds nor less than five pounds, and for every subsequent offence to any penalty not exceeding the first-mentioned amount, nor less than ten pounds.

Made and passed by the Council of the Borough of Newcastle, this eleventh day of April, in the year of our Lord one thousand eight hundred and eighty-one.

(BOROUGH OF NEWCASTLE—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.

Colonial Secretary's Office,
Sydney, 19th October, 1881.

BOROUGH OF NEWCASTLE.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Newcastle, for regulating the Market Wharf in that Borough, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

BOROUGH OF NEWCASTLE.

BY-LAWS to enable the Municipal Council of the Borough of Newcastle, to establish tolls, rates, and dues, at the Public Wharf, at the Boat Harbour or Market Wharf Basin at the foot of Market-street, and for the due regulation and government thereof.

1. That the wharf or landing place at the Boat Harbour, foot of Market-street, situate in the Borough of Newcastle, shall be a public wharf, at which tolls, rates and dues may be collected under the Municipalities Act of 1867.

Division of wharf and uses of such divisions.

2. The said wharf shall be divided into three lots or divisions, that is to say :—

Lot No. 1. Extending along the east and south sides, shall be reserved and appropriated for loading and unloading of farm produce and general merchandise, subject to payment of such tolls and dues as are hereinafter particularized.

Lot 2. From the bridge at the southern end extending to the Government boat sheds, shall be reserved and appropriated as a slip for boats of private persons and licensed watermen, subject to the payment of such dues as are particularized hereinafter.

Lot 3. The extreme westerly end opposite that part of the margin of the boat harbour, reserved and appropriated for the use of Government boats, shall be kept clear, so as at all times to give free access to the Government boat steps.

Wharfinger.

3. The Council may appoint a wharfinger, who shall have charge of the said wharf and boat harbour, under the supervision of the Council and shall see that all the By-laws made by the said Council, in reference to such boat harbour, are enforced. He shall find two sureties, to the satisfaction of the Mayor, to the amount of fifty pounds each, for the faithful performance of his duties.

Duties of Wharfinger.

4. The wharfinger shall preserve order and regularity at the said boat harbour, and may remove therefrom any person or persons making or causing a riot or disturbance, or guilty of cursing, swearing, or using any gross or indecent language, or offending against common decency, or being drunk, or in any way misconducting himself or herself, or committing any breach of these by-laws.

Tolls and Dues.

5. The wharfinger shall be entitled to demand and receive the tolls and dues set out in the schedules hereto, from all persons using any portion of lots Nos. 1 and 2.

Regulation as to Carts.

6. No person having the charge of any dray, cart, or any vehicle, shall be allowed to remain on the landing place longer than the time actually occupied in loading or unloading the same; and no such vehicle shall at any time be left upon the said landing, or at the entrance thereto, unless in charge of a person competent to manage the same.

Goods not to be on the Wharf.

7. No goods, merchandise, produce, or live stock, other than is hereinafter specified, shall be allowed to remain at the edge of the basin for a longer time than may be necessary to ship, store, or cart away the same; and shall only be deposited for such immediate intention upon such part as may be indicated by the Wharfinger.

Shells, lime, timber, &c.

8. No shells, lime, timber, stones, bricks, iron, or other building, or bulky material, shall be allowed to remain on the edge of the basin for more than two (2) clear days after being landed.

Buoys, chains, &c.

9. No buoys, chains, anchors, ropes, or boats, punts, or barges of any kind shall be allowed to remain attached to the landing, except such as may be in immediate use.

Empty Cases, &c.

10. All empty cases, kegs, casks, boxes, fowl coops, crates &c., shall be kept in such places as may be set apart by the Wharfinger for their reception.

Not to create a Nuisance.

11. No person or persons shall place or deposit or permit to remain on any part of the said wharf any refuse, earth, soil, rubbish, dead animals, filth, or nuisance whatsoever, nor shall it be lawful for any person to empty, sweep, spill, slop, or cast into the waters of the basin any rubbish of any kind, nor shall the same be placed in such positions as would render it liable to be washed into the basin.

Record of Tolls, &c.

12. The Wharfinger shall keep a correct register of all the tolls and dues received by him day by day in respect of the several articles landed or shipped, and shall within 24 hours after deposit the amount so received at the Council Chambers with the Town Clerk.

Entrance kept clear.

13. No person shall block up the entrance to the boat harbour or allow his boat to swing around so as to hinder the free ingress or egress of any person coming in or going out, nor shall connect his or her boat to any stake in the centre of the basin, but shall at all times keep the same open and clear.

Watermen and Private Boats.

14. Lot 2 being reserved for boats of licensed watermen and private persons requiring the use of the slips for the hauling up of boats and storing the same, it shall not be lawful for any person to anchor or make fast his boat by any warp in the water so as to interfere with the free use of the said basin reserved as aforesaid.

Size of Berths, &c.

15. The space provided for each boat slip shall be in 6 feet berths to bona fide watermen and private individuals, one man shall not hold more than one berth.

Boats, &c.

16. No boats not in use shall be allowed to remain on any part of the boat harbour.

Old Boats.

17. The Wharfinger may remove all useless boats, and sell, or destroy the same, which are unclaimed, or which the owners after notice fail to remove within 48 hours after such notice.

Position to be taken up.

18. Any person using the said boat harbour shall take up the position assigned him by the Wharfinger, and shall when requested by him remove his boat to any other position.

Council may let.

19. The Council may let by public competition, by way of auction, or by tender, for a term of three years any portion of the said boat harbour, subject to such conditions as the Council may seem meet.

Penalties.

20. Any person who shall commit a breach of, or offend against any of these By-laws, shall for every such breach or offence forfeit and pay any sum not exceeding forty shillings.

NEWCASTLE PAVING AND PUBLIC VEHICLES REGULATION ACT.
(AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 39 Vic. No. 36, sec. 9.

Colonial Secretary's Office,
Sydney, 8th November, 1881.

BOROUGH OF NEWCASTLE—BY-LAWS.

THE following amended By-laws, made by the Council of the Borough of Newcastle, under the powers conferred by the "Newcastle Paving and Public Vehicles Regulation Act" (39 Victoria No. 36), having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above cited Act.

HENRY PARKES.

BY-LAWS under the "Newcastle Paving and Public Vehicles Regulation Act of 1876," 39 Victoria, No. 36.

The Council of the Municipality of Newcastle do, by virtue of the authority vested in them by the "Newcastle Paving and Public Vehicles Regulation Act of 1876," hereby make and establish the following By-laws for the regulation of Public Vehicles within the City of Newcastle, and generally for carrying into effect the purposes and provisions of the said Act, and declare that the same shall stand in the place and instead of all By-laws heretofore in force, which By-laws heretofore made are hereby repealed.

Interpretation.

1. In the construction of these By-laws, unless the context shall otherwise indicate, the following terms in inverted commas shall bear the meaning and include the things hereinafter severally assigned or set against them.

- "Council"—The Council of the Borough of Newcastle.
- "Inspector"—The Inspector or Sub-Inspectors now or hereafter to be appointed by the said Council.
- "Vehicle"—shall include all vehicles of any description hereinafter defined in this By-law.
- "Omnibus"—A vehicle used for the purpose of standing or plying for passengers to be carried for hire at separate fares in any public street or place, and including the following description:—Vehicle on four wheels drawn by two or more horses, carrying more than ten passengers.
- "Omnibus Car"—Any vehicle used for the purpose of standing or plying for passengers to be carried for hire at separate fares in any public street or place, and including the following description:—Vehicle on four wheels, carrying not more than ten passengers, other than a hackney carriage.

"Carriage"—Any vehicle used for the purpose of standing or plying for hire in any public street or place, and including the following descriptions:—Hackney carriages or vehicles on four wheels drawn by one or two horses, cab or vehicle on two wheels drawn by one horse.

"Dray"—Dray, wain, waggon, cart, van, or vehicle of any construction, standing or plying for hire, and drawn by one or more horses.

"Owner"—Every person who alone or in partnership with any other person, shall keep any vehicle for which a license shall or may be obtained by, or transferred to, him under these By-laws.

"Driver"—Every person engaged or employed in driving any vehicle.

"Conductor"—Every person other than the driver engaged or employed in attending upon passengers in or upon any omnibus.

"Passenger"—Every person carried in or upon any vehicle other than the driver or conductor.

"Horse"—Horse, mare, gelding.

And in the construction of these By-laws any word importing the singular number shall be understood to include several persons or things, as well as one person or thing, and any word importing the plural number shall be applied to one person or thing, and every word importing the masculine gender shall extend and be applied to a female as well as a male.

Public Vehicles generally.

No vehicle to ply or person to drive or conduct without a license

2. No vehicle shall ply for hire, nor shall any person act as the driver or conductor of any such vehicle within the Municipality of Newcastle unless licensed in the manner hereinafter mentioned, nor during the suspension or after cancellation of such license, as hereinafter provided. The owner of any such

vehicle shall not permit the same so to ply for hire until he shall have taken out the license therefor, and paid the fee provided in the Schedule hereunto annexed, marked C, applicable to the description of vehicle intended to be licensed: Provided that the Council may, upon sufficient reasons being adduced, reduce such license fee.

A requisition must be sent for licenses.

3. Before any license shall be granted to the owner, driver, or conductor of any vehicle, the person requiring such license shall obtain from the Inspector, free of charge, a requisition in the form of the Schedule hereunto annexed, marked A, or to the like effect, and shall duly fill up and sign the same and deliver it, with a certificate from two respectable persons, stating that he is of good character, of the required age, and competent for the position under license applied for, to the Inspector at his office, or such other place as may be appointed for that purpose.

No license to be granted for vehicle in bad condition.

4. No license for any vehicle shall be granted or renewed unless the vehicle, horse or horses, and harness shall have been examined by the Inspector or other person appointed by the Council, and found by him to be in a fit state to be licensed; and no license shall be granted in respect of any vehicle which, in the opinion of the Inspector, shall be unsafe, in bad repair, or otherwise unfit for the accommodation and conveyance of passengers, or for the conveyance of goods or merchandize.

Form of license.

5. Licenses for owners, drivers, or conductors shall be in form provided in Schedule B, for each such license respectively, or to the like effect.

Licenses to continue in force until 31st December.

6. Every license granted under these By-laws shall be under the hand of the Mayor, countersigned by the Town Clerk, and shall be in force from the date of such license up to and including the 31st day of December then next ensuing; and no such license shall include more than one vehicle: Provided that if by accident any vehicle shall become unfit for use, it shall be lawful for the owner thereof, during such reasonable time as it shall be undergoing repair, to use another vehicle as a substitute; but the substitute shall, in all respects except as to a license, be subject to these By-laws in the same manner as if a license had been granted for it, and the owner using it shall be liable for any non-compliance with these By-laws in respect thereof as if it had been licensed. In order to entitle an owner to the benefit of the above provision, he shall, before using such substitute, give notice of his intention to do so in writing to the Inspector, stating the true cause of his being compelled to use such substitute, and the period during which it will be necessary to do so; and no such substitute shall be used until it shall have been inspected and approved of by the Inspector, or for a longer period than fixed by a certificate to be signed by the Inspector and delivered to the owner.

Licenses, by whom made out.

7. Licenses shall be made out in duplicate by the Town Clerk or his assistants, and numbered in such order as the Council shall from time to time direct.

Fee of licenses.

8. For every such license, or annual renewal thereof, there shall be paid to the Town Clerk the several rates set forth in the Schedule hereunto annexed, marked C.

Renewal of licenses.

9. Licenses may be renewed at the end of every year by endorsement under the hand of the Town Clerk: Provided that the applicant for such renewal shall have been reported by the Inspector as having conducted his business creditably and satisfactorily.

Owner not to part with license or licensed vehicle without the approval of the Council.

10. No owner shall be at liberty to part with or lend his license. Any owner transferring or selling his licensed vehicle shall immediately give notice thereof to the Town Clerk, and the transferee or purchaser shall thereupon apply to have the license transferred to him, and shall sign his name in the books of the Council and on the license; and until this By-law shall have been complied with, the transferrer or seller shall remain liable as owner for the breach of any of these By-laws, and no transferee or purchaser shall use the vehicle or allow it to be used to ply for hire.

Who deemed owner.

11. The person or persons in whose name or names a license shall appear on the books of the Council shall be deemed the owner of the vehicle in respect of which such license shall have been issued.

Change of Residence to be notified.

12. Whenever any person named as the owner, or one of the owners, driver, or conductor, of a licensed vehicle, shall change his place of abode, he shall, within two days next after any such change, give notice thereof in writing signed by him to the Town Clerk, specifying his new place of abode, and the same shall be endorsed upon the license granted to such owner, driver, or conductor, and entered in the Register of Licenses. Any holder of a license, who since the license shall have been issued to him, shall have been convicted of any felony or misdemeanour of having been intoxicated while in charge of a licensed vehicle, or of any two breaches of these By-Laws within a period of six months, shall be liable to have his license cancelled or suspended by the Council; and no person shall during the suspension or cancellation of his license act as driver or conductor of any licensed vehicle. The Council shall have power to suspend or cancel the license of any driver or conductor who shall have been guilty of any breach of these By-Laws, notwithstanding the provisions of the next preceding By-Law and no person shall during the suspension of his license act as driver or conductor of any licensed vehicle.

Driver and Conductor not to part with License.

13. Every driver or conductor shall deliver to the owner employing him the duplicate of his license; but he shall not lend or otherwise part with his original license on any pretence whatsoever. No owner of any such vehicle shall employ an unlicensed person as the driver or conductor thereof, or without receiving from such licensed driver or conductor the duplicate of the license held by him, which duplicate the said owner shall hold during the time of such person's employment by him, and on discharging any such person he shall return to him the said duplicate.

Council may order Inspection.

14. The Council may as often as they shall deem it necessary cause an inspection to be made of all or any licensed vehicles, and of the harness and horse or horses used in drawing the same; and if any vehicle, horse or horses, or harness, shall be found by them in their opinion unfit for public use, notice in the form or to the effect contained in the Schedule annexed, marked L, shall be given to the owner of such vehicle; and if, after such notice, he shall use or let for hire, or suffer to be used or let for hire, such vehicle, horse or horses, or harness as the case may be, before the same shall be in their opinion in condition fit for public use, the Council may suspend, for such time as they may deem proper, the license of such vehicle, and in case the owner shall neglect or refuse to attend with his licensed vehicle, horse or horses, and harness, before the Council when he shall be called upon for that purpose, the Council may suspend the license of such vehicle. And no owner of any such vehicle shall permit or suffer the same to ply for hire during the suspension of such license.

Lamps to be Lighted.

15. Every licensed vehicle shall be provided with a lamp on each side of the same outside, and the driver of same when plying for hire, between sunset and sunrise, shall light and keep such lamps lighted, and the conductor of an omnibus shall, also between the hours of sunset and sunrise, light and keep lighted the lamps inside such omnibus.

No vehicle to be withdrawn without notice.

16. No owner of any licensed vehicle shall withdraw the same from hire, without leave from the Inspector, except in case of accident.

To ply from stands.

17. The owner or driver of any licensed vehicle shall not permit the same to stand or ply for hire, except at or from an appointed stand.

Stands in Schedule.

18. The places specified in Schedules E, H, and I hereunto annexed, are hereby respectively appointed public stands for licensed vehicles. And the said Council may, by resolution from time to time as they may see fit, alter the position of such stands.

Mode of driving on stands.

19. The driver of every vehicle shall, on its arrival at any public stand, drive the same to the end of the rank of any vehicles that may be on such stand; and be last on the same, and at every public stand all vehicles shall be arranged in single rank only.

Space to be left between every fourth vehicle.

20. At every fourth vehicle on every stand there shall be left a space of at least eight feet, for passengers to pass through.

Driver and Conductor to be in attendance.

21. The driver and conductor of every vehicle shall be constantly attendant on the same when standing on a public stand, or whilst plying for hire; and no driver or conductor shall, when standing on a public stand or plying for hire, be at such a distance from the horse or horses attached thereto as to prevent his having control over the same, nor shall the driver or conductor at any time stand by or remain on the footway or pavement of any of the streets, lanes, or public places next adjoining any public stand; but every driver and conductor when not actually employed in or about his vehicle, or in feeding or watering his horses, shall remain on the driving-box or step of his vehicle, and not elsewhere.

Taking up or setting down passengers.

22. The driver of any vehicle taking up or setting down passengers at any place of public worship or public amusement, or at any public meeting, within the Municipality, or who is waiting for any of those purposes, shall obey the direction of the Inspector or other officer, who may be on duty at such place or places, as to the taking up or setting down or waiting for passengers, and as to the order and place in which any vehicle shall stand; and every driver shall perform his duty in a careful and quiet manner, and shall not push into or get out of the line or position fixed for the vehicles, so as to endeavour to arrive at his place of destination before any other vehicle the driver whereof from its position would have a prior right to take up or set down passengers.

Mode of feeding horses.

23. The driver of every vehicle shall place a muzzle upon the head of any vicious horse whilst on the stand, and whilst feeding his horse or horses shall use nosebags to contain the forage, and shall not remove his horse's blinkers during the time of feeding.

No loitering.

24. No driver of any vehicle shall suffer the same to stand or loiter in any street, or alongside any other vehicle, in taking up or setting down any person, or wilfully, wrongfully, or forcibly prevent, or endeavour to prevent, the driver of any other vehicle from taking a fare.

Wilfully or negligently damaging property.

25. Any owner, driver, or conductor who shall, whilst driving, loading, unloading, or attending any vehicle, or whilst upon any public stand, wilfully or negligently do or suffer, or cause, any damage to be done to the person or property of any one, shall, upon conviction, forfeit and pay to the person whose person or property shall have been damaged, such sum for compensation, not exceeding £10, as the justices hearing the case may award.

Drivers and Conductors guilty of misconduct.

26. No driver or conductor shall, whilst acting as driver or conductor, be guilty of any breach of the peace, misconduct, or misbehaviour, or be intoxicated, or make use of any threatening, obscene, filthy, indecent, blasphemous, profane, abusive, or insulting language, sign, or gesticulation, but shall at all times be sober and careful in the discharge of his duties.

Driver to deliver table of fares.

27. The driver of any carriage shall, immediately upon any person entering the same, give to such person a table of the fares payable for the hire of licensed vehicles, printed in clear and legible characters.

Not to stand longer than necessary for loading, &c.

28. No driver shall, except whilst standing on an appointed stand, permit his vehicle with or without a horse or horses, to stand in any part of the City longer than may be absolutely necessary for loading or unloading, or for taking up or setting down passengers, nor shall he cause any obstruction in any part of the Municipality.

Driver to keep on the near side of the road.

29. Every driver of any vehicle shall keep the same on the left or near side of the road, except in case of actual necessity, and shall permit any other vehicle to pass, having the right so to do, and when about to stop shall raise his whip straight up, so as to warn the driver of any vehicle that may be behind.

Driver to turn vehicle at a walk, &c.

30. The driver of every vehicle shall bring the horse or horses to a walking pace before commencing to turn, and shall also go at the same pace in turning the corner of any street.

Pace for omnibuses and carriages, &c.

31. No vehicle except a dray shall be drawn through any part of the Municipality, at a walking pace, except as before provided, or on Sundays, when all shall be so drawn, when passing places of public worship, during divine service, nor at a pace faster than that of a trot, which shall not be at a less rate than six miles an hour, nor more than seven, at which rate all carriages shall be drawn.

Condition of vehicle.

32. The owner of every vehicle shall at all times, when the same is plying for hire, make and keep it clean, strong, and in good order in all respects, and if with windows, they shall be sound and unbroken, with the leathers or lifts suitably attached to the frames. The horse or horses shall be able and sufficient for their work, free from disease, and properly broken in to harness; the harness for each horse shall be perfect, good, and sufficient for the purpose, and every driver or conductor shall be clean in his person, and wear a good hat, and other clean and respectable clothes, and conduct himself in a proper and decorous manner; and no driver shall illuse any horse in any such vehicle.

Who shall be carried.

33. No person suffering from an infectious or contagious disease shall ride in or upon any licensed vehicle, and no driver, or conductor shall knowingly carry, or permit to be carried, any such person, or (except to some police office or watch-house) any corpse, or any person in a state of intoxication, or who is so noisily or violently conducting himself or otherwise so misbehaving as to occasion any annoyance, or to disturb the public peace; and no passenger shall carry inside any vehicle, except a dray, any animal or any substance of an offensive character, or that might soil or damage the vehicle, or the apparel of other passengers. And no driver or conductor shall sleep in or upon any licensed vehicle, or use the same for eating his meals therein.

34. No driver or conductor shall smoke tobacco or other thing whilst driving or conducting any licensed vehicle engaged on any fare, nor shall any passenger smoke on any vehicle without the consent of the driver, or against the wish of any other passenger, and in no case shall any smoking be allowed inside any omnibus or other vehicle. No conductor shall enter any omnibus nor mount on the top of it whilst performing his journeys, for the purpose of collecting any fares or for any other purpose, or permit any person to stand on the steps or monkey-board whilst he shall be conducting.

No person to drive without consent of owner.

35. No person except the driver or conductor of a licensed vehicle (authorised by the owner of such vehicle), shall drive or conduct the same. No driver or conductor shall suffer or permit any other person to act as driver or conductor of such vehicle without consent of the owner, neither shall the driver or conductor of any vehicle leave the same when plying for hire; and no person shall tout or solicit passengers for him.

Not to neglect to take a fare agreed for.

36. No owner or driver of any licensed vehicle having agreed to take a fare from any place, at any time, shall delay, neglect, or refuse to do so.

Vehicle whilst loading to be placed near side of street.

37. Every driver, whilst engaged in loading or unloading his vehicle, shall place it as near as conveniently may be to the near or left hand side of the street, parallel to the footway.

By-Laws to be given to licensed persons.

38. Every person obtaining a license under these By-laws shall at the time of registering his license have given to him, without charge, a copy of these By-laws, each such copy to be signed by the Town Clerk, and to have the name of the owner, driver, or conductor, to whom the same shall be delivered, with the number of the license written distinctly thereupon; and such owners, drivers, and conductors respectively shall at all times have such copy of By-laws ready for production, and shall upon request produce the same for any person using or hiring any vehicle, and every driver and conductor shall at all times have his original license, and produce the same when required by any person as aforesaid, or to the Inspector or his assistants, or to any Justice of the Peace, or Inspector of Police, or police requiring the same.

The register of license.

39. Every owner, driver, and conductor, on receiving his license, shall sign a copy purporting to be such, and acknowledging the receipt of the original license, which copy shall be kept by the Town Clerk, and the production of which, on any

proceeding for breach of the By-laws, shall be sufficient evidence that the person so signing, is in fact the person to whom such original license was issued without any notice to produce the original.

Omnibus and Omnibus Car Regulations.

Construction of Omnibus and Omnibus Car furnishing necessary particulars to be painted.

40. Every omnibus and omnibus car for which a license shall hereafter be applied for shall be of the dimensions herein directed, and shall be provided by the owner, with the fittings and furniture, and have painted on it the words, figures, and notices detailed and described as follows:—

Dimensions.

From floor to roof, in line with front of each seat, not less than five feet.

From top of seat of cushion to roof, not less than three feet six inches.

Each seat shall not be less than fourteen inches wide. Space from seat to seat between the inside seats, not less than two feet.

Fittings and Furniture.

The outside seats, when not of the rustic pattern, and all inside seats, shall be furnished with good cushions.

Springs shall be provided to all window frames, of an approved pattern, effective to prevent noise.

Waterproof aprons shall be provided sufficient to cover the legs of all outside passengers, which aprons the driver shall offer for use.

A bell or check-string to warn the driver to stop when required.

Two lamps outside, one on each side of the omnibus, of the colour prescribed for the line of road on which it shall ply; one lamp inside.

Words, &c., to be painted.

The body of the omnibus shall be painted of the colour prescribed for each particular line of road, and shown in Schedule G.

The number of the license in black, on the outside lamps.

The number of the license, 4 inches long, and of proportionate width, upon or near the driver's seat, and upon the panel of the door on the outer side.

The fare, and name of the owner, on the outside of the door.

The name of the stands between which it shall be licensed to ply, on each external side clear of the wheels; also—

On the end panel inside, in a conspicuous place, the names of the stands between which it shall be licensed to ply, the licensed number of passengers, the time of journey, the fare, and the name of the owner, except where otherwise directed. All the above words and figures to be not less than 2 inches in length, free from flourishes or intricate designs, and of a colour opposite to, contrasting with the ground on which they shall be painted. No alteration shall be made in any of the above without notice to the Inspector and the approval of Council: Provided that no alteration in the colour of the body of any omnibus shall be enforced until it shall be required to be painted: Provided also that it shall not be lawful for the owner, driver, or conductor of any omnibus or omnibus car to suffer any notice, advertisement, or printed bill, or any names, letters, or numbers, to appear upon the outside, or inside thereof, without the consent of the Inspector previously obtained.

Not to carry a greater number than licensed for.

41. No driver or conductor shall admit to the inside, or allow on the outside of any vehicle at any one time a greater number of passengers than the number it shall be licensed to carry inside or outside, as the case may be; and no vehicle shall be licensed for more passengers than the same will accommodate upon fit seats properly cushioned, allowing for each passenger a space of 18 inches, measuring in a straight line lengthwise, on the front of each seat: Provided that no child under five years of age sitting on the lap shall be deemed to be a passenger under these By-laws. No passenger shall carry more than one child without paying its fare.

42. No omnibus shall be taken off the line of road for which it shall be licensed excepting as is herein provided.

Vehicles to start in rotation.

43. The time of starting shall be according to the table in Schedule K. The first vehicle to start on one day shall be the last on the next, and the others in their order, starting earlier

by the interval appointed between any two vehicles on such stand; and each owner shall furnish a vehicle to perform the journeys in every turn that falls to him, so as to keep a continuous rotation daily: Provided that at such stands as do not appear under Schedule J, there shall be an interval of 10 minutes between the starting of every two vehicles plying from any stand to the same place, or such other special cases as the Council may see fit to direct.

Line of road and time to be kept.

44. The driver of every vehicle shall on each line of road start with his vehicle from its stand, and complete the journey and the parts thereof to its other stand, if any, for such road in the times shown in Schedules J and K, without turning the same round or leaving the proper line of road from one stand to the other, as shown in the license of such omnibus or other vehicle.

Extraordinary occasions.

45. The Inspector of licensed vehicles for the time being shall be at liberty to grant permission to the owner or driver of any licensed vehicle to leave the line of road for which such vehicle is licensed, and ply the same from any place, not being an appointed stand, and no owner or driver of any licensed vehicle shall permit or suffer the same to leave the line of road for which such vehicle is licensed without such permission.

No Blowing of horns, &c.

46. No driver or conductor of any omnibus, or other vehicle whilst standing at a public stand or plying for hire in any part of the Municipality, shall endeavour to attract notice by ringing of bells, blowing of horns, or other instruments, nor deceive any person in respect of the route or destination thereof by word or sign; nor shall the driver or conductor of any vehicle endeavour to attract notice by shouting on Sunday whilst standing at a public stand, or in any part of the Municipality: Provided that the Inspector may in certain cases give the driver permission to sound a horn or blow a whistle.

Passing.

47. The driver of any vehicle shall not permit his vehicle to pass any other in the Municipality proceeding in the same direction from or to the same stand, if the latter be proceeding on its journey at a pace faster than a walk.

Eligible passengers not to be refused.

48. No owner, driver, or conductor of any vehicle shall demand, receive, or take from any passenger a larger fare than shall be shown in large immovable figures in some conspicuous place, both inside and outside the vehicle, as the fare for which such vehicle plies: Provided that no fare shall be increased, except between the hours of 10 o'clock at night and 5 o'clock in the morning. And no driver, or conductor of any vehicle shall neglect or refuse to admit and carry any person for whom there is room, and to whom no reasonable objection can be made under these By-laws; nor, except in cases of accident, or other unavoidable cause, shall any driver or conductor stop such vehicle upon any place where foot-passengers usually cross the carriage-way.

Fares to be paid on demand, &c.

49. Any person having taken his seat in or upon any licensed vehicle shall pay the fare when demanded, after the commencement of his journey. The owner of every vehicle plying for hire shall provide the same with a licensed driver and a licensed conductor.

Carriage regulations.

Carrying capacity of hackney carriages.

50. The number of the license granted for every hackney carriage or cab, shall be painted in figures not less than two inches in height, and of proportionate breadth, of a colour to contrast with the colour of the ground on which it shall be painted, outside on the panel of each door on any hackney carriage, and on the sides of the boot of any cab, and upon each lamp on any of the aforesaid vehicles, the same number of the same size shall be painted black, and all the aforesaid numbers shall be kept legible and undefaced during all the time such vehicle shall ply or be used for hire, and the owner of any such hackney carriage or cab shall be liable to the penalties herein provided, for a breach of this By-law. The drivers of such vehicles respectively shall be bound to take, if required, exclusive of the driver, four persons inside and one outside a hackney carriage, or two persons inside a hansom cab. The driver shall not be obliged to take any luggage exceeding fifty pounds in weight, being clean and of such a description as may be placed inside or outside the vehicle without injuring the same, and the driver shall be entitled to claim one shilling for every additional fifty pounds weight, or portion thereof so carried; but the person hiring

such vehicle shall be allowed eighty-four pounds weight of luggage when the number of persons is short of the number aforesaid. Whenever the number of persons carried shall exceed that named for each vehicle respectively, the driver shall be entitled to charge—by time or distance, as the hiring may be—one-third more for each adult or two children over five and under fifteen years of age. Further, the driver shall not allow any person to ride, drive, or be carried in or upon such vehicle without the consent of the hirer.

Number of carriage and table of fares to be affixed inside.

51. The number of the license of every carriage on a card six inches by three, printed in clear legible figures, and the table of fares to be fixed by the Council shall be affixed at the back of the panel of such carriage, or in such other place as the Council may direct; and such card shall be kept so affixed, legible and undefaced, during all the time the carriage shall ply or be used for hire, and also the following notice, viz.:—"Driver is required in all cases to give the hirer on entering the vehicle a ticket, and to produce the By-laws and table of fares on demand." The owner of every carriage shall provide and the driver shall deliver when demanded, to every person hiring a carriage, on entering the same, a printed ticket in the following form, or such other as the Council may from time to time direct, and on such ticket the table of fares fixed by the Council:—

"Preserve this ticket and see that number corresponds with that on vehicle. In case of complaint apply at the Inspector's Office. Table fares (as in Schedule F). Tolls in all cases to be paid by the hirer. No owner or driver of a licensed hackney carriage or cab shall demand, receive, or take more than the several fares set forth in the Schedule hereunto annexed, marked F."

Drivers to draw to near side to put down, &c.

52. Every driver of a carriage whilst engaged in taking up or setting down any passengers shall, during such taking up or setting down, place his vehicle as near as conveniently may be to that side of the street, and in a line parallel with the kerbstone at which the taking up or setting down is required: Provided that he shall put down or take up on his near side.

Fares to be paid for vehicles sent for but not used.

53. Any person calling or sending for a carriage and not further employing the same shall pay as follows:—For a hackney carriage, one shilling: for a cab, nine pence, or the fare from the stand or place from which the carriage was engaged at the driver's option. And if the person calling the carriage shall detain the same more than five minutes, he shall pay for any time it may be detained, not exceeding a quarter of an hour; if a hackney carriage, nine pence, if a cab sixpence, and any further time in the same proportion.

Legal fares to be paid.

54. Any person having hired a licensed carriage shall pay the legal fare when demanded; and any person refusing or neglecting to pay the same shall, on conviction before two Justices of the Peace, forfeit and pay the same with such amount of over damages, costs, and charges, for loss of time, or otherwise, as the said Justices shall think fit.

Dray Regulations.

No person to ride upon dray without reins.

55. No owner, driver, or other person having the care and charge of any dray drawn by one or more horses, or other animals, shall ride thereon, unless he shall be provided with sufficient reins nor in any case if such dray be loaded; and no block dray shall be allowed to proceed out of a walking pace.

Property left on dray.

56. For every case of goods or merchandize being left on any licensed dray, or with the driver thereof, by any person having hired or used the same, such property shall be delivered up to such person, or shall within eighteen hours be taken, in the state in which it shall have been found, to the Inspector's office and there deposited with the Inspector.

Not to carry more than one ton on dray.

57. No owner or driver shall at any one time carry on any licensed dray, having only two wheels and drawn by one horse, a greater weight than one ton.

Detention.

58. Whenever any dray, hired by the load or distance, having taken up a load, shall be detained with the same more than fifteen minutes, the hirer shall pay for every fifteen minutes after the first, sixpence, and so in proportion for any longer period.

How numbers placed on dray.

59. The number of the license granted for every dray shall be painted white on a ground of black, or the reverse, on the sides thereof, in a conspicuous place in figures not less than three inches in height and of proportionate breadth, with the letters N B C of the same colour immediately above the figures, and the driver or owner of such dray shall at all times keep the same legible and undefaced.

Not to demand more than legal fare.

60. No owner or driver of any dray shall demand, receive, or take more than the several fares or amounts fixed by the Council by these By-laws, and no owner or driver of any dray shall carry for hire any persons as passengers.

Fares for sending for, but not using dray.

61. Any person calling or sending for any licensed dray and not further employing the same, shall pay the sum of two shillings, or the fare or hire from the stand or place where the dray was engaged, at the driver's option; he shall further pay for any time the dray may be detained, not exceeding a quarter of an hour, the sum of one shilling, and for any time not exceeding a second quarter of an hour the sum of sixpence, and for any further time at the rate of sixpence for every quarter of an hour.

Distance—how computed.

62. The distance shall be computed from the stand or place where the dray was hired.

To pay legal fare.

63. Any person having hired a dray shall pay the legal fare when demanded.

Council appoint stands.

64. The places enumerated in the Schedule marked E are hereby appointed public stands for drays.

Drays not to stand across street.

65. No driver of any licensed dray shall suffer the same to stand for hire across any street, except so directed by the Inspector, or alongside any other vehicle, nor obstruct the driver of any other dray in loading or unloading any goods or merchandize, or wilfully, wrongfully, or forcibly prevent, or endeavour to prevent, the driver of any vehicle from taking a fare or hiring.

Miscellaneous Regulations.

Property found in vehicles.

66. The driver of every carriage and conductor of every omnibus shall carefully examine his vehicle immediately after setting down his fare, and in every case of property having been left in any vehicle, by any person having used or hired the same, such property, if found by another passenger or other person, shall be delivered to the driver or conductor, who shall deliver the same, with any other property found by him, within eighteen hours after such finding to the Inspector at his office, and there deposit it; and no owner shall detain any property delivered to him by any driver or conductor in his employment longer than the time before-mentioned, but shall deposit it at the Inspector's office with the Inspector.

Additional fare after 10 p.m. and before 5 a.m.

67. For as much of every drive by time or distance as may be performed by any vehicle not an omnibus, after 10 o'clock at night and before 5 o'clock in the morning, an addition of one-half the ordinary fare shall be paid with such ordinary fare, and in case of an omnibus the charge shall be double the ordinary fares between the above-mentioned hours.

Information may be made on behalf of the complainant.

68. It shall be lawful for the Inspector on receiving any complaint from the owner, driver, or conductor of any licensed vehicle, or from any person using or intending to use, or hiring or intending to hire, any such vehicle, that any of these By-laws have been disobeyed, to cause the person against whom the said complaint shall have been made to be summoned to appear before the Justices.

Vehicles on a stand bound to take a fare.

69. Every vehicle except an omnibus or omnibus car standing or being on any public stand shall be deemed to be plying for hire, and the driver thereof shall be bound to take immediately any fare, notwithstanding any pre-engagement: Provided, however, that no person shall be bound to take such fare unless the person requiring the same shall upon demand tender and pay the legal fare for the required hiring there and then. Further, if at any other place than a public stand the owner or driver

shall solicit engagement by word or sign, he shall be bound to take a fare immediately under the same conditions as before mentioned as to the hirer.

Inspector may be appointed.

70. Such person or persons as may from time to time be in that behalf appointed by the Council shall be Inspector or Sub-inspector, during the pleasure of the Council, of all licensed vehicles plying for hire in the Municipality, and such Inspector or Sub-inspectors shall, every three months, examine all such vehicles and report to the Council on the same, and shall at all times see that as far as possible the By-laws are duly observed; and such Inspector or Sub-inspectors shall have power to order from any stand or from being driven or used for hire any vehicle which, with horse or horses and harness attached thereto, upon examination shall not be in a proper and cleanly state, and in all respects in accordance with the By-laws fit for work; and every owner, driver, or conductor shall comply with the orders and directions so given.

No person to obstruct Inspector.

71. No owner, driver, or conductor, or other person, shall obstruct or hinder any such Inspector or Sub-inspector in the execution of his duties, or refuse to comply with any lawful order or direction to be given by him in relation to these By-laws.

72. For any offence against the provisions of these By-laws the offender shall be liable to and shall pay a penalty not exceeding £10 nor less than 6s.

SCHEDULE A.

A requisition for license to

To the Council of the Borough of I, _____, residing in _____ street, do hereby request that a license be granted to me to No. _____ within the said Borough.

Waratah.....	The New Post Office.
Tighe's Hill	The Railway Crossing.
Hamilton	Tudor's Hotel.
Newcastle	The Omnibus Stand.

SCHEDULE K.

But it shall be within the power of the Inspector to grant unto the owner of any vehicle permission to run journeys on Saturday nights, and on any special occasions up to 11½ p.m., such permission to be revocable at the will of the Inspector, and not in any way to interfere with the conditions of the license, otherwise than the observing of all By-laws and Regulations, respecting the due conduct and condition of all owners, drivers, conductors, or vehicles.

SCHEDULE L.

To Mr. _____, owner of the _____, numbered _____

Take notice that I, the duly appointed Inspector of Public Vehicles for the City of Newcastle, have this day examined your _____ and find it defective, it being _____, and I therefore prohibit the same from again being used or hired until the repairs above noted are made and approved of by me. _____ Inspector.

Newcastle, _____ 188 .

Made and passed by the Council of the Borough of Newcastle, this thirtieth day of May, in the year of our Lord one thousand eight hundred and eighty-one.

(L.S.) JOSEPH CREER,

EDWARD S. HOLLAND,
Town Clerk.

Mayor.

1881.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF HUNTER'S HILL—ADDITIONAL BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.Colonial Secretary's Office,
Sydney, 24th October, 1881.

BOROUGH OF HUNTER'S HILL.

ADDITIONAL BY-LAWS.

THE following additional By-laws, made by the Council of the Borough of Hunter's Hill, regulating the charges to be made when the Bailiff is employed and the construction of culverts respectively, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

Charges when the Bailiff is employed.

	s.	d.
1. Warrant (3 copies)	3	0
2. Levy, including inventory	2	0
3. Man in possession, one shilling per hour up to five hours, but no more for the first day, after that five shillings per day.		

Culverts.

CULVERTS may, on application of occupiers, be placed in the water tables opposite gateways, but they must be built by the Municipal servants, and only by consent of the Council. The cost to be borne jointly by the Municipality and the applicant, and to be recoverable by legal proceedings in default of payment. All other erections in or over the gutters to be deemed obstructions and be dealt with accordingly.

(L.S.) J. K. HEYDON, Mayor.

R. V. GALE, Council Clerk.

1881.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF ALEXANDRIA—AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 11th November, 1881.

BOROUGH OF ALEXANDRIA.—AMENDED BY-LAWS.

The following amended By-laws, made by the Council of the Borough of Alexandria, for regulating the proceedings of the Council and the duties of its officers and servants; for determining the times and modes of collecting and enforcing payment of rates; for the management of roads, streets, and public places; for preventing and extinguishing fires; for regulating the erection of buildings; and for generally maintaining the good rule and government of the Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

HENRY PARKES.

AMENDED BY-LAWS FOR THE BOROUGH OF ALEXANDRIA.

All the By-Laws now in force are hereby repealed.

PART I.

1. If at any meeting of the Council the Mayor be absent, the Aldermen then present, if there be a quorum, shall proceed to elect from among themselves a Chairman of such meeting. Whenever there shall be an adjournment of any such meeting, for want of a quorum, the names of the members present shall be taken down, and shall be recorded in the minute book.

2. The following shall be the order of business at all meetings of the Council other than special meetings:—

1. The minutes of the last preceding meeting to be read, corrected (if erroneous), and verified by the signature of the Mayor or other Chairman. No discussion to be permitted on such minutes, except as to whether they are correct.
2. Correspondence to be read, and, if necessary, ordered upon.
3. Accounts.
4. Petitions (if any) to be presented and dealt with.
5. Reports from Committees and minutes from the Mayor (if any) to be presented and ordered upon.
6. Motions of which notice has been given to be dealt with in the order in which they stand on the business paper.

Resolution without Notice.

Provided that it shall be competent for the Council at any time by resolution without notice, to entertain any particular motion, or to deal with any particular matter of business out of its regular order on the business paper, without any formal suspension of this section; and also in like manner to direct that any particular motion or matter of business shall have precedence at a future meeting.

453—

Meetings of the Council.

3. The Council shall meet for the dispatch of business at half-past seven o'clock p.m. on every alternate Wednesday, but when such day shall be a holiday, the Mayor shall appoint such other day for holding the meetings as he may think fit, not exceeding four days earlier or later than the said holiday.

4. In the event of a quorum not being present within half an hour after the time appointed for such meeting of the Council, the names of the Aldermen present shall be taken down and entered into the minute book by the Council Clerk; and each Alderman absent shall pay a fine as hereinafter provided, such fine to be remitted only in case of accident, illness, or other causes which shall be laid before the Council at the next meeting by letter from the absentee, and by them deemed satisfactory.

5. Every Alderman being absent from a meeting of the Council as aforesaid, shall for every offence forfeit the sum of two shillings and sixpence sterling; and all such fines and penalties so incurred shall be paid to the Council Clerk within ten days after the person so fined shall have received or had left at his residence a notice of such fine; and in case of default the Mayor shall enforce the payment thereof under the provisions of the Municipalities Act of 1867. All such fines to be carried to the credit of the Borough funds.

Special Meetings, &c.

6. At special meetings of the Council, the business, after the minutes shall have been read and verified—which shall be done in the same manner as at an ordinary meeting—shall be taken in such order as the Mayor or the Aldermen, at whose instance such special meeting shall have been called, may have directed; and in default of such direction, in such order as the Aldermen present may determine.

Business for Special Meetings.

7. The business paper for each special meeting shall contain only such matters as shall have been specially ordered to be entered thereon by the Mayor or Aldermen calling such meeting.

Papers property of Council.

8. After the business paper shall have been made up as aforesaid, all the said notices of motion, requisitions, and directions, as to which entries have been made thereon, shall be the property of the Council, and shall not be withdrawn, altered, or amended, without leave having been first obtained from the Council for such withdrawal, alteration, or amendment.

9. No motion or amendment in Council shall be entertained until the same shall have been committed to writing, nor shall any such motion or amendment be discussed until it be seconded. Any number of amendments may be moved, but no second or subsequent amendments shall be taken into consideration until all previous ones are disposed of. If any amendment be carried, the question, as amended thereby, shall become itself the question before the Council. No discussion shall be permitted on any motion for adjournment of the Council, and if upon the question being put on any such motion, the same be negatived, the subject then under consideration, or the next in order on the business paper, or any other on such paper that may be allowed precedence, shall be discussed before any subsequent motion for adjournment shall be receivable.

10. Every requisition by an Alderman that any particular matter of business be brought before the Council, shall be regarded and treated as a notice of motion by such Alderman that such business be taken into consideration by the Council; and he shall be called upon in due order to move that such business be so considered, or to make any other motion which he may think fit in reference thereto which shall be consistent with the notice of such business and with good order. And if such Alderman be absent, or if being present and so called upon, he shall make no such motion, then it shall be open to any other Alderman to make such motion. And when any such motion shall have been made, it shall be dealt with in precisely the same manner as if notice thereof had been given, subject, however, to any objection which may exist as to its not being in accordance with the notice actually given of such business or with good order. And if no motion shall be made in reference to such business, the entry relating thereto shall be struck from the business paper.

11. The Council shall vote by show of hands, and every Alderman present shall be compelled to vote, excepting the Mayor or Chairman.

12. The orders of the day shall consist of any matters other than motions on notice which the Council shall at a previous meeting thereof have directed to be taken into consideration, or which the Mayor or any Committee of the Council shall have directed to be entered on the business paper for consideration.

13. Section 10 of this Part of these By-laws shall be considered applicable to orders of the day; and the Alderman who has the usual charge of, or who has previously moved in reference to the particular business to which any such order of the day relates, shall be the person called upon to move: Provided that as to any order of the day entered as aforesaid by direction of the Mayor, such Mayor may arrange with any Alderman to move, and may in such case call upon the Alderman with whom he has so arranged.

14. It shall be incumbent on every Alderman presenting a petition to acquaint himself with the contents thereof, and to ascertain that it does not contain language disrespectful to the Council. The nature and prayer of every such petition shall be stated to the Council by the Alderman presenting the same. All petitions shall be received only as the petitions of the parties signing the same. No motion shall, unless as hereinafter provided, be permissible on the presentation of a petition, except that the same be received, or that it be received and referred to one of the permanent Committees hereinafter mentioned, or that it be received and that its consideration stand an order of the day for some future meeting: Provided, however, that if any Alderman shall have given due notice of a motion in reference to any petition, and such petition shall have been presented before such Alderman shall have been called upon to move such motion, the said motion shall, if otherwise unobjectionable, be considered in order.

15. The Mayor shall have the right of directing the attention of the Council to any matter or subject within its jurisdiction or official cognizance, by a minute in writing. Every such minute shall be written upon paper of the same kind and with the same margin as a report from a Committee, and shall be signed by such Mayor. And the consideration of such minute shall have precedence next after the reading of correspondence and order made thereon mentioned in By-law No. 2, Part I.

16. Every Alderman who shall make or second any motion, or shall propose or second any amendment, or shall take any part in any debate or discussion, or shall put or reply to any question, or shall make any statement, or shall in any other way, or for any other purpose address observations to the Council, shall while so doing stand up in his customary place, unless he shall be prevented from so doing by reason of some bodily infirmity, and shall address himself to the Mayor or other Chairman then presiding: Provided that in the case of a question, such question may, by permission of such Mayor or

Chairman, be put directly to the Alderman or officer to be questioned, and may be replied to in like manner, but in every such case the question so put, and the answer thereto, shall be subject to every legal objection on the ground of disorder or irrelevancy. And all members of the Council shall on all occasions when in such Council, address and speak of each other by their official designations as Mayor, Chairman, or Alderman, as the case may be, nor shall any Alderman be interrupted while thus speaking, unless for the purpose of calling him to order as hereinafter provided.

17. Every mover of an original motion shall have a right of general reply to all observations which may have been made in reference to such motion, and to any amendments moved thereon, as well as a right to speak upon every such amendment. Every Alderman, other than the mover of such original motion, shall have a right to speak once upon such motion and on every amendment thereon. No Alderman shall speak after than once upon any question other than a question of order, unless when misrepresented or misunderstood, in which case he shall be permitted to explain without adding any further observations than may be necessary for the purpose of such explanation. And no Alderman shall be allowed to speak at any time longer than fifteen minutes. An Alderman who has moved any motion or amendment shall be considered to have spoken thereon, but an Alderman who shall have seconded any such motion or amendment, without any further observation than that he seconded the same, shall be at liberty to speak on such motion or amendment. No Alderman shall digress from the subject under discussion, or shall make personal reflections on, nor impute improper motives to, any other Alderman.

18. A debate may be adjourned to a later hour of the day, or to any other day specified, and the Alderman upon whose motion such debate shall have been so adjourned shall be entitled to pre-audience on the resumption of the same. If two or more Aldermen rise to speak at the same time, the Mayor or Chairman shall decide which of such Aldermen shall be first heard.

19. Any Alderman may request the question or matter under discussion to be read or stated for his information, or may require the production of any records of the Council bearing upon such question or matter which are readily accessible: Provided, however, that no such request or requisition shall be so made as to interrupt any other Alderman when speaking, or materially to interrupt the discussion; also that if any such request or requisition shall appear to the Mayor or Chairman not to have been made bona fide, it shall not be complied with.

20. The Mayor or Chairman shall not move or second any motion or amendment, nor put any question as provided for by Section 2 of this Part of these By-laws, except as is further provided for by Section 16 of the same; but such Mayor or Chairman shall have the same right as any other Alderman to speak once upon every such subject or amendment. The Mayor or Chairman shall rise when so speaking (unless prevented by some bodily infirmity from so doing), but shall be considered as still presiding.

21. A Call of the Council may be ordered by any resolution of which due notice shall have been given, for the consideration of any motion or matter of business before such Council. There shall, without any special order to that effect, be a Call of the Council for the consideration of every motion which may be made and of every motion for the rescission of every resolution, order, or decision of such Council. The Call shall be made immediately before the motion or business for which such Call has been ordered or is required to be made by the last preceding Section shall be moved or considered. Such Call shall be made as follows:—The Council Clerk shall call the names of all the members in their alphabetical order, each member present shall answer to his name as so called, and if any members are absent, a record shall be made of such absence; but if leave of absence to any such member shall have previously been granted, or if such an excuse in writing shall have been forwarded to the Mayor or Council Clerk as a majority of the Council then present shall consider satisfactory, such absent member shall stand excused, and a record shall be made of such excuse, and of the reasons for the same. Any member of the Council who, having had notice of such Call of the Council, shall not answer to his name as aforesaid, and shall not be legally excused as aforesaid, and shall fail to show that by reason of extreme illness, or any other sufficient cause he has been unable to send an excuse in writing as aforesaid, or who, having answered to his name as aforesaid, shall not be present when a vote is taken on the motion or business as to which such Call has been made as aforesaid, shall, for every such offence, be liable to a penalty of not less than 2s. 6d., nor more than £1: Provided that if the consideration of every such motion or matter of business be adjourned to a future day, there shall be a further Call on the resumption of such consideration; and the provisions herein, as to penalties for absence, shall have reference to such further Call; and if there shall be more than one adjournment, this proviso shall be taken to extend to the resumption of the consideration of such motion or matter of business after every such adjournment.

22. There shall be three Standing Committees, viz., a By-law Committee, a Committee for Works, and Finance Committee. The By-law Committee shall prepare for the consideration of the Council, drafts of all such By-laws as may be required for the good government of the Borough; they shall also watch over the administration of the By-laws, and of any Statute of which the operation has been or may be extended to the said Borough, and shall take such steps as may be necessary for the prevention or punishment of offences against such By-laws or Statutes, and for the preservation of public health, order, and decency. The Committee for Works shall have the general direction of all works ordered or sanctioned by the Council, and the general inspection of all streets, roads, ways, bridges, public reserves, and other public places under the care and management of the Council; they shall also inquire, and report from time to time, as to such improvements or repairs as they may be directed by resolution of the Council to inquire and report upon. The Finance Committee shall examine and check all accounts, and shall watch generally over the collection and expenditure of the Municipal revenues; they shall inquire and report, from time to time, as to all matters which they may consider to affect, or to be likely to affect, the finances of the Borough, and as to such matters or subjects of the like nature as they may be directed by resolution of the Council to inquire and report upon.

23. Every Committee of which the Mayor shall not be a member shall elect a permanent Chairman of such Committee, within seven days after their appointment. The Council Clerk shall call a meeting of any Committee when requested so to do by the Chairman or any two members of such Committee. The Chairman of each Standing Committee shall make, or cause to be made, in a book to be kept by him for that purpose, memoranda of all the transactions of such Committee, which book he shall, on ceasing to be such Chairman, hand over to the Council Clerk, and by him to the succeeding Chairman.

24. With the exception of emergent matters hereinafter specially provided for, no work affecting the funds of the said Borough shall be undertaken until the probable expense thereof shall have been first ascertained by the Council. For emergent matters, and for necessary current expenses during the intervals which may elapse between the meetings of the Council, outlays to the following extent may be incurred:—1. By order of the Committee for Works, or of the Mayor and one member of such Committee, for repairs or emergent works to the extent of five pounds. 2. By order of the Mayor and any two Aldermen, or without the Mayor, of any four Aldermen, for any emergent purpose, to the extent of five pounds. 3. By order of the Mayor, for necessary current expenses, to the extent of two pounds: Provided that in every case a detailed report, writing, of every outlay, shall be laid before the Council at its next meeting,—such report to be signed by the Chairman of the Committee of Works, or the Mayor, or the Mayor and Aldermen, or the Aldermen without the Mayor, as the case may be, by whom such outlay shall have been authorized. Also, that such outlay shall only be permissible in reference to matters coming strictly within the jurisdiction or functions of the Council, and that no outlay involving a disobedience or evasion of any order or resolution of such Council shall on any pretence be thus authorized.

Accounts or demands for money, &c.

25. All accounts and demands of money against or from the Council shall be examined and reported on by the Finance Committee, before any order shall be made for payment of such accounts or demands. No payment shall be so ordered unless there shall be a certificate or memorandum from the Committee, from the Mayor, or from the officer of the Council to whom the direction or guardianship of such expenditure properly belongs, showing that the demand is a legitimate one, and has been duly authorized or inquired into. It shall be the imperative duty of the Finance Committee to see that this requirement is fulfilled, or to report specially as to the reasons for its non-fulfilment, before recommending payment: Provided, however, that such special report as last herein mentioned may be embodied with the report by which payment of the amount in question is recommended: Provided also, that in cases of special expenditure under section 24 of this Part of these By-laws, the report directed by that section to be laid before the Council shall, if the outlay shall have been lawfully incurred, be deemed a sufficient certificate; and provided further, that in regard to salaries and wages of labour, for officers, servants, and labourers employed at fixed rates of payment by order of the Council, the certificate of the Mayor of the amount due to any such officer, servant, or labourer, and the order of such Mayor for payment of such amount, shall be sufficient authorization for such payment; and such certificate, memoranda, and authorization shall be attached respectively to reports from the Finance Committee on the payments or outlays to which such certificates, memoranda, or authorizations have reference.

Destroying records.

26. Any person destroying, defacing, or altering any record of the Council shall, for every such offence, be liable to a penalty of not less than five pounds nor more than fifty pounds.

Bonds.

27. All bonds given by officers or servants of the Council for the faithful performance of their duties may be deposited with the attorney or the bankers of the Corporation as the Council may order, and no officer or servant of the Council shall be received as surety for any other officer or servant.

Council Clerk's duties, &c.

28. The Council Clerk, in addition to the duties which by the Municipalities Act of 1867, or by the present or any other By-laws thereunder he may be required to perform, shall be the Clerk of all Revision Courts held in the Borough under the provisions of the said Municipalities Act. He shall also, under the direction of the Mayor, conduct all correspondence which may be necessary on the part of the Council. He shall likewise have charge of all the records of such Council, except such books or documents as may (as hereinafter provided) be entrusted to any other officer, and shall be responsible for the safe keeping of such records. He shall generally assist the Mayor in carrying out the orders of the Council and the duties of each Mayor.

Treasurer.

29. The Treasurer shall have the charge of such books of account and other records of the Council as the Council shall from time to time order to be kept by him, and shall be responsible for the safe keeping of the same; and any other officer of the Council may have other records committed to his charge by order of the Council; and in such case shall be responsible for the safe keeping thereof.

Leave of absence, &c.

30. No leave of absence shall be granted to the Mayor or to any Alderman otherwise than by a resolution of the Council adopted after due notice.

Tenders.

31. Whenever it is decided that any work shall be executed, or any materials supplied, by contract, tenders for the execution of such work, or the supply of such materials, shall be called for by public notice as hereinafter provided.

Draft of intended By-laws.

32. A draft of every intended By-law shall lie in the office of the Council for at least seven days before such draft shall be taken into consideration by such Council, and shall be open to the inspection of any ratepayer who may desire to inspect the same, and public notice shall be given as hereinafter provided that such draft is so lying for inspection.

Rescission of orders, &c.

33. Whenever a motion for the rescission of any order, resolution, or vote of the Council shall have been negatived, no other motion to the same effect shall be permissible until a period of three months shall have elapsed from the time of negativing such first-mentioned motion: Provided that nothing herein contained shall be held to prohibit the reconsideration and amendment of any proposed By-law which may have been submitted to the Governor for confirmation, and may have been remitted to the Council with suggested amendments of the same, or the passage after due notice as hereinafter provided, and in due course of law, of any By-law for the repeal or amendment of any other By-law.

Quorum not present.

34. Whenever the consideration of any motion or matter of business shall have been interrupted by reason of a quorum not having been present, the resumption of such consideration may be ordered by resolution of the Council, after due notice, and such consideration shall in such case be resumed at the point where it was so interrupted as aforesaid.

Suits and informations—how laid.

35. Any suits or informations for the enforcement of penalties for or in respect of breach of the Municipalities Act of 1867, or of any By-law made thereunder, or of any Statute, the operation of which may have been extended to the Borough which may have been directed by the Council, or by the By-law Committee, or by the Mayor, to be commenced or laid as follows, namely: When against a member of the Council, or an Auditor, or any officer of the Corporation, by the Council Clerk, unless such Council Clerk shall be the officer to be proceeded against, and in such case by any other officer named by the Council for that purpose; when against any other person, by the officer to whom the carrying out of the statutory provision or By-law imposing the penalty sought to be enforced has been entrusted; and if there shall be no such officer, then by any such officer or person as shall be appointed for that purpose by the Council or the By-law Committee, or the Mayor, as the case may be, on directing such suit or information as aforesaid; and no such suit shall be brought or information laid as aforesaid against any member of the Council or Auditor, except by order of such Council; nor shall any similar proceeding be taken against any officer of the Council except on the order of such Council or of the Mayor, nor against any other person, except upon the order

of the Council, or of the Mayor, or of the By-law Committee. And no such suit shall be directed to be brought, nor shall any such information be directed to be laid as aforesaid, except upon an express resolution of the Council, in any case where the bringing of such suit, or the laying of such information, will be adverse to any previous direction by such Council, or where on the trial or hearing of any such suit or information the same shall have been dismissed on the merits. Provided that in any case the conduct or prosecution of any such suit or information may on the order of the Council be entrusted to an attorney.

Public notice.

36. In all cases where public notice is or shall be required to be given by any By-law of any appointment, resolution, act, order, or regulation done, made or passed, or proposed to be made, done, or passed by the Council or by any Committee thereof, or by the Mayor or any officer of the said Council, such notice shall be given and published by posting the same on or near the outer door of the Council Chambers for the space of seven days, and by advertising the same once in some newspaper circulating in the said Borough.

Persons liable to pay rates, &c.

37. All persons liable to pay any rates shall pay the amounts thereof within the time prescribed by the "Municipalities Act of 1867" into the office of the Council Clerk, during office hours. And it shall be the duty of the Council Clerk to furnish the Mayor with a list of the names of all persons whose rates are unpaid at the expiration of the times fixed for the payment of the same. And it shall be the duty of the Mayor to issue distress warrants against all such persons, and to cause such warrants to be enforced, or to cause such defaulters to be sued for the amount of such rates in a Court of competent jurisdiction.

PART II.

Bailiff, how appointed.

1. The Council may from time to time appoint a Bailiff to the said Borough, and such Bailiff before entering on the duties of his office shall enter into a bond for the faithful performance of his duty—himself in the sum of fifty pounds and two sureties in the sum of twenty-five pounds each, such sureties to be approved of by the Mayor. All distresses for rates in arrear in respect of any premises shall be made by the Bailiff for the time being on the goods and chattels on the said premises while in the occupation of the person on whom the notice of assessment and rate was served, under warrant, in the form of Schedule A hereto, under the hand of the Mayor or any Alderman who may for the time being be duly authorized to perform the duties of that office. If the sum for which any such distress shall have been made shall not be paid, with costs, as hereinafter provided, on or before the expiration of five days, the Bailiff shall sell the goods so distrained, or a sufficient portion thereof, in the manner pointed out by the Act 15 Vic. No. 11, and shall pay over the surplus (if any) that remain, after deducting the amount of the sum distrained for and costs as hereinafter provided, to the owner of the goods so sold, on demand of such surplus by such owner. The inventory on making every such distress shall be in the form set forth in the Schedule B. And the person distraining and the person distrained on shall respectively be entitled to the like advantages as are conferred on either by the said Act: Provided nevertheless that the fees chargeable and recoverable shall be those set forth in the Schedule C. And the Bailiff shall hand over to the Council Clerk all proceeds of every such distress within forty-eight hours after having received the same, less the costs and charges in said Schedule C.

SCHEDULE A.

Warrant of Distress.

I, _____, of the Borough of Alexandria, do hereby authorize you, _____, the Bailiff of the said Borough, to distrain the goods and chattels in the dwelling-house (or in and upon the land and premises) in the occupation of _____, situate at _____, for _____, being the amount of rates due to the said Borough to the day of _____, for the said dwelling-house (or land or premises as the case may be), and to proceed thereon for the recovery of the said rates according to law.

Dated this _____ day of _____, 18 ____.

SCHEDULE B.

Inventory.

I have this day, in virtue of the warrant under the hand of the _____ of the Borough of Alexandria, dated _____, distrained the following goods and chattels in the dwelling-house (or in and upon the land and premises) in the occupation of _____, situate at _____, within the said Borough, for _____, being the amount of rates due to the said Borough to _____ day of _____, 18 ____.

List of Goods and Chattels distrained on

Dated this _____ day of _____, 18 ____.

SCHEDULE C.

Costs.

	s. d.
For every warrant of distress	2 0
For serving every warrant and making levy where the same is not more than £20	2 0
Above that sum in addition for every £10	1 0
For making and furnishing copy of inventory	2 0
For man in possession each day or part of day	5 0
For sale, commission, and delivery of goods per pound on proceeds of the sale	1 0

PART III.

New roads, &c.

1. No new public road, street, or other place less than forty feet in width proposed to be dedicated to the public, shall be taken under the charge and management of the Council until after such road or street shall have been examined by the Committee for Works and reported upon to the Council by such Committee.

New streets, roads, &c.

2. Whenever any proprietor or proprietors of land within the said Borough shall open any road, street, or way, or lay out any park or other place for public use or recreation through or upon such land, and shall be desirous that the Council shall undertake the care and management of such road, street, way, park, or other place, he or they shall furnish the Council with a plan or plans, signed by himself or themselves, showing clearly the position and extent of such road, street, way, or park, or other place as aforesaid.

New road, streets, &c.

3. If the Council shall determine to take charge of any roadway or other place as aforesaid, the plan or plans so signed as aforesaid shall be preserved as a record or records of the Council; and the proprietor or proprietors aforesaid shall execute such further instrument dedicating such road, way, park, or other place to public use or recreation as aforesaid as may be considered necessary by the Committee for General Purposes, and such further instrument of dedication shall also be preserved as a record of the Council.

Management of Roads and Streets.

4. No person shall erect any house or other building in any street, road, or lane in the Borough, without giving notice thereof in writing to the Council Clerk, describing the nature and situation of the intended erection; and the person giving such notice shall be entitled to receive from the Council, within seven days after receiving such notice, an authority to proceed with the said building, upon payment to the Council Clerk of a fee of two shillings and sixpence, without which authority no such buildings shall be erected under a penalty of one pound.

5. No person shall be permitted to encroach beyond the building-line in any road, street, or lane under the control of the Council, by the erection of houses, verandahs, steps, fences, or any other obstruction, under a penalty of one pound.

6. Any person erecting such obstruction as aforesaid, and not removing the same within fourteen days from the date of notice served on the premises or ground complained of, shall be liable to a penalty of not less than forty shillings nor more than five pounds.

7. All houses within the Municipality having frontages to a main thoroughfare being kerbed and guttered, shall be sufficiently spouted with down-piping to be laid under the footpath and kerb into the gutter; no water is to be allowed to flow on the footpath, under a penalty of five shillings.

8. No person shall throw or deposit any rubbish, dead fowls, or animals of any description, or offensive matter, into any road, street, lane, footpath, gutter, or any ground near to a public way, under a penalty of five shillings.

9. No person shall be allowed to place any building materials on the footpaths, unless by the sanction of the Mayor in writing, countersigned by the Council Clerk; and any building materials so placed, or any open cutting or excavations, shall be protected by two lights, to be kept burning from dark until daylight; and for every such authority as aforesaid the sum of two shillings and sixpence shall be charged.

10. No person shall open the footpath for the purpose of laying on gas or water before making application to the Council and paying a fee of two shillings and sixpence, under a penalty of not more than one pound, nor less than five shillings.

Prevention of Fires.

11. No person shall place, or permit to be placed, in any house, workshop, or other building, fire, gunpowder, or combustible or inflammable material of any kind, so as to endanger contiguous buildings.

12. The inspector of nuisances shall, upon receiving a representation in writing that fire is being used or combustible matter stored to the danger of adjoining buildings, proceed to the premises complained of, and shall if he thinks necessary cause the danger to be removed immediately.

Entrance to Premises.

13. In all cases where access is necessary from a street or road to any yard, private way, lane, or premises, the person or persons requiring and using the same shall form and maintain at his or their own cost a crossing over the footpath through the full depth thereof, to be formed and constructed as the Council or their Surveyor shall direct, under a penalty not exceeding twenty pounds nor less than ten shillings: Provided in all cases where the Council shall consider crossings necessary, and the person or persons interested shall fail to make application for the construction thereof, the Council shall have power to form any such crossings.

Levels.

14. The Committee for Works, or any officer or person acting under the supervision of such Committee, shall, subject to such orders as shall from time to time be made by the Council in that behalf, fix and lay out the levels of all public roads, streets, and ways within the Borough, and the carriage and foot-ways thereof; and it shall be the duty of such Committee, officer, or person, to place posts at the corners or intersections of any such public roads and streets, and of the carriage-ways and foot-ways of such roads and streets, wherever the same may be considered necessary or desirable by the Council: Provided that there shall be no change of level in any such public road, street, or way, until the same shall have been submitted to and adopted by the Council as hereinafter directed.

Alteration of Levels.

15. Whenever it may be deemed necessary to alter the level of any such public road, street, or way as aforesaid, the Committee for Works shall cause a plan and section showing the proposed cuttings, to be exhibited at the Council Chamber for fourteen days, for the information and inspection of ratepayers, and shall notify by advertisement in some newspaper circulating in the Borough, that such plan is so open for inspection. At a subsequent meeting of the Council the said plan and section shall, if adopted, be signed by the Chairman of such meeting, and countersigned by the Council Clerk; and such plan and section so signed and countersigned shall be a record of the Council.

Gravel, &c., not to be removed.

16. Any person who shall form, dig, or open any drain or sewer, or remove or cause to be removed any turf, clay, sand, soil, gravel, stone, or other material, in or from any part of the carriage or foot way of any road or street, or other public place within the said Borough, without leave first had and obtained from the Council, or who shall wantonly break up or otherwise damage any such carriage or foot way, shall, on conviction, forfeit and pay for every such offence any sum not exceeding five pounds nor less than one pound.

Holes, &c., not to be made.—Obstructions.—Fences.

17. Any person or persons who shall dig or make, or cause to be dug or made, any hole or excavation, or leave, or cause to be left, any hole or excavation, or any unenclosed or insufficiently enclosed land, adjoining or near to any street or public place within the said Borough, for any purpose whatsoever, and shall not forthwith enclose, and keep the same enclosed in a good and sufficient manner, to the satisfaction of the Committee for Works of the said Borough, or shall keep up, or cause to be kept up and continued, any enclosure upon any public street, thoroughfare, or other public place for any time which, in the opinion of the said Committee, shall be longer than is absolutely necessary, or shall not place lights upon each side of any such enclosure, and keep the same constantly burning from sunset to sunrise during the continuance of any such enclosure shall forfeit and pay for every such refusal or neglect any sum not being less than forty shillings nor exceeding five pounds. If any person or persons shall fence across, or fence in, or in any way obstruct any public street, or road, thoroughfare, or highway, within the said Borough, such person or persons so offending shall upon conviction forfeit and pay a sum not exceeding five pounds nor less than two pounds for every such offence.

Stoppage of Traffic.

18. The Committee for Works, or any officer or person acting under the authority of such Committee, may at any time cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same, or for any necessary purpose, and any person offending against this By-law, either by travelling along such street, lane, or thoroughfare, or such portion thereof, or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds for every such offence, and not less than two pounds.

Trailing of Timber, &c.

19. Any person who shall haul or draw, or cause to be hauled or drawn, upon any part of any street or public place within the said Borough, any timber, stone, or other thing, otherwise than upon wheeled vehicles or barrows, or shall suffer any timber, stone, or other thing which shall be carried principally or in part upon any wheeled vehicle or borrow, to drag or trail

upon any part of such street or public place, to the injury thereof, or to hang over any part of any such vehicle or barrow, so as to occupy or obstruct the street beyond the breadth of the said vehicle or barrow, shall upon conviction forfeit and pay for every such offence a sum of not more than forty shillings nor less than five shillings.

Filth on Road.—Drawings on Foot-ways.

20. Any person who shall throw, cast, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal, blood, or other filth, or annoyance, or any matter or thing, in or upon the carriage-way or foot-way of any street or other public place in the said Borough, or shall kill, slaughter, dress, scald, or cut up any beast, swine, calf, sheep, lamb, or other animal, in or so near to any such street or other public place, as that any blood or filth shall run or flow upon or over, or be on any or either of any such carriage or foot-way, or shall run, roll, drive, draw, or place or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any of the said foot-ways of any such street or public place, any waggon, cart, dray, sledge, or other carriage, or any wheel-barrow, hand-barrow, or truck, or any hogshead, cask, or barrel, or shall wilfully lead, drive, or ride, any horse, ass, mule, or other beast, upon any such foot-way, shall upon conviction forfeit and pay, for the first offence, a sum not exceeding forty shillings nor less than ten shillings; for the second offence, a sum not exceeding ten pounds nor less than one pound; and for the third and every subsequent offence, a sum not exceeding twenty pounds nor less than five pounds for each such offence.

Obstruction of Foot-ways.

21. Any person who shall set or place, or cause, or permit to be set or placed any stall-board, chopping-block, show-board (on hinges or otherwise), basket-wares, merchandise, casks, or goods of any kind whatsoever, or shall hoop, place, wash, or cleanse, or shall cause to be hooped, placed, washed, or cleansed, any pipe, barrel, cask, or vessel, in or upon, or over any carriage or foot-way, in any street or public place within the said Borough, or shall set out, lay, or place, or shall cause or procure, permit, or suffer to be set out, laid, or placed, any coach, cart, wain, waggon, dray, wheel-barrow, hand-barrow, sledge, truck, or other carriage, upon any such carriage-way, except for the necessary time of loading or unloading such cart, wain, waggon, dray, sledge, truck, or other carriage, or taking up or setting down any fare, or waiting for passengers when actually hired, or harnessing or unharnessing the horses or other animals from such coach, cart, wain, waggon, dray, sledge, truck, or other carriage; or if any person shall set on, place, or cause to be set or placed in or upon or over any such carriage or foot-way any timber, stones, bricks, lime, or other materials or things for building whatsoever (unless the same shall be enclosed as herein directed), or any other matters or things whatsoever, or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal, or other thing or matter whatsoever, from any house or other building over any part of any such foot-way or carriage-way, or over any area of any house or other building or premises, or any other matter or thing from and on the outside of the front or any other part of any house or other building or premises over or next unto any such street or public place, and shall not immediately remove all or any such matters or things, being thereto required by the Inspector of Nuisances or other officer appointed by the said Council,—or if any person who, having in pursuance of any such requisition as aforesaid, removed or caused to be removed any stall-board, show-board, chopping-block, basket-wares, merchandise, casks, goods, coach, cart, wain, waggon, dray, wheel-barrow, hand-barrow, sledge, truck, carriage, timber, stones, bricks, lime, meat, offal, or other matters or things, shall at any time thereafter again set, lay or place, expose, or put out, or cause, procure, permit, or suffer to be set, laid, placed, exposed, or put out, the same or any of them, or any other stall-board, show-board, chopping-block, basket-wares, merchandise, goods, timber, stones, bricks, lime, coach, cart, wain, waggon, dray, truck, wheel-barrow, hand-barrow, sledge, meat offal, or other things or matter whatsoever (save and except as aforesaid), in, upon, or over any such carriage or foot way of or next unto any such street or public place as aforesaid, shall, upon conviction, for every such offence forfeit and pay, for the first offence a sum not exceeding forty shillings nor less than ten shillings, for the second offence a sum not exceeding five pounds nor less than £1, and for the third and every subsequent offence a sum not exceeding ten pounds nor less than two pounds: Provided that nothing herein contained shall be deemed to prevent any person from placing an awning in front of his or her shop or house in such manner as that such awning shall be at least seven feet above the height of the foot-way, and that the posts be placed close to the kerbstones or outer edge of such foot-way, and having first obtained permission from the Council to erect such awning.

Carrying Offal, &c.

22. Any person or persons who shall convey, carry, or cause to be conveyed or carried, in any cart, carriage, or other vehicle, or by any other contrivance, any slaughter-house refuse, offal, night-soil, ammoniacal liquor, or other offensive matter, through or in any street, road, or public place within the said Borough,

between the hours of five o'clock in the morning and ten o'clock at night, or who shall fill any cart or other vehicle so as to turn over or cast any slaughter-house refuse, offal, night-soil, ammoniacal liquor, slop, mire, or channel dirt, or filth in or upon any street, road, or public place, or who shall deposit any slaughter-house refuse, offal, night-soil, ammoniacal liquor, blood, or other offensive matter nearer to any street, road, public place, or dwelling-house than two hundred yards, or who shall remove or receive slaughter-house refuse, offal, night-soil, or other offensive matter, except between the hours of ten o'clock at night and five o'clock in the morning, and then not otherwise than in properly covered and water-tight carts, or who shall cause or suffer any vehicle used for this purpose to stand on any premises within two hundred yards from any such street, road, or dwelling-house, shall for every such offence pay any sum not exceeding ten pounds nor less than two pounds, and for every subsequent offence any sum not exceeding twenty pounds nor less than five pounds, and the Inspector of Nuisances shall have power to inspect the contents of all vehicles carrying or used for conveying such offensive matters as aforesaid.

Furious Driving and Riding, &c.

23. Any person who shall ride or drive furiously so as to endanger the life or lives of any person or persons within any streets, roads, or ways of the said Borough, or shall break in any horse, or shall drive any carriage for the purpose of breaking in such horse or horses, to the danger of the passengers in any street, road, or way within the said Borough, shall for every such offence pay a sum not exceeding ten pounds nor less than two pounds.

Drafting Cattle, &c.

24. Any person or persons drafting cattle upon any road street, or public place within the boundaries of the said Borough, shall upon conviction be fined in any sum not exceeding five pounds nor less than two pounds

Lamp, &c.

25. Any person who shall wantonly or maliciously break or injure any lamp or lamp post, or extinguish any lamp set up for public convenience in the said Borough, shall forfeit and pay for every such offence any sum not less than two pounds nor more than five pounds.

Damaging toll or other public building, &c.

26. Any person who shall damage any public building, toll-gate, toll-bar, toll-board, wall parapet, fence, sluice, bridge, culvert, sewer, water-course, or other public property within the said Borough, shall forfeit and pay a sum not exceeding ten pounds nor less than two pounds.

Damaging trees or shrubs, &c.

27. Any person who shall wilfully and without the authority of the Council cut, break, bark, root up, or otherwise destroy or damage the whole or any part of any tree, sapling, shrub, or underwood, growing in or upon any street or place under the management of the Council, shall forfeit any sum not exceeding ten pounds nor less than one pound.

Animals thrown in water, &c.

28. Any person who shall cast any filth, rubbish, or any dead animal, or any animal with intent of drowning, into any public watercourse, sewer, waterhole, river, creek, or canal, or who shall suffer slops, suds, or filth of any kind to flow from his or her premises over any of the foot-ways or streets of the Borough, or permit or cause by means of pipes, shoots, channels, or other contrivances, filth of any kind whatsoever to flow into any public watercourse, waterhole, river, creek, or canal, or shall obstruct or divert from its channel any sewer or watercourse, river, creek, or canal, shall forfeit any sum not exceeding five pounds nor less than one pound.

Dead animals, mode of removal.

29. If any animal shall die in any part of the said Borough, and the owner of such animal or the occupier of the place, if private property, where such animal shall have died, shall not cause such animal to be immediately destroyed by fire, or so effectually removed and disposed of that no nuisance can possibly result therefrom in any part of the said Borough, he shall for every such offence forfeit and pay any sum not exceeding fifty pounds, nor less than ten pounds.

Dead animals on road or street, &c.

30. If any animal shall die on any road, street, or public place within the said Borough, or within half a mile of any road, street, or public place, or of any dwelling-house, and the owner of such animal, or the occupier of the place, if private property, where such animal shall have died, shall not immediately cause such animal to be effectually removed and disposed of as aforesaid, or destroyed as aforesaid on the spot where it shall have died, if a quarter of a mile from any dwelling-house, or if such spot shall not be a quarter of a mile from any dwelling-house, if such owner or occupier shall not immediately cause such animal to be effectually removed as aforesaid, or to be removed to some place not less than a quarter of a mile from

any dwelling-house and there destroyed as aforesaid, every such owner or occupier shall for every such offence forfeit and pay any sum not exceeding ten pounds nor less than two pounds.

Power of Inspector as to dead animals on private premises.

31. The Inspector of Nuisances, or any other officer appointed by the said Council of the said Borough, with his assistant, may at any hour enter upon any premises or place within the said Borough where any animal has died, and require the owner or occupier of such premises or place immediately to destroy such animal by fire, and if necessary to remove the same for that purpose, as such Inspector of Nuisances or other officer appointed by the said Council shall direct, or otherwise forthwith effectually to remove and dispose of the same as aforesaid, in default of which it shall be lawful for any one or more of such officers to cause such animal to be removed for that purpose, and every owner or occupier of such premises or place failing, neglecting, or refusing to comply with such requisition, shall forfeit and pay any sum not exceeding twenty pounds nor less than three pounds.

Dead animals in certain cases to be removed at cost of Municipality.

32. If any animal shall die in any public street or place within the said Borough, and the owner or any person having charge of such animal cannot at the time be found or ascertained, it shall be immediately removed by the Inspector of Nuisances or other officer appointed by the said Council, and destroyed in the manner aforesaid, at the cost of the said Borough.

Hog-sties to be forty yards from street, and animals suffered to stray, &c.

33. Any person who shall breed or keep any kind of swine, lambs, calves, or sheep in any house, building, yard, garden, or other place situated and being within forty yards of any street or public place in the said Borough, or shall suffer any kind of swine, or any horse, ass, mule, sheep, goat, cow, or any other animal of a like nature belonging to him or her, or under his or her charge, to stray or go about, or to be tethered or depastured in any street, road, or public place, shall on conviction forfeit and pay any sum not exceeding forty shillings nor less than ten shillings for such and every animal so bred, kept, suffered to stray, or go about, or to be tethered or depastured in any such street, road, or public place as aforesaid: Provided that if after due inquiry shall have been made the owner thereof cannot be discovered, it shall be lawful for the said Council to cause to be destroyed any swine or goats so straying, tethered, or depastured. And the owner or occupier of any house or premises or other place within the said Borough, wherein any such swine, horse, ass, mule, sheep, calves, goat, cow, or other animal is kept, fed, milked, or used in any way whatsoever, shall, within the meaning of these By-laws, be deemed the owner of every such animal so bred, kept, suffered to stray, or to be tethered or depastured in any such street or public place as aforesaid, and the words "any house," "building," "yard," "garden," or "other place" wherein any kind of swine, lambs, or calves shall be bred or kept as aforesaid, shall respectively be deemed hog-sties within the meaning of those By-laws, and the word "horses" shall be sufficient designation for any entires, goldings, mares, or foals, and the word "cattle" for any bulls, oxen, cows, or calves, when more than one is the subject of any information and summons under the provisions of these By-laws.

Power to impound.

34. The Inspector of Nuisances or any other person duly authorized by the said Council shall have the power to impound, in the public pound of the said Borough, all animals of every description found straying within the said Borough.

Premises and Offal, &c.

35. Any owner or occupier of any house, premises, or place within the said Borough, who shall neglect to keep clean all private avenues, passages, yards, and ways, within the said premises, so as by such neglect to cause a nuisance by offensive smell, or who shall suffer any slaughter-house refuse, offal, bones, or any decomposed substance under any process or otherwise to remain in or upon any premises in the said Borough, or who shall allow the remains of any boiled carcass or boiled slaughter-house refuse, bones, offal, or liquid, to remain or stand in any cart, boiler, trough, cask, tub, in any shed, house, yard, paddock, or other place within the said Borough, until it shall become a nuisance by causing an offensive smell or otherwise, shall for every such offence pay any sum not exceeding twenty pounds nor less than two pounds, and for every subsequent offence any sum not exceeding fifty pounds nor less than five pounds. And the Inspector of Nuisances, or any other officer appointed by the said Council, for the purpose of abating those nuisances, may, when and as often as he shall see occasion, with any assistance he may deem fit, visit and inspect all private avenues, passages, yards, ways, premises, butchers' shambles, slaughter-houses, tannery, sties, boiling-down, and fellmongering establishments in the said Borough, and any proprietor or proprietors of such establishments who shall suffer soup or other offensive matter to run through any drain, sewer, or pipes into any creek, or cause to pollute any creek or other place in a like manner, shall forfeit and pay a similar penalty as aforesaid.

Complaints respecting dirty premises, &c.

36. Upon the complaint of any householder that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances, or any other officer appointed by the said Council, shall make an inspection of the premises complained of. And the officer of the said Council shall have the full power, without any other authority than this By-law, to go upon such premises for the aforesaid purpose. And any person who shall personally, or by any person in his employment or under his control, suffer any waste or stagnant water, or any muck, filth, soil, or other offensive matter to remain in any cellar or place within any dwelling-house or premises within the said Borough for the space of twenty-four hours after written notice to him from the Inspector of Nuisances, or officer of the Council, to remove the same, or shall in like manner suffer the contents of any water-closet, privy, or cesspool to overflow or soak therefrom, shall for every such offence forfeit and pay a sum not exceeding two pounds nor less than ten shillings, and the like sum for every day that the same shall remain after such notice; and the Council may remove or abate the nuisance.

37. Every person who in any street or other public place or passage within the said Borough, to the obstruction, annoyance, or danger of the residents or passengers, shall commit any of the following offences, shall on conviction for any and every such offence, forfeit and pay a penalty of not more than two pounds nor less than ten shillings:—

Every person who shall carry or convey, or cause to be carried or conveyed, in any street or public place, the carcass, or any part of the carcass, of any newly slaughtered animal without sufficient and proper cloth covering the same for concealment from public view, or shall hawk or carry about butcher's meat for sale without covering the same as aforesaid.

Every blacksmith, whitesmith, anchorsmith, nail-maker, metal-founder, lime-burner, brick-maker, potter, or other person using a forge, furnace, or kiln, and having a door, window, or aperture fronting or opening into or towards any street, lane, or passage, and not enclosing such door, or not fastening the shutters or other fastenings of such window, and closing such aperture, or placing a screen before the same every evening within one hour after sunset, so as to effectually prevent the light from showing through the doorway, window, or aperture next or upon such street or lane or passage.

Every person who shall within the distance of one hundred yards from any dwelling-house burn any rags, bones, cork, or other offensive substance, to the annoyance of any inhabitant.

Every person who shall carry goods, tools, implements, ladders, scaffolding, or any frame, to the annoyance of any person upon the foot-way of any street or other public foot-way.

Every person driving any cart, waggon, dray, coach, hackney-carriage, omnibus, gig, or other carriage whatsoever, who shall not keep to the near or left-hand side of such street, road, thoroughfare, or public place, or passage, except when passing any other carriage or other vehicle which is stationary or going in the same direction, or shall in any manner prevent wilfully any other person from passing him or any carriage under his care, upon such street, road, thoroughfare, or public place, or passage, or by negligence or by misbehaviour prevent, injure, or interrupt the free passage of any carriage or person in or upon the same, and every person having the care or charge of any cart, waggon, wain, or van, which shall be drawn by two or more horses or other beasts, who shall ride on the same without sufficient reins to guide the animals drawing the same.

Every person driving or having the care or charge of any wain, waggon, van, cart, or dray, which shall be drawn by any horse or other animal, and driven or guided by reins, who shall wilfully allow the horse or other animal drawing the same to proceed out of walking pace.

The owner of every such wain, waggon, van, cart, dray, as last above mentioned, who shall allow the same to be driven through the said Borough without having his name and place of abode painted in full length on the off side legibly, at least two inches high and proportionately broad, in white letters on a black ground.

The driver or person in charge of any such cart as aforesaid, who shall refuse to give his and the owner's name and address, or shall give a false or fictitious name of himself or the owner, or of the place of abode of either of them.

Placards, &c.

Every person who shall paste or otherwise affix any placard or other paper upon any wall, house, building, fence, or enclosure, or who shall chalk or paint, or in any other manner mark or disfigure such wall, house, building, fence, or enclosure, unless with the consent of the owner thereof.

Offences against Decency, &c.

38. Any person who shall offend against decency by exposure of his or her person, in any street or public place within the said Borough, or in the view thereof, shall on conviction forfeit and pay for every such offence a sum not exceeding ten pounds nor less than five pounds.

Houses of Ill-fame.

39. Upon representation of any respectable ratepayer that any house or premises within the said Borough, and near to the residence of such ratepayer, is of ill-fame, it shall be lawful for the By-law Committee to cause the residents of such house or premises to furnish to the Council a list of the names, ages, sexes, and occupations of all the inmates of the said house or premises, and upon non-compliance with such request, or if upon consideration the said Committee consider the house to be one of ill-fame, they shall, with the sanction of the Council, declare the same to be a nuisance, and shall cause a notice in writing to be served upon the holder of such house or premises, or any person resident or being therein, to discontinue or abate the said nuisance within forty-eight hours after the receipt of such notice. And if such nuisance be not so abated, the holder of such house or premises, or other person residing or being therein and acting as such holder, shall be liable to be proceeded against for such nuisance, and shall on conviction thereof forfeit and pay any sum not less than two pounds nor more than twenty pounds, and if such nuisance shall not be abated within forty-eight hours after such conviction, such holder of such house, or such other person residing or being therein as aforesaid, shall forfeit and pay for such second offence, a sum of not less than five pounds nor more than fifty pounds. And if a further period of forty-eight hours shall elapse after such second conviction without the abatement of such nuisance, such holder of such house or other person residing or being therein as aforesaid, shall for such third offence pay any sum not less than ten pounds nor more than fifty pounds.

Boiling-down Establishments, &c.

40. Any manufacture, trade, calling or occupation, in the conducting, following, or carrying on of which, or in consequence of, or in connection therewith, or from the premises where the same is conducted, followed, or carried on, any gas, vapour, or effluvia, or any large quantities of smoke shall be evolved or discharged, which gas, vapour, effluvia, or smoke shall be calculated to injure animal or vegetable life, or the boiling down or steaming of a carcass or part of a carcass of any animal, slaughter-house refuse, offal, bones, or the keeping of stacked bones under ammoniacal process, or the letting off of any liquid, steam, or vapour from any boiling-down whereby any such manufacture, trade, calling, operation, steaming, boiling down of any carcass, part of a carcass, refuse, offal, the letting off of any gas, liquid, steam, or effluvia from bones, or other vapour emanating from any process, liquid, or decomposed matter or substance whatsoever, shall cause an offensive smell, or in any other way to injure or be a nuisance to the inhabitants or to any portion of the inhabitants of the said Borough, or to people passing through the said Borough, shall be considered a noisome and offensive trade within the meaning of those By-laws; and, generally, anything that by definition of law can be held or construed to be a nuisance within the meaning of the Municipal Act of 1867, or otherwise according to the principles of common law on which the Municipal law is based, shall be deemed a nuisance, and it shall be in the power of the Council to cause inquiry, and the Inspector of Nuisances, or other officer appointed by the Council for that purpose, may take legal proceedings for the abatement of the same, and the party or parties offending therein, for every such offence as aforesaid, shall be liable to any penalty not exceeding twenty pounds nor less than five pounds.

Boiling-down, hog-sties, &c., Council may indict.

41. In case any boiling-down, privy, hog-sty, sink, cesspool yard or enclosure, or any matter or thing which shall at any time be in any place within the said Borough shall be or become a nuisance, it shall be lawful for the Council, after due investigation, by notice in writing, to order the removal of the said nuisance within seven days after such notice shall have been given to the owner or occupier of the premises wherein such nuisance is situated, or shall have been left for such owner or occupier at his or her last or usual place of abode, or on the said premises, and every such owner or occupier refusing or neglecting to remove or abate such nuisance pursuant to such notice and to the satisfaction of the Council, shall forfeit and pay any sum not exceeding twenty pounds nor less than five pounds.

PART IV.

Erection of house, fee for permission, &c.

1. No person shall be permitted to erect any house, shop, or other building, in any street, lane, or place within the said Borough, without first serving seven days notice in writing on the Mayor or Council Clerk before commencing the same, stating his intention, and describing the proposed situation of the building or erection; and every owner of, and every contractor for, such house, shop, or other building, or any part thereof, commencing to build or work thereon without such notice having been given, and shall at the time the said notice is given as aforesaid, pay unto the Council Clerk a fee of five shillings for permission to erect any fence or any such house, shop, coach-house, stables, or other detached buildings to be so erected on any premises, street, lane, or other place within the said Borough, shall forfeit and pay for every such offence any sum not exceeding forty shillings nor less than five shillings.

Pipes, gutters, &c.

2. It shall not be lawful for any person to carry by means of pipes, gutters, or other contrivances, any rain water from the roof of his or her premises or house upon any of the foot-ways of any street or public place within the said Borough, and any owner or occupier of any such house or premises who shall neglect or refuse to remedy or remove any such pipes, gutters, or contrivances when required to do so by any officer of the said Council, shall on conviction forfeit and pay any sum not exceeding two pounds nor less than five shillings: Provided that the owner or occupier of any such premises or house may convey any such rain water by means of pipes laid under the surface of any such foot-ways into the gutter adjoining the same, subject to the approval of the Improvement Committee.

Private drains, &c.

3. It shall not be lawful for any person without notice to the Council, or otherwise according to such plans and directions as such Council may make and give, to make or branch any private drain or sewer into any of the public drains or sewers, or into any drain or sewer communicating therewith, and in case any person or persons shall make or branch any private drain or sewer into any of the said drains or sewers, or into any drain or sewer communicating or to communicate therewith, without such notice or otherwise than as aforesaid, every person so offending shall for every such offence forfeit and pay any sum not exceeding fifty pounds nor less than two pounds.

Drains to be kept clean.

4. All drains or sewers communicating with any public drain or sewer shall from time to time be repaired and cleansed under the inspection and direction of the Council, at the costs and charges of the occupiers of the houses, buildings, lands, and premises to which the said private sewers or drains shall respectively belong, and in case any person shall neglect to repair and cleanse, or cause any such private drains or sewers to be repaired and cleansed according to the direction of the said Council, he or she shall forfeit and pay for every such offence any sum not exceeding five pounds nor less than one pound.

Storm water overflowing on pathways, &c.

5. Every owner or occupier of land in, adjoining to, or near to any street, if such land shall be so situated that surface or storm water from or upon the same shall overflow, or shall tend

naturally, if not otherwise discharged, to overflow any foot-way of any such street, shall within seven days next after the service of notice by the Council for that purpose, construct and lay from such point upon such land, being near to the foot-way as shall be specified in such notice by plan appended or otherwise, and higher in level than the bottom of the channel at the outer edge of the foot-way, to the said channel, and through, under, and transversely to the foot-way, and keep in good condition a good and sufficient covered drain or trunk, subject to the inspection of the Council or its proper officers, and in default of compliance with any such notice within the period aforesaid, or with the provisions of this section, such owner or occupier shall forfeit and pay a sum not exceeding five pounds nor less than forty shillings. And if within seven days after such conviction such owner or occupier shall still have failed to comply with such notice or otherwise in default as aforesaid, he or she shall forfeit and pay any sum not less than one pound nor more than ten pounds, and for every further such offence he shall forfeit and pay any sum not less than two pounds nor more than twenty pounds. And every such owner or occupier who shall still have made default as aforesaid for more than seven days after such second or any future conviction, shall be held guilty of a further offence within the meaning of this section.

Horses fastened to back or sides of vehicles, &c.

6. Any person who shall fasten, tie, or allow to be fastened or tied, any horse or horses to the back or sides of any dray, cart, or other vehicle, while moving or otherwise in any street, road, or public place within the said Borough, shall forfeit and pay any sum not exceeding two pounds nor less than five shillings for every such horse so fastened or tied as aforesaid, and for every subsequent offence any sum not exceeding five pounds nor less than ten shillings; and the person found in charge of such horses, dray, cart, or other vehicle, shall be the person against whom proceedings shall be taken under these By-laws.

PART V.

Interfering with officer.

Any person or persons who shall obstruct any officer of the said Council while in the performance of his duty, or who shall interfere with any officer of the said Council doing, or performing, or going to perform, or returning from the performance of any duty or act under these By-laws, by using any threats, offensive language, hindrance, or insulting language towards the said officer, in any street, road, or other place within the said Borough, shall forfeit and pay for every such offence a penalty not exceeding twenty pounds nor less than two pounds.

Construction of Terms.

In the construction of the foregoing By-laws the provisions of the Act 16 Victoria No. 1 shall be applied so far as the same may be applicable.

Made and passed by the Council of the Borough of Alexandria, in Council assembled, this 24th day of August, 1881.

(L.S.) CHARLES B. HENDERSON.

Mayor.

JAS. JONES, Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF VICTORIA.—AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.Colonial Secretary's Office,
Sydney, 24th November, 1881.

BOROUGH OF VICTORIA—AMENDED BY-LAWS.

THE following amended By-laws made by the Council of the Borough of Victoria, relating to the public wharf at Blue's Point, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

HENRY PARKES.

BOROUGH OF VICTORIA.

BY-LAW the better to enable the Municipal Council of the Borough of Victoria to regulate control and manage the Public Wharf at Blue's Point, to repeal and amend existing By-law in relation to the same, to provide for the leasing of portions of the said wharf and the tolls to be collected in respect thereof. It is hereby ordered by the Municipal Council of the Borough of Victoria,—

Repeal of existing By-law.

1. The By-law made and passed by the Council on the 4th day of October, 1876, and published in a supplement of the Government Gazette, No. 458, bearing date December 21st, 1876, is hereby repealed.

Division of Wharf into Sections.

2. The wharf shall be divided into two sections, with a road 30 feet wide running north and south, the entire length of the wharf between the two sections. Section No. 1 shall consist of the water frontage, and section No. 2 shall consist of that portion of the wharf at the back of and fronting the road before mentioned.

Subdivision of Sections.

3. Section No. 1 shall be divided into two lots. Lot No. 1 shall consist of 100 feet frontage at the northern end of the wharf, and lot No. 2 shall consist of all the residuc of the section. Section No. 2 shall be divided into four lots; lots 1, 2, and 3 shall each have a frontage of 33 feet to the road hereinbefore mentioned, and lot No. 4 shall consist of all the residuc of the section, lot 1 commencing at the southern end of wharf.

Uses of such Subdivisions.

Lot 1, section 1, shall be reserved and appropriated for and to the use of licensed watermen and the owners of ferry boats, for the purpose of landing or taking off passengers, and the landing or taking off vehicles, horses, carts, drays, &c. Lot No. 2, section 1, shall be reserved and appropriated for

the loading and unloading of colonial produce and general merchandise. Lots 1, 2, and 3, section 2, shall be reserved and appropriated to the storage of coals, coke, wood, or other merchandise, and lot 4, section 2, shall be reserved for the use of the Council.

Leasing of Portions.

5. The Council may lease any one or more of the lots for a period of one or more years by tender, open to public competition, and upon conditions to be approved of by his Excellency the Governor and Executive Council.

Fees and Tolls.

6. The wharfinger shall be entitled to demand and receive the fees and tolls set out in Schedule A hereto from all persons using any portion of lot 2, section 1, of the said wharf.

Charge for goods detained on the wharf.

7. All articles landed at or upon any portion of lot 2 section 1 of the said wharf shall be removed therefrom within forty-eight hours after being landed, and any articles or materials remaining upon the said wharf for a longer period than the said forty-eight hours, the owner of such articles or materials shall pay a charge in respect of same as set out in Schedule B hereto, for every forty-eight hours, or part of forty-eight hours, beyond the time allowed for their removal, in addition to the charges set out in Schedule A hereto.

Appointment of wharfinger or wharfingers.

8. The Council shall and may from time to time, as it shall deem advisable, appoint a wharfinger or wharfingers, to control and manage the wharf, and such wharfinger or wharfingers, from time to time to suspend or remove, and such wharfinger or wharfingers shall have power to, and he and they are hereby authorised and required to, keep good order upon the wharf and every part thereof, and to remove all disorderly persons therefrom, and to deliver such person or persons into the custody of any constable.

Road to be kept clear

9. No person shall place, suffer, or permit to be placed, or remain upon the road hereinbefore mentioned, any coals, coke, wood, merchandise, or any goods whatsoever, and no horse, dray, cart, or other vehicle, shall obstruct the said road, or remain thereon longer than may be necessary to pass or re-pass to or from any of the respective lots.

Vessels not to make fast to wharf, &c.

10. No ship, steamboat, or other vessel shall be allowed to make fast to or remain alongside, except while actually loading or unloading cargo, or landing or taking off passengers, and no owner or master of any such ship, steamboat, or other vessel shall suffer or allow any such vessel to remain alongside the wharf longer than may be necessary to load or unload cargo, or to land or take off passengers.

Against improper use of wharf, &c.

11. Any master or other person in charge of any ship, steamboat, or other vessel, or any other person who shall by improper use, carelessness, or negligence cause any damage to the wharf, shall, upon demand, pay the costs of such damages, and if such damage shall be done wilfully or maliciously then any such master or other person so offending shall pay, in addition to such costs, a penalty of not more than five pounds and not less than one pound.

Regulations as to carts, drays, vehicles, &c.

12. No dray, cart, or other vehicle, drawn by one or more horses or other animals, shall be allowed to remain on the wharf longer than may be necessary for loading or unloading, or taking up and setting down passengers, and all such drays, carts, or other vehicles, when so loading or unloading or taking up and setting down passengers, shall be placed between parallel lines bearing north and south, and no such vehicle, horse, or horses, or other animals, or any saddle horse or saddle horses shall at any time be left upon the wharf or entrance thereto unless in charge of a person competent to manage the same.

Goods not to be left on wharf.

13. No goods, merchandise, produce, butchers' meat, or live stock, for shipment, shall be allowed on the wharf until a vessel is ready to receive the same, and all goods, merchandise, produce, butchers' meat, or live stock, landed from any vessel, shall be so placed as not to interfere with the general use of the wharf, and shall in all cases be immediately removed therefrom by the owner, or in default by the Council, and all expenses attending such removal by the Council shall become a charge upon the goods so removed.

Penalties.

14. Every person who shall commit any breach of or offend any section or part of this By-law shall, for every such breach or offence, forfeit and pay any sum not exceeding five pounds, to be recovered by summary jurisdiction, before any two Justices of the Peace.

Made and passed by the Municipal Council of Victoria,
this twelfth day of September, 1881.

(L.S.) FREDERICK SMITH,
Mayor.

WALTER G WILLINGTON,
Council Clerk.

1881.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF CARCOAR—AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 23rd April, 1881.

THE following amended By-laws made by the Council of the Municipal District of Carcoar for regulating their own proceedings; for the collection and enforcement of rates; for preventing and extinguishing fires; for the suppression of nuisances; and for the care and management of public roads and streets, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

MUNICIPAL DISTRICT OF CARCOAR.

AMENDED BY-LAWS.

BY-LAWS for regulating the proceedings of the Council of the Municipal District of Carcoar; for the collection and enforcement of rates; for preventing and extinguishing fires; for the suppression of nuisances; and for the care and management of the public roads and streets.

1. All existing By-laws are hereby repealed.

General Duties of the Mayor or presiding Alderman.

2. The Mayor, presiding Alderman, or Chairman, at any Committee Meeting shall preserve order, and his ruling upon all matters shall be final, and no argument or discussion shall ensue thereon; but he shall state his reasons for such decision.

3. The Mayor, presiding Alderman, or Chairman, shall put all questions, and declare the sense of the Council or Committee thereon.

4. The Mayor, presiding Alderman, or Chairman, shall decide as to pre-audience of members where two or more desire to speak, and may call any member to order for refusing to comply with his decision, or speaking a second time upon the subject unless in explanation.

5. Every Alderman introducing a motion shall have the right of reply, and of speaking once on every amendment.

6. Every motion duly put and seconded, shall be put first in the affirmative and then in the negative, and the Mayor, presiding Alderman, or Chairman may, if he thinks fit, call upon the members to divide, in order that the correct sense of the meeting may be ascertained.

7. The Council shall meet for the despatch of business at 7-30 o'clock p.m. on every alternate Tuesday; but when such day shall be a holiday, the Mayor shall appoint such other day for holding the meeting as he may think fit, not exceeding four days earlier or later than the said holiday.

8. In the event of a quorum not being present within half-an hour after the time appointed for such meeting of the Council, the names of the Aldermen present shall be taken down and entered into the minute-book by the Council Clerk.

9. Every Alderman being absent from three consecutive meetings of the Council, shall be liable to a fine of five shillings sterling, for every successive meeting thereafter until he resume his attendance; and all such fines and penalties so incurred shall be paid to the Council Clerk within ten days after the person so fined shall have received, or had left at his residence, a notice of such fine; and in case of default, the Mayor shall enforce the payment thereof under the provisions of the Municipalities Act of 1867. All such fines to be carried to the credit of the Council funds.

Order of Business.

10. The minutes of the last meeting shall be read, and if no objection be taken as to their correctness, the Mayor or presiding Alderman shall thereupon sign the same; but if any objection be made as to their correctness, or any part thereof, the question shall be put to the Council, and if the Council shall so decide, the alteration shall be made, and such alteration shall be signed in the margin by the Mayor or presiding Alderman, and the Council Clerk.

11. After the confirmation of the minutes of the preceding meeting, the order of business shall be as follows:—

Reading of correspondence.

The presentation of Petitions.

Reports of Committees.

Motions of which notices have been given.

Questions of which notice have been given at the last meeting of the Council.

Business may be dealt with out of regular order.

12. Provided it shall be competent to the Council at any time by resolution, without notice, to entertain any particular motion, or to deal with any particular matter of business out of its regular order on the business paper, without any formal suspension of this section; also and in like manner to direct that any particular motion or matter of business shall have precedence at a future meeting.

Conduct of business

13. Every Alderman shall stand while speaking, and shall address the Mayor or Chairman.

14. Every Alderman shall confine his remarks to the subject before the Council.

15. No Alderman shall make any remarks of an offensive or personal nature upon any Alderman or officer of the Council.

16. No member shall speak longer than ten minutes, nor more than once on any subject under debate, except it be the mover of any motion, who shall have the right of reply, and he shall not speak for a longer period than twenty minutes unless by consent of the Council previously obtained.

17. A debate by motion may be adjourned at any time.

18. All petitions shall be presented by an Alderman, and read by him to the Council, and no petition shall be received unless its reception be moved, seconded, and carried.

19. All notices of motion shall be in writing, signed by the mover, and delivered to the Council Clerk two clear days before the day of meeting.

Absence of proposed mover.

20. No motion, of which notice shall have been entered on the business paper, shall, as hereinafter provided, be proceeded with in the absence of the Alderman by whom such notice shall have been given, unless by some other Alderman producing a written authority for that purpose from such first-named Alderman.

21. The Council shall vote by show of hands, and every Alderman present shall be compelled to vote, excepting the Mayor or Chairman.

22. No member shall interrupt another while speaking by any acclamation or other expressions of approval or dissent.

23. No motion in Council shall be discussed unless and until it be seconded.

24. When a motion in Council shall have been made and seconded, any Alderman shall be at liberty to move an amendment thereon; but no such amendment shall be discussed unless and until it be seconded. No motion or amendment shall be discussed until it shall have been reduced into writing. No second or subsequent amendment shall be taken into consideration until the previous amendment or amendments shall have been disposed of. If an amendment be carried the question as amended thereby shall become itself the question before the Council, whereupon any further amendment upon such question may be moved. If any amendment, either upon an original question, or upon any question amended as aforesaid, shall be negatived, then a further amendment may be moved to the question to which such first-mentioned amendment was moved, and so on, provided that not more than one question and one proposed amendment thereof shall be before the Council at one time.

25. No motion to rescind a resolution, or to affect it in any way, shall be put upon the business paper unless by consent of a majority at a call of the whole Council.

26. A call of the whole Council may be ordered by resolution.

27. Whenever any matter of order arises it shall be taken into consideration immediately, and upon a member rising to order he shall be heard, and the member who was speaking shall sit down until the question of order has been decided, but in case any Alderman called to order or requested to sit down refuses to obey the ruling of the Mayor or Chairman, he shall pay a fine of five shillings.

28. The Council Clerk shall make out a paper to be called the Business Paper, which shall contain all matters to be considered, and all such papers shall be filed and become records of the Council.

29. All such business papers shall be endorsed in the margin by the Mayor or Chairman, specifying the manner in which each matter has been disposed of.

Committees.

30. There shall be four permanent Committees, viz.:—The Finance, the By-law, the Works, and the Committee for General Purposes, and all reports of Committees shall be signed by the chairman.

31. No expenses shall be incurred until the probable cost is first ascertained.

32. The Mayor may in cases of an emergency authorize the expenditure of any sum not exceeding five pounds, and by request of not less than three Aldermen, given him in writing, under their signatures, may for a like reason authorize the expenditure of a sum not exceeding ten pounds, but no further expenditure shall be permitted until the Council shall have met and approved of the outlay.

Officers and Servants.

Notice to Candidates.

33. No appointment to any permanent office at the disposal of the Council shall take place until notice shall have been given by advertisement in the local newspaper inviting applications from qualified candidates for the same. The salary or allowance attached to the office shall in every case be fixed before such advertisement is published, and shall be stated in such advertisement.

Collection of rates.

34. All rates made by the Council may be paid half-yearly, viz., within fourteen days after the expiration of the thirty days allowed by law, and the balance within six months thereafter in each year, and shall be paid to the Council Clerk at his office during office hours.

35. The Council Clerk shall at the expiration of the dates before mentioned lay before the Council a list of all persons whose rates are in arrear.

36. The Mayor shall take immediate steps to enforce payment of all rates due as aforesaid, either by summons or distress warrant, by resolution of the Council.

37. The Council may appoint a Bailiff who shall make all levies of distresses for the recovery of any rates under the warrant of the Mayor according to Schedule A hereto annexed.

38. The Bailiff shall be paid for all levies, entries, distresses, and warrants made under these By-laws according to the Schedule B hereto annexed.

39. The Bailiff shall find sureties to the satisfaction of the Mayor to the extent of twenty-five pounds for the faithful performance of his duty.

40. The Bailiff shall at the time of making any distress make an inventory of all goods, live stock, land, houses, or other property, and shall deliver a copy thereof to the owner of the property, or goods so distrained thereon, or the occupier thereof, or to some person on his or her behalf, or in the absence of any such owner or occupier, then such inventory shall be posted on some part of the premises, and a like copy shall be delivered to the Council Clerk.

41. It shall be lawful for any bailiff and such assistant as he may require, to enter into and upon any land, buildings, or other property, in respect of which a warrant has been issued for the recovery of rates as aforesaid, and to distrain goods therein and thereon, and to remain in charge of such building or other property; and if the sum for which such distress shall have been made or taken be not paid on or before the expiration of five days it shall be lawful to sell the said goods or any part thereof by public auction, either on the premises or at any other place within the Municipal District of Carcarr; and the surplus if any, that may remain after deducting the costs in addition to the sum distrained for, shall be paid over to the owner of the goods so sold.

42. The Bailiff shall within forty-eight hours after such sale deliver to the Council Clerk the proceeds thereof, as also the inventory of the effects so sold.

43. In the temporary absence of the Bailiff through illness or business, the Mayor may appoint a substitute.

Management of roads and streets.

44. Any person who shall erect any house or other building in any street, road, or lane, in the Municipal District of Carcarr without giving notice thereof in writing to the Council Clerk, describing the nature and situation of the intended erection, or who shall encroach beyond the building line in any road, street, or lane, under the control of the Council by the erection of houses, verandahs, steps, fences, or any other obstruction, or who shall after erecting such obstruction as aforesaid, not remove the same within fourteen days from the date of notice served on him to do so, shall forfeit and pay a penalty not exceeding £5.

Open spaces and steps adjoining footways to be enclosed under penalty.

45. Every owner or occupier of any house, building, or premises, or land within the said Municipality, having any entrance, area, garden, or other open space, or any vacant building lot, water-hole, or excavated space, adjoining the footway of any street or public place in such Municipality, shall protect and guard the same by good and sufficient rails, fences, or other enclosures, so as to prevent danger to persons passing and repassing; and every such owner or occupier of any such house, building, premises, or land, having any steps adjoining the footway of any such street, or public place, shall in like manner protect and guard the same by fences, rails, or other enclosure, so as to prevent the like danger to persons passing and repassing; and on the failure thereof of every such owner or occupier shall as often as he shall be convicted of such offence forfeit and pay a sum not being more than five pounds. And every such owner or occupier as aforesaid, who shall fail to erect such fences or other enclosures as aforesaid, shall be deemed guilty of a further offence against this By-law.

Wells to be covered over—penalty.

46. Every person who shall have a well situated between his or her dwelling-house, or the appurtenances thereof, and any road, street, or footway, within the limits of the said Municipality, or at the side of or in any yard or place open or exposed to such road, street, or footway, within the limits of the said Municipality, or at the side of or in any yard or place open or exposed to such road, street, or footway shall cause such well to be securely and permanently covered over; and if any person having such well as aforesaid shall fail to cover over and secure the same within twenty-four hours after notice in writing shall have been given to him or her by any officer of the said Council

or shall have been left for such person at his or her usual or last known place of abode, or on the said premises, shall on conviction forfeit and pay a sum of ten shillings, and for every day after such notice that such well shall remain open or uncovered contrary to the provisions thereof, such person shall be deemed guilty of a separate offence against this By-law.

Temporary stoppage of traffic for repairs.

47. The Council or any officer or person acting under the authority of such Committee, may at any time cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same, or for any necessary purpose, and any person or persons offending against this By-law either by travelling on street, lane, or thoroughfare, or by removing or destroying any obstruction that may be placed thereon, for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds for every such offence.

Drawing or trailing timber.

48. Any person who shall haul or draw or caused to be hauled or drawn upon any part of any street or public place within the said Municipality, any timber, stone, or other thing otherwise than upon wheeled vehicles or barrows, or shall suffer any timber, stone, or other thing which shall be carried principally or in part upon any wheeled vehicle or barrow, to drag or trail upon any part of such street or public place, or to hang over any part of any such vehicle or barrow, so as to occupy or obstruct the street beyond the breadth of the said vehicle or barrow, shall upon conviction, forfeit and pay for every such offence a sum not more than forty shillings nor less than five shillings over and above the damage occasioned thereby.

49. All houses within the Municipality having frontages to a main thoroughfare where the footpath is formed, shall be sufficiently spouted with down piping to be laid under the footpath and kerb into the gutter, under a penalty not exceeding two pounds.

50. Any person who shall throw or deposit any rubbish, dead fowls, or animals of any description, rubbish, or offensive matter, into any road, street, lane, footpath, gutter, or any ground near to a public way, or shall wilfully or negligently do or cause to be done, any damage or injury to the kerb stones, gutters, or footpaths, or who shall lead, drive, ride, or cause to be lead, driven, or ridden, any horses, cattle, or other animals, or wheeled vehicles of any description on the footpaths, shall be liable to a penalty not exceeding five pounds.

51. No person shall be allowed to place any building materials on the footpaths, unless by the sanction of the Mayor in writing, countersigned by the Council Clerk; and any building materials so placed, or any open cutting or excavation shall be protected by two lights, to be kept burning from dark until daylight.

52. No person shall place on the footpath or in the gutter, any cart, barrow, goods, or produce of any kind to the obstruction of the public, under a penalty not exceeding two pounds.

53. Any person who shall negligently, carelessly, or furiously ride or drive through or upon any street or public place within the said Municipality, shall on conviction forfeit and pay a sum not exceeding five pounds.

Prevention of fires.

54. Any person who shall place or permit to be placed in or near any house, workshop, or other building fire, gunpowder, or combustible or inflammable material of any kind so as to endanger contiguous buildings, shall forfeit and pay a penalty not exceeding five pounds.

55. The Inspector of Nuisances shall, upon receiving a representation in writing that fire is being used or combustible matter stored to the danger of adjoining buildings, proceed to the premises complained of, and if he shall think necessary cause the danger to be removed immediately; and if not so removed, the party making such fire or storing such combustible matter, shall be liable to a penalty not exceeding five pounds.

56. No person residing within the Municipality, shall be allowed to permit his or her premises, closets, or drains, to be offensive to the neighbours.

57. Upon the reasonable complaint in writing, of any householder, that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances or any other person appointed by the Council, shall make an inspection of the premises complained of; and the officer of the Council shall have full power without any other authority than this By-law, to go upon such premises for the aforesaid purpose.

Swine, &c., not to wander about the streets.

58. Any person who shall breed, feed, or keep any kind of swine in any house, yard, or enclosure, situate and being in or within forty yards of any street or public place within the Municipality, or shall suffer any kind of swine, or any horse, ass, cattle, mule, sheep, goat, or any other animal of the like nature, belonging to him or her, or under his or her charge, to

stray or go about, or be tethered or depastured in any street, road, or public place within the said Municipality, shall forfeit and pay for every such offence a sum not exceeding £2, and be made liable for damages.

59. In case any privy, hogstye, or any other matter or thing whatsoever, which shall at any time be or become a nuisance by causing unwholesome smells to arise within any part of this Municipality, it shall be lawful for any two Justices, upon complaint thereof by any person, to investigate such complaint, and to order that such privy, hogstye, boiling-down establishment, or other matter or thing, being a nuisance as aforesaid, to be cleansed, removed, or discontinued, as the case may be, within seven days after such order has been made, and notice given to the owner or occupier of the premises whereon such nuisance shall exist; and every such owner or occupier neglecting to remedy or remove such nuisance pursuant to such notice or order, and to the satisfaction of such Justices, shall forfeit and pay a sum of not exceeding ten pounds for every such neglect or disobedience; and also it shall be lawful for such Justices to indict, or cause to be indicted, for such nuisance such person or persons so neglecting or disobeying any such notice or order at the then next Court of General or Quarter Sessions, to be held nearest to the said Municipality, and the person or persons being found guilty shall be subject to such punishment and such further order as the Justices assembled at such sessions shall lawfully decide. Any person who shall wantonly and maliciously break or injure any lamp or lamp-post, or extinguish any lamp set up for public convenience in the said Municipality, shall over and above the necessary expense of repairing the same or injury committed, forfeit and pay for every such offence a sum not exceeding £5.

60. Every person who shall commit any of the following offences shall, on conviction for any and every such offence, forfeit and pay a penalty of not more than two pounds over and above any damage which may be sustained by the Council or any other person:—

Any person who shall sweep gravel from off the footpath into any gutter or roadway.

And every blacksmith, whitesmith, anchorsmith, nailmaker, metalfounder, limeburner, brickmaker, potter, or other person using a forge, furnace, or kiln, and having a door, window, or aperture, fronting or opening into or towards any street, lane, or passage, and not enclosing such door, or not fastening the shutters or other fastenings of such window, and closing such aperture, and placing a screen before the same every evening, within one hour after sunset, so as effectually to prevent the light from showing through the doorway, window, or aperture, next or upon such street, lane, or passage.

And every person who shall be the keeper of or have any dog or other animal which shall attack or endanger the life or limb of any person who may have the right of way or use of any private yard, alley, street, or any other place within the said Municipality.

And any person who shall bathe near or within view of any inhabited house, or of any public wharf, quay, bridge, street, road, or other place of public resort within the limits of the said Municipality, between the hours of seven in the morning and eight in the evening, shall on conviction forfeit and pay a sum not exceeding one pound for every such offence.

Noisome and offensive trades.

61. No person shall carry on any noisome or offensive trade within the said Municipality so as to injure or be a nuisance as hereinafter stated to the inhabitants thereof, any manufacture, trade, calling, or operation, in the conducting, following, or carrying on of which, or in consequence of, or in connection therewith, or from the premises where the same is conducted, followed, or carried on, any gas, vapour, or effluvia, or any large quantities of smoke, shall be evolved or discharged, which gas, vapour, effluvia, or smoke shall be calculated to injure animal or vegetable life, or in any other way to injure or be a nuisance to the inhabitants of the said Municipality, shall be considered a "noisome and offensive trade" within the meaning of these By-laws.

62. Upon the complaint in writing of any householder that any noisome or offensive trade is being so followed, conducted, or carried on in the vicinity of his or her residence or property as to injure his or her health, or the health of any member of his or her family, or to be a nuisance to such householder and to his or her family, the Inspector of Nuisances, or any other person or persons appointed by the Council, shall make an inspection of the premises where such trade is alleged to be so conducted, followed, or carried on as aforesaid, and of the premises or property of the complainant, and shall inquire into the grounds for such complaint, and shall report thereon to the said Council, and if the said Council shall, on the consideration of such report, or after any such further inquiry as may be deemed necessary, be of opinion that the said complaint is well founded, and that any manufacture, trade, calling, or operation so complained of, and so being conducted, followed, or carried on as aforesaid, is a "noisome or offensive trade" within the meaning

of these By-laws, notice shall be given to the person or persons conducting, following, or carrying on such trade, to cease and discontinue the same within such reasonable time, not being less than thirty days nor more than sixty days, as the said Council may direct, or so to conduct, follow, or carry on his, her, or their manufacture, trade, calling, or operation, as that within such reasonable time as aforesaid, the same shall wholly and permanently cease to be noisome or offensive with the meaning of these By-laws, either to the said complainant or to any other resident within the said Municipality, and if such trade shall not be discontinued as aforesaid, or shall not be so conducted that it shall wholly cease to be noisome or offensive as aforesaid, within the time named in such notice as aforesaid, any person conducting, following, or carrying on such trade as aforesaid, shall for the first offence forfeit and pay a sum not less than forty shillings nor more than five pounds, for a second offence a sum not less than five pounds nor more than twenty-five pounds, and for a third and every subsequent offence a sum not less than ten pounds nor more than fifty pounds.

63. The like proceeding shall be taken as aforesaid whenever there shall be a complaint as aforesaid, that any manufacture, trade, calling, or operation is about to be commenced or entered upon which is likely to prove "noisome or offensive" within the meaning of these By-laws, save and except the notice to be given as aforesaid, shall be given to the person or persons about to enter upon such manufacture, trade, calling, or operation, and shall require him, her, or them not to commence or enter upon the same, or take such measures as shall effectually prevent the same from becoming "noisome and offensive" within the meaning of these By-laws, to any resident within the Municipality. And any person who shall in such case commence, enter upon, or continue any such manufacture, trade, calling, or operation, so that the same shall in any way be "noisome or offensive," within the meaning of these By-laws, shall for every such offence forfeit and pay a sum not less than five pounds nor more than fifty pounds.

64. Service of any such notice as aforesaid upon the occupier or owner of any premises or land wherein or whereon any such manufacture, trade, calling, or operation is being conducted, followed, or carried on, or is about to be commenced or entered upon, or at the last known place of abode of such occupier or owner, or upon any person on the said premises or land, shall be a good and sufficient service of such notice for all the purposes of these By-laws. And every person who shall be actually engaged in superintending, directing, or managing, or shall be in any other way actually engaged or employed in any such manufacture, trade, calling, or operation as aforesaid, shall be liable to be regarded and treated as a person conducting, following, or carrying on such manufacture, trade, calling, or operation, within the meaning and for all the purposes of these By-laws.

65. Any person infringing any of these By-laws, the penalty for which is not herein stated, shall be liable to a penalty of not exceeding two pounds.

66. The Inspector of Nuisances, or other person appointed by the Council, may take legal proceedings against any person or persons committing any offence or offences against any of the By-laws of the said Borough.

67. Any person who shall assault, resist, or obstruct, or interfere with any officer or officers of the Council, or other person or persons doing or performing any duty or act under any of the By-laws of the said Borough, shall forfeit and pay a penalty not exceeding twenty pounds nor less than two pounds.

SCHEDULE A.

I, _____, Mayor of the Municipal District of Carcoar, do hereby authorize you _____, Bailiff of the said Municipal District, to distrain the goods and chattels in the dwelling-house, or in or upon the land and premises of _____, situate at _____, for the sum of _____, being the amount of Municipal rates due to the said Municipality to the day of _____, for the said dwelling-house, land, or premises, and to proceed thereon for the recovery of the said rates according to law.
Dated this _____ day of _____, 188 .
Mayor.

SCHEDULE B.

Fees of Bailiff.

For every warrant	3	6
For making every entry and inventory in the execution of a warrant.....	3	0
If in possession	5	0
For every other day or part of a day	6	0
And 5 per cent. on net amount of sale.		

Inventory.

I have this day in virtue of a warrant under the hand of the Mayor of the Municipal District of Carcoar, dated _____, distrained the following goods and chattels in the dwelling-house, or in or upon the land and premises of _____, situate within the said Municipality, for the sum of _____ being the amount of rates due to the said Municipality to the day of _____, 188 .
Bailiff.

Made and passed by the Council of the Municipal District of Carcoar, this 4th day of January, 1881.

(L.S.) B. STIMPSON,
Mayor.

J. O. DODD,
Council Clerk.

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 17th October, 1881.

MUNICIPAL DISTRICT OF MACDONALD TOWN.—BY-LAW.

THE following By-law, made by the Council of the Municipal District of Macdonald Town, under the 179th section of the Municipalities Act of 1867, for regulating the collection of tolls at a Toll-bar to be erected on the Erskineville Road, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the above cited Act.

HENRY PARKES.

BY-LAW made this day, September 5th, 1881, by the Council of Macdonald Town, in Committee, for the erection of a Toll-bar in Erskineville Road, in accordance with clause No. 179 of the Municipalities Act.—

Provideth, That the following is the Schedule of Tolls to be collected at the above Toll-bar, for the purpose of making and keeping in thorough repair the road on which such toll is erected and the streets adjacent thereto.

Scale of Rates to be collected at this Toll-bar :—	s.	d.
For every horse, sheep, goat, or pig	0	0½
For every ox or head of neat cattle	0	1
For every horse, mare, gelding, or mule	0	1
For every cart, dray, or other such vehicle with two wheels drawn by one horse or other animal	0	2
If drawn by two horses or other animals	0	3
And for every additional animal	0	1
For every wain, waggon, or other such carriage with four wheels drawn by two horses or other animals	0	4
For every additional horse or other animal drawing such carriage	0	1
For every gig, chaise, or other such carriage with two wheels drawn by one horse or other animal	0	3
If drawn by two horses or other animals.....	0	4
For every coach, chariot, or other such carriage with four wheels drawn by one horse or other animal.....	0	5
If drawn by two horses or other animals.....	0	6
And for every additional horse or other animal	0	1

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF YASS—BY-LAW.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 24th November, 1881.

MUNICIPAL DISTRICT OF YASS.—BY-LAW.

THE following By-law, made by the Council of the Municipal District of Yass, in substitution for the first of the existing By-laws of that Municipality, relating to the time of meeting of the Council, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

MUNICIPAL DISTRICT OF YASS.—BY-LAW.

THAT number one By-law be expunged, and that the following be substituted:—

The Council shall meet at the Chambers on every alternate Tuesday, at 7:30 p.m., or on such other day and time as the Council may from time to time appoint by resolution, unless such day shall be a public holiday, in which case the Council shall appoint some other day for the meeting.

Passed at a meeting of the Council of the Municipal District of Yass, held on the twenty-first day of October, 1881.

NEW SOUTH WALES.

NUISANCES PREVENTION ACT, 1875.

(MUNICIPAL DISTRICT OF YASS—BY-LAWS.)

Presented to Parliament pursuant to Act 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 21st September, 1881.

THE following By-laws, made by the Council of the Municipal District of Yass, for carrying into effect the provisions of the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above cited Act.

HENRY PARKES.

MUNICIPAL DISTRICT OF YASS.

BY-LAWS for the Municipal District of Yass for carrying into effect the provisions of the "Nuisances Prevention Act, 1875."

1. Every person about to erect a closet or form a cesspit shall before he shall commence any such work give to the Town Clerk seven days' notice in writing of his intention, and of the proposed position of such closet or cesspit, and in default thereof, or in case of his commencing such work without such notice, he shall be liable to a penalty not exceeding ten pounds.
2. No closet shall be erected or cesspit formed except in such position as shall be approved of by the Council or by the Inspector of Nuisances or other officer appointed by the Council.
3. No cesspit shall be built under any dwelling-house, nor at a less distance than twelve feet therefrom, except in case of earth closets, nor in such position that the same cannot be emptied without the contents thereof being carried through any dwelling-house, and no cesspit shall be less than four feet long by three feet wide, internal measurement, nor of a less depth than four feet nor greater than five feet below the ground surface, and the walls and floor of every cesspit shall be built of brick or stone of a thickness of not less than nine inches, set in good mortar or cement, and plastered with cement not less than one inch thick, the floor to slope at least twelve inches towards the manhole, and the top of every cesspit shall not be less than six inches higher than the highest part of the ground immediately adjoining it.
4. Every closet shall be built with walls seven feet high, and shall not be less than three feet six inches wide, and four feet six inches long, and shall be provided with a door capable of being fastened from the inside, and shall have ventilating holes four and a half inches wide.
5. When two or more closets adjoin each other there shall be a brick or stone dividing wall of not less than four and a half inches in thickness between every two closets, and each wall shall extend from the bottom of the cesspit through the roof of the closet so as to effect a complete separation.
6. A separate closet shall be provided for every tenement and a breach of this By-law shall make the owners or occupiers of any premises upon which there shall be a joint closet, liable to a penalty not exceeding five pounds.
7. In dwelling-houses where the number of persons who shall ordinarily sleep therein shall exceed twelve, the capacity of the cesspit shall be increased by four cubic feet for every person beyond the number of twelve, or else a separate closet shall be provided for every twelve persons or fraction of twelve.
8. In schools or in factories or other places of business where a number of persons exceeding twelve shall reside or be occupied or employed, one closet shall be provided for every twenty persons with a cesspit of a capacity of not less than eighty cubic feet, and separate closets shall be provided for each sex.
9. If any alterations shall be requisite in the opinion of the Inspector of Nuisances or any other officer appointed by the Council in that behalf for preserving public health or decency in the case of any existing cesspit or closet, the owner or occupier of such premises shall receive twenty-one days' notice to remove or alter the same, and if he fail to do so and the Council shall adjudge such cesspit or closet to be either injurious to the health or opposed to decency by exposure or otherwise, the same shall be altered by such Inspector of Nuisances or other officer, and the cost of such alteration shall be paid by the owner or occupier of the premises wherein the same shall be.
10. The place of deposit for night soil shall be in such locality as may be from time to time determined upon by the Council, and no night soil shall be deposited in any other locality within the Municipality except as allowed by By-laws 16 and 17.
11. Until otherwise provided by the Council, all night soil shall be removed from cesspits by the servants of or contractors with the Council, in water-tight covered vehicles, between the hours of eleven o'clock in the evening and five o'clock in the morning.
12. Until and unless otherwise provided by the Council, all night soil shall be disposed of by burying it in the earth.
13. In case the Council shall sell or give away any night soil, the same shall be removed in the same manner as above provided, and on being removed from the vehicles in which it is

carried, it shall be deodorized by chemicals or in some other manner, or covered with earth so as to prevent any offensive smell arising therefrom.

14. The Inspector of Nuisances or other officer appointed by the Council may visit and inspect any premises or do any work authorized by the "Nuisances Prevention Act of 1875" on all days, except Sundays and public holidays, between the hours of ten o'clock in the morning and four o'clock in the evening.

15. Any person desirous of erecting an earth closet shall be at liberty to do so after giving notice of his intention to the Inspector of Nuisances or other officer appointed by the Council, but all night-soil shall be removed therefrom once in four days, and if such cesspit shall be within any dwelling, once within twenty-four hours or oftener, and buried in the earth.

16. Every person shall be at liberty to use on his own premises all night-soil collected thereon, but if any nuisance shall arise therefrom he shall be liable to a penalty not exceeding five pounds.

17. No person shall be at liberty without the permission of the Council or of the Inspector of Nuisances or other officer appointed in that behalf, to use on his premises any night-soil brought from elsewhere.

18. The owner or occupier of any house, building, passage, yard, or premises within this Municipality shall cause the yard and ground adjoining or belonging thereto, as well as all drains in connection therewith, to be kept in a cleanly condition, and so as not to be a nuisance or injurious to health.

19. Any person allowing night-soil from any closet to fall into any street, right-of-way, water-channel, gutter, creek, river, or reservoir, or in any other public place, or wilfully allowing filth of any kind or accumulation thereof, or any substance or

substances from which noxious effluvia arises, to remain upon his premises, shall forfeit and pay a sum not exceeding twenty pounds, nor less than two pounds.

20. If at any time the cesspit in any premises shall overflow or cease to be watertight, the owner or occupier shall within twenty-four hours give notice to the Inspector of Nuisances, otherwise such owner or occupier shall be liable to a penalty not exceeding ten pounds.

21. The Council may recover, and the owner or occupier of the premises shall pay, such sums for the emptying of cesspits as may be decided upon from time to time by resolution of the Council.

22. The owner or occupier of any premises within the Municipality, or any other person who shall have or erect upon his premises any closet or cesspit otherwise than in accordance with these By-laws, or who shall refuse or neglect to comply with the provisions of any of the preceding By-laws, or who shall commit any breach thereof, shall (in cases where no special penalty is provided) forfeit and pay a penalty not exceeding five pounds.

23. All words occurring in these By-laws, and which also occur in the "Nuisances Prevention Act of 1875" shall have the like meanings assigned to them as are provided in the fourth section of the same Act.

Passed at a meeting of the Council of the Municipal District of Yass, held on the sixth day of May, 1881.

JOHN HARPER,
Council Clerk.

(L.S.) THOMAS COLLS,
Mayor.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF CASINO—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 24th November, 1881.

THE following By-laws made by the Council of the Municipal District of Casino, for regulating the proceedings of the Council and the duties of its officers and servants; for determining the times and modes of collecting and enforcing payment of rates; for preventing and extinguishing fires; for licensing public vehicles, &c.; for the care and management of streets; for preventing nuisances; for regulating the erection of buildings; for suppressing houses of ill-fame; and for generally maintaining the good rule and government of the Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

HENRY PARKES.

PART I.

Ordinary and Special Meetings.

1. The Council shall meet for the transaction of ordinary business on every alternate Wednesday, at 7-30 p.m., unless such day shall happen to be a public holiday; in the latter case the meeting shall be held on the day following. Special meetings may be called by the Mayor, or in his absence by any two Aldermen.

Election of Chairman in absence of Mayor—And adjournment for want of Quorum.

2. If at any meeting of the Council the Mayor be absent at the expiration of twenty minutes after the time appointed for holding such meeting, the Aldermen then present shall proceed to elect from among themselves a Chairman for such meeting. Whenever there shall be an adjournment for want of a quorum, the names of the members present shall be taken down and recorded in the Minute Book.

Business of Ordinary Meetings.

3. The following shall be the order of business of all meetings of the Council other than Special Meetings:—

- 1st. The minutes of last meeting to be read and corrected (if erroneous), and confirmed, and signed by the Mayor or other Chairman.
- 2nd. Questions and complaints.
- 3rd. Petitions (if any) to be read and dealt with.
- 4th. Statement of accounts.
- 5th. Correspondence.
- 6th. Reports from Committees, Minutes from Mayor (if any) to be presented and ordered upon.
- 7th. Adjourned motions and motions of which notice has been given.

8th. Orders of the Day to be disposed of as they stand on the business paper. Provided that the Council may by resolution without notice entertain any particular motion out of its regular order on the business paper, and may in like manner direct that any particular motion or matter of business shall have precedence at future meetings.

9th. Such other business as may lawfully be brought before the Council.

Business paper—Ordinary Meetings.

4. The business paper of every Ordinary Meeting of the Council shall be made up by the Council Clerk or substitute, and delivered to the Mayor and Aldermen, or left at their respective residences, at least twenty-four hours before the time appointed for such meeting. Provided that the Mayor or any Alderman shall not reside within half a mile of the Council Chambers the notice may be posted.

Business at Special Meetings.

5. At Special Meetings of the Council, the business, after the minutes shall have been read and verified, which shall be done in the same manner as at Ordinary Meetings, shall be in such order as the Mayor or Alderman at whose instance such meeting shall have been called may have directed; the business paper for such meeting shall contain only such matters as shall have been specially ordered to be entered thereon by the Mayor or Alderman calling such meeting.

Business paper—how prepared.

6. The business paper for every meeting of the Council, other than a special meeting, shall be made up by the Council Clerk or substitute, not less than one nor more than three days before the day appointed for the meeting; he shall enter on such business paper a copy of every notice of motion, and of every requisition or order as to business proposed to be transacted at such meeting which he shall have received or shall have been required or directed so to enter. Every such entry shall be made in the same order as such notice, requisition, or direction shall have been received.

Notices of Motion and Requisitions.

7. All notices of motion and all requisitions from Aldermen and directions from the Mayor as to the entry of any particular matters of business for the consideration of the Council at its then next or any future meeting, shall be numbered by the Council Clerk as they are received, and each such notice or requisition shall be preserved by such clerk until after the matter to which it relates shall have been disposed of, and the record in the minute book of the manner in which such matters have been disposed of shall have been duly verified as required by "Part 3" of these By-laws. Provided, however, that the person giving or forwarding any such notice of motion, requisition or direction to the Council Clerk, shall be at liberty to withdraw the same any time before the making of the business papers.

8. After the business paper shall have been made up as aforesaid, all the said notices of motion, requisitions, and directions as to which entries have been made thereon shall be the property of the Council, and shall not be withdrawn, altered or amended without leave having been first obtained from the Council for such withdrawal, alteration, or amendment.

Motions and Amendments.

9. Except by leave of the Council, motions shall be moved in the order in which they stand on the business paper, and if not so moved or postponed shall be struck from such business paper and be considered to have lapsed.

10. No motion of which notice shall have been entered on the business paper shall be proceeded with in the absence of the Alderman by whom such notice shall have been given unless by some other Alderman producing a written authority for that purpose from such first-named Alderman.

11. No motion in Council shall be discussed unless and until it be seconded.

12. When a motion in Council shall have been made and seconded, any Alderman shall be at liberty to move an amendment thereon, but no such amendment shall be discussed unless and until it be seconded.

13. No motion or amendment shall be discussed until it shall have been reduced into writing.

14. No second or subsequent amendment shall be taken into consideration until the previous amendment or amendments shall have been disposed of.

15. If any amendments be carried, the question as amended thereby shall become itself the question, and the Council shall to all intents and purposes be bound by such amendment as if it were the original question.

16. If any amendment either upon the original question or upon any question amended as aforesaid shall be negatived, then a further amendment may be moved to the question to which such first-mentioned amendment was moved and so on: Provided that not more than one question and one proposed amendment thereof shall be before the Council at any one time.

17. No discussion shall be permitted upon any motion for adjournment of the Council, and if upon the question being put on any such motion the same be negatived the subject then under consideration, or the next in order on the business paper, or any other such paper that may be allowed precedence, shall be discussed before any subsequent motion for adjournment shall be receivable.

Orders of the day.

18. The orders of the day shall consist of any matters other than notices of motion which the Council shall at any previous meeting thereof have directed to be taken into consideration, or which the Mayor or any Committee of the Council shall have directed to be entered on the business paper for consideration.

How they are to be dealt with.

19. The Alderman who has the charge of or who has previously moved in reference to that particular business to which any such order relates shall be the person called upon to move: Provided that the Mayor may, as to any order of the day entered by his direction, move the same.

Petitions.

20. It shall be incumbent on every Alderman presenting a petition to acquaint himself with the contents thereof, and to ascertain that it does not contain language disrespectful to the Council, the nature and prayer of every such petition shall be stated to the Council by the Alderman presenting the same.

Petitions may be received at once and dealt with.

21. The Council may at any meeting resolve without previous notice that any petition be received, and the same or any correspondence read may be referred to a committee for report or the request therein granted.

Correspondence.

22. The Mayor shall have the same duty in reference to letters addressed to the Council before directing the same to be read as by section 20 of this Part of these By-laws is imposed upon Aldermen presenting petitions. The Mayor shall direct as to the order in which correspondence shall be presented or read by any Alderman. If the Mayor be absent and shall not

have examined any such letters addressed to the Council, or have given such directions as aforesaid, then the duties imposed by this section shall devolve upon the presiding Alderman.

23. No discussion shall be permitted in reference to any letters which have been written or sent by the Mayor or by any officer of the Council, and copies of which may be read to such Council: Provided, however, that any notice of motion consistent with good order may be entertained with reference to any letters addressed to the Council which the Mayor or presiding Alderman may not have ordered to be read as aforesaid.

Reports from Committees.

24. Every report from a committee shall be in writing, and signed by the Chairman of such Committee, or in his absence by some other member of the same.

Mayor's minutes.

25. The Mayor shall have the right of directing the attention of the Council to any matter or subject within its jurisdiction or official cognizance by minute in writing signed by him.

How reports are to be dealt with.

26. No motion shall, unless as hereinafter provided, be permissible on the presentation of a report from a Committee or a minute from the Mayor, except that the same be received, or that it be received and its consideration stand an order of the day for some future day: Provided, that if any Alderman shall give due notice in reference to any such report or minute, or if the consideration of any such report or minute shall have been entered among the orders of the day, such order of the day or such motion, if otherwise unobjectionable, may be moved and considered in due course, and whenever any such report or minute embodies any recommendation which cannot legally be carried out without due notice, and it is desirable that such report or minute should be ordered upon during the meeting of the Council at which such minute or report is presented, it shall be the duty of the Chairman or member of such committee signing such report, or of the Mayor, as the case may be, to give or transmit to the Council Clerk such notice of motion as will enable the Council Clerk to make the necessary entry on the business paper, and to give such due notice.

Questions and statements.

27. No question or statement shall be allowed to be put or made which is inconsistent with good order.

28. Sufficient notice of every question shall be given to the person who is expected to reply thereto to allow for the consideration of such reply, and, if necessary, to refer to other persons or to documents.

29. It shall not be compulsory upon any person questioned as aforesaid to answer the question so put to him.

30. Every such question must be put categorically, without any argument or statement of facts.

31. Every such statement must be made without argument.

32. No discussion shall be permitted as to any such question or as to any reply or refusal to reply thereto, or as to any such statement at the time when such question is put, or such reply or refusal to reply is given, or such statement is made: Provided, however, that nothing herein contained shall prevent the taking of any objections to any such question or statement being out of order, or shall prevent the discussion, after due notice as hereinbefore provided, of any matter properly arising out of or relating to any such question or reply or refusal to reply, or any such statement aforesaid.

Order of debate.

33. Every Alderman who shall make or second any motion, or shall propose or second any amendment, or shall take part in any debate or discussion, or shall put or reply to any question, or shall make any statement, or shall in any other way, or for any other purpose, address observations to the Council, shall while so doing stand up in his customary place (unless he shall be prevented from so doing by reason of some bodily infirmity) and shall address himself to the Mayor or other Chairman then presiding: Provided that in case of a question such question may by permission of such Mayor or chairman be put directly to the Alderman or officer to be questioned, and may be replied to in like manner, but in every such case the question so put and the answer thereto shall be subject to every legal objection on the ground of disorder or irrelevancy. And all members of the Council shall on all occasions when in such Council address and speak of each other by their official designations as Mayor, Chairman, or Alderman, as the case may be.

34. No Alderman shall be interrupted while thus speaking unless for the purpose of calling him to order as hereinafter provided.

No Alderman to speak twice on the same question or amendment except in Committees.

35. No Alderman shall speak twice on the same question unless in committee or in explanation where he shall have been misrepresented or misunderstood: Provided that any Alderman, although having previously spoken, may speak once on every amendment, and that the mover of every question shall always have a right of final reply.

36. An Alderman who has moved any motion or amendment shall be considered to have spoken thereon, but an Alderman who shall have seconded any such motion or amendment without any further observation than that he seconded the same shall be at liberty to speak on such motion or amendment.

No Alderman to make personal reflections.

37. No Alderman shall digress from the matter under discussion, or make personal reflections, or impute improper motives to any other Alderman.

No Alderman to speak more than ten minutes.

38. No Alderman shall speak upon any motion or amendment for a longer period than ten minutes without the consent of the Council.

Debates may be adjourned.

39. A debate may be adjourned to a later hour of the day, or to any other day specified, and the Alderman upon whose motion such debate shall have been so adjourned shall be entitled to pre-audience on the resumption of the same.

Priority of right in address.

40. If two or more Aldermen rise to speak at the same time the Mayor shall decide which of such Aldermen shall be first heard.

Aldermen may have the matter of discussion stated.

41. Any Alderman may request the question or matter under discussion to be read or stated for his information, or may require the production of any records of the Council bearing upon such question or matter which are readily accessible: Provided, however, that no such request or requisition shall be so made as to interrupt any other Alderman when speaking, or materially to interrupt the discussion; also, that if such request or requisition shall appear to the Mayor or Chairman not to have been made bona fide it shall not be complied with.

Questions of order.

42. The Mayor or Chairman shall preserve order, and his decision on disputed points of order or practice shall be final, except so far as the same may be questioned as in the manner hereinafter provided.

43. Every member of the Council who shall commit a breach of any section of this part of these By-laws, or who shall move or attempt to move any motion or amendment embodying any matter as to which this Council has no legal jurisdiction, or who shall in any other way raise or attempt to raise any question, or shall address or attempt to address the Council upon any subject which the said Council has no legal right to entertain or discuss, or who shall in any other language which, according to the common usage of gentlemen, would be held to be disorderly, or who shall say or do anything calculated to bring the Council into contempt shall be out of order.

44. The Mayor or chairman may without the interposition of any other member of the Council call any Alderman to order whenever in the opinion of such Mayor or Chairman there shall be a necessity for so doing.

45. Every member of the Council shall have the right of calling the attention of the Mayor or Chairman to any motion, amendment, statement, argument, or observation moved, used, or made by any other member which such first-named member may consider out of order.

46. A member called to order shall withdraw while the question of order is being discussed and decided upon, unless specially permitted to offer an explanation, retraction, or apology, but on obtaining such special permission such member may explain, retract, or apologize for the matter or remark alleged to have been out of order, and if such explanation, retraction, or apology be deemed satisfactory no further discussion on the question of order shall be permitted. If any member on being called to order shall ask such permission to explain, retract, or apologize as aforesaid, the Mayor or Chairman may of his own authority grant or refuse such permission as he may think fit, unless any member shall require the sense of the Council to be taken on the question; in such case it shall be the duty of the Mayor or Chairman to take the sense of the Council at once, and without discussion as to whether such permission shall be granted; and when any such explanation, retraction, or apology shall have been made or offered by permission of the Mayor or Chairman, the latter shall in like manner decide, or if required to do so, shall take the sense of the Council as to whether such explanation, retraction, or apology is considered sufficient. If such permission be refused, or if such explanation, retraction, or apology be considered insufficient, the question or order shall be considered and decided before any further business is proceeded with: Provided that if such Mayor or Chairman shall have decided the question of order before any member shall have required the sense of the Council to be taken in reference thereto, such question of order shall not be re-opened, and provided further, that nothing herein contained shall be held to affect the right of such Mayor or Chairman to decide finally, as hereinbefore provided, upon any such point of order after the same shall have been discussed.

47. The Mayor or Chairman when called upon to decide points of order or practice shall state the provision, rule, or practice which he shall deem applicable to the case without discussing or commenting upon the same.

48. Whenever it shall have been decided as aforesaid that any amendment or other matter before the Council is out of order the same shall be rejected, and whenever anything said or done by any Alderman shall be similarly decided to be out of order, such Alderman shall be called upon by the Mayor or Chairman to make such explanation, retraction, or apology as the case may require.

49. Any member of the Council who shall have been called to order, and who shall after having been twice directed to withdraw as aforesaid, refuse to do so, or who shall persist in any line of conduct or argument or observation which shall have been decided as aforesaid to be disorderly, or who shall refuse to make such explanation, retraction, or apology as aforesaid, when required so to do, or who shall be guilty of any other disorder as defined in sec. 43 of this Part of these By-laws, and shall refuse to make such explanation, retraction, or apology as a majority of the Aldermen then present shall consider satisfactory, shall be liable on conviction for such offence to a penalty of not more than five pounds.

50. Any Alderman who is dissatisfied with the decision of the Mayor or Chairman on any such question of order or of practice may by motion on notice respectfully worded invite the Council to lay down a different rule or principle for the determination of any similar questions of order or practice which may thereafter arise, any rule or principle thus laid down shall be binding upon all parties, unless and until it be rescinded, but shall have no retrospective operation: Provided, however, that nothing herein contained shall be held to bind any Mayor or Chairman to put any motion to the Council which in his opinion is contrary to law.

Mode of voting.

51. The Mayor or Chairman shall put to the Council all questions on which it shall be necessary that a vote be taken and shall declare the sense of the Council thereon. And he shall be at liberty to put any question as often as may be necessary to enable him to form and declare his opinion as to the opinion of the majority.

52. Any Alderman shall be at liberty to call for a division. In such case the question shall be put first in the affirmative and then in the negative; and the Aldermen shall vote by show of hands, and the names and votes of the Aldermen present shall be recorded. Any Alderman who shall be present when a division is called for and shall not vote in such division, not being disabled by law from so doing, shall be liable for every such offence to a penalty of not more than two pounds.

Protests.

53. Every Member of the Council (Mayor included) may protest against any resolution or vote by the Council. Notice of their intention so to protest must however be given at the meeting when such resolution is passed or such vote is arrived at, and the protest itself must be handed or sent to the Council Clerk not later than seven days after such notice. The Council Clerk shall enter every such protest in the minute-book, but if in the opinion of the Council, it may inconsistent with the truth, or disrespectfully worded, it may by resolution on notice be ordered to be expunged. In such case the expunction shall be made by drawing a pencil line with the pen through the entry of such protest, with a reference in the margin to the resolution ordering such expunction.

Calls of the Council.

54. A call of the Council may be ordered by any resolution of which due notice shall have been given, for consideration of any motion or matter of business before such Council.

55. There shall, without special order to that effect, be a call of the Council for the consideration of every motion which may be made under section 50 of this Part of these By-laws, and of every motion for the rescission of any resolution, order, or decision of such Council.

56. The call shall be made immediately before such motion or business for which such call has been ordered, or is required to be made by the last preceding section, shall be moved or considered. Such call shall be made as follows:—The Council Clerk shall call the names of all the members in their alphabetical order; each member present shall answer to his name as so called; and if any members are absent a record shall be made of such absence: but if leave of absence to any such member shall have previously been granted, or if such an excuse in writing shall have been forwarded to the Mayor or Council Clerk as a majority of the Council then present shall consider satisfactory, such absent member shall stand excused, and a record shall be made of such excuse and of the reasons for the same.

Committees.

Standing and Special Committees.

57. Besides such Special Committees as may from time to time be found necessary, there shall be two Standing Committees, each consisting of not less than three members, viz., a Finance Committee and an Improvement Committee.

Improvement Committee.

58. The Improvement Committee shall have the general direction of all works ordered or sanctioned by the Council, and the general inspection of all streets, roads, ways, bridges, public reserves, and other public places, under the care and management of the Council. They shall also inquire and report from time to time such improvements or repairs as they may think necessary, or as they may be directed by resolution of the Council to inquire and report upon.

Finance Committee.

59. The Finance Committee shall examine and check all accounts, and shall watch generally over the collection and expenditure of the Municipal revenues. They shall inquire and report from time to time as to all matters which they may consider to effect or likely to effect the finances of the Municipality, and as to such matters or subjects of the like nature as they may be directed by resolution of the Council to inquire and report upon.

Committee of the Whole Council.

60. The Council may at any time resolve itself into a Committee of the Whole for the consideration of any matter affecting the interest of the Municipality, and the business of such Committee of the Whole Council shall be conducted in accordance with the rules hereinbefore provided as near as the same shall apply, except that it shall not be necessary that any motion or amendment in Committee shall be seconded.

Records of Committee.

61. The Chairman of such Standing Committee shall make or cause to be made in a book kept by him for that purpose, memoranda of all the transactions of such Committee, which book he shall, on ceasing to be Chairman, hand over to his successor.

Chairman of Committees.

62. Every Committee of which the Mayor shall not be a member shall elect a Permanent Chairman of such Committee, who may direct the Council Clerk to call meetings whenever he shall think it desirable.

Cost of works to be estimated first.

63. No works affecting the funds of the Municipality, except as hereinafter is mentioned, shall be undertaken until the probable expense thereof shall have been first ascertained by the Council.

Cases of emergency and current expenses.

64. In cases of emergency the Mayor may authorize the expenditure of any sum not exceeding ten pounds, and such expenditure shall be reported to the Council at the next meeting. And the Mayor may order payment of wages for labour of officers, servants, and labourers employed at the fixed rates of payment, such rates being fixed by order of the Council.

Completion of work to be reported by Improvement Committee.

65. No works undertaken by the Council shall be deemed to have been completed, and no order shall be made for the payment in full of same, except upon a report or certificate to that effect from the Improvement Committee.

Common Seal how secured.

66. The Common Seal shall be secured by a cover or box, which shall be kept at the Council Chambers, in the custody of the Council Clerk. There shall be duplicate keys to the lock of this cover or box, of which keys, one shall be kept by the Mayor, and the other by the Council Clerk.

Common Seal how used.

67. The Seal of the Corporation shall not be affixed to any document of the Municipality without the express authority of the Council, and every impression thereof so authorized, shall be verified by the signature of the Mayor, or in the case of illness or absence of the Mayor, by any two Aldermen, and countersigned by the Council Clerk.

Custody of books, records, &c.

68. All books deeds, memorials, letters, documents, and other records of the Council, except as hereinafter mentioned, shall be kept at the Council Chambers, in the custody and care of the Council Clerk, who shall be responsible for the safe custody of same, but the Mayor may for any special purpose authorize their removal.

Books not to be shown without leave.

69. No member or officer of the Council shall be at liberty to show, lay open, or expose any of the books, papers, or records of the Council to any person not a member of the Council, without the written permission of the Mayor, unless as otherwise provided by law.

Records not to be removed.

70. Any person removing any such book, paper, or record from the Council Chambers without leave from the Mayor, shall be subject to a penalty of not more than ten pounds; and nothing herein contained shall be held to affect the further liability of any person who shall have removed such book, paper, or record, and shall not have returned the same, to prosecution for stealing such book, paper, or record, or to an action at law for detention of same as the circumstances of the case may warrant.

Receipt for documents.

71. Every person removing any document or record with such consent as aforesaid, shall give a receipt under his hand for every such document or other record, which receipt shall be carefully preserved among the records until the documents shall have been returned, when such receipt shall be destroyed.

Penalty for defacing or destroying records.

72. Any person destroying, defacing, or wilfully or improperly altering any books, papers, or records, shall be liable for every such offence to a penalty of not more than twenty pounds.

Appointment of officers and servants.

73. Every permanent appointment shall be made by ballot in such mode as may be determined upon whenever there is more than one candidate for such permanent office.

Exceptional cases.

74. Nothing herein contained shall be held to prevent the employment as may from time to time be found necessary, and as may be ordered by the Council, of any workmen or labourers on the public works of the Municipality.

Bonds for good conduct.

75. All bonds given by officers or servants of the Council for the faithful performance of their duties shall be deposited in such custody as the Council may order, and no member, officer, or servant of the Council shall be received as security for any officer or servant.

Council Clerk, duties of.

76. The Council Clerk shall perform all the duties which by the Municipalities Act of 1867, or by the present or any other By-laws hereunder, he may be required to perform. He shall be the Clerk of all Revision Courts held in the Municipality under the provisions of the Municipalities Act. He shall also, under the direction of the Mayor, conduct all correspondence which may be necessary on the part of the Council, and shall generally assist the Mayor in carrying out the orders of the Council and the duties of such Mayor.

Complaints against officers.

77. All complaints against officers or servants of the Corporation must be in writing addressed to the Mayor, and must in every case be signed by the person or persons complaining, and no notice whatever shall be taken of any complaint which is not in writing or is anonymous, and such complaint as aforesaid shall be laid by the Mayor before the Council at the next meeting thereof which shall be holden after the Mayor shall have received the same, and shall be duly recorded.

Special powers of the Mayor.

78. The Mayor may from time to time define the duties of the officers and servants of this Corporation, and shall exercise a general supervision over all such officers and servants, and may order the preparation of any such return or statement, or the giving of any such explanation or information by any such officer or servant as he may think necessary, unless the Council shall have expressly forbidden or dispensed with the preparation of such return or statement or the giving of such explanation or information.

Miscellaneous.**Drafts of intended By-laws.**

79. A draft of any intended By-law shall lie at the office of the Council for at least seven days before such draft shall be taken into consideration by the Council, and shall be open to the inspection of any ratepayer who desires to inspect it.

Lapsed business.

80. Whenever the consideration of any motion or matter of business shall have been interrupted by reason of a quorum not having been present, the consideration of such business shall be resumed at the next meeting at the point where it was interrupted.

Public notice.

81. In all cases where public notice is or shall be required to be given by any By-law of any appointment, resolution, act, order, or regulation done, made, or passed, or proposed to be made, done, or passed by the Council, or by any Committee thereof, or by the Mayor or any officer of the said Council, such notice may be given and published by posting the same on or near the outer door of the Council Chambers for the space of seven days, or by advertising the same once in some newspaper circulating in the Municipal District.

Power to suspend temporarily portions of the By-laws.

82. Any of the foregoing By-laws which relate to or affect the proceedings at meetings of the Council, may be suspended pro tempore without notice in cases of emergency, if all the members of the Council then present shall deem such suspension necessary.

PART II.

Collection and enforcement of rates.

1. All rates levied and imposed by the Council shall be held to be due and payable on and after such days as the Council shall by resolution from time to time appoint.

Time and place of payment.

2. All such rates shall be paid at the Council Chambers, during the hours appointed by the Council for that purpose.

Defaulters.

3. Every person not paying his or her rates as aforesaid within 37 days after the day so appointed for payment thereof, shall be deemed a defaulter, and it shall be the duty of the Council Clerk to furnish the Mayor from time to time with a list of the names of all persons so in default.

Mayor to enforce payment.

4. It shall be the duty of the Mayor to take proceedings to enforce the payment of all rates in default, either by action at law, or by issuing warrants of distress upon the goods and chattels of defaulters.

Bailiff, how appointed.

5. The Bailiff of the Municipality shall be appointed by the Council, and may from time to time be removed by them.

Duties of Bailiff.

6. It shall be the duty of the Bailiff to make levies by distraint for the recovery of rates in the manner hereinafter provided.

Warrant of distress.

7. All levies and distresses shall be made under warrant in form of Schedule A hereto, under the hand of the Mayor or any Alderman who may for the time being be duly authorized to perform the duties of that office.

Distress and sale, &c.

8. It shall be lawful for the Bailiff or his deputy, and such assistants as he may take with him, to enter into any part of the land, building, tenement, or other property in respect of which such rate or rates shall have been made as aforesaid, and to distrain the goods therein or thereon, and to remain in such building, tenement, or other property, in charge thereof, and if the sum for which any distress shall have been made or taken, together with all costs of such distraint, shall not have been paid on or before the expiration of three clear days, the Bailiff or his deputy may, between the hours of eleven in the morning and two in the afternoon on the next day thereafter, cause the goods so distrained, or a sufficient portion thereof, to be sold by public auction, either on the premises or at such other place within the Municipality as the Bailiff may think proper to remove them for such purpose, and shall pay over the surplus (if any) that may remain after deducting the amount of the sum distrained for and the costs of such distraint, to the owner of such goods so sold on demand of such owner, and any person interfering with the said Bailiff in the execution of any duties devolving upon him under these By-laws, or hindering or preventing him from delivering to the purchaser thereof any property so sold by the said Bailiff, shall be liable to a penalty of five (5) pounds.

Inventory.

9. At the time of making a distress the Bailiff shall make out a written inventory in the form of Schedule B hereto, which inventory shall be delivered to the occupant of the land or premises, the owner of the goods so distrained, or to some person on his or her behalf resident at the place where the distress shall be made, and in case there shall be no person at such place with whom the inventory can be left as aforesaid, then such inventory shall be posted on some conspicuous part of the land or premises on which the distress is made, and the Bailiff shall give a copy of the inventory to the Council Clerk.

Goods may be impounded.

10. The Bailiff, on making a distress as aforesaid, may impound, or otherwise secure, the goods or chattels so distrained of what nature or kind soever, in such place or places, or in such part of the land or premises, chargeable with rates, as shall be most fit and convenient for this purpose, and it shall be lawful for any person whomsoever, after the expiration of three days as hereinbefore mentioned, to come and to go to and from such place, or part of the land or premises, where such goods or chattels shall be impounded and secured as aforesaid, in order to view and buy, and in order to carry off and remove the same on account of the purchasers thereof.

Owners may direct order of sale.

11. The owner of the goods or chattels so distrained may, at his own option, direct and specify the order in which they shall successively be sold, and the said goods or chattels shall in such case be put for sale according to such direction.

Proceeds of distress.

12. The Bailiff shall hand over to the Council Clerk all proceeds of every such distress within forty-eight hours after having received same.

Bailiff's deputy.

13. The Bailiff may, with the sanction in writing of the Mayor, or in his absence with the sanction of any two Aldermen of the Municipality, authorize by writing under his hand any person to act temporarily as his deputy, and the person so authorized shall have and exercise all the powers of the Bailiff himself, but the Bailiff and his sureties shall in every case be responsible for the acts of such deputy.

Costs.

14. There shall be payable to the Bailiff for the use of the Council for every levy and distress made under this By-law, the costs and charges in the Schedule hereunto annexed marked C.

SCHEDULE A.

Warrant of distress.

I, Mayor of the Municipal District of Casino, do hereby authorize you, the Bailiff of the said Municipality to distrain the goods and chattels in the dwelling-house, or in and upon the land and premises of , for , being the amount of Municipal rates due to the said Municipality to the day of , for the said dwelling-house (or land and premises, as the case may be), and to proceed thereon for the recovery of the rates according to law. Dated this day of 18 .

Mayor.

SCHEDULE B.

Inventory.

I have this day, in virtue of warrant under the hand of the Mayor of the Municipality of Casino, dated , distrained the following goods and chattels in the dwelling-house (or in and upon the land and premises), of , situate at , within the said Municipality, for being the amount of rates due to the said Municipality to the day of 18 . Dated this day of 18 .

Bailiff.

SCHEDULE C.

	s.	d.
For every warrant of distress	2	6
For every levy	2	6
For every in possession each day or part of a day.....	6	0
Inventory, sale, commission, and delivery of the goods	5 per cent. on the net proceeds of the sale.	

PART III.

Preventing and extinguishing fires.

Fire or combustible materials, &c.

1. Every person who shall place, or knowingly permit to be placed, in any house, yard, workshop, out offices, or other premises, fire, gunpowder, or combustible or inflammable materials of any kind, in such a manner as to endanger any buildings, shall, on conviction for every such offence, forfeit and pay a penalty of not more than five pounds, and shall forthwith remove such fire, gunpowder, or combustible or inflammable materials, and every such person who shall suffer any such fire, gunpowder, combustible or inflammable material, to remain as aforesaid for twenty-four hours after any such conviction, shall be deemed guilty of a further offence against this By-law.

Inflammable fences, &c.

2. Every person who shall erect any fence or brushwood, bushes, or other inflammable material, or shall make or place any stack of hay, corn, straw, or other produce, or place as or for the covering of any such stack, any inflammable material, so as to endanger contiguous buildings or properties, or any trees, shrubs, or other produce of such properties, or any chattels in and upon such buildings or properties, shall forfeit, on conviction for every such offence, a penalty of not more than five pounds, and if he also shall fail to remove such fence, stack, or covering within a reasonable time after such conviction as aforesaid, shall be deemed guilty of further offence against this By-law.

Fireworks.

3. Every person who shall light any bon-fire, tar barrel, or fireworks upon or within ten yards of any public or private street or any public place, or shall discharge any firearms without lawful cause within one thousand yards of any dwelling within the boundaries, shall forfeit a sum not exceeding five pounds.

Setting fire to matter without notice.

4. Any person who shall wilfully set fire to any inflammable matter whatever in the open air, within five yards of any dwelling-house or other building or boundary or dividing-fence, within the said Municipality, without having given notice in writing to the occupiers of the land adjoining the land upon which such matter shall be, of his intention so to do, or between the hours of six in the afternoon of any day and six in the morning of the following day, shall for every such offence forfeit a sum not exceeding five pounds.

Wilfully setting fire to chimneys.

5. Every person who wilfully sets or causes to be set on fire any chimney, flue, smoke-vent, or stove-pipe, herein called in common a chimney, shall forfeit a sum not exceeding five pounds.

Burning shavings and other offensive matter.

6. Any person who shall burn any shavings, rubbish, or other inflammable substance in any road, street, lane, or public place within this Municipality, or shall burn rags, bones, corks, or other offensive matter in any yard within the precincts of the township of Casino, shall for every such offence forfeit and pay a sum not exceeding forty shillings.

PART IV.*Licensing public vehicles.*

1. From and after the 1st day of January, 1881, no vehicle shall ply for hire, nor shall any person act as driver or conductor within the Municipality of Casino, unless licensed for such purpose in the manner hereinafter mentioned, nor during the suspension or after cancellation of such license as hereinafter provided.

2. Before any license for plying any vehicle or for driving or conducting the same, shall be granted, the party requiring such license shall deliver to the Council Clerk a requisition in form of Schedule A hereto or to like effect.

Mayor to grant licenses.

3. The Mayor for the said district for the time being shall be and is hereby authorized to issue all such licenses, in the name and on behalf of the said Municipal Council.

4. Licenses for proprietors, drivers, or conductors shall be in form of Schedule B hereto.

5. Every license granted by the Council shall be signed by the Mayor and countersigned by the Council Clerk, and shall be in force until the 31st day of December next ensuing the date thereof, and no such license shall include more than one vehicle.

Person in whose name vehicle is licensed to be deemed the proprietor.

6. The person or persons in whose name or names a license shall have been obtained shall be deemed the proprietor of the vehicle in respect of which such license shall have been taken out.

7. Any proprietor transferring or selling his licensed vehicle shall immediately give notice thereof to the Council Clerk, and the transferee or purchaser shall thereupon apply to have the license transferred to him, and shall sign his name in the books of the said Council and on the license, and until this By-law shall have been complied with the transferor or seller shall remain liable as owner for any breach of any of these By-laws, and no transferee or purchaser shall use such vehicle, or allow it to ply for hire, until the By-law shall have been so complied with.

8. No driver of any licensed vehicle shall lend or part with his license, nor shall the proprietor employ an unlicensed person as the driver thereof.

Registered proprietor or driver deemed as such.

9. Every proprietor or driver of any and every vehicle shall be deemed to be licensed on production of the license register book containing a copy of such license, and it shall not be necessary to call upon the person prosecuted to produce the original license to enable the prosecutor to give secondary evidence of its contents.

License may be cancelled or suspended.

10. The license of the proprietor, driver, or conductor of any vehicle may be cancelled or suspended by the Mayor for the time being of the said Municipal Council, as he shall deem right (after three days' notice in writing, signed by the Council Clerk, and served upon such proprietor, driver, or conductor, or left at his usual abode, calling upon him to show cause why such license should not be cancelled or suspended, and opportunity given such proprietor, driver, or conductor to show such cause), in case either the proprietor, driver, or conductor shall have been convicted of two offences against these By-laws, committed within a period of six months next preceding.

11. Such person or persons as may from time to time be appointed by the said Municipal Council shall be the Inspector or Sub-inspector of all licensed vehicles plying for hire within the said Municipality, and such Inspector or Sub-inspector shall as often as he or they may deem necessary inspect all licensed vehicles, and also the harness and horse or horses or other animal or animals used in drawing the same, and if such vehicle, horse or harness, animal or animals shall in his or their opinion be unfit for public use, he shall report the same in writing to the Mayor, who shall have power to suspend the license of such vehicle until such vehicle, horse or horses, harness, or animal or animals used in drawing the same shall be in a fit state for public use, and it shall be the special duty of such Inspector at all times to see that as far as possible these By-laws are duly observed and enforced.

Inspectors not to be hindered.

12. No proprietor or driver of any vehicle, nor any other person, shall hinder or obstruct such Inspector or Sub-inspector in the execution of any of his or their duties.

SCHEDULE A.

To the Municipal Council, Casino.

I, _____, residing in _____ street, do hereby request that a license may be granted to me to _____, No. _____, within the said Municipality.

Dated _____ 18 _____.

SCHEDULE B.

This is to certify that _____ is hereby licensed to a certain _____, No. _____, within the Municipality of Casino from the date hereof to the 31st December next, subject nevertheless to all and every the By-laws, Rules and Regulations in force relating thereto.

Given under the common seal of the Municipal Council of Casino, this _____ day of _____ 18 _____.

(L.S.)

Mayor.

Council Clerk.

PART V.*Carter's License for Carts.*

1. The Council may from time to time license to ply for hire within the said Municipality carts or other vehicles approved of by the Works Committee for any or either of the following purposes, namely,—drawing wood, water, earth, stone, gravel, timber, bricks, passengers, or for any other purpose, whether hired by the day or load, and whether driven by the owner or by any person in the owner's employ. Licenses may also be granted for the drivers of such, and to such persons as may be approved of by the Works Committee, such licenses to be personal to the grantee and not transferable, but the license of any cart or other vehicle may be transferred with the cart or other vehicle to any person upon approval as aforesaid, and for every such license, &c.

Application for license.

2. Every such license shall be granted on the written application for the same of the owner, or if there be more owners than one, of some one owner of the cart or other vehicle to be licensed, and in every such application shall be set forth truly the name and surname, and place of abode of the applicant, and the like shall be set forth in the license when granted, which should be in form of Schedule D hereto, or the like effect, and any person who shall wilfully omit from any such application any particular hereby required to be stated therein, or shall wilfully state anything falsely touching any such particulars shall forfeit a sum not exceeding five pounds.

Numbering, &c., of licenses and carts.

3. Every such license for cart or other vehicle shall be numbered and registered by the Council Clerk, and shall be in force from the date until the 31st day of December next ensuing, and the owner named in any such license shall cause to be painted or marked, and to be kept so painted or marked, on some conspicuous place on the right or off side of the cart or other vehicle thereby licensed with the number of such license in legible figures and letters, and the words "Licensed Cart" (or other vehicle) in the like letters, and every such owner who shall omit or fail to comply with the provisions of this section shall forfeit a sum not exceeding forty shillings; and every such license for a driver shall be made out in the form of Schedule E, and shall be exhibited on demand to any person authorized for that purpose by the Council.

Plying without license.

4. If any owner of any cart permit the same to stand, or ply for hire within the Municipality without having a license in force for such cart or other vehicle, licensing or authorizing such standing or plying for hire or use respectively, within such Municipality, or if any person be found within such Muni-

unicipality standing or plying for hire with any cart for which no such license is in force without having the number of such license and the words "Licensed Cart" or other vehicle displayed upon such cart or other vehicle openly and in manner herein provided, and every person acting as such driver of any licensed cart or other vehicle so plying as aforesaid without holding a driver's license, every such person so offending shall on conviction forfeit a sum not exceeding forty shillings.

Leaving carts unattended.

5. If the driver of any cart or other vehicle shall leave the same unattended in any street, whether public or private, or shall go for a distance of more than 51 feet from the side of such cart or other vehicle, being in any such street, without passing through the near wheel or wheels a suitable chain or chains so as to effectually prevent the rotation of such wheel or wheels, whether in any such case the cart or other vehicle be hired or not, or if he shall go to such a distance from such vehicle as to render it beyond his immediate attention or control, every person so offending shall on conviction forfeit a sum not exceeding forty shillings.

Lights for carts, &c.

6. The driver of every coach or other vehicle carrying passengers or goods at a pace faster than a walk which shall, during the hours after sunset of any day, and before sunrise of the following day, be in any street or public place within the said Municipality, shall keep a light attached to or suspended from the off or right side of such cart or other vehicle so as to be plainly visible to the driver of any carriage proceeding along or through such street or place in a contrary direction to that in which the first-mentioned cart or other vehicle shall be directed, and every driver who shall fail to comply with this section shall forfeit a sum not exceeding forty shillings.

Interpretation.

7. The word cart and vehicle shall for the purpose of this part of these By-laws include every waggon, dray, or other carriage, whatever its construction, drawn by horses or other animals used for any of the purposes hereinbefore described in sec. 1 of this part.

SCHEDULE C.

Table of charges for Carter's License.

	s.	d.
For cart	5	0
For driver	1	0
For vehicles carrying passengers for hire and driving one or two horses	5	0
For vehicles carrying passengers for hire and driving three or more horses	10	0

(L.S.)

Mayor.

Council Clerk.

PART VI.

Care and Management of Streets.

Change of level of streets.

1. Whenever it may be deemed necessary to alter the level of any street, road, or way the Council shall cause a plan of the section showing the proposed cuttings and fillings to be exhibited at the Council Chambers for fourteen days for the information and inspection of ratepayers, and shall notify by some newspaper circulating in the Municipality, or in some other public manner, that such plan is open for inspection. At a subsequent meeting of the Council the said plan and section shall, if adopted, be signed by the Mayor or Chairman and countersigned by the Council Clerk, and such plan so signed and countersigned shall be a record of the Council.

Persons not to open drains or remove soil, &c.

2. Any person who shall form, dig, or open any drain or sewer, or remove or cause to be removed any turf, clay, sand, soil, gravel, stone, or other material in or from any part of the carriage or footway of any street or other public place without leave first had and obtained by a written order from the

Mayor, or who shall wantonly break up or otherwise damage any such carriage or footway shall, on conviction, forfeit and pay for every such offence any sum not exceeding five pounds.

Persons not to dig holes, &c.—Persons to enclose buildings and building materials.—Lights to be provided.

3. Any person or persons who shall dig, make, or cause to be dug or made any hole, or leave or cause to be left any hole adjoining or near to any street or public place within the said Municipality for the purpose of making any vault or vaults, or the foundations of any house or other building, or for any other purpose whatsoever, or shall erect or pull down any building, and shall not forthwith enclose the same and keep the same enclosed in a good and sufficient manner to the satisfaction of the Council of the said Municipality, or who shall keep up or cause to be kept up and continued any such enclosure for any length of time which shall be longer than shall be absolutely necessary in the opinion of the said Council, and shall not place lights upon each side of the said enclosure, and keep the same constantly burning from sunset to sunrise during the continuance of such enclosure, shall forfeit and pay for every such refusal or neglect any sum not being more than five pounds.

Persons not to leave dangerous places exposed or obstructions on public ways, &c.

4. Every owner or occupier of any house, building, premises, or land within the said Municipality having any entrance, arca, garden, or other open space, or any vacant building lot, waterhole, or excavated space adjoining the footway of any street or public place in such Municipality shall protect and guard the same by good and sufficient rails, fences, or other enclosures so as to prevent danger to persons passing and repassing, and every such owner or occupier of any such house, building, premises, or land having any steps adjoining the footway of any such street or public place shall in like manner protect and guard the same by fences, rails, or other enclosures, so as to prevent the like danger to persons passing and repassing, and on failure thereof every such owner or occupier shall as often as he shall be convicted of such offence forfeit and pay any sum not exceeding five pounds, and every such owner or occupier as aforesaid who shall fail to erect such rails, fences, or other enclosures as aforesaid within fourteen days after any such conviction as aforesaid, shall be deemed guilty of further offence against this By-law.

Thoroughfares may be stopped by the Council.

5. The Improvement Committee, or officer or person acting under the authority of such Committee, may at any time cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same or for any necessary purpose, and any person or persons offending against this By-law either by travelling on such street, lane, or thoroughfare, or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall on conviction forfeit and pay a penalty of any sum not exceeding five pounds for every such offence.

Careless riding or driving.

6. Any person who shall ride or drive through or upon any street or public place within the said Municipality so negligently, carelessly, or furiously that the safety of any other person may be endangered shall, on conviction, forfeit and pay a sum not exceeding one pound.

Rolling and driving on footways, &c.

7. Any person who shall run, roll, drive, draw, place, or cause, or permit, or suffer to be run, rolled, driven, drawn, or placed upon any footway any waggon, or omnibus, cart, dray, stage, bicycle, carriage, wheelbarrow, cask, wheel, or vehicle of any kind, or shall lead, drive, ride, or place any horse, cattle, or other beast upon any footway shall, on conviction, forfeit and pay a penalty not exceeding five pounds.

Placing obstructions on footways, &c.

8. If any person shall set, or cause, or permit to be set or placed any stall, show-board, sign-board, basket, or goods of any kind whatsoever, or shall hoop, place, wash, or cleanse, or shall cause to be hooped, placed, washed, or cleansed, any cask or vessel in or upon or over any road, footway, or public place within the said Municipality, or shall set out, lay, or place, or shall cause, or procure, permit, or suffer to be set out, laid, or placed any couch, cart, dray, barrow, truck, or other carriage upon any footway, or shall allow any vehicle, goods, or property to remain in or obstruct any road, street, lane, or way, or if any person shall set or place, or cause to be set or placed in, upon, or over any of the said carriage and footways any timber, stones, bricks, lime, or other materials, or things for building whatsoever (unless the same shall be enclosed as hereinbefore directed), or any other goods or things whatsoever, or shall hang out or expose, or shall cause or permit to be hung out or exposed any meat or offal or other commodity or thing whatsoever from any house or premises over any part of such footways or carriage ways, or over any area of any house or premises over or next to any such street, road, or public place, in every case every such person so offending shall forfeit and pay on conviction a sum not exceeding forty shillings.

Penalty for damaging water-tables.

9. Any person driving any waggon, dray, cart, or other carriage whatsoever in any water-table of any street or road, or in any other way damaging such street or road, shall be liable on conviction to a penalty of not more than forty shillings.

Careless use of gunpowder.

10. Every person who shall place, or knowingly permit to be placed, in any house, yard, workshop, out-offices, or other premises fire, gunpowder, or combustible, or other inflammable material of any kind in such manner as to endanger contiguous buildings, shall, on conviction of such offence, forfeit and pay a penalty of not more than five pounds, and shall forthwith remove such fire, gunpowder, combustible, or inflammable material, and every such person who shall suffer any fire, gunpowder, or combustible or inflammable materials to remain as aforesaid for seven days after any such conviction shall be deemed guilty of a further offence against this By-law.

PART VII.

Nuisances.

Casting filth or rubbish into streets, &c.

1. Any person who shall cast, or cause to be cast, any filth, rubbish, or any dead animal into any street, lane, public water-course, sewer, or waterhole, or who shall suffer any dead animal to remain upon his or her land or premises to become a nuisance or otherwise offensive, or who shall permit any filth to flow from his or her premises, or shall permit or cause by pipes, channels, or other contrivances, filth from closets to flow from his or her premises into any street, lane, public watercourse, sewer, or waterhole, shall on conviction forfeit a sum not exceeding five pounds, and shall pay the cost of removing such filth or obstruction, or of restoring such sewer or watercourse to its proper channel.

Keeping swine and straying animals.

2. Any person who shall breed, feed, or keep any kind of swine in any building, yard, garden, or other hereditament situate and being in or within fifty feet of any street or public place in the said Municipality, or shall suffer any kind of swine, or any horse, ass, mule, sheep, goat, or other cattle belonging to him or her, or under his or her charge, to stray or go about, or be tethered or depastured in any street or public place shall, on conviction, forfeit and pay for every such offence a sum not exceeding forty shillings.

Premises and private avenues to be kept clean.

3. Any owner or occupier of any house or place within the said Municipality who shall neglect to keep clean all private avenues, passages, yards, and ways within the said premises, so as by such neglect to cause a nuisance by offensive smell or otherwise shall, on conviction, forfeit and pay a sum not exceeding forty shillings for every such offence.

Inspectors of Nuisances to visit butchering establishments.

4. For preserving the cleanliness of the said Municipality and the health of the inhabitants thereof, it shall be lawful for the Inspector of Nuisances, or for any other officer or officers appointed by the Council from time to time, and when and as often as he or either of them shall see occasion to visit and inspect the butchers' premises, boiling down establishments, tanneries, and fellmongering establishments in the said Municipality, and to give such directions concerning the cleansing of the said premises, tanneries, and establishments, both within and without as to him shall seem needful, and any butcher or the owner or occupier of any such tannery or establishment, who shall refuse or neglect to comply with such directions within forty-eight hours shall, on conviction, forfeit a sum not exceeding ten pounds.

Premises to be inspected on complaint.

5. Upon the reasonable complaint of any householder that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances, or any other person appointed by the Council, shall make an inspection of the premises complained of, and the officer of the Council shall have full power without any other authority than this By-law to go upon the said premises for such purpose.

Persons committing offences, &c.

6. Every person who in any street or other public place or passage within the said Municipality, to the obstruction, annoyance, or danger of the residents or passengers, shall commit any of the following offences shall, on conviction, forfeit and pay a penalty of not more than five pounds:—

Hoisting goods.

1. Every person who shall hoist or cause to be hoisted or lower or cause to be lowered goods of any description from any opening in any house fronting any street or public place and close to the footway thereof without sufficient and proper ropes and tackling.

Conveyance of meat.

2. Every person who shall carry or convey or cause to be carried or conveyed in any street or public place the carcase or any part of the carcase of any newly slaughtered animal, without a sufficient and proper clean cloth covering the same for the concealment from public view, or shall hawk or carry about butchers' meat for sale without covering the same as aforesaid.

Placing lines, &c., across the streets, &c.

3. Every person who shall place any line, cord, or pole across any street, lane, or passage, or hang or place clothes thereon to the danger or annoyance of any person.

4. Every person who shall place any flower-pot in any upper window near to any street or public place without sufficiently guarding the same from being thrown down.

Casting building material, &c., from roofs.

5. Every person who shall throw or cast from the roof or any part of any house or other building any slate, brick, part of a brick, wood, rubbish, or other material in or upon the carriage or footways of any street or public place (unless within a hoard or enclosure) when any house or building is being occupied, erected, pulled down, or repaired.

Blacksmiths to close establishments after sunset.

6. Every blacksmith, whitesmith, anchorsmith, nail maker, metal-founder, lime-burner, brickmaker, potter, or other person using a forge, furnace, or kiln, and having a door, window, or aperture fronting or opening into or towards any street, lane, or passage, and not closing such door, or not fastening the shutters or other fastenings of such window, and closing such aperture, or placing a screen before the same every evening within one hour after sunset so as to effectually prevent the light from shining through the doorway, window, or aperture next or upon such street, lane, or passage.

Persons burning bones, rags, &c.

7. Every person who shall within one hundred yards of any dwelling-house burn any rags, bones, corks, or other offensive substance to the annoyance of any inhabitant.

Carrying goods, &c.

8. Any person who shall carry goods upon the footway of any street, or other public footway, in such a manner as to be dangerous or an annoyance to passengers.

Keeping ferocious animals.

9. Every person who shall be the keeper of and have any dog or other animal which shall attack any person within the Municipality.

Filthy premises injurious to health.

7. If upon the certificate of any two duly qualified medical practitioners it appears to the Council that any house or part thereof, or the premises occupied in connection therewith, within the limits of the said Municipality is in such a filthy or unwholesome state that the health of any person is or may be affected or liable to be affected or endangered thereby, and that the whitewashing, cleansing, or purifying of any house or part thereof, or the premises occupied in connection therewith, would tend to prevent or check any infectious or contagious disease, the said Council shall give notice, in writing, to the owner or occupier of such house or part thereof, or the premises occupied in connection therewith, to whitewash, cleanse, or purify the same as the case may require, and if the person to whom notice is so given shall fail to comply therewith within such time as shall be specified in the said notice, he or she shall be liable to a penalty not exceeding ten shillings for every day during which he or she continues to make default, provided that no such penalty shall collectively amount to any greater sum than twenty pounds, and the said Council shall if they shall think fit cause such house, building, or part thereof, or the premises occupied in connection therewith, to be whitewashed, cleansed, or purified, and for such purpose the proper officers, servants, and workmen of the said Council shall have power to enter the same, and the expense incurred by the Council in so doing shall be paid by the owner or occupier.

Bathing in Public Places.

8. Any person who shall bathe near to or within view of any public wharf, quay, bridge, street, road, or other place of public resort within the limits of the said Municipality, between the hours of 6 in the morning and 8 in the evening, shall, on conviction, pay a sum not exceeding one pound for every such offence.

Offending against Decency.

9. Any individual who shall offend against decency by the exposure of his or her person in any street or public place within the said Municipality, or in view thereof shall, on conviction, forfeit and pay for every such offence a sum not exceeding five pounds.

Persons keeping Cows to provide sufficient space.

10. Any person who shall keep cows on any premises within the said Municipality, and shall not provide a space for each cow of seven feet by five feet shall, on conviction, forfeit and pay any sum not more than forty shillings for each offence.

Connecting Drains with Sewers, &c., without permission.

11. Any person who shall connect any pipe or drain with any sewer belonging to the said Council without permission first obtained from the Council shall, on conviction, forfeit and pay any sum not exceeding twenty pounds.

Earth Closets.

12. Every earth closet shall be built with walls seven feet high, and shall not be less than three feet six inches wide and four feet six inches long, and must not be less than fifteen feet from any dwelling house or public street, and shall be provided with a door capable of being fastened from the inside, and shall be ventilated, and every person having or building any earth closet contrary to this by-law shall, on conviction, be liable to a penalty of not more than five pounds.

PART VIII.

Buildings.

Verandahs and Awnings may be erected.

1. Nothing in these by-laws contained shall be deemed to prevent any person from placing or fixing a movable awning or erecting a verandah in front of his or her shop or house, provided that such awning shall be at least eight feet and such verandah ten feet above the proper level of the footways, and according to the plans and specifications of the Council for the time being, and that the posts of the said awning and verandah, together with all framework connected therewith, shall be prepared and erected to the satisfaction and approval of the Council as they may from time to time direct.

Houses to be properly spouted.

2. All proprietors of houses and other buildings within this Municipality having a frontage to any main thoroughfare shall be required to have the roofs of the said buildings sufficiently spouted and connected with suitable down pipes, and emanators to be carried under the surface of the footpaths into the gutters, or away from the public streets to the satisfaction and approval of the Council under a penalty of ten shillings on conviction, and if not remedied at the expiration of one day after such conviction the offender shall be again liable for a like penalty for every day or part of a day that the same shall not be remedied, together with the cost of repairing all damage to such footpaths resulting from such neglect.

No balcony to project more than five feet.

3. No balcony shall be erected so that the same shall project or hang over the footway of any street, road, or thoroughfare which shall be less than forty feet in width, and no balcony which shall hang over any street, road, or thoroughfare shall be more than five feet wide nor less than ten feet in height from the bottom of the floor joists to the proper level of the footways, and every person who shall offend against this By-law shall, on conviction, forfeit and pay a sum not exceeding five pounds for every day that such balcony shall be allowed to remain after such conviction.

Houses, &c., not to encroach on footpaths.

4. Whenever any road, street, or lane has been marked out in manner herein provided, no house, shop, fence, or other structure shall, except as hereinafter mentioned, be allowed to project or encroach on any part thereof, and it shall not be lawful for any person to erect or put up any building, erection, obstruction, fence, or enclosure, or to make any excavation, hole, &c., or opening in, under, upon, or near to any such road, street, lane, or thoroughfare, unless the consent of the Council or Mayor has been obtained for the erecting or making of any such building, erection or obstruction, fence or enclosure, excavation, hole, or opening as aforesaid, and every person offending against this By-law shall, on conviction, forfeit and pay for the first offence a sum not exceeding five pounds, and for every second or subsequent offence a sum not exceeding ten pounds.

Footways may be levelled.

5. When any footway shall have been marked out in manner herein directed the surveyor or other person as aforesaid may cause the same to be levelled and made as nearly as practicable of equal height and breadth, and with an equal slope or inclination, and may remove any flagging, steps, or other matter, or thing, or obstruction that may injure or obstruct the said footway, or render it unequal or inconvenient, and which now is or may hereafter be erected or placed on the space marked out for the said footway.

Encroachments to be removed on notice.

6. The surveyor or such other officer or person as aforesaid may at any time on the order of the Council, and upon due notice of thirty days, direct the removal of any building, fence, or other obstruction or encroachment in or upon any road, street, lane, or thoroughfare under the charge of the Council. Notice shall in this case be served either personally or at the usual or last known place of abode of the person to whom such obstruction or encroaching structure belongs, or who has erected the same or caused it to be erected.

Council may remove at expense of offender.

7. In any case when after service of notice for the removal of any obstruction or encroachment as aforesaid, the person causing or permitting the same shall not remove it within thirty days after service of the said notice, it shall be lawful for the said Council to direct the removal of the same under the superintendence of its own proper officer, and at the expense and cost of the person so offending (provided that the expenses hereby incurred shall in no case exceed ten pounds), or at the option of the Council to proceed against the offender for breach of By-law. The penalty for the first offence not to exceed twenty-five pounds, and for every subsequent offence a sum not exceeding twenty-five pounds.

PART IX.

Houses of ill-fame.

1. Upon representation by any respectable ratepayer that any house or premises within the Municipality, and near to the residence of such ratepayer, is of ill-fame, it shall be lawful for the By-law Committee to cause the residents of such house or premises to furnish to the Council a list of names, ages, sexes, and occupations of all the inmates of the said house or premises, and upon non-compliance with such request, or if upon consideration the said Committee consider the house to be one of ill-fame, they shall with the sanction of the Council declare the same to be a nuisance, and shall cause a notice in writing to be served upon the holder of such house or premises, or any person resident or being therein, to discontinue or abate the said nuisance within forty-eight hours after the receipt of such notice, and if such nuisance be not abated the holder of such house or premises, or other person residing or being therein, and acting as such holder, shall be liable to be proceeded against for such nuisance, and shall on conviction thereof forfeit and pay any sum not more than twenty pounds, and if such nuisance shall not be abated within forty-eight hours after conviction, such holder of such house, or such other person residing or being therein, as aforesaid, shall forfeit and pay for such second offence a sum not more than fifty pounds, and if a further period of forty-eight hours elapse after such second conviction without the abatement of such nuisance, such holder of such house, or other person residing therein, as aforesaid, shall for such third offence forfeit and pay a sum not more than fifty pounds.

Penalties where not otherwise specified.

2. Every person committing a breach of these By-laws shall, where no penalty is mentioned for any such offence, be liable on conviction to a sum not exceeding twenty pounds, and any person obstructing any person in the discharge of any duty imposed, or in the exercise of any privilege conferred by any of these By-laws, shall be liable on conviction to a sum not exceeding twenty pounds.

The foregoing are the By-laws of the Municipal District of Casino, passed at a meeting of the Municipal Council held 11 January, 1881.

(L.S.) F. B. GULLEY,
Mayor.

ALEXANDER M'CRACKEN,
Council Clerk.

1881.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF LEICHHARDT—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 3rd December, 1881.

THE following By-laws, made by the Council of the Municipal District of Leichhardt, for the collection of Tolls, Dues, and Wharfage Rates within that Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

BY-LAWS to establish Tolls, Rates, and Dues, at certain Public Wharves in the Municipal District of Leichhardt.

Wharves.

1. That the wharves at the foot of the undermentioned streets, situate within and belonging to the Municipality of Leichhardt are Public Wharves, at which tolls, rates, and dues may be collected under the Municipalities Act of 1867, namely,—Wharf Road and Johnston-street.

Timber, Coals, Bricks, Stone.

2. That the Municipal Council for the time being of the Municipal District of Leichhardt, or their lessee, lessees, or servants, shall be entitled to, and may charge, demand, and receive at the said wharves respectively the tolls, rates, and dues following, that is to say,—one shilling for every five hundred feet of timber; sixpence for every ton of coals; sixpence for every three hundred and thirty-three bricks; sixpence for every twenty feet of stone; and one shilling per ton for every other kind of merchandise or materials landed at the said wharves.

3. Before landing any cargo or part of a cargo the manifest shall be exhibited to the person in charge of such wharf or wharves, and no cargo or part of a cargo will be allowed to remain on such wharves longer than three days.

4. Any vessel discharging or taking in cargo may remain three days at the said wharves free of charge, and every such vessel exceeding the said three days shall pay ten shillings for every day or part of a day so exceeded.

5. Any person who shall commit a breach of these By-laws shall forfeit and pay for every such offence a sum not exceeding fifty pounds nor less than two pounds, recoverable before any two Justices of the Peace.

Made and passed by the Municipal Council of Leichhardt, in Council assembled, this 26th day of September, A.D. 1881, and the Corporate Seal attached thereto by order of the said Council.

WALTER BEAMES, Council Clerk.

(L.S.) JAMES WILLIAMS.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF WICKHAM—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.Colonial Secretary's Office,
Sydney, 7th December, 1881.

MUNICIPAL DISTRICT OF WICKHAM.—BY-LAWS.

THE following By-laws, made by the Council of the Municipal District of Wickham, for the regulating and licensing of vehicles plying for hire within the Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

BY-LAWS for regulating and licensing vehicles plying for hire within the Municipal District of Wickham.

1. The word vehicle in these By-laws shall include and apply to every omnibus, car, hackney carriage, cab, buggy, waggonette, or dray; and an "omnibus" shall mean a vehicle upon four wheels, drawn by one or more horses, and a "car" shall mean a vehicle upon two wheels for which an omnibus license has been taken out, and a "hackney carriage" shall mean a vehicle upon four wheels drawn by two or more horses, and a "cab" shall mean a vehicle upon two wheels drawn by one horse, and a "buggy" shall mean a vehicle upon four wheels drawn by one or more horses, a "waggonette" shall mean a vehicle upon four wheels drawn by two horses, and a "dray" shall mean any vehicle used exclusively for the carriage of goods and plying for hire within the Municipal District of Wickham.

2. From and after the 1st day of January, one thousand eight hundred and eighty-one, no vehicle shall ply for hire nor shall any person act as a driver or conductor of any such vehicle within the said Municipal District of Wickham, until licensed for such purposes.

3. Before any license for plying any such vehicle or for driving or conducting the same shall be granted, the party requiring such license shall obtain from the Council Clerk free of charge a requisition in the form of Schedule A hereto, or to the like effect, and shall duly fill up and sign the same, and deliver it to the Council Clerk, and shall also insert in such requisition, in addition to the particulars set forth in Schedule A hereto, the table of rates and fares proposed to be charged by such party for any such vehicle; and in the case of drivers and conductors, not being the proprietor, shall obtain a certificate from the proprietor as to his competency to act as such driver or conductor, and shall obtain from the Inspector hereinafter named a certificate that the vehicle for which a license is applied for is fit for the accommodation and conveyance of passengers.

4. The Mayor of the said Municipal District for the time being shall and is hereby authorized to issue all such licenses in the name and on behalf of the said Municipal Council, and the Mayor shall by endorsement on such license signify his approval of the scale of rates proposed to be charged for the hire of any such vehicle so licensed, not exceeding the rates set forth in Schedule E hereto.

5. Licenses for proprietors, drivers, or conductors of vehicles shall be in form of Schedule B hereto, or to the like effect, and shall be made out, numbered, and registered by the Council Clerk.

6. Every license granted by the Mayor shall be signed by the Mayor, and countersigned by the Council Clerk, and shall be in force until the thirty-first day of December next ensuing the date thereof, and no such license shall include more than one vehicle, but shall extend to any vehicle which shall bear the same number, and shall be used in substitute for any vehicle already licensed and subject to all necessary certificates, any such substituted vehicle being first certified as aforesaid.

7. For every such license or annual renewal thereof there shall be paid to the Council Clerk the several rates set forth in the Schedule hereunto annexed, marked "C."

8. For the license of driver or conductor, which license may be transferred to the successor of such driver or conductor, and for every renewal thereof there shall be paid to the said Municipal Council the sum of two shillings and sixpence for driver—conductor, two shillings.

9. The person or persons in whose name or names a license shall have been obtained, shall be deemed the proprietor of the vehicle in respect of which the same shall have been taken out.

10. No license shall be granted to any person to drive any vehicle unless he be eighteen years of age, or to act as conductor unless he fourteen years of age.

11. Every proprietor of a licensed omnibus or omnibus-car shall provide a driver for the same, and shall be held responsible for the good conduct of the driver, and also for the conductor, if a conductor be employed by him, and shall also be liable for all penalties which such driver or conductor may incur under these By-laws.

12. No proprietor shall be at liberty to part with or lend his license, nor sell or dispose of his licensed vehicle to any person without the knowledge of the Mayor, and if sold shall cause the name of the purchaser, with the approval of the said Mayor, but not otherwise, to be registered on the book of the said Municipal Council, whereupon the purchaser shall become amenable to these By-laws to the same extent as the original licensee; and the purchaser of such vehicle who shall allow the same to

be used or to ply for hire without such knowledge, approval, and registry, shall be considered as plying such vehicle for hire without a license, and liable under these By-laws accordingly.

13. No driver or conductor of any licensed vehicle shall lend his license, nor shall the proprietor of any such vehicle employ any unlicensed person as the driver or conductor thereof.

14. Every person driving or conducting any vehicle and every vehicle shall be deemed to be licensed under these By-laws, on the production of the license-book containing a copy of any such license.

15. The license of the proprietor, driver, or conductor of any vehicle may be cancelled by the Municipal Council of Wickham in case such proprietor, driver, or conductor shall have been convicted of three offences against these By-laws committed within a period of six months next preceding, or for such other cause as to the said Municipal Council may seem sufficient.

16. Such person or persons as may from time to time be in that behalf appointed by the said Municipal Council shall be the Inspector or Inspectors of all licensed vehicles plying for hire within the Municipal District, and such Inspector or Inspectors of all licensed vehicles shall as often as he or they deem necessary inspect all licensed vehicles and also the harness and horse or horses or other animals used in drawing the same; and if such vehicles, horse or horses, animal or animals shall, in his or their opinion, be unfit for public use, he shall report the same in writing to the Mayor, who shall have power to suspend the license of such vehicle until such vehicle, harness, horse or horses, or other animal or animals used in drawing the same shall be in the opinion of the said Mayor in a fit state for public use; and it shall be the special duty of such Inspector or Inspectors at all times to see that as far as possible these By-laws are duly observed and enforced, and the owner of every such vehicle shall upon receipt of a notice in form of Schedule F hereto forthwith put such vehicle in repair.

17. No owner or driver of any vehicle nor any other person shall hinder or obstruct such Inspector or Inspectors in the execution of his or their duty.

18. Proprietors of every licensed vehicle shall cause to be painted or printed thereon the number of the license granted for every omnibus or car in figures not less than four inches in height, and for every hackney carriage, cab, or buggy, in figures not less than two inches in height, and of proportionate breadth, white upon a ground of black on the panel of the door or doors of such vehicle, or on a plate or plates affixed thereon, and also upon each lamp used upon such vehicle or as the Inspector may direct, any such number shall be kept legible and undefaced during all times such vehicles shall ply or be used for hire; and the rate of fare chargeable under license granted for such inside in figures of not less than two inches in height and of proportionate breadth.

19. No proprietor or driver of any licensed vehicle shall demand or take more than the several fares endorsed on the license of such vehicle.

20. The place specified in Schedule D hereto annexed is hereby appointed a public stand for licensed vehicles, provided that the Council may from time to time, as they shall see fit, by resolution abolish or alter the number and situation of the said stand.

21. The proprietor or driver of any licensed vehicle shall not permit the same to stand for hire except at an appointed stand, and shall drive on to such stand before commencing to ply for hire.

22. No driver or conductor of any vehicle while standing at his proper stand (or on Sunday in any part of the said Municipal District), shall endeavour to attract notice by shouting, ringing of bells, blowing of horns, or other noise, nor shall deceive any person in respect to the route or destination of such vehicle by word or sign.

23. The first omnibus or car that arrives at any public stand shall be the first to start therefrom, and the others in due rotation in the order at which they arrive at such stand at intervals of not less than eight minutes and not more than twelve.

24. At every second vehicle on every stand there shall be left a space of at least eight feet, and not more than twelve.

25. Every vehicle on its arrival at any such public stand shall be drawn at the end of, and be the last of the rank, of any vehicle that may be then on such stand. All vehicles shall be arranged only in single rank.

26. No driver of any vehicle other than such as shall be hired by the then occupant for a specific purpose shall suffer the same to loiter in any street or alongside any other vehicle, nor allow his vehicle to remain stationary, except at any appointed stand, longer than it may be necessary for passengers to alight from or enter such vehicle, nor shall the driver of any vehicle obstruct the driver or conductor of any other vehicle in taking up or setting down any person, or wilfully, or wrongfully, or forcibly prevent or endeavour to prevent the driver of any other vehicle from taking a passenger or fare.

27. No driver or conductor of any vehicle, shall whilst driving, loading, or unloading, or attending any vehicle, or whilst on any public stand, wilfully or negligently do or cause or suffer to be done, any damage to the person or property of any one, or be guilty of any breach of the peace, misconduct, or ill-behaviour, or make use of any threatening, obscene, profane, abusive, or insulting language or gesticulation.

28. Every driver, whilst engaged in taking up or setting down any passenger, shall, if required during such taking up or setting down, place his vehicle as near as conveniently may be to that side of the street (and at a line with the kerb-stone or edge of the foot-path), at which the taking up or setting down is required.

29. No omnibus shall pass any other omnibus proceeding in the same direction if the latter be proceeding on its journey at a pace faster than a walk.

30. No licensed vehicle shall be drawn at a pace faster than that commonly known as trotting, and in the event of the conviction of any driver for a breach of this By-law his license may be cancelled by the Municipal Council.

31. No driver or conductor shall carry or knowingly permit to be carried in any licensed vehicle except to some Police Office or Watch-house, any deceased human body, or any person behaving or noisily conducting himself or herself, or otherwise so misbehaving as to occasion any annoyance to any occupant of such vehicle or disturb the public peace.

32. The proprietor of every licensed vehicle shall at all times when plying or employed for hire have the same in good order, with harness perfect and in good condition, and the glasses and frames of such vehicle whole, and the leathers attached to the frames of sufficient strength, and the inside clean and in good repair, and the whole ready and sufficient for duty, with driver and horses competent to perform the journey of such vehicle in due and reasonable time.

33. No driver of any vehicle shall carry more passengers than his vehicle is licensed to carry on the report of the Inspector, nor shall the driver of any cab carry any passenger or person on the driver's box or step behind the same, nor shall the driver or conductor of any omnibus or omnibus car permit or suffer any person except the conductor to be on the foot-step at the back of any omnibus or omnibus car.

34. No driver or conductor shall smoke any pipe or cigar whilst driving or conducting any licensed vehicle engaged on any fare, nor shall any passenger smoke inside or on any vehicle other than a cab without the permission of the driver or against the wish of any passenger.

35. The driver and conductor, if any, of every licensed vehicle shall be constantly attendant upon the same whenever standing or whilst plying or engaged for hire.

36. Every licensed vehicle plying or engaged after sunset shall be provided with a lamp on each side, and the same shall be kept by the driver thereof properly lighted until sunrise if so long plying or engaged.

37. The driver of every omnibus or omnibus car shall provide and keep a lamp properly lighted in such a position inside of every such vehicle as the Inspector may direct whenever such vehicle is plying or engaged at any time between sunset and sunrise.

38. Every lamp used on the outside of any vehicle shall be such and so disposed as to appear white on the front and outer sides and red behind.

39. No vehicle which shall be let to hire by special agreement only, or only when bespoken at the stables or residence of its owner, shall be deemed a licensed vehicle within the meaning of the By-laws, nor shall the owner or driver or conductor of such vehicle be subject to the provisions thereof in any respect whatever.

40. No proprietor or driver or owner of any licensed vehicle shall feed his horse or horses while standing on such stands except with nose bags.

41. No proprietor or driver of any licensed vehicle shall put or allow to be put into any vehicle any horse that is not thoroughly quiet and broken into harness.

42. The driver of any licensed carriage and conductor of every omnibus shall carefully examine his vehicle immediately after setting down his fare, and in every case of property having been left in any vehicle by any person having used or hired the same, such property if found by such driver or conductor, shall be delivered within eighteen hours after such finding to the Council Clerk at the office of the Council, and there deposit it, under a penalty not exceeding twenty pounds.

Dray Regulations.

43. No owner, driver, or any other person having the care and charge of any dray drawn by one or more horses or other animals, shall ride thereon unless he shall be provided with sufficient reins, and no block dray shall be allowed to proceed out of a walking pace.

44. In every case of goods or merchandise being left on any licensed dray or with the driver thereof, by any person having hired or used the same, such property shall be delivered up to such person, or shall within eighteen hours be taken in the state in which it shall have been found to the Council's office, and thence deposited with the Council Clerk.

45. No owner or driver shall at any one time carry on any licensed dray having only two wheels and drawn by one horse, a greater weight than one ton.

46. Whenever any dray hired by the load or distance having taken up a load shall be detained with the same more than fifteen minutes, the hirer shall pay for every fifteen minutes after the first, sixpence, and so on in proportion for any longer period.

47. The number of the license granted for every dray shall be painted white on a ground of black or the reverse on the sides thereof in a conspicuous place in figures not less than three inches in height and of proportionate breadth, with the letters W.M.C. of the same colour immediately above the figures, and the driver or owner of such dray shall at all times keep the same legible and undefaced.

48. No owner or driver of any dray shall demand, receive, or take more than the several fares and amounts which may from time to time be fixed by the said Municipal Council, and no owner or driver of any dray shall permit or suffer any person to be carried therein as a passenger.

49. Any person calling or sending for any licensed dray and not further employing the same, shall pay the sum of two shillings or the fare or hire from the stand or place where the dray was engaged at the driver's option, he shall further for any time the dray may be detained not exceeding a quarter of an hour, pay the sum of one shilling, and for any time not exceeding a second quarter of an hour the sum of sixpence, and any further time at the rate of sixpence for every quarter of an hour.

50. Any person having hired a licensed dray shall pay the legal fare when demanded, and any person neglecting or refusing to do so shall upon conviction, before any two Justices of the Peace pay a penalty of ten shillings.

51. When the hiring of any dray shall be by distance, then such distance shall be computed from the stand or place where the dray was hired.

52. The places enumerated in the Schedule hereto marked E are hereby appointed public stands for drays.

53. No driver of any licensed dray shall suffer the same to stand for hire across any street except so directed by the Inspector or alongside any other vehicle, nor obstruct the driver of any other dray in loading or unloading any goods or merchandise, or wilfully, wrongfully, or forcibly prevent or endeavour to prevent the driver of any vehicle from taking a fare or hiring.

54. Every offender against any of these By-laws to which no specific penalty has been attached shall be liable to a penalty not exceeding twenty pounds.

55. All proceedings for any offence against any of these By-laws shall be taken in the name of the Inspector of Vehicles of the Municipality of Wickham, in a summary way as provided by the Municipalities Act of 1867.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF PENRITH—AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 12th December, 1881.

MUNICIPAL DISTRICT OF PENRITH—AMENDED BY-LAWS.

THE following amended By-laws made by the Council of the Municipal District of Penrith, relating to the times and days of meeting of the Council, to the keeping of swine, and to streets and public places in that Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

HENRY PARKES.

BY-LAWS proposed to be brought into force in the Municipality of Penrith, agreed to by the Council at a regular meeting held on the 15th September, 1881:—

1. That the Council shall meet for the dispatch of business at the hour of 7:30 p.m. on every alternate Thursday; but if it shall happen to be a public holiday, then the meeting shall be held on such other day as the Mayor may appoint.
2. Any person whosoever breeding, feeding, or keeping any kind of swine in any house, building, yard, garden, or other hereditaments, situate and being in or within forty yards of any street or public place, shall be liable to a penalty not exceeding five pounds nor less than ten shillings.
3. Any person setting or placing, or causing or permitting to be set up or placed, upon any footpath any stall-board, chopping-block, show-board, or case (on hinges or otherwise), basket, merchandise, wares, sacks, or goods of any kind whatsoever upon any footway, so as to obstruct the passage of any person upon any such footways within the said Municipality, shall, on conviction, be liable to a penalty not exceeding two pounds nor less than two shillings and sixpence.
4. Any person driving, or causing to be driven, any cart or other vehicle with any night soil or any ammoniacal liquor therein, through or in any street or public place, between the hours of five o'clock in the morning and ten o'clock at night, or filling any cart or other vehicle so as to turn over, or cart any night soil or ammoniacal liquor, slops, mire, or channel dirt, or filth in or upon any of the said streets or other public places within the said Municipality, shall be liable to a penalty not exceeding five pounds nor less than one pound.
5. Any person emptying or beginning to empty or clean out any privy or water closet, or take away any night soil from any house or premises within the streets or public places, or coming with any carts or other vehicles for that purpose, except between the hours of ten o'clock at night and five o'clock in the morning, shall be liable to a penalty not exceeding five pounds nor less than ten shillings.
6. Any person erecting or setting up any horse post, without the permission of the Council, in any street, or after obtaining such permission erecting or setting up the same in any other place than on the exterior edge of the kerbstone or footway of any of the said streets or public places, shall be liable to a penalty not exceeding five pounds nor less than five shillings.
7. No awning or verandah erected over any of the footpaths within the said Municipality shall be covered with bark, shingles, or palings, and any person covering or roofing any awning or verandah with any of the aforesaid materials shall be liable to a penalty not exceeding ten pounds, and if after receiving seven days notice to remove the same and neglect to do so, shall be liable to an additional penalty of five shillings a day so long as the same shall remain, and the Council may remove the same at the expense of the person covering or roofing the same.

Passed by the Council of the Municipal District of Penrith,
this fifteenth day of September, 1881.

(L.S.) ALFRED COLLESS,
Mayor.

ROBERT STUART,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES ACT OF 1867, AND NUISANCES PREVENTION ACT, 1875.

(MUNICIPAL DISTRICT OF COONAMBLE—BY-LAWS.)

Presented to Parliament, pursuant to Acts 31 Vic. No. 12, sec. 158, and 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 14th April, 1881.

The following By-laws, made by the Council of the Municipal District of Coonamble, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867 and the Nuisances Prevention Act 1875.

HENRY PARKES.

Meetings of Municipal Council and duties of Mayor and Aldermen.

1. The Council shall meet at the Court-house, or other place that may hereafter be appointed within the Municipal District of Coonamble, at 7.30 o'clock p.m. on every alternate Tuesday, for the transaction of business, unless otherwise adjourned, subject, however, to the provisions of the Municipalities Act of 1867.
2. There shall be two half-yearly meetings of the Council in the months of March and September in each Municipal year, for the purpose of making up the accounts of the Municipality for the half-year respectively expiring in the preceding months of February and August in such year, and auditing the same.
3. The Mayor or presiding Alderman shall preserve order, and his decision on disputed points of order shall be final.
4. The Mayor or presiding Alderman may take part in all the proceedings of the Council.
5. When the Mayor or presiding Alderman is called upon to decide upon a point of order or practice, he is to state the rules applicable to the case without argument or comment.
6. The Mayor or presiding Alderman shall put all questions, and declare the sense of the Council thereon.
7. If two or more Aldermen rise to speak at the same time the Mayor or presiding Alderman shall decide which Alderman is entitled to pre-audience.
8. The Mayor or presiding Alderman may, without waiting for the interposition of any Alderman, call to order any Alderman proceeding to speak a second time on the same subject, except in a way of explanation only, or of reply by the mover of any motion then under consideration.
9. The Mayor or presiding Alderman shall, on every motion made, put the question first in the affirmative, and then in the negative, and he may do so as often as may be necessary to enable him to form and declare his opinion from the show of hands as to which party has the majority.
10. Every Alderman shall enter his name and address in a book to be kept by the Council Clerk, where summonses and other papers may be left for him.
11. Every Alderman present at any meeting shall record his vote openly upon all subjects.

Order of Business.

12. The business of the Council shall be taken in the following order:—
 - a. Reading, confirming, and signing minutes of last meeting.
 - b. Reading of copies of letters sent by authority of Council.
 - c. Reading of letters received, and considering and ordering thereon.
 - d. Reception and reading of petitions and memorials, but without discussion.
 - e. Reception and reading of reports from Permanent and Select Committees, and ordering thereon.
 - f. Order of the Day and Adjourned motions.
 - g. Motions according to notice.
 - h. Payment of accounts and special payments.
13. All motions shall be made and petitions presented by Aldermen in their places, and every Alderman shall stand when speaking and address the Chair.
14. The Order of the Day shall include all business of which no notice has been given, and all matters arising out of former meetings of the Council.
15. Any motion entered on the notice paper, and the Alderman having given notice of the same being absent, and no other Alderman having been deputed to bring forward such motion when the business is called on, shall be struck out of the paper.
16. Any number of amendments may be proposed on a motion before the Council, and when more than one amendment is moved the question shall first be put on the last amendment, and then on the next preceding, and so on, in the reverse order in which they were moved, except when such motion or amendment shall relate to the acceptance of tenders, the fixing of salaries, or other matters of finance, in which case the lowest sum shall be put first, then the next lowest, and so on to the highest.
17. It shall not be necessary for any motion to be seconded.
18. Motions for adjournment shall be put without discussion, and if negatived it shall not be competent for any Alderman to make a similar motion until half-an-hour shall have elapsed.

19. Motions to rescind or to vary a former vote of the Council shall not be moved without express notice for the purpose given in writing at least four days previous to the meeting at which it is intended to move the same.

Notices of Motion.

20. The Council Clerk shall enter in a book to be kept for that purpose, to be called the "Notice Book," all notices of motion in the order in which they are received.

Petitions.

21. No discussion shall take place on the presentation of any petition without notice of motion given after its reception.

22. It shall be incumbent on any Alderman presenting a petition to acquaint himself with the language thereof, and to report to the Council that he considers it unobjectionable in that respect.

23. All petitions shall be received only as the petitions of the party signing the same.

Committees and their Reports.

24. No Committee shall consist of less than three members of the Council, which number shall form a quorum.

25. The mover of any motion for a Committee shall be a member thereof, and at all meetings of such Committee the Mayor, if a member, shall preside, or if he be not a member then such Alderman shall preside as a majority of the members of the Committee shall have appointed permanent Chairman thereof; and in the absence of the Mayor or the permanent Chairman respectively, such Chairman as the members present shall appoint shall preside.

26. No report of any Committee shall be adopted unless due notice of motion for that purpose be given after its reception.

27. The rules of the Council shall be observed in a Committee of the whole Council, except the rule limiting the number of times of speaking.

Order of Debate.

28. Any Alderman proposing a motion or amendment, or discussing any matter, shall not be interrupted, unless by a call to order, when he shall sit down, the Alderman calling to order shall then be heard, and the question of order decided before the subject is resumed or any other business proceeded with.

29. Any Alderman proposing a motion or any amendment must state the nature of it before addressing the Council.

30. Except in Committee no Alderman shall speak twice on the same question unless in explanation, when he has been misrepresented or misunderstood: Provided, however, that the mover shall be allowed to reply, and that every Alderman shall have the liberty of speaking once on every amendment as well as on the original motion.

31. No Alderman shall digress from the subject under discussion, nor shall he speak upon any motion or amendment for a longer period than fifteen minutes without the consent of the Council.

32. A debate may be adjourned to a later hour of the same evening or to another day to be specified.

33. The Alderman upon whose motion any debate shall be adjourned by the Council shall be entitled to pre-audience on the resumption of the debate.

34. It shall be competent for any Alderman to divide the Council on any question, both in full Council and Committee, and the Mayor or presiding Alderman shall take the division in the usual way—by show of hands; and the names given by the Mayor or presiding Alderman to the Council Clerk shall be taken down by him and recorded.

35. All divisions of the Council shall be entered in the minute book.

36. Any Alderman using offensive or abusive language towards any other Alderman, or persisting in speaking when requested by the Mayor or presiding Alderman to desist, or refusing to sit down when called to order by the Mayor or presiding Alderman, shall forfeit and pay for every such offence a sum of money not being less than five shillings nor exceeding five pounds.

The Estimate.

37. No work affecting the expenditure of the funds of the Municipality shall be undertaken until an estimate of the cost thereof shall have been laid before the Finance Committee, reported thereon at the next meeting, and approved of by the Council.

38. A Committee or Surveyor shall in all cases be appointed to inspect the work performed as soon as completed, and on the written approval of such Committee or Surveyor the same shall be paid for.

39. It shall be lawful for any ratepayer at any time previous to any tender for work being accepted, to petition the Council in support of or against the expenditure on account of such contract.

Council Clerk's Duties, &c.

40. The Council Clerk, in addition to the duties which by the Municipalities Act of 1867, or by the present or any other By-laws thereunder he may be required to perform, shall be the Clerk of all Revision Courts held in the Municipal District under the provisions of the said Municipalities Act. He shall also, under the direction of the Mayor, conduct all correspondence which may be necessary on the part of the Council. He shall likewise have charge of all the records of such Council, except such book or documents as may (as hereinafter provided) be entrusted to any other officer, and shall be responsible for the safe keeping of such records. He shall generally assist the Mayor in carrying out the orders of the Council and the duties of such Mayor.

41. The Treasurer's cash-book and the Banker's pass-book shall be laid before the Council at all its sittings.

By-laws.

42. That no new By-law shall be proposed at any meeting unless notice in writing has been duly given, and no new By-law, amendment, or repeal shall be finally passed at the meeting at which it is first proposed.

43. That not less than seven days shall intervene between the meeting at which the new By-law, amendment, or repeal shall be proposed, and the meeting at which the same shall be passed by the Council.

44. That any proposed new or amended By-law, or repeal of any existing By-law, shall be filed in the Council Clerk's office for the inspection of the Aldermen or inhabitants of the Municipal District from the time at which it is proposed until the meeting at which it is to be finally adopted.

45. Any one or more of the By-laws of the Council relating to the conduct of the business thereof, may be suspended *pro tempore* in cases of emergency, if notice of the intended motion for that purpose be given to the Council Clerk four days previous to the day of meeting at which such motion shall be intended to be made, and the majority of Aldermen present agree thereto, or, without such notice, if the whole of the Aldermen present at such meeting agree thereto.

Miscellaneous Regulations.

46. All contracts for Municipal works shall be by tender, or otherwise, as the Council may see fit.

47. No Alderman or officer of the Council shall be surety for any contractor or officer of the Municipality.

Collector of Rates.

48. That if necessary a duly qualified person shall be appointed for the collection of the Municipal rates, and the remuneration shall be an agreed per centage upon the actual amount collected by such officer from the ratepayers.

49. That such rates shall be collected by half-yearly instalments.

50. The collector of such rates for the time being, if appointed, shall be Bailiff for the Municipality, and in the meantime, until such Collector be appointed, a proper person shall be appointed as Bailiff.

51. The Collector, if appointed, shall in accordance with the provisions of the Municipalities Act of 1867, collect the rates when made from the ratepayers, and shall from time to time report the result of his collection to the Council, and shall execute all warrants for distress, or take such proceedings for enforcing payment of the said rates, if in arrear, as the Mayor or any person who may for the time being be duly authorized to perform the duties of that office shall direct.

52. The Collector, if appointed, shall keep such books required for the collection of rates as shall be furnished him by the Council Clerk, and shall produce the same for the inspection of any ratepayer at any reasonable time.

53. All levies and distresses shall be made under warrant in the form of the Schedule hereunto annexed and marked with the letter A, under the hand of the Mayor or any person who may for the time being be duly authorized to perform the duties of that office.

54. The Bailiff shall be paid for every levy made by him under these By-laws the fees mentioned in the Schedule hereunto annexed and marked C.

SCHEDULE A.

Warrant of Distress.

I, _____, Mayor of the Municipal District of Coonamble, do hereby authorize you, _____, the Bailiff of the said Municipal District, to distrain the goods and chattels in the dwelling-house (or in and upon the land and premises) of _____, situate in _____ street, Coonamble, for _____ being the amount of rates due to the Corporation of the said Municipal District to the _____ day of _____ for the said dwelling-house (or other premises as the case may be) and to proceed thereon for the recovery of the said rates according to law.

Dated this _____

188 .

Mayor.

SCHEDULE B.

Inventory.

I have this day, in virtue of the warrant under the hand of the _____ of the Municipal District of Coonamble, dated _____, distrained the following goods and chattels in the dwelling-house (or in and upon the land and premises) in the occupation of _____, situate at _____, within the said Municipal District, for _____, being the amount of rates due to the said Municipal District to _____ day of 188 _____.

List of Goods and Chattels distrained on

Dated this	day of	188 _____

SCHEDULE C.

Fees of Bailiff.

For making entry and inventory, three shillings; if in possession more than five hours, three shillings additional; and for every subsequent day while in possession, six shillings per day, and five per cent. upon the net proceeds of sale, with actual cost of advertisements, if any.

Placards not to be affixed on walls without consent.

55. It shall not be lawful for any person to paste or otherwise affix any placard or other paper upon any wall, house, or fence, or erection, or deface with chalk, paint, or other matter, any such wall, house, fence, or erection, unless with the consent of the owner thereof, and every person who shall be guilty of any such offence shall pay a sum not exceeding twenty shillings nor less than five shillings.

Prevention and extinguishing fires.

56. It shall be lawful for the Mayor, upon the representation of one or more householders, that fire is being used to the danger of contiguous buildings, to cause a notice in writing to be served upon or left at the residence of the owner or occupier of the premises on which any such fire may exist, and direct (if the urgency of the case should require it) that the said fire should be extinguished at once, or within any reasonable time afterwards which he may deem expedient.

57. If by reason of the neglect of the occupier of any house or building any chimney within the limits of the Municipality shall take fire, such occupier shall on conviction forfeit and pay for every such offence any sum not exceeding forty shillings.

Care and management of the Public Roads and Streets and Public Thoroughfares of the Municipal District.

58. Whenever any footway shall have been marked out, the Surveyor or person acting for him may, with the sanction of the Council, cause the same to be levelled, and made as nearly as practicable of equal height and breadth and with an equal slope and inclination, and for this purpose may remove any flagging, steps, or other matter or thing that may injure or obstruct the said footway or render it unequal or inconvenient, and which now is, or may hereafter be erected or placed on the space marked out for any of the said footways.

59. The Surveyor or person acting for him may at any time by order of the Council cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same, or for any necessary purpose, and any person or persons offending against this By-law, either by travelling on or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall forfeit and pay a penalty not exceeding five pounds for every such offence.

Entrance to Premises.

60. In all cases where access is necessary from a street or road to any yard, private way, lane, or premises, the person or persons requiring and using the same shall form and maintain at his or their cost a crossing over the footpath through the full depth thereof, to be formed and constructed as the Council or their Surveyor shall direct, under a penalty not exceeding twenty pounds nor less than ten shillings: Provided in all cases where the Council shall consider crossings necessary, and the person or persons interested shall fail to make application for the construction thereof, the Council shall have power to form any such crossings.

New roads to be reported on.

61. No new public road, street, way, reserve, or other place proposed to be dedicated to the public shall be taken under the charge and management of the Council, until such road, street, way, or reserve, shall have been examined by the Improvement Committee and reported upon to the Council by such Committee.

Plans of proposed new road &c., to be deposited.

62. Whenever any proprietor or proprietors of land within the said Municipality shall open any road, street, or way, or lay out any park, or other place for public use, or recreation, through or upon such land, and shall be desirous that the Council shall undertake the care and management of such road, street, way, reserve, or other place, he or they shall furnish the Council with a plan or plans signed by himself or themselves showing clearly the position and extent of such road, street, way, reserve, or other place aforesaid.

Dedications of new roads, &c.

63. If the Council determine to take charge of any such road, way, or other place as aforesaid, the plan or plans so signed as aforesaid shall be preserved as a record or records of the Council, and the proprietor or proprietors aforesaid shall execute such further instrument dedicating such road, way, reserve, or other place to public use or recreation as aforesaid as may be considered necessary by the Improvement Committee, and such further instrument of dedication shall also be preserved as a record of the Council.

Improvement Committee to fix street levels, &c.

64. The Improvement Committee or any officer or person acting under the supervision of such Committee, shall, subject to such orders as shall from time to time be made by the Council on that behalf, fix and lay out the levels of all public roads, streets, and ways within the Municipality, and the carriage and footways thereof; and it shall be the duty of such Committee, officer, or person to place posts at the corners or intersections of any such public roads and streets, wherever the same may be considered necessary or desirable by the Council: Provided that there shall be no change of level in any such public road, street, or way, until the same shall have been submitted to and adopted by the Council, as hereinafter directed.

Change of street level.

65. Whenever it may be deemed necessary to alter the level of any such public road, street, or way as aforesaid, the Improvement Committee shall cause a plan and section showing the proposed cuttings and fillings to be exhibited at the Council Chambers for fourteen days, for the information and inspection of ratepayers, and shall notify by advertisement in some newspaper circulating in the Municipality that such plan is so open to inspection. At a subsequent meeting of the Council the said plan and section shall, if adopted, be signed by the Mayor or Chairman and the proposer and seconder of the motion for such adoption, and countersigned by the Council Clerk, and such plan and section so signed and countersigned shall be a record of the Council.

Turf, gravel, stone, &c., not to be removed from streets without permission.

66. Any person who shall form, dig, or open any drain or sewer, or remove or cause to be removed, any turf, clay, sand, soil, gravel, stone, or other material, or any road scrapings, or sweepings in, or from any part of the carriage or footway of any street, or any other public place within the said Municipality, without leave first had and obtained from the Council, or who shall wantonly break up or otherwise damage any such carriage or footway, shall on conviction forfeit and pay for every such offence any sum not exceeding five pounds nor less than one pound.

67. No person shall be allowed to remove loam, sand, gravel, or other material from any reserve or other lands of the Municipality without authority in writing of the Council, or their duly authorized officer, under a penalty not exceeding two pounds; any person offending against this By-law shall be liable to a penalty of not less than one pound or more than forty shillings. The driver of any vehicle shall for the purposes of the By-laws be held and taken to be the owner thereof until the contrary be shown.

Holes to be enclosed.

68. Any person or persons who shall dig or make, or cause to be dug or made, any hole, or leave or cause to be left, any hole adjoining or near to any street or public place within the Municipality for the purpose of making any vault or vaults, or the foundation or foundations to any house or building, or for any other purpose whatsoever, or shall erect or pull down any building, and shall not forthwith enclose the same, and keep the same enclosed, in a good and sufficient manner to the satisfaction of the Improvement Committee of the said Municipality, or shall keep up, or cause to be kept up, and continued any such enclosure for any time which shall be of no longer than shall be absolutely necessary in the opinion of the said Committee, and shall not place lights upon each side of the said enclosure, and keep the same constantly burning from sunset to sunrise during the continuance of such enclosure, shall forfeit and pay for every such refusal or neglect any sum not being less than forty shillings nor exceeding five pounds.

Open spaces and steps adjoining footways to be enclosed.

69. Every owner or occupier of any house, building, or premises, or land within the said Municipality, having any entrance, area, garden, or other open space, or any vacant building lot, waterhole, or excavated space adjoining the footway of any street or public place in such Municipality, shall protect and guard the same by good and sufficient rails, fences, or other enclosures, so as to prevent danger to persons passing and re-passing; and every such owner or occupier of any such house, building, premises, or land having any steps adjoining the footway of any such street or public place shall in like manner protect and guard the same by fences, rails, or other enclosures, so as to prevent the like danger to persons passing and re-passing, and on failure thereof of every such owner or occupier shall as often as he shall be convicted of such offence forfeit and pay a sum not being less than forty shillings nor more than five pounds; and every such owner or occupier as aforesaid who shall fail to erect such fences or other enclosures as aforesaid, shall be deemed guilty of a further offence against the By-law.

Wells to be covered over.

70. Every person who shall have a well situated between his or her dwelling-house, or the appurtenances thereof, and any road, street, or footway, within the limits of the said Municipality, or at the side of, or in the yard, or place open or exposed to such road, street, or footway within the limits of the said Municipality, or at the side of, or in any yard or place open or exposed to such street, road, or footway, shall cause such well to be securely and permanently covered over; and if any person having such well as aforesaid, shall fail to cover over and secure the same within twenty-four hours after notice in writing shall have been given to him or her by any officer of the said Council, or shall have been left for such person at his or her usual or last place of abode, or on the said premises, shall on conviction forfeit and pay a sum of ten shillings, and for every day after such notice that such well shall remain open or uncovered, contrary to the provisions therein, such person shall be deemed guilty of a separate offence against this By-law.

Drawing or trailing timber.

71. Any person who shall haul or draw, or cause to be hauled or drawn, upon any part of any street or public place within the said Municipality, any timber, stone, or other thing otherwise than upon wheeled vehicles or barrows, or shall suffer any timber, stone, or other thing which shall be carried principally or in part upon any wheeled vehicle or barrow to drag or trail upon any part of such street or public place, to the injury thereof, or to hang over any part of any such vehicle or barrow so as to occupy or obstruct the street beyond the breadth of the said vehicle or barrow, shall upon conviction forfeit and pay for every such offence a sum not more than forty shillings nor less than five shillings over and above the damage occasioned thereby.

Driving carriages, horses, &c., on foot-ways, and throwing filth, &c.

72. Any person who shall throw, cast, lay, or shall cause, permit, or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal matter, or other filth or annoyance, or any matter or thing, in or upon the carriage-way or foot-way, or any street or other public place in the said Municipality, or shall kill, slaughter, dress, scald, or cut up any beast, swine, calf, sheep, lamb, or other animal in or so near to any such street or other public place as that any blood or filth shall run or flow upon, or over, or be on any or either of any such carriage or foot way, or shall run, roll, drive, draw, place, or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any of the said foot-ways of any such street or public place any waggon, cart, dray, sledge, or other carriage, or any wheelbarrow, handbarrow, or truck, or any hogshead, cask, or barrel, or shall wilfully lead, drive, ride, or allow to remain any horse, ass, mule, or other beast upon any such foot-way, or do, or cause to be done, any damage to the kerbing, streets, pathways, roads, lanes, or gutters of the Municipality, shall upon conviction, forfeit and pay for the first offence a sum not exceeding forty shillings nor less than five shillings; for the second offence a sum not exceeding five pounds nor less than ten shillings; and for a third and every subsequent offence a sum not exceeding ten pounds nor less than one pound for each such offence.

Throwing or allowing slops, &c., on carriage and foot ways not allowed.

73. Any person who shall cast or throw, or shall cause, suffer, or permit to be cast or thrown, upon any foot-way or carriage-way any soap-suds, slops, or refuse water, or any refuse vegetables, or any other matter or thing, or shall cause or suffer, or permit the same to run or flow from any premises in his or her occupation over any such footpath or carriage-way, shall for every such offence suffer and pay a sum not exceeding two pounds nor less than five shillings.

Placing carriages, goods, &c., on footpath—not removing when required—replacing same.

74. Any person who shall set or place, or cause or permit to be set or placed any stall, board, chopping-block, show-board (on hinges or otherwise), basket, wares, merchandise, casks, or goods of any kind whatsoever, or shall cause to be looped, placed, washed, or cleansed any pipe, barrel, cask, or vessel in or upon or over any carriage or foot way, in any street or public place within the said Municipality, or shall set out, lay, or place, or shall cause or procure, permit or suffer, to be set out, laid, or placed any coach, cart, van, waggon, dray, wheelbarrow, handbarrow, sledge, truck, or other carriage upon any such carriage-way, except for the necessary time of loading and unloading such cart, van, waggon, dray, sledge, truck, or other carriage, or taking up and setting down any fare, or waiting for passengers when actually hired, or harnessing or unharnessing the horses or other animals from such coach, cart, wain, waggon, dray, sledge, truck, or other carriage, or if any person shall set or place, or cause to be set or placed, in or upon or over any such carriage or foot way any timber, stones, bricks, lime, or other materials or things for building whatsoever (unless the same be enclosed, as herein directed), or any other matters or things whatsoever, or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal, or other thing or matter whatsoever, from any house or other building or premises, or any other matter or thing from and on the outside of the front of any house or other building or premises over or next unto any such street or public place, and shall not immediately remove all or any such matters or things being thereto required by the Inspector of Nuisances, or other proper officer of the Council, or if any person who having in pursuance of any such requisition as aforesaid removed or caused to be removed any such stall, board, show-board, chopping-block, basket, wares, merchandise, casks, goods, coach, wain, waggon, dray, wheelbarrow, sledge, truck, carriage, timber, stones, bricks, lime, meat, offal, or other matters or things, shall at any time hereafter again set, lay, or place or put out, or cause, procure, permit, or suffer to be set, laid, placed, or exposed, or put out the same, or any of them, or any other stall, board, show-board, chopping-block, basket, wares, merchandise, goods, timber, stores, bricks, lime, coach, cart, wain, waggon, dray, truck, wheelbarrow, handbarrow, sledge, meat, offal, or other things or matters whatsoever (save and except as aforesaid) in, upon, or over any such carriage-way or foot-way, or next unto any such street or public place as aforesaid, shall upon conviction for every such offence forfeit and pay for the first offence a sum not exceeding forty shillings nor less than five shillings; for the second offence a sum not exceeding five pounds nor less than ten shillings; and for the third and every subsequent offence a sum not exceeding ten pounds nor less than one pound.

Verandahs and awnings may be erected, subject to approval of Council.

75. Nothing in these By-laws contained shall be deemed to prevent any person from placing or fixing a movable awning, or erecting a verandah in front of his or her shop or house: Provided that such awning shall be at least ten feet above the proper levels of the foot-ways, and according to plans and specifications of the Council for the time being, and that the posts of the said awning and verandah, together with all framework connected therewith, shall be prepared and erected to the satisfaction and approval of the Council, as they may from time to time direct.

Riding on drays, careless driving, &c.

76. If the driver of any waggon, wain, cart, or dray of any kind shall ride upon any such carriage in any street as aforesaid, not having some person on foot to guide the same (such carts as are drawn by one horse and driven or guided with reins only excepted), or if the driver of any carriage whatsoever shall wilfully be at such a distance from such carriage, or in such a situation whilst it shall be passing upon such street, that he cannot have the direction and government of the horse or horses or cattle drawing the same, or if the driver of any waggon, cart, dray, or coach, or other carriage whatsoever meeting any other carriage shall not keep his waggon, cart, dray, or coach, or other carriage on the left or near side of the road, street, or thoroughfare, or if any person shall in any manner wilfully prevent any other person or persons from passing him or her or any carriage under his or her care upon such street, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any carriage or person in or upon the same. Every driver or person so offending shall upon conviction forfeit and pay any sum not exceeding forty shillings.

Riding or driving furiously, &c.

77. Any person who shall ride or drive through or upon any street or public place within the said Municipality so negligently, carelessly, or furiously that the safety of any other person shall or may be endangered, shall on conviction forfeit and pay a sum not exceeding ten pounds nor less than one pound.

Vehicles driven after sunset to carry lights.

78. Any person driving any vehicle within the said Municipality between sunset and sunrise, shall carry a light on such vehicle in a conspicuous place. Any one offending against this By-law shall be liable to a penalty not exceeding one pound.

Public property.—Injuring or extinguishing lamps.

79. Any person who shall wantonly or maliciously break or injure any lamp or lamp-post, or extinguish any lamp set up for public convenience in the said Municipality, shall, over and above the necessary expense of repairing the same, and if such damage be wilfully done, shall forfeit and pay a sum not exceeding twenty pounds or less than five pounds.

Damaging buildings.

80. Any person who shall damage any public building, punt, boat, toll-gate, toll-bar, toll-board, wall, parapet, fence, sluice, bridge, culvert, sewer, watercourse, or other public property within the said Municipality, shall pay the cost of repairing the same, and if such damage be wilfully done shall forfeit and pay a sum not exceeding twenty pounds nor less than five pounds.

Damaging trees.

81. Any person who shall wilfully, and without the authority of the Council, cut, break, bark, root up, or otherwise destroy or damage the whole or any part of any tree, sapling, shrub, or underwood growing in or upon any street or place under the management of the Council, shall forfeit any sum not exceeding ten pounds nor less than one pound.

Obstructing public path-ways.

82. That the owner or occupier of any land situated on the side of any street or road in this Municipality, who shall permit any tree, shrub or plant kept for ornament or otherwise to overhang any foot-path or foot-way on the side of any such street or road so as to obstruct the passage thereof, and who on demand made by the Council or their overseer or Inspector, shall not cut, or cause to be cut, lop, or cause to be lopped, all such trees, shrubs, or plants to the height of 8 feet at least, the said Council and their servants, labourers, and workmen, may cut, or cause to be cut or lopped, all such overhanging trees, plants, or shrubs, and to remove or burn any such portion of such trees, plants, or shrubs so cut or lopped without being deemed a trespasser or trespassers; and in case any person or persons shall resist, or in any manner forcibly oppose the said Council, or their servants, labourers, or workmen, in the due execution of the powers given in this behalf by virtue of the Municipalities Act of 1867, every person so offending, shall on conviction for every such offence, forfeit and pay any sum not exceeding ten pounds.

Erection of houses, &c., to be notified.

83. No person shall be permitted to erect any house, shop, or other building, in any street, lane, or place in the Municipality, without first serving notice in writing on the Mayor or Council Clerk, on any lawful day, between the hours of nine a.m. and four o'clock p.m., stating such intention, and describing the proposed situation of the building or erection, and without having received any authority from the Mayor or Council Clerk, who will give the required level and alignment, if in a proclaimed street, on payment of a fee of five shillings. No person shall be at liberty to encroach beyond the building line in any street or lane by the erection of houses, verandahs, doorsteps, fences, or any other obstruction whatever; any person offending against this By-law, shall pay for the first offence a sum not exceeding five pounds nor less than one pound; for a second offence a sum not exceeding ten pounds nor less than five pounds; and for every subsequent offence not more than fifty pounds nor less than ten pounds.

Houses to be properly spouted.

84. All proprietors of houses and other buildings within this Municipality, having a frontage to any main thoroughfares, shall be required to have the roofs of the said buildings sufficiently spouted and connected with suitable downpipes and conductors to be carried under the surface of the footpaths into the gutters or away from the public streets to the satisfaction and approval of the Council, under a penalty of ten shillings on conviction; and if not remedied at the expiration of one day after such conviction, the offender shall be again liable for a like penalty for every day or part of a day that the same shall not be remedied, and together with the cost of repairing all damage to such foot-paths resulting from such neglect.

Houses and erections not to encroach on foot-paths.

85. Whenever any road, street, or lane, has been marked out in the manner herein provided, no house, shop, fence, or other structure shall, except as hereinafter mentioned, be allowed to project or encroach on any part thereof. And it shall not be lawful for any person to erect or put up any building, erection, obstruction, fence, or enclosure, or to make any excavation, hole, &c., or opening, in, under, upon, or near to any such road,

street, lane, or thoroughfare, unless the consent of the Council or Mayor has been obtained to the erecting or making of any such building, erection, obstruction, fence, or enclosure, excavation, hole, or opening as aforesaid; and every person offending against this By-law, shall forfeit and pay for the first offence, a sum not exceeding five pounds nor less than twenty shillings, and for the second and every subsequent offence, a sum not exceeding ten pounds nor less than two pounds.

No balcony to project more than five feet.

86. No balcony shall be erected so as that the same or any part thereof shall project or hang over the foot-way of any street, road, or thoroughfare which shall be less than forty feet in width, and no balcony which shall project or hang over any street, road, or thoroughfare, shall be more than five feet wide, nor less than ten feet in height from the bottom of the floor joists to the proper level of the foot-way; and every person who shall offend against this By-law, shall on conviction, forfeit and pay a sum not exceeding five pounds nor less than one pound for every day that such balcony shall be allowed to remain after such conviction.

Encroachment to be removed on notice.

87. The surveyor or such other officer or person as aforesaid may, at any time, on the order of the Council, and upon due notice of thirty days, direct the removal of any building, fence, or other obstruction or encroachment in or upon any road, street, lane, or thoroughfare under the charge of the Council. Notice shall in this case be served either personally or at the usual or last-known place of abode of the person to whom such obstruction or encroaching structure belongs, or who has erected the same, or caused it to be erected.

Council may remove at expense of offender or proceed for breach of By-law.

88. In any case when, after service of notice for the removal of any obstruction or encroachment as aforesaid, the person causing or permitting the same shall not remove it within thirty days after service of said notice, it shall be lawful for the said Council to direct the removal of the same under the superintendence of its own proper officer, and at the cost of the person so offending (provided that the expenses hereby incurred shall in no case exceed the sum of ten pounds), or at the option of the Council, to proceed against the offender for breach of By-law, the penalty for the first offence not to exceed twenty-five pounds nor less than twenty shillings, and for a second and every subsequent offence a sum not exceeding twenty-five pounds nor less than five pounds.

To apply to obstructions by digging, &c.

89. The foregoing provisions shall be equally applicable to all obstructions by digging or excavation.

Swine not to be kept.

90. Any person who shall breed, feed, or keep any kind of swine in any house, building, yard, garden, or other tenement, situate and being in or within twenty yards of any street or public place, or any dwelling-house in the said Municipality, shall on conviction forfeit and pay for every such offence a sum not exceeding forty shillings nor less than five shillings.

Swine not to wander about streets.

91. Any person who shall breed, feed, or keep any kind of swine in any house, yard, or enclosure, situate and being in or within twenty yards of any street or public place in the Municipality, or who shall suffer any kind of swine, or any horse, ass, cattle, mule, sheep, goat, or any animal of like nature belonging to him, or under his charge, to stray or to go about, or to be tethered or depastured in any street, road, or public place within the Municipality, shall forfeit and pay for every such offence a sum not exceeding forty shillings nor less than five shillings. Provided that if after due inquiry shall have been made, and the owner thereof cannot be discovered, it shall be lawful for the said Council to cause to be destroyed any swine or goats so straying or injuring property of any description.

Hog-styes and nuisances not removed on notice.

92. In case any privy, hog-stye, or any sink, cesspool, yard, or enclosure, or any matter or thing which shall at any time be in any place within the Municipality, shall be or become a nuisance, it shall be lawful for the Council after due investigation, by notice in writing, to order the removal of the said nuisance within seven days after such notice shall have been given to the owner or occupier of the said premises wherein such nuisance is situated, or shall have been left for such owner or occupier at his or her last or usual place of abode, or on the said premises, and every such owner or occupier refusing or neglecting to remove or abate such nuisances pursuant to such notice, and to the satisfaction of the Council, shall forfeit and pay a sum not exceeding ten pounds nor less than forty shillings.

Dead animals in certain cases to be removed at cost of Municipality.

93. If any animal shall die in any public street or place within the said Municipality, and the owner, or any person having charge of such animal, cannot at the time be found or ascertained, it shall be immediately removed by the Inspector of Nuisances or other officer appointed by the said Council, and destroyed in the manner aforesaid at the cost of the said Municipality.

Dead animals not to be thrown into public places, reserves, or watercourses.

94. Any person who shall cast any filth, rubbish, or any dead animal, or any animal, with intent of drowning such animal, into any public watercourse, waterhole, bay, creek, or canal, or shall obstruct or divert from its channel any sewer, canal, or watercourse, shall forfeit a sum not exceeding five pounds nor less than ten shillings, and shall, in addition to such penalty, pay the cost of removing such filth or obstruction, or of restoring such watercourse, sewer, or canal to its proper channel.

Suppression of Nuisances, &c.

95. In case any privy, hogstye, or any other matter or thing whatsoever, which shall at any time be or become a nuisance by causing unwholesome smells to arise within any part of the Municipality, it shall be lawful for any two Justices, upon complaint thereof by any person, to investigate such complaint, and to order that such privy, hogstye, boiling-down establishment, or other matter or thing, being a nuisance as aforesaid, to be cleansed, removed, or discontinued, as the case may be, within seven days after such order has been made, and notice given to the owner or occupier of the premises whereon such nuisance shall exist, and every such owner or occupier neglecting to remedy or remove such nuisance, pursuant to such notice or order, to the satisfaction of such Justices, shall forfeit and pay a sum of ten pounds for every such neglect or disobedience.

Cleansing private avenues, yards, &c.

96. Any owner or occupier of any house or place within the said Municipality, who shall neglect to keep clean any private avenues, passages, yards, and ways within the said premises, so as by such neglect to cause a nuisance, by offensive smell or otherwise, shall on conviction forfeit and pay a sum not exceeding forty shillings nor less than ten shillings for every such offence.

Placing dead animals on premises.

97. Any person who shall place, or shall cause or suffer to be placed, upon any land or premises within the Municipality, any dead animal, blood, offal, night-soil, or any other offensive matter, so as to become a nuisance to the inhabitants thereof, shall on conviction suffer and pay a penalty not exceeding five pounds nor less than ten shillings for every such offence.

Allowing dead animals to remain on premises.

98. Any owner or occupier of any land or premises who shall suffer or permit any dead animal, blood, offal, night-soil, or any other offensive matter, to remain upon the said land or premises, after notice shall have been given to remove the same, shall be subject to a penalty not exceeding two pounds nor less than ten shillings for every day that the same shall so remain.

Butchers' shambles, slaughter-houses, &c. to be cleansed.

99. For preserving the cleanliness of the said Municipality, and the health of the inhabitants thereof, it shall be lawful for the Inspector of Nuisances, or for any other officer or officers appointed by the Council from time to time, and when and as often as he or either of them shall see occasion to visit and inspect the butchers' shambles, slaughter-houses, butchers' carts, casks, baskets, and other utensils used by them, boiling-down establishments, tanneries, and fellmongering establishments in the said Municipality, and to give such directions concerning the cleansing of the said shambles, slaughter-houses, tanneries, and establishments, both within and without, as to him shall seem needful, and any butcher, or any owner or occupier of any such shamble, slaughter-house, tannery, or establishment who shall refuse or neglect to comply with such directions within a reasonable time, shall forfeit a sum not exceeding ten pounds nor less than ten shillings.

Inspection of offensive premises.

100. Upon the reasonable complaint in writing of any householder that the house, premises, yards, closets, or drains, of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances or any other person appointed by the Council, shall make an inspection of the premises complained of, and the officer of the Council shall have full power without any other authority than this By-law, to go upon such premises for the aforesaid purpose.

Various obstructions and annoyances.

101. Every person who in any street or other public place of passage, within the said Municipality to the obstruction, annoyance, or danger of the residents or passengers, shall

commit any of the following offences, shall on conviction for any and every such offence forfeit and pay a penalty of not more than two pounds.

- a. Every person who shall hoist or cause to be hoisted, or lower or cause to be lowered, goods of any description from any opening in any house fronting any street or public place, and close to the footway thereof, without sufficient and proper ropes and tackling.
- b. Every person who shall carry or convey, or cause to be carried or conveyed, in any street or public place, the carcass or any part of the carcass of any newly slaughtered animal without a sufficient and proper clean cloth covering the same for the concealment from public view, or shall hawk or carry about butchers' meat for sale without covering the same as aforesaid.
- c. Every person who shall place any line, cord, or pole, across any street, lane, or passage, or hang or place clothes thereon to the danger or annoyance of any person.
- d. Every person who shall throw or cast from the roof or any part of any house, or other building, any slate, brick, part of a brick, wood, rubbish, or other material or thing, unless within a house or enclosure, where any house or building is being erected, pulled down, or repaired.
- e. Every blacksmith, whitesmith, anchormsmith, nail-maker, metal-founder, limo-burner, brick-maker, potter, or other person using a forge, furnace, or kiln, and having a door, window, or aperture fronting or opening into or towards any street, lane, or passage, and not enclosing such door, or not fastening the shutters or other fastenings of such window, and closing such aperture, and placing a screen before the same every evening within one hour after sunset, so as effectually to prevent the light from showing through the doorway, window or aperture, next or upon such street, lane, or passage.
- f. Every person who shall be keeper of or have any dog or other animal which shall attack or endanger the life or limb of any person who may have a right-of-way or use of any private yard, alley, street, or other place within the said Municipality.

Premises in state to endanger public health.—Houses to be purified on certificate.

102. If upon the certificate of a duly qualified medical practitioner it appears to the Council that any house, or part thereof, or the premises occupied in connection therewith, within the limits of the said Municipality is in a filthy or unwholesome condition, that the health of any person is or may be liable to be affected or endangered thereby, and that the whitewashing, cleansing, or purifying of any house or part thereof, or the premises occupied in connection therewith, would tend to check or prevent infectious or contagious disease, the said Council shall give notice in writing to the owner or occupier of such house or part thereof, or the premises occupied in connection therewith, to whitewash, cleanse, or purify the same, as the case may require, and if the person to whom such notice is so given shall fail to comply therewith, within such time as shall be specified in the said notice, he shall be liable to a penalty not exceeding ten shillings for every day during which he continues to make default: Provided that no such penalties shall collectively amount to any greater sum than twenty pounds.

Offences against public decency.—Bathing prohibited within certain limits.

103. Any person who shall bathe near or within view of any inhabited house, or of any public wharf, quay, bridge, street, road, or other place of public resort within the limits of the said Municipality, between the hours of six in the morning and eight in the evening, shall on conviction forfeit and pay a sum not exceeding one pound for every such offence.

Indecent exposure of the person.

104. Any individual who shall offend against decency by exposure of his or her person, in any street or public place within the said Municipality, or in view thereof, shall on conviction forfeit and pay for every such offence a sum not exceeding ten pounds nor less than one pound.

Earth Closets.

105. Every earth closet shall be built with walls seven feet high, and shall not be less than three feet six inches wide, and four feet six inches long, and must not be less than fifteen feet from any dwelling-house or public street, and shall be provided with a door capable of being fastened from the inside, and shall be ventilated; and every person having or building any earth-closet contrary to this By-law shall be liable to a penalty of not less than one pound nor more than five pounds.

Other closets, privies, not being proper water closets.

106. Any person who shall dig, form, or make any earth-closet within fifteen feet of any dwelling-house, or any other closet within thirty feet of any dwelling-house, or within thirty feet of any well for supplying any dwelling-house with water, shall on conviction forfeit and pay any sum not exceeding two pounds nor less than five shillings, and if not removed within forty-eight hours after such conviction it shall be dealt with as a fresh offence.

Emptying cesspits and removing night-soil.

107. Every closet shall be built in such a position that the same may be emptied without the contents being carried through any dwelling-house, and every person having or building a closet contrary to this By-law shall be liable to a penalty of not less than one pound nor more than five pounds.

How night-soil to be disposed of.

108. Until and unless otherwise provided by the Council, all night-soil shall be disposed of by burying it in the earth at such places as the Council may from time to time appoint.

Hours for removing night-soil.

109. Any person who shall remove any night-soil, or ammoniacal liquor, bones, or other offensive matter, or shall come with carts or carriages for that purpose, between the hours of six o'clock in the morning and eleven o'clock at night, or shall at any time remove any such night-soil or ammoniacal liquor otherwise than in properly covered and water-tight carts or vehicles, or in such a manner so as to upset, cast, spill, or strew any of the said night-soil, ammoniacal liquor, slop, urine, or filth, in or upon, or near to any of the streets, roads, public places, or foot-ways of the Municipality, or shall deposit or throw night-soil, ammoniacal liquor, bones, or other offensive matter, nearer to any street, road, or dwelling-house than shall from time to time be directed by the Council or by the Inspector of Nuisances, or shall allow vehicles used for this purpose to stand on any premises nearer to any road, street, or dwelling-house than shall from time to time be directed by the Council or Inspector, shall upon conviction forfeit and pay for every such offence a sum not exceeding five pounds nor less than one pound, and in case the person or persons so offending cannot be found, then the owner of such carts, carriages, or other vehicles employed in and about emptying or removing such night-soil, bones, or other offensive matter, and also the employer or employers of the person or persons so offending shall be liable to and forfeit and pay such penalty as aforesaid.

Houses of ill-fame.

110. Upon representation by any respectable ratepayer that the house, or neighbouring or adjoining premises, is of ill-fame, it shall be lawful for the Mayor and any Alderman to cause the residents of such house or premises to furnish to the Council a list of the names, ages, sex, birth-place, and occupation of all the inmates of the said house and premises, and upon non-compliance with such request, or if upon consideration the Mayor and any Alderman consider the house to be one of ill-fame they shall with the sanction of the Council declare the same to be a nuisance, and the Mayor shall cause a notice in writing to be served upon the holder of such house or premises, or other person residing or being therein and acting as such holder, to discontinue or abate the said nuisance within forty-eight hours after the receipt of such notice, otherwise such holder or other person shall be liable to a penalty of not less than forty shillings nor more than fifty pounds, and on the second conviction shall be liable to a penalty of not more than fifty pounds nor less than five pounds.

No noisome and offensive trades allowed.

111. No person shall carry on any noisome or offensive trade within the Municipality so as to injure or be a nuisance as hereinafter stated to the inhabitants thereof.

Definition of noisome and offensive trades.

112. Any manufacture, trade, calling, or operation, in the conducting, following, or carrying on of which, or in consequence of, or in connection therewith, or from the premises where the same is conducted, followed, or carried on, any gas, vapour, or effluvia, or any large quantities of smoke shall be evolved or discharged, which gas, vapour, effluvia, or smoke shall be calculated to injure animal or vegetable life, or in any other way to injure or be a nuisance to the inhabitants of the said Municipality, shall be considered a noisome and offensive trade within the meaning of these By-laws.

Complaint.—Inquire and report.—Orders of Council thereon.—Notice to be discontinued, &c.—Penalty.

113. Upon the complaint in writing of any householder that any noisome or offensive trade is being so followed, conducted, or carried on in the vicinity of his or her residence or property, as to injure his or her health, or the health of any member of his or her family, or to be a nuisance to such householder and to his or her family, the Inspector of Nuisances, or any

other person or persons appointed by the Council, shall make an inspection of the premises where such trade is alleged to be so conducted, followed, or carried on as aforesaid, and of the premises or property of the complainant, and shall inquire into the ground of such complaint, and shall report thereon to the said Council; and if the said Council shall, upon the consideration of such report, or after any such further inquiry as may be deemed necessary, be of opinion that the said complaint is well founded, and that any manufacture, trade, calling, or operation so complained of, and so being conducted, followed, or carried on as aforesaid, is a noisome or offensive trade within the meaning of these By-laws, notice shall be given to the person or persons conducting, following, or carrying on such trade to cease and discontinue the same within such reasonable time, not being less than thirty days nor more than sixty days as the said Council may direct, or so to conduct, follow, or carry on his, her, or their manufacture, trade, calling, or operation as that within such reasonable time as aforesaid, the same shall wholly and permanently cease to be noisome or offensive within the meaning of these By-laws either to the said complainant or to any other resident within the said Municipality, and if such trade shall not be discontinued as aforesaid, or shall not be so conducted as that it shall wholly cease to be noisome and offensive as aforesaid within the time named in such notice as aforesaid, any person conducting, following, or carrying on such trade as aforesaid shall for the first offence forfeit and pay a sum not less than forty shillings nor more than five pounds; for a second offence a sum not less than five pounds nor more than twenty-five pounds; and for a third and every subsequent offence a sum not less than ten pounds nor more than fifty pounds.

Mode of proceeding, &c.

114. The like proceeding shall be taken as aforesaid whenever there shall be a complaint as aforesaid that any manufacture, trade, calling, or operation is about to be commenced or entered upon which is likely to prove noisome and offensive within the meaning of these By-laws, save and except that the notice to be given as aforesaid, shall be given to the person or persons about to enter upon such manufacture, trade, calling, or operation, and shall require him, her, or them not to commence or enter upon the same, or take such measures as shall effectually prevent the same from becoming noisome and offensive within the meaning of these By-laws, to any resident within the said Municipality, and any person who shall in such case commence, enter upon, or continue any such manufacture, trade, calling, or operation, so that the same shall in any way be noisome and offensive within the meaning of these By-laws, shall for every such offence forfeit and pay a sum not less than ten pounds nor more than fifty pounds.

Service of notice of liability.

115. Service of any such notice as aforesaid upon the occupier or owner of any premises or land wherein or whereon any such manufacture, trade, calling, or operation is being conducted, followed, or carried on, or is about to be commenced or entered upon, or at the last-known place of abode of such occupier or owner, or upon any person on the said premises or land, shall be a good and sufficient service of such notice for all the purposes of these By-laws. And every person who shall be actually engaged in superintending, directing, or managing, or who shall be in any other way actually engaged or employed in any such manufacture, trade, calling, or operation as aforesaid, shall be liable to be regarded and treated as a person conducting, following, or carrying on such manufacture, trade, calling, or operation within the meaning and for all the purposes of these By-laws.

Miscellaneous.

116. No exhibition other than exhibitions licensed by the Colonial Secretary under the provisions of the Act 14 Victoria No. 23 and 36 Victoria No. 8, or exhibitions of a temporary character, specially provided for, shall be held or kept for hire or profit within the said Municipality; nor shall any bowling alley, skittle alley, or other place of public amusement, other than a place licensed as aforesaid, or a place for temporary amusement, be used as such for hire or profit within the said Municipality, unless and until permission in writing be granted by the Mayor.

117. No such exhibition or place of public amusement as aforesaid shall be held or kept open or used for the purposes of such public amusement on Sunday, Christmas Day, or Good Friday; and every person offending against this By-law in this behalf shall on conviction forfeit and pay a sum not exceeding five pounds nor less than two pounds for every such offence.

118. Every person who shall wilfully let in, or knowingly suffer to enter upon the reserves or public recreation grounds, any animals, without due authority, shall be deemed guilty of wilful trespass, and shall be liable for every such offence to a penalty not exceeding twenty pounds nor less than two pounds.

119. Every person pulling down, defacing, destroying, or injuring any marks or any fence or other erection thereon without the authority of the Council, shall forfeit and pay any sum not exceeding ten pounds nor less than one pound.

120. Any person or persons riding or driving into or out of any yard or alley abutting on any street or road within the the Municipality, shall do so at a walking pace, and any one offending against this By-law shall on conviction be liable to a penalty of not less than five shillings nor more than two pounds.

121. Any person or persons who shall in any street, road, or public place within the said Municipality, drive any carriage or carriages for the purpose of breaking-in, exercising, or trying horses, or shall ride, drive, or lead any horse, mare, or gelding for the purpose of airing, exercising, trying, breaking, or showing or exposing for sale any such horse, mare, or gelding, otherwise than by passing quietly through such streets or public places shall forfeit and pay any sum not exceeding forty shillings. And any person who shall within the said Municipal District furiously or carelessly drive any horse, mare, or gelding to or from any watering-place, creek, or river, or pasturage or elsewhere, shall forfeit and pay any sum not exceeding forty shillings.

Council Clerk or other officer may take legal proceedings.

122. The Council Clerk, or other officer under the authority of the Council, may take legal proceedings against any person or persons committing any offence or offences against any of the By-laws of the said Municipality.

Penalty for interfering or obstructing Council.

123. Any person who shall obstruct or interfere with any officer of the Council, or other person doing or performing any duty or act under any of the By-laws of the said Municipality, shall forfeit and pay a penalty not exceeding twenty pounds nor less than two pounds.

Norxious weeds, Bathurst burrs, &c.

124. Any owner or occupier of land within the said Municipal District who shall permit or suffer to grow or remain on the said land the weeds known as the Bathurst burr or Scotch thistle, or other noisome weeds, or weeds detrimental to good husbandry, and who shall fail to extirpate, remove, or destroy the same within ten days after the receipt of a notice in writing by post or otherwise from the Council so to do, shall for every such offence forfeit and pay a sum not exceeding five pounds nor less than twenty shillings.

Passed by the Council of the Municipal District of Coonamble, this 5th day of August, 1880.

(L.S.) DAVID M'CULLOUGH,
Mayor.
LEWIS MASON,
Acting Council Clerk.

NEW SOUTH WALES.

TAMWORTH FREE PUBLIC LIBRARY.

(AMENDED BY-LAW.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Department of Public Instruction, Sydney, 24th October, 1881.

Tamworth Free Public Library.—Amended By-law.

Hrs Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the undermentioned amended By-law for the management of the Tamworth Free Public Library.

JOHN ROBERTSON.

2. The Tamworth Free Library shall be open to the public daily from 11 o'clock a.m. to 1 p.m., from 2 p.m. to 6 p.m., and from 7-30 p.m. to 10 p.m., excepting on Sundays, Christmas Day, and Good Friday.

NEW SOUTH WALES.

PUBLIC CHARITIES.

(FIFTH ANNUAL REPORT OF INSPECTOR OF.)

Presented to Parliament, pursuant to Act 30 Vic. No. 19, sec. 4.

The Inspector of Public Charities to The Colonial Secretary.

Sir,

25 April, 1881.

I have the honor to lay before you my Fifth Annual Report on the Charitable Institutions of the Colony which come within my inspection, in order that the same, in terms of the Act 30 Vic. No. 19, may be laid before the Governor and Executive Council and both Houses of Parliament.

I desire very respectfully to express regret at the late period at which this report will be presented; but not only are the subjects and details embraced within it most numerous, but the difficulty of obtaining promptly correct information from the several Institutions has hitherto proved quite beyond my control.

Printed forms of Returns to be filled in and sent back to the Inspector not later than 15th January were forwarded last year to all the Country Hospitals and Schools of Arts throughout the Colony.

I had hoped thus to insure early replies capable of being easily tabulated. The result has been, however, exceedingly disappointing.

Repeated applications and reminders were allowed to pass unnoticed. While in a majority of cases the answers, when at length furnished, were so confused, incomplete, or inaccurate, as to render necessary much back reference and consequent delay.

Time and perseverance may gradually, to some extent, bring about more system and regularity, but most of the secretaries and treasurers of these Institutions (holding honorary appointments) are beyond direct Government influence, and the Inspector has no power to rouse their attention, which can only be done through the interests of the Institutions they represent.

Were Government to notify that the annual applications for subsidy, which are accompanied by subscription lists, would have to reach the Minister through the Inspector's Office not only would the latter be able to verify the lists but an inter-dependence advantageous to the Government would be created, as the Inspector might insist on Returns being duly furnished to him for the proper information of the Government as to the operations of these Societies and their exact financial position.

Following departmental changes recently made, I have separated the Institutions reported upon into two groups, placing together those under the control of each Minister—

Part 1. In the department of the Colonial Secretary includes the Government Asylums for Infirm and Destitute; the Sydney Infirmary and Hospitals throughout the Colony; the Benevolent Society's Asylum; the Destitute Children's Asylum, Randwick; the Institution for the Deaf and Dumb and the Blind; the State Children's Boarding-out Society; and various other subsidiary Charities receiving aid from the public revenue as Country Hospitals, &c.

Part 2. Under the Minister of Public Instruction includes the Orphan Schools (Protestant and Roman Catholic); the Industrial Schools, Biloela, and Nautical School-ship "Vernon"; the Sydney Mechanics' Institute; and the Schools of Arts and Mechanics' Institutes scattered over the Colony.

Altogether these Institutions number nearly 150, and it would be no interference with their liberty of action were they obliged to render to the Inspector explicit and punctual information—for so only can he in turn give, within the early part of the year, a proper account to the Government.

The Government Asylums for Infirm and Destitute continue to show satisfactory and economical management. The health of their inmates, all things considered, has been good, and the cost per head of maintenance is so very moderate that it seems impossible to hope to further reduce it without at the same time endangering the quality of the relief.

In June last, taking advantage of being in Victoria, *en route* to Deniliquin and Hay, I visited the Asylums at Hotham, Melbourne, and at Castlemaine. In lowness of cost we have an advantage of 30s. to £2 per head over similar Institutions in the sister Colony. I also prefer our plan of employing the inmates on a system of small gratuities to hired attendants performing the domestic routine duties of the Asylums. In Victoria, oakum picking is enforced as a means to reduce the expenses; with us each man, by assisting, earns a trifle, and the expenditure for clothing, boots, &c., as well as minor repairs, is reduced to a minimum. Seeing so much work going on, I have frequently examined individual inmates under the impression that they were capable of self-support, but have always found them to be suffering from some disqualification sufficient to prevent them gaining a livelihood outside the Asylum, or that they were convalescents about to be discharged after severe illness.

Government Asylums.—Statistics Summarised.

	Hyde Park, Liverpool, and George-street, Parramatta.	Erysipelas Hospital and Macquarie-street Asylum.
In 1879—		
Admissions	1,468	853
Daily average numbers	1,259	233
Cost per head per annum	£13 Os. 7½d.	£15 3s. 5d.
In 1880—		
Admissions	1,419	1,013
Daily average numbers	1,269	297
Cost per head per annum	£12 16s. 2d.	£13 Os. 2d.

Many cases of sickness could not be received into the wards of the Sydney Infirmary for want of room ; and, as not requiring specially active treatment, were admitted into the Hospitals of the Government Asylums.

The Sydney Infirmary.—The erection of the new buildings to be styled “the Sydney Hospital,” is proceeding steadily. The kitchen and laundry will soon be ready for occupation.

The Prince Alfred Hospital is expected to be ready to commence operations about the end of the year, by which time the drainage connections will also be completed.

A further application to Government for money will have to be made to meet liabilities for existing contracts. The financial position is set forth in its place in detail, but may be thus summarized :—

Dr.—Balances payable and contracts accepted	£54,860
Cr.—Unexpended balance	£11,710
Voted, but not yet received from Government	20,000
	31,710
Deficiency to be made up	£23,150

My attention of late has been especially directed to the Country Institutions.

As regards both the Hospitals and Schools of Arts, many particulars will be found not previously given in my reports.

Country Hospitals.—The Medical Reports from so many different localities, setting forth the diseases treated in each Hospital throughout the interior, cannot fail to prove of interest, and will form the nucleus of valuable future statistics.

It affords me much pleasure to report that the Institutions I inspected, particularly the Hospitals, have made much progress during the last three years.

Foremost among the improvements is the New Hospital at Bathurst—a splendidly placed and handsome structure, erected however only in part, at a cost of about £11,200, of which £4,800 was given by Government. A lofty central administrative department, with a two-storied pavilion for wards on either side, constitutes the present structure. The full plan contemplates the addition of either two or four more similar pavilions. The Hospital at present is furnished to accommodate 44 patients.

Grafton has added to its Hospital, at a cost of (say) £2,500, a detached two-storied building, to contain the administrative department, and four rooms or wards ; these are to be placed at the disposal of the Government, for lunatics requiring Hospital treatment, or who are awaiting transmission to Sydney.

The Singleton and Patrick's Plains Benevolent Society completed last year very extensive and handsome additions to their Asylum, by which accommodation is now provided for 120 to 130 inmates.

This Institution appears to be far beyond the requirements of the district, and might be advantageously availed of by the Government, with whom the Society is desirous of treating for a surrender of the buildings.

At Armidale a new Hospital is about to be built ; its erection has been for a considerable time delayed consequent on differences which have arisen between the Town Council and the Hospital Committee.

Hay, Deniliquin, Albury, Wagga, Young, Forbes, and Glen Innes have all made very considerable additions to their Hospitals ; while generally throughout the country districts the improvement in these Institutions during the last three years, both in appliances and system, is very noticeable.

Bath-rooms now are to be found in all, cesspits to closets are being discontinued, and sanitary conditions—especially as regards drainage, ventilation, and the personal cleanliness of the patients—are receiving far greater attention, and have come to be considered an integral part of the duties of Hospital Committees.

As a further indication of the desire to employ improved methods many are placing their wards under the management of trained nurses, male or female, as circumstances rendered advisable. I found such at Bathurst, Goulburn, Newcastle, Maitland, Albury, Deniliquin, Wagga, Young, Forbes, Parkes, Orange, Singleton, Scone, and Armidale.

The advantages likely to follow such introductions are a gentler treatment of the patients, more care in the preparation of their food, and an intelligent carrying out of the instructions of the Medical Officer.

By reference to the statistical columns on the Country Hospitals it will be seen that last year a sum of £925 17s. 6d. was paid in them by contributing patients ; to this amount a further sum of £50 to £70 may fairly be added as from Hospitals who have not forwarded their returns, making in all £1,000—a marked contrast to the £170 3s. obtained in the Sydney Infirmary, where the patients, taken together, represent a class better circumstanced than those in the Country Institutions.

Juvenile Asylums.—Two epidemics, measles and scarlet fever, found entrance last year into most of the Institutions for the children of the State.

The only deaths consequent were at the Benevolent Asylum, and in each case anterior causes were chargeable for the non-recovery of the patients. With above exceptions the health of the children has been very good, and ophthalmia has given less trouble than formerly.

The Randwick Asylum.—The health of the children has greatly improved during last year. The financial statistics of this Society will be found in detail in their place, and deserve particular attention.

It is my duty again to allude to the very heavy expenditure incurred by the Government on this Institution. An expenditure even beyond what is required to meet its exceptionally costly management, and far in excess of that of any other of our Charitable Institutions of similar character. A

2nd.—From a want of inter-communication and co-ordination of purpose among them—a remedy for which, however, can originate only from some outside influence or authority.

3rd.—By isolation wasting forces which would have gathered strength by united effort, and which, if applied by sound methods to well-considered objects, might have been utilized again and again in different Institutions, producing appreciable and lasting results.

A feeling is becoming general that Government should extend to these Institutions both a moral and a substantial support; the former by assigning to them special duties, and the latter by subsidizing them more fully whenever it can be shown there is a fair claim to such consideration.

I have the honor, therefore, to suggest to the Minister—

1st.—That Schools of Arts, Literary Institutes, and Technical Schools or Colleges, be recognized by the Department of Public Instruction as forming an integral though subsidiary part of the Government's general scheme of Education.

2nd.—That on certain conditions, founded on a system of test examinations, assistance from the Public Revenue to the extent of £ for £ be given to such Institutions as may become entitled to such aid.

3rd.—That the Minister might invite persons of known scientific and practical attainments to confer and submit to him a scheme for the best mode of imparting Technical Education through the Colony by means of these Institutions.

Such scheme to include the making use of persons qualified to act as teachers and lecturers who are resident in certain districts.

4th.—In designing the new Government Railway Workshops, provision might be advantageously made for their being—in connection with lectures at the Sydney Mechanics' Institute and Technical College—used for giving the practical training to youths which is necessary for enabling them to become good handicraftsmen; while their attendance at the lectures might be insisted on, and would supply that scientific knowledge necessary in these days of keen competition to make even the good handicraftsman a thoroughly intelligent workman.

I have, &c.,

HUGH ROBISON,

Inspector Public Charities.

THE GOVERNMENT ASYLUMS FOR INFIRM AND DESTITUTE.

THE very satisfactory impression produced by the good order and strict attention to cleanliness in these Asylums continues to win for them my warm commendation.

The relief they afford is most excellent, and the economy of their administration is alike creditable to the Government and the management.

The accommodation in the four Government Asylums equals 1,645 beds. The daily average numbers last year were 1,566, or 74 more than in 1879.

During the year 1880 a gradual change was being made in the character of the admissions into each Asylum, resulting, in the case of the three male Asylums, in a better classification of the inmates. This is spoken of further on when describing each Institution's work.

At the female Asylum, Hyde Park, owing to the cramped space and overcrowding (there are nearly 100 inmates above the number for whom proper accommodation can be provided according to hygienic rules), any attempt to classify is well nigh impossible.

As, however, it is likely the Institution will ere long be removed, I respectfully suggest accommodation for classification be provided for, when planning future arrangements, and especially that those females who suffer from distressing complaints may be able to be withdrawn from the constant observation of the rest of the inmates.

The Erysipelas Hospital and Macquarie-street Asylum, Parramatta, in the absence of suitable provision elsewhere, has had to perform the duties of a Convalescent Hospital, an Infectious Diseases Hospital, and an Asylum for Aged and Infirm Paupers.

Seventy-four cases of erysipelas were treated, only one death resulting.

HYDE PARK ASYLUM FOR WOMEN.

I have alluded in previous reports to the overcrowded condition and want of classification in this Asylum. At present date there are 280 inmates—or nearly 100 more than the number for which proper accommodation can be found. The old buildings are inadequate and unsuitable to their present purpose, notwithstanding which the Institution is maintained in excellent order, and every effort made to produce the best results with the means available.

The Medical Officer's report speaks favourably of the general health of the inmates during last year.

The roof of the main building, which for some time had been a source of constant trouble and annoyance, has been covered with galvanized iron, and is now again water-tight. The ash and refuse heaps require more frequent removal. The particular circumstances of the Institution above spoken of renders the strictest attention to such details a matter of importance.

The closets are still apt to get out of order, and, as the difficulty lies in the defective drainage fall, little, if any, radical improvement can be hoped for regarding them. The statistical columns show details of the working of this Asylum during 1880. In estimating the gross cost per head, although I have included the cost of the new iron roofing as an item, yet in view of the probability of the Asylum being removed to some other locality, it might very fairly have been reduced one-half or altogether omitted.

LIVERPOOL ASYLUM.

The somewhat higher death rate, and the lower average ages of the inmates (*vide* statistics) at this Asylum, as contrasted with the rates at the George-street Asylum, Parramatta, is explained by the fact that all consumptive cases are sent to it for treatment.

Many of the patients are quite young men who have been discharged as incurables from the Infirmary; while some are recent arrivals in the Colony, whither they had come hoping to be benefited by the climate.

The

The inland situation and spacious wards of the Liverpool Asylum, together with its hospital-kitchen, —admirable appliances—and abundant supply of pure milk, mark this Institution as especially fitted for the treatment of consumption.

Outside of this special circle of sufferers the general health of the inmates has been very good throughout the past year.

For a time considerable anxiety was caused to the Surgeon-Superintendent, and no little inconvenience felt by the inmates, from the horrible condition of the river opposite, and close to, the Asylum.

The long continued dry weather caused the overflow from the dam to cease, and so the refuse discharged into the river below the dam from certain wool-scouring establishments, paper-mill, &c., accumulated to so large an extent that the water and shores became ink-black, and emitted a horrible stench which penetrated into every part of the Asylum, causing at times nausea among the sick.

The writer, by direction of the Colonial Secretary, investigated the matter, and reported that the chief difficulty in putting a stop to the nuisance lay in the fact that the Municipal Council of Liverpool were indisposed to extend the Nuisances Prevention Act to their borough. Previous to Dr. Strong's complaint, I had, in conversation, mentioned the nuisance to him, but till he considered the evil as likely to affect the health of the inmates in the Asylum he did not feel at liberty to make any remonstrance.

I have every reason to speak most favourably of the good order and thorough cleanliness always maintained in the Institution.

For particulars of working, cost, &c., see statistics.

GEORGE-STREET ASYLUM, PARRAMATTA.

A better discipline and considerable improvement in the neatness and general appearance of the Institution is apparent under the new management.

It is also satisfactory to report that the average cost per head has been reduced—especially noticeable in the item for clothing.

The sum expended under the Colonial Architect's Department is small, but two very good improvements are noteworthy.

An alteration has been made in the mode of fixing the window sashes, which both improves and places the ventilation under more perfect command.

The kitchen has been made more convenient, and is better lighted; the temperature in it being reduced by a freer admission of air.

The Medical report as to the general health of the inmates was good.

Particulars as to admissions, discharges, &c., and the cost of maintenance for the year will be found in the columns of statistics.

THE MACQUARIE-STREET ASYLUM, PARRAMATTA, AND ERYSIPELAS HOSPITAL.

With the exception of the consumptive patients (sent to Liverpool) this Institution provides for all the heavier cases of disease (inadmissible at the Sydney Infirmary) which come to the Government for relief and treatment.

It receives various forms of organic complaints, cancer, open sores, tedious cases of fractures, or amputations discharged from the Hospitals, typhoid fever, erysipelas, infectious fevers, measles, and even leprosy.

To present time a very marked success has attended the efforts of the Medical Officers and the skilled nursing staff, as was abundantly shown in the early part of 1880—when dealing with typhoid and scarlet fever cases, also with erysipelas patients.

The large area covered by the buildings, and the recent addition of two detached cottages situate in gardens outside the main walled enclosure, afford special advantages for isolating patients; but when it is remembered how dangerous to each other are some of the diseases treated in this Hospital Asylum, moreover that the majority of the inmates are persons in average health (though infirm and destitute), the present operations at this Institution can be regarded only as of a temporary character—in fact, to some extent it is a make-shift for a future Infectious Diseases and Convalescent Hospital, as well as a Pauper Asylum.

THE SYDNEY INFIRMARY.

THE too limited and imperfect character of the accommodation in the present temporary buildings, the ever increasing requirements of a community like ours, and the difficulties surrounding the efforts of the management to meet those wants, and at the same time to mature and give effect to its plans for the erection of a new structure of large extent, on a site already partially occupied, have combined to render the year 1880 memorable to the society as a period of great activity and anxiety.

As regards the treatment of the sick, the work accomplished was more extensive and of a more varied character than heretofore has been attempted.

The arrangements in connection with the Out-door Dispensary have been much enlarged, and new premises had in consequence to be occupied.

In the Out-door Ophthalmic Department the skill and assiduity of its special staff gathered to it patients from distant places—some coming from Queensland. The cases treated within the year numbered 440.

On the Nursing Department new calls have been made and nurses asked for, and sent to South Australia and several of our own Inland Hospitals.

In addition to the above work I am given to understand the Board has been engaged in offering suggestions to the Government as to best methods for establishing a Lock Hospital, and in the selection of a fitting site for the future Fever and Infectious Diseases Hospital.

All these matters bespeak awakened energy, and must earn public acknowledgment. In one respect, however, I regret to notice no improvement—no appreciable effort appears to have been made by the Society to lighten the load cast on the public revenue.

The amount received in 1880 from paying patients was only £170 3s., less in fact by nearly £64 than the amount obtained in 1879. It cannot be doubted but that a considerable proportion of the patients treated in the Infirmary are of a class far removed from "paupers." The rule at present is that a man either pays 2s. 3d. per diem or he is treated as "an indigent person," under Colonial Secretary's recommendation, and is free of all demands. I would suggest a less hard and fast rule, and especially a more active endeavour to protect Government interests, in the cases admitted under the Colonial Secretary's recommendations. Over £925 was received last year from paying patients in the Country Hospitals. †

When it is remembered that a large proportion of the real pauper class are treated by the Government in the Hospitals connected with its four Asylums, and a comparison is made of the proportion of paying and non-paying patients in our Country Hospitals with those in the Sydney Infirmary, I think it will be admitted something further is possible in the direction I have intimated by the latter Institution.

A Colonial Secretary's "recommendation" meets an emergency and guarantees payment, but should not be interpreted as removing the obligation of the patient to contribute if able, or of the Institution to make inquiry as to the patient's circumstances after admission.

Statistics.

Admissions—1st January to 31st December, 1880—

Medical cases	1,332
Surgical "	1,280

Total 2,612

The largest number of admissions in January 253

The smallest " " November 197

Besides the above cases admitted there were 2,513 accident or urgent cases attended to by the Resident Medical Staff, but who were not admitted into the wards.

The cases in the Out-door Ophthalmic Department numbered 440. Some of these were specially interesting, and the treatment very successful.

The deaths numbered 342. Of these 110 patients died within forty-eight hours of admission; others were received in a hopelessly diseased or maimed condition.

The number of patients remaining in Hospital, 31st December, 1880, was 178.

The cases treated by the District Surgeons in connection with the Dispensary amounted to 7,224. Of these cases 806 were visited at their own homes.

Nursing

* Roof covered with iron. † At Liverpool Asylum over £600 was spent on the new tanks for water reserve in case of fire, and cannot fairly be included in estimate of cost for the year. ‡ No returns from Young and Orange received; they would probably have increased the amount to £1,000.

Nursing Staff.—In 1880 5 nurses were sent to other Hospitals from this Institution—1 to assume charge of the Burra Burra Hospital, South Australia, 1 as matron at Wagga Wagga Hospital, 1 as matron to the Burrangong Hospital, Young, 1 as head nurse Catherine Hayes Hospital, Randwick Asylum, 1 as assistant nurse at Orange; 2 nurses have left to undertake private nursing in Sydney and 1 in Goulburn. To the places of the above 10 new probationers have been admitted and are now being trained.

Site.

Eleven acres of land on the University Domain, fronting the Missenden Road.

Plan of Hospital.

The Hospital, when complete, will contain over 400 beds, and is designed upon the principle of detached pavilions, with open-corridor communication.

The *Ward-accommodation* consist of (six) 6 large pavilions;

An ophthalmic and operation block; and in a group of huts for infectious diseases *available for cases arising in the Hospital and requiring isolation.*

The *Administrative-accommodation* is provided in a large central building, a kitchen building, a laundry building, a mortuary, and two lodges.

The Funds at the disposal of the Board being insufficient for the erection of the *whole* of these buildings, it was decided to make the Hospital complete on a smaller scale, by erecting in the first instance, only—

2 large pavilions, containing each 78 beds ...	156	beds
The Administrative building, containing two reception wards, each with 6 beds ...	12	"
The infectious-disease huts, containing ...	4	"
The kitchen buildings; the laundry buildings; the mortuary, and one of the gate lodges.		

Of

Of these the 2 large pavilions, the kitchen, laundry, and mortuary are nearly finished, and a portion of the Administration block (equal to $\frac{1}{4}$ ths of the whole building), one gate lodge, and the infectious disease huts will be completed before the end of the year.

Tenders have, within the last month, been accepted for the remaining portion of the Administration-block at a cost of £23,840, and of the Ophthalmic and Operation Block at a cost of £12,410; and, when these works shall have been carried out, the Hospital will be complete in every particular, except as to the number of pavilions, and will be capable of accommodating 220 patients. The Administrative buildings are being erected on the full scale required for a Hospital containing 468 beds, of which the buildings completed and in course of construction will provide

... ..	220
Leaving to be constructed at a future time 4 large pavilions, each with 62 beds ...	248
In all	468 beds.

The buildings and general arrangements are sufficiently advanced to allow of the Hospital being opened within the next six months if the work connected with the sewerage and drainage shall have been completed by that time. The subsoil drainage within the Hospital grounds is ready, and considerable progress has been made in the formation and planting of the grounds;—the steam boilers for the steam power washing and drying machines for the laundry, and for generating steam for pumping water and for cooking, and as a heating-power all over the buildings, are in their places;—the machinery and utensils necessary for cooking and washing by steam, prepared by Messrs. Benham and Sons upon the most approved plan, are shortly expected;—arrangements have been made for the supply of all the requisite furniture, bedding, &c.;—the sanitary appliances were ordered from Messrs. Jennings and Messrs. Doughtan & Co., and chosen principally from samples in the Sydney and Melbourne Exhibitions. It is confidently expected that everything necessary to the effective working of the Hospital will be completed by the month of September.

The sewage and drainage question was one of considerable difficulty, but has been solved by the determination of the Government to cause the Hospital drains to be connected with the general sewerage scheme for the city and suburbs. Tenders were accepted some months ago by the Government for the construction of a sewer running through and under the University Paddocks, and considerable progress has been made with this work, while, within the Hospital-grounds, drains containing pipes varying from 6 to 12 inches in diameter have been carefully constructed and are all but ready to connect with the main sewer.

Financial Position.

The Funds from time to time available for the erection of the Hospital have consisted of—

Private subscriptions, donations, legacies, and accumulated interest to the amount of	£	s.	d.
	34,753	0	0
Moneys voted by Parliament	50,000	0	0
	£84,753 0 0		
There has been expended upon the erection of two large pavilions, the kitchen, laundry, mortuary, administration block, underground water-tanks drainage, laying out grounds, planting, &c., the sum of	£73,043	0	0
Leaving in hand a sum of	£11,710	0	0
in addition to £20,000 voted by Parliament in 1880, but not yet paid over, to meet the following liabilities:—			
Balances payable on works in course of construction (about)	11,000	0	0
Tenders accepted for—			
Administration block	23,840	0	0
Operation and Ophthalmic Block	12,410	0	0
Infectious disease huts	2,047	0	0
Gate lodge	563	0	0
Estimated cost of machinery for laundry and kitchen, beds, bedding, furniture, and supplies of all kinds	5,000	0	0
	£54,860 0 0		

COUNTRY HOSPITALS.

ANALYSIS of the operations of 45 Country Hospitals from whom returns have been received, 1880—

Total patients, 3,852; total deaths, 354; average cost per patient, £7 2s. 2d.

There are not sufficient data for determining the average cost per annum per bed.

Total receipts from the Public—	£	s.	d.	£	s.	d.
By subscriptions, &c.	12,155	14	3			
From paying patients	925	17	6			
	£13,081			11	9	
Total receipts from the Government—						
Annual subsidy	9,982	0	5			
Unclaimed poundages	2,876	15	3			
Police fines	465	4	11			
Special votes for buildings (new)	3,976	2	4			
	17,295			2	11	
Total amount of invested property 31st December, 1880 (called fixed deposits) ...				20,532	8	8
Total cash balances 31st December, 1880				5,585	17	2
Total less overdrafts, 31st December, 1880				622	14	2
	£4,963			3	0

THE BENEVOLENT SOCIETY'S ASYLUM.

THE operations of this Society for some time past have been conducted under difficulties consequent on the public requirements out-growing the accommodation which the buildings are capable of affording.

During last year much sickness prevailed in the children's department of the Institution—some of it of a serious character.

A larger number of women (233) were received into the Lying-in Hospital last year than during any previous similar period.

The expenditure in out-door relief for 1880 shows a considerable increase as compared with 1879, so that in all its departments the Society's attention and resources were called into fullest activity.

In my many visits to this Asylum I have always been favourably impressed by the good order and cleanliness observable throughout the wards, as also by the kindly care shown to the inmates, and especially to the children by the Medical Officer and the nursing staff.

THE CHILDREN'S DEPARTMENT.

An epidemic of measles of a severe type broke out, giving much trouble and anxiety. The cases numbered 137, and the disease spread to some of the adults in the Lying-in Hospital wards.

The tender ages of many of the little patients, their enfeebled constitutions consequent on inherited taint, and in many cases the adverse circumstances antecedent to their birth, conspired to render the task of carrying them successfully through such illness both arduous and more than ordinarily trying. Towards the end of the year the epidemic was suppressed, and the general health of the children became restored.

I cannot avoid remarking that there seems at this Asylum a constant tendency to weak and inflamed eyes—notwithstanding the extreme vigilance of the Medical Officer and nursing staff. It might be well to inquire how far local causes—I mean the buildings themselves—are liable for inducing a complaint which always finds in Asylum children an easy receptivity.

THE LYING-IN HOSPITAL

The cases in this Department have year by year been increasing. In 1876 there were 156 accouched; in 1879, 203; and in 1880 the numbers had risen to 233.

Every likelihood exists that under present circumstances this increase will be continuous, in which case it will become impossible to prevent improper and perhaps even dangerous overcrowding.

In their Annual Report the Directors lay much stress on this fact, and express an extreme desire to learn the decision of the Government on their application made to it two years ago. They wished to be permitted either to build a new and improved Institution on the present site, or—giving up the land, &c., to the Government at a fair value—to be assisted in the erection of a new Hospital, &c., in another situation.

I would respectfully suggest that the matter is a very important and pressing one.

Subsidiary to the Lying-in Hospital is a recently formed sub-department for the treatment of women suffering from ovarian and womb diseases, but who are not admitted as in-patients. It has already done much valuable work, and many poor married women have availed themselves of the advantages here offered.

OUT-DOOR RELIEF DEPARTMENT.

The expenditure last year amounted to £892 9s. 5d., of which £500 was contributed by the Government; the remainder is made up from the Society's subscriptions, &c.

Statistics.

THE DESTITUTE CHILDREN'S ASYLUM, RANDWICK.

THIS Institution fully maintained the high character which during the last four or five years it has won for attention to all matters in connection with cleanliness, order, and general details of management.

No disturbing influences or complaints such as in 1879 gave the Institution such unpleasant notoriety and for a time even affected its internal discipline were apparent throughout the year 1880.

The directors appear to have spared neither thought nor money in their endeavours to increase the number or improve the character of the appliances at their command, till now the Asylum stands forth a model of its class.

The last important addition was the new Receiving House, towards the erection of which the Government, by special vote in 1878, contributed the sum of £2,000. The total cost of this structure, with fittings, &c., amounts to about £3,600.

It stands apart from all the other buildings, has enclosed grounds, and a special service staff. Every child on its admission to Randwick here undergoes a quarantine.

In previous reports I have spoken of the general aspect of the children in this Institution as impressing me unfavourably. I therefore now the more gladly place on record my testimony to the improvement I observe in their present health and spirits.

A larger daily supply of milk, and the substitution of cocoa for tea in the dietary scale, has probably assisted in bringing about so desirable a change; but to the Medical and Administrative Officers and their subordinates is also due a share of the credit.

The Medical report for 1880 is especially satisfactory when contrasted with some issued of late years. On 31st December, 1879, there were—

In Hospital...	108 cases
Admitted during 1880	867 "
					— Total for year ... 975
Discharged	929 cases
Died (effusion of brain)	3 "
Remaining in Hospital, 31st December, 1880	43 "
					— Total for year ... 975
In 1879 the Ophthalmic cases were	541
In 1880 only	220

And of these the greater number were re-admissions or tedious cases—a legacy from the previous year. Two

* This amount will further swell the Reserve Fund of £30,299 19s. 7d.

Two epidemics—scarlet fever 52 cases, and measles 216 cases—visited the Asylum during 1880. It is especially creditable to the Medical Officers and the nursing staff that they carried their patients through without a single death resulting from either disease.

Consequent on the infectious character of the sickness some extra expenses were necessarily incurred. The Hospital, dormitories, and class-rooms were disinfected, recoloured, or repainted, and important improvements made in the drainage, which have been examined and approved by the City Inspector and City Engineer.

The Department of Education controls the schools of the Institution, and has reported favourably of the progress made by the children during last year. Thus—

Boys' department fair.
Girls' do. fair to very fair.
Infants' do. very fair.

Statistics.

Girls	45	16	53	22	45	20	41	27		
	318				321				= 639	

The average daily number throughout the year was 656 as against 622 in 1879—showing an increase of 34.

Daily average throughout year of Government children ...	461½
Do. do. of Society's do. ...	194½
	Total ... 656

Of the above 639 children, inmates on 31st December, 1880, 455 were State children, admitted by order of the Colonial Secretary through the Benevolent Society's Asylum; and 184 only were the Society's directly admitted children.

This large difference used not to exist in former years, and is, I would again suggest, worthy the attention of the Government. Many applicants who now obtain admission orders for their children to the Benevolent Asylum might, with advantage to the public revenue, be referred to the Randwick Society direct.

I would also here remark that the average maintenance cost per head at this Asylum is much higher than at either of the Orphan Schools, while, from the larger number of the children, it should be less.

DESTITUTE CHILDREN'S ASYLUM, RANDWICK—Analysis of Expenditure for 1880.*

During the year 61 apprentices were sent out from the Institution.

I exceedingly regret the determination of the Society to discontinue the plan carried through from 1862 to 1873, of paying gratuities as rewards to all apprentices who creditably completed the full term of their apprenticeship.

The system was valuable as again bringing the apprentice into direct contact with the Society. It was an incentive to the child to persevere in a good course, and gave an unmistakable evidence to the public and Government of the success or otherwise of the Randwick training. I yet hope to see the practice revived.

* This item is fairly chargeable to General Account, but not to the Apprentice Fund.

THE SOCIETY FOR BOARDING-OUT STATE CHILDREN, &c.

The Society consists of a number of persons who consider it inadvisable to mass the children of the State together, thus giving them as it were a distinctive character, and bringing them up in ignorance of home associations, interests, and experiences; they further insist that children reared in large Institutions do not get the healthiest and happiest development, either physical or mental; are especially liable to that scourge of Institutions, ophthalmia; and are apt in after life to manifest a want of energy and self-dependence which brings them again within the charities area.

The Society believe there are many persons within our community, of undoubtedly respectable position and character, who, having no children of their own, or for other good reasons, are desirous of receiving children into their homes and extending to them parental care and training.

The Boarding-out system has been successfully carried out on a very large scale in Scotland,—in considerable numbers in Ireland,—and to a lesser extent in England. It has also met with approval in Germany and France. In Victoria, South Australia, and Tasmania, the results have been encouraging, and to present time there has been no difficulty, without advertising, in finding homes of a suitable kind for the children taken in charge by the Boarding-out Society.

Its operations date back to November, 1879, when a sum of £200 was granted from the public revenue. Last year, 1880, a further sum of £400 was voted.

Fifty-seven children have been placed in families in various districts—a large proportion in Goulburn and its neighbourhood

In each district where children are boarded-out there is a ladies' committee who periodically (every six weeks) report on the condition of each child—visited at irregular intervals by a lady visitor. The school teachers are also requested to take special note of the State children attending school, and to report freely upon their aspect, health, attendance, &c., to the visitor.

Catholic children will be free to attend their own schools if desired, and be under observation of Catholic ladies and in care of Catholic families.

The State Children Relief Bill, passed during the last session of Parliament, has brought this Society into direct contact with the Government.

I have always pleasure in laying the condition of this Charity before the Government. Not only because of its admirable management and truly benevolent character, but because it has acquired a vigour of growth and self-dependence not equalled by any of our other regularly-subsidised Public Charities.

By reference to the figures above it will be seen that the Government annual subsidy is only £450, while the amounts contributed by the public and paid to the Society by friends of the inmates reached the very respectable sum of £2,454 10s.—

The subscriptions £1,729 15 3
Schooling fees and payments for clothing by friends 724 14 9

If the Institution is fortunate in receiving a few legacies, and the present wholesome system of economy be continued in the future, the Society, in a few years, will become independent of State aid.

The motive of action pursued at this Institution is worthy of a wide imitation. It extends its beneficence to the necessitous, but is careful in exacting contributions from all who are in a position to pay wholly, or in part, for the benefits it can render.

The health of the inmates during the year 1880 was so good that the new Hospital rooms did not require to be occupied.

The "articulation," or German system of instruction, has been brought into operation; but, so far, the time is too short to allow of results, or to form any opinion of its value or suitability.

The

THE INFANTS' HOME, ASHFIELD.

THIS Society comes within the list of Government Subsidized Charities in consequence of a grant in aid of £1,000 given to it by Parliament in 1879.

Its object is "to bestow aid and shelter on friendless women and deserted wives, who, without such aid, would experience much difficulty in obtaining employment, being burdened with the charge of young and often delicate or sickly children."

Whilst rendering assistance to the distressed, it endeavours to avoid pauperising a class able and willing to work were the means and opportunity but afforded them.

It declares that its operations in the past have resulted in much good—that it has been the means of saving many infant lives which otherwise would have been sacrificed, and has replaced many women in spheres of usefulness and respectability who were unable to contend alone against the difficulties of their position, and might, but for its sympathy and help, have succumbed to adverse circumstances and evil influences.

The Home is situated at Ashfield, 5 miles from Sydney, where the Society hold, by purchase, about 4 acres of land—on which a debt of £2,000, due to its own Perpetual Subscribers' Fund, remains.

The building (a large villa of brick) contains the administrative department, and sundry rooms set apart for the infants, most of whom are nursed by their own mothers.

In separate small paddock-like enclosures, nicely grassed, are two wooden cottages, fitted up for children above two years of age. Each hut is under the care of a submatron and nurse, and the children are classed in them according to ages.

Nine of the eldest children, between five and six and a half years old, now attend the Public school at Ashfield.

In order to provide employment, and also to render the Institution as much as possible self-supporting, a well-appointed laundry has been fitted up, which seeks the patronage of the public. An attempt was also at one time made to meet pressing needs by selling milk and garden produce, but the practice has now been given up.

On my visits of inspection to the Institution I was very favourably impressed by the general cleanliness of the place, and the care and attention which seemed to be taken of both the women and children—the former were cleanly and neatly dressed, and altogether looked more calm and domesticated than I had expected to find them. Many of their infants, however, were very small, and bore the appearance of having undergone much trial and suffering, others again seemed fairly nourished.

The children in the "huts" (as they are termed, though in fact very comfortable and well-furnished weatherboard cottages) particularly struck my attention from their remarkably bright, cheerful aspect. Many were a little undersized, but, without exception, they were healthy and most happy looking, and their clothing was of admirable quality and very clean. My visits were sudden, and could not have been anticipated, so that I saw the Institution in its normal condition.

It will be seen by reference to the Balance Sheet of the Society that for the year 1880 a sum amounting to £290 1s. 6d. was contributed towards maintenance by the parents of the children in addition to £107 16s. 11d., the proceeds of work done in the laundry besides the washing necessary for the establishment itself.

In answer to my inquiries, I ascertained that every woman on admission engaged to earn or pay at a certain weekly rate; and that many most faithfully continue to do so after leaving the Institution for service—their children remaining at the Home in charge of the Society. On the other hand, some at once on going out break their promises, and cast their children on the good nature and benevolence of the Society; while a still larger number pay for a time, then gradually become irregular, and finally cease altogether to remit.

Notwithstanding these disappointments the payments on the whole are considered satisfactory in the meanwhile, and it is hoped that as the disinterested benevolence and self-sacrificing character of the Society is better understood and more widely known among the class it benefits, so will better faith be kept with it by its clients.

	— = 33	— = 104
Remaining in Institution, 31st December, 1880...	17 women	46 children.

It is contended by the Society that the death rate, though abnormally high, as compared with ordinary infant mortality, is lighter than what takes place in similar Institutions either in Europe or America; and, further, that they never refuse to admit an infant because its death is probable.

I am not in a position to express any opinion on the above comparison, but it is worthy the consideration of the Government to ascertain if further means cannot be devised for reducing a mortality which is one of the darkest blots on our boasted civilization.

Many

* Of the 73 children admitted in 1880, 60 were below three months old, the greater part delicate, emaciated, and suffering from exposure and bad usage.

Many of the women and children at the Infants' Home, Ashfield, have been discharged from the Benevolent Society's Asylum, and much of the hardship and exposure, before spoken of as tending to cause the high death rate, is endured between the time the infants leave the one Institution and gain the shelter of the other.

The Benevolent Asylum is conducted almost entirely at the Government cost, and the Infants' Home having become a Government subsidized charity, I would respectfully suggest that Government might require such a degree of co-operations between these two Institutions as would, by bridging over the intervening space, tend to the lessening of this heavy sacrifice of infant life.

FINANCIAL Position of the Infants' Home Society, Ashfield, for the Year 1880.

The present Honorary Treasurer cannot verify some of the Accounts prior to 19th April last year.

ADDENDUM.

THE SICK CHILDREN'S HOSPITAL, GLEBE.

In order to lay the objects and present condition of this Institution clearly before the Government, it appears to me desirable that I recapitulate from my Report for 1879.

Certain philanthropic persons desirous of securing for sick children the benefits of regular medical attendance and skilled nursing, and not satisfied with the provision made for children suffering from acute forms of disease at the Benevolent Asylum and Sydney Infirmary, started the project of founding in Sydney a "Sick Children's Hospital."

The co-operation of Government was obtained on the £ to £ principle, and the public having responded liberally to an appeal made to it on behalf of the undertaking, suitable premises were purchased, and on the 1st January, 1880, the Institution was opened with seven patients.

The plan of operations of the Society were declared to be:—

- " 1. Children of either sex and of any creed between the ages of eighteen months and twelve years who may be suffering from disease or accident are eligible for admission.
- " 2. No fitting case will be refused, but payments will be expected, according to a scale, whenever the parents' condition warrants the demand.
- " 3. Infectious and contagious diseases will not knowingly be admitted, but proper isolating wards are provided to meet cases which may arise within the Institution.
- " 4. It is contemplated to provide an out-door department, where children whose parents cannot obtain for them medical treatment elsewhere may take them for advice and treatment."

The Institution is governed by a Board, consisting of thirty members chosen from the subscribers and patrons; the committee being annually elected.

The accommodation consists of four wards—twenty beds being provided for male children and fourteen for female.

The average cubic air space per bed is about 700 cubic feet.

The preparatory receipts and expenditure to 31 December, 1879, are exhibited in the understated memo. of account.

SICK CHILDREN'S HOSPITAL ACCOUNT TO 31 DECEMBER, 1879.

Receipts—

To Subscriptions and donations	£4,429	17	10

It affords me much pleasure to speak in highest terms of the admirable cleanliness and order maintained throughout the Sick Children's Hospital.

Every appliance to render such an institution complete, or which can tend to relieve the tedium of sickness and confinement to the little sufferers, has been most liberally provided by the management.

Although the Society has been at considerable expense in advertising the advantages here offered, the Institution has scarcely been availed of by the public to the extent anticipated; nor has the Children's Hospital lessened the pressure as regards surgical cases within the Sydney Infirmary, although it is believed that some of the out-patients of the Infirmary have been treated in the wards of the "Children's Hospital."

Another year will allow better opportunity for forming an idea as to the necessity of this Institution, and meanwhile it should be the study of the management to reduce its expenditure *pro rata*.

INDUSTRIAL

INDUSTRIAL BLIND INSTITUTION.

In my report for the year 1879 mention was made of the origin and purpose of this Association.

A legacy of £5,000 under the will of the late Mr. J. W. Wood served to give practical effect to an idea already generally existent in the public mind—that means and opportunity should be provided to enable persons, otherwise able to work but who were blind, to find suitable employment.

Mr. Wood's legacy was saddled with two conditions—the whole amount was to be expended on the buildings, and the work was to be commenced within twelve months of the testator's death.

To secure the legacy certain gentlemen guaranteed a subscription from the public of £1,500, and made application to the Government for a site and for a grant in aid.

To both these requests Government gave favourable consideration, and in due course the building was erected at the foot of William-street.

Lack of funds prevented for a time any further steps being taken, but last year a new effort was made and the institution formally opened.

The objects of the association were thus stated :—

- 1st. To furnish to the industrious blind efficient instruction in work, convenient rooms for working in, materials for executing their work, and a place where it may be advantageously sold.
- 2nd. As circumstances permit other measures for promoting generally the welfare of the blind will be adopted, as a library for their use in relief-print collected, lectures and instruction in music will be given, and information disseminated among the public as to the condition of the blind and the best means for ameliorating their condition.
- 3rd. In addition to the ordinary day workers, who will live at their own homes, provision will be made by the Committee for a few special cases by providing for them board and accommodation within the institution on such terms as will be agreed upon.

The management of the institution is vested in twelve members. Three of these are executors of Mr. J. W. Wood's will, and have permanent seats at the Board. The others are chosen annually by the subscribers.

The scantiness of the means at their disposal, their inexperience in the conduct of so peculiar a work, and the difficulty of procuring suitable teachers, have hitherto combined in restricting operations at the institution to the first of the objects before stated, viz., affording instruction in simple handicrafts, and in the disposal of the articles made by the blind.

To present time mattress and basket making have been successfully taught to a limited number.

The Committee speak most highly of the aptitude and intelligence shown by the pupils; but as each has to receive the same rudimentary instruction from the teacher, a great deal of time is lost and the number instructed is reduced to a minimum.

Hereafter certain of the blind will themselves be able to initiate others, thus taking the drudgery of the work off the teachers, and, by enabling them to devote more attention to the advanced pupils, to raise the standard of efficiency, as well as to cheapen the cost of instruction.

A difficulty has hitherto been experienced in finding purchasers for the mattresses made at the Institution, probably from a want of knowledge on the part of the public that such things are for sale there. The demand for basket-ware, however, is encouraging, and this branch of industry will soon doubtless be largely developed. All the work done is of excellent quality, and speaks well for both teachers and learners.

Within the present year, 1881, the numbers attending the Institutions have reached seven. The ages vary from 21 to 58. All are quiet, steady, and industrious.

I have not been able to obtain from the Honorary Treasurer of the Society precise information as to the accounts within the year 1880 covered by this report, but as the Institution has been only so recently opened, this is of small consequence.

The balance sheet, of date 5th May, 1881, herewith, reaches back to the first formation of the Society :—

Receipts :—

	£	s.	d.
Legacy, J. W. Wood's estate	5,000	0	0

PART 2.

INSTITUTIONS UNDER CONTROL OF THE MINISTER
OF PUBLIC INSTRUCTION.

PROTESTANT ORPHAN SCHOOL, PARRAMATTA.

I HAVE pleasure in again calling the attention of the Government to the excellent care and kindly treatment bestowed on the children at this Institution.

In examining the records of its working, and the statistics for the year 1880, three circumstances arrest attention—

- 1st. That, notwithstanding the fact that this Orphanage receives the orphans and fatherless children of all sections of the Protestant community who come to the Government for aid, and although it stands well in the public estimation, yet the daily average number of the children during the last four years show a steady decline in place of, as might fairly have been expected, increasing with the growth of our population.*
- 2nd. That several children were withdrawn from the Institution on its being known that a firmer insistance would be made for a fulfilment of the promise (willingly enough given by friends of children when seeking for admission orders), to aid Government by contributing towards the maintenance cost.
- 3rd. That, notwithstanding the reduced number of the children, and consequent increase *pro rata* of the cost of supervision, the yearly average rate per head for maintenance has not been sensibly increased.

The progress made in school is shown as in subjoined table—

Boys' department	Tolerable to fair.
Girls' department	Fair.
Infants' department	Tolerable to fair.

						<i>Statistics.</i>		Boys.	Girls.

 † Schoolmaster allowed £35 per annum in lieu of quarters, and £45 per annum in lieu of rations. First teacher allowed £35 per annum in lieu of rations and quarters. Baker allowed £10 per annum in lieu of quarters.
 ‡ A considerable falling off here consequent on withdrawal of children whose relatives were called upon to contribute towards support.

THE ROMAN CATHOLIC ORPHAN SCHOOL, PARRAMATTA.

NOTWITHSTANDING its very overcrowded condition, a remarkable success has attended the efforts of the management of this Institution during the past year.

The general health of the children has been excellent; there were no outbreaks of epidemic diseases or ophthalmia, and the three deaths reported were all cases of children who were ailing at time of admission.

I have always been favourably impressed by the cheerful faces of the children, and the sympathy which seems to connect them with their guardians when visiting this Orphanage.

Some much-needed additions are now in course of construction at this Institution. They comprise—

A new wing to the main building for increased accommodation in the girls' department; a laundry; boys' lavatory; servants' dining-room; girls' play-shed; stable and coach-house.

Towards which a sum of £1,000 stands against the Institution in current account in the Colonial Architect's Vote for last year.

The

* Boys' teacher allowed £54 per annum in lieu of quarters and rations. Baker allowed £26 per annum in lieu of rations.

The economy with which this Orphanage is carried on, and the excellent results attained, I think entitle it to the approval of the Government.

The progress made in the school is shown in the subjoined table—

Boys' department	Fair +
Girls' department	Tolerable to fair
Infants' department	Fair +

I would again point to the large proportion of discharges to friends (65), as compared with the number of children apprenticed (25 only), during the year.

I have no means of determining the respective ages of the former, but of those who had approached the apprenticing age, and had been any considerable period at Government charges, I am inclined to think the greater number should have been apprenticed in usual manner. A strict adherence to such a rule is, in fact, the only protection the Government possesses against frequent imposition.

In the Protestant Orphanage it is seen that a mere insistence for payment of a small sum towards maintenance cost (even when such payment has been agreed to at time of application for admission of a child) is often deemed a sufficient reason for its subsequent withdrawal; so, as regards this Orphanage, were a firmer test exacted, the probabilities are the numbers of the children might be reduced without inflicting any real hardship on those having legitimate claims on the Government for aid.

THE NAUTICAL SCHOOL-SHIP "VERNON."

A CULPABLE neglect in the discharge of parental duties on the one hand, and, on the other, an evidently growing disinclination among our youth to submit themselves to discipline or self-restraint, manifest very painfully the necessity of such institutions as the School Training-ship "Vernon."

The advantages she offers, though perhaps beginning to be better understood, are, I venture to think, scarcely yet sufficiently appreciated by magisterial benches.

It is true more committals to the "Vernon" are now made than was formerly the case, still a mistaken and misapplied leniency often again sets adrift many a youthful offender, against whom, in his own interest, it would have been well had the provisions of the Industrial Schools Act been enforced.

Within the last few months more than one such instance has been brought under my notice. The first, a lad of 14 years, now on board the "Vernon," had been previously five times charged with theft. Against a second boy of similar age three charges are recorded. While a third, a boy of 11 years, had earned the evil reputation of a confirmed thief before he was committed.

The subjoined tables show the working of the Institution during the year.

Notwithstanding that two epidemics obtained entrance on board through visitors, the general health of the boys remained excellent.

With much satisfaction I beg to draw attention to the reduced rate of expenditure—less than two-thirds of what it used to be. This, too, has been effected while the efficiency of the Institution has been increased.

I regret the number of boys discharged on embracing a sea life (10) does not equal the number in 1879 (14); and I would respectfully suggest that greater responsibility be cast on the Superintendent, Captain Nietenstein, in making arrangements and transferring the boys when suitable vessels are found.

The machinery of a "Department" is too slow to meet the requirements of such cases. Captains and ships will not wait for Ministerial sanction when they engage apprentices; but were the names of boys who desired to become sailors submitted to the Minister on their attaining a certain age, a general sanction might lie in the Superintendent's hands.

Forty-three boys were discharged to general service—far too large a number as compared with the 10 sent to sea, and a very inadequate return for the expensive education and skilled training given on board.

In the case of big boys sent to the "Vernon" for one year only, I would suggest that, should their conduct on board cause the Superintendent to suspect that it would be beneficial to them to remain a second year before either discharge or apprenticeship, he might be empowered to represent the case to the Minister, and make application, on approval being given, to have the original term of detention extended.

THE FEMALE INDUSTRIAL SCHOOL, BILOELA.

THE general conduct and behaviour of the inmates, especially of the senior girls, throughout last year was quiet and exemplary, and is spoken of approvingly by the matron in charge.

By reference to the tables it will be seen that 14 of the apprentices were returned to the Institution for various reasons. On the other hand Mrs. Walker has received many letters from employers speaking very favourably of their apprentices.

Some of the latter continue to correspond in affectionate terms with their former officers.

The numbers in the school at beginning and end of 1880 show little variation, yet the daily average throughout the year is higher than during any previous similar period.

The health of the inmates has been all that could be hoped for.

Owing to the timely prohibition of visiting by mandate of the Minister the children escaped the prevalent epidemics of measles and scarlet fever. Only one death was reported—the result of peculiar constitutional causes.

The daily average numbers throughout the year	116

Of the admissions—

14 were re-admissions of girls over the age of 15 years, apprenticed but returned for various reasons.

Of the discharges—

5 were boys, sent on board the "Vernon," on having obtained the age of 7 years.

1 girl was sent to Hospital for imbeciles.

1 girl discharged by order of her father.

2 girls discharged on reaching 18 years.

34 girls apprenticed to service.

Total ... 43

It is extremely satisfactory to notice the diminished cost per head at which the Institution is now carried on. This may be accounted for in part by the low rates at which the contracts have been worked, in part by the increased numbers in the school lessening the rate per head for supervision, and in part by a stricter economy in the administration.

THE SYDNEY MECHANICS' INSTITUTE AND TECHNICAL COLLEGE.

THE operations of this Society were especially interesting last year from the great development of the educational features of the Institution, also on account of the Conference held in the College Hall of Delegates from the Country and Suburban Schools of Arts to discuss the best means of deciding on common action with a view of improving the status of their Societies, and to take such steps as would give to those Institutions more thoroughly the character of Public Instructors.

Nothing very definite resulted from the meeting excepting a confession that a remodelling to some extent of these Institutions was advisable, and the general intimation of a wish that Government would include them in its educational system.

MEMBERSHIP.

The number of members increased during 1880 from 1,648 to 2,029. This sudden expansion was in part occasioned by the interest taken in the Sunday opening question, which was about to be submitted to vote.

LIBRARY.

The number of volumes in December, 1880, was 19,409, as against 19,125 in 1879. The issues of a miscellaneous character, but chiefly of works of fiction, amounted to 90,678 volumes to 2,729 subscribers.

Subjoined to this report is a memorandum of the financial position of the Society.

TECHNICAL COLLEGE.

In the Science and School Department the programme published for the year's course was adhered to as closely as possible, and certain additional subjects were brought forward as occasions offered and teachers and lecturers could be obtained. Among these was a course of lessons in practical cookery, which excited attention, and were largely attended. Classes for females in domestic economy, hygeian, and cutting out and fitting clothing, were attempted, but did not meet the attention they deserved.

A series of lectures by Mr. E. P. Field in physiology, admirably illustrated by models, the property of the College, gained great attention.

In the present year (1881) the same system is to be carried out to still greater extent, and there is evidence that other societies—as the Horticultural Society, &c.—will respond to the invitation given them to hold exhibitions and read papers in the Hall of the Society, also that lectures will be delivered by the College lecturers in the rooms of other Institutions.

CLASSES.

CLASSES.

The following list describes the classes held, and the number of students enrolled for each. Altogether their names amounted to 771, a number much greater than for the year 1879 :—

Chemistry	58
Architectural Drawing	78
Freehand Drawing	149
Telegraphy	19
Elocution	49
English Grammar	54
Latin	55
Writing and Arithmetic	264

Cookery	151
<hr/>	
Total number of entries in 1880... ..	1,198
Total number of entries in 1879	478
<hr/>	
Increase	720

So liberal have been the offers of the Board, and so great an interest has been awakened in the general public on the question of practical education, that the accommodation of the College was found insufficient, and it became necessary to hire the old public school in Pitt-street in which to hold certain of the larger classes.

The fees for apprentices and youths have lately been reduced. The total amount paid by students in 1881 amounted to £521, and the allowance to teachers for poor students to £92 9s. 4d.

1881.

NEW SOUTH WALES.

INSPECTOR GENERAL OF THE INSANE.

(REPORT FOR 1880.)

Presented to Parliament, pursuant to Act 42 Vic., No. 7, sec. 73.

The Inspector General of the Insane to The Colonial Secretary.

Sir, Lunacy Department, Inspector General's Office, Gladesville, 30 March, 1881.

In accordance with the provisions of the 73rd section of the Lunacy Act of 1878, I do myself the honor to submit for your information a report on the state and condition of the Hospitals and other Institutions in this Department for the year ending December 31st, 1880, with an appendix containing separate reports and statistical returns by the Medical Superintendents of the Hospitals at Gladesville, Parramatta, and Callan Park.

I have, &c.,
F. NORTON MANNING.

On 31st December, 1879, the number of insane persons under official cognizance was 2,011, and of these 1,878 were on the registers of the Hospitals for the Insane, and 133 were in the Licensed House for the Insane at Cook's River.

On the 31st December, 1880, the number on the registers of the Hospitals was 1,964, and the number at Cook's River, 135; making a total of 2,099 registered patients, and an increase during the year of 88.

The following return shows the number and distribution of the patients:—

	Male.	Female.	Total.
In the Hospital for the Insane, Gladesville	335	369	704
Do. Parramatta (Free)	553	205	758
Do. do. (Convict)	18	4	22
Do. do. (Criminal)	53	6	59
Do. Callan Park	129	129
Do. Newcastle	124	104	228
In the Temporary Hospital for the Insane, Cooma	64	64
In the Licensed House for the Insane, Cook's River	6	129	135
Total	1,282	817	2,099

Three female patients were absent on trial from Gladesville, and three from Parramatta, under the provisions of section 82 of the Lunacy Act, at the close of the year, but were still on the registers of the Hospitals.

The increase of 88 patients was thus distributed:—27 at Gladesville, 11 at Parramatta, 22 at Callan Park, 19 at Newcastle, 7 at Cooma, and 2 at Cook's River.

The following return shows the increase in the number of registered patients during the decennial period ending December 31st, 1880:—

Year.	Male.	Female.	Total.	Year.	Male.	Female.	Total.
1871	68	30	98	1876	32	11	43
1872	15	38	53	1877	74	15	89
1873	48	38	86	1878	28	59	87
1874	37	25	62	1879	59	36	95
1875	66	43	109	1880	44	44	88
Total					471	339	810

or an average of 81 per annum.

The increase in number during the last year has therefore been only slightly above the average for the last 10 years.

The estimated population of the Colony on December 31st, 1880, was 770,524; and the number of insane persons, 2,099. The proportion of insane persons to population was, therefore, one in 367—a trifle less than at the close of the preceding year, and exactly the same as at the close of the year 1872. The proportion to population in England at the close of the year 1879 was one in 357.

The following tables show the number of the admissions, discharges, and deaths; the causes of insanity in the admissions; the causes of death; the length of residence in those discharged and in those who died; the ages of the patients admitted, discharged, and died; the condition as to marriage; and the religious persuasion of those admitted and under care in Hospitals for the Insane during the year 1880. Tables giving similar particulars relative to the patients in the Licensed House for the Insane at Cook's River are given in a subsequent part of the report. The ages and native countries of all the patients under care in Institutions for the Insane during the year 1880 are shown in tables 9 and 10:—

TABLE I.

SHOWING the Admissions, Re-admissions, Discharges, and Deaths, in the Hospitals for the Insane during the Year 1880.

				Male.	Female.	Total.
In Hospital on 31st December, 1879				1,232	646	1,878
				Male.	Female.	Total.
Admitted for the first time during the year				267	145	412
Re-admitted during the year				28	30	58
Transferred during the year				42	24	66

Admissions.

The number of patients admitted for the first time into the Hospitals for the Insane during the year was 267 male and 145 female, a total of 412, and the re-admissions numbered 28 males and 30 females, a total of 58. The admissions and re-admissions together were 470, being in excess of those for any previous year. The number of patients received from other Institutions for the Insane—transferred under section 80 of the Lunacy Act—was 66. At the Licensed House, Cook's River, 5 patients were admitted for the first time, 1 was re-admitted, and 9 were received from other Institutions. It thus appears that the total admissions to all the Institutions was 417, the re-admissions 59, and the transfers 75.* The re-admissions form 12.39 per cent. of the total admissions. The re-admissions into English Asylums during the year 1879, were 13.62 per cent. of the total number of admissions. The transfers are excluded from both calculations. When the transfers are not excluded the percentages are 10.70 and 12.18 respectively.

Table 3, showing the causes of insanity in the admissions and re-admissions is now given for the first time. In 146 cases or 31.06 per cent. the cause of the malady was unknown. Among the physical causes to which, as a whole, 57.44 per cent. are attributed, hereditary influence was the cause in 42 cases or 8.93 per cent., intemperance in drink in 35 cases or 7.44 per cent., and epilepsy in 23 cases or 4.89 per cent. Congenital defect was ascertained in 20 cases or 4.25 per cent., whilst sunstroke, parturition, and the puerperal state, diseases of the skull and brain, bodily diseases and chronic ill-health, all show a high percentage. Amongst moral causes, to which as a whole 11.48 per cent. are attributed, domestic trouble, mental anxiety and "worry," and religious excitement are the most potent.

As the causation of insanity is a subject of very wide interest, I have prepared the following return, showing the assigned causes of insanity in 3,410 patients admitted into Gladesville Hospital—which was for the period indicated the main receiving Hospital of the Colony—from the 1st January, 1869, to the 31st December, 1879.

TABLE

* The admissions and re-admissions for the year give a proportion to the population of 1 in 1,618.

TABLE showing the Assigned Causes of Insanity in 3,410 Patients (being 2,145 male and 1,265 female) admitted into the Hospital for the Insane, Gladesville, from 1st January, 1869, to 31st December, 1879, being a period of 11 Years.

In connection with the influence of temperature as determining the period of attack in cases of insanity, the following return possesses some interest. Spring and autumn, or rather the advent of summer and winter, are distinctly marked, the former by an increase, the latter by a decrease in number of cases admitted into hospital.

RETURN showing Admissions into the Hospital for the Insane, Gladesville, during each month of the year for the Ten Years ending December, 1879.

Total.....	197	277	268	296	312	337	340	433	400	333	

The ages, the condition as to marriage, and the religious persuasion of the patients admitted, are shown in tables 6, 7, and 8, and will be of interest in connection with the census returns.

Total number under Care.

The number under care and treatment in Hospitals for the Insane during the year was 1,569 males and 843 females, a total of 2,414. The number under care in the Licensed House at Cook's River was 10 males and 138 females, a total of 148. The total number under care and treatment was therefore 1,579 males and 983 females, a total of 2,562.

The native countries, ages, condition as to marriage, and religious profession, so far as could be ascertained, are given in tables 7, 8, 9, and 10. From table 9 it appears that 623 are natives of New South Wales, 47 of other British Colonies, 702 of England, 149 of Scotland, 776 of Ireland, 16 of France, 64 of Germany, 64 of China, and 121 of countries other than those named.

Only 143 of the patients were under 20 years of age, 379 were between 20 and 30, 652 between 30 and 40, 647 between 40 and 50, 396 between 50 and 60, and 345 above 60 years of age. By far the larger number were at the period of active manhood, nearly two-thirds being between 20 and 50 years of age.

Discharges.

The number of patients discharged recovered, from Hospitals for the Insane was 196, and the number relieved 40, the former giving a percentage of 41·70, and the latter of 8·51 on the admissions, so that a percentage of 50·21 have been so far benefited by treatment as to render Hospital care no longer necessary. In addition to these numbers 34 patients were discharged recovered and relieved from the Reception House during the year. The proportion of recoveries as in former years compares favourably with that in Asylums in England which, excluding the Idiot Asylums, and therefore not reckoning the most incurable class of cases, gave a percentage of 40·50 on the admissions for the year 1879, and an average of 39·26 per cent. for the ten years 1870 to 1879 inclusive.

The proportion of recoveries varied somewhat at the different Hospitals. At Gladesville it was 45·57; at Parramatta 45·67 in the Free and 17·39 in the Criminal division, and at Callan Park 33·33. No patient was discharged recovered from either Newcastle or Cooma during the year.

Deaths.

Deaths.

The total number of deaths was 136, and on computing the mortality on the total number of patients under care the percentage is 7.10. This rate is somewhat above that for the preceding year. In the English Asylums the average mortality for the ten years from 1870 to 1879 inclusive was 10.14. The average for the past five years in this Colony has been 6.92. The death rate was highest at Callan Park—10 per cent.—whereas the Medical Superintendent explains in his report, a large proportion of the cases succumbed to senile decay; and smallest at Cooma, where the percentage was 3.12. At this latter Institution the patients are for the most part between 20 and 50 years of age, and in good physical health. The causes of death are shown in table 4. Maniacal and melancholic exhaustion and decay are credited with 29 deaths, general debility and old age with 25, general paralysis of the insane, epilepsy and convulsions, and apoplexy and paralysis, with 19, 16, and 12 respectively, and pulmonary consumption with 11. None of the other causes reach to two figures. It will be seen, as might be expected, that death in Hospitals for the Insane is largely due to cerebral disease. The death from suicide occurred at Gladesville, and will be referred to in the remarks on that Hospital.

Numbers remaining and accommodation.

The number of patients remaining in the Hospitals for Insane at the close of the year was 1,964, of whom 1,276 were men and 688 women, whilst 135—6 men and 129 women—were in the licensed House at Cook's River.

In reporting on the state and condition of the Institution for the Insane for the year 1879, it was my duty to report that there were 263 patients in the Public Institutions in excess of the number for whom there was proper accommodation—such accommodation being on the standard of cubic space fixed by the English Commissioners in Lunacy as the lowest compatible with health. During the year 1880, the only increase in the amount of accommodation was afforded by the removal of the Superintendent of the Hospital for the Insane at Newcastle, from quarters in the main building, to a small detached residence formerly occupied by the Police Magistrate. This gave space for 17 patients with 2 nurses, and was occupied with patients as soon as some necessary alterations and repairs could be effected. Twenty-two patients found accommodation in the wards at Callan Park, and the remainder of the 88 were at the close of the year distributed in the already overcrowded dormitories at Gladesville, Parramatta, and Newcastle. Some minor and necessary alterations were made during the year which slightly affected the accommodation, and the following return shows this accommodation and the number of patients at the close of the year:—

RETURN Showing number for whom there is Dormitory Accommodation, and the number in Hospitals for the Insane, 31st December, 1880.

Institution.	Number for whom there is dormitory accommodation.			Number in Hospital on the 31 December, 1880.		
	Male.	Female.	Total.	Male.	Female.	Total.
Hospital for the Insane, Gladesville	259	244	503	335	369	704
Do. Parramatta (Free and Convict)	573	123	696	577	209	786
Do. do. (Criminal)	57	...	57	53	6	59
Do. Callan Park	141	...	141	129	...	129
Do. Newcastle	111	70	181	124	104	228
Temporary do., Cooma	56	...	56	64	...	64
	1,197	437	1,634	1,276	688	1,964
				1,197	437	1,634
Total number in excess of accommodation				79	251	330

It is, I think, desirable to consider the extent and the character of the existing accommodation, both with regard to the steps which have already been taken to increase it, and to those which may be necessary in the future.

Of the existing and occupied buildings for male patients those affording space for 460 out of the total accommodation for 1,197 are of wood. The new buildings at Gladesville are of stone, and will, when completed, accommodate 164 male patients, but the proportion of accommodation in wooden buildings will then be over one-third.

The new buildings for women, which it is hoped will be soon completed, at Parramatta, give accommodation for 252 in wood and 98 in brick rooms. The completion and occupation of these involves the demolition of the old and ruinous prison buildings now containing room for 123. When the changes are complete the accommodation for women in wooden buildings will be 252 out of a total of 664, or considerably upwards of one-third.

The experiment of housing the insane in wooden buildings has been tried to a greater extent in this Colony than in any other part of the world, and there can be no doubt but that such buildings can be erected more cheaply than more substantial structures, and serve admirably for the accommodation of certain classes of patients. They present, however, special danger from their liability to fire, they need frequent painting and repair, and the experiment has not yet been made long enough to enable a correct idea to be formed as to its ultimate economy.

Moreover, the experiment has now been carried to the fullest extent compatible with the safety and comfort of the patients, and experience has clearly shown that there are large classes, especially the more noisy, dangerous, and demonstrative, and all those in the acute stages of the malady, who cannot safely be placed in buildings of this kind. About one-third is the greatest number which can be placed in wooden buildings, without danger or without imperilling the comfort and recovery of other patients.

The proportion of single rooms, so necessary in the treatment of acute cases, is at present 1 to every 8 patients; but of these rooms 28, at Cooma, are borrowed from the Department of Prisons, and 15 at Gladesville are of wood, without any deadening material in the walls, and not, therefore, suited for noisy patients. Excluding these the proportion is 1 to every 11 male and 1 to every 8 female patients, and is too small to admit of successful treatment.

With

With this knowledge it was deemed essential that the new Hospital at Callan Park should be a substantial building, with a large proportion of single rooms, especially as it will be the main curative institution for the metropolis, and will receive from three to four hundred fresh cases annually.

A consideration of the existing accommodation with a view to future operations will, I think, show the necessity for the commencement of some further buildings at no distant period.

The new buildings at Gladsville and Parramatta, which will, it is hoped, be ready for occupation during the present year, would, with the existing buildings, raise the accommodation to sufficient for 1,361 males and 787 females; but unfortunately a large part of the old buildings are of such a character that they can no longer be allowed to continue.

The completion of the Parramatta buildings will, as above stated, render necessary the demolition of old and ruinous buildings now affording space for 123 women. Other buildings for 50 men at the same Institution are in a condition beyond repair. The Hospital at Cooma, with space for 56 men, is borrowed from the Department of Prisons, and the whole of the buildings in the present Hospital at Callan Park with space for 141 men is a temporary structure, and must be removed to make way for the permanent Hospital. The accommodation will thus be reduced to sufficient for 1,248 men and 541 women, and the addition of the accommodation to be provided at Callan Park for 339 men and 327 women will again raise this to accommodation for 1,587 men and 868 women.

As the numbers in the existing Hospitals are now 1,276 men and 688 women, whilst 125 women are paid for by the Government at the private Institution at Cook's River, and the annual increase averages 45 of each sex, it is clear that further accommodation will soon be necessary.

Patients admitted from ships, &c.

I think it necessary again to call attention to the number of patients admitted to the Hospitals for the Insane, either directly from the ships in which they arrived in the Colony, or very soon after landing. The Medical Superintendent of Callan Park has in his report in the appendix called attention to six cases of this kind, and nine others have been admitted to Gladsville. A certain number of insane persons may be expected among emigrants and recent arrivals in the Colony, but owing to the closure of the Victorian and Queensland ports to these cases, the number admitted to New South Wales is certainly larger than it would otherwise be, and the Hospitals for the Insane in this Colony are made the receptacle for the homeless insane from the whole of the South Pacific. There have been several instances during the last and preceding years in which insane patients have been sent from New Caledonia and the South Sea Islands, and others in which the captains of ships have brought on these patients to Sydney rather than enter into the bonds for their maintenance demanded in other Colonies.

The Lunacy Act.

I have to report that those parts of the Lunacy Act which regulate the admission, transfer, inspection, and discharge of patients have worked on the whole satisfactorily and well, but some of the provisions of the Statute are as yet imperfectly understood.

It has been necessary to call for amendment of the medical certificates under section 13 in eight cases during the year. In seven of these the amendment was made, but in one case the medical practitioners expressed themselves as unable or unwilling to make the amendments necessary, and the patient was at once discharged. In five of the seven cases in which the amendment was made the original certificates were meagre and imperfect, and stated the opinion of the medical practitioner, and not the facts on which such opinion was based—as is required by the Statute. In one case the currency of the certificates, limited to ten days by the 8th section of the Act, had expired, and in another the certificate was signed by the doctor of the ship in which the patient was an emigrant; and this gentleman, though a qualified practitioner, was not registered in New South Wales, and therefore not legally qualified according to the provisions of the Act.

The provision in section 6 of the Act enabling Justices to examine insane persons "at any convenient place" instead of in a police court has been taken advantage of in three or four cases during the year, but does not appear to be generally known. The appearance of insane persons in a condition of violent excitement in open court has formed the subject of several sensational paragraphs in country newspapers during the year, and in one case at Deniliquin the patient was described as having his hands strapped and "*held down on the floor of the court by the united strength of four men.*" It is to be hoped that scenes so painful to bystanders and so injurious to the patients will be avoided whenever possible, and the humane provisions of the Act taken advantage of in cases of violent and dangerous insanity.

Leave of absence on trial has been granted under section 82 of the Act to 27 patients during the year, with the result that 14 of these have so far recovered as to render further detention unnecessary, 7 were returned to Hospital, and 6 remained on trial at the close of the year. I trust that in future this section will be more largely taken advantage of. Some unpromising patients have benefited by the change, and it is an undoubted fact that many patients do not and will not attain to perfect recovery in Hospitals for the Insane more than they do in Fever Hospitals, the last touch of treatment wanted being, as has been well said, "the cordial restorative of home, or the tonic of liberty." Dr. Bucknill, a well-known English authority in lunacy matters, in a recently published volume, says, "There is a tide in the affairs of madness which taken at the flood leads on to the precious fortune of health. There is a time when an entire change of surroundings effect the happiest change in the mental state, sometimes resulting in perfect recovery, oftentimes resulting in permanent improvement. If this state be overlooked, it passes into one or other of the forms of insanity, and the last state of that man is worse than the first." It is in such cases that restoration to the care of friends, or leave of absence on trial, is often of the greatest service, and prevents these unhappy people remaining in hospital till they die.

Section 89 of the Act, which provides for an allowance to be made to friends for maintenance of patients, and introduces in fact what has been called the "Boarding-out System," has not yet been acted on in any case. The sum of £300 was made available under the Appropriation Act of 1880 for a trial of this system, and immediately on the passing of this Act I addressed a circular letter to the superintendents of Hospitals for the Insane calling their attention to this vote, and urging the selection of patients for discharge under this section; but no recommendation has so far been made, and I gather that difficulties have been experienced

experienced in the selection of suitable cases. It can never be advisable, except in very special cases, to entrust insane persons to the care of any except near relatives. Some tie beyond a pecuniary one seems absolutely necessary, and from returns obtained on 30th June last, it appears that out of 2,036 insane persons then on the registers of the Hospitals, 1,038, or more than one-half, were, so far as could be discovered from the records of the Hospitals and from the patients themselves, absolutely without friends or relatives. Ten per cent. of the total number were foreigners by birth, and only about 880 had relatives in New South Wales. A considerable portion of such relatives either had no settled homes, or were engaged in occupations which left them scant time or opportunity for looking after insane patients, and in very few cases would the sum which it would be to the advantage of the Government to pay for maintenance be worth consideration by the side of the wages to be earned in this Colony. Under these circumstances, I am not—and indeed I never have been—hopeful that any large reduction of the asylum population will be effected by “boarding-out,” but I am still of opinion that fit cases may occasionally be selected, and I shall take further opportunities of conferring with the superintendents on this subject.

The 48th section of the Lunacy Act renders it legal to set apart wards in public Hospitals for the temporary reception of insane persons, but the initiative is left with the Committees of the Hospitals. Like other permissive legislation the enactment has so far been inoperative, and the prisons remain the only refuge for persons seized with insanity in country districts, whilst waiting removal or travelling to Hospital. In the neighbouring colony of Victoria, lunacy wards have been established in connection with the public Hospitals at Geelong and Sandhurst, Castlemaine, Sale, and Wood's Point, and during a recent visit to Victoria I had an opportunity of visiting those at Geelong, Sandhurst, and Castlemaine, and making inquiries as to their management. The wards were erected with funds provided by the Government on the solicitation of the Committees of the Hospitals, and the Committees are re-imbursed by the Government for the maintenance of all patients treated in them. The system is a vast improvement on that in force in this Colony, and such wards might with great advantage be established in some of the more populous of our up-country towns. From a return supplied to me by the courtesy of the Comptroller General of Prisons, it appears that excluding Darlinghurst, 341 persons were treated for symptoms of insanity in the prisons of the Colony during the year 1880, of whom 128 were certified to be insane. Of the total number under care 45 were sent on to Darlinghurst or other gaols, 113 were sent to Hospitals for the Insane, 87 were discharged at police courts, and 85 as sane, and 11 remained at the close of the year. In addition to these, 112 patients were received at the prisons whilst in transit to Hospital.

The operation of the Lunacy Act has very considerably shortened the stay of insane patients in prisons, and the statutory regulation limiting such residence to 14 days does not appear, according to returns furnished to me, to have been infringed in any case except where the patient was unable to travel owing to physical debility.

Cost of Maintenance.

The annual receipts of the department from all sources amounted to £5,521 0s. 4d., or £2,535 14s. 5d. in excess of those for 1879. The details of these receipts are shown in the following return :—

RETURN showing total receipts on account of Lunacy Department during the Year 1880.

Name of Institution.	Maintenance of Patients.	Payments from Imperial Treasury for Convict Patients.	Sale of Fat and Old Stores.	Rent of Land.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

Total	£ 4,576 15 10	742 10 0	156 15 6	44 19 0	5,521 0 4

The sum collected for maintenance of patients was £4,576 15s. 10d., or £2,638 in excess of the collections for 1879. Of this amount the sum of £4,535 17s. 4d. was collected by the Master-in-Lunacy. The amount is, considering the number of patients, not large, but it should be remembered:—1st. That, as stated in a former part of this report, upwards of one-half of the present population of the Institutions for the Insane are, so far as can be ascertained, quite friendless. 2nd. That insanity is much more prevalent among the poor than among the well-to-do classes. 3rd. That it is in itself pauperising in the most direct way. It continues for weeks or months, or even *in perpetuo*, not for days and weeks only, as is the case with other diseases; and in the case of a father, who is the bread winner of a family, it stops all incoming for long periods.

The total expenditure for the year has been £69,049 17s. 3d., divided as follows:—General expenses, £2,114 13s. 2d.; maintenance in Hospitals for the Insane, £58,509 19s. 10d.; maintenance of Government patients in the Licensed House, Cook's River, £7,319 17s. 6d.; maintenance in Reception House, £1,105 6s. 9d.

The general expenses included the cost of the Inspector General's Office, the allowances to official visitors, and the maintenance of the steam launch "Mabel," used for conveying patients and stores to the Hospitals and for other purposes.

The following tables give particulars of expenditure in the Hospitals:—

TABLE showing annual cost of Patients in Hospitals for the Insane during the Year 1880.

	Average Number of Patients.	Total Cost.	Amount of Collections.	Total Annual cost per Patient	
				without deducting collections.	per Patient deducting collections.
		£ s. d.	£ s. d.	£ s. d.	£ s. d.

Total	1,914	58,509 19 10	5,088 10 5

Average cost per head without deducting collections, £30 11s. 4½d., or deducting collections, £27 18s. 2½d.

TABLE showing weekly cost of Patients in Hospitals for the Insane during the Year 1880.

	Average Number of Patients.	Total Annual Cost.	Salaries and Allowances.	Provisions &c. &c.	Amusements, Books, and Periodicals.	Incidental Expenses and minor Repairs.	Materials for Employment of Patients.	Stores, Bedding, &c. &c.	Total cost weekly without deducting collections.	Weekly cost deducting collections.	Average weekly cost without deducting collections, 11s. 9d., or deducting collections, 10s. 8½d.
Hospital for the Insane, Gladsville	686	19,969 0 8	0 3 10½	0 4 10	0 0 1½	0 0 3½	0 0 3	0 1 10	0 11 2½	0 9 5½	
Do. Parramatta	827	23,907 4 9	0 3 9½	0 4 1½	0 0 1½	0 0 2½	0 0 1½	0 2 9	0 11 1½	0 10 5½	
Do. Callan Park	120	4,379 1 1	0 6 5½	0 4 5½	0 0 3½	0 0 6	0 0 6½	0 1 8	0 13 11½	0 13 3½	
Do. Newcastle	217	6,841 6 8	0 3 10½	0 4 7½	0 0 2	0 0 6½	0 0 3	0 2 7½	0 12 0½	0 11 5	
Temporary do. Cooma	64	3,413 6 8	0 6 10	0 10 2½	0 0 1½	0 0 5	0 0 3½	0 2 7½	1 0 5½	1 0 5½	

The total cost of the Hospitals has been £58,509 19s. 10d., being £1,191 5s. 3d. less than the cost of the preceding year, whilst the average daily number of patients was 106 greater. At the maintenance rate of last year the cost would have amounted to £63,201 2s. 7d., or £4,691 2s. 9d. more than the cost which has been incurred.

The average annual cost per patient has been £30 11s. 4½d., or deducting collections, £27 18s. 2½d., and the average weekly cost has been 11s. 9d., or deducting collections, 10s. 8½d.

The average weekly cost for 1879 was 12s. 8½d., or deducting collections, 12s. 1d.

These figures show a very considerable reduction in the cost for maintenance, due mainly to the favourable contracts for provisions which the Government was able to make for the year, but partly to improvement in the management of the Institutions, and partly to the arrangement by which the whole of the Institutions are worked as one department, and it is thus possible to institute comparisons and exercise a check on the issue of articles not provided for under fixed scales.

The

The weekly maintenance-rate has varied at the different Hospitals, being (without deducting collections) at Gladesville, 11s. 2½d. ; Parramatta, 11s. 1½d. ; Callan Park, 13s. 11½d. ; Newcastle, 12s. 0½d. ; and Cooma, £1 0s. 5¾d.

The difference in cost is due to the varying size of the Institutions, to the contract rates at which provisions are supplied, which are twice as great at Cooma as at any other Institution, and also to the rapidity with which patients are admitted—or, in other words, to the total number under care. In calculating cost this is always an important element, and should be considered in conjunction with the average daily number resident.

During the year the average daily number resident, and the total number under care at the different hospitals have been—

	Total Number under Care.	Average Daily Number Resident.
Gladesville	988	686
Parramatta.....	952	827
Callan Park.....	166	120
Newcastle.....	241	217
Cooma.....	67	64

From the following return it will be seen that the cost of maintenance in all the Hospitals for the Insane has been for some years slowly decreasing.

TABLE showing Weekly Cost of Maintenance at Hospitals for the Insane during the Years 1870 to 1880 inclusive, collections being deducted.

	Gladesville.	Parramatta.	Newcastle.	Cooma.	Callan Park.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

1880.....	0 9 5	0 10 5½	0 11 5	1 0 5½	0 13 3½

The cost of maintenance for Government Patients in the Licensed House at Cook's River has been £7,319 17s. 6d., or at the rate of £58 11s. 2d., per annum, or £1 2s. 6¼d. per week without deducting collections, and £55 15s. 8½d. per annum, or £1 1s. 5¼d. per week, collections being deducted.

The cost of the Reception House for the Insane at Darlinghurst has been £1,105 6s. 9d., which has been reduced by the sum of £40 18s. 6d. collected for maintenance.

HOSPITAL FOR THE INSANE, GLADESVILLE.

The number of patients in this Institution on December 31st, 1879, was 677—of whom 330 were males and 347 females. The admissions for the first time numbered 132 males and 115 females; the re-admissions, 25 males and 29 females; and the transfers from other Institutions, 9 males and 1 female—making the numbers under care 496 males and 492 females, or a total of 988. The daily average number resident was 686. The number discharged recovered was 137, a percentage of 45·51 on the admissions and re-admissions; and the number discharged relieved was 33, or a percentage of 10·96 on the admissions and re-admissions. Twenty men and 32 women were transferred to other Institutions for the Insane; 2 men escaped and were not recaptured within the statutory period; and 36 males and 23 females, a total of 59, died. The total number discharged, transferred, and died, during the year, was 284, and the number on the register of the Hospital on December 31st, 1880, was 704, of whom 335 were male and 369 female. At the close of the year 3 female patients were absent on trial.

The statistics of the Institution are set forth in an elaborate series of tables appended to the report of the Medical Superintendent. From one of these it appears that out of the 59 deaths which have occurred during the year no less than 40 were due to cerebral disease in one or other of its forms. The number of necroscopic examinations has been somewhat less than usual. I direct attention to this because I am of opinion that such examinations should be made whenever this is possible, and does not conflict with the prejudices of friends; not only to increase our knowledge of morbid processes and help to build up a pathological science which will be of service to and help to guide our treatment, but as a safeguard against accident and injury, which, in some demented patients, may exist and be undiscovered except at an autopsy.

I visited this Institution for the purpose of inspection on January 12th, February 9th, March 8th, 14th, and 16th, May 20th, 21st, and 22nd, June 17th, 19th, and 24th, July 12th, 14th, and 29th, August 4th, September 2nd, 5th, and 8th, October 1st, 4th, and 6th, November 3rd, and December 16th, and on each occasion recorded the result of my inspection in the Inspector's book kept at the hospital. The following are copies of the entries made at some of these visits:—

"February 9th.—On the 5th instant I went through all the wards of the female division with the Medical Superintendent and saw all the patients. Two were in bed from severe diarrhoea, and one was in restraint by camisole. No one was secluded. The wards were neat and clean as usual, and the patients free from excitement. The grass and trees in some of the yards require further care and attention. On the afternoon of the same day I inspected the attendants' diningrooms, the stables, wood-yard, artisans' shops, kitchen, laundry, &c., and found all in good order. I saw the various patients employed in the kitchen, laundry, &c. I tasted the bread, cheese, beer, spirits, &c., and saw other articles of provisions, all of which seemed good. On the 7th instant I examined the statutory books, which are correctly kept and written up to date. The medical journal shows that the amount of seclusion and restraint is small, and an inquiry into the individual cases convinced me of the necessity for the latter in all instances in which it has been employed

* First year, and including cost of Stores and Outfit.

employed. I examined the case books which are written up to a recent date. The weight of each patient on admission is now recorded in the case book. I saw all letters written by patients and detained by the Medical Superintendent; they were unusually numerous and contained in some instances complaints of ill-treatment. Those written by an epileptic lad named C. M. were full of complaints, but the majority, if not all, were obviously false, and I think the letters were properly detained, and ordered their destruction after perusal and inquiry.

This morning, the 9th instant, I have visited the whole of the wards in the male division, and seen all the inmates. The patients in No. 2 ward were excited and noisy, but in the other wards they were quiet, and were all sufficiently tidy in dress. Six patients were in single rooms, 2 from illness (1 suffering from typhoid fever), 3 owing to mental excitement, which rendered their confinement to bed on a very wet morning advisable, and 1 was temporarily secluded owing to the noise he makes at the usual medical visit. One patient was in restraint. I am unable to discover any local cause for the typhoid fever, and as the patient has only recently been admitted it is not improbable that he caught it before admission, and that the earlier symptoms were masked by the mental disturbance.

I advise the use of the day rooms for reading, &c., by quiet patients, especially in No. 2 ward, where it is free from beds. Since the date of my last official visit 20 female patients, under the charge of 2 nurses specially added to the staff for this service, have been removed to the new superintendent's house, which has been so arranged as to give them comfortable dormitory accommodation, and a sitting room for the evening. They take their meals and spend their time during the day in No. 1 ward. Notwithstanding this relief the dormitories in the female division are still much overcrowded, and in my opinion their condition now is such as to be prejudicial to both the mental and physical health of the inmates.

April 19th.—I have this day inspected this Institution, passing through all the wards at the time for the ordinary visit with the medical officers, and seeing all the patients except those employed in out-door avocations. I found the patients tidy in dress, and, with the exception of one or two in the admission ward, male division, quiet in demeanour. Although all had an opportunity of speaking to me I heard no complaints, except from a man named T., who complained of his breast bone being broken and his neck injured, and also that he was starved. His condition is one of robust health, and there is nothing wrong with either chest or neck. In the male division 4 patients were in bed from mental or bodily illness, 3 were in temporary seclusion at the medical visit, owing to the noise they make in the ward, and 1 patient (McE) was confined to his room owing to most mischievous habits and constantly denuding himself. As he is not improving I suggested that he should be placed in either a camisole or muffs, and be allowed to take exercise in the yards and recreation ground under special watching. One male patient was in restraint by means of a camisole. In the female division 4 were in bed owing to sickness, and 1 was in restraint by means of muffs at night owing to strong suicidal tendencies and repeated attempts to pull out her tongue. The general health of the patients seemed good, but there is the usual amount of purpura which is not likely to disappear till the overcrowding is lessened. The rooms occupied by patients were in good order and clean. The substitution of paint for whitewash in rooms occupied by dirty patients in the male division has been found quite satisfactory, and I have recommended that the number of painted rooms should be increased in the male division, and that six or eight should be arranged in the female division for those of specially bad habits. In the afternoon I took the opportunity of seeing all the patients engaged in out-door occupations, except those with the gardener: I visited the laundry, kitchen, stores, wood-yards, stables, artisans' shops, and the rooms in No. 6 ward, male division, and found all in good order. The number of patients employed in the laundry appears to be less than usual, and it is advisable to try and increase them. The kitchen was in excellent order, and showed that more attention was paid to its condition than has been the case for a long period. In the stores I examined various articles of provisions, and found all satisfactory except the bread, which was decidedly underbaked, and a portion of which was at once rejected by the Medical Superintendent.

I saw all the patients' letters which had been detained, and destroyed all but one, which it was deemed advisable to send. I examined the statutory books, which are properly kept. The medical journal records two instances of sudden death since my last visit. One (E. K.) died from heart disease, and the other (J. C.) a man who has been upwards of thirty years an inmate, from apoplexy. Inquests were held in both cases, and verdicts of death from natural causes returned. There have also been two escapes; in one the patient was recaptured within two days, and in the other he is still at large. No blame appears to attach to any one as regards these patients, both of whom were quiet and harmless. I notice with great regret the continued increase of patients in the female division, and the very extreme overcrowding which now exists. The numbers as shown at the following dates is evidence of the gradual accumulation of female patients:—

	Male.	Female.	Total.
31 December, 1878	334	323	657
31 December, 1879	328	345	673
22 January, 1880	327	348	675
12 April, 1880	337	356	693

June 17th.—I have this day visited this Institution, and after examining the statutory books I passed through the whole of the wards in the female division. I found the books correctly kept and written up to a recent date. The medical journal shows that no accident has occurred since the date of my last visit, and that there is at this time no case requiring restraint in the hospital. On examining the admission register, I found that on checking it with the papers received on admission, the transfer order from Callan Park in the case of C. B. had not been received. This transfer was made at my request owing to special circumstances, and some delay appears to have occurred in forwarding the papers from the Colonial Secretary's Office. I found the medical certificates in the case of A. B., admitted on the 12th instant, and not yet reported, meagre and insufficient, and at once returned them for amendment under section 13 of the Act. The case books are correctly kept. I saw all the patients in the female wards, and found them in fair average health. Four only were in bed, 1 from paralysis and 1 from lumbago, 1 from old age, and 1 from catarrh. No one was in seclusion or restraint; and the wards were unusually free from noise or excitement. No complaint of any kind was made to me.

The recent change of diet, by which hominy or porridge is added to the usual breakfast, appears to be liked by the patients. At present it is given three or four times a week to each patient in the female division, and is taken by almost all. The dining-room and the dormitories and the yards were in their usual excellent order, and as clean as possible, and the whole division was free from offensive smells. Five single rooms in No. 3 ward have been recently painted, and the nurses report that they are easier to clean. A similar change in the male division is also favourably reported of, and there is no doubt but that the rooms are more speedily cleaned than when whitewashed. I am glad to find that the Medical Superintendent proposes to gradually increase the number of painted rooms in both divisions.

June 19th.—I have this morning, accompanied by the Assistant Medical Officer, visited the whole of the wards in the male division of this Hospital, and seen all the patients except those actively employed. The day rooms and dormitories, and also the yards, were clean and in good order, and the patients generally were in good health, and with two or three exceptions free from excitement. I heard no complaint except of prolonged detention. There was no one in restraint, and the only cases of seclusion were 2 patients who are frequently noisy and create disturbances at the medical visits, so that it is thought advisable to place them in their rooms for a few minutes at these times. Three patients only were in bed, 1 from catarrh, 1 from old age and general break-up, and 1 from mental excitement. The number now unemployed and in the wards seems very large, and I think steps should be taken to induce a greater number to occupy themselves usefully. I visited the dormitories and other rooms in No. 6 ward, and found them clean and in excellent order.

June 24th.—I have this day accompanied the Medical Superintendent on his usual fortnightly inspection of the wards, dormitories, &c. I visited every part of the Hospital, including the attendants and nurses rooms, the bath-rooms, closets, pantries, store-rooms, &c., and found all clean and in good order. The plaster in some of the single rooms in the female division is dropping from the walls, and should be removed and replaced by cement. Additional lavatory accommodation is much required in No. 4 female division, in which the number of patients is now very large. The present lavatory range is quite insufficient, and I think until a fixed range can be obtained it will be advisable to supply to the ward a number of pressed tin or enamelled iron basins, which can be used on a table or forms.

December 16th.—I have this day visited this Institution, and spent the greater part of the day in seeing the patients, and in making an inspection of the dormitories and day rooms, and of the stores, laundry, kitchen, out-buildings, &c. The number of patients is now 701, of whom 343 are males and 358 females. Three females and 1 male are absent on leave, under the provisions of section 82 of the Lunacy Act. The numbers show an increase of 13 men and 11 women since the close of 1879, when the Institution was already greatly overcrowded. At the present time the numbers are 84 males and 114 females in excess of the number for whom there is proper dormitory accommodation. This overcrowding

is painfully evident in every part of the Institution, and taken in connection with a constant influx of new patients, many of whom are in an acute and demonstrative phase of the malady, renders the management extremely difficult, and keeps the wards both day and night in a condition highly prejudicial to the mental health of the patients, and inimical to their mental restoration.

In the male division two or three wards were by no means so quiet and well ordered as is desirable, owing to overcrowding and the presence of a number of cases of acute insanity. I found 1 patient in restraint by a camisole, owing to extremely destructive habits; and 3 were in their rooms—2 owing to excitement in the course of general paralysis, and 1 for epileptic mania. Only 1 patient was in bed from bodily sickness, but a number of feeble patients were in invalid chairs in the hospital ward. In the female division the patients were as a rule free from excitement. No one was in restraint; but 2 were in seclusion, and 3 were in bed from sickness. I heard no complaints, except of detention; and the patients, especially in the female division, were, as a rule, tidy in dress and well looked after. Some improvement in respect to dress is however possible in wards 2 and 3 in the male division.

Since my last visit four additional cases of measles have occurred in the male division, but the patients are now all convalescent, and there is no appearance of a continuance of the epidemic. The rooms occupied by patients were clean and tidy throughout, and the bedding, &c., clean and in good order. In wards 2, 3, and 4 male, the paths in the yards are much in need of re-gravelling; and in the first two of these yards screens are required in front of the closets. Matting in the centre of the associated dormitories is also required to deaden the footsteps of the night attendants, and to add to the comfort and general appearance of the rooms.

The kitchen, laundry, stores, and out-buildings were in excellent order. I saw in the stores various provisions supplied by the contractor, which were all of good quality. In the tailor's shop a larger number of patients than usual were employed, and a large amount of useful work was in progress. I saw all the patients employed in the kitchen, laundry, out-buildings, garden, grounds, &c., and heard no complaints from any of them. I saw and signed the statutory books, which are correctly kept and written up to date. No accidents or unusual occurrences appear to have taken place since my last visit. I saw the papers received with all patients admitted since the last visit of the official visitors, and found them correct."

One case of suicide occurred during the year, and formed the subject of special inquiry. A report on this case was forwarded to you. The jury added a rider to their verdict that no blame was attached to any member of the staff of the Hospital. The Medical Superintendent did not concur in this, and deemed it necessary to dismiss a nurse whose carelessness had, in his opinion, contributed to the fatal result. The only serious accidents during the year were two cases of fractured arm, both in female patients. In one of these the nurse appeared so much to blame that her immediate dismissal was considered necessary. In the other case, after fully reviewing the evidence collected by the Assistant Medical Officer during the absence on leave of the Medical Superintendent, and making further inquiries, I came to the conclusion that the fracture was due to unavoidable accident and that no blame was attached to any one.

A charge of ill-treatment of a patient by one of the attendants involved a lengthened and somewhat difficult inquiry, owing to the patient's delusions and his demented condition, but at its close I addressed a memorandum to the Medical Superintendent recommending the dismissal of the attendant whose conduct had been called in question, and my recommendation was at once acted on.

Two or more of the official visitors (Alfred Roberts, Esq., H. G. Alleyne, Esq., M.D., and W. Owen, Esq., barrister-at-law) have visited the Hospital once in every month at uncertain times, and as a rule without prior notice, and have reported to you after each visit. I have been afforded an opportunity of perusing these reports and find in them nothing calling for special observation. The official visitors have not failed to call attention to the overcrowded condition of the female wards of the Hospital. Both measles and croupelias made their appearance in the Institution during the year, but happily did not spread.

The buildings are as a rule in a fair condition of repair; but, as no vote for alterations and repairs to Institutions for the Insane was taken for the year 1880, it has been impossible to carry out some alterations which are much needed, and some repairs which would cost but little if undertaken at once, but which will increase with each month's neglect, and in time cost a considerable amount. Requisitions for these services have been forwarded but allowed to stand over. Such repairs as are within the capabilities of the carpenter on the staff of the Hospital have been carried out by him with the assistance of patients, and a very large amount of painting has been done.

The new wing of the Hospital which is intended for male patients, and which will afford accommodation for 164, with the attendants and nurses required for their care, was not nearly ready for occupation by the close of the year, although the contract time had been exceeded by some months. During the year I deemed it necessary to forward to you a special report on the delay in the completion of this much needed addition to the Institution, but no steps appear to have been taken to urge the contractor to complete the work. Patients have been occupied during the year in improving the garden and grounds, in cutting fire-wood, in the artisan's shops, the laundry, kitchen, sewing-rooms, and store, and in the ordinary domestic work of the Institution. The following were the numbers usefully occupied on the last day of each quarter:—

	Number of Patients.			Number usefully employed.		
	Male.	Female.	Total.	Male.	Female.	Total.
31 March	331	358	689	127	136	263
30 June	338	359	697	123	135	258
30 September	331	351	682	128	145	273
31 December	335	366	701	133	145	278

Religious services have been held by the Protestant and Roman Catholic chaplains on every Sunday, and on other occasions. I attended the service several times during the year and found the congregation large and attentive. The opportunity of attending service is regarded by a number of the patients as a pleasure, and a privilege, and is of use by inducing habits of quietude, order, and self-control. The room used for Divine Service and other gatherings is now too small for the number of patients, and I very strongly recommend that it should be enlarged so as to accommodate the full number who can be allowed to attend.

The overcrowding which existed in this Institution at the close of last year was increased by the admission of new patients, and on December 31st, 1880, the Hospital contained 76 male and 125 female patients in excess of the number for whom there was proper accommodation. The condition of the female division where the dormitories were crowded with beds was extremely bad. It has taxed the energies of the matron and the staff under her direction in the highest degree, has led to frequent quarrels and disturbances amongst the patients, and been prejudicial to health and inimical to recovery. It is indeed no small matter that

that the patients in the main curative Institution for the Insane in the Colony are not infrequently deprived of sleep by the noisiness and unbearable closeness of the dormitories, and it is saddening to those charged with their care and visitation to see efforts for restoration of intellect and health thwarted by circumstances beyond their control.

HOSPITAL FOR THE INSANE, PARRAMATTA.

The number of patients (free and convict) on the register of this Institution at the close of 1879 was 771, of whom 563 were males and 208 females. The admissions during the year amounted to 79—54 males and 25 females; the re-admissions to 2—1 of each sex; and the numbers transferred from other Institutions were 18 males and 2 females. The total number under care was 872, of whom 636 were males and 236 females. Of this number 25 males and 12 females recovered, 2 males and 1 female were discharged relieved, 1 male and 1 female transferred, 1 male escaped and was not recaptured within the statutory period, and 36 males and 13 females died. The number remaining on December 31st, 1880, was 780—571 males and 209 females, and the average number under care was 744—562 males and 212 females. Three female patients were absent on leave at the close of the year.

The number discharged recovered gives a percentage of 45·67, and those discharged relieved a percentage of 3·70 on the admissions and re-admissions. The deaths give a percentage of 6·33 on the average number resident. The statistics of the hospital are set forth in tables appended to the report of the Medical Superintendent.

Inquests were held in two cases of sudden death from sanguineous apoplexy, and the following accidents occurred during the year:—

T. F.—Fracture of tibia, caused through the patient climbing by means of an iron railing on the roof and thence on to a wall from which he jumped to the ground.

F. K.—Inflicted a penetrating wound on his chest, by means of a pair of scissors, with a suicidal intent. An attendant was seriously to blame in this case, but his prompt confession of his neglect and his previous good conduct induced the Medical Superintendent to allow him to retain his situation. The patient recovered from a very dangerous wound without any serious symptoms.

This Hospital has been inspected by the official visitors, Alfred Roberts, Esq., H. G. Alleyne, Esq., M.D., and William Owen, Esq., barrister-at-law, once in each month. Mr. Owen's place in the latter months of the year being taken by C. J. Manning, Esq., barrister-at-law.

The visitors have made reports to you after each visit, and I have been afforded an opportunity of perusing all of these. Attention is called in several of them to the overcrowded condition of the Hospital, and an opinion expressed that no more patients should for the present be received. In nearly all the reports regret is expressed that no progress was being made in the new buildings for women, the urgent need for which is again and again pointed out.

I have been throughout the year painfully aware of the overcrowded condition of this Hospital, but I have not seen my way to recommend that no more patients should be received, since such a course would only have thrown greater stress on the wards at the other Institutions, especially at Gladesville, where the female division is, so far as overcrowding is concerned, quite as bad as Parramatta.

The stoppage throughout the whole of the year of all the works at the new buildings for women, when the wards were all but ready for occupation, and the only requirements were kitchen, laundry, tanks, fencing, and residences for the laundresses and other servants, is very greatly to be deplored. I have not failed to bring this matter under your notice, and take this opportunity of again recommending that authority may be granted for the completion of the works.

In their report for June the visitors called attention to the very bad condition of some of the buildings in the division for the sick, and describe them as "hovels intensely wretched and unfit for human habitation"; and in July they direct attention to the condition of the main centre building of which the woodwork is rotten throughout, and the floors in a lamentable condition of disrepair.

The condition of these buildings has been for a long time under consideration, and I have reported that the continued occupation of the centre building is not devoid of danger, but it appears to be impossible to carry out the extensive repairs necessary whilst they are occupied by patients.

On the completion of the new buildings for women it will be possible to move the male patients in these dilapidated buildings to the present female division, and to carry out such repairs and alterations as may be necessary. The minor suggestions of the visitors appear for the most part to have been acted on by the Medical Superintendent.

I visited this Institution on January 8th and 19th, February 12th and 19th, March 5th and 16th, April 6th and 20th, June 22nd and 25th, July 14th, August 11th, September 7th, October 7th and 14th, and December 21st and 22nd, and the following are copies of the entries made in the Inspector's book at one visit during each quarter:—

“March 16th.—I have this day visited this Institution, and accompanied the Assistant Medical Officer on the usual morning round to every part, except the weatherboard building, seeing all the patients in the wards, and visiting nearly all the dormitories and day rooms. The patients were much more quiet than usual, and I noted a very decided improvement in their dress, which, in every yard, was more tidy, and showed increased care on the part of the attendants. I heard no complaint, except of detention. One male and 3 females were in restraint, and in each case I considered this treatment to be necessary. In the criminal division progress has been made in planting the yard and painting and cleaning the rooms and corridors. The large bars on all the doors appear to me quite unnecessary, except for occasional cases, and I recommend that they should all (except half-a-dozen) be removed. At the same time it will be advisable to replace the present useless locks by Monk's locks *en suite* with those in use in other parts of the Institution, and when the doors are re-painted they should be made all of one color, instead of being picked out with black, and their prison character emphasised as at present. I recommend that a commencement be made of turfing and planting the new large yard at the earliest possible time, so as to take advantage of the winter months. The Hospital and adjoining yards are now green, and the improvement is so marked that the other yards cannot be left in their present bare condition. I visited the weatherboard buildings with the Assistant Superintendent, and noted with very great satisfaction the great improvement effected by the new seats and closets, and by the alteration to the room for Divine Service now being decorated. The cricketing oval has been marked out, and the patients are busily at work forming paths, &c., around it. I saw the case books, which are written up to date, and contain entries in accordance with the case-book order, and I saw and signed the statutory books, which are correctly kept.

The rooms occupied by patients both in the male and female division were clean and in good order. The attendants were tidy in dress, and those in charge appeared to know the patients entrusted to them thoroughly well.

The Medical Superintendent is now absent on leave, and the charge of the hospital rests with the Assistant Medical Officer. The Visiting Medical Officer has, however, been requested to visit the Hospital daily, during Dr. Taylor's absence.

June

June 22nd and 25th.—I paid visits of inspection to this Institution on both of the above days. On the 22nd instant the number of patients was as follows :—

	Male.	Female.	Total.
Free and Convict	553	203	756
Criminal	48	6	54
	601	209	810

In addition to this, 4 female patients were absent on leave, though still on the books of the Hospital. The free and convict patients in the Institution have decreased by 10 males and 5 females, and the criminals by 3 males since the close of 1879. I went through all the wards both in the male and female divisions at the time of the usual medical visit, and saw all the patients except those employed in the garden and grounds, the laundry, kitchen, stores, and other places. The patients as a rule were free from excitement, and I heard no complaints except of detention in Hospital. The general health seemed unusually good. The freedom from minor ailments is remarkable, and is no doubt due to a great extent to the dietary scheme, to the supply of oranges, now very abundant, and to the liberal amount of fresh vegetables supplied from the garden. The addition to the dietary of hominy or porridge for breakfast during the winter months appears to be appreciated, and I find that it is taken by a majority of the patients. There were 8 patients in bed in the male and none in the female division. There was only 1 patient (N.) in the male division, and 1 in the female (McK.) in restraint, both by means of muffs. One male patient was in his room owing to the noise and disturbance he causes at the medical visit, and 6 female and 1 male patient were in the small seclusion yards. The patients in the Hospital yard were tidy in dress, and appeared to me particularly well cared for, the attendants in this division being more than usually careful and attentive. The rooms throughout were clean and in fair order. Their appearance will be improved by some attention to the bed and pillow-ticks and the pillow-cases which at present are not well-made, whilst many are old and torn. I learn on inquiry that progress is being made in the manufacture of new ticks and cases. I advise the introduction into the weatherboard dormitories of earth closets instead of the present night tubs. These are now in all but universal use at Gladesville, and the wards are much sweeter than formerly, whilst the floor is less soaked with urine. The condition of the walls, floors, and ceilings in the main centre building is becoming very bad indeed, the joists and flooring-boards are rotten, the water used in cleaning and the urine soak to the ceilings below and cause them to fall, and the plaster is dropping off the walls in many places. Requisitions for the repair of these floors were forwarded a long time ago, and I recommend that an urgent letter should be addressed to the Colonial Secretary on this subject. Unless something is done serious accidents will occur. The main range in the female division is, if possible, more gloomy and disheartening than ever, but every effort is made to keep it clean and free from offensive smells. Progress is being made in breaking-up, turfing, and planting the yards in the male division, and the results already obtained are so satisfactory as to encourage the officers to continue the work until all the yards are grassed and planted. The absence of warm water in the bath-room in No. 3 yard, and the defective supply in the criminal division, were brought under my notice. It is impossible to ensure due cleanliness in insane persons without a supply of warm water at all seasons, and I think steps should be taken at whatever cost to supply a sufficient amount of hot water to the bath-room of both No. 3 yard and the criminal division. The arrangements for emptying the straw in the soiled beds and refilling them might, I think, be altered with advantage. At present these beds stand for a great part of the day in an unsightly row at the back of the Hospital. I think a straw-house and straw-yard should be provided in the situation where the beds are now placed, that such of the straw as is wet should be emptied into the yard, and the remainder, with fresh straw from the straw-house, placed in clean ticks and at once taken back to the wards. This should be done by the night attendant in both divisions before going off duty. The straw-yard could be emptied once a fortnight or oftener if the carts could be spared.

I saw the meat, bread, cheese, sugar, rum, beer, and other articles of provisions, all of which were thoroughly good. The stores are very small and overcrowded, and it is on this account, as I gather from the Assistant Superintendent, that a larger stock of soap is not kept. If store room can be found, it is most advisable that a four or even six months' supply of soap should always be kept on hand, as it is found to be much more economical to use it when thoroughly dry than in its fresh state as supplied by the contractors. I examined and signed the statutory books, and saw the papers received with all cases admitted since the last visit of the official visitors. I went to the farm where the new gardener's house is in progress and where several improvements have been recently carried out. The pig-styes have been enlarged, repaired, and much better arranged; greater care is apparent in the cultivation of the farm, and the fences are in better order. Some difficulty with the trustees of the Parramatta Park has prevented the renewal of the boundary fence as was arranged.

August 11th.—I have this day visited this Institution and passed through all the wards, seeing the patients with the Assistant Medical Officer at the time of the usual medical visit. With a few exceptions they were quiet and orderly, and I heard no complaints except such as were obviously due to delusions. There appears to be a general improvement in their dress which is neater and more tidy, and the general health is fairly good. The number in bed in the male division was 12. In the female division, though there are a number of feeble patients, not one was in bed at my visit. As there are always a few sick in the weatherboard division, I consider that it would be advisable to somewhat reduce the number of beds in one of the rooms, to procure a press for medicines and medical comforts, to purchase a few pictures, to give the room a cheerful appearance by means of minor accessories than it at present possesses, and to set it apart for hospital and feeble patients—not to supplant but as an addition to the present Hospital. I am of opinion also that it is desirable to place large earthenware jars and drinking cups in the associated dormitories at night so that the patients can help themselves to water. The water-cans or buckets now supplied have not a pleasant or cleanly appearance, and the earthenware vessels now in use at Callan Park and Gladesville are much preferable. In the green yard an extension of the present shed, one side of which could be boarded in and fitted with a fireplace, is clearly desirable, and the alteration is, I am glad to learn, under consideration by the Medical Superintendent.

The alterations to the inner yard of the criminal division are now nearly complete, but various minor improvements are still in progress, and I am glad to learn that the laying out of the outer yard is about to be commenced. The dangerous iron skirtings in this division have now all been removed, and the corridors are being painted; the iron bars from the doors are being removed and new locks substituted for the old and useless ones. The patients in the criminal division, 55 in number, were very quiet; 1 was in the small seclusion yard, 2 in their rooms owing to sickness, and 1 temporarily in seclusion in his room owing to the disturbance he creates at the medical visit. One criminal patient, whose warrant is addressed to the criminal division (J. D.), was in hospital. I have before expressed an opinion that a special report should be made for the information of the Colonial Secretary in every case in which a patient, whose warrant is addressed to the criminal division, is removed therefrom; and in cases serving sentence, and considered demented and not dangerous, action should be taken under section 62. In the non-criminal division I found only 1 man in restraint (by gloves) to prevent injury and interference with a wound in the scalp. In this division 3 patients were in their rooms, owing to mental excitement necessitating such treatment. The female division was quiet and the patients evidently well cared for. The number now is 213, so that there has been no increase in number since the commencement of the year. Four patients were in the small seclusion yards, but no one secluded in the rooms. One patient was in muffs, owing to sudden aggressive tendencies. I was very glad to notice an increase in the number in those engaged in sewing. The nurses' dining-room is now used as an additional workroom, and was, at my visit, occupied by 8 patients, all busy and apparently interested in their work. A baby has been admitted with a new patient, and steps should, I consider, be taken to send it to the Benevolent Asylum. I saw and signed the statutory books, which are correctly kept. The medical journals are written up to July 29th and August 3rd, respectively. I saw and destroyed two letters written by patients and detained by the Medical Superintendent.

December 21st and 22nd.—I visited this Institution on both these days, on the former seeing all the patients in the main division, and on the latter those in the weatherboard, and on both examining a number of the rooms occupied by patients as dormitories, day rooms, &c. I took some trouble to see and speak to every one of the criminal patients and to mark the name off on my list. I found that all except 10 of the criminal patients were in the criminal division, and that in the case of all those who are in the other parts of the Institution, the warrants for detention are not addressed to this division, and the patients are quiet and harmless, and for the most part have been for some years in the Institution. In addition to these there are 3 other patients whose sentence is unexpired but who, having been certified to be demented and not dangerous, have been removed in due legal course from the criminal division under section 62 of the Lunacy Act. The male patients as a rule were fairly quiet in demeanour and reasonably tidy in dress, and with one exception I heard no complaints. In this case a man (T.) complained that his ribs were broken. It appeared that the Medical Superintendent

tendent had made full inquiry into the matter and found that this patient had been violent and engaged in a struggle with two attendants, but that no blame attached to these, and further that it was impossible on repeated examination by the Medical Superintendent and Assistant Medical Officer to detect any fracture or bruising. I found no male patients in restraint, but 4 were in seclusion; 1 in the small separate yard and 3 in their rooms. Two of the latter were only placed in for a few minutes at the time of the medical visit, owing to the noise they caused at that time. Whilst on the subject of seclusion, I think it necessary to recommend that the small separate yards for this purpose, in the criminal division, should be altered by the removal of the present heavy iron gratings and doors, which are offensive and out of place in an institution of this character, and the substitution of wooden doors and screens, with proper openings, to admit of the necessary supervision at times by the attendants. The general health of the inmates was fairly good, and the number in hospital small—4 only being in bed. In the female division the patients were quiet, comfortably dressed, and apparently well-cared for. There was only 1 in bed; but the number of aged and feeble patients is very large. Two patients were in restraint by muffs for reasons which appeared quite sufficient. Five were in seclusion in the small yards, and objectionable as these in many respects are, they afford the only present means of separating violent and aggressive patients from those to whom they would do injury. The number occupied in the sewing-room has more than doubled during the last few months, owing almost entirely to the use of the new room (designed and used as a nurses' dining-room) as a sewing-room instead of the old, gloomy, and confined apartment which was formerly the only room which could be devoted to this purpose. The present room is now quite full, and there is no doubt but that a still larger number would employ themselves in sewing if a larger and more cheerful room were provided. In the hope, however, of the occupation of the new female department, in which large sewing-rooms are provided, before the close of another year, it has not been deemed right to take any steps to increase the accommodation at present available in the old female quarters.

The dormitories and other rooms throughout the Institution were fairly clean, and it is evident in the criminal and hospital yards, and in the new range of buildings, that the attendants take a commendable pride in the order and management of the rooms under their care. With the old buildings, however, and especially those in the centre block, with floors, ceilings, and walls in a painful condition of disrepair, it is also evident that the state re-acts unfavourably on those in immediate charge of them, and that attempts at thorough cleanliness and order appear a hopeless task. In the weather-board buildings the bedsteads are greatly in need of repainting, and the bedding is not in as good order as is desirable. In this division it does not appear that the separation into two separate yards, each senior attendant having separate and entire charge of his own patients, is as complete as it might be. I think a complete division, except when the patients are in the recreation ground, to be extremely necessary, since no one senior attendant can be responsible for the due care of the number of patients now in this division. I have recommended to the Medical Superintendent the employment of a number of the patients, especially in the criminal yard and in No. 3, in teasing horsehair so as to fill pillows and beds. The horsehair for these has been in the hospital store for some time, and patients who are unfit for and unwilling to do other work might be usefully occupied at this light and safe employment.

The number of patients on the book was—

	Male.	Female.	Total.
Convict and Free	572	207	779
Criminal	51	6	57
Total	623	213	836

Of these, 2 females were absent on trial under section 82.

It appears from the daily reports that the number attending Divine Service has increased, and on the 12th instant 149 male and 51 female attended. The number of wet and dirty patients shown on night report is females 5 wet and 5 dirty, and male 10 wet and 3 dirty. These numbers appear to represent about the average, and point to a considerable improvement in this respect.

The new boiler house for supplying hot water to the bath-rooms in two yards is at last in progress, but a long list of requisitions on the Colonial Architect's Department are still uncomplished with. The delay in the supply of furniture, and in carrying out alterations in the buildings, prevents some much needed alterations in the management of the Institution, especially in the arrangement for patients' meals.

I regret to find that the works in connection with the new division for female patients so urgently required are still at a standstill."

On one of my visits the Medical Superintendent brought under my notice some of the evils resulting from a money allowance made to certain patients who assist in the work of the Institution. This practice, which has been in operation for many years, and is a relique of the old convict and invalid establishment, is calculated to lead to breaches of the discipline of the Hospital, and I advise that these allowances should be permitted to cease gradually, and that careful inquiries should be made as to the sums possessed by these patients (some of whom, it is believed, have accumulated a considerable amount) with a view of placing these in the Savings Bank in their individual names.

On several of my visits stores, supplied from the Government Store Department, and manufactured in the gaols, were submitted for my inspection, and were found to be most inferior in quality, and quite unfit for use in an institution of this character. The tinware was especially bad, and some boots (made at Berrima Gaol) and shirts which I saw on April 20th were badly cut, badly sewn, and altogether most unsatisfactory. Such articles would not be received from a contractor, and they are charged for as a rule in excess of contract price, with the result of greatly and unfairly increasing the cost for stores in the Lunacy Department. The artisans on the staff of the Institution have, with the assistance of patients, carried out numerous minor alterations and repairs, but the absence of any vote on the Estimate for Public Works for 1880, for repairs to Hospitals for the Insane, together with the overcrowding, has prevented the execution of some much needed and extensive repairs to the buildings, a number of which are still in a most unsatisfactory condition. The existence of these ruinous buildings, and the absence of some of the essential requirements of an institution of this character, have seriously interfered with the good order and management of the Hospital, but in spite of these drawbacks very considerable improvements have been made during the year.

The completion of the new division for female patients will render further improvements, still much needed, possible.

HOSPITAL FOR THE CRIMINAL INSANE, PARRAMATTA.

There were 51 male and 6 female patients in this Institution on December 31st, 1879, and 21 males and 2 females were admitted during the year, making 72 males and 8 females, a total of 80 under care. Of these 4 recovered, 13 were transferred to the Hospital for the Insane at Parramatta on expiry of sentence or change of status, and 4 died. The number remaining on December 31st, 1880, was 53 male and 6 female, and the average daily number resident was 53.

The percentage of recoveries was 17.39 on the admissions, and that of deaths 7.54 on the average number resident. A number of the cases transferred to the Free division had been considerably benefited by Hospital treatment. Among the cases transferred were 4 under section 62 of the Lunacy Act, the patients

patients having become demented and no longer dangerous, and 2 who were awaiting trial, on the Attorney General declining to prosecute. In the remaining cases the sentences had expired. The following was the classification of the patients on December 31st, 1880:—

	Male.	Female.	Total.
Awaiting trial.....	14	...	14
Found insane on arraignment.....	2	...	2
Detained during the Governor's pleasure.....	22	5	27
Serving sentence.....	15	1	16
Total.....	53	6	59

A very great improvement has been effected in this Institution during the year. The corridors and verandahs have been painted in cheerful colours, the heavy iron bars have been removed, the old worn-out and cumbrous locks have been replaced by new locks similar to those in use in other institutions for the insane, the windows have been re-arranged so as to allow of freer ventilation. The dangerous iron skirting have been replaced by cement, and the yards have been laid out, turfed, and planted. These alterations have for the most part been carried out by the patients under the direction of the artisans and attendants of the Hospital, and have been accompanied by a marked improvement in the conduct of the patients, who have shown themselves responsive to their altered surroundings, and have taken an interest in, and benefited by, the occupation which the carrying out of these changes has afforded them.

HOSPITAL FOR THE INSANE, CALLAN PARK.

The number of patients in this Institution on December 31st, 1879, was 107, all males. The number admitted for the first time was 52, and the number re-admitted, 2. The transfers from other institutions were 5. The total number under care was 166, and the average daily number resident, 120. Eighteen patients—a percentage of 33·33 on the average number resident—recovered, and 2 were discharged relieved, 5 were transferred, and 12 died. The number remaining on December 31st, 1880, was 129. The deaths give the somewhat high percentage of 10·00 on the average number resident, and occurred for the most part in elderly men, of whom there was an unusually large proportion in the Hospital. Five of these were due to cerebral, 2 to thoracic, 2 to abdominal disease, and 3 to general debility and old age.

The statistics of the Institution are given in tables appended to the report of the Medical Superintendent.

I visited this Institution on January 23rd, March 9th, 25th, and 30th, April 8th, May 13th and 29th, June 9th and 28th, August 2nd and 5th, September 4th and 18th, October 12th, and December 12th and 17th, and on each occasion recorded the result of my visits in the Inspector's book.

The following are copies of the notes made at one of my inspections in each quarter:—

“March 9th.—I have this day visited this Hospital, and passed through all the wards and dormitories, seeing all the patients, except those employed in the garden. The number is now 113, and there have been 9 admissions, 2 discharges, and 3 deaths since my last visit of inspection. I saw, and examined particularly, all those recently admitted, and examined the papers sent with them, finding all in order. The general health of the patients was good, and they were free both from excitement and complaint, and sufficiently tidy in dress. The yards are improving in appearance, and a commencement has been made at stencilling and decorating the large dining-room. The kitchen and laundry-yard have been much improved by colouring the walls of an uniform tint, and the out buildings all look much better owing to being whitewashed inside. These yards require planting with creepers and flowers. I examined the statutory books and case books, and found all written up to date. The Medical Journal does not record any accident, and the amount of seclusion and restraint has been small. No one was secluded or in restraint at the time of my visit.

June 28th.—I have this day visited this Institution, and seen all the patients, speaking to each, and marking off each name from my list. The number now is 122. No increase from the number on May 12th. The general health is satisfactory, and 3 only were in bed—1 from general paralysis, 1 from epileptic excitement, and the third from old standing bladder disease. No one was in seclusion or restraint, and the Medical Journal shows that the latter is resorted to only on rare occasions and for a short period, and the former in few instances and chiefly for epileptic excitement. I heard no complaints, and there was a complete freedom from noise and excitement. Several of the patients are progressing most satisfactorily, and I signed the necessary discharge papers in two instances. The patients' dress was decidedly more tidy than at former visits, and by constant attention to this point I am sure that still further improvement in this respect will be made. I noticed that the attendants were either in old uniform or plain clothes, due to the failure of the contractors to supply requisitions made as long ago as February last. Special complaints on this subject have been made to the Treasury. The dormitories and day rooms were clean and in good order, and improvements are still in progress in the yards. I think some trees might be planted in No. 2, and that the grass will be better preserved if posts and chains are placed at some of the angles. A large number of the patients (30) continue to be actively employed in the garden and grounds, and a fair number (20) are usefully occupied in the kitchen, laundry, carpenters' shop, &c. The number attending Divine Service on Sunday last was 74, a very fair proportion. The amusement of the patients is promoted in every way by rounders and other games at the Hospital, by visits to Sydney to the circus and other places, and by visits to the associated amusements at Gladesville, as well as by trips in the launch. A dramatic and miscellaneous performance given by a number of ladies and gentlemen at the Hospital during the past week was a great success, and a band performance last Saturday was much appreciated. The night reports show that the average number of wet and dirty patients is not more than 3. The offices, kitchen, and laundry were clean and in good order. The tar paving in the yards is becoming very rough in places, and I strongly recommend that a fresh surface should be applied whenever required. The Superintendent reports that the contractor is somewhat troublesome as to delivery of articles, but that they are as a rule of good quality. The full supply of milk required for rations and extras is obtained from the cows belonging to the Institution, three new ones having recently been purchased. On the whole, the condition of the Institution is very satisfactory.

September 4th.—I have repeatedly during the past ten days visited various parts of this Hospital, and to-day, accompanied by the Medical Superintendent, I have passed through all the wards and seen all the patients therein, and also all those employed in the gardens, grounds, workshops, and offices. The total number is now 121, and there has been no admission since the date of my visit on August 5th. I found the patients quiet and remarkably free from excitement or complaint. The general health was good, and 1 patient only was in bed, this was D., mentioned in my last report, and who is now suffering from an inflamed burst patella as well as from continued abscesses around the shoulder. The patients were clean and fairly tidy in dress, but it is evident that constant attention to the attendants is necessary to maintain such a standard of tidiness as is desirable. The rooms occupied by patients were clean, and as a rule in good order. I think some improvement might be made in condition of all the dormitories, and especially those upstairs in No. 1 ward. The bedsteads in these were dusty, and the rooms generally showed some want of care. It is desirable that white counterpanes should be furnished for such of these rooms as are occupied entirely by quiet and better class patients, and this would decidedly improve the appearance of some of those upstairs. I would advise the discontinuance, as far as possible, of holystoning the pavement of the entrance hall and verandah, which leads to a large amount of dust in the dormitories

dormitories and elsewhere. The kitchen and laundry were clean and in good order, as was also the provision store in which I saw the provisions supplied by the contractor, all of which seemed equal to sample. My attention was called to a supply of brushware and shirts sent through the Store Department from one of the gaols, which were of a most inferior and unsatisfactory kind, and of which I ordered the return. The articles are all charged at a high rate and will not wear a tithe of the time of articles supplied by contractors. The chief attendant pointed out to me the great need of a slop-sink in No. 2 ward and of a straw-house. The latter was some months ago made the subject of a requisition on the Colonial Architect, and the former I directed to be at once supplied. I saw and signed the statutory books, which are correctly kept. There is not at present, and has not been since my last visit on August 5th, any one in restraint, and the instances of seclusion are few and unfrequent.

December 17th.—I visited this Institution on the 22nd ultimo, when I saw patients recommended for discharge, on the 12th instant when I attended Divine Service at which there was a large and attentive congregation of patients, and to-day when I saw all the patients, and with the Medical Superintendent visited every part of the Institution. The number of patients on the books is 125, and of these none are absent on leave. I saw and spoke to all, and examined into their mental and physical health. The amount of sickness is very small, and only 1 patient suffering from heart disease and epilepsy was in bed. I heard no complaints, and the general appearance of the patients was indicative of the care and attention bestowed on them. The general appearance of their dress was decidedly more tidy than at some former visits, and there was a marked absence of excitement and noise. No one was in seclusion or restraint, and the Medical Journal shews that restraint has only been resorted to during one day, and in the case of 1 patient, since my visit in October, and that seclusion is infrequently ordered, and as a rule only in cases of epileptic excitement. The Medical Journal records 1 fracture of the right clavicle in a patient J. B., and inquiry proved that the occurrence was purely accidental, and was due to a scuffle between two patients in one of the dormitories, during which one of them fell on the edge of a bedstead. From the daily reports it appears that 56 patients are usefully employed, that 83 attend Divine Service, and that only 6 are on an average wet and 2 dirty at night. I visited all the dormitories, day, and dining-rooms, and also the kitchen, stores, laundry, and out-buildings, and found all in good order. The rooms occupied by patients were particularly clean, and showed evidence of increased attention, whilst numerous minor additions and improvements tending to the comfort of the patients have been carried out under the direction of the carpenter on the staff of the Institution, with whom several patients are always actively employed. A large amount of useful work is in progress in the grounds, and the orchard and garden are carefully attended to. The latter has improved considerably during the past few months, and a large and varied supply of vegetables is now obtained from it. I saw the sugar, tea, bread, and other supplies received from the contractor, and found the quality quite satisfactory. Some complaints are, however, made by the Medical Superintendent as to the contractor's negligence in not supplying articles at the times required, and in sending short quantities and so necessitating the purchase of goods at the nearest shops. Advantage is taken of amusements at Gladesville to send patients, and cricket is played almost daily. On Sundays, and at other times, walking parties are arranged within and without the grounds, and every possible opportunity is taken advantage of by the Medical Superintendent to render the daily life of the patients as little monotonous as possible. The employment of a tailor has been recommended with a view to the saving of clothes and other stores, and at the same time making the patients' dress more tidy. I saw and signed the statutory books, and destroyed after examination all letters written by patients and detained by the Medical Superintendent."

The only accident of importance was a fractured clavicle caused by a scuffle between 2 patients whilst dressing in the morning, during which 1 of them fell on the edge of a bedstead.

The buildings, which are for the most part of wood, have been kept in repair by patients under the direction of the artisan and other attendants on the staff of the Institution, and by the same means a very large amount of minor alterations and improvements have been effected.

The religious services have been regularly conducted by the Church of England and the Roman Catholic chaplains, and I am informed that there is invariably a good attendance of patients. On one occasion on which I was present the congregation numbered upwards of 70.

The Medical Superintendent has made great efforts to organise amusements for the patients, and has encouraged cricket, rounders, quoits, and other games. Parties have been sent to the dances and other amusements at Gladesville, and the steam launch placed at the disposal of this Institution on one afternoon in each week has enabled a number of the patients to go for excursions down the harbour.

The erection of the New Hospital has proceeded with considerable activity during the year, but more than one-fourth of the contract time has elapsed, and it is doubtful if one-fourth of the work has been completed. The rapid increase in the number of patients renders it extremely desirable that this building should be finished within the contract time.

Advantage has been taken of the excavations for foundations, &c., to commence the reclamation of one of the bays. The amount which can be reclaimed is over 4 acres, and will form a much needed addition to the garden of the Institution, in a situation which will allow of sewage irrigation.

HOSPITAL FOR THE INSANE, NEWCASTLE.

On December 31st, 1879, the number of inmates was 124 males, 85 females; total 209. Five males and 3 females were admitted direct, and 3 males and 21 females were transferred from Gladesville. The total number under care was 241, of whom 132 were males and 109 females. Of these 2 were discharged to the care of friends, 1 was transferred to Gladesville, and 10 died. The death-rate was 4.60 on the average number resident, and, considering the feeble character of the patients, is extremely small. On December 31st, 1880, the number of inmates was 228, of whom 124 were males and 104 females.

The accommodation was increased by dormitory space for 17 female patients and 2 nurses during the year; the Superintendent having removed to a detached cottage within the Hospital enclosure, formerly occupied by the police magistrate, and his quarters in the buildings having been altered and fitted for patients. It was deemed necessary to transfer patients from Gladesville to fill this additional accommodation, and the Institution was as much overcrowded at the close of 1880 as at the same period of the preceding year. The dormitory accommodation at the close of the year was sufficient for 111 male and 70 female patients, so there were at that time 13 male and 34 female patients in excess of the numbers for whom there was accommodation.

The appended tables give the main statistics for the year, and some interesting details with regard to the patients.

At the close of the year 89 males and 83 females—a total of 172—were imbecile or idiotic, suffering from congenital defect, or an arrest of intellectual development, whilst the remainder were demented, the intellect after development having failed from different forms of brain disease. No less than 30 males and 32 females suffered from epileptic fits, but in several cases in which epilepsy was present on admission it had ceased under care and treatment, but not before it had permanently affected the mental condition. The majority of the patients—143 in number—were under 20 years of age.

The following are stated to be the causes of idiotcy or imbecility :—

	Male.	Female.	Total.
Congenital	49	50	99
Epilepsy.....	20	20	40
Fright.....	1	1	2
Disease of Brain and Hydrocephalus	5	2	7
Falls or Blows on Head in infancy or early life	2	4	6
Fall of mother during pregnancy	2	...	2
Imperfection of bones of skull	1	...	1
Fever	2	2
Teething.....	1	1	2
Unknown	8	3	11
Total.....	89	83	172

In a number of cases the malady is stated to be hereditary as well as congenital.

The only accidents during the year were two cases of fractured clavicle. In one, the patient, M. C., was pushed whilst coming down stairs by a fellow-patient, and in the other the patient, A. M., fell whilst running and struck his shoulder against the corner of a wall. I inquired into both cases and found that no blame was attached to any one.

The Institution has been quite free during the year from epidemic disease, and though measles were for months prevalent in the city, and several of the attendants' children suffered, no patient was attacked. I attribute this result largely to the care exercised by the Superintendent, and to the excellent sanitary arrangements of the Hospital. In one case a patient was somewhat thoughtlessly forwarded from another Government institution only ten days after recovery from measles, but precautions were taken to isolate him after arrival and to prevent any chance of infection.

I visited the Institution on January 14th and 15th, April 11th and 12th, June 10th and 11th, August 17th, October 28th, and December 30th, and the following are the entries made in the Inspector's book after three of these visits :—

“ April 11th and 12th.—I visited the Institution on both of the above days. On the first I attended Divine Service at which the Church of England chaplain officiated, and which was conducted with all possible decorum. About 60 patients, some of the attendants and nurses, and Mr. Cane and some of his family attended. The general behaviour of the patients was excellent, and the singing very good. Mr. Cane's son presided at the harmonium. In the afternoon Catholic service was held, and about 40 patients attended, so that a total of 100 patients attend Divine Service. On the 12th I thoroughly inspected the Hospital, and took care to see all the patients. At my last visit the numbers were—

	Male.	Female.	Total.
January 15.....	124	84	208
There have since been admitted direct	1	2	3
Total.....	125	86	211
	M.	F.	Total.
Discharged to care of friends	1	1	2
Died.....	3	1	4
Remaining	121	84	205

I specially examined the patients admitted since my last visit, and found all 3 to be fit subjects, and I saw the papers received with them, which were in due order. The deaths were due to chronic disease in feeble constitutions. I found the patients as a rule in fair physical health. There was no one in bed in the female division, and though 10 were in bed in the male, a considerable proportion were suffering from only trifling ailments. The ophthalmia has disappeared, though some weakness remains in one or two cases. Three cases of ringworm are under treatment. I found the patients quiet and happy-looking, and quite free from complaints. Their dress was sufficiently tidy, and that of the working patients, and of the males generally, decidedly better than at my last visit. I was glad to find that about 35 of the patients have now special suits which they wear on Sundays and holidays, and I think this should be extended to all who occupy themselves usefully, and are sufficiently cleanly in habits. There are still some points on which the dress may be improved; the present round cloth caps are unsuited to adults, and the white canvas or ticken dresses should have a waistband, and should be replaced by tweed or serge in all cases where the patients are not very dirty. On examination of the night reports, I find that an average of 15 males and 5 females are wet, and 11 males and 1 female dirty at night. The number of patients usefully employed is 24 males and 17 females. I examined the statutory books, which are correctly kept and written up to date. The Medical Journal records no instance of accident or injury since my last visit, and the amount of seclusion and restraint is small. I found 3 patients (A., S., and M.) in muffs, and 1 (J.) in a canvas dress, and I consider this restraint more or less constantly necessary for the present in all these cases, owing to faulty habits. One patient (A. C.) was in seclusion at my visit owing to epileptic violence. Since admission he has grown into a strong man, and as the paroxysms of violence are increasing in frequency, his removal to Gladsville is desirable. I passed through all the rooms occupied by patients, and found them clean and in order, and I made a special examination of the various out-buildings and offices. The kitchen, laundry, and other offices are much more tidy than at my last visit, and the kitchen apparatus works admirably, and admits of the dietary scheme being fully carried out. The new arrangement, by which there is a special nurse supervising the men and boys at the laundry, is working well. In the dormitories I noticed that the majority of the bedsteads require repainting, and this work should be undertaken at the earliest possible time by the carpenter and attendants. I examined the meat, bread, sugar, tea, coffee, vegetables, flour, arrowroot, cheese, and other provisions, all of which were good and equal to sample, and saw all the patients at dinner, which was well cooked and tidily served. Some

Some improvement in the arrangements are, however, desirable in the male division. The quantity of minced meat might be increased with advantage, and on this and on various minor points I consulted with the Superintendent. Various improvements are in progress in the garden and grounds. Since my last visit additional lavatory accommodation has been provided by the carpenter, and various works are in progress under the direction of the Colonial Architect. These include a verandah to closets, male division, additional drying posts in the laundry yard, repairs, &c., to new Superintendent's residence. There are, however, still some long outstanding requisitions, and among them one for repairs to verandah floor, asked for so long ago as May, 1878, is still unattended to, and the condition of this is really becoming dangerous. The water supply has been sufficient in quantity during the summer, but a large part of it was drawn from the well in the female division, which contains a large admixture of iron, and is somewhat turbid, though probably not unwholesome. The drying room at the laundry is most unsatisfactory, and some new arrangement of the flues is necessary. It has never worked well, and recently the fire came up through the plates on the floor and burned a quantity of linen. It is absolutely necessary that this should be put in order before the winter. I examined the departmental books, which are correctly kept. The visits of the medical officer and the chaplains are paid with regularity and sufficient frequency. The female division is much overcrowded, but some relief will be afforded as soon as the Superintendent can vacate his present quarters.

August 17th.—I have this day visited and inspected every part of this Institution, seeing the whole of the patients, and speaking to the greater part of them. At my last visit the numbers were—

	Male.	Female.	Total.	
There have been since admitted.....	123	84	207	
.....	...	21	21	from Gladesville
And	1	...	1	has died
Leaving.....	122	105	227	

I saw all the patients admitted from Gladesville, specially, and found that all were contented, and, with one or two exceptions, had improved in general health. The female division was clean and in good order, and some alterations have been made since my last visit. The rooms formerly occupied by the Superintendent have been arranged for 21 female patients and 2 nurses, and been fitted with the necessary lavatories, partitions, &c. The dormitories are very comfortable, but there is a want of day accommodation, and I have arranged with the Superintendent to erect a sun shed in the front garden to serve as an adjunct to the verandah and give the additional space necessary. The Superintendent proposes to set apart a room in the out-buildings, now unoccupied, for contagious diseases, and I think the proposal a good one. It should be arranged and kept always ready, and it will be advisable to place all patients admitted direct, in it for some days after admission, until they are found to be free from contagious disorder. I found the patients in the female division clean, tidy, and well cared for. Two only were in bed. No one was in restraint or seclusion, but the muffs are used in one case at night to prevent destructive habits. The male division was in good order, and various improvements have been carried out since my last visit. The upper verandah floor, which has been for such a long period out of repair, has been relaid through the Colonial Architect's Department, and a tar floor and seats have been placed in the recreation shed. The yards at the back have been levelled and properly laid out, and after a few showers will be covered with grass. The patients in this division were clean, and some improvement is apparent in their dress. It is, however, still too monotonous, and I strongly advise further attention to this. Colonial tweed clothing should be used for all cleanly patients. I found 9 patients in bed chiefly suffering from minor ailments, but there were two cases of ophthalmia, and all possible care should be taken to prevent this spreading. Two patients were in muffs at the time of my visit, and in both cases I considered this treatment necessary.

I saw and signed the statutory books, which are correctly kept, and examined the departmental records as usual. I saw the Official Visiting book, and ascertained that the visits of the Medical Officer and chaplains are paid with due frequency and regularity. On last Sunday it appears that 118 patients attended Divine Service. The provisions supplied by the contractor appear of good quality, and I saw an excellent dinner of meat pie served with order and care to the patients. The Superintendent complains with reason that the brushware and other articles supplied from the gaols through the Store Department are very inferior in quality. I saw some of the brushware, which was most inferior and really useless. The kitchen and out-buildings were in good order, and the kitchen range works most satisfactorily. The laundry arrangements are as yet in some respects unsatisfactory; the drying room is now quite useless, owing to the plates being burnt, and the fire from the furnace coming through the floor. Requisitions for repair of this are unattended to, and it will no doubt be advisable to utilise the waste steam from the kitchen for heating this room instead of the furnace. On the whole my visit has been a source of pleasure. It is evident that care and attention are paid to details of management, and that the Institution is progressing.

December 30th.—I have this day paid a lengthened visit to this Institution, and, after seeing all the patients, I visited the day and dining rooms, and dormitories, and also the kitchen, laundry, and other out-buildings. I saw, spoke to, and inquired into the mental and bodily condition of each patient, taking especial care to see each one individually. They appeared as a rule in excellent health, and very happy and contented. There are two or three cases of ringworm, and about the same of mild ophthalmia, all of which are under treatment by the Medical Officer. No one was in bed in the female division, and only 6 in the male, the maladies from which they were suffering being due to their feeble mental, and general condition. Although both measles and scarlet fever have been very prevalent in the city and district, and even among the families of married attendants, these affections have not appeared in the Institution. No female patient was in restraint, but 3 males are kept more or less constantly in gloves owing to bad or destructive habits. No one was in seclusion, and it appears from the Medical Journal that this is rarely found necessary in the male division. I found a youth (A. M.) with a fractured clavicle, and his own account of the accident, corroborated by that of the attendants, showed that it was due to an unavoidable accident which happened three days ago. The dress of the patients was sufficiently tidy, and the females as usual seemed especially well-cared for, and attended to in this and in other respects. I found the dormitories and day rooms clean and in good order, and the mattresses and bedclothing sufficient and clean. A large number of the bedsteads require repainting, and as soon as a fresh supply is received from England, which will be in a few weeks, I advise that a commencement to repaint and varnish the old ones should be made—work which can be carried out by degrees, and by the labour of patients and attendants. The laundry, kitchen, and other buildings were in good order, but in the laundry and in other parts of the Institution the woodwork and other parts require repainting. Some minor alterations to pipings, cisterns, tanks, &c., are much needed, and the new lavatory ranges in the female division are temporarily useless owing to the discharge pipes, which are much too small, being choked. Requisitions for these services have been furnished to the Colonial Architect's Office. A number of matters—some of importance—such as the alterations to the drying room, and the renewal of the gas mains, have been made the subject of requisition and correspondence, but are as yet unattended to, and furniture for the Matron's Office and attendants' rooms, asked for some months ago, is still unsupplied. The number of patients at my last visit was, male, 123; female, 104; total, 227. Two males have been admitted, and 1 has died since, leaving 124 male and 104 female now in Hospital. Of these, 28 male and 27 female are usefully employed. From the night report it appears that an average of 13 males and 6 females are wet, and 6 males and 3 females dirty at nights, a number smaller than formerly, and creditably small considering the class of patients. I saw the meat, potatoes, sugar, butter, oatmeal, and other articles of provisions supplied by the contractor, and found all of excellent quality. The Superintendent reports that the milk lately supplied has been of very poor quality, and by no means up to the lactometer standard. I have advised the rejection of all future supplies which are not of proper quality, and the temporary use of preserved milk in place of it. I saw and signed the statutory books, and spent some time in examining the store and provision registers and other departmental records. The papers received with the 2 patients admitted since my last visit are correct in form. The particulars of the cases have been duly entered in the case books."

TEMPORARY HOSPITAL FOR THE INSANE, COOMA.

The number of patients in this Hospital at the close of 1879 was 57, all males. Three patients were admitted direct, and 7 were transferred from Gladesville, making a total of 67 under care. Of these 1, an aged and feeble man, was transferred to Gladesville, and 2 died, leaving 64 on December 31st, 1880. The death rate was lower than at any other Institution. The causes of death were epilepsy in one case and pulmonary consumption in the other. I paid a visit of inspection to this Institution on April 27th and 28th, and November 8th, 9th, and 10th, and on both occasions found it clean and in good order.

The following are copies of the entries made in the Inspector's book at each visit :—

"April 28th.—I have yesterday and to-day inspected this Institution and seen all the patients, speaking to everyone, and marking off each from my list so as to be sure I missed no one. I found the patients quiet and orderly in conduct, tidy in dress, and having the general appearance of being well-cared for. Two or three look somewhat thinner than usual, but the general health is good. One man (H.) was so extremely pallid that, although he did not complain, I deemed it necessary to examine him specially. I found him fairly nourished, and free from all physical signs of lung mischief, and his pallor is no doubt due in great part to a habit of hiding away in corners and covering his face up with his hat. I heard no complaint, except such as were manifestly due to delusion, except in one case where a patient complained of several being bathed in the same water. On inquiry I find that never more than 2 patients are bathed in the same water, and this only when water is scarce. I have suggested an arrangement by which even this may be avoided, and fresh water, even when scarce, given to each patient. When plentiful it will, of course, be a rule to use the ordinary baths in the ordinary way for each patient. I went through the dormitories, saw all the single rooms, the dining-rooms, kitchen, store, laundry, and out-buildings, and found all as thoroughly clean and tidy as could be wished. A great improvement has been made by laying out and planting borders in various corners and other places, and these, now bright with flowers, serve to relieve very much the sombre character of the buildings. I examined the bread, meat, tea, sugar, cheese, butter, and other articles of provisions which, with one exception (the rum), seemed thoroughly good. The Superintendent reports favourably of the supplies furnished by the new contractor. I saw the arrangements for dinner, which consisted of meat-pie, well cooked, and properly served. The additional dining-tables asked for some time since have been supplied, but the table space is still scanty, and there is no room for more. I have suggested that 6 or 8 of the more quiet and useful patients should dine in the kitchen, at a separate table, after assisting the attendants to serve the others. The drinking mugs which I before suggested should be placed on the table have not yet been supplied. On an examination on the day and night reports I find that the patients are as a rule quiet and well-conducted by day, that there is little noise at night, and that there is an average of only 1 or 2 wet beds and seldom 1 dirty. The number usefully employed is now 28, and the number attending Divine Service 20. I think the latter might be increased by a little persuasion and care. The number now in the Hospital is 65. Two have been discharged, 1 has died, 1 admitted direct, and 7 sent from Gladesville since my last visit. I saw the papers received with all admitted, and find them correct. I examined and signed the statutory books which are correctly kept and written up to date. The Medical Journal shows that seclusion is not often resorted to, and that restraint has only been employed in the case of 2 patients since my last visit. In one of these the patient (W.) is prone to frequent, sudden, and dangerous attacks of aggression due to delusion. In the other (T.) the patient is so extremely destructive that he requires the exclusive care of an attendant when not in restraint to prevent him tearing his clothes, denuding himself, and getting into trouble by tearing the clothes of other patients. In this instance the muffs have been used for some time and almost continuously, and I have suggested to the Superintendent to dispose with them as much as possible, and to try a course of medical treatment. I saw the letters written by patients and detained by the Superintendent, and ordered all to be destroyed. The departmental books are correctly kept, and the chaplains and Medical Officers appear to have visited the Institution with commendable regularity and frequency. The supply of clothing is running short, and requisitions dated February 24th are as yet unattended to. I have to-day written to the Superintendent of Stores requesting that blankets, shirts, under-shirts, and thick winter coats, &c., may be sent as speedily as possible.

Requisitions for iron tanks, and blacksmiths' and carpenters' shops made on the Colonial Architects Department some time ago are as yet unattended to, and the plan of the Hospital required by Section 77 of the Act has not yet been supplied. The garden in front of the Institution bears evidence of assiduous care and attention, and the flower beds and borders inside are admirably kept. I strongly advise that all patients who can be safely trusted should not be confined to the small yard; but should be permitted as often as possible to enjoy the larger space now so nicely planted, and that additional seats should be placed in this. The kitchen garden is not so full of vegetables as usual, but it is undergoing a change in plan, a road being made completely through it so as to admit of carting wood, &c., and the ground being laid out in beds. This change has interfered with the cropping, but will soon be so far complete as to permit of the full amount of vegetables being grown. It is much to be regretted that the amount of land for cultivation is so small, and when once the present garden is in full order and bearing it may be possible and advisable to secure a further amount at some little distance by purchase or renting. The Superintendent reports favourably of all members of the staff under his orders, and the whole appearance and conduct of the Institution indicates attention, care, and unanimity of action, and is creditable to all concerned.

November 8th.—I have this day visited this Institution and seen all the patients, speaking to each one, and examining into their mental and physical condition. I heard no complaints except from one M. S., who stated that the attendants were unkind to him at bathing times. On inquiry I could not discover that there were any grounds for complaint, and as he subsequently expressed great dissatisfaction with his meals, and stated that no article except the bread was fit to eat, whereas I assured myself that the food was thoroughly wholesome and well cooked, I have no doubt but that his complaint as to the bathing arrangements was part of a general morbid discontent.

The patients as a rule seemed in fair general health, and were sufficiently, and, with two exceptions, tidily clad. Two or three seemed, however, to have failed somewhat of late, and H. H., who was in bad health at my last visit, is still extremely pallid and unwholesome looking. I saw two patients (F. L. and A. B.) specially in consultation with the Visiting Medical Officer, Dr. Daniell. The former, whose chest I examined, is suffering from commencing pulmonary phthisis, and the latter from commencing brain-softening, accompanied by some paralysis and mental hebetude. No one was in seclusion, and it appears from the Medical Journal that this is rarely found necessary. One patient (T. W.) was in muffs at my visit, and it appeared had been more or less continuously during the day for nearly three weeks owing to sudden and violent outbursts, during which he strikes his fellow-patients very severe blows. I have recommended that he should be again tried without the muffs. This is the only case in which restraint has been employed since my last visit.

The number is now 65, 2 have been admitted and 2 have died since my last inspection. Of the admissions, 1 was an epileptic in a condition of great exhaustion, who lived only a month after admission, and the other a case of melancholia in an aged and somewhat demented man. I have thought it necessary to recommend the friends of this patient, who is now better than on admission, either to remove him or to ask for his transfer to Gladesville, for which Institution his case is more fitted. Of the 2 deaths one was from exhaustion following epilepsy, and the other from bronchitis in a phthisical subject. I visited the day, dining-rooms, and dormitories, and also the kitchen, laundry, stores, and out-buildings, and found every part of the Institution clean and in good order. The bedding was clean and sufficient in quantity, and the mattresses clean and in good order.

In the stores I saw the bread, tea, sugar, butter, cheese, rum, and other articles, and found all of excellent quality. The Superintendent reports very favourably of the manner in which the contractor is supplying the Institution. Complaints were made to me of the quality of several articles supplied through the Store Department, and especially of the galvanized ironwork, which has apparently been made in the galls, and is most inferior both as to strength of material and manufacture. I found that a very considerable portion of the attendants uniform asked for early in the year had not been supplied, and as the first contract taken has been annulled by the Government, owing to the contractor's misconduct, I recommend that fresh requisitions for articles unsupplied should be submitted. I saw a well-cooked and plentiful meal of soup with boiled beef and potatoes served to the patients in a clean and orderly manner, and the Superintendent reports that the maize meal added to the dietary at the beginning of the year is much appreciated by the patients, and is taken at breakfast by nearly all of them.

Considerable

Considerable improvement has been made in the vegetable garden, which is now judiciously cropped, and from which a fair supply of vegetables is obtained. Additional flower borders have been made within the walls, and the old ones, both within and without, are kept in excellent order, and do much to atone for the sombre character of the buildings. It would be a great improvement to cover some of the walls with creeping plants, and I have recommended the Superintendent to obtain a supply. The water supply has failed on several occasions since my last visit, and a supply is now and has for some weeks past been obtained from the creek by carting. This labour, however, almost monopolises the services of one attendant and the horse and cart, and as it is now apparent that the new tank does not furnish a sufficient quantity, it seems advisable that steps should be taken to deepen the well, which now only affords a scanty supply, to the level of the neighbouring creek, if this work can be carried out without any serious expense. Some of the requisitions on the Colonial Architect's Department have been complied with, but the contractor who has undertaken to erect a shed for blacksmiths' and carpenters' shops has delayed commencing the work for several weeks, and shows no signs of active progress. The boiler from which hot water is supplied for bathing is burnt out, and a new one is urgently needed. I saw and signed the statutory books which, with the case books, are correctly kept, and I examined also the whole of the departmental books and records, which are in good order. The day and night reports show that the number actively employed averages 29 or 30, and that the patients are as a rule much quieter, more self-controlled, and less faulty in habits than when they first came to Cooma.

The Medical Officer and chaplains appear to have visited the Institution with regularity and sufficient frequency.

The general condition of the Institution impressed me very favourably, and is in itself evidence of the care of the officers and the harmonious working of the staff."

RECEPTION HOUSE FOR THE INSANE, DARLINGHURST.

The number of patients who have passed through this Institution during the year has been 332, an increase of 20 on the number during 1879. Of these, 34, or 10.36 per cent. were discharged recovered, 1 was discharged to the care of friends, 286 were sent on for Hospital treatment, 3 died, and 6 remained at the end of the year. In addition to these, 1 was sent to the Central Police Court, and 1 to the Hyde Park Asylum for the Infirm and Destitute. In the first of these cases the papers received with the patients on admission were found to be incorrect in form, and in the second the patient was received on one medical certificate under section 15 of the Lunacy Act, and after admission was found to be so far intelligent that the Medical Officer of the Institution declined to sign the second certificate necessary for admission to an Hospital for the Insane. This patient, a young girl, was an apprentice from Randwick, and as the Directors of that Institution declined to receive her back she was forwarded to the Hyde Park Asylum, from which Institution, owing to the kindness of the Matron, she soon obtained a situation.

Of

Of the patients forwarded to Hospital, 233 were sent to Gladesville, 2 to Parramatta, 49 to Callan Park, 1 to Newcastle, and 1 to Cook's River.

I have paid seventeen visits of inspection during the year, and on every occasion have found the Institution thoroughly clean and in excellent order. There has been no accident of any kind. The medical treatment and the care of the patients has been thoroughly judicious, and the whole conduct of the Institution satisfactory.

The additions to the buildings were completed early in the year, and the increase in accommodation has afforded means of classifying patients and separating the more noisy and demonstrative from the quieter cases. The Institution now contains space for 13 patients of each sex, whilst, owing to the period of residence in this Institution having been shortened by the operations of the Lunacy Act, the average daily number of both sexes resident has only been 6.

Under these circumstances the question of admitting to this Institution the numerous doubtful cases in which neither the justices nor the medical practitioners are satisfied of the existence of real insanity, and which are now remanded to the Gaol for medical treatment, has again occupied my attention, and I have consulted the stipendiary magistrates sitting at the Central and Water Police Courts, as well as several of the justices who frequently occupy seats on the benches of those Courts, on the subject, and find them unanimous in opinion that this method of dealing with a certain proportion of these cases would be for the benefit of the patients, and spare them and their friends the distasteful association of the prison. If a judicious selection of these cases can be made, I can see no objection to the alteration, but a short Act of Parliament will be necessary, and provision should, I think, be made in this for certain restrictions so as not to throw open the door of this Institution to the habitual drunkard, suffering from *delirium tremens*, as the result of oft-repeated debauchery.

The following tables give the statistics of the Institution for the year :—

TABLE 16.

LICENSED HOUSE FOR THE INSANE, COOK'S RIVER.

The number of patients in this Institution on December 31st, 1879, was 133, and during the year 5 were admitted for the first time, 1 was re-admitted, and 9 were transferred from the Hospitals for the Insane, making a total of 148 under care. Of these 4 recovered, 2 were discharged relieved, 2 were transferred, 5 died, and 135 remained at the close of the year.

The recoveries give a percentage of 66.66 on the admissions, and the deaths a percentage of 3.79 on the average number resident. These results are in the highest degree satisfactory. Throughout the year 125 of the patients, all females, were maintained at the Government expense, and all vacancies caused by death, &c., were immediately filled up by transfer from other Institutions. There were 6 male and 4 female patients in the division devoted to private patients at the close of the year.

I visited the Institution on January 30th, February 27th, March 25th, May 6th, June 8th, July 9th, August 6th, October 5th, November 2nd, and December 23rd, on every occasion without prior notice, and invariably found the Institution clean and in good order, and the patients comfortable and well-cared for. On two occasions I saw the patients at dinner, at which a well-cooked and plentiful meal was provided, and I have several times examined the bread, meat, and other stores, and always found them excellent in quality.

A considerable improvement has been made in the appearance of the Institution by repainting throughout, a special building has been provided as a mortuary, a number of old bedsteads have been replaced by others of a much improved pattern, and various minor improvements have been carried out. The chaplains have visited the Institution with regularity and sufficient frequency, and the amusement of the patients has not been neglected.

By notice in the *Government Gazette* dated 22nd October, 1880, Alfred Roberts, Esq., H. G. Alleyne, Esq., M.D., and Wm. Owen, Esq., barrister-at-law, were appointed official visitors to the Institution under section 72 of the Lunacy Act, and have since visited the Institution about once a month. The only serious casualty which has happened during the year was a fracture of the neck of the thigh-bone in an aged woman. This was an unavoidable accident. The statutory books have been produced to me at each visit, and have always been correctly kept and written up to a recent date.

OBSERVATION WARD, H. M. GAOL, DARLINGHURST.

The number of admissions into this ward during the year under section 60 of the Lunacy Act was 52; and of these 27 were discharged back to prison, either having recovered or not being considered insane, 20 were sent to Hospitals for the Insane, 1 died, and 4 remained at the close of the year.

Some of the cases were for a considerable time under close observation before being either certified as insane or discharged. This ward has in addition been used for the reception of cases acquitted at the Sydney Courts on the ground of insanity, whilst awaiting the decision of the Governor as to their final destination, and also for want of other accommodation, for the cases of *delirium tremens* and doubtful insanity remanded from time to time by the magistrates sitting at the Sydney Police Courts. These cases have numbered 302 during the year.

The

* Not known.

The following return shows the number of cases admitted into this ward and their disposal :—

I inspected this ward in accordance with section 70 of the Lunacy Act on January 30th, March 17th, April 15th, June 15th, August 3rd, September 24th, and December 20th; and I have visited the ward on several other occasions to see special patients.

At all my visits I have found the ward clean and in good order, and the registers and report books carefully and intelligently kept.

The patients appeared to be judiciously treated, and in only one instance were complaints made to me. In this case the patient was with good reason supposed to be malingering, and I considered the complaints to be unfounded.

Some structural alterations in the cells which have been made during the year have conduced to the more careful and constant observation of the prisoners, but a special building for this purpose attached to and forming part of the Hospital buildings is still required, and, if provided, the present ward could revert to ordinary prison uses.

APPENDIX A.

Sir,

Lunacy Department, Hospital for the Insane, Gladesville, 28 March, 1881.

I do myself the honor to forward for your information a report upon the Hospital for the Insane at Gladesville for the year 1880, accompanied with the usual statistical tables.

On the 31st December, 1879, 330 males and 347 females, making a total of 667, remained in Hospital.

Of the admissions during the year 1880, 132 males, 115 females, making a total of 247, were admitted for the first time; 25 males and 29 females, making a total of 54, were re-admitted; and 9 males and 1 female were transferred from other Institutions for the Insane.

The total number of patients under care during the year was 496 males and 492 females, a total of 988.

The average number resident was 333 males and 353 females, a total of 686.

The numbers discharged and died in the year 1880, amounted to 161 males and 123 females, making a total of 284, of these 86 males and 51 females were recovered, 16 males and 17 females were relieved, 21 males and 32 females were transferred 2 males escaped, and were not recaptured, and 36 males and 23 females died.

On the 31st December, 1880, there remained on the Hospital Register 335 males and 369 females, of the latter, however, 3 were absent on trial, under 42 Victoria, No. 7, section 82.

In the table marked No. 1, these figures are shown.

The number of admissions for each year since 1870 is given in the following table :—

Year.	No. of admissions.	Year.	No. of admissions.
1870	197	1876	340
1871	277	1877	433
1872	268	1878	400
1873	296	1879	333
1874	312	1880	311
1875	337		

On the 31st December, 1879, 1 male and 1 female were absent on trial, and since that 7 males and 8 females have been removed on trial by their friends—of these 6 males and 4 females have been discharged at the termination of their leave, 2 males and 2 females have been returned as being unmanageable or suffering from an exacerbation of their malady, and 3 females were absent on the 31st December, 1880.

Although new patients of both sexes have been admitted into the Hospital for the Insane at Parramatta, and of the male sex into the Hospital for the Insane at Callan Park, it will be seen that the number of admissions in 1880 was only 22 less than in 1879.

Of the cases admitted, 66 were suffering from the various forms of dementia, 104 from simple or delusional mania, 115 from melancholia, 9 from general paralysis, 5 from general insanity, and 12 were idiotic or imbecile. On referring to table 10, it will be seen that the assigned causes of insanity in those admitted were mental anxiety and worry in ten cases, intemperance in drink in 18, the puerperal state in 18, epilepsy in 19, previous attacks in 47, hereditary influence ascertained in 30, other ascertainable causes in 11, and no cause was given in 114—no cause having been assigned in the papers forwarded with them or apparent afterwards.

The number of cases re-admitted was 25 males and 29 females, making a total of 54, and there were 9 males and 1 female transferred from other Hospitals.

Of the readmissions the average length of absence from hospital was 3 years and 1 month, the longest being upwards of 14 years, and the shortest 7 days.

The number of patients discharged recovered was 86 males and 51 females, making a total of 137, and giving a percentage of 45.51 upon the admissions.

The number of patients discharged relieved was 16 males and 17 females—total 33, which gives a percentage of 10.96.

The percentage of deaths and the average number resident was 10.81 in the male and 6.51 in the female, making a total of 8.60.

There was 1 case of suicide during the year, the particulars of which have been already reported to you.

The only serious accidents were 2. After a searching inquiry I was satisfied that in 1 case no blame attached to any member of the staff, and in the other I considered a nurse so far culpable that her immediate dismissal was necessary.

On October 19th a case of measles broke out, and subsequently 4 more male patients were attacked. Every precaution was taken to prevent the spread of the disease, and only 5 patients suffered from it.

Of the 311 patients admitted 193 were admitted by the order of magistrates, 68 were admitted by request of friends, 42 were admitted by request of officers in charge of Government Institutions, and 10 were admitted by transfer warrants issued by the Colonial Secretary.

I have thankfully received copies of the following newspapers free of charge, and desire to express my gratitude to the proprietors, viz :—*The Burrangong Chronicle, The Bathurst Free Press, The Bathurst Times, The Clarence and Richmond Examiner, Deniliquin Chronicle, Dubbo Express, Dubbo Dispatch, Grafton Argus, Maitland Mercury, Riverina Grazier, Wagga Advertiser, Wagga Express, The Western Examiner, Yass Courier, Australian Churchman, Bega Gazette, Social Reformer.*

Two copies of the following papers are forwarded for one subscription :—*Burrangong Argus, Goulburn Herald and Chronicle, Grafton Observer, Illawarra Mercury, Kiama Independent, Monaro Mercury, Queanbeyan Age, Southern Argus, and Western Post.*

The following donations for amusements have been received during the year, viz :—Mrs. B., £5; Mr. R. R. T., £5. The usual fortnightly dances have been regularly attended and enjoyed in the winter months.

Many dramatic and other entertainments have been given by friends, and cricket, rounders, hand-ball, bowls, and such out-door games have afforded much amusement and benefit to the patients.

Several very pleasant afternoons have been passed by both male and female patients in listening to the band of H.M.S. "Wolverine" and the Albion Band.

Mrs. Darvall and Mr. Salter as usual have been most kind in giving large quantities of fruit; and Mr. E. O. Smith, Mrs. Norton, Miss Morchead, Mr. Thomas Walker, Mr. T. Salter, Mrs. Stanger Leathes, Mr. Stone, Mrs. Lea, Mrs. Newton, Mr. Whetham, have kindly forwarded packages of illustrated and other papers for the benefit of the patients.

I have further to acknowledge the receipt of a wild goose from Dr. Creed, of Scone; a wood-hen and a number of palms from Captain Armstrong; two cockatoos from Dr. Little of Gladesville, and one from Mrs. Haydon; a kangaroo from Mr. C. W. Lawson of Mudgee; one albatross from Mr. T. Macansh; and two squatter pigeons from Mr. A. H. McCulloch.

I have also received from Mr. Asher Day, of the General Post Office, many large bags of unclaimed papers, &c., and from the Hon. A. H. Palmer, Colonial Secretary of Queensland, and Mr. B. D. Morchead, a large number of Queensland stag horn ferns and orchids.

Several parcels of papers forwarded anonymously have been gratefully received, and their perusal has been enjoyed by many of the patients.

The whole of the staff have given me the most prompt and willing assistance during the year, and their duties have been carried out efficiently.

I have, &c.,

THOS. M. JOSEPH,
Medical Superintendent.

APPENDIX B.

HOSPITAL FOR THE INSANE, PARRAMATTA.

29 March, 1881.

Sir, I have the honor to submit for your information my report upon the Hospitals for the Insane, Parramatta, for the year 1880, with the usual statistical tables. The number of patients in Hospital on 31st December, 1879, was 828, thus classified—

Free Male	544
Free Female	202
Criminal Male	51
Criminal Female	6
Convict Male	19
Convict Female	5
	828

The number of patients admitted was 124, thus classified—

Free Male	73
Free Female	28
Criminal Male	21
Criminal Female	2
	124

The number of patients discharged recovered was 41, thus classified—

Free Male	25
Free Female	12
Criminal Male	4
	41

The number of patients absent on leave on 31st December, 1880, was 3 females.

The number of deaths, was 53, thus classified—

Free Male	35
Free Female	12
Criminal Male	4
Convict Male	1
Convict Female	1
	53

The number of patients in Hospital on 31st December, 1880, was 839, thus classified—

Free Male	553
Free Female	205
Criminal Male	53
Criminal Female	6
Convict Male	18
Convict Female	4
	839

The total number of patients under care was 952.

The number of patients of all classes discharged recovered was 41, being at the rate of 39·4 per cent. of recoveries upon first admissions.

The recoveries upon the admission of free patients—male and female—was at the rate of 46·0 per cent.

The admissions of all classes numbered 124.

The deaths numbered 53, representing a low rate of mortality or 5·40 per cent. on all under care.

Some of the patients who died had reached an advanced age, and had been for many years inmates of the Institution. The oldest male patient dying during the year was 89 years of age, having been a resident for nearly 25 years. The male patient dying who had been longest in residence was 72 years of age, having been for 32 years an inmate. The youngest patient dying was 26 years of age, with a duration of residence of 9 months.

The shortest duration of residence in the male division was a man aged 80, after 21 days.

The oldest female resident was 84, with 7 years duration of residence. The longest duration of residence was 25 years, of a woman who died at 57 years of age.

The youngest female patient who died was 30 years of age; she had, however, been an inmate for 15 years. The briefest residence in the female division was for 14 days of a woman 42 years of age.

The average age of the men who died was 49 years and 4 months.

The average age of the women who died was 50 years and 3 months.

The average duration of the men's residence was 8 years and 9 months.

The average duration of the women's residence was 10 years and 8 months.

Two cases of sudden death occurred. An inquest was held upon each, and in accordance with the medical evidence produced, verdicts of death from apoplexy were returned.

One male patient escaped and has not since been recovered.

The health of the inmates has been remarkably good. There has been an absence of epidemics or any outbreak of contagious disorders.

No serious accidents or acts of violence by the patients have occurred, and no death has taken place from suicide.

There has been in the past year a happy immunity from severe sickness in the wards or amongst the old patients during the winter months, and the sanitary condition of the entire Institution has been singularly satisfactory.

The admissions have been numerous, and the percentage of recoveries bears favourable comparison with that of kindred Institutions.

Increased experience in, and enlarged observation upon, the working of the Lunacy Act of 1878, justify me in expressing my confidence in its useful and beneficial operation. Under its wise provisions the insane and their relatives are spared much of the pain and exposure formerly inseparable from the execution of the older Acts; and whilst the liberty of the subject is surrounded by numerous safeguards, and jealously protected, every precaution is taken to shelter the victim of insanity from the gaze of the idle and the curious; and he need no longer be exhibited in a public court as an offender against the laws before he is consigned to a place of retirement and protection.

The details of the Lunacy Act appear now to be fully understood and correctly executed; and, with but a few unimportant exceptions, all the necessary certificates and documents have reached me in strict accordance with its provisions. Many of the patients forwarded to this Hospital reach me after travelling long and weary journeys by rail and coach. It affords me sincere gratification therefore to be enabled to express my entire approval of the manner in which the police have discharged their duties to the insane whilst under their care. In every case that has come under my observation during the year, the patients have been treated with great kindness and humanity whilst under the temporary protection of the police. Although in several instances insane persons have been brought from a great distance, in no case has there been any evidence or complaint of harsh treatment or bodily injury. The police appear to have exercised both judgment and humanity in dealing with some violent and dangerous patients conveyed to this Hospital from a considerable distance.

The efficacy of the methods pursued by the Master in Lunacy in recovering maintenance proportioned to their means from the relatives of the insane is fully demonstrated by the large sums of money received by him during the past year. It is small compared to the cost and outlay of the Institutions, but large when compared with the revenue formerly derived from the same source.

It is astonishing how much larger an interest is felt in the insane by relatives having to contribute to their maintenance; now that payment is compulsory the recovery of the insane person supported is eagerly inquired after, and I know that insane persons neglected previously for years are now regularly visited and felt an interest in.

The various means whereby the insane of other countries or Colonies are grafted upon the Institutions of this Colony may be partially illustrated by the following cases. Sometime since an aged Irishwoman of very feeble mental organisation called at this Hospital to make inquiries for some of her missing children, from whom she had not heard for several years, and in whose interest she had left Ireland to seek and inquire for them. Her inquiries led to the discovery of one son and a daughter, then inmates of this Hospital; and further inquiry led to the production of two more daughters, then inmates of Yarra Bend, Victoria. In the history of this family it is evident that a heavy burden has been imposed upon this and the sister Colony, as it is hard to believe that those who counselled or undertook their emigration had the least hope that they would become good and useful citizens. Another case of recent occurrence is that of an old man whose friends appear to have paid his passage to one of the distant northern ports really to get rid of him. On the steamer reaching Sydney he came ashore, spent what little money he had in intoxicants, and after being in Sydney streets for some days ultimately wandered to Parramatta township, where he was taken by the police and finally remitted to this Hospital, a burden for the remainder of his life.

Instances of this class, supported by cases of insane patients landed direct from ships so soon as they reach the ports, seem to suggest a vigilant inspection before embarkation; and some system of reciprocity with the Colonies as regards the pauper and insane.

During the past year many alterations and improvements have been made around and within the Institution. Several of the recreation yards have been freshly laid out, planted, and turfed, and now present a very pleasing and agreeable contrast to their former bare and uncultivated aspect.

In this work the patients have been largely and cheerfully employed with considerable benefit to themselves, as manifested by increased mental quietude and improved bodily health.

The average daily number of patients employed is large, and their labour is distributed through various channels, as in the garden, farm, carpenter's shop, painting, ward cleaning, &c., &c.

The enlargement of the sewing room attached to the female division has afforded accommodation to an increased number of workers, and has been the means of encouraging many patients who were previously idle to join those more profitably engaged.

The amusement of the patients has, as in previous years, received the fullest attention, and many concerts and entertainments have been given, whereby several hundred people have been interested and amused. At various times a great number of the patients visited the Exhibition at the Garden Palace, and I am happy to state that no single instance of annoyance or bad conduct occurred; indeed, the liveliest interest in the Exhibition was taken by the patients generally, and no greater treat has been afforded them than being allowed to visit it. Whilst acknowledging the ready and valuable assistance rendered to the Institution by several amateur companies, I have specially to thank Mr. Ireland, of Balmain, for the generous and intelligent interest he has manifested in the amusement of the patients. He and his company, many of them relatives, have been several times during the year, and on each occasion have succeeded in affording to large audiences a considerable amount of amusement. The amusement room or theatre is large and amply provided with stage appurtenances, and I hope in the current year to meet some of the amateur companies again. I regret to say that by the general public but little interest is manifested in the welfare of this institution and its patients. Whilst the rich and generous freely bestow their gifts upon kindred Institutions, no mark of remembrance ever reaches this. Fortunately a liberal Parliament cheerfully bestows a sum annually for amusements and books, &c. But parcels of old illustrated journals, newspapers, or books are always welcome amongst so large a body of people.

During the year Mrs. Brown, of Cowerwell, presented the Institution with a large parcel of *Illustrated London News*, *The Queen*, and other papers, and the Secretary of the Pillow Mission, with her usual consideration, forwarded a bountiful supply of "Christmas letters, &c," and I can hardly express the delight and thankfulness expressed by those who received them.

Newspaper proprietors might also bear us in mind when making up their parcels, as no newspaper reaches us now, unless paid for.

To the Secretary of the General Post Office we are, however, largely indebted for the very liberal supply of old papers furnished during the year.

The chaplains have diligently and punctually attended to their important duties in visiting the sick and dying, and conducting with regularity the services of their several churches.

A great number of patients, men and women, attended each communion every Sabbath day.

I regret very much to have to report that the new buildings intended for the comfort and reception of the female patients remain almost in the same condition as they were at this time last year. No steps have been taken towards completing them, and this really excellent block of building remains useless and uninhabitable, whilst the female patients are consigned to such accommodation as is a standing reproach to an Institution dedicated to the care and alleviation of the most terrible forms of human suffering.

The main building is in such a condition as demands immediate repair. The safety of those called upon to dwell within its walls necessitates very early attention to this matter, and common prudence would suggest that it should not be much longer neglected.

During the year the water supply has been abundant and good. Fortunately the means taken to repair the dam before the last winter prevented any escape and waste, and throughout the summer we have had a full and wholesome supply. Nevertheless the construction of a dam and causeway as previously recommended, and urgently needed, must sooner or later be undertaken.

The protection of the premises has, to a certain extent, been provided for by the purchase of a fire-engine, with buckets, hose, and necessary appliances. These were much needed, as, in a large wooden structure, the dread of fire seems to be ever present.

By

By the employment of artizan attendants, a carpenter and a painter, much important work has been carried on throughout the various buildings. By their employment useful occupation is also found for some of the patients able and willing to work with them.

The large amount of labour employed during the past year has resulted in improving the comfort and appearance of many portions of the Institution, and in beautifying the gardens and recreation grounds.

The farm and orchard have been carefully cultivated and attended, and the produce of fruit and vegetables has been fairly remunerative. The return this year is rather less owing to the profit on pigs being reduced by the smaller number kept.

During the year the contractors have faithfully carried out their several contracts, and all the articles supplied have been of good quality, and in accordance with samples and conditions.

The stores have been visited frequently during the year by the Inspector General of the Insane and Board of Visitors, and the articles of diet examined and found satisfactory.

The average number of male patients employed in various ways was 206 daily. In the female division the average daily number usefully employed was 45.

The usual statistical tables will be found attached. I have made but one addition to their number, viz., a classification of the admissions for the year of the criminal insane with respect to the period at which insanity was recognised.

The staff of superior officers remains the same as in the last year. To Dr. Beattie, the Assistant Medical Officer, to Dr. Brown, and my more immediate colleagues, I am greatly indebted for zealous assistance and diligent co-operation in carrying on the anxious and increasing business of this large Institution, and for their kind and humane interest in the general welfare of the patients.

The staff of attendants and nurses has undergone but few changes. Collectively, they represent a highly efficient and intelligent body of public servants, cheerfully and contentedly discharging arduous and unpleasant duties with zeal and fidelity. I consider that the discipline of the service has been fairly maintained and every effort made to render the institution useful and efficient.

In the female division, surrounded by many obstacles and disadvantages, the Matron has carried on the duties with her usual good judgment, kindness, and attention, whilst the nurses and others under her control have yielded a ready obedience to her direction, and discharged their several offices with singular humanity and efficiency.

I have, &c.,
CHAS. TAYLOR,
Medical Superintendent.

APPENDIX C.

HOSPITAL FOR THE INSANE, CALLAN PARK.

Sir,

January 30th, 1881.

I have the honor to submit for your information a report upon this Hospital for the year 1880, and to furnish the usual statistical tables.

The number of patients in Hospital on December 31st., 1879, was 107.

The number admitted during the year 1880 was 59.

Of whom were admitted for the first time..... 52

Re-admitted..... 2

Transferred from other Hospitals..... 5

The number discharged during 1880 was 37.

Recovered..... 18

Relieved..... 2

Transferred..... 5

Died..... 12

The number remaining in Hospital on December 31st., 1880, was 129.

The total number of patients under care during the year was 166.

Of the 52 patients admitted for the first time 8 at least were new arrivals either from England or the neighbouring Colonies.

Particulars, as far as can be gathered, are appended—

T. A., arrived from England about 3 months.

J. M., arrived in the Colony shortly before admission.

W. B., insane on his arrival in an emigrant ship.

W. G., left London March 1st., 1880, admitted to Hospital May 12th., 1880.

W. H. S., sent from Queensland by friends while insane.

F. F., about 12 months in the Colony, during which time he has been twice in gaol with symptoms of insanity.

T. W., arrived in Brisbane late in 1879, travelled overland to Sydney, and was admitted to Hospital June 30, 1880.

H. V., had just arrived from New Zealand.

The general health of the patients has been good, all the deaths having been caused by chronic diseases (principally of the brain) and senile decay.

Of the 12 patients who died 6 were above 58 years of age, and the average age at death was 53 years.

All the dormitories in the new buildings have been occupied, and found satisfactory as regards space and ventilation.

The new airing court attached to ward No. 2 has been laid out and planted and the paths formed. The occupation of this court by patients has relieved the crowded state of No. 2 ward, and has given a much more cheerful view to the patients.

The tar pavement of the temporary buildings has worn very badly, and a great portion has required repairs.

The proportion of patients usefully occupied has been large. Of 129 patients remaining on December 31st, 1880, 55 were daily employed in garden, grounds, wood-yard, kitchen, stores, laundry, carpenters' and blacksmiths' shops, &c.

The gardener and patients assisting him have kept up a constant supply of vegetables for the use of the Hospital, and have considerably increased the amount of land under cultivation in the new garden.

The carpenter and patients under his direction have been busily engaged in preparing minor fittings for the wards, executing the repairs constantly required in the older portion of the buildings, and the additions and improvements so constantly called for in an institution of this kind. The kind of work has been varied, and comprised bricklaying, plastering, paperhanging, blacksmith's work, &c., in addition to the ordinary carpenter's work.

A number of patients working in the grounds have kept in order all plantations and avenues, advanced the trenching of the orchard, and kept up the supply of firewood, a sufficiency of which has been obtained from the grounds.

Notwithstanding the drought, the water supply has been sufficient, the water from the Sydney reservoir flows during the nights and fills the underground tanks in the Hospital, from which enough is drawn during the day to meet all requirements.

A line of telegraph was carried from Balmain to the Hospital, and the necessary instruments fixed on June 19th. This has proved a great convenience, as previous to that date it was frequently necessary to send messengers who could be ill-spared from their duties in the Hospital. The line has also been of service to the contractors for the new Hospital, and is still at their service when required.

The usual Sunday services have been held by the Church of England and Roman Catholic chaplains, and have been attended by large and attentive congregations.

The amusements have been more varied and frequent; the purchase of a piano having permitted the acceptance of various offers made by dramatic clubs to give evening performances. Cricket has been played daily throughout the season, and on most Saturday afternoons matches have taken place against local clubs or the inmates of other Institutions. The patients have also attended the fortnightly dances at Gladesville.

The Petersham and Balmain Alliance Brass Bands each gave several afternoon performances, which were much appreciated, and for which thanks are due to the conductors, Messrs. Douglas and Summers.

The Balmain Royal Amateur Dramatic Club, at the instance of Mr. B. N. Jones, gave two very enjoyable evening entertainments, and thanks are tendered to the ladies and gentlemen taking part therein.

The following donations have been received during the year :—

Mr. J. J., £5.

Mr. G. Allerton, 4 years' numbers of "Graphic" and "Dark Blue" magazine.

St. Leonard's School of Arts, by C. H. Woolcott, Esq., A large quantity of papers, magazines, and periodicals.

Mr. John Keep, A basket of oranges.

Mr. W. Maddock, Books and periodicals.

The officers and attendants have performed their duties cheerfully and well.

I have, &c.,

R. B. SCHOLLES,

Medical Superintendent.

To the Inspector General of the Insane.

1881.

NEW SOUTH WALES.

NAUTICAL SCHOOL SHIP "VERNON."

(REPORT FOR THE YEAR ENDED 30 JUNE, 1881.)

Presented to Parliament by Command.

The Superintendent N.S.S. "Vernon" to The Under Secretary of Public Instruction.

Sir,

N.S.S. "Vernon," 1 July, 1881.

I have the honor to submit my Annual Report of the Nautical School Ship "Vernon," for the year ended 30th June, 1881, for the information of the Minister of Public Instruction.

2. The usual tables (fourteen in number) are embodied, and give particulars of the business and conduct of the institution for the past twelve months, with but little need of explanation. Table 1 shows the admissions and discharges, and it will be seen that these outnumber those of any preceding years, 108 having been received, and ninety-two discharged.

3. The sanitary condition of the inmates still retains its high standard, and will compare favourably with any other establishment of a like nature. The total number of cases of sickness of all kinds for the year was fifty-one; and this would not have been reached had it not been for measles attacking over thirty of the lads, owing, as I have reason to believe, to the disease having been imported here by visitors during the prevalence of the complaint in Sydney.

4. The boys, when sent to the ship, are usually in the poorest condition, through the neglected life led on shore, and suffering from skin disease, want of proper nourishment, effects of dirt, vermin bites, &c. The rapidity with which a change in their health and physique is effected by the wholesome diet and discipline of the ship must be considered satisfactory. A case was not long ago reported in the columns of the daily press of Sydney giving an idea of the condition in which children are sent here; and a perusal of a short extract which I beg leave to quote from one of the metropolitan newspapers will lead to a conception of what is not the least of our difficulties. Five children, four of whom were sent here, were apprehended under the following conditions:—They had formerly been inmates of one of our asylums, from whence they had been removed upon the petition of their father, and the manner in which this man fulfilled his parental duties is thus described:—

"The father, dissolute and vicious, in company with a worthless woman, led a life of disgusting savagery, camped at the water reserve, Moore Park; the whole party slept on the ground, without any covering except their ragged clothes, until they literally sweltered in filth and vermin. The sergeant upon approaching them at 8:30 p.m. found the stench sickening, the children in a frightful state,—half famished, diseased, nearly blind with ophthalmia, so dirty that they looked like blacks, and covered with the veriest rags. They were brought up at the Water Police Court, where they excited both pity and abhorrence."

5. No deaths have occurred during the past six years, and at the present date, among a total ship's company of 180, there is but one case of illness of any kind,—a boy suffering from general debility, who is quickly gaining strength under generous diet.

6. The usual drills have been engaged in, and with satisfactory results, the smartness, healthiness, and improved bearing of the boys testifying to the value of this part of the system of training, which is carried out, as far as is practicable, according to the routine of duties upon the training ships at home. Gun, musketry, cutlass, and a portion of the light infantry drills have been regularly prosecuted, in addition to fire-drill, sail-drill, manning yards, pulling and sailing boats, knotting, splicing, &c., and we are at present employed in thoroughly overhauling the spars and rigging, in the accomplishment of which we have stripped the vessel to the lower masts, and have found it necessary to remove the main lower-mast and replace it with a new spar. This is as heavy work as can be done by the crew of any vessel, entailing the handling of masts and yards some tons in weight. Upon the completion of the process of refitting, which will yet occupy some time, the experience gained will doubtless prove of much practical value to those among the older boys likely to adopt the sea as a profession.

The great value of a systematic course of drilling in all schools, but more especially in those of the nature of this institution, in being conducive to order, improvement of bearing, and personal neatness, with other reasons, are now generally recognised by all competent authorities.

7. Where so large a number of boys is congregated as is the case on board—many of them very small—it is a matter of importance that the most perfect discipline should obtain, as serious results would be likely to occur in the event of fire and other accidents taking place. As a practical proof of the order on the "Vernon," I would instance the case of an outbreak of fire in the store-room, where large quantities of oil, tar, pitch, and other inflammable goods are kept, on the 27th January last, at 3 a.m., when, with the exception of the officer on watch, every one was asleep.

Annual Report, 1881.

Tables giving full particulars appended. Admissions and discharges more than in former years.

Satisfactory sanitary condition. Total number of cases of sickness, fifty-one.

Boys sent on board in a dirty, debilitated condition.

An instance of the condition in which boys are received.

No deaths for six years.

Usual drills.

Important work now being performed.

Value of drill as a reformative agent.

Safety of boys requires perfect discipline.

Outbreak of fire on board at 3 a.m.

Fire speedily
quelled by boys,
who showed
coolness.

The boys behaved well and quietly, and showed promptitude and coolness under trying circumstances; they rigged the engines and hoses, having large supplies of water from the four various means of supply; they got the boats ready for lowering; small boys mustered on poop, &c., in a very short time from first alarm.

Much other work
performed.

8. In addition to the various drills and time occupied in school, many other duties are performed by the boys which fully occupy their time: Decks are to be washed daily, outside of vessel to be cleaned, boats to keep in order, water to be procured in our pinnace from the shore and pumped into the hold four times weekly, clothes to be washed—this is done three times weekly, each boy washing his own—clothes to make and repair, hammocks and beds to make, repairs to ship, rigging, boats, &c.

Value of labour
on board.

The estimated monetary value of the work done on board will be gathered from the following industrial return for the past year:—

Monetary value
of industrial
training—£1323.

72,000 pieces of clothing washed, 1½d.	£450	0	0
Painting ship, inside and out, three times yearly	50	0	0
„ masts and yards	12	0	0
„ boats	10	0	0
General rigger's work	100	0	0
Repairing awnings, sails, tarpaulins, &c., hammock clews	30	0	0
Making and repairing hammocks, beds, &c.	50	0	0
Making hoods for hatches, hammock-cloths, &c.	30	0	0
Cooking and general steward's work for officers and crew, performed by 1 officer with 11 boys as assistants	175	0	0
Fishing-net making and repairing	45	0	0
General blacksmith work performed	100	0	0
Carpenter's work—constructing hospital with fittings, repairing spars, boats, book-presses, forms, and general work	120	0	0
Repairs to clothing	50	0	0
Jumpers made, 269, at 2s.	26	18	0
Trousers, 266, at 2s.	26	12	0
Flannels, 446 at 1s. 6d.	39	9	0
Caps, 207, at 1s.	10	7	0
Total	£1,323	6	0

To this should be added the value of the time occupied by the officers in instructing the boys in the trades, seamanship, &c.

Recreation.

9. While it will be seen from the foregoing that the boys have been kept well occupied during working hours, the necessity of providing recreation for their leisure time has not been overlooked. An excellent library well stocked with illustrated periodicals—the works of Dickens, Ballantyne, Marryat, and other well known authors, with abundance of chess-boards, draughts, dominoes, solitaire and other games, is open for their amusement of an evening; solo and chorus singing are much indulged in; entertainments with a dissolving view apparatus have been given; cricket and other games on Cockatoo Island, while frequent excursions on Saturdays up Middle Harbour, Lane Cove, and various parts of the harbour have taken place. During the summer months fishing (both net and line) has been largely engaged in, and proved a great source of enjoyment. I have personally instructed a large number in the proper mode of net-fishing, and many large hauls of fish of all kinds have been made on the various beaches about Balmoral. At the usual regattas the gun-boat and firing party have on every occasion been supplied by us; and at the last Anniversary Regatta we were successful in winning a prize of £5 5s. for rowing. All of these amusements are open to every one on board, and deprivation of them forms our principal corrective measure for misconduct, the disciplinary method of treatment in force being based upon a class and mark system initiated by me in 1878, which has proved successful in its results, and enabled us to dispense with a large amount of corporal punishment. Although the greater portion of our lads come on board with the worst of characters, their conduct on board has been satisfactory, and has given us but little uneasiness or cause for anxiety.

Excellent library

Boys experi-
enced net-fishers

Attendance at
regattas.

System of re-
wards and
encouragement for
good behaviour.

System initiated
in 1878 proves
successful.
Good behaviour
of boys during
year.

Vocal and in-
strumental
music now
taught.

10. Since my last report two important additions have been made to the routine of duty on board—the teaching of vocal music and the establishment of a brass band. The singing is systematically taught under the “tonic-sol-fa” method, and fair progress is being made. The boys forming the brass band—the instruments for which were presented by the Sydney and suburban residents—commenced their instruction in November last, and are progressing rapidly and successfully under the tuition of the band-master and bugler, who deserve praise for their unwearied good temper and patience. The boys are now able to play well some twenty tunes, and the band is a great source of pleasure and amusement not only to the inmates of the institution but to the surrounding neighbourhood.

Gratifying visits
from former
inmates.

Kindly feeling
towards Com-
mander and
officers on part
of former in-
mates.

Letter from one
who had years
ago been a boy
on board.

11. We have had several visits from boys who have at different times been members of the ship's company, and a large number of letters from “old boys” has been received.

I have not thought it out of place to give here copies of a few among a number recently to hand, as the best evidences of the kindly feeling entertained towards their old officers and companions by boys who have left the ship.

One who has long completed his term of apprenticeship is now in business for himself. He thus writes under date of yesterday:—

Dear Sir,—I received your letter, and you will excuse my not answering your kind and friendly note before. I am progressing very favourably with my business, and am getting to be very well known amongst business people. You asked me if I was married. Well, you were correctly informed. I must say I am far better off married than I was single. On the whole, I am enjoying life as well as man can expect. I must now conclude with best respects and kind wishes. I am, yours respectfully,

Letter from boy
apprenticed to
sea.

My dear Captain,

“I have now got a good place and I like the island very well, and I am learning to be a farmer and a seaman also. I had a very pleasant trip in the “Alacrity.” We came from Sydney in three days. We had fair winds; we were just in time to see the sham fight; I have fine sport pig-hunting and fishing and goat-hunting. Captain Armstrong is very kind to me, and gives me plenty to eat and drink. Captain Armstrong gave me a very nice rifle and bayonet.

I remain your friend,

J. G.
My

Lord Howe's Island.

My dear friends,

I now sit down to write these few lines to you, hoping to find you all well on board, as I am all right myself at present. I am getting on very well up here, and were you coming up, and tell Jacob Spence to write to me as soon as he can to let me know how he is getting on. The weather is very fine. Give my kind wishes to all, and Mr. Komp, and Mr. Gorman, and Mr. Bailey.

Lemon Grove, Paterson, 21 July, 1880.

Yours truly,
P.M.

Dear Sir,

I now sit down to write you a few lines, hoping to find you in good health, as I am myself at present. We had a very long passage again, and I did not like to write to you before, as I wanted to see as much of London as I could. I went on board the "Exmouth," and it opened my eyes when I saw how large she was. Captain Boucher made me quite at home, and was very glad to see me; he sent a boy to show me all round the ship. She has five decks altogether, and 601 boys on board; they have got all sorts of amusements for the boys; they have got a splendid brass band, with forty-five players in it. They have got no boatswains on board—they call everything away with the bugle. You could stow the "Vernon" in the water-ways without knowing she was there. There is twenty-eight officers altogether. I was also at the Crystal Palace. I was out of my time a month ago, but I am going back A.B. and donkey-man. Respects to my best friends.

Gladstone, East India Docks, London, September, 1880.

P.M.

My dear Sir,

I have much pleasure in letting you know where I am and how I am getting on. I am very happy here, and will soon be going to Sydney, when I will go to see you and all on the ship, and also my father, who has written to me, and has also been to see Mrs. Barton, at Ryde. I will be able to tell you better what I have seen and how I am getting on when I see you, so will conclude for the present, and

Dubbo, 5 February, 1881.

Remain yours, &c.,
D. G.

My dear Sir,

I write you these few lines to let you know how I am getting on with my work. People are very kind to me. I see plenty of native cats and opossums, and wallaby and bandicoots, and it is a very nice place. We caught a native cat on Sunday night; and there is a boy and a man working with me, and we are treated well. We have very good bedding; we are very comfortable, and we have good food; and the boy is a very good mate to me, and we both go together for the cows and horses. We have five horses and three cows. That is all I have to say at present.

Eisenfels, Nattai.

I remain, &c.,
J. V.

Dear Sir,

I am very thankful to you for getting me a good situation. I have got a very good master and mistress, and they are very kind to me, and I haven't got much work to do. My master often takes me out to his farm, about 8 miles, for a nice ride, and I enjoy myself very well. Dear sir, there is a circus coming up into Singleton very soon, and he is going to let me go to all sorts of amusements. Dear sir, I like Singleton very well; it is a very nice town. There is two or three "Vernon" boys besides me. I often see young Freeman, and Dummicks told me that he seen M'Lean. He lives about eight or nine miles out of the town, and young Freeman often see him, and he said he has got a very good master too. Dear Captain, would you let me know how Mr. Plummer is getting on; and who does he get to teach the tablet class instead of me? Dear sir, do not forget to answer this. That's all I have got to say at present.

Singleton.

I remain, &c.,
E. G.

Dear Sir,

I now take the pleasure of writing to you, hoping to find you and all my comrades enjoying the best of health. I wrote to you some time ago, but received no answer. Perhaps it did not reach your hands safely. Dear sir, I may now mention that my time of apprenticeship is nearly expired, and during my services to Mr. Cook I have found him, in every respect, an excellent master, and I have done all in my power to please him, and I have never wanted for anything. Dear sir, I think that I may stay with Mr. Cook after my time is up, as I do not think I can do better, having no idea of travelling about by myself. So, trusting this will find my old comrades all well,—

Quirindi, 22 Oct., 1880.

I remain, &c.,
W. R.

Dear Sir,

I thought I would write to you to let you know how I am getting on. I have had no beatings, but I deserved them over and over again, but the Mr. has often threatened me about it. You know that I can scheme a bit when I like, and that is what makes the master angry. I hope you are quite well, as I am myself just now. Give my best respects to Mr. Gorman and Mr. Mason, and tell them I have forgotten my past follies, and for the future I am going to be a good boy, because I know it will be for my own benefit. I hope all the boys are all quite well on board the ship. When you write, dear sir, tell me where Fraser went to. Give my best regards to Mrs. Neitenstein. And now I must say good night, with best regards to all on board.

Giro Station, 2 February, 1881.

I remain, &c.,
E. R.

Dear Sir,

I now take the pleasure of writing these few lines, hoping they will find you in good health, as it leaves me at present. I received your kind and welcome letter, and was glad to hear from you. Owen Tout told me that he went and seen the "Vernon" when he went to Sydney. I will come and see you when I come down. I finished my time the 29th of May, and I am still living with Mr. Mackay, and I don't think I will leave.

Upper Manning River, July, 1880.

I remain, &c.,
W.H.G.

The Superintendent, N.S.S. "Vernon."

Sir,

I am now six months living with my master, Mr. Waller. I am doing well and trying to be a good boy. My master says he likes me very well and he is kind to me. He put £2 12s. in the Bank for me. With loving and respectful regards,—

"The Grange," Wallarobba, 26 June, 1881.

I am your little friend,
J. McL.

12. On Sundays the boys have been landed in fine weather to attend Divine Service, marching about 2 miles to their respective churches, under the charge of officers. Religious instruction has also been regularly conducted on board, under the superintendence of the Reverend Messrs. Tress (C.E.), Dillon, Muraire, Tressallet (R.C.), and Mr. Ludovic, of the "Marist Brothers"; and the Sunday-school is under the control of Mr. Chilcott, who is assisted by a number of ladies and gentlemen, members of the congregation of St. Mary's, Balmain. To all these ladies and gentlemen too much praise cannot be awarded for their kind and generous efforts on behalf of my boys, who are sincerely appreciative of the interest taken in them.

Religious instruction.

13. A general idea of the educational attainments will be gathered from the particulars furnished in the attached table. The school is presided over by a duly certificated teacher, and is arranged upon a plan by which each boy receives three hours' schooling daily—one half the inmates attending in the morning and the remainder in the afternoon. A number of the younger and more ignorant, however, attend on both occasions, and this brings the average number present at each lesson to about 105. This accomplishes fair work, and is productive of as good results as can be expected, seeing that the majority only stay here twelve months prior to being apprenticed, and that they arrive on board for the most part entirely uneducated. At the last inspection by Mr. District Inspector M'Creddie, the following results were given in the "Observation Book":—

Educational attainments.

Assistant school-master needed.

Attainments.

First class.

Reading, fair to very fair.
Spelling, moderate.
Writing, fair.
Arithmetic, tolerable
Attention, fair.

Object lessons, tolerable.
Mental effort, tolerable.
Mental culture, tolerable.
General proficiency, tolerable.

Second

Second class.

Reading, fair.	}	Geography, fair.
Writing, fair.		Attention, very fair.
Dictation: writing, fair; spelling, $\frac{4}{5}$		Mental effort, tolerable.
Arithmetic, } indifferent to moderate.		General proficiency, tolerable.
Grammar, }		

Third class.

Reading, fair to very fair.	}	Geography, moderate.
Spelling, fair to very fair.		Mental effort, fair.
Writing, very fair.		Grammar, barely tolerable.
Dictation, moderate.		Attention, very fair.
Arithmetic, indifferent.		General proficiency, tolerable.

Observations upon the organization and discipline:—Order and discipline, good.

J. M'CREIDIE,
District Inspector.

14. The expenditure per head is shown by Table 10, the net cost being £23 13s. 10d., or a reduction upon last year's cost of £4 per head.

	Gross cost each,	1875	...	£	s.	d.	...	Total expended, £4,239
A daily number of 54 boys more maintained than in 1875, at £400 less cost.	do.	1876	...	41	0	0	...	do. 3,856
	do.	1877	...	35	0	0	...	do. 3,779
	do.	1878	...	36	15	0	...	do. 3,660
	do.	1879	...	36	1	9	...	do. 3,264
	do.	1880	...	28	7	9	...	do. 3,656
	do.	1881	...	28	11	3	...	do. 3,774
	do.	1881	...	24	13	5	...	do. 3,774

Not cost less than in any previous year.

Parents extremely reluctant to contribute.

See Reports, 1878, 1879, 1880. Magistrates should have power to make orders to contribute when sending boys here. Boys apprenticed to good situations enticed away by relatives. Example.

Another example.

History of a boy twice sent here under Industrial Schools Act who was enticed from a good situation by his father.

This gross cost is further reduced by contributions of relatives to £23 13s. In this amount is included the whole cost of repairs, painting, and other items, and the substantial reduction which has this year taken place is attributable to several causes, amongst which are the increase in our numbers, economy of expenditure, and contributions exacted from relatives of inmates. Of these persons it is right to state that they pay the smallest weekly sums, some as low as 1s. 6d., and only do so upon compulsion and after much trouble and patience is exercised to compel them to do so. £150 was paid into the Treasury this twelve months, being £34 more than last year. The difficulty experienced by me in performing this portion of my duties, which entails much correspondence, attendance at the Police Courts, and unpleasantness, has been shown in my last two Annual Reports. In 1880 I quoted from the Report of the Inspector of Industrial Schools in Victoria, and the suggestions made by Mr. Neale would cause a decided improvement, if they could be embodied in the Act in force in this Colony. These persons, many of whom are in easy circumstances, should, when able to pay, be made to feel the weight of their parental obligations, and the State should not be saddled with the whole expense attendant upon their criminal negligence.

15. The usual difficulty has occurred with some of the boys' parents upon the apprenticing of the children, and several employers have had their apprentices enticed away by these people, to the ultimate misfortune of the lads. One gentleman, who is a country clergyman, wrote to me a few weeks ago:—"C.M. has behaved well since he came here, but it certainly is not pleasing to hear, just after we have incurred the expense of clothing him, that his mother is planning to regain possession of him; we hardly know what to do, for access to this place is so easy that if she is determined it will not be difficult to decoy the boy away.—G.B." Another gentleman thus reports:—"Dear sir,—The conduct of the boy was all I could wish for while with me, but through his mother he has left me, and I have not been able yet to get him back.—J.P." The history of another boy, named G.T., will convey an impression of the length to which these persons will go to regain possession of their sons; and it will also show how, this being accomplished, they take no further interest in them, but permit the unfortunate children to roam about the streets, neglected and uncared for. This boy was first sent here in the latter part of the year 1879, aged 11 years, under the Industrial Schools Act; character, as stated in record-sheet, very bad. Prior to this, however, the extent to which his parents looked after him may be understood by the fact that he had been on various occasions convicted of stealing watches, money, confectionery, eggs, and tobacco. After being here twelve months, during which time his father petitioned for his release without success, he was apprenticed to a well-known gentleman, a Magistrate in the Albury district. This gentleman being unable to come on board himself, deputed a friend, resident in Sydney, to conduct the boy from the ship to the station, and he accordingly left here on the 15th January of this year. Two days after Mr. Ross wrote: "My apprentice absconded on the 17th, when Mr. F. was taking him from the vessel to the train; his mother took possession of him, and he had to call the police to his aid to prevent a rescue, and she told the boy as soon as possible. I spent a good sum in providing him with suitable clothes, all of which he has taken with him.—A. Ross." Four months after this he was brought on board again, under committal from the Water Police Court, on the 30th May, 1881, for being found in company with reputed thieves. He informed me that his father had sent him £3 to pay his passage to Sydney and to abscond from Mr. Ross's service. Upon his arrival on board he was found to be barefooted, covered with the dirtiest rags, and verminous; he had been convicted of stealing a cash-box and its contents from a house in Crown-street; he said he had done nothing but "knock about" since his return home, excepting working at a gingerbeer shop for a little more than a week.

"Vernon" has been 14 years in existence as an Industrial School. Résumé. 1,012 boys admitted.

16. The "Vernon" is now entering upon the fifteenth year of her existence in her present capacity, having been proclaimed an Industrial School on the 6th May, 1867, the first boy being sent here from the Central Police Court, Sydney, on the 20th of that month. Fourteen years have therefore passed away since her establishment, and during that time 1,012 boys have been admitted on board, the majority from Sydney; but nearly every Police Court in the Colony has sent us lads under the Industrial Schools Act of 1866. How this large number has been disposed of will be seen from the following particulars:—

Admitted on board during fourteen years	1,012
Apprenticed, or otherwise discharged	847
Remaining on board, 30th June, 1881	165

Of

Of the conduct of those apprenticed whose period of service is yet unexpired, and who are now completing their indentures, the following reports have been made to me within the last few weeks by the masters of the boys, in reply to my half-yearly circular :—

153 good.
9 indifferent.
5 absconded.
8 cancelled indentures (returned).
23 no report yet received.

Application has been made to the Inspector General of Police to cause an inquiry to be made into those cases where no reports have been received, and upon this being done the number of "goods" will probably be still further increased. As has been the case hitherto where persons have neglected to reply to my circular, the police have visited their residences and had personal interviews with both master and apprentice in the majority of such cases, finding satisfactory relations existing between master and boy. Of the eight boys returned with indentures cancelled during the twelve months just ended, one was sent back on account of severe illness; two were returned, as it was not considered that their employers were treating them properly; one was returned in order to be discharged to his father, and four for alleged ill conduct.*

Supervision explained.

17. Eleven boys have been apprenticed as sailors during the year, and all these are doing well. Most of our boys have a desire to go to sea, but, for the reasons detailed in my previous reports, much difficulty is experienced in procuring them suitable ships, in order to gratify their desire. Several more would, however, have gone this year had I been able to obtain authority to apprentice them before their proposed vessels sailed from port. The boys in the service of the Australasian Steam Navigation Company occasionally come on board during the stay of their ships in harbour, and in every instance have expressed satisfaction with their mode of life. What their employers think of them may be ascertained from the two following letters :—“Australasian Steam Navigation Company, Sydney, 1st April, 1881. Captain F. W. Neitenstein, Nautical Training Ship ‘Vernon.’ Sir,—In answer to your letter of the 29th ultimo, as to the conduct of the lads apprenticed to the Company from the ship under your charge, I have to say that we have received very satisfactory reports of their conduct and their willingness to learn from the different commanders under which they are placed.—I have, &c., H. E. NEWSHAM, Acting Secretary.” The other letter is as follows :—“Strange enough, one of your boys has just been with me requesting employment. He is out of his time, and bears a good character from Captain Fison, with whom he served. The others are apparently very decent, steady lads.—Yours truly, T. KNIGHT, Marine Superintendent.” Favourable reports have also been received from Captain J. C. Ellis, of Newcastle, and other shipowners having our lads as sailors.

All boys who have gone to sea during year are doing well.

Boys in service of A.S.N. Company.

Gratifying letter from the Company.

Boy who has served his time still following a seafaring occupation.

Best proof of the success of the “Vernon” as an Industrial School to be gained from opinions of those who have had apprentices from here.

18. With respect to the boys who are apprenticed to other pursuits, the best practical proof of the success attained by the “Vernon” in rescuing the neglected and vicious youngsters of the Colony may be gained by a perusal of letters, reports recently received, &c., which can be seen on board. I beg to quote a few extracts.

Mr. G. S. W. writes the following gratifying letter of the conduct of his apprentice who was bound to him after being twelve months on the “Vernon :—“The Grange, Wallarobba. The boy J. Mc., apprenticed from your ship to me, has turned out very satisfactory; in fact I was quite surprised to find that the boy was imbued with such good moral and religious ideas, and which I consider speaks volumes for what I might call the Christian training that he received. Doubtless a good many of the poor boys get into very bad hands, and then all is lost.—I am, sir, yours truly, G. S. W. I have told the boy to write to you.”

Of a boy who had been several times convicted prior to coming here, and who arrived on board with an especial bad character from the police, his master, a well known Magistrate of the Colony, thus reports, under a letter of this day's date.

Mr. J. R. Fairfax writes :—“In reply to your circular of the 5th instant, I am able to say that the lad Joseph Belpit Still conducts himself in a satisfactory manner. He has £10 2s. 6d. deposited in his name at the Savings Bank. I have requested him to write to you.”

Mr. J. R. Fairfax, S. M. Herald Office.

Mr. William Cook reports :—“I take much pleasure in answering your letter. The boy Featherstone is very good in all ways. I would not wish for a more attentive and willing boy.”

Mr. William Cook reports.

Mr. A. T. Bolton thus writes :—“In reply to your circular of 31st January, I have pleasure in stating that the apprentice referred to has up to the present behaved himself very well, and, I may add, has given me almost entire satisfaction.”

Mr. A. T. Bolton thus writes.

Mr. P. D. Blake reports :—“Bethel informs me that it is not unusual for the boys to be allowed to see their old messmates. I have therefore taken the liberty of sending him to the ship to-day without asking your leave; kindly let me know if I have broken any rules. Bethel has behaved himself very well indeed since he has been with me, and has given me general satisfaction.”

Mr. P. D. Blake reports.

Mr. H. P. Stacy writes as follows :—“I beg to acknowledge receipt of your letter of the 11th instant, and in reply beg to report that the boy apprenticed to me has conducted himself very well.”

Mr. H. P. Stacy writes as follows.

Mr. F. Stennett says :—“I have the honor to acknowledge your letter of 21st ultimo, in reference to my apprentice, Percy Medler, and have much pleasure in reporting favourably of his conduct generally. I find him attentive to his duties, obedient, and I believe honest.”

Mr. F. Stennett says.

Mr. E. H. Barton writes :—“I am in receipt of your circular letter, No. 81/71, of the 31st January, 1881, and in reply have much pleasure in stating that I am much pleased with the manner in which David Gibson has conducted himself, and have every hope as well as the desire to see him become a very useful member of society.”

Mr. E. H. Barton, of Cowal, writes.

Mr.

* Since writing particulars of boys' conduct, I have received this day, 1st July, through the kindness of the Inspector General of Police, reports from the Police in charge of the various districts, giving the result of their inquiries into those cases where masters had not replied to my circulars. Of the twenty-three boys of whom, as stated above, no reports were made, twenty receive very good characters, two have misconducted themselves, and in the remaining case the master showed so much indignation at the police making inquiry that he refused to give any information. I have since been given to understand the boy is doing well. (I might explain that to this gentleman had been sent three circulars prior to the police making inquiry, and no answer was received to any of them.) The result of these inquiries will therefore increase the number of “goods” to 174 and cancel the “no reports,” making this year's report of the conduct of “Vernon” apprentices much more favourable than that of any former year.

- Conduct of C. F. Mr. Charles Horwood thus informs me :—" I have much pleasure in answering your request concerning my apprentice, Charles Featherstone; he is a very good boy to work—he will soon be able to do man's work; he has had the best of health—he has not cost me 10s. for medicine since I have had him."
- Conduct of R. C. Mr. William Bell states :—" I beg to acknowledge the receipt of your letter dated 9th February, 81/205, and in reply I beg to say that hereto I have not placed any money to the credit of the boy in the Savings Bank, but should you deem it necessary I have not the slightest objection to do so, as it is immaterial to me how I pay him his wages. I also wish to add that I have no fault whatever to find with my apprentice. I find him a good, steady, and industrious lad."
- Conduct of A. Z. Mr. J. Jackson, of Redfern, writes :—" In reply to your letter, I have the honor to inform you the boy is getting on very well indeed, and the first opportunity he will write himself."
- Conduct of W. T. " I have the honor to acknowledge the receipt of your letter of the 19th instant, and to state in reply that my apprentice, William Tout, is a very good lad, and that he has conducted himself well during the time he has been in my service."
- Conduct of J. S., boy out of his time. Mr. Donald M'Kinnon thus favourably writes of a boy who served his full term of service :—" In reply to your circular, 19th instant, I have much pleasure in informing you that the boy John Latimer has conducted himself very well indeed; his term of apprenticeship expired about two years ago, but he is still in my employ."
- Conduct of C. W. Mr. Hill, of Dungog, thus writes :—" I beg to inform you that I have banked in the Savings Bank at Wingham (£39) thirty-nine pounds to the credit of my apprentice, Charles Walsh, being the amount of wages due to him. Charles says when his time is up he will go to sea."
- Conduct of W. M. Q. Mr. John Hags states :—" I beg to acknowledge the receipt of yours of the 31st ultimo concerning my apprentice, Walter Morley Quinn. I beg to state that he has behaved himself very well as yet, and appears to be very willing to do whatever he is asked to do."
- Conduct of R. C. Mr. Thomas Richardson, of Gresford, reports :—" I have nothing to complain of; my apprentice is a very good boy, and he is learning his work very well."
- Conduct of two boys. Mr. W. Newby, of Rocky Mouth, thus writes :—" In reply to yours of the 5th instant, it is with the greatest pleasure I have to inform you that the lads apprenticed to me from your ship have conducted themselves very well indeed during their stay with me."
- Conduct of W. T. II. Mr. Parnell, of Edith Villa, Glebe Point, reports :—" In reply to question No. 1 in your circular of the 9th instant, I have the honor to inform you that my apprentice has conducted himself on the whole satisfactorily."
- Conduct of W. W. Mr. John Johnson writes :—" I am happy to have to inform you that the boy's conduct up to the present has been very good. The boy is going to write to you himself."
- Conduct of J. D. Mr. Upton, of Emu Plains, states :—" In answer to your letter concerning the boy's welfare and conduct, he is a dutiful and very obedient boy, and I trust he will continue in the same way, I shall have no reason to complain of him."
- Conduct of H. W. Mr. W. Hanrahan, of Robertson, writes :—" My apprentice has conducted himself very well to the present time."
- Conduct of E. R. Mr. Alfred Cobb states :—" I have still in my employ John Firth, who has been out of his time over twelve months. E. Rogers has conducted himself very well. I have instructed him to write to you at once."
- Conduct of H. S. Mr. William Nicholson, J.P., writes as follows :—" Henry Spence has conducted himself to my entire satisfaction."
- Conduct of J. S. Mr. George Carter, of Boggabri, states :—" In reference to the boy Jacob Spence, I have much pleasure to inform you that he has conducted himself very well since he has been in this service."
- Conduct of J. M'G. Mrs. M. Harpur writes :—" I am glad to inform you that my "Vernon" boy J. M'Grath is doing very well."
- Conduct of W. A. Mr. Patrick Murphy, of Menangle, reports as follows :—" In reply to your communication of the 24th instant, with reference to the lad William Alburn, I beg to state that he has conducted himself to my entire satisfaction and with credit to himself."
- Conduct of E. G. Mr. A. Brown, of Roseville, writes :—" I have much pleasure in stating that my apprentice Edward Gandion has conducted himself satisfactorily."
- Conduct of E. M. Mr. James Conroy, of Glencoe, states :—" I have to state that my apprentice Edward Maroney has conducted himself very well; I have desired the lad to write to you as desired."
- Conduct of F. Y. Rev. Mr. Sheppard, B.A., of Berrima, writes :—" Footner is getting on very well; in the matter of moral education his progress is, I think, all that one would desire. An incident which occurred last October is worth mentioning in illustration of this. We were in Sydney on our way to the Hawkesbury for a holiday, and Footner was with us; passing down Pitt-street we came upon a band of arabs outside the *Evening News* Office; they were skylarking as usual, and I asked Footner if he would not like to join them and be one with them as he once was with such boys; his answer was not in words alone—I had evidently hurt the lad's feelings; his eyes filled with tears, and with unutterable disdain—I shall not easily forget it—he exclaimed, 'I should think not.' No more was said, but the boy's happiness was for a few minutes gone. He walked on to the Circular Quay without uttering a word or noticing anyone. An incident of this sort, it seems to me, speaks more concerning the lad's separation from old sympathies than anything one may learn from himself."
- Conduct of H. S. Mr. R. F. Campbell, of South Bellinger, states :—" In regard to the boy's behaviour I have no complaint to make; for over two years he has been very delicate, but now he is getting quite hardy—in fact this place is particularly healthy."
- Conduct of G. C. Mr. J. K. Mackay writes :—" In reply to your circular *re* boy George Clarkson, I beg to say that I have no complaint to make—he has behaved well so far. I will make him write you and give an account of his Bank account; I would like another boy when you have one to spare."
- Conduct of F. and S. Mr. J. R. Ruthven, J.P., of Gowrie, writes :—" Your circular *re* apprentices of the 19th April duly to hand, and should have been answered ere this but for my absence from home, and I forgot since my return until the Sergeant of Police spoke to me on the subject on the 7th instant. I sent him up to Gowrie next day, as I am staying here for a few weeks, where he saw the boys, and I presume will report to you. The conduct of both Fitzsimmons and Samuels has been on the whole good."

19. The following Tables will give various particulars in connection with the Institution :—

The Schoolmaster to The Superintendent, N.S.S. "Vernon."

Sir,

N.S.S. "Vernon," 30 June, 1881.

I have the honor to submit the following report upon this school for the year 1880-81.

The school is conducted as formerly on the half-time principle, and all the subjects prescribed for Public Schools by the Department of Public Instruction (including vocal music) are taught.

Considering the limited time many of the boys will remain on board, more time than usual is devoted to reading, writing, and arithmetic, these being more likely to be useful to them than some of their other studies.

The progress made for the time the boys have been under instruction is fairly satisfactory, though owing to the low mental power displayed by many of them it is impossible to expect very large results. In the Inspector's report upon the last examination most of the subjects are marked "fair," and the order and discipline "good." When this is taken into consideration with the character borne by most of the boys when they come on board, as well as the utter neglect of educational advantages previously, it must be evident that great improvement has been made.

I feel the less hesitation in making these remarks, as, having only been in charge of this school for about two months, I am not reporting on my own work, and therefore am able to speak impartially.

I have, &c.,

JAS. W. BALL,
Schoolmaster.

20. In conclusion, I would desire to express my great acknowledgments to Mr. Fosbery, the Inspector ^{Thanks to E.} General of Police, for the valuable assistance he has on many occasions rendered me; and I would also ^{Fosbery, Esq.} tender our thanks for donations of money (regatta prize), books, fruit, buns, &c., from Mrs. Hoskins, of London, Mrs. Darvall, Mr. C. J. Roberts, J.P., Mr. H. Taylor, J.P., Messrs. Stack & Co., the Anniversary Regatta Committee, and the Sydney Mechanics School of Arts.

The officers of the ship continue to render me every assistance, and perform their arduous duties with commendable zeal and interest.

I have, &c.,

FREDK. W. NEITENSTEIN,
Commander and Superintendent.

1881.

NEW SOUTH WALES.

STATE CHILDREN RELIEF ACT OF 1881.

(REGULATIONS UNDER.)

Presented to Parliament pursuant to Act 44 Victoria, No. 24, sec. 6.

Colonial Secretary's Office,
Sydney, 2nd September, 1881.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to make, under the 6th section of the "State Children Relief Act of 1881," the following Regulations in carrying out the purposes of the above cited Act.

HENRY PARKES.

REGULATIONS.

STATE CHILDREN RELIEF ACT, 1881. (No. XXIV.)

Meetings of the Board—Method of conducting business.

1. The ordinary meetings of the State Children's Relief Board shall be held at periods to be duly appointed, but special meetings may be called (if necessary) by the President, provided at least three clear days' notice (exclusive of Sundays) of such meetings be given by circular by the Secretary, to every member of the said Board. The President shall preside at all meetings at which he may be present, but in his absence any other member of the Board may be appointed to preside. Before any business can be transacted at such meetings, the minutes of the previous meeting shall be read, confirmed by the Board, and signed by the Chairman. The Boarding-out Officer's monthly report, and all correspondence and accounts received since the previous meeting shall then be submitted, and the Board may then deal with other matters of general business. There shall be a minute book kept of the proceedings of the Board, in which shall be entered the day and hour of each meeting, the names of the members present at such meeting, the business brought before the Board in detail, and the resolutions adopted in respect to such business.

Boarding-out Officer's duties.

2. It shall be the duty of the Boarding-out Officer to inquire into all applications for children, and also into all applications from persons who may desire to have their children placed out as boarders, or for adoption, or service. He shall when practicable personally visit every house in which a person applying for a child resides, and shall in all cases be held responsible for the selection of suitable homes for the children to be placed out, so far as it may be possible for him to accomplish that end by diligent and careful inquiry and the adoption of all necessary and proper precautions. He shall also take due care that parents are not enabled by false representation of their circumstances to relieve themselves of the care of their children, and improperly make them a charge upon the State. He shall further take care to ascertain the means of such parents, and any other facts concerning them that may be likely to assist the Board in deciding the extent to which they should be made chargeable for the maintenance of their children. All children placed out must be visited by him as often as conveniently practicable, and he shall adopt every means possible to ascertain the nature of the treatment the children have received since his previous visit, and the condition of their clothing, bedding, and sleeping accommodation. He shall submit to the Board once a month a report containing particulars of his visits and inquiries, and any suggestions which he may consider necessary in the interests and for the security and proper treatment of the children. He must, when lawfully directed, remove and place out any State child from any Asylum or Reformatory School, unless such child shall be exempt from liability to be boarded out as herein provided. And he shall, in the event of ascertaining that any child placed out is being improperly treated, have power, if directed by the President, to remove such child without notice from the custody of its foster-parent or employer, and immediately place it out again as a boarder or for adoption or service with any person whose application may have been approved of by the Board. He must also keep in the registers appointed for that purpose a record of every visit paid by him to each child, parent, or applicant for children, together with such a statement of particulars of each case as may be requisite for the information of the Board.

Secretary's duties.

3. It shall be the duty of the Secretary to keep all books of accounts, conduct all correspondence, and generally to do the whole clerical work of the Department, except that which has been already specified as appertaining to the Boarding-out Officer. He shall summon all meetings of the Board, and attend thereat to take minutes. He must keep a correct record in the proper books of all accounts between foster-parents and the Department, as well as of amounts due or paid by parents for the maintenance of their children, and by employers on account of or due to apprentices. He must be careful to pay once each month into the Savings Bank all moneys received by him on account of apprentices. Parents' contributions, together with any income of the Department (excepting moneys received on account of apprentices and from the Government), shall be paid by him at the beginning of every month into the Consolidated Revenue Fund. He shall keep a separate account in the ledgers for each child placed out, whether as a boarder or for service, and also a separate Savings Bank book for each apprentice. He shall render the apprentices' accounts to employers regularly as each half-year's amount falls due, and must take care that all payments to foster-parents for maintenance of children are promptly made as authorized by the Board.

And he shall be careful to notify to the Board at its regular meetings any neglect on the part of contributing parents or employers to pay moneys that may be due by them to or on behalf of children boarded out or apprenticed. It will also be his duty to see that all legal forms under which children are received from parents or placed out as boarders or for adoption or service are properly filled up and executed.

Appointment of Lady Visitors.

4. One or more lady visitors may be appointed by the Board in every district in which children are placed out. It shall be the duty of these ladies, or any one of them, to visit every boarded out and adopted child as often as conveniently practicable, but at least once a quarter; and report respecting boarded out and adopted children to the Boarding-out Officer at the end of every quarter, in the forms provided for that purpose (Schedule G), stating the apparent bodily condition and behaviour of each child, and all reasonable complaints made by or concerning the child against or by the foster-parents. These reports must be submitted to the Board at its meeting next ensuing upon their reception. All children placed out as boarders or for adoption must be inspected by the Boarding-out Officer as hereinbefore provided.

Lady Visitors to report in cases of emergency.

5. In the event of a lady visitor being aware of any emergency requiring prompt action with respect to children placed out as boarders, or for adoption, or service, she should communicate immediately (by telegraph if necessary) with the Boarding-out Officer, and inform him of the nature of the emergency, so that he may without delay take any steps that may be necessary for the protection of the child.

Applications for children—how to be made.

6. Applications for children, in the forms provided, for boarding out, adoption, or service (Schedule A), must be sent to the State Children's Relief Board, and must be accompanied by the certificate of a clergyman and magistrate or other approved person, as to the moral character and fitness of the applicants to be entrusted with the charge and training of children, such applications to state in general terms the circumstances and condition (whether married or single) of the applicants, their religious denomination, and the number of children in the family, as well as any other particulars that may be required.

Licenses for boarders.

7. Licenses, in the form prescribed in Schedule B, may be issued to persons desirous of receiving State children as boarders, provided that applications have been made in the proper form, and inquired into and reported upon by the Boarding-out Officer, and approved of by the Board. One form of such license to be issued to the foster parent, and a copy thereof to be kept in the records of the State Children's Relief Department.

Licenses for adoption.

8. Licenses to adopt State children may be issued in the form and under the undertaking prescribed in Schedule C, to any person who shall be held by the Board to be a fit person to receive a child for adoption, and after all the conditions set forth in the form of application have been complied with. One form of the license and undertaking will be issued to the foster-parent, and a copy thereof kept in the records of the State Children's Relief Department. Provided that any child so adopted may, upon the expiration of the period specified in the license, be apprenticed either to the foster-parent or such other duly licensed person as the Board may direct, except in cases in which the Board may consider it desirable to allow the child to remain permanently with the foster-parent, and be trained up in the same manner as if such child were the offspring of the foster-parent. Children who may be thus permanently adopted, shall be liable to be visited and inspected as provided for in the case of temporary adoption, until they are seventeen years of age, and if apprenticed to the foster-parent, shall be held to be liable to all the conditions appointed for apprentices in these regulations.

Indentures of apprenticeship.

9. State children may be apprenticed in the form of the Indenture set forth in Schedule D (if a boy), and Schedule E (if a girl), by and in the name of the Boarding-out Officer, who shall, subject to the direction of the Board, have power to legally enforce all the conditions of apprenticeship on behalf of the child. No child may be apprenticed for any term exceeding five years, or before the child is of the age of twelve years. And male children must, when possible, be apprenticed to learn a trade.

Applications for apprentices.

10. Applications for apprentices must be made in the forms provided for that purpose, and must contain all the particulars required in the said forms.

Payment of apprentices.

11. Payments will be made to children placed out as apprentices according to the following table, but these terms may be departed from in special cases to be approved of by the Board, and in the event of the child being over twelve years of age when placed out.

Period during which payments are to be made.	To be paid weekly by the Master or Mistress to the Apprentice for pocket money.	To be forwarded to the Secretary of the State Children's Relief Department, and be paid by him to the credit of the child in the Sydney branch of the Savings Bank.
1st year.	per week.	per week.
2nd "	"	"
3rd "	"	"
4th "	"	"
5th "	"	"

Apprentices to be visited.

12. Apprentices may be visited once in every six weeks and oftener, if it should be considered necessary, by a local lady visitor, who shall send in a report (Schedule F) quarterly to the Boarding-out Officer, in the form appointed for that purpose, and these reports must be submitted to the Board at its meeting next ensuing upon their reception. Apprentices must also be visited and inspected by the Boarding-out Officer as hereinbefore provided. The visitors should strive to impress upon the children the importance of fidelity to their employers, and discourage the habit of gossiping or talking about their private affairs.

Children to be exempted.

13. Any State child whose parent may wish to reclaim such child from any public institution shall be exempt from liability to be boarded out or placed out for adoption or service, provided it be shown to the satisfaction of the Board that the parent is a fit and proper person to have the custody of the child. And the Board may, at its discretion, direct that any State child whatsoever shall be exempt from boarding out, adoption, or service, under these Regulations, if circumstances should appear to justify such exemption.

Free carriage of children by railway.

14. The children to be placed out shall be taken to their destination in the custody of an attendant of any asylum from which they may be selected by the Boarding-out Officer or some person approved by the Boarding-out Officer, under directions from the Board. And such children, together with their attendants, shall have free carriage upon all Government Railways, upon

upon producing a certificate from the Boarding-out Officer that they are State children under conveyance to foster-parents or employers. And this certificate may be retained by the attendant, to enable him or her to have free carriage upon all Government Railways, when upon his or her return journey after the children have been so conveyed. It shall be lawful for any Railway Station-master on the Government Railways, and he is hereby required to allow children placed out under these Regulations to have free access to and from Public Schools by such railways.

Children's Outfits.

15. Every boy or girl on being placed out will be furnished with a box containing such articles of clothing as are specified in Tables Nos. 1 and 2 respectively, the box to have an inventory of the clothing affixed on the inner side of the lid; and every foster-parent or employer must maintain efficiently this scale of clothing by repairs and renewals, making all reasonable allowance for wear and tear—the clothing to be the property of the children—

Table No. 1—Boys' outfits.

2 caps or hats	2 suits	3 crincoan shirts
4 collars	3 night shirts	2 pairs of boots
4 pairs of socks	4 pocket-handkerchiefs	1 pair of braces

Small and large comb and brush, in a box.

For Protestant children, a Bible; for Catholic children, such book of devotion as may be approved.

Table No. 2—Girls' outfits.

1 hat	2 sunbonnets	2 print dresses
2 warm dresses	1 warm petticoat	3 chemises
3 pairs drawers	3 night dresses	2 flannels
1 pair of stays	6 pinafores	4 pairs of stockings
4 pocket-handkerchiefs	2 pairs of boots	1 winter jacket

Small and large comb and brush, in a box.

For Protestant children, a Bible; for Catholic children, such book of devotion as may be approved.

Foster-parents and employers to produce clothing.

16. Foster-parents and employers must, if required, on every visit from the Boarding-out Officer or lady visitor, produce the clothing of the child or children in their charge, in order that it may be compared with the inventory, and its condition ascertained, and also to permit the said Boarding-out Officer or visitor to inspect the sleeping accommodation of the child or children.

Medical Officer's duties.

17. A Medical Officer will be appointed in every district in which children are boarded out, whose duty it will be to attend boarded-out children (but not others placed out by the Board) in illness or in case of accident, either at the residence of the foster-parent or his own residence or surgery as may be necessary, and to supply all requisite medicines and medical appliances. Whenever possible the Medical Officer appointed under these Regulations should be the Government Medical Officer for the particular district in which the children are placed out. And if any child boarded out should meet with an accident or become ill the foster-parent must take such child, without delay, to the Medical Officer herein mentioned, if practicable, or otherwise the Medical Officer must at once be informed of the necessity for attending the child; and for such attendance and medicines the Medical Officer shall be paid at the rate of

Medical attendance to adopted and apprenticed children.

18. Proper medical attendance, nursing, and medicines, must be supplied to children placed out for adoption or service at the expense of the foster-parent or employer, as provided in the form of undertaking and the indenture of apprenticeship included in these Regulations.

Burial of boarded-out children.

19. In the event of any boarded-out child dying the foster-parent must arrange for the decent interment of such child, and immediately thereafter forward an account of the funeral expenses to the Board, by whom such expenses will be defrayed.

Burial of adopted children and apprentices.

20. In the event of any adopted or apprenticed child dying, the foster-parent or employer must arrange for the decent interment of such child, and the funeral expenses must be borne by the foster-parent or employer, as prescribed in the form of undertaking and indenture of apprenticeship included in these Regulations.

Moral and religious training of children.

21. It shall be the duty of the foster-parents or employers of the children to properly provide for their moral and religious training, to see that they say prayers morning and evening, and grace before and after meals; and the children must, when six years of age, be sent at least once a day to a church and Sunday-school of their own religious denomination when practicable. Provided that when no Protestant church or Sunday-school is available for Protestant children, or Roman Catholic church or Sunday-school for children of that faith, suitable Sunday lessons must be set for them at home. And the clergyman of the religious denomination to which the children belong must be allowed every reasonable facility for imparting to them religious instruction at convenient hours.

Children to be placed with families of their own religious faith.

22. Protestant children will be placed in Protestant families, and Roman Catholic children in Roman Catholic families. Provided that if there be no applications from fit persons of the same religious denomination as the children, then the children may be placed with fit persons of any other denomination. Provided further that the children placed out in the manner last stated shall, when practicable, be sent regularly to a church of their own faith, as prescribed in Regulation 21. And, when otherwise, they must be required to read at home, on Sundays, any suitable Scripture lessons or other religious books that may be directed by a clergyman of their own denomination—all such lessons or books to be provided by the foster-parent or employer.

Education of children.—School report.

23. The children placed out must be regularly sent to school when practicable after they have reached the age of six years, and must certainly attend not less than seventy days in every half-year, as required by clause 20 of the Public Instruction Act, unless proper cause for exemption can be shown. A printed Form of Report (Schedule J) will be sent to the schoolmaster of every district in which the children are placed out, who must fill up such form with particulars of the child's progress and general appearance during each half-year, and forward it within one month from the date of its receipt to the Secretary. Children placed out for adoption or as apprentices must be sent to school until they are fourteen years of age, unless it shall be shown that they have been educated up to the standard required by the Public Instruction Act of 1880. In the event of the foster-parent or employer residing more than two miles from a school, satisfactory provision must be made for the education of the child at home. Preference will, if possible, be given by the Board, when allotting children, to applicants residing within such distance of the nearest Public School as to admit of the regular attendance there of the children.

Children to be exempt from school fees.

24. All children placed out by the Board as boarders or apprentices may attend any Public School without payment of fees.

Payments

Payments for boarded-out children.

25. Children placed out as boarders with foster-parents residing in the country will be paid for once a quarter by money orders. These money orders must be sent by the Secretary to the foster-parents by post, and their receipt must be immediately acknowledged in the forms provided for that purpose. Foster-parents residing at convenient distances from Sydney will be required to call for their money at the offices of the Department, upon receiving information from the Secretary that such moneys are ready to be paid to them, unless otherwise arranged for. The rates of payments will be seven shillings a week for every child under three years of age, and for every child of three years and under twelve years of age five shillings per week, except in special cases, when the amount of payment may be fixed by the Board.

Parents to pay maintenance charge.

26. Parents who are able to contribute, wholly or in part, towards the cost of maintaining their children when placed out as boarders will be required to do so under the form of bond provided in Schedule H, in such sums, weekly or quarterly, as may be fixed by the Board, and all such payments must be made by cash or money order, and forwarded when due, addressed to the Secretary at the offices of the State Children's Relief Department, who will at once acknowledge their receipt in the form provided for that purpose. Any parent failing to make these payments may, at the discretion of the Board, either be summoned as an ordinary debtor at the nearest Court of Petty Sessions, or be proceeded against and dealt with as the law directs for child desertion.

Parent to resign control of apprenticed child.

27. Any parent wishing to have a child placed out by the Board as an apprentice will be required to give an undertaking, in the form prescribed in Schedule I, that he or she resigns all control over the said child and the earnings of the said child during the term of apprenticeship.

Boys and girls not to be placed in same family.—Separate sleeping-rooms.

28. Children of opposite sexes may not be apprenticed to or adopted by the same person unless they are brother and sister, and separate sleeping rooms must be provided by the foster-parents or employers for all children of opposite sexes above the age of seven years. When boarded-out children reach the age of seven years, separate sleeping rooms must also be provided for boys and girls.

Children absconding.

29. In the event of any child placed out under these Regulations absconding, the foster-parents or employers must immediately give notice thereof at the nearest Police Station, and also give notice, by telegram, to the Boarding-out Officer; and shall further make every effort possible to recover possession of the child.

Transfer of children.

30. No child may be transferred by foster-parents or employers, or placed under the permanent care of any other person, unless the proposal for such transfer has first been submitted to and approved of by the Board; and the Boarding-out Officer must, before such a transfer can be effected, ascertain that the person who wishes to receive the child is a fit person, and has complied with all the conditions necessary to qualify him or her to receive a child under these Regulations.

Foster-parents changing residence or leaving Colony.

31. Foster-parents or employers who have changed their residence must immediately thereafter inform the Boarding-out Officer of their new address, and no foster-parent or employer shall take a State child out of the Colony of New South Wales without first receiving permission from the Board.

Children not to be sent to paupers or publicans.

32. No child shall be placed out with any person who may be in receipt of Government relief, or holding a license for the sale of spirituous liquors.

Deductions for improper treatment.

33. Deductions may, at the discretion of the Board, be made from the quarterly payments to foster-parents for any neglect or improper treatment of the children.

Children to be allowed amusement.

34. The children placed out as boarders must be allowed to play at reasonable times when not attending school, and, if employed in any way, must only be placed at such work as will afford them easy healthful exercise and recreation. It must be distinctly understood that the children are not to be made the drudges of the household in which they are placed. It is imperative that the apprentices must not be put to do other work than that which they have been indentured to learn, and that, outside reasonable hours of labour, they must be allowed proper opportunities for amusement and healthy relaxation from work.

Parents to visit children.

35. The parents and friends of children placed out as boarders or apprentices, may, if they first show to the satisfaction of the Boarding-out Officer that they are persons of good character, be allowed to visit the children once a quarter, at convenient times, so as not to interfere with the children's schooling or employment, and the foster-parents or employers must keep a record of the dates and hours of such visits, and furnish a copy of it to the Boarding-out Officer at the commencement of every quarter: Provided that no such visit shall extend beyond one hour, and that the visits must be altogether discontinued if so directed by the Board.

Half-yearly reports from foster-parents and employers.

36. Half-yearly reports of the general conduct of the children placed out under these Regulations for adoption or as boarders or apprentices shall be forwarded to the Boarding-out Officer by the foster-parent or employer in the forms provided for that purpose. (Schedule K.)

Additional directions from Boarding-out Officer.

37. Foster-parents and employers must comply with any directions they may receive from time to time from the Boarding-out Officer, whether provided for in these Regulations or not, and subject to the approval of such directions by the Board.

Schedules, &c., to be part of Regulations.

38. All the Schedules and Indentures appended to these Regulations shall be read and construed as part of the Regulations, and it shall be lawful for such additional Regulations and conditions to be framed from time to time as may be necessary in the interests of the children.

Boarding-out officer to take legal proceedings.

39. The Boarding-out Officer shall be the proper person to initiate and carry out all legal proceedings in the name and on behalf of the Board.

Interpretation clause.

40. The various terms used in these Regulations shall have the respective meanings hereby assigned to them—that is to say:—

- "Board" shall mean the State Children's Relief Board.
- "President" shall mean the President of the said Board.
- "Boarding-out Officer" shall mean a Boarding-out Officer appointed under the "State Children Relief Act of 1881."
- "Secretary" shall mean the person acting as Secretary for the time being.
- "Department" shall mean the State Children's Relief Department.
- "Regulations" shall mean all Regulations framed under the "State Children Relief Act of 1881," and adopted.

SCHEDULE A.

day of

18 .

Undertaking.

To the Secretary of the State Children's Relief Board.

I, the undersigned, do hereby undertake to adopt and that I will bring h up as if were my own ; providing h with proper food, clothing, washing, and sleeping accommodation. I will use my best endeavours to have h taught suitable employment, and to train h in habits of truthfulness, obedience, personal cleanliness, and industry. I will endeavour, by precept and example, to promote the moral and religious training of the said child, bringing h up in the faith. I will take care that attends regularly at Church and Sunday-school of the denomination, until attains the age of sixteen years. I also undertake to send regularly to school, unless prevented by sickness, during all the usual hours for instruction thereat, until has attained the age of fourteen years, unless has obtained prior thereto the certificate prescribed by clause 20 of the "Public Instruction Act of 1881." In case of the child's illness I will at my own cost see that has prompt and proper medical advice, medicines, nursing, and attention, and will report the case to the Boarding-out Officer. I will at all times permit the child to be visited by the Boarding-out Officer, or by any person specially appointed by the State Children's Relief Board for that purpose. Should the child abscond from me or die I will notify the same at once to the Boarding-out Officer and the local lady visitor, and in the case of h death provide for and bear the cost of h decent and suitable burial. Should circumstances necessitate my residing outside the Colony of New South Wales, I will return the child to the control of the State Children's Relief Board unless the permission in writing for h to continue under my care is given to me by the said Board.

Witness :

Secretary.

Foster-parent.

Dated at

the

day of

18 .

NOTE.—This undertaking does not interfere with the right of the Board to remove the child, should circumstances render such a course at any time necessary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SYDNEY INFIRMARY.

(PARTICULARS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 12 July, 1881.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 1st April, 1881, a.m., That there be laid upon the Table of this House, a Return containing the following particulars respecting the Sydney Infirmary, from the 1st January, until the 31st December, 1880, viz. :—

“(1.) The total number of persons who received medical treatment during the above-mentioned period, distinguishing the number of males and females, of in-door and out-door patients, commencing with those cases showing the highest rates of mortality, with their scientific and popular names, and descending by gradation to those exhibiting the lowest number of deaths.

“(2.) The number of patients received into the Infirmary, who have died within forty-eight hours after their admission.”

(*Mr. R. B. Smith.*)

SYDNEY INFIRMARY.

RETURN showing the total number of persons who received medical treatment from 1st January until the 31st December, 1880, distinguishing the number of males and females, of indoor patients:—

There have been 2,612 cases treated in the hospital from 1st January to 31st December, 1880. Of these 1,843 were males and 769 were females.

There have been 7,224 cases treated by the District Surgeons, as out-door patients, from 1st January to 31st December, 1880. Of these 2,138 were males, 3,456 were females, and 1,630 were children. The sexes of children are not recorded.

Total number of persons treated, 9,836.

The number of patients received into the Infirmary, who have died within 48 hours after their admission, was 110.

RETURN showing the highest rates of mortality, with their scientific and popular names, and descending by gradation to those exhibiting the lowest number of deaths.

NEW SOUTH WALES.

VACCINATION.

(REPORT FOR 1880.)

Presented to Parliament by Command.

The Medical Adviser to the Government to The Principal Under Secretary.

Sir,

Sydney, 11 April, 1881

I do myself the honor to herewith enclose the annual return of vaccinations performed during the year 1880 by the Government Vaccinators in the country districts, the Superintendent of the Vaccine Institution in Macquarie-street, Sydney, and other vaccinators in Sydney and Suburbs.

Table A includes the returns from the country districts, and shows that 825 children under one year of age, 1,770 children from one to five years of age, and 1,977 children from five to ten years of age were successfully vaccinated in the country districts.

Table B gives the number of successful vaccinations in Sydney and Suburbs, as follows:—141 under one year of age, 227 of from one to five years of age, and 89 of from five to ten years of age, making a total of successful vaccinations during the year throughout the whole Colony of only 5,029.

I have, &c.,

H. G. ALLEYNE.

1881.

MEETING OF CABINET.

THURSDAY, 15 SEPTEMBER, 1881.

MINISTERS PRESENT :—

The Honorable Sir Henry Parkes, K.C.M.G.,
The Honorable Sir John Robertson, K.C.M.G.,
The Honorable Robert Wisdom,

The Honorable John Lackey,
The Honorable Sir George Innes, Knt.,
The Honorable Francis Bathurst Suttor.

L. H. J. Maclean, Esq., M.D., M.R.C.P., M.R.C.S., introduced to the Council :—

1. *Sir Henry Parkes.*] You have recently arrived in the Colony, Dr. Maclean? I have.
2. From India? From home.
3. Will you be good enough to describe your status in the profession—the diplomas you hold? I am a Doctor of Medicine, a Member of the Royal College of Physicians of London, and a Member of the Royal College of Surgeons of England. I have also passed the examinations required on entering the army.
4. The Government are desirous of eliciting your opinion on the question of compulsory vaccination, whether you are in favour of it or against it. I wish you to state what your views are, and, if you can, to give the experience upon which your opinion is founded, and if you can further do so to give some authority or some passage from your own experience in support or illustration of the opinion you give? My own personal experience has been such that I am decidedly in favour of compulsory vaccination. For a number of years in India I was in charge of the Vaccine Department of the district where I was located, and I certified to the vaccination of about 60,000 children.
5. How many years? Seven years.
6. What part of India? The Punjaub. The results were most favourable. We never had an epidemic of small-pox during the whole time I was in charge, and before vaccination was introduced small-pox was very prevalent in the district. I think when I am stating my own experience I am giving the experience of the whole of the medical officers who worked in the Punjaub with me.
7. Did you act there under a compulsory law? Yes, it is compulsory there. The Government being autocratic, orders were given to collect the children in every village, and the vaccinators had to go out to them to vaccinate.
8. Could you give any experience as coming within your own knowledge of the consequences where vaccination did not take place? I can only quote isolated instances where confluent small-pox has set in, and the patients have been carried off. During the time I was with the artillery there was not a case of small-pox, but then the men were all vaccinated on joining.
9. We would prefer you to state anything you desire to state in your own way, without questions, as much as we can? I would first like to draw your attention to the average of deaths from small-pox out of every 1,000 deaths from all causes during the last half of the last century—the half century preceding vaccination. For the ten years ending 1760, one hundred deaths; for the ten years ending 1770, one hundred and eight deaths; for the ten years ending 1780, ninety-eight deaths; for the ten years ending 1790, eighty-seven deaths; and for the ten years ending 1800, eighty-eight deaths. Now the table showing the same during the first half of the present century—the half century succeeding the introduction of vaccination—for the ten years ending 1810, sixty-four deaths; for the ten years ending 1820, forty-two deaths; for the ten years ending 1830, thirty-two deaths; for the ten years ending 1840, twenty-three deaths; and for the ten years ending 1850, sixteen deaths. Now the frequency of epidemics in London has been before protection as forty-two; during inoculation, as fifty-four. It was, I think, increased because every person inoculated formed a fresh centre of contagion. During the frequency of vaccination the number is as fourteen. All

our

L. H. J.
Maclean, Esq.,
M.D.,
M.R.C.P.,
M.R.C.S.
15 Sept., 1881.

our recruits on joining the army are revaccinated, whether they have been vaccinated in childhood or not, and in the reports of sickness in our army from 1817 to 1836 we find in the Dragoon regiments and Guards, with a strength of 44,600 men, a mortality of 627 men, and only 3 deaths from small-pox. Among the troops at Gibraltar 1 death only from small-pox occurred in a strength of 60,269 men, the whole mortality being 1,291. In the West Indies the same favourable results were obtained. Several epidemics ravaged the islands, and on a strength of 86,661 not one person died of the disease, the total mortality being 6,803, and amongst the black troops there was not one case of small-pox. From 1836 to the present time the same favourable statistics are recorded at the War Office. In the Prussian army, composed of a very heavy mass of men, 900,000 trained soldiers having been placed under arms in July, 1870, the same system of revaccination prevails as with us, and with results equally favourable. Now, to come at once to late records, Dr. Buchanan, Medical Officer of the London Board of Health, in his report gives the deaths in a million of unvaccinated persons at 3,350; in the vaccinated at 90; if under 20 years of age, 4,520 to 61; if under 5 years of age, 5,951 to 40 or 40½. In the Post Office Department on an average number of 10,500 all are required to undergo revaccination if not performed within seven years of entering the service. Not a single death is recorded in ten years, and only 10 non fatal attacks. In the Telegraph Department, where revaccination had not been carried out so thoroughly, 12 cases are recorded, each of the attacks being a person who had not been revaccinated. The Committee of the Epidemiological Society were requested by the Government to report on vaccination, and this is the substance of the report:—"That though it may be doubtful how far in this free country it is justifiable to compel a person to take care of his own life, or of that of his offspring, it can scarcely be disputed that no one has a right to put in jeopardy the lives of his fellow subjects. The principle of so using one's own as not to injure another's is one which has always been acted upon in our legislation as regards property and personal nuisances, and it is but an extension of the principle to apply it to questions of life and health." I may state also from Mr. Simon's Blue Book that the mortality in Copenhagen is but one-eleventh of what it was before vaccination was introduced, and at one time they succeeded in stamping it out altogether. Some two years afterwards they became careless, small-pox again found a footing in the country, and since then they have only been able to reduce it to a minimum; cases occasionally crop up. In Sweden it has been reduced a little over one-thirteenth; in Berlin and in large parts of Austria it is but one-twentieth; in Westphalia, but one twenty-fifth. I myself think that this, taken in connection with the large number of children in the great European States who remain unvaccinated, proves to us what a wonderful safe-guard against small-pox vaccination is. In fact some of our best authorities go so far as to say they consider that vaccination properly performed is almost as good a preventive as going through small-pox itself. Although we have in England a compulsory Bill that was passed in 1853, yet through no executive officer being appointed it remains more or less a dead letter, and it is in consequence of this that we have such an enormous number of unvaccinated adults and children in London.

10. I understood you to say that you are altogether in favour of compulsion being enforced by legislation? So I am.

11. Would you apply the compulsion to revaccination? I would hesitate in applying it, except in childhood.

12. Simply to children? Yes.

13. What about adults in such places as gaols and public institutions? I should certainly recommend revaccination, whether vaccination had been performed in childhood or not, but I would recommend it once only.

14. Would you make that compulsory? I would in the army, and I would make it a *sine qua non* in the gaols.

15. You would apply the principle to persons confined in gaols, hospitals, and other such places, but not to the population at large? No, I would not do that.

16. Will you kindly explain? I would recommend it only for people entering the Public Service. With regard to applying it to gaols it would be rather difficult to do it because the majority of sentences are very short. If there were any danger of an epidemic I would recommend it, but not before.

17. That could not be done in an emergency? No.

18. And not unless there was a law in existence to authorise it? No.

19. The question is whether you would recommend such a law? I would hesitate in doing that.

20. You see in Darlinghurst Gaol, which no doubt you are acquainted with, there are, I suppose, 700 inmates, without the officers, in the midst of a thick population? In a case of that kind of course a law would require to be passed, and in a case of that kind, situated as the gaol is here, it would be more advisable to have it done.

21. *Mr. Wisdom.*] Is it within your experience that diseases other than vaccine diseases are communicable by vaccination? There are cases on record.

22. From your experience? I never met with one.

23. Although you have vaccinated 60,000? Yes; I never met with, nor heard of, a case in India, and if a case had come under the notice of the Inspector General and he had declined to publish it in his report we should have had a private circular about it.

24. Are syphilitic diseases common in India? Yes.

25. And you never knew of a case such as I have mentioned from vaccination? No. There are cases, I know, on record.

26. *Sir Henry Parkes.*] From what source do you think that lymph used in vaccination should be obtained? I am in favour of the use of humanised lymph, because it has more effect on the human subject than animal lymph.

27. *Mr. Wisdom.*] With regard to the lymph taken from animals which is the more efficacious, that from a cow inoculated with small-pox, or that from a cow having the natural cow-pox? Both ought to be good. There are five spurious forms of cow-pox, and they all have similar effects on the system, but if you should be vaccinated from any of those spurious forms you are not protected from the disease.

28. Do you think that the vaccine matter becomes more efficacious by transmission through the human system? It becomes more powerful; it gains strength. The failures in vaccinating with animal lymph are put down to the want of skill on the part of the operators.

29. But have not several eminent medical men given opinions that vaccine becomes weaker by going through the system? Dr. Cameron, of Glasgow, has advanced that as a theory, but I suspect there are other causes

as well, such as our over-crowded cities, and diseases in various forms. Disease has undergone several important changes during the last 40 or 50 years. I know that Dr. P. M. Latham held that opinion, and he told me himself that he very rarely had recourse to general depletion, and notwithstanding that his success was not so great at Bartholomew's Hospital as in his first years of work there. The permanent members of the National Vaccine Board in London consider that vaccine lymph has not deteriorated by transmission. I would suggest, however, if the Government decide on introducing a Bill to render vaccination compulsory that the public should be at liberty to choose between humanized and animal lymph. A station for animal lymph could easily be established in the neighbourhood of Sydney. Dr. Jenner surmised that small-pox and cow-pox were one and the same disease. Dr. Baron confirmed this view. Dr. Gassner, of Günzburg, and Dr. Thiele, of Kasar, on the Continent; and in England, Mr. Ceely, of Aylesbury, and Mr. Badcock, of Brighton, have worked out Dr. Jenner's views in such a way as to prove that these two diseases are one and the same. Mr. Simon, the late Medical Adviser to the Privy Council, in one of his reports, when speaking of vaccination, says:—"That the infection of small-pox by inoculation can be communicated from man to the cow; that its result is an eruption of vesicles presenting the physical characters of cow-pox; that the lymph from these vesicles, if implanted in the skin of the human subject produce the ordinary local phenomena of vaccination; that the person so vaccinated diffuses no atmospheric infection; that the lymph generated by him may be transferred, with reproductive powers to other unprotected persons; and that on the conclusion of this artificial disorder, neither renewed vaccination nor inoculation with small-pox, nor the closest contact and cohabitation with small-pox patients will occasion him to betray any remnant of susceptibility to infection."

L. H. J.
Maclean, Esq.,
M.D.,
M.R.C.P.,
M.R.C.S.

15 Sept., 1881.

30. Have you had any experience of small-pox hospitals in India? Yes. When I have had two or three cases of small-pox I have recommended that they should be placed out at once under canvass, with an efficient hospital staff on the outskirts of the military cantonment.

31. Those were not regular hospitals? No, temporary hospitals. With the artillerymen I cannot remember having had a single case of small-pox. There were cases amongst the officers, but never amongst the men, and I attribute that entirely to revaccination.

32. Then you think that vaccination in childhood is not a sufficient prophylactic or preventive? No; I think that at the age of fifteen or sixteen it ought to be renewed.

33. *Sir Henry Parkes.*] There are inspectors of vaccination in England, I believe? There are public vaccinators appointed by Government.

34. Is it within your knowledge that they have reported that disease, especially syphilis, has been communicated by vaccination? No, not to my knowledge. I have read all the reports upon the transmission of syphilis by vaccination. Mr. Jonathan Hutchinson, senior surgeon of the London Hospital, brought forward a series of cases in 1871, and in 1873 he brought forward two more series, and the result, after having carefully studied these cases, was the conclusion that as long as the vaccine vesicle contained no blood it was very improbable that the disease could be transmitted.

35. *Mr. Wisdom.*] Have you known in your experience any deaths among infants from the vaccine virus? No; but I would not recommend any one to vaccinate a person in ill health or who is suffering in any way.

36. Which period of the year have you found best for vaccination? The winter.

37. In which season have you found the least disturbance affecting the system from vaccination? About the setting in of the warm weather.

38. *Sir Henry Parkes.*] Do you think that, in a place like Sydney, small-pox could be generated without being introduced from without? I do not think so.

39. How does it arise in the first instance? It is difficult to account for it. I daresay we have had some cases going on quietly without the Government being aware of them. People do not like telling the Government they have small-pox; it is only by the cases being ferreted out that they are discovered.

40. *Mr. Wisdom.*] The first case which ever occurred must have been spontaneous? It might have been brought from home.

41. But what *Sir Henry Parkes* wants to arrive at is, whether small-pox may have made its appearance here without being brought from without? I do not think so.

42. You do not think the disease is endemic here? I do not think it is; certainly not.

43. *Sir John Robertson.*] You told us you are convinced that the people are not so prone to take small-pox after having been vaccinated? Certainly not; the danger is reduced to a minimum.

44. Suppose a hundred persons were vaccinated, and among them were a dozen who afterwards took small-pox, would they suffer as much as those not vaccinated? No, in a modified form. I have had it in my own case in a modified form, and I have been vaccinated.

45. You have had it in a different form after having been vaccinated? Precisely so.

46. Have you ever known an instance of a death from small-pox where the person has been vaccinated before he took the small-pox? No, not one.

47. *Mr. Wisdom.*] But there have been numbers of cases where persons have died after being revaccinated? Isolated cases; they are very rare.

48. But they do occur? Yes. I do not say that vaccination will protect you altogether from confluent small-pox.

49. *Sir John Robertson.*] I think you said to *Sir Henry Parkes* you would scarcely recommend that adults in gaols be compulsorily vaccinated unless some necessity arose;—would it not then be necessary to have an Act of Parliament enabling the Government, under circumstances such as that, to do it? I think so; I think great discretionary power should be in the hands of the Government, but under the advice of their medical adviser.

50. *Sir George Innes.*] With reference to compulsory vaccination, you say that you are not disposed to recommend compulsory revaccination of adults; but in the cases of adults who have never been vaccinated do you think vaccination should be made compulsory? Well, medically, I think it ought to be done, but whether it could be carried out is another question. I do not think it could be carried out. Many things we could recommend medically could not be carried out. Of course it would be better if you could get it done.

51. With reference to communication of other diseases—and particularly syphilitic diseases—by vaccination, do I understand you to say that you do not believe in the possibility of communicating syphilitic diseases? I do believe in the possibility of communicating syphilitic disease.

52. That is in cases where the lymph is mixed with blood? I doubt very much whether syphilitic disease could be communicated in any other way. *Mr. Henry Lee*, one of our best authorities at Home, and formerly

- L. H. J. Maclean, Esq., M.D., M.R.C.P., M.R.C.S.
15 Sept., 1881.
- formerly on the staff of the Lock Hospital in London, holds the view that at certain times there are periods of what are called syphilitic activity in the system—that is, that secondary symptoms which have been lying dormant in the system assume a state of activity, and if a person be vaccinated at this time the commotion caused in the system by the vaccine virus will bring out the disease; but the cases are very rare, and the danger so infinitesimally small, that it is scarcely worth considering.
53. Have you ever known a case of a child being vaccinated from a person suffering from constitutional syphilis? Not of my own knowledge. Rollet, of Lyons, has done it frequently.
54. You say that other persons have experimented? Rollet, of Lyons, has done it, and with a negative result. In fact, to inoculate with syphilis is very difficult, because we fail in three cases out of four. It was proposed at one time to try and protect men from attacks of syphilitic disease by inoculation, and the failures were three out of four.
55. That is not unfrequently done, is it not, in France? It has been done in France, but it has been abandoned.
56. *Mr. Suttor.*] You are clearly of opinion that vaccination of infants should be compulsory? Yes.
57. And that revaccination should take place about puberty? Yes.
58. Then if you think that should be done at that time it ought to be made compulsory? Yes; but I do not see the possibility of carrying it out. That is the only objection I have. Of course when a recruit enters the army he is bound to have it done.
59. *Sir John Robertson.*] If a man forty years of age became a recruit would he be revaccinated? Age is no exemption from small-pox. It is not like typhoid fever. The greatest mortality from small-pox is amongst the aged and the young.
60. *Mr. Wisdom.*] Have you ever heard or read of physicians of any school administering the vaccine virus internally with a view to the prevention or cure of small-pox? No.
61. *Sir George Innes.*] Have you studied the homœopathic system? Up to a certain point—sufficiently to become acquainted with its fallacies.
62. *Mr. Wisdom.*] Would you like to recommend such a practice? No, I certainly would not.
63. Not even homœopathically? No.

Henry Norman MacLaurin, Esq., M.A., M.D., L.C.S.E., introduced to the Council :—

- H. N. MacLaurin, Esq., M.A., M.D., L.C.S.E.
15 Sept., 1881.
64. *Sir Henry Parkes.*] Would you be good enough, Dr. MacLaurin, to state to us the degrees you hold? I am a Master of Arts of the University of St. Andrew's, a Doctor of Medicine of the University of Edinburgh, and a Licentiate of the College of Surgeons, Edinburgh.
65. The Government are desirous of ascertaining from you what opinion you have formed as to the desirability and sound policy of making vaccination compulsory by law, and we would be glad if in stating this opinion you would give us the experience on which it is based, and such information as may occur to you in support of it, derived from other sources; we wish you to state your opinion in your own way? In order to get the greatest possible amount of protection against small-pox it would be necessary that the population should first of all be vaccinated in early childhood—in early infancy—and, secondly, revaccinated efficiently at puberty.
66. Would you make both the vaccination and revaccination compulsory? I am merely explaining what would be necessary to get all the protection which vaccination is capable of affording. It would be necessary to have vaccination of the whole population in infancy, and, secondly, satisfactory revaccination at puberty. It would also be necessary to have the vaccination inspected carefully, so that it should be seen that each vaccination and revaccination was satisfactory. It is admitted that no vaccination can be considered as perfectly satisfactory unless the resulting cicatrices cover at least half a square inch. If the cicatrice resulting from the vaccination does not cover half a square inch it is considered an unsatisfactory vaccination.
67. *Sir John Robertson.*] You mean the mark? Yes; one thorough primary vaccination and one careful revaccination at puberty are all that are required to practically give the population complete protection from small-pox; that is to say, as great protection at least as the population would have if it had had small-pox either in the natural way or by inoculation. That is the opinion I entertain as to what would be the result of complete vaccination and revaccination, but it would be necessary that it should be guarded by inspection. Now, in respect to the facts we go upon: When vaccination has been performed, even in the child, even with the effect of raising only a single vesicle, subsequent death from small-pox in childhood very seldom indeed occurs—this we know from statistics. Dr. Marson found that of 268 reputed vaccinated persons who died in the Small-pox Hospital, 191 having the vaccine cicatrice on their arms, only three had been vaccinated in the way shown to be most protective—that is to say, only three with good cicatrices covering half an inch square. Not more than one child in eight of the whole population was found to be so vaccinated as to have the highest degree of protection which vaccination is capable of affording, and that shows that even the unsatisfactory vaccination which had taken place in England was sufficient to give such protection that it was the very rarest thing to find a death from small-pox in a child. Upon these facts I found my opinion of the beneficial effects of vaccination in infancy, and of the necessity of inspection of the vaccination in infancy, in order to be certain that the full benefit is obtained, because a child may be improperly vaccinated, and among those there would be a very much larger proportion of deaths from small-pox. With respect to sufficient revaccination after that small-pox even in its most modified form is found very rarely or scarcely ever to occur, so that revaccination is a protection against—almost a complete protection against—even a mild form of small-pox. The facts given by Heim, a German physician, are as follows: He took five years during which small-pox was prevailing in 344 places in Wurtemberg. He took 14,384 revaccinated soldiers; he took 30,000 revaccinated persons in civil life; he took also 363,298 persons in civil life who had not been revaccinated, and some of whom had not been vaccinated at all. Among the 14,384 re-vaccinated soldiers living in these towns, in five years there was only one instance of modified small-pox—no instance of real small-pox. Among the 30,000 persons in civil life who had been revaccinated carefully there were only two cases of modified small-pox in the five years; and among the 363,298 persons who had not been revaccinated and some of whom had not been vaccinated, there were 1,674 cases of small-pox, and many of them very severe.

68. *Mr. Wisdom.*] Many deaths? Yes; many deaths. Then there is a fact given by Dr. Marson. In thirty years of his service at the Small-pox Hospital no nurse nor servant there ever took the small-pox, Dr. Marson having taken care to revaccinate everyone on their coming to the hospital. There had not been a single case in thirty years' time of any servant or nurse of the hospital taking small-pox.

69. *Sir George Innes.*] May they not have selected nurses who had had small-pox? No; they simply selected persons suitable for the office. Then for about 5 months they had a number of workmen working in the Small-pox Hospital, and most of these consented to undergo revaccination; not one of those took small-pox, but out of those who declined to be revaccinated several took small-pox. I think those facts are quite as many as are required. The same thing has been observed in the London hospitals of late. In the last ten years not a single case of small-pox has occurred among the servants or nurses at the Hampstead or other small-pox hospitals.

70. *Mr. Wisdom.*] They revaccinate there frequently? They revaccinate on persons taking service.

71. But when there is any epidemic they revaccinate? There are always cases of small-pox there. But the opinion of most authorities is, as I said before, that one thorough primary vaccination and one careful revaccination after puberty are all that are required to protect the population from small-pox. Of course a person brought into immediate contact with small-pox may think it wise to revaccinate more frequently.

72. I always thought it was the custom in the small-pox hospitals to revaccinate every seven years? In Germany some authorities believe that one revaccination is not sufficient, and that it should be done every ten or twelve years; but that is based on theoretical grounds rather than upon practical experience, because we have experience of persons being revaccinated once, and that in a large number of cases they do not take small-pox. But there is no absolute protection. All that vaccination can be expected to give is equally good protection to that which a man would have if he had had small-pox before. We know that revaccination gives a better protection than if a person had small-pox in infancy; that a person revaccinated carefully is safer from having small-pox or from dying from it than a grown person who has had it in his early youth.

73. *Sir George Innes.*] As to a compulsory law for vaccination—what do you say about that? There are various things to be taken into consideration. There is the extreme difficulty of carrying out a compulsory law in this country; the population is so scattered that you would find it difficult to do so. I might throw out as a suggestion that if it were possible it might be arranged that no child should be admitted to a public school, or to any school at all, unless there were evidence that the child had been sufficiently vaccinated to protect it from small-pox. There is no doubt that it would be a great advantage to the public if all children were vaccinated in infancy, and afterwards revaccinated.

74. *Sir Henry Parkes.*] Without reference to the peculiar difficulties arising from the position of this country, what is your opinion as to whether it is necessary to make vaccination compulsory by law for the protection of health? I believe it would be a very great advantage; I believe the general protection would be very much improved by making vaccination compulsory by law; but if you wish to get the full benefit that vaccination will give, you must have, first, vaccination; secondly, revaccination; and thirdly, careful inspection of the results.

75. But you think it would be advisable or beneficial for the public health for all those things to be secured by law? Most decidedly so.

76. I would like to ask one general question—whether, in your judgment, small-pox could be generated in a country like ours without its introduction from abroad; whether there might be such a combination of putrid filth and fever for the generation of disease as would produce small-pox without its actual introduction from abroad? I believe not; diseases breed very true; that is to say, the same germ always produces exactly the same condition of disease, and the same condition of disease requires the same germ to produce it. We have no instance on record of small-pox taking its origin in a country *de novo*.

77. How did small-pox originate? I believe it is an endemic disease of the valley of the Yang Tze and other river valleys in China. Just as you get the cholera in the valley of the Ganges, as you get the plague in the Euphrates, and the yellow fever in the Mississippi, so I believe you get the small-pox in the Yang Tze Kiang. It never made its appearance in Europe until about 1,000 years ago. It was only about that time that communication with the extreme east of Asia became fairly common, and it was with the commencement of that communication that small-pox made its appearance, and small-pox came from the east. That is my belief, though I would not be prepared to substantiate it absolutely by facts.

78. *Sir George Innes.*] Is that the result of considerable study and research as to the origin of small-pox? Yes; I believe it is an endemic disease of the Chinese river valleys.

79. *Mr. Wisdom.*] Do you think that syphilis, scrofula, and other diseases are communicable by vaccine lymph? By vaccination?

80. Yes? It is possible to communicate syphilis by vaccination. Of that there is no doubt, because it has been done. It is very rare, considering the vast number of cases of vaccination—it is exceedingly rare to find syphilis communicated; but still it is a thing that might happen, and I believe it has happened.

81. *Sir Henry Parkes.*] But you have no hesitation in stating your belief that the cases are very rare? Yes.

82. Perfectly exceptional? Perfectly exceptional; and the French authorities maintain that if vaccination is carefully performed, only pure lymph used, and no blood admitted, syphilis cannot possibly be conveyed. Many people agree with them; but it would be wiser not to vaccinate from a syphilitic child. That danger might be avoided by keeping up a supply of vaccine from the calf.

83. *Sir George Innes.*] Then you would vaccinate the calf from the child? From the human being; or you might get the vaccinia from Gloucestershire, and vaccinate the calf or cow here. As for scrofula it is conceivable that if you take great pains to inoculate a child with scrofulous poison at the same time as vaccinating it you might succeed, but it has never happened so far as I know.

84. *Sir Henry Parkes.*] Have you known cases of skin diseases following vaccination, and to what cause do you attribute them? They are not uncommon. But these skin diseases are of a very transient character; they arise under many circumstances; they are mostly to be found in children, and they do not possess any constitutional importance; they are well known to all persons who have studied vaccination.

85. What is your opinion with reference to the advisability of vaccinating persons in a gaol like that at Darlinghurst, where there are 700 or 800 inmates? I think it is in the highest degree advisable; and I can speak with a little experience in that matter, because I was at one time surgeon at Parramatta Gaol, and I considered it advisable to vaccinate the prisoners there. In fact I think it is imperative that prisoners in a gaol like that at Darlinghurst should be vaccinated.

H. N.
MacLaurin,
Esq.,
M.A., M.D.,
L.C.S.E.
15 Sept., 1891.

Carl Frank Fischer, Esq., M.D., L.R.C.P., M.R.C.S., introduced to the Council :—

C. F. Fischer, Esq., M.D., L.R.C.P., M.R.C.S. 86. *Sir Henry Parkes.*] Would you be good enough to state the diplomas you hold—your status in the profession? I am Doctor of Chirurgie of Berlin, a Doctor of Medicine of the University of Halle, a Doctor of Medicine, &c., of the University of Wurzburg, a Doctor of Medicine of the Homœopathic Medical College of Pennsylvania, and of the Homœopathic Medical College of New York, a Member of the College of Surgeons of England, and a Licentiate of the College of Physicians of London.

15 Sept., 1881.

87. The Government are desirous of ascertaining what your opinion is upon vaccination being compulsory by law. We should prefer your stating your opinion in your own way, and we think it would be an advantage if you could state the experience upon which your opinion is based, and perhaps fortify it by some instances within your personal knowledge or within your knowledge by reading works of established authority? My opinion is decidedly in favour of compulsory vaccination, as carried on now in almost every country, at all events throughout Europe. The value of compulsory vaccination is I suppose so sufficiently proved by statistics from the time of its early discovery and its introduction by Jenner, to the present day, that it needs no further comment. My statement of the opinion is however not only based on the experience of statistics, but because I am an advocate of the law *similia similibus curantur*, the principle of homœopathic therapeutics, though perhaps this is a question better not introduced here; but upon scientific data I can show that the cow-pox being the most like disease to small-pox, the virus of cow-pox whether by introduction of inoculation or administered in the shape of medicine must be, and has proved to be, a prophylactic and a curative agent against variola or small-pox. As you are aware, statistics prove quite sufficiently that the percentage of persons vaccinated who take small-pox is very small, and how the disease in a great measure has been moderated and eradicated compared to the time before the introduction of vaccination. But then again, the length of time that the vaccine virus has been humanized by arm-to-arm vaccination for so many years, has rendered the prophylactic power doubtful, and it has been found during the time—say fifty years—that persons have not been so well protected against small-pox, that the virus seems to have lost its prophylactic power. To replenish this, as far back as thirty years ago in Germany new vaccine lymph was procured from cows. During the time I was a student in Berlin, cows were covered with the bedding of small-pox patients; these cows became diseased, and from the pustules vaccination was carried on, and consequently a fresh stock of vaccine was procured as it was believed to be of more prophylactic force. This was repeated from time to time. Afterwards, in Dresden I think, where the first vaccination institute was established, calves were vaccinated from calves and a regular animal vaccine was procured. Brussels followed next, under the Government; then, I believe Vienna, and at present in every large town in Holland there are institutions where people are vaccinated from the calf. The argument in favour of the introduction of animal vaccine is not only that it is believed the virus coming from the animal has greater prophylactic power, but I believe statistics are more favourable as to the results of vaccination in Germany than in England, in consequence of this calf or animal vaccination. At the present time the question of calf vaccination is agitated in England; and there exists now in London one establishment, conducted by Dr. Renner, where a regular supply is kept up. There are the same institutions in America. So far then as regards the prophylactic power. I am further of opinion—perhaps contrary to most other medical opinions—that constitutional diseases, such as scrofula and syphilis, may be transmitted by the process of vaccination from person to person.

88. That opinion is not generally shared by the profession? No, I do not think it is; but the opinions are very variable. I think it is shared on the Continent more than in England.

89. Will you state briefly what has been your own experience in the treatment of, or precautions against, small-pox? Well, I can only speak of positive vaccination as the surest preventive; and then my own experience includes my having given, before I could procure vaccine virus from the calf, vaccine, that is vaccine matter prepared medicinally or rendered as medicine, instead of introducing it into the system by vaccination.

90. You are vaccinating at the present time? Yes, from the calf, and only from the calf.

91. To what extent? I have vaccinated nearly 400 persons.

92. In what time? From the 26th of July last, which was the date I commenced. I have vaccinated now about 390 cases.

93. Most of your cases turned out well? I have scarcely a failure on record.

94. We gather from what you have stated that you have no hesitation in expressing an opinion in favour of a compulsory law on the subject? Yes.

95. But you would apply the principle of compulsion only to children I presume? I would go as far as on the Continent, in Germany. Now, I believe, in Prussia revaccination is required at the twelfth year of age.

96. Then you would apply the principle of compulsion to revaccination as well as to vaccination? I think I would. I believe this question is agitated at present in England, consequent on the present epidemic, and when the law is once to be made I would certainly include re-vaccination, if not at twelve, I would say at twenty-one years of age. I know that for a long time past in the German Army every young man when entering if he has not been revaccinated has to be revaccinated; this is at the age of nineteen to twenty-one.

97. *Mr. Wisdom.*] You say that you are of opinion that syphilitic and scrofulous diseases can be communicated by vaccination, but have you known any case in your own experience? Yes, I have. I have seen children and treated children of very healthy parents and healthy families who after vaccination have become diseased. Scientifically, by the highest class of pathologists, the question is not doubted. Medical men generally have perhaps not entered so minutely into this question, and not observing instantaneous or acute effects doubt it. Suppose a child is vaccinated, and the instantaneous effects of the vaccination are not acutely manifested, but scrofula or secondary syphilis being transmitted to this child, at the age of 13 to 20 symptoms of tuberculous or other constitutional disturbances, perhaps tending to syphilis, develop themselves; you would hardly attribute this condition to the vaccination in infancy, although no other member of the family may be similarly afflicted, but still this might result from vaccination. An instantaneous effect of constitutional diseases would hardly manifest itself immediately after vaccination in every case; it would only be in isolated instances.

98. But in such cases as that of which you speak, it is possible that the disease may not have been the result of vaccination? Quite so; but there is no reason why it should not be attributed to that.

99. But it is quite consistent with what you know that it might have been introduced in another way? Yes, it is quite consistent.

100. What I want to know is whether within your own experience a case has occurred? I actually know a case where a child has been vaccinated, and where I have seen manifested in the child soon after vaccination symptoms of syphilis.

101. Only one case? I will not say only one, but I know this one.

102. *Sir George Innes.*] In cases of that sort, in an isolated case, may not the disease have been latent in the system of the child? Probably. It may be that the disease has been excited and become developed by the process of vaccination. This question is very difficult to answer positively, and is at present occupying the minds of the profession in all countries. There are a *pro* and a *con*, but I would say on a scientific basis that those who are for the transmission of diseases are on the better side.

103. *Mr. Wisdom.*] Do you think those diseases might be transmitted by taking only the lymph from arm to arm, or must there be some of the blood taken? I believe they can be communicated by the mere transmission of the lymph, without blood, because the lymph itself is the product of the plasma of the blood, and when too old—when even a day too old—is transformed into pus. It is often not possible for a medical man to judge when the lymph has lost its crisis, and so with the most careful vaccination danger is a possibility. You cannot place this question on a very minute basis, but on a broad scientific pathological basis there can be no doubt that it is possible, and I believe that through the lymph itself constitutional diseases can be transmitted.

104. You vaccinate from the calf direct? Yes.

105. But these calves have been vaccinated from some persons having vaccine disease? My calves were originally not vaccinated from human vaccine but from virus collected for me by Mr. A. Mackenzie, of Bondi, from a cow, and from virus I brought from Europe.

106. Where was that obtained? From Vienna, from the calf.

107. Were those calves vaccinated from human virus? That I could not positively state. I could not positively say where it originally came from, because the institution in Vienna has existed a long time. I have perhaps vaccinated twenty calves through which the vaccine has passed, and there would scarcely be any traces of human virus there.

108. What is the origin of cow-pox—is it caused by contact with a person suffering from small-pox? The cow-pox is understood to be a zymotic disease in the cow, and originates in the animal in the same way as in a human being. It can also be transmitted from the horse to the cow. In the horse the disease is known as the quitter, swelled leg. It has also been observed that during a small-pox epidemic cows are more liable to be affected with cow-pox.

109. Would that not go to show that the cow-pox arises from contact with a person suffering from small-pox? No. I do not think that is the case. In districts and places where there is no small-pox epidemic cows have been affected. But there are five varieties of pox affecting cows, differing from each other. There is the water-pox, from which you could not vaccinate. There is a pox like a hard nodule, which is also considered a cow-pox, and which could not be transmitted. It is very difficult to distinguish in the cow the real vesicle fit for vaccination.

110. Have homœopathists administered vaccine matter internally for the prevention and cure of small-pox? Yes.

111. With success? Yes, I can speak of that personally. During the years 1849 to 1853 I practised in London, and had many cases of small-pox, the majority of which I treated with vaccine internally. In April, 1851, I myself was afflicted with small-pox, and I took vaccine virus, partly for experiment, at the very commencement of the disease, in not an infinitesimal dose.

112. *Sir George Innes.*] An allopathic dose? I may have taken a drop of the vaccine matter directly. I succeeded admirably in my case; the disease was checked, and instead of crusts scales formed on the pustules which peeled off.

113. *Mr. Wisdom.*] You actually had the small-pox? Yes; and besides taking the vaccine matter internally I vaccinated myself, and here I am without marks. I will go further, and lay little stress on my own experience: The Homœopathic Literature is full of cases recorded, and I will quote a few. Dr. Rummel reports having treated in one epidemic 110 cases with vaccinine without one failure. Dr. Kallenbach writes: "In the winter of 1858 to '59 a wide-spread small-pox epidemic raged through Holland, attacking the vaccinated as well as the unvaccinated. I treated thirty-four patients with vaccinine. The course of the disease in all patients was shorter and milder than under allopathic treatment. We made the following observation on two children never vaccinated: that the suppurative stage was missed, the fully developed pustules getting dry and brown on the seventh day without suppuration. During the epidemic I gave more than 200 persons vaccinine as a preservative, and not one got either variola or varioloid."

114. Have any allopathic practitioners used vaccine virus internally? Yes; Dr. Nogueira, an eminent allopathic practitioner of Porto Alegre in Brazil, reports having cured during an epidemic of small-pox a number of cases with vaccine in not infinitesimal doses. (*New York Journal of Medicine.*) Dr. Bayes, of London, writes: "I was induced to try the effects of vaccinine in small-pox, and gave it as soon as the eruption was apparent; it had a very marked effect in reducing the areola round the pustules, and consequently in severe cases in reducing the general swelling and heat of the skin. The irritation is greatly lessened and the whole development of the disease appears modified. I would add one other remark that the peculiar odour of small-pox was much less in those cases treated with vaccinine."

115. According to your theory of the transmission of this disease syphilitic diseases might be cured by the same mode? Certainly. I believe that every poison or medicine which produces a similar or like condition and symptoms to a disease would be the specific against it.

116. Administered internally? Yes; or by injection or inoculation, but in such infinitesimal doses as not to produce unnecessary or severe disturbances.

117. *Sir Henry Parkes.*] You are aware that in London there are Government inspectors of vaccination who have seen hundreds and thousands of cases. Do you know whether they have reported any cases of disease in which syphilis has been communicated by vaccination? No. In England the question of the introduction of syphilis by vaccination is yet an open one. There are two sides—some, even anti-vaccinationists, are for the fact, and others against it. But it would be exceedingly difficult even for an inspector of vaccination to see traces of disease immediately coming on after vaccination. We oftentimes hear from parents—from mothers—the expression, "Ever since my child has been vaccinated it has been ill." I believe there can be no medical man who has not heard such things as "Ever since my child has been vaccinated an eruption has come out." I have seen very many cases of skin disease following vaccination.

C. F. Fischer,
Esq., M.D.,
L.R.C.P.,
M.R.C.S.

15 Sept., 1881.

118. *Mr. Wisdom.*] Since the recent outbreak? I have not seen any since the recent outbreak here; the time is too short. But mothers come to me continually, saying, "Since my child has been vaccinated I have observed this and that," and we must give some credit to what parents say in this way.

119. *Sir George Innes.*] If you believe in the liability of communicating human diseases may there not be a possibility of communicating diseases from which cattle may be suffering if you use lymph direct from the calf? Yes, if there were any constitutional diseases in cattle or domestic animals which could be transmitted, but there are none. There is no scrofula nor syphilis in cattle. Besides we live on the flesh of animals, our fibres are built up from it, our blood replenished, and therefore if there were transmissible diseases the germs of them would not be destroyed by cooking and by the preparation of food. Hence such diseases would have been generated in man by other means than by the transmission of vaccination. This is the reason why I believe no diseases from animals can be transmitted by vaccination.

120. Then you do not believe in the transmission of disease from the cattle? No; by that I mean constitutional diseases, such diseases as those which give rise to abnormal degeneration of our tissues as amyloid or fibroid degeneration, scrofula, or syphilis. But infectious diseases like cow-pox, or the glanders in the horse, or the hydrophobia of the dog, can and do affect man.

121. But notwithstanding your belief in the possibility of communicating diseases of terrible character you are in favour of a compulsory law? Yes, rather than have small-pox disseminating our population in this fair land, and I think there is no necessity for hindering careful vaccination as it is going on. It is better even that now and then constitutional diseases may be transmitted than that we should have small-pox raging amongst us and we not preventing it while we know it is in our power.

122. *Mr. Suttor.*] I suppose you know that cattle suffer from pleuro-pneumonia? Yes, pleuro-pneumonia is a sporadic or epidemic disease.

123. I dare say you are aware that it is common amongst cattle-breeders to inoculate one animal from another to prevent the spread of the disease? Yes.

124. And do you think there is no possibility of a calf suffering from that disease, and from which you take the lymph, injuriously affecting a child? Certainly not, for a calf having pleuro-pneumonia would be too ill to be vaccinated, and pleuro-pneumonia not being a constitutional or hereditary disease could not be transmitted from cow to calf, because this disease is only an epidemic or sporadic disease—inflammation of the lungs—and like any epidemic, but not constitutional like scrofula or syphilis, which is transmitted from father or mother to child. In pleuro-pneumonia the animal, as it is after any acute illness, when the crisis is over and the disease has passed its course, is quite well again.

125. *Sir Henry Parkes.*] I should like to ask one general question: Do you think small-pox could be generated in the City of Sydney, for example, without being introduced from without; that is, could there be such a condition of putrid filth, generating distemper, as would produce the disease without its being introduced? That is a question which is difficult to answer. Epidemics like small-pox, scarlet fever, measles, &c., are generally spread by contagion. Germs may float in the atmosphere and so the miasma may be carried, and in a place where there is filthy and bad ventilation conditions may exist which favour the development of the germ in that locality. The miasma can adhere to clothes, to articles of various kinds, and be carried about to develop in a congenial soil. Miasma may be carried by persons who have not themselves been afflicted by the disease. But it is not unlikely that even suddenly the germs or bacteria may develop themselves at times, and under favourable circumstances foster the disease. It is therefore not necessary that by personal contact only the disease has found its origin here.

126. You think that is possible? Yes.

127. *Sir George Innes.*] Small-pox must have begun somewhere? Yes, but in London and other large towns outbreaks constantly occur.

128. *Mr. Wisdom.*] I suppose the origin of small-pox is not known? 2,000 years before Christ it was in China, and old manuscripts in Chinese and Brahmin refer distinctly to small-pox 25 years after Christ, when it was carefully described in a Chinese library; in 1323 in a work published it appears that inoculation was practised in China.

129. *Sir Henry Parkes.*] You said something just now about children having a disease. You stated that a number of children got skin diseases after vaccination;—are you quite clear that these diseases might not have been latent in the system and brought out by vaccination? Probably. This is a question difficult to answer to a nicety. If I have a patient with a skin disease in a family where there is no member similarly afflicted, and this skin disease has come after vaccination, should I not suppose that it might have been introduced by it. I recollect a little patient who had croup and disease of the throat, and who was vaccinated from a child liable to throat diseases. No other member of the family was liable to it. The mother positively stated that the illness originated with the vaccination. Could I in this case doubt it?

130. *Mr. Suttor.*] But do you not think that a mother often tries to find a cause for a child's illness? Yes; it may be that vaccination excites latent diseases. But speaking pathologically, the vaccine plasma or virus which generates in the pustule is but the product of the plasma of your blood, having been excited by the poison which I introduced in your constitution by inoculation. It creates an inflammation and general fever, and develops the vaccine pustules. When vaccinating I introduce only a small, scarcely appreciable, quantity of virus; the miasma or germ in this virus entering your circulation produces a specific illness, a fever, pain, and general disturbance in your system; then the places where the vaccine virus has been introduced fills with lymph, a morbid product which has been created within you; and is it not likely that constitutional disease germs which afflict you go in this virus? Or will you tell me that the virus of a diseased person—say syphilitically diseased—is as pure as the virus of a perfectly healthy person? That morbid matter which exists in persons may contaminate and go into the vaccine virus may be proved by the following case:—I had a patient suffering from psoriasis. This man was vaccinated, and with the process of vaccination his skin disease disappeared. Here also the miasma which favored the production of the skin disease must have influenced or gone into the vaccine virus which was thrown off by him as a morbid product. If I vaccinated you with the lymph of this man should I be wrong in supposing that I would introduce the tendency to psoriasis in your system? Nay, could it be denied that I could introduce psoriasis in your system by that vaccine?

131. *Mr. Wisdom.*] Would not these diseases—scrofula, syphilis, and others—be just as likely to be communicated by the small-pox virus as by the vaccine virus. Supposing a person to get small-pox from a syphilitic child or man would not syphilis be liable to be transmitted in that way? No, I do not think so.

132. Then why from the vaccine virus? If I inoculated from the pustules of this patient I believe he would, but if the person gets the small-pox through the miasma or germs which surround the atmosphere of that patient I think it is impossible that syphilis could be transmitted; this would be syphilitic small-pox. In this case the disease is introduced probably by the mucous membranes, or even by inhaling; in the other case by directly bringing the virus into the blood.

133. *Sir George Innes.*] But small-pox produces as much constitutional derangement as vaccination? Certainly, and more so; but I would say that it is impossible to transmit syphilis from the miasma or by contagion with a small-pox patient.

C. F. Fischer,
Esq., M.D.,
L.R.C.P.,
M.R.C.S.

16 Sept., 1881.

FRIDAY, 16 SEPTEMBER, 1881.

MINISTERS PRESENT :—

The Honorable Sir Henry Parkes, K.C.M.G.,
The Honorable Sir John Robertson, K.C.M.G.,
The Honorable James Watson,
The Honorable Robert Wisdom,

The Honorable James Hoskins,
The Honorable John Lackey,
The Honorable Sir George Innes, Knt.,
The Honorable Francis Bathurst Suttor.

Charles K. Mackellar, Esq., M.B., introduced to the Council :—

134. *Sir Henry Parkes.*] Would you be good enough, Dr. Mackellar, to state the degrees you hold? Bachelor of Medicine and Master in Surgery.

135. The Government are desirous of eliciting your opinion on the question of compulsory vaccination—that is, whether you have any fixed opinion on the subject that it is necessary or not for the protection of the public health to enforce vaccination by law. We would be glad if, in stating that opinion, you would explain the evidence upon which it is based, and give any facts that occur to you in illustration of it. We would like you to do it in your own way? Last night I jotted down some notes on this subject, which probably it would take 5 minutes to read, and if you please I will read them to you. Of course the statistics upon which I have based my opinions are not our statistics. We have had no opportunity in this country of coming to any definite conclusion as regards the probable death rate from small-pox should it become epidemic amongst us, further than by comparing this with the countries which are similarly circumstanced—that is to say, other countries in which vaccination is not *universally* practised among the people. But I will just read to you one or two notes I have here. These I have written in order to place them before the Health Board. They will form about a two-paged pamphlet, which I intend to advise them to circulate among the people, as there seems to be on this subject a considerable difference of opinion among people generally, though very little difference of opinion in the profession, and I have written them with a view to draw attention to the horrors that accompany small-pox, and to the means that we may adopt to evade those calamities. They were compiled from various sources, but chiefly from a small pamphlet issued by Mr. Ernest Hart, who is the Chairman of the Committee on Parliamentary Bills for the British Medical Association :—

C. K.
Mackellar,
Esq., M.B.

16 Sept., 1881.

A few facts concerning Small-pox and Vaccination, compiled from various sources.

It has been said that, "it is easy to be bold against an absent danger, to despise the antidote whilst one has no painful experience of the bane," and to nothing in this world does this more aptly apply than to small-pox and vaccination. We who live in a country more or less protected from small-pox, by vaccination, have very little idea of that disease in all its loathsomeness. If we wish to form a correct estimate of it we must either go back to the records of the last century in England, or to those of the present time in countries where vaccination is not practised. We will do both :—

1st. In England during the last century small-pox was always present, and when not badly epidemic it caused one-fourteenth, whilst in France it caused one-tenth, of the whole death rate.

Dr. Léttsom, an authority on this subject, calculated that the average annual death-rate from small-pox was 3,000 in every million.

But its ravages are not half enumerated in the sum of those killed, for (says De la Condamine) many are left consumptive, weakly, and sickly; many are disfigured for life by horrid scars, and become shocking objects to those who approach them; and Sir Gilbert Blane tells us that two-thirds of those who applied to the Hospital for the Indigent Blind had lost their sight by small-pox.

2nd. How does it appear at the present time in unvaccinated communities? Consul-General Bulwer (see *Despatch*, February 27th, 1873) says, that at the town of Brunei, in Borneo, in a few months, at the end of 1872 and beginning of 1873, out of a population of 35,000, 4,000 died of small-pox.

Mr. Ashbury, the senior Member of Parliament for Brighton, who in the course of a recent yachting cruise visited Ceara, a Brazilian Scaport of 70,000 inhabitants, shortly after an epidemic of small-pox which had decimated the town, found that in 1878-79 no fewer than 40,000 deaths from small-pox had taken place. These figures will show that small-pox has lost none of its virulence in those countries where the glorious discovery of Jenner is unknown or unpractised.

Now how has vaccination affected the small-pox statistics in England? Well from the year 1854 (when the Compulsory Vaccination Act was passed), until 1879, during which period there were two epidemics of small-pox, the annual death-rate from that disease was 208.5 per million.

These statistics would to most reasonable minds be conclusive evidence that vaccination was to be relied on as a preventive, but if more proof were necessary it would be found in the facts related by Mr. Marson, who for 41 years was resident surgeon of the London Small-pox Hospital. He says, that the nurses and other servants of that Institution must invariably submit to vaccination, which in their case is often re-vaccination, on taking office, and so perfect has been the protection that though they live in the closest and most constant attendance on small-pox patients, he never, during his 41 years of office there, knew small-pox to affect one of these nurses or servants.

Mr. Marson further says, that in 30 years he had under his personal care in hospital 15,000 cases of small-pox, and that the death-rate among the unvaccinated was 35 per cent., while among those vaccinated it was only 6½ per cent. Drs. Seaton and Buchanan, who during the epidemic of 1863 examined 50,000 children in various national schools and workhouses, &c., in England, found that many were unvaccinated, and the rest were vaccinated in various degrees of efficiency. Of every 1,000 without vaccination marks

C. K.
Mackellar,
Esq., M.B.
16 Sept., 1881.

360 had scars of small-pox, whilst of every 1,000 who had vaccine marks only 1·78 had traces of that disease. It is a well known fact that of persons who have had an attack of small-pox a few are liable, under certain circumstances, to a second attack. The same may be said of those vaccinated, and in much the same ratio. The records of the Royal Asylum of Chelsea show this has been 6·15 and 7·06 per thousand respectively during the stay of 5,744 boys who were admitted to that Asylum during a period of forty-eight years.

Now against these facts favouring the practice of vaccination, what objections are urged? That vaccination propagates syphilis, consumption, and other hereditary diseases.

Mr. Marson, who has vaccinated some 50,000 people, says, "I have never seen other diseases so communicated; and Dr. West, of the Children's Hospital, London, who has treated 50,000 to 60,000 children, since 1832, says "he does not think that vaccination does produce disease"; and similar evidence is given by Drs. Gull, Sir James Paget, and hosts of other men, the most celebrated in the world in their profession, while Sir William Jenner says, "I should think myself wicked and really guilty of a crime if I did not recommend every parent to have his child vaccinated early in life."

To conclude, the Select Committee of the House of Commons on this question says, "After careful consideration of this evidence, and of medical, and other evidence given in reply, your Committee agree with the general opinion, that if the operation is performed with due regard to the health of the person vaccinated, and with proper precautions in obtaining and using the vaccine lymph, there need be no apprehension that vaccination will injure health, or communicate any disease"; and further on they add, "That it is the duty of the State to endeavour to secure the careful vaccination of the whole population." That is culled chiefly from a small pamphlet, as I said before, and I am about to recommend it to the Board of Health for publication.

136. Do you hand it in to us? Yes, I will hand it in to you. My own experience has been that I have never seen syphilis, or any other disease, produced from any case I have vaccinated, nor do I consider it possible that syphilis, or any disease, could be produced in a case where vaccination is properly carried out.

137. I do not think you have stated in so many words your opinion as to whether we should enforce vaccination in this Colony? My opinion is that we shall have no security against an epidemic of small-pox until an Act is passed compelling the whole of the population to be vaccinated.

138. You mean compel vaccination in infancy? Yes.

139. Would you apply the principle of compulsion to revaccination? I would not.

140. I suppose you are of opinion that revaccination is advisable? Yes, but I would not enforce it. I had experience in the epidemic of 1871, when I was in the habit of visiting small-pox patients, I having been vaccinated only in infancy. I never knew a person who had been vaccinated, or rather who bore the marks of vaccination, to take small-pox. I know that persons frequently take small-pox who have been vaccinated, but it never occurred in my experience.

141. Gentlemen who have come before us have stated it as their opinion that revaccination at the age of puberty or a little before is absolutely necessary to those who are vaccinated in infancy? The best authorities say it is advisable; I do not think they say it is absolutely necessary.

142. You would not compel them to revaccinate? I would not.

143. *Mr. Hoskins.*] You would not advocate the compulsory vaccination of adults? I would not; nor would I advocate the compulsory vaccination of all infants indiscriminately. I think a power should be left in the hands of some responsible authority, who would state those who were unfit for vaccination, for occasionally it happens that children are not fit subjects for vaccination.

144. *Sir Henry Parkes.*] In what respect? They are otherwise unhealthy.

145. Do you think that the disease of small-pox could be generated by certain conditions of unhealthy existence without being introduced from without? I think not; we have no authority for saying so.

146. It must have had an origin? Yes, but that is in the remote past, which we do not know anything about.

147. What is your opinion as to the advisability or even the necessity of vaccinating in such a place as Darlinghurst Gaol, where, I believe, there are upwards of 700 inmates? I think it is absolutely necessary that every criminal who goes into the gaol should be vaccinated immediately.

148. And in that respect you would make it compulsory with adults? In that respect. Those people come from the lowest part of the town where small-pox is rife, and I would have them treated very much as the employes of foreign Governments are treated—revaccinated against their will; for they are very well calculated to spread the disease.

149. *Mr. Hoskins.*] Do foreign Governments compel? All their officials.

150. Does the German Government do that? The German Government does it in the army, and the French do it in the army.

151. *Sir Henry Parkes.*] I heard somebody say the French had a compulsory Act now? I am not aware of the fact.

152. *Mr. Wisdom.*] Would you recommend compulsory vaccination in the case of adults not vaccinated in infancy? Certainly.

153. *Sir Henry Parkes.*] In one word, you would make vaccination compulsory upon everybody? Compulsory upon everybody, for the safety of the general public.

154. *Mr. Hoskins.*] That is to say, where they have not been vaccinated in infancy? Certainly. In point of fact I think I would go further. I think it is advisable that vaccination should be certified to by a Government official, that it should not be left to practitioners generally, some of whom are mere birds of passage.

155. Where compulsory vaccination is carried out with anything like uniform order there are inspectors to report on the vaccinations, are there not? I do not think so. A large number of the vaccinations in England are conducted by private practitioners, and they certify to them. I do not know whether the same is the case in the State vaccinations, but I think the private practitioners often vaccinate children never seen by a Government official. Unless I err, that is the case.

156. I gather that you would advise or rather approve of the Government being armed with the power to make vaccination among the prisoners, in Darlinghurst Gaol for instance, compulsory? Certainly.

157. Is that in consequence of there being so large a number of persons congregated together in such a large building? It is in consequence of the localities from which these persons come, and their liability to spread disease.

158. Would not that recommendation apply equally to every institution under the Government where a large number of persons are brought from all classes of the community—for instance, the Benevolent Asylum? I think not. Those persons who are taken to gaol, and remain there for a few days, plant seeds of disease in the gaol, and then pass away again into the community. In the Benevolent Asylum the people are retained for a time, and there would be some opportunity of seeing the disease from its advent.
159. *Sir Henry Parkes.*] What would you say to an institution such as the asylum at Liverpool, where there are some 800 decrepid old men? I should say vaccinate, but it should not be enforced in their case. I think the officer appointed by the Government to exercise certain discretionary powers would certify probably that this was not necessary. A decrepid old man would not require to be vaccinated, but I think you should run the risk there.
160. Simply running the risk against the chances of injury? I think so.

C. K.
Mackellar,
Esq., M.B.
16 Sept., 1881.

Harman Tarrant, Esq., L.R.C.S., L.R.C.P., M.P., introduced to the Council:—

161. *Sir Henry Parkes.*] Would you have the goodness to state what degrees or diplomas you hold? I am a Licentiate of the Royal College of Surgeons in Ireland; a Licentiate of the Royal College of Physicians of Edinburgh; and a Licentiate in midwifery of the Royal College of Physicians of Edinburgh.
162. The Government are anxious to obtain your opinion on the question of compulsory vaccination—whether or not you consider it is necessary for the protection of society that legislative power should be given to compel, all children at least, to be vaccinated. We would like you to state your opinion in your own way, and if it is based on any experience you will probably state what your experience has been; and perhaps you will be good enough to give any instance or statistics that may occur to you in support of that opinion? I consider that vaccination is about the best preventive we have of the disease of small-pox. If any person asked me as a custodian of the public health if I would prefer the disease of scarlet fever to that of small-pox in a community, I would certainly say I would prefer the disease of small-pox, because it is one of those diseases which we have the power to stamp out by a properly conducted system of vaccination and re-vaccination. I consider that when a person has been vaccinated if he should take the disease of small-pox he will take it in a very mild form, and I look upon re-vaccination as almost a preventive against a person taking that disease. I have had a good deal of experience in the treatment of small-pox in Dublin. I attended the fever and small-pox hospital there; and when nurses were taken upon the staff of that institution they were always vaccinated. Even if they had previously been vaccinated they were subjected to re-vaccination, and we had not within my recollection a single case of small-pox occurring among the nurses on the staff of that institution.
163. Do I understand you to say that you would apply the principle of compulsion to revaccination as well as to vaccination in the first instance? No, I do not think it is necessary, because I think that when persons have reached adult age they are capable of judging for themselves; but I think a parent having charge of a child should be compelled to have the child vaccinated.
164. What would you do with adults who have not been vaccinated? That is a debatable point; I should not like to give any decided opinion upon that.
165. Then you would confine the application of the principle of compulsion to infants? Yes, to children.
166. Could you state to us any cases where the non-existence of vaccination has led to ravages by the disease, in contrast with cases where vaccination has been a preventive of the disease? Well, I think the best proof of that is to be found in the appearance of the young generation of England at the present time. You will see very few of them marked with the pits of small-pox, whereas if you go back fifty years nearly three out of every five people were marked by the pitting of small-pox.
167. *Mr. Wisdom.*] Is that not owing greatly to the mode of treatment? I do not think it is, because almost the same treatment was adopted by medical men many years ago to prevent pitting as is adopted at the present day. They adopted a mode of treatment to keep light and air from interfering with the pustules, and the same mode of treatment is adopted in the present day, except that perhaps our appliances are a little better.
168. *Sir Henry Parkes.*] Do you think it possible for the disease of small-pox to be generated by conditions of infectious filth favourable to the production of disease, without its being introduced from abroad? No, I think the disease of small-pox being a specific poison is likely to occur from contagion, like the majority of eruptive diseases. No doubt the neglect of proper sanitary measures would favour the spread of any disease when once established.
169. It must have had an origin sometime or other; but you do not think, taking this Colony of New South Wales for example, that it could be produced here without being introduced from without? No; I think not. Dr. Watson, an eminent authority, states that "Small-pox never occurs except from contagion."
170. What is your opinion about such a place as Darlinghurst Gaol, where the inmates number more than 700, in the midst of a thick population, or such a place as the Benevolent Asylum at Liverpool, where the inmates number 800 or 900, but are mostly decrepid old men;—do you think that vaccination should be carried out in such places as those? Well, I would first like to know whether you ask my opinion as a Member of the medical profession or as a Member of the Assembly?
171. Certainly not as a Member of the Assembly? I think the Government were perfectly justified in the steps they took to enforce vaccination in the gaols of the Colony.
172. I was not thinking of that, I may perhaps explain —? I think in the interests of the whole community it was a perfectly justifiable action on the part of the Government to issue instructions to have the inmates of these institutions vaccinated.
173. I think it is perhaps just as well I should explain to you, Dr. Tarrant, that the object of the Government in asking different members of the profession to state their opinions here is not really to fortify the Government in anything they do, but if possible to conciliate the public to anything that may be done to remove prejudices by the weight of medical authority, as far as we can; that is our object. In asking you about Darlinghurst Gaol I had not the remotest thought of what occurred in the Assembly, but all my thought was confined to the circumstance that there is a mass of persons there, numbering between 700 and 800 or more (I do not know the exact number), and that they are there confined in a building in the midst of a dense population; and I merely wanted to elicit your opinion as that of a medical man, whether you thought that in such a case the protection of society demanded the vaccination of those people? Yes; I think that taking into consideration the public health—the health of the inhabitants of the city—the Government were perfectly justified in the action they took in the matter. I state that as a medical man.

H. Tarrant,
Esq.,
L.R.C.S.,
L.R.C.P.,
M.P.
16 Sept., 1881.

George Marshall, Esq., M.D., L.R.C.S., introduced to the Council :—

G.
Marshall, Esq.
M.D.,
L.R.C.S.
16 Sept., 1881.

174. *Sir Henry Parkes.*] Would you be good enough to inform us what degrees or diplomas you hold? Licentiate of the Royal College of Surgeons, Edinburgh, and M.D. of the University of Glasgow.

175. The Government are desirous of ascertaining what your opinion may be on the question of compulsory vaccination. In this Colony hitherto there has been no such law, nor have there existed any formal regulations on the subject, and the question naturally enough arises whether or not some measure should be introduced to make vaccination uniform amongst the children of the country at least. We would like you to favour us with your opinion, stating it in your own way, and giving an explanation of any personal experience on which it may be based; and also we shall be glad if you will give us any statistics or authorities which support it? I am a strong advocate for vaccination; I was vaccinated when I was only an infant, and I have been often exposed to small-pox since without being infected with the disease. I believe the only proper mode of stamping out small-pox is by vaccination. I remember that some years ago, when I held an appointment as a dispensary surgeon in the north of Ireland, small-pox was introduced into the district on two occasions by inoculation, and on each occasion it was stamped out by vaccination. On another occasion a lady, who was very much opposed to vaccination, had her child inoculated with small-pox, and the child being very ill after, she sent for me to attend to it. While paying my visit I vaccinated her other children, two in number, contrary to her wishes; she then actually took the two children I had vaccinated and put them into the bed with the child who had small-pox, and they did not take the small-pox. These are cases that came under my own observation.

176. You then would be in favour of making vaccination compulsory? I would.

177. Would you confine the application of the principle of compulsion to infants—to children? No.

178. Do you think it necessary for persons who have been vaccinated in infancy to be revaccinated at the age of puberty or afterwards? Yes, I think it would be necessary to do so.

179. Would you apply the principle of compulsion to revaccination as well as to vaccination in the first case? Well, if the cicatrices were at all doubtful, and not bearing the proper marks of successful vaccination in the first instance, I should certainly insist upon revaccination, as I consider it is the best course to adopt in all doubtful cases.

180. Have you any authorities that you could produce as to the effect on given numbers of persons who have been vaccinated, in contrast to the effect upon given numbers who have not? Yes; I have a work here with a few statistics that I have marked. Do you mean the death-rate of those who have been vaccinated and those who have not?

181. Yes; the effect in view of the public health? This is Dr. Aitken's "Science and Practice of Medicine," vol. I, page 281 :—"To prove the influence of vaccination in England, it is shown that out of every 1,000 deaths in the half century, from 1750 to 1800, there were ninety-six deaths from small-pox; and out of every 1,000 deaths in the half century, from 1800 to 1850, there were only thirty-five deaths from small-pox. To prove the influence of vaccination on the Continent, it is shown that in various German States sufficient evidence can be obtained to show that out of every 1,000 deaths *before vaccination was used*, 66.5 were deaths from small-pox; but that out of every 1,000 deaths *after vaccination* came into use, the deaths from small-pox were only 7.26. To prove that in countries where vaccination is most perfectly carried out small-pox is least mortal it is shown that: (a) In this country where vaccination has been voluntary, and frequently neglected, the deaths from all causes being 1,000, the deaths from small-pox were as follows :—London, 16; Birmingham, 16.6; Leeds, 17.5; England and Wales, 21.9; Perth, 25; Paisley, 18; Edinburgh, 19.4; Glasgow, 36; Galway, 35; Limerick, 41; Dublin, 25.6; Connaught, 60; All Ireland, 49. (b) In other countries where vaccination has been more or less compulsory, the deaths from all causes being 1,000, the deaths from small-pox were as follows :—Westphalia, 6; Saxony, 8.33; Rhenish Provinces, 3.7; Pomerania, 5.25; Lower Austria, 6; Bohemia, 2; Lombardy, 2; Venice, 2.2; Sweden, 2.7; Bavaria, 4. Evidence corroborative of these results has been adduced by Dr. Balfour from the records of the Army and Navy Medical Departments, where every soldier or sailor is protected by vaccination, if he has not previously suffered from cow-pox or small-pox. 1. For twenty years, namely from 1817 to 1836 inclusive, it is shown that in dragoon regiments and guards, with an aggregate strength during that period of 44,611 men, and a total mortality of 627, only *three* deaths were from small-pox. 2. Among the troops at Gibraltar, the aggregate strength being 44,611 men during that period, and a total mortality of 1,291, only *one* death from small-pox occurred. 3. In the West Indies several epidemics of small-pox prevailed during the period, but there were *no deaths* either among the British or white troops, of whom the aggregate strength was 86,661, and with a total mortality of 6,803. Among the black troops on the same station, with an aggregate strength of 40,934, and a mortality of 1,645, there was not *one* case of small-pox. 4. At Bermuda, Nova Scotia, New Brunswick, Cape of Good Hope, and the Mauritius, not a death from small-pox occurred during the twenty years mentioned; and the white troops of Western Africa wholly escaped this disease, while the black unprotected population were dying by hundreds." I wish to mention that vaccination prevents an epidemic of small-pox. We have not had nearly so many epidemics of small-pox since vaccination was established; it has lessened the influence of small-pox.

182. *Mr. Wisdom.*] With respect to Darlington Gaol: considering the number of prisoners there, and the fact that the gaol is surrounded by a very dense population, would you approve of compulsory vaccination with regard to the prisoners? Yes, I think if you do not have it compulsory you will not be able to stamp out the small-pox.

183. With respect to the asylum at Liverpool, where there are some hundreds of very old people, do you advise compulsory vaccination with regard to them? Well, it would depend of course very much upon how they have been vaccinated in the first instance. If the mark on the arm is a genuine one of course I would not insist upon re-vaccination, but if the mark is doubtful I would.

184. Would there not be far more danger attending the vaccination of elderly people such as are in that institution? I have been vaccinating for thirty years, and I have never had a bad case, and never have seen any serious effects from vaccination.

185. Not even in vaccinating elderly people;—is there not a considerable constitutional disturbance? There is what is called vaccine fever, and if the constitution is not in good order at the time the person is vaccinated there may be some bad results.

186. You are speaking generally; I am speaking with regard to old people? Old people are not so liable to take small-pox. I do not consider there is any danger in vaccinating old people, provided they are in good health.

187. *Sir John Robertson.*] You would not have compulsory vaccination where those old people are, would you? Well, it would depend very much upon how they had been vaccinated in the first instance. If the mark on the arm was doubtful I would compel them to be re-vaccinated; if the marks were genuine I would not insist upon it, nor would I if their state of health was not good.

188. *Mr. Suttor.*] Do you not think it necessary to revaccinate when the original mark has disappeared? Certainly. I think revaccination is necessary.

189. *Sir Henry Parkes.*] You are aware that in many countries persons who enter the Public Service have, as a rule, to submit to vaccination? Yes.

190. Would you be disposed to recommend that vaccination should take place in such cases as the police, gaol warders, and postmen, wherever there is a large Public Service? Yes, I would.

191. Do you think that small-pox might be generated by certain conditions of filth favourable to the generation of disease, without being introduced in the form of contagion from abroad? I do not think so.

192. Take this Colony of New South Wales and assume that it is free from small-pox. Of course, there are places where, from the neglect of all sanitary precautions and from the accumulation of putrifying filth, fevers are generated;—could small-pox be generated by a combination of those unfavourable elements? I am inclined to think not. I think it is generated by infection or contagion.

193. *Mr. Wisdom.*] Have there been any epidemics on the Continent not traceable to outside sources? I do not think so. There have been several epidemics which may have spread after contagion from the state of the atmosphere, which is favourable to it at certain times of the year.

194. *Sir Henry Parkes.*] Suppose that in this Colony of New South Wales vaccination generally prevailed—that all infants were vaccinated, and that they were revaccinated at the age of puberty, and that this was done under a system of inspection;—do you think that would be an absolute preservation from small-pox? Almost; I believe it would be as great a preservation from small-pox as having had small-pox. Some people never take small-pox twice, but there are cases on record where persons have taken it four or five times. Some constitutions from their peculiarity are disposed to certain diseases. If vaccination was properly performed you would have the same exemption from small-pox as you would from having had the disease itself.

195. *Mr. Suttor.*] Do you think it is likely that syphilis would be imparted into the system by the use of lymph—by vaccination? I think not, if you use pure lymph from a genuine vaccine vesicle, and take the infection off at the proper time, and take nothing but the lymph; it is then impossible to convey syphilis. I do not care even if the patient from whom the lymph is taken had syphilis. I saw one case where a healthy child was vaccinated from a syphilitic child without any bad effects. I had the syphilitic child under my treatment afterwards. The doctor who vaccinated did not know at the time that the child had syphilis.

196. Would it be possible to impart the disease if you got a particle of blood with the lymph? It would be dangerous to do so. I consider if you do not bring the blood, and do not bring anything with you but the vaccine matter (the cow-pox infection) there is no danger of conveying disease.

197. Did you ever notice that skin diseases appear after vaccination? I have seen eruptions on the skin after vaccination, but they were not caused by vaccination. I believe them to have been caused by the state of health of the child before vaccination, and the vaccine fever has been only the exciting cause. I never saw any bad effects from vaccination; I never saw any disease conveyed by vaccination. I have known a rash and also spots to appear on the skin after vaccination, but of simple character that I could account for.

198. Is it common for parents to consider that their children do become ill, and have these eruptions from vaccination? Yes, it is common for parents to labour under this erroneous opinion. I think a child should be in good health before vaccination.

199. *Sir Henry Parkes.*] Have you performed many vaccinations in Sydney? Not many. I have performed a good many, but not since I have come to Sydney. I have not vaccinated much during the last ten years, but before that time I was a public vaccinator for years.

200. *Mr. Lackey.*] Is there any risk in vaccinating systems not in sound constitutional health,—for instance, persons who are afflicted with consumption, asthma, or any of those constitutional diseases? I do not think there would be any danger in vaccinating cases of that kind. The fever that is produced by vaccination is of a very mild character generally.

MONDAY, 19 SEPTEMBER, 1881.

MINISTERS PRESENT:—

The Honorable Sir Henry Parkes, K.C.M.G.,
The Honorable Sir John Robertson, K.C.M.G.,
The Honorable James Watson,
The Honorable Robert Wisdom,

The Honorable James Hoskins,
The Honorable John Lackey,
The Honorable Sir George Innes, Knt.,
The Honorable Francis Bathurst Suttor.

Arthur Renwick, Esq., M.D., F.R.C.S., M.P., introduced to the Council:—

201. *Sir Henry Parkes.*] Will you kindly state what degrees or diplomas you hold? I am a Doctor of Medicine of the University of Edinburgh, and a Fellow of the Royal College of Surgeons, Edinburgh.

202. We should be glad, Dr. Renwick, if you would afford us the benefit of your opinion on the subject of compulsory vaccination. We would like you to state your opinion in your own way, and if you could illustrate it from your own experience, from any results that have come under your own professional experience, or by results which you are aware of from long established authority, it would be an advantage? The question that is referred to in the points you have just adduced is such a very large one that I think it would be desirable to break up the matter into various heads. I might be asked in the first place the question whether vaccination is a success, or whether it has been found to be a successful process in regard to the objects for which it was intended.

203. Very well; you can give your answer in that way. We wish to avoid putting questions as far as possible, and leave you to state your own individual opinion. The main question we want to get information upon is the policy of compulsory vaccination, or whether vaccination should be made compulsory by law? It appears to me that the desirability of compulsory vaccination is proved by the successful results which have attended the process in nearly every country where legislation to that end has been adopted. It has been found as a matter of practical result that the invasions of small-pox and the unfortunate results that have followed from epidemics have been considerably reduced in those countries where compulsory legislation

G. Marshall,
Esq., M.D.,

legislation on this matter has been adopted. For example, in England and in other countries statistics are given by the very best authorities to prove that prior to the time when vaccination itself was adopted—whether voluntary or compulsory—serious results followed from outbreaks of this disease, but that since vaccination has been adopted, and more particularly since it has been made compulsory, both in Great Britain and on the Continent, the results have been that the disease has become milder when it has affected the human body, and that in fact it has been made much more amenable to treatment, or that the results are not so severe. These matters I can prove by first class authorities. In fact, all the medical authorities I know of tend in that direction. In order to save time I have selected one of established authority—I mean Sir Thomas Watson—who has been President of the Royal College of Physicians, and lectured for many years. He does not now lecture, but was professor of physic in King's College, London. He has also been a clinical teacher in some of the London hospitals. In his lectures to his students, delivered some years ago, he touched, of course, largely upon the question of small-pox and upon vaccination and revaccination. Without entering very particularly into all the matters that are contained in these lectures, which are very interesting in themselves—but perhaps it might not be desirable to read them all—I may state that he is wholly in favour of vaccination, and he is also in favour of carrying out as far as possible, under proper circumstances, the process of revaccination. Of course, as he has pointed out, in all parts of the world there have been opponents to the system of vaccination, just as there have been to every human institution that has ever been brought under the attention of the public. In regard to the opposition to vaccination he uses the following words: "It is scarcely necessary for me to notice the objections which were made to the practice of vaccination. Some of them were merely foolish—as that it was unnatural and injurious to engraft the diseases of a brute upon a Christian." I would scarcely quote that had I not heard this very same objection stated in a public place, and this very gentleman, whose opinions I am reading, was quoted as being an opponent of vaccination. "Others were untrue—as that it introduced into the system new, unheard of, and monstrous disorders, distinct from the cow-pox itself. It triumphed over all these cavils; and in six years from its first promulgation the discovery was known in every region of the world." Then further he says that the question arises as to whether a repetition of this operation of engrafting the cow-pox renews or adds to the security of the public against small-pox." Happily this question may also be answered in the affirmative, and answered by statistics of the amplest comprehension. In his able and most conclusive digest of the whole subject, published by the General Board of Health, Mr. Simon shows that during the five years (1833-7) though small-pox infection had been sixteen times imported into different regiments of Wirtemberg, there had ensued among the 14,384 revaccinated soldiers one single instance only of modified small-pox. Still more satisfactory experience is that of the Prussian Army." And then he goes on to quote the results in the Prussian Army, and says "Similar facts, equally cogent with these, may be gathered from the experience of other countries. Mr. Marson, the resident surgeon to the Small-pox and Vaccination Hospital, London, states, "That not one of the nurses or servants of the hospital has had small-pox for the last twenty years. They have all either been vaccinated or revaccinated on coming to live at the hospital." The same gentleman holds "That as a matter of safety it is well for all persons who were vaccinated in infancy to be revaccinated at puberty," and so on. In the same lecture to which I have just referred there is a large amount of other information bearing exactly on the same subject, and it also contains statistics of the highest importance. I need not read this further, except to call attention to this paragraph in the lecture: "Surely we may perceive—in authenticated statements like these—how inadequately the great preventive remedy of small-pox has hitherto been for the most part applied in this country; how successful might become its thorough application. Surely, now that the maxim *salus populi suprema lex* is beginning to be acknowledged by our legislators, any general sanitary enactment must be held defective which does not provide for and compel effectual vaccination, and punish variolous inoculation" (of course there is no fear of that now), "and shut up in strict quarantine every case of small-pox as soon as its existence in the community is discovered. By these three provisions—and probably by nothing less than these—the seeds of that dire distemper would gradually become scarce and finally disappear; and the soil upon which they might still chance to light would be made unfruitful of the deadly harvest." The most modern authority that I know, of a high standard, is to be found in the "System of Medicine," edited by Dr. Reynolds. In this book articles are written by some of the most experienced scientific men in Great Britain. There is a very able article on small-pox and vaccination, written by Mr. J. Marson. In this article a number of questions are treated of, to which I indirectly referred when I spoke at first, and I shall just read from the article one or two matters which I consider of very great importance in connection with this subject. The first is the question as to the protection afforded by vaccination against small-pox; and this writer says, in the first place, "On no subject is medical testimony more unanimous than on the very large immunity from attacks of small-pox which successful vaccination will confer." After laying down this proposition he goes on to prove it by a number of statistics, and he says: "While there are few unvaccinated persons who do not at some period of their lives sustain an attack of variola, the vaccinated are, as a rule, entirely exempt from it. Precise data have never been collected on a sufficient scale to enable us to state with numerical accuracy what proportion of persons may still be liable to take small-pox who have already had variola or who have been successfully vaccinated." He gives further statistics in a tabulated statement which would be well worthy the attention of those who are going to legislate on a matter of this importance. He states: "The facts showing the power of vaccinia in modifying small-pox, if it should happen to be subsequently contracted, and of disarming it of its terrors, are so ample that it is difficult to know whence to select examples;" and he gives further statistics in connection with that, showing the proportion, the degree, to which persons are liable to be affected according as they are unvaccinated, or stated to be vaccinated but having no cicatrix, according as they are vaccinated with one cicatrix or two, and so on, and according as they have previously had the small-pox. This table is a very important one in view of this question. It appears that the number of deaths per cent. in each of the following classes is as follows:—Of those unvaccinated 35 per cent. died from small-pox; of those vaccinated, but having no mark, 23 per cent.; of those vaccinated, and having one mark, 7 per cent.; of those vaccinated, and having two marks, 4 per cent.; of those vaccinated, and having three marks, 1 per cent.; and so on. Of those who previously had the small-pox 19 per cent. died when reattacked with small-pox. It is a very important table, and shows the importance of vaccination. A classification of a similar character was made as the result of observations made by Dr. Buchanan, another celebrated authority on this question; it was taken during the epidemic of small-pox in London in 1863, the calculations

being

being made among upwards of 50,000 children. "Of every 1,000 children without any mark of vaccination we found that no fewer than 360 had scars of small-pox, while of every 1,000 children who had evidence of vaccination only 1.78 had any such traces, and on further classification with reference to the *kind* of vaccination we obtained the following important results:—Proportion marked with small-pox per 1,000 children in each class respectively—having no vaccine marks, 360; vaccinated and having one vaccine cicatrix 6.80; having two vaccine cicatrices, 2.49; having three vaccine cicatrices, 1.42; having four or more vaccine cicatrices, 0.67. On taking the extremes, it appeared that, of children having four or more perfect vaccine marks, only 0.62 per 1,000 had any trace of small-pox, while of those who had a single bad mark of vaccination 19 per 1,000 were scarred by small-pox." This writer goes on to say that "the protective power of vaccination against small-pox extend to every race of mankind, and is seen in every climate and in every part of the habitable globe." He produces statistics from India, from Mauritius, and from Jamaica—from the very best authorities and medical gentlemen occupied in the subject in those parts of the world—to prove the proposition he lays down. He says further:—"In consequence of the remarkable power of vaccination in protecting against small-pox, and the adoption of the practice universally by educated people, and in annually increasing proportion by the population at large, the present average death-rate from small-pox is scarcely in any European country one-tenth part, and in those countries in which vaccination has been most carefully carried out, it is much less than one-tenth part of what it was at the end of the last century." He gives examples from Sweden, Copenhagen, Denmark, and Berlin, and then gives the same points with regard to England and Wales, and compares the periods. I need scarcely point out the value of having statistical evidence with regard to the various periods, because it is necessary to know what the death-rate from small-pox was prior to vaccination. That is an excellent standard; and then it is desirable to know in the next place how vaccination affected small-pox, and the results of the disease during the successive periods afterwards, because arguments have been used on both sides in regard to this question that the influence of vaccination dies out, and that small-pox itself changes its character in the various periods of its history. This gentleman, having these points in view, has drawn up the following table from the best statistics and Parliamentary reports and other sources that could be obtained; he has drawn it up, for instance, from statistics of Mr. Simon's, from the report of the Small-pox and Vaccination Committee of the Epidemiological Society, from an article written by himself in the *Chirurgical Journal*, and from the present system of registering deaths, commenced in 1837. It appears that during the average of thirty years previous to the introduction of vaccination the annual death rate per million of the population was 3,000. During the three years 1838-40, when vaccination had become to a great extent diffused, but before any public provision was made for its gratuitous performance, the deaths from small-pox in England per million of the population were 770, about one-fourth of what occurred previously. During nine of the years (1841-53) when public vaccination was gratuitously provided, but vaccination was not obligatory, 304 was the annual rate; and the average of twelve years (1854-65), during which vaccination was to a certain extent obligatory, the annual rate was 202. I do not know whether I weary you with this.

204. Oh dear, no; we are much obliged to you? I think the information I am giving is very pertinent to the matter in view; I will state my own experience afterwards. This gentleman in writing states: "In the official inquiries above referred to, in the course of which the arms of nearly half a million vaccinated children were examined, evidence was obtained of the great extent to which imperfect or insufficient vaccination had heretofore prevailed in England." I refer to this matter because undoubtedly the results which might have been anticipated from the perfect use of vaccination as a remedy for and preventive of small-pox have never been obtained, in consequence of a large amount of this imperfect vaccination. This is thoroughly apprehended by every medical gentleman in practice; he knows whether, from the mode in which the operation is performed, or from the constitution of the patient on which the operation is performed, or from other causes, the vaccination becomes imperfect in its character, and then the protection is smaller and the results are affected. "It is satisfactory," this writer says, "that these, the chief causes of imperfection, are of a kind for which we have in future an obvious remedy (and which, it may be added, are now rapidly being remedied), in the proper practical instruction of vaccinators, in the employment of more care and attention in vaccinating, and in better arrangements for transferring lymph. Other causes of imperfect vaccination which are quite independent of the vaccinator, though far less widely operative than those just enumerated, must not however be overlooked; as something particular in the child's constitution or condition at the time of vaccination, which even the most experienced vaccinator may have been unable to detect; aberrations of lymph—rarely indeed but still occasionally met with—occurring under undefinable conditions, of which the first manifestation to the vaccinator has been the unsatisfactory result; the carelessness of parents in allowing the vaccine vesicles to be disturbed in their course and the crusts to be prematurely removed." I need scarcely refer to this except to show that there is a danger of vaccination being done imperfectly, and that affects the result; and if any legislation should take place provision will have to be made that vaccination shall be as perfect as is necessary for the purpose. "It has been contended that, apart from imperfections in the mode of conducting vaccination, the vaccine lymph itself necessarily degenerates by repeated transmissions through the human body, and loses something of its infective and protective power." I think that is of very serious importance in connection with the matters to which I am referring. It has been contended that it would be absolutely necessary for the Government to have proper supplies of lymph, and the lymph used hitherto in this Colony has been obtained from India and Great Britain; and perhaps persons have objected to take lymph which has travelled to this country. This gentleman and most of the authorities I am acquainted with are perfectly satisfied in the first place that human lymph itself is sufficient for the purposes of vaccination. Of course it is desirable now and then to obtain the matter from the cow. Lymph that has passed through the calf may be affected in particular ways, but it cannot receive any purifying influences that are traceable, and on providing legislation upon a question like this it would be necessary to establish stations where the original true cow-pock matter can be obtained for starting this process. I remember being edified the other evening in a public place by hearing a great deal said of greasy heels, and of the necessity of going to the diseases of the lower animals to get protection from this disease. It is unquestionably true that those who attend greasy horses can produce the cow-pock in cows, but it is also a fact that this disease originates independently where there are herds of cows roaming together; and from either of those two sources satisfactory results may be obtained. For my own part I agree with this authority when he lays down this proposition: that vaccination when once thoroughly established in the human body can be so modified by those who practise it that the strength

A. Renwick,
Esq., M.D.,
F.R.C.S.,
M.P.
19 Sept., 1881.

of the virus and its protective power may be kept up perfectly without resort being had again to cows for the purpose of obtaining it ; in other words, I agree that " facts are equally at variance with the supposition that transmission through human bodies causes vaccine lymph to lose anything of its *protective* power. Persons vaccinated with lymph direct, or only a few removes from the cow, and others vaccinated with long humanised lymph, have been submitted to the test of variolous inoculation, but the result in each class of cases has been the same." That is a proposition with which I entirely agree. Another subject for consideration in reference to this question is how far the protective power of vaccination extends, and its permanency in the individual. It has often been said it is a protection for a limited period only. I agree with most authorities in recommending that as soon as the cicatrix on the arm begins to die out it is desirable to re-vaccinate. I think revaccination is absolutely essential, and the necessity is proved by the fact that if a person is revaccinated the system is seriously affected, but not so seriously as it was in the first case ; and I believe if an experiment were made with small-pox upon a person who has been vaccinated, but vaccinated so that the marks have been very much erased though not quite disappeared, it would be found that the proportionate influence would depend entirely upon the strength of the marks ; in other words, that those with but a little mark would be very severely attacked by the small-pox, but not so severely as would be the case if they were unprotected by vaccination. This gentleman, in regard to revaccination, gives a large number of tables of a highly important character, proving the results I shortly stated just now. I need not refer any further to them except to state, in relation to this part of the subject, that the very latest statistics that have come into my hand in connection with the importance of revaccination are as follows :—" An interesting illustration of the value of revaccination is found in a report lately furnished at the instance of the Local Government Board by the chief medical officer of the General Post Office, London. This report relates to an average number of 10,504 persons permanently employed in the Postal Service in London, all of whom have been required to undergo revaccination on admission to the Service, unless that operation has been performed within seven years previously. Among these persons during the ten years 1870-79 there has not been a single fatal case of small-pox, and in only ten instances have there been non-fatal attacks—all of which were of slight character. In the Telegraph Department, where the enforcement of revaccination has not been carried out with the same completeness, twelve cases have occurred in the same period among a staff 1,458 in number. Eight of these attacks occurred in persons who had not been revaccinated, and one proved fatal. The remaining four were of revaccinated persons, who all perfectly recovered without pitting. This experience, like that of the nurses of the small-pox hospitals, seems to show that revaccinated persons enjoy absolute immunity from severe attacks of small-pox, and that their risk of catching that disease at all, even in its most modified form, is infinitesimal. It is much to be wished that this fact could be appreciated by the classes among whom revaccination is most neglected and small-pox is now spreading." A most important question in connection with this subject, and one which is always referred to where the question of vaccination is considered at all, is how far by means of vaccination do we introduce other diseases into the human system when we vaccinate ; in other words, what are the alleged dangers of vaccination ? The first of these dangers is what is termed generally the displacement of mortality theory of M. Carnot—" The allegations that scrofula and typhoid fever have become more frequent in consequence of the introduction of the practice (being in fact, it has been said, 'vaccinational varieties of small-pox') and other like absurdities." All these matters have been referred to very fully by Mr. Simon, and in his papers on the practice of vaccination it will be found that there is nothing very candid in this argument. The next point I wish to refer to is about syphilis. Before, however, referring to that matter, I should like to state that Mr. Marson, Sir William Jenner, Dr. West, and Professor Paget—all first-class authorities on these matters—have examined this matter very carefully among children, and not among small numbers. Mr. Marson examined the performance of 50,000 vaccinations of children ; Dr. West, 26,000 ; Dr. Paget speaks of the large number of children in Bartholomew's Hospital ; and Sir William Jenner of the children at the Hospital for Sick Children, London. They hold that it is perfectly impossible that the diseases of scrofula, typhoid fever, and the like, could in any way so originate. They say, further, that the worst thing that can be charged against vaccination is that sometimes, through the disturbance caused by vaccination and the fever that attends it, diseases which are lurking in the system are developed perhaps a little more readily—that they are pushed onwards. That is the experience of every medical man, and it is my experience also. I have vaccinated a large number of children, and in some exceptional cases have seen rather troublesome affections. In cases of children of weak scrofulous constitution it may occur that eruptions appear on the body, but they would have appeared from any exciting cause—from fever of any form, or from anything that would disturb the child's constitution—even from the use of physic or anything like that. When carefully conducted, no risk in this respect occurs from the process of vaccination. The charge in regard to the introduction of syphilis is one that is most commonly brought forward by those opposed to the process of vaccination, and within the last fifteen or twenty years a large number of experiments have been made, principally by continental surgeons and physicians, with regard to syphilis and inoculation with syphilitic virus ; the object being to determine the nature of syphilis, and how far practice might be brought to bear on that dreadful disease. Of course I need hardly tell those to whom I am now speaking that these experiments have principally been made in France, in Norway, and in Germany ; and in consequence of the matter taken from syphilitic sores and put into a healthy person having produced syphilitic disease in the person so inoculated, this objection has not only originated but been greatly strengthened and spread in the popular mind. It should be remembered, however, that when vaccination is performed the lymph is not taken from a syphilitic sore, but from really a different thing altogether, as I shall show presently, and that syphilis, when it exists in the blood, does not really affect the results of vaccination on any person ; in other words, supposing a person is affected with syphilis, the burden of proof goes to show that although his blood is affected and the blood afterwards disturbed by the introduction of the vaccine virus, the lymph does not carry the syphilitic poison with it ; it is the blood that carries it, but not the vaccine pustule itself.

205. *Sir George Innes.*] Did I understand you to say that syphilis can be successfully communicated by inoculation ? Yes, from the chancre—from the perfect syphilitic sore ; but they cannot inoculate with secondary or tertiary syphilis in the same manner, because that has got into the blood and affected the system generally. I would like this point to be clearly understood, because it is of great importance in connection with these objections raised to vaccination, and especially in connection with the syphilitic taint. Of course any one can comprehend that any person in his senses would sooner be affected with the very
worst

worst form of small-pox than have syphilis introduced into his system, and hence the importance of understanding the arguments used by those writers to whom I refer, and with whom my personal experience coincides. "Scientific authority unites with general medical experience to negative the possibility of the vaccinal communication of syphilis—it being implied always, of course, that the vaccination is true vaccination, *i.e.*, with vaccine lymph taken from a true Jennerian vesicle. Professor Paget states the pathological grounds for disbelieving the possibility of any such communication to be (1), because *infantile syphilis* (which alone need be here considered), though conveyable in some instances by its own peculiar morbid products, does not render the blood of the patient capable of directly conveying the disease; and (2), because if the blood of a syphilitic child could so modify the vaccine disease within it as that the vaccine lymph should be capable of conveying any other disease, there is every reason to believe that the vaccine vesicle formed in the diseased child would be modified in correspondence with the modified lymph. 'All pathological researches,' he observes, 'accumulate the evidences of the constant correspondence between the material in the blood, on which each specific disease depends, and the morbid structure by which each is manifested.'" "Direct experiments made on a large scale, at many times, and by many individuals, have led in every single instance to the same conclusion." Reference is then made to the experiments made in France and in Germany, where "it was found no more possible to produce syphilis by vaccine lymph taken from a syphilitic child than it is to produce small-pox by lymph taken from vaccine vesicles on the arms of patients who are incubating, or suffering from that disease. This it is well known has been done hundreds of times, but never has small-pox been thus communicated or anything but a vaccine vesicle resulted." Dr. West is one of the first authorities in regard to this matter, from his long connection with the Children's Hospital, and he informs us that there never has come under his notice an instance where there was the slightest pretence of any syphilis being communicated to children from the vaccine lymph. Sir James Paget states that he does not remember "to have heard infantile syphilis ascribed to vaccination, frequent as the instances of it (infantile syphilis) are among the out-patients;" and Mr. Marson and Mr. Leese, and the experience of the National Vaccine Establishment in England, show that they have not known a single instance. Of course, in all the arguments and the different works on this subject, reference is made to the case of M. Trousseau, of the Hotel Dieu, in Paris, and the syphilitic endemic in Rivalta, in Italy. These are thoroughly discussed in this article; I need not read it because they are thoroughly discussed here. I should now like to call the attention of those who are listening to me to a matter which appeared in the *British Medical Journal* on June 18, 1881. It is a memorandum to the President of the Local Government Board by Dr. Buchanan, the same gentleman as I have already referred to. He is the medical officer of the Board in London, and he gives in this memorandum statistics and a large amount of valuable information. The statistics refer particularly to the comparative small-pox death-rates among Londoners vaccinated and unvaccinated respectively, for the fifty-two weeks ended May 29th, 1881. The death rate per million of the vaccinated class, of all ages, was 90; of the unvaccinated class, 3,350; under 20 years of age, 61 of the vaccinated class, and 4,520 of the unvaccinated; and under five years of age, 40½ of the vaccinated, and of the unvaccinated, 5,950. I hand in this paper which I think is of very great importance. (*Vide Appendix B.*)

206. That is a report summarised from the *Saturday Review*, and copied into the *Herald*? Yes. As a matter of great importance in connection with the practical steps to be taken to insure that vaccination is properly performed, of course every one knows that Mr. Husband's suggestions, and the rules he laid down are of very great value; and these observations and suggestions which he made in view of an anticipated outbreak of small-pox in Scotland, expecting that it would be brought from London, have been issued by the Board of Supervision in Scotland. I have cut them out, and preserved them, and now hand them in to you. (*Vide Appendix B 1.*) Lastly, I would like to call attention to a most able letter, written by Dr. Carpenter to the *London Times*, of 13th May. I dare say that is in the hands of the Government; but in any case I have copied it out here. I consider Dr. Carpenter's statement as valuable as any from any authority whatever. He has not only had a large experience as a medical man, and is one of the most successful teachers of medical men, and connected with the London University for many years, but he is one of the first writers on animal history, and, in fact, on natural science generally, and his researches, not only in connection with the works he has written, but also in connection with scientific voyages, render him a first-class authority upon anything that pertains to the history of the development of the germs which are the foundation of all disease, and make him, in regard to this particular subject, an unequalled authority. In writing a most interesting and, in my opinion, very logical letter to the *Times*, he states first: "There can be no question of the congenital liability of almost every individual born into the world to be, once in his or her life, the subject of certain diseases known in medicine as the Exanthemata—measles, scarlatina, whooping-cough; the cases being very rare in which persons exposed to the infection of these diseases during early life, escape being attacked by them." Small-pox is included, of course, in that category. Then, secondly, he refers to the impression which existed of vaccination affording a complete protection against small-pox; and, thirdly, to the illogical arguments of the anti-vaccinationists, showing that in most of them there is an utter want of ordinary correctness. For example, he says, "an objection has been raised against vaccination on the ground of the admitted, though extremely rare, transmission with the vaccine lymph of some communicable poison which due care would prevent; I would ask whether it would be a sufficient reason to refrain from eating the protective herb that once in 50,000 cases injury had accrued from through some poisonous plant having been gathered with it which due caution on the part of the gatherer would have eliminated;" and so on. Dr. Carpenter believes and I believe with him, that if vaccination were carried out perfectly small-pox would be eliminated.

207. *Sir Henry Parkes.*] That is, your opinion is quite decided that it would be safe to society if vaccination were compulsory? I have no doubt about that.

208. Would you apply the principle of compulsion to revaccination? I think it is not so necessary as regards revaccination; but that is a more difficult point to decide upon.

209. You are not prepared to state your opinion? I am only prepared to say that for the safety of society if the marks, the cicatrices, have disappeared—and that ought to be the true test as to whether a person has been vaccinated or not—vaccination ought to be compulsory in that case.

210. A second time? Yes; or a third time.

211. Do you think, Dr. Renwick, that small-pox could be generated by certain conditions of poisonous filth favourable to a spontaneous origin of the disease without being introduced from abroad? No, I do not.

212.

A. Renwick,
Esq., M.D.,
F.R.C.S.,
M.P.

19 Sept., 1881.

- A. Renwick, Esq., M.D., F.R.C.S., M.P.
19 Sept., 1881.
212. *Sir George Innes.*] Have you any theory as to where small-pox had its origin? That is going too far back.
213. Lost in remote antiquity? Too remote altogether.
214. Would you be an advocate for compulsory vaccination for unvaccinated adults? —
215. *Sir Henry Parkes.*] You would apply the law of compulsory vaccination without regard to age? As a general rule, and the same with respect to circumstances.
216. *Sir John Robertson.*] Would you except old persons? I would, old persons who would be likely to be injured by the process. Those are persons I would hardly take to be within the category of those for whom legislation is required.
217. There ought to be some limit? Yes.
218. *Sir Henry Parkes.*] It must be left to the discretion of somebody? Yes.
219. *Mr. Wisdom.*] Have you ever heard of a death from vaccination? Never.
220. Are there any deaths on record? I never heard of them, but I have heard of deaths attributed to vaccination.
221. *Sir George Innes.*] Is there any medical authority opposed to or doubtful of vaccination as a protective agent? Not that I know of.
222. Amongst the scores of writers on the subject? There are some who do not go so far as I or the authorities I have referred to go.
223. *Sir Henry Parkes.*] Do you think it dangerous to society for the large number of persons—more than 700 I believe—confined in Darlinghurst Gaol, to go unvaccinated? I am entirely in favour of their vaccination, and believe that they ought to be vaccinated. I think it must be a source of danger to the community to leave them unvaccinated.
224. That would apply to any body of men shut up? To any body of men. If there is an outbreak of disease we know what has occurred in other places. Take London, for example, during the prevalence of epidemic fevers and the plague, where the Judge, jury, and court have frequently been affected by the disease, and have been compelled to summarily suspend the business of the Assize.

Owen Spencer Evans, Esq., M.R.C.S., introduced to the Council:—

- O. S. Evans, Esq., M.R.C.S.
19 Sept., 1881.
225. *Sir Henry Parkes.*] Will you kindly state any degree or diploma you hold? I am a member of the Royal College of Surgeons, England.
226. We are desirous, Dr. Evans, of ascertaining what your opinion may be on the question of compulsory vaccination, and we should prefer your stating this opinion in your own way and supporting it by any authorities that may be within your possession, or any facts within your own professional experience? Well, I am inclined to think that revaccination is desirable, from the number of cases that I have revaccinated. I have found, as far as my experience goes, that about 80 per cent. of them have appeared to take, thereby showing that the effect of the previous vaccination could not have been fully in force. I should say about 10 per cent. of the remainder ran an incomplete course and did not produce perfect vaccine pustules, and about 10 per cent. I should consider did not take at all—I am speaking approximately—showing that the system in those cases was protected from small-pox.
227. *Mr. Wisdom.*] Might it not have been that there was something ineffective in the vaccine? No, I think not. Wherever I have found a case that has not taken I have tried it again—*Experimentum crucis*. As far as statistics go, I do not know whether you gentlemen have these statistics (*Vide Appendices C and C 1*); they are from Mr. Marson, and I have brought an article from the *Sanitary Record*, a very short paper, which urges the necessity for revaccination, and points out the steps taken by the Privy Council at Home to introduce it to the notice of the people. This is the article—"The Truth about Vaccination." (*Vide Appendix C 2*.) It is very short.
228. *Sir Henry Parkes.*] We would like to elicit your distinct opinion on the question of compulsory vaccination—we do not mind what it is, whether you are against it or for it? I am distinctly of opinion that vaccination should be made as general as possible. I should hardly go the step to make it absolutely compulsory.
229. That is to say, you would stop short in making it legally compulsory? Yes. As a medical man I would like to see everyone vaccinated.
230. But we must come to the question whether it ought to be made compulsory by law? I think it would be very desirable.
231. Suppose you had a seat in Parliament would you vote for such a Bill? That is another matter; I do not think I should.
232. *Sir John Robertson.*] As a medical autocrat having power what would you do? Then I would do it.
233. *Sir Henry Parkes.*] If you were the Emperor of Russia? Yes, I certainly would.
234. *Mr. Wisdom.*] You have had a large experience in vaccinating? Yes, very large.
235. Have you ever known any deaths from vaccination? I could not trace any death from vaccination, and I have vaccinated some thousands.
236. *Mr. Suttor.*] It is a common thing for skin diseases to appear after vaccination? Yes.
237. It is very frequently the case? No, it is the exception not the rule.
238. Do you think it is the effect of the vaccination? No; when people think it is the vaccination I think it is the *post hoc ergo propter hoc* style of argument; it has nothing to do with vaccination.
239. *Mr. Wisdom.*] But the fever produced by vaccination would encourage the eruption? Not frequently.
240. Suppose the disease were latent would not the fever produce the eruption? I do not think any disease would be produced by the vaccine pustules.
241. But the fever? You might get a rash from the cow-pock; not always.
242. *Mr. Suttor.*] We have been told by a medical man that mothers constantly come to him and say that their children are healthy before vaccination and afterwards are sickly; in your opinion is that the result of vaccination? No; because you often see skin diseases whether there has been vaccination or not.
243. *Sir Henry Parkes.*] I suppose when you speak of compulsory vaccination you apply the principle to children? Yes.
244. Would you apply it also to persons at puberty? Hardly.
245. *Mr. Wisdom.*] To persons who have not been vaccinated? As a medical man I say it would be desirable.

246. *Sir Henry Parkes.*] Would you apply it to all persons not vaccinated, without regard to age? No; only compulsory to children.
247. Do you think revaccination necessary—if a child is vaccinated at 3, 4, 5, or 6 years of age, is revaccination necessary at the age of puberty? Without going so far as to say it is necessary it is like proving a sum; if you revaccinate, and it takes, it shows that it is required—that the system is not under the influence of the previous vaccination; if you vaccinate and it does not take, that it is not required.
248. *Mr. Wisdom.*] But knowing from statistics and experience that primary vaccination is not absolutely protective is it not desirable to revaccinate? Certainly, I think it is desirable to revaccinate.
249. *Sir Henry Parkes.*] You are aware that in some countries where branches of the Public Service consist of large bodies of men—such as the police—it is a condition of entrance to those bodies that persons should be vaccinated? Yes.
250. Would you propose that? I would decidedly.
251. Would you apply vaccination to large bodies of men such as the prisoners in one of our great gaols? Certainly—to prisoners, soldiers, policemen, and seamen.
252. Have you had your attention directed to the necessity of inspection, to ensure proper vaccination where it is done by compulsion? Yes; it is shown by statistics that the number of deaths is less in proportion as the persons have been properly vaccinated—from three-quarters per cent. up to as high as 21 per cent. as against 35½ per cent. of unvaccinated.
253. Can you form any opinion as to testing the quality of the lymph supplied by the Vaccine Institution of Sydney? Yes, the lymph I have had is very good.
254. You have no doubt about that? No.
255. Have you heard any complaints about its purity? I have heard no complaints. A good deal depends upon the way you use it.
256. Do you think it possible for small-pox to be generated without being introduced from abroad—that there might be conditions of poisonous filth which would generate it? No, I do not think it could arise of itself in this country. Of course I believe there has been small-pox here; we see in the account of Governor Phillip's voyage that one of the marines belonging to one of the ships died from it, and we know that some of the aboriginal natives have had what in England would be put down as small-pox, because they have had the pustules and pitting; but I do not think the disease could arise spontaneously.

James C. Cox, Esq., M.D., F.R.C.S., introduced to the Council :—

257. *Sir Henry Parkes.*] Would you kindly state the degrees and diplomas you hold? M.D. of the University of Edinburgh, and a Fellow of the Royal College of Surgeons, Edinburgh.
258. We should be glad if we could obtain from you an expression of your opinion on the subject of compulsory vaccination—whether you consider it necessary for the protection of society against disease that all persons should be vaccinated by law; and we think it best that you should state this opinion in your own way, fortified by any illustrations or statistics that occur to you, or any facts within your professional experience? I am of opinion that it would be a great benefit to the public generally were a Compulsory Vaccination Bill introduced into this Colony. I have come to that conclusion from facts which are on record, and from experience I have had in witnessing the course of the disease. I was in Edinburgh in 1857, during a very severe epidemic of small-pox, and I there took charge of the small-pox wards of the Royal Infirmary. I had considerable experience during that time, and on that principally I have based the conclusions I have arrived at. I have never seen small-pox in this Colony. The best summary of conclusions of the arguments in favour of vaccination that I know is in this small pamphlet, by Ernest Hart. He is the Chairman of the Parliamentary Bills Committee of the British Medical Association, and I think that I cannot better say more than that I endorse every word of those conclusions. They are very short and very excellent. (*Vide Appendix D.*)
259. You wish to direct our attention particularly to the summary of conclusions? Yes, and in fact to the whole pamphlet. I believe that great public benefit—that great confidence would be instilled into the public—if a pamphlet of that sort were published and placed in their hands gratuitously; and I would strongly recommend it to be done.
260. But your opinion is quite decided—that you think a compulsory law is necessary for the preservation of the public health? I do.
261. I assume that you are thinking of the vaccination of children; would you apply the law of compulsion to the vaccination of persons who have not been vaccinated, regardless of their age? Yes, I would.
262. Then with regard to revaccination? Well, I would leave that to the option of the public.
263. That is you would not apply the principle of compulsion to revaccination? No, certainly not.
264. Do you consider it necessary for the efficient operation of the principle of vaccination that the person who has been vaccinated in infancy should be vaccinated again afterwards? I believe in many cases it is absolutely essential, but the great mass of the public are absolutely protected by one vaccination—I mean to say if the vaccination has been properly done; but there are numbers of people in this country who imagine that they have been vaccinated and who have not been vaccinated; they have been vaccinated from persons who have been vaccinated previously, and that vaccination is useless.
265. What is your opinion on the question of lymph;—do you think the lymph supplied by the Vaccine Institution in Sydney is good in quality? I do; the lymph is always obtained from well selected cases.
266. Have you heard complaints made against it? Never. I have seen one or two mothers who complained of it, but I have not blamed the lymph, I have blamed the children's constitutions for the ill effects; in fact they have had hereditary diseases such as tubercle or syphilis. I will instance one case, if you like, to show what I mean: My second child had symptoms of tubercular disease of the brain; it was at the period of teething, and I did not wish it vaccinated; my wife, however, had it vaccinated. That child died, and it died through the very rapid development of the disease which it had had formerly. But it was not the fault of the vaccination, it was the mistake of vaccinating a child in that state. It is in that way that the mass of children die, and the deaths are blamed to vaccination.
267. You are aware that in many countries large bodies of men in the service of Government, such as the police, have to be vaccinated by rule—that is, they are not admitted unless they submit to vaccination? Yes; I think it is a good law, a good principle.
268. *Mr. Wisdom.*] I think it is a regulation, not a law? It is a compulsory Privy Council order, I believe.

J. C. Cox,
Esq., M.D.,
F.R.C.S.

19 Sept., 1881.

- J. C. Cox, Esq., M.D., F.R.C.S.
19 Sept., 1881.
269. *Sir Henry Parkes.*] Do you think that such large bodies of men as the servants of the Post Office, the members of the Police Force, and the members of our military bodies, ought to be vaccinated on admission? I do.
270. Now what is your opinion as to the safety to the outside public of large bodies of men, such as the prisoners in a great gaol—perhaps 700 or 800—being allowed to remain unvaccinated? I believe it would be to their benefit to be vaccinated.
271. But what I more particularly wish to get an opinion upon is how far the public health is endangered. Darlinghurst Gaol, for instance, is situated in a populous part of the city, and more than 700 persons are cooped up within the walls of the gaol. Would not small-pox be likely to take a more deadly and frightful hold of the community if it got into a place like that? It would; just like typhus fever, which we never have had in this country. If it got into a place like Darlinghurst it would be very fatal.
272. Do you suppose the germs of the disease would be carried over the walls to the adjacent houses? No, I do not.
273. There is a good deal of doubt as to how the germs of the disease are conveyed? Yes, it is a matter of speculation. The probability is that it is through clothing, as a rule, and by a person shaking hands with another who is excreting the poison of the disease, and then going and eating his meals without washing his hands—it is in that way very often introduced into the body; and by the breath also.
274. You must have thought on the subject whether it is possible for this disease to be generated by conditions of poisonous filth favorable to its generation, without being actually introduced from abroad? I do not think it is possible to generate it *de novo*.
275. It must have had an origin? Yes, it must.
276. *Mr. Wisdom.*] Had not the blacks, many years ago, a sort of small-pox here? There is very strong evidence to that effect.
277. Even before the white people came I mean? Yes; I instance the fact that Mr. Macleay, when he went on to the Murrumbidgee, found natives pitted, and he was quite under the impression they had had small-pox.
278. *Sir George Innes.*] Do you prefer humanized lymph, or the pure lymph direct from the cow or the calf? I prefer the lymph, if possible to get it, from the cow-pox. There is no such thing in this Colony as far as we have ascertained, and therefore I prefer humanized lymph to lymph only passed through a calf from the human subject.
279. *Sir Henry Parkes.*] Have you any suggestion to offer for the better supply of lymph? No, I have none; I never had any difficulty about it; I have obtained it from the British Association in London for the Supply of Pure Vaccine Lymph, and from the New York Dispensary.
280. *Sir George Innes.*] Do you say there is not true vaccine lymph direct from the animal here? None whatever.
281. *Mr. Wisdom.*] What you mean is there has never been any case of true cow-pox in the Colony? No.
282. The cases here are those of calves which have been vaccinated? Yes, which must of necessity deteriorate the vaccine matter.
283. *Sir George Innes.*] Why? Because it passes through an animal with a very large active circulation. It is positively the opinion of almost all medical men that lymph is deteriorated by being bovinized; and what is more, the great danger of it is that you introduce into the body diseases such as pleuro-pneumonia from the calf, which you could not introduce by taking the lymph from good healthy vesicles on children.
284. But is pleuro-pneumonia a constitutional disease communicable to another person? Yes, of cattle, communicable by vaccination.
285. Do cows suffer at all from tuberculosis? No.
286. Is there not some particular disease called bovine tuberculosis? Yes, there is; it is an infectious glandular fever or disease.
287. Is that a disease which could be communicated by vaccination from the animal? I believe so.
288. I suppose you know there are practitioners in Sydney who say it is infinitely preferable to vaccinate from the calf? Oh, yes.
289. *Mr. Wisdom.*] In your own practice have you ever known a death or serious injury as a direct result from vaccination? Never, except in the way I have told you. If a child has syphilis in its blood, from the parents, or tubercle either in the mesenteric glands or in the membranes of the brain, and that child is vaccinated, the probability is the child will die more rapidly than if it had been left alone; but that is not the fault of vaccination.
290. Do you consider a system of Government inspection necessary to ensure vaccination properly carried out? I do.
291. Is there such a system in England? Not compulsory, but as far as it is able to be carried out inspection is made.
292. *Sir Henry Parkes.*] There is an imperfect system? Yes. The necessity for it is this: That one or two of the only cases of syphilis which are on record, from inoculation, are supposed to have been done by the dirty knife of a surgeon used in opening a bubo on a man. If a man vaccinated you with that knife it would give you secondary syphilis.
293. *Mr. Suttor.*] But if the lymph was mixed with blood and placed on the lancet, would that give you syphilis? The blood corpuscles—according to the evidence before the House of Commons it would not do so. With regard to the question of vaccino-syphilis, Simon quotes the fact that about 539 medical men, in answer to inquiries, denied that syphilis can be conveyed by vaccination. That was the last investigation before the House of Commons. "The direct experiments of Cullerier and others, on the effects of intentional admixture of syphilitic matter and vaccine, and of the vaccination of large numbers of persons with vaccine matter intentionally taken from persons suffering from constitutional syphilis, added positive evidence of the most powerful kind against the possibility of transmitting syphilis by an ordinary vaccination with lymph taken out of a true Jennerian vesicle."

George Fortescue, Esq., M.B., London, M.R.C.S., introduced to the Council :—

294. *Sir Henry Parkes.*] Will you kindly state the degrees or diplomas that you hold? I am a Bachelor of Medicine, University of London, and a Member of the Royal College of Surgeons, England.
295. We would be glad to get from you an expression of your opinion on the subject of compulsory vaccination—whether you consider it is necessary for the preservation of the public health that vaccination should be made compulsory by law; and we would be glad if you would state this opinion in your own way, with as much fulness as you choose, and support it with any facts in your own professional experience, or with any statistics or illustrations from established authorities? I think it is highly advisable that vaccination should be made compulsory for these reasons: First, that we have small-pox almost certainly established here, for few of us believe that the attempts which are being made to stamp it out will be successful; and whether or no, as communication is now so rapid and frequent with countries where small-pox has prevailed from the earliest time,—China, the Asiatic Archipelago, India, and Ceylon, and from which we are now distant only a few weeks voyage—we shall have, unless what we propose is done, frequent reintroductions and a perpetually recurring series of scares, not very creditable to us. Secondly, assuming what we all believe that a person thoroughly well vaccinated, and under the vaccine influence, is incapable, or almost incapable, of taking small-pox—is in fact, rather more secure against it than if he had already taken the disease—it is surely the most reasonable thing to make the population here incapable of receiving it. The proofs of the efficacy of vaccination as against small-pox I suppose you do not want me to go into at length. They are very numerous, very conclusive, and very accessible, and are to be found in all the text books and cyclopædias of medicine. You must have had the full detail before derived from these sources, and it cannot be necessary to go over the same ground again.
296. We would prefer you taking your own course, just as you think well? I do not wish to dwell on things which are so well known to us, and so much a matter of faith among members of our profession. People who are well informed upon this subject, and who still doubt the efficacy of vaccination as a preventive of small-pox, seem to me to be open, at all events, to the charge of considerable eccentricity, and to give a proof of inability to weigh evidence, which is not a little remarkable.
297. You are aware, of course, that there are men of considerable ability who are much opposed to vaccination? I never heard of one man of recognized professional standing opposed to vaccination.
298. But men outside the profession? I have heard so, and doubtless men outside the profession are to be found. I hear that Herbert Spencer is among them, but I regard Herbert Spencer's authority on small-pox as nothing at all. We must, I think, make the people incapable of receiving small-pox. The contagion of small-pox is so penetrating, lies dormant so long, is so subtle, and so easily communicated, that I am convinced we shall never put a stop to its progress by any system of quarantining or enforced isolation alone. We have it here, and we are sure to have it reintroduced frequently, and we must make people incapable of receiving it.
299. *Mr. Suttor.*] How are we to do that? By universal compulsory vaccination. This is an important point: so long as there is any considerable residuum of people unvaccinated so long will there be material for the disease to work upon. If we are to allow people to take their own way in the matter of course there will always be a certain number of eccentrics, of careless, ignorant, or ill disposed persons, who will remain unprotected and keep alive the disease.
300. And do you think that to make people incapable of taking small-pox revaccination is necessary? I think it is highly advisable, and indeed essential to the complete protection of the community. But then comes in another question: People are at an age at which they will talk of the rights of the individual, and argue that they can judge for themselves.
301. *Sir George Innes.*] But might not the argument apply that parents are able to judge for their children? No doubt, some would apply it against compulsion of any kind, even in the matter of education; but if the difficulties apart from the medical aspect of the question are not insuperable I am sure that compulsory revaccination is also a very desirable thing. It is the law in Germany.
302. Compulsory? Yes, in all the State schools and private schools of the country, after 12, and has been so since 1874.
303. *Mr. Suttor.*] Do you think that skin disease or illness that overtakes children after vaccination is the result of vaccination? I have no reason to think so, though I have had considerable experience of the effects of vaccination, or to believe that such affections are directly traceable to the influence of vaccination itself. There are cases in which children having some inherent delicacy of constitution only wait for some depressing cause to develop symptoms of disease, and no doubt vaccination sometimes acts as the depressing cause, and the children are made ill in consequence of that depression, and indirectly by the process of vaccination. I have no doubt that vaccination has had the credit of directly causing many evils and some deaths in cases of the kind in which it has only had an indirect influence. It has simply precipitated what the patients had in them and were certain to develop some time or other. That opens the question whether we should not exempt certain individuals, except in periods of great emergency—whether delicate children might not, on a certificate, be exempt from vaccination until they were considered strong enough to undergo it. That point has been touched upon by some writers on the question.
304. *Mr. Wisdom.*] Have you ever known deaths to be the result of vaccination? Never; and erysipelas very rarely. There has been much talk about syphilis being communicated by vaccination, but I have never seen any instance of the kind, and as the result of my reading I find that the people who have had most experience in vaccination have seen the least of it. There are some cases, however, on record which show that somehow or other, either by communication through the lymph, which I doubt, or through blood, or, as I think more probable, by an accidental rubbing of syphilitic matter on the vesicle, or by inoculation afterwards in the sore stage, syphilis has followed vaccination, but all the direct experiments, and they have been very numerous, chiefly in France, made by vaccinating from typically syphilitic children on healthy ones have failed in producing syphilis. A friend of mine told me he was on a visit to Mr. Marson, a great authority—probably the greatest in England—on the subject of small-pox and vaccination, at the Vaccine Institution in Blackfriars, I think, and that Marson gave a striking illustration of his disbelief in the communicability of syphilis by vaccination. "I do not believe" he said, "in the communication of anything but vaccinia from the vaccine vesicle. To prove it I have not been vaccinated for many years. That child," he continued, pointing to one among many others waiting, "is a typically syphilitic child. I will vaccinate myself from that child." And he did so.

G. Fortescue,
Esq., M.B.,
Lond.,
M.R.C.S.

19 Sept., 1881.

- G. Fortescue, Esq., M.B., Lond., M.R.C.S.
19 Sept., 1881.
305. *Mr. Wisdom.*] Did the vaccination take in his case? I do not know; but it showed what he thought of it. For my own part I would allow myself to be vaccinated from the most syphilitic child that you could bring me, supposing that the vesicle was a good one, that the surface of it was clean, and that no blood was mixed with the lymph.
306. *Sir Henry Parkes.*] At all events you are clearly of opinion from what you have said that any such cases must be extremely rare? It is exceedingly rare; I can scarcely assert that it is impossible.
307. *Sir George Innes.*] But with regard to the law of compulsion—I suppose you would apply it to all persons who have not been vaccinated, without regard to their age? I would.
308. Leaving someone to exercise authority to exempt old and infirm persons? I think that it is advisable to exempt infirm people of any age, except indeed at periods of great emergency when small-pox is spreading rapidly, when consideration for the individual must give way to those for the general good.
309. Do you consider that revaccination is necessary for absolute security? Yes.
310. If a child is vaccinated under 6 or 8 years of age, would you advise that it be again vaccinated when it arrives at puberty? That is my opinion.
311. *Sir John Robertson.*] How about persons about 40 or 50 years of age? I think it would be advisable. I hold the view that it is the duty of every good citizen to avoid the chance of becoming a source or a carrier of contagion, and to be vaccinated or revaccinated as the case may be.
312. *Sir Henry Parkes.*] Would you give us your opinion as to the danger to the public health, resulting from a large number of human beings—from 700 to 800—being cooped up in a gaol like Darlinghurst, in the midst of a population outside the gaol;—do you think it is a danger to the public health if they remain unvaccinated? Highly dangerous. You could scarcely conceive of any better field for small-pox to exert itself in.
313. That is exactly what I wanted to get at—whether the disease would be likely to take a more fatal hold in such a place as that if it once got in? Undoubtedly.
314. And the danger to the outside public would be very great? Yes.
315. And you would of course be in favour of compulsory vaccination in such a place as that? Most undoubtedly.
316. And also in any public institution where there is a large number of human beings? Yes.
317. And in such bodies of men as for instance the police or those in the Post Office? Yes.
318. You are aware that in some countries it is the rule that anyone entering certain branches of the Public Service must submit to vaccination? I may say that it is so in France, where there is no compulsory general law in which respect France is alone, I believe, among the nations of Europe; they compel every Civil servant and every pupil of a public school to be vaccinated.
319. Do you think it would be possible for the disease of small-pox to be generated by conditions of poisonous filth favourable to its generation, without its being introduced from abroad? Certainly not. Nor do I think that filth has much to do with it, except as likely to preserve contagion longer than if a constant stirring up, free ventilation, and washing away by water are done.
320. Suppose, for example, that small-pox was amongst the aboriginal inhabitants of this country before white men arrived here, how did they get it? In two ways. No doubt it might have been introduced from the north by the Malay proas that land there, and then spread through the country, but, as I understand, it was introduced here from Europe in the early days of settlement.
321. Opinions are entertained that it existed here before Captain Cook discovered the country? Then the explanation is most easy, because the home of small-pox is at the north of us—in China and the Eastern Archipelago; and thence the Malays have brought it.
322. *Mr. Suttor.*] Is it at all likely that the disease would be carried about the country by letters sent to their different destinations, and if so is there any way of fumigating the letters? I think it is a most improbable way of communicating the disease; I can scarcely conceive it possible that the disease would be carried that way.
323. *Sir George Innes.*] Bank notes would be much more likely to carry it? Much more likely.
324. *Mr. Suttor.*] If it were possible to carry it about by letters could you suggest any means of fumigation, except by opening the letters? Not without dipping or damaging the letters; as for fumigation, I do not believe that it can be relied upon to destroy contagion in any way in which it is possible to apply it on the large scale. The only certain destroyer of small-pox contagion appears to be dry heat, if over 140; that temperature renders the vaccine virus inert, and probably has the same effect upon the contagion of small-pox.

TUESDAY, 20 SEPTEMBER, 1881.

MINISTERS PRESENT:—

The Honorable Sir John Robertson, K.C.M.G.,
The Honorable Robert Wisdom,
The Honorable James Hoskins,

The Honorable John Lackey,
The Honorable Sir George Innes, Knt.
The Honorable Francis Bathurst Suttor.

John Le Gay Brereton, Esq., M.D., M.R.C.S., L.A.C., introduced to the Council:—

J. Le G.
Brereton, Esq.
M.D.,
M.R.C.S.,
L.A.C.
20 Sept., 1881.

325. *Sir John Robertson.*] Would you be good enough to tell us your position in the profession, the diplomas you hold, and in a general way what your position is? I am a Member of the Royal College of Surgeons, Edinburgh, a Licentiate of the Apothecaries Company, London, and an M.D. of the University of St. Andrew's.
326. We are anxious to have your opinion as to the advisability of compulsory vaccination, and we should like to have a statement of your own so that members of the Government present may afterwards ask you questions upon it. We think it would be more pleasant to you for you to make your own statement without interruption, and then upon that to have some inquiries put to you afterwards. Will you be good enough to say what your views are? My views with regard to compulsory vaccination are necessarily in opposition to such a measure, because I regard vaccination itself as an evil greater than that of small-pox.
327. Then you would be against vaccination at all, either compulsory or otherwise? No, I would allow anyone to take his choice.
328. You would never advise it? No, and for many years I have not practised it.

329. Will you give us some reasons why you would not advise vaccination? Because from experience I have seen more evils result from vaccination than I ever saw result from small-pox.

330. Have you had much experience in small-pox treatment? I have had the average experience of my profession; I have attended numerous cases of small-pox; I have witnessed one severe epidemic.

331. What is the nature of the injuries that spring from vaccination? In the first place, I have seen direct fatal results from vaccination. In the second place, I have seen chronic—incurably chronic—disease the result of vaccination, and death after the lapse of many years; and, in the third place, I have seen introduced into the system, through vaccination, diseases of a destructive character, especially syphilis.

332. *Mr. Wisdom.*] Where have you seen those cases—in this country? I have seen them both in this country and in England.

333. Have you been vaccinated? I have. I was vaccinated when a boy, and a few years afterwards I took small-pox.

334. Was it a mild or severe attack of small-pox? It was an average attack. There were several cases at the same time in the town where I resided, and mine was a fair sample. It was not a bad case of small-pox in anyone at that time, but I had it equally bad with those not vaccinated.

335. How long is it since you left off practising vaccination? I did not entirely leave it off till about five or six years ago. For some years previously I vaccinated under protest.

336. Would you decline to allow any member of your family to be vaccinated? I would rather be shot than have anyone of my family vaccinated.

337. As a matter of fact, you do not allow them to be vaccinated? No. I vaccinated my first four children. One of them died certainly from vaccination, and another was never strong after he was vaccinated.

338. How long ago was that? About fourteen years.

339. And since that none of your children have been vaccinated? No, none have been vaccinated.

340. Then I need hardly say you are opposed to revaccination as well as to vaccination? The same objections that would hold against vaccination would of course hold against revaccination.

341. Have you ever had any experience at all in the treatment of small-pox? Yes.

342. Where? In Doncaster and other places in Yorkshire.

343. And in your experience was there any difference in the virulence with which the disease attacked non-vaccinated persons and that with which it attacked vaccinated persons? Well, sometimes vaccination seemed to modify it, and in other cases not. The conclusion I arrived at was that if we could embrace in our observation the whole range of facts vaccination makes no difference.

344. And how do you account for the decrease of small-pox since Jenner's discovery? Small-pox is steadily on the increase with the increase of vaccination.

345. With the increase of vaccination? Yes, as vaccination extends small-pox is increasing and becoming a more constant disease, a chronic condition. With regard to your first question why it ceased at the time that Jenner introduced vaccination, the reason was that inoculation became illegal about that time, and small-pox had been constantly and almost universally propagated throughout the kingdom by means of inoculation, and was thus kept always going. As soon as inoculation ceased to be practised small-pox suddenly disappeared. That could not be the result of vaccination, because the vaccinated portion of the population at that time was only about 1 per cent.

346. You are a homœopathic practitioner? Yes.

347. Of course you are aware that homœopaths as well as allopathists believe in vaccination? I am aware that the mass of the profession of all schools believe in vaccination.

348. Have you ever heard of vaccine matter being administered internally with a view to the prevention or cure of small-pox? Yes, I have; I know that it is practised.

349. By what school? Only by the homœopathic school as far as I am aware.

350. Do you know with what effect? It has not been tried on a sufficient scale to draw any inference. You see in matters of medicine statistics are of very little use until they embrace an immense field of observation; there are so many modifying influences which have to be taken into account. I am quite aware that sometimes, in some series of facts, vaccination appears to have been a wonderful preventive of small-pox, and I am also aware that according to another series of facts it appears to be a great aggravator of small-pox. I do not think that vaccination has prevented small-pox, as it seems to have done if we select one class of evidence, and I do not think it has aggravated small-pox, as it also seems to have done if we select another class of evidence.

351. *Sir George Innes.*] But on the whole you think it has tended to spread small-pox? It has tended to make its presence chronic instead of epidemic.

352. I thought you said it had been steadily on the increase? Yes; small-pox has steadily increased and is still increasing as the practice of vaccination is more generally enforced. There is one fact that should be borne in mind in making a statement like that: that a considerable amount of the lymph now in circulation, used by the Government vaccinators, is that known as Ceeley's and Badcock's. That lymph was obtained by small-poxing cows and calves. That is the method which has also been proposed by some medical men to be adopted in Melbourne. The matter taken from small-poxed calves is just as liable to revert into small-pox in the human subject as it was to be altered to cow-pox in the cow or calf. The difference is only a difference of soil not of seed, and as you revert to the original soil you are liable to reproduce the original disease.

353. *Mr. Wisdom.*] But is there any instance of true small-pox being generated by vaccine matter? Yes, of true and most deadly small-pox being produced by vaccination. I have got numerous authenticated instances with me if you like to have them.

354. Do you think that syphilis is communicable from one person to another by vaccine lymph, supposing that lymph is pure? If pure it will have no syphilitic taint. If there be no syphilitic poison mixed with the lymph there will be no syphilis communicated.

355. Suppose the lymph is mixed with blood? The highest medical authorities in France and England state, and it is admitted by the highest medical journals—the *Lancet* and the *Medical Gazette*—that there is no question whatever that syphilis is communicated by means of lymph, supposed to be perfectly pure, in which no blood could possibly be detected, and where no blood had been drawn.

356. Then it would seem from that the lymph itself has a syphilitic taint? The lymph is derived from the blood of the patient, and syphilitic poison, when present, exists in the blood, and the lymph which exudes

L.A.C.

20 Sept., 1881.

out of the blood into the vaccine vesicle is just as liable to contain syphilitic virus as vaccine virus if there be syphilitic taint in the system, and there is no possible means of detecting it, either by the microscope, or by chemical test, or by other means.

357. And other diseases may be communicated in the same way—such as scrofula, or skin diseases? Cases of scrofula, skin diseases, and other maladies could be adduced by the thousand. Many such instances have occurred in Sydney, and some deaths.

358. *Sir George Innes.*] Have you ever submitted to scientific test any case in which you supposed there had been a syphilitic taint by vaccination? I do not know what you mean by scientific test.

359. By examination and criticism? As far as you can get at facts through evidence I have.

360. What doctors have you made acquainted with any particular case, and brought it under their notice so that they themselves could examine into it? Well, I consider I am as competent to judge as any other doctor.

361. But you have strong opinions and theories? I have no theory.

362. Have you ever submitted any case at all for the examination of anybody besides yourself? Have I ever called any doctor into consultation in reference to vaccino-syphilis? I do not know that I ever have.

363. You know there are many cases mentioned in the books which have been examined? The conclusions, bear in mind, are open to many fallacies. There might have been syphilitic taint in the subject already, and the vaccination aroused it into action. Medical facts are very doubtful unless on a wide scale. The facts I should rely upon would not be my own only, for none of us see many cases of vaccino-syphilis, unless we go about looking for them. But there are medical men who have made that a special study, and they are of the highest authority.

364. But speaking from your own experience has there ever been an instance where you have shown a case to another medical man or anybody else competent to form an opinion? No, I do not recollect that I ever consulted another medical man on such a case.

365. But did not you state there were many cases both in England and here where there has been an undoubted taint from syphilitic vaccination? As I did not vaccinate all those cases myself, I could not be sure in every instance that no blood had been drawn. I have, however, accidentally communicated syphilis myself by vaccination, when no blood was drawn.

366. I suppose you will admit that amongst medical authorities you are in the minority? Not upon this question. Most medical authorities of high standing are perfectly agreed upon this question. The greatest authority in the world upon syphilis is the French surgeon, Ricord, and he states as follows:—"The obvious fact is that if ever the transmission of disease with vaccine lymph is clearly demonstrated, *vaccination must be altogether discontinued*; for in the present state of science we are in possession of no criterion which may permit the *conscientious* practitioner to assert that the lymph with which he inoculates is perfectly free from admixture with tainted blood. At first I repelled the idea that syphilis could be transmitted by vaccination. The recurrence of facts appearing more and more confirmatory, I accepted the possibility of this mode of transmission, I should say with reserve, and even with repugnance, but to-day I hesitate no more to proclaim their reality." That is from M. Ricord.

367. That is as to the possibility of the thing;—does he not say that they are extremely exceptional cases? No. I will give you an English authority on that question. Dr. Ballard says, "From several instances on record there can remain no reasonable doubt that the vaccine virus and the syphilitic virus may both be drawn at the same time, upon the same instrument, from one and the same vesicle."

368. Without any admixture of blood? He does not state the admixture of blood; but others do, whom I will quote:—"That syphilis could be communicated by vaccination was, though admitted abroad, long disputed in this country. * * * It can no longer be so. * * * Are such cases extremely rare? He (Mr. Hutchinson) feared not; all these occurred to him in the ordinary way of practice. His second series were by a public vaccinator who had no idea of their existence. Other surgeons were, he feared, in the same condition, and thus a false feeling of security prevailed. * * * It had been said that if a child reached four months without sign (of syphilis) it would escape; but this was not so. In many cases syphilis really lies latent till puberty." That is from the *Medical Times and Gazette*. Those are the opinions of M. Ricord and Mr. Hutchinson, senior surgeon to the London Hospital, who are authorities as high as we can have in the profession. The *Lancet* admits that Hutchinson's cases demonstrated the fact of vaccino-syphilis. Mr. Hutchinson also states that in many of the cases there was no evidence of any contamination with blood.

369. *Mr. Wisdom.*] Still in all these cases there was a possibility that syphilis was latent in the system, and merely made its appearance through the constitutional disturbance caused by vaccination? In all these cases, some of which were fatal, the *sine qua non* of the disease exhibiting itself was vaccination.

370. But what I want to know is whether there is not a possibility of the syphilis being latent in the system? You cannot tell that, because syphilis is undoubtedly sown broadcast through the whole population by vaccination. But there have been many experiments conducted in France with the greatest possible care, where syphilitic patients have been taken, and the greatest care has been used in vaccinating from them, and a very large percentage of the patients vaccinated from them were syphilised, and where there has been no evidence to show that there was any syphilis in the system before.

371. Do you know the names of the medical men who made those experiments? They are men of eminence in the French Academy. The question is quite settled; the best French and the best English authorities do not dispute it.

372. They do not dispute its possibility, but does any authority say it is frequent? Mr. Hutchinson thinks so. The recorded cases are numerous.

373. *Sir George Innes.*] What I understand you to say is that there may be syphilis latent in the system, and if it were not excited by vaccination the child might live to a good old age, and die without having suffered from syphilis? It might do so for anything I know to the contrary, but we do not know that it is so; that is mere speculation. The fact is this:—A child is vaccinated from a syphilitic patient, one in whom it is ascertained there is syphilitic taint, and that child becomes syphilised and dies. That has been a frequent occurrence. All we know then is that the child was vaccinated with suspicious lymph, and that the child previously free from symptoms of syphilis, and its family free from all symptoms of syphilis, afterwards died from that disease.

374. You do not think there would be any security whatever by extending the age at which children should be vaccinated? No; that has been shown.

375. You do not then agree with the theory that hereditary syphilis generally shows itself within a few months after birth? It does not need to show itself in order to be communicated. A child may have hereditary syphilis, and that syphilis may be communicated although it has not yet manifested itself; cases proving this fact are on record. We know that of different children of the same parents, inheriting syphilitic constitutions, some show syphilis and some do not. You can never get a mathematical certainty in medicine; it is not an exact science by any means, and never will be. I will give you another extract, if you like. It is from the *Medical Examiner*, 24 May, 1877, by Dr. Brundevell Carter, a man of high standing—"I think that syphilitic contamination by vaccine lymph is by no means an unusual occurrence, and that it is very generally overlooked, because people do not know either when or where to look for it. I think that a large proportion of the cases of apparently inherited syphilis are in reality vaccinal; and that the syphilis in these cases does not show itself until the age of from eight to ten years, by which time the relation between cause and effect is apt to be lost sight of."
376. *Mr. Hoskins.*] There are between 700 and 800 prisoners in Darlinghurst Gaol; suppose there was an outbreak of small-pox among them, how would you treat them? I would treat each case as it arose; I should isolate them of course.
377. Suppose you could not do so, the building being too crowded? Well, when you are speaking of prisoners it is a different thing from speaking of other people; there are other considerations that come in.
378. It is a matter that has seriously engaged the attention of the Government in this inquiry—what steps should be taken if in an overcrowded gaol situated in a populous neighbourhood small-pox were to break out? Leaving the consideration of prison difficulties out of the question, I would do the same as I would in scarlet fever, diphtheria, or any other infectious disease. If it arose from local causes and you could remove everybody I would remove them. If it did not arise from any local cause I would keep the infected were they were, and put a cordon round them, and remove the healthy to another place; but I should never take the small-pox patients and carry them about unless there were a small-pox hospital, and then I would take them there.
379. *Sir George Innes.*] Is there any other member of the medical profession in Sydney who agrees with you that vaccination is not a protection against small-pox? None that I know; I believe some are aware of the dangers attending vaccination.
380. Who are they? I was speaking the other day to Dr. Deck who told me he vaccinates his children with trepidation.
381. Anyone besides Dr. Deck? I do not know anyone else. There is a large and growing feeling against vaccination in Europe and America.
382. Is there anybody else whom you could suggest as a witness? The only one I know is Dr. Morton who is against vaccination; he is not in Sydney.
383. We want to have a thorough investigation into the matter—to hear all shades of opinion? Yes.
384. *Mr. Suttor.*] Was this Dr. Morton a Government vaccinator? Yes; a Government vaccinator in the Colony.
385. And yet he was opposed to vaccination? Yes; and he resigned his position because he was opposed to vaccination. He will be in Sydney shortly.
386. *Sir George Innes.*] Do you think it possible for the disease of small-pox to have been generated by reason of the accumulation of filth or other noxious causes, and not necessarily to have been introduced from without? Undoubtedly. I have studied that carefully, and cannot find any evidence that it was introduced from without.
387. You think it not only possible but extremely probable that it may have been endemic? It is quite probable. There is no doubt we have got Ceeley's matter here; it is spread over all the world. It can be proved that there is variolous matter abroad, and I believe it has produced small-pox on a large scale. The most fatal form of small-pox has arisen direct from vaccination both in London and in Hong Kong. When there is a variolous condition of the atmosphere vaccinia is undoubtedly liable to turn into small-pox. That there is a variolous condition of atmosphere here is proved by the prevalence of a spurious cow-pox, contemporaneously with small-pox, and it is exceedingly probable that vaccination is one cause of the spread of small-pox in Sydney.
388. Some doubt that cow-pox is here? I have letters from the country offering me lymph from the cow.
389. *Mr. Suttor.*] That might not be cow-pox? There is, I believe, no *true* case of cow-pox in Australia; it died out in England about the same time that small-pox died out. Cow-pox was an exceedingly virulent and fatal disease coming to the fag end of its career in Jenner's time. He found it difficult to get lymph from the cow, and therefore he resorted to the heels of horses; and the original vaccine lymph we use from the Royal Vaccine Institute has never been vaccine lymph at all, from the day it was introduced into London to the present time—it was derived from the arm of Jane King, who was inoculated from a horse with greasy heels.
390. You say you had some experience in the treatment of small-pox in England before you came here? Yes.
391. Did your experience lead you to the conclusions you now hold—to the many objections you now point out? No, I was not awakened to it then.
392. *Sir George Innes.*] How long have you been practising in this country? Twenty-three years.
393. And it is since you have come here that you have seen these objections? Yes.
394. *Mr. Suttor.*] I think before a Committee of Inquiry, with respect to a Bill introduced into the Legislative Council, your evidence was in favour of vaccination? No, it was against vaccination. I was opposed to compulsory vaccination at that time.
395. Did you not say then that you were in favour of vaccination? No, I do not think I did; I may have been hesitating at that time. But I remember that I gave instances of vaccino-syphilis. I gave an instance where a great part of a village was syphilitised through one vaccination.
396. *Sir George Innes.*] Where was that? At Rivalta, in Piedmont.
397. *Mr. Suttor.*] I think I am correct in saying that you were in favour of vaccination, and were vaccinating children? I had not then entirely ceased to vaccinate. I had paid a good deal of attention to the question, and I had serious doubts about vaccinating, and if I remember rightly my evidence was not in favour of vaccination; certainly not in favour of compulsory vaccination.
398. You say that small-pox is increasing? Steadily increasing.

J. Le G.
Brereton, Esq.

- J. Le G. Brereton, Esq. M.D., M.R.C.S., L.A.C.
20 Sept., 1881.
399. Do you think the results are worse now? There is reason to believe that the death-rate of small-pox is much higher now than it was in Jenner's day.
400. And as the small-pox increases the death rate increases in proportion? You have to be very careful in making statements of death rates before there was any Registrar-General's office. The only reliable statistics we have of small-pox before vaccination are taken from journals of medical men, who kept notes of their own, and from their notes we gather that the average death-rate of small-pox is very much higher now than it was a hundred years ago. For instance, Dr. Tanner calculated that the average death-rate from inoculated small-pox was not more than 1 in 662. Dr. Wagstaffe, writing in 1722, states that the mortality among children from small-pox amounted to hardly one in a hundred. The infant mortality from small-pox at the present day is enormous.
401. What do you think is the average death-rate from vaccination of persons who have been vaccinated? The average hospital mortality from small-pox since the adoption of vaccination is over 18 per cent.
402. *Sir George Innes.*] 18 per cent. of persons who have been vaccinated, and without ever having had small-pox? Oh, no.
403. *Mr. Suttor.*] You have given a certain proportion of persons who have died from inoculation? Those are not general; they are taken perhaps from one or two large towns. All statistics of that period were taken from local observations, and the number was multiplied into the supposed population of Great Britain.
404. What proportion of persons have died from vaccination? It is impossible to say.
405. But a record has been kept of persons dying from inoculation? No, it is taken from private records.
406. *Sir George Innes.*] Conjecture—based on very flimsy materials, I suppose? The materials are good, but they are not general; they are from the extensive experience of such men as Drs. Lettsome, Radcliffe, and others.
407. *Mr. Suttor.*] If lymph be perfectly pure from syphilitic taint what objection would you then have? Vaccinia itself is an abominable disease, and if you have pure vaccine lymph introduced into a pure constitution it might engender diseases which you might never get rid of. But you cannot get a pure constitution to put it into, and it is liable to develop any latent tendency to disease.
408. *Sir George Innes.*] In point of fact it is impossible to get humanised vaccine lymph which you can say is pure? Yes, and an important point is that you cannot get a healthy subject to put it into.
409. Nor a healthy subject to put it there? No.
410. *Mr. Suttor.*] If you get animal lymph then it is just the same? Yes; then you have the diseases of animals to consider, which are more to be dreaded than those proper to man.
411. That is an objection to vaccinating from the calf? Yes, if you can find a calf of immaculate conception, with spontaneous cow-pox, then you would get the lymph pure.
412. *Sir George Innes.*] You attribute the decrease of small-pox, particularly after Jenner's discovery, not to the influence of vaccination but to the illegality of inoculation? To the suspension of inoculation.
413. Was inoculation largely practised in continental countries? Yes, with the same results.
414. Was it declared illegal there? Not everywhere, I believe. Wherever inoculation has been suspended small-pox has decreased.
415. Now vaccination is spreading it? Yes, and our constitutions are undermined by vaccination; we are not so strong as our grandfathers were.
416. Are people more short-lived now than they were two generations ago? Infant mortality is much higher, and the death rate from epidemic diseases is much higher.
417. Insurance Societies do not tell us that? No, we are better fed and better housed, but we are not generally so robust and hardy.
418. Is there anything else you would like to bring before the Government? I have marked a passage here respecting the vaccination which is now being advocated—that is, of inoculating a cow with small-pox, then inoculating a calf, and then taking the lymph from the calf. This is from the Local Government Board, Dublin:—"Small-pox virus taken from a calf would communicate that disease to a human subject, and be thereby a fertile source of propagating the disease, and would moreover render the operator liable to prosecution under the fourth section of the 31 and 32 Vic. cap. 87. If the proposition were to vaccinate a calf with lymph obtained from the human subject, the Board have to state it has long since been ascertained that the animal lymph for vaccination purposes must, in the first instance, be obtained from a cow in which the disease has spontaneously arisen, and that vaccination performed with lymph taken from a cow which has been vaccinated with human lymph is not reliable. The Local Government Board therefore lose no time in cautioning the medical officers against either of the practices referred to, as the guardians, no doubt, acted in ignorance of the consequences when they passed the resolution directing their medical officers to act on the suggestion made." Again, "Surely now that the tardy confession has been made, that matter procured in the identical way in which Ceely and Badcock admittedly procured it for the Government—viz., by inoculating a calf or cow with small-pox virus—would 'become a fertile source of propagating the disease' of small-pox, we might look for an immediate order to have the circulation of all the matter in daily use by the public vaccinators peremptorily recalled." That is from the Galway correspondent of the *Daily Express*, a comment on the passage above quoted. In procuring lymph from Europe we do not know what we get. We have got absolute small-pox circulating in the form of vaccinia. That is from small-poxing calves. We have got grease from Dr. Jenner; we have got arm-to-arm virus circulating; and we have got also vaccination from the human subject to the beast and back again to the human subject. We have all these sources of vaccination. One of them is acknowledged to be ineffective, and another is acknowledged dangerous; but the pure vaccine lymph we have not got.
419. Why is that? Because cow-pox died out, and does not reappear in the form that Jenner figured it. At all events it is not circulated from the Central Office, because the matter to which, up to a very recent date, they exclusively adhered, is that which they have had from the days of Jenner, having confidence in its virtues, and that matter was obtained from the horse's heel. There is also another disease which is supposed to be communicated now; it is spreading in Trinidad among the Europeans, and it is attributed to vaccination.
420. What disease is that? Leprosy.

Eben. Atherton, Esq., M.R.C.S., L.S.A., introduced to the Council:—

421. *Sir John Robertson.*] Would you be good enough, Dr. Atherton, to tell the Members of the Government what diplomas you possess? I am a Member of the Royal College of Surgeons, and a Licentiate of the Society of Apothecaries, of London.

E. Atherton,
Esq.,
M.R.C.S.,
L.S.A.

422. We are anxious to obtain advice on the matter of compulsory vaccination. We have every reason to believe that you have given a great deal of consideration to the matter, and we should like to have your views upon it. We prefer having your own statement of them because it will save time, and then perhaps some members of the Ministry here will ask you questions? I am entirely in favour of compulsory vaccination.

20 Sept., 1881.

423. Have you any instances that you could quote in favour of it? There are general statistics and general scientific information published, very bulky indeed, and proving the necessity for and usefulness of vaccination.

424. With regard to compulsory vaccination—that is more the question now; I think we are all agreed about vaccination? I think that compulsory vaccination is necessary, because it will meet those who are ignorant and prejudiced—who are prejudiced perhaps from ignorance on the subject; as any reasonable man would be vaccinated or have his family vaccinated.

425. I presume that in a place like Darlinghurst Gaol, where there are 700 or 800 prisoners, compulsory vaccination would be especially required, would it not? I think so. I will mention one amongst many facts in favour of such vaccination. During the stay recently of Captain Harvey, of the P. & O. mail-steamer, "Hydaspes," he engaged in conversation with myself on the subject of vaccination, and mentioned the fact that in the P. & O. boats, trading as they do in the very hot-beds of small-pox, China and India, they were continually at one time being troubled and put to annoyance and great expense through small-pox cropping up amongst the crews, &c., until at last the directors made a rule that every man employed in the service should be revaccinated, and that all who subsequently joined the service should be vaccinated upon entering, and "now," he said, "we never see small-pox." That is one out of numerous facts in support of vaccination and of revaccination. I look upon vaccination as an evil; it is introducing a disease into the system for a time; but it runs a short course, and as a rule no bad result arises afterwards. There is no doubt that it prevents small-pox, or if it does not prevent it entirely it modifies the course of the disease considerably.

426. And would you recommend compulsory revaccination? No, I do not.

427. Has it come within your experience that there have been any considerable proportion of cases of injury from vaccination? No, I do not know of any case of injury, and I have vaccinated for over twenty years.

428. *Mr. Wisdom.*] Would you advise compulsory vaccination in places like the gaol at Darlinghurst, where there are a large number of prisoners, perhaps 700? I would.

429. And in regard to the police? I would.

430. The Post Office Department? I would revaccinate all Government officials who are likely to come in contact with contagion, or with persons who have had small-pox recently, or who reside in infected districts.

431. With respect to compulsory vaccination would you advise it in the case of adults who had not been vaccinated in infancy? I would; although the susceptibility to small-pox decreases according to age, yet there are exceptions to that rule; it is well-known that many old people have died from small-pox.

432. Do you prefer taking the vaccine matter from the human subject, or from the cow? I think it would be well to renew it from the cow occasionally, but I believe that the vaccine obtained from the human subject is good and reliable.

433. Have you vaccinated to any extent lately? I have, very considerably.

434. And have the vaccinations been successful? Very successful.

435. Have you found any difficulty in obtaining good lymph? No; I had at first. I had to send to Melbourne for my lymph. Since then I have been able to keep up the supply.

436. Have any practitioners administered vaccine lymph internally as a preventive or cure of small-pox? I have heard of it, but I consider it perfectly ridiculous. The gastric juices would immediately destroy its virtue in anybody.

437. Even if administered in allopathic doses; much more so then if administered homœopathically? In any way it would be destroyed.

438. *Sir George Innes.*] You are a homœopath? I am a general practitioner, believing in homœopathic law, and look upon homœopathic principles as a very important part of medical science, but I do not bind myself exclusively to any system of medicine, or any sect, to use a better word.

439. Do you think it is possible for the disease of small-pox to be generated here in Sydney by reason of any accumulation of filth or other matter of that kind, or by any peculiar condition of the atmosphere, or do you think it must have been introduced from without? I think it must have been introduced from without, but I consider that a good deal of filth and dirt in some of the streets of Sydney has become a good bed for the growth and development of the germs of small-pox.

440. Once introduced? Yes, once introduced.

441. But you do not think it has a generation here? I do not think it is spontaneously developed here.

442. No matter how great the accumulation of filth and other noxious causes may be? I do not think so; I do not think they would produce it.

443. Do you believe in the possibility of communicating syphilis or any other diseases by vaccination? I think it is possible, but with very great carelessness, and I think the case from which it would be communicated would be a recent one of syphilis, where there would be marked signs of it on the body of the infant from whom the lymph was taken.

444. But where it is a case of a pure vaccine sore, with no suggestion whatever of a syphilitic sore, from which the matter is obtained—has there ever been an instance on record of syphilis being communicated from a vaccine vesicle? There are certain reported cases, but I do not believe in most of them. They want scientific confirmation.

445. Have you ever in your own experience come across a case where any disease has been communicated by vaccination? Never. I believe too that many of the so-called cases of syphilis have arisen after vaccination in children previously syphilised, and that the vaccine disturbance might bring it out in that way, and therefore it is a rule not to vaccinate children where there is any suspicion of hereditary syphilis, or to wait until they are a little older than the prescribed age in England.

446. Within what time if a child is what you call syphilised would the symptoms of the disease appear? It would show itself within three or four months.

447.

- E. Atherton, Esq., M.R.C.S., L.S.A. 20 Sept., 1881.
447. Then you think it would be prudent to extend the time? Certainly, if there is any suspicion of that kind.
448. *Mr. Suttor.*] Do you think that if a compulsory law were passed it would be necessary to allow certain discretion to be exercised by the doctors as to whether a person should be vaccinated or not? I do certainly, because I believe that half the mischief of vaccination is done by indiscriminate vaccination—vaccination for instance when a child is not fit to receive it, and ought not to be disturbed by it.
449. *Sir George Innes.*] I believe it is universally admitted that vaccination is a great protection against small-pox—admitted even among the opponents of vaccination? I think so.
450. But your argument is that it may introduce other diseases in an otherwise healthy child, and the balance of evil by that result may preponderate over the balance of good from the protection from small-pox? I do not believe in the evil; I have never seen any permanent harm arise from vaccination. I think that the anti-vaccinationists get up many of these cases from their own imaginations; there is no truth in them at all; they are in the face of the strongest facts possible.
451. Do you believe that typhoid and enteric fevers generally, and a variety of other diseases—consumption and other things—have been largely introduced by reason of vaccination? Certainly not.
452. *Sir John Robertson.*] Coming back to the compulsory question, what you would recommend would be a compulsory law for infants, and for people in the Public Service where there are large numbers employed or congregated together, and for prisoners in gaols, compulsory revaccination? I would recommend compulsory vaccination for all infants born in the Colony, and I would recommend compulsory revaccination in the Public Service amongst people who are exposed to contagion, and particularly if their marks of previous vaccination are not very good, or if they have not had small-pox. If they have had small-pox I would make an exception.
453. Or if the marks are particularly plain? If the marks are particularly plain I do not think it is necessary.
454. *Sir George Innes.*] Would you vest in some medical officer a power of exemption—a discretion to exempt? I would recommend some medical officer to exempt.
455. To inspect, and after inspection to exempt? I think the carrying out of such an Act should be entirely under the direction of medical men.
456. *Sir John Robertson.*] You have said that your compulsory vaccination would be for children, but if you would recommend revaccination for certain classes of people I presume that if any of those people have never been vaccinated you would recommend them to be vaccinated? Oh, yes.

WEDNESDAY, 21 SEPTEMBER, 1881.

MINISTERS PRESENT :—

<p>The Honorable Sir Henry Parkes, K.C.M.G., The Honorable Sir John Robertson, K.C.M.G., The Honorable James Watson, The Honorable Robert Wisdom,</p>	<p>The Honorable James Hoskins, The Honorable John Lackey, The Honorable Sir George Innes, Knt., The Honorable Francis Bathurst Suttor.</p>
---	---

Andrew Ross, Esq., M.D., M.P., introduced to the Council :—

- A. Ross, Esq., M.D., M.P. 21 Sept., 1881.
457. *Sir Henry Parkes.*] Would you be good enough, Dr. Ross, to state the diplomas or degrees which you hold? I have a degree in medicine and a diploma in surgery.
458. The Government are desirous of ascertaining what may be your opinion on the question of compulsory vaccination, or in other words, the necessity to protect the public health by insisting upon persons being vaccinated by law; we would be glad if you would state your opinion in your own way—we wish to avoid putting questions as much as we can—and fortify it by any facts within your personal experience, or by any statistics of established authority you are in possession of? I have had considerable experience in treating small-pox in the old country, and from what I have observed in regard to the efficacy of vaccination, and of compulsory vaccination, I am quite in favour of it. In a Colony like this, in the semi-tropics, it would have to be performed under special rules, because the heat here in summer is very excessive, and consequently it would not do to have compulsory vaccination here in the heat of summer; it might endanger those vaccinated, owing to the flies that are so troublesome, because if the arm happened to be exposed it might produce other diseases irrespective of that which accompanies vaccination. I am quite in favour of it in cold weather—especially in Spring—and when it is more particularly confined to dense populations such as that of Sydney. It might not act so beneficially in the interior where the population is so scattered, because people there cannot avail themselves of opportunities such as are afforded them in Sydney.
459. *Mr. Wisdom.*] That does not affect the desirability of vaccination? Not in the least. I am quite in favour of the efficacy accruing from vaccination. I have seen good results in the old country in my experience as a medical practitioner. I have seen them, not only in Glasgow but in London. If the compulsory clause were carried out it would have to be done under guarded rules. I do not say every person should be permitted to vaccinate; none but those who are duly qualified should be allowed to do so, because others might perchance inoculate the system with other diseases. If vaccination is followed strictly in accordance with literal medical science it is impossible to introduce other diseases.
460. Then with regard to those you would authorise to vaccinate, would you leave it to them to make exceptions where persons are not in a good state of health? Yes; I would examine as is done in the city of London, where persons in ill-health are examined every six months. I would do the same in this Colony. Some are more susceptible to the influence of vaccination than others. I would have vaccination in infantile life, not in adults. I believe small-pox is a disease belonging to infantile life.
461. How is it then so frequently attacking adults in England? Generally it germinates from juveniles, and then it becomes contagious to the adults, from one source to the other. I am not in favour of revaccination. I think one vaccination is quite sufficient for all purposes. There is nothing to justify revaccination.
462. That is assuming that the first vaccination has been satisfactorily performed? Yes. In the city of London you obtain a certificate after being vaccinated. That is handed to you with your name and a number upon it, and it is produced afterwards, to show you have passed through a successful vaccination. Once, in my opinion, is quite enough to protect against the contagious nature of small-pox.
463. But in the event of a person not having been vaccinated in infancy? Then I insist on the adult passing through the same ordeal as the juvenile.
- 464.

464. *Sir John Robertson.*] Can you always tell if a person has been properly vaccinated? Yes, by looking at the arm. A. Ross, Esq.,
M.D., M.P.

465. I thought the marks wore out sometimes? A thoroughly successful vaccination never wears out; you will see it sixty years afterwards. 21 Sept., 1881.

466. *Mr. Wisdom.*] Having regard to the prisoners in Darlinghurst Gaol—about 700;—what is your opinion about compulsory vaccination with respect to them? As far as the prisoners go, lately I took the trouble to examine the prison, and I think it is scarcely possible that the disease could get a hold or root in the gaol, it is kept so scrupulously clean. I have been in similar places in London, and it astonished me to compare Darlinghurst Gaol with what I have seen in London; I was surprised at it. It is simply from the casualties that might arise from outside circumstances that small-pox would get into the gaol, and if it got in I think it would not exist.

467. Then you think compulsory vaccination not desirable with regard to the gaol? I think not. In a time of epidemic it would be a wise precaution, but you see, the place being so well and orderly kept the disease is not likely to find a place there; it is more likely to find a place in localities such as the hovels in Sydney. That is where it is most likely to germinate. Such was my opinion in the city of London.

468. *Mr. Wisdom.*] Have you known within your personal experience any evil results to follow vaccination? None whatever. I had two cases out of about 4,000 I vaccinated, and I can account for the way it was done. On some occasions I had to vaccinate from thirty to forty a day; I was very short of lymph, and I had to preserve it; I preserved a little during the heat of the summer, and before the occasion arrived when I required to use it it partly decomposed. I did not know that at the time because it was well corked up and a piece of cotton wool placed in the tube; but it turned out bad, and the inflammatory action of the arm was very great. I never from that day used preserved matter. Those were the only cases out of 4,000 in which I had any difficulty.

469. You have never known syphilis or scrofula to be communicated by vaccination? No. I believe it can be done, but not by following those rules I adopted in my practice. I never took more than three charges from each vesicle; it was a small cup vesicle, and it only contained a certain quantity of lymph; if you take more than that you take the *liquo sanguineous*, you take the elements of the blood, and if you draw blood you may cause risk. I never draw blood; if I draw blood I stop at once and never touch it. I never vaccinate from a patient whose vesicle takes ten, eleven, or twelve days to mature. The proper healthy vesicle takes eight days, which is the proper duration of the pock. If it rises only at fourteen days I discard it because it is not natural.

470. *Sir John Robertson.*] Do you think that small-pox would arise from the filthy state of the houses here;—do you think that small-pox could arise in the city here or anywhere from filth? It would not originate in that way, but it would be propagated from it; it must be imported.

471. *Mr. Wisdom.*] You think it must have come from abroad? Yes, it must be imported. I feel sure it was imported here.

472. *Mr. Lackey.*] In speaking about compulsory vaccination would you apply it indiscriminately to people confined in gaols? Well, I could not give a decided answer. Of course I have not seen the various gaols throughout the Colony, but as far as Darlinghurst is concerned, owing to its scrupulous cleanliness, I would hardly think it suitable.

473. *Mr. Wisdom.*] But would it do any harm? No.

474. *Mr. Hoskins.*] Seeing that persons are constantly being brought to Darlinghurst from the lowest classes and from the squalid and dirty parts of the city, and may carry the germs of the disease with them, do you not think, looking at the large number of persons in the gaol, and that the gaol is situated in the midst of a densely populated neighbourhood, that it would be desirable to give the Government power to vaccinate? Under those circumstances I would be inclined to support it. The disease would not be so likely to spread among the prisoners by adopting such a precautionary measure. Being out and in so often renders the prisoners more likely to communicate the disease.

475. *Mr. Lackey.*] Would you not object to apply vaccination to all constitutions without reference to constitutional diseases? Well, I would; delicate persons should not be subjected to vaccination.

476. Should they when suffering from consumption? I think it would be detrimental to health.

477. And asthma? I think so.

478. *Mr. Watson.*] Is it on account of illness that people are exempted as you say for six months? Yes; they undergo at the end of six months another examination, but they must all submit to compulsory vaccination.

479. *Mr. Wisdom.*] The opinion of the profession generally is in favour of compulsory vaccination? I believe so. Nine-tenths of the profession generally are in favour of it.

480. Both in England and here? Yes; in England they are, I know. There can be no doubt about the efficacy of vaccination; I have not the least doubt in my own mind.

481. *Mr. Watson.*] Do you think revaccination necessary? No; I entirely disapprove of it when unnecessary; one vaccination is quite ample.

482. *Mr. Wisdom.*] But do I understand you to mean that it is injurious, or simply superfluous? Superfluous.

483. Not that it would do any injury? I think it would; I think it is very detrimental to health to any person 40 or 50 years of age; it might cause or develop diseases that are in a latent state in the body.

484. Is it not the general opinion of the profession that if the system is proof against an attack of small-pox, vaccination will not have any effect? I do not hold that opinion; it is the opinion of the profession, but I do not adhere to the principle.

485. You think it would have an injurious effect? I think so. In fact vaccination does not prevent small-pox, but it modifies it if you happen to take it. I had the disease myself, and I have been vaccinated. I had it in a very mild form, and that was through vaccination.

486. *Mr. Suttor.*] And you do not even think persons should be revaccinated when they arrive at the age of puberty? I think it is unnecessary unless not vaccinated before, and then I say it is necessary to compel them to be vaccinated even at any risk; but if a law were brought in to compel vaccination it would be done in early life.

487. Would you make vaccination compulsory with regard to adults who have not been vaccinated? I think not; not after 40, because their susceptibility to catch the disease is not a tenth part so great as persons

A. Ross, Esq., persons under 30, 20, or 10 years of age. Youths are very susceptible to it; I know they are in the old country.
M.D., M.P.

21 Sept., 1881.

488. *Mr. Lackey.*] Have you any definite guide as to the result of the operations of vaccination. Some cases of vaccination show considerable signs afterwards; is it likely that in the cases where these signs are not shown the vaccination has not been successfully performed? There is a distinct mark, and I think that is sufficient to show the efficacy of the vaccination. If I examine an arm I can tell whether the vaccination has been sufficient or insufficient; if there is the least sign it is sufficient.

489. *Mr. Suttor.*] Persons with this cicatrix are susceptible to revaccination, and it will take again? It will.

490. And they are subject to small-pox? Yes; if you vaccinate them fifty times they are still subject to it. The vaccination is done on the skin; to take the small-pox it must go through the system, from inwardly outwardly. Even if inoculated you would take the small-pox, because inoculation goes from the outside; the disease of small-pox, to take its natural course, must go from in out.

491. But vaccination goes through the system? I believe it is a local inflammation.

492. But if a local inflammation why is it that it protects from small-pox? Because it is a concentration; any humours there may be are drawn to the vesicle.

493. *Mr. Wisdom.*] But if the effects of vaccination are simply of a local character how does it happen that there is so much disturbance, such as fever and pains in the system? That is simply an irritative fever; it causes an irritative fever. A blow will cause that; it gives a shock to the system.

494. *Mr. Suttor.*] As the effects of the vaccination are only local, how can it be possible to affect the system by vaccination? It might drain from the arms, or lungs, or heart—from other portions of the body; the irritative fever might upset the whole system; it creates a great sudden shock to the whole system. In London vaccination must be done within three months after birth; that is the limit in England.

P. Sydney Jones, Esq., M.D., F.R.C.S., introduced to the Council:—

P. S.
Jones, Esq.,
M.D.,
F.R.C.S.

21 Sept., 1881.

495. *Sir Henry Parkes.*] Will you kindly tell us what diplomas or degrees you hold? I am a Doctor of Medicine, University of London, and a Fellow of the Royal College of Surgeons, England.

496. The Government would be glad to obtain your opinion on the advisability of introducing into this country a law compelling vaccination—in other words, whether you consider it necessary to the protection of the public health that all persons should be vaccinated under the law, by compulsion; and we should be glad for you to state your opinion in your own way, supporting it by such facts as may have occurred in your own professional experience, and by any authorities you may desire to refer to on the matter? I am decidedly of opinion that small-pox will never be successfully combatted until vaccination and revaccination are carried out in their entirety, and in order to accomplish that of course both vaccination and revaccination should be made compulsory.

497. Would you state more definitely what you mean by vaccination and revaccination,—that is, would you make vaccination compulsory at a certain age or under a certain age in children, and then revaccination at a certain age afterwards? Quite so; I should make primary vaccination compulsory as is usual in England, under three months—at any rate under six months of age. Then revaccination, I think, should be made compulsory between puberty and five and twenty years of age—say at puberty.

498. Would you apply the principle of compulsion to all lives without regard to age,—say a man or woman advanced in life who has not been vaccinated? Who has not been vaccinated at all?

499. Yes? Yes, I think the whole population should be vaccinated. If vaccination in early life has been neglected it certainly should be made compulsory afterwards.

500. Suppose there was a law of compulsion in this Colony, should you consider it necessary to deposit in the hands of somebody or other the power of making exceptions in the cases of children of feeble health, or in the cases of old men or of old women in decrepitude? Yes, I think some such discretionary power should be allowed. I may state that why I think revaccination should be made compulsory at puberty is because it is found that after puberty there is a great tendency to develop or take the disease—a much greater tendency between puberty and five-and-twenty or thirty years of age than at a later period of life. If a child is successfully vaccinated in infancy he is pretty safe from small-pox, or at any rate, from unmodified small-pox, until he arrives at about sixteen or seventeen years of age; between that and five-and-twenty or thirty years of age he is exceedingly prone to take the disease—much more so than before sixteen years of age. When he has passed twenty-five or thirty years of age there is very much less tendency to take the disease.

501. Of course, as you are of opinion that vaccination should be compulsory, you hold the opinion that large bodies of men, such as the police or persons in large Government establishments, ought to be vaccinated? Undoubtedly.

502. And such bodies of men as the inmates of a large gaol? Quite so.

503. Where indeed they are much more penned up than other bodies similar as to numbers? Quite so.

504. Do you think it is possible for small-pox to be generated by conditions of filth, or the absence of sanitary precautions favourable to the generation of disease, without its being introduced from abroad? I think not; I do not know of any evidence to support such a conclusion.

505. Then you think it must be communicated by contagion? I do, either by contagion or infection.

506. *Mr. Wisdom.*] In what part of the world was small-pox first observed; is that known? I could not tell you at this present moment. I think in Egypt; but my memory does not serve me.

507. Within your own experience have you known any diseases such as syphilis or scrofula to be communicated from one person to another by the vaccine lymph? I have not—not a single case.

508. Do you believe in the possibility of it? I believe in the possibility if vaccination is carelessly performed; if properly performed I do not believe in the possibility.

509. *Sir George Innes.*] Even in vaccinating from a syphilised child? Yes; I believe if you take the pure lymph, and nothing but the lymph, at the proper stage, there is no risk whatever of communicating disease.

510. Do you believe that the vaccine matter we have here, and which has been used, contains within itself the germs of small-pox? I do not.

511. I mean such that by its use true small-pox can be produced with all its infectious and contagious characteristics? You mean a child vaccinated with the lymph in ordinary use here?

512. The lymph obtained from England—from the vaccine institutions? That the child is likely to take small-pox as a consequence?

513. We have had an opinion expressed here by a medical gentleman of large practice that we have no occasion to go abroad for the small-pox, that we have abundance of it here in the lymph which is introduced here? I do not think there is the shadow of a foundation for such a statement.

514. *Mr. Wisdom.*] We have also been told that the vaccine disease and small-pox are the same? That is contrary to all authority.

515. It is not the prevalent opinion of the medical profession? Certainly not. Cow-pock and small-pox are two distinct diseases—totally distinct.

516. And therefore the cow-pock is not the result of inoculation from small-pox in the first instance? Certainly not. At any rate that is the belief of the profession and those able to speak with authority on the matter.

517. They are two distinct diseases? Two distinct diseases.

518. *Sir George Innes.*] You do not think the diseases are identical? I do not.

519. *Mr. Wisdom.*] I need hardly ask you then are there any cases known of a patient suffering from symptoms of small-pox after having been vaccinated—the patient having taken small-pox from vaccination? I am not aware of a single case on record. A person may take small-pox after vaccination, but not as a result of vaccination.

520. But as a direct result from vaccination? I have not heard of a single case.

521. If the diseases were identical the cases would be frequent? Yes, most assuredly.

522. We have been also told that vaccine disease is simply a local affection, not a general constitutional one;—is that so? I think not; I think it is a general disease. In fact, if general and constitutional symptoms are not developed by vaccination it is no protection against small-pox. Unless you have the constitutional disturbance you have no evidence of affording your patient any protection from attacks of small-pox.

Alfred Roberts, Esq., M.R.C.S., L.A.S., introduced to the Council:—

523. *Sir Henry Parkes.*] Will you be good enough to state the diplomas or degrees you hold? I am a Member of the Royal College of Surgeons, England, and a Licentiate of the Apothecaries Society.

524. We are desirous of ascertaining from you whether you have formed any opinion on the advisability of making vaccination compulsory by law; in other words, whether you consider it is necessary for the protection of the public health that all persons should be vaccinated. We would prefer you stating your opinion in your own way, with such facts as may have occurred in your own professional experience, or such authorities as you may rely upon in support of your opinion? I believe that universal vaccination is essential to the safety of the individuals of the community and the community generally from small-pox, and that universal vaccination cannot be obtained except by compulsory legislation. Since you were kind enough to intimate to me about a week ago that this question would be put to me before the Cabinet I have looked up a variety of authorities, and without troubling you with the ordinary medical works, I would allude more especially to the recent lectures of Dr. Corfield, Professor of Hygiene and Public Health at University College, London, and to the various reports of the Local Government Board which I received about a month ago from England, and which contain a larger mass of evidence upon the subject than any other work that I am acquainted with; in fact they contain the original information from which many other works principally quote, and the opinion I have just given is, I find, fully corroborated by the experience in England as I can trace it through these reports, dating from '59 to the present day. It is hardly necessary for me to trouble the Cabinet with many statistics showing the great fatality of small-pox, but I will append brief quotations from Professor Corfield's Lectures. (*Vide Appendix F.*) And I would allude to the reports of the medical officers of the Local Government Board to show that it has not up to the present time lost its virulence. That is to say, one or two of the latest epidemics have shown an amount of severity and virulence quite in accord with those we read of in the old authors, and that the only apparent reason why the community—why the English Nation—has been spared from very serious mortality, has been that general vaccination has been carried out. (*Vide Appendix F.*) That was the opinion given by the Privy Council and by Dr. Seaton. I think perhaps it will be unnecessary to trouble the Cabinet with further facts upon this point, but I should be happy to refer to the evidence contained in the reports of the Local Government Board if the Cabinet think it would be of use to them, or the reports can be left for the insertion of the quotations should the Cabinet require it.

525. We should prefer having in the evidence you now give such authorities as you think most important; it will render them more accessible when printed. We would prefer having in your evidence all you have of importance? It would perhaps be better for me to note down the paragraphs, and let the short-hand writer have them; they are lengthy, and I fear it would make it tedious to read them; this I will do.

526. You are of opinion, without any hesitation, that vaccination ought to be made compulsory? I am.

527. Would you apply the principle of compulsion to adults as well as to infants? Yes.

528. That is, you would make it compulsory for all persons to be vaccinated at one age or other? I would make it compulsory for all infants to be vaccinated before they attain the age of six months in the cities, and of one year in the country districts; and I would make it compulsory for every individual to be revaccinated after he or she had attained the age of puberty.

529. You would make that compulsory? I would—after the age when the system had undergone the change which it does undergo during the access of puberty.

530. And you would make vaccination compulsory upon persons who have not been vaccinated, without regard to their age? Yes; and I would make it compulsory a second time—that is to say, it would be revaccination.

531. But irrespective of that? Yes, irrespective of that.

532. Do you think that large bodies of men employed by the Government, such as the police, for example, ought to be vaccinated as a condition of entering the service? I do.

533. Do you think the inmates of a large gaol ought to be vaccinated? I do.

534. That it is necessary to the safety of the public? I do; more especially in a community like this, where no revaccination has taken place up to the present time, and where I find that a very large proportion

A. Roberts,
Esq.,
M.B.O.S.,
L.A.S.

21 Sept., 1881.

of the adults whom I have vaccinated during the present epidemic have taken in a manner indicating that their constitutions were not under the influence of the prior vaccination.

535. Do you consider that the lymph we have in the Colony is good in quality? The lymph that has been used during this present epidemic has not proved to be satisfactory.

536. Have you any suggestions which you would wish to offer for remedying this unsatisfactory state of things? It appears to me that if the Government should propose either to extend the present system of vaccination or to make vaccination compulsory, they are bound at the same time to take every possible means of insuring a good quality of vaccine lymph, and a full supply of it; also, that the operation is efficiently performed. These points appear to me to be quite as high and important a duty as the extension of vaccination; in fact, a necessary part of it.

537. How would you do that? I would do it by having certain central vaccine institutions. In fact, I would follow in the footsteps which experience has taught the Local Government Board to adopt in England. I would have certain central vaccine institutions. The population which is served by each institution should be as large as possible, and the days appointed should not be too frequent; but they should be fixed, in order to supply a considerable number of children at each attendance. The children who come one day should attend on the seventh or eighth day afterwards, and unless there is a considerable number of children it is impossible for the officer to make a suitable selection of lymph from the most suitable cases, and he may be induced by the pressure put upon him to obtain and circulate lymph that he otherwise would not. I think also that each of these districts should be inspected annually or bi-annually by an officer appointed by the Government for the purpose, who should see first of all that the children were all vaccinated, that the proper number of cicatrices were visible, and that those cicatrices were sufficiently marked; and he should superintend generally the arrangements of the vaccinators, and report upon it to the Government. The records in these books show the very great importance of that inspection; and even before the compulsory Act came into vogue I find that the vaccination in England not proving satisfactory, inspections such as I speak of were directed to be made, and that through those inspections the vaccinations improved very much, both in quality and number. After a time, however, vaccination again fell off, and then compulsion was adopted. Since the compulsory Act has been passed the inspections have been still more strict, and more effectually carried out. The third measure I would adopt, would be that *all* lymph collected by the district local vaccinators (who should not be too numerous) should be sent to a central office in Sydney, where it should be carefully examined, microscopically, before it is distributed through the Colony. Such a system would provide specially selected trained vaccinators for the purpose of vaccinating the children, whose work would be periodically inspected, and for the careful examination of all the lymph collected at the central office before it was distributed.

538. Do you consider that a system of inspection is necessary to ensure compulsory vaccination? I am satisfied it is, to ensure good compulsory vaccination; and when I use the word "good," I would wish to express not only that it should be universal but that justice should be done to the health of the child vaccinated. Good vaccination means not only that no possible risk of harm should be incurred which can be avoided but also that the vaccination should be effective against the disease for which it was intended to provide. I may be permitted to add that if a Government renders vaccination necessary it is its duty to provide precautions similar to those I have mentioned.

539. Would you be good enough to give us the benefit of your opinion, as to whether you think that the disease of small-pox could be generated by conditions favourable to its generation without being introduced from abroad? I think not.

540. In your opinion, no condition of putrid or poisonous matter favourable to the generation of disease would produce small-pox? I think not, and I would quote the opinion of Dr. Simon, for many years Health Officer to the Privy Council. He came to the conclusion that filth as filth—outside filth—had not much to do with the diffusion of small-pox, and probably nothing to do with the generation of it. The inside filth and that kind of personal filth, for instance, which attends overcrowding, and especially the overcrowding of people of depraved habits such as those in low boarding-houses, is, I need not say, a very important cause, not in developing the disease but in extending it.

541. *Sir John Robertson.*] You have said that you would advise revaccination at the age of puberty; but supposing a person had passed that age up to thirty or forty, would you cause him to be revaccinated also? Do you mean a third time?

542. No, revaccination—the second vaccination? Yes, most certainly.

543. Then you would cause revaccination to be done up to any age if revaccination has not been done at puberty? Yes; in fact the evidence, as far as I can gather it, is to this effect, that at the present time we cannot say how long vaccination in an average 1,000 people will last; but the indications are that it begins to fade, say from somewhere between eight and twelve years. The majority of persons, however, who are effectually vaccinated in infancy will be only liable to a modified attack of small-pox during their lives; but in a considerable proportion of them, after from eight to twelve years the vaccine influence as a preventive of small-pox more or less dies out. That especially appears to be the case at puberty. If the Cabinet will permit me I shall be glad to express my opinion upon cow or heifer lymph.

544. Yes? This is a matter which has cropped up much lately, and the last reports of the local Government Board contained distinct evidence upon it. Dr. Buchanan, the present Health Officer, in his report thus summarises the results of recent investigations:—"The purpose of the National Vaccine Establishment is, as medical practitioners need to be reminded, not the provision of indefinite supplies of lymph for the vaccination of each person who may require vaccination in a district or a medical practice, but the supply of such amount of lymph as shall suffice for the establishment of local 'stocks,' and for the replacement by lymph of a new stock, and of undoubted efficiency, of any local stocks that may be found to be giving unsatisfactory results. Having this purpose more especially in view, and desiring always to know whether there was any better lymph to be had for the use of the establishment than that which is selected among the supplies furnished by the experienced public vaccinators who form the staff of the establishment, the Board caused examination to be made of the effects upon children of lymph which had been derived from the Animal Vaccine Institution of Brussels. Dr. Cory, of St. Thomas's Hospital, who officiates at the chief Educational Vaccination Station of the metropolis, undertook this investigation for the Board, and his report forms Appendix A to this report. It will suffice in this place to say of Dr. Cory's results with Dr. Warlomont's lymph that in some respects they differed from those which he habitually obtains with long-humanized

humanized lymph; that there was no reason for preferring the results of the calf lymph; and that the humanized lymph had, in its arm-to-arm transmissions, the advantage over the calf lymph of showing greater uniformity of action." That is a summary of the information which appears to embody all I can collect in the most recent authorities on this subject. There are various others, but all the information may be said to be contained in that paragraph.

A. Roberts,
Esq.,
M.R.C.S.,
L.A.S.

21 Sept., 1881.

545. *Mr. Wisdom.*] Have you ever known within your own practice any bad results to follow from vaccination—for instance, the communication of other diseases, such as syphilis, scrofula, or skin diseases? I have never known syphilis or scrofula introduced into the system by vaccination. I have seen eruptions follow vaccination, but I am satisfied they were only the result of a feverish or other morbid condition of the patient, and merely temporary. I have seen other trouble follow vaccination, and more during this last epidemic than I ever saw before. For instance, I have seen abscesses in the arm and an abscess in the axillary gland. It is the result of a peculiar state of the system; but I have not the slightest idea that it was caused by the absorption of anything from the constitution of the child from whom the vaccine lymph was taken, because in most instances other children vaccinated with the same lymph have had excellent arms.

546. You think it probable that vaccination develops something that was latent? Yes; the person is in an unsuitable state of health when vaccinated, though you do not perceive it at the time—you think he is well.

547. *Sir George Innes.*] You state that these disagreeable consequences have been more apparent during the recent epidemic? Yes.

548. To what do you attribute that? Partly to the enormous demand for lymph, and to the, I may say, necessary use of lymph that would not have been used under ordinary circumstances.

549. Diseased lymph? No; lymph perhaps taken a little too late, taken when there was a little inflammation around the vesicle. Under all circumstances it should be made possible to follow the course I was recommending just now—you should have a large number of vaccinated children available on the seventh or eighth day, and only select the most healthy children, with the most complete vesicles on their arms, to take the lymph from. But the demand for lymph has, however, been so great lately, and so little preparation was in readiness, that I have no doubt the lymph has been taken from some in which every possible advantage was not present.

550. Do you think it is in any way attributable to any peculiar condition of the atmosphere? I cannot say. At one time so many of my arms showed an unfavourable appearance that I left off vaccinating for a short time, while the westerly winds were about. But that only amounts to a surmise on my part, and I took the precaution of stopping.

551. How long did you discontinue vaccination? About a fortnight; when there was then a fall of rain.

552. And then you resumed? Yes.

553. You have stated that the disease of small-pox could not be generated by any filth: do you think there is any possibility of it being generated by any germ of it being in the vaccine matter that is used? No.

554. We have had an opinion expressed to us that the materials for small-pox exist here in very great abundance by reason of the germs of it being in the vaccine matter repeatedly used? I scarcely know what is meant by that, because there can be very little doubt, I suppose, that vaccine lymph which was originally taken from the cow is actually the small-pox in the cow—it emanates from that—the cow has had small-pox originally; it has been passed through several generations, and that is the cow-pock.

555. You think the two diseases are identical? I believe so.

556. Is that the generally received opinion? Yes, and in these blue books you will find a series of experiments upon the subject, which can be published as an appendix to the report.

557. They tend to show that the two diseases are identical? I do not think there is any doubt about it.

558. Do you agree with the opinion that there is no such thing existing as the true Jennerian cow-pock-vaccine matter; the theory is that Dr. Jenner was unable to continue the supply of that, and was obliged to resort to the greasy heels of horses? The experiments conducted under the direction of the Local Government Board and others are to this effect: Lymph has been taken from the arms of carefully selected children in the National Vaccine Institution, and children have been vaccinated from those by an experienced physician. The same physician has, at the same time, been supplied with fresh tubes of animal lymph from the establishment which has the highest character for the cultivation of heifer lymph at Brussels, and he has vaccinated selected children from that for two or three generations down, and the resulting vesicles from the two kinds of lymph have then been compared side by side, the result being that the stock lymph of the National Vaccine Institution has produced, on the whole, the most even and regular results.

559. You do not quite answer the question as to whether it had its origin in the greasy heels of horses rather than in the pustules of the cow? But can I? I mean it would be going back so many generations. I only know that the gentlemen who have conducted these experiments have had a farm of heifers under their care for many months, that those heifers have been vaccinated and inoculated, and that all the lymph taken from them under the direction of the Local Government Board has been most carefully taken. Not only would it not I believe be taken in this instance from greasy heels, but I should judge, from the care with which the reports are made, that any animal having the slightest flaw or feverishness would be put aside at once.

560. How are those calves begun with inoculation—inoculation by vaccination? In one series of experiments they are inoculated with the lymph from small-pox patients.

561. From the vesicles of small-pox? Yes.

562. Not of vaccination? No. The calf lymph for sale and dissemination is derived from healthy heifers vaccinated from human lymph, or from cows suffering from the natural cow-pock; other heifers are inoculated with the small-pox, but that has been more experimental than otherwise.

563. Then in point of fact in vaccination the disease really is a modified form of small-pox? It is small-pox, in a modified form.

564. *Mr. Wisdom.*] Is that the prevailing opinion among medical men? I think so.

565. *Sir George Innes.*] Wherein does vaccination differ from inoculation by small-pox? In one case it has passed through the cow; in the other it has not. Jenner's great discovery consists in the fact that small-pox passed through the cow was converted into a much more mild disease, whereas small-pox inoculated from the human subject is nearly if not quite as infectious as small-pox itself; and for that reason it was made after a few years' trial illegal.

566. *Mr. Suttor.*] Though you say you are not only in favour of vaccination but of revaccination, would you vaccinate adults who have never been vaccinated? Yes, certainly.

567.

- A. Roberts, Esq.,
M.R.C.S.,
L.A.S.
567. You would vaccinate every person? I would.
568. *Sir Henry Parkes.*] You would leave with somebody a discretion as to vaccinating very old and feeble people? Most certainly, and also any child that was sick for the time being.
569. Then, in any law of compulsion, there must be a discretion deposited in the hands of somebody as to exceptions? Yes. I may say that the percentage of individuals—of children—not accounted for by the vaccine officers at Home amounts to about 5 per cent.; they are all vaccinated short of 5 per cent.
570. I think I understood you to say you would hand in certain authorities supporting the opinions you have expressed? I should be very happy to do so.
571. *Mr. Watson.*] Is vaccination a preventive of small-pox? I think almost positively so.
572. *Mr. Suttor.*] Then you do not believe that notwithstanding vaccination small-pox has increased, and its effects become more serious? Certainly not.
573. *Sir George Innes.*] Of course vaccination is not an absolute security from small-pox? Oh no, it is not.
574. Many persons have small-pox after being vaccinated? Oh yes, but almost always in a modified form.
575. *Sir Henry Parkes.*] It is the best safeguard known? Yes. Mrs. Garrard, a recent patient at Botany, was nursed by her husband; he was vaccinated a week ago, and has now got small-pox; the small-pox was probably taken into his system before the vaccination, but the attack has been a very mild one—it has been so much modified by the vaccination.
-

APPENDIX.

[To Dr. Maclean's evidence.]

A.

L. H. J. Maclean, Esq., M.D., to The Colonial Secretary.

Dear Sir Henry,

26, Alberto Terrace, Darlinghurst, 16 September, 1881.

As the Cabinet when consulting me touched on the subject of "Vaccino-Syphilis," I have thought it but right to submit to them a paper written on the subject by me for the consideration of the Medical Section of the Royal Society of N. S. Wales. As you will see my intention was to push the Government to bring in a Bill in favour of compulsory vaccination, the paper had better be in your hands. I shall be happy to answer any questions that may require clearing up.

I omitted to state yesterday that the whole medical profession may be said to be unanimously in favour of compulsory vaccination; in fact, during the thirty years that I have been a member of it the only exception that I have heard of is Dr. Le Gay Breton, of this city.

I remain, &c.,

L. H. J. MACLEAN, M.D.

A 1.

VACCINO-SYPHILIS.

As a good deal has been written lately on the danger of transmitting syphilis through vaccination, I have thought it would be useful if a brief summary of cases bearing upon the subject was submitted for consideration to the members of the Medical section of the Royal Society of New South Wales, commencing first with a brief statement of the cases; 2nd. The proofs advanced in favour of transmission of disease through the vaccine virus; 3rd. The arguments against such transmission; 4th. An endeavour to arrive at a fair and just conclusion, either for or against; and lastly, my own personal views on a subject of paramount importance to us all.

To begin then:—The *Lancet*, in one of its numbers of 1861, startled the medical profession with the announcement, copied from an Italian Medical Journal, of syphilis conveyed by vaccine lymph to forty-six children. This is said to have occurred at Rivalta, in Piedmont, and authenticated by a letter to the *Lancet* by Dr. Tacchiotti. The child vaccinated was eleven months old, and in good health, from lymph forwarded in a tube from Acqui. Not on the seventh or eighth day, as in England or France, but on the tenth, forty-six children were vaccinated from this child, and ten days after these later operations seventeen other children were vaccinated from the lymph of one of the forty-six infants just mentioned. A committee was ordered to inquire into these cases, but declined to express any opinion on the subject. Tissam, of Milan, speaks of a boy whose father was suffering from secondary syphilis, having been vaccinated from a healthy child. From the vesicle of this boy fifty-six children were vaccinated, out of whom thirty-five were attacked in a few months, and had diseased their mothers. Lymph was taken from eight of these syphilitic children, and a second series of thirty-four vaccinated, and none of these thirty-four showed symptoms of venereal disease.

Lancereux, since 1862, has collected a number of cases—351—in which vaccination was performed with lymph supposed to be impregnated with syphilis. Out of this number 258 were attacked—ninety-three only escaping. It was probably owing to the publication of Lancereux's papers, and the above-mentioned cases in the *Lancet*, that induced Mr. Jonathan Hutchinson, the senior surgeon to the London Hospital, to study the question of syphilitic transmission in vaccine virus.

He has taken up the question very carefully, and I think we are justified in going somewhat into detail with reference to his cases.

In Mr. Hutchinson's first series, in 1871, twelve young adults were vaccinated from an apparently healthy child, in whom constitutional syphilis soon afterwards showed its appearance. Vaccination progressed satisfactorily in all, but in ten indurated chancres were developed at the seat of the punctures during the eighth week. Blood is supposed to have been mixed with the lymph in these cases.

In Mr. Hutchinson's second series the child showed only slight symptoms of inherited syphilis. Twenty-six persons were vaccinated from this child—nine out of this number, who were all children, were attacked, suspicious symptoms were observed in six others, and the remainder are supposed to have been unaffected.

In the third series, a typical case is given. This man was 46 years of age—twelve persons were vaccinated from the baby, including three of the patient's children, young adults. In these adults the result was negative; in fact all seem to have escaped with the exception of this man. The vaccinator said the child was in excellent health at the time. Mr. Hutchinson says he saw the child, and attached great importance to the sunken bridge of the nose and large forehead.

In the fourth series the typical case chosen was a lady of 45 years of age, who applied to him in December, 1872, for a vascular growth of the urethra. On examining the patient the remains of a copious dusky syphilitic rash were found. She stated having been very ill after vaccination, and having had a severe rash and inflammation of one eye, synechia being present in the left. The disease was probably syphilitic iritis. She was vaccinated in May, 1871, by four punctures, none of which took; just a month later one of them inflamed, and became a hard-edged ulcer, lasting three months. A number of others had previously been vaccinated from the same child, but had not been traced. The lady's two daughters were vaccinated, and escaped all contamination. She was apparently the last vaccinated. The vacciner and mother appeared in good health. During dentition, however, conglomerate sores were observed. It was the third child—all three living. The eldest, between six and seven, showed no signs of inherited taint; the second, a girl of five, had a large forehead—similar sores about the anus occurred in her, as in the vacciner—the vacciner had also a large forehead.

I will now proceed to the other side of the question. Up to the publication of these cases, vaccino-syphilis was an unknown quantity in the medical profession, proving how very rare these cases must be; and Mr. Hutchinson was found fault with for publishing them. Dr. Jenner, in his original work on vaccination, makes no allusion to the possible transmission of disease by vaccination. Dr. Walker, an ardent admirer of his, and one of the Fellows of the London College of Physicians, vaccinated in London, with his own hands, more than 100,000 children, and may have said to have died lancet in hand, as he was vaccinating three days before his death. No such cases were ever observed by him. Mr. George Cooper, when Mr. Hutchinson's paper was being discussed at the Royal Medico-Chirurgical Society, said he had been a public vaccinator for twenty-seven years, had vaccinated many thousands, but had never seen a case of syphilis after vaccination. Rollet, of Lyons, and others have vaccinated healthy people repeatedly from syphilitic children, and with a negative result. Dr. Leaton was of opinion that no vaccination syphilis existed in England.

From the cases which I have brought forward, I think we must acknowledge that it is possible to convey syphilis in impure vaccine lymph, although the Continental cases are very carelessly drawn up. Vaccinating the tenth day would inevitably lead to foreign material being introduced, and such a large number as forty-six or fifty-six from one vesicle would induce us to believe that the white or red corpuscles of the blood would be contained in the lymph. Again, vaccinating from one child to the other,

other, and the supposition that syphilis can be transmitted in this way before constitutional symptoms have shown themselves, ought I think to be rejected. Mr. Hutchinson's cases are carefully drawn up, and he inclines to the opinion that as long as the lymph is pure there is no danger. Mr. G. R. Lane, of St. George's Hospital, goes a little further, and thinks it is possible to transmit the poison from a pure vaccine vesicle—in other words, that the syphilitic virus, whatever it may be, is suspended in the fluid of the vaccine vesicle, irrespective of any blood taint.

The opinion of others is that if a vaccine vesicle is not injured or drained too much we are comparatively safe in vaccinating a limited number from it, but if secondary syphilis is lying dormant in the system the commotion excited by the vaccine virus will bring it into activity—that is, that vaccination will run its course in the majority of cases, and then that the usual symptoms of syphilitic poisoning will show themselves. I am inclined myself to side with Mr. Henry Lee, who supposes that there are certain periods of syphilitic activity, and that if at this time vaccination is properly performed, even with pure vaccine lymph, the inevitable results of venereal poisoning will follow. I think the irregularities or eccentricities of the cases can scarcely be explained in any other way. We have, however, enough in the above cases to prove to us that every precaution is necessary on our part, and that we cannot be too careful, both as to the state of the vaccinifer and the person to be vaccinated.

I have certified myself to the vaccination of some 60,000 children, and have never seen such cases as described by Mr. Hutchinson. If such cases had occurred in India, and the Inspector General had declined publishing them, a private circular would have been sent to us, putting us on our guard against the danger. Syphilis, too, is rife enough in India, and my hospital was always pretty well filled with cases of venereal in its different forms, and yet no cases of syphilitic poisoning from vaccination turned up. Again, if vaccinating adults from children is attended, as we have just seen, with lamentable results, how careful we ought to be in using adults as vaccinifers. My own experience, when a student, and afterwards as officiating Resident Medical Officer at the Royal Infirmary for Children in Lambeth, was that if congenital syphilis did not manifest itself before the third month we could depend with tolerable safety upon the vaccinifer, even if driven to vaccinate from it as a last alternative.

Cases of the kind we have been discussing are so very rare that since 1873 I can find no record of any new cases, and if they could be found at all would certainly be found in London with its teeming millions. We ought therefore not to be discouraged, but press the Government here to bring in a Bill in favour of compulsory vaccination.

Another thing which diminishes considerably our risk of syphilitic complications is that the experience of late years proves that vaccination is only necessary twice—in infancy and at puberty. Dr. Manning, the Inspector General of Lunatic Asylums for this Colony, attributes the large number of failures to the patients having been vaccinated in 1871, and in this I fully agree; and if revaccination were renewed in 1891 the same results would probably be recorded.

Although the relative merits of humanised lymph and animal lymph are perhaps foreign to my paper, I cannot refrain from saying that humanised lymph has a more powerful hold over the system than lymph direct from the cow—failures being far more frequent with the latter than with the former. This is attributed to want of skill on the part of the operators. Medical men in general practice have no time to devote themselves to acquiring greater skill than they now possess; and after all Dr. Cameron's objections to humanised lymph are theoretical, and only based on the principle that humanised lymph does not seem to possess such strong preservative power as formerly. Admitting it, other things may be at work to produce this—such as increased sickness, disease in an intensified form in our overcrowded cities, and other debilitating causes, which certainly render man more liable to disease than formerly. Dr. Peter Mere Latham was, and Sir Thomas Watson is, of opinion that disease has assumed during the last forty years an athenic type, general depletion being rarely had recourse to now; and Dr. Latham informed me himself that during the last years of his work at Bartholomew's Hospital his practice was less successful and the mortality greater.

In conclusion, let us never forget that we have a popular prejudice to meet, or rather to overcome, encouraged and fostered occasionally by members of our own profession, who condemn vaccination "in toto," notwithstanding the brilliant results lately published by Dr. Buchanan, the Medical Officer to the London Board of Health—results which prove to every unprejudiced mind how valuable vaccination is as a preventive against small-pox, and how wonderfully it modifies a disease that has been known as a scourge to the nations of the earth since the great Arabian physician, Rhazes, gave us the first authentic narrative of variola, in the year 900, and which, up to the time of the immortal Jenner, was looked upon as the hereditary curse of the human race, and an inheritance which neither time nor medicine could dissipate.

26 Alberto-terrace, Darlington,
13 September, 1881.

L. H. J. MACLEAN, M.D., M.R.C.P.L.

[To Dr. Renwick's evidence.]

B.

British Medical Journal, 18 June, 1881.

SMALL-POX AND VACCINATION.

IN a very able memorandum, presented to the President of the Local Government Board, and just published as a Parliamentary paper, Dr. Buchanan, the Medical Officer of the Board, gives some very striking figures which add a very strong additional proof—if this were needed—to the wealth of evidence that has accumulated as to the different degrees in which the vaccinated and unvaccinated suffer from small-pox. Dr. Buchanan's figures are for the fifty-two weeks which have elapsed since the Registrar-General began, in his weekly returns, systematically to record what he could learn about vaccination in the case of deaths registered in London from small-pox.

The facts about vaccination are stated in the case of not quite two-thirds of the deaths registered; they are not stated in the case of rather more than a third of the registered deaths. It is to be regretted that the latter proportion is so large. The great bulk of such cases had certainly been attended by medical practitioners; through whose omission to record the facts about vaccination room is left for dispute whether the proportion between the cases certified as vaccinated and not vaccinated would be altogether the same, if the "not stated" cases were taken into account. Dr. Buchanan proceeds on the assumption that the deaths among persons whose vaccination is not recorded (the "not stated" deaths) occurred among vaccinated and not vaccinated in the same proportion as the deaths of persons where the fact of vaccination was recorded; and he therefore sets aside the "not stated" deaths altogether; being satisfied, as any candid mind must be, that a fair approximation to the truth, about the comparative rates of small-pox deaths in vaccinated and unvaccinated, may be got from an examination of the deaths that are "certified" to have taken place in the one and in the other class respectively. The absolute death-rate of the year in the two classes respectively could not, of course, be measured unless the "not stated" class were included in the calculations.

Of people living in London at all ages, there died of small-pox during the fifty-two weeks included in Dr. Buchanan's tables, 1,532; and of these 325 are certified to have been vaccinated, and 637 not to have been vaccinated; while the facts about vaccination are not stated in the case of 570 of the deaths. Estimating the vaccinated as nineteen times more numerous than the unvaccinated, the present 3,810,000 inhabitants of London divide into a vaccinated class numbering 3,620,000, and an unvaccinated class numbering 190,000. Applying the mortality from small-pox at all ages during the last fifty-two weeks to these populations, the rate of small-pox mortality for the twelvemonth among the vaccinated class may be reckoned as 90 per million, and among the unvaccinated class 3,350 per million. During the same period 874 persons under 20 died of small-pox. Of these, 94 are known to have been vaccinated, 475 are known not to have been vaccinated; and the facts about vaccination are "not stated" in respect of the remaining 305. Dividing the estimated number of persons under the age of 20 now living in London, 1,535,000 appears as the number of the vaccinated class, and 105,000 as that of the unvaccinated. Thus the rate of small-pox mortality amongst these populations was, during the past twelvemonth, 61 per million amongst the vaccinated class, and 4,520 per million amongst the unvaccinated. Again, in the fifty-two weeks under review, there were in the London community 19 deaths among children under five certified to have been vaccinated, 244 deaths among children of that age certified not to have been vaccinated, and 138 deaths among such children whose vaccination is "not stated."

Dr. Buchanan estimates the vaccinated population of London under five years of age as 469,000 children, and 41,000 as probably not vaccinated; the latter number including children unsusceptible, unaccounted for, and the like, along with the children who are under the customary age for vaccination, and the unvaccinated children of people who have come up to London from the provinces. The rates of death from small-pox among these vaccinated and unvaccinated children last year appear, therefore, as 40½ per million among the vaccinated class, and 5,950 among the not vaccinated class. These figures appear much more striking when given in a tabular form, which we accordingly subjoin.

Comparative

Comparative Small-pox Death rates among Londoners Vaccinated and Unvaccinated respectively, for the fifty-two weeks ended May 29th, 1881.

	Death rate per million of the vaccinated class.	Death rate per million of the unvaccinated class.
All ages	90	3,350
Under 20 years	61	4,520
" 5 "	40½	5,950

From such figures Dr. Buchanan draws the following inferences.

1.—As no one suggests that the vaccinated and unvaccinated classes live under conditions differing from each other in their influence on small-pox, unless it be this one condition of vaccination, the vaccinated are much less liable to die of small-pox than the unvaccinated.

2.—Vaccination is not an absolute protection against small-pox; though he argues from the experience published by the Royal College of Surgeons in 1806, that no falling off in this respect has occurred since the early days of vaccination.

3.—The degree of protection, both actual and relative, afforded by vaccination, is greatest to people under five years of age; less when ages from birth to twenty years are examined; and still less when people of all ages are taken into the account. Thus Londoners can, by availing themselves of one average vaccination, diminish the chances of their children dying of small-pox in the proportion of 146 to 1 for the first five years of their life; and the same vaccination serves to lessen, in the proportion of 74 to 1, the chance of their being killed by the disease before they reach the age of twenty. After that age the vaccination in infancy is further reduced in its protective influence, for the difference in mortality from small-pox between the unvaccinated and the vaccinated class through the whole period of life is as 1 to 37, a protection incomplete indeed, but obviously important for everybody to possess.

Dr. Buchanan points out that the evidence as to the diminished potency of vaccination to prevent persons of later age dying of small-pox, shows strongly the need for repeating the operation as age advances; and he insists also upon the importance of the operation being thoroughly performed. Of course everything passing under the name of "vaccination" is not of the same avail as a protection against small-pox; and, even when vaccinated persons have contracted small-pox, it is known that those who are thoroughly well vaccinated have twenty-fold the advantage over those who have been very badly vaccinated, in respect of their chances of recovery. The Registrar General's returns have been content to place everything that could be spoken of as "vaccination," perfect and imperfect together, in the same category; but Dr. Buchanan reports that he is now engaged, with Dr. Stevens's assistance, in some inquiries into the relative protective influence of one and another sort of vaccination during the present small-pox epidemic in London, the results of which he proposes to report subsequently.

The publication of these statistics must be regarded as extremely opportune at the present moment, and the skill with which Dr. Buchanan has brought out their true meaning is deserving of the highest admiration. As he truly observes, however, these lessons are "nowise new, but they are taught afresh by to-day's experience among our own selves in London; and they would appear, therefore, to be worth bringing to the notice of people who are trusting to chance for the escape of their children and themselves from the distressing, disfiguring, and fatal disease of small-pox."

B 1.

SMALL-POX IN SCOTLAND.

IN view of the danger at present existing of the small-pox being widely disseminated in Scotland by importation from London and elsewhere, the Board of Supervision have issued an official memorandum regarding small-pox, in which they impress the value of Mr. Husband's suggestions. They add: "1. In the first place, that everyone should make sure that he is not mistaken in supposing himself to have been well vaccinated in infancy. 2. That the unvaccinated should be searched for, especially among the unsettled and migratory portion of the population, among whom chiefly the disease is likely to appear in the first instance. 3. That those who desire absolute security should get themselves revaccinated. 4. That infants should be vaccinated a few weeks, or even months, earlier than usual." The points of primary importance, requiring the attention of local authorities in their endeavours to check or stamp out the disease when it makes its appearance, are: 1. The general vaccination and revaccination of the population, by which means the number of persons liable to be attacked will be diminished; 2. The removal of all apparent or probable sources of insalubrity in the district, by which means the general health of the population will be promoted; 3 and 4. The early discovery of the first and each subsequent attack in the district, and the immediate isolation of the first and subsequent cases, by which means the local authority may hope to prevent the disease being communicated to others, and becoming epidemic in the district. These measures, however, will be of little avail, if they are only resorted to when the disease has actually appeared. If the local authorities are not prepared beforehand, they will then have to encounter panic, confusion, and the impossibility of effecting immediate isolation. The only true hope of safety lies in their being fully prepared, and in being able so to act, when the first case of the disease occurs, that it may not be disseminated throughout the population.

B 2.

VACCINATION AND SMALL-POX.

Sir,

To the Editor of the *Times*.

The mind of the public is evidently so much unsettled as to the "protective" influence of vaccination that I venture to think it may not be indisposed to listen to what can be said on the question by one who has watched its course for more than half a century, with scientific as well as philanthropic interest, and who claims as complete a freedom from professional prejudice as any outsider—his sympathies in this matter being, not with the "doctors" but with the public, whose welfare is, with him, not the primary, but the only consideration.

It happened that my attention was specially directed to the subject at the very commencement of my medical apprenticeship, in 1828, by the number of cases which then fell under my notice of total and irremediable deprivation of sight by small-pox during the first months of infancy, my master, Mr. J. B. Estlin, of Bristol, having a widespread reputation in the West of England and South Wales as an ophthalmic surgeon. Strict inquiry being made in every case as to previous vaccination, the reply was invariably negative. During the eight years of my attendance at Mr. Estlin's eye dispensary I must have seen at least a hundred such cases (I well remember reckoning the average at more than one a month), and not one of these occurred after vaccination.

It was impossible for me, therefore, to be otherwise than strongly impressed with its "protective" agency, and I took an active part, both while I remained a pupil and during the few years in which I practised my profession, in diffusing, without fee or reward, what I regarded as its unquestionable benefits. That these benefits have been latterly called in question is due (as it seems to me) to three causes—first, the entire ignorance of the present generation, save the few who have specially studied the medical history of the last century, as to the ravages of small-pox before the introduction of vaccination by Jenner at the beginning of the present; second, the exaggerated claim to complete protection originally advanced by the advocates of vaccination; and, third, the strangely illogical idea by which the anti-vaccinationists of the present time are possessed that what is not complete protection is no protection at all. To each of these points, therefore, I must address myself as briefly as possible:—

1. There can be no question of the congenital liability of almost every individual born into the world to be, once in his or her life, the subject of certain diseases known in medicine as the Exanthemata—measles, scarlatina, and whooping-cough; the cases being very rare in which persons exposed to the infection of these diseases during early life escaped being attacked by them. This is shown in the most remarkable way when the infection of anyone of them is conveyed to a community among which there are few or no persons who are "protected" by having previously been its subjects. It will be in the recollection of many of your readers that the Fiji Islands were thus ravaged by measles not many years ago. It is within my own knowledge that the population of the Faroe Islands, old and young, were similarly affected some years further back, scarcely any escaping,

escaping, save a few old people who had suffered in an epidemic 65 years previously, and the inhabitants of Suderoe, who kept themselves in a rigid quarantine. That small-pox belongs to this group of diseases, and that the congenital liability to it is at least as great as it is to measles, are amply proved by the medical records of the past century. That it was then quite exceptional for any one to reach middle age without having been the subject of small-pox is clearly shown by the arguments urged in favour of small-pox inoculation. Of the deaths among children under 10 years of age (a far higher percentage than now) it was estimated that half were due to small-pox; and of the total mortality of the country, deaths from small-pox were estimated at an average of 8 per cent. But the universality of the liability to small-pox was best shown by the ravages of its epidemics in communities not "protected" by a previous attack. Thus, in Iceland, whose isolated position kept it free during very long periods from epidemic invasion, its well-kept records show that in 1720 the introduction of small-pox caused the death in a few months of nearly one-fourth of its entire population; so that, according to the ordinary rate of mortality from the disease, almost every one must have been attacked by it. And the readers of Mr. Catlin's "North American Indians" will recollect the almost entire extermination of the tribe of "polite and friendly Mandans" by its fell ravages. The anti-vaccinationists have to show that the congenital liability to small-pox is less now than formerly, and to account for the broad fact that, though at least 19-20ths of our present population have never had the small-pox, even in its mildest form, the number of our teeming millions who suffer in the severest small-pox epidemics of modern times is a very small fraction of those who were affected by them in the corresponding period of the last century, when the population of England was scarcely a third of what it is now, and the great bulk of it was "protected" by having been previously small-poxed.

2. In the first days of vaccination it was affirmed, on the basis of a far too limited experience, that it afforded a complete protection against small-pox. This claim, however, was early negated by the occurrence of small-pox in persons who had undoubtedly been successfully vaccinated, but it was remarked that the disease was unusually mild in its type, the mortality being small, and disfigurement and blindness rare. Hence the term "modified" small-pox came into use as the designation of the type of the disease which generally (it was maintained almost invariably) presented itself in vaccinated subjects. But in process of time the advocates of vaccination were startled by the indisputable fact of the not rare occurrence of small-pox in its worst form among persons who had undoubtedly been thoroughly cow-poxed, and this, of course, was a severe blow to the believers in its efficacy. On careful inquiry, however, it proved that so large a proportion of such cases occurred among adults or adolescents that there was obvious ground for the belief that the protective effect of early vaccination had died out. The practice of revaccination was then introduced, and it was found that when performed on adults who had been vaccinated in early childhood so considerable a proportion took the cow-pox a second time as to indicate that its protective influence, whatever its nature, had expired. I may be allowed to quote my own case as an instance: Having myself been successfully vaccinated in infancy, I was revaccinated at the age of 11 or 12, but did not then take the cow-pox a second time. Having accidentally scratched myself with a charged lancet about 12 years afterwards, a very characteristic vesicle developed itself. The "protection," which the want of success of my first revaccination showed that I still enjoyed, had died out by the time I arrived at manhood, and I might have been attacked by small-pox when exposed as I was to its poison, but for the new protection I unintentionally gave myself.

Facts of this kind all tended to confirm the original belief of Jenner that cow-pox and small-pox are essentially the same diseases, the protection afforded by successful vaccination being just the same kind as that given by a first attack of small-pox. There can be no question that second attacks of small-pox did now and then occur in old times, just as second attacks of measles, scarlatina, &c., do now; and this especially when the first attack occurred in infancy or early childhood, as in the historical case of Louis XV. The fact seems to be alike in regard to cow-pox and small-pox, that whatever be the constitutional effect left by the first attack, the original liability is much more likely to be reproduced during the period of growth, when tissue-change is very active, than it is subsequently. And this obviously points to the importance of revaccination at or about the termination of that period, and to the probability that the protection it affords will then endure through life. How completely this scientific anticipation is borne out by experience is proved by the facts lately recorded in your columns as to the absolute immunity from small-pox enjoyed by the 1,000 nurses and attendants in the Asylums Board hospitals, who had undergone revaccination, although exposed to small-pox infection in its severest form; and the almost complete immunity enjoyed by the 10,000 employes in the Post Office, of whom a large number must have been in the way of catching the disease. The anti-vaccinationists have to meet these most cogent facts; which, to the scientific mind, carry the assured conviction that if it were possible to enforce, not only vaccination in infancy but revaccination at the age of, say 18, small-pox might be as completely exterminated from our islands as it had been from Malta, when my scientific visits to that island in 1870 and 1871 gave me the opportunity of inquiring from its medical authorities as to the effect of the compulsory vaccination long in force there. And it is to be remembered that this immunity cannot be attributed to the insular position of Malta, for it is, from its constant communication with every Mediterranean port, quite as liable as Great Britain to have zymotic poisons brought in from without. That small-pox still lingers among ourselves is thus plainly owing (1) to the persistence of an unvaccinated residuum; and (2) to the existence among the vaccinated of a certain proportion who (like those who in old times became the subjects of second attacks of small-pox) have acquired a renewed liability which revaccination would destroy.

That Jenner's view was correct, and that cow-pox is really small-pox modified by passing through the cow, was proved many years ago by the experiments of Mr. Ceeley, of Aylesbury, who succeeded in communicating true small-pox from a human patient to the cow by covering the latter with blankets taken from the former, and in reproducing cow-pox in the human subject by inoculation with lymph taken from the vesicles which appeared on the surface of the cow's skin. And it is not irrelevant to mention that analogous means of mitigating the severity of various animal plagues are now being sought out and put in practice by our most advanced pathologists with a success which led Professor Lister to express to the meeting of the British Medical Association last year confident expectation that like means will be found before long of substituting a mild, innocuous disorder for the severe and often fatal infections of measles and scarlatina.

3. On the utterly illogical argument of the anti-vaccinationists I need not waste many words. Suppose that Jenner had discovered that the eating some common wild herb, producing a slight temporary disorder, would afford the same "protection" against an attack of small-pox as the having once had that disease, say to the extent of 90 out of every 100, what would be thought of the mental capacity of the man who should refuse to make his children eat of that herb because it did not protect the 100? Suppose, further, that it was found by experience that the protection given by such eating died out during childhood, and that it could not only be renewed, but made almost absolute by the eating of the herb a second time at the age of 18, what should we think of the good sense of a young person who should neglect, still more should refuse, thus to obtain immunity for himself, and to prevent his becoming a source of danger to others? And, finally, to meet the objection which has been raised against vaccination, on the ground of the admitted, though extremely rare, transmission, with the vaccine lymph of some communicable poison which due care would prevent, I would ask whether it would be a sufficient reason to refrain from eating the protective herb that once in 50,000 cases injury had accrued from through some poisonous plant having been gathered with it, which due caution on the part of the gatherer would have eliminated? If the neglect of such caution were visited with severe penalties, I make no doubt that we should soon hear no more of its sad results.

I have, &c.,

WILLIAM B. CARPENTER, M.D., F.R.S.

B 3.

ADVANTAGES AND IMPORTANCE OF VACCINATION.

THE Central Board of Health in Melbourne, in a memorandum to the Chief Secretary, thus reports on the advantages and importance of vaccination:—

“Central Board of Health, Melbourne, June 21, 1880.

“The fallacies of those who are opposed to vaccination have been so frequently and thoroughly exposed that it is a matter of surprise that any intelligent person should at the present day be found to repeat them; and were it not for the mischief which is done to the cause of vaccination by the circulation of such fallacies amongst the ignorant and unreflecting part of the community, the Central Board of Health would consider it simply a loss of time to again refute them.

“In

"In view, however, of the statements lately made, it may be well to give the following facts:—

"1. As to the protection which vaccination affords against small-pox, on this point the evidence is simply overwhelming. Three distinct and very comprehensive investigations have been made in England—one by the Royal College of Physicians in London, eight years after vaccination had been adopted; another by the National Epidemiological Society of London in 1852-3, when an almost national poll was taken on the subject; and a third in 1857 by Dr. Simon, C.B., F.R.S., then Medical Officer to the Privy Council of the United Kingdom, when the opinions were taken, not only of the medical profession generally, but also of the members of the medical departments of the army and navy, together with the opinions of several foreign Governments; and speaking of these investigations Dr. Aitken says, "These 'polls' may be held as completely decisive of the question, really practically decided in the affirmative fifty years ago. From such evidence the inference is so inevitable that he who disputes it is equally unreasonable as he who opposes in like manner any proposition in Euclid."—('Practice of Medicine,' 3rd edition, 1864, p. 285.) Dr. Seaton, in his well-known 'Hand-book on Vaccination,' Dr. Marston, of the London Small-pox Hospital, and, in fact, a host of the highest medical authorities, are equally positive on this point, while there is not perhaps a single qualified medical man who has any doubts upon it. On the other hand, Dr. Simon says:—"Whosoever vaccination falls into neglect, small-pox tends to become again the same frightful pestilence it was in the days before Jenner's discovery;" and "whosoever vaccination is universally and properly performed, small-pox tends to be of as little effect as any extinct epidemic of the Middle Ages."

"2. As to the alleged danger of conveyance of other diseases, the evidence is all the other way, and indeed conclusive, that vaccination, when properly performed, does not, and in fact cannot, convey any disease but vaccinia. Talking for instance, of cutaneous and scrofulous or glandular diseases (the invaccination of which is most dreaded by the ill-informed), Dr. Seaton says, "No facts exist to prove, or even to render probable, their greater frequency among the vaccinated than amongst the unvaccinated of the same ages respectively; observation, indeed, tends to show that there is no such greater frequency."—(Handbook, p. 301.) Again 'Parental complaints of such communication arise, as Marson very justly states, from the unwillingness of parents to believe that there is anything wrong in their offspring, and, when other diseases follow, vaccination gets blamed for what is really and truly due to other causes.'—(P. 302.) Dr. Seaton, whose vaccination experience, as is well known, was most extensive, adds:—"I have never yet in a single instance found that the child from whom the lymph was taken was suffering from the disease it was said to have imparted."—(P. 302.) Dr. Marson, after vaccinating 60,000 cases, states that he had 'never seen other diseases communicated with the vaccine disease, nor did he believe in the popular reports that they were so communicated.'—*Seaton's Handbook*, p. 302.) Dr. Leese, whose vaccinations have been almost as numerous, says his experience was the same. Sir William Jenner, after six years' experience in the Hospital for Sick Children, during which he met upwards of 13,000 cases, adults and children, states that in no case had he reason to believe, or even to suspect, that any constitutional taint had been conveyed from one person to another by vaccination. Dr. West, after 15 years' experience, and attending 26,000 infants and children says the same. Professor Paget, with his large experience among children in the out-patients' room at St. Bartholomew's, gives like testimony. Similarly as to syphilis, as to the possible conveyance of which disease by vaccination there is also a large amount of ignorant apprehension. Neither Drs. Marson nor Leese, with their immense vaccination experience, 'ever met with anything to countenance the belief that vaccine lymph had on any occasion been the vehicle of conveying syphilitic infection.' Mr. Tomkine, inspector of vaccination, of the National Vaccination Establishment, who has himself vaccinated upwards of 50,000 cases, states he never heard of a case. In fact, the possibility of conveying syphilis by vaccination has been tried by actual experiment and on a large scale on the Continent, where several cases were vaccinated with lymph purposely taken from syphilitic subjects, the result being that in no case was any syphilitic taint conveyed. Indeed an illustrative case occurred some years ago in this colony, where a child was vaccinated with lymph taken by mistake from an infant whose mother was described as 'one mass of syphilis.' The vaccinator watched the vaccinated child closely for five years, and it never showed the slightest sign of syphilitic infection. The fact really is, as all educated medical men well know, that it is physiologically impossible that syphilis can be conveyed by vaccination properly performed. The Central Board of Health are of course aware that the statement is frequently made that syphilis is so conveyed, but a solution of the difficulty is given by the chairman of the National Health Society of Great Britain, who says, 'Parents have obvious self-interested motives in ascribing the appearance of this disease to vaccination.'

"3. Alleged superiority of lymph direct from the cow. On this point it will be sufficient to say—1. That although there is at present some agitation in England for such an alteration of the law as will make it optional to use lymph taken direct from the cow, the movement is very far from being likely to be successful, the president of the Local Government Board having the other day informed a deputation on the subject that the proposed innovation would not receive his support, as it would utterly disorganize existing vaccination arrangements, which are found to work satisfactorily, and by means of which the population of the country is protected against the horrors of small-pox. 2. To those who know anything of the subject it is needless to repeat the arguments by which it has been proved over and over again that the lymph now in use is as active as it was in the days of Jenner, and that it has lost nothing whatever by its repeated transmission through the human body. In fact, as is observed by a recent writer in the *Lancet*, to say that the effectiveness of lymph necessarily diminishes with each such transmission is about as logical as it would be to argue that the procreative powers of the human race have necessarily decreased since the days of Adam."

"The Central Board of Health desire to remind all concerned, that it is owing to the fact that the people of this colony are so thoroughly protected by vaccination that we have been enabled so rapidly to stamp out small-pox each time it has made its appearance here. Any moment we may have it again from our now frequent communication with India, where, by the way, small-pox kills 100,000 people annually; and were vaccination discontinued or neglected for a few years, it is only too certain how fearful would be the ravages which the next invasion of the disease would make in this colony. Surely those who are advocating a cessation of vaccination here are ignorant of, or have forgotten, what a frightful and loathsome disease it protects us from, and that in England alone it is estimated that 57,000 lives are annually saved by vaccination, to say nothing of the thousands who are also saved from frightful disfigurement or loss of sight and hearing.

"The Board desire, in conclusion, to protest in the strongest possible manner against any such suicidal action as a repeal of the law which, by making vaccination compulsory, gives the people of the colony an assured protection against one of the most horrible scourges to which the human race is liable.

"By order of the Board,

T. R. WILSON, Secretary."

[To Dr. Evans' evidence.]

C.

STATISTICAL Evidence of the different degrees in which persons vaccinated in different ways will be safe against Death by Small-pox, if they should happen afterwards to contract this disease.

The table is founded on information given to the Medical Officer of the Local Government Board by Mr. Marson, Surgeon of the Small-pox Hospital, as the result of his observations made during 25 years in nearly 6,000 cases of post vaccinal small-pox.

Cases of Small-pox, classified according to the vaccination marks borne by each patient respectively.	Number of deaths per cent. in each class respectively.
1. Stated to have been vaccinated, but having <i>no</i> cicatrix	21½
2. Having <i>one</i> vaccine cicatrix*	7½
3. Having <i>two</i> vaccine cicatrices†	4½
4. Having <i>three</i> vaccine cicatrices	1½
5. Having <i>four or more</i> vaccine cicatrices	½
Unvaccinated	35½

* Among cases in which the one cicatrix was *well marked*, the death-rate was 4½. Among cases in which it was *badly marked*, the death-rate was 12.

† Among cases in which the two cicatrices were *well marked*, the death-rate was 2½. Among cases in which they were *badly marked*, it was 7½.

C 1.

TABLE showing the ages at which the deaths from Small-pox occurred in England during the six years 1856—61.

Age.	1856.	1857.	1858.	1859.	1860.	1861.	Total for the six Years.
Under 1 year of age	544	972	1,525	990	649	330	5,010
Between 1 and 2 years of age	236	483	751	447	323	153	2,393
Between 2 and 3 years of age	174	343	557	352	237	98	1,761
Between 3 and 4 years of age	177	267	435	264	201	73	1,417
Between 4 and 5 years of age	168	270	317	194	134	69	1,152
Total under 5 years	1,299	2,335	3,585	2,247	1,544	723	11,733
Between 5 and 10 years of age	272	638	1,113	478	307	140	2,948
Between 10 and 15 years of age	88	120	248	169	113	60	798
Between 15 and 25 years of age	298	363	677	440	327	161	2,266
Between 25 and 35 years of age	161	260	490	263	236	100	1,510
Above 35 years of age	159	220	347	251	222	136	1,335
At all ages... ..	2,277	3,936	6,460	3,848	2,749	1,320	20,590

C 2.

THE TRUTH ABOUT VACCINATION.

"From the *Sanitary Review*, 15 May, 1881."

IN view of the extreme state of anxiety which now prevails in the metropolis with regard to the alarming spread of small-pox, and in view, also, of the difficulties experienced, through the Hampstead Hospital decision, in securing the isolation of the sufferers, the National Health Society must be held to have performed a great public service in drawing up and circulating a pamphlet, giving, in a plain and concise form, the real facts as to the value of vaccination as a protection against the now raging epidemic. The pamphlet, which this always practical and useful Society has prepared, has been so much approved by the Local Government Board that they have had it revised by their own officials, so that it may now be regarded as an official publication on the subject of which it treats. The Whitehall Board have further assented to the distribution of the pamphlet, from house to house, in the Poplar Union, by officers specially appointed by the Local Guardians for this purpose, and have sanctioned the payment, out of the Metropolitan Common Poor Fund, of the expenses incidental to this distribution. It would certainly be an advantage if the truth about vaccination could be brought home to the half-educated, self-sufficient classes of persons who are so easily swayed by noisy clamour about the liberty of the subject to neglect the vaccination of their children, and so render them fit subjects for an attack of small-pox. It must be difficult, indeed, for any unbiassed person to rise from a perusal of the National Health Society's pamphlet without being disabused of any lingering prejudices against vaccination. All the statements in it have received the official approval of the Local Government Board, so that there can be no possible doubt as to their authenticity. The pamphlet commences with a description of the extreme fatality of small-pox in its natural state, shows the groundlessness of the alleged injuries from vaccination, and of the alleged inoculation of a foul disease, contrasts the small-pox mortality in bygone generations with the mortality since vaccination became general and since it became compulsory, proves that the liability to attack, and the severity of attack, is in direct inverse proportion to the thoroughness of the vaccination, and insists upon the importance of every child being vaccinated thoroughly and being revaccinated at the age of puberty. The pamphlet is throughout couched in simple yet striking language, and its publication and circulation ought to do much good to encourage vaccination amongst the classes who now so greatly neglect it.

[To Dr. Cox's evidence.]

D.

SUMMARY OF CONCLUSIONS.

1. Small-pox in its natural state is one of the most loathsome and terrible of human diseases, attacking a whole population indiscriminately, and killing a very large proportion of those it attacks.
2. Those who recover remain for life disfigured by scars and pittings, are left consumptive, weakly, or maimed, and may either totally or partially lose their sight or hearing.
3. The characters of small-pox, when uncontrolled by vaccination, still remain the same, as is evidenced by the present mortality from it amongst unvaccinated persons.
4. Vaccination, without endangering the life of the individual submitted to it, and without diffusing any infection, entirely and permanently exhausts the susceptibility to small-pox in the vast majority of those in whom it has been properly performed.
5. The objections raised to vaccination have no foundation in fact, and are disproved by the whole of the evidence on the subject.
6. There are absolutely no grounds for the statement that vaccination introduces the matter of diseased animals and children into the blood of healthy children, or that vaccination is mainly derived from small-pox inoculation of calves and heifers, or that vaccination breaks the law forbidding inoculation. The lymph used in vaccination is the product of the vaccine disease, and cannot of itself produce any other disease.
7. The whole current of medical opinion is against the hypothesis that vaccination renders persons more liable to other diseases than small-pox, or that it communicates other diseases; and this has been indorsed by a Committee of the House of Commons, after a most patient hearing of the anti-vaccinators. The increase of deaths from particular causes is in all probability due to the greater precision in the diagnosis and certification of fatal diseases, rather than to their actual greater fatality.
8. No case of syphilis caused by vaccination has ever been discovered by the Medical Department of the State during the twenty years that it has supervised the vaccination of the kingdom. Parents have obvious self-interested motives in ascribing the appearance of this disease in their children to the results of vaccination.
9. The danger, if there be any at all, of communicating in a properly performed vaccination any other infection than vaccinia, is so infinitesimally small that for all practical purposes it may be regarded as non-existent.
10. The small-pox death-rate has been greatly diminished since the introduction of compulsory vaccination. The small-pox fatality in England and Wales has declined, since the passing of the first compulsory Vaccination Act, to less than one-half of that recorded before the passing of that Act.
11. In every epidemic of small-pox the proportion of unvaccinated persons attacked (relatively to their numbers) is very much larger than the proportion of vaccinated persons attacked. The number of attacks of persons efficiently vaccinated and successfully revaccinated is extremely small.
12. The degree of severity which post-vaccinal small-pox may manifest is chiefly determined by the perfection of character and the sufficiency of amount of the vaccination that has been performed. Even when the vaccination has been most imperfect, leaving but a single mark of indifferent character, the disease is still in most instances modified in its course, and is not fatal in one-third the proportion of cases in which natural small-pox is fatal.

13. When the vaccination has been done in the best-known manner the modification is so general and so great that the proportion of deaths to attacks is scarcely more than one-seventieth part of that which occurs in the natural disease.

14. In cases where the vaccination in early life has been but imperfectly performed, or has been from any other cause but imperfectly successful, the protection against small-pox neither lasts so long nor, while it lasts, is nearly so complete as the protection which first-rate vaccination gives. It is therefore advisable and prudent that all persons who have been vaccinated in infancy should, as they approach adult life, undergo revaccination.

15. Revaccination, once properly and successfully performed, does not appear ever to require repetition, and is an almost absolute protection against small-pox. By universal revaccination small-pox has been virtually stamped out of the army and navy.

16. A strict enforcement of vaccination in early infancy, and a general system of revaccination at puberty, with scrupulous care as to the complete and perfect performance of the operation, would reduce to an insignificant fraction of its present amount the still considerable small-pox mortality of this kingdom.

[To Dr. Fortescue's evidence.]

E.

ZIEMSSSEN'S CYCLOPÆDIA OF MEDICINE, 1875.—ARTICLE "SMALL-POX," CURSCHMANN.

A WEAPON of defence against the scourge of small-pox so powerful as vaccination should not be left to the pleasure of the individual, but the State has the right and the duty to look after its most thorough performance. As in other spheres, where for the attainment of a result perfect co-operation is requisite, so our experience in regard to vaccination teaches that instruction and admonition alone are almost powerless in the struggle against negligence, deficient sense of duty, and evil disposition which oppose this useful measure at every step. Those acquainted with the subject therefore have long since been of the opinion that to the attainment of the desired end *legal compulsion* is absolutely necessary. The authority of the State to effect this is unquestionable in the minds of those free from prejudice for the effectiveness of the method is beyond all doubt. Indeed, even since vaccination has been very imperfectly employed against the decimating plague, the average length of life has undergone an evident increase. Compulsion is furthermore justifiable on the ground that a certainty of success is impossible so long as a few individuals are not subjected to the operation, since from the extraordinary contagiousness of small-pox these become conveyers and diffusers of the poison. Even if vaccination were to be considered in the light of a sacrifice, the State might *under certain circumstances* demand this from the few in the interest of the community, and upon this basis rest a large number of State institutions. But even the selfish pretext that vaccination is injurious becomes, as we have seen, so far untenable as the great number of the formerly accepted dangers of vaccination have been shown to be wholly imaginary, and the *unquestionable harm which only rarely occurs can be certainly avoided by means of caution and experience.*

[To Mr. A. Roberts' evidence.]

F.

THE following extracts have been selected from the latest work on "Health," by Dr. W. H. Corfield, Professor of Hygiene, at University College, London, and from some of the reports of the Medical Officer of the Privy Council and Local Government Board from 1858 to the present time.

They are intended to illustrate, in some degree, the development and progress of compulsory vaccination in Great Britain, as well as the difficulties encountered in bringing the system to its present position.

An attempt was first made to classify them according to the various subjects, but it was found to be more desirable to arrange them in the order of their dates.

THE FOLLOWING ARE FROM PROFESSOR CORFIELD'S WORK:—

Fatality of Small-pox.

In the last century, in England, there were thirty-four decided epidemics of small-pox, or about one every three years; and during that time there were five severe epidemics. You will understand what I mean by severe epidemics when I tell you that they caused more than 150 out of every thousand deaths from all causes, an enormous percentage.

So far from decreasing towards the end of last century, as has been stated, the most fatal year of small-pox in England was the year 1796, in which year no less than 184 persons out of every 1,000 died from small-pox, and the five severe epidemics all occurred during the last half of the century: so you see that at the end of last century small-pox was not decreasing. On an average during the last century it caused in England one death out of every twelve from all causes, and it killed about one out of every five it attacked. It was a disease especially fatal to children. Like scarlet fever, measles, whooping-cough, and diphtheria, it was far more fatal to children than to adults. It is calculated that it caused half the deaths of children under ten years of age. Dr. Guy says, speaking of the statistics of this disease, "If I read the figures aright they point to a disease always specially greedy of the blood of children, but sometimes feasting upon them to repletion, and then waiting with cruel patience till the lapse of time had provided a fresh repast."

Progress of Legislation and Statistics—Vaccination.

A pamphlet was published of experiments made by various medical men, and a law passed making vaccination gratuitous, but not obligatory; this, I think, was in 1844; and in 1853 vaccination of infants, before they were three months old, was made compulsory. The result of this, up to the year 1860, was published for us by the report on the Small-pox and Vaccination Committee of the Epidemiological Society. The average annual number of deaths in England from small-pox during the three years before the vaccination laws was 11,944, the average annual number of deaths in England during nine years while vaccination was gratuitous but not compulsory was 5,221, the average annual number of deaths in the third period, from 1853 to 1860, when vaccination was compulsory, was 3,234.

Mr. Simon calculated some time ago that the death rate at that time among unvaccinated people varied from 14½ per cent. of those attacked to 53½ per cent., and the death-rate of vaccinated people varied from ½ per cent. to 12½ per cent.; and Mr. Marson, who was for many years resident-surgeon in the small-pox hospital, says that the average death-rate among vaccinated people was about 5½ per cent. of those attacked.

Suppose I put it in this way then: I told you, you will remember, that in 1796 the small-pox caused 184 deaths out of every 1,000 deaths from all causes. Suppose we take fifty years at a time, from 1750 to 1800 there were ninety-six deaths from small-pox out of every 1,000 deaths; from 1800 to 1850, including part of the inoculation period and part of the gratuitous vaccination period, there were thirty-five deaths out of every 1,000; from 1850 to 1860, when vaccination had become compulsory, there were but eleven deaths out of every 1,000.

A few more figures. In 1853, before the compulsory law was passed, a return was presented to Parliament showing the mortality from small-pox in various places in the United Kingdom where vaccination was practised among people sufficiently educated to avail themselves of it while it was gratuitous but not compulsory, and showing at the same time the mortality in various countries abroad where vaccination was directly or indirectly compelled. It showed in London sixteen deaths out of every 1,000; Glasgow, thirty-six; Connaught, sixty; Edinburgh, nineteen to twenty; Limerick, forty-one; all Ireland, forty-nine; and in England and Wales, twenty-two; the smallest number thus being in London. These were the number of deaths which occurred in England when it was proposed to make vaccination compulsory. The largest return that was given from abroad, in countries where vaccination was directly or indirectly compulsory, was for Saxony, viz., 8½. Several countries abroad had been much before us in this matter—we do things slowly but surely—but many countries had turned vaccination to use, and the numbers vary downwards, through Westphalia, 6; Bavaria, 4; Sweden, 2·7; Venice, a little over two; Bohemia and Lombardy, 2; so that at that time, in 1853, before our compulsory Act was passed, there were actually countries in Europe where the number of deaths from small-pox was reduced to two out of every 1,000 deaths from all causes. I mention this to show you that there was sufficient reason at the time for the passing of the Compulsory Vaccination Act. Dr. Jenner himself believed that by vaccination small-pox could be stamped out, and he was one of the few discoverers who lived to see, to a very great extent, the fruit of his discovery and its value recognised. It

It was then clearly shown by Jenner himself that when cow-pox was inoculated into a human being, that person was not susceptible to small-pox either by inoculation or by exposure to the poison; and there is no instance of a vaccinated person getting small-pox until about fifteen years after vaccination was first introduced, but about that time there gradually came to be instances of vaccinated people getting small-pox. And so it came to be seen that a certain number of years after being vaccinated people required to be vaccinated again, and for a long time there were a lot of very strange ideas afloat, such as that we required to be vaccinated once in every seven years. But to make a long matter short, I may tell you at once that the fact is that after infant vaccination people only require to be vaccinated once again at about the age of 15 or 16. I must give you one or two instances showing the results of vaccination and of revaccination. Dr. Balfour tells us that after vaccination was made compulsory in the army and navy, in the dragoon regiments and guards with 44,611 men, between 1817 and 1836, out of 627 deaths only three were from small-pox. In the regiment at Gibraltar, of the same strength, out of nearly 1,300 deaths only one was from small-pox. There are plenty of instances on record where troops subjected to compulsory revaccination were completely protected from small-pox—did not in fact have a case of small-pox among them—while the natives died by hundreds from that disease. Now Malta gives an excellent example of the protection of revaccination. During the twenty-one years from 1818 to 1838, the British troops, numbering 40,826, only lost 2 men by small-pox. In 1830, in Malta itself, one in every twelve persons was attacked by small-pox, and one out of every eighty-five persons in the island died; but among the military, including wives and children, only one out of every 188 was attacked, and only one out of every 682 died of it. The Bavarian army, too, gives a remarkable example of the power of revaccination. From 1843 to 1857, fourteen years, there was not a single case of unmodified small-pox in the army, nor a single death from small-pox. The nurses in small-pox hospitals also give proof of the power of revaccination. Mr. Marson, in his evidence some years ago, tells us that during an experience of thirty-six years of the London Small-pox Hospital, he has never had a case of a nurse having small-pox, because he revaccinated them all within three days of their arrival. During the last epidemic, out of the number of nurses in attendance, amounting sometimes to 300, there was scarcely any case of small-pox, and the few that occurred were cases of nurses or attendants who through the hurry of business had not been revaccinated.

Revaccination.

It has been quite clearly shown that people can be vaccinated well and badly; that good or bad vaccination depends upon the number and kind of marks produced. Mr. Simon showed this some years ago by computation from statistics of the London Small-pox Hospital for twenty-five years. He showed that the mortality from small-pox among vaccinated people varied from less than one in 100; and among the people who died were some who, though stated to have been vaccinated, had no marks at all.

I will just rapidly read the figures:—

	Died per cent
Of persons vaccinated, but having no marks.....	21 to 22
" " and having one mark.....	7½
" " " two marks, a little over.....	4
" " " three " 	1½
" " " four " less than.....	1

A few words about the last epidemic in London in 1870-72.

This epidemic was exceedingly virulent, and extremely fatal. From a paper read by Dr. Grieve before the Epidemiological Society upon "Small-pox," I find that the rate of mortality among all the cases treated at the Hamstead Small-pox Hospital, was between 19 and 20 per cent.; that is a very high percentage. There came to that hospital 6,221 people during the epidemic, and it was found that of unvaccinated people over 51 per cent. died, and of vaccinated people only 11·4 per cent. It was also shown that the mortality among vaccinated people depended upon the number of scars they had. Vaccination is not considered to be efficiently performed unless at least two marks are produced; and if four good marks are produced the person may be considered, practically speaking, to be protected from small-pox until the age of 12 or 15.

Now among these 6,221 cases that came into the Small-pox Hospital only three cases presented proofs of revaccination, and these were mild cases. Experience thus shows quite clearly that cases of small-pox after revaccination are rare, and much less severe.

During that same epidemic, taking all the hospitals together, there were about 14,000 cases treated in London, and out of these 14,000 there were only four that showed proof of revaccination, and these were all mild cases.

I will just take the instance of people under 15. Out of 3,085 consecutive cases in the Homerton and Stockwell Hospitals the mortality among those under 15 who were unvaccinated was 41 per cent., the mortality among those who had bad vaccination marks was 12 per cent., and the mortality among those who had only one vaccination mark was only 1½ per cent.; and to crown all, 277 cases under 15 years of age had two or more good marks, and there was not a death amongst them.

A word or two about the epidemic that we have at present. In 1876, 735 people died from small-pox in London. Of these some are reported as vaccinated, some as unvaccinated, and some of the certificates give no information. So that there may be no misunderstanding I will not take that whole number, because it includes doubtful cases. I will take the 338 who died in hospitals, as we know of those whether they were vaccinated or not. Out of this number 204 had not been vaccinated, and 134 had been; that is to say, 60 per cent. had not been vaccinated, while 40 per cent. had been; in other words there were 20 per cent. more deaths among the unvaccinated than among the vaccinated people in the small-pox hospitals of London, although the vaccinated people in London are about nine times as numerous as the unvaccinated. Now we will take the completed cases in the hospitals, that is, cases either cured or in which death ensued. There were 1,377 cases, 1,018 vaccinated, and 359 unvaccinated of the 1,018, 134 died, and of the 359, 204 died; from which we see that a little over 13 per cent. of vaccinated people died, and nearly 57 per cent. of unvaccinated; that is the experience of 1876.

Summary.

It is thus clearly demonstrated how vaccination has thrown the *agis* of protection over the world; and how ample, how great, and how efficient that protection may be. It has been shown to diminish mortality generally, and the mortality from small-pox in particular both in civil and in military life, at home and abroad, and just in proportion as it is *efficiently* performed. It has been shown to diminish the epidemic influence; it has been shown to preserve the good looks of the people; it has been shown that it tends to render small-pox a mild disease compared with the same disease in the unprotected; it confers an almost absolute security against death from small-pox; and lastly, it has been shown to exercise a protecting influence over the health of the community generally. On the other hand, it is no less amply proven that "wheresoever vaccination falls into neglect, small-pox tends to become again the same frightful pestilence it was in the days before Jenner's discovery; that wheresoever vaccination is universally and properly performed, small-pox tends to be of as little effect as any extinct epidemic of the middle ages.—(SIMON.)"

Disease from Vaccination.

Dr. Ferguson says—"Vaccination does not communicate other diseases. Mr. Marson has vaccinated 50,000 times and has never known of such communication. Sir William Jenner, Sir James Paget, and Dr. West of the Children's Hospital, Ormond-street, London, all testify to the same fact, and Dr. West during seventeen years had 26,000 children under his care from whom to draw conclusions." On the other hand, it is quite certain that there have been one or two exceedingly rare cases where persons have not been properly vaccinated and bad results have followed; this has been shown by a man who is a very strong advocate of vaccination himself, Mr. Jonathan Hutchinson.

I am glad to find that this matter has been lately investigated by a board of guardians in a part of country which has been noted for its opposition to vaccination. I will read you the account given in the *London Government Chronicle* of April 14th, 1877.

"SKIPTON--VACCINATION INQUIRY.—In consequence of assertions made by the anti-vaccination agitators of this part of Yorkshire, the Skipton Board of Guardians, about two months ago appointed a committee, composed partly of guardians opposed to vaccination, to inquire into certain alleged cases of injury from vaccination, which the opposing party of the Board were in the habit of referring to as an argument against vaccination. After much deliberation the members of the committee have drawn up a report in which they state the result of their investigation. To facilitate the investigation, advertisements were inserted in the local papers, asking individuals for information of supposed injury from vaccination. In reply thirteen cases were adduced, but the report states that they were greatly exaggerated, and the majority of them were reported by persons

persons not related to the sufferers. Except in one case of rash, in respect of which the physician consulted could not positively say that all the symptoms were owing to vaccination, the committee have come to the conclusion that no person reported to them has suffered in consequence of vaccination. Four cases looked very strong from the reports, but upon investigation it was found that in two instances the ailment was not complained of until two years after revaccination; and it was proved, by communications from the medical men who had attended the cases, that the illness had nothing whatever to do with vaccination, but appeared to be hereditary."

THE FOLLOWING ARE FROM THE REPORTS OF THE MEDICAL OFFICER OF THE PRIVY COUNCIL AND LOCAL GOVERNMENT BOARD:—

Object of National Vaccine Establishment.

It may be convenient to your Lordships that, before describing the nature of this change, I give an outline of the objects, constitution, and recent history of the establishment.

The original object of establishing the National Vaccine Institution (as declared in Parliament in 1808, by those who promoted its first institution) was to forward the general adoption of vaccination throughout the empire, by giving to the practice the public countenance and support of Government. To most persons of intelligence the results of experience, both at home and abroad, appeared, even at that time, decisive of the great advantages of vaccination; but whether or no it were infallible, as a preventive of small-pox, was a question still involved in uncertainty. In order, therefore, to ascertain with precision the facts by which those doubts might be dispelled, to conduct such investigations under the eye of the public, and to insure accuracy to the publication of the results when ascertained, it was proposed that all cases of reputed failure should be referred to the Board. The Board were also to organize and set in action a central institution, for carrying on in London, under their own immediate superintendence, the practice of vaccination, and for distributing vaccine lymph to every part of the empire. (1858.)

Importance of good Lymph.

"It will be obvious to your Lordships that, if the primary object of the National Vaccine Establishment had been to provide public vaccination, there was now no reason why it should continue to exist. But, in fact, its performance of public vaccination had no other meaning or importance than that the establishment might thus be enabled to fulfil what had become its one essential function—the function of maintaining and distributing a supply of authenticated vaccine lymph. And this duty had become of even increased importance; for with the minute subdivision of vaccination districts, and with other unfortunate accidents of the new system, it appeared certain that local supplies of lymph would, generally speaking, not be maintained long in an efficient state, and consequently that well-organized central arrangements for the collection and distribution of lymph were absolutely indispensable to the country. (1858.)

Importance of large Vaccinating Stations, and care.

In the first place well-frequented stations could alone be thus available. In order to keep up a mere succession of normal vaccine vesicles at any single station it is requisite that vaccinated subjects returning for eighth-day inspection should habitually be numerous enough for ample selection to be exercised among them as to the taking of lymph; and much more, of course, is this necessary, if the succession is to be so abundant as to furnish an excess of lymph in aid of other vaccinating stations. England contains dozens of large towns which might reasonably be expected to contain stations of sufficient magnitude for the purpose; but in many of these instances (and important metropolitan parishes are cases in point) the public vaccination is parcelled out among so many vaccinators, that perhaps not one station can conveniently be looked to for lymph. Again, very strict scrupulousness—almost fastidiousness, in everything which concerns the performance of vaccination and the watching of its results—must be claimed from persons who would supply lymph for the Public Service; for any mischief herein resulting from slovenly practice may not only be irremediable in some one particular case but may ramify injurious results among large numbers of sufferers. (1858.)

Education in Vaccination.

In the second place, it makes a commencement towards what may hereafter, with much advantage to the public, fill a present want in medical education. For hitherto it has been the case that neither the ordinary schools of medicine have had means of practically teaching vaccination, nor have any of the public vaccinating stations been opened as public schools for the purpose. Consequently many a medical student has completed his studies without having had any convenient opportunity of learning to vaccinate; and although the mere manipulation with the lancet scarcely requires special study, yet to know well the results of vaccination, especially to know well and practically the characters of a vesicle from which it is proper to take lymph, does require some little attentive and accurate observation. It has therefore often been wished that some well-frequented vaccinating stations, situated in those large towns where medical schools exist, could be available for educational purposes. To connect such stations with the National Vaccine Board by making them superintend contributories of lymph (as is now done in the case of Manchester) is a first step towards giving them that special position and guaranteed character which would suggest their being recognized as national schools of vaccination. (1858.)

Instructions for Vaccinators.

- (1.) Except there be immediate danger of small-pox, vaccinate only subjects who are in good health. Satisfy yourself that there is not any eruption behind the ears, or elsewhere on the skin; nor, even in an incipient stage, any irritation from teething. Under no circumstances vaccinate a subject who is seriously ill, or probably under the incubation of measles or scarlet fever. Do not revaccinate persons who in infancy have been efficiently vaccinated, unless they be more than 15 years of age, or, if during any immediate danger of small-pox, more than 12 years of age.
- (2.) Wherever there are proper means of doing so, vaccinate directly from the vesicle of a previous subject. Moist lymph, conveyed from case to case in a vial, or in other like manner, must not be used for vaccinating later than 18 hours (or, in very hot weather, 12 hours) after it has been taken from its source.
- (3.) Vaccinate by four or five separate punctures, so as to produce four or five separate good-sized vesicles; or, if you vaccinate otherwise than by separate punctures, take care to produce local effects equal to those just mentioned.
- (4.) Take lymph only from children who are in perfect health. Especially satisfy yourself as to their freedom from eruption on the skin.
- (5.) Take lymph only from perfectly normal vesicles, and not later than the day week after vaccination. Except on emergency, do not take from any one average vaccine vesicle more lymph than will suffice for the immediate vaccination of five subjects, or for the charging of five ivory points. Do not take lymph from cases of revaccination.
- (6.) Register the results of vaccination only after having inspected the cases. Register as "successful" no case of primary vaccination, unless the course of the vesicle have been strictly regular, according to the subjoined description, A. Register as "successful" no case of revaccination unless either the regular vaccine vesicle have ensued, or the results have been normally modified, according to the subjoined description B.
- (7.) Use every proper care and exertion to maintain at your vaccinating station the means of vaccinating successfully from subject to subject without the employment of dried lymph. If from any cause your supply of lymph ceases, or becomes unsuitable for further use, make immediate written application for a fresh supply; addressing your letter "To the Registrar of the National Vaccine Establishment, Privy Council Office, London, S.W."
- (8.) Scrupulously observe in your inspections every sign which tests the efficiency and purity of your lymph. Note any case wherein the vaccine vesicle is unduly hastened or otherwise irregular in its development, or wherein any undue local irritation is excited; and if similar results arise in other cases vaccinated with the same lymph, desist immediately from employing it.

"SIGNS OF SUCCESSFUL VACCINATION AND OF SUCCESSFUL REVACCINATION.

"(A.) 'When vaccination has been successfully performed on a healthy infant, the puncture may be felt elevated on the second day, and on the third, if examined with a magnifying glass, appears surrounded by a slight redness. On the fifth day a distinct vesicle is formed, having an elevated edge and depressed centre. On the eighth day it appears distended with a clear lymph. The vesicle, on this, its day of greatest perfection is circular and pearl-coloured; its margin is turgid, firm, shining and wheel-shaped. On the eighth day an inflamed ring or areola begins to form around the base of the vesicle, and, with it continues to increase during the two following days. This areola is of a circular form, and its diameter extends from 1 to 3 inches. When at its height, on the tenth day, there is often considerable hardness and swelling of the subjacent cellular membrane. On the eleventh day the areola begins to subside, leaving as it fades two or three concentric circles of redness. The vesicle now begins to dry in the centre, and acquires there a brownish colour. The lymph which remains becomes opaque, and gradually concretes; so that about the fourteenth or fifteenth day the vesicle is converted into a hard round scab of a reddish-brown colour. The scab contracts, dries, blackens, and, about the twenty-first day, falls off. It leaves a cicatrix which is permanent in after life, circular, somewhat depressed, dotted or indented with minute pits, and, in some instances, radiated. The above described local changes, while in active progress, are attended by feverishness; first, from the fifth to the seventh day, so slightly that often the fact passes unobserved; and again more considerably during those days when the areola is about its height; the infant now being restless and hot, with more or less disturbance of stomach and bowels. About the same time, especially if the weather be hot, children of full habit not infrequently show on the extremities, and less copiously on the trunk, a lichenous, roseolar or vesicular eruption, which commonly continues for about a week. When vaccination is performed on such adults or adolescents as have not previously been vaccinated, and likewise when lymph is employed which has recently been derived from the cow, the resulting phenomena, as compared with the preceding description, are somewhat retarded in their course; and the areola is apt to be much more diffused. There is also more feverishness; but lichenous eruption is less frequently seen.

"(B.) 'When persons who have once been efficiently vaccinated are, some years afterwards, revaccinated with effective lymph, there sometimes result vesicles which, as regards their course and that of the attendant areola, cannot be distinguished from the perfect results of primary vaccination. But far more usually the results are more or less modified by the influence of such previous vaccination. Often no true vesicles form, but merely papular elevations surrounded by areolæ; and these results, having attained their maximum on or before the 6th day, afterwards quickly decline. Or if vesicles form, their shape is apt to vary from that of the regular vesicle, and their course to be more rapid; so that their maturity is reached on or before the sixth day, their areolæ decline on or before the eighth day, and their scabbing begins correspondingly early. In either case the areolæ tend to diffuse themselves more widely and less regularly, and with more affection of the cellular membrane, than in primary vaccination; and the local changes are accompanied by much itching, often by some irritation of the axillary glands, and in some cases on the fourth or fifth day by considerable febrile disturbance.'

"GREGORY, revised by CEELY and MARSON." (1858.)

Virulence of Small-pox.

It is not requisite for me to describe the particular circumstances under which small-pox was prevailing in all the several unions and parishes communicated with. Those circumstances, where they could be well ascertained, had nothing exceptional in their character:—they were but confirmatory of our common knowledge, that, wheresoever vaccination falls into neglect, small-pox tends to become again the same frightful pestilence as it was in the days before Jenner's discovery; that wheresoever vaccination is universally and properly performed small-pox tends to be of as little effect as any extinct epidemic of the middle ages. (1860.)

Protective power of Vaccination.

First, as regards vaccination in the inspected districts, so great was the stimulus given, that for some weeks the parochial vaccinations of previously unvaccinated persons (not to mention the increased proceedings of the National Vaccine Establishment, or those of private practitioners) were carried on at *about five times their average rate*. And besides this very large increase of primary vaccination, adolescents and others with imperfect marks of vaccination were revaccinated to an extraordinary extent.

Secondly, as regards small-pox in the *inspected*, as compared with the *uninspected* districts of the metropolis—the former, comprising* a population of 1,076,853 persons, suffered 621 deaths, while the latter, comprising* a population of 1,285,383 persons, suffered 1,442 deaths. In other words, the small-pox death-rate of the inspected districts (5.7) was but about half the small-pox death-rate (11.2) of the uninspected districts. Moreover, of the 621 deaths which occurred in the inspected districts, only 231 took place after the inspection had come into effect; when, according to the standard of the uninspected districts, the inspected districts, if left to themselves, would have suffered about 850 instead of 231 deaths by small-pox. (1860.)

Causes of failure of certain Systems.

The law, as laid down in that Act, is—that every child, its health permitting, shall be vaccinated within three, or, in case of orphanage, within four months of birth, by the public vaccinator of the district, or by some other medical practitioner; that notice of this requirement, and information as to the local arrangements for public vaccination, shall, whenever a birth is registered, be given by the registrar of births to the parents or guardians of the child; that every medical practitioner who, whether in public or in private practice, successfully vaccinates a child, shall send to the local registrar of births a certificate that he has so done; that the registrar shall keep an account of all certificates thus received; that parents or guardians who, without sufficient reason, either omit to have a child duly vaccinated, or, this being done, omit to have it inspected as to the results of the vaccination, are liable to a penalty of £1; that all penalties are recoverable under Jervis's Act, and are to be paid towards the local poor rate.

Doubtless it was the intention of the framers of the Act that these provisions would suffice for the proposed object, "to extend and *make compulsory* the practice of vaccination." Doubtless it was their expectation, that, with such facilities as were designed for comparing together the register of births and the register of successful vaccinations, all cases of default would be patent to any one interested in discovering them; that either the local registrars, as having one kind of interest in the matter, or the local guardians of the poor, as having another kind of interest, would institute all such legal proceedings as might be necessary; and that these proceedings might be begun, without limitation of time, at any moment during the parental neglect. During the first year of the Acts being in operation (the year 1854) it certainly seemed as if those expectations were being fully realized, and as if small-pox would in consequence be thenceforth virtually extinguished in this country. Subsequent years have, however, most lamentably shown that those first great successes of the Act depended on an erroneous estimate, not of its intentions but of its effectiveness. The illusion has been dispelled, and the truth has now become notorious to all persons interested in the results of the Act, that the Act as it stands cannot work according to the intentions of its framers.†

Among

* That is, according to the census of 1851. This, of course, is now no longer *absolutely* true with reference to either population, but may, in all likelihood, still express with accuracy enough for our present purpose, the *relative magnitude* of the two populations.

† The following extract from a letter which I addressed in 1857 to the President of the then General Board of Health, will show what were the early indications of the above-mentioned failure, and what, in my opinion, were its causes:—"The first line of figures gives the average of births and of public vaccinations during the years 1848-52; and you will observe that while the births in England were 568,811, the infantine vaccinations were only 130,900. In 1853 the law was altered. In 1854 you find the infantine vaccinations considerably more than doubled. From 130,900 they had risen to 408,824. And not only this. The indirect action of the law had extended to induce what it could not compel; and vaccinations at ages after the first year of life had likewise been increased by more than 100,000 cases. Thus in 1854, under the immediate influence of the new law, the total public vaccinations of England, at all ages, exceeded by more than 75,000 the total number of births; the large majority of 290,111 cases in the third column, consisting, no doubt, of young children whose vaccination under the former defective system had been indefinitely delayed.

The table shows a further important fact. In the line for 1855 and in that for 1856 you will notice again a decline in the number of vaccinations; not alone in the third column (where a decline from 290,111 to 109,120, and again from 109,120 to 84,165, might mean only that the first year of activity had so far cleared off existing arrears in the category as to leave but few non-vaccinated children to appear afterwards) but also in the second column, where a decline from 408,824 to 354,979, and from 354,979 to 350,847 infantine vaccinations can only denote that the stimulus which was given to early vaccination by the new law in the first year of its working, became in the second year less effective than in the first, and in the third less effective than in the second.

The explanation is simple. At the first passing of the law people hastened to obey—because they feared to disobey—its imperative provisions. The possibility of a summons and of a fine was before them. This which would not have conquered any resolute objection, was just enough to stir that mere indifference which, among uneducated persons, is the main obstacle to universal infantine vaccination. The law commanded and threatened; so it must be obeyed. Thus, in the first year. But it was soon discovered that the threat was an empty one; that it could not be fulfilled; that the law had provided no machinery for its execution. And then forthwith obedience began to decline in the proportion which those figures express.

	Annual Public Vaccinations.				Annual Public Vaccinations.		
	Under 1 year of age.	Over 1 year of age.	Annual Births.		Under 1 year of age.	Over 1 year of age.	Annual Births.
Average of the 5 years, 1848-1852.....	130,900	185,139	568,811	1857 (σ).....	338,720	84,701	649,663
1854.....	408,824	290,111	623,699	1858 (σ).....	341,700	126,218	654,914
1855.....	354,979	109,120	623,181	1859 (σ).....	335,200	120,149	669,834
1856.....	350,847	84,165	640,840	1860 (σ).....	354,401	140,641	689,090

(σ) These numbers for later years are added to the original text, and confirm its argument.—J.S., 1861.

Among the *Instructions for Vaccinators* is the following direction:—"In all ordinary vaccinations, vaccinate by four or five separate punctures, so as to produce four or five separate good sized vesicles; or, if you vaccinate otherwise than by separate punctures [for some vaccinators prefer to make long slight scratches, side by side or intersectingly, instead of punctures] take care to produce local effects equal to those just mentioned. Obedience to this instruction is necessary for conferring on those who are vaccinated the full amount of protection which good vaccination confers. Therefore the inspector was charged always to ascertain whether the direction was obeyed; and, in case of negative finding, he was to bring to the knowledge of the vaccinator certain facts which I have here tabulated. He reports "To most of the vaccinators the conclusive evidence of the superior value of several vesicles derived from the records of the small-pox hospital was unknown. My communication with them enabling me to lay before them the facts collected by Mr. Marson, which I had had printed in a convenient form, and to explain fully the plan of vaccinating pursued with perfect safety at the large stations of the National establishment, it was a great pleasure to me to find that the result of the free and ample consideration and discussion of these points resulted always in the assurance that the mode enjoined in the instructions would henceforth be adopted.

STATISTICAL Evidence of the different degrees in which persons vaccinated in different ways will be safe against death by Small-pox, if they should happen in after-life to contract this disease.

THE Table is founded on information given to the Medical Officer of the Privy Council, by Mr. Marson, Surgeon of the Small-pox Hospital, as the result of observations made during twenty-five years in nearly 6,000 cases of post-vaccinal small-pox.

Cases of Small-pox, classified according to the Vaccination Marks borne by each Patient respectively.	Number of Deaths per cent. in each class respectively.	Cases of Small-pox, classified according to the Vaccination Marks borne by each Patient respectively.	Number of Deaths per cent. in each class respectively.
1. Stated to have been vaccinated, but having no cicatrix	21½	4. Having <i>three</i> vaccine cicatrices	1½
2. Having <i>one</i> vaccine cicatrix*	7½	5. Having <i>four or more</i> vaccine cicatrices	35½
3. Having <i>two</i> vaccine cicatrices†	4½	Unvaccinated	

* Among cases in which the one cicatrix was *well marked*, the death-rate was 4½. Among cases in which it was *badly marked*, the death-rate was 12.

† Among cases in which the two cicatrices were *well marked*, the death-rate was 2½. Among cases in which they were *badly marked*, it was 7½.

As regards another clause in the above-mentioned *Instructions*, and as regards some urgent recommendations addressed for the same purpose by their Lordships to local authorities, the inspector's report contains valuable information. The instruction I refer to is:—"Endeavour to maintain in your district such a succession of cases as will enable you uniformly to vaccinate with liquid lymph directly from arm to arm, and do not, under ordinary circumstances, adopt any other method of vaccinating." And the recommendations to which I refer are comprised in a memorandum (given, with explanations, in the last annual report) on "the subdivision of vaccinating stations as affecting the supply of lymph." The importance of making such local arrangements as will enable the vaccinator habitually to vaccinate from arm to arm, instead of having recourse to dry lymph, is well illustrated by the following passages of the Inspector's report:—"The register of one vaccinator whose common practice it was to use dry lymph, showed 46 failures in 240 vaccinations. Another vaccinator who, during last summer, vaccinated 200 cases, most of them at the people's houses with recent dry lymph on points, but some of them direct from the arm, said that he had had altogether between 20 and thirty failures, not one of which had been in the cases done from the arm; and most vaccinators, without being able to make any numerical statement, spoke of frequent failures with dry lymph. Success, when attained, was in most instances only partial. A vaccinator, whose habit it was to insert lymph by puncture in six places, told me he seldom got more than one or two vesicles; another, operating by abrasion in three places, said he got sometimes three, sometimes two, more often one only; and the testimony was very strong and general that a vesicle could not with confidence be looked for from each puncture or insertion of lymph. I met with many illustrations of the paramount importance of so conducting vaccination as to secure, as far as possible, the success of the operation, of the elder children in schools, whom I have enumerated among the unvaccinated, there were many who assured me they had been cut, and some of them more than once, and that it would not take, and they seemed to be under the impression that it would be of no use vaccinating them any more. Some of the children marked with small-pox in the schools said also they had been vaccinated, "but it would not take." Small-pox had been introduced into one village by a child who had been vaccinated three times unsuccessfully. And, on other inquiries, I have met with several cases of death from small-pox in children said to have been vaccinated, but whose vaccination, it appeared on investigation, had not been successful.

Finally, I have to quote from the Inspector's report one large set of facts which will show how much remains to be done for the improvement of English vaccination, and how poorly Jenner's countrymen are protected against small-pox, in comparison with that protection which his discovery might confer on them. The Inspector "examined carefully the arms of 12,349 children in various national parochial, and charitable schools, including 397 children in workhouses." The result of this large scrutiny may in round numbers be thus stated:—Of every 12 children examined, 2 would show *no conclusive mark* of having been vaccinated; 3 others would show *only such marks* as imply a *very imperfect protection* against small-pox; 4 others would have marks which are classed as *passable*; only 3 would be, in the Inspector's opinion, *well*, and *very well* protected. (1860.)

Faults of System.

There is reason to believe that the performance of public vaccination in England is disadvantageously affected by its present extreme subdivision.

For the satisfactory working of a public vaccinating station it is requisite that systematically on each vaccinating day two groups of cases should assemble there;—on the one hand, infants, who, having been vaccinated on the day-week preceding are now (as the law requires) brought back for inspection, and are ready to furnish the vaccinator with lymph for his present proceedings; on the other hand, infants brought for vaccination, who, if now vaccinated, will on the day-week following be brought back for inspection, and then in their turn contribute lymph for the benefit of further applicants. By the coming together of these two groups of cases the vaccinator is enabled to vaccinate from arm to arm, a mode of proceeding, which as a rule is of great importance to his success.

It is also requisite that each group of cases should not be too restricted in number. The careful vaccinator does not indifferently vaccinate from the arms of all infants brought back on the eighth day, but exercises selection among them; and facility for this selection cannot be afforded him unless there be on each vaccinating day an average return of several vaccinated cases. If his share of the local vaccination be either too small or too much subdivided among different stations and different days, the cases returning to him for eighth day inspection will on many vaccinating days be too few for his purpose. On all such occasions he must either omit to vaccinate those who apply to him, or (unless he have recourse to less eligible sources) must vaccinate them with preserved lymph, and incur the much greater chances of failure which belong to the usual modes of thus vaccinating.

Ill-frequented vaccinating stations—stations, that is to say, where the total number of vaccinations, as compared with the number of vaccinating days, is too small for the local lymph supply to be continuously and properly maintained, are now a very prominent feature in our system of public vaccination. And this state of things is one of serious consequence; not only as implying that at present a large proportion of the vaccinations in England are performed under disadvantageous circumstances, but also because, if it continue, the general lymph supply of England can scarcely fail to become insufficient or deteriorated.

The excessive subdivision which leads to this result arises in various ways. Sometimes, no doubt, the quantity of vaccination to be performed within one jurisdiction has been divided among too many performers. But still oftener it is the case, that individual vaccinators have distributed their respective shares of the public duty among too many stations, or too many vaccinating days; and in some cases the vaccinator develops the inconvenience to its greatest extent by almost or entirely disusing the appointed station, and habitually performing his vaccinations under contract at the several private dwellings of his patients. (1861.)

Vaccination should be done in Infancy.

But this was exceptional, and usually wherever vaccination in early infancy was neglected, its performance was indefinitely postponed, and accumulations of arrears took place. (1861.)

Inefficiency

Inefficiency of Vaccination.

In order to test the quality of the vaccination in the different unions of late years, many (196) national, parochial and workhouse schools were visited, and 15,239 children examined therein. Statistics as to the vaccine cicatrices found on the arms so examined are submitted in table B.

With very few remarks this table may be left to speak for itself. Although the value of the cicatrices was assessed as much as possible in the favour of the vaccinator, yet, of the gross number of children examined, only 3·0 per cent. had four typical cicatrices, 6·8 per cent. had three equally good; 26·7 per cent. had but two; 25·5 had only one; 15 per cent. were quite unprotected; and the amount of immunity from death from small-pox of the remainder may be taken as very slight. With the view of acquiring evidence of the latest style of vaccinating in vogue in the different unions visited, I have separated the infant schools, and tabulated the results of their examination in a similar manner to that adopted with the mixed schools, table C. Of the total 15,239 given above, 3,590 were in 39 schools set apart for the youngest children, many of them mere babies, who were sent, for the most part, to be kept out of mischief, and some of whom could only just run alone. Here, those having four typical cicatrices were only 1·5 per cent.; just half the proportion so protected in the schools taken together. Those with three good marks were 4·9 per cent., as against 6·8 per cent. of the former table. Those having two were 25 per cent.; whereas in the mixed schools this proportion came out 26·7. Those having one mark only were more numerous, being 27·6 per cent. against 25·5; and 19 per cent. were not vaccinated at all. (1861.)

Improving System.

The nature of the defects which required correction had been very fully explained in successive annual reports of this department, particularly in those from the second to the sixth inclusive; and as far back as 1859 my Lords had communicated to the Poor Law Board, for the assistance of local authorities contracting for public vaccination, an exposition of the broad principles of arrangement on which contracts must in future be based if the defects in question were to be prevented. In 1868, with the new law, the time had come when this merely recommendatory mode of dealing with very serious evils could no longer be considered sufficient; and my Lords accordingly saw fit to issue express regulations for the purpose, by an Order of Council bearing date February 18th, 1868. Of the regulations thus issued, a copy is subjoined to this Report, as Appendix No. 2. The great object was that public vaccination should no longer be so excessively subdivided among times and places and persons as to have needless difficulties put in the way of its effective performance; and with this object the regulations provided, as their general effect, that the public vaccinator under ordinary circumstances should vaccinate only at public stations, and at no station oftener than once a week, and, if in a town district, only at one station therein; that no two public vaccinators should in any case act for one and the same district; and that the division of towns into vaccination districts should not go beyond certain limits of smallness. Also, with reference to section eight of the new Act, a special regulation was made, limiting the extent to which revaccination at the public expense might be given.

The new law did not abrogate any of the existing contracts for public vaccination, but it tended to make new contracts in many cases desirable; and thus during the year new arrangements, which had to be conformed to the new law and to the regulations operating under it, and which my Lords had to consider in more or less detail, and for the most part very minutely, with the respective local authorities or with the Poor Law Board, were proposed by more than a seventh part of the entire number of vaccination authorities of the country. The year has in this way been one of very great improvement in our system of public vaccination. Also in other and ordinary ways influences for improvement have been at work.

The systematic inspection which goes on under their Lordships' orders extended during the year to nearly half the public vaccination of England, namely, to 1,749 vaccination districts, comprised in 312 different unions or parishes: each inspection involving, first, an inquiry into the state of vaccination in the district; secondly, where requisite, a notification to the authority of defects found in the local arrangements for carrying the law into effect, and advice as to the changes required; and thirdly, in suitable cases, a recommendation of the vaccinator for reward under section five of the Vaccination Act, and in accordance with the system described in my ninth report. (1868.)

Revaccination—Regulation of.

The performance of revaccination by the public vaccinator on persons applying to him for that purpose shall be limited in each case by the following conditions: (1) that, so far as the public vaccinator can ascertain, the applicant has attained the age of 15 years, or, if during any immediate danger of small-pox, the age of 12 years, and has not before been successfully revaccinated; and (2) that, in the public vaccinator's judgment, the proposed revaccination is not for any sufficient medical reason undesirable; and (3) that the public vaccinator can afford vaccine lymph for the purpose without in any degree postponing the claims which are made on him for the performance of primary vaccination in his district. (1868.)

Machinery of Vaccination System.

The prevention of small-pox is an object for which the Board communicates with local authorities systematically through the Medical Department.

The 647 Boards of Guardians of England and Wales, who, within their respective Unions or Parishes, are the local Vaccination authorities of the Kingdom, have at work under them, first, for the performance of the vaccinations, more than 3,000 medical practitioners acting as public vaccinators, and secondly, for the non-medical parts of the business, about 1,400 so-called vaccination officers; each public vaccinator, and also each vaccination officer, having, under the local authority, a special area of duty to himself. This local machinery for the prevention of small-pox is subject in certain respects to regulation and control by the Local Government Board, and is superintended and periodically inspected by the Medical Department of the Board with regard to its efficiency of work: the Board in this respect continuing the system which the Lords of the Council, when in sanitary supervision of the country, had established. The local authorities are required to conform to certain general rules as to the qualifications of persons whom they would appoint to be public vaccinators, and as to the attendances which shall be prescribed to these officers: the aims being, in the first respect, that each vaccinator shall have given proof of being competent to discharge the special duties of the office*; and, in the second respect, that such attendances shall be given as will best facilitate the performance of vaccination with due succession of well-selected lymph†. The public vaccinators are required to conform to certain "Instructions" embodying rules of recognised professional sanction, with regard to the precautions which give to vaccination the completest attainable safety and effectiveness‡. The vaccination officers—who have as their chief functions to secure obedience to the compulsory intentions of the law, and to keep such records and give such notices as are necessary for this purpose, act in all respects under regulations of the Local Government Board, and are required to make such half-yearly reports as may account, in regard of vaccination, for all children whose births have been registered in the respective areas of duty.

The periodical returns made by the vaccination officers throughout the country form the basis on which the Board must mainly rely for its means of estimating the quantitative success of the vaccination laws. The first annual collection of such returns under the Act of 1871 was completed early in 1874; and I subjoin (App. No. 1) a tabular abstract of them, digested, with requisite explanations, by Dr. Seaton. It will be seen that of the 821,856 children registered as born in England and Wales in the year 1872, all up to a margin of 5- $\frac{1}{16}$ per cent., have been exactly accounted for by the vaccination officers; and I concur in Dr. Seaton's opinion that, when due regard is had to the difficulties of the case, as explained in his note on the appended table, the nearness with which the first year's returns approximate to completeness is such as the Board may deem satisfactory§. (1874.)

Digest

* The necessity for express provision in this sense had long been shown by the experience of the London Small-pox Hospital, as set forth by Mr. Marson, and was abundantly explained in my earlier Reports to the Lords of the Council with reference to their Lordships' Regulations in this matter.

† The necessity for special care to secure this object is explained in a departmental memorandum which I prepared for my Lords in 1859, and which is still in constant use under the Local Government Board, on the subdivision of public vaccination as affecting the supply of vaccine lymph.

‡ Of these "Instructions" (which of course, in the light of increasing knowledge, require re-consideration from time to time) a second and amended issue took place in 1871, it having then been found that one particular class of precautions needed to be more insisted on than before.

§ Shortly after the passing of the Vaccination Act of 1871, the Local Government Board issued under that Act instructions as to the duties of the Vaccination Officers; but under the Act of 1874, these required to be somewhat modified, and a new Order was in consequence issued. The former instructions are given in the first Annual Report of the Board, Appendix A, No. 27. For convenience of reference, the Order under which the officers at present act is subjoined in my present Appendix, No. 2.

Digest of working of Act.

DIGEST, by Dr. Seaton, of the Vaccination Officers' Returns, so far as received down to January 31st, 1874, with regard to Children born in the year 1872.

The following is the first annual return under the Vaccination Act, 1871, and has reference to the children born in England and Wales in 1872. It shows that of 821,856 births returned to the Board by the several Vaccination Officers in the kingdom as registered during that year, 698,137 (being 85 per cent. of the whole) had been registered as successfully vaccinated at the time the return was made; 1,693 (or 0·2 per cent. of the whole), had been registered as insusceptible of successful vaccination*; 905 (or 0·11 per cent. of the whole), as having contracted small-pox before they could be vaccinated; and 78,594 (or 9·5 per cent.) as having died before they could be vaccinated; leaving 42,527, or 5·1 per cent., of the births still to account for. If from the 821,856 births deduction of the deaths without vaccination be first made, it appears that of the surviving 743,262 children, about 94 per cent. (93·92) were returned as successfully vaccinated; 0·35 per cent. as either insusceptible of vaccination or having had small-pox; and 5·72 per cent. as still to account for.†

The cases returned as "not finally accounted for" consist almost entirely of (1) cases in which vaccination at the time of the return was postponed on account of the children's state of health; (2) cases in which vaccination had really been performed successfully, but which could not be registered as vaccinated on account of a legal certificate of the vaccination not having been yet received by the vaccination officers; (3) cases which, having removed from the district or place of birth before vaccination, or having (as is not uncommon in the case of illegitimate children) been registered under false names or false addresses, could not be traced by the vaccination officers; and (4) cases which, in certain Unions, from the imperfect development of the machinery of the Act, or from the want of due understanding of his duties on the part of the vaccination officer, had not been properly looked after. The number of cases in which there was direct refusal on the part of parents to have their children vaccinated, or in which legal proceedings had to be taken to secure this result, constitutes an utterly insignificant proportion of the cases unaccounted for.

Considering that this was the first year's working of an Act the execution of which devolves on upwards of 1,400 local officers, appointed by and acting under the direction of 647 Boards of Guardians; that in many Unions more or less delay in making these appointments was inevitable on account of various matters of detail which required to be arranged; that the duties devolving on the officers themselves were to all of them in some respects new, and to a very large proportion, if not to the majority of them, altogether new, and that as a necessary consequence they were by many of them at starting imperfectly understood; the return, rendering as it does exact account, in respect of the vaccination laws, of 95 per cent. of the year's births, must, it appears to me, be considered as remarkably satisfactory.

It will be seen that the proportion of cases "not finally accounted for" in the metropolis considerably exceeds the average of the kingdom. This is chiefly due (1) to the difficulty in working which arises in London from the large proportion of lodgers and persons living in tenemented houses, and from the constant removals taking place from Union to Union, or frequent changes of dwelling in the same Union; (2) to the appointments of vaccination officers in some of the Unions having been insufficient for the amount of work to be done, and to two or three of the officers first appointed having proved very inefficient.

When the Metropolitan Unions are deducted from the rest of the kingdom, the proportion of births "not finally accounted for" in the latter is reduced to 4·5 per cent. To this proportion the different counties contribute very variously; and to a certain extent variation must be expected. (1874.)

Early age of Vaccination in England.

The vaccination laws of the United Kingdom require the performance of vaccination at an earlier age than those of any foreign State. It was in fact the main argument of the Epidemiological Society's report, that to establish an effective control over the small-pox mortality of any kingdom, it is indispensable to secure the vaccination of children *in early infancy*. Children are liable to contract small-pox at the very earliest age, and indeed so liable to contract it young, that at the time the report was made no less than from 70 to 80 per cent. of the entire small-pox mortality of Great Britain and Ireland occurred under the age of five years, and 25 per cent. even under the age of one year ‡. Vaccination is as safe an operation in early infancy as at any other period of life. Hence it was obvious that any law which, though directly obligatory, permitted, say, a whole year from birth to pass before requiring vaccination, like the law of Prussia, or two years, like the law of Sweden, must be fundamentally defective and leave an unnecessarily large amount of the young population exposed to the ravages of small-pox, *à fortiori*, that laws which were only indirectly obligatory, as by requiring, for example, a certificate of vaccination before a child could be admitted to school, permitted a still greater waste of life.

The law for England requires that children should (health permitting) be vaccinated within three months from birth, or in rural districts (where public vaccination is only carried on periodically) at the first public vaccination held in the district after the child shall have attained the age of three months. In Scotland and Ireland, in which divisions of the United Kingdom the population is much less aggregated in large towns than it is in England, the age is fixed at six months. (1874)

Statistics in favour of Compulsory Vaccination.

In the General Annual Report of the Registrar General for Scotland for 1872, the results for that year are thus commented on:—

"If the same relative mortality had taken place among children at that age (under five years) as occurred during the previous epidemics, when they were less efficiently protected by vaccination, instead of only 362 children under five years of age having died from small-pox in the eight towns during 1872, 3,370 would have died. The enforcement of the Vaccination Act therefore during the seven previous years appears to have had the effect, in these eight towns alone, of saving the lives of upwards of 3,000 children."§ Applying these observations to the whole period, there will have been a gain in the eight towns of nearly 7,000 lives under five years of age alone. It is then a very moderate calculation indeed that, but for the Vaccination Act the total small-pox deaths in these towns from the epidemic would (instead of amounting to only 3,192) have considerably exceeded 10,000.

Conclusions from comparison of the proportions of deaths from a particular disease at different ages require always to be drawn with caution, and with a full knowledge and appreciation of fallacies to which they may be liable. The scale of observation, however, in this case, is so large, and the result is in such exact correspondence with what our knowledge of the protective power of vaccination would lead us to expect, and with what has been the result of similar measures in England and in Ireland, that there can be no hesitation whatever in accepting the above as fairly measuring the effect the compulsory vaccination law has had, during this epidemic of small-pox in Scotland, in saving the lives of young children. It is by no means necessary, however, to rely on this evidence exclusively; for other proofs are at hand in a comparison of the mortality of young children in Scotland from the recent epidemic with that which has resulted *from the same epidemic* in foreign countries, which have either no compulsory vaccination law, or a compulsory law of a much less complete and effective kind. The places for which our present information is sufficiently complete to afford the material for such comparison with the chief towns of Scotland are Holland, the cities of Berlin and Leipsic, and the State of Hamburg.

In Holland there is no general vaccination law, and the only check on the neglect of parents is a rule existing in some communes, and in some only (but by no means always applied, as I am informed, in many communes in which it nominally exists) that children must have been vaccinated before they can be admitted to the communal schools. Hence vaccination is habitually delayed, and children are much more generally than not above two years of age, and repeatedly six, seven, or more years

* By this of course all that is meant is that the children had been three times unsuccessfully vaccinated, and were no longer therefore subject to the compulsory provisions of the law.

† The return as to the births registered from January to June, 1872, was made on the 31st July, 1873; and that as to the births registered from July to December, 1872, was made on the 31st January, 1874. In consequence of correspondence from the Board a considerable deduction from the cases unaccounted for at the time of the returns has since been made.

‡ In countries in which, as in parts of the East, vaccination has only as yet reached a relatively small proportion of the population the small-pox deaths are nearly all in young children. Dr. De Renzy, the sanitary commissioner in the Punjab, says with reference to the great small-pox epidemic which has prevailed there since 1872, that the deaths are confined almost entirely to young children under 10 years old; *the adults having previously all had small-pox*, with which most of them were scarred, many partially or totally blind.—(*Lancet*, March 1, 1873, and *Medical Times and Gazette*, July 19, 1873.) In England, before vaccination was known, Dr. Haygarth tells us that in 1781, on examination of the Cheshire and Lancashire Militia it was found that only one in twenty had not already had the small-pox. (Haygarth, Sketch of a Plan to exterminate the venereal small-pox. 8vo. Lond., 1783.)

§ Eighteenth Annual Report on the Births, Deaths, and Marriages, registered in Scotland during 1872; and Eighth Annual Report on Vaccination, p. 20-1. The Registrar General for Scotland publishes for each year two separate Annual Reports: (1) a General Annual Report, which appears a few months after the year has terminated; and (2) a Detailed Annual Report, which is the really important one for statistical purposes, but which usually does not appear for two or three years later.

years old before they are taken to be vaccinated, if, indeed, vaccination be not omitted altogether.* If now we compare the deaths among children under five years of age in the chief towns of Scotland and Holland from the recent small-pox epidemic, during its two years of greatest prevalence in those towns, the following is the striking result:—

Groups of Towns compared.	Actual Small-pox Deaths under five years of age in the two years.	Small-pox deaths under five years of age in the two years for equivalent populations of 1,000,000 of all ages.
Eight principal towns of Scotland in 1871 and 1872 (aggregate estimated mean population, 1,083,750)	557	514
Eight principal towns of Holland in 1870 and 1871 (aggregate population on 31st December, 1870, 693,080)	4,245	6,122

As, however, the epidemic continued, though with much diminished force, both in the towns of Scotland and of Holland beyond the periods comprised in the above table, it is necessary, and the more so that *relatively* the subsequent mortality was greater in the Scotch than in the Dutch towns, to extend the comparison, as accurately as we can, to the entire termination of the epidemic in each group. For the Scotch towns the figures are complete; and to the 557 deaths under five years of age in 1871 and 1872, we have to add 193 which occurred up to the end of June, 1874. The returns from Holland, however, for 1872 are so far incomplete, that while showing a total of 382 small-pox deaths in the eight towns, they do not give the number of those deaths which were under five years of age. If, however, we assume the proportion to have been the same as in the two preceding years (and in this we cannot be far wrong), there would be 229 to be added to the 4,245 in the table, making the entire number for the three years 4,474; and the comparison would stand thus:—

Groups of Towns compared.	Actual (or estimated) Small-pox Deaths under five years of age in the entire periods compared.	Small-pox Deaths under five years of age in the entire periods compared for equivalent populations of 1,000,000 of all ages.
Eight principal towns of Scotland during the 3½ years the epidemic subsisted	750	692
Eight principal towns of Holland during the 3 years the epidemic subsisted	4,474	6,455

In Hamburg, as in Holland, there was not, at the time of this outbreak of small-pox, any compulsory vaccination law, nor any check on the negligence of parents except a requirement of certificate of vaccination before a child could be admitted to the "schools of the poor." In Saxony also there was no direct compulsory law. In Prussia, however, such a law existed; and as its provisions have apparently been much misunderstood in this country, it is important they should be explained. This law required that children should be vaccinated within one year of birth, *without, however, attaching any penalty to neglect, except in the cases in which small-pox followed such neglect.* But these were the very circumstances under which there was a natural indisposition to prosecute; technical difficulties also not unfrequently arose about the prosecution; and the result was that prosecutions were seldom undertaken, and that while by most parents the law was duly obeyed, a great many were in the habit of risking it. The number of these latter had, as Dr. Guttstadt informs us in his official report, of late years considerably increased. Hence, when this epidemic broke out, large numbers of children were found in Berlin who had attained school age without vaccination having been performed; † and it was to this accumulation of unvaccinated children that the high mortality of the epidemic in that city was, according to Dr. Guttstadt, in great measure attributable. When children in Prussia had attained the age of admission to the State schools, an important check came into operation, for they had then to produce the certificate of having been vaccinated.

Our information for Hamburg, Leipsic, and Berlin supplies the ages at which the small-pox deaths occurred, and embraces for each of those places the whole period of epidemic prevalence. A comparison with the town populations of Scotland and Holland gives the following results:—

Towns or groups of Towns compared.	Actual Small-pox Deaths under five years of age during the whole period of the epidemic in each town or group of towns.	Small-pox Deaths under five years of age during the whole period of the epidemic for equivalent populations of 1,000,000 of all ages.
Eight principal towns of Scotland (population, 1,083,750), 1871-4	750	692
Berlin (population, 882,569), 1871 and 1872	2,837	3,448
Hamburg (population, 338,974), 1871 and 1872	1,938	5,717
Leipsic (population, 106,925), 1871	659	6,200
Eight principal towns of Holland (population, 693,080), 1870-2	4,474	6,455

The position occupied by Berlin is, as might be expected, intermediate between that of the Scotch towns on the one hand, and Hamburg, Leipsic, and the Dutch towns on the other. ‡ (1874.)

Deaths from bad Vaccination.

Of the 42,220 small-pox deaths which took place in England in 1871 and 1872, 5,817 (*viz.*, 3,161 in 1871 and 2,656 in 1872) were in children under the age of one year. The proportion which this infantile small-pox mortality bears to the total small-pox mortality is somewhat less than 14 per cent., while previous to the Vaccination Act of 1867 the average annual proportion was, with scarcely any variation from year to year, 24 per cent. These 5,817 deaths include the cases (which constitute undoubtedly a large proportion of them) in which the disease was contracted before the children had attained the age when vaccination

* Of the primary vaccinations performed in the year 1872, at the Vaccine Institution at Rotterdam, considerably more than half were between the ages of two and ten years; and I find from a return for 1873 of the vaccinations practised in the different provinces of Holland, that out of a total of 133,931 vaccinations and revaccinations performed, there were but 31,843 under two years of age; 32,433 were in children between two and 10 years old; and the remainder in persons above 10 years old. (Verslag over het Geneeskundig Staatsoezigt over 1873, p. 139.)

† Zeitschrift des Königlich Preussischen Statistischen Bureaus, 1873, p. 182. Laws for rendering the performance of vaccination directly compulsory have since been passed, I believe, both for Prussia and for Hamburg.

‡ In some foreign towns the military form a large proportion of the population. If from the population of Leipsic in 1871, as given in the text (106,925), the soldiers be deducted, the remaining inhabitants were only 89,326 in number. As it was among these that all the deaths under five years of age occurred, the proportion per million might more correctly be put down as 7,377 than as 6,200. This proportion, though higher than that of the Dutch towns in the aggregate, is not so high as that in some of them, for in Rotterdam the rate was 9,045, and at the Hague, 10,437 per million. (See L. Thomas, Beiträge zur Pocken-statistik insbesondere aus der Leipziger Epidemie, von 1871, in Archiv der Heilkunde, 1872. Dr. Thomas gives the small-pox deaths under five years of age in Leipsic as 659; but I adhere to the numbers (659) officially supplied to our Government, and have made my calculation accordingly.)

vaccination under penalty can be enforced—cases in which life might undoubtedly have been saved by timely vaccination, but to which it would be difficult to extend a compulsory law. The remainder, except of course those cases in which there had been lawful postponement of vaccination on account of the children's health, were the result of illegal postponement and neglect.

The deaths between the ages of one and five years were 7,711; between five and ten years, 6,566; and between ten and fifteen years, 2,535, making an aggregate of 16,812 deaths between the ages of one and of fifteen years. Of these all but a fraction might have been saved by efficient vaccination, and a very large proportion would undoubtedly have been saved if all the population up to fifteen years of age, and not merely a very limited part of it, had been under the application of a vaccination law as effective as that which is now in force in England. Although in the vast majority of vaccinated persons the vaccination completely exhausts (usually for life and at all events for a great number of years) the susceptibility to variola, it is a knowledge which dates back to the earliest days of vaccination that there are some persons in whom that susceptibility is only partially exhausted and who may contract the small-pox within a few years, and even within a few months, or weeks, of having been vaccinated. Willan, writing in 1806, within eight years of the promulgation of vaccination, had himself already seen thirty such cases, and whenever the disease is extensively epidemic instances of this kind are not unfrequently met with. But the infection under these circumstances is usually so modified in its effects, the small-pox resulting is generally so mild and so void of danger to the individual attacked, that it is laid down as a rule by the leading medical authorities on this subject that in vaccinated persons under fifteen years of age severe small-pox is rare, and deaths from that disease scarcely noticeable.* Under intensity of epidemic influence, when a malignant and hæmorrhagic form of the disease prevails, it stands to reason that severe cases in vaccinated persons, whether children or adults, will be more common and deaths more numerous than at other periods, just as the mortality of the natural disease then increases, and just as persons who may have already had small-pox are then more liable to take it, and to have it severely, a second time. Especially where the vaccination had been at all imperfect, the imperfect cases would be picked out in larger proportion than usual. Accordingly, in the recent epidemic, the severity and malignancy of which has been very largely in excess of anything within our previous experience, the deaths of children under fifteen years of age bearing some marks of vaccination appear to have been more numerous than in previous epidemics. But still they were exceptional, and when the vaccine marks were satisfactory the mortality was very trifling. Among 420 small-pox patients under fifteen years of age with proper vaccination marks (irrespective of the number of such marks, which at this early age seems to be of comparatively much less consequence), who were treated in the Stockwell Small-pox and Homerton Fever Hospitals, there were but two deaths, the total small-pox deaths in these hospitals under that age being 179. Of the remaining 177, twelve were in children who had been vaccinated but whose marks were of a manifestly imperfect character, and 165 in children who had not been vaccinated at all.† It does not, I think, admit of reasonable doubt that the 16,812 small-pox deaths arising from the epidemic in England between the ages of one and fifteen years were, with comparatively small exception, the result of sheer neglect of vaccination.

The deaths in persons above fifteen years of age which were registered in the two years were 19,591, of which 8,288 were between the age of fifteen and twenty years and 16,303 had passed the age of twenty. A very large proportion of these deaths, especially of those past twenty years of age,‡ were in persons who had been vaccinated. In the several hospitals of the Metropolitan Asylum District there occurred 1,358 deaths in persons above twenty years of age,§ and of these 799, or about 60 per cent., were in persons who had been vaccinated and 559 in persons not vaccinated; these proportions, however, cannot safely be applied to the kingdom generally; for in the hospitals of some of the provincial towns the preponderance (though not a large one) of fatal adult cases was in the unvaccinated, and there is besides good ground for believing (as will be immediately stated) that the proportion of adults who are vaccinated is considerably larger in the metropolis than in the provinces. Still I think it may without hesitation be accepted that of the fatal cases of small-pox above fifteen years of age, half, or thereabouts, were in persons who had been vaccinated, or who had at least undergone something which had passed for vaccination.

But if the actual number of small-pox deaths in persons above puberty who had been vaccinated were equal to, or even exceeded, that which occurred in persons who had not been vaccinated, it must be borne in mind that the proportion of our adult population which is protected against small-pox by vaccination is at least from twenty-five to thirty times as great, and much more probably from fifty to sixty times or more as great as that which is unvaccinated. The relative number of persons who now-a-days attain manhood or womanhood without having been vaccinated is very small. Examination of the young men who are recruited for the Army has shown for many years past that, putting aside the small per centage who are marked with small-pox, the proportion of the remainder who do not present distinct marks of having undergone vaccination averages for the whole of England 3.9 per cent. of those examined, and for London separately 2.8 per cent.¶

As these small proportions include all doubtful cases, it is clear then that somewhat considerably more than 96 per cent. of those in England, or than 97 per cent. of those in London only, must have been vaccinated. Now recruits, I apprehend, are not generally drawn from that class of the population which has been the most cared for; and there is, therefore, a reasonable probability that the proportion of the whole adult population of England which is thus protected against small-pox is much larger. But even if the full proportion just given, or more than that proportion, be applied to the adult population generally—4 per cent. being taken as unvaccinated, and 96 per cent. as vaccinated—it is clear that, with equal actual mortality among the two classes, the relative mortality of the former would be twenty-four times that of the latter. The figures then are conclusive that vaccination as it was practised in this country fifteen years ago and upwards, instead of failing to protect persons from fatal small-pox after they had grown up, has in the immense majority of cases very effectually protected them. It would be a waste of time to insist on this any further. Much more important is it to consider how it is that it did not protect in the remainder, and that in two years (two years it is true of intense epidemic influence) an enormous number of adults, probably from 9,000 to 10,000, who in a rough and general sense must be taken as vaccinated, should have perished of small-pox in England.

The answer is not difficult—though it is not one which can be given with any satisfaction. The cases were, it may be affirmed with the utmost confidence, with comparatively few exceptions, cases in which the vaccination had not been thoroughly and efficiently performed. At the time this recent epidemic set in, rather more than seventeen years had elapsed since Mr. Marson, in a memorable communication to the Royal Medical and Chirurgical Society of London, founded on his (even then unequalled) experience of small-pox at the London Small-pox Hospital, called attention to the fact that the fatal small-pox which during sixteen years' observation he had met with in that hospital, in persons in whom vaccination was said to have been performed, had been almost entirely in cases in which the vaccination had been imperfect, the vaccine marks being either wanting in essential characteristics, or deficient in number, or both. He demonstrated that, apart from any question of the different relative liability of well and ill vaccinated persons to contract small-pox, any vaccinated persons who did take it had it lightly or severely, with scarce any risk of death or with a risk not inconsiderable, according to the quality of the vaccination they had received. To the cases which he had at that time collected and analysed, and from which he drew these conclusions, he has since been able to add the result of sixteen years' further experience (up to 1867) on patients who, though admitted to the hospital since the publication of his paper, had with very few exceptions been vaccinated prior to that time.¶ Taking the two series of observations together, an analysis of 1,161 small-pox deaths which had occurred in that hospital in persons stated to have been vaccinated shows that in 614, or more than one-half of them, the vaccination had been little else than nominal, for in no fewer than 180 no mark whatever of successful vaccination could be discovered, and in 434 only a single mark of imperfect character. Of the remaining 547 deaths, 513 were in cases which, either in the character or in the number of vaccine marks which each presented, or in both these respects, fell considerably short of the standard of good vaccination, for in 384 the character of the vaccine marks was imperfect, and in 129 though the marks were characteristic they were only one or two in number. There had been in the hospital but 34 deaths altogether in persons who had three or more proper

* Entries, not unfrequently met with in the death registers at times when small-pox is epidemic, of death from "small-pox after vaccination" in young children are almost invariably incorrect and misleading; the cases in which the entry occurs being generally cases in which the vaccination had been performed while the patients were incubating the small-pox. Sometimes also cases are so entered in which an attempt at vaccination had been made, but without success.

† In the Poliklinik at Leipzig, of 117 cases of small-pox treated in vaccinated children under 15 years of age none was fatal; of 266 cases treated in unvaccinated children under 15 years of age, 110 died. (Thomas, Archiv de Heilkunde, 1872.)

‡ Eighteen is, according to Mr. Marson, the age at which post-vaccinal small-pox begins to be chiefly noticeable.

§ The deaths which occurred in these hospitals between 15 and 20 years of age cannot be given, as in the Table in the Report of the Asylum Boards Committee the cases, after the age of 10 years, are arranged in decennial periods of age only. Between 10 and 20 years of age the majority of deaths was in the unvaccinated.

¶ Average of six years terminating in 1871. The Army Medical Report for 1872, which has appeared since this average was cast, shows that of all the recruits examined in England during that year, putting aside the few who had marks of small-pox, there were only 24 per cent. (2.6) without marks of vaccination, and of those examined in London—upwards of 4,000 in number—only a little more than 1 per cent. (1.06). I have thought it right to make my assumptions in the text as unfavourable as possible to vaccination. I do not myself suppose that even 1 per cent. of the general adult population is unprotected.

¶ Evidence as given in Report of Select Committee on Vaccination Act (1867), p. 236.

proper vaccine marks, though 2,584 patients having such marks had been admitted; and in 18, or more than one-half of these 34 deaths, the fatal result was not due to the small-pox merely (which in some of them was slight), but either to its being complicated with some other disease from which the patient was suffering, or to the patient having contracted some other disease, as erysipelas, &c., in the hospital. Of the 2,584 patients to whom reference has just been made as having been admitted with three or more good vaccine marks, 1,505 only had the four or more such marks which constitute the standard of good vaccination, and among these 1,505, the fatal cases had been 13 only, in 10 of which there had been superadded disease. Summarily, the thirty-two years' observations show that, of 13,765 reputedly vaccinated patients admitted to the hospital during that period the vaccination was very defective in 11,172, of whom 1,027 died; was reasonably good (as represented by three characteristic marks) in 1,079, of whom twenty-one died; and was quite up to the now acknowledged standard in 1,505, of whom only thirteen died. These facts, while they are conclusive as to the necessity for vaccination, if it is to be a complete or nearly complete protection against fatal small-pox, being performed in the most thorough and careful way, illustrate also the extent to which imperfect and insufficient vaccination was practised at the period when the present adult vaccinated population, the recent small-pox mortality amongst whom is now under our consideration, would have received their vaccination.

The records of the various hospitals in which small-pox was treated during the recent epidemic agree in showing, as has been already stated, (§ 2) that the proportion of deaths to attacks among the vaccinated taken generally was, compared with those among the unvaccinated, very small, the proportion however in both classes being so influenced by the intensity and malignancy of the epidemic as to be considerably above the usual average. Unfortunately, most of these reports merely distinguish between the "vaccinated" and the "unvaccinated," and take no quality of the vaccination. Wherever this was done Mr. Marson's observations were found substantially to hold good, nearly all the fatal cases being amongst such as had been ill vaccinated or insufficiently vaccinated, and the deaths amongst persons thoroughly vaccinated being in comparison strikingly few. Some careful observations made in the Stockwell Small-pox and Homerton Fever Hospitals show that of 2,382 patients having marks of vaccination, 1,866 had characteristic marks (one or more), and 516 had marks which were bad or indifferent. Of the former seventy died, or 3.9 per cent.; of the latter 129, or 25 per cent. Of the 1,866 patients with characteristic vaccine marks, 1,306 had but one or two such marks, of whom sixty, or 4.5 per cent., died; 560 had three or more such marks of whom only ten, or 1.8 per cent., died. According to the rate deducible from Mr. Marson's observations on patients with three or more good cicatrices of vaccination, the deaths among these 560 should not have been ten but a little over seven; and probably the difference indicates what was due to exceptional epidemic influence. In the Leeds Hospital the deaths among the patients whose marks of vaccination were noted as imperfect were above 12 per cent., but among the patients with characteristic marks 2.75 per cent. only; there were forty-eight cases treated having three or more characteristic marks, but none of them was fatal. In the city of Glasgow Fever Hospital the mortality of the small-pox cases among the vaccinated with bad marks was 21 per cent., but of those with characteristic marks only 3.8 per cent.; very few cases were admitted, and none died, having more than two characteristic marks. By some of the hospital physicians severe observations are made as to the "badness" of the marks in many of the cases so classified, these being so imperfect and so wanting in the essential characters of the vaccine mark that they might have arisen just as well from some other cause, and at all events showed the vaccine effect to have been next to nil. In two of the small-pox hospitals of the Metropolitan Asylum Board, observations made in 4,523 cases, having some marks of vaccination, with reference to the number of marks only and without any regard to their character (an omission greatly to be regretted), showed a mortality of 15.2 per cent. in the cases with only one mark, 11.7 per cent. in the cases with only two marks, 9.4 per cent. in the cases with three, and 6 per cent. in the cases with four or more marks. The death-rate in these hospitals among the unvaccinated was 55.9 per cent. Of a total of 506 deaths occurring in the 4,523 patients with marks of vaccination, 373 were in 2,845 persons having only one or two such marks, eighty-eight in 936 persons with three, and forty-five in 741 persons with four or more. The proportion of cases to deaths, whether among the entire number of patients with three or more cicatrices (133 deaths out of 1,677) cases), or whether among that portion only who had four or more marks (forty-five deaths out of 741 cases), is about three times as great as that shown by Mr. Marson's observations on patients treated by him in the London Small-pox Hospital who had the same number of marks respectively, the good and bad marks being taken together, and cases of superadded disease not being deducted. Making every allowance for increase in the rate of mortality due to the malignancy of the epidemic, the proportion observed in the two hospitals of the Metropolitan Asylum Board is suggestive of an unusual amount either of superadded disease, or of hospital influence, or of vaccination of a very imperfect character, or of all these causes taken together. A valuable report made by Mr. Dyke, the Medical Officer of Health of Merthyr Tydfil, on the epidemic as it affected the district of his local board in 1871-2, in which he gives the result of inquiries made as to vaccination in every case of small-pox, fatal or not, known to have occurred within the district, shows that among 308 fatal cases which occurred there were but thirty in persons having three or more marks of vaccination, though 1,070 cases having this number of marks came under observation; and that of these thirty, six only were among that portion of the cases (418 in number) which had four or more vaccine cicatrices. The death-rate among the patients with one cicatrix was 8.5 per cent.; of those with two cicatrices, 6 per cent.; of those with three, 3.7 per cent.; and of those with four, 1.5 per cent.; of twenty-two patients who had more than four marks none died. The death-rate among the unvaccinated was 51.1 per cent. (1874.)

Revaccination.

The observations which were made during the recent epidemic afforded remarkable evidence of the value of revaccination, not merely in controlling the mortality from small-pox but usually in preventing altogether the occurrence of the disease. Its power of preventing small-pox under circumstances the most favorable of all others for contracting it was tested on a very large scale on the nurses, servants, and attendants of the various hospitals established for the treatment of the epidemic in the metropolis and in the provinces: the attendants in the Hospitals of the Metropolitan Asylum district alone amounting at one time to above 300. In every hospital report which has reached me it is specially stated that not a single one of these officials, who had been revaccinated before coming to take duty at the hospital, contracted small-pox. On the other hand, a few cases of the disease occurred in some nurses and servants in the hospitals of the Metropolitan Asylum District whose revaccination in the pressure of the epidemic had been overlooked, and there was one case in a nurse who, having had small-pox previously, had consequently not been vaccinated on coming to the Hospital. There was also a very modified case in a nurse in whom revaccination had been performed, but not till after her arrival at the Hospital, and when the small-pox infection had already been received. The cases of small-pox which were admitted for treatment in the several hospitals in persons who had been successfully revaccinated were very few and very slight. In the hospitals of the Metropolitan Asylum Board, in which upwards of 14,800 cases of small-pox were treated, there were but four cases in which there was good evidence of revaccination having been performed with effect, and these were all light cases. In Liverpool, says Dr. Trench,* revaccination was found a constant and perfect protection against the small-pox. In the Newcastle-on-Tyne small-pox hospital, in which 778 cases were treated, there were two in which revaccination was alleged to have been successfully performed (but without mention whether there were marks of such revaccination or not), one of them ten years and the other four years before the attack of small-pox; both recovered. In the same hospital eight patients were admitted stated to have had small-pox before, five of whom were distinctly marked by it; one of the three not marked died, the remaining seven recovered. In the Leeds Hospital there were four cases in which previous revaccination was alleged; but in none of them was the evidence of revaccination conclusive. One of them, in which the revaccination was said to have been done at seven years of age, was fatal; the other three cases were mild. There were three (fatal) cases of small-pox in persons believed to have had small-pox previously; but the evidence of the former small-pox is not stated. Similar infrequency and mildness of small-pox after revaccination was noted in the hospitals abroad. In the Municipal Small-pox Hospital at Berlin, in which 1,529 cases were treated in persons who had been vaccinated, only nineteen of these were in persons (all above thirty years old) who had been successfully revaccinated; they were all of them cases of varioloid or of variolous fever without eruption, and none of them died. In the same hospital there were seven cases (three of them fatal) in persons who had previously had small-pox.† In the Baracken-Lazareth, used also as small-pox hospitals in the same city, in which 1,805 cases were treated in persons who had been vaccinated, seven only were in persons who had been successfully revaccinated, of whom six had a mild attack, and one (a woman 60-70 years old) had the hæmorrhagic form and died.‡ In the hospital at Leipsic, out of 1,504 vaccinated patients there were thirteen who had been successfully revaccinated in early life, all of whom recovered; in the same hospital there were twenty-two cases in persons who had had previous small-pox, and of these six died § In the hospital at Hamburg the cases in persons who had been revaccinated were more numerous, amounting to fifty-nine out of a total of 2,267 vaccinated patients; and there were three deaths.¶ (1874.)

Good effects of Compulsion.

The facts of that comparison, and indeed the whole facts of the epidemic when carefully studied, afford the most complete confirmation of the opinion which was expressed in 1871 by the Select Committee of the House of Commons on vaccination that "On the one hand, if vaccination had not been general this epidemic might have become a pestilence as destructive as small-pox has often been where the population has been unprotected; and that, on the other hand, if this prevention had been universal, the epidemic could not have approached its present extent." The epidemic may have been useful in reminding some, although no one who had practical knowledge of small-pox could ever have doubted that that disease, uncontrolled by vaccination, is at the present day exactly the same disfiguring and fatal disease which in the last century destroyed, on an average, 3,000 persons annually out of every million of our population, and which, at that rate, would now, but for vaccination, be causing in England alone an average annual mortality of nearly 70,000. There is good ground, indeed, for believing that the present annual death-rate from small-pox would have exceeded that of last century; for while the disease has lost nothing of its deadly character, the facilities of communicating it are infinitely greater now than they were formerly, on account of the constantly increasing aggregation of population in towns and cities, and the enormously extended means of inter-communication between place and place. The disease tends, just as ever, to recur in epidemics, and by and by another epidemic will have to be faced, which may or may not have the character of ordinary epidemics of the disease, or may or may not be as virulent as that which has passed away, but against the fatality of which, however intense, we shall be able if it is trusted to present much greater securities than were in existence at the time the recent outbreak took place, though not as yet all the securities we desire, or hope to attain. (1874.)

Power of Vaccination over Small-pox.

When these duties of foresight have been carefully executed, even for a few years, the dealing with importations of small-pox into any locality has been found to be a matter of comparative ease, consisting mainly in the exercise of great vigilance with regard to the surroundings of each imported case. Again and again during the recent epidemic did instances come to my knowledge where the small-pox was thus arrested or controlled; and one I will cite because it relates to a place—the city of Exeter—in which, before the Vaccination Act of 1867 came into operation, vaccination had been greatly neglected, and which had in consequence suffered very severely in previous epidemics of small-pox. On an official inquiry into the state of vaccination in that city, which I made in 1861, I found as many as 158 out of 844 children in attendance at the public schools unvaccinated. Exeter had a very fatal epidemic of small-pox in 1850, a slighter one in 1861, and again a very severe one in 1864 and 1865. When the Vaccination Act, 1867, came into effect steps were at once taken which have led to the complete vaccination of all children born subsequently in the city, and of as many as could be found of children who had been born in the city previously, or who have migrated into it. On the extension, in 1871, of the recent epidemic into the west of England, it soon found its way to Exeter. An incessant look-out for each imported case was kept by the vaccination officer, and in every such case, whatever measures in the way of vaccination or revaccination were required for the protection of the immediately surrounding population were at once taken. The result was that, though small-pox was imported many times into the city, and on certain occasions spread to a limited extent among adults and children born before the Act of 1867 who could not be got hold of in time, the total deaths caused by it were only one in 1871, eight in 1872, and eleven in 1873. Having an opportunity of inquiring with regard to nine of the eleven deaths of 1873, I found that the whole of these were either in persons grown up or in children born before 1868, with the single exception of a child aged 2½ years not born in Exeter. Now, I believe that what was done here might be done under similar circumstances with the like results in every other place, and that in any and every locality where the current vaccinations are duly care for, any outbreak of small-pox may be brought speedily and easily in like manner under control. But if the duties of foresight have been omitted, and if accumulations of unvaccinated children have been allowed to take place, any such dealing with an outbreak, at least in a crowded city, becomes almost impracticable. (1874.)

Effectiveness—Revaccination.

The second, and scarcely less important, security is the performance of the vaccination always in the most complete and effective way. It is beyond doubt that, for want of this having been done some thousand of persons died of the recent epidemic who had believed themselves secure. And I fear that unless revaccination be adopted by our present adult population, and by our present adolescent population when they are grown up, to a much larger extent than has been done, there must in the next, and in succeeding epidemics of small-pox for some time to come, be a not inconsiderable amount of adult mortality. For (1) though, under the improvements which have been described as having been effected in the performance of public vaccination, the proportion of thoroughly vaccinated as compared with imperfectly vaccinated children must be year by year largely increasing, a long while must elapse before the result of this will be fully visible on the small-pox mortality, inasmuch as it is not, as a rule, till after puberty that small-pox mortality even in the imperfectly vaccinated is met with; and (2) it must be recollected that the manner of performing vaccination is only within the control of the Government so far as the public vaccination is concerned.

The most perfect infantine vaccination is not an *absolute* eventual security against fatal small-pox, any more than the having passed through an attack of small-pox is an *absolute* security; but after proper infantine vaccination death from small-pox is very rare. Many persons, however, who have been properly vaccinated in infancy may at times of epidemic prevalence of small-pox contract the disease, and though they would have it generally in a very modified way, and with little or no risk of life to themselves, they would, from their liability to spread the infection, be of danger to the community, and so far even as themselves only are concerned would of course prefer not to have the disease at all. Hence, even to the best vaccinated the additional security of revaccination at puberty is important, as giving all but complete safety from subsequent small-pox even of the mildest sort. But to all whose vaccination is other than the best (and it is certain that a considerable number of the present vaccinated adolescents and adults are in this position) revaccination is not merely important but highly necessary. In every aspect of the case it would indeed greatly conduce to the security of the public against future small-pox epidemics if some means could be taken for giving effect to a rule which I ventured to lay down some years ago, and of the practical importance of which each year's experience has more and more convinced me, that "the revaccination of persons as they reach about fifteen years of age should be as systematically done as is the vaccination of young infants." (1874.)

Working of Act—Experiments.

The Department continued during the year 1878 the administration of the National Vaccine Establishment. In compliance with your desire I described the operations of the establishment with somewhat more than usual detail, although there has been nothing exceptional in the year's work. The stations from which lymph is supplied to the establishment have, as usual, been visited systematically by Dr. Stevens. They have been found in excellent working order, and the vaccinators in charge of them have been found careful in the selection of lymph and in the processes required for its preservation. Furthermore, in accordance with now established practice, the lymph has been subjected, after its receipt at the office, to exact microscopical examination, with the result of eliminating a certain proportion of the supply which has appeared on one ground or another to be undesirable for distribution.

Charges of lymph have been distributed from the establishment to 9,590 applicants, being public vaccinators, private medical practitioners, and others described in Appendix No. 3. From those who have used the lymph, representations as to want of success with it have been received from less than 4 per cent.* Complaint of some untoward result attending the use of the lymph has been made by six out of the 9,590 recipients of the lymph. Each of these complaints has, according to the custom of the Department, been the subject of special inquiry. In one instance erysipelas had followed vaccination with the lymph; the evidence, however, did not point to the lymph as the cause of the erysipelas but suggested exposure to some local infection during the progress of the vaccination. In the remaining instances, where the complaint related to some irregularity in the course of the vaccination, inquiry was made as to other children who had been vaccinated with the same lymph, and in no instance did it appear that similar irregularity of result had been witnessed in the other children. Hence a strong presumption arose that the irregularity (which in no instance was a matter of serious importance to the health of the child vaccinated), was related rather to the previous state of health of the individual upon whom the operation was performed than to any peculiarity of the lymph distributed from the establishment.

No hint of a case of syphilitic disease connected with vaccination was heard of from any one of the 9,590 medical practitioners to whom the lymph was supplied. (1878.)

Animal

* These were, of course, failures with *preserved* lymph.

Animal Lymph.

The Medical Department was engaged during the year in the consideration of two questions relating to animal vaccination, the one pathological, the other administrative.

Dr. Klein was occupied at the Brown Institution, under the supervision of the Medical Officer, of Dr. Burdon Sanderson, and of Mr. Ceely of Aylesbury, in certain experiments which had for their object to settle a disputed point in the pathology of vaccinia; namely, whether or not it can be produced in bovine animals by inoculation of them with the lymph of human small-pox. At the end of the year Dr. Klein had obtained no affirmative result; though his operations had extended to the inoculation of sixteen heifers and fifteen milk cows; and though the lymph he used had been taken from cases of small-pox at various stages of the disease. It is intended, if opportunity serve, to continue the experiments further, and for the present it is not proposed to publish the details of the observations.

The Medical Officer in person made inquiry, during the autumn of 1878, into the use of vaccine lymph cultivated upon calves and employed in human vaccination at certain stations on the continent. From a memorandum which he prepared, but which is not a complete report on the subject, it appears that the difficulties which had at first been encountered in the transmission from animal to animal of lymph derived in the first instance from a natural source of cow-pox had practically ceased. Dr. Seaton was able to observe a considerable number of children upon whom vaccination had been performed with lymph taken direct from the calf after long transmission through the calf system, and he says of them that their vesicles were neither more nor less complete, though somewhat smaller in size, than the vesicles produced by like methods of operating with humanized lymph at the public vaccination stations of England. The chief difference between the two lymphs was in the degree of certainty with which a desired result could be produced. In the hands of an experienced operator with fresh *humanized* lymph in England, 2,996 children out of 3,000 were successfully vaccinated at the first attempt; and failure to produce a vesicle where it was intended to produce a vesicle occurred so rarely that, with a fair approach to certainty, every child obtained the whole result which the operation was intended to produce. On the other hand, according to Dr. Seaton's observations at Amsterdam and the Hague, vaccination done by very experienced operators, but with fresh *animal* lymph, showed two total failures out of ninety-one operations, and twenty cases out of the ninety-one where the number of vesicles had been less than half the number that the operator had endeavoured to produce. At Rotterdam complete success had been attained in only some 54 per cent. of children operated on. At Berlin 7 per cent. of total failures were recorded; and of the successful operations, complete success had been attained in much less than half of the children operated on. These failures to obtain complete results had in Berlin led to a large proportion of the children receiving an imperfect degree of protection against small-pox, and at Amsterdam and the Hague had led to the practice of making a much larger number of insertions than were regarded as necessary for protection against small-pox, merely because the operator expected that some of the insertions would fail.*

The following paragraphs from Dr. Seaton's memorandum bring into relief certain considerations that are often overlooked by those who have not studied the working of the English system, and who believe that England has only to follow the experience of Belgium to exchange her own excellent system for a better:—

"Anyone who is familiar with the practice of public vaccination in England will at once see the difficulties which would be met with in inducing parents first to allow their children to be submitted to ten punctures, instead of the four, five, or six which are usually employed in this country, and which under the use of the current lymph are quite sufficient to secure the number of vesicles desired, and secondly, to allow the performance in a considerable number of the cases of a second vaccination at the end of the day week, even supposing that this second vaccination could be relied on to make good what had been wanting in the first. It was the great object, steadily held in view, in the reorganization of the public arrangements for vaccination in England, that these should be such as would make the single performance of the operation as completely successful as in the nature of things a single infantine vaccination can be." * * * *

"From these notes respecting the success of animal vaccination in those countries of Europe in which I was able to inspect it on the present occasion, it will be seen how considerably inferior are its merits for effectually producing at once the needful protection against small-pox to that of the system at present in use in England. The substitution of certainty for uncertainty of success in the performance of vaccination was the great purpose of the re-organization of vaccination arrangements which took place in England, in consequence of the official inquiry in 1859-64 into the then state of vaccination in this country, a reorganization which had been and is working with the most satisfactory results. To admit into our system, and stamp with the sanction of Government as one of equal value, a plan to which the main objection is its uncertainty, would seem to me to be indeed an inconsistent and a retrograde step." * * * *

The practice of vaccination in Belgium does not, as might have been supposed from the statements often made, afford to the observer much opportunity of seeing for himself the direct action of animal lymph on the human subject, and of noting for himself its relative degree of success. Vaccination from the calf to the human subject was practised many years ago at Brussels at the Institut Vaccinal de l'Etat, as stated by me in my report for 1869 [12th Report of Medical Officer of Privy Council]; but this has long been discontinued, and the vaccination generally in the kingdom is carried on by vaccinators, public and private, from arm to arm. It is absurd therefore to speak, as is sometimes done, of vaccination from the calf to the arm as the Belgian National System.

"Thus the Department, in its concern with vaccination during 1878, was not content to know that the established arm-to-arm system was working extremely well and always with some improvement, but it was desirous of getting such information as it could obtain respecting the specialities and actual working of animal vaccination. The Department proposes, as occasion serves, to continue its researches in this direction. Opportunity for observing vaccinia in animals and the results of calf-vaccination on the human subject are not largely to be met with in England, and special arrangements for the further study of the subject in its various aspects may probably prove to be desirable. Meanwhile private establishments for the vaccination of children with animal lymph (if they should grow in this country, as they have grown in other countries, owing to some general demand for such lymph), can afford some of the opportunities of which the Department is in search." (1878.)

Objects of National Vaccine Establishment—Good Lymph Supply—Animal Vaccine Humanised.

The purpose of the National Vaccine Establishment is, as many medical practitioners need to be reminded, not the provision of indefinite supplies of lymph for the vaccination of each person who may require vaccination in a district or a medical practice, but the supply of such amount of lymph as shall suffice for the establishment of local "stocks," and for the replacement by lymph of a new stock and of undoubted efficiency, of any local stocks that may be found to be giving unsatisfactory results.

Having this purpose more especially in view, and desiring always to know whether there was any better lymph to be had for the use of the establishment than that which is selected from among the supplies furnished by the experienced public vaccinators who form the staff of the establishment, the Board caused examination to be made of the effects upon children of lymph which had been derived from the Animal Vaccine Institution of Brussels. Dr. Cory, of St. Thomas's Hospital, who officiates at the chief educational vaccination station of the metropolis, undertook this investigation for the Board, and his report forms Appendix A, No. 4, to this report. It will suffice in this place to say of Dr. Cory's results with Dr. Warlomont's lymph that in some respects they differed from those which he habitually obtains with long-humanized lymph; that there is no reason for preferring the results of the calf lymph; and that the humanized lymph had, in its arm-to-arm transmissions, the advantage over the calf lymph of showing greater uniformity of action.

Reference will presently be made to some experimental studies by Dr. Klein into the pathological relations of cow-pox and small-pox. (1879.)

Digest of Act.

The following return, which is the sixth annual return under the Vaccination Act, 1871, shows the continued successful working of that Act. Of 887,947 births returned to the Board by the several Vaccination Officers in England and Wales as registered during the year 1877, the number which, at the time the return was made, had been registered as successfully vaccinated was 766,824 (being 86·3 per cent. of the whole), and the number registered as having died before they could be vaccinated was 79,497 (or 8·9 per cent. of the whole). Of the remaining 41,626 children 926 (or 0·1 per cent. of the whole) had been registered as insusceptible of vaccination†; 118, or (0·13 per cent.) as having contracted small-pox before they could

* In this paragraph, vaccination with *absolutely fresh* lymph is alone spoken of. At Berlin, record had been kept (Klin. Wochenschr. 1878, No. 16), of the result of vaccinations with animal lymph that had been stored. Of such vaccinations, 18 out of 60, or 30 per cent., had been unsuccessful.

† This number does not include 96 births registered in the late Presteigne Union.

‡ The cases included under this heading are children, who being certified as having been three times unsuccessfully vaccinated, are no longer subject to the compulsory provisions of the law.

could be vaccinated; 6,681 (or 0·75 per cent.) as having their vaccination postponed by medical certificate, leaving 33,901 (or 3·8 per cent.) as removed, "not to be traced," or otherwise unaccounted for. If from the 887,947 births returned by these officers deduction of the deaths without vaccination be first made, it appears that of the surviving 808,450 children there were registered at the time of the return 94·85 per cent. as successfully vaccinated; 0·13 per cent. as either insusceptible of vaccination, or as having had small-pox; and 0·82 per cent. as under medical certificate of postponement; leaving 4·19 per cent. as at that time still unaccounted for as regards vaccination.

Of the 33,901 cases which this last per-centage represents, the very large majority were children who could not be found by the Vaccination Officers, usually because of the removal of the parents from the place of birth. In many districts the amount of removals without vaccination was unduly large, on account of delay on the part of the Vaccination Officer in instituting the inquiries which the Board's "Instructions to Vaccination Officers" direct. The remaining cases in the last column (with the exception of a certain number in which vaccination had really been performed successfully, but which could not be registered as vaccinated on account of the legal certificate of vaccination not having been received by the Vaccination Officer) were cases which at the time of the return were still unvaccinated in the union or district of birth. Local imperfections in administrative machinery were the main causes of this default, where it occurred. The number of cases in which non-vaccination was due to direct refusal on the part of parents to comply with the law when required to do so, constitutes, as usual, only a very small proportion of the cases entered in this column.

The results are still less complete in the metropolis than in the rest of the kingdom, and there is a slight falling off in the metropolitan returns for 1877 as compared with those for the previous year, the per-centage of cases unaccounted for having risen from 6·5 per cent. in 1876 to 7·1 per cent. in 1877. The per-centage in the rest of the kingdom, which was 4·0 in 1876, was 4·1 in 1877. Of the registered births of the six years 1872-7 the proportion not finally accounted for in regard to vaccination in each year respectively has been in the metropolis 8·8, 8·7, 8·8, 9·3, 6·5, and 7·1 per cent., while in the rest of the kingdom it has been only 4·5, 4·2, 4·1, 3·8, 4·0, and 4·1 per cent. In 1877 the proportion of cases unaccounted for, after deduction of the postponed cases, in the metropolis and in the rest of the kingdom, was 6·2 and 3·4 per cent. of births respectively. (1879.)

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

VACCINATION IN DARLINGHURST GAOL.

(CORRESPONDENCE.)

*Ordered by the Legislative Assembly to be printed, 16 August, 1881.**[Laid upon Table, in accordance with promise made in Answer to Question 2, Votes 24, Friday, 12th August, 1881.]*

SCHEDULE.

NO.	PAGE.
1. The Principal Under Secretary to Under Secretary of Justice, respecting vaccination of inmates and officers of all Government establishments, with enclosure. 17 June, 1881	1
2. The Under Secretary of Justice to the Comptroller General of Prisons, directing that the inmates and officials of all gaols throughout the Colony be vaccinated. 17 June, 1881	2
3. General Orders issued by Prison Department, <i>re</i> vaccination	2
4. The Matron, Darlinghurst Gaol, to the Principal Gaoler, respecting objections made by a female warder to vaccination from a prisoner named Susan Fisher, with enclosures and minutes. 15 July, 1881	3

No. 1.

The Principal Under Secretary to The Under Secretary of Justice.

Sir,

Colonial Secretary's Office, Sydney, 17 June, 1881.

In transmitting to you the enclosed copy of a letter from the Medical Adviser to the Government, recommending that the inmates and officers of all Government establishments be vaccinated, &c., I am directed by the Colonial Secretary to request that you will invite the Minister of Justice to have the goodness to cause the needful instructions to be given in the matter with regard to all establishments under his control.

I have, &c.,
CRITCHETT WALKER.

[Urgent.]

Inform heads of Subordinate Departments accordingly.—J.G.L.I., 17/6/81. The Comptroller General of Prisons to be instructed as regards prisons.—17/6/81. Comptroller General informed.—17/6/81.

[Enclosure.]

The Medical Adviser to the Government to The Under Secretary for Finance and Trade.

Sir,

I do myself the honor to recommend that instructions be given to the medical officers of all Government establishments, whether schools, reformatories, asylums, or gaols, to vaccinate the inmates and officers attached to the institutions; and that no one, whether a pupil teacher or other person, who comes from a dwelling in which there is a case of any kind of eruptive sickness be allowed to enter a school.

Sydney, 16 June, 1881.

I have, &c.,

H. G. ALLEYNE.

The Colonial Secretary.—J.W., 16/6/81. The Under Secretary, Colonial Secretary's Department.—G.E., 16/6/81 Appd.—H.P., 16/6/81.

No. 2.

The Under Secretary of Justice to The Comptroller General of Prisons.

Sir,

Department of Justice, Sydney, 17 June, 1881.

In transmitting to you the enclosed copy of a letter* from the Medical Adviser to the Government, which has been received from the Colonial Secretary's Department, recommending that the inmates and officers of all Government establishments be vaccinated, &c., I am directed by the Minister of Justice to request that you will have the goodness to cause the needful instructions to be given in the matter with regard to all establishments under your control.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

* See enclosure to No. 1.

No. 3.

General Orders issued by Prisons Department *re* Vaccination.

(General Order, 81-12.)

Department of Prisons, Comptroller General's Office, Sydney, 20 June, 1881.

In order to prevent the increase of small-pox in the Colony, the Gaolers are hereby directed to confer with the Medical Officers attached to their respective gaols, in order that all inmates and officers connected with the establishments may be vaccinated with the least possible delay. The utmost caution as to cleansing, and, if practicable, disinfecting process should be observed, under the direction and suggestions of the Visiting Surgeon.

HAROLD MACLEAN,
C. G. Prisons.

All gaols.

General Order, 81-13.

Department of Prisons, Comptroller General's Office, Sydney, 22 June, 1881.

REFERRING to the general order respecting vaccinations, it is directed, so far as officers are concerned, in view of the possibility of some proportion being temporarily thrown off duty, that in the established gaols the vaccination shall be at one time within one-fourth of the officers, the other vaccinations to follow, as the officers vaccinated are not to be relied upon for duty.

In the Police Gaols the warders only one at a time; the officers in charge of both description of gaols to report if they can find substitutes for any officers who may be temporarily disabled, or how far they can manage by extra duty for the remainder to meet the requirements without them.

HAROLD MACLEAN,
C.G. Prisons.

All gaols.

General Order, 81-14.

Department of Prisons, Comptroller General's Office, Sydney, 23 June, 1881.

THE Visiting Surgeons and other Medical Officers of Prisons should be informed that they should apply to the Superintendent, Vaccine Institution, Macquarie-street, Sydney, for all supplies of lymph required by them for public purposes.

HAROLD MACLEAN,
Comptroller General.

All gaols.

General Order.

Department of Prisons, Comptroller General's Office, Sydney, 15 July, 1881.

IN taking lymph from a prisoner or other person, to carry out the general order of 81/12, it is directed by the Medical Adviser that lymph taken from a person previously vaccinated should not be used.

All surgeon's accounts for vaccination services are to be sent in separate vouchers. The fees laid down for vaccination are in successful cases only 2s. 6d. a case, and 3s. 6d. for cases beyond five miles from residence.

HAROLD MACLEAN,
Comptroller General.

All gaols.

General Order.

Department of Prisons, Comptroller General's Office, Sydney, 23 July, 1881.

REFERRING to the order as to vaccination in prisons, it is further notified that when a person objects, on the ground of previous vaccination, and satisfies the medical attendant of the alleged fact, it will be for the medical attendant to exercise his own discretion as to the necessity for revaccination. It is desired to carry out the order of the Government by persuasion if possible; but when the medical attendant pronounces vaccination necessary, disobedience must, in the case of prisoners, be dealt with as a prison offence. No disobedience on the part of an officer or inmate of a prison by residence with an officer is anticipated.

HAROLD MACLEAN, C.G.P.

To all gaols.

No. 4.

No. 4.

The Matron, Darlinghurst Gaol, to The Principal Gaoler.

Sir,

Female Wing, Darlinghurst, 15 July, 1881.

It has been reported to me by Mrs. Costello that Miss Sullivan had been vaccinated from a woman named Susan Fisher, whom she said was enough to infect a nation, and that she had made her bathe and poultice her arm immediately after; also, that Miss Lynch had refused to be vaccinated from that woman, and that Miss Sullivan had felt so deeply about it that she had shed tears, and that the nurse, Mrs. Gourley, had looked significantly at Miss Sullivan to give her to understand that Fisher was not a fit person to be vaccinated from.

There has been evidently a great deal of idle talk and a strong feeling about this matter; and (you will pardon my plain speaking, I hope) if the sub-matron and warders are under an illusion in believing Miss Sullivan was vaccinated from a prisoner who had been suffering from a disease so loathsome that she had been prematurely confined in Darlinghurst Gaol in consequence of same, I think, to put an end to the uncomfortable feeling existing amongst them, it would be as well to have that illusion dispelled, for in the event of Miss Sullivan losing her health, supposing she ever does, no matter from what cause, it will in all probability be attributed to the vaccine taken from prisoner Fisher.

I am, &c.,
F. M. CHALLIS,
Matron.

[Enclosures.]

The Sub-matron to The Matron.

Madame,

I beg to state that Miss O'Sullivan came to me crying, and asked me what she would do with her arm. I told her to have it washed or poulticed.

Female Wing, 14 July, 1881.
Yours, &c.,
CATHERINE COSTELLO.

The Sub-matron to The Matron.

Madame,

I beg to state that Miss O'Sullivan came to me on the 5th of the present month, and said she was vaccinated with the lymph taken from prisoner Susan Fisher's arm. Mrs. Gourley was present, and said she gave Miss O'Sullivan a look at the time she was getting it done.

Female Wing, 14 July, 1881.
Yours, &c.,
CATHERINE COSTELLO.

Memo. by Mrs. Gourley.

I BEG to state that I was there when the doctor vaccinated Miss O'Sullivan with the lymph taken from prisoner Susan Fisher's arm and put into Miss O'Sullivan's arm on the 5th of the present month.

14 July, 1881.
MARY GOURLEY.

Miss O'Sullivan to The Matron.

Madame,

In answer to the explanation required of me, I beg to state that I was vaccinated on the 5th instant by Dr. O'Connor, the lymph being taken from a prisoner named Susan Fisher. I have been for some time under the impression that prisoner Fisher was suffering from a disease of some sort, and I came to the conclusion that she was not a fit person to be vaccinated from. I felt rather annoyed about it, and when I came back from the surgery I informed the Sub-matron of my getting the lymph from the prisoner Fisher. I said to the Sub-matron, "What shall I do?" She told me to go at once and wash and poultice my arm, which I did. My arm feels all right now. I did not tell the doctor what I had done. I am sure the doctor was very kind and attentive to me.

Darlinghurst Gaol, 14 July, 1881.
Yours, &c.,
ANNIE O'SULLIVAN.

The Principal Gaoler to The Comptroller General of Prisons.

I WOULD beg leave to suggest that the Comptroller General will investigate this matter at his earliest convenience, as the rumour is current and calculated to bring vaccination into abhorrence.

If the woman Fisher has suffered from the loathsome disease to which low prostitutes of her class are subject, and lymph has been taken from her to vaccinate the female warders and others, no comment is needed from me; but if the allegation is unfounded, the sooner it is dispelled the better.

J. C. READ, P.G.

The Comptroller General of Prisons.—B.C., 15/7/81. It appears to me that, before any other step is taken in this matter, the Visiting Surgeon should see these papers, and make such remarks as they appear to call for.—H.M'L. The Principal Gaoler.—B.C., 15/7/81. Report herewith.—J.C.R., P.G. The Comptroller General of Prisons, B.C., 18/7/81.

No. 5.

The Visiting Surgeon, Darlinghurst Gaol, to The Comptroller General of Prisons.

Sir,

Darlinghurst Gaol Hospital, 18 July, 1881.

In replying to the serious and unexpected charge made against me, viz., "knowingly vaccinating Miss O'Sullivan from a person suffering from a 'loathsome disease,'" permit me to offer the following remarks, which I trust will dispel the "illusion," or rather "delusion," that certain officials are labouring under.

In the first place, Susan Fisher has been under my care in the Gaol hospital on only two (2) occasions, and then she was suffering from miscarriages, which, in my humble opinion, did not originate directly or indirectly from any constitutional disease, nor did she ever exhibit symptoms of the "loathsome disease" to which Mr. Read invites attention; on the contrary, I believe that there is no healthier inmate of Darlinghurst Gaol than the prisoner in question. On the date of verification after vaccination in her case, seeing that the operation had succeeded, and that the lymph yielded was of the best quality, I offered to vaccinate some of the female warders, and Miss O'Sullivan submitted without the slightest demur (as her attached report to me will show)—the result being that her case was quite successful. I have also vaccinated over twenty persons from Susan Fisher, all of whom have resulted satisfactorily, and I myself would not have the least hesitation in being inoculated with the same lymph; and if certain superior officials, instead of going outside the Gaol to be vaccinated had been inoculated from Susan Fisher, they probably would not have had occasion to express their abhorrence of vaccination, and certainly would have experienced

experienced more satisfaction as far as their bodily comfort was concerned, besides avoiding the very bad example and tendency to subvert all regular discipline likely to ensue from their injudicious proceeding.

With reference to the Matron's report, Miss O'Sullivan (to whom I do not attach the slightest blame in the matter) assures me that she had not the least idea of making any complaint, and being the one interested was greatly surprised that a few chance words that dropped from her should have been made the pretext for an attack upon me and my department.

It is now two years since Mrs. Challis, in conjunction with Mr. Read and others, were pleased to censure my conduct bitterly, because, for very good reasons, I declined to agree with them in recommending the release of a prisoner named Isabella O'Brien, who by the way did infinite credit to their humane recommendations. Ever since that affair (as you can easily verify by reference to past correspondence) I have been the subject of attacks based on the most frivolous grounds, and the recipient of gratuitous insults at the hands both of Mr. Read and Mrs. Challis.

On reference to the prison rules I find—1st. "That any official making a charge will be expected to substantiate and prove it." 2nd. Any subordinate making a complaint or charge against a superior official on frivolous grounds will be held accountable. Now, I submit that Mrs. Challis has infringed both of those rules, and Mr. Read one of them.

Mr. Read's proper course to pursue would have been to consult with me before creating such an uncalled-for disturbance, and it probably would never have reached you, as I most certainly consider that Mr. Read ought to feel himself capable of dealing with such trivial cases without making it an official controversy.

In conclusion, I may remark that Mr. Read does not seem to have quite appreciated the extreme gravity of the charge that he brought against me—a charge so serious that I should have been quite justified in appealing to the Colonial Secretary, but that knowing the very great and unnecessary trouble which is continually being given you about this department (the medical), I do not wish to cause any further unpleasantness. For this forbearance I neither expect nor desire thanks from the officials I have before alluded to, only I think it as well to remind them that human patience has its limits, and that a little more of this petty warfare on their part will culminate in some very decided step on my part.

I have, &c.,

MAURICE J. O'CONNOR,

Visiting Surgeon.

P.S.—Accompanying this are reports from Mr. Stapleton, Miss O'Sullivan, and Mrs. Gourley (Hospital nurse).—M. J. O'CONNOR.

[Enclosures.]

Sydney Gaol, 18 July, 1881.

THOMAS STAPLETON, dispenser, reports that he was present when the Visiting Surgeon vaccinated Miss O'Sullivan, a female warder, with lymph taken from the arm of Susan Fisher, a prisoner, and that Miss O'Sullivan did not offer any objection at being vaccinated with the said lymph.

He also reports that during the last eighteen months the prisoner Susan Fisher has only been twice under medical treatment, viz., March 31, 1880, and March 6, 1881, when she was admitted to hospital, and on each occasion delivered of a still-born child; she recovered rapidly on both occasions, remaining in hospital only nine days. He considers her to be one of the healthiest prisoners in the gaol.

The Visiting Surgeon.

THOS. STAPLETON,
Dispenser.

Sir,

I beg to state, in reference to my being vaccinated, that on that day of undergoing that operation, and when at the surgery for that purpose, prisoner Susan Fisher was there, and the lymph being taken from her I was inoculated with it. I did not object to it at the time, as I was very nervous, but when I came out, and after a little reflection, I felt annoyed, as I thought Fisher might not be a clean woman. My arm feels very well now, and after making inquiries, and being quite recovered, I feel satisfied that I did not receive impure lymph, as the woman was a long time in prison at the time, and I believe was in a good state of health.

Darlinghurst Gaol, 15 July, 1881.

Respectfully yours,

ANNIE O'SULLIVAN.

16 July, 1881.

Sir,

I beg to state that I have known the woman prisoner Susan Fisher these two years, and never knew her to have any disease, and I believe her to be as healthy a woman as there is in the gaol.

Your obedient servant,

MARY GOURLEY,

Nurse of the Female Hospital.

I do not think it worth while to make reply to Dr. O'Connor's attack and threat in his report, as no doubt it will be investigated, and I trust that I will not have long to submit to such unwarrantable assertions.

J. C. READ,

Principal Gaoler.

18/7/81.

No. 6.

Minute of Comptroller General of Prisons.

I do not see any occasion for an investigation in this matter. No further information is likely to be obtained, and the facts are simple.

From the report of the Visiting Surgeon and papers attached, there seems to be every reason to believe that the woman Fisher was a healthy and proper subject, and any uneasiness on the part of those vaccinated from her may be dispelled.

At the same time, it does certainly present itself to my mind that, looking to the life led by the prisoner, as evidenced by her repeated (thirty-three) convictions, it is natural that a feeling of distrust should be engendered, and in that sense I think that it is to be regretted that she was made the subject whence to derive lymph.

As regards the correspondence, I can only, as on a previous occasion, express my regret at the attitude of officers in whose co-operation the service of the establishment is so dependent.

In dealing with such matters, I take it to be my part to confine my attention to the facts brought before me, and not to complicate them by viewing questions of feelings or motives, which in a general way, I am of opinion, should be left out of official correspondence.

The Principal Gaoler, for his information. A copy has been sent to the Visiting Surgeon.

HAROLD MACLEAN,

Comptroller General.

J. C. READ,

Principal Gaoler.

No. 8.

The Principal Gaoler to The Comptroller General of Prisons.

Sir,

Darlinghurst Gaol, Sydney, 22 July, 1881

I have the honor to report that prisoner Annie Jones was brought before the Visiting Magistrate yesterday, and sentenced to seven days cells for refusing to be vaccinated.

Mary Ann Thompson was locked up for refusing to be vaccinated, but subsequently, on her expressing to me her willingness to submit, I sent word to request the doctor to be kind enough to vaccinate her at once, before the arrival of the Visiting Magistrate, but he positively refused to do so until the woman was taken before the Magistrate and punished, which I cannot see the necessity of, as she has submitted and not caused trouble, as the first-mentioned prisoner did.

I.

I was glad to get Thompson to agree to be vaccinated, as her sentence will expire on the 24th, and all the punishment she could receive would not be very deterrent to her—through the delay she will probably escape the operation altogether.

Report from the Matron and warder (Mrs. Cunningham) herewith.

I have, &c.,
J. C. READ,
Principal Gaoler.

[Enclosures.]

The Matron to The Principal Gaoler.

Mary Ann Thompson, 24 years of age, seven days confined.

Sir, Female Wing, Darlinghurst, 21 July, 1881.
The prisoner named in the margin was taken to the doctor this morning by warder Mrs. Cunningham, who told him the Principal Gaoler had expressed a wish that this prisoner should be vaccinated, as her sentence expired on Sunday morning. She came back and reported to me the doctor would not vaccinate her, but wished her brought before the Magistrate and punished for refusing to be done before.

I am, &c.,
F. M. CHALLIS.

Mrs. Cunningham to The Principal Gaoler.

Sir, 22 July, 1881.
I beg to state I brought prisoner Mary Ann Thompson round to the doctor in the surgery on the morning of the 21st for to be vaccinated, and the doctor said he wished the prisoner to be brought before the Magistrate and punished, as she refused before.
MARY G. CUNNINGHAM.

Referred to the Visiting Surgeon. There appears to be difficulty with some prisoners on the question of vaccination, but I am inclined to think that when they are disposed to submit, punishment should be avoided, unless absolutely required for example.—H.M.L.

The Principal Gaoler. B.C., 22/7/81. I consider that either punishment or reprimanding was absolutely necessary in their cases. I intend to vaccinate Mary Ann Thompson before expiration of sentence.—M. J. O'CONNOR, Vis. Surg., 22/7/81.

Forwarded to the Comptroller General. The prisoner was vaccinated previous to her discharge yesterday morning, and was detained in the cells till discharged. I think this was sufficient punishment.—J.C.R., P.G., 25/8/81. The Comptroller General. Seen.—H.M.L., 25/7/81.

No. 9.

The Principal Gaoler, Darlinghurst, to The Comptroller General of Prisons.

Annie Jones.

Sir, H.M. Gaol, Sydney, 26 July, 1881.
I have the honor to inform you that the prisoner named in the margin was brought before the Visiting Justice on the 21st instant, for refractory conduct and refusing to be vaccinated, and sentenced to seven days cells. The Visiting Magistrate suggested that she be put under restraint and vaccinated; and as she still refuses, will you be good enough to inform me if this will be done.

I have, &c.,
J. C. READ,
Principal Gaoler.

[Enclosure.]

PARTICULARS of conviction and punishments of Annie Jones, a prisoner in Sydney Gaol:—Annie Jones; born in London, 1855; convicted at Central Police Office, 4 July, 1881; offence, obscene language; sentenced to three months' imprisonment, by Justice J. W. Lees.

Previous convictions.—Repeatedly convicted of drunkenness and vagrancy.

General conduct in gaol, bad.

J. C. READ,
Gaoler.

Sydney Gaol, 26 July, 1881.

I am loth to resort to the course suggested. If she still refused, she should be charged afresh.—H.M.L. The Principal Gaoler, B.C., 26/7/81. Seen.—M. J. O'C., Vis. Surg., 27/7/81.

The prisoner was brought before the Visiting Justice (Mr. Stewart, acting for Mr. Chatfield), and sentenced to three days cells, this morning, for refractory conduct and persistently refusing to be vaccinated. The prisoner says she will die rather than submit.—J.C.R., Principal Gaoler. The Comptroller General of Prisons, B.C., 28/7/81.

No. 10.

Parliamentary Question.

Thursday, 4th August, 1881.

7. MR. BUCHANAN to ask THE COLONIAL SECRETARY,—Does the Government enforce vaccination upon all Government Officials as well as all prisoners in our Gaols?

With reference to letter of the 17th June last, will Mr. Maclean kindly say what has been done to carry into effect the instructions therein conveyed.

Information desired in connection with above question, and reply to be given.

The Comptroller General of Prisons.—B.C., 4th August, 1881.

W. E. PLUNKETT.

The order for vaccination has been and is being duly observed by the Prison officers. No occasion for enforcing the order has arisen.—HAROLD MACLEAN, Comptroller General. 4/4/81.

No. 11.

Minute of Minister of Justice.

It is directed that compulsion must not be used to enforce vaccination in the gaols, and there must be no punishment for refusal to submit to vaccination.—J.G.L.L., 5 August, 1881. The Comptroller General of Prisons, B.C., 5/8/81.

No. 12.

The Under Secretary of Justice to The Comptroller General of Prisons.

Sir,

Department of Justice, Sydney, 5 August, 1881.

In reference to the enclosed copies of papers,* the originals of same having been left at this Department by a gentleman from your office, I am directed by the Minister of Justice to inform you that compulsion must not be used to enforce vaccination in the gaols throughout the Colony, and that there must be no punishment for refusal on the part of persons to submit to vaccination.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

* See papers Nos. 13 and 14.

No. 13.

Telegram from Comptroller General of Prisons, East Maitland, to Prisons Department, Sydney.

SHOW Under Secretary of Justice last modifying order as to vaccination. Prepare a general order, conveying, in their own terms, instructions as to non-compulsion, and get approval. Say I am of opinion that new order should be marked "confidential," to be shown only to Visiting Justices and Surgeons; but follow Mr. Plunkett's directions. Instruct established gaols by telegraph—Darlinghurst at once. I leave for Tamworth to-morrow. Show this to Mr. Plunkett.—5/8/81.

No. 14.

Further general order issued by Prisons Department *re* Vaccination.

Department of Prisons, Comptroller General's Office, Sydney, 6 August, 1881.

To be shown to Visiting Justices and Surgeons only.

It is directed that compulsion must not be used to enforce vaccination in the gaols.

HAROLD MACLEAN.

The above order was sent by telegram to the following gaols:—

Sydney.	Mudgee.	Dubbo.	Port Macquarie.
Parramatta.	Tamworth.	Forbes.	Queanbeyan.
Bathurst.	Wagga Wagga.	Glen Innes.	Singleton.
Berrima.	Bega.	Gundagai.	Tenterfield.

Minute of Comptroller General of Prisons.

HAS the prisoner Jones, who refused to be vaccinated, persisted in her refusal and not been vaccinated?
The Principal Gaoler.

H. M'L.

12/8/81.

She has not been vaccinated. After serving the first sentence of seven days cells, she was again charged with refusing, and sentenced to three days further punishment, from which the Visiting Surgeon released her, as re-vaccination in her case was not thought necessary.—J. C. READ, Principal Gaoler, 12/8/81. The Comptroller General.

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

VACCINATION IN DARLINGHURST GAOL.

(FURTHER CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 24 August, 1881.

The Comptroller General of Prisons to The Under Secretary of Justice.

Department of Prisons, Comptroller General's Office,
Sydney, 17 August, 1881.

Sir,

I have the honor to forward, for the information and consideration of the Minister of Justice, an important letter upon the subject of vaccination in Darlinghurst Gaol, which has just been placed in my hands by the Visiting Surgeon.

It would seem to be evident that without compulsion vaccination cannot be proceeded with in Darlinghurst, nor probably in the other prisons of the Colony.

In view of the serious public danger indicated by the Visiting Surgeon, it might perhaps be deemed desirable to provide for compulsion by legislation.

I think it right to call attention to the most serious departmental difficulties in the disposal of prisoners that would arise, in the event of Darlinghurst and other prisons being quarantined, should an outbreak of small-pox occur therein.

I have, &c.,

HAROLD MACLEAN,
Comptroller General.

[Enclosure.]

The Visiting Surgeon, Darlinghurst Gaol, to The Comptroller General of Prisons.

Sir,

Darlinghurst Gaol Hospital, 16 August, 1881.

In view of the anxiety felt concerning the probable spread of small-pox, it appears to me that I should not be properly fulfilling my duty if I did not bring the following facts under your observation. I have been more particularly induced to do so because, in consequence of the last departmental order, vaccination is practically at an end in the gaol.

1st. Darlinghurst Gaol is, as you are aware, of limited area, very limited, considering the number of inmates it has to accommodate; it is the centre of a well populated district (a great many houses being merely separated from it by the width of a narrow street), a portion of which is considered eminently healthy, while yet another portion is quite the opposite, in respect of situation, drainage, &c.

I have several times commented on the crowded state of the prison, and I may again remark that the number of inmates who may be described as long-sentenced criminals is about 500, while the casual inhabitants are no less than between eight and ten thousand yearly. As you will readily observe, it is from this latter class that the greatest danger is to be apprehended. Its members are habitués of the lowest, filthiest, and most disease-engendering purlieus of Sydney, just where small-pox is most likely to arise. The majority of them have never been vaccinated, and it is not likely that, knowing they are at perfect liberty to refuse vaccination, they will submit to an operation that entails the slightest inconvenience. It is known that the highest and most generally accepted authorities on the subject are agreed concerning the utility of vaccination, and the comparative exemption from disease that it bestows; and in a place like this institution, and at a time when it is considered highly probable that small-pox will continue to spread, it seems to me that the operation is an absolute necessity. If by means of this current population the disease should be introduced into the gaol without even the check that vaccination could impose on it, the results would be simply terrible—Darlinghurst Gaol would have to be quarantined, the influx of prisoners would of necessity be checked, the infection would beyond a doubt spread in one direction, viz., through the low-lying, crowded, and badly-drained streets, between the back of the gaol and Glenmore Road; in another, through the still worse condition of portions of Woolloomooloo.

Again, in addition to small-pox, there would be the chance, not at all problematical, of gaol fever, and all this with the warm weather rapidly approaching. In a word, this gaol would become the fruitful nucleus of a pestilence that would devastate the whole city. In conclusion, I wish it to be understood that I do not think of attaching the slightest blame to those officers who declined to submit to vaccination: they simply availed themselves, and were justified in doing so, of the choice given them, not understanding the very serious issues.

I have, &c.,

MAURICE J. O'CONNOR,

Visiting Surgeon.

P.S.—Since the receipt of the last instructions all prisoners have refused to be vaccinated, also the officials with the exception of one overseer.—M.J.O'C.

Minute of Minister of Justice.

[Urgent.]

Vaccination in Darlinghurst Gaol.

I HAVE, in a personal interview with the Comptroller General of Prisons, conveyed to him an expression of my strong disapprobation of the recent proceedings in reference to vaccination in the gaol, both as to the resorting to compulsion and also as to the extreme indiscretion on the part of the Medical Officer, Dr. O'Connor, in vaccinating any person with lymph procured from the prisoner Susan Fisher. I feel reluctantly constrained to place on record my disapprobation.

I cannot understand how Mr. Maclean can have so construed my letter of the 17th of June as a positive order to violate the law. Mr. Maclean has explained to me that, as prisoners to a certain extent must be subject to prison discipline in matters dealt with by regulation, such for instance as the cropping of their hair, compulsory bathing, the wearing of prison clothing, the compulsory taking of medicines, &c., &c., he regarded vaccination as coming within the same general category, and hence looked upon my letter as warranting him in treating as a breach of prison discipline a refusal on the part of a prisoner to submit to vaccination if deemed necessary by the Medical Officer. But this explanation, though not wholly undeserving of consideration, is not satisfactory; and, in a question of so much importance, Mr. Maclean should have referred to me before proceeding to the extreme measure of issuing his general order of the 23rd July. That order, which certainly should never have been issued, was, I much regret, not submitted to me for approval, and on the first intimation that I received that any compulsion was being resorted to, I immediately issued my minute of the 5th August, peremptorily forbidding compulsion or punishment for refusal to submit to the operation.

I feel the more regret in writing this censure of Mr. Maclean, as I have every reason to esteem him as a most valuable public servant.

With regard to the conduct of Dr. O'Connor I cannot but express my strong disapproval. Although, apparently, no bad results have followed, I cannot but regard as a most grave indiscretion his using the lymph from such a prisoner as Susan Fisher. His refusal, subsequently, to vaccinate the prisoner Mary Ann Thompson—even after she had expressed her willingness to undergo the operation—unless she was punished or reprimanded, is, in my opinion, conduct calling for severe censure.

J.G.L.I.

Let a copy of this minute be forwarded to the Comptroller General, and also to Dr. O'Connor.—J.G.L.I., 18/8/81. Prepare letter to accompany copy for the Comptroller General of Prisons, and for Dr. O'Connor.—W.E.P., 19/8/81.

The Under Secretary of Justice to The Comptroller General of Prisons.

Sir,

Department of Justice, Sydney, 19 August, 1881.

18/8/81.

With reference to recent correspondence, &c., respecting the vaccination of officials and prisoners in Darlinghurst Gaol, I am directed to transmit to you the enclosed copy of a minute which has been written by the Minister of Justice upon the subject.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

[Similar letter addressed to Dr. O'Connor.]

The Visiting Surgeon, Darlinghurst Gaol, to The Under Secretary of Justice.

Sir,

Darlinghurst Gaol, 22 August, 1881.

In reply to your letter of the 19th instant, I have the honor to offer the following explanation respecting vaccination from Susan Fisher, and to remark, in connection therewith, that if I had the slightest idea my memorandum on the subject would have been required before Parliament, I would have made it as explicit as I intend to do now.

When I received written instructions to vaccinate all prisoners and officials in Darlinghurst Gaol, I applied to Dr. Egan for lymph. At that time there was a scarcity of it in Sydney, and I had to wait some time before the Doctor could supply me with even a limited quantity, sufficient to vaccinate only a small number of persons; amongst those vaccinated were Susan Fisher and Miss Sullivan.

On the date of verification I found that the operation had not succeeded in the case of Miss Sullivan, but with Susan Fisher it was quite successful, and also in the case of the other prisoners (seventeen in number) it yielded satisfactory results. I examined every one of them, and found that Susan Fisher was the healthiest. Moreover, it was the first time that she was vaccinated, and as I had no lymph I selected her. I knew nothing whatever of her previous career more than that she arrived from Maitland Gaol a considerable time ago with a favourable report on her state of health from Dr. Spink. Since then she has been in hospital on only *one* occasion, suffering from a miscarriage. I examined her

her carefully, and found, from her own statement and a careful personal examination, that she was not suffering from syphilis, nor did she exhibit symptoms of having ever suffered from that disease. Miss Sullivan never objected to be vaccinated; her case was quite successful, as well as the others who received lymph from Susan Fisher. Even supposing for a moment (which was not the case) that Susan Fisher was suffering from syphilis, the greatest authorities on the subject are agreed that it is impossible to transmit disease by vaccination. Mr. Jonathan Hutchinson, Senior Surgeon to London Hospital, Mr. George Cooper, Sir James Paget, and Dr. Reynolds, in England, Messieurs Cullerier and Tanpin in France, and Herr Hein in Germany, after careful observation and experiments, deny that syphilis can be transmitted from one individual to another by means of vaccine lymph, and the *Lancet*, dated February 1st, 1873, endorses their opinions. At the time I received instructions to vaccinate, it was highly probable that small-pox might be introduced into this gaol; and as Medical Officer to the establishment I was expected to afford as much protection as possible to the inmates against the possibility of infection, and the only manner in which I could do so was by vaccination; consequently unless I could generate a sufficiency of lymph within the gaol, vaccination would practically be an end, and I could not carry out the instructions received. Again, the most effective mode of vaccination is, if possible, to inoculate from arm to arm.

With reference to the case of Mary Ann Thompson, she refused in a most impertinent manner and in the presence of a number of other prisoners to be vaccinated

Dr. Stapleton (the dispenser) was present at the time. The female warder in charge was directed by me to bring her before the Visiting Magistrate and have her reprimanded, and that I would vaccinate her afterwards. If such a course were not pursued, all the other prisoners would have acted in a similar manner, the discipline of the gaol would be at an end, I would have probably been reported for encouraging insubordination, and my instructions to vaccinate could not have been complied with.

Enclosed I beg to forward copies of correspondence between the Chief Medical Adviser to the Government and myself on this subject.

I have, &c.,

MAURICE J. O'CONNOR,
Visiting Surgeon, Darlinghurst Gaol.

[Enclosures.]

The Visiting Surgeon, Darlinghurst Gaol, to The Medical Adviser to the Government.

Dear Sir,

Darlinghurst Gaol, 16 July, 1881.

I have vaccinated all the prisoners in Darlinghurst Gaol, excepting those whose sentences do not exceed seven days, and some of the latter object to be inoculated, on the ground that they will not be able to follow their usual occupation (generally laborious) on being discharged from gaol.

Will you be good enough to instruct me whether I shall vaccinate them or not, as in my opinion this class of prisoners is the most likely to introduce small-pox into this establishment.

Yours truly,

MAURICE J. O'CONNOR.

The Medical Adviser to the Government to The Visiting Surgeon, Darlinghurst Gaol.

Dear Sir,

Sydney, 17 July, 1881.

In reference to your note of the 16th instant, I have to say that it is equally necessary that the short-sentenced prisoners should be vaccinated as those detained for longer periods. There should be no exception on the grounds of the length of their sentences.

Yours truly,

H. G. ALLEYNE.

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

VACCINATION IN DARLINGHURST GAOL.

(FURTHER CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 25 August, 1881.

The Colonial Secretary to F. N. Manning, Esq., M.D., L. H. J. Maclean, Esq., M.D., M.R.C.P.L., Owen Spencer Evans, Esq., M.R.C.S.E., and George Fortescue, Esq., M.B., M.R.C.S.E.

Gentlemen,

Colonial Secretary's Office, Sydney, 24 August, 1881.

I am desirous of obtaining your services, on behalf of the Government, to visit Darlinghurst Gaol and examine and report upon the state of health of the prisoner named in the margin.

I desire that your examination should be conducted quite independently of the Visiting Surgeon of the Gaol, and should be specially directed to the following points of inquiry:—

- (1.) The present state of health of the prisoner.
- (2.) Whether she is a person of sound constitution, physically and otherwise.
- (3.) Whether vaccinating other persons with lymph from Susan Fisher was, in your judgment, attended with the danger of communicating disease to the person so vaccinated.
- (4.) Whether, so far as you can ascertain, the Visiting Surgeon had difficulty in obtaining lymph, as stated in his letter of the 22nd August herewith.*

Susan Fisher,
sentenced to two
years hard labour
in gaol.

Although these several points are submitted for your special consideration, you will be good enough to extend your inquiries in any other direction which may seem to you desirable, to enable you to report to the Government, in the fullest manner, on the facts of the case as disclosed in the accompanying papers.

respecting vacci-
nation in
Darlinghurst
Gaol.
Do. do. further
correspondence.

I have, &c.,
HENRY PARKES.

F. Norton Manning, M.D., L. H. J. Maclean, M.D., M.R.C.P.L., Owen Spencer Evans, M.R.C.S.E., G. Fortescue, M.B., M.R.C.S.E., to The Colonial Secretary.

Sir,

H. M. Gaol, Darlinghurst, 25 August, 1881.

In accordance with instructions contained in your letter of the 24th instant, we do ourselves the honor to report that we have this day visited H. M. Gaol, Darlinghurst, and examined Susan Fisher, a prisoner therein.

We are of opinion that the present state of health of Susan Fisher is very good, that she is unusually robust and naturally of a sound constitution, that she is free from all marks of venereal disease past or present, and that there was no danger of communicating disease to persons vaccinated from her. From inquiries we have made, and from our personal experience, we are aware that there was considerable difficulty in obtaining lymph at the time the vaccination at Darlinghurst Gaol was in progress.

We have, &c.,

F. NORTON MANNING, M.D.
L. H. J. MACLEAN, M.D., M.R.C.P.L.
OWEN SPENCER EVANS, M.R.C.S.E.

No. 1.

Dr. Alleyne to The Under Secretary for Finance and Trade.

Sir,

Sydney, 16 June, 1881.

I do myself the honor to recommend that instructions be given to the medical officers of all Government establishments, whether schools, reformatories, asylums, or gaols, to vaccinate the inmates and officers attached to the institutions; and that no one, whether a pupil-teacher or other person, who comes from a dwelling in which there is a case of any kind of eruptive sickness, be allowed to enter a school.

I have, &c.,

H. G. ALLEYNE.

The Colonial Secretary.—J.W., 16/6/81. The Under Secretary, Colonial Secretary's Department.—B.C., G.E., 16/6/81. Appd.—H.P., 16/6/81. Issue instructions to various Departments at once.—C.W., 16/6/81. The Under Secretary for Finance and Trade.—B.C., C.W., 18/6/81.

No. 2.

The Principal Under Secretary to The Inspector General of the Insane.

Sir,

Colonial Secretary's Office, Sydney, 17 June, 1881.

The Medical Adviser to the Government having recommended that the inmates and officers of all asylums and other Government establishments be vaccinated, I am directed by the Colonial Secretary to request that you will cause immediate steps to be taken for giving effect to this recommendation in all establishments for the reception and treatment of the insane.

I have, &c.,

CRITCHETT WALKER.

No. 3.

The Principal Under Secretary to The Manager of the Government Asylums for the Infirm and Destitute.

Sir, Colonial Secretary's Office, Sydney, 17 June, 1881.
At the instance of the Medical Adviser to the Government, I am directed by the Colonial Secretary to request that you will be good enough to give immediate instructions to the surgeons of the Asylums for the Infirm and Destitute and the Erysipelas Hospital for vaccinating the inmates and officers of the respective institutions.

I have, &c.,
CRITCHETT WALKER.

No. 4.

The Manager of the Government Asylums for the Infirm and Destitute to The Surgeon and Dispenser of the Hyde Park Asylum.

Sir, Sydney, 18 June, 1881.
I am directed by the Colonial Secretary to request that you will, without delay, vaccinate the officers and inmates of the Hyde Park Asylum.

A supply of lymph can be obtained on application at the Vaccine Institution.

I have, &c.,
FREDERIC KING,
Manager.

[Similar letters were addressed by the Manager of the Government Asylums, on the same date, to the Surgeon-Superintendent of the Asylum for the Infirm and Destitute, Liverpool, and to the Visiting Surgeon of the Asylums for the Infirm and Destitute at Parramatta.]

No. 5.

The Manager of the Government Asylums for the Infirm and Destitute to The Superintendent, Vaccine Institution, Sydney.

Sir, Sydney, 20 June, 1881.
I have the honor to request that you will be good enough to supply the Surgeons of the Government Asylums—Dr. Ward, of Hyde Park, Dr. Strong, of Liverpool, and Dr. J. C. Rutter, of Parramatta—with as much vaccine lymph as you can spare for the use of the inmates and officers of the Asylums. The several Surgeons will notify their wants to you.

I have, &c.
FREDERIC KING,
Manager.

No. 6.

The Manager of the Government Asylums for the Infirm and Destitute to The Principal Under Secretary.

Sir, Sydney, 24 June, 1881.
I have the honor to report, for the information of the Colonial Secretary, that Dr. R. D. Ward has informed me that a large proportion of the inmates of the Hyde Park Asylum have refused to be vaccinated.

I do not propose taking further steps in the matter.

I have, &c.,
FREDERIC KING,
Manager.

No. 7.

The Inspector General of the Insane to The Principal Under Secretary.

Sir, Lunacy Department, Inspector General's Office, Gladesville, 9 September, 1881.
In accordance with your B.C. minute* of the 7th instant, I do myself the honor to forward here-with all correspondence connected with vaccination in this department. This correspondence includes—
1st. A circular letter of instructions addressed to the Medical Superintendents of Hospitals for the Insane, at Gladesville, Parramatta, and Callan Park.
2nd. A letter addressed to the Superintendent of the Hospital for the Insane at Newcastle.
3rd. A letter addressed to the Superintendent of the Licensed House for the Insane at Cook's River; and
4th. Reports from the Visiting Medical Officer of the Hospital for the Insane at Newcastle, and the Assistant Medical Officer of the Hospital for the Insane at Gladesville.

Immediately after issuing the letter of instructions to Hospitals for the Insane, I deemed it necessary to consult with the medical officers of the Hospitals at Gladesville, Parramatta, and Callan Park, with regard to some points of detail, and advised that patients who strongly objected, and in whose cases mental excitement, or a dangerous and unwholesome antipathy to the medical officers might be induced, should not be vaccinated, and my advice has been acted on.

The

* The minute referred to is a copy of Mr. Jacob's Question, which was transmitted to Dr. Manning.

The vaccination at Newcastle and Gladesville appears to have been conducted with judgment and care. At Gladesville the number of unsuccessful vaccinations is somewhat large, owing to the fact that a large number of the inmates were vaccinated in 1872, at the time small-pox last appeared in Sydney.

The vaccination at the Hospitals at Parramatta and Callan Park has, I regret to say, not been completed, owing to the difficulty of obtaining lymph. The medical officers are, however, making some progress with the work.

Instructions have not yet been issued to the Temporary Hospital for the Insane at Cooma.

I have, &c.,

F. NORTON MANNING,
Inspector General.

[Enclosure 1.]

The Inspector General of the Insane to The Medical Superintendents of Hospitals for the Insane, Gladesville, Parramatta, and Callan Park.

Sir, Lunacy Department, Inspector General's Office, Gladesville, 11 July, 1881.

The Colonial Secretary having, at the recommendation of the Medical Adviser to the Government, directed that the inmates and officers of all Public Institutions be vaccinated, I do myself the honor to request that you will take steps for carrying out this order so far as it relates to the inmates of the institution under your superintendence.

With regard to the members of the staff under your orders, I am of opinion that, whilst the desirability of vaccination should be pointed out to them, their individual wishes on the subject should be regarded.

In vaccinating the inmates it will be advisable to carry out the operation by degrees, so as to interfere as little as possible with the ordinary routine and work of the institution.

I have, &c.,

F. NORTON MANNING,
Inspector General.

[Enclosure 2.]

The Inspector General of the Insane to The Superintendent, Hospital for the Insane, Newcastle.

Sir, Lunacy Department, Inspector General's Office, Gladesville, 28 June, 1881.

The Medical Adviser to the Government has recommended the vaccination of the inmates of all Government Establishments, and this appears to me to be especially necessary with regard to the inmates of the hospital under your superintendence. I have therefore the honor to request that you will suggest to the medical officer the advisability of vaccinating, at times convenient to himself, the whole of the inmates and such members of the staff as may so desire.

As the medical officer is a public vaccinator, the cases will be entered on the usual official returns, and paid for in the ordinary course from the Votes for Vaccination.

I have, &c.,

F. NORTON MANNING,
Inspector General.

[Enclosure 3.]

The Inspector General of the Insane to G. A. Tucker, Esq., Ph. D., Licensed House for the Insane, Cook's River.

Sir, Lunacy Department, Inspector General's Office, Gladesville, 24 August, 1881.

The Colonial Secretary has, by letter dated 17th June last, directed the vaccination of all patients in Institutions for the Insane, and I shall be glad if you will take steps for the vaccination of the Government patients under your care.

In carrying out this vaccination you will obtain lymph from proper sources of supply, and not vaccinate from patient to patient.

It appears to me advisable that patients in feeble physical health, and in whose cases the resulting febrile disturbance might prove dangerous, should not be vaccinated, and it will be advisable also not to vaccinate any patient who strongly and persistently objects, or in whom it would produce unhealthy mental excitement or a marked antipathy to the medical officers.

The vaccination of the private patients is a matter which I think should be left entirely to your discretion, and on which it may in some cases be necessary to consult the relatives.

I have, &c.,

F. NORTON MANNING,
Inspector General.

[Enclosure 4.]

Medical Visitor to the Hospital for the Insane, Newcastle, to The Inspector General for the Insane.

Dear Sir,

Hospital for the Insane, Newcastle, 24 August, 1881.

I enclose the result of the vaccination at the Asylum.

There were 233 persons vaccinated, of which 228 took the disease satisfactorily; the remaining five, although the vaccination was repeated several times, did not take.

The marks of previous vaccination were perfectly distinct on 138, including the five unsuccessful cases mentioned above.

With the exception of two axillary abscesses, no evil effects followed the operation.

I also enclose the return to be handed to the Government Medical Adviser, Dr. Alleyn.

There is nothing to report of the inmates of the Asylum.

Yours truly,

RICHARD HARRIS.

[Enclosure 5.]

The Assistant Medical Officer, Gladesville, to The Medical Superintendent.

Sir, Hospital for the Insane, Gladesville, 2 September, 1881.

I have the honor to lay before you the following report of the members of the staff and patients of this institution vaccinated by me since the issue of a circular by the Inspector General of the Insane, dated 11th July, 1881:—

Thirty-nine members of the staff have availed themselves of the opportunity afforded them.

I have vaccinated 372 male patients and 381 females, making a total of 753, leaving about 20 unvaccinated. Of these, I have decided not to vaccinate some for fear of setting up too much mental excitement, and others on account of bad bodily health.

The lymph was all procured from outside the hospital (and most of it by myself) from children; finally, I may add that no ill effects have followed in any case.

Appended are the results in a tabular form:—

Patients

Patients vaccinated.

Males	372	Females	381
Successful.....	201	Successful	223
Unsuccessful	171	Unsuccessful	158
	<u>372</u>		<u>381</u>
Unvaccinated	16	Unvaccinated	3

Officers and Staff vaccinated.

Males	20	Females	19
Successful.....	12	Successful	11
Unsuccessful	6	Unsuccessful	8
Unverified	2		<u>19</u>
	<u>20</u>		

I have, &c.,
H. BLAXLAND,
Assistant Medical Officer.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SMALL-POX.

(REGULATIONS, &c.)

Ordered by the Legislative Assembly to be printed, 9 September, 1881.

No. 1.

REGULATIONS FOR THE ESTABLISHMENT AND MANAGEMENT OF AN AMBULANCE AND DISINFECTING STAFF.

1. The staff is to consist of a party of men under the superintendence of a Senior-constable of Police, and they are to be chosen from persons who have had the small-pox.

2. Their duties will be to remove, in suitable vehicles provided by the Government—(1) persons infected with the small-pox, or (2) who may have been found in the immediate neighbourhood of infection from that disease, to such place or places as they may be directed, and (3) to deodorize, disinfect, and thoroughly cleanse all houses, buildings, or localities where the small-pox is known to have existed, or is supposed to exist, and (4) generally to do such other work of a sanitary nature as may be directed by the Board of Health.

3. They will reside in quarters specially provided for them, where they will be considered as in quarantine, and they will not be allowed to remove from such quarters without special authority, nor to associate with their friends or any other persons.

4. In the performance of their duties they will proceed (when instructed) to and from their quarters in a vehicle provided for the purpose, and in doing their work they are strictly to avoid coming into contact with any person or persons not being one of their number.

5. They will be in charge of an ambulance for the conveyance of patients, and a waggonette, in which they are to come direct from their quarters to their work, and in which they are to return direct from their work to their quarters, without stopping at any place or communicating with any person.

6. The ambulance and waggonette are to be thoroughly cleansed and disinfected immediately after each occasion on which they have been used.

7. The men on going out to work must be clothed from head to foot, including headgear and shoes, in canvas (or other material which admits of being washed), with flannel under-garments. They will be furnished with six suits each, and must change their suits immediately on their return from work. The suit taken off must then at once be put into a strong solution of carbolic acid, and the articles must be cleansed by being boiled for five or six hours.

8. The men should be clean shaved, or their whiskers, moustache, beard, and the hair of the head must be kept cut short.

9. The walls of infected houses must be cleansed by being scraped, and afterwards treated by repeated washings with hot lime. The floors and inner roofs of the rooms must be cleansed in the same manner. The furniture must be washed also with hot lime, and afterwards with carbolic acid.

10. All beds, bedding, and clothing of any kind which have been used by, or in the immediate neighbourhood of the sick people or their attendants, must be destroyed by fire.

11. All rubbish that can be burned on the premises will be there burned; other refuse must be treated with a strong solution of carbolic acid before being removed, and such removal will be effected in a covered cart provided for the purpose, and the refuse will be buried in a place set apart for the purpose.

12. When any rubbish which cannot be destroyed by fire ought to be removed, or drains require cleansing, the Senior-constable in charge will give intimation to the City Inspector of Nuisances, through the police on duty, verbally.

13. The cart-horse to be carefully washed and groomed, and not to be driven at a fast pace.

14. If patients are handled, cotton gloves must be used, which must be afterwards well boiled and washed.

15. The Senior-constable will be responsible for the discipline of the Staff, and for the thorough performance of the duties entrusted to the men.

16. He will keep a careful record of every article of property destroyed on each place, and the estimated value of the same.

17. Cesspits to be thoroughly treated with carbolic acid and pure lime. If they require emptying, notice to be sent verbally by the Senior-constable to the Inspector of Nuisances.

18. In no case whatever shall persons who are not suffering from small-pox be conveyed in the vehicle provided for sick persons only.

Treasury, 18th July, 1881.

No. 2.

INSTRUCTIONS FOR DISINFECTING CORPS.

WHENEVER instructions are issued to cleanse and disinfect a house or building, the following directions are to be strictly observed:—

First Stage.

Make an inventory of everything in the house.

Make a separate inventory of everything you may have to destroy, and attach the value at which you estimate it; if possible also enter the value put upon it by the proprietor.

All clothes, mattresses, bedding, carpets, matting, curtains, oilcloths, mats, &c., are either to be destroyed by fire upon the premises or disinfected.

The responsibility of deciding whether articles are to be destroyed or disinfected will rest with the senior-constable in charge.

Be careful not to make dust that can be blown about to other premises.

All articles of furniture in each room are to be placed on the floor, each apart from the other, and away from the walls, before using the sulphur process.

Apply the sulphur process to every room, separate passage, staircase, &c., in the following manner:—Paste coarse brown paper over the fire-place and window joints—light the sulphur—close the doors, and paste paper over the outside of their crevices.

Sulphur Process.

Place the large tinned-iron basin two-thirds full of water upon the floor in centre of room, stand the tripod over, and upon this the sulphur iron dish—light the sulphur and leave the room.

Second Stage.

All papered walls to be stripped; a hot solution of carbolic acid (consisting of 1 lb. or a pint of common carbolic acid to 4 gallons of hot water) being used for the purpose. All wall-paper to be burnt after removal from the walls.

All whitewashed walls, ceilings, &c., to be thoroughly scraped, and scrapings burnt.

All walls, including those from which the paper has been removed, and all ceilings and floors, are to be washed with the chloride of lime solution, and the house left with the windows open for six days.

At the end of this time all walls and ceilings are to have two coats of lime-wash.

Outbuildings to be treated in every way as above.

Yards.

All refuse, empty cases, &c., to be destroyed by fire upon the premises, or removed in the covered cart. If paved, the pavement to be well cleansed and lime-washed. If not paved, all portions contaminated with filth to be mixed with 1-20th part of lime, and removed in the covered cart and buried; the removed portions to be replaced with fresh suitable stuff, containing 1-20th of unslacked lime. All walls to receive two coats of hot lime-wash.

Sinks, Traps, and Drains.

All these to be examined and put into effective working order and flushed. All imperfections requiring skilled workmen to be reported.

Lime-wash.

Slack fresh lime; when quite soft mix with water to thickness of cream; add one pound of alum dissolved in hot water to each bucketful.

Chloride of Lime-wash.

Two pounds of chloride of lime and a quarter of pound of alum to three gallons of water.

No. 3.

Sir,

Board of Health, The Treasury, Sydney, 5 August, 1881.

Believing that the present time affords an unusually favourable opportunity for obtaining valuable information bearing upon the importance of "re-vaccination" in this Colony, the Board direct me to say that they will be glad if you will favour them with returns of all cases re-vaccinated by you during the present year.

In order to afford you as little trouble as possible, and at the same time to provide the information in a definite form, I enclose two "Return Tables" for the register of your cases, and have to request that you will kindly forward "Table A," filled up, by the 1st proximo, if possible, and "Table B" between the 1st and the 15th January, 1882.

To

I have, &c.,

Secretary.

RETURN A.—Return of Cases Re-vaccinated by me from the 1st January to 30th June, 1881.

August, 1881.

(Signature)
(Address).

Previous history..		Results of Re-vaccination.			Remarks.
Present age (Approximate.)	Sex.	Not taken.	Taken, but running an abortive course.	Taken, running full course of true vaccinia.	

This Form to be returned by the 1st September, 1881, if possible:

RETURN B.

RETURN B.—Return of Cases Re-vaccinated by me between the 1st of July and the 31st December, 1881.
1882.

(Signature)
(Address)

Previous history.				Results of Re-vaccination.			Remarks.
Present age.	Sex.	Number of good vaccination cicatrices.	Age when last vaccinated.	Not taken.	Taken, but running an abortive course.	Taken, and running full course of true vaccinia.	

This Form to be returned between the 1st and the 15th of January, 1882.

No. 4.

Sir,

Board of Health, The Treasury, Sydney, 8 August, 1881.

I have the honor to inform you, by direction of the Board of Health, that, after this date, notice will be sent to the Council Clerk of every case of small-pox occurring in your Municipality, immediately after its verification.

I am at the same time to express the desire of the Board to have the zealous support and assistance of your Corporation in their endeavour to check the spread of the threatened epidemic.

I beg to enclose copy of a Resolution passed at a meeting of the Board, on the 4th instant.

I have, &c.,

The Mayor of

RESOLUTION.

Secretary.

THE Board recommend that every case of small-pox shall be immediately reported to the Council Clerk of the Municipality in which it occurs, and that the Corporation of such Municipality should render the Inspector of Nuisances or other officer responsible that the yards and premises of all houses within a radius of not less than 300 feet of the infected house be fully cleansed; that all rubbish be removed daily from them; and that all drains be thoroughly cleansed, and when necessary, repaired.

The infected house will be dealt with by the Ambulance Corps.

No. 5.

SANITARY RULES FOR THE GUIDANCE OF HOUSEHOLDERS IN THE NEIGHBOURHOOD OF HOUSES INFECTED WITH SMALL-POX.

Perfect cleanliness and free ventilation by night as well as by day, are essential to health.

It is very important that every person in your house should be immediately vaccinated, whether they have been vaccinated before or not.

Have all your windows kept full open during the day, and half open during the night.

Have all floors well scrubbed twice a week; this should always be done early in the morning, and they should be dried quickly.

Have all walls and ceilings lime-washed. Have the floors, walls, and ceilings of the water-closets well washed down and then lime-washed, giving them two coats. Have the closet pans cleaned and flushed with water daily.

Clean all surface drains daily, and flush all other drains with water.

If any drain is out of order, report it immediately to the Inspector of Nuisances.

Should any member of your family appear to be ill, report it to the doctor without delay, and as long as any doubt exists as to the nature of the disease, you must carry out the following regulations:—

Give the patient an airy, detached room, or one the air of which can be easily kept out of the rest of the house. Take out of it all unnecessary furniture, all carpets, curtains, hangings, and clothing, and clean it out before you put the patient in.

If the room has a fire-place, burn a fire night and day; keep the door closed which communicates with the rest of the house, and keep the windows of it open night and day.

One person should devote herself to attend to the patient, and she must avoid going near any one else.

No visitor must be allowed into the room where the patient is.

All crockery, glass, and other articles, must be kept clean, but not removed from the patient's room.

All excretions are to be disposed of at once, and the utensils immediately washed in boiling water, with Condyl's Fluid in it (one large wine-glassful to a gallon of water). A small wine-glassful of Condyl's Fluid to be left in the utensil.

All rags, paper, &c., used by the patient, are to be destroyed by fire immediately.

Keep a tub full of water and Condyl's Fluid (a large wine-glassful to a gallon of water) outside the door of the patient's room, and put all clothes which have been used by him into it at once, and have them boiled in fresh water, with soap and soda, for two hours, as soon as possible.

No. 6.

RULES FOR THE GUIDANCE OF SURGEONS VISITING CASES OF SMALL-POX, OR OF A DOUBTFUL CHARACTER.

TAKE with you two of the boxes provided for the purpose—one marked "*clean*," and one without a mark. Take also a cake of carbolic soap.

Each box marked "*clean*" will contain:—

- 1 clean calico ulster
- 1 clean towel
- 2 sheets of new brown paper and string.

The

The boxes not marked will be empty.

Both will be supplied to you locked, and either of them will open with the key given you with them.

Stop not less than 30 feet from the patient's house, and request some one from an adjoining house to take a basin of clean water to the cab, that you may wash your hands after seeing the patient.

Take the ulster, towel, paper and string from the box marked "clean," and lock it again. Put on the ulster and visit the patient.

Upon your return, take off the ulster and fold it up, inside out; then do it up in the brown paper and tie the parcel. Put it into the box which has no mark, and lock it up.

The two boxes are to be sent to the laundress *locked*. She is provided with duplicate keys.

No. 7.

THE BOARD OF HEALTH MAKE THE FOLLOWING RECOMMENDATIONS, TO BE ACTED UPON IN THOSE CASES WHERE PERSONS HAVING THE SMALL-POX ARE RETAINED FOR TREATMENT IN PRIVATE HOUSES.

In the event of small-pox breaking out in a house, whether detached or adjoining others in a continuous line, as in a terrace or street, the patient may be treated in the house, under the following conditions:—

1. The proprietor or tenant of the house should engage a duly qualified medical man to attend upon the patient, and should report his name and address to the Board within twenty-four hours of the commencement of quarantine.

2. He should be responsible that well-ventilated rooms, as much isolated as possible from the rest of the house, be set apart for the patient and nurse.

3. He should be responsible for the perfect cleanliness, free ventilation, and disinfection of his house and premises, and for the efficiency and cleanliness of the drains, &c., during the period of quarantine.

4. He should be responsible for the patient not leaving the house until the written permission of the Board has been obtained.

5. He should have the whole of his house cleaned and disinfected to the satisfaction of the Board as soon after the patient's convalescence as the Board may deem desirable.

6. He should not allow any inmate of his house to leave it during the period of quarantine, without the written permit of the Board.

7. He should faithfully carry into effect any further regulations made by the Board of Health.

SANITARY SUGGESTIONS FOR THE GUIDANCE OF HOUSEHOLDERS WHEN VISITED BY SMALL-POX.

Perfect Cleanliness and Free Ventilation by Night as well as by Day are essential to health.

1. Every person in the house should be immediately vaccinated, whether they have been vaccinated before or not.

2. All windows should be kept wide open during the day and half open during the night.

3. All floors should be scrubbed twice a week, and this should always be done early in the morning that they may dry quickly.

4. Papered walls should be well rubbed down, painted walls should be washed, and all other walls as well as ceilings should be lime-washed.

5. The sulphur process should be applied to every part of the house where feasible.

6. All unnecessary furniture, lumber, and all carpets, curtains, hangings, and clothing which can be dispensed with, should be cleaned in the open air and at once packed away. When the house is liberated from quarantine, and has been cleaned and disinfected, they can also be again cleaned, disinfected, and returned to their places.

7. All floors, walls, and ceilings of water-closets should be washed down and lime-washed—the closet-pans should be cleaned and flushed with water daily.

8. All sinks, traps, and surface drains should be cleaned daily, and all other drains flushed with water daily.

9. Should any drain get out of order, it should be immediately repaired.

10. All refuse, empty cases, and lumber generally should either be destroyed by fire upon the premises, or removed for that purpose in a covered cart. All walls of outhouses and yards should be lime-washed.

11. Select two rooms for the exclusive use of the patient and nurse; they should either be upon the upper floor or in a detached building, or otherwise isolated. Should rooms on the highest floor be selected, the entire floor must be given up to the purpose.

12. Every unnecessary article of furniture, and all carpets, curtains, hangings, and clothing, &c., should be removed from the selected rooms, and they should be thoroughly cleaned out before the patient is put in.

13. The fire should be kept burning in the patient's room night and day, the windows should always be kept open, and the door which communicates with the rest of the house should be kept shut.

14. The nurse must devote herself to the patient and avoid going near any other member of the family; she should wear cotton washing dresses.

15. No visitor should be allowed to enter the patient's quarters.

16. All crockery, glass, and other articles must be kept clean without being removed from the patient's quarters.

17. All excretions should be disposed of at once, and the utensils immediately washed in boiling water with Condy's fluid in it (one large wine-glassful to a gallon of water). A small wine-glassful of Condy's fluid to be left in the utensil.

18. All rags, paper, &c., used by the patient should be destroyed by fire immediately.

19. Keep a tub full of water and Condy's fluid (a large wine-glassful to a gallon of water) outside the door of the patient's room, and put all clothes which have been used by him into it at once, and have them boiled in fresh water, with soap and soda, for two hours, as soon as possible.

Sulphur Process.

Paste strong brown paper over the fire-place and all the window joints. Place a large iron basin, two-thirds full of water, on the floor of the room. Lay a couple of bricks in the basin, and stand upon them a small iron basin. Put a handful of sulphur into the latter; pour a wine-glassful of spirits of wine upon it, and light it; then leave the room, close the door, and paste brown paper over the outside of the joints. The doors and windows may be opened any time after six hours.

Lime-wash.

Slack fresh lime; when quite soft mix with water to thickness of cream; add one pound of alum dissolved in hot water to each bucketful.

Chloride of Lime-wash.

Two pounds of chloride of lime and a quarter of a pound of alum to three gallons of water.

INSTRUCTIONS FOR DISINFECTING CORPS.

WHENEVER instructions are issued to cleanse and disinfect a house or building, the following directions are to be strictly observed :—

In conducting the process of disinfection all care is to be taken of property in houses, as well as of the houses themselves. The officers in charge must accept the responsibility of seeing that no property is unnecessarily damaged.

Make an inventory of everything to be destroyed, and record the estimated value ; if possible, also enter the value put upon it by the proprietor.

All clothes, mattresses, bedding, carpets, matting, curtains, oilcloths, mats, &c., which may have come into contact with a patient, are to be burnt upon the premises. Those which have not been in the room with the patient are to be disinfected, unless there may be special reasons for destroying the same.

The responsibility of deciding whether articles are to be destroyed or disinfected will rest with the senior constable in charge.

Care to be taken to prevent dust which may be blown about to other premises.

All articles of furniture in each room are to be placed on the floor, each apart from the other and away from the walls, before using the sulphur process.

All papered walls of every room which has been occupied by a patient are to be stripped ; a hot solution of carbolic acid (consisting of one pound or a pint of common carbolic acid to four gallons of hot water) being used for the purpose. All wall paper to be burnt after removal from the walls.

All whitewashed walls, ceilings, &c., to be thoroughly scraped, and scrapings burnt. All walls, including those from which the paper has been removed, are to be lime-washed.

Wash all floors with the chloride of lime solution.

Apply the sulphur process to every room, separate passage, staircase, &c., in the manner detailed below.

After this all walls and ceilings are to have one thick coat of lime-wash.

Out-buildings which have been occupied by an infected patient, or in which members of the family have been living, to be treated as above ; other detached buildings to be cleansed and have two coats of lime-wash.

Yards.

All refuse, empty cases, &c., to be destroyed by fire upon the premises, or removed in the covered cart. If paved, the pavement to be well cleansed and lime-washed. If not paved, all portions contaminated with filth to be mixed with one-twentieth part of lime and removed in the covered cart and buried ; the removed portions to be replaced with fresh suitable stuff, containing one-twentieth of unslacked lime. All walls to receive two coats of hot lime-wash.

Sinks, Traps, and Drains.

All these to be examined and put into effective working order and flushed. All imperfections requiring skilled workmen to be reported.

Lime-wash.

Slack fresh lime ; when quite soft mix with water to thickness of cream ; add one pound of alum dissolved in hot water to each bucketful.

Chloride of Lime-wash.

Two pounds of chloride of lime and a quarter of a pound of alum to three gallons of water.

Sulphur Process.

Paste coarse brown paper over the fire-place and window-joints.

Place the large tinned-iron basin two-thirds full of water upon the floor in centre of room, stand the tripod over, and upon this the sulphur iron dish—light the sulphur, and paste paper over the outside of the crevices : leave the room thus closed for not less than six hours.

No. 10.

REGULATIONS FOR THE MEDICAL STAFF.

They will attend all cases to which they may be summoned by the Police.

They will visit every patient suffering from small-pox who is treated in his house, at least once a day, and oftener if necessary.

They will visit all quarantined houses every second day, or more frequently when desirable. They will provide medicines for all cases of illness in such houses, and will immediately isolate any person suffering from symptoms of a suspicious or doubtful character.

Other houses in infected neighbourhoods will be visited and reported upon when specially directed.

They will give an order, through the Police Sergeant appointed for the duty, for necessaries required by any person suffering from illness in a quarantined house.

They will immediately report to the Health Officer (through the Police Sergeant appointed for the duty) every new case of variola, in accordance with form A, in order that the premises may be immediately placed in quarantine.

They will report daily to the Health Board upon the sanitary condition of the various districts, mentioning any cases of disease of a suspicious character, any premises the sanitary condition of which is seriously defective, and upon any matter which appears calculated to affect the health of the community.

It will be a part of their duty to vaccinate or re-vaccinate all persons whose consent can be obtained, in families where small-pox exists, in quarantined houses, and in houses situated in infected districts.

It will also be a part of their duty to make suggestions arising from their investigations for the preservation of the public health, and the rapid stamping out of the present epidemic.

Each member of the staff will, upon all occasions after returning from work, remove his outer garments in the sulphur room, leave them there, and disinfect himself.

RULES FOR THE GUIDANCE OF SURGEONS VISITING CASES OF SMALL-POX OR OF A DOUBTFUL CHARACTER.

Take with you two of the boxes provided for the purpose, one marked "clean," and one without a mark. Take also a cake of carbolic soap.

Each box marked "clean" will contain :—

One clean calico ulster.

One clean towel.

Two sheets of new brown paper and string.

The boxes not marked will be empty.

Both will be supplied to you locked, and either of them will open with the same key given you with them.

Stop a short distance from the patient's house and ask some one from an adjoining clean house to take a basin of water to the cab, that you may wash your hands after seeing the patient.

Take the ulster, towel, paper, and string, from the box marked "clean," and lock it again. Put on the ulster and visit the patient.

Upon your return, take off the ulster and fold it up, inside out; then do it up in the brown paper and tie the parcel. Put it into the box which has no mark, and lock it up.

The two boxes are to be given to the laundress *locked*.

She is provided with duplicate keys, and will put the parcel direct into boiling water after cutting the string.

The Eastern and Australian Steamship Co. (Limited),
93, Pitt-st., Sydney, 27 April, 1881.

Sir, We have the honor to inform you that the s.s. "Brisbane" will be due here on Friday morning, and she will steam direct to Spring Cove Quarantine Station.

The Directors of the Company, to whom we telegraphed that a case of small-pox had appeared, have cabled in reply to "spare no reasonable expense, and asking that the timber of the sleeping berths and the bedding be burnt."

As it will be of great importance to have this done at the earliest moment, under the supervision of the Health Officer, we urgently request you will cause tents to be provided on shore for the passengers (about 360), and we promise all possible assistance by the captain and officers in keeping order.

We have, &c.,
BRIGHT BROS. & CO., Agents.

The Health Officer.—J.W., 28/4/81. REPORT OF THE HEALTH OFFICER.—I cannot recommend that the Chinese passengers and others be tented on the shore, for reasons given in my recent report on the subject. The danger to the public health of such a procedure would be so extreme that I earnestly entreat that the

the Hon. the Colonial Treasurer will not grant the request. On the day of the arrival of the "Brisbane" I instructed Mr. Carroll to see that all of the bedding of whatever description was landed whenever it was possible, for the purpose of being washed, aired, and otherwise cleansed. Before the ship is released from quarantine I shall see that all bedding and other articles which it may be necessary to destroy, are burned. It will be inflicting much less hardship on the passengers that they be obliged to sleep on the flooring of the ship than that they be compelled to sleep on the damp earth.—H. G. ALLEYNE, 30/4/81. The Under Secretary, Finance and Trade. P. S.—I have no objection whatever to the request that "*the timber of the sleeping berths be burnt.*"—H.G.A., 30/4/81. The Under Secretary Finance and Trade. MINUTE OF THE COLONIAL TREASURER.—I fully concur in the views and the course suggested by Dr. Alleyne.—J.W., 2/5/81.

No. 2.

Messrs. Bright Bros. & Co. to Dr. Alleyne, Health Officer.

re "Brisbane."The Eastern and Australian Steamship Co. (Limited),
93, Pitt-street, Sydney, 27 April, 1881.

Dear Sir,

Within please find the copy of a letter we have addressed to the Hon. the Colonial Treasurer, and we shall feel greatly obliged if you can see your way to support the request we make, to have the Chinese placed under tents on shore immediately they arrive per "Brisbane," due here on Friday morning.

We are, &c.,

BRIGHT BROS. & CO.,
Agents.

No. 3.

The Under Secretary for Finance and Trade to Messrs. Bright Bros. & Co.

Gentlemen,

The Treasury, New South Wales, Sydney, 2 May, 1881.

I have the honor, by direction of the Colonial Treasurer, to acknowledge receipt of your letter of the 27th ultimo, with reference to the arrival of the s.s. "Brisbane."

I am to say, that the granting of your request for the tenting on shore of the Chinese passengers (numbering about 360) would be attended with such extreme danger to the public health, that the Treasurer cannot entertain it; and, so far as regards the immigrants themselves, there will be far less hardship in sleeping on the flooring of the vessel than in lying on the damp earth.

I am to add that, on the day of the "Brisbane's" arrival, Dr. Alleyne gave instructions that all the bedding, of whatever description, was to be landed at the earliest possible moment, for the purpose of being washed, aired, or otherwise cleansed. There will be no objection to the timber of the sleeping-berths being burnt.

I have, &c.,

G. EAGAR.

No. 4.

Messrs. Gibbs, Bright, & Co., to The Colonial Treasurer.

Sir,

Sydney, 10 May, 1881.

We have the honor to say that, on the arrival of the s.s. "Brisbane," at Cooktown, on 22nd April, the doctor on board reported a case of small-pox, and the vessel was ordered to proceed to this port. She arrived here on 29th April, and was immediately placed in quarantine. The man reported as sick was immediately removed to the hospital ship "Faraway."

From what has since come to our knowledge, we have reason to believe that the man in question had not small-pox at all, but that he suffered from "scabies," which the doctor on board, in error, took to be small-pox.

We have, therefore, respectfully to request that you will appoint three (3) doctors in whom you have confidence, to proceed to the hospital ship "Faraway" and examine the man in question, and to report to you what he had suffered, or may now be suffering from.

In consideration of your complying with our request, we hereby guarantee to cheerfully pay the necessary expenses.

If the man has not been suffering from small-pox, nor from a dangerous and infectious or contagious disease, we feel assured the "Brisbane" would not be detained an hour in quarantine. We therefore most respectfully urge our request upon you, and wait anxiously for a favourable reply.

We have no wish whatever to interfere in the selection of the medical men, but we suggest a few names, viz. :—

Dr. Edwin Chisholm, Abergeldie, Ashfield.

Dr. Ewan.

Dr. Craig Dixon.

Dr. A. A. West.

Dr. M'Laurin.

Dr. Sydney Jones.

We have, &c.,

GIBBS, BRIGHT, & CO., Agents.

MINUTE OF THE COLONIAL TREASURER.—The Cabinet has decided that the Health Officer must go and report on the case of alleged small-pox on board the "Brisbane." This course must be taken to-morrow morning—no delay should take place.—J.W., 12 May, 1881.

No. 5.

Messrs. Gibbs, Bright, & Co. to The Colonial Treasurer.

Sir,

Sydney, 10 May, 1881.

Since having the honor of addressing you this morning respecting the s.s. "Brisbane" now in quarantine, it has come to our knowledge that the father of the youth reported to be ill of small-pox is on board the s.s. "Brisbane," and that he declares the youth to be only twelve years of age; and that when he was eight years of age he had small-pox unmistakably, and bears the marks now. He also declares that the youth is in perfect health.

Mr.

Mr. Robt. Stewart, Chief Engineer of the "Brisbane," a highly respectable man, who has been in the service of the Company since it commenced operations, writes under date May 10 :—"I will not sail out of Sydney with the present doctor, as he is quite unfit to be in the position of doctor here, or even to be accountable for his own actions at the most of times."

We have, &c.,
GIBBS, BRIGHT, & CO.,
Agents.

MINUTE OF THE COLONIAL TREASURER.—Place with other letter on the subject.—J.W.

No. 6.

Messrs. Gibbs, Bright, & Co. to Dr. Alleyne, Health Officer.

The Eastern and Australian Steamship Co. (Limited),
93, Pitt-street, Sydney, 10 May, 1881.

Dear Sir,

We have the honor to enclose a copy of a letter we have just addressed to the Hon. the Colonial Treasurer, praying that three doctors be appointed to proceed to the hospital ship "Faraway," and examine the boy said to have been sick of small-pox; and we hope you will be able to recommend the compliance with our request.

We also enclose a copy of a second letter.

The father of the boy who was said to be ill is on board the "Brisbane," and he declares that the boy is now twelve years of age, and that when he was eight years of age he had small-pox, and bears the marks now.

We have likewise been informed that the boy is perfectly well.

We have, &c.,
GIBBS, BRIGHT, & CO.

No. 7.

The Under Secretary for Finance and Trade to Dr. Alleyne, Health Officer.

Sir,

The Treasury, New South Wales, Sydney, 12 May, 1881.

I have the honor to inform you, by desire of the Colonial Treasurer, that the Government have decided that the Health Officer should report, personally, on the alleged case of small-pox recently transferred from the steamer "Brisbane" to the hospital ship "Faraway."

I am to request, therefore, that you will have the goodness to proceed with Dr. Foucart to the Quarantine Station without delay, and make the needful examination and report accordingly.

I have, &c.,
G. EAGAR.

No. 8.

Messrs. Gibbs, Bright, & Co. to The Colonial Treasurer.

Sir,

93, Pitt-street, Sydney, 14 May, 1881.

We have the honor to enclose for your information a letter, dated — May, from Dr. Leonard, who went down on the 11th inst. to take medical charge of the s.s. "Brisbane," now in quarantine, and we invite your kind attention to it, and especially to the part where he says, "I feel sure from what I have learned from Dr. Spencer that he was mistaken, and should advise you to urge an inquiry. He says the case was doubtful, and he could not say what it was."

At the close of his letter, Dr. Leonard trusts "the vessel will be allowed out at the end of twenty-one days," but as it appears to us she should not have been in quarantine, we hope she will be released without delay.

We have, &c.,
GIBBS, BRIGHT, & CO.,
Agents for the E. and A. S. Co.

[Enclosure.]

John Leonard, Esq., to — Murray, Esq.

Dear Mr. Murray,

I have carefully examined every one on board, and found two cases of syphilis—no fever—no scabies; and cannot see why the vessel ever came into quarantine. I feel sure from what I have learnt from Dr. Spencer that he was mistaken, and should advise you to urge an inquiry. He says the case was doubtful, and he could not say what it was. I have written Dr. Alleyne and given a good account of things, so that I trust he will allow the vessel out at the end of the twenty-one days.

Yours truly,
JOHN LEONARD.

No. 9.

Dr. Alleyne, Health Officer, to The Under Secretary for Finance and Trade.

Sir,

Sydney, 14 May, 1881.

Referring to your letter of 12th instant, and to the directions therein given, I do myself the honor to inform you that I proceeded to the Quarantine Station at an early hour this morning, taking Dr. Foucart with me.

Both Dr. Foucart and myself went on board the "Faraway," and having had the patient lately ill from an attack of small-pox stripped and all of his clothing of whatever kind taken off him, we made a careful examination of the scars now exposed by the recent falling off of scabs. These scars, although small and shallow, are characteristic of small-pox.

The scabbing process appears to have been completed or nearly so, but epithelium is still to be seen at the base of the pits.

There is "scabies" between the fingers, but we could not see any on the trunk, which bears no other marks on it but the scars resulting from a mild attack of modified small-pox.

I have, &c.,
H. G. ALLEYNE.

No. 10.

No. 10.

Dr. Alleyne, Health Officer, to The Health Officer, Cooktown.

My dear Sir,

Sydney, 16 May, 1881.

I shall feel very much obliged to you, to let me know why you refused pratique to the s.s. "Brisbane," on her late voyage from Hongkong to Cooktown?

I remain, &c.,

H. G. ALLEYNE,

Health Officer.

[The text of this note is from recollection, as Dr. Alleyne did not keep a copy.]

No. 11.

Dr. E. Mohs, Health Officer, Cooktown, to Dr. Alleyne, Health Officer.

Dear Sir,

Cooktown, 2 June, 1881.

In reply to yours of May 16, I beg to inform you that, on arrival of the "Brisbane" in this port, the master told me that there was no small-pox on board—only some innocent skin disease. I got the men on the gangway, but the weather being very rough, I could not decide the disease from the small boat. I therefore went on the gangway myself, and on examination I found both patients suffering from small-pox, one being a very mild case, the pustules in the different states of the disease. But both cases were *quite decided* cases of *small-pox*, and I refused therefore pratique. With my best respects,—I remain, &c.,

E. MOHS, M.D., Health Officer.

1881.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

INFECTIOUS DISEASE SUPERVISION BILL.

(MESSAGE No. 39.)

Ordered by the Legislative Assembly to be printed, 7 December, 1881.

AUGUSTUS LOFTUS,
Governor.

Message No. 39.

In accordance with the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with the Bill "To make further provision to prevent the spread of the disease known as Small-pox and for other purposes."

Government House,
Sydney, 7th December, 1881.

1881.

NEW SOUTH WALES.

FISHERIES ACT, 1881.

(REGULATIONS FOR GIVING EFFECT TO PROVISIONS OF.)

Presented to Parliament, pursuant to Act 44 Vic. No. 26, sec. 9.

Colonial Secretary's Office,
Sydney, 30th June, 1881.

His Excellency the Governor, with the advice of the Executive Council, has been pleased, in accordance with section 9 of the "Fisheries Act, 1881," to make the following Regulations for giving effect to the provisions of that Act.

HENRY PARKES.

Conduct of Business—Duties of Officers.

1. The Commissioners will meet for the transaction of business at their office on every Monday and Thursday at 2 o'clock. If either of these days be a public holiday, the meeting will be held on the day following.

2. The President may by circular to be addressed by the Secretary to the residence or office of each Commissioner, convene a special meeting of the Commission on any day and hour mentioned in such circular.

3. The common seal of the Commissioners shall not be affixed to any document, paper, or writing except by direction of the President, or in his absence, of the Chairman, and in the presence of some Commissioner.

4. It shall be the duty of the Secretary to prepare the business paper for each meeting of the Commission, to take and record the minutes of proceedings at the same; to conduct all correspondence, and keep all such books of account, vouchers, reports, documents, plans and charts as the Commissioners may direct or require; to keep the common seal of the Commissioners, and to affix the same to any document or paper if so directed by the President or Chairman; to give such instructions to Inspectors, Assistant Inspectors, and other officers and persons appointed under the Fisheries Act as the Commissioners shall direct, or as the regulations may prescribe; and generally to fulfil zealously and to the best of his ability all duties and obey all directions imposed on or given to him by the Commissioners.

5. Every Inspector of a Division must report in detail to the Commissioners once in every month or oftener if practicable, as to the state of the Fisheries included within his Division so

far as he has been able by personal inspection, or from trustworthy information to ascertain the same. He will be required to report especially as to the condition of the natural oyster beds and deposits of oysters in all waters within his Division; whether the oysters are in marketable condition or otherwise, and what number of bags of oysters have been dredged from such beds during the preceding month, together with the amount of the royalty paid or required to be paid thereon; to receive and transmit to the Commissioners all applications for leases which may be sent to him; to fill up, to the best of his knowledge and judgment, and to transmit without delay to the Secretary, all forms of returns issued to him; to inform the Secretary of all breaches of the Act or the Regulations, whether by acts of commission or default, and to await the instructions of the Commissioners before laying an information against offenders or defaulters; to take particular notice of the movements, and habits of the various kinds of useful fish, whether included in the Schedules of the Act or not; to report to the Secretary the existence of any source of pollution to the waters under his inspection, or of any mortality, disease, or ill-condition of fish, oysters, lobsters, crabs, or prawns; to insure cleanliness and good order in his boat and crew (if any); to keep true and particular accounts of all expenses incurred by him when absent from his post on inspection or other service, and to enter the same in his journal; to keep a diary or journal in which he shall enter every day's work, and any other matter affecting the state of the fisheries in his Division; to visit and report upon all stations within his Division at least once in each quarter, unless otherwise directed by the Commissioners; to report himself at the office of the Commissioners whenever in Sydney on duty; to promote, by every means in his power,

good feeling and concert of action in his relations with all Inspectors, Assistant Inspectors, and other persons concerned with the administration of the Act within his Division, and generally to devote his best energies to the administration of the Act and Regulations, and to the performance of all duties delegated to him by the Commissioners.

6. The duties of an Assistant Inspector shall be the same (*mutatis mutandis*) as those of an Inspector of a Division, except that his reports shall be in duplicate, one to be transmitted to the Inspector of the Division, the other to the Secretary of the Commissioners, and that he will not, unless required by the Commissioners, visit or inspect any fisheries except those included within his district.

7. The duties of an Acting Assistant Inspector shall be to assist the Inspectors so far as may be in his power; to inform them of any breach of, or non-compliance with, the Fisheries Act or the Regulations, and, in the absence of an Inspector, to report any such breach or non-compliance to the Secretary, and receive the instructions of the Commissioners thereupon; to take all legal and other proceedings which he may be instructed to take; to protect the Revenue by all means in his power from being defrauded by non-payment of royalties or otherwise; to report all cases of oysters being found in a vessel in unbranded bags or otherwise in contravention of the Act or Regulations; to inform Inspectors of all matters relating to the fisheries at or near his station which come to his knowledge; and to carry out all instructions received from the Commissioners to the best of his ability.

Marking of Licensed Fishing Boats.

8. The owner or person in charge of a Fishing Boat licensed under section 19 shall paint and keep painted on the inside of the tuck or transom of such boat the christian and surname of such owner, and the words "Licensed Fishing Boat" in legible Roman letters, not less than 3 inches in length.

Fishing Boat Licenses.

9. Fishing Boat Licenses under section 19 shall be in form A hereto. The fee of £1 for such license shall be paid either to the proper officer at the Treasury, Sydney, or to the Police Magistrate, or Clerk of Petty Sessions of the Bench nearest to the fishery wherein such license is intended to be exercised. Owners of boats fishing within the limits of the Home Fisheries (*i.e.* between Port Stephens and St. George's Basin south of Jervis Bay), should, wherever practicable, take out licenses and pay license fees at the Treasury, at Sydney. In the other Divisions the licenses must be taken out and the fees paid at the nearest Court of Petty Sessions. The license must be renewed in like manner annually at the like fee of £1. After the 30th June in any year the fee for the broken portion of the year will be 10s.

Fishermen's Licenses.

10. Fishermen's Licenses under section 20 shall be in form B hereto. The fee of 10s. for such license shall be paid at the like places, and to the like persons, as Fishing Boat License fees. The license must be renewed annually in like manner. After the 30th June in any year the fee for the broken portion of the year will be 5s.

Oyster-dredging licenses.

11. Oyster-dredging licenses under section 36 shall be in the form C hereto. They may be taken out either for the whole year or for any quarter of a year. The fee for the yearly license is £10, for the quarterly £3, to be taken out and paid in each case at the Court of Petty Sessions nearest to the place where the license is to be exercised or (at the applicant's choice) at the Treasury in Sydney. The Police Magistrate or Clerk of Petty Sessions is the proper officer (out of Sydney) to whom application for licenses should be made.

Oyster dealer's licenses.

12. Oyster dealers' licenses under section 42 shall be in the form D hereto, and applications for such licenses must be made either to the Secretary of the Commissioners, or to the Police Magistrate of the nearest Bench. The license fee of £5, or £2 10s. for the broken portion of the year, if the application be made after the 30th June in any year, must be paid to the proper officer at the Treasury in Sydney. The license must be renewed annually by application made in like manner.

As to transmitting and accounting for moneys.

13. The General Instructions to Public Officers issued by the Treasury shall govern all Police Magistrates, Clerks of Petty Sessions, and all other officers collecting or receiving license fees or other moneys under the Act or the Regulations.

Testing length and mesh of nets.

14. Every net for the purpose of testing the length thereof, shall be measured along the cork line, or line on which such net is hung. The size of mesh in every case shall be ascertained by measuring the length on the diagonal, or between knot and knot of opposite corners, the net being first wetted and being tanned, barked, or otherwise prepared for use. In case of dispute or doubt, a half pound weight shall be slung or attached to one knot of a mesh, in order to produce a fair strain or extension, and the space between the knots shall be measured forthwith while the mesh remains extended. If the net to be measured is dry, the part to be measured shall be soaked either in fresh or salt water for not less than ten minutes, and the mesh so soaked shall then be measured.

Marketable prawns.

15. Marketable prawns are prawns not caught during the close season prescribed by section 16 for certain fisheries, and being not less than one inch and a half in length, measured from a point between the eyes to the end of the tail; and all smaller prawns shall be deemed to be unmarketable, as well as all prawns (whatever the size) caught during such close season as aforesaid: Provided that if in any basket of prawns, or other vessel or receptacle in or upon which prawns shall be exhibited for sale, a number of unmarketable prawns not being on the whole more than one-tenth part of the contents of such basket, vessel, or receptacle shall be found so exhibited, no liability under the Act or Regulations shall be incurred by any person in respect of the exhibition of such prawns.

Priority among netters.

16. The right of first shooting and hauling a net on any fishing ground shall belong to the licensed fisherman who first arrived on the ground with his boat and net ready for shooting; and the next turn shall belong to the licensed fisherman who arrived next after such first-mentioned person, and so on in order of arrival. An unlicensed fisherman shall not be entitled to shoot a net on any fishing ground until every licensed fisherman then being on the ground with boat and gear ready for shooting shall have had his turn. This regulation shall not apply to prawn fishermen. Two or more turns may be taken at the same time if the water to be fished permits of double-banking, but no net shall be shot round an inner net within a boat's length of the cork line of such net.

Turns in oyster dredging.

17. Every licensed oyster-dredger shall take his turn and place on the bed according to the time of bespeaking such turn, unless the Inspector chooses to permit several boats to work at the same time on the same bed, in which case the dredgers shall work in obedience to the Inspector's directions. All turns must be bespoken from the Inspector at least twenty-four hours in advance. Every dredger bespeaking a turn shall lose it if he is not on the ground with boat and gear ready punctually at the time appointed by the Inspector.

Inspection of artificial oyster beds and layings.

18. Artificial oyster-beds and layings of any lessee (not being private fisheries, under Part III) may be inspected by any Inspector once in every month, or oftener if directed by the Commissioners, upon such Inspector giving twenty-four hours notice either to the lessee or his manager or agent in charge of the beds of the intention to inspect the same. In the course and for the purposes of such inspection the lessee, his manager, agent and servants shall, at the request of the Inspector, test the state of any bed or laying required by the Inspector to be tested, by dredging or gathering by tongs, hand, or otherwise (according to the nature of the bed) oysters from such bed, under a penalty upon every such person refusing or neglecting so to do of £5.

Dredging on natural oyster-beds.

19. Natural oyster beds shall not be dredged, nor shall any oysters be taken from such beds (except by an Inspector in the performance of his duties) unless the same shall have been notified in the Gazette to be open for dredging or otherwise than in accordance with the directions of the Inspector of the fishery within which such oyster-beds are situated.

Cleaning, &c., of natural beds.

20. The Inspector may, notwithstanding any such notification as aforesaid, close any natural oyster-bed, or portion thereof, for the purpose of cleaning, levelling, or otherwise improving the same, in any case where and for such time as in his opinion such closing shall be necessary; but such closing shall be subject to revocation and modification by the Commissioners. No dredging shall take place on a bed or portion so closed until the same shall be declared by the Inspector or the Commissioners to be again open to dredging.

Inspector may in certain cases stop dredging.

21. Whenever the Inspector shall be of opinion that the further dredging of any bed would be injurious, or that the oysters therein are out of season, and not fit for food, whether by reason of spatting, freshets, or any other cause, he may prohibit the dredging or taking of oysters from such bed for such period, subject to the directions of the Commissioners, as he shall think necessary, and during such period no person shall dredge for or take oysters from any such bed under a penalty not exceeding £20.

None but licensed dredgers to dredge.

22. No person shall be allowed to dredge for or take oysters from any natural oyster-bed who shall not, on demand of the Inspector, produce his oyster-dredging license for inspection.

No turn allowed unless to licensed oyster dredgers.

23. Every person bespeaking a turn for dredging on any such bed must produce his license (if required by the Inspector) before such turn shall be allowed.

Scale of royalties on oysters dredged from natural oyster beds.

24. The sums payable by way of royalty on oysters dredged from natural oyster beds shall for every bag containing or reputed to contain three bushels be payable according to the following scale:—

River, bay, inlet, or other locality where or near to which the natural beds are situated.	Amount of royalty per bag.
	s. d.
The Tweed	2 0
The Richmond	3 0
The Bellinger	3 0
The Nambuccera	2 0
The Brunswick	2 0
Port Macquarie	2 6
The Manning	2 6
The Hunter	4 0
Port Hacking	3 0
Jervis Bay	2 6
Twofold Bay	3 0
Any place other than those above specified...	2 6

The above scale of royalties shall be in force until the Commissioners otherwise appoint, but shall not apply to any rivers or other oyster-bearing waters mentioned in the Third Schedule to the Act until the proclamation closing the same shall be rescinded by a proclamation published in the Gazette, or the term of closure limited by such Proclamation shall have expired.

Royalty, how payable.

25. Royalties according to the prescribed scale for the time being shall be paid to the Inspector or, in his absence, to the Assistant Inspector, on the dredging or taking of oysters from the bed, and before the same are removed or shipped on board any vessel; but in all cases where such oysters are consigned to dealers or persons resident at any port or place within the Colony, such Inspector may give the consignor a shipping permit in the prescribed form, and issue a duplicate thereof for the master of the vessel in which the oysters are intended to be shipped. Such permit shall state the number of bags shipped, the royalty payable thereon, the brands and marks of the bags containing the oysters shipped, and the names of the consignor and consignee. On the vessel's arrival at the port of destination, the master shall deliver the said permit to the proper officer of Customs, and the consignee shall on payment to such officer at the Custom-house or to the proper officer of Customs of the amount stated in the permit to be due as royalty on such oysters, be entitled to take delivery thereof. If the royalty be not paid within twenty-four hours after the vessel is reported to the Customs, the proper Officer of Customs shall take possession of the oysters, and either warehouse the same or cause them to be sold as the Commissioners shall direct. In case of sale the whole proceeds of sale shall be paid into the Treasury, and after the amount due as royalty shall have been deducted therefrom, the balance shall be paid to the consignee or to his authorized agent.

Disposal of culch, &c.

26. All dead shells and culch, whether with or without young oysters attached thereto, dredged up by any person dredging for oysters on natural oyster beds, shall be thrown back by such person in such places as the Inspector shall appoint; and all oysters below marketable size so dredged up shall be returned to the beds by the person who dredged them up, at such places and at such time as the Inspector shall direct.

Marketable oysters.

27. No oysters which can be passed through a metal ring having a clear inside diameter of one inch and three quarters shall be deemed to be marketable oysters; and it shall be unlawful to dredge for, take, consign, or expose for sale any such under-sized oysters, but they may be taken for the purpose of being laid down on another bed or in different water. This regulation shall apply to all lessees of Crown Lands for oyster culture, and to all grantees of Private Fisheries.

If any person exposes for sale in any shop, boat, vehicle, stand, or place, any oysters not marketable within the meaning of this regulation, he shall be liable to a penalty not exceeding £10; but this regulation shall not apply to persons selling oyster-spat or brood to lessees and owners of private fisheries, otherwise than for consumption as food, or to oysters imported into this Colony from another Colony.

Permit to lessees and others to procure spat from Crown Lands.

28. A lessee or an owner of a private fishery desirous of obtaining a supply of spat or young oysters for the purpose of stocking his leased land or private fishery, must apply to the Commissioners for a permit, which will be granted on the terms and conditions therein specified, if the Commissioners are of opinion, after receiving the report of the Inspector, that there is sufficient young oyster stock on the foreshores of the tidal waters, on or near to which is situated the lease or private

fishery for which the supply is required, to allow of its distribution among lessees and owners of private fisheries. Such permit shall describe the area within which, and the time during which, the permission may be exercised. The fee payable for such permit shall be £1, and shall be paid to the Colonial Treasurer or officer authorized by him to receive fees under the Act.

Disposal of seized oysters.

29. Oysters seized under the authority of the Act shall be taken charge of by the seizing officer and delivered to the Inspector or person authorized by the Inspector to take delivery of such oysters. If the Inspector shall be of opinion that the oysters so seized will die or become unmarketable before adjudication, he shall cause them to be sold to the best advantage, either by private contract or by public auction at his discretion. And the proceeds of sale shall be paid into the Treasury to the credit of a special Suspense Account. If the oysters seized shall afterwards be adjudged to be forfeited, such proceeds shall be paid into the General Revenue; if not, they shall be paid to the person entitled to the oysters. But if the person in possession of the oysters at the time of seizure wishes them to be retained in the custody of the seizing officer or Inspector, such officer shall so retain them, but at the risk of such person as aforesaid, until the case has been disposed of, either by adjudication of the Justices, or by order of the Commissioners directing the Inspector to abstain from any or to stay further proceedings. Notwithstanding anything contained in this regulation, the Commissioners may direct the seizing officer or Inspector to dispose of any oysters so seized as aforesaid in such way, and subject to such terms and conditions as they may by writing addressed to such officer appoint.

Branding of oyster-bags, &c.

30. Oysters shipped on board any vessel shall be placed in bags branded with the christian and surname of the consignor and consignee, and with the name of the river or place where such oysters have been dredged or taken. For example:—Oysters dredged by John Smith at the Clarence, and shipped there for Sydney, must be placed in bags branded JOHN SMITH, CLARENCE RIVER (the name and address of the consignor), and ROBERT BROWN, SYDNEY (the name and address of the consignee). All such brands shall be in Roman capital letters not less than three inches in length, and shall be placed on the outside of the bag, at or near the middle thereof.

31. No brand of a consignor's name and address shall be affixed to any bag containing oysters so shipped unless the same has been registered either by the Inspector at the place where such oysters were dredged or taken, or with the Inspector of the Division within which the same were dredged or taken, or at the Office of the Commissioners of Fisheries in Sydney, and unless a certificate of registration under the hand of such Inspector, or a like certificate under the hand of the Secretary to the said Commissioners, shall have been given to the person desiring to register such brand.

32. The fee on the registration of an oyster-bag brand shall be two shillings and sixpence, which must be paid before the issue of the certificate to the registering officer.

Rewards on destruction of cormorants or shags.

33. On the production to an Inspector of any number of heads of cormorants or shags not being less than half a score, such Inspector shall give the person producing the same a receipt therefor, and on production of such receipt at the Treasury in Sydney, the person producing the same shall be entitled to receive a sum equal to sixpence for each head (not being in the whole less than ten) of the larger cormorant or black shag, and equal to fourpence for each head (not being less than as aforesaid) of the smaller cormorant or white bellied shag.

34. The Inspector receiving such heads shall forthwith after recording the same, destroy them by fire in the presence of some Justice of the Peace, Officer of Customs, or of the Department of the Marine Board or Constable, who shall certify the fact of such destruction under his hand on the butt of the receipt book of the Inspector.

As to public oyster reserves.

35. Portions of Crown Lands declared exempt from lease under the 33rd section, and notified in the Gazette as Public Oyster Reserves, shall be divided into two classes:—(1.) Public Oyster Reserves for recreation. (2.) Public Oyster Reserves for oyster breeding purposes.

Reserves to be under control of Inspectors.

36. All public oyster reserves shall, subject to the directions of the Commissioners, be under the control and supervision of the Inspector of the tidal waters wherein such reserves are situated. And such Inspector, or any officer of police or constable, may apprehend and lodge in custody any person found removing oysters from any Recreation Reserve in a bag or other vessel or receptacle other than a bottle, and for his own consumption, or found wantonly destroying any oysters on such reserve, or conducting himself thereon in a disorderly manner, using profane, obscene, or disgusting language, drowning or destroying dogs, goats, cats, or any animal whatsoever, or depositing any dead carcase on, or within one hundred yards of, such reserve; or exposing his person, or annoying the residents or passers by. And any person charged with the commission of any such act as aforesaid shall, on conviction thereof, forfeit and pay a sum not exceeding £10.

Licenses to gather oysters and spat for sale or culture from Breeding Reserves.

37. Annual licenses may be granted on application to the Commissioners or to the Police Magistrate or Clerk of Petty Sessions of the Bench nearest to a public oyster reserve for oyster breeding purposes, to any persons to gather oysters and spat therefrom for sale or culture, whether for laying down on the layings of the applicants or on those of other persons. The fee for every such license shall be five shillings; but each license shall authorize only the person named therein to gather such oyster or spat. If no particular portion of the reserve is specified in the license the licensee can gather throughout the entire reserve; but if a particular portion be specified, the licensee will be restricted to that portion. Notwithstanding the grant of licenses, a public oyster reserve for breeding purposes, or any portion thereof, may, if the Commissioners think fit, be withdrawn from use as a gathering ground for such time as they may appoint. And all licenses shall be deemed to be granted subject to the condition of such withdrawal.

Marking of public oyster reserves.

38. All public oyster reserves, and all portions of Crown Lands exempted from lease under section 33 of the Act, will be marked or defined by stakes, buoys, or such other mode as the Commissioners shall direct; but such marking or definition shall not be deemed to be mandatory in any case where the boundaries of any such reserve have been defined in the Gazette notifying such reserve.

As to recognizances under section 62.

39. The gaoler or person in charge of any gaol, lock-up, or police station, may liberate any person lodged in his custody under the 62nd section of the Act, on such person entering into a recognizance, with or without sureties, as such gaoler or person in charge as aforesaid shall think fit, conditioned that he will appear for examination before a Justice of the Peace at a place and time to be therein specified. And such recognizance shall be of equal obligation on the parties entering into the same, and be liable to the same proceedings for estreatment as if the same had been taken before a Justice of the Peace.

And such gaoler or person in charge as aforesaid shall make the like entries and take the same proceedings (as shall also the Justice before whom the same are tried, and the Clerk of the Peace and all other persons) in respect thereto, as are required or directed by the Towns Police Act, 2 Vic. No. 2, in respect of persons charged with any petty misdemeanour thereunder.

Regulations for the hauling and landing of gar-fish and prawn nets.

40. Every *bond-fide* gar-fish net within the meaning of section 11 of the Act, and every net having a mesh in the centre less than 2 inches, and in the wings less than 3 inches, shall be emptied in the water, and shall not be hauled ashore to a beach or strand.

41. Whenever a net used for catching prawns shall be hauled ashore to a beach, one end of such net shall be opened so as to allow all under-sized fish to escape, and only the flue or centre of the net shall be brought ashore.

Marking oyster-beds and leased areas.

42. The position of natural oyster-beds shall be marked by piles or stakes driven into the bottom at such places and in such manner as to define with reasonable accuracy the length, width, and shape of the beds. Such piles or stakes shall show above the line of high-water-mark at least 6 feet, and shall be painted red, with the words "Oyster-bed, No. " [stating the number of the bed on the particular river or tidal water] painted in white Roman letters at least 3 inches in length, on a black cross bar or batten, near the head of the pile, or stake. Piles must be not less in average diameter than 6 inches. Buoys of iron or wood may be substituted for piles or stakes, if the water be too deep for piles or stakes, or in cases of necessity, or temporarily, at the discretion of the Inspector.

43. All areas leased under section 28 or 32 shall be marked at each corner by white piles of the same dimensions, and showing out of water to the same height as in the case of natural oyster-beds, or by iron or wooden buoys, in each case painted white, at the option of the lessee, if the bottom at any such corner shall be rock, or otherwise incapable of holding a pile, or if the water be deeper than 2 fathoms at low-water. In all cases the words "Oyster lease, No. " (inserting the registered number) shall be painted in black Roman letters at least 3 inches in length, on a white cross-bar or batten near the head of the pile or stake, or across the face of the buoy.

44. Wherever practicable the piles, stakes, or buoys shall be so placed, both on natural oyster-beds and on leased areas, that imaginary lines connecting the boundaries across the river, creek, or inlet shall be at right-angles to the direction of the tide.

45. If two or more contiguous portions leased under section 28 or 32, or both, be held by the same lessee, the outer limits only of the block need to be marked by piles, stakes, or buoys, as directed by these Regulations, unless the Inspector satisfies the Commissioners that all the corners or limits of each such portion ought to be marked.

46. Every lessee who shall neglect to mark and keep marked the limits of his leased area as required by these Regulations shall be liable to a penalty not exceeding £10.

47. Any person who destroys, removes, or injures any pile, stake, or buoy, marking out the position of a natural oyster-bed, or of any leased area, or who defaces or obliterates any letters on any such pile, stake, or buoy, shall be liable to a penalty not exceeding £20 for every such offence.

48. No person engaged in dredging oysters on a natural oyster-bed shall make fast his warp to any pile, stake, or buoy defining such bed under a penalty for each offence not exceeding £2.

Disposal of forfeited Fish.

49. Fish ordered to be forfeited to Her Majesty, pursuant to the provisions of section 14 or 18, may, at the discretion of the Justice or Justices as the case may be, be handed over to the authorities of the Benevolent Asylum, or of any Hospital or Charitable Institution nearest to the place where such forfeited fish are; but, if such fish are unfit for food, such Justice or Justices shall order them to be destroyed.

Disposal of forfeited Oysters.

50. Oysters forfeited to the use of Her Majesty, pursuant to the provisions of section 39 or 46, must be destroyed if unfit for food, but otherwise shall be sold by auction, unless the Commissioners direct that they shall be laid down on a natural oyster-bed or in some tidal water. If sold, the proceeds of sale shall be paid into the General Revenue.

Disposal of forfeited Nets.

51. Fishing nets forfeited to the use of Her Majesty pursuant to the provisions of section 18 shall be sold by auction, and the proceeds of sale shall be paid into the General Revenue; but such sale shall not take place until the expiration of sixty days from the date of the conviction under the said section. The Commissioners however may in any case, if they shall be of opinion that the offence or default leading to the forfeiture was committed or arose through inadvertence or mistake recommend the Governor to restore any forfeited net to its owner.

Penalties on breach of Regulations.

52. Any person who shall commit any act in breach of, or be guilty of any default or non-compliance with the requirements or prohibitions of any of the foregoing regulations, shall in every case where no penalty or forfeiture has been in such case provided be liable to a penalty not exceeding £10.

NEW SOUTH WALES.

FISHERIES ACT, 1881.

(REGULATIONS RELATING TO OYSTER-BED LEASES.)

Presented to Parliament pursuant to Act 44 Vic. No. 26, sec. 27.

Colonial Secretary's Office,
Sydney, 30th June, 1881.

His Excellency the Governor, with the advice of the Executive Council, has been pleased, in accordance with section 27 of the "Fisheries Act, 1881," to make the following Regulations relating to Oyster-bed Leases validated by the same section of the Act.

HENRY PARKES.

1. In these Regulations the term "lease" means a lease or promise of a lease made under the "Oyster-beds Act of 1868," as validated by sec. 27 of the "Fisheries Act, 1881." "Lessee" means the holder of or person entitled for the time-being to any such lease. "Inspector" means any Inspector or Assistant Inspector. "Bed" means any natural oyster-bed as defined by the said "Oyster-beds Act of 1868," or any other laying included within any such lease.

2. The yearly rent payable in respect of all oyster-beds under lease, or promise thereof, shall continue to be paid in advance, as heretofore, to the Colonial Treasurer or officer authorized by him to receive the same. And on default of payment of any such rent for one calendar month after the same shall have become due the interest of the lessee so in default shall be declared forfeited to Her Majesty, and upon notification of such forfeiture in the Gazette such interest shall be forfeited, and the lease or promise thereof shall thereupon terminate accordingly.

3. Every bed shall be open to inspection by an Inspector at any time between sunrise and sunset, and he may test, by dredging or in any other way, the condition of such bed, and of the oysters thereon.

4. No oysters capable of being passed through a metal ring having a diameter of one inch and three quarters (inside measurement) shall be taken from any bed by the lessee or any other person, except for the purpose of being laid down for culture in some other portion of the area under lease.

5. On a report in writing of the Inspector, furnished to the Commissioners, that the oysters in any specified bed, or portion of a lease, are out of condition, whether by reason of spatting or for any other cause, the Commissioners may recommend the

Governor to prohibit the removal of any oysters from such bed. Such prohibition shall be notified in the Gazette, and a notice thereof served on the lessee, or posted to or delivered at his usual place of business, shall be sufficient notice to the lessee that the taking of oysters from such bed is prohibited during the period named therein.

6. The lessee and every person employed by him for the purpose of dredging or taking oysters from a bed under lease shall each be severally liable for any breach of these regulations, or non-compliance therewith, to a penalty not exceeding £20 for every such offence or default.

7. Upon a second or subsequent conviction of the lessee for any offence under these regulations, his lease, as validated by section 27 of the said Act, may on the recommendation of the Commissioners, and in addition to any penalty prescribed by these regulations, be declared by the Governor, with the advice of the Executive Council, to be forfeited to Her Majesty.

8. Upon receipt of a report by an Inspector that any bed has been so stripped of oysters, or otherwise so mismanaged by the lessee during his tenancy that the production of oysters on such bed has, in such Inspector's opinion, been so reduced as to threaten the destruction of the bed, or to render it unfit to be dredged under Royalty, or to be worked, upon the determination of the lease, the Commissioners may call upon the lessee to show cause why they should not recommend the Governor, with the advice aforesaid, to declare the lease of such lessee to be forfeited. And upon the receipt of a recommendation by the Commissioners recommending the forfeiture of any such lease, the Governor may, by notification in the Gazette, declare the same to be, and the same shall thereupon be, forfeited accordingly.

1881.

NEW SOUTH WALES.

FISHERIES ACT, 1881.

(SUPPLEMENTARY REGULATION.)

Presented to Parliament, pursuant to Act 44 Vic. No. 26, sec. 9.

Colonial Secretary's Office,
Sydney, 8th November, 1881.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased, in accordance with section 9 of the "Fisheries Act, 1881," to make the following Supplementary Regulation relating to Marketable Oysters.

HENRY PARKES.

"FISHERIES ACT, 1881."—MARKETABLE OYSTERS.

Regulation supplementary to the 27th Regulation.

53. If any person shall dredge for or take any oysters not marketable within the meaning of the 27th Regulation, except for the purpose of laying such oysters down on another bed or in a different water, or shall consign, ship, send, or deliver, except for any such purpose, any such oysters to any other person, knowing the same to be below the marketable size prescribed by the said Regulation, such first-mentioned person shall be liable to a penalty not exceeding £20.

And all such oysters may be searched for, seized, condemned, and dealt with, pursuant to the provisions of section 67 of the Fisheries Act, 1881.

TRANSFER OF A PUBLICAN'S LICENSE TO JAMES FAY.
(PAPERS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 30 November, 1881.

[Laid upon Table in accordance with promise made in answer to Question 1, Votes No. 80, Friday, 25 November, 1881.]

FRIDAY, 28 OCTOBER, 1881.

To the Worshipful the Justices of the Peace acting in and for the City and District of Sydney.
I, JOHN Woods Flanagan, licensed publican, keeping the house known as the "Mansion House Hotel," in the City of Sydney, being desirous of relinquishing my business as a licensed publican for the above described house, beg respectfully to submit to your worships the name of Mr. James Fay, of George-street West, as my appointee, to whom I am solicitous your worships will be pleased to transfer the rights and privileges of my publican's general license for the residue of the term the same has now to run, in accordance with the Act of Council 25th Victoria No. 14, intituled the "Sale of Liquors Licensing Act of 1862." This application was refused.

Given under my hand, at Sydney, this 13th day of October, 1881.

JOHN WOODS FLANAGAN.

I, James Fay, householder, of George-street West, in the City of Sydney, hereby respectfully request that your worships will be pleased, in compliance with the above request of Mr. John Woods Flanagan, licensed publican, keeping the house known as the "Mansion House Hotel," and situated in George-street, in the City of Sydney, to transfer to me the license he holds for such house. I am a married man, having a wife and seven children, and I have previously held a publican's license.

Given under my hand, at Sydney, the 13th day of October, 1881.

JAMES FAY.

To the Worshipful the Justices acting in and for the District of Sydney, in the Colony of New South Wales.
Gentlemen,

No. 2 Police Station, 24 October, 1881.

I respectfully beg to object to the transfer of the publican's license held by John Woods Flanagan, for the "Mansion House Hotel," George-street South, to James Fay, on the following grounds, viz. :—

- (1st.) That within the last seven months, whilst keeping the "Golden Anchor Hotel," George-street West, that house has been badly conducted, inasmuch as he allowed it to be nightly frequented by reputed gamblers, who were permitted to remain therein until two and three o'clock in the morning.
- (2nd.) That a room in the said house, which should have been furnished as a sleeping room for public accommodation, in accordance with the "Sale of Liquors Licensing Act," and without which its requirements could not have been complied with, was evidently furnished and kept for the use of the persons already referred to, and (as I believe) for gambling purposes.
- (3rd.) That the said room contained a large padded table, a number of chairs, a board to darken the windows, and over the table a bracket with two gas burners and shades.

I have, &c.,

ALEXANDER MACKAY,
Sub-Inspector.

TUESDAY, 15 NOVEMBER, 1881.

To the Worshipful the Justices of the Peace acting in and for the City and District of Sydney.

I, JOHN Woods Flanagan, licensed publican, keeping the house known as the "Mansion House Hotel," and situated in George-street, in the City of Sydney, being desirous of relinquishing my business as a licensed publican for the above described house, beg respectfully to submit to your worships the name of Mr. James Fay, of George-street West, as my appointee, to whom I am solicitous your worships will be pleased to transfer the rights and privileges of my publican's general license for the residue of the term the same has now to run, in accordance with the Act of Council 25th Victoria No. 14, intituled the "Sale of Liquors Licensing Act of 1862."

This application
was granted.

Given under my hand, at Sydney, this 28th day of October, 1881.

JOHN WOODS FLANAGAN.

I, James Fay, householder, of George-street West, in the City of Sydney, hereby respectfully request that your worships will be pleased, in compliance with the above request of Mr. John Woods Flanagan, licensed publican, keeping the house known as the "Mansion House Hotel," and situated in George-street, in the City of Sydney, to transfer to me the license he holds for such house. I am a married man, having a wife and seven children, and I have previously held a publican's license.

Given under my hand, at Sydney, the 28th day of October, 1881.

JAMES FAY.

To the Worshipful the Justices acting in and for the District of Sydney, in the Colony of New South Wales,
Gentlemen,

No. 2 Police Station, Sydney, 8 November, 1881.

I respectfully beg to object to the transfer of the publican's license held by John Woods Flanagan, for the "Mansion House Hotel," George-street South, to James Fay, on the following grounds, viz. :—

- (1st.) That within the last seven months, whilst keeping the "Golden Anchor Hotel," George-street West, that house has been badly conducted, inasmuch as he allowed it to be nightly frequented by reputed gamblers, who were permitted to remain there until two and three o'clock in the morning.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING PUBLIC-HOUSES.

(PETITION FROM THE PRESIDENT OF THE CHURCH OF ENGLAND SYNOD IN THE DIOCESE OF SYDNEY.)

Received by the Legislative Assembly, 13 July, 1881.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, President of the Church of England Synod in the Diocese of Sydney,—

RESPECTFULLY SHOWETH :—

That in a recent session of the aforesaid Synod your Petitioner was authorised by and on behalf of such Synod to petition your Honorable House to make such amendments in the Law which at present exists with regard to licensing Public-houses for the sale of intoxicating liquors, as experience has proved to be urgently needed.

That your Petitioner firmly believes that the drinking habits of the people are largely affected by the facilities afforded for procuring intoxicating liquors, and that an increase of those facilities produces in the community an increase of intemperance, and with this an increase of immorality, pauperism, disease and crime, entailing a woful waste of wealth, labour, and life, with a largely increased expenditure by the State in the support of asylums, hospitals, gaols, and police.

That your Petitioner submits for the consideration of your Honorable House that while the Church of England and other Temperance Societies are laudably striving to correct these evils and to develop habits of thrift, industry, and sobriety, in the people of the Colony, their labours are greatly impeded and frustrated by the attractions and influence of the numerous public-houses now licensed by the State.

That for these and other reasons your Petitioner as representing the Synod before mentioned earnestly prays your Honorable House taking the premises into consideration, to adopt such measures as shall tend to ameliorate the evils which are occasioned by the present law, and largely to diminish the traffic in intoxicating liquors.

And your Petitioner, as in duty bound, will ever pray.

Signed, on behalf of the Synod,
WILLIAM M. COWPER,
President.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL.
(MESSAGE No. 6.)

Ordered by the Legislative Assembly to be printed, 14 July, 1881.

AUGUSTUS LOFTUS,
Governor.

Message No. 6.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to re-model the law relating to Publicans and other persons engaged in the sale of liquor.

*Government House,
Sydney, 13 July, 1881.*

1881.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL.

(PETITION AGAINST—PRESIDENT AND VICE-PRESIDENTS OF THE CITY AND PROVINCIAL LICENSED
VICTUALLERS' ASSOCIATION.)

Received by the Legislative Assembly, 20 July, 1881.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the members of the City and Provincial Licensed Victuallers' Association,—

SHOWETH:—

That your Petitioners have read the Bill recently introduced into Parliament to remodel the laws relating to publicans and other persons engaged in the sale of liquors.

That your Petitioners have held a meeting of their members to consider the provisions of the said Bill, and at such meeting it was resolved that a Petition should be presented to Parliament protesting against the Bill becoming law.

That your Petitioners, therefore, humbly protest against the following clauses in the said Bill, viz. :—
Part I.—Clause 6, sub-clause 1: Your Petitioners would humbly suggest that, instead of the proposed Board, a Judge be appointed, similar to the practice in England and Ireland; or, if a Board be insisted upon, and as referred to in sub-clause 4, that the restriction might with advantage be enlarged with justice to the other side, so as to include professed teetotallers or persons beneficially interested in temperance hotels and coffee palaces. Clause 10, sub-clause 1: Your Petitioners humbly object to old-established and notedly respectable hotels being subject to this humiliating and iniquitous proceeding, and object to sub-clause 4 as being tyrannical as regards retail stores. Clause 19: Your Petitioners humbly protest against the power proposed to be given to inspectors to enter any part of any licensed premises, and suggest that the power to enter and search should be limited to the bar where the liquors are sold, or to the cellars where the same are kept.

Your Petitioners also protest against the powers given to any inspectors to take a list of their stock, and suggest that, owing to the large interests involved and the revenue derived from the duties on spirits, the Government should appoint an analytical chemist to analyse all liquors before they leave the bonded warehouse or wine and spirit merchants' stores, and issue a voucher for same. Clause 21: Your Petitioners humbly protest against this clause as being most arbitrary and despotic. Part II.—Clause 22, sub-clause 5: Your Petitioners humbly object to this sub-clause. A proviso should be inserted to prohibit them from serving and selling to civilians; and in sub-clause 6 they humbly suggest that the word "guests," so far as it applies to purchasing drink and paying for it at clubs, should be cancelled. Clause 24: Your Petitioners humbly suggest that the hours for selling be from 4 o'clock in the morning to 12 o'clock at night. Clause 26: Your Petitioners humbly suggest that the license fee for selling Colonial wine be increased to £10. Clause 27: Your Petitioners humbly protest against the bottle license proposed by this clause, and suggest that no wine and spirit merchant be allowed to sell less than four gallons at one time of the same spirit or liquors to other than licensed victuallers. Clause 29: Your Petitioners humbly object to this clause requiring notice of intending applicants for licenses having to post notices of their intention on their doors and inserting the same in newspapers. And your Petitioners would also humbly suggest that all board and lodging houses should be licensed, and the keepers be made to contribute towards the revenue. Clause 31, sub-clauses 1 to 6: Your Petitioners humbly protest against these clauses as being antagonistic to the interest of the licensed victuallers, and tending to decrease the number of first-class hotels and to the increase of low public-houses or drinking shops. Clause 36, sub-clause 1: Your Petitioners humbly object to this sub-clause being inserted. Clause 40: Your Petitioners humbly protest against sub-clauses *a*, *b*, and *c*, and suggest that £25 per annum ought to be the standard fee for a license, as in the neighbouring colonies, and that sub-clause 4 be struck out altogether. Clause 44: Your Petitioners humbly protest against the power given to the owners of premises being allowed to object to the removal of a license, as great hardship might be cast upon a publican whose lease of premises might expire, and having paid for his license, have to forfeit it, unless he could get the consent of his landlord to remove it. Clause 46: Your Petitioners humbly protest against this clause, as a loan may be made by a publican to a relative, another publican, which would give him an interest in the house and license, or a publican may be the holder of a license for one hotel and be the owner of another, and so would have a beneficial interest in each, which would make him liable to a penalty.

penalty. Clause 47: Your Petitioners humbly protest against this clause, requiring publicans in the City of Sydney to keep a light burning all night, and humbly suggest that a proviso should be introduced into the clause exempting any publican within the City from keeping a light burning after the hour of closing his hotel. Clause 48: Your Petitioners humbly suggest that, upon any conviction under this section, an informer should get half the fine. Your Petitioners humbly suggest that a clause be inserted after clause 56, empowering publicans to sell goods distrained for accommodation supplied, and enable them to sell same by public auction after the lapse of three months from the accruing of the debt. Clause 63: Your Petitioners humbly suggest that the hours for selling for each of the business days of the week be from 4 o'clock in the morning to 12 o'clock at night, and that the hours for selling on Sunday should be the same as those mentioned for Good Friday and Christmas Day, and that liquors be allowed to be consumed on the premises. Clause 64: Your Petitioners humbly suggest that the distance for travellers be reduced to two miles, and that it should not be compellable to prove a customer as a *bona-fide* traveller by the person selling. Part III.—Clause 70: Your Petitioners humbly suggest that nothing less than four gallons of one and the same spirit or liquor be supplied to others than publicans. Clause 72: Your Petitioners humbly suggest that a fee of £10 per annum be paid for billiard and £5 for bagatelle tables, the same not being attached to a licensed house and used for gain. Part IV.—Clause 76: Your Petitioners also humbly protest against this clause, as being most arbitrary and despotic; and they wish to draw the attention of the Legislature to this fact: that if a publican shall be convicted of the most trifling offences under the Act, on three occasions, for a period of three years previously, he becomes disqualified from holding a license for a period of three years, and this disqualification he would be subject to, if convicted three times, for not having a light over his door. Clause 87: Your Petitioners humbly suggest that the police acting under this clause should wear some badge or other mark of distinction. Clause 89: Your Petitioners humbly suggest that this clause be expunged, as they think they ought not to be made the subject of any proceeding under this clause any more than other tradesmen. - Clause 90: Your Petitioners humbly suggest that the words "to remain in or knowingly harbouring" should be inserted in this clause. Clause 95: Your Petitioners humbly protest against the amount of five pounds being a bar to appeals.

Your Petitioners therefore humbly pray that your Honorable House will take their case and the several matters referred to in this petition into your favourable consideration and afford them such relief and assistance as to your Honorable House shall seem fit.

And your Petitioners, as in duty bound, will ever pray, &c.

For and on behalf of the City and Provincial Licensed Victuallers' Association.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL (NO. 2.)

PETITION AGAINST—PRESIDENT AND VICE-PRESIDENTS OF THE CITY AND PROVINCIAL LICENSED VICTUALLERS' ASSOCIATION.

Received by the Legislative Assembly, 20 September, 1881.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned members of the City and Provincial Licensed Victuallers' Association,—

SHOWETH :—

That your Petitioners have read the Bill recently introduced into Parliament to remodel the laws relating to publicans and other persons engaged in the sale of liquors.

That your Petitioners have held a meeting of their members to consider the provisions of the said Bill, and at such meeting it was resolved that a Petition should be presented to Parliament protesting against the Bill becoming law.

That your Petitioners, therefore, humbly protest against the following clauses in the said Bill, viz. :—
Part I.—Clause 6, sub-clauses 1 and 4 : Your Petitioners would humbly suggest that, instead of the proposed Board, a Judge be appointed ; or, if a Board be insisted upon, and as referred to in sub-clause 4, that the restriction might with advantage be enlarged with justice to the other side, so as to include professed teetotallers or persons beneficially interested in temperance hotels and coffee palaces. Clause 10, sub-clauses 1 and 4 : Your Petitioners humbly object to old-established and notably respectable hotels being subject to this humiliating and iniquitous proceeding, and also to sub-clause 4 as being tyrannical as regards retail stores. Clause 19 : Your Petitioners humbly protest against the power proposed to be given to inspectors to enter any part of any licensed premises, and suggest that the power to enter and search should be limited to the bar where the liquors are sold, or to the cellars where the same are kept.

We also protest against the powers given to any inspector to take a list of our stock, and suggest that, owing to the large interests involved and the revenue derived from the duties on spirits, the Government should appoint an analytical chemist to analyse all liquors before they leave the bonded warehouse or wine and spirit merchants' stores, and issue a voucher for same. Clause 21 : Your Petitioners humbly protest against this clause as being most arbitrary and despotic. Part II.—Clause 22, sub-clauses 5 and 6 : Your Petitioners humbly object to sub-clause 5. A proviso should be inserted to prohibit them from serving and selling to civilians ; and in sub-clause 6 we humbly suggest that the word "guests," so far as it applies to purchasing drink and paying for it at clubs, should be cancelled. Clause 24 : Your Petitioners humbly suggest that the hours for selling be from 4 o'clock in the morning to 12 o'clock at night. Clause 26 : Your Petitioners humbly suggest that the license fee for selling Colonial wine be increased to £10. Clause 27 : Your Petitioners humbly protest against the bottle license proposed by this clause, and suggest that no wine and spirit merchant be allowed to sell less than four gallons at one time of the same spirit or liquor to other than licensed victuallers. Clause 29 : Your Petitioners humbly object to this clause, requiring notice of intending applicants for licenses having to post notices of their intention on their doors, and inserting the same in newspapers. And your Petitioners would also humbly suggest that all board and lodging houses should be licensed, and the keepers be made to contribute to the revenue. Clause 31, sub-clauses 1 to 6 : Your Petitioners humbly protest against these clauses as being antagonistic to the interests of the licensed victuallers, and tending to decrease the number of first-class hotels and to the increase of low public-houses or drinking shops. Clause 34 : Your Petitioners humbly protest against the introduction of local option in any form. Clause 36, sub-clause 1 : Your Petitioners humbly object to this sub-clause being inserted. Clause 40, sub-clauses 1 (*a, b, c*) and 4 : Your Petitioners humbly protest against sub-clause 1 (*a, b, c*), and suggest that £25 per annum ought to be the standard fee for a license, as in the neighbouring colonies, and that sub-clause 4 be struck out altogether. Clause 44 : Your Petitioners humbly protest against the power given to the owners of premises being allowed to object to the removal of license, as great hardship might

be cast upon a publican whose lease of premises might expire, and having paid for his license, have to forfeit it, unless he could get the consent of his landlord to remove it. Clause 46: Your Petitioners humbly protest against this clause, as a loan may be made by a publican to a relative, another publican, which would give him an interest in the house and license, or a publican may be the holder of a license for one hotel and be the owner of another, and so would have a beneficial interest in each, which would make him liable to a penalty. Clause 47: Your Petitioners humbly protest against this clause, requiring publicans in the City of Sydney to keep a light burning all night, and humbly suggest that a proviso be introduced into the clause exempting any publican within the city from keeping a light burning after the hour of closing his hotel. Clause 48: Your Petitioners humbly suggest that, upon any conviction under this section, an informer should get half the fine. Your Petitioners humbly suggest that a clause be inserted, after clause 56, empowering publicans to sell goods distrained for accommodation supplied, and enable them to sell same by public auction after the lapse of three months, and duly advertising. Clause 63: Your Petitioners humbly suggest that the hours for selling for each of the business days of the week be from 4 o'clock in the morning to 12 o'clock at night, and that the hours for selling on Sunday should be the same as those mentioned for Good Friday and Christmas Day, similar to the hours for selling in England, where it was found to work well; and that liquors be allowed to be consumed on the premises. Clause 64: Your Petitioners humbly suggest that the distance for travellers be reduced to two miles, and that it should not be compellable to prove a customer a *bona fide* traveller by the person selling, as the holder of the license would be at the mercy of any designing stranger. Part III.—Clause 70: Your Petitioners humbly suggest that nothing less than four gallons of one and the same spirit or liquor be supplied to others than publicans. Part IV.—Clause 73: Your Petitioners also humbly protest against this clause, as being most arbitrary and despotic; and we wish to draw the attention of the Legislature to this fact: that if a publican shall be convicted of the most trifling offences under the Act, on three occasions, for a period of three years previously, he becomes disqualified from holding a license for a period of three years, and this disqualification he would be subject to, if convicted three times, for not having a light over his door. Clause 84: Your Petitioners humbly suggest that the police acting under this clause should wear some badge or other mark of distinction. Clause 86: Your Petitioners humbly suggest that this clause be expunged, as they think they ought not to be made the subject of any proceeding under this clause any more than other tradesmen. Clause 87: Your Petitioners humbly suggest that the words "to remain in or knowingly harbouring" should be inserted in this clause. Clause 92: Your Petitioners humbly protest against the amount of five pounds being a bar to appeals.

Your Petitioners therefore humbly pray that your Honorable House will take their case and the several matters referred to in this Petition into your favourable consideration, and afford them such relief and assistance as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray, &c.

For and on behalf of the City and Provincial Licensed Victuallers' Association.

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM THE REV. WILLIAM M. COWPER, ACTING PRESIDENT OF THE COMMITTEE AND OFFICERS OF THE NEW SOUTH WALES CHURCH OF ENGLAND TEMPERANCE SOCIETY.)

Received by the Legislative Assembly, 2 August, 1881.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Committee and Officers of the New South Wales Church of England Temperance Society,—

RESPECTFULLY SHOWETH:—

1. That their Society has been established with a view to the removal and prevention of the manifold evils arising from the intemperate habits which are so widely prevalent.

2. That they have learnt with satisfaction that a Bill has been introduced into your Honorable House with a view to the re-modelling of the law relating to persons engaged in the sale of liquor.

3. That your Petitioners are of opinion that the provisions of the said Act require to be amended in certain particulars, viz:—

(a) With regard to the principle of local option, so as to apply it to the granting of renewals as well as to the issue of new licenses.

(b) With regard to the voting, under the local option clause, which, in the opinion of your Petitioners, should be decided by a two-thirds majority of all the votes taken, and not by a two-thirds majority of possible votes.

(c) With regard to the 27th clause, in which that part relating to bottle licenses should be struck out, your Petitioners are persuaded that its retention will lead to an increased consumption of liquor in the homes of the people to the injury of their moral and social welfare.

(d) With regard, further, to the granting of licenses at ten pounds per annum to roadside inns, which your Petitioners believe would be most prejudicial.

(e) And, with regard to the sale of liquor upon the Lord's Day, your Petitioners are decidedly of opinion that all public-houses should be closed throughout the Colony upon the Sabbath-day.

Your Petitioners therefore pray your Honorable House to take these premises into your careful consideration, and by the adoption of these amendments to render the proposed measure more satisfactory and beneficial to the community.

And your Petitioners will, as in duty bound, ever pray.

Signed on behalf of the Committee and officers of the Church of England Temperance Society,

WILLIAM M. COWPER,
Acting President.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM RESIDENTS OF PARRAMATTA AND SURROUNDING DISTRICTS.)

Received by the Legislative Assembly, 10 August, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned,—

HUMBLY SHOWETH:—

That your Petitioners desire to express their satisfaction at the Government of the day introducing a Bill to amend the laws relating to the traffic in intoxicating liquors, in which the principle of local option is fully acknowledged as a correct one.

Your Petitioners would, however, call the attention of honorable Members to certain defects, which if permitted to remain must of necessity much impair, if not entirely destroy, the true objects as well as the usefulness of the measure.

1st. Your Petitioners consider that clause 63 should be so amended as to provide for the entire closing of all licensed public-houses during the whole of the Sabbath day, and that publicans should in the matter be placed in the same position as other tradesmen.

2nd. That clause 27 relating to bottle licenses be omitted, as the experience of the United Kingdom and other lands where the system has been tried proves it to be highly injurious to the morals of the people.

3rd. That the clauses relating to local option require amending, so as to carry out a principle admitted by the Bill as correct. To do this fairly, your Petitioners submit that a majority of the votes cast should, under a liberal Constitution like our own, be sufficient; and that the asking for a two-third majority of all possible votes is equal to the demanding of an impossibility.

4th. That the principle of local option be applied to removals and renewals as well as to new licenses.

5th. That the granting of £10 licenses to roadside inns will prove a grave mistake, and call into existence a number of houses of inferior character on the sides of the public roads, whose tendency will be to lower the morals of the people, increase crime, and cause a wide-spread demand for additional police protection.

Finally, your Petitioners would submit to the honorable Members the desirability of introducing a clause in the proposed measure which would have the effect of closing all public-houses on the day of election in each particular district.

We humbly pray that you will give the foregoing premises your earnest and careful consideration, with a view to make the proposed measure not only acceptable to your Petitioners but also prove a blessing to the community.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 219 signatures.]

Similar Petitions were received,—

On 10th August, from residents of the District of Monaro, in Public Meeting assembled in the School of Arts, Cooma; 2 signatures.

On 11th August, from residents of the District of Maclean, Lower-Clarence, in Public Meeting assembled in the Wesleyan Church; 2 signatures.

On 11th August, from residents of West Sydney, in Public Meeting assembled in the Temperance Hall, Pitt-street; 1 signature.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM CITIZENS OF NEWCASTLE, IN PUBLIC MEETING ASSEMBLED.)

Received by the Legislative Assembly, 16 August, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Citizens of Newcastle, in public meeting assembled, in the Victoria Theatre, Newcastle, on the 10th day of August, 1881,—

HUMBLY SHOWETH:—

That your Petitioners desire to express their satisfaction at the Government of the day introducing a Bill to amend the laws relating to the traffic in intoxicating liquors, in which the principle of local option is fully acknowledged as a correct one.

Your Petitioners would however call the attention of the honorable Members to certain defects, which, if permitted to remain, must of necessity much impair, if not entirely destroy, the true objects as well as the usefulness of the measure.

1st. Your Petitioners consider that clause 63 should be so amended as to provide for the entire closing of all licensed public-houses during the whole of the Sabbath Day, and that publicans should in the matter be placed in the same position as other tradesmen.

2nd. That clause 27, relating to bottle-licenses, be omitted, as the experience of the United Kingdom and other lands, where the system has been tried, proves it to be highly injurious to the morals of the people.

3rd. That the clauses relating to local option require amending so as to carry out a principle admitted by the Bill as correct. To do this fairly, your Petitioners submit that a majority of the votes cast should, under a liberal Constitution like our own, be sufficient, and that the asking of a two-third majority of all possible votes is equal to demanding an impossibility.

4th. That the principle of local option be applied to removals and renewals as well as to new licenses.

5th. That the granting of £10 licenses to road-side Inns will prove a great mistake, and call into existence a number of houses of inferior character on the sides of the public roads, whose tendency will be to lower the morals of the people, increase crime, and cause a wide-spread demand for additional police protection.

Finally, your Petitioners would submit to the honorable Members the desirability of introducing a clause in the proposed measure which would have the effect of closing all public-houses on the day of election in each particular district.

We humbly pray that you will give the foregoing premises your earnest and careful consideration, with a view to make the proposed measure not only acceptable to your Petitioners but also prove a blessing to the community.

And your Petitioners, as in duty bound, will ever pray.

Signed by order of and on behalf of the meeting,—

JOSEPH CREER,
Chairman.

THOS. H. SMITH,
Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM RESIDENTS OF THE DISTRICT OF CHATSWORTH, IN PUBLIC MEETING ASSEMBLED.)

Received by the Legislative Assembly, 23 August, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of the District of Chatsworth, in Public Meeting assembled in the Temperance Hall, on the 1st day of August, 1881,—

HUMBLY SHOWETH :—

That your Petitioners hail with satisfaction the introduction, by the Government, of a Bill to amend the law relating to the use and sale of intoxicating liquors, and are pleased to observe that the fundamental principle of local option, although in an imperfect and objectionable form, is embodied in the proposed measure. Being fully impressed with the necessity of a radical reform in the existing liquor traffic, and that the indiscriminate sale of intoxicating drink is fraught with great danger and absolute injury to a large proportion of the community, we humbly submit the following amendments in the proposed measure for your consideration, viz. :—

1. That the principle of local option shall apply to the granting of renewals as well as to the issue of new licenses.
2. That the voting under the local option clause shall be decided by a majority of all votes cast, in contradistinction to the proposal of a two-thirds majority of possible votes.
3. That clause No. 27 relating to bottle licenses be struck out, as its introduction would lead to the consumption of alcohol in the homes of the people, and thus tend to most undesirable consequences.
4. That the proposal to grant license to roadside inns at £10 per annum would have a prejudicial effect in multiplying such houses to the injury of their respective neighbourhoods.
5. That clause 63 be amended, so that all public-houses shall be closed during the whole of the Sabbath day throughout the colony.

We humbly pray that you will give the foregoing premises your earnest and careful consideration with a view to make the proposed measure not only acceptable to your Petitioners but also prove a blessing to the community.

And your Petitioners, as in duty bound, will ever pray.

Signed by order of, and in behalf of, the meeting,

G. J. GREY, Chairman.
GEO. JONES, Secretary.

Similar Petitions were received :—

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM RESIDENTS OF THE DISTRICT OF TAMWORTH.)

Received by the Legislative Assembly, 30 August, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Residents of the District of Tamworth,—

HUMBLY SHOWETH :—

That your Petitioners hail with satisfaction the introduction by the Government of a Bill to amend the law relating to the use and sale of intoxicating liquors, and are pleased to observe that the fundamental principle of local option, although in an imperfect and objectionable form, is embodied in the proposed measure. Being fully impressed with the necessity of a radical reform in the existing liquor traffic, and that the indiscriminate sale of intoxicating drinks is fraught with great danger and absolute injury to a large proportion of the community, we humbly submit the following amendments for your consideration, viz. :—

1. That the principle of local option shall apply to the granting of renewals as well as to the issue of new licenses.
2. That voting under the local option clause shall be decided by a majority of all votes cast, in contra-distinction to the proposal of a two-thirds majority of possible votes.
3. That clause No. 27, relating to bottle licenses, be struck out, as its introduction would lead to the consumption of alcohol in the homes of the people, and thus tend to most undesirable consequences.
4. That the proposal to grant licenses to roadside inns at a lower fee than that now charged would have a prejudicial effect in multiplying such houses, to the injury of their respective neighbourhoods, and would tend to lower the morals of the people and increase crime.
5. That clause 63 be amended, so that all public-houses shall be closed during the whole of the Sabbath day throughout the Colony.

We humbly pray that you will give the foregoing premises your earnest and careful consideration, with a view to make the proposed measure not only acceptable to your Petitioners but also prove a blessing to the community.

And your Petitioners, as in duty bound, will ever pray.

EDWIN HUNT,
Mayor of Tamworth, in the Chair.
JOHN DENNING.

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM MATRONS AND SPINSTERS IN THE DISTRICT OF BOLWARRA, MAITLAND.)

Received by the Legislative Assembly, 6 September, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Matrons and Spinsters resident in the District of Bolwarra, East Maitland,—

HUMBLY SHOWETH :—

That your Petitioners rejoice in the knowledge of the fact that a measure has been introduced into your Honorable House for placing some necessary restrictions on the almost indiscriminate sale of intoxicating drinks, and which proposes many wise and necessary reforms on the existing traffic. Nevertheless, your Petitioners deem any measure there enacted incomplete that fails to provide for the closing of all public-houses on the Sabbath Day.

We therefore humbly pray that you will cause provision to be made in the new Licensing Bill, whereby all public-houses shall be closed during the whole of the Sabbath Day throughout the Colony.

We make the foregoing prayer in view of the drunkenness and dissipation that obtains on the day named, an evidence of which may be had on reference to the Police Court records, and that no necessity can exist commensurate with the evils arising from Sunday trading in alcohol.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 94 signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL (NO. 2.)

(PETITION FROM RESIDENTS OF THE MUNICIPAL DISTRICT OF TENTERFIELD.)

Received by the Legislative Assembly, 27 September, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales.

The Petition of the undersigned in and around the neighbourhood of the Municipal District of Tenterfield,—

HUMBLY SHOWETH:—

That the Bill "To Remodel the Law relating to Publicans and other Persons engaged in the Sale of Liquor" now before Parliament, may be passed, but with the following amendments:—

- 1st. That the clause relating to bottle licenses be expunged, as promotive of intemperance in the homes of the people. The effect of grocers and others supplying in this way has proved very injurious in Great Britain.
- 2nd. That the holders of Colonial wine licenses should only be allowed to sell wine between the hours of 8 a.m. and 10 p.m., and that such houses be under the surveillance of the police as licensed houses.
- 3rd. That the clause relating to local option be amended, and that the majority should be in the proportion of five (5) to four (4) of the votes recorded.
- 4th. That in clause 50 the words "sixteen years" should be substituted for "twelve years."
- 5th. That provision be made for licensing rooms used for dancing, and placing such places under the surveillance of the police as licensed houses.

Your Petitioners humbly pray that these matters may be taken into consideration by your Honorable House when the said Bill shall come before it.

And your Petitioners will ever pray, &c.

Dated this 31st day of August, 1881.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL (No. 2).

(PETITION FROM WILLIAM BROOKES, J.P., NORFOLK-STREET, NEWTOWN.)

Received by the Legislative Assembly, 28 September, 1881.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

That while your Petitioner highly approves the principle of local option embodied in the new Licensing Bill now before Parliament, he is at the same time thoroughly convinced that the machinery provided therein by which it is proposed to carry out local option is not calculated to effect its purpose comprehensively or in its integrity.

In the thirty-fourth (34) clause of that Bill a vicious principle is admitted that, in the opinion of your Petitioner, finds no parallel in the legislative history of any other country, whether under constitutional or any other form of government.

Your Petitioner refers more especially to that unique proposal in the said clause for the admission of all unrecorded "possible votes," by which the free votes of free men duly recorded may and will be stultified by the intervention of a class of favoured dummies, who are to be accounted as being against local option, and to be reckoned without the supervision of a scrutineer or any other precaution calculated to prevent every species of possible fraud and corruption in the manipulation and manufacture of dummy voters. Nor can your Petitioner, after mature deliberation, perceive any good and sufficient reason why the question here in issue should not be decided by simple majority—the rule observed in every other Department of State—save and except in regard to any amendment that may be proposed in the Constitution Act. Why, therefore, a pursuit so exceptional in character and in consequences, such as the liquor traffic is both by law and public opinion admitted to be, should have accorded to it an exemplary majority for its protection, and be thus raised by statutory enactment to rank in dignity and importance with the Constitution Act itself, is an anomaly which surpasseth the understanding of your Petitioner, while it also creates an invidious distinction at variance with every other (save one) institution known to the Colony.

Even in its modified form, the abnormal majority of eleven-twentieths in favour of the liquor traffic is none the less a piece of class legislation, aggravated by the introduction of an heretofore unheard of proposition to count the anti-optionists by their poles with cumulative privileges added, instead of by their recorded votes taken in the ordinary manner, which is a dangerous innovation of our electoral system, quite outside all constitutional usage, as well as beyond all legislative precedent, and one that must inevitably render abortive all legitimate efforts to secure local option under the disabilities created by this clause of the Bill.

It is, moreover, admitted that the Metropolitan City of Sydney has been chosen in which the crucial experiment is to be tried. Your Petitioner may, therefore, be permitted to point out to your Honorable House the deplorable state of its constituency, from which under present circumstances it will be impossible to elicit anything like an expression of public opinion on the merits of the measure to be submitted.

By the operation of certain provisions contained in the Corporation Act now in force in Sydney, nearly two-thirds of its ratepayers are disfranchised, while the remainder may be said to consist chiefly of publicans and property-owners the whole of whom are cumulative voters, so that the decision whatever it may be will not numerically represent persons but pluralists.

Out of 19,425 persons on the books of the Corporation liable as ratepayers 12,131 are disfranchised, leaving only 7,294 on the electoral roll as *bona fide* voters for the year 1881. Of this number your Petitioner is informed and verily believes that upwards of 600 are publicans, each of whom from the higher rate of rental obtained on this class of property will be qualified to give the maximum cumulative vote, which in the aggregate will amount to 2,400 or 2,600 votes out of 7,294 on the roll. It is fairly presumable, moreover, that a very large proportion of the residue on the roll are also cumulative voters, chiefly extensive owners of both public-house and other property, and it is alleged that one wine and spirit merchant alone is the possessor of 100 houses within the city precincts; and if this interested class of persons make common cause with the publicans, there will not remain even the remotest chance for the success of local option.

To counteract this monopolizing tendency, and with a view to impart greater efficiency to the working of the measure, your Petitioner may be allowed to suggest that the basis of the franchise should be extended so as to embrace within it tens of thousands of the people who are resident within the boundaries of Municipalities, and who to all intents and purposes are as deeply interested in the solution of this problem as are those unpatriotic ratepayers who have disfranchised themselves, and to whom it is proposed to confine suffrage. Your Petitioner is, therefore, of opinion that the voters on the Parliamentary Roll who may be for the time being resident within the limits of any Municipal Ward in every Municipality should be entitled to vote on this question. By these means the spirit and principle of local option will be as strictly maintained as by those proposed in the Bill, since none only but those on the Parliamentary Roll resident in each Ward respectively will be entitled to vote, while on the other hand the basis of the franchise would be materially enlarged, and thus a far more comprehensive and enlightened result obtained.

Your Petitioner being also of opinion that this drink traffic is a purely moral, social, and non-political question, more or less affecting the home conditions of almost every household, permeating alike our social system as well as our public intercourse with an insidious, seductive, and polluting influence transcending all others in magnitude and intensity, and against which no parental authority or maternal solicitude can effectively cope withal, so as to guard and save their offspring from becoming its precocious and demoralized victims,—therefore, your Petitioner would earnestly entreat your Honorable House to confer the right of suffrage on females, in so far as this particular measure is concerned, so that its operation may be hallowed by the sanction of domestic co-operation and the beneficent and counteracting influence of the family circle.

Your Petitioner need not elaborate this view of the case, in order to demonstrate to your Honorable House the propriety and importance of admitting female voters on a question of this kind, at a time when the Universities of almost every country in Europe and America have fully recognised their academic claims, as well as by their admission to the Civil Service and to a professional status both in law and medicine. Within the precincts of the City of London a married woman may enter into and carry on trade, may sue and be sued, without the intervention or liability of her husband. In the United Kingdom as a *feme sole* she may participate in local self-government by serving the office of Overseer of the Poor, and may act as Churchwarden if elected thereto, and is also entitled to vote under the Municipalities Act, as well as to elect and be elected a member of Public School Board; and therefore, this question of local option having been placed within the category of local affairs, the enfranchisement of females would be as appropriate as their influence would be beneficial.

Your Petitioner may likewise be permitted to direct the attention of your Honorable House to the fact that, in the year 1870, the second reading of a Permissive Bill was carried in the Assembly by a majority of twenty votes to six, when no less than three Members of the present Administration voted in its favour. That measure was supported by numerous petitions from all parts of the Colony, including one presented by the Hon. J. B. Wilson, signed by 15,000 Daughters of Temperance alone, thus indicating the deep and abiding interest taken in this to them vital question by the females of our population. Since that period public-houses for the sale of intoxicating liquors have increased in number far beyond the limits of public requirement, and notwithstanding the existence of and boasted influence of Good Templars, Sons of Temperance, and other kindred Societies, in like manner the crime of drunkenness has also increased tenfold, is still increasing, and will not be diminished by other than stringent legislative means. The above allegations are fully borne out by the indisputable facts and figures adduced by Inspector Reid in his "Police Statistics," covering precisely the same period as that referred to, namely, the decade from 1870 to 1880. In that report Inspector Reid has given the number of population in 1870, together with the number of licensed houses, and likewise the number of persons convicted for drunkenness during that year, and then proceeds to show in like manner in each successive year the relative increase of the one with the other; and these figures disclose the alarming and humiliating fact that in the last year of the decade, 1880, drunkenness had increased eleven times beyond the ratio of increase in the population, and, as compared with the Statistics for the Metropolitan District of London, that the crime of drunkenness in the Metropolitan Police District of Sydney was three times greater than in that "Modern Babylon," with its four millions of inhabitants.

Pondering these facts, and actuated by those higher aspirations which the love of country and of kind are calculated to inspire, your Petitioner humbly but earnestly implores your Honorable House to pass into law the present measure now before Parliament, with such amendments as may render its operations salutary and effective, and thus confer a boon on the present and future generations of the Colony.

And, as in duty bound, your Petitioner will ever pray, &c., &c.

WILLIAM BROOKES, J.P.,
Norfolk-street, Newtown, N.S. Wales.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL (NO. 2.)

(PETITIONER IN FAVOUR OF—THOMAS CLARK, CHAIRMAN OF A PUBLIC MEETING OF
INHABITANTS OF MUDGEES.)

Received by the Legislative Assembly 6 October, 1881.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Inhabitants of the town of Mudgee, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

That on the twenty-eighth day of September, A.D. 1881, a public meeting of the inhabitants of the above-mentioned town was, pursuant to notice by advertisement, held at the Mechanics' Institute, in that town, for the purpose of considering and discussing the advantages of the Licensing Act now before your Honorable House.

That your Petitioners in such public meeting assembled, after free and deliberate discussion and consideration of such Act, decided that its main provisions, viz., local option and licensing boards, cannot fail to prove acceptable throughout the Colony, and tend to the moral and social interests of all people.

That your Petitioners desired the Chairman of such meeting to sign this humble Petition on their behalf, and respectfully present the same for the consideration of your Honorable House.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take into favourable consideration the decision of such public meeting, and that the Licensing Act now before your Honorable House may become law.

And your Petitioners will ever pray, &c.

On behalf of the inhabitants of Mudgee in such public meeting assembled.

THOMAS CLARK, Alderman.
Chairman.

1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL (NO. 2.)

PETITION FROM MEMBERS OF THE CHURCH OF ENGLAND IN THE DISTRICT OF TARALGA.

Received by the Legislative Assembly, 6 October, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of the undersigned members of the Church of England in the District of Taralga,—

HUMBLY SHOWETH :—

That your Petitioners have learnt with satisfaction that a Bill to amend the law relating to the sale of intoxicating liquors has been introduced by the Government into your Honorable House, which, with some amendments, appears calculated to remedy the evils which have been so long and loudly complained of, and have been exposed in the public press.

That your Petitioners are of opinion, however, that the following amendments are necessary in the proposed Bill :—

1. That the principle of local option shall be applied to the renewal of licenses as well as to the issue of new licenses.
2. That voting under the local option clause shall be decided by a two-thirds majority of all votes taken.
3. That clause No. 27, relating to the bottle licenses, be struck out of the Bill, as its retention would lead to increased consumption of alcoholic liquors in the homes of the people.
4. That the proposal to grant licenses to roadside inns at £10 per annum be struck out, as it would have a very prejudicial effect in multiplying such houses, to the injury of their respective neighbourhoods.
5. That clause 63 be amended, so that all public-houses shall be closed during the whole of the Sunday throughout the Colony.

Your Petitioners therefore humbly pray that you will take these premises into your earnest consideration with a view to make the proposed Bill not only acceptable to your Petitioners as citizens, but beneficial to the community.

And your Petitioners, as in duty bound, will ever pray.

(Here follow 48 signatures.)

—

LICENSING BILL (N^o. 2).

(PETITION FROM WIVES, MOTHERS, AND DAUGHTERS, RESIDENT IN SYDNEY.)

—

Received by the Legislative Assembly, 12 October, 1881.

—

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New Wales, in Parliament assembled.

The humble Petition of the undersigned Wives, Mothers, and Daughters, resident in the District of Sydney,—

HUMBLY SHOWETH :—

That your Petitioners rejoice in the knowledge of the fact that a measure has been introduced into your Honorable House to remodel the law, or further restrict the almost indiscriminate sale of intoxicating drinks. Nevertheless, your Petitioners deem any measure in this direction incomplete, unless it provides for the closing of all public-houses on the Sabbath-day.

We therefore humbly pray that you will cause provision to be made in the new Licensing Bill, whereby all public-houses throughout the Colony shall be closed during the whole of the Sabbath-day.

We make the foregoing prayer in view of the drunkenness and dissipation on the day named, an evidence of which may be had on reference to the Police Court records, and we feel that no necessity can exist commensurate with the evils arising from Sunday trading in alcohol.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL (NO. 2.)
 PETITION FROM RESIDENTS OF THE PARADING GROUND.)

Received by the Legislative Assembly, 14 October, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Residents of the District of Parading Ground,—

HUMBLY SHOWETH:—

That your Petitioners hail with satisfaction the introduction by the Government of a Bill to amend the law relating to the use and sale of intoxicating liquors, and are pleased to observe that the fundamental principle of local option, although in an imperfect and objectionable form, is embodied in the proposed measure. Being fully impressed with the necessity of a radical reform in the existing liquor traffic, and that the indiscriminate sale of intoxicating drinks is fraught with great danger and absolute injury to a large proportion of the community, we humbly submit the following amendments for your consideration, viz. :—

1. That the principle of local option shall apply to the granting of renewals as well as to the issue of new licenses.
2. That voting under the local option clause shall be decided by a majority of all votes cast, in contra-distinction to the proposal of a two-thirds majority of possible votes.
3. That clause No. 27, relating to bottle licenses, be struck out, as its introduction would lead to the consumption of alcohol in the homes of the people, and thus tend to most undesirable consequences.
4. That the proposal to grant licenses to roadside inns at a lower fee than that now charged would have a prejudicial effect in multiplying such houses, to the injury of their respective neighbourhoods, and would tend to lower the morals of the people and increase crime.
5. That clause 63 be amended, so that all public-houses shall be closed during the whole of the Sabbath-day throughout the Colony.

We humbly pray that you will give the foregoing premises your earnest and careful consideration, with a view to make the proposed measure not only acceptable to your Petitioners but also prove a blessing to the community.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL (NO. 2.)
(PETITION FROM BREWERS IN COUNTRY DISTRICTS.)

Received by the Legislative Assembly, 11 October, 1881.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

1. That your Petitioners are Brewers carrying on business in the country districts.
2. That their annual sale of malt liquors ranges from one thousand to four thousand barrels per year.
3. That it is proposed by the fifth section of the sixty-eighth clause of a Bill now under consideration by your Honorable House, entitled, "*A Bill to re-model the law relating to Publicans and other persons engaged in the sale of liquor,*" to impose a tax upon the industry in which we are engaged by the imposition of a license fee, varying in amount from sixty pounds for the sale of one thousand barrels to two hundred pounds for the sale of four thousand barrels per year.
4. That brewers carrying on business in Sydney, who sell very much larger quantities of beer, will under the Bill pay no more license fee than the sum of two hundred pounds per year.
5. That the inequality of the incidence of the proposed tax upon small and large brewers will be a heavy burden and a great injustice to your Petitioners.
6. That in proof of this, a brewer who sells four thousand barrels per year will pay a tax of one shilling per barrel; whereas a brewer who sells twenty thousand barrels per year will pay a tax of 2½d. per barrel; and a brewer who sells fifty thousand barrels per year will pay a tax of less than one penny per barrel.
7. That your Petitioners pay large sums annually to the Railway Department for the carriage of material used by them in their business.
8. That the proposed license fee for brewers, which will range from fifty to two hundred pounds per annum, is largely in excess of the fee proposed to be imposed on the wholesale wine and spirit merchants.
9. That in the case of wholesale wine and spirit merchants a larger tax is proposed for the Sydney houses than for country houses; whereas the tax proposed on small country brewers will, in proportion to the amount sold, be largely in excess of that proposed to be imposed on the large Sydney brewers.
10. Your Petitioners therefore pray that your Honorable House will take these matters into your favourable consideration, and make such amendments in the part of the Bill referred to in this Petition as in your wisdom you may think fit.

And your Petitioners will ever pray, &c.

NEW SOUTH WALES.

LICENSING BILL (N^o. 2).
(PETITION FROM MATRONS AND SPINSTERS IN THE DISTRICT OF DUBBO.)

—
Received by the Legislative Assembly, 18 October, 1881.
—

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Matrons and Spinsters residents in the District of Dubbo, August 1, 1881,—

HUMBLY SHOWETH :—

That your Petitioners rejoice in the knowledge of the fact that a measure has been introduced into your Honorable House for placing some necessary restrictions on the almost indiscriminate sale of intoxicating drinks, and which proposes many wise and necessary reforms on the existing traffic. Nevertheless, your Petitioners deem any measure there anent incomplete that fails to provide for the closing of all public-houses on the Sabbath-day.

We therefore humbly pray that you will cause provision to be made in the new Licensing Bill, whereby all public-houses shall be closed during the whole of the Sabbath-day throughout the Colony.

We make the foregoing prayer in view of the drunkenness and dissipation that obtains on the day named, an evidence of which may be had on reference to the Police Court records, and that no necessity can exist commensurate with the evils arising from Sunday trading in alcohol.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL (NO. 2.)
(PETITION FROM RESIDENTS OF THE DISTRICT OF MUDGEE).

—
Received by the Legislative Assembly, 20 October, 1881.
—

To the Members, Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents of the district of Mudgee,—

HUMBLY SHOWETH:—

1. That the cultivation of the wine-grape is an important industry to many in this neighbourhood, and consequently we view with alarm the striking out of the 23rd clause (relating to the sale of Colonial wine) of the Licensing Bill now before Parliament.

2. We think the action of your Honorable House in this matter is antagonistic to the interests of all Colonists who depend wholly or in part for a living from the produce of their vineyards.

3. In this neighbourhood alone there is a large quantity of land under cultivation of the vine (as the soil is found most suitable for it), and as there is no specific law for the sale of Colonial wine, the striking out of the 23rd clause in the Bill will be the means of paralysing this industry throughout the Colony.

Your Petitioners therefore humbly pray that having taken the premises into consideration, you will be pleased to consider our interests in this respect by having a clause embodied in the Bill now before your House for the legitimate sale of Colonial wine.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 187 signatures.]

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL (No. 2.)
(PETITION FROM RESIDENTS IN THE MUNICIPALITY OF MANLY.)

Received by the Legislative Assembly, 3 November, 1881.

Manly, 28 October, 1881.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents in the Municipality of Manly,—

HUMBLY SHOWETH:—

That your Petitioners have heard with great concern that they will be excluded from the benefits of the sixty-third clause of the Liquor Licensing Bill now before your Honorable House, by which public-houses are to be closed on Sundays; for whereas large numbers of excursionists come down to Manly from Sydney on Sundays, and the distance is more than seven miles, they will under the provision made for travellers be entitled to have the bars of our public-houses kept open for them.

That as the trip from Sydney only takes three-quarters of an hour, there is no need to provide such accommodation for those who take it, sufficient to justify the continuance of the nuisance that is caused both to residents and visitors by the number of idlers hanging round the public-houses in our principal streets on Sundays.

That your Petitioners therefore pray that you will omit the words "seven miles" from the definition of a "traveller," as referred to in the Bill, with a view to the insertion of the words "ten miles" in lieu of the same.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 218 signatures.]

1881.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL (No. 2.)

(PETITION FROM RESIDENTS OF THE HUNTER, PATERSON, AND WILLIAMS RIVERS.)

Received by the Legislative Assembly, 15 November, 1881.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents on the Hunter, Paterson, and Williams Rivers, and in the surrounding Districts,—

RESPECTFULLY SHOWETH:—

That your Petitioners believe that the repeal of the Acts regulating the sale of Australian wines, without further legislation giving facilities for the sale of these wines, would be a great check and injury to an important and rising industry, in which many people have invested a large amount of capital, and would be absolute ruin to all proprietors of small vineyards, and to hundreds of families who are now employed in the culture of the vine.

That your Petitioners believe the wine industry will yet prove one of the most powerful means of developing the resources of this country; and in support of this belief would point to the results of vine culture on the Continent of Europe, and in the sister Colonies, and to the fact that our wines have compared favourably with the wines of Europe at all recent Intercolonial Exhibitions.

That the police reports of 1874, which showed the then existing law to be working unsatisfactorily, cannot apply to the working of the amended Act of 1876.

That the "Australian Wine Sales Amendment Act of 1876" gives full power to the police to supervise licensed houses and check any abuses that may arise, and your Petitioners desire to see this power exercised more fully and efficiently than it has hitherto been.

That the encouragement by every legitimate means of the consumption of the pure wines of the country will not tend to increase intemperance, but the reverse, as has been proved by the experience of all wine-growing countries where facilities for the sale of pure wines have been given; and would point to Victoria, where there are nearly 600 wine licenses, and where the number of committals for drunkenness is shown by statistics to be about 25 per cent. less than in this Colony, in proof of their statement.

That should the sale of these wines in quantities less than two gallons be permitted at public-houses only, their consumption would be virtually prohibited to the general public, as it is a fact that at most of the hotels in the Colony the prices charged are from 100 to 200 per cent. higher than the cost price to the publican.

Your Petitioners therefore pray that your Honorable House will not repeal the Acts before referred to, which the Licensing Bill now before the House proposes to repeal, unless you propose to make other provision for removing all unnecessary restrictions, and giving such facilities for the sale of colonial wine as shall in your wisdom seem to be just to those who have embarked a large amount of capital in this enterprise, and at the same time consistent with the interests of the general public.

And your Petitioners will ever pray.

[Here follow 1,510 signatures.]

A similar Petition was received:—

On 16th November, from Residents on the Hunter, Paterson, and Williams Rivers, and in the surrounding Districts; 142 signatures.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL (No. 2).

(PETITION FROM WINE-PRODUCERS IN THE DISTRICT OF PORT MACQUARIE AND HASTINGS RIVER.)

—
Received by the Legislative Assembly, 15 November, 1881.
 —

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
 Parliament assembled.

The respectful Petition from the Wine-producers in the District of Port Macquarie and
 Hastings River,—

RESPECTFULLY SHOWETH:—

We, the undersigned vigneron, resident at Port Macquarie and neighbourhood, in the Hastings
 and Manning Electorate, view with much uneasiness the Licensing Bill now passing through the
 Legislative Assembly, by which it is proposed to rescind the Australian Wine Sales Amendment Act,
 40 Victoria, No. 7.

Your Petitioners would most respectfully call the attention of your Honorable House to the fact
 that they have been at a great outlay in purchasing their land, and also in preparing it for the cultivation
 of the vine, and absolute ruin would accrue to them by the withdrawal from producers the right of their
 disposing of colonial wine by the bottle, as hitherto.

It would also be detrimental to the interest of your Petitioners for publicans to possess the
 exclusive right of retailing colonial wine by the bottle, which the producers now enjoy, and would not
 satisfy the public generally.

Your Petitioners would also submit that the present Colonial Wine Sales Act, of the 40 Victoria,
 No. 7, for the sale of wine by the producers, is sufficiently stringent to meet police supervision.

Your Petitioners therefore humbly pray that, before the new Licensing Bill is finally passed by
 your Honorable House, that it may be recommitted to meet the requirements of your Petitioners, who as
 in duty bound will ever pray.

Port Macquarie, 11th November, 1881.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ELECTORATE OF THE GWYDIR.

(RETURN OF ALL MONEYS RECEIVED FROM 1ST JANUARY, 1876, TO 31ST DECEMBER, 1880.)

Ordered by the Legislative Assembly to be printed, 5 July, 1881.

RETURN (*in part*)* to an *Order* of the Honorable the Legislative Assembly of New South Wales, made on the 23rd June, 1880, That there be laid upon the Table of this House,—

- “ (1.) A Return of all moneys received from The Gwydir Electorate for the sale of land by auction, by conditional purchase, rents of lands, and all other sources, per year, from 1st January, 1876, to 31st December, 1879.†
- “ (2.) A Return of all moneys voted and spent on Roads, Bridges, and other public works, per year, from 1st January, 1876, to 31st December, 1879, designating the respective works on which the money was so spent, and “locality.”

(*Mr. Dangar.*)

* This return is complete so far as the Department of Lands is concerned.

† At the request of Mr. T. G. Dangar, M.P., the return has been compiled to the 31st December, 1880.
