LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DEPARTMENT OF MINES.

(ANNUAL REPORT OF THE STOCK AND BRANDS BRANCH.)

Ordered by the Legislative Assembly to be printed, 7 July, 1886.

TO THE HONORABLE JAMES FLETCHER, ESQ., M.P., MINISTER FOR MINES.

Sir,

I have the honor to submit herewith the Report of the Chief Inspector of Stock upon working of the Stock and Brands Branch for the year 1885.

The Report discloses a large amount of work performed by the Officers of the Branch during the year.

In view of the recent heavy losses from drought, the returns of the numbers of horses, cattle, and sheep are most satisfactory, showing, as they do, a moderate increase in the number of horses, the number for 1885 being greater than for any year since 1881; while the number of sheep in 1885 exceeds that of any previous year except 1883, and very nearly equals the number for that year. The number of cattle returned for 1885 shows a further decrease, but, as the Chief Inspector points out, this decrease is not wholly due to the drought, but to a large extent arises from cattle runs being converted into sheep stations. The losses of cattle from drought and disease are estimated at 4,656. The clip of wool for 1885 compares favourably with that of the preceding year, and the quantity exported through the adjoining Colonies appears to be steadily decreasing.

According to the estimate furnished it appears that the number of sheep destroyed by tame dogs is greater than by native dogs.

The number of districts more or less affected by noxious plants and weeds points to the necessity for legislation to render eradication compulsory.

Appended to the Report of the Chief Inspector are valuable reports by the Government Veterinarian on Anthrax and Anæmia in sheep, and a report upon the weed *Euphorbia Drummondii.*

I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

Department of Mines,
1st July, 1886.

*444—A

[1,030 copies—Approximate Cost of Printing (labour and material), £22 19s. 9d.]

2

The Chief Inspector of Stock to The Under Secretary for Mines.

Sir, Department of Mines, Stock Branch, Sydney, 1 May, 1886.

I have the honor to submit for your consideration my Report on the working of this Branch, for the year ending 31st December last, which is as usual based very much upon Inspectors' estimates, the owners still showing very little inclination to furnish data.

I.—INSPECTORS AND THEIR WORK.

1. *The Inspectors.*

There are now forty-five Inspectors, having charge of fifty-nine Sheep Districts.

2. *The Inspections made.*

The inspections made during the year were as follows :—

Of Stock	13,881
Of Reserves	3,284
Of Pounds	473
Of Pastures	5,126
Of Dogs	450
Total	23,214

This would give an average of 516 inspections made by forty-five Inspectors.

3. *Horses, Cattle, and Sheep inspected.*

Horses.—The number of horses inspected during the year was 54,840, by forty-three Inspectors.
Cattle.—The number of cattle inspected during the year was 644,818.
Sheep.—The number of sheep inspected during the year was 24,022,931. This is an excess of 399,122 on last year's inspection.

4. *Distance travelled by Inspectors during the year on duty.*

The total number of miles travelled by forty-five Inspectors was 185,616, being an average of 4,124 each per annum, and a slight increase on last year.

5. *Prosecutions and Convictions.*

The prosecutions instituted during the past year were as follows :—

Under Sheep Act	133
,, Lands Act, trespass on reserves...	1
,, Brands Act	0
,, Pastures Act	970
Total...	1,103

This shows a very large increase in the prosecutions under the Pastures Acts, and is accounted for by Inspectors becoming better acquainted with the owners in their districts and looking up defaulters.

The number of convictions were :—

Under Sheep Act	115
,, Lands Act	0
,, Brands Act...	0
,, Pastures Act	759
Total	874

II.—HORSES.

1. *The Number.*

By returns the number of horses in the Colony during the twenty-five years previous to and including 1885 was as follows :—

Year.	No.	Year.	No.
1861	251,497	1873	328,408
1862	233,220	1874	334,462
1863	273,389	1875	357,696
1864	262,554	1876	366,703
1865	284,567	1877	328,150
1866	282,587	1878	336,468
1867	278,437	1879	360,038
1868	280,201	1880	395,984
1869	280,818	1881	398,577
1870	280,304	1882	328,026
1871	337,597	1883	326,964
1872	304,100	1884	337,172
		1885	344,697

This shows a slight increase, 7,525, during the year ; and is due to the favourable season.

2. *The different Breeds.*

Draught.—The number returned under this head is—ordinary, 87,047 ; thoroughbred, 12,804 ; total, 99,851.
Light Harness.—The number returned as ordinary is—86,059 ; thoroughbred, 8,337 ; total, 94,396.
Saddle.—The number of ordinary is given as 133,091 ; thoroughbred, 17,359 ; total, 150,450.

3

3. *Horses introduced.*

From other districts.—The number of stud horses introduced was 256, and stud mares, 367; ordinary mares, 1,622; and horses, 2,269.

From other Colonies.—The number introduced by sea was—Stud horses, 99; stud mares, 248; and ordinary horses and mares, 1,075.

The number introduced overland was 96 stud mares and 104 stud horses; and ordinary, 205 mares and 151 horses.

From England and other Countries.—The numbers introduced under this head were 11 stud mares and 15 stud horses.

4. *Horses fit for Sale.*

The number returned as being fit for market during the present year is 16,939 draught, 16,827 light harness, and 26,816 saddle.

Of this number it is estimated that 6,804 are suited for the India and China markets.

There were sent from five districts 787 horses to be shipped from Sydney, and from five districts 639 horses to Melbourne for Foreign Countries.

5. *Improvement.*

In forty-one districts the horses are said to be improving. The principal reasons given are—introduction of superior stud horses, breeding from good mares, more attention to the rules of breeding, and better prices obtainable. In thirteen districts the breed of horses is, so far as regards improvement, reported as stationary, and in five districts deteriorating—the reasons given being too much light blood introduced, breeding from weedy mares for racing purposes, and drought.

6. *Diseases in Horses.*

Influenza in horses was reported in several parts of the Colony, and in an outbreak in the Windsor district, Mr. Government Veterinarian Stanley found the disease in an epidemic form of a mild character, the symptoms being slight fever, general debility, loss of appetite and flesh, and swelling of the limbs, the fever lasting for two or three weeks, and usually terminating in recovery—under the proper treatment—*i.e.*, mild fever medicines, with mashes or green food, and rest. Fatal consequences followed in several cases where sick animals were forced to continue at work, or their vitality reduced by purging medicines.

In the years 1842 and 1843, influenza spread through the Colonies in a virulent form, and losses were heavy in consequence of the lungs being the organ most severely attacked; occasional outbreaks have been noticed ever since.

Besides this the only diseases reported were mild attacks of strangles in twenty districts, and a few cases of inflammation, worms, and colic.

In thirty-nine districts the horses are reported to have been entirely free from disease.

7. *Losses in Horses.*

The losses in horses from drought, starvation, wire in chaff, and other accidents as reported amount to 5,102. This must be considerably under-estimated.

8. *Wild Horses.*

The number of wild horses in the Colony is estimated at 9,622, which shows a decrease on the previous year of 472.

9. *Tax on Entire Horses.*

The recommendation which has been repeatedly made by owners in all parts of the Colony that a tax should be imposed on entire horses, comes again from several of the principal horse-breeding districts, and there is no doubt but that the majority of the owners of the largest studs in the Colony are in favour of such a tax.

Among others, Mr. A. A. Dangar, of Baroona, on the Hunter, has taken this matter up, and has brought under the notice of the different Agricultural Societies a practical scheme for imposing such a tax and utilizing the funds which it would raise in the establishment of a system of inspection, classification, and certificate, and in offering prizes for the encouragement of the improvement of the different breeds of horses, which will be found as Appendix A to this Report.

III.—CATTLE.

1. *Number.*

The returns of cattle in the Colony during the twenty-five years ending 31st December, 1885, stand as follows:—

Year.	No.	Year.	No.
1861	2,271,923	1874	2,856,699
1862	2,620,383	1875	3,134,086
1863	2,032,522	1876	3,131,013
1864	1,924,119	1877	2,746,385
1865	1,961,905	1878	2,771,583
1866	1,771,809	1879	2,914,210
1867	1,728,427	1880	2,580,040
1868	1,761,411	1881	2,597,348
1869	1,795,904	1882	1,859,985
1870	2,195,096	1883	1,640,753
1871	2,014,888	1884	1,425,130
1872	2,287,660	1885	1,317,315
1873	3,794,327		

This shows a decrease during the year of 107,815, and for the last ten years of 2,001,904.

4

2. *Different Breeds.*

Shorthorns.—The number of pure-bred and stud Shorthorns is estimated at 31,068; and ordinary, 571,491; total, 602,559.

Herefords.—Pure and stud, 15,851; ordinary, 162,506; total, 178,357.

Devon.—Pure and stud, 5,480; ordinary, 49,779; total, 55,259.

Black-polled.—Pure and stud, 208; ordinary, 1,045; total, 1,253.

Ayrshire.—Pure and stud, 665; ordinary, 2,130; total, 2,795.

Alderneys.—Pure and stud, 100; ordinary, 62; total, 162.

Crosses.—Pure and stud, 3,151; ordinary, 473,779; total, 476,930. The crosses are estimated as follows:—Shorthorn and Hereford, 181,212; Shorthorn and Devon, 58,227; Hereford and Devon, 30,535, Shorthorn and Black-polled, 946; Ayrshire and Shorthorn, 3,500; the balance, 202,510 being unrecognizable.

3. *Stock introduced.*

From other Districts.—Stud bulls, 733; stud cows, 235; total, 968; ordinary cattle, 56,374.

From other Colonies by Sea.—Stud bulls, 85; stud cows, 110; total, 195.

Overland.—Stud bulls, 102; stud cows, 281; ordinary cattle, 28,557; total, 28,940.

From England and other Countries.—Nil.

4. *Increase and Decrease of Cattle.*

The decrease (107,815) in the number of our cattle during the year 1885 arises principally through the cattle runs being converted into sheep stations, but lately also to a very considerable extent through severe drought, which has indirectly as well as directly led to this decrease, for the greater part of those owners who thus lost their cattle have restocked with sheep, as sheep have both paid better and suffered proportionately less than cattle from drought.

5. *The "Cast" of Fat and Store Cattle.*

The estimated "cast" of fat cattle to be sent to market during the coming year is 193,064, and store cattle, 144,542. From twelve districts the fat cattle are principally sent to Melbourne; from three districts they are principally sent to Adelaide, and the remaining districts supply the markets of Sydney, Maitland, Mudgee, Bathurst, Orange, and Tamworth. The principal demand for store cattle comes from Victoria, and for breeding stock from Queensland and the far north, where new country is being taken up.

6. *How kept.*

The number of cattle kept wholly in paddocks is returned as 875,938; on open runs, 307,796; and the balance, 133,581, are depastured both ways.

7. *Improvement and Deterioration.*

In thirty-one districts the cattle are said to be improving; in twenty districts they are stationary; in eight districts are deteriorating. The principal reasons given for the improvement are—introduction of good stud stock, more attention and care in selection, also in culling and keeping in paddocks. The reasons given for deterioration are—drought, inattention to breeding, owners getting rid of cattle, and substitution of sheep for cattle.

8. *Their Diseases and Ailments.*

In twenty-nine districts, on 173 runs, the cattle were reported as affected slightly with pleuro-pneumonia; and in thirty districts the cattle are reported as being free from that disease.

In twenty-two of the infected districts the disease was caused by contagion, from infected travelling stock, in four districts its cause could not be traced, and in three districts the disease was said to be latent in the herds.

On sixty-six stations it is reported inoculation checked disease, on sixty-nine stations it was adopted successfully and satisfactorily, on four stations disease apparently stamped out, and on twenty-nine stations inoculation was not performed.

The number of owners in favour of inoculation is given as 3,111; against, 844; undecided, 1,899; and 4,997 opinions not known.

The number of owners in favour of compulsory inoculation in the case of infected herds is given as 2,540; against it, 1,383; undecided, 1,990; and 4,933 opinions not known.

9. *Losses from Disease and Drought.*

The number of cattle reported to have died from Cumberland disease is 460; from blackleg, 212; from swelling in jaw or throat, 2,936; from ophthalmia, 202; from tuberculosis, 146; from red water, 700; total, 4,656.

10. *Pleuro Pneumonia.*

Amongst the information which has recently reached this Colony, with respect to this disease, it is very satisfactory to find that the efficacy of inoculation was confirmed by the International Veterinary Congress, held at Brussels in 1883, at which the nature of the disease and its treatment were fully discussed by the veterinary authorities of the highest standing in Europe and America; and while the Congress expressed its preference for the stamping-out system (the destruction of all animals actually diseased or suspected of being diseased) in the case of herds or lots of cattle where their slaughter was likely to include the whole of those infected, it decided that inoculation should be practised where the infection was widely spread.

There was considerable discussion on the point whether the infection could be conveyed by inoculated to uninoculated cattle, and a majority of the Conference was of opinion that it could be so. This, however, is I think contrary to the experience of these Colonies, where inoculation has been more extensively practised than in any other part of the world—millions of cattle having been inoculated with success.

The proof that inoculated cattle do not convey the infection to uninoculated, lies in the fact that hundreds of our breeding herds have been inoculated, in which calves were of course being almost daily dropped, and if the infection had been conveyed from inoculated to uninoculated cattle (It is not disputed but that germs of the disease may exist at the seat of the inoculation which are capable of setting up the infection

under

under certain exceptional and favourable circumstances), the all but universal result which followed the operation, the speedy cessation of the disease in the herd, and its restoration to health, could not possibly have happened for the inoculated cattle (in some cases the calves' own mothers) would have infected the calves dropped immediately after the operation was performed; these again would have infected the calves dropped subsequently, and in this way the disease would never have been got rid of; whereas it is a well established fact that in the case of large herds of 8,000 and 10,000 head, the infection left them in the course of three or four months after they were inoculated, that is to say, as soon as all the cattle which were affected before they were inoculated had died or recovered, the infection disappeared from the herd; and that practically, at any rate, there is no danger of inoculated cattle conveying the infection to uninoculated, or that inoculation will keep alive and spread the infection.

I would again recommend that inoculation be made compulsory in the case of all herds or mobs, in which the infection shows itself. If this course were adopted, and all cattle actually diseased destroyed, the disease would soon be stamped out in the Australian Colonies.

11. *Tuberculosis.*

The Government Veterinarian, acting for the Board of Health, has condemned several carcases of cattle affected with this disease, slaughtered at the Abattoirs; and it is to be hoped that stock-owners will look to their own interests, as well as that of the public, and eradicate this scourge from their herds; for it not only destroys the value of the stock from a breeder's point of view, but the Health authorities condemn the flesh, as it is recognised as a medium of communicating the disease "Tubercle," *i.e.*, consumption, to human beings.

IV.—SHEEP.

1. *The Number.*

The numbers of sheep in the Colony during the twenty-five years ending 31st December, 1885, stand as follows:—

1861	...	...	6,119,169	1874	...	...	22,797,416
1862	...	...	6,550,896	1875	...	...	25,353,924
1863	...	...	7,169,126	1876	...	...	25,269,755
1864	...	...	9,082,463	1877	...	...	21,521,662
1865	...	...	9,650,106	1878	...	...	25,479,484
1866	...	...	11,644,593	1879	...	...	30,062,910
1867	...	...	15,066,377	1880	...	...	35,398,121
1868	...	...	16,000,090	1881	...	...	36,591,946

Return of Sheep to Clerks of Petty Sessions.

The number of Sheep in the Colony at 1st January, 1886, as returned to the several Clerks of Petty Sessions for 1885, and the increase or decrease for the year is as follows:—

District.	No. of Sheep on 1st January, 1885.	No. of Sheep on 1st January, 1886.	Increase.	Decrease.	District.	No. of Sheep on 1st January, 1885.	No. of Sheep on 1st January, 1886.	Increase.	Decrease.

7

Increase and Decrease.

This shows an increase of 6,160,585, which is attributable mainly to the favourable season and good lambing in most of the districts, but to some extent also to the introduction of sheep from other Colonies, to restock the runs which had suffered from drought. It is reported that 776,124 were brought across the Border, principally from Victoria.

2. *The different Breeds.*

3.

3. *Sheep introduced and imported.*

(1.) From other districts in this Colony.—Stud, 2,835; ordinary, 1,195,972; total, 1,198,807.
(2.) Overland from other Colonies.—Stud, 54,405; ordinary, 721,729; total, 776,134.
(3.) By sea from other Colonies.—Stud. 1,829; ordinary, ——; total, 1,829.
(4.) From England and Countries and Colonies other than Australian.—*Nil.*

With reference to stud sheep from other Colonies (class 3), it will be seen, on reference to Appendix B, that 1,592 Sea-borne sheep were offered at the annual sale of stud sheep, held in the month of July last (1885). Of these, 1,536 were from Tasmania, 32 from Queensland, and 54 from South Australia. They were quarantined for eighteen days, and received one dipping with tobacco and sulphur; 953 of these being unshorn, and 639 shorn.

After reaching the stations to which they were taken, these sheep were all duly examined by the proper Inspectors, who were instructed to report on the appearance of the sheep and the effect of the dipping, and from their reports, based principally on the owners' statements, it would appear that, of the unshorn sheep, 1 ewe died, and 2 lambs were dead when dropped, as the owners state, from the effects of the dipping, and that some 35 other sheep suffered in their wool and condition from the same cause. Of the shorn sheep, again, it was reported to the Inspectors that 1 ram had died from the dipping, and that several of the other shorn sheep suffered to some extent from that cause.

Although the owners attribute these losses to the dipping, they are far more likely—so far, at least, as the unshorn sheep are concerned—to have arisen through the removal of sheep before their fleeces were dry, and exposing them to chills on the steamers and in the railway trucks, and the fact that so many sheep are reported as not having suffered in any appreciable degree from the dipping, proves that the dipping was successfully as well as thoroughly carried out, for if the dipping had been improperly administered, far more sheep would have been affected—they were all treated alike.

As was to be expected, it will be noticed that the shorn sheep suffered much less than the unshorn, and owners, unless they are taking their sheep to New England, Monaro, or any of the other upland portions of the Colony, would do well to shear before dipping, and to do so as soon as possible after the sheep are purchased. While the unshorn sheep should be allowed to dry before they are removed from Sydney.

4. *Long-woolled Sheep.*

Amongst the long-woolled sheep the Lincoln is said in a large majority of the districts to give the best returns in wool and in weight of mutton, the cross-bred sheep being second.

5. *The "Cast" of Fat and Store Sheep.*

The annual "cast" of fat sheep for the ensuing season is estimated at 2,862,265, and store sheep, 3,762,955.

6. *How Sheep are kept.*

Paddocked	34,925,220
Shepherded	1,780,654
Both ways	1,115,032
	37,820,906

7. *Condition of the Flocks.*

In thirty-eight districts the sheep are said to be improving; the principal reasons given being—More attention to breeding, paddocking, introduction of high-class rams and ewes, more careful classing and culling, and better season.

In seven districts they are said to be stationary, and in fourteen districts they are deteriorating. The reasons given are—Severe drought, bad pasture, country not suitable, breeding from inferior ewes, bad management, and errors of judgment in selecting rams.

8. *Lambing.*

The general average for the whole of the Colony of the paddocked sheep is returned by Inspectors at 64 per cent., and shepherded sheep at 53⅔ per cent. In thirty-five districts, the lambing was high; in ten districts, ordinary; in five districts, low; and in eight districts, very low. The reason given for the high percentage is the favourable season; while the ordinary and low percentages are attributable to the low condition of the sheep during 1884, bad season, and losses by dogs and eagle hawks.

The paddocked sheep show a higher percentage than the shepherded sheep by 10⅓ per cent.

9. *The Clip.*

Lambs.—The number of lambs shorn in the grease was 4,113,383; the number washed, 42,584; total lambs shorn, 4,155,967.

Sheep.—The number of sheep shorn in the grease was 28,324,595; hot water and spout washed, 38,000; creek-washed, 642,424; and scoured, 267,250.

The average weights of the clip are estimated as follows:—

	Lambs.		Sheep.	
	lb.	oz.	lb.	oz.
Grease	1	12	5	7½
Washed	.....		.....	
Hot water and spout	.....		3	4
Creek-washed	1	8	3	2
Scoured	.....		3	0

Condition of Clip.

In thirty-six districts the clip is reported as good and sound; in four districts, poor, and unsound; n three districts, light but sound; and in the remaining districts, fairly sound but wanting in yoke.

Average per Sheep.

The total clip in the Colony for the year 1885, according to the number of sheep, would be 28,324,595 sheep, shorn in the grease, average clip, 5 lb. 7½ oz. per sheep = 154,900,128 lb.; 38,000 sheep, hot water and spout washed, average clip, 3 lb. 4 oz. per sheep = 123,500 lb.; 642,424 sheep, creek-washed,

washed, average clip, 3 lb. 2 oz. per sheep = 2,007,575 lb.; 267,250 sheep, scoured, average clip, 3 lb. = 801,750 lb. Lambs—4,113,383 lambs, shorn in the grease, average clip, 1 lb. 12 oz. per lamb = 7,198,420 lb.; 42,584 lambs, washed, average clip per lamb, 1 lb. 8 oz. = 63,876 lb.; total clip, 165,095,249 lb.

Exportation of Clip.

The clip grown in the Colony of New South Wales is shipped to England, America, France, and other countries, from the principle ports of the three Border Colonies, as well as from Sydney. The portion of our clip thus shipped from the other Colonies is often mistaken as the produce of those Colonies.

The following is an estimate of the clip shipped at Sydney, and also the proportion sent across the Borders and shipped by the other Colonies at Melbourne, Adelaide, and Brisbane, for the years 1884 and 1885:—

Port of Shipment.	1884.			1885.		
	Greasy.	Washed.	Total.	Greasy.	Washed.	Total.
	lb.	lb.	lb.	lb.	lb.	lb.
Sydney	88,054,285	3,281,142	91,335,427	119,565,541	2,265,685	121,831,226

Adelaide	7,216,407	209,387	7,426,394	9,216,164	299,322	9,515,486
Brisbane	695,630	59,676	755,366	886,064	94,935	980,999
	126,008,923	4,329,143	130,338,066	162,098,548	2,996,701	165,095,249

Classing the Clip.

In twenty-six districts the clip is reported as being well classed, and in the other districts it is not considered so, the reasons being—Owners do not think it pays, want of convenience, sheds not large enough to warrant expense, and the difficulty of obtaining competent woolsorters.

Wool-presses.

A great number of different kinds of presses are used; those most in favour are Williams and Robinson's; rack, screw, and pinion presses are used. There is still room for improvement in the mode of pressing, especially by small owners.

Woolpacks.

The woolpacks used are mostly Calcutta and Dundee, of various sizes, from 4 to 6 in. × 2 feet 2 in. to 5 feet 3 in., and the weight from 10 to 12 lb.

On forty-four stations the wool is dumped before leaving.

10. *Sheep-brands and marks.*

Ear-marking.

In most districts the system of ear-marking sheep is now properly carried out, and nearly all the owners approve of it.

Tattoo-marking.

This system of marking is mostly used by owners of stud sheep—not, as yet, to any great extent in the case of ordinary flock sheep; but where tried it has been found to act as a good preventive to sheep-stealing, and a case has just occurred in which a notorious sheep-stealer was convicted, mainly through the tattoo-mark on the sheep, and sentenced to five years' imprisonment.

V.—DISEASES IN SHEEP.

1. *Scab.*

The flocks in this Colony, and in the Colonies of Queensland, Victoria, South Australia, and Tasmania are free from scab. It exists, but to no great extent, in New Zealand and Western Australia, and good progress in stamping out the disease is being made in both these Colonies. It is hoped that they will soon be declared clean. The importation of sheep from New Zealand and Western Australia is prohibited.

2. *Anthrax—Splenic Apoplexy.*

This scourge, which is known in the Australian Colonies as "Cumberland Disease," has, I regret to say, been prevalent during the past year in several parts of the Colony; and an outbreak, which was attributable by the owners to poisonous plants, was investigated and reported on by the Government Veterinarian. His report accompanies this, as Appendix C.

3. *Anæmia.*

This ailment, which had carried off a good many young rams, in the country lying between the Murray and Murrumbidgee, was investigated by the Government Veterinarian. His report accompanies this, as Appendix D.

4. *Foot-rot.*

In five districts the sheep have been slightly affected with foot-rot during the year; the reasons given being—swampy ground, country not suitable. The remedies principally used were arsenic and blue-stone; carbolic acid, paring, &c., with satisfactory results.

5. *Fluke.*

In fourteen districts the sheep were slightly affected with fluke, through depasturing on sour, unsound country. The remedies used were—removing to sound country, salt, tar and turps, sulphate of iron, and salt and sulphur—with good results.

10

6. *Worms.*

No sheep have been reported as suffering from worms.

7. *Supposed Poison Plant—"Euphorbia Drummondii."*

As large numbers of sheep are reported to have been poisoned by eating this plant, the Government Veterinarian put the matter to the test of actual experiment, and found that in its then comparatively ripe state, at least, it is not poisonous, and considers that the losses (of which there is no doubt) have occurred from hoven. His report on the subject will be found as Appendix E.

8. *Losses through Drought.*

Although the returns for the year show a large increase in sheep, yet on reference to the C.P.S. returns it will be seen that in some districts there has been a decrease amounting, on the whole, to 1,923,585 sheep. This decrease is attributable not so much to the drought during the year as to that of 1884.

VI.—PIGS.

As pigs were declared by proclamation of 8th January, 1885, to be subject to the provisions of the Imported Stock Acts of 1871 and 1884, it is necessary that they should find a place in this Report.

According to the latest returns collected by the police, it appears that the number of pigs in the Colony was only 208,694.

It is regretted that more attention is not given by farmers and dairymen to the breeding and fattening of pigs, and until it is so our settlers cannot prosper as they would otherwise do.

This branch of agriculture has been one of the principal means of the great prosperity of American farmers, and it would be well if our agriculturalists, instead of confining their atttention, as they now almost exclusively do, to wheat, maize, and hay growing (which impoverish the soil), would take more to dairying and pig breeding and fattening, which, if properly conducted, will enable the farmer in a large measure to retain the fertility in his land.

By the latest accounts it appears there were in the United States no less than 12,000,000 dairy cows and 41,000,000 pigs. Besides being comparatively few in number, our pigs are as a rule wanting in quality, and stand in great need of improvement.

Disease in Pigs.

On board the ship "Partian" the Veterinary Inspector found disease resembling, in some respects, "swine fever" amongst the pigs; and by his advice they were at once destroyed, and their pens cleaned and disinfected.

VII.—DOGS.

Dogs have also by the proclamation of 8th January, 1885, issued under the Imported Stock Acts, been declared subject to the provisions of those Acts, with the view to prevent the introduction of rabies as it is the opinion of the highest medical and veterinary authorities in England that there is every probability of that disease being introduced if dogs from countries in which it exists are not subjected to a proper inspection and quarantine before being allowed to land.

Happily, as yet, no well authenticated case of rabies has occurred in any of the Australian Colonies. This is mainly attributable to the length of the voyage; but this has of late years been greatly reduced, and every possible precaution should be taken to keep them free from this terrible malady.

The disease has recently been very prevalent in England and other parts of Europe, and also in America, and the whole of the scientific world is anxiously watching the marvellous efforts of the famous scientist, Pasteur, who claims to have succeeded in finding a cure in inoculation for rabies.

It is hoped he will succeed; but however this may be, the proper course for these Colonies unquestionably is to adhere to the regulations now in force, and insist upon a six months' quarantine for all dogs from places outside the Australian Colonies.

An outbreak of rabies is dangerous enough in countries such as England, but here such an occurrence would be attended with much more disastrous results, for with the swarms of tame and wild dogs in the Colonies, and stock of all sorts in such numbers liable to be bitten by dogs if they were to become mad, the consequences would be horrible to contemplate, as all animals are liable to rabies, and they would of course, if affected, bite one another.

The inspection and quarantine of dogs occupy a considerable portion of the Port Inspector's time, for almost every vessel which arrives has dogs on board, and passengers by the Colonial steamers frequently neglect to bring the necessary papers from the Colony from which they came, and thus entail the necessity of inspection and declaration, lest the dogs should be foreign dogs (*i.e.*, dogs from places outside the Australian Colonies), which had been transhipped, and not passed through quarantine.

Foreign dogs, to the nmber of twenty-nine, passed through quarantine during the year.

Disease in Dogs.

Some cases of brain disease in dogs, attended with delerium have been reported as rabies, and in the case of the foreign dogs on board the ship "Tanandera" the Minister, on the advice of the Government Veterinarian, ordered those that had been in contact with the affected dog to be destroyed; he had been killed by order of the captain, who considered him to be rabied, as a prophylactic measure.

Besides these, three of the dogs quarantined became affected with heat apoplexy, and exhibited symptoms in many respects closely resembling rabies. They were for a time quite delirious, but under proper treatment they all recovered.

VIII.—TRAVELLING STOCK.

1. *Trespass on Reserves.*

In twenty-five districts the driftways and reserves for travelling stock are reported to have been frequently, and in twenty-two districts occasionally, trespassed on by neighbouring squatters' and selectors' stock, and in eleven districts they have been free from trespass. Inspectors suggest various remedies, such as fencing in the reserves, appointing caretakers, &c., &c. What, however, is principally wanted (and has been

been repeatedly asked for during the last five or six years) is that the boundaries of the reserves and driftways should be permanently and prominently marked. Until this is done it will be next to impossible for a drover who has not frequently been over a road to know what land he is entitled to feed his stock upon and what not.

Even drovers well acquainted with a road do not know all the reserves upon it, and if they are not fenced off from the alienated land the drovers are unable to run the boundaries, and therefore deterred from making use of the reserves to the extent they would if they knew which was reserved and which alienated land.

Then again, until these boundaries are properly marked Inspectors can neither detect the encroachments, which are in many cases made on them, nor can they with any certainty substantiate the charges for trespass on the driftways and reserves which they have to bring before the Bench. Convictions have no doubt been obtained, and the driftways and reserves are not now trespassed on to the same extent as they were before the Public Watering-place Act of 1884 was passed; but until they are properly marked the object for which they were notified will be attained to only a comparatively small extent.

2. *Grass on Reserves and Driftways.*

In sixteen districts the Inspectors report that there is not sufficient grass on the reserves and driftways in their districts to enable fat stock to reach the market in good condition; in sixteen districts that there is only sufficient in good seasons; and in twenty-six districts that as a rule there is sufficient grass on these reservations.

3. *Ringbarking Driftways and Reserves.*

As the pasture on the driftways and reserves is now very far short of the requirements of the stock traffic, and as the ringbarking of the driftways and reserves used by travelling stock would everywhere largely increase and improve the pasture on them—in some cases to the extent of even 400 and 500 per cent.—it is recommended that this work be undertaken. It would give employment to a large number of the men when out of work, and could be carried out by contract at reasonable rates.

4. *New Roads for Travelling Stock.*

In fifteen districts new roads for travelling stock are required; in forty-two districts no new droving roads are recommended; and in the remaining two districts the Inspectors report that there are no Crown Lands available.

5. *New Reserves for Travelling Stock.*

In twenty-five districts new reserves for travelling stock are required; in thirty districts there are sufficient reserves; and in the balance there are no more Crown Lands available.

6. *Travelling Charges for Stock.*

In sixteen districts travelling charges for stock have been collected on thirty-one separate occasions, the total amount collected being £5,782 2s. 4d., of which £4,361 1s. 6d. has been refunded on appeal to the Boards.

7. *Laws relating to Travelling.*

In fifty-five districts the Inspectors report that the provisions of the Amended Sheep Act relating to travelling stock are working well, and have almost put an end to loafing.

8. *Sheep Travelling for Grass and Water.*

In the case of thirty-four districts the Inspectors report that during the year 5,311,635 sheep passed through, either making for country where they could obtain grass and water, or returning to their own runs. But although this gives some idea of the very large numbers of sheep which had to leave their runs on account of the drought in 1884, and which are here brought under notice principally in returning home, the actual number would not, it is believed, exceed 1,500,000, as the same sheep in several instances had to pass through several districts. Besides these, the Inspectors report 326,106 sheep loafing for sale, but the actual number of these again may, it is thought, be put at 50,000 or 60,000, as sheep of that class usually travel through a great many districts. The same sheep would perhaps be reported by five or six Inspectors.

IX.—REGISTRATION OF HORSE AND CATTLE BRANDS.

1. *Brands registered.*

The number of horse and cattle brands registered up to 31st December, 1885, was 53,488. The number of brands registered during the year 1885 was:—Horse brands (alone), 390; cattle brands (alone), 250; and horse and cattle brands, 934; making a total of 1,564, being an increase of 87 applications on the previous year.

2. *Brands transferred.*

The brands recorded during the year 1885 as transferred were:—Horse brands, 17; cattle brands, 12; horse and cattle brands, 55; total, 84.

3. *Brands cancelled.*

The brands cancelled (horse and cattle) in 1885 were 29.

4. *Address changed.*

The number of addresses of owners changed in 1885 was 46.

5. *Compliance with the Act.*

In fifty-six districts the provisions relating to registration and the other requirements of the Act are reported as being duly carried out, and in the remaining three districts fairly so.

6. *Benefits of the Act.*

In fifty-eight districts the Inspectors, in alluding to the benefits of the Act, report that it prevents duffing, stock stealing, facilitates identification, assists in recovering lost stock, and otherwise is a great convenience and protection to stock-owners.

X.—POUNDS.

1. *Number and Inspection.*

There are 324 pounds in the Colony, some of which are at present closed for want of pound-keepers. The whole of the pounds are inspected periodically by the various Inspectors of Stock. 2.

12

2. *State of Yards.*

Thirty-four of the pound yards are reported to be old, and several require renewing, being unfit for the safe custody of stock, eight are reported as not being up the requirements of the Act, and the remainder are said to be in a fair and good condition.

3. *Keeping and Depasturing Pound Stock.*

The provision made for the proper substenance of impounded stock, according to the reports received, are satisfactory. As a rule pound-keepers have now paddocks for the stock.

4. *Management of Pounds.*

The pound-keepers generally are reported to be performing their duties in a satisfactory manner, and the appointment of Inspectors of Stock as Inspectors of Pounds has had a very beneficial effect.

XI.—NOXIOUS ANIMALS.

1. *The Districts in which the Pastures and Stock Protection Act is in force.*

The Act has been brought into operation in all the districts, fifty-nine in number.

2. *Receipts and Expenditure under the Act.*

The amount of assessment paid by stock-owners during the year 1884 was £49,212 13s. 1d., and the amount expended, £67,485 10s. 4d. The amount of assessment raised by stock-owners in 1885 was £61,754 15s. 4d., and the amount expended was £67,432 1s. 8d., the difference being accounted for by the subsidy granted by the Government to the Boards which raised full rates. Three districts are reported to be in debt to the amount of £414 5s. 4d.

In forty-one districts full rates were levied, in two districts half rates, and in eleven districts various rates, while in four districts no rates whatever were levied.

During the year the bonuses paid by the Boards for scalps ranged as follows:—For kangaroos, from 3d. to 1s. 6d.; wallaby, from 1d. to 1s.; wallaroo, 6d; paddymelon, from 3d. to 1s.; wombats, from 2s. 6d. to 5s.; hares, from 6d. to 2s. 6d.; eagle hawks, 10s.; native dogs, from 10s. to 60s.; pups, 2s. 6d. to 10s.; and wild pigs, 2s.

3. *Estimated Number of Noxious Animals.*

The aggregate of the returns by Inspectors of the estimated numbers of noxious animals in their districts shows that there are supposed to be 2,500,000 kangaroos, 2,300,000 wallabies, and 20,000 native dogs in the Colony.

4. *Increase and Decrease.*

The decrease of noxious animals during the past year has in twenty districts been reported as considerable; in thirty-five districts it is slight to fair; in four districts they are reported as increasing.

5. *Number destroyed.*

The number of kangaroos destroyed during the past year was 855,676; of wallabies, 506,372; of wild pigs, 922; of hares, 5,878; of native dogs, 8,474; and of eagle hawks, 55.

6. *Steps taken for their Destruction.*

In the majority of the districts, hunting with dogs, drives, shooting, and trapping have been adopted with satisfactory results. In several of the districts poison has been used with fair to best results, and only from two districts has it been reported as unsuccessful.

7. *Amendments suggested in the Act.*

It is suggested that the Government should administer the Act, that uniform rates be levied, that all assessments be paid to a general fund at the Treasury, that the rates of bonuses be the same throughout the Colony, that all owners make returns of their stock on a particular day, and that all owners should contribute irrespective of the number of stock.

8. *Losses from Tame and Native Dogs.*

The losses in stock for the past year from the ravages of native dogs are estimated at 63,117 sheep, valued at £25,068, and from tame dogs, 69,745 sheep, valued at £29,658, making the loss from tame and native dogs together £54,726.

Special Inspections.

The Forbes Board, at the suggestion of its chairman, had a special inspection made during the year of the runs in the District as regards the prevalence of noxious animals, and where required has called the attention of the owners to the necessity for more effective work. This course might be followed with advantage by other boards.

XII.—COMMONS.

1. *Number and Extent.*

The number of permanent commons in the Colony is 140, with an average extent of about 1,250 acres each. The number of temporary commons is 161, with an average extent of 2,000 acres each.

2. *Number of Commoners, Stock, &c.*

The average number of commoners to each common is estimated at 130, and the average number of stock kept on each common is 223.

In twenty-three districts the commons are reported to be used for other purposes than that of grazing commoners' stock.

XIII.—GENERAL.

1. *Artificial Grasses.*

In twenty-four districts artificial grasses have been sown during the year to a small extent, in fifteen districts to a large extent, and in remaining districts none; the most successful being lucerne, prairie, and rye.

2. *Number and Division of Runs.*

The number of open or unenclosed runs in the Colony is 1,062; the number enclosed is 10,188; the number partially subdivided is 4,427; and the number properly subdivided is 6,305.

3. *Improvements, Fencing, Dams, Tanks, and Wells.*

The number of miles of fencing throughout the Colony is estimated at 823,612, at an average cost of £49 15s. per mile, amounting to £40,974,697.

The

13

The number of dams used for stock purposes is estimated at 17,791, at an average cost of £99 4s., amounting to £1,765,217. Number of tanks, 21,338, average cost of each, £196 5s.; and the number of wells used is estimated at 2,737, at an average cost of £238 each, amounting to £4,839,796.

Cost of fencing, £40,974,697; cost of dams, £1,765,217; cost of tanks, £4,188,300; cost of wells, £651,495; making a total of £47,579,709, as representing the amount expended by way of improvements, &c.

4. *Noxious Plants and Weeds.*

In forty districts the land is reported as being slightly infested with Bathurst burr; and in twelve to a large extent; in four the land is not infested; and three districts not stated.

In twenty-eight districts the land is slightly infested with trefoil burr; in sixteen districts to a large extent; in twelve districts the land is not infested; and from three districts no return is given.

In thirty-three districts variegated thistle is reported to a slight extent; in fifteen to a considerable extent; ten districts are reported as free from it; one, no return.

In twenty-seven districts black thistle is reported to a slight extent; in sixteen, to a great extent; ten districts are reported to be free from it; and from three districts no return is given.

Other noxious weeds are reported to a slight extent from twenty-six districts; to a great extent from twenty-one districts; ten districts are said to be free from them.

Darling pea reported in five districts, and *Euphorbia Drummondii* in three districts.

Prickly-pear is reported as existing to some extent in three districts, largely in two districts, and slightly in one district.

5. *Cost of Clearing Commons, Reserves, &c., of Weeds.*

The cost of clearing the permanent commons of noxious weeds throughout the Colony is estimated at £23,782; the temporary commons, £20,359; the police paddocks, £4,977; the travelling stock reserves, £47,210; and the droving roads at £39,418; amounting in all to (say) £135,746.

6. *Examination of intending Applicants for appointment of Inspector.*

During the year four examinations were held with the following result:—

Date of Examination.	No. of Candidates.	Names of Successful Candidates.	Nature of Certificate issued.
1885.			
January 21	10	Samuel Durham, M.R.C.V.S.	1st Class.
		Mark J. C. Tully	1st Class.
		P. Life Smith	2nd Class.
		G. S. Smith	2nd Class.
February 24	4	John Fraser	1st Class.
		Charles Lyne	2nd Class.
		E. G. Finch	2nd Class.
April 10	1	.....	Failed to pass.
September 29	7	C. J. Vyner, M.R.C.V.S.	2nd Class.
		R. W. Dawson	2nd Class.

From the above it will be seen that twenty-two candidates were examined last year, three receiving first-class and six second-class certificates.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

APPENDIX A.

Improvement of the Breed of Horses.

I have long been of the opinion that a great deal of good might be done in this matter, if only legislation could be brought to bear on it, and there is no reason why it should not, if only some member of Parliament, with the welfare of the horse at heart, would seriously take it up. "Stockman" has given the outline of a bill which, with a little alteration, might be made to suit all parties, while if the thing is to work beneficially, I would go further than "Stockman" and compel the registration of all stallions, and the castration of all those that were found to be unfit for stud purposes. I would suggest that until our agricultural societies are federated (as I believe they are in Victoria) the jury could be nominated by the Council of the Agricultural Society of New South Wales, on the understanding that it took the opinions of the committees of the other societies throughout the Colony before making the nomination.

I am, &c.,
A. A. DANGAR.

It has been frequently suggested that an Act should be passed, compelling the owners of entire horses used in the stud to register them, and to pay a fee of £5 or £10 for the registration, with the view to the improvement of our horse stock.

I believe such a measure would be highly beneficial, and by way of improving upon the suggestion and bringing it to a practical issue, I would propose that a bill containing some such provisions as the following should be passed:—

1. That every entire horse used in the stud be registered with the Inspector of Stock for the district in which he is kept, the fee for registration being (say) £5.

2. That the moneys received from registration fees be expended in carrying out the Act, and in the payment of prizes to be awarded to deserving horses.

3. That a jury consisting of two experienced judges of horses and a properly qualified veterinary surgeon, nominated by the Council of the Agricultural Society of New South Wales and appointed by the Governor, attend during the year at (say) twenty of the principal agricultural shows, most conveniently situated, for the purpose of examining and reporting on the entires presented for their inspection.

4. That the jury be paid at the rate of (say) £2 per diem, exclusive of £1 per day for travelling expenses; but, where any of the jury acts as a judge at a show, the society employing him should pay his travelling expenses.

5. That owners be invited to submit their horses for inspection to the jury at one or other of the shows at which they attend.

6. That the entires considered by the jury fit for stud purposes receive certificates to that effect, of three grades, according to the merit of the horse.

7. That such horses as the jury consider deserving be awarded prizes from the moneys collected as registration fees.

14

8. That entires considered unfit to be in the stud or unsound, be refused certificates.

The advantages arising from such a measure as this would, among others, be:—

1. That the payment of the registration fee, although it is a low one, would prevent a good many owners from keeping the worthless entires which are now to be met with in every other district of the Colony.

2. It would very soon be the case that no one would patronize a horse for which his owner did not hold the certificate of the jury, and in this way owners would indirectly be obliged to present their horses for inspection, thereby securing the object aimed at by the Act without resorting to what might be termed arbitrary legislation were the inspection made directly compulsory.

3. The societies at whose shows the jury attended in carrying out their inspections would be certain to engage them as judges in all classes in the horse section, and the engagement of paid judges in one section would soon lead to their employment in all the important sections, thereby getting rid of the greatest difficulty in connection with shows, the securing the services of properly qualified disinterested judges.

Then, again, if the judges were paid, it would not be unreasonable to ask from them full reports on the classes they judged, and these reports would be of very great value.

As to the funds for carrying out such a measure, I would imagine that there are at least some 300 entires in the stud in the Colony to be registered, and these, with a registration fee of only £5 each, would bring in (say) £1,500. Of this sum £800 would be required to meet the expenses of working the Act, which would leave (say) £700 for prizes of sufficient amount to induce the owners of the best horses (prizes should only be given for the very best and most useful) to present them for inspection, if the jury's certificate were not of itself sufficient inducement.

I am, &c.,

"STOCKMAN."

APPENDIX B.

Annual Sheep Sales.

The following lots of sheep, bred by the several New South Wales, Queensland, Victorian, Tasmanian, South Australian, and American owners, were disposed of at the annual stud sales held in July last:—

Names of Breeders.	Address.	Number of Rams.	Number of Ewes.	Total.	
				Rams.	Ewes.
Sold by Messrs. Raleigh, Aitken, & Co., on account of					
New South Wales.					
Thomas Armstrong, Esq.	Noorong, Deniliquin	14		14	
Victoria.					
George Cumming, Esq.	Mt. Violet, Darlington	18			
William Lewis, Esq.	Stoneleigh, Beaufort	10	19		
Messrs. John L. Currie & Co.	Larra, Derrinallum	10			
Charles Gray	Nareeb Nareeb	6	18		
Messrs. Thos. Russell & Co.	Barunah Plains, Hesse	12	11		
,, Bailey & Wynnie	Perrmallum, Darlington	20			
,, Wm. Cumming & Son	Mt. Fyans, Darlington	20			
Chas. Ayrey, Esq.	Warramooke, Glenorchy	25			
Sir Saml. Wilson	Ercildoune, Burrumbeet	16			
Sir Saml. Wilson	Mt. Bute	6	14		
Hon. H. H. Wettenhall	Carr's Plains, Glenorchy	16			
Colonel Buchanan	Titanga, Lismore	10	6	169	68
South Australia.					
J. H. Angus, Esq.	Hill River	20		20	
Sold by Messrs. Mort & Co., on account of					
New South Wales.					
A. L. Faithful, Esq.	Springfield	12			
Stephen White, Esq.	Merribindinyah	8	8		
H. R. F. Hume, Esq.	Everton	2	1		
Hon. G. H. Cox	Burrundulla	5			
G. H. F. Cox, Esq.	Binawee	2			
Messrs. J. F. & H. White	Belltrees	4			
Richard Rouse, Esq	Guntawang	19		52	9
Queensland.					
Messrs G. Clark & Co.	Hendon	9	3		
,, Marshall & Slade	Glengallan	16	4	25	7
South Australia.					
Hon. G. C. Hawker	Bungarec	16		16	
Tasmania.					
James Gibson, Esq.	Bellevue, Epping	120	8		
David Taylor, Esq.	St. Johnston, Campbelltown	28	8		
George Parramore, Esq.	Wetmore, Ross	33			
Thomas Parramore, Esq.	Beaufront, Ross	38	10		
Robert Jones, Esq.	Reccarton, Campbelltown	90	14		
W. A. Kermode, Esq.	Morva Vale, Ross	40			
J. B. Gibson, Esq	Perth	41	6		
G. W. Keach	Chiswick, Ross	27	21		
Chas. Field, Esq.	Woodfield, Cressy	17	8		
R. D. Finlay, Esq	Douglas Park, Campbelltown	35	7		
W. H. Bennett, Esq.	Bloomfield, Ross	7	10		
W. Percy Archer, Esq.	Panshanger, Longford	31	12		
W. H. Gibson, Esq.	Fairfield, Epping	47			
W. Gatenby, Esq.	Woodburn, Cressy	32	12		
James Taylor, Esq.	Stewarton, Epping	6			
D. M'Kinnon, Esq.	Dalness, Evandale	31			
James Cox, Esq.	Clarendon, ,,	38			
E. Dowling, Esq.	Quorn Hall, Campbelltown	15			
L. Henry Smith, Esq.	Harland Rise, Evandale	10	20

APPENDIX C.

ANTHRAX.

Splenic Apoplexy (Cumberland Disease).

Edward Stanley, F.R.C.V.S., Government Veterinarian to the Stock Branch, to Alexander Bruce, Esq., Chief Inspector of Stock.

Stock Branch Office, Department of Mines, Sydney, 17 December, 1885.

I HAVE the honor to report the result of my examination of the sheep reported to be dying from poison weeds in Lachlan district, and so far as my inquiry went, the report is unfounded.

The sheep are dying from anthrax (Cumberland disease). All my experiments, observations, and inquiries confirm the conclusions arrived at by my predecessor, the late Veterinary-Surgeon Willows, in his very able report (on the same district), dated 13th April, 1883.

The poison plants, *Euphorbia Drummondii*, I found distributed over a large extent of country on sand hills and plains, a very few plants here and there, but never in any quantity; it was quite as plentiful in paddocks where no losses had occurred; there was no direct evidence whatever to prove the theory that it was the cause of the mortality in the neighbourhood I visited. I noticed in many places, on swampy ground, large quantities of a plant that I have since learnt to be named *Myrugyne minuta*, probably from seeds left by floods, it is untouched at the present time by sheep or horses, being very strongly scented may explain their avoiding it, and there was more food than stock, and although said to obtain poisonous properties, I see no reason to attribute the losses to it. Unless pressed by starvation, animals instinctively avoid noxious weeds.

Having been unable to obtain reliable evidence of plant-poisoning, I proceeded to investigate the disease. I made several *post-mortem* examinations, all bearing the unmistakable pathological appearances of anthrax, and the microscope revealed the specific bacteria in the blood, a parasite that develops, multiplies, and obtains its maturity at the expense of the blood of sheep.

It is well known anthrax is propagated by the bacteria escaping from an infected animal with the excretions and nasal discharge tainting the grass, and in that manner enters the stomach of a healthy sheep, and, unless that sheep's blood is in some manner (at present imperfectly understood) able to withstand the germination of the bacteria, the sheep so infected will serve for the maintenance of the bacteria for about forty hours after its introduction, when death ensues.

To prove practically whether bacteria were present, six sheep shut in a pen were fed on lucerne. I took a little blood from one that had died with anthrax, diluted it with water, and drenched the six sheep with it. They immediately continued eating the lucerne, and appeared to be in good health and were chewing their cuds thirty hours after drenching, but ten hours later five of the six lay dead, every one of them undoubtedly having anthrax. No vegetable poison could possibly have produced such results.

I would suggest the following preventive measures:—

(1.) Move the sheep from the infected to healthy runs, and the fatality will cease in five or six days; and, as certain seasons favour the development of the bacteria, arrangements for removal should be made before the disease established itself.

(2.) Burn every carcase completely, and as speedily as possible after death.

(3.) Burn the camps, fences, and earth which are impregnated with the bacterial germs, and bush the camps to make the returning stock select fresh camping ground.

(4.) Wherever practicable burn the whole of the infected paddocks.

As it is very evident some paddocks teem with germs, and thousands of sheep consume myriads of them every day, there must be some condition of their blood which resists the development of the bacteria.

Such a condition is said to be obtained by Pasteur's inoculation with attenuated virus, and I believe there are certain medicinal agents which may safely be introduced into a living animal which will render him proof against the attack of this fatal parasite, but much careful scientific investigation will be necessary before trustworthy results can be expected.

I need not dilate on the importance of this subject, and conclude my report with the suggestion that the Government offer a reward sufficiently substantial to induce scientists to solve the problem, by what means sheep may be protected from the disease anthrax, colonially known as "Cumberland disease."

I have, &c.,

EDWARD STANLEY,

Inspector of Stock.

Minute Paper.—Sheep Diseases, Lachlan District.

Department of Mines, Stock Branch, Sydney, 24 December, 1885.

MEMO.—There is no doubt that the cause of the death of the sheep here reported as investigated by Mr. Government Veterinarian Stanley was Cumberland disease (splenic apoplexy), and I regret to say that the losses of stock through this disease have during the present year been heavy in several parts of the Colony.

It may be that some of the deaths which have been reported have arisen through the stock feeding on poisonous plants, and steps are being taken to settle the question how far the plants suspected of being poisonous are so by feeding sheep upon them.

It will be noticed that Mr. Stanley, in order to satisfy himself as to the true nature of this disease, besides examining the blood of the sheep under the microscope, drenched six sheep with some of the blood diluted with water, with the result that in the course of forty hours five of them died, confirming his own opinion that the disease was Cumberland, and also establishing the fact that the food is at least one vehicle by which the germs of the disease are conveyed to healthy stock.

Mr. Stanley offers some practical suggestions for dealing with the disease which should, I think, be made public for the benefit of stock-owners; but the movement of sheep affected with Cumberland disease should be confined to fresh ground on the owner's own run.

Mr. Stanley also points out the expediency of trying experiments for the prevention of the disease, *i.e.* (1). Inoculation with cultivated or modified virus, as practised by Pasteur; and (2.) Medical agents administered to the sheep which would render them proof against an attack of the disease.

The second preventive could at once be tried with such medicines as Mr. Stanley thinks there is any prospect of being successful, in a thorough and systematic manner. But with regard to the first preventive, inoculation, I believe sufficient information has not yet been obtained in the Colonies to admit of its being properly tested.

I would suggest, therefore, that the necessary information be obtained from those countries in which inoculation has been tried experimentally or practically for anthrax; and if that course be approved, the Hon. the Colonial Secretary might, perhaps, be moved to obtain through the Agent-General the required information from England.

The other countries from which information of value is likely to be got are France, Italy, Germany, and the United States of America, and considerable time would be saved if it could be so obtained through the resident consuls of these countries instead of through the Colonial Office.

The question of offering, as suggested by Mr. Stanley, a reward for the discovery of a preventive for Cumberland disease should, I think, be deferred until the required information is obtained from the countries mentioned and considered by the Government.

ALEX. BRUCE,

To The Under Secretary for Mines. Chief Inspector of Stock.

APPENDIX D.

ANÆMIA IN SHEEP IN THE URANA DISTRICT.

Department of Mines, Stock Branch.

SEVERAL of the sheep-owners in the Urana district having reported that they were losing valuable stud rams from an unknown disease, the principal symptoms of which were swelling of the face, nose, and throat, Mr. Government Veterinarian Stanley was directed to visit the district and report on the ailment.

Mr. Stanley has made the necessary investigation, and considers the disease to be what is termed "Anæmia" (poverty of the blood), and his report, which is herewith, explains, I think satisfactorily, the primary cause of the ailment—*i.e.*, the impoverished nature of the pasturage on which the rams have been kept, and suggests a remedy.

The ram paddocks in which the young rams are depastured, have, it would seem, in many cases become what is termed "sheep sick," that is, the paddocks have not for years had such a spell as to give the good grasses, much less the saline and alterative herbs and plants, a chance of growing. With the rams continually in these paddocks, which are of comparatively limited area, no sooner have the good and nutritious grasses and plants shown above ground than they have been eaten off, and, only the coarse and inferior having been allowed to feed, the pasture is comparatively devoid of nutriment, and especially wanting in salt. I believe, too, that the evil here pointed at has been aggravated during the by-past summer through the rain coming late in the season, and the pasture, as a consequence, had less substance, and was less nutritious, than if there had been good winter rains.

If this be the true explanation—and there is little doubt that it is—owners by adopting the suggestions offered by Mr. Stanley, will be able to prevent, in a great measure at least, a recurrence of the disease; but, to provide a permanent and inexpensive remedy, I would suggest that fresh paddocks be found for the rams, and that cattle be kept for, say, one or two seasons in the ram paddocks. On nearly all the sheep stations there are small herds of cattle which could be put into these paddocks, and where there are not, store cattle could be brought and put on. This would give the ram paddocks a spell without losing a return from the grass.

I have elsewhere called the attention of sheep-owners to the expediency of stocking their runs to a small extent—say one-fifth or one-sixth—with cattle, and systematically spelling their paddocks in order to give the best grasses and plants a chance of seeding and renewing the pasture by keeping the cattle on them in rotation; and I think the outbreak of this disease shows the necessity for the adoption of such a system; for although the deterioration of the pasture is not so discernible on the run generally it is not the less surely going on, especially where there has been overstocking. There is, too, now, I am sorry to say, greater inducements to adopt such a course, in as far as the return from cattle is likely in future, through the fall in the price of wool, to be nearer that from sheep than in bygone years.

ALEX. BRUCE,

The Under Secretary for Mines. Chief Inspector of Stock.

Edward

17

Edward Stanley, Government Veterinarian, to Alex. Bruce, Esq., Chief Inspector of Stock.

Stock Branch Office, Department of Mines.

Sir,

I have the honor of reporting, for your information, that I visited the stations of Coonong and Bundure *en route* to Yanko and Coree, prosecuting inquiries into the fatality among the sheep in Urana and the neighbouring district. From information I collected from various sources, I am able to give the following :—

History of the Disease.

For the last three or four years many valuable young stud and flock rams have been dying on several runs, from a mysterious disease, and the mortality has been steadily increasing. This year the losses are estimated at upwards of a thousand rams.

Special features of the Disease.

Only young rams are affected. Both ewe and wether hoggets appear to be exempt, although put into the same paddocks after rams have died in them.

The disease is most prevalent from October to March, becoming less frequent and disappearing as autumn advances.

Most deaths occur between the ages of five and nine months.

The disease is reported as being identical on several stations widely apart, having no connection whatever with each other, the rams being the descendants of different distinct breeds, and are not blood relatives.

The symptoms observed in most cases are an edematous swelling diffused over the face, nose, jaws, and throat, in some cases closing the eyes, nostrils, and mouth to such an extent that suffocation kills the sufferers. In others the symptoms are loss of energy and evident appearance of indisposition, which usually lasts two or three days, until the animal is seen lying dead.

Some few animals are believed to have recovered.

Reports of the symptoms and *post-mortems* very closely resemble the disease anthrax, *i.e.*, Cumberland, swelling of the carcase, frothy discharge, sometimes blood stained, from the mouth and nose, and gelatinous and blood-stained effusions under the skin.

In a four-tooth ram I found the disease in a chronic form, showing emaciation associated with swollen throat, face, and jaws. There were no symptoms of organic disease that could be detected in the living animal. This was killed for examination.

On account of the decline in the mortality at this season of the year, I was only able to make three *post-mortem* examinations of affected animals. The appearances were similar, although in three different stages, all being typical of the disease.

The pathological process are characterized by gelatinous effusions and the absence of inflammatory action, with important alteration in the blood, which produce the condition known as anæmia—poverty of the blood.

The microscope revealed the presence of bacilli, and at once raised the question of anthracis, it being very difficult, from the extreme minuteness of these parasites, without the aid of most powerful objectives and elaborate careful preparation, to determine their true character. I therefore had recourse to several experimental inoculations without being able to transmit the disease. Septic infection resulted in one case, terminating fatally, and this was verified by the *post-mortem* appearances.

Having satisfied myself that the diseased tissue was the blood, and that it was not of a contagious nature, and by experiments that it was not caused by poison weed I proceeded to investigate the sources of the blood supply, namely the food, water, and general management of the animals.

The character of the country is extensive red plains, with the watercourses of the Yanko and Billabong, clumps of box and gum trees, and myall or borec, with salt-bushes and some sand hills and pine ridges.

The water supply is chiefly from tanks supplied by rainfall and some creeks. Although this water is not free from impurities, on the whole it is of good quality.

The herbage on the plains to which the rams are restricted is composed of native grasses, the varieties known as white or silver umbrella, corkscrew, wild barley, oat, and trefoil.

Young succulent grass is plentiful in spring, but its nutritive value is then at its lowest standard ; it is greatest when mature and seed bearing.

The last three years have been unusually dry, consequently fatal to the growth of many weeds that go to make up pasturage for sheep, so that the herbage is deteriorated in its character by adverse seasons and over stocking. I noticed the entire absence of anything green in the ram paddocks ; nothing was left but the tall dry yellow-brown grasses, with seeds from clover burr on the ground.

I came to the conclusion that the ram paddocks were wanting in nutritive food, especially deficient in some essential elements necessary for digestion and assimilation of the grasses.

This was borne out by the rams being in poor condition, although there was apparently abundance of feed, such as it is, and plenty of water.

I observed the entire absence of salt-bush and saline plants, these being kept so closely eaten off by the sheep as to appear to be exterminated in their paddocks, whereas on the other side the fence, several varieties from dwarf saline weeds to high salt-bush flourish, these paddocks being reserved exclusively for horses or cattle. These animals consume salt, but not so extensively as sheep ; for the latter, salt is an important article of diet, as it materially assists nutrition, acting an important part in digestion and assimilation of the food, and the fact of their runs being so free from saline herbage would indicate that they require an artificial supply of this important adjunct to their daily food.

Rock salt has been provided on one run and the sheep have freely honeycombed it, showing that the want of salt is felt by them, and it is proving beneficial.

In every *post-mortem* examination I made, either of diseased or healthy sheep, I found a few ntestinal worms ; these would be destroyed by salt. These parasites in some seasons and localities often prove fatal, especially in young sheep.

The reason the disease is confined to young rams appears to be because they are more limited in their pasture, being kept year after year in the home paddocks for more careful supervision ; hence these ram paddocks have become exhausted in the production of nutritive food.

Male lambs are weaned about four months old, and two or three months later they are rams ; in the natural course of things they rapidly develop all the attributes of the male sex—robust, large frames, with huge horns, and generative apparatus, as well as the growth of wool. Such rapid growth and development

can

18

can only be supported by a highly nutritious diet, both nitrogenous material and mineral salts being appropriated to build up their organism.

It is well known that young rams are (compared with other animals) delicate and less able to bear hardship, disease, or surgical operations. Hoggets, being less valuable, are sent away to rougher country, often into timber paddocks or forests, where weeds, shrubs, and bushes afford abundant variety of feed, and more extended choice, hence they remain in good health on the same runs that their brothers who are being more carefully tended actually die from want of the various elements in their food necessary to their existence.

The cases of disease that I have been able to see, being limited to three, scarcely warrant my giving an opinion as to the disease and its cause, but presuming my theory, founded more on inquiry than on research, is correct, then remedial measures will naturally suggest themselves.

Change of pasture alone should save the lambs.

Spell or rest the ram paddocks for a year.

Put rams on country where salt-bush is growing, such as horse or cattle paddocks, give a liberal supply of salt in troughs roofed to shelter from rain. Crystalized, known as Liverpool-salt, is preferable to rock salt, because sheep can eat it freely without waste, and without loss of saliva from their mouths, which is the great drawback when licking rock salt, and is also injurious, as all their saliva is wanted in their food during the process of rumination and digestion.

Salt requires to be given with discretion, as sheep craving for it may eat in poisonous quantities and die. Half a hundredweight of salt per thousand sheep, given about every ten or fourteen days, is usually considered to be sufficient.

I also recommend the use of artificial feeding where it is desirable to bring rams to early maturity, by giving liberal food. It must always be remembered that the soil is constantly being exhausted, going off as flesh, wool, bone, and horn, and is never replenished by manures, hence chemical elements, such as earthy phosphates, lime, soda, and potash are likely to be exhausted. These are best supplied by giving bran or pollard with chaff in troughs for the three months after weaning, and however impracticable it may read, if a thousand rams can be saved annually to the country by artificial means, the thoughtful will give it due consideration.

I am glad of the opportunity of being able to point out what I believe will prevent the recurrence of a disease which appears to be within the control of those most interested.

I have, &c.,
EDWD. STANLEY, F.R.C.V.S.,
Government Veterinarian.

Since writing the foregoing I have come across an excellent little pamphlet, by W. A. Dixon, F.I.C., F.C.S., Technical College, School of Arts, Sydney, giving an analysis of salt-bush, &c., and compares them with European fodder plants. In his introductory remarks he says :—"For many reasons foreign to the purpose of this paper, it has been too much the interest of every one to let the sheep and cattle of to-day eat the best there is, even if they destroy it off the face of the earth, without regard to what those of to-morrow will do. It seems reasonable to suppose that in our peculiar climate, subject to periods of continued drought, and having in many cases soils peculiarly saline, the plants which have withstood these influences for ages past would be more reliable than others developed under different conditions of soil and climate."

The great differences between the salt-bushes and European fodders is thus shown conspicuously, and the former are placed entirely by themselves; whilst the cotton-bush, as far as the points considered are concerned, ranges itself with the latter.

Ratios of digestible matter of ash, potash, and salt.

	Digestible.	Ash.	Potash.	Salt.

5. ———	56·14	100	249
6. Blue-bush	54·71	100	174
7. Old man salt-bush	61·48	100	211
8. Cotton-bush	68·09	100	641
Meadow hay	62·36	100	478
Red clover	64·13	100	284
Lucerne	60·95	100	256
Oaten hay	64·38	100	482

The

19

The old-man salt-bush ranks first in nutritive value and contains the highest percentage of common salt, the next being the dwarf salt-bush. It will be seen that the cotton-bush is the most fattening and approaches the nearest in chemical constituents to the fodder plants of Europe, and the fact of its keeping green during the drought makes it a most valuable food. The importance of the preservation of the natural pasturage will be apparent to all, and I commend the pamphlet as pointing out the value of various varieties that should have special care.

EDWARD STANLEY.

APPENDIX E.

Euphorbia Drummondii, Spurge Wort.

It having been reported by some of the Inspectors that this plant was of a poisonous nature, and had caused the death of large numbers of sheep, Mr. Government Veterinary Stanley was instructed to investigate the correctness of these reports. He, therefore, took the opportunity while in the Urana district, where the plant is very generally distributed, to carry out his instructions, and he has, I think, done so in a thorough and exhaustive manner, as detailed in his report, which is herewith.

From Mr. Stanley's report it would seem as was suspected:—1. That, although the statements that large numbers of stock had been lost through eating this plant are correct, it is not poisonous in the ordinary sense of the term. 2. That the deaths have occurred among the sheep from hoven, the same as they do at times through stock eating green lucern, clover, or any other succulent food; and (3) that they have done so almost solely where starved. Travelling sheep had engorged themselves with the plant in a succulent state, and then drunk heavily of water.

Although scarcely necessary, it might perhaps have been more convincing to those who consider the plant poisonous had the experiments actually demonstrated that deaths arise from hoven; but Mr. Stanley has proved it to be a non-poisonous plant, which ought to be sufficient; and, if any deaths should again occur among sheep through eating it, owners and inspectors will now know what to look for, and be able to recognise the symptoms, and thus finally settle the question.

The lessons which I think Mr. Stanley's report teaches—and they are of considerable value—are that the drovers should be careful when the plant is plentiful, and especially when it is succulent, either to water their sheep before they are allowed to feed, or to keep them away from water for two or three hours afterwards, but in no case should the sheep be allowed to eat much of the plant by itself.

ALEX. BRUCE,
Chief Inspector of Stock.

The Under Secretary for Mines.

Report on Investigation of the Weed Euphorbia Drummondii.

Edward Stanley, F.R.C.,V.S., Government Veterinarian., to Alexander Bruce, Esq., Chief Inspector of Stock.

Many specimens of this weed have reached the stock officer from various sources, and to it has been attributed much loss amongst sheep from its supposed poisonous properties.

On inquiry I failed to find any one acquainted with the symptoms of illness produced by the poison, or with the *post-mortem* lesions.

I found the weed freely distributed over a very wide area in the Lachlan and Riverina, and noticed it cropped short, unless it was protected from sheep by a fence, as in a garden, on the railway, in a horse paddock, &c.; in such situations the plant is conspicuous, being very hardy in drought, and in slight rain grows rapidly.

Many observers had seen sheep eat it, apparently with impunity. In two or three instances where sheep had died mysteriously a sheep had been fed on the weed purposely, in every instance without ill effects.

In Urana a large patch of the weed grows on the stock route, and no other herbage is seen for miles. Mr. Brett informed me that last October, just after rain, a drover arrived at this patch with 3,000 sheep that had been starving for three or four days previously; they stopped and ate up the patch of weed, and walked a mile or so on to Urana common to water and camp; in about three hours about 1,500 were lying ill over a space of ground, and 220 died before morning. Symptons: Distended stomach, staggering gait, frothy discharge nose and mouth, unable to rise when down.

The 1,280 sufferers that survived continued to travel next day with the others that were unaffected.

This history is valuable, because the number that died was small, and the recoveries being so large and so quick remove all suspicion of poison.

I attribute the deaths to indigestion and flatulency. Exhausted animals suddenly engorged with food and water, no matter whether from this weed or any other succulent food, would be just as likely to die.

This occurred on the Jerilderie stock route, 2 miles from Urana. Many thousands of sheep have travelled the same road without ill effects.

An opportunity having occurred of testing the effects of this weed, I determined on a few simple experiments. It may be well to mention that for the past six months many sheep have died on different runs in these districts, and during this time the weed has been in much the same condition as it is to-day; it appears to flower and seed at all times, but is more tender and milky after rain than now; after long drought and hot weather, it still thrives, but is smaller and harder in the stems; but still sheep die, although less frequently than in the spring. So that it would be well to experiment again in October or November, if any doubt its poisonous properties at other seasons.

I believe it to be a nutritive herb or plant, and certainly free from any poisonous properties whatever; in its present condition it has a slightly bitter taste, like a dandelion or fresh-cut lettuce stem.

It must be remembered that several nutritious plants and different articles of food belonging to an order or class of poisons are, nevertheless, indispensable to the digestive process of animal life. To the courtesy of Mr. Carse, Yanko Station, I am indebted for the supply of sheep from a healthy flock in which no disease had occurred, and for the weed known as Spurge Wort, or better known as *Euphorbia Drummondii*, growing plentifully in the horse paddock, and for assistance of every kind that I could possibly require for carrying out these experiments, which were greatly facilitated by my obliging assistant, Mr. Inspector Brett.

We put up seven sheep of various ages, and I carefully examined the conditions and health of each, the skin, the conjunctiva, age, sex, pulse, temperature taken by thermometer introduced three minutes, blood examined under microscope for baccilli, noting the state of their evacuations. In

20

In most of the subjects the respirations were panting, and the heart's action too excited to be of value. The weather was hot and dry, temperature ranging from 80 degrees to 97 degrees in the shade.

The weed was gathered fresh every day, and given to the sheep morning and evening by three methods :—1st. In its natural state. 2nd. Chopped into small pieces and moistened with water, it was administered with the thumb and fingers put on to the roof of the tongue, was slightly chewed, and swallowed, being followed by the little water left in the pan ; none was wasted. A pound was found to be too large a feed at once, and a half-pound night and morning was taken with ease and comfort, and evidently relished. It has an agreeable odour, like new hay, and a slightly bitter taste. 3rd. Made into a decoction like tea, by steeping 2lb. of weed in one gallon of boiling water, and covering it up one to two hours, drain off, and use when cool ; it has a brownish colour, fragrant smell, and by no means unpleasant taste.

Those drenched fed with less relish than those starved into taking the weed, but showed no nausea or lassitude.

It may be observed that over (fifty-six) 56lbs. of the weed were procured fresh, and used by weight. This was reduced by evaporation and some dirt. The bulk of this weed was consumed by six sheep in six days without the slightest indication of medicinal effect; their spirits never flagged, their general appearance was of perfect health, and their evacuations were normal in quantity, colour, and consistency throughout the experiments.

Paddock sheep do not take kindly to pen-feeding; hence to save time resort was had to hand-feeding and drenching. Each sheep occupied a separate pen. No food was given during the experiments, excepting a handful of salt-bush and chaff. The first time chopped weed was given in troughs to tempt them to eat.

Water to drink was constantly provided in pans, excepting while drenching with the decoction.

The crossbred ewe dropped a male lamb fully developed, and cleansed at once (not abortion). The lamb is three days old, and both are perfectly robust and healthy, the ewe feeding ravenously, and giving plenty of milk.

I made an extract and also a tincture for further analysis in the laboratory, and have handed them to Professor Watt, with a bundle of dry weed. It is well known that sheep after a drought or from enforced hunger, will eat greedily, engorging themselves, of several young succulent plants, such as clover, lucern, growing wheat, and possibly also of this weed, for it grows up very quickly after rain, causing indigestion, fermenting in the stomach, distending the abdomen, producing mechanical pressure on the vital organs, and death from suffocation. Such deaths are not due to poison, but are purely accidental, mechanical and not toxic.

From the experiments made, I can only conclude that the weed is not the cause of the many deaths that have occurred throughout these districts—that, at least, at this season of the year, it is perfectly harmless—and the absence of any medicinal effects from the use of such large quantities makes me doubt its possessing any poisonous properties whatever ; on the contrary, I found it a nutritious weed, and probably of more value than is imagined, being widely distributed, so hardy, and drought-resisting.

I have, &c.,
EDWARD STANLEY, F.R.C.V.S.,
Government Veterinarian.

Sydney : Thomas Richards, Government Printer.—1880.

1885–6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

AUSTRALASIAN STOCK CONFERENCE.

(REPORT OF.)

Ordered by the Legislative Assembly to be printed, 14 *October*, 1886.

[*Laid upon the Table of the Honorable the Legislative Assembly of New South Wales by the Honorable the Minister for Mines, a copy of the Report of the Conference of Chief Inspector of Stock, Veterinary Surgeons, and Stock Breeders of the Australasian Colonies held in Sydney in September and October*, 1886.]

CONFERENCE of Chief Inspectors of Stock, Veterinary Surgeons, and Stock Breeders, of the Australasian Colonies, held in Sydney in September and October, 1886.

THE Conference commenced its sittings on the 27th of September, and concluded its labours on the 8th of October.

It was called together by the Hon. the Minister for Mines, with the view of assimilating the the regulations in force in the Colonies for the prevention of diseases in stock.

The following representatives were present:—*New South Wales:* Messrs. A. Bruce, Chief Inspector of Stock; R. G. Higgins, Stock Breeder; E. Stanley, F.R.C.V.S., Government Veterinarian. *Victoria:* Mr. E. M. Curr, Chief Inspector of Stock. *Queensland:* Mr. P. R. Gordon, Chief Inspector of Stock; Hon. H. C. Wood, M.L.C., Stock Breeder. *Tasmania:* Mr. T. A. Tabart, Chief Inspector of Stock; Mr. A. Park, M.R.C.V.S., Government Veterinarian; Mr. J. Meredith, Stock Breeder. *New Zealand:* Hon. W. S. Peter, M.L.C., Mr. J. D. Lance, M.H.R., Mr. J. M'Kenzie, M.H.R., Stock Breeders; Mr. G. S. Cooper, Under Secretary, Wellington. *South Australia:* Mr. C. J. Valentine, Chief Inspector of Sheep; Mr. J. Bagot, M.P., Stock Breeder.

The following is a copy of the circular letter, dated 30th July, by which the Conference was called together:—

"Sir, Colonial Secretary's Office, Sydney, 30th July, 1886.

"Referring to my letter of the 8th February last, in which attention was invited to the desirability of assimilating the regulations in force in all the Colonies relating to sea-borne sheep, I have now the honor, at the instance of my colleague the Secretary for Mines, to enclose, for the consideration of your Government, a copy of a minute by the Chief Inspector of Stock for this Colony, with reference to the holding of a Conference in Sydney for the purpose above mentioned, and to suggest that each Colony be represented at such Conference by its Chief Inspector of Stock, and two gentlemen connected with stock breeding."

The Conference was opened by the Minister for Mines, who pointed out the vast interests with which the Conference were about to deal. He said that the value of horses, cattle, and sheep, in the Colonies was estimated at £78,994,871, and the income therefrom £33,669,973. Taking the capital value of land with improvements and plant and the capital value of stock, the total was £359,000,000.

The Minister having declared the meeting opened, withdrew, and Mr. A. Bruce was appointed Chairman.

Resolutions on the following subjects were agreed to:—

1. Treatment of the different diseases in animals.
2. Regulations relating to the introduction of Australian animals—(1) by sea, (2) by land.
3. Regulations with respect to the introduction of foreign animals, *i.e.*, animals from places outside the Australasian Colonies.
4. The collection and publication of information with respect to diseases in animals.
5. Regulations in regard to the travelling, movement, or conveyance of animals.
6. The destruction of noxious animals.
7. The destruction of weeds and noxious plants.
8. The branding and marking of animals.
9. Any other subject which may be suggested and agreed to by the members of the Conference, connected with the object for which it is convened.

The resolutions passed by the Conference will be found appended to this Report. Its proceedings will shortly be printed, together with a report, taken by a shorthand writer, of all that took place on each sitting day; and copies of the proceedings and report will be forwarded to the Representatives of the several Colonies, with the view to their being submitted to their respective Governments.

ALEX. BRUCE,
Chairman.

RESOLUTIONS PASSED BY THE CONFERENCE.

1. *Preliminary.*

1. That each Colony have three votes.
2. That the following be the order of business:—
   (1.) The consideration of Regulations with respect to diseases.
   (2.) Regulations relating to the introduction of Australian animals—(1) by sea, (2) by land.
   (3.) Regulations with respect to the introduction of Foreign animals.
   (4.) The collection and publication of information with respect to diseases in animals.
   (5.) Regulations in regard to the travelling, movement, or conveyance of animals.
   (6.) The destruction of noxious animals.
   (7.) The destruction of weeds and noxious plants.
   (8.) The branding and marking of animals.
   (9.) Any other subject which may be suggested and agreed to by the members of the Conference connected with the object for which it is convened.
3. That the term "Australasian Colonies" comprise the Colonies on the continent of Australia, also Tasmania and New Zealand; and that the term "Foreign" shall be held to include all other parts of the world.

2. *Diseases in Animals.*

4. That Legislative power be taken to compel the destruction of all animals which have died of or are suffering from anthrax, and that all other animals which have been in contact with the diseased animals be, where practicable, placed in proper quarantine until certified free from disease.

5. That the travelling, selling, or offering for sale, or slaughtering for food of any animals affected with the disease known as tuberculosis, or the using of cows affected with tuberculosis for dairy purposes, be punishable by law.

6. That power be taken to destroy animals actually diseased with pleuro-pneumonia, that penalties be enforced for leaving diseased animals or dead bodies undestroyed, and that stockowners be compelled to give notice in writing of every outbreak of the disease to the Chief Inspector of Stock, and to the nearest Inspector of Stock.

7. That the Conference desires to express its belief in the efficacy of inoculation as a preventive of pleuro-pneumonia.

8. That inoculation for pleuro-pneumonia be not made compulsory.

9. That communication be opened with M. Pasteur with a view to ascertain whether the virus or contagium of pleuro-pneumonia has been, or can be cultivated, apart from the living subject, and if so to state the mode of cultivation; as also the best methods of preparing and preserving virus for inoculation.

10. That all sheep infected with catarrh be destroyed; that the owners be recompensed to two-thirds the value of sound sheep at the date of destruction, and that the run or place on which the sheep were pasturing be strictly quarantined for six months.

11. That as the conditions are so various in the different Colonies, each Colony should legislate for itself where practicable on the subjects of fluke, worms, and foot-rot in sheep.

12. That the Government of Western Australia be urged by the Governments of the Colonies represented at the Conference to take all possible steps for the speedy eradication of scab.

13. That the Conference, having heard from Mr. Lance, one of the New Zealand delegates, the steps taken by the Government of that Colony with regard to scab, are satisfied that the stringent measures being adopted will result in the speedy eradication of the disease.

14. That the several Governments obtain power, in the event of an outbreak of scab, to destroy at their discretion the infected sheep, and those that have been in direct or indirect contact with them, and to take every other means for the absolute and immediate eradication of the disease.

15. That steps be taken by the several Australasian Colonies to thoroughly eradicate ticks and lice in sheep.

16. That any animals found to be infected with glanders, farcy, foot-and-mouth disease, rinderpest, sheep pox, swine fever, rabies, trichinosis, or any other infectious or contagious disease not existing within the Colonies be at once destroyed.

17. That it is desirable that an efficient and competent staff of inspectors of stock be maintained in each Colony, to prevent the introduction and to arrest the spread of scab or any other contagious or infectious disease.

3. *Interchange of Australian Animals.*

18. That no sheep brought from any of the Australasian Colonies in which scab exists be introduced into any of the other Australasian Colonies.

19. That no Colony shall be deemed to be a clean Colony in which scab exists or has existed within the next preceding twelve months.

20. That no breeding sheep shall be imported except by vessels that have not traded to any but a clean Australasian Colony within the next preceding six months, nor by any vessel which shall within that period have had any sheep on board from any Colony or Country other than a clean Australasian Colony.

21. That all breeding sheep be accompanied by a certificate of an inspector of sheep, or a declaration of health certified by an inspector of the Colony from which they came that such sheep are clean, and that scab has not existed there for the preceding twelve months.

22. That imported breeding sheep from any of the Australasian Colonies before they are allowed to go at large in any other Australasian Colony, be placed in quarantine until they have been once dipped in a tobacco and sulphur or lime and sulphur dressing.

23. That the temperature of the dip be not less than 100, nor more than 110 degrees Fahrenheit.

24. That the sheep swim and be completely immersed while in the bath, and the bath to last from one to two minutes, according to its temperature, and as the case may require.

25. That no straw, litter, or excreta with, or about imported sheep, be landed; and that all fittings, cases, or cages brought with such sheep and landed, be cleansed and disinfected as the Chief Inspector shall direct, or be re-shipped.

26. That it be not necessary to dip fat sheep imported from any clean Australasian Colony to another Australasian Colony solely for the purpose of slaughter; provided that such sheep be slaughtered in accordance with the regulations of any such Colony for such description of sheep.

27. That stock, unless from Western Australia, which are allowed by law to travel in the Australasian Colony in which they have been bred, or into which they have been introduced, in accordance with the law there in force, be allowed to enter any neighbouring Colony by land at any lawful place of entrance without further obstacle, unless it be found, on examination by an Inspector of the Colony into which it is proposed to introduce such stock, that they are infected with some disease which is held to be contagious or infectious by the law of such Colony; or unless such Inspector has reason for suspecting the presence of contagious or infectious disease in such stock; and the fact that stock are held to be free from disease in any Colony, and so allowed to go at large, be *primâ facie* evidence of their freedom from contagious or infectious disease.

28. That where an outbreak of disease occurs in any Colony the neighbouring Colonies may, pending the extent and risk of the outbreak being definitely ascertained, at once issue a prohibition against the introduction of stock from such Colony; and that the duration of the prohibition depend upon the amount of risk arising from such outbreak.

29. That the Conference desires to express its strong opinion, in view of the prospect of the assimilation of the stock regulations of the different Colonies, and the great desirability for the freest interchange of stock, that it is undesirable that any duty be charged upon stock going from one Colony to another.

4. *Introduction of Foreign Animals.*

30. That the time has arrived when the prohibition on the importation of cattle and sheep from the United Kingdom, may, under proper restrictions, be safely removed, and that the Governments of Australasia be requested to give effect to this resolution.

31. That the importation of goats and deer be prohibited except for Zoological Gardens.

32. That the importation of pigs be prohibited, as Swine Fever is prevalent in England.

33. That foreign dogs landed in any Australasian Colony be detained in quarantine at a special place set apart for the purpose by the Government of each Colony for a period of six months from date of arrival.

34. That camels be inspected on arrival by an Inspector of Stock and a veterinary surgeon, and if they are not infected with disease they be permitted to land, and be quarantined for the same period as cattle, namely, 120 days; that if they are infected with foot-and-mouth disease or rinderpest they be destroyed; and that all camels suffering from any skin disease be treated in such manner as the Chief Inspector shall direct, and under his control.

35. That the following be included among the regulations under which foreign stock are admitted into any Australasian Colony:—

(*a.*) That foreign stock leaving any district for export to any of the Australasian Colonies, be accompanied by a declaration of cleanness from the owner or breeder.

(*b.*) That all foreign cattle and sheep be taken direct from the place from which they start to the port of shipment; and if they do not travel on foot they be conveyed in a goods waggon, and not put into any conveyance, stable, or other place where animals liable to the same diseases have been within the next preceding 60 days.

(*c.*) That all animals exported to Australasia be shipped from the port of London.

(*d.*) That the Agents-General for the several Colonies be asked to appoint one (*i.e.*, the same) registered veterinary surgeon to examine all stock intended to be exported to any of these Colonies; such veterinary surgeon to give a certificate of health to accompany the animals.

(*e.*) That the skins of all animals which may have died or been slaughtered on board any foreign vessel during the voyage, and not destroyed or thrown overboard, be salted and securely packed in cases or casks, and not landed.

(*f.*) That foreign animals be only admitted at such port or ports as shall be declared quarantine ports for such animals.

(*g.*) That a declaration be obtained from the captain of the vessel as to the health of foreign stock on board on arrival in port.

(*h.*) That the introduction by sea or land of any animal or thing infected or suspected of being infected, be prohibited.

(*i.*) That if foreign animals are infected, they be destroyed or disposed of as the Minister directs.

(*j.*) That if any foreign animals are brought to a port or place in an Australasian Colony, but are not intended to be landed, they be examined by an inspector or veterinary surgeon, and if found free from infectious or contagious disease, removed to quarantine, and there kept until the sailing of the vessel, the expense of their detention in quarantine being defrayed by the owner. If their owner refuse to send the animals to quarantine, they be forthwith destroyed on board.

(*k.*) That foreign horses be admitted without quarantine if found, on inspection by a properly qualified veterinary surgeon and inspector of stock, to be free from disease.

(*l.*) That foreign animals intended to be landed in the Colonies be examined by a veterinary surgeon and an inspector of stock, who shall report to the Chief Inspector of Stock whether or not such or any other animals on board such vessel are infected. (*m.*)

(*m.*) That if foreign animals other than horses are not prohibited, and are reported free from infection, and if the Chief Inspector be satisfied that they are not infected, they may, after being washed and disinfected as he shall direct, be landed for quarantine on sufficient bond and guarantee.

(*n.*) That all foreign animals be conveyed by water, at the owner's risk and expense, to quarantine, and remain for the terms respectively prescribed for the different kinds of animals, at their owner's risk and expense, and that they be washed, dipped, and disinfected, as the Chief Inspector of Stock shall direct.

(*o.*) That the period of quarantine for cattle be 120 days.

(*p.*) That all foreign sheep landed in any Australasian Colony remain in quarantine for a period of not less than 90 days.

(*q.*) That all foreign sheep landed in the Colonies forthwith receive two or more dressings with tobacco and sulphur or with lime and sulphur, at intervals of from ten to fifteen days between each dressing, with the medicaments of the strength, at the temperature, and for the duration prescribed in regard to imported Australasian sheep.

(*r.*) That on the expiry of the term of quarantine prescribed for foreign animals, they be examined by a duly qualified veterinary surgeon and an inspector of stock, and released on the order of the Chief Inspector.

5. *Publication of Information re Diseases.*

36. That the several Governments be invited to collect, publish, and exchange all original useful information with respect to diseases in animals, and their prevention and cure.

6. *Regulations re Travelling and Movement of Animals.*

37. That regulations in regard to the travelling, movement, or conveyance of animals, be left to be dealt with by each Colony within its own boundaries.

7. *Destruction of Noxious Animals.*

38. That as the skins of marsupials have become so valuable, the several Governments of the Colonies in which marsupials exist instruct the Vermin Boards, or others who have the administration of the law, not to levy assessment for the coming year or for such further period as may be deemed advisable.

39. That the means at present available for the destruction of rabbits are most costly, and are not radical cures, and that until some discovery shall have been made more searching and fatal in its effects upon rabbits than anything at present known their absolute eradication cannot be accomplished. The Conference therefore recommends that a bonus be offered by the Australasian Colonies collectively for the purpose of bringing about such a desirable object; such bonus to be granted under such regulations as to success as the Colonies may consider desirable.

8. *Destruction of Noxious Plants.*

40. That the Governments of the several Colonies, where they have not already done so, take power to make the destruction of noxious plants, such as prickly pear, Californian thistle, Bathurst burr, Noogoora burr, and other plants injurious to wool, stock, or pastures, compulsory.

41. That collections be made of all plants suspected of being poisonous to stock, with the view to their true character being ascertained by analysis, feeding of stock, and otherwise, and to the necessary steps being taken to prevent, as far as possible, losses to stock by such plants as are found to be poisonous.

9. *The Branding and Marking of Animals.*

42. That only such ear-marks as are authorized by the Governor-in-Council and registered with the Inspector for the district be used for sheep; that the "tip" mark be prohibited; and that all ear-marks be made with pliers.

43. That any stockowner owning runs in different Colonies, with the sanction of the Registrars of Brands, be permitted to register in each Colony the brand in use by him and registered in his name in either Colony, and that it be a recommendation of the Conference that such Colonies as have legislation on the subject so amend their Brands Acts as to give effect to this resolution.

44. That the dew-lap mark be reserved in all Colonies having legislation upon the branding and marking of stock as a distinctive mark for spayed cows.

45. That the distinctive mark in use in Queensland—taking the tip off the off (*i.e.* the right) ear, be used throughout the Colonies, as the sign of inoculation.

10. *Additional.*

46. That all drafts of laws or regulations dealing with the diseases of animals be, as far as practicable, submitted by the Government framing them to the Governments of the other Colonies for remark before they become law.

47. That it is desirable that regulations be framed on the resolutions passed by the Conference so that the regulations and relative certificates in each Colony may, as far as practicable, be the same in all the Colonies.

48. That the Conference recommends to the Queensland, South Australian, and Western Australian Governments the desirability of exercising the greatest possible vigilance with respect to their northern ports to prevent the introduction of disease from Eastern, Indian, or Chinese ports.

49. That the Conference, taking into consideration the importance of the subjects that have come before them for discussion and decision, are of opinion that an Australasian Stock Conference should be held triennially at the chief city of one of the Colonies, and they respectfully offer this recommendation to the several Governments.

Sydney: Thomas Richards, Government Printer.—1886.

[3*d.*]

1885–6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LIVE STOCK AND AGRICULTURE.

(RETURNS FOR YEAR ENDED 31 MARCH, 1886.)

Ordered by the Legislative Assembly to be printed, 12 *May,* 1886.

LIVE STOCK.

RETURN of LIVE STOCK in each ELECTORAL DISTRICT of the COLONY, for the Year ending 31st March, 1886.

NEW SOUTH WALES.

EXPORT OF WOOL.

(RETURN OF—FROM 1880 TO 1886 INCLUSIVE.)

Ordered by the Legislative Assembly to be printed, 15 *June*, 1886.

[*Return, in answer to Question asked by Dr. Ross on 11th June.*]

SHOWING the number of pounds of Wool, also the number of bales of Wool, that were exported from New South Wales in the following years, viz., 1880–1–2–3–4–5 and 6 respectively; also the approximate value of the same.

NUMBER of pounds and value of Wool exported from New South Wales during each year from 1880 to 1886 inclusive.

	Weight.	Value.
		£
1880	162,486,322 lbs.	8,437,534
1881	147,183,687 lbs.	7,530,792
1882	153,351,344 lbs.	7,773,704
1883	199,638,895 lbs.	10,136,244
1884	183,016,518 lbs.	9,382,499
1885	178,373,425 lbs.	7,678,247
1886—to 31st March ...	43,545,507 lbs.	1,677,064

The number of bales cannot be ascertained.

1885–6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

UNITED STATES WOOL DUTIES.

(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 20 *April*, 1886.

Cablegram from Premier of New Zealand to Premier of New South Wales.

QUESTION of reducing duty on wool now before Congress, United States. Suggest united action by all Australasian Colonies sending representation through Foreign Office to States, stating that admission of their wool free of duty would be regarded as an act of great friendship to the Anglo-Saxon Colonies on the part of the elder descendant from the same race. The Agents-General could be instructed to aid. Of course no hints even of retaliation or threats should be used. Ask concession on ground of friendship. Will you communicate with different Australian and Tasmanian Governments.

Telegram from Premier of New South Wales to Premiers, Victoria, Queensland, South Australia, Tasmania, and Colonial Secretary, Western Australia.

Sydney, 20 April, 1886.

HAVE received following cablegram from Premier of New Zealand :—

"Question of reducing duty on wool now before Congress, United States. Suggest united action by all Australasian Colonies sending representation through Foreign Office to States, stating that admission of their wool free of duty would be regarded as an act of great friendship to the Anglo-Saxon Colonies on the part of the elder descendant from the same race. The Agents-General could be instructed to aid. Of course no hints even of retaliation or threats should be used. Ask concession on ground of friendship. Will you communicate with different Australian and Tasmanian Governments.

"ROBT. STOUT.

"19th April, 1886."

Please favour me with your views at early convenience. This Government disposed to agree.

Cablegram from Premier of New South Wales to Premier of New Zealand.

Sydney, 20 April, 1886.

HAVE communicated to other Australasian Governments your cablegram of yesterday *re* United States wool duties. Will wire you immediately on receipt of replies. This Government will join in proposed representation to United States.

FC

1885-6.

NEW SOUTH WALES.

IMPORTED STOCK ACT OF 1871, AND IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

(REGULATION UNDER.)

Presented to Parliament, pursuant to Act 48 Vic. No. 12.

[*From the Government Gazette of 29th September*, 1885.]

Department of Mines, Stock Branch, Sydney, 29 September, 1885.

IMPORTED STOCK ACT OF 1871, AND IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to cancel such parts of the Sub-Regulations (1) and (2) of Regulation 16 of 5th January last, 1885, so far as the same relates to dogs, and that portion of Sub-Regulation (11) of Regulation 16 which prescribes the term of quarantine of dogs; and to make the following Regulation, which is hereby published for general information.

JOSEPH P. ABBOTT.

The duration of quarantine to which any dog imported from a port or place not in any of the Australian Colonies shall hereafter be subjected shall be six months from the date on which such dog shall have been put on board such vessel at any such port or place.

1885–6.

NEW SOUTH WALES.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

(REGULATION IN LIEU OF REGULATION No. 11 OF 1st JULY, 1886,—CANCELLED.)

Presented to Parliament, pursuant to Acts 35 Vic. No. 6, sec. 13, and 48 Vic. No. 12, sec. 4.

Department of Mines, Stock Branch, Sydney, 6th August, 1886.

IMPORTED STOCK ACT OF 1871, AND THE IMPORTED STOCK ACT AMENDMENT ACT OF 1884.

THE following Regulation, made by His Excellency the Governor, with the advice of the Executive Council, under the provisions of the abovenamed Act, is hereby published for general information, in lieu of Regulation No. 11 of 1st July, 1886, which is hereby cancelled:—

HOW IMPORTED AUSTRALIAN SHEEP ARE TO BE ADMITTED OVERLAND FROM OTHER COLONIES.

Sheep imported from any clean Australian Colony into any other clean Colony, and intended to be introduced overland into this Colony, may be admitted if their owner produce the certificates prescribed by Regulations 5, 6, and 10 of 1st July last (1886) under the abovenamed Acts for such sheep, and if they are found on examination by the Inspector for this colony at the border to be not infected; or such sheep may be admitted at the border on inspection as aforesaid if their owner produce to such Inspector a certificate under the hand of the Chief Inspector for the Colony from which they are intended to be introduced that when such sheep were introduced into that Colony they were accompanied by a certificate as prescribed by number 5 of the abovementioned Regulations, and that such sheep have been twice dipped with proper preparations of tobacco and sulphur, or of sulphur and lime, in a bath given at the temperature and of the duration and in the manner prescribed by number 8 of the abovementioned Regulations. But all such sheep, unless they shall have been imported, inspected, quarantined, and dressed as prescribed in this and the abovementioned Regulations, shall, on crossing the border, be placed in quarantine, and kept and dipped in the same manner in every respect as prescribed with regard to Australian imported sheep landed at Sydney.

JAMES FLETCHER.

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DISEASES IN SHEEP ACTS.

(REVENUE AND EXPENDITURE DURING THE LAST FIVE YEARS.)

Ordered by the Legislative Assembly to be printed, 30 *September*, 1886.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 13th August, 1886, That there be laid upon the Table of this House,—

"A Return showing the Revenue and Expenditure under the Diseases in "Sheep Act during the last five years.

(*Mr. R. B. Wilkinson.*)

RETURN showing the Revenue and Expenditure under the Diseases in Sheep Act during the last five years:—

NEW SOUTH WALES.

DISEASES IN SHEEP ACT OF 1876, AND THE DISEASES IN SHEEP ACTS AMENDMENT ACTS OF 1878 AND 1882.

(REGULATION UNDER.)

Presented to Parliament, pursuant to Act 30 Vic. No. 16, sec. 77.

[*From the Government Gazette, 3rd November*, 1885.]

Department of Mines, Sydney, 3rd November, 1885.

DISEASES IN SHEEP ACT OF 1876, AND THE DISEASES IN SHEEP ACTS AMENDMENT ACTS OF 1878 AND 1882.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulation under the above-named Acts, which is hereby published for general information:—

When an Inspector of Sheep has to travel 20 miles or more to examine any sheep about to be introduced into this Colony at any of the Crossing-places proclaimed as such on the boundaries of this Colony, he shall be entitled to charge and receive from the owner or person in charge of such sheep expenses at the rate of fifteen shillings per day for the time he is absent from his station in making such examination.

JOSEPH P. ABBOTT.

NEW SOUTH WALES.

PASTURES AND STOCK PROTECTION ACT OF 1880, AND THE PASTURES AND STOCK PROTECTION ACT AMENDMENT ACT OF 1881.

(REGULATIONS UNDER.)

Presented to Parliament, pursuant to Act 44 Vic. No. 11, sec. 30.

[*From the Government Gazette of the 20th November*, 1885.]

Department of Mines, Stock Branch, Sydney, 20 November, 1885.

PASTURES AND STOCK PROTECTION ACT OF 1880, AND THE PASTURES AND STOCK PROTECTION ACT AMENDMENT ACT OF 1881.

Enclosures for keeping Hares.

HIS Excellency the Lieutenant-Governor, with the advice of the Executive Council, has been pleased to approve of the following Regulations, under the above-named Acts, which are hereby published for general information.

GEO. THORNTON.

1. The land upon which it is intended to keep any hares shall be fenced, to the satisfaction of the Minister, with a close and substantial paling fence, not less than 5 feet 9 inches high.

2. Wire netting, not less than 1 foot broad, with mesh not more than 1½ inches wide, shall be properly fixed along the bottom of the fence.

3. Wire netting, not less than 1 foot broad, and mesh not more than 3 inches wide, shall be securely fixed on the top of the fence on strong posts, which shall have an incline of 25 degrees inward, making the fence in all not less than 6 feet 6 inches high.

4. All corners in the fence shall be properly guarded by wire netting, and special attention shall be paid to making the fence secure at creeks, water courses, &c., and such other places as the Inspector shall direct, by means of wire netting or otherwise.

5. A caretaker shall reside on the ground.

6. There shall be no road or thoroughfare through the ground.

7. All gates shall be kept locked, except when opened by caretaker for necessary ingress or egress.

8. No additions shall be made to any land on which hares are kept under permission, as herein provided, without the sanction of the Minister.

9. Live hares shall not be permitted to be taken out of, nor allowed to leave, enclosure.

10. The Minister shall be the sole judge of the sufficiency of the enclosure.

11. If any person commit a breach of any of these Regulations he shall, on conviction, for every such offence, incur a penalty not exceeding £10; and such breach by the person to whom permission shall have been granted hereunder to keep hares shall, or shall not, according as the Minister shall decide, entail the cancellation of such permission.

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

AGRICULTURAL SOCIETIES.

(PARTICULARS OF.)

Ordered by the Legislative Assembly to be printed, 15 *June*, 1886.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 21st May, 1886, That there be laid upon the Table of this House, a Return showing:—

"The names of all the Agricultural and kindred Societies in this Colony "which have participated during the ten years ending 31st December, 1885, "in the annual grants to Agricultural Societies, showing the amounts paid "to such Societies in each year during that time; and also the names of all "such Societies that have received special grants during the like period, "showing the several amounts and dates when so paid."

(Mr. Gould.)

Sydney: Thomas Richards, Government Printer.—1886.

[6*d*.]

1885–6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

FAILURE OF CROPS.

(PETITION FOR FREE GRANT OF SEED WHEAT—FARMERS OF EUGOURA.)

Received by the Legislative Assembly, 13 *April*, 1886.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Farmers of Eugoura and surrounding District,—

HUMBLY SHOWETH :—

That your Petitioners have sustained heavy losses through the disastrous drought from which the Colony has of late years been suffering,—a drought which has brought a great many of us to the brink of ruin, through the continued failure of our crops.

The year 1885 has been above all others the most trying, disheartening, and ruinous of all seasons to our industry, many having no crops at all, and many others reaping not more than two or three bushels to the acre, while others have had to turn in their stock to save them from starvation.

We most respectfully, therefore, desire to point out to your Honorable House that in many instances, owing to the all but complete failure of crops, many farmers this year in this neighbourhood are now left almost helpless and penniless, and totally unable to find seed to sow their lands for the coming season. We, your Petitioners, therefore humbly pray that your Honorable House will take our sad case into your most favourable consideration, and grant us seed wheat for the coming season, and thus save us from total ruin.

And your humble Petitioners, as in duty bound, will ever pray.

[*Here follow* 16 *signatures.*]

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LOSSES OF STOCK FROM NOXIOUS OR POISONOUS PLANTS.

(PARTICULARS OF.)

Ordered by the Legislative Assembly to be printed, 8 *October*, 1886.

Return in reply to a Question asked by A. Ross, Esquire, M.D., M.P., in the Legislative Assembly, on 16*th September*, 1886, *respecting Losses of Stock from Noxious or Poisonous Plants, as follows:—*

9. DR. ROSS *to ask* THE SECRETARY FOR MINES:—

(1.) Will he enumerate or furnish a list of the various noxious or poisonous plants, of which sheep and cattle are alleged to have partaken and died, in the various districts throughout the Colony, and the approximate number of each that have been annually destroyed from this cause?

(2.) Will he submit a list of the respective districts in which such alleged poisonous or noxious weeds exist?

(3.) As a rule are such alleged noxious weeds confined to private or to Crown Lands, and in what ratio?

(1.) NEW SOUTH WALES PLANTS KNOWN TO BE HIGHLY POISONOUS TO STOCK.

Zygophyllum apiculatum—Hab., Molle's Plains.
Zygophyllum glaucescens—Hab., Erskine, Lachlan, and Darling Rivers.
Zygophyllum iodocarpum—Hab., between the Darling and the Lachlan Rivers.
Zygophyllum fruticulosum—Hab., Mitchell, Darling River.
Drosera Arcturi (Sundew)—Hab., Mount Kosciusko.
Drosera glanduligera (Sundew)—Hab., George's River.
Drosera pygmœa (small Sundew)—Hab., Race-course, Parramatta, and Jervis Bay.
Drosera spathulata (spoon-shaped Sundew)—Hab., common about Port Jackson, northward to Hastings River.
Drosera binata (Sundew)—Hab., Port Jackson, Blue Mountains, and Illawarra.
Drosera auriculata (Sundew)—Hab., Port Jackson, northward to Clarence River, southward to Twofold Bay.
Dresera peltata (Sundew)—Hab., Port Jackson.
Swainsonia Greyana (Darling Pea)—Hab., flats on the Darling River, Mudgee, and Dubbo.
Swainsonia lessertiifolia—Hab., Nangus.
Euphorbia Sparmanni (Spurgewort)—Hab., East Coast, Manly Beach, Howe's Island.
Euphorbia australis (Spurgewort)—Hab., near the Barrier Range.
Euphorbia Drummondii (Spurgewort)—Hab., Port Jackson, New England, Barrier Range, Lachlan and Darling Rivers (a very virulent poisonous plant).
Euphorbia Macgillivrayi (Spurgewort)—Hab., Clarence River, New England.
Euphorbia eremophila (Spurgewort)—Hab., Murray and Clarence Rivers, Darling River to Barrier Range, New England.
Excœcaria Agallocha—Hab., Islands and sea-coast Northern District.
Goodia lotifolia (yellow pea flowering shrub)—Hab., Hastings River.
Trachymene Pilosa—Hab., Port Jackson.
Lobelia gibbosa—Hab., Port Jackson to the Blue Mountains, New England, Hastings River.
Lobelia dentata—Hab., Port Jackson to Blue Mountains, Clarence River.
Lobelia gracilis—Hab., Port Jackson to the Blue Mountains.
Lobelia trigonocaulis—Hab., Hastings and Macleay Rivers, New England.
Lobelia anceps—Hab., Port Jackson, Hastings, and Clarence Rivers, Twofold Bay, Howe's Island.
Lobelia purpurascens—Hab., Port Jackson to the Blue Mountains, New England, Hastings and Macleay Rivers.
Pratia erecta—Hab., Paterson, Lachlan, and Macquarie Rivers.
Pratia puberula—Hab., Glendon.
Pratia pedunculata—Hab., Hunter River.
Isotoma axillaris—Hab., crevices of rocks, near Bathurst, New England, Mount Mitchell, between the Lachlan and Darling Rivers.

Solanum—

Solanum nigrum (Black fruiting Nightshade)—Hab., Port Jackson, common northward to Hastings River, New England; southward to Gabo Island, in the interior, on the Darling River.
Solanum—All the introduced and now naturalized European annual species.
Nicotiana suaveoleus (tobacco)—Hab., Port Jackson to the Blue Mountains, Macleay and Hastings Rivers, southward to Kiama, in the interior from Lachlan and Darling Rivers to the Barrier Range.
Omalanthus populifolius—Hab., Port Jackson to the Blue Mountains, northward to Hastings, Clarence, and Richmond Rivers, southward to Illawarra, Twofold Bay.

New South Wales plants suspected to be poisonous to stock, but their poisonous properties have not yet been tested:—

Swainsonia galegifolia (a kind of Darling pea)—Hab., Port Jackson, Hunter River, northward to New England, Macleay, Hastings, and Clarence Rivers, in the interior to the Macquarie, and Darling.
Swainsonia brachycarpa—Hab., New England, Clarence River.
Swainsonia phacoides—Hab., Darling River.
Swainsonia Burkittii—Hab., between the Lachlan and Darling Rivers.
Swainsonia oligophylla—Hab., Darling River.
Swainsonia procumbens—Hab., Liverpool and Dundas Plains, open downs on the Gwydir, Darling, and Castlereagh Rivers.
Swainsonia phacifolia—Hab., Darling River, Flinder's Range.
Swainsonia oroboides—Hab., in the interior, head of Gwydir, New England.
Swainsonia monticola—Hab., Blue Mountains, Nangas, ridges between Curacan and Canowindra.
Swainsonia microphylla—Hab., Hunter River, sandy plains between Wellington and Dubbo, between the Darling and Cooper's Creek.
Swainsonia Fraserii—Hab., Macquarie and Hastings Rivers.
Swainsonia laxa—Hab., on the Darling.
Trachymene cyanopetala—Hab., between the Upper Bogan and Lachlan Rivers.
Trachymene australis—Hab., north of Bathurst, Mooni Creek, New England.
Trachymene glaucifolia—Hab., near Duroodoo, towards the Barrier Range.
Trachymene incisa—Hab., Port Jackson to the Blue Mountains, New England, Hastings, Clarence, and Gwydir Rivers.
Solanum aviculare (Nightshades)—Hab., Port Jackson to the Blue Mountains, northwards to Hastings River, southwards to Twofold Bay.
Solanum simile—Hab., Darling and Murray Rivers.
Solanum verbascifolium—Hab., Clarence River.
Solanum Stelligerum—Hab., Port Jackson to the Blue Mountains, New England, Clarence and Hastings Rivers.
Solanum parvifolium—Hab., Liverpool Plains, Macnamara Hills, Mount Murchison.
Solanum ferocissimum—Hab., Lachlan River, and between it and the Upper Bogan, Darling, Peel's Range, Mount Murchison.
Solanum violaceum—Hab., Paterson, Clarence, Hastings, and Richmond Rivers, Blue Mountains, Glendon.
Solanum amblymerum—Hab., Macquarie River, New England.
Solanum esuriale—Hab., from the Murray, Lachlan, and Darling, to the western frontier, Peel's Range.
Solanum chenopodinum—Hab., from the Darling River to the Barrier Range, Mount Murchison.
Solanum densevestitum—Hab., New England, Hastings River, Mount Lindsay.
Solanum semiarmatum—Hab., Clarence and Richmond Rivers.
Solanum sodomœum—Hab., Port Jackson, and various parts of the Colony.
Solanum armatum—Hab., Port Jackson to the Blue Mountains, Hastings River.
Solanum pungetium—Hab., Port Jackson, Illawarra.
Solanum eremophilum—Hab., Macquarie River.
Solanum campanulatum—Hab., Port Jackson and Grose River, Kurrajong, New England, Clarence River.
Solanum cinereum—Hab., Grose, Hunter, Mackenzie, Nepean, and Gwydir Rivers, near Bathurst, Liverpool Plains.
Solanum lacunarium—Hab., Deserts of the Murray and Darling.
Solanum petrophilum—Hab., Mutanic Ranges.
Solanum ellipticum—Hab., Peel's Range, Mount Murchison, Darling River, thence to the Barrier Range.
Gompholobium latifolium (yellow pea flower)—Hab., Port Jackson, Port Stephens.
Gompholobium Huegelii—Hab., Port Jackson to the Blue Mountains, New England, and to the southward.
Gompholobium grandiflorum—Hab., Port Jackson to the Blue Mountains.
Gompholobium virgatum—Hab., Port Jackson to the Blue Mountains, Port Stephens.
Gompholobium minus—Hab., Port Jackson.
Gompholobium uncinatum—Hab., Blue Mountains, Parramatta, New England.
Gompholobium glabratum—Hab., Port Jackson.
Gompholobium pinnatum—Hab., Port Jackson.
Irema aspera—Hab., Port Jackson to the Blue Mountains, northwards to Hastings and Macleay Rivers and New England, southwards to Illawarra.
Oxylobium ellipticum—Hab., Port Jackson, Argyle County, Illawarra, Clarence and Hastings Rivers.
Oxylobium cordifolium—Hab., Port Jackson, Botany Bay.
Oxylobium Pultenece—Hab., Port Jackson, Hunter River, near Wollomby, Blue Mountains.
Oxylobium scandens—Hab., Port Jackson, Parramatta, Blue Mountains, Hastings River.
Oxylobium procumbens—Hab., Manero.
Oxylobium trilobatum—Hab., Port Jackson, northwards to Clarence and Hastings Rivers, Hunter River, New England, southward to Illawarra, Twofold Bay. Some of the worst poison plants of S.W. Australia belong to the genera Gompholobium and Oxylobium.
Oxylobium staurophyllum—Hab., Port Jackson, Blue Mountains, Macleay River, Lachlan District.
Lotus Australis—Hab., Hunter and Macquarie Rivers, northward to Clarence River, New England, and in the interior to the Murray.
Indigofera australis (Native Indigo)—Hab., Port Jackson to the Blue Mountains; Hunter River, northwards, to Hastings and Clarence Rivers; New England, southwards to Argyle County, Twofold Bay, in the interior to Darling and Lachlan Rivers.

Tephrosia purpurea—Hab., Hunter and Clarence Rivers.
Myriogyne minuta—Hab., Port Jackson to the Blue Mountains, Clarence River, in the interior to Lachlan and Darling Rivers.
Duboisia myoporoides—Hab., Port Jackson to the Blue Mountains; Hastings, Clarence, and Richmond Rivers; Port Macquarie, southwards to Illawarra.
Anthocercis scabrella—Hab., Nepean River.
Anthocercis albicans—Hab., Pine Hills, near Bathurst; near Cassilis.
Anthocercis Eadesii—Hab., near Camden.
Anthocercis Hopwoodii—Hab., Darling River, very rare.
Gratiola pedunculata—Hab., Port Jackson, New England, Richmond River, Darling Downs.
Gratiola peruviana—Hab., Port Jackson to the Blue Mountains; Hastings, Macleay, and Clarence Rivers; Illawarra.
Stypandra glauca—Hab., Port Jackson to the Blue Mountains, Liverpool Plains, New England, in the interior to Lachlan River.
Stypandra Cæspitosa—Hab., Port Jackson to the Blue Mountains, northwards to New England, Newcastle, Mount Mitchell, in the south-western interior.
Stypandra umbellata—Hab., Port Jackson to the Blue Mountains. The abovenamed species of stypandra are accused, particularly in South-west Australia, of causing the blind disease in sheep.

Note.—This list of poisonous, or suspected to be poisonous, plants has been compiled from information obtained from Baron Mücller, K.C.M.G., F.R.S., &c., Government Botanist, Melbourne; and supplemented by information furnished by the Inspector of Forests, Sydney.

There is no record of the number of cattle and sheep that have been destroyed by eating these plants.

(2.) New South Wales Poisonous Plants, or Plants suspected to be poisonous to Stock, specimens of which have been received from the Inspectors of Stock, specifying the districts where the plants are found growing.

From the Inspector of Stock, Tamworth.

Euphorbia Drummondii (Spurgewort)—Hab., Port Jackson, Lachlan and Darling Rivers, from thence to the Barrier Range, New England; also in Queensland, Victoria, Tasmania, and South and West Australia. A poisonous plant.

From the Inspector of Stock, Murrurundi.

Swainsonia Greyana (Darling Pea)—Hab., Flats on the Darling River, Mudgee, Dubbo; also in Victoria and South Australia. A poisonous plant.

From the Inspector of Stock, Coonamble.

Pimelia simplex (suspected to be poisonous)—Hab., Coonamble; also in Victoria and South Australia.

From the Inspector of Stock, Ivanhoe.

Myoporum deserti sp. (Dogwood), suspected to be poisonous.
Euphorbia Drummondii (Spurgewort) a poisonous plant—Hab., Port Jackson, Lachlan and Darling Rivers; from thence to the Barrier Range, New England; also in Queensland, Victoria, Tasmania, and South and West Australia.
Also eleven species of fodder shrubs not yet identified.

From the Rabbit Inspector, Mossgiel.

A collection of dried specimens of eighty-one species of fodder, grasses, and shrubs from the Mossgiel district.

From the Inspector of Stock, Cobar.

A copy of the census of the flora of the Cobar district, compiled by Mr. Hans C. Andra, enumerating the poisonous fodder and other plants indigenous to the district, the former of which are included in Baron Mücller's list of poisonous plants.

From the Inspector of Stock, Moama.

Bulbine bulbosa (wild onion, yam)—This plant is said to be very sickening to cattle, and to cause butter to have a very disagreeable flavour. Hab., Port Jackson to the Blue Mountains, northwards to New England and Clarence River; in the interior from the Darling to the western frontier.

From the Inspector of Stock, Forbes.

A specimen of a plant from Forbes, said to be very poisonous, but not yet identified.

From the Inspector of Stock, Narrabri.

Swainsonia Greyana (Darling pea)—A poisonous plant. Hab., Flats on the Darling River, Mudgee, Dubbo; also in Victoria and South Australia. A poisonous plant.
Euphorbia Drummondii (Spurgewort)—A poisonous plant. Hab., Port Jackson, Lachlan and Darling Rivers; from thence to the Barrier Range, New England; also in Queensland, Victoria, Tasmania, and South and West Australia.
Eremophila maculata—Not known whether poisonous or not. Hab., Murray, Darling, and Lachlan Rivers to the Barrier Range; junction of the Murray and Murrumbidgee; also in Queensland, Victoria, and South Australia.
Euphorbia eremophila (Spurgewort)—A poisonous plant. Hab., Murray and Darling Rivers, thence to the Barrier Range, Clarence River, New England; also in Queensland, Victoria, South and West Australia.
Atriplex sp.?—An edible shrub.
Atriplex sp.? (saltbush)—An edible shrub.

Erodium

Erodium cicutarium (crowsfoot)—An excellent dwarf fodder plant. Hab., between the Lachlan and Darling Rivers, Twofold Bay; also in Victoria, Tasmania, South and West Australia, Europe, and temperate Asia.

From the Inspector of Stock, Euston.

Lotus Australis—Suspected to be poisonous—Hab., Hunter and Macquarie Rivers, northwards to Clarence River, New England, and in the interior, to the Murray; also in Queensland, Victoria, Tasmania, South and West Australia.

Also 40 specimens of miscellaneous plants not yet identified.

From Mr. Corry, Terry-Hie-Hie Station *via* Moree, reporting the loss of 500 sheep through eating a poisonous plant, and forwarding a specimen of it for identification.

The plant is—

Beyeria viscosa, and the Government Analyst reports that from an examination he made of it he believes the result proves it to be poisonous—Hab., Blue Mountains, Liverpool Plains, Moree River, between the Lachlan and Bogan Rivers, New England; also in Queensland, Tasmania, and West Australia.

From Mr. Duncan Carson, Owenyeran Run, Warrego District, Queensland.

Euphorbia sp. ?—Supposed to be poisonous to stock, but the species cannot be identified in the absence of flowers and fruit.

From the Inspector of Stock, Molong.

Forwarding three specimens of plants which the owner of Loombah Station considered had poisoned a number of his sheep. The three plants are:—

Ranunculus lappaceus (Buttercup), suspected to be poisonous—Hab., in boggy and swampy localities, Port Jackson and in the interior, common; also in Victoria, Tasmania, South and West Australia.

Acæna sanguisorba, not poisonous—Hab., Port Jackson, Blue Mountains, Gwydir and Hastings Rivers, southwards to Illawarra, Gabo Island; also in Victoria, Tasmania, South Australia, and New Zealand.

Euphorbia Drummondii (Spurgewort), a poisonous plant—Hab., Port Jackson, Lachlan and Darling Rivers; from thence to the Barrier Range, New England; also in Queensland, Victoria, Tasmania, and South and West Australia.

From the Inspector of Stock, Gunnedah.

Argemone mexicana—A native of Mexico and now a naturalized weed in several parts of New South Wales. It belongs to the Order Papaveraceæ or poppy family; resembles a thistle, and is most probably poisonous to stock. The Inspector of Stock at Gunnedah reported the death of 160 head of cattle through eating this plant.

From the Inspector of Stock, Corowa.

Solanum ensuriale, suspected to be poisonous—Hab., between Corowa and Urana, Peel's Range, from the Murray, Lachlan, and Darling to the western frontier; also in Queensland, Victoria, and South Australia.

From Mr. Stock Inspector Copeland.

Reporting losses of stock through eating—

Casuarina glauca (Belah). This is not considered a poisonous plant, although from its nature it would probably cause constipation of the bowels to animals eating it. Hab., Port Jackson, Blue Mountains, Liverpool Plains, New England, Lachlan and Darling Rivers, towards the Barrier Range.

(3.) The poisonous, or suspected poisonous, plants of New South Wales will be found on both private and Crown Lands, but in what ratio cannot be stated.

1885-6.

NEW SOUTH WALES.

RABBIT NUISANCE ACT OF 1883.

(REGULATIONS UNDER.)

Presented to Parliament, pursuant to Act 46 Vict. No. 14, sec. 45.

Department of Mines, Rabbit Branch,
Sydney, 10th September, 1885.

RABBIT NUISANCE ACT OF 1883.

THE following Regulations, which have been made by His Excellency the Governor, with the advice of the Executive Council, for the purpose of carrying into effect the objects of the abovenamed Act, shall come into operation on and after the 1st day of November, 1885.

JOSEPH P. ABBOTT.

I.—INSPECTORS' POWERS AND DUTIES.

1. Inspectors when giving any authority to any person, pursuant to the provisions of the above Act, shall give such authority in writing in the form or to the effect of Form 1 hereto; and every person holding any such authority shall produce it on demand by any Inspector or by the owner of the land on which the authority is to be exercised. Persons holding any such authority are hereinafter termed "Assistants."

2. Inspectors or their Assistants, whenever practicable, before entering the first time upon any land, or otherwise within twenty-four hours after making entry thereon, shall give the owner notice in writing of such entry in the form or to the effect of Form 2 hereto.

3. Inspectors and their Assistants entering upon any land, pursuant to the provisions of the 9th section of the above Act, may—

(1.) After having given the owner not less than seven days' notice in the form or to the effect of Form 3 hereto, lay poison on any land, and shall on doing so post a notice in a prominent position near the place where the poison is laid, stating where such poison has been laid.

(2.) Lay poison in or about, or fumigate, dig out, or stop up any rabbit burrows or holes on such land; and may, after fourteen days' notice to the owner, cut down or destroy by fire any scrub or brushwood.

(3.) With the sanction of the Minister, cut down, or destroy by fire, or remove any brushwood, or log, or other fence, or remove any stone wall on any such land which is in their opinion a harbour or cover for rabbits; but, before proceeding to destroy or remove any such fence or wall, they shall give the owner of such land, and any other owner whose land is enclosed or bounded by such fence or wall, not less than one month's notice of the intention to destroy or remove the same.

II.—RECEIVERS.

4. Each Rabbit Inspector shall be the Receiver, under the Rabbit Nuisance Act of 1883, for the Rabbit District of which he has charge; and all Sheep Inspectors, Forest Rangers, and any persons whom the Minister may specially authorize by notice in the Government Gazette, shall also, for the purposes of the said Act, be deemed to be Receivers within the limits prescribed by such notice.

5. Each Receiver shall visit every holding within his district periodically in rotation for the purpose of receiving rabbit skins with scalps attached.

6. Owners delivering rabbit skins, with scalps attached, to the Receiver shall, together therewith, produce vouchers under the hand of the persons from whom they were obtained, and attested by a witness, showing what rate of remuneration had been paid to the persons who procured such skins; and the Receiver, if satisfied with the genuineness of any such voucher, shall initial and date the same.

7. The Receiver, upon taking delivery of the skins with scalps attached, shall carefully count them, and shall then destroy them by fire, unless the owner from whom he takes delivery desires to retain the skins, in which case the Receiver shall cut off the scalp only, and destroy it by fire.

8. As soon as the Receiver shall have destroyed the skins and scalps, or the scalps only as aforesaid, he shall give to the owner a certificate, under his hand, in the form of Form 4 hereto, of the number of skins with scalps attached received from such owner, but he shall not include in any such certificate any skin from which the scalp had been cut off before it was received by him.

9. In all cases if the Inspector is of opinion that proper and sufficient care is not taken to secure the skins and to prevent any person other than the owner or person authorized by him having access to them, or removing them from the place of security, he shall destroy them.

III.—SUBSIDIES.

10. Every owner intending to make any claim under section 18 of the said Act shall, before commencing the work necessary to destroy rabbits on his land, give at least fourteen days' notice to the Minister for Mines of his intention to make such claim.

11. All applications for payment under the said 18th section shall be made in the form of Form 7 hereto, and shall be accompanied by vouchers for the amounts stated to have been paid, and by the proper Receiver's certificate, and shall be also accompanied by a statutory declaration made by the claimant that all the expenditure was made as alleged in such application and vouchers.

12. The amount of such claims as approved by the Minister shall be paid quarterly.

13. Any Superintending Inspector or Inspector under the abovenamed Act shall have the right at all reasonable times to inspect all books of accounts belonging to any owner who claims subsidy.

IV.—Miscellaneous.

14. All owners of infested land shall keep a journal in Form 5 hereto, which shall be open at all times to the inspection of any Inspector or any Assistant, and such owner shall also within one week before the last day of each month make a return to the Inspector, in Form 6 hereto.

15. All notices under section 38 of the said Act of rabbits being on any land shall be in the form or to the effect of Form 8 hereto.

16. All appeals under section 24 of the said Act shall be in the form or to the effect of Form 9 hereto.

17. If any person commits a breach of any of the foregoing regulations he shall, on conviction for every such offence, forfeit and pay any sum not exceeding £5.

From and after the 31st day of October next, the Regulations under the Rabbit Nuisance Act of 1883, made by the Governor and Executive Council on the 17th day of April, 1885, shall be and the same are hereby repealed.

Form 1.

Rabbit Nuisance Act, 1883.

Authority by Inspector to Assistant.

To

You are hereby authorized as my Assistant, to enter upon any part of any of the lands mentioned in the Schedule below, at all reasonable hours, for the purpose of searching for and destroying rabbits.

Inspector.

Dated at , this day of 188 .

[Schedule referred to.]

Form 2.

Rabbit Nuisance Act, 1883.

Notice of Entry.

To

Take notice that it is my intention to enter [or that I have entered] upon of your land known as in the District of , for the purpose of searching for and destroying any rabbits there may be on such land.

Inspector,
or Assistant of Inspector.

Dated at , this day of , 188 .

Form 3.

Rabbit Nuisance Act, 1883.

Notice of intention to lay poison.

To

Take notice that it is my intention on or about the [dated] to lay on the portion of your land for the purpose of destroying rabbits.

Inspector,
or Assistant of Inspector.

Dated at this day of , 188 .

Form 4.

Rabbit Nuisance Act, 1883.

Certificate of Destruction.

I hereby certify that of* in Rabbit District No. delivered to me the skins of rabbits with scalps attached, destroyed within such holding. And I further certify that such skins and scalps, or scalps only, have been duly destroyed by me by fire as required by the Regulations under the abovenamed Act.

Inspector of Rabbits.

Dated at this day of 188 .

* Insert name and description of holding.

Form 5.

Rabbit Nuisance Act, 1883.

Owner's Journal.

Date.	No. of men employed	Names of men employed.	Whether employed every day in destroying rabbits; if not, the No of days so engaged.	On what part of holding employed and where camped.	Number of rabbit skins with scalps attached delivered.	Rate of bonus or wages paid.

Form 6.

Rabbit Nuisance Act, 1883.

Monthly Report by Owner.

Report of the men employed and sums paid for the destruction of rabbits by of during the month of , 188 .

1. The men employed.
   (1) The number.
   (2) Their names.
2. Whether employed every day destroying rabbits; and if not state the number of days so engaged.
3. On what portion of employer's holding at work, and where camped.
4. Number of rabbit skins and scalps delivered.
5. At what rate per skin paid if by bonus.
6. If by wages, the rate.
7. Total amount paid by owner during the month for destroying rabbits.
8. Any other information which it would be advantageous to give or to publish.

Form 7.

Rabbit Nuisance Act, 1883.

Application for Subsidy.

To the Honorable

The Minister for Mines, Sydney.

188 .

I, of being the owner of land known as in Rabbit District No. and more particularly described in the Schedule appended hereto, have the honor, in terms of section 18 of the abovenamed Act, to request that you will authorize the payment to me of the sum of £ as three-fourths of the total cost incurred by me up to the last, of exterminating the rabbits on such land,—as more particularly shown by the returns, vouchers, and receivers' certificates produced herewith by me, in proof of the work done and moneys expended in carrying out such extermination; and that you will pay the amount mentioned, or such other sum as you may deem right and proper to grant on my account, to

1885–6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RABBIT NUISANCE ACT.

(PETITION FROM RUN-HOLDERS AND OTHERS IN THE WESTERN DIVISION OF NEW SOUTH WALES.)

Received by the Legislative Assembly, 17 *June*, 1886.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales.

The humble Petition of the undersigned run-holders and others, resident in the Northern portion of the Western Division of New South Wales,—

RESPECTFULLY SHOWETH:—

That your Petitioners are threatened with an invasion of rabbits which are fast spreading in this direction from the south and south-west.

That much of the country in these districts is of a kind in which the rabbits are certain to increase rapidly, and that they are sure to become such a pest as to render the country almost if not wholly valueless.

That unless prompt measures are taken to check their spread, almost the whole of the Colony will inevitably become infested, and to such an extent in the back blocks, where the country is held in large areas, and everything is so favorable to their spread, that the country in all probability will have to be totally abandoned.

That your Petitioners strongly recommend rabbit-proof wire-netting fencing as the only means of preventing the uninfested country from becoming infested.

That the great majority of the run-holders in the uninfested country would, if they were exempted from the tax paid under the present Rabbit Act, be quite willing to be taxed to defray the cost of a line of rabbit-proof fencing judiciously placed to divide the infested from the uninfested country.

That the run-holders themselves are perfectly powerless to act in the matter without the assistance of Government, seeing that, even if there were no obstacles in the way of fencing off the infested country by private enterprise, no move could be made in the matter unless an Act of Parliament were passed, fixing the site for the fence and compelling those benefited by it to pay towards its cost.

That the cost of the fence would be comparatively trifling, seeing that many boundary fences of runs at present in existence could be utilized to fix the wire-netting on, and a great saving in the cost of construction be thereby effected.

That your Petitioners earnestly pray that the proposal to erect rabbit-proof fencing along the Railway Line to Bourke be immediately carried out, and that the fence be continued from Bourke west, or a little south of west, to the South Australian border, and north along it to the Queensland border, where it would join the rabbit-proof fence now being constructed by the Government of that Colony.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow* 52 *signatures.*]

1885-6.

NEW SOUTH WALES.

PUBLIC WATERING-PLACES ACT, 1884.

(AMENDED REGULATIONS UNDER.)

Presented to Parliament by Command.

Department of Mines,
Public Watering-places Branch,
Sydney, 1st December, 1885.

PUBLIC WATERING-PLACES ACT OF 1884.

THE following Regulations made by His Excellency the Governor, with the advice of the Executive Council, for the purpose of carrying out the abovenamed Act and of regulating the Management, Maintenance, and Control of Watering-places, are hereby published for general information, in lieu of those published on the 28th April, 1885, which are hereby cancelled from 1st January, 1886.

GEO. THORNTON.

GENERAL.

1. All water within the area of any Public Watering-place, except that lying within the limits of any Public Road, shall be held to belong to such Public Watering-place; and any person using such water shall pay on demand to the tenant or caretaker of such Public Watering-place, the authorized charges.

2. Inspectors and Overseers of Public Watering-places and other persons appointed under the abovenamed Act, or any person acting under the authority of the Minister for Mines, shall have free ingress and egress to and from any Public Watering-place, and access to any appliance or appurtenance thereon, and to the books and papers relating thereto, and may also when necessary examine and test the machinery and appliances at such Public Watering-places, and with that view the tenant or caretaker in charge thereof shall, when called upon, supply, as the case may be, the necessary steam, horse, or manual power, and provide such tools and implements as may be required to make such test or examination.

RULES OF WATERING.

3. No stock, except travelling stock in charge of a drover supplied with a travelling statement or permit (as required by the Act 41 Vic. No. 19, or by any Act amending or repealing the same), or teams and horses used by travellers, shall be supplied with water by the tenant or caretaker; but the tenant may water not more than thirty head of his own stock.

4. Drovers, to ensure prompt supply, should give six hours notice to the tenant or caretaker of their intention to water at a Public Watering-place. Any person requiring water shall, on the request of the tenant or caretaker, render every assistance to enable him to supply water safely and promptly.

5. In order that the water be kept free from pollution no stock shall be allowed to camp in such a position that their droppings will be carried into the water. And the carcasses of all stock dying in the neighbourhood of a Public Watering-place shall be removed and burnt by the drover or owner of such stock.

6. Tenants and caretakers shall make all arrangements necessary for the safety and convenience of stock watering, and shall always keep the supply tank full.

7. All travelling stock shall be promptly supplied with water in the order of their arrival at a Public Watering-place upon prepayment of the authorized charges. Working horses and working cattle shall be served before travelling stock.

WATERING CHARGES.

8. All persons in the Public Service, including the Police, shall be allowed water for their horses free of charge, upon the tenant or caretaker being satisfied of the position or occupation of such persons.

9. The charges for water which the tenant or caretaker shall collect, are as follows:—

	s.	d.
Horses per head	0	2
Cattle ,, ...	0	1
Sheep per hundred or portion of hundred	1	0

Any other animals according to agreement between the tenant or caretaker and the owner or drover.

10. Horses belonging to mail contractors running over the road near which a Public Watering-place is situated shall be charged one-half of the above rates.

11. Horses belonging to any coach proprietor used in coaches running regularly over such road, other than those of the mail contractor, shall be entitled to water at the authorized rates at all Public Watering-places near such road.

12. A copy of the scale of charges, with the name of the Watering-place and of the tenant or caretaker attached, shall be placed in a conspicuous position and maintained in a clear and legible condition.

SALES OF LEASE BY AUCTION.

13. Where it is desired to offer the lease of a Public Watering-place for sale by public auction, such sale shall be held at a time and place and by such licensed auctioneer as may be appointed by the Minister.

14. A sealed envelope containing the upset price reserved by the Minister for the lease of the Public Watering-place to be offered shall be forwarded to the auctioneer previous to the sale of such Watering-place; and such envelope shall only be opened upon the lease of such Watering-place having been knocked down by the auctioneer to the person making the highest bid.

15. If such person's bid be found equal to or exceed the upset price, he shall be declared the purchaser, and shall, subject to the stipulations and conditions set forth in these Regulations be held and deemed to be the tenant of the Public Watering-place for which his bid shall have been made, provided he shall thereupon pay to the Auctioneer a deposit of £5 sterling.

16. Should any dispute arise between the bidders, or between the bidders and the seller, previous to the name of the highest bidder being declared as aforesaid, the lease shall be then and there put up again by auction.

17. The purchaser and his sureties shall be present at such auction, or if unable to be present, shall have a person duly authorized in that behalf to represent him and them thereat, whose signature shall be binding on the purchaser and his sureties.

18. Should the lease of any Public Watering-place not be disposed of by auction, it may be disposed of by tender or otherwise, as the Minister shall direct.

Tenders for Public Watering-places.

19. A separate tender shall be made for the lease of each Public Watering-place, and shall be sealed and endorsed "Tender for Public Watering-place."

20. Every such tender shall be placed by the tenderer or his agent in a box kept for that purpose at the office of the Minister; and any tender transmitted by post shall be forthwith placed in such box unopened.

21. Every tender shall be accompanied, under the same envelope, by a Bank draft for £5, or by a receipt showing that that sum has been deposited in the Colonial Treasury; and in the event of the ultimate acceptance of the tender the tenderer shall receive credit for the amount of such payment or deposit in the rent; and in the event of the tender being rejected the amount shall be returned to the tenderer.

22. The Tender Board appointed for that purpose shall open the tender box at noon on the first Tuesday after the date fixed for tenders to be sent in, and all tenders found in the box shall be recorded by the Board.

23. Neither the highest nor any tender shall necessarily be accepted, and fresh tenders may at any time be called for, as the Minister shall direct.

24. Upon the tender for a lease of a Public Watering-place being accepted the acceptance shall be notified in the Gazette, and the tenderer shall thereupon be held to be the tenant of such Public Watering-place, but subject to all the conditions and stipulations contained in these Regulations.

Conditions of Lease.

25. The lease of a Public Watering-place shall confer upon the tenant the right to collect and retain the charges authorized at such Watering-place, and the right of agistment within the leased area.

26. No lease shall confer any right to purchase in virtue of improvements or otherwise any land comprised within the lease.

27. The tenant and two sureties resident in the Colony, approved by the Minister, shall, when called upon, execute a lease and enter into a bond, in a sum equal to two years rent of such Public Watering-place, to secure the due payment of the rent, and for the due fulfilment by him of all the stipulations and conditions of these Regulations and of the provisions of the abovenamed Act.

28. The rent of such Public Watering-place shall be paid to the Colonial Treasurer, at Sydney, in equal quarterly instalments in advance, and if not paid within ten days after the same falls due each instalment shall bear interest, at the rate of eight pounds per centum per annum, from the day of default until paid; and if the rent be not paid when due, the Minister may direct an officer to take possession of such Public Watering-place and collect the charges payable thereat, without prejudice to any right to cancel the lease, or to enforce any claim against the lessee hereunder.

29. The tenant, on payment of the first quarter's rent in advance will receive notice to attend at the Public Watering-place for which his offer has been accepted; and if, after receiving such notice, he fail to attend and take delivery as requested, a caretaker shall be engaged for such Watering-place at his risk and expense, and his deposit shall be forfeited.

30. If the tenant of a Public Watering-place fail for more than thirty days after the date of his purchase, or of the notice of the acceptance of his tender, to attend and take delivery of such Watering-place, the Minister may cancel the lease, and cause the same to be put up for lease by auction or let by tender, and the tenant and his sureties shall be liable for all loss or damage which may be incurred, and all costs, charges, and expenses entailed thereby; and the amount of such loss, damages, costs, charges, and expenses may be recovered from the tenant and his sureties, as provided by the Act or the Regulations thereunder.

31. If the tenant attend according to notice a statement of the works, appliances, and appurtenances at the Public Watering-place, and of the state and condition thereof at the time they are handed over to him, shall be prepared in duplicate, and shall be signed by the tenant and the officer delivering the works over to him, as an acknowledgment of the condition and state thereof, and one copy of such statement shall be retained by the tenant and the other by such officer.

32. At the termination of the lease the tenant shall surrender to the overseer, or such other person as the Minister shall authorize in that behalf, the works, appliances, and appurtenances leased to him, in the same good order and condition, reasonable wear and tear excepted, in which they were received by such tenant; and if the works, appliances, or appurtenances so surrendered be then such as to require repairs the tenant shall pay to the Colonial Treasurer the cost of such repairs.

33. The lease shall be liable to forfeiture upon the breach or failure of any of these conditions; the fact of such breach or failure shall be determined by the Minister.

34. The lease of any Public Watering-place shall be liable to forfeiture upon the rent being in arrear, or if the tenant shall become insolvent, or if he shall assign his estate for the benefit of his creditors; or upon his conviction of illicit traffic in liquor, or of keeping a disorderly house, or of harbouring improper characters, or other offences against the Vagrant Act,—the tenant and his sureties being liable for any loss arising from the re-letting of such Public Watering-place.

35. No sub-letting nor transfer of lease of a Public Watering-place will be permitted without the sanction of the Minister.

36. Should the tenant desire to renew his lease, he must give the Minister three (3) months' notice of such desire.

37. The tenant of a Public Watering-place shall, during his lease, keep the works, buildings, fences, gates, gauges, drains, inlets, valves, pipes, embankments, approaches, and all machinery, appliances, and appurtenances thereto belonging, in good order, repair, and condition.

38. Upon receipt of notice from the Inspector or Overseer, the tenant shall forthwith make any necessary repairs; and if he fail to do so within fourteen days after the receipt of such notice, they may be made by order of that officer, or of any officer appointed by the Minister in that behalf, at the tenant's expense; and the payment of the cost of such repairs by the tenant or his sureties shall be enforced, as provided by these Regulations.

39. Every precaution shall be taken by the tenant during floods to prevent injury or damage to the Public Watering-place, its appliances, or appurtenances under lease to him, and he shall be liable for all loss and injury caused by negligence in any such case.

40. No remission of rent will be allowed on account of damage by flood or otherwise.

41. The tenant shall be accountable for the proper conduct and be responsible for the acts of his employees, one of whom shall always be in attendance at the Watering-place.

42. A book, which will be supplied for the purpose, shall be kept by the tenant, containing an exact statement of all stock watered, and such book shall be open at all times for the inspection of the Inspectors and Overseers of Public Watering-places or any other officer authorised by the Minister.

43. The tenant must forward to the Chief Inspector of Public Watering-places, Sydney, at the end of each week, upon forms which will be supplied, a statement of the depth of water, as shown by the gauge in a tank or dam, or by sounding in a well, and such other particulars as may be required.

44. The Minister may dismiss any agent or caretaker appointed by the tenant, whom he considers unfit for the charge of the works.

45. The tenants of Public Watering-places must keep copies of the Watering-places Act and any Regulations issued thereunder, which they shall produce when asked for by any person requiring water.

46. Should the Minister decide to repair or alter any tank, dam, or well, or any appliance or appurtenance thereof the tenant shall, on receiving seven days' notice, allow and permit such repairs or alterations to be promptly and fully carried out.

47. The tenant or his agent shall reside in the immediate neighbourhood of the Public Watering-place.

48. If the Minister considers such a course necessary he may, on giving the tenant three months' notice, cancel any lease granted hereunder, and the tenant shall have no claim for compensation on account of such cancellation.

WATER TRUSTS.

49. Any Public Watering-place may be placed under Tru stees, subject to these Regulations and the following conditions:—

1. The number of Trustees may be three or five as the Minister shall decide.
2. The Trustees must engage and may discharge a caretaker who will be under their immediate control and direction, but his remuneration will be fixed and paid by the Government.
3. The Trustees shall see that the works, appliances, and appurtenances are kept in a thoroughly efficient state, and will, as the necessity arises, make requisition to the Minister for repairs.
4. Persons residing within certain limits, to be fixed in each case by the Minister, will be entitled to obtain water from any Public Watering-place under Trustees for domestic purposes, free of charge, and for stock at the following charges, namely:—

	s.	d.
Horses, per head	0	0½
Cattle and Goats, per head	0	0¼
Sheep, per hundred, or portion of a hundred	0	6

Any other animals according to agreement with the Trustees.

5. All travellers, teamsters, and drovers entitled to obtain water at a Public Watering-place shall, on pre-payment of the charges prescribed by Regulation No. 9, be equally entitled at Public Watering-places under Trustees.
6. All watering charges collected at Public Watering-places under the control of Trustees shall be paid into the Consolidated Revenue Fund.

FORFEITURES AND PENALTIES.

50. No person shall, except at the request of the tenant, caretaker, or proper officer, interfere with the machinery or appliances of a Public Watering-place, and no person shall allow his stock to water except where directed by the tenant or caretaker.

51. The tenant shall not, under pain of forfeiture of his lease, allow stock to be admitted to the main or conserving tank.

52. All persons are prohibited taking water from a Public Watering-place without pre-payment of the charges, or without the consent of the caretaker, tenant, or the person for the time being in charge. And all persons so doing are liable to prosecution for the recovery of the authorized charges, and for all penalties incurred for breach of the Regulations, under Clause 16 of the Act.

53. If any person other than a tenant, caretaker, or trustee shall violate or neglect any of the foregoing Regulations for which a penalty is not provided for by the Act, such person shall, on conviction for every such offence, be liable to a penalty not exceeding £2.

1885-6.

NEW SOUTH WALES.

PRICKLY-PEAR DESTRUCTION ACT OF 1886.

(REGULATIONS UNDER.)

Presented to Parliament, pursuant to Act.

Department of Mines, Forest Branch,
Sydney, 6th October, 1886.

THE PRICKLY-PEAR DESTRUCTION ACT OF 1886.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following Regulations under the abovenamed Act, which are hereby published for general information.

JAMES FLETCHER.

Notices by Owners or Occupiers to Inspectors.

1. All notices by owners or occupiers to Inspectors of Prickly-pear being on such owners or occupier's land, or to attend and ascertain whether there is Prickly-pear on their land, shall be to the effect of Form 1 hereto.

Clearing Leases of Land infested with Prickly-pear.

2. The Minister may, pursuant to the above-cited Act, fix a minimum rent, and offer at auction, or may invite tenders for leases, subject to the following conditions and covenants, that is to say:—

(I.) That the rent shall be paid annually in advance.

(II.) That the Lessee and two sureties, resident in the Colony, and to be approved by the Minister, shall enter into a bond for such an amount as the Minister shall direct for the due fulfilment of the conditions and covenants of the lease.

(III.) That the Lessee will not assign, sublet, or subdivide the land demised without the consent of the Minister signified in writing.

(IV.) That the Lessee shall within the period named in the lease commence to eradicate from the land demised all Prickly-pear growing thereon, and shall for that purpose employ the number of men specified in the lease, and that the Lessee shall keep the land free from Prickly-pear to the satisfaction of the Minister during the term of such lease: Provided that the Minister may at any time permit the lessee to suspend the work of clearing or to employ fewer men than the specified number, upon being satisfied that such suspension of work or reduction of men is absolutely necessary.

(V.) That the Lessee shall at the expiration of the term for which his lease is granted, surrender the demised land, and give peaceable and quiet possession thereof to the Minister, or to any person authorized by him.

(VI.) That the Lessee shall keep in good condition and repair during the continuance of the term of his lease, all houses, fences, wells, reservoirs, tanks, dams, and all other improvements of a permanent character on the land demised, whether erected, constructed, or made by such Lessee or otherwise; and on receipt of notice from the Minister to repair any damage done to any such improvements, the Lessee shall forthwith repair the same.

(VII.) That the lease shall be expressed to be voidable if, in the opinion of the Minister, the Lessee shall have committed any breach of, or shall have failed to comply with, any of the conditions or covenants of the lease.

(VIII.) That the Minister may at any time cancel any lease if the demised land or any part thereof be required for any public purpose, but subject to payment of compensation to the Lessee for any loss he may sustain by reason of his lease being cancelled, and the amount of such compensation shall be determined by arbitration, as provided by the Act 35 Victoria No. 15.

(IX.) That the Lessee shall have the right of ingress, egress, and regress to and from the land comprised in his lease, through and over any land lying between the demised land and the nearest public road or track.

(X.) That the Minister, or any person authorized by him in that behalf, may at any time enter upon the demised land to ascertain whether the conditions and covenants in any such lease are being duly performed by the Lessee.

(XI.) That if the Lessee shall with the consent of the Minister, signified in writing, erect or construct on any part of the land comprised in his lease any houses, fences, wells, reservoirs, tanks, dams, or other improvements of a permanent character, he shall on the resumption under the authority of these Regulations, or at the expiration of the term of such lease, be entitled to demand and recover from the Minister the full value of such improvements erected during the term of his lease: But the sum to be paid shall not exceed the sum expended thereon, which shall be ascertained as provided by No. VIII. hereof.

(XII.) In any case in which it shall appear to the Minister proper so to do, he may insert special conditions in a lease.

Clearing Roads of Prickly-pear.

3. If a road divides the land of two owners or occupiers, and if there is Prickly-pear upon such road, each of such owners or occupiers shall eradicate the Prickly-pear on the half of the road bounding his land; and if either of such owners or occupiers shall have cleared his portion of such road, and the

C3

other owner shall have failed to clear his portion, the first-mentioned owner or occupier may give the second-mentioned owner or occupier notice to the effect of Form 2 hereto to clear his portion within a reasonable time, to be specified in such notice; and if such last-mentioned owner or occupier shall not comply with such notice within the time specified, the first-mentioned owner or occupier may clear the whole width of such road and may sue for and recover from the defaulting owner or occupier the cost of eradicating the Prickly-pear on the half of the road bounding such defaulting owner or occupier's land.

FORM 1.

Prickly-pear Destruction Act of 1886.

Notice to Inspector of existence of Prickly-pear.

To Mr.

Prickly-pear Inspector,

I hereby give you notice that (*or* to attend and ascertain if) Prickly-pear is to be found on portions of the land more particularly described in the Schedule below.

[Schedule referred to above.]

Land District Sheep District
County parish lot area
Area infested (or suspected of being infested)
Name and address of owner
Name and address of person in charge
Description and boundaries such as will lead to the identification of infested land.

Signature (owner or person in charge),

Dated at this day of 188 .

FORM 2.

Prickly-pear Destruction Act of 1886.

Notice by owner to defaulting owner to clear road

To

You are hereby required in terms of Regulation 3 under the abovenamed Act to eradicate the Prickly-pear on the half of the road (bounding the land of which you are the owner or occupier) from to of Prickly-pear, on or before the and I hereby give you notice that if the Prickly-pear is not eradicted on the portion of the road specified within the time mentioned, the work will be carried out at your expense.

Dated at , this day of , 188

1885.
(THIRD SESSION.)

NEW SOUTH WALES

FOREST BRANCH, DEPARTMENT OF MINES.

(ANNUAL REPORT.)

Printed in accordance with Resolutions of both Houses of Parliament.

To the Honorable Joseph Palmer Abbott, Esq., M.P., &c., Minister for Mines.

Sir,

I have the honor to submit herewith the reports upon the working of the Forest Branch during the year 1884, furnished by the Inspector of Forests and the Chief Clerk of the Branch respectively.

I am happy to state that the work in the Head Office under the direction of Mr. W. F. Piper, the Chief Clerk, was satisfactorily performed during the year, notwithstanding the large increase of business. The Forest Rangers, who are also under the direction of the Chief Clerk, performed their duties creditably.

Care was taken as far as practicable to preserve for purposes of timber supply such areas of land in various parts of the Colony as will provide supplies equal to future demands, and in the most convenient positions; but in view of the growing demand and the rapidly-failing supply of the timbers most in demand the adoption of stringent measures for the suppression of waste is an urgent necessity, though any measures in that direction are sure to invoke the hostility of a certain class of persons who have long been accustomed to fell valuable trees without let or hindrance, and who have exercised the privilege, not always because they required to use the tree felled, but to prevent a competitor from getting possession of it. It is to be hoped that these people will see that efforts to prevent wasteful destruction of valuable timber trees are really made in the interest of timber getters and dealers as well as for the public benefit.

Under the operation of the Ringbarking Act an enormous number of trees have been and will of necessity be destroyed; and, doubtless, in spite of the efforts of the Officers of this Department to restrict ringbarking to trees of the least valuable description, large numbers of valuable trees have been and will be thus destroyed; and though we may fairly anticipate that the improved growth of grass will amply compensate for the waste of timber, still the knowledge that such large quantities of timber are being destroyed renders more imperative the duty devolving upon the Department of preserving our timber supply by thinning out and otherwise improving and protecting our existing forests.

It is to be regretted that, owing to the drought and the unsuitability of the sites selected, the wattle plantations formed along the railway line have not proved a success.

The plantations of catalpa, walnut, and cedar, formed under the supervision of the Inspector of Forests (Mr. John Duff), are in a promising condition. Mr. Duff is making preparations for establishing nurseries for the propagation of the best kinds of timber trees. The principal one is to be established near Gosford, where indigenous and foreign timber trees will be propagated for planting in forest and other approved reserves; the other will be established in the interior of the Colony, mainly for the purpose of testing the kinds of trees best adapted to thrive in the dry districts.

Much attention has been given by the Inspector of Forests to collecting information concerning some of the valuable timbers of this Colony hitherto not much known or used. I anticipate that the Inspector, with the valuable aid of Mr. Forest Ranger Rudder, will be able ere long to furnish much useful information concerning the habitat, uses, extent of supply, and cost of procuring timbers possessing special economic value.

I regret that the progress made in regard to the work on the Forest Flora of this Colony has been so slow, but I am convinced that the Inspector of Forests is doing all in his power to complete for publication the first number.

Appended hereto is the report furnished by Dr. R. von Lendenfeld upon the insect which destroys pine scrub in certain districts.

I have, &c.,
HARRIE WOOD,
Under Secretary for Mines.

Department of Mines,
Sydney, 21 July, 1885.

[1298 copies—Approximate Cost of Printing (labour and material), £80 13s. 9d.]

Report from the Chief Clerk, Forest Conservancy Branch, to The Under Secretary for Mines.

Sir, Forest Conservancy Branch, Sydney, 27 May, 1885.

I have the honor to submit a report for the year 1884 upon the work performed by this Branch of the Department.

The Staff.

The staff employed, together with the date each officer entered the Department, and the salary paid, are shown on Schedule A.

During the year thirty-eight Forest Rangers and Assistant Rangers in the field have travelled 177,935 miles on duty in inspecting Forest Reserves and Crown Lands; much of this travelling was in connection with reporting upon applications for permission to ringbark timber, four Rangers alone having travelled 25,988 miles almost exclusively upon this work.

Two Rangers and two Assistant Rangers were appointed to fill vacancies caused by resignation or dismissal.

Revenue and Expenditure.

Appended are schedules showing revenue for year 1884	Schedule B.
Expenditure do do 1884	do C.
Details of revenue from specified Reserves	do D.
Comparative statement of revenue and expenditure for each year from 1877 to 1884	do E.
Particulars of prosecutions by Forest Rangers for illegally cutting timber, and penalties inflicted, 1884	do F.

The revenue again shows a considerable increase, the amount, £18,250 5s. 8d., being over four times that received for the year 1877.

As in the years 1882 and 1883, a large proportion of the expenditure has been incurred in connection with ringbarking duty.

Reserves and Timber.

Appended are schedules showing the following particulars:—

Summary of number and area of Timber Reserves	Schedule G.
Distribution of Reserves amongst Forest Rangers	do H.
Details of area of Reserves and particulars of the timber	do J.
Timber Reserves proclaimed as exempted from the operation of ordinary timber licenses, issued under the Regulations of 24th September, 1878	do K.
Other Reserves and Crown Lands proclaimed exempted from the operation of ordinary timber licenses	do L.

The total area reserved for preservation of timber supply is estimated at 5,390,513 acres, or about $2\frac{1}{10}$ per cent. of the area of the Colony.

This is not by any means too large a proportion, as the tendency, especially in the Central Division of the Colony, is to destroy nearly all timber, so that the land may produce a greater growth of grass; for instance, in the County of Denison, where, in 1882, 83 per cent. of the land had been alienated from the Crown, Ranger Manton reports, "That, with the exception of the Forest Reserves, a few strips along the Travelling Stock Reserves, and small portions of Water Reserves, all the timber in the county has been ringbarked." The area reserved for preservation of timber supply in this county is 39,492 acres.

Again, reporting generally on the districts adjoining the river Murray, in the Central Division, where a very large proportion of the land has been alienated, Mr. Manton writes: "In a very short time there will be no Crown Lands (excepting the reserves) in this district, and as previously stated, alienation of the land means utter destruction of the natural forests; even at the present time there is very little living timber to be seen excepting on reserves, and it may become necessary ere long to plant," *i.e.*, to plant portions of reserves not now containing valuable timber. The total area reserved for timber supply in the district referred to is estimated at 461,431 acres, the greater part low-lying and subject to inundation upon the snow water from the mountains reaching the plains. The soil is generally a poor black clay, very adhesive when wet, with occasional low ridges of apparently wind-blown sand. With the progress of settlement many of the timber reserves, especially those in the Central Division, will be valuable, if only to preserve a certain proportion of timbered country, irrespective of any other economic value the timber may have, as in most cases after ringbarking country the increase in the growth and quality of the grass is so marked, and the immediate profit so great, that the trees are destroyed without any other consideration.

Upon the reserves worked under Forest License 14,569,035 feet of timber have been cut, besides 293 trees felled for special purposes; the royalty and license fees amounted to £8,392 8s. 10d.

Nearly all the matured pine in the Central Murray District has been cut out. Anything like an approximate estimate of the quantity of timber felled throughout the Colony would be difficult to arrive at. The available records show the quantities shipped from ports or shipping places along the coast to be 58,267,350 superficial feet, 5,331 piles, 1,539 girders, 4,849 logs, 2,341 pieces, 13,492 spokes, 2,213,000 laths, 498,000 palings, 53,547 felloes, besides naves, posts and rails, and shingles; this does not include timber shipped from the Gosford, Macleay River, and Hawkesbury River Districts, these returns not having been furnished, nor the timber shipped from Sydney and Newcastle.

From the Richmond River alone, deducting the quantity of timber cut on reserves under Forest License, 13,698,181 superficial feet, 4,849 logs, and 2,341 pieces were shipped, while the fees for Timber Licenses amounted to only £588 10s. It is, however, reported that a large proportion is cut upon freehold land, much of it conditionally purchased solely for the value of the timber.

It is, however, obvious that the total quantity shipped is understated, the returns from Port Stephens, whence the timber from the extensive forests around the Myall River and Lake is shipped, being given as only 54,734 superficial feet, besides 1,196 piles, 1,539 girders, and 950 spokes, while the total quantity cut at 6 mills in that locality is about 5,577,120 feet per annum.

The trade generally appears to be confined to a few well-known species of timber, others being neglected because they are somewhat hard or difficult to cut. Without doubt many of the indigenous timbers might be more largely utilized for purposes for which they are now scarcely used.

Mr.

Mr. Henry Bonnard, the Executive Secretary for this Colony at the Bourdeaux Exhibition of 1882, in his report, page 18, after drawing attention to the fact that wine-casks for a large firm on the Douro are made from timber mostly imported from the United States or northern parts of America, writes:—"With respect to these, Mr. Tait, a British gentleman, who is manager of a cask steam manufactory at Oporto, and his brother, a wine and spirit broker there, mentioned the somewhat astonishing fact that they were growing forests of Australian gum-trees in the south of Portugal for no other purpose than utilizing them for the making of casks. They said that they had already tried and found them of good service, in no way injurious to the new wines if the staves have been previously steamed. They wondered at Australian industry not having found this out long before, and made use of it for the shipment of Colonial wine. The main condition to be observed in the selection of the timber is that the trees must grow very straight up, and they do take great care to secure this end on their southern plantations. I recollected then my first impression in entering Portugal, coming from Madrid. It was 1 o'clock in the morning when the train reached the Portuguese border town, and being awoke by the stoppage and noise of the Customs officers rummaging the train, I landed on the platform, when for a few seconds I wondered if I was not in Australia, for the trees overhanging the railway premises were all gum-trees, with their usual strong smell, whilst the primitive station-buildings were the same as those to be seen here in the up-country districts. This impression was a particularly pleasant and agreeable one, bringing to my mind recollections of my adopted and distant land. It was therefore with great pleasure that I heard the practical and useful discovery made by the Oporto people, from whom I learned also that a short time before me a representative of South Australia, Mr. T. Hardy, wine-grower, had also visited the district for the same purpose as myself.

"Messrs. Tait were so good as to promise to ship to Sydney a cask made of eucalyptus timber, so as to help me in convincing Colonial people of a fact which could otherwise be reasonably doubted, owing to the peculiar botanical constitution of the wood, which, in the opinion of most men, would justify it, discarding for such purposes as wine-cask making. Whenever this cask arrives I intend leaving it in the Technological Museum of Sydney, that it might be seen and inspected by all interested."

The mountain ash, growing on the Bago forest reserve, counties of Selwyn and Wynyard, appears to possess the qualities required, this timber having been used several years previously by one of the vignerons of Albury for making casks holding some 2,000 or 3,000 gallons; it was pointed out in the annual report of the Occupation Branch for 1880, Schedule 7, that it was likely there would be a large demand for the purpose.

Scrubbing and Thinning Reserves.

During 1884 permission has been granted to clear scrub and thin out saplings on five forest reserves, area 57,250 acres, and on 26,710 acres of other reserves and lands.

Permission to thin out timber on reserves is made subject to the condition that an officer should constantly supervise the work; this is necessary, because while it is the object of the Department to improve the growth of timber, the aim of the lessee is to clear away as much as he can so as to secure as large a growth of grass as possible. If trees and saplings are left at too great a distance apart they become branchy and produce inferior timber, and injury may be caused in a few days by injudicious thinning, which could not be remedied for many years.

During the year work has proceeded on seven reserves, and 7,065 acres have been done to the satisfaction of the officers supervising the thinning.

The dry season, heavy cost of labour, and uncertainty respecting the land law, appear to have militated against a larger area being operated upon.

Ringbarking.

Schedule M shows in tabulated form particulars of applications for permission to ringbark timber on lands held under five years' pastoral lease.

197 applications were finally dealt with, permission being granted in 155 cases, for an area of 1,207,537 acres, making the total area granted under the Ringbarking on Crown Lands Regulation Act of 1881, 3,861,108 acres. This is exclusive of applications for permission to ringbark on lands held under annual lease, dealt with by the Department of Lands; during the year 163 such applications were reported upon by the Forest Rangers.

Generally the restrictions attached to the permissions were well observed by the lessees, but in six cases the authorities have been cancelled for breach of conditions. In other cases, where it appeared proper steps were not being taken to have the work carefully done, the lessees were warned.

Cedar, Catalpa, and Wattle Plantations.

The expenditure on this work is given on Schedule C. Further particulars will be given by the Inspector of Forests, under whose immediate direction the work was done.

Office.

During the year the following papers were received and despatched:—

Papers Registered.	Papers Despatched.
10,829, exclusive of 880 timber license returns.	Manuscript letters, 4,210 Letters on Printed forms, 1,934. Blank-cover communications, 2,150.

County Maps.

Maps of thirty-eight counties, showing the Forest Reserves, and, as far as practicable, the land for hich permission to ringbark timber has been granted by this Department, have been prepared.

W. F. PIPER,
Chief Clerk.

Narrandera and Urana	J. G. Condell, Narrandera; Assistant Ranger, T. Musgrave, Urana.	70	228,598½
Murray, Edward, and Wakool Rivers	J. A. Manton, Moama; assisted by Rangers O. Wilshire, Denilquin; S. Payten, Tocumwall; J. Guilfoyle, Moama, and Assistant Ranger Cousins, Koondrook.	70	461,431½
Shoalhaven and South Coast	J. S. Allen, Ulladulla	30	506,195
Cumberland	J. M'Keown, Petersham, Cumberland Ranger	1	106
	Not under special supervision	8	14,700½
		797	5,390,518⅞

* Has also the supervision of the Myall and Wallis Lakes Forest, 217,600 acres.

SCHEDULE J.

NAME and Number and Area of Reserves, with particulars of the Timbers.

Locality.		Number and name of reserve.	Area in acres.	Description of principal kinds of timber.	Report and general remarks.
County.	Parish.				
Arrawatta	North Nullamanna and Wean.	958—Mount Gagan	3,600	Ironbark and pine	The good timber is very much scattered and mixed with scrub.
Do	Bonshaw	1,336	6,400	Ironbark (broad leaf), red gum, box, pine, and bloodwood.	Fairly timbered; medium quality.
Ashburnham	Bocabidgle	1,035	580	Pine and bull oak	Thickly timbered; principally immature timber.
Do	Gunningbland and Nellungalong.	1,147	3,500	Lachlan pine, forest oak	Thickly timbered.
Do	Gregra	1,373	320	Ironbark and Lachlan pine	Heavily timbered; good quality.
Do	Gregra and Brymedura	1,374	290	do do	do do
Do	Terrara, Coonambra, Bindogandri, and Bimbury.	1,403	12,760	Pine, ironbark, and stringybark	Fairly timbered; medium quality.
Do	Dulladerry, Terrara, and Bunbury.	1,730	6,500	Ironbark and Lachlan pine and stringybark.	Pine good; rest of timber fair quality.
Do	Dulladerry and Terrara	1,731	2,300	do do do	do do
Do	Wangan	2,030	190	Red gum and yellow box	The red gum is exceptionally good.
Do	Troubalgie, Dowling, & Wise	2,048—Yamma	16,320	Pine, bull oak, and box	
Argyle	Currowang	151—Lake George.	365	Gum, stringybark, and apple-tree	Reserved for firewood; timber evenly distributed.
Do & Murray	Merigan and Mulwaree	170—Wolowolar	3,200	Gum, stringybark, and mountain ash.	Well timbered; quality good.
Auckland	Cobra and Yuramine	337—Myrtle Creek	1,960	Mountain ash, messmate, blue gum, stringybark, cat-tail ash, and mountain gum.	Thickly timbered; medium quality.
Auckland and Wellesley.	Mila, Lawson, Gulgin, and Bondi.	385—Mila A	1,440	Peppermint, white gum, &c	Fairly timbered; inferior quality.
Do	Lawson and Bondi	385—Mila B	4,800	Messmate, ash, gum, and peppermint.	Densely timbered; good quality.
Auckland	Yowaka and Bimmil	774	2,375	Mountain ash, bloodwood, and blackbutt.	Timber inferior; much scorched by fire.
Do	Wyndham, Gnupa, and Cobra.	775	3,840	Stringybark, gum, and mountain ash.	Thickly timbered; good quality.
Do	Bournda	825	350	Bloodwood, blackbutt, stringybark, black ash.	do do
Do	Colombo	911	7,000	Messmate, cat-tail ash, silvertop gum, &c.	Well timbered; fair quality.
Do	Werriberri	991	1,000	Spotted gum, mountain ash, stringybark, and gums.	Densely timbered; good quality.
Do	Mumbulla, Bega, and Brogo.	996—Brogo River	350	Swamp oak and broadleaf wattle	This area is situated within the bed of the Brogo River.
Do	Mumbulla	1,003	3,000	Mountain ash, stringybark, box, peppermint, and wattle.	Densely timbered; poor quality.
Do	Bournda, Kameruka, and Wallagoot.	1,004	6,500	Mountain ash, stringybark, box, and woollybutt.	Densely timbered; inferior quality.
Do	Brogo	1,012	319	Red gum, apple, box, and stringybark.	Within the suburban boundaries of Brogo; well timbered; good quality.
Auckland and Wellesley.	Bredbendorra, Mogila, Cathcart, and Creewah	1,045—Reedy Creek	11,800	Ash, messmate, gum, silver wattle, and peppermint.	Densely timbered; good quality.
Baradine	Talluba, Minnon, Moglewit, Bullerawa, and Merimborough.	1,272	54,198	Pine, ironbark, box, belar, and oak	Thickly timbered; good quality.
Baradine and White.	Belmore, Coghill, Cook, Capp, Anson, Mollea, Nerable, Dampier, Crowie, Bohena, Quinn, Boral, and Merimborough.	1,273—Robertson A	151,400	Pine, ironbark, and box	Thickly covered with timber of good quality in all stages of growth.
Baradine and Leichhardt.		1,430—Ceelnoy	351,900	Ironbark, pine, box, belar, and oak	do do
Baradine	Rundle and Gora	1,657	17,920		
Do	Yarrigan	1,872	2,600	Pine and ironbark	Healthy growth of young timber; about two matured trees per acre.
Bathurst	Lucan and Wangoola	84	3,300	Stringybark and white box.	Thickly timbered with healthy young trees; no matured timber.
Do	Wangoola	87	985	do do	No matured stringybark; lightly timbered.
Do	Bracebridge	91	2,398	White box, appletree, mountain gum, and stringybark.	Timber of inferior quality; damaged by fire.
Do	Galbraith and Lowry	179	862	Stringybark	Thinly timbered.
Do	Tintern	184	2,923	Pine	
Benarba	Banarway	814—Keelo	2,500	Pine	Principally young timber.
Do	Caidmurra and Myall	1,207	700	Pine, bloodwood, gum, carbeen, and sandalwood.	No good matured timber; patches of young timber of prospective value.
Do	Boonery	1,381	1,400		
Do	Boonery	1,382	1,320		
Benarba and Stapleton.	Bundori, Newcastle, Kunopia, Tyrrell, Boronga, Paluanga, Bundora, &c.	1,331—Kunopia	2,240	Pine and carbeen	Thickly timbered; good quality.

SCHEDULE J—*continued.*

Locality.		Number and name of reserve.	Area in acres.	Description of principal kinds of timber.	Report and general remarks.
County.	Parish.				
Beresford	Cooma & The Brothers.	157	1,929	White gum and pine	Fairly timbered; in parts scrubby and inferior; reserved for water supply and firewood.
Do	Murrumbucka	266—Murrumbucka.	960	Pine, white gum, and apple-tree	Well timbered; inferior quality.
Do	Bulgundramine	287—Bulgundramine.	2,500	Peppermint, cabbage, and white gum.	Only suitable for fencing-stuff and fuel.
Do	Callaghan	397	240	White gum and apple-tree	Reserved for fuel.
Do	Gladstone	438A—The Peak	20½	Cabbage gum	A lightly wooded knoll; also reserved for trigonometrical purposes.
Do	Dangelong	460—Dangelong	195	Cabbage gum	Inferior quality; reserved for fuel.
Do	Woolumla	498	280	Cabbage and white gum	Sparsely wooded; reserved from sale for firewood.
Do	Coolringdon	622	1,066	White gum, box, and peppermint.	
Do	Umaralla	653	1,200	White gum, pine, and peppermint	Only suitable for fuel.
Do	Dandelong	716	1,019	Cabbage and white gum	Inferior quality; suitable for fuel and fencing stuff.
Do	Montagu	717	534	White gum and peppermint	Lightly timbered; inferior.
Do	Big Badja	877	2,200	Cat-tail ash, mountain ash, and white gum.	Fairly timbered.
Beresford and Wallace	Jillamatong & Bradley.	1,016—Jillamatong.	2,350	Peppermint and white gum	Fairly timbered; medium quality.
Bland	Jingerangle	1,357	1,464	Pine, bull oak, belar, and white box.	Densely timbered; fair quality.
Do	Warralonga	1,413	1,294½	Pine, white box	Fairly timbered.
Do	Caragabal	1,460	570	Pine, white box, and yellow box.	Timber generally of good quality.
Do	Boonabah	1,574	512	Pine, white box, and bull oak	Pine of good quality; box inferior.
Do	Bimbella and Wyrra	1,825	11,520	Pine, ironbark, and box	Pine of good quality; box inferior.
Do	Eurabba and Euroka	1,830A	3,260	Pine, red gum, forest oak, and white box.	Pine and gum good; rest of timber faulty.
Do	Weedallion	1,831	3,600	Pine, forest oak, and white and yellow box.	Timber of fair quality; pine requires thinning.
Do	Bribaree	1,832	360	Pine, forest oak, and white box	Pine and forest oak require thinning.
Do	Curraburrama	2,068	837	Pine, bull oak, white box and yellow box.	Little good matured timber.
Do	Mininjary, Caragabal, and Jingerangle	2,185	1,400	Pine, bull oak, belar, and white box	Pine fairly distributed and good quality.
Do	Stockinbingal and Dinga Dingi.	2,190	1,240	Pine and white box	Timber of fair quality.
Do	Caragabal and Berendebba.	2,330	1,160	Pine, white and yellow box, and bull oak.	Timber of poor quality.
Do	Mandamah	2,538	7,520	do do	
Do	Yerai	2,745	3,080	Pine, white and yellow box	Timbered principally with immatured pine.
Do	Wargin	2,864	724	Pine, forest oak, and box	Pine and box timber of fair quality.
Do	Narraburra, Boginderra, and Thurungly	2,873	10,880	Pine	
Do	Combaning and Trigalong.	3,056	4,250	do	A large growth of prospective value, besides box and yellow jacket.
Do	Trigalong	3,079	154	do	
Bland and Harden	Congou and Jindalee	1,274—Burthong	3,260	Ironbark and stringybark	Lightly timbered.
Bland and Monteagle.	Euroka, Marowie, Bimbi, and Weddin	1,855—Weddin	34,560	Pine, white and yellow box, and ironbark.	Thickly wooded; pine requires thinning.
Bland and Forbes	Wheogo, Maudry, and Yuline.	2,896	8,800	Ironbark, box, pine, and stringybark.	Fairly timbered; good quality.
Bland and Clarendon.	Sebastopol & Trigalong	3,082	333	Pine	
Bligh	Bobadeen	62	882	Ironbark, stringybark, pine, box, and apple.	Fairly timbered; medium quality.
Do	Doulagunmala	109	125	Apple-tree and white box	Timber of inferior quality.
Do	Collaroy	110	400	Ironbark, box, and pine	Fair quality; pine requires thinning
Do	do	111	700	do do	do do
Bligh	Turill	124	2,248	Ironbark, apple, pine, box and stringybark.	Timber inferior quality; the best matured has been removed.
Do	Bellaleppa	130	368⅝	Red gum, stringybark, and box	Thinly timbered; poor quality
Do	Warung and Gunna	142	1,970	Stringybark and red gum	Thickly timbered; quality very good.
Do	Warung	143	2,150	do do	Thickly timbered; fair quality
Do	Munmurra	158	12,646	Ironbark, pine, and red and slaty gum.	Thickly covered with timber in all stages of growth.
Do. Pottinger and Napier.	Brennan, &c.	646—Brennan's Gap	6,720	Blue gum and stringybark	Well timbered; condition good
Bligh & Lincoln		1,598	360	Box and Ironbark	Fairly timbered; medium quality.
Bourke	Berrembed	281	1,760	White and yellow box and red gum.	The best matured timber has been removed.
Do	Ganmain	303A—Ganmain	1,920	do do	do do

SCHEDULE J—*continued.*

Locality. County.	Locality. Parish.	Number and name of reserve.	Area in acres.	Description of principal kinds of timber.	Report and general remarks.
Bourke	Kindra and Coolamon	892—Coolamon A.	34,675	Pine, white and yellow box, and bull oak.	The pine is of value for saw-mill purposes; other timbers only valuable for shade and fencing material.
Do	Coolamon, Kindra, and Berry Jerry.	892—Coolamon B.	1,280	do do	do do
Do	Hooke, Ganmain, and Kockibitoo.	1,251—Ganmain No. 2A.	9,246	do do	The best matured pine has been removed; thick growth of young pine of prospective value.
Do	Ganmain	1,251—Ganmain No. 2B.	3,540	do do	Best matured pine has been cut; a thick growth of young pine.
Do	Elliott, Kockibertoo, and Matong.	1,421—Matong	13,280	Pine	Good growth of young pine.
Do	Robertson	1,439—Currajong	25,555	Pine, white and yellow box, and bull oak.	Most of the matured timber has been cut; young pine requires thinning.
Do & Cooper	Jillett and Willandra	1,654—Willandra	11,520	Murray pine and box	Fairly timbered; young pine requires thinning.
Bourke	Ardlethan, Ariah, and Davidson.	2,548—Clear Paddock.	10,240	Pine	Timber in all stages of growth; requires thinning.
Do	Ashbridge, Dulah, and Devlin.	2,652	62,000	Pine	A healthy growth of young and matured pine. The box timber and some pine under 7 inches in diameter ringbarked before the reserve was proclaimed.
Do	Davidson, Kildary, and Langikalkal.	2,761	7,400	Pine	The area embraces fine belts of pine, with young timber growing in intervening spaces
Do	Beaconsfield & Trickett	2,784	8,440	Ironbark, box, and pine	Fairly timbered.

Do	Cathcart	322—Cathcart	120	Messmate and white and cabbage gum.	Fairly timbered; medium quality.
Do	Thoko and Wellsmore	343—Ando Hill	640	Cabbage and white gum	do do
Do	Ironmungy	356—Ironmongy	200	White gum, bastard box	do do
Do	Wangellie	366A—Gunning Grach	658	White gum	do do
Do	do	366B— do	151½	do	do do
Do	Boco	382	1,340	Cabbage and white gum	do do
Do	Wellsmore	384—Thoko	570	Blackbutt, messmate, and white gum.	Thickly timbered.
Do	Bungarby	390—Bungarby	1,280	Cabbage gum, dwarf box, and peppermint.	Fairly timbered; timber only suitable for fencing-stuff and fuel.
Do	Gecar	411—Gecar	420	Cabbage gum and honeysuckle	Thinly timbered.

SCHEDULE J—*continued.*

Locality.		Number and name of reserve.	Area in acres.	Description of principal kinds of timber.	Report and general remarks.
County.	Parish.				
Wellesley	Cambalong	422	1,100	Cabbage gum, white gum, and peppermint.	Thickly wooded; poor quality.
Do	Bunarby and Peters	428—Snowy River	4,500	Bastard box, cabbage gum, pepermint, and pine.	Fairly timbered; medium quality.
Do	Cathcart	457	240	Cabbage gum, white gum, and pepermint.	Thickly wooded; inferior quality.
Do	Nelson	491	40	White gum and peppermint	Reserved for fuel.
Do	Hayden	727	5,100	Cabbage, white gum, and peppermint.	Thickly covered with timber of fair quality.
Do	Hayden	728	370	Cabbage gum, peppermint, and a little stringybark	Thickly timbered; poor quality.
Do	Jettiba	747	300	Peppermint, white and cabbage gum.	Timber only suitable for fuel.
Do	Ashton	828A	750	White gum, peppermint, and black wattle.	Well timbered; fair.
Do	Meringo & Merriangaah	874—Bald Hill	2,350	Ribbon gum, peppermint, white gum, and bastard box.	The only timber of commercial value is ribbon gum.
Do	Burrimbucco and Coolumbooka	905	360	Messmate, mountain gum, and pepermint.	Fairly timbered; medium quality.
Do	Lawson	1075	4,000	Ash, messmate, gums, and peppermint.	Heavily timbered; scrubby; good quality.

SCHEDULE K.

FOREST RESERVES proclaimed as exempted from the operation of the ordinary timber licenses issued under the Timber Regulations of 24th September, 1878.

Timber cut upon these Reserves is subject to license fees, payment of royalty, and the conditions specified in the State Forest Regulations, or in the regulations applying to the Timber Reserves:—

County.	Parish.	Number of Reserve.	Area in Acres.

SCHEDULE L.

LANDS exempted from the operation of ordinary timber licenses.

In addition to the lands specified in the 34th Timber Regulation of 24th September, 1878, the following lands have been notified in the Government Gazette as being exempted from the operation of ordinary licenses to cut timber :—

County.	Parish.	Area in acres.	Date of Gazette Notice.	Particulars of Land.
Cumberland	Southerland	.....	24th Dec., 1877	All Crown Reserves.
Do	Londonderry	.....	29th Oct., 1877	All Crown Lands.
Do	Hunter's Hill and Field of Mars	6,235	4th Nov., 1879	Field of Mars Common.
Do	Hunter's Hill	170	22nd Dec., 1879	Lunatic Asylum Reserve.
Gloucester	Verulam and Fitzroy	.....	23rd Nov., 1877	Church and School Lands.
Do	Tuncurry	.....	21st June, 1878	Includes part of Forster's Forest.
Do	Wang Wauh, Kyle, Gooloongolok, Curreeki, Teleraree, Bachelor, Wallingat, Forster, Topi Topi, Booloombayt, and Bullah Delah.	217,600	29th Sept., 1877	Myall and Wallis Lake Forests.
Leichhardt	Euroka and Youendah	4,700	8th Dec., 1884.	
Northumberland	Teralba	2,848	28th Dec., 1884	Reserve No. 60, for coal-mining purposes.
Wynyard	Wagga Wagga	1,000	19th Aug., 1884	Travelling stock reserve No. 3,027
Young	.....	1,600	20th June, 1879	Part of Wilcannia population reserve.
.....	.....	.....	6th Dec., 1878	All Crown Lands reserved as sites for future towns or villages.
.....	.....	4,000	14th Oct., 1878	Lord Howe Island.

APPENDIX.

Annual Progress Report for the year 1884.

Report of the Inspector of Forests to The Under Secretary for Mines.

Sir, Sydney, 20 July, 1885.

I have the honor herewith to submit my Annual Progress Report upon the Forest Conservancy Branch of this Department for the year 1884. I have, &c.,

JOHN DUFF.

Reserves inspected, Reports submitted, and work performed during the year 1884.

January, 1884. Inspected the wattle plantations on Southern Railway Line, between Campbelltown and Cootamundra, and engaged four men to clear off grass and weeds from around the wattle plants to prevent them being smothered by grass and weeds, or burned through sparks from the engines igniting the grass when dry.

The clearing was done between the plants with hoes, and a strip of land on each side of the rows of wattles was cleared of grass with scarifiers drawn by horses.

The best wattle plantations are those between Minto and Campbelltown, and Hill Top and Colo Vale, most of the other plantations being a comparative failure owing chiefly to dry seasons and the poor shallow soil in which they were planted.

Clearing the wattle plantations commenced on 22nd January, and was completed on 19th April following, the work being done by four men and two horses.

About 20 miles in length of the plantations, containing about 6,690 trees, and extending from Minto to Yass, were cleared, and only those plantations in which the trees were sufficiently numerous to justify incurring the expense of clearing were operated upon.

The clearing was conducted under the supervision of Mr. Forest Ranger Rotton, and cost the Department about £180 for labour.

It is much more difficult and expensive to plant and clean the long narrow strips of ground planted with wattles on the railway line than it would be if a block of (say) several hundred acres of land were prepared and planted, and the liability to losses through sparks from the engines igniting the grass when dry is much greater on the railway line than it would be on a large plantation situated at some distance from the railway line.

January. Inspected the Catalpa plantation at the Cootamundra Railway Station, and found that the trees were making vigorous growth, having grown from 3 to 5 feet since planted about five months previously, proving that the soil and climate of Cootamundra are well adapted for the growth of the Catalpa speciosa, and as the trees required supports, a man was sent from Sydney to stake and tie them, at a cost to the Department of about £5.

February. Inspected the land on the north shore side of the Hunter River at Newcastle, reported by Mr. Harbour-Master Allen to be liable to collapse and silt up the river owing to the timber on it being cut and removed for firewood, and therefore increasing the sand-drift. Recommended that the land should be reserved from the operation of all descriptions of leases or licenses, and placed under the supervision of an official whose duty it would be to occasionally inspect the reserve.

March. A new fence, 9¼ rods long, was erected on the eastern end of the Catalpa plantation, at Cootamundra Railway Station. The wires in the other fences around the plantation were strained; the new fence and repairs being required to prevent goats, &c., from obtaining access to the trees, the work costing the Department the sum of £5 12s. 6d.

March. Inspected town reserves, West Maitland, accompanied by the Mayor of that town (R. Hyndes, Esq.), for the purpose of selecting a site for planting Catalpa speciosa trees. The soil and situation of the reserve were considered suitable for the Catalpa, but the expense requiring to be incurred for trenching and fencing separate borders and patches of ground for the trees, which was the only suitable method that could be adopted for planting the reserve, was considered an obstacle to carrying out the work, and I understand the Borough Council of West Maitland also raised some objections to the conditions upon which the Forest Branch proposed to plant the reserve, if it should be considered suitable for the Catalpa trees.

Advised the Mayor with reference to the best mode of laying out and planting the West Maitland reserves, and furnished that gentleman with a list of the trees and shrubs best adapted for the soil and climate of the district.

March. Accompanied the Honorable the Postmaster-General and the Superintendent of Telegraphs to near Belmont, Newcastle District, for the purpose of inspecting and reporting upon the land cleared of timber for telegraph line, and estimating the extent of clearing and value of timber cut and removed therefrom.

Inspected Mr. Forest Ranger Coberoft's district, Gosford, and held an inquiry respecting his performance of the duties of his office, and at the same time inquired into the performance of the duties of his assistant, Mr. Assistant Forest Ranger Brunker, and submitted reports thereon.

April. At the request of Baron Mueller, Government Botanist, Melbourne, and with the approval of the Honorable the Minister for Mines, detailed instructions were issued to all the Forest Rangers to collect and dry specimens in bud, expanded flowers, and ripe fruit of all species of eucalyptus in each of the Forest Ranger's districts, and to furnish the local names, habitats, extent of distribution, and full information respecting the uses and general characteristics of each species, the specimens and information being required by Baron Mueller to assist him in correctly identifying, describing, and illustrating the numerous species of New South Wales eucalypts in his "Eucalyptographia," or Atlas of the Eucalypts of Australia.

The Forest Rangers were supplied with drying paper, boards, and straps, to enable them to preserve the eucalypt specimens.

Inspected

Inspected the Macpherson Range and other forest reserves in Messrs. Green and Shadforth's districts, Richmond River, and held an inquiry into Mr. Forest Ranger Green's management of his district, and submitted a report thereon. May

The attention of the Honorable the Minister for Mines having been directed by Mr. Godhard to the value of the rain tree (*Pithecolobium Saman*) especially for its sweetish seed-pods, which constitute a very fattening fodder for stock, for which purpose it is now extensively cultivated in several countries, the Minister for Mines requested me to furnish him with a full report upon the nature and uses of the tree, on receipt of which he instructed me to take steps to procure seeds of it, and endeavour to get it established in as many parts of the Colony as are suited for its growth. A letter was therefore forwarded to the Director of the Royal Botanic Gardens, Calcutta, requesting him to supply this Department with seeds of the tree, and that gentleman promptly forwarded 5 lb. of its seed, 2 lb. of which was sent to the Director of the Sydney Botanic Gardens, for the purpose of raising plants of it in the State Nursery; and 3 lb were distributed amongst seven Forest Rangers, chiefly in the northern coast districts, who were instructed to sow them in suitable places in the forest reserves and in private gardens in their districts, and to report *re* progress of the tree. June.

Messrs. Forest Rangers Green, Richmond River, and King, of Coonamble, report that they have only succeeded in raising two plants and one plant each from the seed forwarded to them, and that the plants are making satisfactory progress, having grown about 18 inches since planted; and the Director of the Botanic Gardens reports that 130 plants have grown from the seed sown in the State Nursery, and if the plants survive the winter, which is very doubtful, it is proposed to form one or more plantations of them in the warmer parts of the Colony during the ensuing spring. The small number of plants raised from the seed sown is chiefly attributed to last summer being very hot and dry.

The advisability of planting out young cedar trees in the forest reserves in the cedar-growing districts was first brought under the notice of the Honorable the Minister for Mines in April, 1883, and a report was then submitted containing recommendations for proceeding with the work. The proposal to plant cedar in the forest reserves was approved by the Minister, and arrangements were made to commence planting on the Dorrigo Forest Reserve, Bellinger River district, and a sum of £300 was authorized to be expended on the work. July.

An overseer and six men were engaged, on the 4th August, to commence cedar-planting on the Dorrigo Forest Reserve, Bellinger River District, the number of trees planted during the month being 849; and 300 root-cuttings were also planted during the month as an experiment, the cuttings having since been reported as a complete failure. August.

The wages of overseer and men for the month, cost of tools, and carriage of tools and rations to the plantation, amounted to £92 2s. 7d.

During the month a border on each side of the Bank-street Reserve, East Maitland, was levelled, and trenching commenced for a plantation of black walnuts (*juglans nigra*) and Catalpa speciosa; 221 plants of each tree, or a total of 442 plants, were planted, and parallel inner fences were erected to enclose the trees, and prevent them being injured by cattle, boys, &c. August.

The cost of trenching and fencing the plantation, exclusive of supervision, amounted to about £197, and a sum of about £8 or £10 was expended for staking, tying, and watering the trees, and for a few necessary tools, the whole of the work connected with the plantation being completed in October.

Cedar-planting was continued on the Dorrigo Forest Reserve up to the end of this month, during which period 2,083 trees were planted, at a cost to the Department of £74 17s. 8d. for wages. Heavy soaking rains having fallen towards the end of the month and in the beginning of October rendered the watering of the trees unnecessary, and greatly assisted their growth. September.

The cedar plantations have been inspected on several occasions by Mr. Forest Ranger Mecham, who reports that the trees have grown well, and only a very small percentage of those planted have failed.

The plantation of Catalpa speciosa at the Cootamundra Railway Station was extended by trenching 104 rods of ground, and planting 121 plants of Catalpa, and 121 plants of juglans nigra, the black walnut thereon, and with the fifty Catalpa trees planted in 1883, there is now a total number of 272 trees in this plantation. The trenching and planting were completed on the 16th October, and cost the Department a sum of about £85, and the plantation has since been frequently inspected by Mr. Forest Ranger Stevenson and Mr. Assistant Forest Ranger Postlethwaite, who report that the trees have made healthy and vigorous growth. September.

Twenty-five red cedar trees were planted as an experiment on the Olney Forest Reserve, in County of Northumberland, by Mr. Forest Ranger Coberoft, who reports favourably of their progress. This would be a very suitable district in which to plant cedar, as its close proximity to Sydney would enhance the value of the timber. September.

Mr. M'Dougall, the overseer of the cedar plantation on the Dorrigo Forest Reserve, was engaged from the beginning of September till the 18th November in removing undergrowth from around the young cedar trees on the Dorrigo Forest Reserve, his wages for this period amounting to £22. September.

Inspected wattle plantations between Junee and Coolamon on south-western railway line; Catalpa plantation, Cootamundra; and wattle plantation between Minto and Colo Vale; and recommended that the latter plantation should be cleared of grass and weeds to prevent the plants from being destroyed by sparks from the engines igniting the grass, and also that where the plants were growing too closely together the weakest plants should be cut out. These recommendations were approved, and accordingly a man was engaged on 12th November to carry out the work. Another man was employed at end of December, at which time the clearing was completed to near Hill Top, and up to end of December the cost for clearing amounted to £17 6s. Clearing has still to be done between Minto and Menangle. September.

Inspected the Brewarrina District for the purpose of ascertaining and reporting respecting the quality and uses of the indigenous timbers, and if it would or would not be advisable to appoint a Forest Ranger to the district. Owing to the inferior quality of the timber of the district, I did not strongly recommend the appointment of a Forest Ranger, and whilst admitting that such an appointment would tend to check wasteful destruction of timber and increase the revenue from license fees, &c., I, at the same time, submitted for consideration whether it would not be preferable to appoint additional officers to some of the more important timber districts, many of which are too large to be properly supervised by the existing staff. October.

Inspected Catalpa and Walnut Plantation in Bank-street Reserve, East Maitland, and requested the Mayor to authorise a man to be sent to remove weeds therefrom. November.

As

As the Catalpa trees had made rapid growth and required tying, and the ground being very dry it was necessary to water the trees, the amount required for the purpose was obtained, and a man sent to attend to the trees.

December. Accompanied by Mr. F. J. Ferguson and Mr. Forest Ranger Coberoft, I inspected all the Forest and Water Reserves situated between Gosford and East Maitland for the purpose of selecting a site for a Forest Nursery, and after a careful inspection of these reserves it was decided that the best position for the Nursery would be on Hogan's Brush Forest Reserve No. 63, it being within 2½ miles of Gosford, and about 1½ miles from Fountain's Platform, on the Homebush-Waratah railway line. There is a permanent supply of excellent water on this reserve, and the quality of the soil is all that could be desired.

Unless the land should be purchased for the Nursery, no more convenient site for the receipt and dispatch of plants by rail or steamer could be chosen. Tenders have been invited and received for clearing and fencing the 20 acres of land for the Nursery, but previous to commencing the work the land has to be surveyed.

Office Work.

In addition to the work specified as being performed throughout the year, numerous reports and letters have been written, and many of the Forest Rangers' and other reports have been submitted to me for perusal and advice on the various subjects on which they treated. Considerable time has been occupied in the examination, arrangement, and preparation of collections of eucalypt and other specimens and seeds received from the Forest Rangers throughout the Colony, duplicates of which specimens have been forwarded to Baron Mueller when received, to enable him to classify and describe the eucalypts of this Colony in his "Eucalyptographia"; and some of the specimens forwarded to the Baron have proved that certain species are indigenous to localities not hitherto known; whilst others, it is thought by the Baron, will prove to be new undescribed species, which, in many instances, cannot be described until sufficient materials to enable them to be accurately determined can be obtained. The value of the learned Baron's labours in making known to the world the existence and uses of the timber trees of the Colonies, and of the assistance rendered to him by the Forest Branch, cannot be over-estimated, and I trust the Forest Branch will always be permitted to assist him in his labours in every possible way, as the information thus disseminated by the Baron is of universal value and importance.

Forest Nurseries.

The land intended for the Forest Nursery, near Gosford, will be cleared of timber, fenced, and laid out, and the necessary buildings erected, on completion of the survey of the portion intended for Nursery purposes; and the propagation of indigenous and foreign timber trees for planting in Forest and other Reserves and distribution will then be proceeded with.

A site will also be selected for a Nursery in the interior, for the purpose of testing the kinds of trees that are suitable for planting in the dry districts.

Ringbarking.

The Honorable the Minister for Mines having approved of my recommendation to leave belts of trees for shade and shelter around blocks of 5 miles square, permissions to ringbark are now granted in accordance with this decision, or a modification of it, if good reasons can be given by the lessees and Forest Rangers reporting upon applications for permission to ringbark for a departure therefrom.

Thinning and Scrubbing on Forest and other Reserves.

Thinning and scrubbing on the following Forest and other Reserves have been proceeded with during the year at the entire expense of the applicants or lessees of the runs on which the Reserves are situated.

On Nowraine Run (Messrs. Lyell and Simpson, lessees), county of Urana, forest reserves Nos. 2,216, 2,217, and 2,996, including water reserves Nos. 1,118, 1,143, and reserve No. 2,038, were thinned and cleared of scrub, the pine saplings being left at distances of 12 feet apart on the forest reserves, and 15 feet apart on the water reserves, an area of about 9,860 acres on the whole of the reserves having been cleared at a cost of about 5s. 6d. per acre to the lessees, the work being supervised by Mr. Forest Ranger Condell, assisted by Mr. J. J. Allen.

On the Milbrulong forest reserve, No. 2,722, on Mittagong Run, county of Mitchell (Mr. J. F. M'Mullen, lessee), an area of 3,569 acres was thinned and cleared of scrub, under the supervision of Mr. Forest Ranger Taylor, assisted by Mr. J. B. Reid.

On Urana Run, county of Urana (Messrs. Watt and Thomson, lessees), water reserve No. 2,081, forest reserve No. 2,049, and a portion of adjoining Crown Lands were thinned and cleared of scrub under the supervision of Mr. Assistant Forest Ranger Musgrave, and at a cost to the lessee of about 10s. per acre.

On Yanco Block A Run, Murrumbidgee District (Mr. L. Kiddle, lessee), about 390 acres have been cleared of scrub on forest reserves Nos. 1,879 and 1,880, under the supervision of Mr. Forest Ranger Wilshire.

New Timber Regulations.

During the year new timber regulations have been framed, the principal objects in so doing being to prevent monopoly and wasteful destruction of timber, and to increase the revenue derivable from the timber of the Colony; and considering that the revenue obtained from the timber of New South Wales during the year 1883, including proceeds of sales of seized timber, ringbarking inspection fees, and quarry licenses, only amounted to £16,685 19s. 7d.; that after paying working expenses of the Forest Branch, a balance of only about £1,287 was placed to general revenue; that hitherto comparatively little has been done by the Department towards planting treeless districts in localities where timber is becoming scarce, or in thinning and pruning naturally produced trees in the forest reserves, the expenses of which work should be defrayed by revenue obtained from the timber;—I think it cannot be denied that the increased rates are necessary and reasonable. In framing the new regulations those of the other Colonies were very carefully considered, and care was taken that they should not be more restrictive, or the charges for license fees, royalty, &c., higher than those imposed in the other Colonies; in fact, in several instances the charges proposed in the new

new regulations are lower than those of some of the other Colonies; for example, in Queensland the royalty charged on cedar is 3s. per hundred superficial feet, whilst in this Colony the highest charge for royalty is 1s. 6d. per hundred superficial feet. Considerable dissatisfaction has been expressed by timber merchants and licensees in this Colony respecting what they represent as the excessive charges on timber proposed in the new regulations, and it has been urged by them that these increased rates and restrictions will compel them to import timber from other countries and Colonies; but these assertions are misleading, as under the new regulations timber can be procured at as cheap or cheaper rates than it could be obtained elsewhere; and it is well known, although a few kinds of timbers are imported from New Zealand, America, &c., such as Kaurie pine, Baltic deal, Californian redwood, &c., for which we have no suitable substitutes, that the hardwoods, cedar, and some of the other timbers in this Colony cannot be surpassed for cheapness, or the purposes for which they are used, by any kinds of timbers imported from other countries or colonies.

I am fully convinced that this Department hitherto has not obtained more than half the revenue from the timber that it should have yielded, considering that the timber trade is one of the most important of our Colonial industries; and the increased charges now proposed are absolutely necessary to enable the work of forest conservation to be carried on so as to attend to and preserve existing forests as far as practicable, plant trees where necessary, and prepare for the timber requirements of future generations; moreover, I cannot see that the proposed increased rates on the timber will be detrimental to the interests of the timber merchants or licensee, as the latter will merely charge the former a higher price for cutting and hauling the timber, and the timber merchants will correspondingly increase their charges to the public.

Forest Flora.

The Honorable the Minister for Mines having approved of the publication of an illustrated work on the Forest Flora of this Colony, several Forest Rangers have been instructed to collect and forward specimens of leaves, flowers, fruit, wood, and bark of the most useful kinds of timber trees in their districts for illustrating and describing in the flora, and also to furnish full information respecting the extent of distribution, uses, dimensions, habitats, and general characteristics of the various kinds of timber trees, of which specimens are forwarded, so as to enable the fullest information concerning them to be furnished in the work. The difficulty of procuring specimens from long distances sufficiently fresh to enable drawings of them to be made has been great, and has considerably retarded the progress of the work, most of them, although carefully collected and packed, being found on receipt to be useless for the purpose, consequently only four drawings of trees have yet been made. Delay has also been caused through Mr. Nilson, the draughtsman, being unable to work at the drawings, except by daylight, and this, during the winter months, his official duties prevented him from doing. It is proposed to publish the work in parts, each containing six plates and descriptions of trees, and as information has been collected respecting the trees of which drawings are finished, it is expected that the first part will be published in the course of two or three months.

The Timber Trees of New South Wales.

The publication of a pamphlet on the timber trees of New South Wales was approved by the Minister, the work having been compiled by Mr. Arvid Nilson, of the Survey Office, from the works of the most reliable authorities on the subject, was printed and distributed amongst the Forest Rangers, Schools of Arts, and other educational institutions throughout the Colony.

It is intended hereafter to correct and augment the information contained in this work, when the fullest information has been collected respecting the timber trees of the Colony.

Collecting and drying specimens of indigenous trees, seeds, &c.

Collections of tree seeds and eucalyptus specimens chiefly have been made by several of the Forest Rangers, with the view of assisting Baron Mueller in figuring and describing the Eucalypts of the Colony in his "Eucalyptographia"; also for exchanging with kindred Departments, and procuring a collection of named specimens for reference in this Department, Baron Mueller having kindly undertaken to furnish the names of all specimens forwarded to him. The Forest Rangers also retain a duplicate set of the specimens they collect for their own use, and are afterwards furnished with their correct names.

List of rare indigenous and foreign trees desirable to plant in forest or other reserves.

A list is hereto appended of rare indigenous and foreign trees which it would be desirable to plant in suitable localities throughout the Colony.

List of indigenous timber specimens named and arranged on the ground floor of this Department.

A list of the orders and botanical and local names of the timber specimens exhibited in this Department is hereto appended.

Donations received.

From J. E. Brown, Esq., F.L.S., Conservator of Forests, Adelaide, twenty-two copies of his "Treatise on Tree Culture in South Australia." — March, 1884.

From Mr. Bailey, Brisbane, per Secretary for Mines, 1¾ lb. rain-tree seeds (*Pithecolobium saman*). — July, 1884.

From Charles Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney, 320 plants of black walnut (*juglans nigra*), 280 plants of *Catalpa speciosa*, and twelve plants of *Pinus insignis*. — September, 1884.

From J. E. Brown, Esq., F.L.S., Conservator of Forests, Adelaide, 100 plants of *Catalpa speciosa*. — October, 1884.

From C. J. Horsley, Esq., Crown Lands Agent, Brewarrina, seeds of "gruie or colaine" (*Owenia acidula*.) — December, 1884.

From Baron Mueller, F.R.S., K.C.M.G., Government Botanist, Melbourne, botanical names of collections of Eucalypts, of the poison plants, and various other specimens of trees indigenous to New South Wales. — December, 1884.

Seeds, &c., presented by Forest Branch, Department of Mines, Sydney.

Sent to C. Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney, 2 lb. rain-tree seeds (*Pithecolobium saman*). — October, 1884.

Sent to Baron Mueller, Government Botanist, Melbourne, seeds of *Owenia acidula* and *Endiandra sp?* (corkwood), from Port Macquarie. — October, 1884.

Sent to W. R. Guilfoyle, Esq., F.L.S., Director, Botanic Gardens, Melbourne, seeds of *Owenia acidula*. — October, 1884.

November, 1884. Sent to G. B. Scott, Esq., Wagga Wagga, seeds of rain-tree (*Pithecolobium saman*).

November, 1884. Sent to C. Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney, seeds of *Owenia acidula*, *Endiandra sp?* (corkwood), Port Macquarie, and *Eremophila longifolia* (emu bush).

December, 1884. Sent to Baron Mueller, F.R.S., K.C.M.G., Government Botanist, Melbourne, seeds of *Owenia acidula*.

List of useful and rare Timber Trees suitable for planting in Reserves.

Sequoia semper virens—Californian redwood.
Dammara robusta—N.S.W. Kauri pine.
Araucaria Cunninghamii—Moreton Bay pine.
Quercus cerris—Turkey oak.
,, *pedunculata*—English oak.
,, *Ilex*—Evergreen oak.
,, *suber*—Cork oak.
,, *tinctoria*—Dyer's oak.
,, *virens*—Live oak.
Juglans Regia—Common walnut.
,, *nigra*—Black walnut.
Ulmus montana—English elm.
Grevillea robusta—Silky oak.
Laurus camphora—Camphor tree.
Fraxinus Americana—American ash.
,, *excelsior*—English ash.
Eugenia myrtifolia—Brush cherry.
,, *Ventenattii*—Water gum.
Eucalyptus calophylla—Red gum, W. Australia.
,, *cornuta*—Yeit., W. Australia.
,, *globulus*—Blue gum.
,, *maculata*—Spotted gum.
Eucalyptus marginata—Jarrah, W. Australia.
,, *siderophloia*—Ironbark.
,, *corynocalyx*—Sugar gum.
,, *rostrata*—Red gum.
,, *diversicolor*—Karri gum.
,, *microcorys*—Tallow-wood.
,, *pilularis*—Blackbutt.
,, *longifolia*—Woollybutt.
Acacia melanoxylon—Blackwood.
,, *pendula*—Myall.
Harpullia pendula—Tulipwood.
Flindersia australis—Native ash.
Gmelina Leichhardtii—White beech.
Stenocarpus salignus—Beefwood.
Dysoxylon Fraserianum—Rosewood.
Fagus Moorei—True native beech.
Podocarpus spinulosus—White pine or deal.
Tristania conferta—Brush, bastard, or white box.
Robinia Pseudo-Acacia—False acacia.
Rhus rhodanthema—Yellow cedar.
Cedrela australis—Red cedar.

List of Timber specimens arranged on ground-floor of the Mining Department, Sydney.

Acacia melanoxylon. Blackwood.
,, sp.? Hickory.
,, sp.? Golden green wattle.
,, sp.? Silver-leaved boree.
,, sp.? Yarren or myall.
,, doratoxylon. Currawang.
,, sp.? Umbrella bush.
,, salicina. Cuba or native willow.
,, hakeoides. Black wattle.
,, sp.? Yarren.
,, sp.? ,,
,, sp.? Black myall.
,, sp.? Myall.
Avicennia officinalis. Mangrove.
Angophora intermedia. Apple-tree.
Banksia integrifolia. Honeysuckle.
Backhousia myrtifolia. Scrub myrtle.
Ceratopetalum apetalum. Coachwood.
Cargillia pentamera. Black myrtle.
Casuarina quadrivalvis. Swamp oak.
,, torulosa. Forest oak.
,, equisetifolia. Bull oak.
,, suberosa, fœm. She oak.
,, ,, mas. He oak.
Cedrela australis. Red cedar.
Doryphora sassafras. Sassafras tree.
Eucalyptus rostrata. Red gum.
,, maculata. Spotted gum.
,, resinifera. Mahogany.
,, leucoxylon. Red ironbark.
,, crebra. Grey ironbark.
,, piperita. Redwood or peppermint.
,, virgata. Mountain ash.
,, corymbosa. Bloodwood
,, longifolia. Woollybutt.
,, obliqua. Messmate.
,, sp.? Mountain gum.
,, sp.? Stringybark.
Eucalyptus sp.? Stringybark.
,, pilularis. Blackbutt.
,, sp.? White box.
,, sp.? Round-leaved box.
,, melliodora. Yellow box.
,, albens. White box.
,, sp.? Red box.
,, sp.? Black ironbark.
,, robusta. Swamp mahogany.
,, microcorys. Tallow-wood.
,, saligna. Grey gum.
Eugenia ventenatii. Large-leaved water gum.
,, myrtifolia. Brush cherry.
Exocarpus, cupressiformis. Native cherry.
Frenela endlicherii. Red or black pine.
,, robusta. Common, white, or scrub pine.
Flindersia oxleyana. Yellow-wood.
Geijera parviflora. Dogwood.
Gmelina Leichhardtii. White beech.
Melaleuca leucodendron. White or broad-leaved tea-tree.
,, styphelioides. Prickly-leaved tea-tree.
Myrtus acmenoides. Lignum vitæ.
Melia australis. White cedar.
Orites excelsa. Red ash.
Rhus rhodanthema. Yellow cedar.
Stenocarpus salignus. Beefwood.
Syncarpia laurifolia. Turpentine tree.
Sloanea australis. Maiden's blush.
Sterculia diversifolia. Kurrajong tree.
Tristanea suaveolens. Beech or swamp mahogany.
,, neriifolia. Small-leaved water gum.
,, conferta. Brush, bastard, or white box.
,, laurina. Broad, long-leaved water gum.
Tarrietia actinodendron. Black stavewood.
Wilga.

Total, 71 species, or 87 timber specimens, including duplicates.

Timbers from Lord Howe Island.

1	Hot bark.

Dr. R. Lendenfield to the Minister for Mines.

Glenburn, Sydney, 28th February, 1885.

I beg to submit the following report, the result of my recent investigations into the life history of an insect destroying the pine scrub in the Nymagee, Condobolin, and Forbes District.

The report is divided into the following fourteen parts, and two plates are appended :—

1. Introduction.
2. The utility of timbered and scrubby country.
3. Pine scrub.
4. An important parasite on pine.
5. The Beetle.
6. The lava. The anatomy of its jaws.
7. Occurrence.
8. The life history of the insect.
9. The structure of the pine-stem.
10. The physiological effect of ringbarking.
11. Influence of the insect on the pine.
12. The effects observed.
13. Practical results and suggestions.
14. Explanation of plates.

1. *Introduction.*

Before entering on my subject it is my pleasant duty to express my thanks to those who have materially assisted me in carrying out the work entrusted to me by the Hon. the Minister for Mines. The Hon. William Macleay furnished me with the most important information on the subject. Mr. Thomas Glynn, of Nymagee, the Brothers Pearson, of Nangerybone, and Mr. Dadney, of the Steam Scoop Works, assisted me by their hospitality and in other ways, and I am also indebted to Mr. Kidston, the Local Inspector of the District, for much valuable information.

2. *The utility of timbered and scrubby country.*

It is known since the times of Archimedes that only one thing can be in one place at the same time. Slightly modified, this law applies to the vegetation. There is a certain allowance of water and light, and this can be used once only. It is well known to everyone who has been in the country that either scrub and timber or grass can grow, but not both simultaneously at the same place. The rainfall, particularly in the interior, is not enough for both. Most of the timber and all the scrub is valueless, and it would accordingly appear of great advantage to the lessees of Government land if there was only a little of the necessary useful timber in the land, no scrub, and if the country were covered with grass. It has been asserted that the clearing of the country would influence the climate, and also in other ways would cause changes of a kind to make the whole of the country absolutely useless to posterity. I contend that this is a simple prejudice. In the European Alps, where it is absolutely necessary to conserve the timber, the circumstances are totally different. There the trees are required for the purpose of holding the soil to the steep mountain sides, and in this way prevent avalanches and floods. In Australia there are no slopes sufficiently steep to allow of a comparison with the European Alps.

The effect which is produced on a steep slope in a very rainy country cannot be produced in an undulating land with very little rainfall by the same cause—timber. If the water that falls in the shape of rain does not enter the soil to a large extent, much more of it will be lost by flowing into the sea than there would if more of it were sucked up by the soil, and could be turned into practical use by furnishing the grass with the necessary moisture. This water would evaporate during dry seasons, causing a dew thereby. Further also, the disastrous floods, caused by volumes of water flowing off the soil without being engulfed or retarded, in a heavy downpour, would lose their extent and danger if the soil could be made to absorb more water.

The amount of water absorbed is of course in proportion to the sponginess and looseness of the soil on one hand, and the time during which the water remains on the soil on the other.

In a timbered or scrubby district in the interior the soil is smooth and hard, the water falling on it flows down the flanks of the low hills at a terrific rate; not impeded by anything when the rivulets are small and weak, they rapidly join to form a torrent irresistible and dangerous which will often do more harm than good.

Were grass to grow there instead of timber, then the soil would be loosened. Every little root of a plant of grass will, when dead and decayed, leave a little open channel. Many of these channels will soon be formed when grass once grows, and they will lend to the soil that peculiar spongy structure which is so essential a qualification of good soil. Given the same rainfall as described in its effects on timbered country above, much more water will be absorbed by the paddock than would have been by the forest. But the grass has a still more important influence on the flow of water. Every blade of grass will retard its progress, and so the soil will have more time to absorb the water. More water will be retained, floods will be prevented, and the whole must evidently have a most beneficial influence on the country and on the climate.

It is evident, therefore, that clearing the country of useless scrub and timber would be most advantageous; it would not only be of immediate advantage to the country, but also of lasting advantage to posterity; by keeping more water in the country the dew and rainfall must necessarily be increased.

It would lead too far to follow this out any further here.

3. *The Pine Scrub.*

In certain districts in the interior a large portion of the scrub, the noxious influence of which on this Colony has been proved in the previous chapter, consists of conifers belonging to the genus *Callatris*, the well-known pine. The pine is, when it grows well, most valuable timber, but it is only a very small percentage of pine plants which actually are valuable trees. The pine tree takes apparently forty years to grow to sufficient size. Pine trees of that age are about 10 inches thick 15 feet from the ground. They do not grow to very large dimensions in the districts visited by me. The largest on record (Thomas Glynn, Esq.) measured 3 feet across at the base. These trees lend to the vegetation a peculiar character, and the

difference

difference between forests with many pine trees, and such without, is very striking; the pine trees grow in clusters. There seems not to be any extent of forest consisting of pine only; various eucalypty, the box, and the ironbark, are always mixed up with them. If among the tall trees the pine is comparatively rare, it is most abundant in the shape of scrub wherever it can grow. In some places this scrub is so dense that it can be pronounced impassable, and in one instance (Mr. Kidston) no less than fifty-nine little pine plants have been counted on 1 square foot, that is, a plant per every 2·4 square inches. As stock does not eat the pine, and as these dense scrubs preclude the growth of any edible scrub or grass on the locality, it is evident that it appears of the greatest importance to get rid of the superabundance of it. A sufficient number of trees for building purposes can easily be reserved. In the above chapter it has been shown that the clearing of the scrub has no injurious influence on the climate, so that every possible mode of destroying this scrub should be employed.

4. *An important parasite on the pine.*

The Honorable Mr. Copeland, travelling in the district, noticed that great patches of pine scrub were dying, and he investigated the cause thereof, together with Mr. Glynn. They found that a grub was eating the timber, and ascribed the dying of the scrub to this grub. Mr. Copeland drew attention to this important fact, and specimens were procured through the Government geologist. The larva of a beetle and also the beetle itself were found in the passages gnawed by the insect in the timber, and the beetle was identified. My recent researches have shown that it is indeed this beetle which causes the pine scrub to die.

5. *The Beetle.*

The beetle which in its young larva stage causes the destruction of the pine is represented in Plate I, figs. 1 and 2. That this is really the beetle in question has been proved by finding many specimens *in* the pine stems. The beetle is *Diodoxus erythrurus* (white).

Diodoxus is a genus confined to Australia, and represented by two species—*Diodoxus erythrurus* and *scalaris*.

The genus *Diodoxus* belongs to the family *Buprestidae*, most of the members of which are characterised by their very peculiar shape.

They are greatly compressed, only ¼–½ as high as broad, and of an oval shape. The head, thorax, and abdomen are not divided by deep and marked incisions from each other.

Both flaps of the lower jaw are characterised by their soft membranaceous appearance. They possess no defensive or offensive thorns, but are covered with soft hair. The feelers have eleven joints. The dixatal ones are of such a shape as to give to the whole centrifugal part of the feeler a serrated appearance. The legs are short. Abdomen and legs have five joints. The prothorax possesses a posterior process, extending in some cases as far back as the metathorax.

The species *Diodoxus erythrurus*, our beetle, is characterised as follows:—The male is 0·65 inches long, 0·2 inches broad, and about 0·08 inches high. The female appears to be much larger—1·1 inches long, 0·3 inches broad, and 0·1 inches high. With the exception of the size the two sexes are perfectly alike. Shape and colour correspond.

At the sides of the head the eyes are situated; the visible part of the head between the eyes, as seen from above, appears broader than long. There is hardly any incision between head and thorax (breast). The thorax seen from above appears quadratic. The abdomen has the shape of a gothic arch. The whole beetle is oval, truncate anteriorly, and more pointed posteriorly.

The dorsal exoskeleton of the head and thorax is dotted, granular, the wing-covers striped longitudinally, in consequence of the existence of raised granular lines divided from each other by slight grooves. The raised parts are much broader than the dividing grooves: eleven on each side. With a magnifying glass the grooves can be seen to be formed by longitudinal lines of small depressions or holes, which are similar to the irregularly disposed ones on the head and thorax. The feelers are short, about as long as the thorax, and slender. No spines are found on the legs except at the lower joints.

The ventral plates in front are large. The latter part of the abdomen is covered by two narrow rings, and an end piece.

The colour of our beetle is green, black, and orange.

The dorsal side is black, with large orange-coloured spots and stripes. These are of characteristic shape. The eyes appear dark green; the forehead orange, with a small black line extending for a short distance in the centre forward. The dorsal side of the thorax possesses an orange line in the centre extending longitudinally, and an orange line on each side at the margin. The anterior part of this is wider than the posterior, and contains a green patch. Two black bands, widened posteriorly, divide these orange lines from one another. On the wing-covers there are four pair of large orange spots. The anterior pair are elongated longitudinally, and twice as large as the others, which decrease in size posteriorly. The two middle pair are somewhat semi-lunar, the last smallest pair oval.

The anterior two-thirds of the ventral sides are green. The rings are dark reddish brown, with a pair of round orange-coloured spots on each. The legs are likewise green.

6. *The Larva.*

The larvæ and their principal jaw are represented in plate I, Figures 3–8. The time the larvæ take to reach maturity is not known, but extends probably over several years.

The young larva (fig. 5) has, more or less, the shape of a large maggot. As it grows it changes its shape somewhat. It not only increases in size, in length, and breadth, but the head grows to quite a disproportionate size. The larvæ are light, pale, whitish, yellow; only their protruding jaws are dark-brown. The body shows the usual rings, which have the same size in the greater part of the body. The last segments are slightly smaller, narrower than the others. The largest larva I have seen, measured 1·7 inches in length, 0·3 inches in breadth, and 0·15 inches in width. The large flat head, which is nearly circular, measured 0·42 inches across.

The Anatomy of the Principal Jaws.

This larva eats through the timber of the pine, and produces extensive tunnel-shaped excavations (plate II.) This is what makes this insect important to us. The larva is enabled to perform this difficult task of burrowing in the hard pine timber by the peculiar structure of its jaws, which are particularly adapted for the purpose. The mouth organs of beetles and their larvæ, and insects in general, are very different from those of vertebrate animals.

There

There are several pairs of *laterally* moving jaws; one pair of these is in our case very highly developed. With these jaws the larvæ gnaw the tunnels. Each jaw (figs. 6, 7, 8) consists of a broad, roughly speaking, triangular, solid piece of chitine, the horny substance which composes the outer skeleton of the insects. This triangle is a plate, about two and a half times as long as thick, and of nearly equal thickness throughout. The anterior free corner of the triangle encloses the smallest angle of the three; here we find the cutting edge. The two other corners are connected with tendons (fig. 7, *e, f*), which lead down to the muscles moving the jaw (fig. 7, *a, b*). The *outer* one (fig. 6) of these corners encloses a nearly right angle. Here we find on each side of the tabular jaw (fig. 8, *f*) a spherical excrescence—the joint. These two spheres are embedded movably in sockets, and it is around an axis drawn through these two joints that the jaw moves. This axis is vertical.

The muscles attached to the *inner* corner (fig. 7, 8, *a*), the flexores, are very large, and fill the greater part of the cavity of the head. To their very high development the extremely large size of the head must be ascribed. When these muscles contract the jaws are closed on one another, moving horizontally. When, on the other hand, the muscle (*b*), the tensor, is contracted, the jaws move away from one another. These two muscles produce the characteristic pincers-like movement of the jaws.

The anterior cutting edge (fig. 7, 8, *c, d*) is in this way continually moved backwards and forwards, and the grub can produce any desired excavation by applying this scraping mechanism to the wood.

The cutting edge is very sharp (fig. 7), and slightly serrate (fig. 8). The corners of this cutting edge are slightly produced to form teeth, the upper one of which (*c*) is particularly large.

The inner surface of the triangular jaw possesses an S-shaped contour (fig. 7), and is provided with a groove leading down to the mouth (fig. 8). Along this groove the sawdust passes down.

7. *Occurrence.*

The species *Diodoxus erythrurus* has been found in several parts of this and the adjacent colonies.

The beetle is met with in summer, from September until March. The larvæ, of course, can be found always in the pine scrub affected by them. They frequent the lower part of the stem, mainly on the young scrub. Pines of more than 2 inches stem thickness are rarely affected. The larvæ are found in the splint, between bark and wood, and also in the wood itself. It is the rule with insects of this kind to be dependent on a certain species of tree for their food to such an extent that they will perish if not just the right kind of food; the species of tree to which they are accustomed is obtainable for them.

There can be hardly a doubt that this beetle and its larva are entirely dependent on the pine, as even in those places where acres of land had been cleared by the beetle no trace of the insect could be detected on any of the other shrubs which were examined.

8. *The life-history of the insect.*

It is highly probable that the life-history of *Diodoxus* is similar to that of some well-known European species of *buprestidae*, because the numerous stages of the *Diodoxus* which I have observed correspond entirely to similar stages of those European species of the life-history of which has been thoroughly investigated.

I consider myself therefore justified in filling in those gaps between the stages of Diodoxus observed by me by means of comparison with European forms.

The known species of *buprestidae* undergo a complete metamorphosis, that is to say, they pass through three well-defined stages, the caterpillar, the chrysalis, and the beetle.

A "division of labour in time" is expressed in a high degree in this family.

The egg is deposited in the timber, and develops into a small grub. This grub eats its way through the timber and forms irregularly curved passages beneath the bark. This is also done by the Australian species as shown by the specimens. Other timber-devastating beetles make passages of other shapes, and the effect on the tree will of course greatly depend on the shape of these passages.

As the larva or grub proceeds it grows, becomes thicker and longer, and relinquishes its original maggot-like shape more and more. The passages which it forms are of course adapted to its size, and become wider the older the grub gets. These passages are accordingly not cylindrical, but more or less conical.

This grub lives for a long time, that is, for several years, and grows very slowly. Finally, it attains the characteristic nail-shape met with in the larvæ of this family.

When the season comes, which in Europe is mostly the second autumn, the grub forms a chrysalis. It is evident from the above that chrysalis of our beetle will always be found at the wider end of the long conical passage formed by the grub during its relatively long life.

The chrysalis is broader and shorter in proportion than the grub and wedgeshaped.

In Europe the known *buprestidae* remain incisted in the chrysalis throughout the second winter. It is probable that the chrysalis-stage of the Australian species does not last so long, because the climate is not so severe.

When the beetle is formed by the transformation of the grub within the chrysalis it commences to gnaw a passage through the timber in a centrifugal direction. The passages gnawed by the *buprestidae* are remarkable, inasmuch as they are oblique tending upwards and outward, and of a very elongate oval transverse section, pointed lancet-shaped at each end. The beetle has itself such a transverse section, and of course does not excavate more timber than necessary to get through. The shape of this passage represents the shape of the beetle, and is consequently very different from that of the passages made by the grub. On the outer surface of the stem these tunnels terminate with very characteristic apertures, which have a more or less oblique oval shape.

When the beetle has worked his way through the wood he steps out on the bark, and there rests for some time to gather strength for his maiden flight. The beetle flies fast and far. He prefers sunny, warm, dry days to a dull time for his excursions.

The beetle lives only a few weeks, feeding mainly on flowers or leaves. Very soon after he has left the chrysalis the sexual act takes place, and the beetle commences to lay the fructified eggs when he is about six weeks old (the European species). The female possesses an organ, a so-called ovipositor, by means of which it deposits its eggs in the bark of the pine trees. It does not appear probable that the beetle is able to penetrate the thick bark with the ovipositor. He may bite a hole in the bark first, or, what perhaps occurs most

most frequently, he may utilize an already existing interruption in the continuity of the bark—a slight scratch or wound in the bark. Two or three eggs are laid in one and the same place, not more. There are rarely more than that number of grubs in one tree. There the eggs commence to develop into maggots, which feed on the splint, the soft tissue of the tree between bark and wood, and form tunnels extending mostly horizontally in a semi-circle for three-quarters of a circle round the stem. This will often cause the tree to die. After the maggots have become larger they often commence to eat right into the wood, emerging from these inner tunnels occasionally to work along the surface of the timber for a short time. Then again they will gnaw into the wood, until finally they again form chrysalis and turn into beetles.

If we cast a glance at this description we shall perceive that the beetle grows slowly and surely, storing up nourishment and leading a very quiet life as a grub, and then spends the nourishment slowly stored up and saved in a short, happy, and eventful career of flight and exertion, in which period his unconscious aim is to *spread the species.*

This mode of life is characteristic of the beetles and butterflies, and the division of labour in time has led to the very extraordinary complete metamorphosis of these animals.

9. *The Structure of the Pine Stem.*

The bark of the young plants is smooth, and only 0·08 inches thick. It can easily be penetrated by the ovipositor of the female beetle, and so the larvæ are found very frequently in these young pines. So thin a bark is found on stems under 0·8 inches diameter. The bark soon increases in thickness, and already on stems 2 inches in diameter attains a thickness of 0·3 inches. It loses its smoothness, and soon becomes transversed by mostly longitudinal breakages, which roughen it more and more. The bark on the large trees is very rough and 0·5–0·8 inches thick.

The microscopic structure of callitris-wood shows no peculiarity. As in other coniferæ, the cambiform and trellis-cells are found exclusively in the soft bast below the bark. The yearly rings are narrow and irregular, in consequence of the unseasoned climate of the locality. The pine grows twice as rapidly in soft earth than on rocks, and the timber of the rock-pine is accordingly very much harder than that of the pine growing in soft earth.

10. *The Physiological Effect of Ringbarking on Plants.*

It is a fact known for many centuries that by cutting through the bark of certain trees, by ringbarking them, they are killed, whereas other trees treated in a similar manner are not affected much, and soon recover from the wound.

The different effect of ringbarking on different trees has been explained by Hanstein* and Sachs†. The experiments of the former have shown that only those trees are killed by ringbarking which do not possess any scattered fibro-vascular bundles nor any threads of trellis and cambiform cells in the interior of the stem, the pith. If such a tree is rung, a thick mass of lenticells and sometimes also roots are produced on the upper margin of the ring. If the lenticells can cover it in any portion of the removed ring before the tree has died, then it will recover, but not otherwise.

On the lower margin of the ring adventive buds are incited to produce shoots in a similar manner, as if the stem had been cut off instead of being only ringbarked.

There are Dicotyledons in the stems of which threads of cambiform and trellis cells occur, but no fibro-vascular bundles (*Asclepideæ, Apocyneæ, Solaneæ*), and others where, as it is the rule in Monocotyledons, also fibro-vascular bundles are present in the interior of the stem (*Piperaceæ, Mirabilis, &c.*) In all these plants the supply of nourishing material to the parts below the ring from the organs above is not interrupted by ringbarking, and the plant will continue to grow after it has been rung.

Sachs (*l.c.*) gave the explanation for this. He showed that the hydrocarbons (starch, sugar, &c.) travel mainly along the circumference of the fibro-vascular bundles, in trees, also in the wood; and further, that the nitrogenous substances mainly move along the cambiform and trellis-cells which form the soft part of all fibro-vascular bundles, and are exclusively found in the inner portion of the bark of Dicotyledons. As both kinds of substances are necessary to nourish the plant, it is evident that that part of the plant must die from which the supply of either is cut off. If, therefore, the tissue along which this nourishing material flows be cut through the plant will be killed. A very small portion of the nitrogenous substances travel also along the wood, so that exceptionally it may be possible for a tree to overcome the bad effects of ringbarking, and the ring may heal over.

11. *Influence of the Insect on the Pine.*

The larva of our beetle ringbarks the pine trees in its way, and the effect is precisely similar to that described in the above chapter.

The ovum is deposited in the thin cylindrical layer of soft bast which lies between the wood and the bark, and which is so essential to the life of the tree as the only canal through which certain most necessary nourishing substances flow.

The maggot which issues from the egg is much too small and weak to be able to attack the hard timber, and so it naturally eats its way along the cylindrical layer of soft bast between the bark and wood, which is much softer, and which contains more nourishment for the grub than either the wood or the bark.

If our grub were to follow a longitudinal course, and gnaw out a tunnel running up or down the stem, it would not affect the tree any more than a longitudinal cut in the bark would do; it would have no perceptible injurious effects, because the longitudinal supply canals in the soft bast would remain mostly uninjured.

But, extraordinary to say, the grub does not take this evidently easiest course, but, on the contrary (plate II, fig. 11), gnaws a horizontal transverse passage right round the stem. These transverse canals are very characteristic of our grub; they extend, as mentioned above, more or less far round the stem; sometimes right round, sometimes half to three-quarters of the circumference. The advantage which the grub attains by cutting these transverse canals can easily be comprehended: all the vertical sap-canals are cut through, and an abundance of nourishing material for the pine is poured into the tunnel from above and below. The grub doubtlessly licks up that sap, and lives on it to a great extent.

After

---

* Pringsheims Jahrbuch für wissenschaftliche Botanik. Band II. † Experimental—Physiologie Seite, 331-386.

After the grub has worked more or less round the stem, it either enters the stem and commences to work a tunnel right through the wood, or it changes the direction of the surface canal and burrows along in varying crooked lines, which may, particularly in very slender stems, become more or less longitudinal (plate II, fig. 9). At another point it may again commence a horizontal tunnel round the stem, and in this way cut through the few supply canals, perhaps, which were not destroyed by the formation of the first circular tunnel.

It is clear that the effect of this would be exactly the same as that of ringbarking. *Our grub actually ringbarks the pine scrub.*

Were it not for these transverse tunnels the grub would not be nearly so destructive.

When the pine is dying in consequence of having been rung by the grub, then the soft bast dries up, and the larva, already large and strong, commences to burrow in the interior of the wood only. It seeks those places where it is most likely to find sap, and, therefore, invariably burrows down to the lower termination of the stem, there eating the wood of the stem and the main root, which extends vertically downward, as in other coniferæ, until a nice trellice-work of thin wood is left around the cavities, gnawed out by the larvæ (plate II, fig. 10).

By this time the larva has grown up and the pine is quite dead. It forms its chrysalis near the great excavation, and turns therein into a beetle.

A pine is known to linger for twelve months when rung only through the soft bast, but it dries in one month, when the whole of the white wood is cut through, down to the dark central part. (Mr. T. Glynn.)

The work of our grub belongs to the first category; the pine lives for a year after it has been rung by the grub. Firstly, the highest tips of the green boughs shrivel up and turn brown. This process extends further and further downwards, until the whole plant is brown. Leaves and branches are broken off. The stems alone hold out a little longer, until also these, weakened at the base by the excavations of the grub, give way to a heavy gust of wind, or are broken down by stock or wild animals.

If the grub were to attack the stems *above* the lowest branches they could not kill the trees, because these branches and their leaves would remain alive, even after the top, the part above the spot rung by the grub, has withered and died. But the grub invariably—I have examined many hundred specimens—attacks the pine-stem at its base.

I am inclined to believe that most of the pines attacked by the grub die, but this, of course, is only an assumption.

12. *The effects observed.*

In the vicinity of the township of Nymagee, all along the road from that place to Condobolin, in the south (Hon. Mr. Copeland), and also to the west (Mr. T. Glynn), between Nymagee and Nangerybone, and in the vicinity of Melrose, patches of pine scrub have been observed to die out, without an apparent reason. The Hon. Mr. Copeland has made it highly probable that on the Nymagee-Condobolin Road this grub is the cause of their dying. I have examined hundreds of specimens in the localities mentioned above, and I think that there can be no doubt that this grub kills the pines. Large areas on the property of Mr. Glynn formerly covered with pine scrub are now cleared; only a dead, dried, and half-decayed stem, which can be broken down with one finger, here and there, testifies to the pre-existence of scrub in the locality. Around this area there is a belt of dying pines. There are several clear patches surrounded by similar belts in other localities.

I do not think that the recent drought can have anything to do with the dying of the pine, because the patches where the scrub has vanished are found indiscriminately in elevations and in damp hollows.

The drought would certainly favour the beetle in his flights.

13. *Practical Results and Suggestions.*

1. The pine scrub covers many hundred square miles.
2. It would be of great advantage to the Colony to have this scrub cleared.
3. There exists a beetle, *Diadoxus erythrurus*, which in its lava stage kills the pines it attacks, and clears the scrub.
4. This biological fact can be turned to practical account, if point (2) be accepted as correct.

If the grub and beetle were kept in store so that they could always be supplied to any squatter desirous of clearing the pine scrub, this (point 4) could be done. Although the grub is very hardy, and lives in a bottle without food for a fortnight, still it would seem better to use the beetle for the purpose of distributing the species. One female beetle lays a great many, probably hundreds of eggs, and would, if let out in a pine scrub, affect a great many plants. *One pair* of beetles per square mile would be sufficient to clear it within twelve years. It would be necessary, however, for the purpose of having a large stock of beetles always at hand, to breed them artificially in the manner I suggested in my previous report, by covering some affected pines with a fine net or wire gauze to prevent the escape of the beetle.

At the right season, in early summer or spring, beetles could easily be caught in great numbers, and might be procured at a cost of about 2s. a hundred, of which about half or more would be females.

If once established in a certain district the beetle will multiply; but as the larvæ live for years the rate of increase will not be very fast.

If we assume that the development from the egg to the beetle takes three years, and that each female beetle lays 200 eggs, the rate of increase would be as follows:—

1st	year.....	2 beetles.....	(1 pair.)
2nd	„	200 grubs.	
3rd	„	200 grubs.	
4th	„	200 beetles.....	(100 pair.)
5th	„	20,000 grubs.	
6th	„	20,000 grubs.	
7th	„	20,000 beetles.....	(10,000 pair.)
8th	„	2,000,000 grubs.	
9th	„	2,000,000 grubs.	
10th	„	2,000,000 beetles.....	(1,000,000 pair.)
11th	„	200,000,000 grubs.	
12th	„	200,000,000 grubs.	

Let

Let us assume that half of these perish, then it is clear that 100,000,000 large grubs will be the offspring of one pair of beetles in twelve years. If we now assume that there are in the pine scrub country, taking it all through, two pines to the square yard, we shall have 6,000,000 to the square mile. There are, as mentioned above, only a few grubs, two to four, in each pine affected, so that it will require 18,000,000 grubs to clear this area. But we have, after twelve years out of each pair of beetles, 100,000,000 of grubs, so that it would be easy to clear a square mile of pine scrub in twelve years with one pair of beetles!

Of course, by applying 100 pairs of beetles, for instance, per square mile, there would be a sufficient number of grubs to destroy the scrub in half that time.

With a greater number, of course a better and quicker result will be obtained in proportion.

When the pine scrub has been exterminated the insect will also become less numerous, as it is not able to live on any other plant.

When the pine scrub used to be kept down by bush-fires the insect was scarce. Now that the fires are put a stop to the pine scrub flourishes, and its natural enemy the *Diodoxus* increases in number proportionately. It will decrease again when its own ravages have caused the pine scrub to become scarce.

Explanation of Plates.

Plate I.—*Diodoxus erythrurus* and the structure of its principal jaw :—

Fig. 1. The male beetle, natural size, caught flying, in February.
Fig. 2. The female beetle, natural size, in February.
Fig. 3. The Larva adult, ready to form a chrysalis from a part of the pine represented in fig. 10 ; natural size.
Fig. 4. The Larva not so highly developed ; natural size.
Fig. 5. Young Larva, about three or four (?) months old from the pine, represented in fig. 11 ; natural size.
Fig. 6. The principal (anterior) pair of jaws of the larva, seen from above ; magnified 20 diameters.
Fig. 7. One of the jaws represented in fig. 6, seen from below ; magnified 30 diameters.
Fig. 8. The same jaw seen from within. The face *c.c.*, appears in fig. 7 en profile, and in fig. 8 en face.

The letters in figs. 7 and 8 have the following meaning :—

(*a*) Muscles to move the jaws towards each other. *Flexores mandibuli anterii.*
(*b*) Muscle to move the jaws away from each other. *Tensor mandibuli anterii.*
(*c*) Upper tooth on the cutting margin of the jaw.
(*d*) Lower tooth on the cutting margin of the jaw.
(*e*) Insertion of the *Tendon Flexoris* in the jaw.
(*f*) Joints on which the jaw articulates.

Plate II.—Pine stems affected by the larva of *diodoxus erythrurus* derived of the bark in natural size.

Fig. 9. Portion of the stem of a young pine 6 feet high, 2 feet above the ground. The tips of the branches appeared withered, otherwise the tree was green ; larvæ middle-sized.
Fig. 10. Portion of the main root and base of stem of a pine tree 5 feet high. Just below the ground the stem is eaten more than half away. The tree was dead, the larvæ in it alive and nearly adult. (Fig. 3.)
Fig. 11. Portion of the stem of an apparently dying pine, about 20 feet high, 3 feet above the ground ; the larvæ alive, but small. (Fig. 5.)

May I hope that the results of this investigation will be of practical use to the owner of the land, the Government, and the tenants of the land, the squatters.

1885–6.

NEW SOUTH WALES.

FOREST BRANCH, DEPARTMENT OF MINES.

(ANNUAL REPORT.)

Printed in accordance with Resolutions of both Houses of Parliament.

To the Honorable James Fletcher, Esq., M.P., Minister for Mines, &c., &c.

Sir,

In submitting the reports upon the working of the Forest Branch for the year 1885, I have much pleasure in bearing testimony to the efficiency of the officers of this Branch. I must, at the same time, apologise for the lateness of this report, due mainly to the fact that the officers of the Branch have, until recently, been so much engaged in preparing for the Colonial and Indian Exhibition. The revenue of the Branch collected during 1885 is less than that of 1884 by £4,387 3s., chiefly due to the decreased demand in Victoria for the timbers of this Colony; but it is quite possible that a demand for these timbers would arise in other countries if they were better known outside the limits of Australia. With a view to disseminate information concerning the qualities and uses of these timbers, much care and attention was devoted to the collection and preparation of samples for the Colonial and Indian Exhibition about to be opened in London. In this work I personally took a great interest, and I feel much indebted to Mr. Duff, the Inspector of Forests, and Mr. Piper, the Chief Clerk, for their most valuable assistance. I also gladly recognise able and zealous services in this matter of Mr. Rudder and some of the other Forest Rangers. It is quite possible, however, that full justice was not done to some of the timbers, as, owing to the very limited time available for collection and preparation, some of the samples could not be properly seasoned. It is to be feared that the collection is deficient in samples of veneers, partly due to sundry articles of furniture which had been ordered not having been supplied in time for transmission, and partly to the fact that the sending of veneers in sheets was overlooked. It is thought that the samples of engraving woods and fibres sent to the Exhibition, which were carefully prepared and described by the Inspector of Forests, may have the effect of creating a demand for them outside this Colony.

Last year (for the first time since 1877) the cost of conducting the work of the Branch exceeded the revenue collected. This is probably due to the causes assigned by the Chief Clerk in his report, seeing the Regulations of the 18th August last are practically the same as those of the 24th September, 1878, so far as regards reserves which are subject to royalty; therefore the falling off in the revenue cannot be ascribed to any reduction in the rate of royalty chargeable, consequently, it must be due to a decreased demand. The revenue for the present year (1886), however, shows signs of recovery.

The following statement shows the decrease occurs mainly in the receipts from royalty and ring-barking trees:—

	1884.	1885.
Revenue from reserves subject to royalty	£8,392 13 10	£4,588 12 8
Ringbarking fees	650 5 0	39 2 6
Revenue from all other Timber and Quarry Licenses ...	8,679 5 0	8,695 10 0
Seizures	528 1 10	539 17 6

The area of reserved timber land is 5,675,950 acres. Quantity of timber cut upon 2,382,406 acres subject to royalty, 6,860,512 superficial feet, besides 828 trees. No account is kept of the quantity of timber cut on other reserves and Crown lands. The quantity of timber shipped from ports other than Sydney and Newcastle, 62,669,310 superficial feet. The value of timber exported was £54,931.

During the year attention was invited to a disease in maize, known in the coast districts as "maize blight"; but as no reports on the subject were received during the year to which this report refers, I shall perhaps be pardoned for referring here to the action taken and reports received during the early part of 1886; and, in doing so, I desire to express my obligation to Mr. W. S. Campbell, the Chief Draftsman of this Department, for the able assistance he has so cheerfully given me. The following is the report on the first samples submitted:—

Sir, Department of Mines, Charting Branch, 15th February, 1886.

I beg most respectfully to submit, for the information of the Hon. the Minister for Mines, a most exhaustive report, by E. Haviland, Esq., F.L.S., on the "Maize Disease."

The specimens examined by Mr. Haviland were obtained by Mr. Forest Ranger Wilson from four farms on the Hastings River.

I have, &c.,
WALTER S. CAMPBELL.

The Under Secretary for Mines.

[1,258 copies—Approximate Cost of Printing (labour and material), £27 12s. 9d.]

REPORT on four samples of Maize received from River Hastings; by E. Haviland, F.L.S.

I HAVE most carefully and minutely examined the four parcels, consisting of nine plants of diseased maize procured from the River Hastings.

I find that this disease, known to the farmers in the Northern districts of the Colony as "blight," is caused by the microscopic fungus *Ustilago candollei*. The fungus appears, as a rule, to make its first attack upon the leaves of the plant; its mycelium, which in some respects may be compared with a creeping root, penetrating the leaf, and not only robbing it of its sap, but choking the sap vessels. The mycelium is shortly succeeded by pseudo spores, which produce true spores, and these true spores in their turn produce secondary spores, the secondary spores reproducing the mycelium, and so completing the circle. All these spores choke and clog the tissues of the leaves, preventing the free flowing of the sap. The leaves, being thus to a great extent deprived of their nourishment, wither and die.

It is the duty of the leaves to receive the crude sap from the roots, and, by exposing it spread out over their broad surfaces to the atmosphere, to elaborate and render it fit to be returned as food for the plant; but their destruction preventing this, the other portions of the plant are left to sustain life as long as they can by means of the crude, unelaborated sap only. The plant, of course, soon becomes deprived, or almost deprived, of its vital energy, and is left in the same position as any other inanimate organic matter when exposed to damp and warmth—liable to decay and to the attacks of "moulds" and "mildews." Accordingly, I find that the close sheathing parts, where the leaf joins the stem, have been attacked by the mould common on decaying vegetable matter, *Aspergillus glaucus*, and that the holding of moisture between the several grains has induced decay, hastened by the growth of this "mould," until the point of attachment has been destroyed, and the grains have fallen, leaving the "cob" partly naked. I estimate that of the five "cobs" accompanying these samples fully 40 per cent. of the grain has been thus lost. I have found no trace of disease either in the stems or roots of these samples, and only in few instances in the ovaries.

Nothing, I think, can be done to save a crop when once affected; *but I should earnestly advise those concerned, as preventive measures for future crops, to destroy by fire all culms, roots, and leaves of the present diseased crop;* to avoid planting maize, year after year, upon the same ground; to obtain seed for the next planting from some distant source, where it can be ascertained that there has been no disease; and by taking such measures, best known to practical farmers, as are likely to increase the vigour of the crop, and thus to give it every chance of resisting the attacks of this fungus should it again make its appearance.

I append particulars of the examination of each parcel:—

Sample No. 1.—*Three plants, A, B, C.*

A.—Stem small and attenuated, but fresh and green. The whole of the leaves dead throughout their entire length, and clouded by spores of the fungus under the cuticle. This specimen bears a "cob," the sheathing leaves of which are free from disease. The "cob" is well formed upon side only, the grains full and plump; but upon the other side more than half the grains have been lost, the ovule shrinking within the testa in some grains, the others having rotted quite away. As there is no appearance of the fungus *Ustilago* in the "cob," this diseased state has been caused by the destruction by that fungus of other parts of the plant.

B.—In a portion of the sheathing of the "cob" the mycelium of the fungus *Ustilago* remained, and with masses of pseudo and true spores, forming a grumous mixture, completely choked the vessels. In a second "cob" two-thirds of the grains had disappeared, and many of those that remained presented a shrivelled half rotten appearance, covered by the mould *Aspergillus glaucus*, and by the mycelium of the *Ustilago*. In this specimen I found many of the pseudo spores in the ovary.

C.—A young plant. The lower leaves of this plant were completely covered with pseudo spores, but the upper leaves were clean.

No. 2.—*Two plants, A and B.*

A.—The sheathing portion of the leaves much diseased, and covered to some extent along the leaves by cloudy markings formed of spores on the surface of the cuticle, but attached to it. The "cob" attached to this specimen was half stripped of its grains, but those that remained were healthy. The receptacles of the grains that had disappeared were much decayed and covered by "mould." No trace of the fungus *Ustilago* in the ovary.

B.—In the "cob" about a third of the grains had decayed. Sheathing leaves all clean. No disease in the ovary. This specimen showed symptoms of disease at the nodes (joints) of the stem; but although some of the pseudo spores and mycelium were present, I could not trace the disease beyond the cuticle.

No. 3.—*Three plants, A, B, C. Young plants, planted first week in December.*

A.—This specimen could scarcely be said to be diseased. There were a few pseudo spores here and there on the surface, perhaps from other plants, and the mycelium present in isolated spots. Apparently it had been very recently attacked.

Same remarks will apply to *B* and *C*.

No. 4.—*Three plants, A, B, C, from Rawdon Island, River Hastings; also D, one young plant, planted 24th December.*

A.—Leaves but slightly diseased; "cob" nearly half destroyed; inner sheathing of the "cob" clean; outer sheathing diseased; pseudo spores in the empty receptacles of the missing grains; some few spores in the ovary *germinating*.

B.—Leaves very much diseased; particles of decayed matter, taken from the abortive "cob" contained the pseudo, primary, and secondary spores. In this plant the "cob" had failed entirely, leaving only a small mass of matter containing hundreds of the secondary spores.

C.—The leaves mostly diseased, extending somewhat to the cuticle of the stem; only a few grains of the "cob" lost; some of those left had pseudo spores in the ovaries.

D.—Scarcely affected.

In

In submitting Mr. Haviland's report upon the Maize Disease, I desire to point out that that gentleman has evidently devoted much care and attention to the subject, that he is specially qualified for the duty, and that he kindly volunteered his services without fee or reward of any kind. I gather, from the report and from a conversation with Mr. Campbell, that the remedy is the destruction by fire of the roots and other remains of the infected crop, the drainage of the land, the planting of other crops for a year or two, and, when the planting of maize is resumed, the procuring of seed from a distant and uninfected district.

I submit that the best thanks of the Department are due to Mr. Haviland, that thanks are also due to Mr. W. S. Campbell (Chief Draftsman in this Department) for the action he has taken in the matter, and that the papers be printed and copies forwarded to the Members of the Northern Coast Districts for distribution, and to the Press.

H. W., 16/2/86.

The report may be printed and the thanks of the Department conveyed to Messrs. Haviland and Campbell.—R.M.V., 17/2/86.

The following letter from the Curator of the Botanical Gardens contains the advice of that gentleman upon the subject generally before any specimens had been submitted to him :—

Sir, Botanic Gardens, Sydney, 25 February, 1886.

With reference to the accompanying letters (from John See, Esq., M.P.) on the subject of the disease with which some of the maize crops in the northern districts are affected, I would state that, although I have not seen any form of the disease, yet, from all I have heard, it is undoubtedly caused by a fungoid growth similar in its effects to the rust in wheat.

I shall be glad to get specimens of it for examination, and, in the meantime, I would most strongly recommend that wherever the disease makes its appearance the plant on which it is found should be at once cut down to the base, the cuttings placed on a heap away from the other crops, and burnt as soon as possible thereafter.

I have, &c.,

The Principal Under Secretary. CHARLES MOORE.

The following is a copy of a circular sent to Forest Rangers :—

Sir, Department of Mines, Forest Branch, Sydney, 1886.

With reference to your appointment as a Forest Ranger, I have to inform you that you should invite, and as far as possible assist, farmers and others in the district assigned to you, who are troubled with diseases in their crops, to forward specimens to this Department.

When such specimens are received, every endeavour will be made to have the nature of the disease investigated.

You should make this known generally throughout your district.

I have, &c.,

Mr. Forest Ranger Under Secretary.

In response to which Mr. Forest Ranger Wilson sent twenty-one samples from farms on the Hasting River, which were submitted to Mr. E. Haviland, F.L.S., who reported as follows :—

Report on six parcels, consisting of twenty-one plants of maize, received from Department of Mines; by E. Haviland, F.L.S.

The twenty-one plants of maize received by me, and which I believe were grown on the River Hastings, have had my most careful attention. I have examined every part of each plant separately and microscopically, and have found, as in the previous parcels upon which I reported in February last, the whole of the plants infested, in a greater or lesser degree, by the microscopic fungus, *Ustilago Candollei*.

In my report above referred to, I explained the mode of attack of this fungus and the manner in which the plant is destroyed by it, which it will therefore not be necessary to repeat; but I must draw especial attention to the examination of the plant *A* in the parcel No. 1, from the farm of Mr. John Hyde (see particulars of examination annexed.) This plant was almost entirely destroyed. A portion reserved shows that nearly the whole of the vascular and cellular tissues were either choked by the protospores of the fungus or decayed and rendered incapable of conveying and distributing the sap. It would be exceedingly interesting and instructive to know under what conditions of soil, drainage, &c., this plant was grown, and I may here add that in all cases of the examination of diseased crops, such knowledge would be productive of future valuable statistical information. In the parcel No. 2, from Mr. Lockton, it will be seen that, while the plants *A* and *B* were comparatively healthy, *C* was diseased in an aggravated form. The question naturally arises—Were these three plants portions of the same crop, planted at the same time, and under similar circumstances; or, under what conditions do their states differ so materially ?—a question which could perhaps only be answered by actual inspection of the crop while growing, or by careful inquiries made on the spot.

I wish also to take advantage of this opportunity to state that the protospores of this fungus possess the property of decomposing the tissues of the plant in their immediate neighbourhood, each one forming a centre of action upon the adjacent parts.

It will be observed that in this report I have made use of the word "Protospore." This I have substituted for "Pseudospore," used in my last report, as I considered it the more correct application.

I append particulars of examination of each parcel.

PARCEL No. 1.

Two plants, A, B, from Mr. John Hyde.

A.—This plant much impoverished and infested throughout by the fungus *Ustilago Condollei*. The two "cobs" upon it are small and bare, neither of them containing more than ten or twelve grains, the others having either shrivelled from want of nourishment (the sap vessels being destroyed by the fungus), or, becoming soft and rotten, have fallen an easy prey to insects, especially the common "ear-wig" (*Forficula*)—an insect very destructive to the softer portions of plants, and of which I find very many in these cobs. A transverse section of the leaf of this plant, shows the fungus completely through its substance, and the whole of the sap vessels destroyed.

B.—

C.—The leaves quite destroyed by the fungus and the plant generally in the same condition as *A*, but in a somewhat less degree. This plant bears two "cobs"—one only partially formed, the other contains only a few half-formed grains.

PARCEL No. 2.

Three plants A, B, C, from Mr. J. Lockton.

A.—In this plant the fungus, although it has penetrated the cuticle of the stem, has but slightly affected the leaves. It is, therefore, in a comparatively healthy state. It bears one "cob," which is sound and well formed; a few grains only are missing, which have probably been picked off by the hand.

B.—The above remarks will also apply to this plant, excepting that the "cob" has been pulled off. The sheathing of the "cob" is, however, quite healthy. These two plants are stouter and of more vigorous growth than any, at all affected by the fungus, that I have examined.

C.—In this plant the sap vessels of the leaves are either nearly all destroyed by the the decomposing property of the fungus, or choked by the protospores. The grain and ovaries are also to some extent affected. Although as tall as *A* and *B*, the diameter of its stem is not more than half that of those specimens. This plant bears two "cobs"—one about half destroyed, the other a mere rotten mass.

PARCEL No. 3.

Six plants, A, B, C, D, E, F, from Mr. James Dicks.

A.—A very sickly-looking plant. In many of the leaves the protospores of the fungus are deeply imbedded in the tissue in waved bands extending across the base of the leaf, and cutting off all communication of the sap between the stem and the leaf. A transverse section of the leaf shows the fungus very deeply embedded. At all the joints, both the mycelium of the *Ustilago* and other fungi (mildews and moulds) have made their appearance. There is no "cob" on this plant.

B.—Not so badly affected as the preceding specimen, yet the "protospores" of the fungus are making their way through the leaves in isolated patches.

C.—In this specimen the sheathing portions of the leaves are altogether destroyed presenting, under the microscope, the appearance of small broken tubes filled with purple beads. Two small "cobs," which do not exceed an inch in length, are reduced to rotten masses.

D.—All the leaves infested by the "protospores" and in some parts by the mycelium of the fungus. One cob; grains not developed.

E.—Although slightly affected, a tolerably healthy plant.

F.—Not only all the leaves but the cuticle of the stem badly affected. "Cob" partially destroyed, the shrivelled grains remaining on it.

PARCEL No. 4.

Five plants, A, B, C, D, E, from Mr. Tuffin.

A.—Leaves entirely infested by the fungus both in its mycelium and "protospore" forms. There is no leaf on this plant capable of performing the necessary duties of transporation and elaboration of the sap. It appears to have been attacked late, as one "cob" is large and well formed, and has lost but a few grains, while a younger one is completely shrivelled, though only 3 inches long.

B.—This plant slightly affected only. "Cob" small but sound.

C.—Leaves covered by the "protospores," which are also deeply imbedded in them. One "cob" only on this plant, most of its grains rotten.

D.—This specimen, with the exception of *A*, in parcel No. 1, is the worst affected of any, the protospores so clogging the tissues as to make it impossible for the sap, even if it could pass in its thin and crude state, to return when it is thickened and elaborated as food for the plant. In consequence of this, the stem, although mature, is not more than three quarters of an inch in diameter, and its one "cob" but 2 inches long and without grains.

E.—As nearly as possible in the same condition.

PARCEL No. 5.

Three plants, A, B, C, from Mr. Clapson.

A.—Leaves destroyed by the fungus which has penetrated quite through them. Under the microscope these leaves have the appearance of having been washed over with some adhesive matter, and that then the "protospores" of the fungus had been thickly strewn over them. One "cob" on this plant, the grain checked and undeveloped by want of nourishment.

B.—Leaves in a similar condition. No "cob" on this plant.

C.—Not so badly affected, the upper leaves only containing the "protospores."

PARCEL No. 6.

Two plants, A, B, from Mr. Law.

A.—All the sap vessels of the leaves quite destroyed by the fungus throughout their entire length. One "cob" on this plant, the grains formed on one side only.

B.—Equally bad. No "cob" on this plant.

Mr. Haviland also favoured the Department with the following report upon two samples of maize grown at Gosford:—

"REPORT on two samples of Maize grown at Gosford and received from Department of Mines; by E. Haviland, F.L.S.

"*A.*—A very stout and robust plant, 15 feet high, and nearly 7 inches in circumference at the base, bearing two cobs—one cob large, well-shaped, and healthy, excepting that it had lost about fifteen or twenty of its grains from the apex. One grain only, which fell off during examination, was decayed at the point of connection with the "rachis," and this decayed portion was covered by mycelium of the fungus *Ustilago candollei*. The outer sheathing of the "cob" also was infested by the mycelium and protospores of the fungus, but the inner sheathing and the remainder of the cob were clean and healthy. A second and much younger cob on this plant had quite failed to form its grains, and completely perished. The *laminæ* (blades) of the whole of the leaves were clean and free from the fungus, or nearly so, and, though withered and dead, appeared, at first sight, to have become so simply in the ordinary course after the

the plant had been taken from the ground; but upon stripping the leaves down and examining the sheathing portions in contact with the stem, they were at once seen to be completely infested and destroyed by the fungus, and sections under the microscope showed that every sap-vessel, without exception, in each leaf was choked by the protospores. Thus all the sap that should have been passed through the leaves, and consequently all nourishment to the plant generally, had been cut off at its very point of ingress; hence the dead leaves and the abortive "cob." This must, however, have happened after the plant had attained its full growth and the first cob was mature, but before the second cob had formed its grains.

"*B.*—This specimen was but the upper portion of a plant. One cob only upon it and that passably well formed, but its outer sheathing badly infested by the protospores of the fungus, and the leaves in the same condition as the specimen *A*. This plant also appears to have been attacked late.

"From the many specimens that I have had opportunities of examining I am of opinion that this fungoid disease, so disastrous to the maize crops of the past season, originated between the Tweed and Richmond Rivers, from thence proceeding southward to the close vicinity of Sydney. I have not yet heard of it in the Southern Districts, but it may have been present to some extent there also."

In view of the fact that the reports furnished to the Technological Board, upon samples of maize, differ materially from the foregoing, both as to the cause and nature of the disease, I should have withheld Mr. Haviland's reports until they could have been submitted to some unquestionable authority, but that it may perhaps be desirable that persons interested in maize growing should have the full benefit of the labors both of Dr. Morris and Mr. Haviland, and that the opinions of these gentlemen may be fully discussed.

Forest Ranger Martin recommends that seed for planting in the localities where the crops have been affected by the disease be procured from the Camden district.

The report furnished by the Inspector of Forests shows a record of valuable work performed by that officer during the year. The report also contains suggestions well worthy of favourable consideration.

Mr. Duff reports that about fifty of the black walnut-trees planted out died during the hot dry weather of last summer, while the efforts to raise the rain-tree from seeds procured from Calcutta failed through cold during our winter season.

The plantation of wattle on the Southern Railway line has not been altogether successful, and has been somewhat costly for the results obtained, owing to adverse conditions attending such plantations on the narrow strips of land along the railway; and the Inspector repeats his objection to the formation of plantations in such positions. Nevertheless, after thinning out in May last, there were 6,690 trees along the line from Minto to Burradoo, comprising black, green, and golden wattle.

Much useful work has been done in connection with the plantations of the catalpa at Cootamundra and East Maitland respectively.

TOTAL number and species of trees planted from the year 1882 up to 1885 inclusive.

At East Maitland.

221 Catalpa Speciosa,	221 Juglans nigra. Black walnut.

At Cootamundra.

613 Catalpa speciosa.	83 Pinus insignis. Californian pine.
121 Juglans nigra. Black walnut.	5 Eugenia Ventenattii. Water gum.
61 Syncarpia laurifolia. Turpentine.	18 Quercus ilex. Evergreen oak.
94 Eucalyptus. Various species.	51 Fraxinus Americana. American Ash-tree.
29 Grevillea robusta. Silky oak.	37 Quercus virens. Evergreen oak.
225 Sterculia diversifolia. Kurrajong.	35 Laurus camphora. Camphor-tree.
3 Melaleuca leucadendron. Tea-tree.	24 Araucaria Cunninghamii. Pine-tree.
25 Tristania conferta. Brush box.	8 Olea Europæa. Olive-tree.

It is to be regretted that of the 1,000 American ash-trees presented by the Conservator of Forests in South Australia only about one dozen survived the journey.

Under the direction of the Inspector the work of cedar planting in the Forest Reserves has progressed most satisfactorily. A large number of seedling plants have been collected and planted out in all the open parts of the Dorrigo Reserve, besides a number of cedar root-cuttings. A considerable amount of work has been done in clearing around and otherwise protecting self-sown cedar-trees, of which there are a large number in the Dorrigo Reserve. The total number of red cedar-trees (*cedrela australis*) planted and self-sown seedlings counted on the Dorrigo Forest Reserve was 8,258, and 300 root-cuttings.

Some time was devoted to the selection of a suitable site for a State Forest Nursery. Two sites were eventually submitted for consideration, but, owing to objections raised, great difficulty has been experienced in deciding upon the site best suited for the purpose, and consequently the work of preparing the nursery has been delayed.

The list of the timber specimens sent to the Colonial and Indian Exhibition prepared by Mr. Duff reflects great credit upon him, and will, if distributed amongst the Forest Rangers, prove most useful to them in the discharge of their duties.

I am happy to say that, notwithstanding the unavoidable delays in collecting samples of the fruit, wood, and bark for illustration, the Inspector of Forests has made such good progress that I trust the first part of the "Forest Flora" will be ready for publication within this year, and I feel convinced that the work will reflect credit upon the Department.

Due attention has been given to the collection of dried flowering specimens and seeds of our timber trees for planting, distribution, &c., &c.

Information has been collected and disseminated concerning the known poisonous plants of New South Wales, and directions have been issued for the guidance of Rangers and others in collecting and preserving specimens of plants known or suspected to be poisonous to stock, with a view to their examination and arrangement for reference.

A collection of timber specimens has been prepared for exhibition in the Geological Museum attached to this Department, and it is intended to prepare for exhibition in connection therewith seeds and seed-vessels of these specimens, together with dried leaves and flowers of each species; also gums, resins, fibres, tanning and other barks, &c., &c.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

Department of Mines,
Sydney, May 11th, 1886.

Report from The Chief Clerk, Forest Conservatory Branch, to The Under Secretary for Mines.

Sir, Forest Conservatory Branch, Sydney, 31 March, 1886.

I have the honor to submit a report for the year 1885 upon the work performed by this Branch of the Department.

The Staff.

Schedule A shows the number of officers and others employed, during the year, the only change in the *personnel* of the Staff has been the appointment of Mr. Forest Ranger Powell, *vice* Mr. West, transferred to the Department of Lands.

In schedule B a list of the Forest Rangers in the field is furnished, together with the names of stations and the Land Districts within which they exercise supervision.

With reference to the duty performed, it may be remarked that while in some districts the Rangers are employed in patrolling timber reserves, supervising timber cutting, and similar work, in other districts they are almost wholly engaged in inspecting country in connection with reporting upon applications to ringbark the timber, and in seeing that the conditions of the permissions granted are carried out.

Revenue and Expenditure.

The following schedules are supplied :—

C. Revenue for the year 1885.
D. Expenditure „ „
E. Details of revenue from specified reserves.
F. Comparative statement of revenue and expenditure for each year, from 1878 to 1885.
G. Prosecutions by Forest Rangers for illegally cutting timber; penalties inflicted.

The revenue has not reached the estimate. This is partly attributable to the lessened demand for our timber in Victoria, the railways in that Colony having opened up sources of supply hitherto inaccessible ; partly to the completion of certain public works, the timber for which was drawn from the protected forests, and partly to the effects of the drought. The fall in the value of wool and consequently lessened expenditure, and the uncertainty regarding the subdivision of runs, has no doubt also contributed to the falling off.

In 1884, 9,084,779 sup. feet, exclusive of piles, were cut on the Murray Forests, while in 1885 the quantity reached only 3,975,796 sup. feet. In 1884 the exports to Victoria were 11,259,420 feet against an import of 2,143,476, the figures for 1885 being 6,765,675 and 2,302,739 respectively.

The duty of reporting upon applications for permission to ringbark timber upon Crown lands is again accountable for a large proportion of the expenditure.

Reserves and Timber.

The following schedules are appended :—

H. Summary of number and area of Timber Reserves.
J. Distribution of Timber Reserves amongst Forest Rangers for purposes of supervision.
K. Details of area and particulars of timber on reserves notified during the year.
L. Reserves cancelled wholly or in part.
M. Reserves exempted under Regulations existing prior to 2nd July, 1885, the timber upon which is subject to royalty.
N. Lands other than timber reserves exempted from operation of ordinary timber or wood-cutters' licenses.

The reserves for preservation of timber supply number 855, the aggregate area being estimated at 5,675,950 acres. This is an apparent increase of 285,432 acres. In a large number of cases, however, reserves, after careful inspection, have been recommended to be cancelled or curtailed, so as to cut out portions found not to contain useful or valuable timber. These recommendations are now being acted upon by the Lands Department, and will have the effect of considerably reducing the total area. The operation of the 52nd section of the Crown Lands Act will have the effect of still further reducing it.

On the reserves subject to royalty, the quantity of timber cut amounted to 6,860,512 superficial feet, besides 828 trees. On a very large number of the reserves the timber is subject to a license fee only, and no account of the quantity felled is taken. On all timber reserves a minimum girth is fixed, below which trees are not permitted to be felled without special permission.

The quantity of timber returned by the Forest Rangers as shipped from twenty-nine coastal ports is :—

Sawn timber, hardwood, and cedar	57,418,631	sup. feet.
Hardwood piles, girders, and logs	3,219,679	„
Cedar, in log	1,731,000	„
Paving blocks	300,000	„
	62,669,310	„
Piles	2,350	running feet.
Do	2,260	number of
Sleepers	31,407	„
Posts and rails	185,600	„
Palings	523,402	„
Spokes	86,283	„
Felloes	60,000	„
Dray-shafts	546	„
Laths	2,315,900	„

This is exclusive of Sydney and Newcastle, which are ports of reshipment.

The

The ruling rates for Colonial timbers are at present low, the following being the quotations in Sydney:—

Cedar boards, 18s. to 35s. per 100 sup. feet.
„ logs, 16s. to 25s. „ „ girth measurement.
Pine (coast) boards, 12s. to 16s. per 100 sup. feet.
„ logs, 7s. to 9s. „ „ girth measurement.
Beech „ 14s. to 18s. „ „ „
Ironbark (sawn), 14s. „ „
Assorted hardwoods (sawn), 7s. to 10s. per 100 sup. feet.
„ (logs), 5s. 6d. to 6s. „ „ girth measurement.
Girders (ironbark), up to 2s. per cubic foot.
Piles—ironbark, turpentine, grey gum, red gum—price according to length.

Assorted hardwoods are stated to include stringybark, tallow-wood, turpentine, spotted gum, blackbutt, and woolly-butt. It is, however, reported that other kinds of wood, of similar appearance to some of these, are often sold under the above names.

The supply of most descriptions of felled timber is apparently largely in excess of the demand, hence the comparatively low prices and the closing of several mills, present rates not proving remunerative.

In the western districts the principal timbers used for saw-mill purposes are pine (*frenela*), ironbark, red gum, and stringybark. Prices vary according to the locality. The pine (*frenela*) though rather brittle, from its resisting the white ant (*termite*), is a most valuable wood, and in some localities commands a higher price than American timber, at Tumut the prices being 26s. and 22s. 6d. respectively. Matured, or even fairly grown trees, are becoming scarce in some districts, and the right to cut over limited areas commands a high rate.

Much of the country bordering the Murray, Darling and Lower Murrumbidgee Rivers is supplied with red gum from the Murray Forests, the river affording unusual facilities for access to these valuable national forests. The timber is drawn a few miles to the river bank when the ground is sound. If this cannot be done it is allowed to lie until the forest is flooded with the water from the melting snow on the mountains. The logs are then fished up and punted to the river, where they are slung to ends of beams lying across barges. The barges, with their suspended loads, are then either towed up to the mill or allowed to drift down, a chain trailing loose from the stern having the effect of keeping them in mid-stream away from the banks. Local quotations for sawn timber are 10s. to 14s. per 100 sup. feet. A large quantity of the timber is used for piles, girders, railway sleepers, &c.

The hardwoods, from their weight, would probably form fair ballast, and, if charges did not exceed 20s. per ton, most kinds could be landed in London at from 10s. to 12s. per 100 sup. feet. At present rates this would be likely to prove remunerative, as the timber has a high value for many purposes.

Thinning out Timber on Reserves.

During the year permission has been granted to thin out, under special supervision, useless timber and scrub on three timber reserves of a total area of 18,780 acres. Of this area 3,260 acres have been operated upon. Work in progress at the commencement of the year on five reserves has also been completed to the extent of 11,430 acres.

Ringbarking.

Permission to ringbark timber, on lands other than timber reserves or State Forests, is now granted by the Local Land Boards, under such restrictions as may to them seem advisable. The Forest Rangers report upon applications sent to them by the Chairman, and the reports are returned direct. No instructions as to timber to be excepted, &c., are now issued by this Department for their guidance.

It may be stated that the preparation of specific instructions affecting such a subject is a very difficult matter, the circumstances vary so widely in different parts of the Colony; but the utility of one general rule formerly insisted upon, viz., the leaving belts of timber untouched at intervals in the Western Districts, or where scrub is troublesome permitting only pine to be ringbarked in such belts, was exemplified on a recent journey to the country. Land, formerly scrubby and thickly wooded, had been alienated and the timber ringbarked for some years. The dropping wet season prevailing in the locality at end of the year induced an extraordinary growth of grass, far beyond what anyone viewing the land in its natural state would suppose could be possible. This grass caught fire and there being no break of timber the fire got beyond control. Some 60,000 or 70,000 acres were burnt, including several selections.

Cedar, Catalpa, and Wattle Plantations.

The amounts expended on plantations, &c., is given in Schedule D, particulars of the work done will be furnished by the Inspector of Forests under whose directions it is carried out.

Indian and Colonial Exhibition.

A large amount of work was done by the Forest Rangers toward making a collection of the timbers, leaves, flowers, and seeds of timber trees for the Indian and Colonial Exhibition.

Office.

The following papers were received and despatched:—

Papers received and registered.	Papers despatched.

SCHEDULE B.

LIST of Forest Rangers, together with the names of Stations and of Land Districts over which they exercise supervision.

Name of Ranger.	Station.	Land District supervised.
Allan, J. S.	Ulladulla	Braidwood, Broulee, Dowling, Shoalhaven (Nowra).
Allen, W.	Wagga Wagga	Portion of Gundagai and Wagga Wagga Districts lying north of Murrumbidgee River.
Brown, G. R.	Mudgee	Cassilis, Mudgee, Rylstone, Wellington.
Croberoft, E.	Gosford	Brisbane Water, Newcastle, Wollombi.
Brunker, F. E., Assistant	Coorambong	
Condell, J. G.	Narrandera	Narrandera, Urana, Eastern part of Hay.
Musgrave T., Assistant	Urana	
Cullen, P.	Booral	Dungog, Port Stephens (Stroud), Raymond Terrace.
Deverell, E. J.	Glen Innes	Bingera, Glen Innes, Inverell, Moree, Tenterfield, Warialda.
Byron W., Assistant	Inverell	
Evans, T. M.	Queanbeyan	Goulburn, Gunning, Queanbeyan, Yass.
Green, T. H.	Casino	Casino.
Higgens, E.	Muswellbrook	Maitland, Muswellbrook and Merton, Patterson, Patrick's Plains (Singleton), Scone.
Huxham, F. P.	Grafton	Grafton (the south-eastern portion, including Dorrigo Reserve, No. 377, and Orara Reserve, No. 642, are supervised by the Boat Harbour Ranger, W. Mecham).
Forster, F. M. C., Assistant		
Kidston, T.	Condobolin	Condobolin, south-eastern part of Cobar, north-west part of Parkes, eastern part of Hillston.
Macdonald W., Assistant Ranger	Worrel Creek	Macleay River (West Kempsey), that portion south of Taylor's Arm and the northern boundary of the county of Dudley.
	Nambucca	
M'Gee, T. H. B.	Narrabri	Coonabarabran, Coonamble, Narrabri.
King G., Assistant	Coonamble	
Manton, J. A.	Moama	Moama, southern portion of Deniliquin. Ranger Manton has also general supervision of Ranger Payten's (Tocumwall), and Wilshire's (Deniliquin) Districts, which see.
Guilfoyle, J.		
Cousens, W., Assistant	Koondrook	
Martin J.	Dubbo	Dubbo.
Mecham, W.	Boat Harbour	Macleay River (West Kempsey), that portion north of Taylor's Arm, and the north boundary of the county of Dudley; also reserves Nos. 377 and 642.
Noake, I.	Penrith	Hartley, Windsor, but excepting the county of Cumberland.
Payten, S.	Tocumwall	Corowa.
Powell, H. W.	Gunnedah	Gunnedah, Tamworth, Murrurundi.
Rotton, H. O.	Bowral	Berrima, Camden, Narrellan, Kiama, Picton, Wollongong.
Shadforth, H. S.	Candelo	Bega, Bombala, Cooma, Eden.
Siddens, R. L.	Armidale	Armidale, Walcha.
Stevenson, R.	Cowra	Bathurst, Boorowa, Carcoar, Cootamundra, Cowra, Forbes, Grenfell, Molong, Orange, Young, south-eastern portion of Parkes.
Cork, R. J.	Forbes	
Postlewaite, J. G.	Grenfell	
Assistants		
Taylor, J. S.	Wagga Wagga	Albury, Tumut, portion of Gundagai and Wagga Wagga Districts lying south of Murrumbidgee River.
Ward J., Assistant	Adelong	
White, T.	Lismore	Lismore, Tweed River (Murwillumbah).
Wilshire, O.	Deniliquin	Deniliquin, portions of Balranald and Hay Districts in counties of Townsend and Wakool.
Wilson, T. W.	Port Macquarie	Manning River (Wingham), Port Macquarie.

SCHEDULE M.

FOREST RESERVES proclaimed as exempted from the operation of the ordinary Timber Licenses issued under the Timber Regulations of 24th September, 1878.

Timber cut upon these Reserves is subject to license fees, payment of royalty, and the conditions specified in the State Forest Regulations, or in the Regulations applying to the Timber Reserves, Class C.

SCHEDULE N.

LANDS exempted from the operation of ordinary Timber or Wood-cutters' Licenses.

In addition to the lands specified in the 2nd Timber Regulation of 18th August, 1885, the following lands have been notified in the Government Gazette as being exempted from the operation of ordinary timber or wood-cutters' licenses.

County.	Parish.	Area in Acres.	Date of Gazette Notice.	Particulars of Land.
Clarence	Elland, Clarenza, and Southampton.		31 Mar., 1885	All Crown Lands within the population boundary of South Grafton.
Cumberland	Southerland*		24 Dec., 1877	All Crown reserves.
Do	Bulgo, Heathcote, & Southend		4 Mar., 1885	Crown Lands.
Do	Londonderry		29 Oct., 1877	All Crown Lands.
Do	Hunter's Hill and Field of Mars	6235	4 Nov., 1879	Field of Mars Common.
Do	Hunter's Hill*	170	22 Dec., 1879	Lunatic Asylum reserve.
Do	Bulgo and Heathcote	100	20 Apr., 1885	Railway reserve No. 93.
Gloucester	Wang Wauh, Kyle,† Gooloongolook, Curreeki, Telcraree, Bachelor, Wallengat, Forster, Topi, and Booloombayt.	217600	29 Sept., 1877	Myall and Wallis Lakes Forests. Gold-field reserve No. 29.
Do	Nerong and Willabah		12 Nov., 1885	All Crown Lands in the parish of Nerong and part of Willabah.
Macquarie	Torrens		2 June, „	Land within Port Macquarie population boundary.
Mossgiel and Waljeers			17 Nov. „	Part of the resumed area of Mossgiel holding.
Leichhardt	Euroka and Youendah	4700	8 Dec., 1884	
Pottinger	Dubleda	30	2 Oct., 1885	
Wynyard	Wagga Wagga	1000	19 Aug., 1884	Travelling stock reserve No. 3,027.
Young		1600	20 June, 1879	Part of Wilcannia population reserve (Census of 1871.)
			14 Oct., 1878	Lord Howe Island.

* Timber cutting prohibited. † Timber cut under Timber Cutters' License, Class A, Regulations 10 to 12.

APPENDIX.

Annual Progress Report for the year 1885.

Report of the Inspector of Forests to The Under Secretary for Mines.

Sir,

I have the honor to submit my Annual Progress Report upon the Forest Conservancy Branch of this Department for the year 1885.

I have, &c.,
JOHN DUFF.

Reserves inspected, reports submitted, and work performed during the year 1885.

January, 1885. The Catalpa and other trees planted in the Bank-street reserve, East Maitland, were re-tied and watered at a cost to the Department of £7 15s.

The Catalpa trees on this reserve have grown remarkably well, but about fifty of the black walnut trees have died owing to the hot dry weather in the summer of 1885. It is proposed to prune the trees, re-stake and tie them, and re-plant the vacant spaces in this plantation during the forthcoming winter or spring.

Collections of dried flowering specimens of eucalyptus and other genera, and seeds and seed-vessels of same were received from several of the Forest Rangers, and complete sets of these specimens and seeds, together with all available information respecting the dimensions, habitats, uses, general characteristics, and extent of distribution of each species, were prepared and forwarded to Baron von Mueller, K.C.M.G., F.R.S., Government Botanist, Melbourne, to assist him in illustrating and describing the trees of New South Wales in his "Eucalyptographia" and other publications on the Flora of Australasia.

It is proposed to continue collecting and forwarding dried specimens, seeds, and information, as above specified, to Baron Mueller, as time and other circumstances will permit, until as complete a collection as can be procured by the officers of the Forest Branch has been made and transmitted to the Baron, and duplicate sets of all timber-tree specimens will be retained in this Branch of the Department for reference, Baron Mueller having kindly volunteered to furnish this Department with the names of all timber-tree specimens forwarded to him, the identity of which may be doubtful or unknown to me.

January and February. Clearing off grass and thinning the wattle trees in the plantations between Minto to beyond Burradoo, on the Great Southern Railway Line, was continued during the months of January and February, and cost the Department the sum of £35 4s. for labour.

Prepared and forwarded an additional collection of dried eucalyptus specimens, received from the Forest Rangers, to Baron Mueller, and requested him to furnish me with a list of all New South Wales plants known or suspected to be poisonous to stock, the said list being required for the information of the Chief Inspector of Stock of this Department, with which request the Baron readily complied.

Directions were also prepared for the guidance of the various Inspectors of Stock throughout the Colony in collecting and preserving specimens of the plants of New South Wales, known or suspected to be poisonous to stock, with the view of ascertaining their identity and forming a collection of them for future reference.

March. Accompanied Mr. L.-Surveyor Dalgleish to Hogan's Brush, forest reserve No. 63, near Gosford, for the purpose of ascertaining the boundaries of that reserve, with the view of having 100 acres of the most suitable land on it surveyed for a State Forest Nursery; and Mr. Dalgleish fixed the position of the reserve, and instructed another surveyor to clear and mark the boundaries of the 100 acres for the nursery site.

Inserted advertisements in the *Maitland Mercury*, and posted notices at the Court-house, Gosford, and at Wyong, calling for tenders for the clearing and fencing of the land proposed as a nursery site, and left specifications for the work to be done with Mr. Forest Ranger Coberoft, Gosford, and at the *Maitland Mercury* office, for the information and guidance of persons desirous of tendering for the work, who were informed in the advertisements that, upon application to Mr. Forest Ranger Coberoft, he would point out to them the land to be cleared and fenced; and, in response to these advertisements, tenders for the work were received.

April. Authority was granted for the employment of a man to clear off the undergrowth from around the young cedar trees planted or self-sown on the Dorrigo forest reserve during the years 1884–85; consequently, a man has since been employed on this work and in planting vacant spaces where trees had died, and in sowing cedar seeds in ground prepared and enclosed for the purpose, the object being to raise a plentiful stock of cedar plants to enable the planting of cedar on the forest reserves to be annually proceeded with.

May. By the request of the New South Wales Commission for the London, Indian, and Colonial Exhibition of 1886, and with the approval of the Honorable the Minister for Mines, detailed letters of instructions and lists of timbers to be collected for the Exhibition were prepared and issued to twelve Forest Rangers stationed in various parts of the Northern and Southern Coast Districts and in the interior, the timbers to be collected to include extra specimens of such kinds as were considered suitable for wood-engraving, veneers, and articles of turnery.

The Forest Rangers were also instructed to collect several specimens of the leaves of each species of tree of which they forwarded a section of timber, with flowers, seeds, and seed-vessels of each kind, if procurable; also gums, resins, fibres, dye-woods, tanning, and medicinal barks, or any kind of vegetable product of commercial value, the Forest Rangers being supplied with the necessary requisites for collecting the specimens required.

As the specimens for the Exhibition were received, arrangements were made with the Commission for their storage, and estimates of the cost of preparing the various exhibits, together with recommendations as to the best modes of preparing the samples and kinds of articles to be prepared for the Exhibition, were submitted to the Commission for its consideration and approval.

The

The clearing of grass and thinning the trees in the wattle plantations on the Southern Railway Line was resumed and completed at a cost to the Department of about £30. The estimated number of wattles left growing in the plantation from Minto to beyond Burradoo, when thinned, being 6,875 trees. May.

Mr. Forest Ranger Rotton reports that the telegraph line repairers have broken off the branches, and cut close to the ground a large number of wattle-trees which were either touching or considered soon likely to come in contact with the telegraph wires.

As this work has been done in such an unskilful manner as to kill or permanently injure a large number of trees which have been planted and kept clear of grass, at a large expense to this Department, it is very discouraging that the trees should be thus destroyed by the telegraph authorities, without reference to this Department, which would, no doubt, have sent an officer and men to lop the branches and remove the trees interfering with the telegraph wires had the necessity for so doing been pointed out to it.

Considering the large expense of forming these plantations on the narrow belts of land on the railway lines, the cost of keeping them clear of grass to prevent them being burned through sparks from the engines igniting it when dry, through their liability to be destroyed through the Railway employés frequently burning off the grass in summer to protect the Railway fences, and to their frequently being killed or damaged by goats kept by Railway employés and others, it is now evident that, under all these discouraging disadvantages, the expenditure incurred in forming and attending to wattle plantations on the railway lines will always largely exceed the revenue hereafter to be derived from the sale of wattle-bark; and I therefore would not recommend any further extension of wattle plantations on the railway lines.

If, in future, it should be considered necessary to continue planting wattles, I would recommend, as I have already done in several reports to the Department, that large blocks of suitable cleared or lightly-timbered land, 100 or more acres in extent, should be cleared, fenced, ploughed, and harrowed for the purpose, and the wattles sown in rows about 2 or 3 feet apart, and the same distance between the seeds in the rows.

The preparation of such blocks of land, thinning out the plants, and clearing off weeds in the plantations, would be much more easily and effectively performed at less cost to the Department, and the trees would be much less liable to injury than if planted on the railway lines.

Ministerial authority having been received for the expenditure of a sum of £300 for planting cedar in forest reserves, six men and an overseer were employed in the beginning of this month to collect seedling-plants and continue the planting of cedar in all the open parts of the Dorrigo forest reserve, Bellinger River District, which work was commenced in 1884. June.

During the month 852 cedar-trees were planted out, and 300 cedar root-cuttings, at a cost for labour of £60 14s. 5d.

The timber specimens commenced to arrive for the Colonial and Indian Exhibition, and were stored at Messrs. Taylor & Co.'s timber yard, Sussex-street, as received.

The planting of cedar on the Dorrigo forest reserve was continued, the number of trees planted for the month being 1,804, and the cost for labour £79 8s. 6d. July.

Cedar planting continued on the Dorrigo forest reserve, the number of trees planted for the month of August being 1,331, and the cost of labour £76 9s. 8d. August.

The planting was suspended during part of this month owing to the soil being too dry.

Ministerial authority having been obtained for the expenditure of the sum of £300 for completing the plantation of catalpas and other trees on the railway reserve at Cootamundra, I engaged the men and proceeded to that town to arrange for the work of fencing, removal of stumps, and trenching the ground to be planted.

During the month of September 1,971 cedar-trees were planted on the Dorrigo forest reserve, at a cost for labour of £76 9s. 8d. September.

The fencing, removal of stumps, and trenching of the land to be planted with catalpa and other trees on the railway reserve, Cootamundra, was proceeded with during the month.

The timber specimens received from the forest rangers for the Colonial and Indian Exhibition were marked, so as to indicate the size and number of pieces into which each log was to be cut; and Messrs. J. Taylor & Co. commenced cutting and planing the samples to be forwarded to the Exhibition, two officers of the Forest Branch being appointed to supervise the cutting of the timbers and numbering of each sample when cut.

Cedar planting was continued on the Dorrigo forest reserve up to the 17th October, at which time planting ceased for the season, and the labourers were discharged. October.

The number of cedar-trees planted up to the 17th October was 300, and 500 holes were prepared for the reception of trees to be planted so soon as a good fall of rain occurred, the ground at this time being too dry to complete planting the holes prepared.

The overseer of the plantation, whose services were retained to remove undergrowth from around the cedar-trees planted in 1884, has since planted the 500 holes; and Mr. Forest-Ranger Mecham, under whose supervision the planting was conducted, reports in December last that the cedar-trees planted are strong and healthy, and that only a very small percentage of them has failed to grow.

In addition to the cedar-trees planted, the Forest Ranger reports that he estimates there are 1,500 self-sown cedar-trees growing on or near the ground planted, and he thinks there are a large number of cedar seedlings on the reserve, the number of which has not yet been estimated.

The total number of cedar-trees planted and self-sown seedlings counted on the Dorrigo forest reserve up to date is 8,258 trees and root-cuttings, and the expenditure for the year on the plantation was £381 17s. 1d.

442 trees of catalpa speciosa having been received from the Conservator of Forests, Adelaide, for the plantation on the railway reserve, Cootamundra, Mr. Forest-Ranger Allen, of Wagga Wagga, was instructed to proceed to Cootamundra to supervise the planting and watering of the catalpa and measurement of the ground trenched for the trees.

Unfortunately, 1,000 trees of the American ash (*fraxinus americana*), also presented to this Department by the Conservator of Forests, Adelaide, for the Cootamundra plantation, were almost all dead when received, only about a dozen of the trees having survived the journey.

Application was then made to the Director of the Sydney Botanic Gardens for a supply of trees to plant in lieu of the American ash, and having received authority to select such trees as were available in the Botanic Gardens and State Nursery, Campbelltown, I procured 730 suitable kinds of trees, and proceeded to Cootamundra with them to supervise the planting, staking, and watering of the trees, and measurement of the ground trenched for the plantation.

418 rods of ground was trenched, 9¼ rods of fencing removed and re-erected across one end of the plantation, 52 stumps were extracted from the ground, and 1,140 trees planted and watered, and about 500 of the trees staked, at a total cost to the Department of about £330.

November. Proceeded to Wyong, Gosford District, to inspect and report upon a site reported by Mr. Forest-Ranger Cobcroft to be suitable for a State Forest Nursery, and recommended the purchase of the land for the reasons explained in my report thereon.

Engaged in naming and arranging in books dried flowering specimens of the timber-trees, sections of which were to be forwarded to the Colonial and Indian Exhibition; also in naming and placing in bags, seeds, seed-vessels, gums, and resins, &c., of same, and in packing them for shipment to London.

December. Occupied during the whole of the month in naming, arranging, and packing exhibits for the Colonial and Indian Exhibition, and in preparing descriptive lists of same for insertion in the Official Catalogue of the New South Wales Exhibits; and with this work I was assisted by Messrs. Forest-Rangers White and Rudder, and Mr. John M'Coig.

I am also indebted to the Rev. Dr. Woolls, F.L.S., of Richmond, for naming a number of the dried flowering specimens for the Exhibition, which were either unknown to me, or of which I was dubious of their identity.

Office Work.

Numerous letters and reports have been written, and a considerable portion of my time has been occupied by persons requiring information on various subjects, and in perusing Forest Rangers' and other reports submitted to me for advice.

Collections of plants, dried specimens, and seeds have been prepared and forwarded to several correspondents; and my time was for a lengthened period devoted to the preparation and despatch of the Forestry Exhibits for the Colonial and Indian Exhibition.

I would respectfully suggest that the services of a junior clerk should be permanently at my disposal, as my time is altogether too much occupied with unimportant office routine to permit me to properly attend to the most important and pressing duties of my office.

State Forest Nursery.

As the site for the State Forest Nursery on Hogan's Brush forest reserve, near Gosford, was reported by Mr. Licensed-Surveyor Harris to be subject to inundation, and the cost of forming a road and several bridges through private property thereto, were considered obstacles to its selection for the nursery site, I recommended that Mr. Forest-Ranger Cobcroft should be instructed to ascertain and report if a suitable site could be purchased in the district, at less expense than the clearing of the land and construction of the road and bridges to Hogan's Brush would cost. Mr. Cobcroft accordingly reported that he had fixed upon a site at Wyong, which he considered suitable for the purpose. I therefore proceeded to inspect the site, and recommended its purchase, not only on account of the expense of buying the cleared land at Wyong being less than to clear the land on Hogan's Brush and form a road thereto, but for various other reasons which I have, or can furnish, in favour of the Wyong site being the best adapted for a State Forest Nursery for raising miscellaneous species of timber-trees, and to my recommendations and opinions on the subject I firmly adhere, notwithstanding that my views have been opposed by several gentlemen whom I maintain are not more capable of selecting a suitable site for the nursery, or more likely to have a deeper interest in the welfare of the Forest Branch than myself, considering our relative positions.

As I have been occupied continuously in the practical and theoretical work in the various branches of my profession, including nurseries, for a period of thirty years, I trust that this long experience may be considered a sufficient guarantee of my competency, and I appeal to the Honorable the Minister and Under Secretary for Mines to uphold me in my position, and to assist me in my endeavours to speedily establish the nursery, which is so essential to the progress and welfare of the Forest Branch, as it must be apparent that my efforts to form plantations of indigenous and imported timber trees throughout the Colony can only be comparatively futile until a plentiful supply of young trees are placed at my disposal.

I am supported in my opinion that the Wyong site for the nursery is the most suitable by that of Mr. J. F. Fergusson, nurseryman, of Sydney and Camden, who inspected the site recommended with me, and who also has had extensive Home and Colonial experience in nurseries.

List of timber specimens and other forestry exhibits forwarded to the London, Colonial, and Indian Exhibition.

It is suggested that about 200 copies of this list, which was carefully compiled for insertion in the Official Catalogue of New South Wales Exhibits, from information received from the Forest Rangers, my own knowledge of the trees, and all available reliable publications on the subject, should be printed separately for distribution amongst the Forest Rangers, kindred departments, and presentation to individuals requiring information respecting the timber-trees of this Colony for purposes of trade and export.

Forest Flora.

There are now seven drawings of leaves, flowers, fruit, wood, and bark of indigenous timber-trees, prepared from specimens obtained from each species of tree, of which drawings have been made, and information sufficient to popularly describe most of the species has been collected; and when the drawings have been lithographed the first part of the work can be published.

Delay in publishing the first part of the work has been caused through fruit, wood, and bark of the species illustrated not usually being procurable at the same time or season as the leaves and flowers, and to the preparation of forestry exhibits and other work of an urgent nature preventing its completion and issue.

Drawings of five other species of indigenous timber trees are completed, with the exception of the fruit, which will be attached to them when obtainable.

Collecting

Collecting dried specimens, seeds, and plants of indigenous timber-trees.

It is recommended that the Forest Rangers be instructed to collect annually dried flowering specimens and seeds of the timber-trees in their districts, also plants of such species of timber-trees as may be indicated to them.

The seeds and plants will be required in the Forest Nursery, and surplus specimens, seeds, and plants for exchanging with kindred Departments.

Thinning and scrubbing on forest and other reserves.

There has not been much work done during the year by the Crown lessees in thinning and scrubbing on forest reserves, owing probably to the scrub clauses of the Land Act not being fully understood, or to delay through applications having to be referred to the Land Boards and the District Forest Rangers for reports.

Permissions to thin saplings and remove scrub on forest reserves should also include authority to ringbark useless trees, which only retard the growth of those around them, and prevent the growth of saplings, excepting in districts where timber is very sparsely distributed, and, although of inferior quality, is useful for fencing, shade, shelter, &c.

The following permissions to thin and scrub have been granted, and on some of the reserves the work is in progress, viz. :—On reserves No. 1,799, county of Urana; No. 1,830A, county of Bland; No. 3,263, county of Wakool. Work is in progress on reserves No. 1,830A, county of Bland; No. 1,880, county of Townsend; Nos. 2,216, 2,217, 2,696, all in county of Urana; and No. 1,445A, in county of Wakool.

Cedar and other plantations.

It is recommended that the trees in the plantations at Cootamundra and East Maitland be pruned and staked, the weeds removed, and all vacancies where trees have died replanted during the forthcoming winter and spring; also, that additional plantations of cedar and other trees be made in suitable localities, for which work, if approved, a sum of from £700 to £800 will be required.

The Rain-tree (Pithecolobium Saman).

In accordance with instructions received from the Honorable J. P. Abbott, M.P., Minister for Mines, in 1884, a quantity of seeds of the above tree was procured from the Royal Botanic Gardens, Calcutta, and by the Minister for Mines from Queensland, a portion of which was forwarded to the Director of the Sydney Botanic Gardens, and to several of the Forest Rangers, chiefly in the northern coast districts, for planting.

From reports received it is evident that the warmest parts of this Colony are too cold for cultivating this tree successfully, as six plants which sprung up and grew vigorously during the summer on the Richmond River, Mr. Forest-Ranger Green reports, were killed to the ground last winter, and only one tree recovered the following summer, which is now alive, although unhealthy, and will probably not survive the coming winter.

The northern parts of Queensland, Fiji, and New Guinea, would most probably be adapted for cultivating the rain-tree; but as I can procure a dozen or more strong plants, established in pots, I purpose, during the ensuing spring or early in summer, to forward a few plants to each of the Forest Rangers stationed in the warmest parts of this Colony for a further trial.

List of indigenous timber specimens now prepared and to be exhibited in the Geological Museum of the Mines Department.

The timber specimens arranged on the ground floor of this Department, which, owing to the light for their inspection being defective, could not be properly examined, have been presented and transferred to the Technological Museum, and a collection of 214 small timber blocks 6 x 4 x 2 have been prepared for exhibition in the Geological Museum of this Department, a list of the botanical and local names of which is hereto appended.

It is intended to exhibit in show cases in connection with the timbers, seeds, and seed-vessels of the timber specimens; also dried leaves and flowers of each species, arranged in books, gums, resins, fibres, tanning and other barks, and articles of turnery, &c.

LIST of indigenous Timber specimens now prepared and to be exhibited in the Geological Museum of the Mines Department.

Botanical name.	Local name.
Acacia linifolia	Sallow.
,, doratoxylon	Spearwood.
,, longifolia	Long-leaved wattle.
,, cunninghamii	Bastard myall
,, aneura	Mulga.
,, pendula	Boree, myall.
,, glaucescens	Brigalow.
,, melanoxylon	Blackwood.
,, binervata	Hickory.
,, sp. (?)	Ironwood.
,, decurrens	Green wattle.
,, ,, var. Mollis.	Silver wattle.
,, homalophylla	Curly yarren.
,, notabilis	Hickory.
,, hakeoides	Black wattle.
Alphitonia excelsa	Leatherjacket, red ash.
Avicennia officinalis	Mangrove.
Aphananthe philippinensis	Elm, tulipwood.
Akania hillii	
Angophora sp. ?	Apple-tree.
,, intermedia	,,
Achras australis	Black apple.
Ackama Muellerii	Corkwood.
Banksia integrifolia	Honeysuckle.
Backhousia myrtifolia	Scrub myrtle.
Casuarina stricta	She oak.
,, ,, mas	He oak.
,, Cunninghamiana	River oak.
,, torulosa	Forest oak.
Ceratopetalum apetalum	Coachwood.
,, gummiferum.	Christmas bush.
Callistemon lanceolatus	Water gum.
Cedrela toona	Red cedar.
Cryptocarya obovata	She beech.
,, glaucescens	
,, var reticulata	Grey sassafras.
,, Meissnerii	Leatherjacket.
,, australis	Laurel.
Cupania semiglauca	White bark.
Cargillia pentamera	Black myrtle.
Dysoxylon Fraserianum	Rosewood.
,, sp ?	Bog onion.
,, Muellerii	Pencil cedar.
Dodonæa lobulata	Giant hopbush.
Diploglottis Cunninghamii	Tamarind tree.
Daphnandra micrantha	Light yellow-wood.
Duboisia myoporoides	Corkwood.
Eremophila mitchellii	Rosewood.
,, sp. ?	Whitewood.
,, longifolia	Berrigan.

Botanical name.	Local name.
Eremophila sp. ?	Budda, sandalwood.
Eucalyptus populifolia	Bimbil box.
,, sp. ?	White gum.
,, macrorhyncha	Stringybark.
,, bicolor	Slatey gum.
,, punctata	Red gum.
,, sp. ?	White gum.
,, tereticornis	Blue or grey gum.
,, sp. ?	Mountain gum.
,, rostrata	Red gum.
,, virgata	Mountain ash.
,, longifolia	Woollybutt.
,, microcorys	Tallowwood.
,, saligna	Flooded gum.
,, melanophloia	Silver-leaved ironbark.
,, largiflorens	Cooburn.
,, sp. ?	Gum.
,, tesellaris	Carbeen.
,, sideroxylon	Ironbark.
,, leucoxylon	Red ironbark.
,, hemiphloia	Grey box.
,, sp. ?	Gum.
,, brachypoda	Goborra.
,, amygdalina	Messmate.
,, sp. ?	Coolibah.
Euphorbiaceæ, genus ?	From Richmond River.
Endiandra glauca	Teakwood.
,, laurina	Redwood.
,, Sieberii	Corkwood.
Elæocarpus grandis	Blue fig.
,, cyaneus	White boree.
,, holopetalus	Blue-berry ash.
Eugenia myrtifolia	Brush cherry.
,, sp. ?	,,
,, jambolana	Durobbi.
,, Ventenattii	Large-leaved water gum.
Echinocarpus australis	Maiden's blush.
Euroschinus falcatus	Jemmy Donnelly.
Erythrina vespertilio	Batswing coral.
Ficus macrophylla	Moreton Bay fig.
,, aspera	White fig.
Frenela robusta	White pine.
,, ,, var microcarpa.	Richmond white pine.
Frenela rhomboidea	Illawarra pine.
,, Macleayana	Port Macquarie pine.
Flindersia Bennettiana	Teak—Bulboro.
,, maculosa	Spotted tree.

Botanical name.	Local name.
Flindersia Oxleyana	Yellowwood.
Fusanus acuminatus	Quandong.
Gmelina Leichhardtii	White beech
Grevillea robusta	Silky oak.
,, striata	Beefwood.
,, Hilliana	White yiel yiel.
Geijera salicifolia	Balsam of copaiba.
,, ,,	Wilga.
Genus ? Verbenaceæ	Colonial deal.
Genus ? Laurineæ	She beech.
Geissois Benthamii	Leatherjacket.
Hemicyclia australasica	
Helicia prealta	Nut tree.
Harpullia pendula	Tulipwood.
Hakea dactyloides	Turmeric.
Litsæa dealbata	Pigeon-berry tree.
Melia composita	White cedar.
Myoporum acuminatum	Dogwood.
Melaleuca styphelioides	Prickly-leaved tea tree.
,, armillaris	Tea tree.
Myrtus acmenioides	Lignum vitæ.
Macadamia ternifolia	Queensland nut.
Nephelium sp. ?	Scrub ironbark.
Notelœa ovata	Native olive.
Olea paniculata	Marble-wood.
Orites excelsa	Red ash.
Podocarpus spinulosa	Native plum.
Panax elegans	White sycamore.
Phyllanthus Ferdinandii	White beech.
Rhodamnia argentea	White myrtle.
Rhus rhodanthema	Yellow cedar.
Stenocarpus salignus	Beefwood.
Sterculia diversifolia	Kurrajong tree.
Schizomeria ovata	Corkwood.
Synoum glandulosum	Brush bloodwood.
Syncarpia leptopetala	Brush turpentine.
,, laurifolia	Turpentine
,, var. glabra	Turpentine.
Tarrietia argyrodendron	Ironwood.
,, actinodendron	Stavewood.
Trema aspera	Elm. Rough fig.
Tristania laurina	Swamp mahogany.
,, conferta	Brush box.
Ventilago viminalis	Supple jack.
Weinmannia rubifolia	Corkwood.
Zanthoxylum brachyacanthum.	Satinwood.

Plants and seeds received.

1885.
17th February. Received from C. J. Horsley, Esq., Crown Lands Agent, Mudgee, seeds of Hakea leucoptera.

September. Received from J. E. Brown, Esq., F.L.S., Conservator of Forests, Adelaide, 1,000 plants of Fraxinus americana, the American Ash, and 500 plants of Catalpa speciosa.

September. Received from Mr. Forest-Ranger Mecham, Boat Harbour, 200 plants of araucaria Cunninghamii, the Hoop or Moreton Bay pine.

October Received from Charles Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney, 767 trees, consisting of turpentine, eucalypt, silky oak, catalpa, kurrajong, brush box, pinus insignis, evergreen oak, American ash, camphor, olive, and Moreton Bay pine.

November. Received from H. Wilkinson, Esq., J.P., about 200 plants of araucaria excelsa, the Norfolk Island pine, and a quantity of seeds of Kentia Forsteriana, and K. Belmoreana, the thatch, and curly palms of Lord Howe Island.

Plants, seeds, dried specimens, &c., presented by Forest Branch, Department of Mines.

1885.
24th January. Sent to Baron Mueller, K.C.M.G., F.R.S., Government Botanist, Melbourne, 100 dried flowering specimens of eucalypt and other indigenous trees.

24th January. Sent to Baron Mueller, seventy species of indigenous seeds, seed-vessels, and two copies of Nilson's Pamphlet on the timber-trees of New South Wales.

25th February. Sent to Baron Mueller, thirty-five dried flowering specimens of indigenous eucalyptus.

25th February. Sent to Baron Mueller, five species of seeds and seed-vessels of indigenous eucalypt.

26th February. Sent to E. W. Moon, Esq., Consul General, Republic of Costa Rica, Central America, forty-two species of eucalypt, and other indigenous tree seeds.

25th August. Sent to W. H. Wesley, Esq., Tintern, Parramatta, twenty-four plants of Catalpa speciosa.

25th August. Sent to the Honorable J. P. Abbott, Esq., M.P., Minister for Mines, thirteen plants of Catalpa speciosa.

Sydney: Thomas Richards, Government Printer.—1886.

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

FOREST BRANCH, DEPARTMENT OF MINES.

(RETURN SHOWING INCREASES TO OFFICERS OF.)

Ordered by the Legislative Assembly to be printed, 10 *February*, 1886.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 4th February, 1886, That there be laid upon the Table of this House,—

"A Return showing the increases to Officers of the Forest Branch, Mines "Department, under the Civil Service Act, specifying the dates upon "which such increases commenced."

(Mr. Fitzgerald.)

INCREASES to Officers of the Forest Branch, Mines Department.

No. of Officers.	Offices.	Classification under Civil Service Act.	Increase under Civil Service Act, from 1st January, 1885.
1	Inspector of Forests	4th Class ...	£20.
1	Chief Clerk	5th do ...	£20.
1	Clerk	5th do ..	£20.
2	Do	6th do ...	£20 each.
2	Forest Rangers, acting as Clerks	5th do ...	£20 each.
2	Junior Forest Rangers, acting as Clerks ...	6th do ...	£20 each.
7	*1st Class Forest Rangers	7th Section	£5 from 1st January, 1885. £10 do do 1886.
21	2nd Class Forest Rangers	7th do ...	£5 do do 1885.
10	Assistant Forest Rangers	7th do ...	£5 do do 1885.

* Ranked as 1st Class under 7th section of the Civil Service Act, from 1st January, 1886.

[865 copies—Approximate Cost of Printing (labour and material), £1 6s. 6d.]

[3d.] 215—

1885–6.

NEW SOUTH WALES.

TIMBER AND STATE FORESTS.

(CANCELLATION OF PART OF THE 26TH REGULATION OF 18TH AUGUST, 1885.)

Presented to Parliament, pursuant to Act 39 Vic. No. 13, sec. 39.

Department of Mines, Sydney, 6th August, 1886.

It is hereby notified, for general information, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to revoke that part of the 26th Timber and State Forest Regulation, of 18th August, 1885, which imposes a royalty of 6d. per cord of 128 feet upon dead wood and loppings for fuel removed from State Forests and Timber Reserves, Class C.

JAMES FLETCHER.

[3d.] 812—

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TIMBER AND FOREST RESERVES.

(ON THE MURRAY, EDWARDS, WAKOOL, BILLABONG, AND MURRUMBIDGEE RIVERS.)

Ordered by the Legislative Assembly to be printed, 16 *September*, 1886.

[*Return to a Question asked by R. Barbour, Esq., M.P., on the 16th September*, 1886, *respecting certain Timber and Forest Reserves on the Murray, Edwards, Wakool, Billabong, and Murrumbidgee Rivers.*]

QUESTIONS.

1. What is the area of the timber and forest reserves on the Murray River, down stream from Moama?
2. Have any timber blocks for saw-mills been taken there, giving area and situation?
3. What is the area of the timber and forest reserves on the Murray River, up stream from Moama?
4. Have any timber blocks for saw-mills been taken there, giving area and situation?
5. How much money has been received from the timber reserves on the Murray, up stream from Moama, for rents, royalty, and licenses, during the several years since these reserves were made in 1871?
6. What is the area of the timber reserves on the Edwards, Wakool, Billabong, and the Murrumbidgee Rivers?
7. Have any timber blocks for saw-mills been taken on any of these rivers; if so, state area and situation?
8. How much money has been received for rents, royalty, and licenses from the timber reserves on these rivers during the year 1885?

ANSWERS.

1. Area of timber and forest reserves on Murray River from Moama down to South Australia border, 148,940 acres (proposed to be reduced by 42,460 acres).
2. Yes, twelve, viz.:—

Reserve No. 3,258, County of Wakool.	Block	50,	3,200 acres,	Parish of Cangan.
	„	52,	3,200 „	„ „
	„	53,	3,200 „	„ „
	„	55,	3,200 „	„ Tittil.
Reserve No. 2,066, County of Wakool.	„	65,	640 „	„ Nunnagoyt.
	„	66,	640 „	„ „
Reserve No. 3,254, County of Cadell.	„	47,	1,440 „	„ Tantonan.
	„	49,	1,280 „	„ „
	„	49*a*	1,280 „	„ „
	„	47*a*	960 „	Parishes of Tantonan and Yarraman.
	„	46,	2,750 „	„ Tantonan, Yarraman, and Burrumbury.
	„	49*b*	2,770 „	Parish of Tantonan.

3. Area of timber and forest reserves on the Murray River from Moama up to its source, 140,902½ acres (proposed to be reduced by 29,680 acres).
4. Yes, fourteen, viz.:—

Reserve No. 3,265, County of Townsend.	Block	4,	2,560 acres,	Parish of Wonnur.
	„	5,	2,560 „	Parishes of Wonnur and Narratoola.
	„	11,	2,240 „	Parish of Tawarra.
	„	12,	2,560 „	„ „
	„	1,	780 „	„ Wonnur.
Reserve No. 3,253, County of Cadell.	„	33,	1,050 „	Parishes of Bama and Moira.
	„	34,	1,240 „	„ „
	„	35,	1,500 „	Parish of Bama.
Reserve No. 3,263, County of Townsend.	„	1,	1,000 „	„ Nallam.
	„	2,	1,000 „	„ „
	„	3,	1,000 „	„ „
Reserve No. 3,265, County of Townsend.	„	1,	640 „	Parishes of Bullatella and Coronalla.

[3d.]

1885–6.

NEW SOUTH WALES.

PUBLIC PARKS BRANCH, DEPARTMENT OF MINES.

(REPORT FOR 1885.)

Presented to Parliament by Command.

Department of Mines, Public Parks Branch, Sydney, 12 January, 1886.

I HAVE the honor to report as follows upon the operations of this Branch since the date of its transfer from the control of the Colonial Secretary to that of the Secretary for Mines, to the end of last year, a period of eleven months :—

2. By notification in the Gazette of 20 January, 1885, the administration of public parks and recreation grounds, other than reserves, was placed under the control and direction of the Secretary for Mines.

3. By notification in the Gazette of 9 June, 1885, the business connected with the Land for Public Purposes Acquisition Act, 44 Victoria No. 16, vested in the Secretary for Public Works, so far as relates to public parks or grounds for public recreation or places for bathing, was placed under the control and direction of the Secretary for Mines.

4. By letter from the Under Secretary for Lands, dated 11 November, 1885, the dealing with all matters relating to recreation reserves was handed over to the Department of Mines.

5. Since 29 January, 1885, the date on which the removal of the Parks Branch from the Colonial Secretary's Department took place, the following have been the numbers of papers registered and letters written :—

Number of papers registered	1,033
Number of letters written	480

6. Besides the above, Executive minutes, notices of appointment of trustees for public parks for insertion in the Government Gazette, proclamations of parks under the "Public Parks Act of 1884," and notifications of resumption of land for public parks under the Lands for Public Purposes Acquisition Act, also for insertion in the Government Gazette, have been prepared in this Branch.

7. As this is the first general report which has been drawn up on the operations carried on for about four years relative to the acquisition of land for the purposes of public recreation, I beg to furnish the following statement of what has been done, and what still remains to be done in order to carry out the purpose for which the votes were passed by Parliament.

8. Of the two sums of £100,000 each, voted by Parliament in 1881 and 1883, £199,250 1s. 4d. has been spent, leaving a total balance in hand of £749 18s. 8d., against which liabilities have been incurred to the amount of £59,720.

9. It thus appears that a total sum of about £259,000 has been spent or engaged to be spent in the acquisition of public recreation grounds in places where such were absolutely required, and there was no Crown land available for the purpose, and that therefore a vote of say £60,000 will be required to fulfil arrangements actually entered into.

10. For the above sum of £259,000 the parks set forth in Schedule 1 hereto attached have been procured, the area and cost of each being as severally stated therein.

11. It may be remarked that, as many of these lands were acquired several years ago, their value has since considerably increased, and they are now worth much more than the price given for them. I should imagine that the increase is at least 25 per cent. all round.

12. It should be added that a few parks, other than those specified already, have been acquired, which were not paid for out of the two £100,000 votes. Of these the following have come to my knowledge :—

Paterson,
Rushcutter Bay,
Waverley Water and Recreation Reserve,
Ashfield,

and there may possibly be a few others.

13.

[1,258 copies—Approximate cost of printing (labour and material), £6 15s.]

13. The action which has been taken in acquiring land for public parks has had three objects in view: the first to provide suitable places for the population of towns to carry on games and sports; the second to obtain and set apart for the enjoyment of the public for all time lands containing objects of remarkable natural beauty, which had been alienated from the Crown; and the third, to prevent the ill effects on the health of the community of mud flats, swamps, and other lands difficult of drainage.

14. I venture to submit that not one of these objects is as yet fully attained. There are still many places in the Colony where play-grounds are required and not yet provided, and in respect to these the applications named in Schedule 2 have been received by the Department.

15. There are also many places possessing great natural beauty, which it appears to me should be secured to the public without delay. Of this kind are the lands appearing in the following applications which have been received:—

Lake Macquarie,
Murrurundi,
Bronte (Nelson Bay),
Deno Point and Willoughby Falls,
Cremorne,
Waverley (Fletcher's Glen),
Bulli Pass,
Waragamba,
Lake Illawarra,
Mount Kembla.

16. Of these there are two in regard to which, I think, it is specially desirable that the opportunity which at present exists of acquiring them should not be allowed to lapse, namely, Bulli Pass and Fletcher's Glen. It would be a national calamity if the romantic beauty and luxuriant sub-tropical vegetation of the Bulli Pass should be destroyed, as it is certain to be before very long, unless it is made public property, and placed under efficient control. The Illawarra Railway will shortly bring its charms within an hour or two's reach of Sydney, some of the land will probably be sold in small allotments, and cleared, and the rest will be greatly marred by indiscriminate gathering of plants, leaves, and flowers, and thus its wonderful beauty of palms, fern-trees, ferns, creepers, and moss covered rocks will gradually but surely be destroyed.

17. Similar considerations urge the acquisition of Fletcher's Glen at Bondi. This is undoubtedly the most picturesque spot in the immediate vicinity of Sydney, and contains within an area of 20 acres a remarkable combination of beauty, in its terraces of rocks, deep glens, waterfalls, streams, lake, trees, and flowers, secluded bay, and massive sea cliffs of picturesque form. The whole has been well laid out and planted at great expense, and with good judgment. The property happens to be at present in the market, and can be obtained for a moderate price, but if not acquired now the opportunity is not likely ever to recur. It is probably a unique circumstance for a great city to have two such rural paradises in its close proximity.

18. Round the whole circumference of Lake Illawarra there is not an acre of recreation reserve. Some parts of it are within 1½ mile of the Illawarra Railway, and several charming spots could be selected for parks which would probably in time become places of great public resort. So would the summit of Mount Kembla, which has unfortunately also been alienated, and which will likewise be within easy reach of the railway line.

19. The extension of the reserve on both sides of the Waragamba Gorge to Penrith Bridge, by acquiring a strip of land 100 feet wide along the bank of the Nepean River, would provide access to the finest river reach in the Colony, and much facilitate public recreation, boating and otherwise.

20. There are several localities on the shores of Port Jackson which are admirably adapted as beauty spots for the delectation of the inhabitants of the crowded metropolis—Cremorne, for instance, where the long narrow peninsula which culminates at Robertson's Point, affords extensive views up and down the harbour; of such a park the 100 feet reservation in the original grant would form a continuation on both sides, along which a carriage drive of remarkable beauty could be constructed.

21. In the third category alluded to in paragraph 13, where the acquisition of land is made for sanitary considerations, that is, where the ground lies so low as to be unfit for human habitation, or where pestiferous mud flats constitute a danger to the health of the surrounding inhabitants, are the following applications:—

Rushcutter,
Mosman Bay,
Neutral Bay,
Careening Cove,
Blue's Bay.

22. That the public health would be benefited by the conversion of these low-lying sites into public parks there can be, I think, no doubt. Rushcutter Bay, Double Bay, and Blackwattle Bay have been so treated already. Much of the land round the head of Snail's Bay and Rose Bay has been acquired with this object in view, and there are several other bays in addition to the list above given, White's Bay for example, where reclamation is also highly necessary.

23 Applications not coming under either of the foregoing heads have been received from the following places and have not yet been dealt with:—

Ryde,
Narabeen,
Woollahra,
Adelong,
Paterson,
Scone,
Bowna.

24. For the reasons given in the ten preceding paragraphs I beg respectfully to suggest to the Minister the desirability in the public interest of placing on the Estimates for 1886 a sum of not less than £100,000 for the acquisition of land for public parks, £60,000 or thereabouts being required to clear off existing liabilities, and the balance to be devoted to fresh acquisitions where urgently required.

W. M. COOPER,
Surveyor of Public Parks.

P.S.—Copies of the two notifications in the Gazette referred to in paragraphs two and three of the foregoing, and of the letter from the Under Secretary for Lands, dated 11/11/85, are attached hereto, as also a Return of lands resumed for Public Parks to date—W.M.C.

[*Enclosures.*]

[*Extract from Government Gazette No.* 25, *of* 20*th January*, 1885, *p.* 553.]

Colonial Secretary's Office, Sydney, 20 January, 1885.

ADMINISTRATIVE ARRANGEMENTS.

His Excellency the Governor, with the advice of the Executive Council, has approved of the office of the Surveyor of Public Parks and all matters relating to Public Parks and Recreation Grounds, other than Reserves, being placed under the Ministerial control and direction of the Secretary for Mines.

WILLIAM BEDE DALLEY.

[*Extract from Gazette No.* 232, *9th June*, 1885, *p.* 3611.]

Colonial Secretary's Office, Sydney, 2 June, 1885.

ADMINISTRATIVE ARRANGEMENTS.

With reference to previous notices, His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the business connected with the administration of the "Lands for Public Purposes Acquisition Act," 44 Victoria, No. 16, vested or imposed upon the Secretary for Public Works, so far as relates to Public Parks or Grounds for Public Recreation or Places for Bathing, and to the reclamation of land for or in connection therewith, being under the Ministerial control and direction of the Secretary for Mines, and of the same Minister being charged, in accordance with the terms of section 2 of the "Executive Councillors (Functions Substitution) Act," with the powers, duties, and obligations pertaining to the administration of the business specified.

ALEX. STUART.

Sir, Department of Lands, Sydney, 11 November, 1885.

I have the honor to inform you that the Secretary for Lands has approved of all matters relating to Public Parks after dedication being dealt with in your Department, and to forward herewith papers in connection with the same.

I am to add that the Under Secretary for Finance and Trade has been asked to transfer the balances of the 1884 and 1885 votes for improving such reserves to the credit of your Department.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

The Under Secretary for Mines.

Resumptions for Public Parks.

1. Abstract of Lands resumed for the purposes of Public Parks, under the provisions of the Lands for Public Purposes Acquisition Act, 44 Victoria No. 16.

NATIONAL PARK.

(MONEY VOTED FOR AND SPENT UPON.)

Ordered by the Legislative Assembly to be printed, 14 *October*, 1886.

[*Laid upon the Table of this House, in accordance with promise made, in answer to question No.* 5, *Votes No.* 147, *Thursday*, 14*th October*, 1886.]

5. MR. SYDNEY SMITH *to ask* THE COLONIAL SECRETARY,—
   (1.) How much public money has been voted for the National Park since it was first set apart for public purposes?
   (2.) How much of the same has been spent upon the Park?
   (3.) What is the nature of the work that has been done for the money so expended?
   (4.) Who are the Trustees of the Park?

1. £17,950.
2. £17,672 7s. 3d. (during seven years.)
3. The principal works effected at the Park are:—
   Construction and maintenance of roads, bridges, and pathways.
   Construction and maintenance of dam across Port Hacking River, near Audley.
   Work towards construction of dam across Port Hacking River, between the "Lower Peach Trees" and the "Upper Peach Trees."
   Excavation of water-tanks.
   Land-clearing, under-scrubbing, stumping, and tree-planting.
   Erection of Park boundary fencing and other fencing.
   Removing fallen timber and detached rocks from Port Hacking River and Kangaroo Creek to facilitate navigation.
   Erection of training-walls in Port Hacking River, below dam, near Audley.
   Construction of small dock, Port Hacking River, near Audley.
   Erection of slip and shed for hauling and repairing steam launch and boats.
   Erection of boat-house, jetties, pavilions, caretaker's cottage, cottages for carpenter, groom, and labourers, erection of stables, stores, smithy, and outhouses.
   The above-stated sum of £17,672 7s. 3d. also includes cost of boats, punts, steam launch, waggons, drays, horses, forge, tools, and other plant, furniture, and fittings, purchased or constructed for Park purposes, and cost of caretaking, secretarial work, &c.
   Information in detail is furnished in the Report of the Park Trustees, dated 26th May, 1884 (which was laid upon the Table of the Legislative Assembly on the 26th August, 1884), and that of the 31st August, 1885, a copy of which is annexed.
4. The names of the Trustees will be found in the last-mentioned report (31st August, 1885).

REPORT to the present date from the date (31st December, 1883) to which the last Report recorded the operations of the Trust.*

The Chairman, National Park Trust, to The Secretary for Lands.

Sir, 31 August, 1885.

The Trustees† of the National Park have the honor to present to you their Report of the works effected since 31st December, 1883.

Road extension.

The formation of the road along the valley of Port Hacking River towards the southernmost boundary of the Park has been extended a further distance of 3 miles, to the bridge in course of construction across Bola Creek,—making the total distance completed 6 miles.

The work has been carried out under contract, and performed in a most satisfactory manner, notwithstanding the numerous heavy rock and shale excavations.

The bridges and culverts are very strongly built; they are of durable character and of sufficient capacity, and with strength sufficient to withstand the heaviest floods.

This road follows the windings of the river, and brings into view some of the most beautiful scenery of the Park. It will doubtless become a favourite drive and promenade. Just beyond Tāmūr Creek, on the opposite (the left-hand) side of the river, there are tall forest trees, over which vines climb and overhang; also, bangalo and cabbage-tree palms, fine specimens of bird's-nest ferns, tree ferns, &c.; intermixed are wild canes, which attain to 100 feet.

About 2 miles below Bola Creek (northerly therefrom) the Illawarra formation commences, and extends from thence upwards to the southernmost boundary of the Park; this accounts for the rich varied palm, fern, vine, and tree foliage.

About 1 mile south-westerly from Bola Creek Bridge there is a forest of magnificent timber as yet unassailed by the devastating hands of the woodman. Included in the forest are blackbutts of gigantic height, some measuring 22 feet in girth at the height of 5 feet from the ground; and turpentines, about 150 feet high, measuring 27 feet in girth at 5 feet from the ground. No forest within 100 miles of Sydney is comparable to it.

A contract has been arranged for road extension beyond the bridge over Bola Creek, and through the easterly margin of this forest, which will thus be made easily accessible for visitors to the Park.

New road.

A new road, with very easy gradients, has been made from the crossing, at 16 miles 30 chains from Sydney, of the Railway line over the main Illawarra Road, to the gate on the saddle below the southerly end of Loftus Heights, which will be the terminus in the Park of the Railway. The length of this road is 1¼ mile. The whole has been cleared, and the formation is nearly complete.

Shelter and accommodation for the public.

The necessity of providing shelter and accommodation for visitors to the Park, more especially at the time of the opening of the Railway, became so apparent that the Trustees unsuccessfully requested the Government to authorize them to transfer the expenditure of £1,200, voted for roads southerly in the Park, and for a bridge to cross Bola Creek, to defray the cost of providing the required shelter and accommodation. As the sum appropriated could not be legally transferred, the Trustees determined to make other arrangements.

A beautiful serpentine walk has been made, leading from the southern end of Loftus Heights, which will be the terminus of the Railway siding, to the salt-water part of the river, where boats will be kept for the accommodation of the public. The walk is continued up the left bank of the river, facilitating approach to the boats, which will be kept on the fresh water above the dam.

Land clearing at Loftus Heights.

The area of land cleared at Loftus Heights has been extended from 80 acres to upwards of 200 acres. This work has been done mainly under contract in areas from 5 to 20 acres. As in all similar work at the National Park, precaution has been exercised to preserve the best of the ornamental and all the good sheltering trees, all Christmas bushes, waratahs, gigantic lilies, &c.

Tree-planting.

During the past year progress has been made in planting ornamental trees obtained from the Government nurseries and from various contributors. Many of the trees are well established and thriving.

Deer park.

Among the latest and most attractive improvements is the partial clearing of a very picturesque area of about 160 acres for a deer park. This area is enclosed where necessary, and to the extent of ¾ mile, by a permanent 6-feet fence of 9 wires; the other boundaries, 2 miles in length, are Port Hacking River and its pretty inlets.

A considerable proportion of the area is well grassed, with a never-failing supply of pure fresh water, including the water of the brook, which terminates at "The Fountain," opposite Mangrove Island.

The under-scrubbing of the area is in progress.

Seven deer, a donation from the Trustees of Parramatta Park, are now running on this area, and doing well.

Park boundary fence.

After surmounting many difficulties, a contract was entered into, in October last, for the erection of a fence along that part of the boundary of the Park which extends from Woronora River to Port Hacking River. 1¾ mile of this fence is completed.

On

---

* That Report is dated 26th May, 1884, and was presented to Parliament by the Honorable the Secretary for Lands, on Tuesday, 26th August, 1884.

† The Trustees of the Park now are:—

Honorable Sir John Robertson, K.C.M.G., M.P.,	appointed	26th April, 1879, Chairman.
Honorable Robert Wisdom, M.P.,	do.	do.
Angus Cameron, Esquire, M.P.,	do.	do.
Andrew Hardie McCulloch, Esquire, M.P.,	do.	do.
Joseph Graham, Esquire, J.P.,	do.	do.
Charles Moore, Esquire, F.L.S.,	do.	do.
Walter Bradley, Esquire,	do.	do.
George Frederick Want, Esquire,	do.	do.
Edmund Bingham Woodhouse, Esquire,	do.	12th December, 1879.
Honorable James Squire Farnell, M.P.,	do.	4th February, 1881.
John Williams, Esquire, J.P.,	do.	1st August, 1882.
James Patrick Garvan, Esquire, M.P.,	do.	14th November, 1884.

On application of the Park Trustees, the southerly shore of Port Hacking River, so far as it bounds the National Park, was, on 19th June, 1885, proclaimed a Public Oyster Reserve, and exempt from the power of leasing. Oyster lands abutting the National Park.

With a view to the advancement of oyster culture the Trustees have made arrangements to procure the best varieties from America.

In November, 1884, and at subsequent periods, the Trustees expended a sum of money for the introduction of English perch and other fresh-water fish. Acclimatisation of fresh-water fish.

In May last, by the kind co-operation of His Worship the Mayor and the City Clerk of Ballarat, and Officers of the Railway Departments of Victoria and New South Wales, a large number of live trout and English perch, from Ballarat, were successfully introduced into Port Hacking River, above the "Upper Peach Trees."

The river, perhaps the only one running from south to north between high and precipitous mountains, is shaded from the sun more than any other river in New South Wales known to the Trustees —hence the prospect of English fish thriving in it is the greater, owing to the cool temperature.

The training-walls erected in 1883 (incomplete though these were) along and partly across the worst sand-shoal flat in Port Hacking River, situate about ¾ mile below the dam, has resulted in considerably deepening of the channel at this part. Further expenditure will be required to make the work more completely effective. Training-walls below the dam.

The Trustees propose to carry out similar improvements in the future on the river, below the dam, near Audley, and they hope with equal or even greater beneficial results, so that the river throughout may become navigable for large boats at all times. Above the dam the river for 4 miles is constantly navigable for steam launches of moderate draught and large boats, as a result of the construction and maintenance of that structure. During the past four months this dam has been increased in height, so that it is now above the level of the highest king tides.

On 3rd October, 1884, a purchase at auction, at Messrs. Richardson & Wrench's Rooms, Pitt-street, Sydney, was effected (on behalf of the Government), of 60 acres, between Simpson's 50 acres and Lord's 20 acres, to afford for the Park a convenient approach to the high land at the back, and an additional desirable frontage to Port Hacking at a clear sandy beach. The price paid, equal to £7 6s. 8d. per acre, is undoubtedly very moderate. Land purchased for an approach near Cabbage-tree Creek.

The Trustees hope to be able to furnish with the next Report accurate maps, which are in course of compilation, to a sufficiently large scale to show clearly the various roads, structures, and improvements generally, as well as the natural features, &c. Maps to show positions of improvements, &c.

I have the honor to be,
Sir,
Your obedient servant,
JOHN ROBERTSON,
Chairman, National Park Trust.

SCHEDULE of Names adopted for Natural Features within the National Park since its dedication.

THE names "Fountain Brook" and "The Fountain," respectively, for the brook and the natural fountain within and close to the southerly boundary of the "Deer Park."

The name "Loftus Heights," in honor of His Excellency the Governor, for the high land between the Illawarra Railway, at about 16¾ miles from Sydney, and Port Hacking River, below the dam. This area is now cleared to the extent of 200 acres to afford sites for recreation and military encampment and review grounds; from it fine views are obtained of the ocean, Port Hacking, Botany Bay, Randwick, parts of Sydney, &c.

The name "Audley" has been adopted for the locality of the Main National Park Camp, at the confluence of Port Hacking River with Kangaroo Creek, in honor of Licensed Surveyor Lord Audley, who, in the year 1864, made the first accurate survey of Port Hacking River, and had his Main Survey Camp at the place.

The name "The Island" for the isolated high hill or mountain immediately southerly from the confluence of Port Hacking River and Bola Creek, and between those streams.

The names hereunder have been adopted for the brooks which flow to the right bank of Port Hacking River, and are crossed by the road formed through the valley of that river :—

Distance by road southerly from the Dam.	Name of Brook in the language of the Aborigines of Australia adopted.	In parentheses, the Meaning in the English Language of the Name

Total estimated value to 31st Aug., 1885...	£13,600	0	0

* Under special authority of Parliament (item 339 of Appropriation Act of 1884). £1,000 of this sum has been expended for general improvements.
† Caretaking, maintenance of roads, &c., have been covered by this sum since October, 1879.
‡ Memo.—31st August, 1885, estimated liability on contract for bridge over Bola Creek and road half a mile beyond, £371 16s.
§ Inadvertently omitted from Schedule.

Sydney : Thomas Richards, Government Printer.—1886.

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WILBERFORCE COMMON.

(PETITION, CERTAIN TRUSTEES FOR—AND RESIDENTS OF WILBERFORCE.)

Ordered by the Legislative Assembly, to be printed, 3 August, 1886.

To the Honorable the Speaker and Members of the Legislative Assembly.

The humble Petition of the undersigned Trustees for the Wilberforce Common, and residents of Wilberforce, and the neighbourhood, having a right of commonage thereto,—

RESPECTFULLY SHOWETH:—

That the proposed sale of certain portions of the Wilberforce Common, amounting to 5,390 acres, as announced in the *Government Gazette* of date 9th July, 1886, would, if carried into effect, be highly prejudical to your Petitioners, for the reasons set forth below, viz.,—

(1.) That the said Common has been since the date of the grant thereof, in the year A.D. 1804, and is now a great boon to the inhabitants of Wilberforce, and those having right thereto as a run for their stock, the procuring of firewood, and fencing building material, a place of refuge in flood time for their horses and cattle, and for other good purposes.

(2.) That the Trustees have a code of by-laws for the management of the Common, which were adopted at a public meeting of the commoners, and sanctioned by the Attorney-General, whereby the Trustees were enabled to have the Common nearly fenced in at a considerable cost, thus adding to its usefulness.

(3.) That the portions if sold as proposed would render the remainder of very little avail for the purposes for which the Common was granted, about a square mile thereof being very barren and scrubby; in fact during times of drought the whole of the Common is barely sufficient for the support of the stock entitled to be run thereon.

(4.) That the sale as proposed would not be the means of settlement or of public benefit, as your Petitioners have good reason to believe that land speculators would be the chief buyers.

(5.) That the consequence of the portions being sold would most likely lead to impounding of stock and vexatious actions for trespass or otherwise, and moreover purchasers who may reside on and improve their purchases would claim a right of commonage, which if not granted to them they would perhaps so dog the stock off the portion reserved as to render it practically useless.

Your Petitioners therefore humbly pray that this their Petition may receive your favourable consideration, and that your Honorable House will not sanction the resumption and sale as proposed.

And your Petitioners will ever pray.

[*Here follow* 80 *signatures.*]

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RESERVES, GLEN INNES LAND DISTRICT.

(NUMBER, AREA, AND NAME OF RUN OF WHICH SITUATE.)

Ordered by the Legislative Assembly to be printed, 25 March, 1886.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 24th September, 1885, That there be laid upon the Table of this House,—

"A Return showing the Reserves within the Glen Innes Land District, the "official number, the area of each, the name of run on which situate, and "the objects for which each Reserve was made."

(Mr. W. J. Fergusson.)

RETURN showing Reserves from Sale in the Land District of Glen Innes.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RESERVES, MARRAR RUN, AND COUNTY OF MITCHELL.

(CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 11 *June*, 1886.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 30th April, 1886, That there be laid upon the Table of this House,—

"Copies of all reports, minutes, and papers having reference to a Reserve "on the Marrar Run, and situated on the Railway line between Junee and "Marrar Platform, such Reserve having been withdrawn from sale on or "about the 18th March; and copies of all reports, minutes, and papers "having reference to a Reserve in the county of Mitchell, parish of "Brewarrina, proclaimed a special area on the 6th of April."

(*Mr. Gormly.*)

SCHEDULE.

578—A

[805 copies—Approximate Cost of Printing (labour and material), £31 19s. 3d.]

RESERVES, MARRAR RUN, AND COUNTY OF MITCHELL.

Copies of all reports, minutes, and papers having reference to a reserve on the Marrar Run, and situated on the railway line between Junee and Marrar platform, such reserve having been withdrawn from sale on the 23rd March, 1886.

No. 1.

Mr. District Surveyor Bolton to The Surveyor-General.

Sir, District Surveyor's Office, Wagga Wagga, 29 March, 1881.

I beg to acknowledge the receipt of your letter of the 29th December, 1881, No. 542, directing me to report on the locality in each county in my district in which I would advise the survey of land in anticipation of demand; and, in reply, I now do myself the honor to forward a sketch herewith showing certain land in the county of Bourke that I would recommend to be measured for alienation.

There appears to be no reason why the reserves embraced in the tract proposed to be measured should not now be revoked and alienated. The land indicated by green edging adjacent to the intersection of the railway with Murrulebale Road should be retained by the Crown for the present.

I have, &c.,
C. F. BOLTON, D.S.

No. 2.

Mr. Licensed Surveyor Commins to The Surveyor-General.

Sir, Wagga Wagga, 21 October, 1881.

In accordance with instructions received from District Surveyor C. F. Bolton, I have the honor to transmit herewith plan of portions 100 to 114, in the parish of Kinibilah, county of Bourke.

The wire fence on portions 103 and 104 is the run boundary, and belongs to the owners of Junee and Marrar Runs.

The fence on the west side of portions 111 and 113 belongs to D. Robertson; the value is stated on the plan.

The character of the soil is good throughout, but there is no water, and that can only be secured by tanks.

I believe all the land will be conditionally purchased when the reserve is revoked.

Discrepancies exist between my work and Mr. B. C. Garland's in every portion.

On the plan of portion 91, Mr. Garland represents the azimuth of No. 70, 5′ lower than 91; I find it higher.

The south side of 101 is the south side of No. 70, produced, and according to Mr. Garland's work it ought to read 89° 48′, and the east side of No. 70 ought to read the same, plus 90°; I represent it 359° 57′ or 9′ more.

Mr. Garland represents portion 96 parallel to the railway—I find it 8′ different.

I believe I can prove my work correct by the plans already in the office; all my work to the north, south, and east is measured on or reduced to one azimuth. Portion 100, parish of Gwynne (*vide* tracing herewith, or my plan 81-162) was measured on the azimuth of the portions lying east of it; and all the surveys in the parish of Gwynne are on the same azimuth which was laid out by the line which is a continuation of the west side of reserve Nos. 256 and 552 (on C. 1,463 roll); that line is represented 0° 1′, therefore the azimuth of C. 1,463 is 1′ higher than the surveys north of No. 100, and on C. 1,463 No. 3 is represented 359° 56′—and by referring to my plans of portion 110, 111, 113, parish of Gwynne, it will be seen that Robertson's C.P. (same azimuth as No. 3) are represented 359° 55′ or 5′ lower than Fox's C.P. No. 100, which is exactly the same as on C. 1,463 (359° 56′ and 0° 1′). On C. 1,463, portions 3, 2, 41, 81, 82, and 83, are represented 89° 52′; they are the same on my plan (81-162 herewith) portion 31, being 90, portions 86, 87, 92, 90, and 91, same azimuth portions 106, 107, 108, and 109, same azimuth reading 1′ in the survey herewith. I produced the west side of No. 107 north, and continued the same straight line to portion 96, and I found the azimuth of No. 109 (same as 110, 111, 113, &c., before referred to) to be 359° 55′, or "exactly" the same as it had been given before on the plans of 110, 111, 112, and 113. Thus I have worked over a great many miles, sent in the work at long intervals, and it closes perfectly. It will be observed that the chaining is fixed on the north and south, and if the long line was even one minute out it would not close.

All the foregoing will be more easily understood by reading it in connection with my plan 81-162; but, as that plan does not clash with Mr. Garland's work, I had to explain it in this letter.

The country being all alike the usual form will not be required; the distance from Wagga Wagga is about 20 miles, from Junee railway station about 5 miles.

Timber, worthless box; soil, good; no water; thick wattle scrub everywhere.

I have, &c.,
GEORGE W. COMMINS,
Licensed Surveyor.

Minutes

Minutes on No. 2.

Forwarded to the Surveyor-General, 27th October, 1881.—I have retained a copy of this letter, and will investigate the differences which occur between Messrs. Commins' and Garland's work. I would now recommend that the reserves embraced by these measurements be revoked and the land alienated. Mr. Commins having worked at great disadvantage from absence of grass and water for many months, I did not exact any reduction from the scale of fees for this survey.

C. F. BOLTON, D.S.

[*Enclosure.*]

Mr. Commins' letter, 81-163.

Number of portion.	Distance from nearest township and Land Office.	Water supply.	Timber and physical character of country.
100 to 114	20 miles from Wagga Wagga...	No water	All very scrubby; box forest worthless timber; granite formation; good red soil.

Junee Railway Station. Village and Post Office—about six.

This description of land is very meagre, and not to the point. Mr. Commins will be cautioned to be more precise in future.

Where hills are shown the country is undulating, and out-crops of granite occur. The remainder is comparatively open box forest, suitable for wheat-growing and grape vines. The timber very inferior in quality for building material, but excellent for fuel. There is no undergrowth of small wattles.

C. F. BOLTON,
District Surveyor.

No. 3.

Charting Branch.

Memorandum of subjects requiring explanation or completion in connection with the survey and plan of 15 portions Nos. 100 to 114 inclusive, parish of Kinilibah, county of Bourke, transmitted by Mr. Licensed Surveyor Commins' letter, No. 163, of 21st October, 1881. Instructions issued by Mr. District Surveyor Bolton, and on which Mr. Commins' report in explanation is required.

Subject:—

The county boundary, as shown on the above plan, along the eastern sides of portions 100 to 104, 109, 110, and 112 is incorrect; the boundary, as surveyed by Mr. Licensed Surveyor R. M'Donald, and shown in blue on tracing attached, is that adopted, and must be adhered to. There is also a discrepancy in the position of the range forming such boundary.

A connection should have been made with some of the marked trees on the boundary line.

The observations for the true meridian required by paragraph 34 of general instructions have not been supplied either on the above plan or that of the adjoining subdivision on the east.

P.F.A.

9th January.

Report:—

Licensed Surveyor M'Donald did not make a survey of the county boundary; he merely made a flying traverse of country claimed by Mr. M'Donnell, lessee of the Murrulebale Run. I am positive the range is correct on my plan, and if the blue line is adopted as the county boundary, it will not fit with the range.

I could not find any trees * * As stated above, it was not a survey of the county boundary, merely a private traverse. I determined the true meridian in several places on the adjoining work, and it was unnecessary to take it again, especially as I have verified its accuracy with connecting surveys on which observations had been taken many miles apart and close to a few seconds (14).

Full information was sent on a separate sheet for the surveys on the east; it was not given on plans, and payment was refused in consequence, and I had to supply it before I was paid.

GEO. W. COMMINS.

Minutes on above.

Chief Draftsman,—It is presumed the range, must continue to form the county boundary, as it forms the eastern boundary of the Bourke, Cooper, Dowling, and Gipps Gold-field, which latter boundary is described as being coincident with the county boundary.—G.P., February 10/82.

No. 4.

Memorandum from Mr. District Surveyor Twynam to Mr. District Surveyor Bolton.

It is preferable, for many reasons, that prominent natural features, such as ranges and rivers, should be adopted as county boundaries, wherever in other respects suitable; and, in this instance, such a low range separates the counties Clarendon and Bourke, and as such has been properly made or available for the boundary of the Bourke, Cooper, Dowling, and Gipps Gold-field.

The subdivision is not in accordance with the design prepared by the District Surveyor, and approved, and it must be amended accordingly, defining the county boundary, being the summit of the low range of hills; and if the conditions be suitable, a road 150 feet wide might be designed separating the portions on each side.

If either of the trees on run survey—box over 71, box over broad-arrow, box broad-arrow over M—be extant, connections should be measured to either or all of them. Mr. M'Donald's survey does not exactly follow the summit of the low range or division of the water-sheds, but to a great extent is a traverse of a then standing fence, adopted as a boundary by mutual arrangement.

The District Surveyor will be in a position to decide whether the road separating portions 112 and 117, &c., so nearly accords with the natural boundary as to warrant its adoption, which appears to be expedient; and he will also give special instructions as to the extent and particulars of amendment of boundaries, and effacement of the marked lines not utilized.

To

To the District Surveyor at Wagga Wagga, who will be so good as to cause amendment of survey under the above minute as soon as possible. I think the amendment should be effected by Mr. Licensed Surveyor Commins without delay, so as to avoid complication by conditional purchase. I may also add that if the matter had come under my notice sooner the usual advance on account would have been withheld pending amendment.

(For the Surveror-General),
E. TWYNAM,
7 March, 1882.

B.C., Mr. Bolton, District Surveyor.

Minute on No. 4.

Mr. Licensed Surveyor Commins,—To make the required alterations as indicated, more particularly in pencil on sketch attached to memo. form within.—C. F. Bolton, D.S., 27 July, /82.

No. 5.

Mr. Licensed Surveyor Commins to The Surveyor-General.

Wagga Wagga, 9 August, 1882.

Sir,

In accordance with your letter of instructions B.C. 82-109 of 7th March, issued to District Surveyor C. F. Bolton, and transferred to me on the 27th July, I have the honor to transmit herewith, plan of portions 157, 158, 162, and 167, parish of Maror, county of Clarendon, and portions 109, 116, and 117, parish of Kinilibah, county of Bourke.

The plan is only intended to supply information which can be put on the originals, in order that the work may be kept together.

I have not sent an account, as I suppose the alterations will be applied to the original plans, and the accounts altered accordingly.

The references to all corners are not given, partly because they are on the original plans, and partly because I have not got my field-book here. District Surveyor Bolton asked me to make the survey as speedily as possible, and I did so on the first fine day after receiving the instructions, and send the plan with such information as I have at hand.

The numbers on the original trees have been altered to correspond.

I could not find the old trees to which connections were required, and such connections are unnecessary now, as all the county boundary has been resurveyed by me in the measurement of portions.

I have, &c.,
GEO. W. COMMINS,
Licensed Surveyor.

Minutes on No. 5.

Forwarded to the Surveyor-General, 15 August, 1882.—If Mr. Commins' original plans were transfer lithographed instead of photo-lithographed, the alterations could be on the lithograph so as not to be apparent.—C. F. Bolton, D.S.

Memo to L. S. Commins, asking whether a road has been marked along each side of the railway line—20 Feb, 1883.—R.H.C.

Mr. G. Lewis.—Then to Mr. Blake for auction sale.—W. D. Armstrong, 9 March, 1883.

Mr. Commins should probably have shown the trial line of railway (from which reserve 218 acres was described).

No. 6.

Memorandum from Surveyor-General to Under Secretary for Lands.

Out of the 2,324 acres measured as shown on plan B. 850-1,806, counties of Bourke and Clarendon, papers enclosed, 2,188½ acres are included within the following reserves, viz. :—Railway reserves 218ac, 218ac. extension, 1847, and reserve No. 665 for water supply. It is submitted for the consideration of the Secretary for Lands whether the cancellation of these reserves be proceeded with pending legislation. The only improvement is fencing, in no case reaching £40 on a measured portion.

G. LEWIS,
(For Surveyor-General).

19 April, 1883.

Minutes on above.

Submitted that action be stayed for the present.—F.H.W., 25/4/83. C.O., 27/4/83. Approved.—J.S.F., 28 April, 1883. For the information of Survey Office.—J.D.D. (*pro.* F. H. Wilson), 28/4/83. Mr. G. Lewis,—Is the land within a resumed or leasehold area?—C.O., 29/10/85. Mr. Houston—J.E., 31/10/85.

Portions in county of Bourke are within resumed area, Marrar Holding, No. 16, Central Division, gazetted 11 July, 1885; and portions in county Clarendon are within resumed area, Junee Holding, No. 147, Central Division, gazetted 11 July, 1885.—C.J.S., 5/11/85. Mr. Edwards. Submitted.—Whether the reserve be cancelled—R.H.D., 14/11/85. C.O., 16/11/85. Approved.—J.P.A., 20/11/85 Mr. Geo. Lewis.—R.H.D., 21/11/85.

No. 7.

Memorandum from Surveyor-General to Under Secretary for Lands.

Descriptions are enclosed for the cancellation of part of water reserve 665, R.R. 218a. R.R. 218a. extension, and R.R. 1847, in the parishes of Kinilibah and Maror, counties of Bourke and Clarendon, in accordance with Ministerial approval.

G. LEWIS,
(For the Surveyor-General).

10 Dec., 1885.

Minutes on above.

Mr. Gerard will please state if this description is included within the leasehold or resumed area of any holding.—For G.L., W.H.H., 14/1/86. Situated partly within the resumed area of Junee Holding and resumed area of Marrar Holding.—F.G., 16/1/86. Erased from map, plan noted, and Land Agent informed.—W.D.L., 8/2/86.

No. 11.

No. 11.

The Under Secretary for Lands to The Crown Lands Agent, Wagga Wagga.

Sir, Department of Lands, Sydney, 13 February, 1886.

I am directed to transmit herewith, for your information, a description with a tracing showing those parts of reserves No. 665, 218, 218a extension, and 1,847, counties of Bourke and Clarendon, which have been revoked by notice in the Government Gazette of the 23rd ultimo, the revocation taking effect at the expiration of sixty clear days from the date thereof.

I have, &c.,
R. H. DE LOW,
(For the Under Secretary).

No. 12.

Messrs. Cape & Kent to The Secretary for Lands.

Sir, Commercial Union Chambers, Pitt and Hunter Streets, Sydney, 20 March, 1886.

Re Marra Reserve, we have the honor to bring under your notice the following case :—

On 26th* January, 1886, the Minister revoked the reserve as shown on the accompanying plan. Our client, the lessee of the run, informs us that the portion of the revoked reserve, and edged blue, contains three quarries, from which the railway line has been supplied with ballast. There is also a line of sleepers laid from one of the quarries to the railway line. This is the only available locality between Junee and Narrandera where ballast can be obtained.

We respectfully submit that by the temporary withdrawal from sale no injury can result.

We understand that the land is open for sale on the 25th instant, and on this account we would ask that immediate attention be given to the matter, and that the land be withdrawn from sale, and the reserve re-gazetted, and the district surveyor instructed to report on the matter. Kindly return the plan.

We have, &c.,
CAPE & KENT.

* Query.—23rd January, 1886. No plan received in Miscellaneous Branch.—A.M.D., 22/3/86.

No. 13.

Executive Council Minute.

Reserve from sale under the 101st section of the Crown Lands Act of 1884.

Department of Lands, Sydney, 23 March, 1886.

It is recommended to His Excellency the Governor and the Executive Council that the portion of Crown Land described in the annexed Schedule be reserved from sale, under the 101st section of the Crown Lands Act of 1884, for the purposes mentioned in connection therewith.

HENRY COPELAND.

SCHEDULE.

Registration Number. Miscellaneous.	Area about.	Reserve No.	County.	Purpose of Reservation.
85-24,520...	2,104 acres	25	Bourke and Clarendon	For village requirements and pending subdivision.

The Executive Council advise that the land herein described be reserved from sale in terms of the said Act.—Alex. C. Budge, Clerk of the Council. Min. 86–16, 23/3/86. Confirmed.—30/3/86. Approved.—Carrington, 23/3/86.

No. 14.

Gazette Notice.

Department of Lands, Sydney, 23 March, 1886.

Reserve from sale for village requirements and pending subdivision.

His Excellency the Governor, with the advice of the Executive Council, directs it to be notified that, in pursuance of the provisions of the 101st section of the Crown Lands Act of 1884, the land specified in the Schedule appended hereto shall be reserved from sale for village requirements and pending subdivision, and is hereby reserved accordingly.

HENRY COPELAND.

No. 25, subdivision of the counties of Bourke and Clarendon, parishes of Kinilibah and Maror, within resumed areas of Junee and Marrar holdings, area about 2,104 acres. The Crown Lands within the following boundaries: Commencing at the north-east corner of portion No. 112, parish of Kinilibah, county of Bourke; bounded thence on the north-west by that portion and the north-west boundary of portion No. 113, bearing south-westerly to the north-west corner of No. 113; thence on part of the west by the west boundary of that portion south to the north-west corner of portion No. 111; bounded thence on the north by a line and the north boundary of portion No. 114, bearing west to the north-west corner of portion No. 114; thence on the west by the west boundary of that portion and a line crossing the railway line from Narrandera to Junee, bearing south to the northern boundary of portion No. 108; thence on the north-east by part of the north-east boundary of that portion and the north-east boundary of portion No. 107, bearing north-westerly to the north-west corner of portion No. 107; thence on the west by the west boundary of that portion and the west boundaries of portions Nos. 106 and 105, bearing south to the south-west corner of No. 105; thence on the south by the south boundary of that land, bearing east to a point north of the north-west corner of portion No. 103; thence again on the west by the west boundaries of that portion and of portion No. 102, bearing south to the south-west corner of No. 102; again on the south by the south boundary of that portion, bearing east to its extremity; thence on the east by a line partly forming the east boundaries of portions Nos. 102, 103, 167 (parish of Maror, county of Clarendon),

No. 109 (parish of Kinilibah, county of Bourke), and No. 110 (same parish), bearing north, crossing the railway line aforesaid, to the south-east boundary of portion No. 111 aforesaid; thence on the south-east by part of the south-east boundary and by the south-east boundary of portion No. 112 aforesaid, bearing north-easterly to the south-east corner of portion No. 112; and thence on the east by the east boundary of that portion, bearing north to the point of commencement, as shown on plan catalogued B. 850-1,806 Roll, Surveyor General's Office.

The above is in lieu of parts of reserve No. 218A and 218A extension, cancelled 23rd January, 1886, and is within the Land Board District of Wagga Wagga.

No. 15.

The Under Secretary for Lands to The Crown Lands Agent, Wagga Wagga.

Sir, Department of Lands, Sydney, 23 March, 1886.

I am directed to invite your attention to a notice, published in this day's Government Gazette, of the reservation from sale of 2,104 acres, in the counties of Bourke and Clarendon, parishes of Kinilibah and Maror, and to impress upon you the necessity of taking every precaution to prevent the land, or any portion of it, being conditionally purchased.

Should an applicant insist on his application being received, you must caution him, in terms of paragraph 39 of the Instructions to Crown Lands Agents.

A tracing showing the reserve will be forwarded with as little delay as possible, and on receipt it must be charted, as directed by paragraph 148 of the Instructions before refered to.

I have, &c.,
R. H. DE LOW,
(For the Under Secretary).

No. 16.

The Under Secretary for Lands to Messrs. Cape & Kent.

Gentlemen, Department of Lands, Sydney, 24 March, 1886.

I am directed to invite your attention to the Government Gazette of the 23rd instant, from which you will perceive that a portion of land, containing 2,104 acres, in the counties of Bourke and Clarendon, parishes of Kinilibah and Maror, has been reserved from sale, under the 101st section of the Crown Lands Act of 1884, for village requirements and pending subdivision, in accordance with your application of the 20th instant.

I have, &c,
R. H. DE LOW,
(For the Under Secretary).

No. 17.

Memorandum from Mr. G. Lewis to The Under Secretary for Lands.

8 April, 1886.

A TRACING is enclosed showing, by green edging, reserve 25, for village requirements and pending subdivision, notified 23rd March, 1886, counties of Bourke and Clarendon, parishes of Kinilibah and Maror, for the information of the Crown Lands Agent at Wagga Wagga.

I have, &c.,
G. LEWIS,
(For the Surveyor-General).

Minutes on above.

After informing Land Agent, it is submitted that papers be returned to Reserve Branch. Mr. G. Lewis, 14/4/86.

Dealt with in Reserve Branch.—J.F., for G. LEWIS, 28/4/86.

Charting Branch.—J.D., *pro* R. H. DE LOW, 30/4/86.

No. 18.

The Under Secretary for Lands to The Crown Lands Agent, Wagga, Wagga.

Sir, Department of Lands, Sydney, 12 April, 1886.

I am directed to transmit herewith, for your information, a description, with tracing, showing certain land in the counties of Bourke and Clarendon, which, by notice in the Government Gazette of the 23rd ultimo, has been reserved from sale, under the 101st section of the Crown Lands Act of 1884, for village requirements and pending subdivision.

I have, &c.,
R. H. DE LOW,
(For the Under Secretary).

Copies of all reports, minutes, and papers having reference to a reserve in the county of Mitchell, parish of Brewarrina, proclaimed a special area on the 2nd of April, 1886.

SCHEDULE.

No. 1.

Mr. George Faithfull to The Secretary for Lands.

Sir, Brewarrina Station, 2 November, 1882.

I have the honor to request that you will grant me permission to ringbark and clear of scrub the southern portion of water reserve No. 354, *i.e.*, south of a line drawn easterly from the south-east corner of portion No. 64, parish of Buckinbong, to the Old Man Creek; and thence bounded by that creek to its junction with portion No. 91, parish of Brewarrina. The above water reserve is situated in the parish of Brewarrina, in the county of Mitchell. Tracing enclosed.

I have, &c.,
GEORGE FAITHFULL,
Agent for W. P. Faithfull.

Mr. Wood, for duplicate tracings.—W.F.P., 13/11/82. Duplicate tracing herewith.—20/11/82. Plan to Lands, and inform that application has been referred to F. R. Condell for report.—W.F.P., 20/11/82.

No. 2.

Mr. George Faithfull to The Secretary for Lands.

Sir, Brewarrina Station, 2 November, 1882.

I have the honor to request that you will grant me permission to ringbark and clear of scrub that portion of water reserve No 353, in the parish of Brewarrina, in the county of Mitchell, situated between a line drawn about south-east from the south-east corner of portion No. 94, in the parish of Brewarrina, and a line drawn south-east from the intersection of the western boundary of water reserve No. 354, with water reserve No. 353.

I enclose a tracing showing the portion of land referred to.

I have, &c.,
GEORGE FAITHFULL,
Agent for W. P. Faithfull.

Forwarded for early report, in accordance with previous instructions. Mr. Forest Ranger Condell.—H.W., B.C., 22/11/82.

No. 3.

No. 3.

The Under Secretary for Mines to The Under Secretary for Lands.

THE accompanying plan, showing land claimed to be held under five years pastoral lease, for which application for permission to ringbark timber has been made, in accordance with the provisions of the Ringbarking on Crown Lands Regulation Act of 1881, is forwarded to the Lands Department, with a request that it may be stated whether--

District, Murrumbidgee; Run, Brewarrina. Area referred to, shown by red edge.

1. Any of the land has been measured.
2. Whether it is held under auction or pre lease.
3. Whether it forms portion of a timber reserve.

HARRIE WOOD,
Under Secretary.

B.C., Department of Mines, 22 November, 1882.

Minutes on above.

No pre or auction lease within the area applied for.—W.H.H., 28/11/82. Charting Branch,—Has the land been measured?—S.F., 29/11/82. The land has not been measured.—M.O.C.B., for Surveyor-General, 9/12/82. Reserve Branch.—There are no timber reserves within the area traced red on the enclosed tracing.—G.L., 12/1/83. The Under Secretary for Mines.—H.C., for the Under Secretary, B.C., Lands, 22/1/83.

No. 4.

The Under Secretary for Mines to Mr. G. Faithfull.

Sir, Forest Branch, Department of Mines, Sydney, 22 November, 1882.

I have the honor to inform you that your application of 2nd instant, for permission to ringbark timber on the Brewarrina Run, Lachlan District, has been referred for the report of Mr. Forest Ranger Condell (Narrandera).

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 5.

Mr. Forest Ranger Condell to The Under Secretary for Mines.

Report by Mr. Forest Ranger J. G. Condell on application for permission to ringbark timber upon a run.

Applicant, W. P. Faithfull, Brewarrina; Pastoral district, Murrumbidgee.

Sir, Narrandera, 18 December, 1882.

In pursuance of instructions, dated 22nd November, 1882, I have the honor to state that, on the 11th and 12th December, 1882, I personally inspected the timber on the land comprised in the areas referred to in the above-mentioned application, and beg to forward my report and recommendation thereon.

Area applied for, about 960 acres. Kind of trees it is sought to ringbark:—Box, bull-oak, and pine scrub.

The species and local names of all trees growing upon the land desired to be ringbarked, with estimate of the number per acre, and proportionate distribution of each kind, their value with regard to local circumstances, such as demand for fuel, timber or shelter, and the supposed effect of their removal upon climate, &c.

The timber growing on the area it is sought to ringbark consists of pine, box, and bull-oak. The timber is distributed over the whole area, none of the land being free from timber and pine scrub. The numbers of each kind of timber or trees growing on the area per acre are—pine, about eight or nine trees; box, nine or ten trees; and bull-oak, five or six trees. Some of the pine is 15 to 18 inches diameter, and more from 3 inches to 15 inches in diameter. The box timber is scrubby and unsound, and the bull-oak scrubby and of no value.

The ringbarking of the above-mentioned trees on the areas described below, and with the exceptions specified, would not be objectionable in the public interest, and would, I believe, have the effect of improving the growth of the grass, and of the timber not ringbarked, and would prevent the growth of scrub.

The trees recommended to be excepted, their numbers per acre, and proportionate distribution of each kind, with reasons why they should not be ringbarked, are as here noted.

I would recommend that all pine over 2 inches in diameter be exempted from ringbarking, pine being the only valuable timber growing in the area it is sought to ringbark. I estimate the number of pine trees per acre to be about eight or nine trees growing all over the area.

The area described contains about 960 acres heavily timbered, and 960 acres lightly timbered.

The physical character of the land is level. The soil—red gritty loam.

The present quality of grass is indifferent, and it is estimated that 4 acres are required to feed a sheep; and the land is watered by a creek, the supply from which is at present good.

At the time of inspection, I found that part of the land comprised within this area had already been ringbarked; and therefore furnish the following estimate of the kinds, number per acre, area, date when carried out, number of trees now growing, and apparent effect of the operation. Nil.

Upon the annexed plan I have sketched the boundaries of the land desired to be ringbarked, the boundaries of that recommended to be ringbarked, the boundaries of that which should be excepted from ringbarking operations, the boundaries of that upon which ringbarking has already been done, the approximate position of leading ranges, &c., and the distribution of the timber.

With a view to the several matters touched upon being fully understood, and the report rendered as complete as possible, I may state about one-half of the reserve fronting the Murrumbidgee River, and which it is now asked to ringbark, is timbered with valuable red gum timber.

I am of opinion that it would benefit the land very much to kill the useless timber, as well as encourage the growth of grass and of the remaining timber.

The following is a detailed description of the boundaries of the land recommended to be ringbarked.

Area, about 960 acres. The whole of the timber, viz., box, bull-oak, and pine scrub, under 2 inches in diameter, on the area coloured pink, being water reserve No. 353, county of Mitchell, parish of

Brewarrina, situated between a line drawn south-east from the south-east corner of portion No. 94, in the parish of Brewarrina; thence along the north-western boundary of water reserve No. 353, to the south-western corner of water reserve No. 354, about 1½ mile; thence south-east about ¼ mile to the south-eastern boundary; thence north-easterly about 1½ mile; thence north-easterly about ¼ mile, to the point of commencement.

I have, &c.,
J. G. CONDELL,
Forest Ranger.

No. 6.

Mr. Forest Ranger Condell to The Under Secretary for Mines.

Report by Mr. Forest Ranger J. G. Condell on application for permission to ringbark timber upon a run.

Applicant, W. P. Faithfull, Brewarrina; Pastoral district, Murrurundi.

Sir, Narrandera, 19 December, 1882.

In pursuance of instructions, dated 22nd November, 1882, I have the honor to state that on 11th and 12th December, 1882, I personally inspected the timber on the land comprised in the areas referred to in the above-mentioned application, and beg to forward my report and recommendation thereon.

Area applied for, coloured pink, about 1,280 acres. Kind of trees it is sought to ringbark—Box, bull-oak, and pine scrub.

The species and local names of all trees growing upon the land desired to be ringbarked, with estimate of the number per acre, and proportionate distribution of each kind, their value with regard to local circumstances—such as demand for fuel timber or shelter—and the supposed effect of their removal upon climate, &c.

The timber growing on the area it is sought to ringbark consists of pine, box, and bull-oak. The timber is distributed over the whole area, none of the land being free from timber and pine scrub. The numbers of each kind of trees growing on the area per acre are—Pine, about ten or twelve trees; box, nine or ten trees; and bull-oak, five or six trees.

Some of the pine is matured, and more from 5 inches to 12 inches in diameter. The box timber is scrubby and unsound, and the bull-oak scrubby and of no value, the timber being mixed up together and growing thickly.

The ringbarking of the above-mentioned trees on the areas described below, and with the exceptions specified, would not be objectionable in the public interest, and would, I believe, have the effect of encouraging the growth of the grass and of the remaining timber, and would assist in preventing the growth of scrub.

The trees recommended to be excepted, their numbers per acre, and proportionate distribution of each kind, with reasons why they should not be ringbarked, are as here noted.

I would suggest that all pine over 2 inches in diameter be exempted from ringbarking, as pine is the only valuable timber on the area. I estimate the number of pine trees per acre to be about ten or twelve, growing all over the area.

The area described contains about 1,280 acres heavily timbered; 1,280 acres lightly timbered.

The physical character of the land is level. The soil—red gritty loam.

The present quality of the grass is indifferent, and it is estimated that 4 acres are required to feed a sheep; and the land is watered by a creek, the supply from which is at present plentiful.

At the time of inspection I found that part of the land comprised within this area had already been ringbarked, and I therefore furnish the following estimate of the kinds, number per acre, area, date when carried out, number of trees now growing, and apparent effect of the operation. Nil.

Upon the annexed plan I have sketched the boundaries of the land desired to be ringbarked, the boundaries of that recommended to be ringbarked, the boundaries of that which should be excepted from ringbarking operations, the boundaries of that upon which ringbarking has already been done, the approximate position of leading ranges, &c., and the distribution of the timber.

With a view to the several matters touched upon being fully understood, and the report rendered as complete as possible, I may state that about one-half of the reserve fronting on the Murrumbidgee River, "and which it is not sought to ringbark," is timbered with red-gum and box—the former a useful and valuable timber.

I am of opinion that it would benefit the land very much to destroy the useless timber; it would also encourage the growth of grass and of the timber remaining.

The following is a detailed description of the boundaries of the land recommended to be ringbarked:—Area, about 1,280 acres. The whole of the timber, viz., box, bull-oak, and pine scrub, on the area coloured pink, "being portion of water reserve No. 354, county of Mitchell, parish of Brewarrina." Commencing at a line drawn easterly from the south-east corner of portion No. 64, parish of Buckingbong, to the Old Man Creek; and thence bounded by that creek to its junction with portion No. 91, parish of Brewarrina.

I have, &c.,
J. G. CONDELL,
Forest Ranger.

Sir, Brewarrina, 4 January, 1883.

In answer to your letter of date 29th December, 1882, informing me that the fee towards defraying the cost of inspection of land applied for to ringbark not having been received, I enclose a cheque for £6 herewith.

I have, &c.,
GEO. FAITHFULL.

[*Minutes on above.*]

£6 cheque.—T.C.B., 6/1/83. Receipt sent, 6/1/83. The Registrar to note.—A.A.D., 6/1/83. Noted and returned.—T.C.B., 6/1/83.

Mr. Forest Ranger Condell recommends that pine over 2 inches in diameter should be excepted from ringbarking operations. Ask him whether pine below that diameter, or even up to 3 or 4 inches, is "ringbarked" or cut down; also whether the estimated number of pine trees per acre, ten to twelve, includes the saplings above 2 inches.—W.F.P., 20/1/83.

No. 11.

Mr. G. Faithfull to The Under Secretary for Lands.

Sir, Brewarrina Station, Wagga Wagga, 6 January, 1883.

I have the honor to suggest that the Forest Ranger for the district be instructed to inspect the portion of land situated partly in the parish of Brewarrina, and partly in Buckinbong, in the county of Mitchell, a tracing of which is enclosed, with the view of proclaiming that part coloured green as a timber reserve, there being much valuable timber thereon.

I have, &c.,
GEORGE FAITHFULL,
(*Per* W. P. Faithfull).

Minutes on above.

The Under Secretary for Mines.—F.H.W. (for the Under Secretary), B.C., 10 January, 1883.

For early report of Mr. Forest Ranger Condell, whose attention is directed to his reports upon applications to ringbark portion of this area.—H.W., B.C., 23 January, 1883.

No. 12.

The Under Secretary for Mines to Mr. G. Faithfull.

Sir, Department of Mines, Forest Branch, Sydney, 8 January, 1883.

Referring to your letter of the 27th ultimo, respecting your application for permission to ringbark timber on the Brewarrina Run, I have the honor to inform you that you must not commence ringbarking until you receive an authority under the hand of the Secretary for Mines.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 13.

The Under Secretary for Mines to Mr. Forest Ranger Condell.

Sir, Department of Mines, Forest Branch, Sydney, 25 January, 1883.

With reference to your report on the application for permission to ringbark upon the Brewarrina Run, in which you recommend that pine over 2 inches diameter should be excepted from ringbarking operations, I have the honor to request that you will be good enough to state whether pine below that diameter, over or even up to 3 or 4 inches, is ringbarked or cut down, and, further, whether the estimated number of pine trees per acre, ten to twelve, includes the saplings above 2 inches.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 14.

Mr. Forest Ranger Condell to The Under Secretary for Mines.

Sir, Narrandera, 27 January, 1883.

Referring to your letter of the 25th instant, requesting to be informed whether pine below 2 inches in diameter, or even up to 3 or 4 inches, is ringbarked or cut down, and, further, whether the estimated number of trees, pine, per acre, ten to twelve, includes the saplings above 2 inches, on Brewarrina Run,—

1st. I have the honor to inform you that no timber is ringbarked on the land that I have reported on.

2nd. The number of pine trees, ten to twelve, does not include the saplings above 2 inches. There is, perhaps, about a like number of young pines from 2 to 8 inches in diameter, viz., ten to twelve per acre

I have, &c.,
J. G. CONDELL,
Forest Ranger.

No. 15.

Mr. Forest Ranger Condell to The Under Secretary for Mines.

Sir, Narrandera, 27 January, 1883.

I have the honor to inform you that in forwarding Mr. G. Faithfull's application to cause certain lands in the Brewarrina Run to be reported on with the view of proclaiming it a forest reserve, the tracing of the land has not been forwarded with the application. I therefore respectfully request that the tracing may be forwarded to me, as a guide to the land it is desired to reserve.

I have, &c.,
J. G. CONDELL,
Forest Ranger.

Minutes on above.

Tracing appears to have become detached—has it been sent?—W.F.P.

Mr. Bennett, Mr. Bell,—The tracing was not detached by me, and its omission would, I think, have been noticed when dispatching, if detached.—C.A.B.

To the best of my belief the tracing was forwarded.—J.R.B.

Inform that the tracing appears to have been attached to the application when it left this office. The area referred to lies east of portions 21, 51, 52, and 53, and includes the greater part of the area tinted on enclosed tracing, but of course the boundaries of any area that may be recommended for reservation should depend upon the character of the timber.—W.F.P., 1/2/83.

No. 16.

The Under Secretary for Mines to Mr. Forest Ranger Condell.

Sir, Department of Mines, Forest Branch, Sydney, 5 February, 1883.

In reply to your letter of 27th ultimo, I have the honor to inform you that the tracing, in illustration of Mr. Faithfull's application for a timber reserve on Brewarrina Run, appears to have been attached to the papers when they left this office.

The area referred to lies east of portions 21, 51, 52, and 53, and includes the greater part of the area tinted on enclosed tracing; but of course the boundaries of any area that may be recommended for reservation should depend upon the character of the timber.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 17.

Mr. Forest Ranger Condell to The Under Secretary for Mines.

Sir, Narrandera, 2 March, 1883.

I have the honor to inform you that I have inspected the timber Mr. Faithfull applies to have reserved, and I find the land, viz., that part tinted green, contains a large quantity of valuable pine timber, I consider about ten to twelve matured trees to the acre, and twelve to fifteen young trees. Pine is the only timber on the land of any value.

I would respectfully suggest that the area hereunder described be proclaimed a forest reserve, viz., the portion of land situated partly in the parish of Brewarrina and partly in the parish of Buckingbong, in the county of Mitchell, as coloured green on annexed tracing.

I may add that on Mr. Faithfull's applying to ringbark the timber on this area I recommended that box, bull-oak, and pine scrub, under 3 inches in diameter, be ringbarked, as this timber is quite useless, and would improve it as a forest reserve, giving the useful timber room to grow.

I have, &c.,
J. G. CONDELL,
Forest Ranger.

Minutes

Minutes on No. 17.

In accordance with minute, and under ranger's report, the Lands Department may be asked to proclaim the reserve for preservation of timber, as shown by green lines on tracing, if unobjectionable.—A.A.D. (for the Chief Clerk), Forest Branch, 19/3/83. Submitted—H.W., 20/3/83.

Approved—J. P. ABBOTT, 22/3/83. The Under Secretary for Lands.—H.W., B.C., 29 March, 1883.

No. 18.
Memorandum.

Ringbarking, Brewarrina Run, district of Murrumbidgee; area, 35 square miles; rent, £63.

MR. W. P. Faithfull applied for permission to ringbark timber upon about 2,200 acres of the run. He subsequently applied to have a timber reserve proclaimed, including part of this area.

The ranger recommends that permission should be given to ringbark pine scrub under 2 inches diameter, box, and bull-oak, excepting the largest pine, estimated at ten to twelve trees per acre, and saplings 2 to 8 inches diameter, about the same number. He now recommends that the greater part of the area should be included in a timber reserve.

It was decided not to grant permission to ringbark timber on a forest reserve.

It is asked whether, under the circumstances, the permission should be given in this case.

W.F.P., Forest Branch, 9 March, 1883.

Minutes on No. 18.

Submitted.—H.W., 10/3/83.

I can see no reason for allowing the timber upon a forest reserve to be ringbarked, and as the ranger thinks this area, or the greater part of it should be made a timber reserve, I think the application may be refused, with the view to the making of the area a forest reserve.—J. P. ABBOTT, 10/3/83.

For necessary action in Survey Office.—J.D.D., *pro* F. H. WILSON, 4/4/83. Mr. G. Lewis.

Mr. District Surveyor Bolton, for consideration and report as to the advisableness of reserving land shown by green lines on accompanying tracing for the preservation of timber.—G. LEWIS (for the Surveyor-General), 17 April, 1883. District Surveyor Bolton.

Transferred to Mr. Surveyor A. H. Bray, 11 August, 1883.—C. F. BOLTON, District Surveyor.

Replied to by my letter of 19th August.—ARTHUR H. BRAY, Surveyor.

No. 19.
The Under Secretary for Mines to Mr. G. Faithfull.

Sir, Department of Mines, Forest Branch, Sydney, 16 March, 1883.

With reference to your application for permission to ringbark upon the Brewarrina Run, I have now the honor, by direction of the Secretary for Mines, to inform you that the permission sought will not be granted, the making of the area a forest reserve being about to be recommended.

I have, &c.,

HARRIE WOOD.

No. 20.
The Under Secretary for Lands to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 19 April, 1883.

I have the honor to inform you that the papers in connection with the subject mentioned hereunder have been referred to Mr. District Surveyor Bolton for consideration and report on proposed reserve.

I have, &c.,

J. G. BLAXLAND,

(For the Under-Secretary).

Proposed Forest Reserve, parish of Brewarrina, county of Mitchell.

No. 21.
Mr. Surveyor Bray to The Surveyor-General.

Proposed Forest Reserve, parish of Brewarrina, county of Mitchell.

Sir, Sunny Camp, near Wagga Wagga, 19 August, 1885.

I have the honor to transmit herewith sketch showing proposed forest reserve, in the parish of Brewarrina, county of Mitchell, inspected by me on the 18th August, 1885, in accordance with instructions dated 17th April, 1883, to Mr. District Surveyor Bolton, and transferred to me, 11th August, 1885.

I would recommend that the whole of the land shown within green edging on sketch herewith be proclaimed a forest reserve.

The part south of the Old Man Creek, including measured portions Nos. 95 and 96, is thickly timbered with pine, a good proportion of which is sound mature timber.

The land south of the Old Man Creek contains a quantity of good gum timber, and, as I understand, an application has been made to have it proclaimed a forest reserve, I would suggest that it be included in this reserve, as shown on sketch.

I have, &c.,

ARTHUR H. BBAY,

Surveyor.

Minutes on No. 21.

Forwarded to the Surveyor-General, 19th August, 1885, with a recommendation that Mr. Bray's suggestion be acted upon, and that the reserve for the preservation of timber be duly notified.—L. F. BOLTON, District Surveyor.

Mr. Gerard,—Is the land shown within green edge on lithograph within a leasehold or a resumed area?—J.F., for G.L., 26/10/85.

The land shown by green edging on attached lithograph is situated within the leasehold and resumed areas of Brewarrina holding.—F.G, 27/10/85.

No. 22.

Memorandum by Surveyor-General.

THE surveyor reports that the area shown within green edge on lithograph, parish of Brewarrina, county of Mitchell, south of the Old Man Creek, is thickly timbered with pine of good proportion, and that the part north of that creek contains good gum, at the same time recommending its reservation as a forest reserve.

In view of the report and of the recommendation of District Surveyor Bolton, it is submitted for the consideration of the Secretary for Lands that the area within green edge on lithograph, containing 6,258 acres, be notified as a forest reserve, as requested by the Mining Department, and that the parts of water reserves Nos. 353 and 354 affected be cancelled.

The proposed reservation is situated partly within the leasehold and partly within the resumed area of the Brewarrina holding, Land Board and Land District of Wagga Wagga.

G. LEWIS,
(For the Surveyor-General).

3 November, 1885.

Minutes on No. 22.

Submitted.—R.H.D., 14/11/85. C.O., 16/11/85.

In my opinion this is a case in which it would be a public wrong to proclaim this area as a forest reserve. The whole of the land contained in this reserve is within what is now the resumed area To make a forest reserve of it would be practically to secure by a lease one-half of the Brewarrina Run to the lessee, and the other half to him by a forest reserve. This I shall not do. I notice by the papers that the lessee of the run has moved for this reserve to be proclaimed a forest reserve. This may have been upon public grounds; but I think, if so, the lessee is mistaken in his view of the question. The whole of this reserve No. 354 is at once to be cancelled and thrown open for setttement.—J. P. ABBOTT, 20/11/85.

No. 23.

Mr. Geo. H. Stevens to The Secretary for Lands.

Sir,

Narrandera, 25 November, 1885.

The enclosed is all the information I can obtain from the District Surveyor, Mr. C. F. Bolton, Wagga Wagga. I and several others have been waiting a long time for the chance of getting a home upon one of the many reserves about here, and, judging by Mr. Bolton's memo., are likely to have to wait much longer.

Can you supply more definite information?

My excuse for troubling you is that the Hon. G. R. Dibbs, in his address here to the electors, advised us thus:—"If you want speedy and correct information, address your inquiry to the fountain-head."

I have done so, and await the result.

I have, &c.,
GEO. H. STEVENS.

Minutes on No. 23.

Submitted that the applicant be requested to specify the particular reserves which he desires to have revoked.—R.H.D., 2/12/85. Ask.—F.H.W., for U.S., 3/12/85.

[*Enclosure to No.* 23.]

Memorandum from District Surveyor, Wagga Wagga, to Mr. G. H. Stevens.

YOUR note of 19th instant has been duly received. A general report will be made on all reserves within the resumed areas with a view to the cancellation of those which may be considered no longer required. I am not now in a position to say what reserves will be recommended for cancellation, or when they will be cancelled.

C. F. BOLTON,
District Surveyor.

20 November, 1885.

No. 24.

The Under Secretary for Lands to Mr. G. H. Stevens.

Sir,

Department of Lands, Sydney, 14 December, 1885.

In reply to your letter of the 25th ultimo, I have the honor to request that you will be good enough to specify the particular reserves you desire to have revoked.

I have, &c.,
F. H. WILSON,
(For the Under Secretary).

No. 25.

Mr. G. H. Stevens to The Secretary for Lands.

Sir,

Narrandera, 18 December, 1885.

In reply to your memo., I beg to state that the reserve upon which I should like to select is No. 354, on the boundary of Buckingbong and Brewarrina (Mr. Faithfull's run); but, as I do not wish to leave the neighbourhood, any other reserve that may be thrown open will be occupied, as there are many awaiting the opportunity.

I may remark that, upon inspecting the map of the resumed area upon Mr. Faithfull's run, there are not a hundred acres in one block open for selection, the principal part being taken up by Mr. Faithfull and his friends.

I have, &c.,
G. H. STEVENS.

Minutes

Minutes on No. 25.

Will Mr. G. Lewis please give a reference to the papers relating to the reserve referred to and any available information regarding it?—J.O.D. (*pro* R. H. De Low), 21/12/85.

Reserve No. 354 was reported on by surveyor, and a submission made to the Secretary for Lands that the southern part be notified as a timber reserve, 30th September, 1885, on papers Ms. 85-16,159. —G. LEWIS (for Surveyor-General), 24/12/85. The Under Secretary for Lands. Correspondence Branch to inform applicant of cancellation of reserve No. 354, section 85-21,788.—I.O.D. (*pro* R. H. De Low, 16/3/86.

No. 26.

Executive Council Minute.

Department of Lands, Sydney, 18 January, 1886.

IT is recommended to His Excellency the Governor and the Executive Council that the temporary reservation of the portions of land within described and particularized in the annexed Schedule be now revoked, under the provisions of the Crown Lands Act of 1884, the revocation to take effect at the expiration of sixty clear days from the date of notification thereof in the Government Gazette.

GERALD SPRING.

No. 28.

The Under Secretary for Lands to The Crown Lands Agent, Wagga Wagga.

Sir, Department of Lands, Sydney, 6 February, 1886.

I am directed to invite your attention to a notice, published in this day's Government Gazette, of the revocation of reserve No. 354, in the county of Mitchell, parish of Brewarrina, the revocation taking effect on the 8th day of April next.

A tracing showing the reserve will be forwarded with as little delay as possible.

I have, &c.,
R. H. DE LOW,
(For the Under Secretary).

No. 29.

The Surveyor-General to The Under Secretary for Lands.

A TRACING is enclosed showing, by red edging, revocation of reserve No. 354, notified 29th December, 1865, county of Mitchell, parish of Brewarrina, for the information of the Crown Lands Agent at Wagga Wagga.

G. LEWIS,
(For the Surveyor-General),
24 February, 1886.

Minutes on above.

After informing Land Agent, it is submitted that papers be returned to Reserves Branch, to chart parish map.—W. G. LEWIS, 2/3/86.

Map noted. Dealt with in Reserve Branch. Attention is drawn to letter Ms. 85/24,842, enclosed.—G. LEWIS, 12 March, 1886.

No. 30.

No. 30.

The Under Secretary for Lands to The Crown Lands Agent, Wagga Wagga.

Sir, Department of Lands, Sydney, 1 March, 1886.

I am directed to transmit herewith, for your information, a description with a tracing showing reserve No. 354, in the county of Mitchell, parish of Brewarrina, which has been revoked by notice in the Government Gazette of the 6th ultimo, the revocation taking effect at the expiration of sixty clear days from the date thereof.

I have, &c.,
R. H. DE LOW,
(For the Under Secretary).

No. 31.

Mr. District Surveyor Bolton to The Surveyor-General.

Sir, District Surveyor's Office, Wagga Wagga, 4 March, 1886.

With reference to the revocation of reserve No. 354, parish Brewarrina, county Mitchell, notified on 6th February, 1886, I do myself the honor to inform you that portion of the land embraced in such reserve was reported on by Mr. Surveyor Bray's letter of 19th August, 1885, sent to Head Office on 19th August, 1885, in connection with your instructions of 17th April, 1883, to report on an application by Mr. Faithfull for a timber reserve in the parishes of Buckingbong and Brewarrina, county Mitchell.

Herewith I forward a letter from Mr. Faithfull relative thereto.

I have, &c.,
C. F. BOLTON,
District Surveyor.

[*Enclosure to No.* 31.]

Mr. G. Faithfull to Mr. District Surveyor Bolton.

Dear Sir, Brewarrina, 3 March, 1885.

I observe that water reserve No. 354, in the parish of Brewarrina, is to be thrown open to sale. Part of this reserve has been applied for as a timber reserve, and should, I think, be reserved for that purpose, viz., that portion south of a line east from the south-east corner of portion No. 64, parish of Buckingbong, to the Old Man Creek; bounded from thence on the north by the Old Man Creek.

I draw your attention to this, as you may have overlooked the matter.

I have, &c.,
GEORGE FAITHFULL.

P.S.—There is not a timber reserve on this run.

No. 32.

Messrs. Blomfield & Dickson to The Minister for Lands.

Sir, 10 March, 1886.

We would draw your attention to the papers noted in the margin (85-16,159 Ms.—G. Faithfull), and request that the reserve for the preservation of timber may be re-gazetted, as advised by the District Surveyor and another surveyor.

We would point out, the surveyor, after a careful investigation, reported on the necessity of this being made a timber reserve, and yet, when the lessee applied to ringbark the reserve, the Minister for Mines refused, on the ground that the timber was required in the public interest; and yet, when reported on by two surveyors that the reserve should be made for the preservation of timber, Mr. Abbott said it was not required, and ought to be cancelled in the public interest, and thrown open at once for selection, and this without ever having been near the land.

Had Mr. Abbott visited the land we could have understood him differing in opinion; but to take the whole responsibility on himself, in the face of the reports, simply because it would appear that the lessee asked for it to be made a reserve.

We would ask your careful consideration of the facts of the case, and request, if any action is taken, it may be done within sixty days from 6th February, otherwise the opportunity will be lost.

We have, &c.,
BLOMFIELD & DICKSON.

Minutes on above.

Reserve No. 354 was cancelled 6th February, 1886, on papers 85-21,788.—G. Lewis (for the Surveyor-General) 17th March, 1886.

Submitted as to whether sufficient reasons have been given for disturbing the decision on 85-21,788. Specially submitted.—R.H.D., 23/3/86.

No. 33.

The Under Secretary for Lands to Mr. G. H. Stevens.

Sir, Department of Lands, Sydney, 17 March, 1886.

I have the honor, in reply to your letter of the 18th December last, to inform you that the cancellation of the reserve referred to therein, No. 354, in the parish of Brewarrina, county of Mitchell, was notified in Government Gazette of the 29th December, 1865.

I have, &c.,
F. H. WILSON,
(For the Under Secretary).

No. 34.

Mr. G. Faithfull to The Colonial Secretary.

Sir, Brewarrina, *viâ* Wagga Wagga, 20 March, 1886.

As one of your constituents, I write to inform you of a matter which should be brought to your notice, viz., that water reserve No. 354, situated on this run, is to be revoked on April 8 next. In the

the first place, I think it is rather hard lines that so large a reserve on such a small run as this should be thrown open in such a bad season as this, especially as so many large runs have a number of reserves. But the chief thing is, it appears to me, that, at a time like this, the Government should endeavour to obtain as much for the land as possible. Now, if this reserve were subdivided and submitted to auction, I would myself bid £2 per acre for it, and I think the upset price should not be less; a great number of people hold the same idea. It must be noted that said reserve has 1 mile frontage to the Murrumbidgee and 3 miles to the Old Man Creek, and is about 13 miles from Narrandera, so that it is really a valuable piece of land.

As it now stands, it is simply making a present of £2,560 to the man (who shall draw the prize) at the end of five years, without any benefit to the country.

If submittted to auction, there will doubtless be many buyers, and the country will have the benefit of it. If you will draw the attention of your colleagues to the above matter, I feel sure they will have the matter carefully considered, and have the land appraised by a competent person.

I have, &c.,
GEO. FAITHFULL.

Minutes on above.

Can this be stopped?—G.R.D., 23/3/86. Papers at once, please.—C.O., 24/3/86. Papers herewith.—T.N., 27/3/86. Submitted in reference to the decision of Mr. Secretary Abbot.—C.O., 27/3/86. This land to be proclaimed a special area, at £2 per acre, to be open to selection in portions not exceeding 160 acres each.—H.C., 27/3/86.

No. 35.

Mr. G. Faithful to The Minister for Lands.

Sir, Brewarrina, *vid* Wagga Wagga, 20 March, 1886.

Having observed in the Gazette that water reserve No. 354, in the parish of Brewarrina, in the county of Mitchell, is to be revoked on 8th April next, I have the honor to inform you that, being valuable land, situated about 13 miles from Narrandera, and having 1 mile frontage to Murrumbidgee River, also a creek running over 3 miles through the reserve, if this reserve was subdivided, as you might think fit, and submitted to auction, it would realize considerably more to the Treasury than by throwing it open to selection. I am myself prepared to bid for the same if the upset price is fixed at £2 per acre. That portion of the reserve south of the Old Man Creek has been applied for, and should, I think, be gazetted a forest reserve, there being no timber reserve on Brewarrina Run.

I have, &c.,
GEO. FAITHFULL.

No. 36.

Mr. Geo. H. Stevens to The Minister for Lands.

Sir, Narrandera, 24 March, 1886.

I have the honor to inform you I received a memo. from the Lands Office dated 17th instant, being a reply to a letter from me dated 18th December, 1885, and I am under the impression that the memo. is a mistake, and should be obliged for a more speedy reply, if possible, as I and my family have been waiting months for the opportunity to make a home.

The extract referred to is as follows:—"That the cancellation of the reserve referred to therein, No. 354, in the parish of Brewarrina, county of Mitchell, was notified in the Government Gazette of the 29th December, 1865." If this is correct, am I right in presuming that a portion of the said reserve is and has been for twenty years open for selection?

I have, &c.,
GEO. H. STEVENS.

Minutes on No. 36.

Will Mr. G. Lewis please state what action has been taken in this case.—J.O.D., *pro* R. H. De Low, 26/3/86. Reserve No. 354, notified 29th December, 1865, parish of Brewarrina, county of Mitchell, was cancelled 6th February, 1886, on papers Misc. 85-21,788.—G. Lewis (for the Surveyor-General), 31 March, 1886.

No. 37.

Minute-paper for the Executive Council.

Subject.—Recommending proclamation of special area.

Department of Lands, Sydney, 27 March, 1886.

It is recommended to His Excellency the Governor and the Executive Council that the within described area of 3,632 acres, in the county of Mitchell, parish of Brewarrina, being reserve No. 354, which was revoked by notice in the Government Gazette of the 6th February last, be proclaimed a special area, under the 24th section of the Crown Lands Act of 1884, and that the price of the same, by conditional purchase, under sections 22 and 42, be forty shillings per acre, the deposit money be four shillings per acre, and the instalment of balance be two shillings per acre; and for non-residence selections, under section 47, the area of which shall not exceed 160 acres, the deposit money be eight shillings per acre, and the instalment of balance be four shillings per acre.

HENRY COPELAND.

The Executive Council advise that the land referred to be proclaimed a Special Area upon the terms herein set forth.

ALEX. C. BUDGE,
Clerk of the Council.

Minute, 86-17.—30/3/86. Approved.—Carrington, 30/3/86. Confirmed, 6/4/86.

No. 38.

Proclamation.

New South Wales, to wit.
L.S.
CARRINGTON, Governor.

PROCLAMATION by His Excellency The Right Honorable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

IN pursuance of the provisions of the 24th section of the Crown Lands Act of 1884, I, Charles Robert, Baron Carrington, the Governor of the Colony of New South Wales aforesaid, with the advice of the Executive Council, do hereby proclaim that the following portion of Crown Lands is declared to be set apart as a "Special Area," within which it shall not be lawful to conditionally purchase more than 160 acres or less than 40 acres, and the price shall be £2 per acre for residence conditional purchases, under sections 22 and 42 of that Act, the deposit money four shillings per acre, and the instalments of balance of purchase money two shillings per acre; and on conditional purchases without residence the price per acre, deposit, and all subsequent instalments shall be double those stated above.

No 1 of the county of Mitchell, parish of Brewarrina, within the leasehold and resumed areas of Brewarrina holding, area about 3,632 acres. The Crown Lands within the following boundaries: Commencing on the southern bank of the Murrumbidgee River, at the north-eastern corner of portion No. 4, parish of Buckinbong; bounded thence on the west by a line partly forming the east boundaries of that portion and Nos. 62, 63, and 64, south to the north-western boundary of water reserve No. 353, notified 30th December, 1865; thence on the south-east by part of that north-western boundary north-easterly to the south corner of portion No. 96, parish of Brewarrina; thence on the east by a line partly forming the western boundaries of that portion and Nos. 95, 91, 97, 58, 57, and 3, north to the Murrumbidgee River; and thence by that river downwards, to the point of commencement.

The above-described land was reserved from sale as No. 354 for water supply, 30th December, 1865, and cancelled 6th February, 1886.

Within the Land Board District of Wagga Wagga.

Given under my hand and seal, at Government House, Sydney, this second day of April, in the year of our Lord one thousand eight hundred and eighty-six, and in the forty-ninth year of Her Majesty's reign.

By His Excellency's Command,
HENRY COPELAND.

God Save the Queen!

No. 39.

The Under Secretary for Lands to The Crown Lands Agent, Wagga Wagga.

Sir,

Department of Lands, Sydney, 6 April, 1886.

I have to invite your attention to this day's Government Gazette, containing proclamation of 3,632 acres, in the parish of Brewarrina, county of Mitchell, as a special area, under the 24th section of the Crown Lands Act of 1884, at £2 per acre.

I am to explain that a tracing showing the land referred to will be forwarded as soon as practicable.

I have, &c.,
R. H. DE LOW,
(For the Under Secretary).

No. 40.

The Surveyor-General to The Under Secretary for Lands.

A LITHOGRAPH is enclosed showing "special area" No. 1, proclaimed 6th April, 1886, county of Mitchell, parish of Brewarrina, for the information of the Crown Lands Agent at Wagga Wagga.

G. LEWIS,
(For the Surveyor-General).

13th April, 1886.

Minutes on above.

Dealt with in the Reserves Branch. Correspondence Branch to inform applicant.—J.O.D. (*pro* R. H. De Low), 28/4/86.

No. 41.

The Under Secretary for Lands to The Crown Lands Agent, Wagga Wagga.

Sir,

Department of Lands, Sydney, 21 April, 1886.

I am directed to transmit herewith, for your information, a description, with lithograph, showing certain land in the county of Mitchell, which, by proclamation in the Government Gazette of the 6th instant, has been set apart, under the 24th section of the Crown Lands Act of 1884, as a special area

I have, &c.,
R. H. DE LOW,
(For the Under Secretary).

No. 42.

The Under Secretary for Lands to Mr. G. H. Stevens.

Sir,

Department of Lands, Sydney, 30 April, 1886.

Referring to your letter of the 24th ultimo, I have the honor to inform you that the area within reserve No. 354, in the parish of Brewarrina, county of Mitchell, Land Board District of Wagga Wagga, was proclaimed a special area (*vide* Government Gazette of the 6th instant), under the 24th section of the Crown Lands Act of 1884.

I have, &c.,
F. H. WILSON,
(For the Under Secretary).

No. 43.

No. 43.

The Under Secretary for Lands to Messrs. Blomfield & Dickson.

Gentlemen, Department of Lands, Sydney, 30 April, 1886.

Referring to your letter of the 10th ultimo, I have the honor to inform you that the area within reserve No. 354, in the parish of Brewarrina, county of Mitchell, Land Board District of Wagga Wagga, has been proclaimed a special area, under the 24th section of the Crown Lands Act of 1884. (*Vide* Government Gazette of 6th April, 1886.)

I have, &c.,
F. H. WILSON,
(For the Under Secretary).

No. 44.

The Under Secretary for Lands to Mr. G. Faithfull.

Sir, Department of Lands, Sydney, 30 April, 1886.

Referring to your letter of the 20th ultimo, I have the honor to inform you that the area within reserve No. 354, in the parish of Brewarrina, county of Mitchell, Land Board District of Wagga Wagga, has been proclaimed a special area, under the 24th section of the Crown Lands Act of 1884. (*Vide* Government Gazette, 6th April, 1886.)

I have, &c.,
F. H. WILSON,
(For the Under Secretary).

I hereby certify that I in person made and on Augt 1881 completed the survey represented on the plan on which are shewn the bearings and the lengths of the lines measured by me, that I used a Theodolite in accurate adjustment and a chain adapted to the standard of the Sydney Observatory that I commenced the survey at the point A on this plan and used as the basis of bearings the line AB hereon and that the whole of the survey has been executed in accordance with the practice of this Department and the regulations published for the guidance of Surveyors. I declare that the above certificate is true in every particular.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RESERVE, BOTTLE FOREST.

(APPLICATIONS FOR PORTIONS OF.)

Ordered by the Legislative Assembly to be printed, 20 September, 1886.

[*Return to a Question asked by F. Abigail, Esq., M.P., on the 16th September*, 1886, *respecting Applications for portions of Reserve No. 24, at Bottle Forest.*]

QUESTIONS.

1. The names of the parties who applied for portions of Reserve No. 24, at Bottle Forest?
2. When was the permission granted, and by whom?
3. The number of acres granted, and to whom granted?
4. Is it true that the Honorable Member for Gunnedah, Mr. J. P. Abbott, while Minster for Mines, refused all these applications?
5. Under what conditions were these lands granted?

ANSWERS.

1. John Coghlan, James Birrell, James Robertson, W. F. Mackenzie, Thomas Garrett, Angus Cameron, James Fletcher, junr., W. G. Laidley, Vincent Coghlan, M. C. Cowlishaw, William O'Brien, Thomas Saywell, David Laing, Thomas W. Garrett, R. Prendergast, Andrew Broad, R. P. Davys, C. Sweetland, Thomas Brooks, W. Laing, Charles F. Stokes, W. Edye Mort, A. Ebsworth, R. W. Hogg, R. Reid.
2. 28 September, 1883.—The Honorable J. P. Abbott.
3. 11,743 acres.—Thomas Garrett, John Coghlan, Vincent Coghlan, James Robertson, John Robertson, R. W. Hogg, Henry Clarke, W. M'Millan, Thomas Saywell, W. F. MacDermott, R. P. Davys, Herbert Douglas, Francis Lord, J. R. Peebles, William Laidley, W. Edye Mort, Duncan Clark, John Coghlan, A. H. McCulloch, G. C. Loughnan, E. M. LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CITY OF SYDNEY IMPROVEMENT BOARD.

(SIXTH ANNUAL REPORT.)

Ordered by the Legislative Assembly to be printed, 19 *November*, 1885.

City of Sydney Improvement Board,
Offices, No. 35, Castlereagh-street, Sydney, 31 August, 1885.

To the Honorable the Colonial Secretary,—

Sir,

Notwithstanding the many causes (already brought under notice in each former Annual Report, and frequently dwelt upon in other communications since the initiation of the Board in 1879) which exist to limit the beneficial working of the "City of Sydney Improvement Act," so far as the powers of this Board are concerned, members, in now presenting their Sixth Annual Report, are glad to be in a position to state that their services are being more largely availed of than in the earlier years of the Board's existence. Under the present law the Board is of course powerless to act independently, but must be set in motion by appellants, or by the City Corporation, through their officer, the City Building Surveyor.

During the past year 60 (sixty) references from the City Building Surveyor, under the 27th and 29th sections of the Act, and 10 (ten) appeals from owners, under the 7th and 8th sections thereof, have been received and disposed of.

The buildings thus dealt with number 116 (one hundred and sixteen), and necessitated numerous meetings for purposes of inspection, hearing of evidence tendered by owners and occupiers interested, and deliberation. Some of these cases have extended over several sittings, and in others special consideration has been requisite, partly in consequence, in such instances, of the defective construction of the Act and the absence of the necessary machinery for properly exercising the functions conferred upon the Board.

The total number of cases shows a considerable increase upon last year's work, and they exceed the whole number for the first four years inclusively. It is, therefore, satisfactory to observe that the practical business performed has been largely augmented since the transmission of last Annual Report, and that it appears to be rapidly growing.

Ever since the commencement of the working of the Act the Board have recognized the necessity for its amendment, and they have not ceased to bring this fact prominently under notice, and to propose the alterations considered advisable. Several amending Bills, containing, it is thought, many valuable suggestions, have been prepared with this view, and members are still willing that the knowledge acquired during the past six years of the working of the present defective Act, and the amendments which their experience enables them to point out as necessary, may be utilized in such manner as may be thought fit, so as to bring about the much-needed alteration in the law affecting the improvement of the City, both architecturally and sanitarily.

We have the honor to be,
Sir,
Your obedient servants,

BENJ. BACKHOUSE, CHAIRMAN.
W. BAILEY,
FRANK SENIOR,
GEO. EVANS,

1885-6.

NEW SOUTH WALES.

CITY OF SYDNEY IMPROVEMENT BOARD.

(SEVENTH ANNUAL REPORT.)

Presented to Parliament by Command.

City of Sydney Improvement Board,
Offices, No. 35, Castlereagh-street, Sydney, 31 August, 1886.

To the Honorable the Colonial Secretary,—

Sir,

The members of the City of Sydney Improvement Board have the honor to present this their Report for the year ended 31st August, 1886.

It will be remembered that the Board have no power to act independently; 43 meetings have, however, been held, and 146 buildings have been dealt with; 75 of these were brought under notice by the City Building Surveyor in 43 references received from that officer, and 71 were considered in connection with 22 appeals made by owners of properties. 41 orders have been issued to the City Building Surveyor, under the 27th and 29th sections of the "City of Sydney Improvement Act," for the taking down, repairing, or securing of various buildings and structures; in numerous instances extensive repairs or alterations to some of the buildings under consideration having been directed, the remainder being entirely condemned.

Of the appeals, 9 were upheld, conditionally upon certain work, repairs, alterations, and improvements, as specified by the Board, being effected; 11 were dismissed, 5 unconditionally, in 2 cases an extension of time being allowed for taking down the buildings, and in 4 other cases a similar privilege was extended conditionally upon temporary repairs, &c., being performed. In 2 cases the appeals were upheld conditionally upon work, repairs, alterations, and improvements being carried out in respect of portions of the buildings brought under notice, but dismissed as regards other parts of such buildings.

It may thus be seen upon comparison with former reports that the work performed by the Board is still increasing, proving the necessity for the continuance of some such body, which should, however, it is believed, possess larger powers more comprehensively defined.

Much good has been effected in spite of the fact that the functions of the Board are partly paralysed (as already pointed out from year to year), chiefly by the inherent defects of the Act, which will, it is earnestly hoped, be amended as soon as possible. Failing this, and in view of the many and serious impediments which obstruct the attempts of the Board to give some substantial and intelligent effect to the evident intention of the framers of the "City of Sydney Improvement Act," the machinery provided for so doing being sadly insufficient, it will become a question for members to consider whether or not they shall continue those efforts.

Their repeated representations on the subject not having yet produced any satisfactory result, the present opportunity is taken of expressing the opinion that the time has arrived when the Board should either be abolished or placed upon a proper footing, as they are still more than ever conscious of the feeling mentioned in their first Annual Report, that, in the face of the difficulties with which they have to contend, satisfactory progress is impossible.

Were

Were they even in a position to better enforce the due exercise of the provisions of the existing Act, a large benefit would be conferred upon the community in the protection afforded, to a certain extent, not only from insecure and dangerous structures, but also from the violation, in a vast number of buildings, both in the centre and outlying portions of the City, of the laws of health, decency, and architectural taste.

The fees paid, in terms of the 12th section of the Act, by appellants and others for distribution amongst the five members constituting the Board, amount to £417 18s., or on an average at the rate of £83 11s. 7d. each member for the year.

It is noticeable that this is the largest amount collected within a similar period since the establishment of the Board, and that the emolument received by members, several of whom are professional men, whose time is valuable, is merely nominal, whilst the duties performed require considerable care, attention, and experience, bearing in mind more particularly the almost unworkable character of the Act, under which they are called upon to adjudicate and to arrive at their decisions.

We have the honor to be,

Sir,

Your obedient servants,

BENJAMIN BACKHOUSE, CHAIRMAN.

WM. BAILEY, J.P.,
CRAIG DIXSON, M.D., F.R.C.S., E.,
GEORGE EVANS,
FRANK SENIOR, J.P.,

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUNICIPALITY OF MEREWETHER.

(PETITIONS AND OTHER DOCUMENTS CONNECTED WITH THE RECENT INCORPORATION OF.)

Ordered by the Legislative Assembly to be printed, 24 *March*, 1886.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 24th September, 1885, That there be laid upon the Table of this House,—

"Copies of all petitions, investigations, minutes, reports, and all other "documents connected with the recent incorporation of the Municipality "of Merewether."

(Mr. Fletcher.)

TO HIS EXCELLENCY THE RIGHT HONORABLE SIR AUGUSTUS WILLIAM FREDERICK SPENCER LOFTUS (commonly called Lord Augustus Loftus), Knight Grand Cross of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

The Petition of the undersigned Residents of the Glebe and Burwood, near Newcastle, in the Colony of New South Wales.

HUMBLY SHOWETH:—

1. That your Petitioners state that upon incorporation they will be liable to be assessed for Municipal Rates in respect of property or household residence.

2. That the boundaries they propose are as follows:—
All that parcel of land containing about one thousand one hundred and fifty acres, situate in the parish of Newcastle, county of Northumberland: Commencing at the southern extremity of the east boundary of Edward Christopher Merewether's nine hundred and fifty acres, and bounded towards part of the south by the summit of a dividing ridge running north-westerly to the west boundary of the last named measurement; thence by a line bearing north to the south-west corner of the village of Adamstown; thence on part of the north and part of the west by the south and east boundaries of that village; thence on the remainder of the north by the south boundary of the Australian Agricultural Company's Grant bearing easterly to the Pacific Ocean; and thence on the east by the waters of the ocean southerly, to the point of commencement.

3. That the population of the proposed Municipality is one thousand six hundred, or thereabouts.

4. That the incorporation of the proposed Municipality would be a great boon to the inhabitants.

Your Petitioners therefore humbly pray that your Excellency would be pleased to take the matter into your favourable consideration, and declare the said area of land to be a Municipal District under the Municipalities Act by the name of the "Municipal District of Merewether."

And your Petitioners, as in duty bound, will ever pray.

Declared at Newcastle, this twentieth day of December, A.D. 1884, before me,— } DAVID INGLIS.

W. H. SHAW, J.P.

Chief Clerk for report, 4/11/84.

If the names were submitted in a supplementary Petition for incorporation, they could be treated as additional to original Petition, but as there has been no counter petition, and three months publication of the substance of the Petition expires on 20th instant, I think that no notice need be taken of the additional names submitted.—19/12/84. Prepare minute for publication.—C.W., 22/12/84. Herewith, 22/12/86.

Mr. A. Lindsay to The Principal Under Secretary.

Dear Sir, Patrick-street, Newcastle, 22 December, 1884.

Would you kindly advise up to what time you will be able to receive from me the counter Petition I am now getting signed against the incorporation of this place to be called the Municipal District of Merewether.

By so doing you will much oblige. Yours, &c.,

ALEXANDER LINDSAY.

Minute Paper for the Executive Council.

MEREWETHER—PETITION FOR INCORPORATION OF.

Colonial Secretary's Office, Sydney, 22 December, 1884.

REFERRING to the minute of the Executive Council of the 23rd September last, authorising the publication, in accordance with the "Municipalities Act of 1867," of the substance and prayer of a Petition praying that a certain area might be constituted under the above cited Act a Municipality under the name of the "Municipal District of Merewether," I now recommend the publication in like manner of the accompanying supplementary list of persons in favour of the proposed incorporation.

WILLIAM B. DALLEY.

Minute of Executive Council.

THE Executive Council advise that the publication of the supplementary Petition, herewith submitted, be published as herein recommended.

ALEX. C. BUDGE,
Clerk of the Council.

Approved.—A.L., 23/12/84. Min. 84–57, 23/12/84.—Confirmed, 30/12/84.

Published in Supplementary Gazette, No. 39, of 28th January, 1885, *Newcastle Herald* and *Newcastle Despatch*, 31st January, 1885.

Counter Petition against Incorporation of proposed Municipality of Merewether.

To His Excellency the Right Honorable Lord Augustus William Frederick Spencer Loftus, Knight Grand Cross of the Most Honorable Order of the Bath, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

The humble Counter Petition of the undersigned,—

Respectfully sheweth,—

1. That your counter Petitioners learn a Petition was lately presented to your Excellency, under the provisions of the Municipalities Act of 1867, from a number of persons praying for the incorporation under the title of the Municipal District of Merewether, of certain lands therein defined.

2. That your counter Petitioners are informed, and do believe that with the exception of 32 (thirty-two) acres or thereabouts, the property of the Church of England, Newcastle, the whole of the lands proposed to be incorporated are the property of Edward Christopher Merewether.

3. That the Petitioners for incorporation and your counter Petitioners are either tenants of the Glebelands without fixity of tenure or leaseholders from said Edward C. Merewether, and that the majority of the leases have only short terms to run; that in some instances new leases have been issued on longer terms; but your counter Petitioners consider the conditions of same prohibitory, besides providing for an increased rent equal to (166½) one hundred and sixty-six and a half per cent. over the previous rental.

4. That the Glebeland tenants have not as yet received any lease although they have been located on the said lands seven or eight years, and although they understood previous to settling thereon that a lease for (21) twenty-one years would be given as an inducement for them to build, but now the authorities of the said Church wholly refuse and neglect to grant such leases in accordance with promise made.

5. That the population of the proposed Municipal District is chiefly a mining population, and the people generally of the poorer classes.

6. That with very few exceptions the buildings on the land proposed to be incorporated are of the simplest construction, and most unsubstantial character, and have in nearly all cases been built by the tenants themselves, some under lease for a term of years, and a great many under no fixed tenure.

7. That an admirably kept main road runs immediately past the centre of population in the proposed Municipal District, and funds for keeping the said road in good repair have been voted by the Government, and can now or at any future period be operated upon by the Road Superintendent.

8. That your counter Petitioners, being chiefly lessees, would reap no benefit by the proposed incorporation, and would be taxed to enhance the value of the fee simple.

9. Your counter Petitioners further allege that a number of the signatures to the before-mentioned Petition were obtained by misrepresentation, and that a number of the said signatures were given in ignorance

ignorance of the nature and effect of the said Petition, that several hold no such qualification as entered in said Petition, and lastly, that others have signed twice.

Your counter Petitioners therefore humbly pray,—

That your Excellency will be pleased to refuse to declare the aforesaid District as incorporated under the said Act.

And that your Excellency will be pleased to cause such enquiry to be made with respect to the allegations set out in the ninth clause of the counter Petition herein contained as may to your Excellency seem necessary in that behalf.

And your counter Petitioners, as in duty bound, will ever pray.

We, Alexander Lindsay, mining engineer, of Burwood, Newcastle, and Robert Patterson, miner, of Glebeland, Newcastle, in the Colony of New South Wales, do solemnly and sincerely declare that all the signatures affixed to the above Petition are the genuine signatures of the persons whose signatures they purport to be, and that such persons are persons liable to assessment for municipal taxes in respect of property or household residence within the boundaries of the proposed Municipal District, as set forth in this Petition.

ALEXANDER LINDSAY.
ROBERT PATTERSON.

Declared and subscribed at Newcastle, this 29th day of December, 1884, before me,—

GEO. H. MILSON, J.P.

Minute for the Executive Council, 30/12/84. Herewith, 30/12/84.

Minute Paper for the Executive Council.

MEREWETHER—COUNTER PETITION AGAINST INCORPORATION.

Colonial Secretary's Office, Sydney, 30 December, 1884.

WITH reference to the Petition, of which the substance and prayer were published in a Supplementary Government Gazette, of the 24th September last, from 243 persons, who would upon incorporation be liable to be assessed for Municipal taxes, praying that a certain area in their Petition defined might be incorporated as a Municipality under the name of the "Municipal District of Merewether," I now recommend the publication in like manner of the accompanying counter Petition, signed by 251 persons, who would be similarly liable against the incorporation of the proposed Municipality.

WILLIAM B. DALLEY.

Minute of Executive Council.

THE Executive Council advise that the substance and prayer of the counter Petition, herewith submitted be published as herein recommended.

ALEX. C. BUDGE,
Clerk of the Council.

Approved.—A.L., 2/1/85. Min. 85-1, 2/1/85.—Confirmed, 6/1/85. Published in Supplementary Government Gazette, No. 60, of 13 February, 1885, *Newcastle Herald* and *Newcastle Despatch*, 18 February, 1885.

To His Excellency the Right Honorable Lord Augustus William Frederick Spencer Loftus, Governor and Commander-in-Chief of the Colony of New South Wales.

The humble Petition of the Burwood Coal-mining Company (Limited), who would in the event of the incorporation of the "Municipal District of Merewether" be liable to be assessed for Municipal taxes in respect of property within the boundaries of the proposed Municipality, as set forth in the substance of the Petition published in the Government Gazette, of the twenty-fourth day of September last, number 486, respectfully showeth, as follows:—

That if any Municipality be proclaimed, then no object can be attained by including a railway or tram-line used by your Petitioners from what is termed the Junction within the proposed boundaries to the Redhead Tunnel outside the proposed boundaries, as there are few (if any) residents on the side of the said railway line facing the Pacific Ocean.

Your Petitioners therefore humbly pray,—

That should your Excellency decide to proclaim a Municipality, that the boundaries may be limited so as not to include the said railway line.

G. OSWALD HYDE.
M. C. COWLISHAW.

Signed and sealed by two of the Directors of the Burwood Coal-mining Company (Limited), in the presence of,—

JNO. MESTON,
Manager.

Sydney, 31 December, 1884.

The

The Manager, Newcastle Coal Company, to The Principal Under Secretary.

The Newcastle Coal-mining Company (Limited).

Sir, Manager's Office, Scott-st., Newcastle, 30 December, 1884.

I have the honor to forward (enclosed) a Petition from the Newcastle Coal-mining Company (Limited) against the incorporation of the proposed Municipal District of Merewether, which, with the Petition from the inhabitants also against incorporation, it is to be hoped will have the desired effect.

STEWART KEIGHTLEY,
Manager.

[*Enclosure.*]

To His Excellency the Right Honorable Lord Augustus William Frederick Spencer Loftus, Knight Grand Cross of the Most Honorable Order of the Bath, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

The humble counter Petition of the undersigned respectfully showeth,—

1st. That your counter Petitioners learn a Petition was lately presented to your Excellency under the provisions of the Municipalities Act of 1867 from a number of persons praying for the incorporation, under the title of the District of Merewether, of certain lands therein defined.

2nd. That your counter Petitioners are informed, and do believe that, with the exception of 32 acres or thereabouts, the property of the Church of England, Newcastle, the whole of the lands proposed to be incorporated are the property of Edward Christopher Merewether.

3rd. That the terms of the letting of the said land and of the occupation of the tenants will prevent any buildings of value being erected thereon, and the vehicular traffic will consequently be very limited.

4th. That dwellings erected on the said area are widely scattered, and the nature of the country would require an enormous expenditure to be made to carry streets past even a majority of the houses now erected.

5th. That the said dwellings are nearly all of wood, of very simple construction and unsubstantial character, and generally speaking are mere huts.

6th. That certain coal-mines under the surface of the proposed Municipality are leased by the said Edward Christopher Merewether to the Newcastle Coal-mining Company (Limited), who have only a very small portion of surface land in their occupation, and the rates on the said mines and on the railway therefrom to the borders of the adjoining Municipality would constitute almost the whole of the revenue of the Municipality, while the Company paying it would derive no benefit from the incorporation.

7th. That if the said proposed Municipality were incorporated, the management of the affairs thereof, and the expenditure of the rates, would rest with a comparatively small number of individuals, whose rates would amount to only a few shillings a year each, while the Company, out of whose pockets at least nine-tenth of the rates would come, would have neither vote nor voice in the expenditure of the funds to which it would so largely contribute.

8th. That the population of the proposed Borough is chiefly a mining population, and the people of the poorer classes.

9th. That an admirably kept main road runs immediately past the centre of the population in the proposed Borough.

10th. That your Petitioners being lessees, would reap no benefit by the proposed incorporation, and would be taxed to enhance the value of the fee simple.

Your counter Petitioners therefore humbly pray that your Excellency will be pleased to refuse to declare the aforesaid Borough as incorporated under the said Act; and that your Excellency will be pleased to cause such inquiry to be made with respect to the allegations set out in the counter Petition herein contained as may to your Excellency seem necessary in that behalf.

And your counter Petitioners, as in duty bound, will ever pray, &c.

Signed on behalf of the Newcastle Coal-mining Company (Limited),—

FRED. ASH, } Directors.
W. A. STEEL, }
STEWART KEIGHTLEY, Manager.

Newcastle, 30th day of December, 1884.

I, James Lacey, of Glebe, near Newcastle, in the Colony of New South Wales, do solemnly declare that the seal affixed to the above Petition is the common seal of the Newcastle Coal-mining Company (Limited), a corporation, and that all the signatures affixed thereto are the genuine signatures of the persons whose signatures they purport to be, who are directors of the said corporation, and that the said corporation is liable to assessment for municipal taxes in respect of property or leasehold residence within the boundaries of the proposed Municipal District of Merewether.

Declared and subscribed at Newcastle, this thirtieth day of December, one thousand eight hundred and eighty-four, before me,— } JAMES LACEY.

THOMAS BROOKS, J.P.

Chief Clerk for report, 3/1/85. I do not think this can be treated as supplementary to the counter Petition, as the three months allowed have elapsed, and the reasons given are altogether different to those in the counter Petition. It is a second petition,—5/1/85. Inform, 5/1/85. Mr. Keightley, 6/1/85.

Mr. A. Lindsay to The Principal Under Secretary.

Sir, Patrick-street, Newcastle, 2 January, 1885.

Referring to the interview I had the honor of having with you on the 30th ultimo, respecting the Petitions for and against the proposed incorporation of the Municipal District of Merewether, I do myself the honor to state the following reasons why the supplementary Petition in favour of incorporation should not be received.

The

The 10th section of the Municipalities Act enacts that the Governor on receipt of the Petition for incorporation, which is to contain certain particulars, is to cause the substance and prayer of that Petition to be published, and that unless a counter Petition be received by the Minister within (3) three months from the date of publication, the Governor may proclaim the Municipality.

The subsequent sections speak only of the original Petition and counter Petition, and it is clear no others are contemplated.

The publication is the starting point. Those who object to the incorporation have to answer the published Petition, and to do so with a greater number of names than were attached to that Petition.

If a supplementary Petition were presented then that should be advertised, and a supplementary counter Petition could be sent in within the next three months, and then there would be no finalty if those in favour of incorporation were to be at liberty to do as they wish.

In fact, were the supplementary Petition published and acted on, then I contend it would override the original one and start matters afresh.

I may state that more signatures could easily have been obtained to the counter Petition had it been considered necessary to do so.

Should the supplementary Petition be forwarded to His Excellency, I respectfully claim that a supplementary counter Petition should also be received and forwarded.

In conclusion, I beg leave to say that within the whole of the land proposed to be incorporated there is not one single public road; it is the private property of C. E. Merewether, with the exception of 34 acres held by the Minister of the Church of England, Newcastle, and he has all along refused to dedicate 1 inch of ground for a street to the Newcastle Council portion of the said Borough on the south, being part of Burwood Estate.

I have, &c.,

ALEXANDER LINDSAY.

The majority of people residing about here are living on the Church land, having no where else to go, and the following is a true copy of their lease:—CHRIST CHURCH, Newcastle, 31 July, 1876. I hereby agree to let to David Salt, allotment No. 18 of section C, at the Glebe, and to give him a lease thereof, for the term of my incumbency; or in case of my handing over the same to Trustees, for a term of not less than twenty-one years, such lease to date from the 1st day of August, 1876. The rent is to be paid quarterly in advance, or the lease will be forfeited.—ARTHUR E. SELWYN.

P.S.—Although the holding by this is bad, as you will see for yourself, I consider it far before Merewether's. Copy of his I will send also, if you desire to see it.—A. LINDSAY.

Chief Clerk for report, 6/1/85. The objection to the receipt of the supplementary list of signatures to the Petition for incorporation cannot be entertained, but Mr. Lindsay should be informed that a supplementary counter Petition will be received.—7/1/85. This practice of admitting supplementary Petitions seems likely to lead to complications; and the keenness of the contest in this case of Merewether suggests that the time has come when this Department should be fortified with an authoritative, and clear interpretation of the law as applied to such cases. Another case (that of Kogarah) is now in hand. I suggest that the opinion of law officers be taken whether the publications of such supplementary Petition is the beginning of a fresh period of three months under section 10, and whether there is any limit to the admission of such Petitions.—8 Jan., 1885. The Crown Solicitor will perhaps kindly advise in this case.—C.W. B.C., 9/1/85.

The Principal Under Secretary to the Manager, Newcastle Coal-mining Company.

Sir,

Colonial Secretary's Office, Sydney, 6 January, 1885.

In acknowledging the receipt of your letter of the 30th ultimo, I am directed by the Colonial Secretary to inform you that the Petition therein submitted against the proposed incorporation of a Municipality to be called the "Municipal District of Merewether" cannot be treated as supplementary to the counter Petition already received, as the three months allowed by law have elapsed since the publication of the original Petition, and the reasons given are not the same as those given in the counter Petition.

I have, &c.,

CRITCHETT WALKER.

The Manager, Newcastle Coal Company, to The Principal Under Secretary.

The Newcastle Coal-mining Company (Limited),

Sir,

Manager's Office, Scott-st., Newcastle, 19 January, 1885.

I have the honor to acknowledge the receipt of your letter 85–29, dated 6th instant, with regard to this Company's Petition against the proposed incorporation of the "Municipal District of Merewether."

In reply thereto, it is not desired that our Petition shall be treated as supplementary to the counter Petition from the inhabitants of the district alluded to, but that it shall be treated as a Petition direct from this Company against the proposed incorporation, a course which I presume the Company is entitled to adopt, irrespective of any other party or any reasons that may be set forth by such party or parties.

With regard to dates, the Petition in favour of incorporation was not published in Newcastle until the last day of September. Our Petition having reached you on the last day of December, the three months allowed by law has evidently been observed. I have therefore to request that you will receive the Petition of this Company upon its merits, and when considering the application made, take it into account.

I have, &c.,

STEWART KEIGHTLEY, Manager.

Chief Clerk for report.—28/1/85. This Petition as a counter Petition under section 10 of the Act is informal; but it may be considered (as Mr. Keightley herein suggests) "upon its merits," when the Government comes to exercise its discretion upon the question of incorporation.—28/1/85. Yes.—28/1/85. Mr. Keightley, 30/1/85.

The Principal Under Secretary to The Manager, Newcastle Coal Company.

Sir, Colonial Secretary's Office, Sydney, 30 January, 1885.

In reply to your letter of the 19th instant, I am directed by the Colonial Secretary to inform you that the Petition from the Newcastle Coal-mining Company against the incorporation of the proposed Municipal District of Merewether is informal, as a counter Petition under section 10 of the "Municipalities Act of 1867," but that it will be considered, as suggested by you, "upon its merits" when the Government comes to exercise its discretion upon the question of incorporation.

I have, &c.,
CRITCHETT WALKER.

Mr. A. Lindsay to The Principal Under Secretary.

Sir, Patrick-street, Newcastle, 5 February, 1885.

I do myself the honor of drawing your attention to the fact that a Petition signed by thirty-one persons has been published in Saturday's issue of the *Newcastle Advocate*, bearing date 31st January, 1885, purporting to be a supplementary Petition to the one published in the abovenamed newspaper on the 30th September, 1884, for the incorporation of certain lands in this district, to be known as the Muuicipal District of Merewether.

In reply to the above, I beg leave to say that I am now at a loss to know how to act, or what course to pursue, to oppose the proposed incorporation, as the Act to me does not seem to provide a course of procedure for me to follow; in fact it seems to me the receiving of a supplementary Petition to be foreign to the spirit or intention of the Act. Clause 10, pages 6 and 7, provide definite instructions how to act in constituting new municipalities; but although I have carefully searched the Act through of 1867, I have entirely failed to find one word about receiving supplementary Petitions, or how to oppose them.

Would you, therefore, be kind enough to advise me at your earliest convenience, on behalf of self and counter Petitioners, what clause you are proceeding under, and what clause provides our remedy, and whether we have (3) three months allowed to oppose supplementary, same as original, because the Municipalities Act of 1867 that we have here does not enlighten us on those points, and by receiving the above information from you, we will then be able to decide what course is best to pursue so that wo may successfully oppose it.

Trusting to hear from you thereon at your earliest convenience.

I have, &c.,
ALEXANDER LINDSAY,
(For self and counter Petitioners.)

The Crown Solicitor to The Principal Under Secretary.

Sir, Crown Solicitor's Office, Sydney, 9 February, 1885.

I have the honor to return herewith the papers which were forwarded to me under B.C. 9/1/85, relating to the proposed incorporation of the Municipal District of Merewether and the admission of supplementary Petitions, and to state that I have submitted the matter to Mr. Attorney General Dalley, a copy of whose advising thereon will be found on the other side of this letter.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

[*Enclosure.*]

In *re* supplementing a Petition for incorporation of Merewether.

I am of opinion that no such course as that proposed to be adopted can be legally taken. The matter of granting or withholding the incorporation must be determined on the original application and on the counter Petition, if such be forwarded against the incorporation. To hold any other view would be to prevent any finality in dealing with the question.

WILLIAM BEDE DALLEY,
Attorney General.

Colonial Secretary's Office, 3 February, 1885.

Inform, in accordance with opinion of Attorney General.—C.W., 16/2/85. Mr. Alex. Lindsay, Ninian Melville.—21 Feb., 1885.

The Principal Under Secretary to Mr. Ninian Melville, M.P.

Sir, Colonial Secretary's Office, Sydney, 21 February, 1885.

With reference to the recently published supplementary list of persons in favour of the incorporation of the proposed Municipal District of Merewether, I am directed by the Colonial Secretary to enclose for your information a copy of an opinion that has been given by the Attorney General on the subject, from which it will be seen that the matter of granting or withholding the incorporation must be determined on the original application and on the counter Petition.

I have, &c.,
CRITCHETT WALKER.

The Principal Under Secretary to Mr. Alexander Lindsay.

Sir, Colonial Secretary's Office, Sydney, 21 February, 1885.

In reply to your letter of the 5th instant with reference to the recently published supplementary list of persons in favour of the incorporation of the proposed Municipal District of Merewether, I am directed by the Colonial Secretary to enclose for your information a copy of an opinion that has been given by the Attorney General on the subject, from which it will be seen that the matter of granting or withholding the incorporation must be determined on the original application and on the counter Petition

I have, &c.,
CRITCHETT WALKER.

Mr

Mr. John Young, and other Gentlemen, to The Colonial Secretary.

Sir, Burwood, Newcastle, 13 March, 1885.

We, the undersigned, on behalf of the persons who have already petitioned for the incorporation of the proposed Borough of Merewether, humbly ask that you might be pleased to cause an inquiry to be held concerning the late counter Petition forwarded against the incorporation of the said Borough. We beg to submit the following reasons for seeking such inquiry:—

1. It is alleged in the counter Petition that an admirably kept Government road runs through the proposed Municipality, which we can prove is not a fact.
2. On the counter Petition there are several names of persons who signed the original Petition, along with ourselves, in favour of incorporating the proposed Borough of Merewether.
3. There are also on the counter Petition the names of females who are not entitled to vote in Municipal matters, inasmuch as they are neither leaseholders or householders, their husbands being the owners of the lease or house, as the case may be.
4. In conclusion, we trust the above reasons will be deemed sufficient grounds for our request to be granted, and that it may please you to cause an inquiry to be held at an early date.

We have, &c.
JOHN YOUNG.
JOHN WILSON.
HENRY LOVELL.
CALEB JONES.
JOHN GRIFFITHS.
WILLIAM WILSON, Sec. to the Incorporation Committee.

As a scrutiny of signatures has been demanded, Mr. A. A. P. Tighe might be appointed to inquire into the Petitions under the 12th section of the Municipalities Act.—C.W., 18/3/85. Approved.—W.B.D.

The Principal Under Secretary to Mr. John Young, and the other Gentlemen who signed Petition for incorporation.

Gentlemen, Colonial Secretary's Office, Sydney, 19 March, 1885.

In acknowledging the receipt of your letter of the 13th instant, I am directed by the Colonial Secretary to inform you that it has been decided, in consequence of the representations therein made, to cause an inquiry to be held under the 12th section of the Municipalities Act of 1867 as to the validity of the signatures attached to the counter Petition against the incorporation of a Municipality to be called the "Municipal District of Merewether," as also generally concerning the Petitions, and that Mr. A. A. P. Tighe, J.P., of Petersham, has been appointed to hold the proposed inquiry.

I have, &c.,
CRITCHETT WALKER.

The Principal Under Secretary to Mr. Daniel Conway, and the other Gentlemen who signed the counter Petition.

Gentlemen, Colonial Secretary's Office, Sydney, 19 March, 1885.

Referring to your counter Petition against the incorporation of a Municipality to be called the "Municipal District of Merewether," I am directed by the Colonial Secretary to inform you that it has been decided, in consequence of certain representations which have been made on behalf of the Petitioners for incorporation, to cause an inquiry to be held under the 12th section of the Municipalities Act of 1867 as to the validity of the signatures attached to the counter Petition; as also generally concerning the Petitions, and that Mr. A. A. P. Tighe, J.P., Petersham, has been appointed to hold the proposed inquiry.

I have, &c.,
CRITCHETT WALKER.

The Principal Under Secretary to Mr. A. A. P. Tighe, J.P.

Sir, Colonial Secretary's Office, Sydney, 19 March, 1885.

It having been decided, in consequence of certain representations made on behalf of the Petitioners for the incorporation of a Municipality to be called the "Municipal District of Merewether," to cause an inquiry to be held under the 12th section of the Municipalities Act of 1867 as to the validity of signatures attached to a counter Petition against such incorporation (which was published as to its substance and prayer in a supplementary Government Gazette of the 13th of February last) as also generally concerning both Petitions, I am directed by the Colonial Secretary to inform you that he has appointed you to hold the proposed inquiry.

2. I am desired to invite your attention to the 13th and 14th sections of the Municipalities Act, whereof the former sets forth the manner in which the inquiry may be conducted, while the latter fixes the time within which the report shall be made.
3. All the papers connected with the matter are enclosed for your information.
4. Your services will be remunerated at the rate of two guineas and a half a day.

I have, &c.,
CRITCHETT WALKER.

Mr. A. Lindsay to The Principal Under Secretary.

Sir, Patrick-street, Newcastle, 28 March, 1885.

Three (3) months ago I presented a Petition against the incorporation of the proposed Municipality of Merewether, and not having heard from you that anything had been done by the other side, I presume it will be all at an end again, if this is so, kindly advise at your earliest convenience. The (3) three months will be up on Monday, the day you receive this from me.

I have, &c.,
ALEXANDER LINDSAY.

Mr. A. A. P. Tighe to The Principal Under Secretary.

Sir, Petersham, 14 April, 1885.

I have the honor to report that in accordance with the directions in your letter of the 19th ultimo, I held an inquiry as to the validity of signatures attached to a counter Petition against the incorporation of a Municipality, to be called the Municipal District of Merewether, and also generally concerning such Petition and a Petition for such incorporation. I herewith return all the papers which were enclosed in your letter.

The evidence taken at the inquiry is hereto appended. It discloses that a portion of the area of the proposed Municipality is the property of Mr. Merewether, and that the remaining portion is Glebeland, held as such by the Rev. Canon Selwyn, the Incumbent of Christ's Church, Newcastle, and that both proprietors have leased considerable portions of their respective lands in building allotments to a large number of persons. A copy of what is stated to be Mr. Merewether's conditions of lease is appended to the evidence (exhibit C). It appears that the Rev. Canon Selwyn does not consider that the nature of his holding permits him to dedicate for permanent streets any of the Glebeland which is now used as streets (exhibit A).

The evidence as to the condition of the main road referred to in the counter Petition is conflicting. A majority, however, of those who gave evidence on the point spoke favourably of the road. The same may be said of those who gave evidence as to the general condition of the roads and streets of the proposed Municipality. The evidence is also conflicting as to the condition and quality of the houses generally within the area referred to. The preponderance of evidence is in favour of the opinion that the houses are for the most part built with a view to serve for dwellings only during the continuance of the leases, but it appears that there are some good substantial weatherboard and other kinds of structures on both Mr. Merewether's and the Church land.

The counter Petition contains 251 signatures. One of the persons, whose names are attached to it, states that he did not sign or authorise anyone to sign for him; two were not qualified, they having sub-let the property in respect of which they signed, the tenants holding under them were the occupiers. and therefore the persons "liable to be assessed"; two signed who had no qualification; six married women signed as leaseholders, but in each case the husband was the person "liable to be assessed," he being the occupier; one married woman signed as a householder, but her husband was the occupier. So far then the counter Petition contains 12 invalid signatures, and 239 valid signatures.

The Petition contains 243 signatures. One person signed it twice, and two signed who had no qualification. So far the Petition contains 3 invalid signatures, and 240 valid signatures.

37 persons signed both the Petition and the counter Petition, 29 of whom desire their names to be retained to the counter Petition and erased from the Petition, while the other 8 persons desire the reverse. Neither the Municipalities Act of 1867 nor the Amendment Act of 1874 directs or indicates how such signatures should be dealt with. It must be intended that they should be dealt with in some way, otherwise in cases like the present, where there is no dispute as to the genuineness of the signatures or the qualification of the persons who wrote them, the 2nd section of the Amendment Act of 1874 would be void of any purpose or effect.

Only three possible modes of dealing with such signatures occur to me.

1st. That they might be dealt with in accordance with the expressed wish of the persons who signed.

2nd. That the signatures to the counter Petition (being the later ones) might be considered to supersede the same signatures to the Petition, and consequently be held to be cancelled as respects the Petition, and to have effect only in respect of the counter Petition.

3rd. That the persons who signed the Petition were not competent to sign also the counter Petition. The Municipalities Act may not intend to permit the same person to sign both for and against the proposed incorporation. The true interpretation and meaning of the words of part of the 10th section of the Act of 1867 may be—"And unless a counter Petition signed by a greater number of (*other*) persons in like manner liable to be assessed," &c.

I think I would transgress the bounds of the duty committed to me if I were to attempt or offer to decide what seems a doubtful point. I may, however, point out that if the first mentioned mode be adopted the counter Petition will have valid signatures, 231; and the Petition will have valid signatures, 211. If the second mode be adopted, the counter Petition will have valid signatures, 239; and the Petition will have valid signatures, 203. If the third mode be adopted, the counter Petition will have valid signatures, 202; and the Petition will have valid signatures, 240.

One of the persons who verified the signatures and signed the declaration to the counter Petition (Mr. Lindsay) appears not to have been qualified to do so, he not being "a householder resident within the proposed Municipality," but the other (Mr. Patterson) was then duly qualified, and his declaration will, no doubt, be considered sufficient.

I have, &c.,
A. A. P. TIGHE.

15

Proceedings of Inquiry.

PROCEEDINGS of an Inquiry under the Municipalities Act of 1867, held by the undersigned, as to the validity of signatures attached to a counter Petition against the incorporation of a Municipality to be called the Municipal District of Merewether, and also generally concerning such Petition and a Petition for such incorporation.

A. A. P. TIGHE.

Glebeland, 7 April, 1885.

MR GORRICK appears as Solicitor for the counter Petitioners, and Mr. Melville appears as agent for the Petitioners.

Examined by Mr. Melville.—Alexander Lindsay states: The declaration to the counter petition was made by me; the signature is mine: I then lived in Patrick-street, in the city of Newcastle; I admit that I was not at the time a householder within the proposed Borough of Merewether; I signed the counter petition as a leaseholder; I cannot produce my lease because it is only a verbal one; I saw all the signatures placed by the parties to the counter petition; I saw Thomas Phillips make his mark thereto; the road referred to in the counter petition runs through the proposed Municipality about ¾ of a mile; I never saw a 'bus stuck up on it; the Government formed and metalled the portion of the road I refer to; Mary Bland signed the counter petition; I saw her do so; I told her she had a right to sign it as well as the original petition if she thought fit; John Rees signed the counter petition, his qualification is within the proposed Municipality; I think there is only one brick building within the area; I decline to state the cost of any buildings on Mrs. Lindsay's property; some of the persons who signed the counter petition did the work of building with their own hands; the counter petition states that the new leases on Mr. Merewether's land contain prohibitory clauses; we mean by that that the lease is drawn with terms and conditions that no tenant can fulfil; one point is, that should any difference arise there shall not be any arbitration, that makes Mr. Merewether's decision final; tenants must build within a certain time and keep the buildings insured in Mr. Merewether's name; he rose the rent from £6 to £16 per acre; he can direct the course of the water where he pleases, and is not obliged to pay towards the cost of repairs or damage; he can compel any alterations and improvements that he thinks fit, and if not done by the tenants within three months the lease is liable to forfeiture; the statement in the counter petition about people signing the original petition in consequence of misrepresentation is quite true; I do not know that Mr. Merewether ever took advantage of the clause in the leases which gives him the power to direct the water into any allotment leased; I read to some of the persons who signed the counter petition the letter from the Rev. Mr. Selwyn, which I now produce (*Exhibit* A); as far as my memory serves me, Mr. Patterson was present as well as myself when the respective parties signed the counter petition; when I speak of the conditions in the leases, I quote from memory.

Examined by Mr. Gorrick—I saw Robert Patterson sign and make the declaration to the counter petition; Mr. Merewether holds about 1,118 acres of the area of the proposed Municipality; he declines to sell any; I have repeatedly asked him; he said he would not sell any; the remainder of the area is Glebeland, and no one has power to sell any of it.

ALEXANDER LINDSAY.

By Mr. Melville—John Fisher states: The signature John Fisher, householder, Glebeland, is not mine in the counter petition.

JOHN FISHER.

By Mr. Melville—Richard Gill states: I cannot write; I signed my mark to both petitions; I wish to cancel the signature against incorporation, and to hold to that in favour of it; I want incorporation to be established.

his

RICHARD × GILL.

mark.

By Mr. Melville—John Gulliver states: I signed both petitions; I am against incorporation; I had no leasehold qualification when I signed the counter petition; my lease had expired; I was then and am still an occupier of the land I had leased.

By Mr. Lindsay, for *Mr. Gorrick*.—My qualification is that of an occupier now.

JOHN GULLIVER.

By Mr. Melville.—Willoughby H. Sutton states: I signed both petitions; I am in favour of non-incorporation.

By Mr. Lindsay: I wish my name to be taken off the original petition.

W. H. SUTTON.

By Mr. Melville.—Margaret Lindsay states: I signed the counter petition: I hold a lease under the Married Women's Property Act, and therefore signed the counter petition; the property leased by me is within the area of the proposed Municipality; I leased part of the property to my husband; the rent is 10s. per year; the lease from me to my husband is a verbal one; I do not reside on the property; I receive the rent yearly; the area of the property leased to me is ¼ of an acre; I have leased a quarter of that to my husband.

MARGARET LINDSAY.

By Mr. Melville.—Mary Bland states: I signed both petitions; Mr. Lindsay and Mr. Patterson told me that the streets would never be made, and that the idea of incorporation was abandoned; they thus induced me to sign the counter petition; I afterwards asked them to strike my name off the counter petition, but they refused; I now wish my name to be taken off it; I am in favour of incorporation.

By Mr. Lindsay.—Both Mr. Lindsay and Mr. Patterson told me that the streets would never be made; I asked them to take my name away from the counter petition; I do not remember telling any one that I was afraid of getting into trouble through having signed both petitions.

MARY BLAND.

By Mr. Melville.—Jane W. Searle states: I signed the counter petition, so did my husband—I as a leaseholder, and my husband as householder of Glebeland; the lease is in my favour; the one property is referred to in both instances; we both reside on the property.

By Mr. Lindsay.—I am against incorporation.

J. W. SEARLE.

By

By Mr. Melville.—Constable Porter states: I did not serve the summons upon Ellen Sangster; she has left the district; I know her; she left about three months ago; she had then a husband; she told me he was engaged on the new railway, he appeared about that time in answer to a summons, and I served that summons at Ellen Sangster's house; I left it with her; it was for not sending their children to school; there is no other person of the same name in this locality.

By Mr. Lindsay.—They were reputed to be man and wife.

EDWIN PORTER,
Constable.

By Mr. Melville.—Margaret Screen states: I signed the counter petition; I signed it as a leaseholder; I hold the lease in my own name; the land belongs to Mr. Merewether; I made the mark to the signature myself; both Mr. Lindsay and Mr. Patterson were present; I took the lease before I married Mr. Screen; my husband also signed the counter petition; we both live on the property; my husband is the occupier; neither I nor my husband hold any other property which is situated within the area of the proposed Municipality; I pay the rent myself; my husband does not pay any rent for the property; I do not carry on any business apart from my husband.

her
MARGARET × SCREEN.
mark

By Mr. Melville.—Thomas Phillips states: I did not sign the counter petition; my name that I now look at to that petition was not written by me; it is a forgery; there is no other person of the same name who is a leaseholder of Burwood; I did not authorize any one to sign my name.

By Mr. Lindsay.—I saw you with the counter petition; you asked me to sign, and I refused; that was about twelve months ago; it might have been thirteen months; I never saw you before or since about the petition one way or another; I never put a mark to the counter petition; it might have been less than twelve months since I refused to sign the petition.

By Mr. Melville.—Mr. Lindsay never told me that he had put my mark to the counter petition for me.

THOMAS PHILLIPS.

By Mr. Melville.—Robert Walton states:—I signed the counter petition; Mr. Lindsay and Mr. Patterson were present; I also signed the petition in favour of incorporation; I wish my name to be taken off the counter petition, and to be retained on the original petition in favour of incorporation.

ROBERT WALTON.

By Mr. Melville.—Elizabeth Gibson states: I signed the counter petition; I am a leaseholder from Canon Selwyn; my husband has also signed as William Gibson, householder, Glebeland; we live together on the property; I do not carry on any business on my own account; my husband has no other qualification as liable to assessment except as the occupier of the land I lease; the land is within the proposed Municipality.

By Mr. Lindsay.—The property was leased by my former husband, and left by him to me; he exercises no control over the property except occupying it with me; I here refer to my present husband.

By Mr. Melville.—I decline to say whether I have any means of support apart from my husband.

ELIZABETH GIBSON.

By Mr. Melville.—Mary Wilmott states: I signed the counter petition; so did my husband, at least he made his mark to it; I signed as a leaseholder; I lease from Canon Selwyn; my husband holds no other property; we both live together on the land; my husband signed as householder; we both signed in respect of the same property; it is within the area of the proposed Municipality.

By Mr. Lindsay.—I hold the land independently of my husband; I have held it eight years; my husband has no control over it.

MARY WILMOTT.

By Mr. Melville.—Eliza Stallard states: I signed the counter petition as a leaseholder; I hold the lease in my own name from Canon Selwn; I hold the land independently of my husband; we both live on the land; it is our dwelling-place; my husband is the occupier and I am the leaseholder of it.

By Mr. Lindsay.—My husband has no control over the property; I built a second house on the same leased land; I let that house to a tenant; it was so let when I signed the counter petition.

E. STALLARD.

By Mr. Melville.—Henrietta Doohan states: I signed the counter petition as a leaseholder; the land leased is situated in the proposed Municipality; my husband and I dwell on the leased land; he occupies the dwelling thereon with me; he has nothing to do with the property only as an occupier, not as a leaseholder of it.

By Mr. Lindsay.—It is my own *bona fide* property; I alone have to look after anything required for it; I assist to support the family by doing work.

H. DOOHAN.

By Mr. Melville.—Louis Crawley states: I signed the counter petition as a householder; I see my father's signature to the same counter petition; that is his handwriting; he is a leaseholder of the same property that I claim to be the householder; he is very ill, and quite unfit to appear here; he is about 80 years old; I took the lease out in his name, but I pay the rent and keep my father; he lives with me; I am the occupier of the property and the master of the house on it.

LOUIS CRAWLEY.

By Mr. Melville.—Margaret Conway states: Mr. Lindsay called on me with the counter petition; I signed it; I hold a lease for land within the proposed Municipality; there were tenants holding under me on the same land when I signed the counter petition; I built houses on the land and let them to tenants; neither I nor my husband occupy the land or any part of it; it is sub-let; I have had the land about twenty years.

By

By Mr. Lindsay.—I signed against incorporation; all the land was sub-let by me when I signed the counter petition; my husband has no control over the property.

her
MARGARET × CONWAY.
mark

Adjourned until to-morrow at 10 o'clock a.m.

A. A. P. TIGHE.

Glebeland, 8 April, 1885.

By Mr. Melville.—John Rabbas states: I signed the counter petition, and also the petition for incorporation; I wish my name to be taken off the counter petition; I am in favour of incorporation; I am a householder within the proposed Municipality.

JOHN RABBAS.

By Mr. Melville.—John Rees states: I know no other person of the same name as myself in this neighbourhood; the signature John Rees to the counter petition is not my signature.

By Mr. Gorrick.—I know John Rees at Newcastle; another man of the same name may have signed the counter petition.

JOHN REES.

Mr. Melville.—Constable Porter states: I knew a man living at Glebeland named Daniel Phillips; he was a boarder in the house of Edmund Phillips; he has left the district; he left in December last; I know no other person named Daniel Phillips here; he was not a householder, he was only a boarder; I have lived here nearly five years; I knew one John Gardner here, he was a lodger here; I never knew him to be a householder; he left the district some time ago; I cannot say how long; I know of no other John Gardner in this district.

By Mr. Gorrick.—Daniel Phillips was in this neighbourhood in December last; I do not think John Gardner was, he might have been; I cannot say they were not householders, they may have been so for a week while the petition was going round.

By Mr. Melville.—I never knew them as householders; I knew them both well.

EDWIN PORTER, Constable.

By Mr. Melville.—Constable Porter states: I served a summons on Minnie Smatell to appear at this inquiry; she is not in attendance; she told me that she would not appear when I served the summons; I also served a summons on Caroline Smatell; I left it with the landlady where she boards; Caroline Smatell is not in attendance; I know them both; I believe they are single girls; at the time the counter petition was being signed they both lodged here with one David Thomas.

By Mr. Gorrick.—I could not say that they were not householders when they signed the counter petition.

EDWIN PORTER, Constable.

By Mr. Melville.—David Thomas states: I have lived here for six or seven years; Minnie and Caroline Smatell were lodgers of mine for six or eight months; they left my house about ten weeks ago; the both told me that they had signed the counter petition against incorporation; they did so while they lodged with me.

By Mr. Gorrick.—I let a house to one M'Intyre; the young women paid him rent for one fortnight for a room; they did not sign the counter petition during that fortnight; they lived at my house in December last; I let them have a room in return for work they did for me; instead of paying rent they did work.

By Mr. Melville.—They paid part of their lodging-money by service; the house was occupied by myself, M'Intyre, and the two young ladies in December last; each of us had a separate portion of the house.

DAVID THOMAS.

By Mr. Melville.—William Burchill states: I signed the counter petition, also the petition for incorporation; I am in favour of incorportion, and I want my name to be struck off the counter petition.

WILLIAM BURCHILL.

By Mr. Melville.—Henry Burns states: I signed the petition for incorporation, and counter petition also; I wish my name to remain on the petition for incorporation, and to be struck out of the counter petition; I know Louis Crawley who gave evidence here yesterday; I know John Crawley; I did not see them sign any petition; they live on the same allotment with me, but in another house; they both occupied that house in December last in common with Crawley's father; John Crawley is married, and had his family in the house; the lease is in the name of Louis Crawley, senior; John Crawley is the master of the house, and Louis Crawley, junior, pays John Crawley for board; the elder Louis Crawley is kept by the family; he is very old and infirm; we all are related to each other, and live on the same allotment; I see John Crawley's name to the counter petition; that is his signature.

By Mr. Gorrick.—I occupied a house and paid rent for it to John Crawley when I signed the counter petition; one Sheldon occupied a third house on the same allotment in December last.

HENRY BURNS.

By Mr. Melville.—John Finlayson states: I signed the counter petition, and also the petition for incorporation; I wish to withdraw my name from the counter petition, and to let it remain on the original petition; I am in favour of the proposed incorporation; I and two other men occupied a house here when I signed the petitions; we paid the rent between us; we all three were liable for the rent.

By Mr. Gorrick.—I have no lease; I assist to pay the rent; Thomas Smith leases from Mr. Merewether, and we three tenants pay the rent to Smith.

JOHN FINLAYSON.

By Mr. Gorrick—David Wilson states: I signed both the petition and the counter petition; I wish my name to be withdrawn from the petition, and to be left on the counter petition; I am not in favour of incorporation; I did not understand the thing properly when I signed; I was induced to sign because it was represented to me that the place would be added on to the Newcastle Borough unless we had a separate Borough; on that representation I was led to sign in favour of incorporation.

By Mr. Melville—My mind was made up to sign against incorporation before Mr. Lindsay asked me to sign the counter petition; I do not know what road is referred to in it; there is not a proper made road to my house from the main road; I think Mr. Lindsay read the counter petition to me when I signed it; I lease the property that qualifies me to sign; the roads all about here are very bad.

DAVID WILSON.

By Mr. Gorrick.—John Watkins states: I signed the petition for incorporation and also the counter petition; I want the signature to remain to the counter petition, and to be struck off the petition in favour of incorporation.

By Mr. Melville.—I do not remember what Mr. Lindsay said to me when I signed the counter petition; the roads about here are in a bad state; the main road is about 250 yards from my residence; I do not know the road referred to in the counter petition; the road used by the 'busses is a good one.

JNO. WATKINS.

By Mr. Lindsay.—Peter Penman states: I signed the counter petition as a householder of Glebeland; I was then only two days in the place; when I signed Mr. Lindsay told me that the counter petition was against incorporation; I was a householder when I signed.

PETER PENMAN.

By Mr. Melville.—Robert Archibald states: I signed the counter petition and also the petition for incorporation; I am in favour of incorporation; I want my name struck off the counter petition, and kept on the petition in favour of it; I expect we will get good roads made here if we are incorporated; in bad weather the roads are very bad; they are very bad on the Church land; we have no roads metalled.

By Mr. Lindsay.—I altered my opinion because I thought incorportion would be better for us all; I learned that the taxes would not be so heavy as I at first thought; I did not alter my opinion because I found that Mr. Lindsay had told me what was not true.

ROBT. ARCHIBALD.

By Mr. Melville.—Constable Porter states: I served a summons on Ann Thomas to attend here to-day; she is not in attendance; she lodges at a house kept by Mrs. Barnes (at least so Mrs. Barnes told me); I knew nothing about Ann Thomas's position at the time she signed the counter petition.

EDWIN PORTER (Constable.)

By Mr. Melville.—Henry Lovell states: I know Ann Thomas referred to by the last witness; she is a widow and lives with a relation of hers named Barnes; she lived there during and before December last; she is not and never was a householder here since the Municipality was proposed.

By Mr. Lindsay.—She never told me that she was only a boarder; she occupies a room in Barnes's place.

HENRY LOVELL.

By Mr. Melville.—Constable Porter states: I served John Crawley with a summons to appear here to-day; he is not present; I called him in the usual way this morning and this afternoon; he is a brother of Louis Crawley, who gave evidence yesterday afternoon, and brother-in-law of Henry Burns who gave evidence this morning; he lives in the same house as Louis Crawley; I saw him here yesterday; I believe he then came in answer to the summons (the summons was for yesterday) and to continue present during the inquiry until called upon to give evidence.

EDWIN PORTER (Constable.)

By Mr. Lindsay.—John Barnes states: I am a householder at Burwood, and also a leaseholder; Ann Thomas lives with me; she rents the two front rooms in my house; she pays me 4s. per week; she has done so for nine or ten months past; I do not find her in anything; she is not a boarder of mine, and never was.

By Mr. Melville.—I and my family occupy the back part of the house and Mrs. Thomas occupies the front; we each enter and leave by a different door; she is too ill to move about; she is not able to attend here; my residence and Mrs. Thomas's are two distinct holdings.

his
JOHN × BARNES.
mark

By Mr. Lindsay.—David Hutchinson states: I signed the petition for and the counter petition against incorporation; I want my name to be struck off the one in favour of incorporation, and to be retained against incorporation; I am opposed to the place being incorporated.

By Mr. Melville.—I live at Glebeland; the roads are good enough for me; I decline to answer any question as to the state of the roads; I once kept the "Travellers' Rest Hotel"; the road is a good one about that part of the proposed Municipality.

DAVID HUTCHINSON.

By Mr. Lindsay.—William Rendall states: I signed both the petition and the counter petition; I am in favour of non-incorporation, and want my name taken away from the petition in favour of incorporation and left on the counter petition.

By Mr. Melville.—The road leading to my place is blocked up by a building, and that is why I do not want incorporation; some of the roads are middling, others are very bad, especially in wet weather; a portion of the main road referred to in the counter Petition is metalled.

WM. RENDAL.

By Mr. Lindsay.—William Lacey states: I signed the petition and also the counter petition; I want my name to be kept on the counter petition and to be taken off the petition; I am against incorporation.

By Mr. Melville.—Morgan-street is not in the best condition; a few loads of stone would improve it; it is pretty well drained by a creek hard by; there are no good roads about here.

WILLIAM LACEY.

By Mr. Lindsay.—Thomas Campbell states: I signed both the petition and the counter petition I am against incorporation, and want my name struck off the petition and kept on the counter petition; the roads about here are good enough for me; I refer to the road mentioned in the counter petition, and say that I consider it a good road; the roads all about here are passable in fine weather, but bad in wet weather.

By

By Mr. Melville.—Part of the road referred to in the counter petition is metalled—not all of it; the road between my place and that road is not bad in some parts; I can cross it in any weather; some of the roads are not safe to travel on by night; they would not be dangerous if there were lamps; I never had an accident on the road; even if there were lamps a stranger could not safely travel by night; Patrick-street in Newcastle is as bad as any street within the proposed Municipality, and Newcastle is incorporated.

THOMAS CAMPBELL.

By Mr. Lindsay.—Joseph Littlefair states: I signed both the petition for and the counter petition against incorporation; I am against incorporation; I want my name to be taken away from the petition and kept to the counter petition; there is a good road where I live; the reason I signed the petition in favour of incorporation was because a party made me believe that unless we had our own incorporation we would be compelled to be tacked on to the Newcastle or Hamilton Corporation; only for that I would never have signed in favour of incorporation; it was one of the persons getting signatures to the petition who persuaded me so.

JOSEPH LITTLEFAIR.

By Mr. Lindsay.—George Bailey states: I signed both the petition and the counter petition; I am against incorporation; I wish my name to be struck out of the petition and retained to the counter petition.

By Mr. Melville.—The road is pretty fair near my property; there is no reason to complain of the roads generally; I do not know how they are in bad weather; I am not long in the district, and have had no very bad weather during my time; I broke my leg on one of the Glebe roads; there is a creek in the road, and the bank on the side gave way with me and I fell into it; there are no dangerous ruts in the road now; buggies can travel over the road very well, except where the creek crosses it several times; the roads generally are safe for foot passengers; they would be greatly improved by lamps; my house is worth about 7s. per week; I saw the road in which I broke my leg six weeks ago; it was then improved as compared with its state when I broke my leg. People do not improve the road by cutting drains; I have cut drains from my place into the creek; when I signed the petition for incorporation, I thought the lands about here would be given to the Corporation; when I say lands, I mean streets; and I now believe that the streets must be dedicated by the owners of the soil before the Corporation could deal with them; I would favour incorporation if the Corporation could, in my opinion, claim the streets on the property of the Church and Mr. Merewether.

By Mr. Lindsay.—We cut drains from the wash-house to the creek in the road; there is one creek, and there are also artificial drains in the streets; I broke my leg through an accident; I misjudged the quality of the ground I stepped across; I signed the petition for incorporation because I then thought the place wanted improving; when I saw the letter from Canon Selwyn, that he could not dedicate streets on the church land, I changed my opinion.

GEORGE BAILEY.

Adjourned until to-morrow at 10 o'clock a.m.

Glebeland, 9 April, 1885.

By Mr. Lindsay.—James Hookway states: I signed the petition in favour of incorporation; the signature thereto that I now look at is mine; it is witnessed and declared to by Mr. Curtin and Mr. Griffiths; I look at another signature to the same petition, which is also mine; as a matter of fact I signed the same petition twice; I first signed in my own house; it was left in my house for me to sign; Mr. Curtin's little girl was waiting for me to sign it; Curtin and Griffiths did not see me sign so far as I know; they were not in my house at the time—that I know.

By Mr. Melville.—The declaration to the petition of Curtin and Griffiths is true, so far as my first signature is concerned; I signed the second time because I had forgotten that I previously signed; Mr. Price has declared the truth in respect of my second signature, if he has made the declaration which I look at—having his name thereto.

JAMES HOOKWAY.

By Mr. Lindsay.—Kate Isabel Read states: I look at my name signed to the original petition; I put my mark to it; I do not nor did I then hold any qualification; I was not then an owner, lessee, or occupier of any property within the proposed Municipality; I did not understand the law of the matter at the time; I do not think the list of names was pasted on the sheet of large paper as it is now pasted.

By Mr. Melville.—I am a housekeeper in Mr. Blacknell's house at the Glebe; he is not a boarder of mine; I took the house from the landlord; Mr. Finan is the owner; sometimes I give the rent and sometimes Mr. Blacknell gives it; I did not tell the man that asked me to sign the petition that I was only a housekeeper.

KATE I. × READ.

mark

By Mr. Lindsay.—Mary Ann Barnes states: I am the wife of John Barnes, and I live with him in Burwood; we rent the two front rooms to Mrs. Thomas; Constable Porter served her with a summons last week to attend here; he served the summons by leaving it with me for her, and I immediately gave it to her; he was on horseback outside the gate in the road; I only said to him that Mrs. Thomas could not attend through illness; I did not say that Mrs. Thomas is only a boarder; she is not a boarder; she pays rent for her two rooms; if the constable says I told him she was a boarder, it is a barefaced untruth of his; Mrs. Thomas was sitting inside her house when I took the summons; I produce the rent-book showing the weekly rent paid by Mrs. Thomas for her two rooms; she has paid her rent up to the 30th of March last; we each have separate and distinct means of access to our respective dwelling-places.

By Mr. Melville.—The constable simply asked me if Ann Thomas lived with me; I said that she lived in the two front rooms; he said he had a summons for her, and I told him I would take it to her; I was not summoned to give evidence here; some lad came and asked me to come here and answer to my husband's name; I do not know what was the object of my coming here; I did not know that the constable had said that I told him Mrs. Thomas was only a boarder; the road is very good from my place

to

to here; I decline to answer any more questions; I will not say whether I ever saw any drays stuck up through the badness of the roads; there is a good road from my house to the railway line; anyone can walk very well from there to the main road; I have seen a dray stuck up by the badness of the road, but it was a considerable distance from my place.

M. A. BARNES.

By Mr. Lindsay.—Joseph Bowtell, junior, states: I signed both the petition and the counter petition; I wish my name to remain on the counter petition, and to be taken off the petition; I am against incorporation.

By Mr. Melville.—The counter petition was read to me before I signed it; we have a very passable road from our place to the main road; my father had repairs done to it; the other roads within the proposed Municipality are not so very bad; I have not known any drays stuck up for about two years; people improve the roads near their places by putting rubbish in the holes; the whole of the road referred to in the counter petition may or may not be metalled for all I know; there are about 300 yards of that road which are not metalled; the 'busses are able to travel over it right up to the "Traveller's Rest Hotel;" the petition I now look at has my father's signature to it; it is a petition referring to road improvements (*Exhibit* B); the main road could be improved by stuff taken from the top of the hill close by; a cart was capsized last winter at Burwood, partly through the bad road and partly through careless driving; the house I live in is put up just so as to last while the lease lasts; that is about another ten or twelve years; the bricks are laid in mud and only half bricks are used; the houses at Burwood are made of slabs, bark, and mud bricks made by the miners themselves; it would be hard to tell whether the majority of the houses consist of weather-boards; some are made of wattle and dab; there are not many empty houses about here; I changed my mind as to incorporation because Mr. Merewether need not dedicate any of the streets unless he pleases; another reason is because Canon Selwyn cannot allow any streets to be made on the Glebeland; the so-called streets on the Glebe are not public property; I signed the original petition because I then thought that Canon Selwyn could give streets; in very bad weather the roads and streets here are not safe in some places.

JOSEPH BOWTELL, Junr.

By Mr. Lindsay.—James Mouter states: I signed both the petition and the counter petition; I wish my name to remain on the counter petition, and to be taken off the petition; I do not want any incorporation for this place.

By Mr. Melville.—The roads about Burwood are very good, and are safe to travel over by night; so far as I know, all the roads within the proposed Municipality are good; my house is a weatherboard one, built on brick pillars; it is a good house; I consider the houses in my neighbourhood pretty good.

By Mr. Lindsay.—Some of the houses near me are poor ones.

JAMES MOUTER.

By Mr. Lindsay.—William Young states: I signed the petition and also the counter petition; I want my name taken off the petition and kept on the counter petition; I am opposed to incorporation; Curtin went round for signatures to the original petition, and told me that if I did not sign it, we would be forced to join the Newcastle corporation, and I was in that way induced to sign in favour of incorporation.

By Mr. Melville.—I would prefer to pay for good roads rather than be joined to Newcastle and get nothing from that corporation in return for taxes but lamps. The roads about here are pretty good; I do not have to carry a lamp when I go out of a night; my wife takes a lamp, but she is lame.

WILLIAM YOUNG.

By Mr. Lindsay.—Hugh Donnison states: I signed the petition and counter petition; I wish my name to remain on the counter petition and be taken off the petition; I am against incorporation; Mr. Griffith and Mr. Lovell were present when I signed the petition for incorporation; they both told me that the streets on the Church land could be dedicated, and that it was a hoax to say to the contrary; I would not have signed only for that.

By Mr. Melville.—There is a bridge in the street about 120 yards from my place; the neighbours, including myself, paid for it; the roads are very good near my place, and that is about the worst part of the proposed Municipality for roads; the bridge near my place is for horses and carts as well as for foot-passengers; the water-course in the street near Winterbine's butcher's shop is about a foot or two deep; if the bridge near my place were washed away vehicles could not pass in the street there.

HUGH DONNISON.

By Mr. Lindsay.—John Ballenden states: I signed the petition and the counter petition; I want my name to be kept on the counter petition and taken off the petition; I am against incorporation; I signed the petition because I was told we would thereby be able to have good roads, and that if we had not a corporation of our own, we would be taken into the Newcastle Corporation against our wish; I subsequently signed the counter petition, because Mr. Lindsay let me see the Municipalities Act, and I could then see that we need not join Newcastle against our will.

By Mr. Melville.—I live at Burwood; the streets are in good condition; the road is a bad one in wet weather near Sage's blacksmith's shop, but I consider it is safe to travel over by night; the main road referred to in the counter petition is not metalled all the way so far as I know, but I have never been along the whole of it; so far as I know it is well kept; some of the houses about here are substantial ones; some are not; most of them are substantial; I mean they look well on the outside, but they are put up very temporarily; most of the men who put them up did not very well understand how to do the work; my house is pretty fair; the frame-work of most of the houses is very slight; the house next to mine is about equal to mine; my house had to be passed by the architect of the Building Society.

JOHN BALLENDEN.

By Mr. Lindsay.—Alexander Goodwin states: I signed the petition for and the counter petition against incorporation; I want my name to be taken off the petition and to be kept on the counter petition; I am against incorporation; I signed the petition because I was led to believe that we would be compelled to join Newcastle corporation if we had not a corporation of our own; when I was convinced to the contrary, I signed the counter petition.

By

By Mr. Melville.—Nothing was said to me about a Local Government Act; the roads are good about my place; there is a water-course in one street, and the people near put bridges across it; I have to cross a railway to get to the main road from my house; my house is pretty fairly substantial; the work was passed by an architect; some of the houses are very bad; some of them are scarcely fit to live in; I cannot say whether the majority of them are good or bad; the main road referred to in the counter petition is good so far as I have been over it; I do not know that there are any funds available for keeping it in repair; I know no persons in the proposed Municipality who have not a fixed tenure; I cannot say whether the whole of the counter petition was read to me or not before I signed it; I did not notice the clause referring to fixity of tenure.

By Mr. Lindsay.—I am still of the same mind, that is, against incorporation; I understand that all the people who lease the Glebeland have no fixity of tenure; I have seen two of the so-called leases, and am satisfied that the Glebeland lessees have no fixed tenure; they are only good while Canon Selwyn lives.

ALEXANDER GOODWIN.

By Mr. Lindsay.—Peter Fisher states: I signed the counter petition as a householder; I held the qualification for about twelve months when I signed; I know Mrs. Helm; she is my housekeeper; I saw her put her mark to the name on the petition for incorporation; it is signed Mrs. Helm, her mark; she has no qualification as a householder now; she had none when she signed; she is now very ill, and not able to appear here; she has neither a leasehold, or household, or other qualification.

Mr. Melville and Mr. Lindsay agree to the withdrawal of Peter Fisher's evidence.—A.A.P.T.

By Mr. Melbille.—I was not present when Mr. Lovell called at my house with the petition; Mr. Watson brought the petition; I saw Mrs. Helm sign; I saw her sign her mark to it; if the petition I now look at is not the one Mr. Watson brought to my place, then I did not see Mrs. Helm put that mark, but I certainly did see her put her mark to a petition in favour of incorporation.

his
PETER + FISHER.
mark.

By Mr. Lindsay.—Robert Coulson states: I signed the petition and the counter petition; I want my name to be retained on the counter petition, and to be taken off the petition; I am opposed to any incorporation here.

By Mr. Melville.—I did not apply to any one for payment for coming here. I was summoned; I do not receive any payment.

ROBERT COULSON.

By Mr. Lindsay.—John Gray states: I signed the petition and the counter petition; I want my name to be kept on the counter petition and taken off the petition; I do not want any incorporation.

By Mr. Melville.—I was summoned to appear here.

JOHN GRAY.

By Mr. Lindsay.—Stephen Powell states: I signed the petition and the counter petition; I want my name to be kept on the counter petition, and taken off the petition; I do not want the place to be incorporated.

By Mr. Melville.—I changed my wish about incorporation after I read Canon Selwyn's letter.

STEPHEN POWELL.

By Mr. Lindsay.—Thomas Graham states: I signed the petition and the counter petition; I want my name to be kept on the counter petition and taken off the petition; I do not want any incorporation.

THOS. GRAHAM.

By Mr. Lindsay.—George Kirkwood states: I signed the petition and the counter petition; I want my name kept to the counter petition and taken off the petition; I do not want incorporation here.

GEORGE KIRKWOOD.

By Mr. Lindsay.—William Kirkwood states: I signed the petition and the counter petition; I want my name to be kept off the petition and kept on the counter petition; I now find that I signed a leaf which is not properly a part of the original petition, so that strictly speaking my name does not appear to the original petition.

his
WILLIAM × KIRKWOOD.
mark

By Mr. Lindsay.—Gilbert Anderson states: I signed the petition and the counter petition; I want my name taken off the petition and kept on the counter petition; I do not want incorporation.

By Mr. Melville.—I cannot say that the counter petition was ever read to me; I do not recollect that part of it that says there is an admirably kept road running through the proposed Municipality; I do not know whether it is a good road or not; I do not know how much of it is metalled; the houses generally about here are some good, some bad, some large, some small; I have a first-class road past my place; it would be hard to tell a road here from an allotment; the roads about Taylor's hotel are pretty fair; I signed the petition in favour of incorporation through rashness; I signed the counter petition because I do not want any incorporation; I do not know where the well-kept main road is referred to in the counter petition; I knew very little about anything when I signed the counter petition; the counter petition may have been read to me before I signed it.

GILBERT ANDERSON.

Adjourned until to-morrow at 10 o'clock a.m.

Glebeland, 10 April, 1885.

By Mr. Lindsay.—Enoch Evans states: I signed the petition and also the counter petition; I want my name to be kept on the counter petition and taken off the petition; I am against incorporation.

By Mr. Melville.—Mr. Patterson saw me sign the counter petition, Griffiths and Lovell saw me sign the petition; I did not ask any one for payment for signing.

ENOCH EVANS.

By

By Mr. Lindsay.—Alice Helm states: I signed the petition as Mrs. Helm; I now look at the signature, that is mine; it is Mrs. Helm, her mark; I put the mark to it; I then was not an owner or lessee or occupier of any property in the proposed Municipality; I did not know that I should have any qualification before I signed; they said they were going to make roads, and so I signed in favour of incorporation; Mr. Peter Fisher owns the house I live in; I am not the mistress of the house, I am only the housekeeper for Mr. Fisher; Mr. Fisher owned the house for about fifteen months past.

By Mr. Melville.—I was the landlady before Fisher purchased the house; he then lived in the house; I did not tell Mr. Lovell or Mr. Griffiths that I was the landlady when I signed.

her
ALICE × HELM.
mark

By Mr. Lindsay.—John Fisher states: The signature I look at to the counter petition is mine.

By Mr. Melville.—Mr. Lindsay and another were present when I signed.

JOHN FISHER.

By Mr. Lindsay.—John Jones states: I signed the petition and the counter petition; I am against incorporation, and want my name to be kept to the counter petition and taken off the petition; no one was present but John Griffiths when I signed the petition; I now look at my mark to the signature to it; no one read the petition to me before I signed it.

By Mr. Melville.—I knew what I signed; Griffiths explained to me what I was signing for; Mr. Lindsay asked me to sign against incorporation, and I did so; he did not tell me anything about a reference to an admirably kept road; I know the main road here; it is not a very good one nor a very bad one; the roads generally are good enough for the place, and good enough for me; my house is a pretty fair one; it is of slabs.

his
JOHN × JONES.
mark

By Mr. Lindsay.—David Jones states: I signed the petition by my mark; I now look at that mark; I also signed the counter petition; I want my name to be kept to the counter petition and taken off the petition; I am against incorporation; the persons who brought me the petition read some paper to me, but I did not understand it; I am a Welshman, and have not good English.

his
DAVID × JONES.
mark

By Mr. Melville.—Thomas Craig states: I signed the petition and the counter petition; I now look at my mark to the name on the petition; I made the mark and that is my name to it; I want my name to be taken off the petition and kept on the counter petition; I do not want any incorporation; I did not see Lovell when I signed the petition; if he had been present I must have seen him; if Mr. Lovell has declared that that is my mark it is the truth; I now look at it on the petition; I have had no conversation with Mr. Lindsay about this inquiry.

his
THOMAS × CRAIG.
mark

By Mr. Lindsay.—Thomas Griffiths states: I signed the petition and the counter petition; I am against incorporation, and I want to have my name struck off the petition and left on the counter petition; I live at Glebeland, the roads are pretty fair about here; I have not seen the road past the "Glebe Colliery Hotel" for some months; the roads are fit to travel over in wet weather; they are fit for children to travel on so far as I know; it is a good road from my place to the pit.

his
THOMAS + GRIFFITHS.
mark

By Mr. Lindsay.—William Lewis states: I signed the petition and the counter petition; I want my name to be taken off the petition and kept on the counter petition; I do not want any incorporation here.

By Mr. Melville.—The only road I travel is the railway line; between the line and my house the road is passable; there are some creeks in the roads; the main road is pretty fair near the "Travellers' Rest Hotel"; I saw no waterholes in it.

WILLIAM LEWIS.

By Mr. Lindsay.—William Campbell states: I signed the petition and the counter petition; I am against incorporation, and want my name kept on the counter petition and taken off the petition; when I signed the petition, the person who had charge of the petition told me it was a paper to get good roads; I did not intend to submit to taxation; the petition was not read by or to me.

By Mr. Melville.—The roads near my place are pretty fair; the road near the Glebe Colliery is passable; there are no creeks continually running in the roads; there is a dry creek 2 feet wide and 1 foot deep in the road near the hotel and in the street; I took it for granted that the statement in the counter petition about the main road was true; it is not safe to travel on foot over the railway line; I refuse to go now and inspect the main road.

WILLIAM CAMPBELL.

By Mr. Melville.—Constable Porter states: I gave evidence on Tuesday last to the effect that I did not know any householder named John Gardner here, also in respect of Daniel Phillip to the same effect; since then I have discovered that there is another man of the name of John Gardner, and that he was a householder in the proposed Municipality at the time the counter petition was going round for signature; I am also able to say the same in respect of Daniel Phillips; he has left the district some time; but there was a householder here I find of that name when the signatures were being taken.

EDWIN PORTER, Constable.

By Mr. Melville.—Robert Simpson states: I have just examined the main road from the "Travellers' Rest Hotel" to the Mechanics' Institute; I find two streams of water running in ruts from 12 to 18 inches deep and from 3 to 4 feet wide; eastward from the Institute towards Newcastle I find two streams running in a serpentine course; about 200 yards below the Institute the two streams unite and continue a similar course and form a stream of water 12 or 14 feet wide; I could not reach the metalled part of the road without crossing that stream, therefore I consider the main road utterly impassable for foot passengers, and it is unfit for traffic of vehicles; the roads in general all through the proposed Municipality are bad.

ROBERT SIMPSON.

Alexander Lindsay states: I have just examined the main road in the Municipality which is referred to in the counter petition; it has been raining these two days; I have taken nine cross measurements of the worst part of the road opposite; the "Travellers' Rest Hotel" I find a drain on the south side of the road 2 feet wide and 2 inches deep in the centre; on the north side I find a drain 2 feet wide, with the usual batter and a centre depth of water 1 inch; the average width of the drain on the north side is 18 inches, and the average dip of the water is 2 inches; the dip of the drain is 15 inches; then 11 yards towards the east the measurement is about the same, but 22 yards from the south side of the street there is an old waterway on flat ground about ¾ of an inch deep and 2 feet wide; on the south side of the road there is a drain 2 feet wide, with a centre dip of water 1½ inches with a roadway intervening 11 feet wide between the fence on the south side of the road and the drain referred to; thence to the east, 22 yards, I find the width of the roadway 24 feet from the fence on the south side; then I find a watercourse 2 feet wide with an inch of water in the centre; then towards the north I find a road 34 feet, with a drain 2 feet wide with an average depth of water 2½ inches; then 22 yards further to the east there is a roadway 17 feet wide from the fence on the south side, and a drain 2 feet wide and 1½ inches average depth of water; thence towards the north there is a road 30 feet wide, and a drain 2 feet wide and an average depth of 2½ inches; 22 yards further to the east from the south side of the road there is a roadway 9 feet wide, and then a drain 1 foot wide by an average depth of 1½ inches; then 50 feet wide the road appears on the north side, with a drain 18 inches wide and an average depth of 2 inches. Drains up to this point, I believe, have been cut by the Government, and they run parallel with the fence on the north side, leaving a narrow pathway between the drain and the fence; 18 yards further to the east on the south side I find the road 11 feet wide; thence on the north I find a drain 2 feet wide with an average depth of 1¼ inch; thence on the north the road is 45 feet wide, and a drain 2 feet wide and 1¼ inch average depth; then I find 4 feet of a road on the north side between the drain and the fence; then 22 yards further to the east from the south I find the road 16 feet wide, with a drain on the north 2 feet wide by 1 inch deep; then still on the north there is a road 27 feet wide, and a drain 2 feet wide and 1 inch average depth; further on the north the road is 15 feet wide between the drain and the fence; thence towards the east, 22 yards, the roadway is 5½ feet wide, with a drain 1½ foot wide and a depth of about ¾ of an inch; then by a road 18 feet wide, with a drain on the north 2 feet wide and 1 inch deep; from the drain to the fence there is a roadway 12 feet wide; 22 yards further to the east there is a roadway 42 feet wide, with a drain on the north 2 feet wide and 1½ inch deep; from the drain to the fence there is a roadway 51 feet wide, with a drain on the north 2½ feet wide and 1 inch deep; on the north there is a roadway 9 feet wide; 22 yards further to the east there is a roadway on the south side 15 feet wide; here there is a shallow flat with an average depth of ½ an inch; then there is a space 12 feet wide to the fence; further to the east. 159 yards, I find the road nearly clear of water on the south side, but on the north side the water spreads considerably, because there is no drain there. This then takes us to the metalled portion of the road referred to in the counter Petition; it lies on the west side of Newcastle boundary; these are all cross measurements. Although it has been raining hard for two days, I find the dray and 'bus traffic is not incommoded; they are now passing up and down; from the "Travellers' Rest" to Adamstown a new main Government road is in course of construction; the formation of the whole is nearly completed; it will be a good road when metalled; I am a resident of the Newcastle district, and live close by the proposed Municipality, and have lived there about twenty-five years; I never knew of an accident on this main road; I have travelled over the whole of the proposed Municipality at all times, both by day and night and in all kinds of weather, and never had an accident; the roads in use in the district I have known since they were laid out; upon the whole, I consider them to be good roads, with ordinary weather; the major portion of the roads that are not metalled are covered with grass, and are on the whole much better than those of the Municipality of Newcastle; when there is any water on the road, it is so simply through the want of a small drain. I hand in a copy of Mr. Merewether's lease (*Exhibit C.*).

ALEXANDER LINDSAY,
Mining Engineer.

By Mr. Melville.—Constable Porter states: I served a summons on Robert Patterson (who declared to the signatures in the counter petition) to attend this inquiry; he is not present; I have not seen him here at all during the inquiry; I served the summons by leaving it with his wife at his residence; I left it on the Wednesday; it was for attendance on Thursday and until called upon during the inquiry; his wife said she believed he was drinking; he subsequently told me he would not attend unless he was compelled; he was the worse of liquor then.

EDWIN PORTER,
Constable.

The foregoing evidence was taken and stated before me on the 7th, 8th, 9th, and 10th April, at Glebeland.

A. A. P. TIGHE.

Exhibit A.

Christ Church, Newcastle, 24 November, 1884.

HAVING heard that it is proposed to include the Glebe in the proposed Municipality about to be petitioned for, I wish to state for the information of the tenants on the Glebe, that I, as incumbent, have no power to dedicate any portion thereof for the purpose of making streets, &c.

ARTHUR E. SELWYN.

Exhibit B.

To Messrs. Melville and Luscombe, M.'sL.A.

Gentlemen, Glebeland, 16 January, 1885.

At a most influential and enthusiastic meeting of the inhabitants of the Glebe and Burwood, held in the Mechanics' Institute on Thursday evening last, 9th instant, we, the undersigned, were chosen as a Committee to bring under your notice the very deplorable state of the main road from the top of Glebe Hill towards Burwood Junction, and also to make known the wishes of said inhabitants in reference thereto.

Therefore,

Therefore, for your information, we beg to state,—

1. That some time ago a sum of money was voted for, and is now being spent in the formation of a main road from Adamstown to Glebe. The wisdom of this is fully recognised by the inhabitants of this place, inasmuch as at the late public meeting the following resolution was most unanimously agreed to:—

"That this meeting desires to express its appreciation of the work now being carried out by the Government in making the road from Adamstown to the Glebe; but at the same time would most respectfully draw attention to the fact that unless the road is continued some 300 yards further on the Burwood end the whole distance will be comparatively useless to the inhabitants of this place."

2. To more fully explain the latter portion of the resolution, we further desire to state that the present contract is only from Adamstown to the top of the Glebe Hill, and when completed will leave the eastern slope of the hill, together with the Burwood Road, in the same condition as now.

3. Seeing then that the residents of the Glebe and Burwood will not be benefited by the Adamstown Road, unless it be further extended, we desire that said road be continued across Glebe Hill by a cutting of about 8 feet in depth on the crown, which would make the hill of comparatively easy access. In connection with the cutting, we would bring under your notice the fact that the stuff got from it would be conglomerate rock, which could be used to advantage in making the road from the foot of the hill on the Burwood end.

4. In conclusion, we further beg to state that about fourteen months ago this same subject was brought under the notice of the Roads Department in Sydney, and at the same time a sketch was forwarded showing the various roads in this locality, and the pressing need of the Glebe and Burwood road being made. But this time we have taken the liberty of addressing ourselves to you on the subject. We do so the more readily because we know that you are ever ready to give your valuable services for the furtherance of all matters relating to the prosperity of this district. Knowing that you will do your very best for us in the matter of this road, We remain, &c.,

JOHN DIXON.
GEORGE HALL.
WILLIAM ARMSTRONG.
JOSEPH BOWTELL.
G. ROBERTSON.
JAMES REID.

Exhibit C.

THIS INDENTURE, made the day of , in the year of our Lord one thousand eight hundred and . between Edward Christopher Merewether, of "The Ridge," near Newcastle, in the Colony of New South Wales, Esquire (hereinafter called "Lessor"), of the one part, and of (hereinafter called "Lessee"), of the other part.

WITNESSETH, that in consideration of the rent hereinafter reserved, and of the covenants and the conditions hereinafter contained, and on the part of the lessee to be observed and performed, he, the lessor, doth hereby demise and lease unto the lessee all that piece and parcel of land, more particularly described in the schedule hereunder written; together with all rights, members, easements, appurtenances to the said premises belonging or appertaining, except and reserving out of this demise unto the lessor all mines and minerals whatsoever in and under the said land, with liberty for the lessor to dig, search for, win, convert, remove, and carry away the same; and also excepting and reserving unto the lessor the free running of water and soil in and through the sewers, drains, and channels for the time being in, upon, or under the said land hereby demised or any part thereof; to have and to hold the land and premises hereby demised unto the lessee for the term of sixty-six years, to be computed from the first day of January, one thousand eight hundred and seventy-seven, yielding and paying therefor yearly and every year during the said term the yearly rent of by equal quarterly payments, on the first day of January, first day of April, first day of July, and first day of October in each and every year, the first of such quarterly payments to be made on the first day of April, one thousand eight hundred and seventy-seven, the said rent to be paid clear of all deductions; and also yielding and paying, in the event of and immediately upon the said term being determined by re-entry under the proviso hereinafter contained, a proportionate part of the said rent for the fraction of the current quarter up to the day of such re-entry. And the lessee doth hereby, for himself, his heirs, executors, administrators, and assigns, covenant with the lessor, his heirs and assigns, in manner following (that is to say)—That he, the lessee, will pay unto the lessor the yearly rent hereby reserved on the days and in the manner hereinbefore appointed for the payment thereof, free of all deductions whatsoever; and also will, during the said term, pay also existing and future taxes, rates, assessments, charges, impositions, and outgoings of every description for the time being payable by either landlord or tenant in respect of the said premises, or any messuages or buildings at any time during the said term to be erected and standing thereon; and also will, within the space of six months from the date of these presents, at his, the lessee's own expense, well and sufficiently fence off the land and premises hereby demised from the adjoining property with a good and substantial three-rail fence or a substantial paling fence; and also will, at his own costs and charges, from time to time, and at all times during the said term hereby granted, well and sufficiently repair, maintain, and keep all buildings, erections, and fences which now are or shall at any time hereafter be erected and built upon the said land hereby demised, or any part or parts thereof, and all fixtures and additions, conveniences, and appurtenances thereto belonging, in good and substantial repair and condition in all respects; and also will permit the lessor, or all persons authorized by him, twice in every year during the said term hereby granted, at all reasonable hours of the daytime, and after twenty-four hours' previous notice in writing, to enter into and upon the said premises and every part thereof, to view the condition thereof, and to give or leave notice in writing upon the said premises for the lessee of all defects and wants of repair then and there found; and also that he, the lessee, will, within three calendar months after every or any such notice, well and sufficiently repair and make good such defects and wants of reparation whereof notice shall have been so given or left; and also that it shall be lawful for the workmen of the lessor or his tenants or occupiers of lands, houses, and premises adjoining or near to the land and premises hereby demised, at all reasonable times in the daytime to enter into and upon the said demised premises or any and every part thereof, or any buildings to be erected thereon, for the purpose of making,

making, digging, constructing, cleansing, and repairing any such drains, sewers, and water-courses in, through, upon, or under the said demised premises; and also that the lessor shall have free liberty of water-course in, through, and under the said demised premises, to carry off the water and sewerage from the adjoining or contiguous properties; and also that the lessee will, at all times during the term hereby granted, at his own cost, keep all messuages and buildings now or hereafter to be erected and built on the said land insured in the joint names of the lessor and lessee against loss or damage by fire in some insurance office, to be approved of by the lessor, in the full value of the buildings so insured, and will, when required by the lessor or his agent, produce the policy or policies of such insurance, and the receipt or receipts for the current year's premium or premiums payable for effecting and keeping on foot such insurance; and also will lay out all moneys which shall be received under or by virtue of any such insurance in rebuilding or repairing such part of the said premises as shall have been destroyed or damaged by fire; and also, that the lessee will not carry on or permit to be carried on any noisy, noxious, or offensive art, trade, or business in or upon the said land or any part thereof, or any building to be erected thereon, or do or permit any act, deed, or thing whatsoever which may be an annoyance or disturbance to the lessor or his tenants in the neighbourhood; and also, that he, the lessee, will from time to time, within twenty-one days after every assignment or assurance of the said demised premises shall have been made, at his, the lessee's own expense, deliver to the lessor a copy of such assignment or assurance; and also, that the lessee will, at the expiration or sooner determination of the said term, deliver up to the lessor the land, and all fences, erections, and buildings thereon, and all fixtures and additions thereto, and the appurtenances thereunto belonging, in good, sound, and substantial state, repair, and condition, and in such state and condition as shall be consistent with the due performance of the several covenants hereinbefore contained. And the lessee further covenants with the lessor that it shall and may be lawful for the lessor, or his lessee or lessees, or any person authorized by him from time to time, and at all times hereafter to win, work, carry away, and dispose of the seams, veins, and mines of coal and other mineral beneath the surface of the land demised the person actually exercising such rights, or working the said mines, paying compensation for any damage done to any fences, erections, buildings, crops, or the surface of the said land, by the sinking or the subsidence of the said land, or any part thereof that may arise in consequence of the working of the said mines; but in no case shall the lessor be liable for the acts of his lessees. Provided always, and these presents are upon the express condition that if the rent hereby reserved, or any part thereof, shall be unpaid for the space of twenty-one days next after any of the days whereon the same ought to be paid as aforesaid, although no formal demand shall have been made thereof, or in case of the breach, non-observant, or non-performance of all or any of the covenants hereinbefore contained, and on the lessee's part to be observed and performed, then, and in all or any of the said cases, it shall be lawful for the lessor to re-enter upon any part of the said land and premises in the name of the whole, and the same to have again, re-possess, and enjoy as of his first and former estate, and thereupon the said term of sixty-six years shall absolutely determine, and this present Indenture, except as to any prior breach on the part of the lessee shall be absolutely void and of no effect. Provided always, and it is hereby agreed and declared that it shall and may be lawful for the lessor to resume and take possession of all, or any portion of the said premises which may be required at any time or times hereafter, for the purpose of any railroads, or other roads or ways, on giving to the lessee three calendar months' previous notice in writing of such his desire, and on making full compensation in respect thereof to the lessee; the amount or extent of such compensation, in case of difference, to be settled by arbitration in the usual manner, one arbitrator to be chosen by the lessor and the other by the lessee, which said two arbitrators, before they enter upon such arbitration, shall choose and elect a third, and the decision of such arbitrators, or any two of them, shall be binding and conclusive on all parties. And the lessor doth hereby covenant with the lessee that he, the lessee, paying the rent and observing and performing the several covenants hereinbefore contained, and on the lessee's part to be paid, observed, and performed, shall and may, peaceably and quietly, have, hold, use, occupy, possess, and enjoy the said land and premises, without any eviction, interruption, or denial of, from, or by, the lessor, or any person or persons lawfully claiming by, from, through, under, or in trust for him. And also, that if the said lessee shall be desirous of taking a renewed lease of the said premises for the further term of thirty-three years from the expiration of the term hereby granted, and if such his desire, shall, prior to the expiration of the said term, give to the lessor, or shall leave at his last known place of abode, in the colony of New South Wales, six calendar months' notice in writing, and shall pay the said rent hereby reserved, and observe and perform the several covenants and agreements herein contained, and on the part of the lessee, to be paid, observed, and performed, to the expiration of the term hereby granted, he, the lessor, will, upon the request of the lessee, and at his expense, and on his executing and delivering to the lessor a counterpart thereof, forthwith execute and deliver to the lessee a renewed lease of the said premises for the further term of thirty-three years, at an increased rent equal to fifty pounds per centum upon the rent hereby reserved and otherwise under the subject to the several covenants, provisoes, and agreements herein contained, but not including the present covenant. And it is hereby lastly declared and agreed that the heirs, executors, administrators and assigns of the lessor, and the executors, administrators and assigns of the lessee, shall be bound by and entitled to the benefit of these presents, and the covenants, provisoes, and conditions herein contained, in like manner as if they had been respectively herein named next after the words lessor and lessee respectively throughout as far as the same will admit, and unless the context be repugnant to such construction.

In witness whereof, the said parties to these presents have hereunto set their hands and seals the day and year first above written.

Mr. A. A. P. Tighe to The Principal Under Secretary.

Sir,

Petersham, 21 April, 1885.

I beg to hand you the enclosed letters, which I this day received from Mr. Alexander Lindsay, concerning the recent Inquiry as to the validity of signatures, &c., to Petitions for and against the proposed Municipality of Merewether.

I have, &c.,

A. A. P. TIGHE.

[*Enclosure.*]

[*Enclosures.*]

Mr. Alexander Lindsay to A. A. P. Tighe, Esq.

Sir, Patrick-street, Newcastle, 17 April, 1885.

I have shown Mr. Gorrick the letter I spoke to you about, and he thinks it would be better to forward it on to you, and that you would then be the proper person to forward it on to head quarters, to appear with your report, which I now do.

I have, &c.,
ALEXANDER LINDSAY.

Mr. Alexander Lindsay to A. A. P. Tighe, Esq.

Sir, Patrick-street, Newcastle, 10 April, 1885.

Since my arrival home this afternoon from the Inquiry *re* incorporation of Burwood and Glebeland, I have thought over the question put by Mr. Melville to Constable Porter, after the inquiry was considered closed, as agreed upon between us, about having served Mr. Patterson with a summons, and further, that he did not attend thereat.

Now, from the answer given to the above question, the Executive or the Minister might come to the conclusion that all others attended that were summoned, whereas the following persons were summoned and did not attend:—Alfred Kedwell, James Searl, Neil M'Crimmon, Mrs. Harris, Patrick Dwyer, Minnie Smattel, Mr. Clemens, William Attwood, Thomas Lewis, W. H. Harris, John Crawley, Edward Stallard, Mrs. Wilton, Mrs. Fisher, Mrs. Muck, John Kennedy, &c., although they were all served, for the following reason, brought under your notice personally, that they refused to pay those poor people their wages after keeping them there several days, and as Commissioner you were appealed to and could do nothing for them. Others would not come, as they did not receive any money to enable them to attend, and, as you are aware, they are simply poor hard working men, depending upon their daily wage for the support of themselves and families. By attaching this letter to your report it will give the necessary explanation for the non-attendance of so many.

I have, &c.,
A. LINDSAY,
(For self and counter petitioners.)

I sincerely trust Mr. Tighe will not think that I have any desire to interfere with his report by sending this letter to him; but if he should think so, or disapprove of me doing so through him, I will send it to the Principal Under Secretary; or perhaps Mr. Tighe would oblige me by doing so.—I am, &c., A. LINDSAY.

Proposed Municipality of Merewether.—Scrutineers' Report.

Colonial Secretary's Office, Sydney, 24 April, 1885.

MR. TIGHE finds that, apart from the matter mentioned below, there are 240 for incorporation, and 239 against. But thirty-seven persons signed both Petitions, and he propounds three possible modes of dealing with the matter:—

1. To let the present expressed wishes of the several persons prevail.
2. To take the signatures to the counter Petition (being the later ones) as superseding those to the original Petition.
3. To hold that those who signed the original Petition were thereby precluded from signing the other (here Mr. Tighe suggests a legal question as to the interpretation of the statute).

According to 1 or 2, the counter Petitioners would be in the majority; according to 3, the original Petition would prevail.

Under the report of Mr. Tighe the original Petition might, I think, prevail, and the necessary steps be taken for the incorporation of Merewether.—C.W., 25/4/85. Approved.—W.B.D., 25/4/85.

Minute Paper for the Executive Council.

MUNICIPAL DISTRICT OF MEREWETHER—INCORPORATION.

Colonial Secretary's Office, Sydney, 27 April, 1885.

THE substance and prayer of the accompanying Petition from 243 persons, described as persons liable upon incorporation to be assessed for Municipal taxes, praying for the incorporation of a Municipality to be called the Municipal District of Merewether, have been published in the Government Gazette, and otherwise, for the period prescribed by section 10 of the Municipalities Act of 1867.

2. A counter Petition signed by 251 persons, described as similarly liable, praying that such incorporation may not be granted, has also been received and published.

3. As, however, the result of an inquiry held by A. A. P. Tighe, Esq., under section 12 of the Municipalities Act has been to show a majority in favour of the Petition for incorporation, I recommend the issue of a proclamation declaring the proposed Municipality to be a Municipal District by the above name, and defining the limits and boundaries thereof, in accordance with the provisions of the aforementioned 10th section of the Act above cited.

WILLIAM B. DALLEY.

Minute of Executive Council.

THE Executive Council having fully considered the Petitions herewith submitted, together with the report of Mr. Tighe, advise that a proclamation be issued incorporating the area referred to by the name of the Municipal District of "Merewether," in terms of the 10th section of "The Municipalities Act of 1867."

ALEX. C. BUDGE,
Clerk of the Council.

Approved.—A.L., 12/5/85. Min. 83-13, 12/5/85.—Confirmed, 21/5/85.

Telegram from Mr. J. A. Gorrick, M.P., to The Colonial Secretary.

Newcastle, 28 April, 1885.

WITH much respect, would ask you to reconsider Tighe's report respecting incorporation of Merewether. There must be serious error somewhere, and people are more than surprised; there is a considerable majority of authentic signatures against incorporation. Will you meet deputation, and when.

Will receive deputation Friday week.—C.W., 28/4/85.

Telegram

Telegram from Principal Under Secretary to Mr. J. A. Gorrick, M.P.

29 April, 1885.

Colonial Secretary will receive deputation regarding Merewether incorporation on Friday week, 8th May, 11 o'clock.

Mr. J. A. Gorrick, M.P., to The Colonial Secretary.

My dear Mr. Dalley, Bolton-street, Newcastle, 6 May, 1885.

Mr. Alex. Lindsay (one of the chief members of our deputation *re* Merewether Incorporation Petitions) will call at your office for the purpose of perusing Mr. Tighe's report. I presume that a member of the deputation seeing it a few hours before the formal interview will make no difference, but it will have the advantage of shortening the formal interview by enabling us to strictly confine ourselves to the bare points which the report will put in issue, of which, however, we will not be aware without some or one of us seeing the report beforehand.

I remain, &c.,

J. A. GORRICK.

[*Extract from "Sydney Morning Herald, dated 9th May,* 1885.]

Incorporation of Merewether.

Two deputations waited simultaneously upon Mr. Wright (for Mr. Dalley) yesterday in reference to the incorportion of a place called Merewether, situated to the south of and near to Newcastle. One deputation, in favour of incorporation, was introduced by Mr. Melville, M.L.A., and Mr. Luscombe, M.L.A. The other, in opposition, was introduced by Mr. Levien, M.L.A. (for Mr. Gorrick) and Mr. Mitchell, M.L.A.

Mr. Wright, after very patiently hearing both sides, said that a Petition had been sent in to the Government for the incorporation of Merewether, and a counter Petition was sent in against it, with an apparent majority.

As there appeared to be some dispute about the Petitions, the Government appointed Mr. A. A. P. Tighe, to inquire into the circumstances, in pursuance of the 12th section of the Municipalities Act. Mr. Tighe, having held an exhaustive inquiry, sent in a report, in which he found that the original Petition had 240 genuine signatures, and the counter Petition had only 239. But there were twenty-nine persons who had signed the counter Petition after signing the original one, and therefore were clearly not entitled to any consideration with regard to the second Petition. This would of course make a majority of thirty in favour of the original Petition. Mr. Dalley had settled the matter by a minute, which was now ready to go before the Executive Council, recommending the incorporation of this locality. His own opinion was that the incorporation of this locality would be a great boon to the inhabitants who were engaged in working the coal mine, and who had a right to good streets and proper sanitary arrangements. He would submit to his Colleague, Mr. Dalley, all that had been said on both sides, but he would not advise that gentleman to reverse the decision that he had already arrived at, or to re-open the question.

Will the Under Secretary for Lands kindly obtain and furnish for proclaimation a technical description of the boundaries of the proposed Municipality.—The Under Secretary for Lands,—B.C., 26 May, 1885. J.B. for P.U.S. The Surveyor General.—F.H.W., for Under-Secretary, 28/5/85.

Proposed Municipal District of Merewether.

It is submitted for the consideration of the Secretary for Lands that the Petition for a Municipality at Merewether be forwarded for the special consideration of the Colonial Secretary, attention being invited to the erroneous and indefinite nature of the description which has made it exceedingly difficult to determine the lands that were intended to be included.

The starting point of the description is from the southern extremity of the east boundary of E. C. Merewether's 950 acres, and thence on part of the south by the summit of a dividing ridge north-westerly to the west boundary of the last-named measurement. As there are two ridges, one extending from the south-east corner of the land referred to, and the other from a point on the south-east boundary of the grant immediately north of its south boundary, it is believed that the former range is that which was referred to.

Further, the description is continued from the west boundary of E. C. Merewether's 950 acres, bearing north to the south-west corner of the village of Adamstown, whereas a north line from the last-mentioned point would strike the south-east corner instead of the south-west of Adamstown, and exclude land which it was probably intended to include.

It is submitted that it be ascertained what lines should be adopted in defining the south and west boundaries of the proposed Municipality.

G. LEWIS, for the
SURVEYOR GENERAL,
1 June, 1885.

Urgent. Recommendation submitted for approval.—J.B., 1/6/85. Approved.—F.A.W., 1/6/85. The Principal Under Secretary.—C.O., Department of Lands, B.C., 2 June, 1885. The Under Secretary for Lands, B.C., 5 June, 1885.—J.B., for P.U.S. Submitted.—The description supplied by the Petitioners is clearly erroneous. But it is possible that Mr. Lewis (who is going shortly to the northern districts) may be able to verify the intended boundaries by personal inspection, if the Surveyor General instructs him to do so. The papers might be referred to the Secretary for Lands with that view. 3 June, 1885. Approved.—A.S., 5/6/85.

The

The Surveyor General.—J.E., 9/6/85. Mr. Geo. Lewis, 10/6/85, M.A.

As requested by the Colonial Secretary, I made a personal inspection of the boundaries intended to be included within the proposed Municipal District of Merewether, and enclose a description of the boundaries cleared and marked on the ground, and which can readily be followed. A sketch can be prepared for the information of the Municipality after incorporation, should they so desire.—G. Lewis, 7 July, 1885.

County of Northumberland, parish of Newcastle, area, 1,114 acres: Commencing at the south-east corner of James Mitchell's, now E. C. Merewether's 953 acres; bounded thence on part of the west by part of the east boundary of that portion bearing north 41 minutes west 25 chains 26 links to a main dividing ridge; thence generally on the south by lines bearing—

North	26	degrees	59	minutes	west	8	chains	3 links

to the east boundary of James Mitchell's, now E. C. Merewether's portion No. 177 of 413¾ acres; thence on the south-west by a line bearing about north 39 degrees 38 minutes west 85 chains 50 links, to the south-west corner of portion No. 7 Thomas Adams's 54 acres; thence on part of the north by the south boundary of that portion bearing north 89 degrees 33 minutes east 52 chains 53 links; on the remainder of the west by its east boundary bearing north 5 minutes west 10 chains 52 links to its north-east corner; thence on the remainder of the north by part of the south boundary of the Australian Agricultural Company's 2,000 acres, which forms part of the south boundary of the Municipal District of Hamilton, proclaimed 11th December, 1871, being lines bearing about south 79 degrees 14 minutes east 5 chains 11 links, and about north 89 degrees 4 minutes east 111 chains to a north-west boundary of the Municipality of Newcastle, as proclaimed 8th September, 1871; thence by part of that boundary south-westerly to its southern extremity; thence on the north-east by a south-west boundary of that Municipality south-easterly to the shore of the Pacific Ocean; thence by the Pacific Ocean south-westerly, to the point of commencement. Shown in plan catalogued M. 1-2,398 in the Surveyor General's Office, Sydney.

The Under-Secretary for Lands.—P. F. Adams, 8 July, 1885. The Principal Under-Secretary.—C.O., B.C., 8/7/85. For Proclamation, 10/7/85. Proclamation published in Supplementary Government Gazette, No. 355 of 20th August, 1885—*Newcastle Herald* and *Newcastle Despatch* 27th August, 1885.

New South Wales, } Proclamation by His Excellency The Right Honorable Lord Augustus William
to wit. } Frederick Spencer Loftus, Knight Grand Cross of the Most Honorable Order
(L.S.) of the Bath, a Member of Her Majesty's Most Honorable Privy Council,
Augustus Loftus, Governor and Commander-in-Chief of the Colony of New South Wales and its
Governor. Dependencies.

Whereas the Municipalities Act of 1867 provides for the constitution of a Municipality, on receipt of a Petition signed by not fewer than fifty persons, who would upon incorporation be liable to be assessed for Municipal taxes in respect of property or household residence within the area proposed to be so incorporated: And whereas a Petition signed by two hundred and forty-three persons liable to be so assessed upon such incorporation has been received by the Governor, praying for a Municipality, to be styled the "Municipal District of Merewether": And whereas the substance and prayer of such Petition have been duly published in the Government Gazette and otherwise, in accordance with the said Act: Now, therefore, I, Lord Augustus William Frederick Spencer Loftus, the Governor aforesaid, in pursuance of the provisions of the said Act, and with the advice of the Executive Council, do, by this my Proclamation, declare that the area hereinafter described shall be and the same is hereby constituted a Municipality under the name and style of the Municipal District of Merewether, viz.:—

County of Numberland, parish of Newcastle, area 1,114 acres: Commencing at the south-east corner of James Mitchell's, now E. C. Merewether's, 950 acres; bounded thence on part of the west by part of the east boundary of that portion bearing north 41 minutes west 25 chains 26 links to a main dividing ridge; thence generally on the south by lines bearing north 26 degrees 59 minutes west 8 chains 3 links, north 36 degrees 57 minutes west 8 chains 55 links, north 66 degrees 22 minutes west 14 chains 22 links, north 87 degrees 1 minute west 4 chains 99 links; south 72 degrees 32 minutes west 3 chains 46 links, south 63 degrees 13 minutes west 7 chains 27 links, south 85 degrees 29 minutes west 7 chains 23 links, south 56 degrees 26 minutes west 10 chains 63 links, south 23 degrees 28 minutes west 6 chains 42 links, south 48 degrees 56 minutes west 2 chains 95 links, south 74 degrees 34 minutes west 9 chains 60 links, south 70 degrees 9 minutes west 5 chains 33 links; north 70 degrees 55 minutes west 5 chains 69 links to the east boundary of James Mitchell's, now E. C. Merewether's, portion No. 177 of 413¾ acres; thence on the south-west by a line bearing about north 39 degrees 38 minutes west 85 chains 50 links to

the

the south-west corner of portion No. 7, Thomas Adams's 54 acres; thence on part of the north by the south boundary of that portion bearing north 89 degrees 33 minutes east 52 chains 53 links; on the remainder of the west by its east boundary bearing north 5 minutes west 10 chains 52 links to its north-east corner; thence on the remainder of the north by part of the south boundary of the Australian Agricultural Company's 2,000 acres, which forms part of the south boundary of the Municipal District of Hamilton, proclaimed 11th December, 1871, being lines bearing about south 79 degrees 14 minutes east 5 chains 11 links, and about north 89 degrees 4 minutes east 111 chains to a north-west boundary of the Municipality of Newcastle, as proclaimed 8th September, 1871; thence by part of that boundary south-westerly to its southern extremity; thence on the north-east by a south-west boundary of that Municipality south-easterly to the shore of the Pacific Ocean; thence by the Pacific Ocean south-westerly, to the point of commencement.

Given under my Hand and the Seal of the Colony, at Government House, Sydney, this twentieth day of August, in the year of our Lord one thousand eight hundred and eight-five, and in the forty-ninth year of Her Majesty's Reign.

By His Excellency's Command,
ALEX. STUART.

GOD SAVE THE QUEEN!

The Principal Under Secretary to Mr. Daniel Conway, and the other Gentlemen who signed the Counter Petition.

Gentlemen, Colonial Secretary's Office, Sydney, 20 August, 1885.

Referring to my letter of the 19th March last, concerning the appointment of Mr. A. A. P. Tighe to make inquiry, under section 12 of the Municipalities Act of 1867, into the Petition for and counter Petition against the incorporation of a Municipality to be called the Municipal District of Merewether, I am now directed by the Colonial Secretary to inform you that the report of Mr. Tighe having been furnished, His Excellency the Governor, with the advice of the Executive Council, has been pleased, by a proclamation published in a Supplementary Government Gazette of this date, to constitute the Municipal District of Merewether under the provisions of the Municipalities Act.

I have, &c.,
CRITCHETT WALKER.

From the Principal Under Secretary to Mr. John Young and other Gentlemen who signed the Petition for Incorporation

Gentlemen, Colonial Secretary's Office, Sydney, 20 August, 1885.

Referring to my letter of the 19th of March last, respecting the Petition praying for the incorporation of a Municipaity, to be called the Municipal District of Merewether, I am now directed by the Colonial Secretary to state that His Excellency the Governor, with the advice of the Executive Council, has been pleased, by a proclamation published in a Supplementary Government Gazette of this day's date, a copy of which is enclosed, to constitute such Municipality accordingly.

2. I am further desired to point out that the 65th section of the "Municipalities Act of 1867" provides that the first election of Aldermen and Auditors shall take place within three months from the date of incorporation, and to request that you will fix a day not earlier than the middle of October next, for the holding of the Merewether election, and communicate the same to me, as well as the name of the place where the election is to be held, with the least possible delay.

3. The name in full, of some gentleman duly qualified as an elector, and willing to Act as first Returning Officer, should be furnished at the same time.

I have, &c.,
CRITCHETT WALKER.

The Principal Under Secretary to The Under Secretary for Justice.

Sir, Colonial Secretary's Office, Sydney, 20 August, 1885.

I am directed by the Colonial Secretary to state for the information of the Minister of Justice, that a proclamation has been published in a Supplementary Government Gazette of the present date, incorporating a Municipality to be called the Municipal District of Merewether.

I have, &c.,
CRITCHETT WALKER.

Sydney: Thomas Richards, Government Printer.—1885.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUNICIPALITIES ACT AMENDMENT BILL.

(PETITION IN FAVOUR OF—BOROUGH COUNCIL OF WOOLLAHRA.)

Received by the Legislative Assembly, 24 September, 1886.

To the Honorable the Speaker and the Members of the Legislative Assembly.

The Petition of the Borough Council of Woollahra,—

SHOWETH:—

That your Petitioners notice that a Bill has been sent to you from the Legislative Council to amend the Municipalities Act so as to give power to municipalities to appoint a polling-place within the boundaries of the city of Sydney, in addition to the polling place or places to be appointed by the Returning Officer under the provisions of the Principal Act.

That the provision sought to be introduced is very desirable and necessary, as at present time very many electors are disfranchised by reason of their not being able to vote locally.

Your Petitioners therefore humbly pray that the Bill may have your favourable consideration and support.

And your Petitioners, as in duty bound, will ever pray.

For and on behalf of the Borough Council of Woollahra.

W. J. TRICKETT,
Mayor.

NEW SOUTH WALES.

MUNICIPALITIES ACT AMENDMENT BILL.

(PETITION IN FAVOUR OF—MUNICIPAL COUNCIL OF BOROUGH OF VICTORIA.)

Received by the Legislative Assembly, 5 October, 1886.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Mayor and Aldermen of the Municipal Council of the Borough of Victoria,—

HUMBLY SHOWETH:—

1st. That a Bill called "A Bill to amend the Municipalities Act of 1867" is now before your Honorable House, having been transmitted thereto from the Honorable the Legislative Council, which passed the measure without amendment.

2nd. That in consequence of a decision of the Supreme Court of New South Wales, a large number of ratepayers will be disfranchised by reason of the establishment of polling-places in Sydney or Suburban Municipalities having been declared illegal.

3rd. Your Petitioners therefore humbly pray that your Honorable House will pass the said Bill during present Session.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow* 5 *signatures.*]

Similar Petitions were received:—

On 8th October, 1886, from the Mayor and Aldermen of the Municipal Council of Balmain; 1 signature.

On 8th October, 1886, from the Mayor and Aldermen of the Municipal Council of Waverley; 1 signature.

On 8th October, 1886, from the Mayor and Aldermen of the Municipal Council of Five Dock; 1 signature.

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MUNICIPALITIES.

(ALIGNMENT OF STREETS—PARTICULARS OF, WITHIN TEN MILES OF SYDNEY.)

Ordered by the Legislative Assembly to be printed, 14 September, 1886.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New Wales, dated 4th June, 1886, That there be laid upon the Table of this House, a Return showing:—

"(1.) The name of each Municipal Borough within 10 miles of Sydney, the "streets of which have been aligned.

"(2.) The total length of the streets so aligned.

"(3.) The cost of the alignment of each Borough.

"(4.) The total cost borne by each Borough.

"(5.) The length of the streets in each Borough, completed and aligned.

"(6.) The length of the streets in each Borough, the alignment of which "has not been completed."

(Mr. Abbott.)

RETURN affording information with reference to Alignment of Streets in Boroughs within 10 miles of Sydney.

1. Streets have been aligned in the Boroughs of Alexandria, Ashfield, Balmain, Burwood, Camperdown, Canterbury, Darlington, East St. Leonards, Five Dock, Glebe, Hunter's Hill, Leichhardt, Marrickville, Manly, M'Donald Town, Newtown, North Willoughby, Paddington, Petersham, Randwick, Redfern, Ryde, St. Leonards, St. Peters, Victoria, Waterloo, Waverley, West Botany, and Woollahra.

2. The total length of streets so aligned is 518½ miles approximately.

3. The cost of the alignment of each Borough cannot be stated because the surveys have extended over a period of more than 20 years, and no special record of the cost has been kept. The streets involving the most searching investigation, and in the survey and definition of which the greatest difficulties were known to exist and had to be encountered, have now been aligned, and very few such remain to be dealt with; the cost of survey in these cases has reached an average of £30 per street, while ordinary cases average very much less, and it is estimated that the cost of present and future surveys will range between £11 and £30, and the average cost will probably be under £20 per street.

4. No direct contribution towards the cost of alignment surveys is made by the Boroughs, but they are required to provide and erect at their own cost, under the supervision of the surveyor, substantial alignment-posts or stone blocks for the permanent marking of the survey.

5.

[805 copies—Approximate Cost of Printing (labour and material), £1 12s. 3d.]

891—

5. The length of streets surveyed for alignment in each Borough is, approximately :—

	Miles.	Chains.		Miles.	Chains.
Alexandria	5	2	Newtown	16	64
Ashfield	33	75	North Willoughby	41	53
Balmain	19	59	Paddington	11	56
Burwood	18	50	Petersham	14	30
Camperdown	7	76	Randwick	41	25
Canterbury	40	7	Redfern	10	12
Darlington	1	8	Ryde	48	18
East St. Leonards	7	23	St. Leonards	16	55
Five Dock	22	0	St. Peters	11	1
Glebe	10	74	Victoria	5	56
Hunter's Hill	17	0	Waterloo	7	43
Leichhardt	12	6	Waverley	28	26
Marrickville	20	25	West Botany	9	35
Manly	13	43	Woollahra	20	65
M'Donald Town	5	12			

6. The length of streets in each Borough which may yet require to be aligned cannot be given as it depends upon the number of streets dedicated in private subdivisions from time to time, but it may be stated that in most of the Boroughs quoted the greatest number of the streets provided in the original Government subdivisions has by this time been either aligned or surveyed for alignment.

Sydney : Thomas Richards, Government Printer.—1886.

(BOROUGH OF BALMAIN—BY-LAW.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.

Colonial Secretary's Office,
Sydney, 29th October, 1885.

BOROUGH OF BALMAIN—BY-LAW.

THE following By-law, made by the Council of the Borough of Balmain, relating to persons loitering in public places within the Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the "Municipalities Act of 1867."

P. A. JENNINGS.

BY-LAW OF THE BOROUGH COUNCIL OF BALMAIN.

ANY person or persons standing or loitering upon or near any of the streets, footways, or other public places within the Borough of Balmain, to the inconvenience or annoyance of the passers-by or residents, or in any way interrupting or impeding the traffic, shall discontinue doing so upon and at the request of the Mayor, or any Alderman, officer, or servant of the Council, or any Police Officer stationed within the said Borough; and any person or persons so offending and refusing or neglecting to remove or disperse when requested as aforesaid, shall for every such offence, upon conviction, forfeit or pay a penalty or sum of not less than ten shillings or exceeding five pounds.

Made and passed by the Council of the Borough of Balmain, this twenty-fourth day of March, in the year of our Lord one thousand eight hundred and eighty-five.

(L.S.) J. GARRARD,
Mayor.

H. B. MACINTOSH,
Council Clerk.

(BOROUGH OF PETERSHAM—BY-LAW.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 29th October, 1885.

BOROUGH OF PETERSHAM.—BY-LAW.

THE following additional By-law, made by the Council of the Borough of Petersham, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the "Municipalities Act of 1867."

P. A. JENNINGS.

BOROUGH OF PETERSHAM.—ADDITIONAL BY-LAW.

No person shall use, drive, or conduct any vehicle along any street or roadway within the said Borough between sunset and sunrise without carrying a light upon some conspicuous part of such vehicle, in such a manner as that the same shall be distinctly visible to persons either meeting or following such vehicle. Any person committing a breach of this By-law will be liable to a penalty not exceeding ten pounds nor less than ten shillings.

Passed by the Council of the Borough, on the twenty-eighth (28th) day of July, 1885.

(L.S.) WM. LOVEL DAVIS,
Mayor.

AUBREY MOWLE,
Council Clerk.

(BOROUGH OF QUEANBEYAN—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 12th November, 1885.

BOROUGH OF QUEANBEYAN.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Queanbeyan, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

P. A. JENNINGS.

BY-LAWS to regulate the proceedings of the Municipal Council of Queanbeyan, the collection of rates, and the general good rule and government of the Municipality.

THAT the following be and are hereby confirmed as the By-laws of the Borough Council of Queanbeyan :—

Meetings of Council.

Ordinary meetings.

1. Unless otherwise ordered, the Council shall meet for the despatch of business on every alternate Thursday, at the hour of 7·30 p.m., from the 1st March to the 1st September, and from the 1st September to the 1st March at the hour of 8·30 p.m., unless such day shall happen to be a public holiday, in which case the meeting shall be held on such day as the Mayor may appoint.

Chairman—election of, in absence of Mayor.

2. If the Mayor be absent fifteen minutes after the hour appointed for any meeting, the Aldermen present shall at once proceed to elect a Chairman : Provided always that, if the Mayor shall afterwards attend, such Alderman shall leave the chair which shall be taken by the Mayor. If a quorum be not present within thirty minutes of the time appointed, such meeting shall lapse, and the names of those members present shall be noted in the minute-book.

Order of procedure.

3. The following shall be the course of procedure at such meetings, viz. :—

(i) The reading and confirmation of minutes of the previous meeting, no discussion being permitted on such minutes, except as to their accuracy.

(ii) Reading of correspondence, and dealing with same.

(iii) Reports of Committees, and, when practicable, dealing with same.

(iv) Presenting and reading petitions.

(v) Orders of the day as specified on business paper.

(vi) Adjourned motions, and motions of which notice has been given, in the order in which received.

(vii) Notices of motion, which must be numbered as received by Council Clerk.

(viii) Such other business as may lawfully be brought before the Council : Provided that it shall be competent for the Council to take any particular matter out of the regular order in which it stands on the business paper, and in like manner to order that any particular motion or matter of business shall have precedence at a future meeting.

Aldermen to stand whilst speaking.

4. Except in committee every Alderman shall stand whilst speaking, and shall address the chair.

Pre-audience—how determined.

5. If two Aldermen shall rise to speak at same time the Mayor or Chairman shall decide which Alderman shall have pre-audience.

Limit to speaking.

6. No Alderman shall speak twice on the same question, unless in committee or in explanation : Provided always that any Alderman having previously spoken on the original question shall be entitled to speak once on each amendment, and that the mover of the original question shall have the right of final reply. No Alderman shall speak for a longer period than ten minutes without consent of Council.

No digression.

7. No Alderman shall digress from the subject under discussion.

Aldermen making offensive remarks to apologise.

8. No Alderman shall make any offensive personal remarks upon, nor impute any improper motives to, any other Alderman; and any Alderman so offending shall, immediately upon being required thereto by the Mayor or Chairman, withdraw such offensive expressions, and retract such imputations of motives, and make an apology satisfactory to the Council. Any Alderman refusing so to apologise, and to withdraw such offensive expressions or imputations, the same shall be recorded in the minutes as evidence in court, and he shall, on conviction, be liable to a penalty not exceeding ten pounds.

Mayor to preserve order.

9. The Mayor or Chairman shall preserve order, and may at any time call to order any Alderman whom he may deem to be out of order.

Calls to points of order.

10. Any Alderman may call the attention of the Mayor or Chairman to any Alderman being out of order, and to any point of order.

Consideration of points of order.

11. Every point of order shall be taken into consideration immediately upon its rising, and the decision of the Mayor or Chairman shall be final and conclusive, except as hereinafter provided.

Appeal from decision of chair.

12. Any Alderman who is dissatisfied with the decision of the Mayor or Chairman on any such question of order or of practice may, by motion on notice, respectfully worded, invite the Council to lay down a different rule or principle for the determination of any similar question of order or of practice which may thereafter arise. Any rule or principle thus laid down shall be binding upon all parties unless and until it be rescinded, but shall have no retrospective operation.

Questions, how put.

13. All questions shall be put through the Mayor or Chairman, and no motion shall be discussed unless and until it be seconded.

Notices of motion to be in writing.

14. Every motion, notice of which has been given, shall be in writing, and signed by the mover. No motion seconded shall be withdrawn without leave of the Council.

Casting vote.

15. The Mayor or Chairman shall have an ordinary and a casting vote, and may take part in all discussions and proceedings of the Council or committees thereof, but shall not move or second any motion.

Discussion of amendments.

16. When a motion shall have been moved and seconded, any Alderman shall be at liberty to move an amendment thereon, but no such amendment shall be discussed unless and until it be seconded.

Second amendments, when permissible

17. No second or subsequent amendment shall be taken into consideration until the previous amendment shall have been disposed of.

When an amendment becomes the question.

18. If an amendment be carried, the question as thereby amended shall become the question before the meeting, whereupon any other amendment may be moved.

Mode of putting questions.

19. The Mayor shall put all questions first in the affirmative, and then in the negative (provided that when an amendment is moved to any motion the amendment shall be put first), and may do so as often as may be necessary to enable him to determine the sense of the Council thereon, and thereupon he shall declare his decision, which shall be final, unless a division be called for.

Voting how done.

20. Voting shall be by show of hands, and it shall be competent for any Alderman to call for a division of the Council; and no Alderman shall leave his seat or place until the names of the Aldermen and how voting shall have been taken down by the Council Clerk or person officiating for him.

Notices of motion to rescind.

21. No motion the effect of which, if carried, would be to rescind any motion which has already been resolved on by the Council, shall be entered on the business paper unless a call of the whole Council has been duly granted and made for that purpose.

Question to be read by Council Clerk.

22. Any Alderman may require the question or matter under discussion to be read once for his information and, upon such request the question or matter under discussion shall be read by the Council Clerk.

Divisions to be minuted.

23. All divisions of the Council shall be inserted in the minutes of the proceedings.

Debates may be adjourned.

24. Debates may be adjourned to a later hour on same day, or to another day.

Pre-audience on resumption of debate.

25. The Alderman upon whose motion any debate shall be adjourned shall be entitled to pre-audience on the resumption of the debate.

Motions of adjournment.

26. Any motion for adjournment of the Council, if seconded, shall be immediately put without discussion; but, if such motion be negatived, it shall not be competent for any Alderman to make a similar motion until thirty minutes shall have elapsed.

Motions under notice when not to be proceeded with.

27. No motion of which notice shall have been entered on the business paper shall be proceeded with in the absence of the Alderman by whom such notice shall have been given, unless by some other Alderman producing an authority for that purpose from such first-named Alderman.

Order of special meetings.

28. At special meetings of the Council, the business (after the minutes shall have been read and verified, which shall be done in the same manner as at ordinary meetings) shall be taken in such order as the Mayor or Aldermen at whose instance the special meeting shall have been called may have directed.

Orders of the day.

Orders of the day defined.

29. The orders of the day shall consist of any matters other than motions on notice which the Council shall at any previous meeting thereof have directed to be taken into consideration, or which the Mayor or Chairman or any Committee of the Council shall have directed to be entered upon the business paper for consideration.

Who to move.

30. The Alderman who has the usual charge of, or who has previously moved in reference to, the particular business to which any such order of the day relates, shall be the person called upon to move: Provided that the Mayor or Chairman for the time being may, as to any order of the day entered by his direction, arrange with and call upon any Alderman to move the same.

Petitions.

Contents of petition to be known and stated before presentation.

31. It shall be incumbent on every Alderman presenting a petition to acquaint himself with the contents thereof, and to ascertain that it does not contain language disrespectful to the Council. The nature and prayer of such petition shall be stated to the Council by the Alderman presenting the same, and all such petitions shall be received only as the petitions of the parties signing the same.

Petitions—order of proceeding with referred to.

32. On the presentation of any petition the only question that can be entertained by the Council shall be that the petition shall be received, or that it be referred to a committee: Provided that any petition which has been received may be taken into consideration upon notice of motion in the usual manner.

Protests against resolutions or votes.

33. Any member of the Council may protest against any resolution or vote of the Council. Notice of intention to protest must be given at the meeting when such resolution or vote is come to, and the protest itself in writing must be handed to the Council Clerk not later than three days after such notice. The Council Clerk shall enter every such protest in the minute-book; but if, in the opinion of the Council, such protest be inconsistent with truth, or disrespectfully worded, it may, by resolution of the Council, be ordered to be expunged.

Call of Council.

34. A call of the whole Council may be ordered by any resolution of which due notice shall have been given for the consideration of any motion or matter of business before such Council.

Exclusion of strangers.

35. Upon the opening of any tender, or during the appointment of any officer, strangers shall be ordered to withdraw.

Letters—who to open.

36. All letters shall be opened by the Mayor or Chairman, who shall acquaint himself with their contents before reading them to the Council.

Tenders to be advertised.

37. Whenever it is determined by the Council to carry out any work by contract, public notice calling for tenders shall be given by advertisement in the local papers, and by a notice posted on a board outside the Council Chambers for one week at least.

Committees of the Whole.

38. On resolution, the Council may resolve itself into a committee of the whole for the consideration of any question brought regularly before it. In Committee of the whole all the rules herein laid down for the conduct of the ordinary business of the Council shall be observed, except the rules limiting the number of times of speaking, and requiring the Aldermen to stand whilst speaking. All reports of Committees of the whole shall be made by the Chairman *viva voce*, and shall be recorded in brief in the minute-book, but no such report shall, by reason of such entry, be considered as adopted by the Council.

Standing and Special Committees.

Special Committees.

39. The appointment of Special Committees shall continue until the specific duty for which they have been appointed shall have been discharged: Provided that such Committees may at any time be dissolved by vote of the Council.

Standing Committees.

40. Besides such Special Committees as shall from time to time be appointed there shall be three Standing Committees elected annually, viz., By-laws Committee, Finance Committee, and a Works Committee, each of which Standing Committees shall consist of not less than three Aldermen, and shall include an Alderman from each Ward, should the Borough be so divided.

By-laws Committee—their duties.

41. The By-laws Committee shall prepare, for consideration of the Council, drafts of all By-laws which may be required for the good government of the Municipality, and shall supervise the administration of such By-laws and adopt measures for their enforcement.

Finance Committee.

42. The Finance Committee shall deliberate and report upon all questions affecting the finance of the Municipality which shall be committed to it by resolution of the Council; it shall also examine the accounts and watch over the financial administration of the Municipality.

Duties of Finance Committee.

43. It shall also be the duty of the Finance Committee to inspect all books of accounts, records, statements, and memoranda from time to time, at least once in each three months, to ascertain that the same are properly kept, and to report at once to the Council any inaccuracy, or appearance thereof, which they may have discovered in the keeping of the same.

Accounts to be examined by.

44. No money shall be paid by the Council until the account for the same shall have been examined and reported upon by the Finance Committee.

Works Committee.

45. The Works Committee shall inspect and direct all public works in progress within the Municipality, and may call the attention of the Council thereto by report at all times, and to the state of any public street, lane, or thoroughfare, and to any other improvements which may be required within the Municipality, and shall consider and report upon all questions relating to improvements that they may think necessary, or that may be committed to them by resolution of the Council.

Duties of Chairman of Committees.

46. Each Chairman of a Standing Committee shall keep a record of the proceedings of such Committee in a book to be used solely for that purpose; such book shall be the property of the Council, and shall be produced to the Council when required.

Standing Committees—when appointed.

47. The Standing Committees shall be appointed within thirty-one days after the commencement of each municipal year.

Committees may take evidence.

48. Every Committee may take evidence upon any question or questions of fact, and a minute of such evidence shall in all cases be appended to their report.

Reports of Committees to be in writing, &c.

49. The report of every Committee shall be in writing, on foolscap, with one-third margin, and shall be signed by the Chairman of such Committee.

Council Clerk to call meetings of Committee.

50. The Chairman of any Committee may direct the Council Clerk to call meetings of such Committee at such time and place as he may deem expedient.

Protection of Funds and Records.

Expense of proposed works to be ascertained.

51. Except in cases of emergency, as hereinafter specially provided for, no work affecting the funds of the Municipality shall be undertaken until the probable expense thereof shall have been first ascertained by the Council.

Payment to be duly authorised.

52. No payments out of the funds of the Corporation shall be made but such as are authorised by the Council, and all payments shall be made on a warrant signed by the Mayor or Chairman, and countersigned by the Council Clerk.

Works of emergency.

53. For works of emergency requiring immediate attention, and for necessary current expenses between the meetings of Council, a warrant may be issued by the Mayor, with the assent of any two Aldermen, authorising the expenditure of any sum or sums not exceeding in all twenty pounds (£20): Provided always that the particulars of such expenditure be reported to the Council at their next meeting, and that no outlay involving a disobedience or evasion of any order or resolution of such Council shall on any pretence be thus authorised.

Custody of records, &c.

54. All stationery, books, records, papers, maps, agreements, plans, deeds, charters, muniments of or relating to the municipality, shall be kept at the Council Chambers, and shall be in charge of the Council Clerk, who shall be responsible for the safe custody of the same.

Records to be filed.

55. All such records other than the minute-book and other books, and other than electoral rolls and other records relating to elections, shall be numbered and filed in due order, and shall be duly registered by the Council Clerk in a book to be kept by him for that purpose. Upon the face of every such record to which there is any reference in the minute-book there shall be a note of the page wherein it is so referred to.

Books, papers, or records not to be exposed or shown.

56. No member or officer of the Council shall show, lay open, or expose any of the books, papers, or records of the Council to any person not being a member of such Council, without leave had and obtained of such Council, except as provided by law, under a penalty not exceeding five pounds.

Books, &c., not to be removed without Mayor's leave.

57. No person shall remove from the Council Chambers any such book, record, or paper of the Council without leave for such removal having been first obtained from such Council; and any person offending against this by-law shall for every such offence be liable to a fine not less than one pound and not exceeding ten pounds: Provided always that leave for the temporary removal of books or other records for the purpose of posting up entries, preparing returns, or performing any other necessary duty, may be granted by the Mayor to the Council Clerk or other officer of the Council. Such leave shall be in writing, and shall specify the books for the removal of which leave is granted: Provided also that nothing herein contained shall be held to affect the further liability of any person so removing any book, record, or paper as aforesaid, and shall not have returned the same, to prosecution for stealing the same, or to an action at law for detention of the same.

Books, &c., not to be defaced or altered.

58. Any person wilfully destroying, defacing, or altering any book or books, record or records of the Council, shall for every such offence be liable to a penalty not exceeding fifty pounds.

Custody of Seal.

59. The Mayor shall have the custody of the Corporation Seal, and shall affix it to all documents creating an obligation on the Council, in the presence of the Council Clerk, who shall duly verify the impression of the same by his signature. In every case such document shall be signed by the Mayor.

Impression of Seal not to be made.

60. No member or officer of the Council shall take any impression of the Corporation Seal.

Appointment to permanent offices how made.

61. No appointment to a permanent office under the Council shall be made until the salary for such office be fixed, and advertisements shall have been inserted in the local papers stating the nature of the office and inviting applications to be sent thereon: Provided that the Council may appoint without advertisement any salaried officer of the Council to any other permanent office to which no further salary is attached, or to any office requiring only occasional attention, and when payment for such duty is to be proportionate only to the extent of duties performed; and that the Council may employ from time to time, as may be found necessary, workmen or labourers on the public works of the Municipality.

Duties of officers to be defined.

62. The duties of all officers and servants of the Corporation shall be defined by regulations made from time to time by the Council.

Mayor to have supervision.

63. The Mayor shall exercise a general supervision over all officers and servants of the Corporation, who shall pay due deference to his instructions and directions, whether in writing or otherwise, in all cases where such instructions and directions have reference to the performance of any matter or thing within the sphere of such officer's or servant's duties under the Corporation.

Complaints against officers.

64. All complaints against officers and servants of the Municipality must be in writing, and signed by the person or persons complaining, and shall be addressed to the Mayor, who shall have power at once to investigate them. All explanations by the person or persons complained against shall be in writing, and placed before the Mayor, who upon investigating the case shall state in writing his opinion as to what order should be made thereon, and such complaints and explanations, with the Mayor's opinion, shall be laid before the Council at its first meeting and be dealt with forthwith.

Determination of engagement of officers.

65. The engagement of any officer may be determined at any time by a vote of the majority of the whole Council: Provided that one month's notice shall be given to every such officer whose services are to be so dispensed with, and that any officer may resign his appointment by giving to the Council one month's notice in writing of his desire and intention to do so: And provided further, that nothing herein contained shall be taken or construed in any way to affect the powers of suspending officers and of dismissing men for misconduct, vested in the Council by the 152nd section of the Municipalities Act of 1867, 31 Vic. No. 12.

Bonds, where deposited.

66. All bonds given by the officers or servants of the Corporation shall be deposited with the attorney or bankers of the Council.

Sureties to be qualified and approved.

67. In all cases where security shall be required by the Municipalities Act of 1867, the sureties offered shall be approved of by the Council; and it shall not be competent for the Council to accept as surety any of its members, or any person holding office under the Council.

Moneys to be banked.

68. All moneys received by any officer of the Council shall immediately, or within twenty-four hours after the receipt of the money, when possible, be paid by such officer to the Treasurer, together with a statement in writing setting forth the particulars thereof; on receipt of which the Treasurer shall sign a voucher, acknowledging the receipt of such payment, and shall pay the amount thereof into the Bank within twenty-four hours after such receipt thereof.

Rates.

Rates to be collected half-yearly.

69. All rates levied or imposed by the Council under the 164th section of the Municipalities Act of 1867, 31 Vic. No. 12, or under any other section thereof, and for the purposes mentioned in the said section or sections, shall be collected half-yearly; and every such instalment shall be held due and payable on such days as the Council may by resolution appoint at the time of imposing such rates; and all such rates shall be payable at the office of the Council Clerk during office hours, that is to say, between the hours of 11 a.m. and 3 p.m. of every Monday, Thursday, and Saturday, in each week, or upon such other days as the Council may from time to time appoint by resolution.

Change of occupiers—notice to be given of.

70. If the owner, tenant, or occupier of any property within the Municipality, for which he or she is assessed, shall give up the possession of such property, he or she shall, within one day from the date of giving up possession thereof, deliver to the Council Clerk a notice in writing showing and setting forth the name and address in full of the person to whom possession of such property has been given.

Subdivisions—notice required in cases of.

71. If any property shall be subdivided in the interval between one assessment and another, and sold or let to two or more persons, the tenant or owner who previously occupied the whole of such property shall, within seven days from the time of such subdivision taking place, deliver to the Council Clerk a notice in writing setting forth in full the area, rent, and names in full of the owners or occupiers of such subdivision; and any owner, occupier, or tenant failing or neglecting to give such notice as is herein required, shall, on conviction, be liable to a fine not exceeding two pounds.

Defaulting ratepayers.

72. It shall be the duty of the Council Clerk to furnish to the Mayor a list of the names of all persons whose rates are unpaid at the expiration of the period fixed for the payment thereof; and it shall be the duty of the Mayor to issue distress warrants against all such persons, and to cause such warrants to be enforced, or to cause such defaulter to be sued for the amount of such rates in a court of competent jurisdiction.

Bailiff to find sureties.

73. A Bailiff for the purpose of enforcement of rates shall be appointed by resolution of the Council upon notice, and shall be liable to removal from office in the same manner. He shall find two sureties, who shall be approved of by the Mayor, and who shall enter into a bond of £25 (twenty-five pounds) each on his behalf that he shall well and truly perform all the duties imposed upon him as such Bailiff.

Duties of Bailiff.

74. It shall be the duty of the Bailiff to make all levies by distress for the recovery of rates, to conduct all sales of goods distrained upon, and to receive and forthwith account for all moneys paid over to him, or arising from such sales, and to pay into the hands of the Council Clerk, within forty-eight hours after the receipt thereof, the amount or amounts which shall have been recovered in discharge of such rate or rates for which distress has been enforced as aforesaid.

Sale under distraint

75. If the amount for which any distress shall have been made be not discharged, with all costs, on the expiration of five days after such distress, the Bailiff shall sell the goods so distrained upon, or a sufficient portion thereof, by public auction (due notice of such sale having been previously advertised in local papers), on the premises, or such other convenient place within the Borough as he may think it best in the interest of the defaulter or owner to remove them to for such purpose; and immediately after such sale shall pay over to the late owner, or anyone authorized in his or her behalf, or should there be no such person, to the Council Clerk, any surplus proceeds of such sale as may remain in his hands after deducting the amount due for rates, and all necessary expenses authorized by the Council in distraining and selling the said goods.

Warrants of distraint.

76. All levies and distresses shall be made under warrant, in the form of Schedule A (*vide* Appendix), under the hand of the Mayor, or alderman who may for the time being be duly authorised to perform the duties of that officer.

Inventory to be made of goods distrained.

77. At the time of making a distress the Bailiff shall make out a written inventory in the form of Schedule B (*vide* Appendix), which inventory shall be delivered to the occupant of the land or premises, or the owner of the goods so distrained, or to some person on his or her behalf, resident at the place where the distress shall be made; and in case there shall not be found any person with whom such inventory can be left or delivered, then the same may and shall be posted in or upon some conspicuous place on the land or premises, and a copy of such inventory shall be delivered without charge by the said Bailiff to the person distrained upon, or should there be no such person, to the Council Clerk, at any time within four weeks after distress.

Distrained goods to be impounded.

78. The Bailiff, on making distraint, may impound or otherwise secure the property seized, of what nature or kind soever it may be, in or upon such place or places, or in or upon such part of the land or premises chargeable with rates, as he shall consider best fitted for the purpose; and it shall be lawful for any person whatever, after the expiration of the five days aforesaid, to come and go to and from such place or part of the aforesaid land or premises, where such goods or property may be impounded or secured as aforesaid, in order to view, buy, and carry off or remove the same on account of the purchaser or purchasers.

Owner may direct order of sale.

79. The owner of the property distrained upon may, at his or her option, direct the order in which such property shall be sold, and the Bailiff shall thereupon dispose of such property in the order as directed by the owner thereof.

Scale of charges.

80. There shall be payable to the Bailiff, for the uses of the Council, the following costs and charges, namely:—

	s.	d.
For every distress warrant	2	6
For levying distress and making inventory ...	5	0
For possession each day or portion thereof.....	3	6
All charges incurred for advertising, and 5 per cent. on net proceeds of goods.		

Prevention and Extinguishing of Fires.

Inflammable fences, &c.,

81. For the better prevention of fires it is provided that no person shall erect any fence of brushwood, bushes, or other such inflammable material, or any stack of wheat, hay, grain, or other inflammable material or contents within fifty yards of any building in any portion of the town, under a penalty, upon conviction, not exceeding five pounds, to be recovered in a summary way. And if the said stacks or fences be not removed within such period after conviction as the Council may order, the person offending shall be liable to further prosecution as in the first instance.

Inflammable buildings.

82. No person shall erect any building of bark or roofed with that material or with calico within the populous part of the town, except by express permission of the Council, and then for a temporary purpose only. Any person so offending shall, on conviction, be liable to a penalty not exceeding ten pounds, to be recovered in a summary way; and shall be bound to remove the aforesaid building within such period as the Council may determine.

Storage of combustibles, &c.

83. Any person who shall knowingly allow fire, gunpowder, or any combustible or inflammable material, matter, or thing whatsoever, to be kindled, stored, or placed in, about, or upon any portion of his premises, or premises over which he has control, in such a manner as to endanger adjoining buildings or the public safety, shall upon conviction forfeit a penalty not exceeding five pounds, and shall be further liable to a like penalty for every forty-eight hours during which he shall allow the said fire, gunpowder, or combustible matter to remain in or about his said premises after the first conviction.

Wilfully setting fire to inflammable material.

84. Any person who shall wilfully set fire to any grass, stubble, or other inflammable material in the open air within the Municipality, without giving at least twenty-four hours' notice of his intention to do so to the owners or occupiers of the adjoining land or premises, shall be liable, upon conviction, to pay a penalty of not more than ten pounds.

Payments and premiums for delivery of water in cases of fire.

85. There shall be paid out of the funds of the Municipality to the owner of every licensed or other water-cart who shall have attended with water at the place of any fire in any building, premises, or other property within the Municipality, and delivered the same as required, such reasonable compensation as the Council shall have appointed in that behalf, and also to such owner of such cart as shall have first in order attended with a load or loads of water at the place of such fire, such further sum by way of reward as the Council may have determined.

Water-carts to be licensed.

86. The Council shall from time to time license to ply within the Municipality such carts for the carrying and sale of water as shall upon inspection be found fit for that purpose. Every such cart or vessel contained therein for the holding of water for sale shall be capable of containing not less than fifty gallons, and shall have the name of the owner, and the words "licensed water-cart," painted on such cart in legible letters.

Applications for licenses.

87. Every such license shall be issued on the written application of the owner thereof, in which application shall be set forth the name and surname and place of abode of the applicant; and for every such license there shall be paid to the Council at the rate of two shillings and sixpence per quarter, payable on the first day of January, April, July, and October, in each year, in advance.

Penalty for unauthorised sale of water.

88. Any person hawking or carrying water for sale or hire, otherwise than in a licensed water-cart as aforesaid, shall, upon conviction, be liable to a penalty not exceeding two pounds.

Water—where to be obtained.

89. The driver of every licensed water-cart shall fill his cart only at such place or places as may be appointed by the Council, and shall sell full casks of not less than fifty gallons. Every person offending against this section shall be liable to a penalty not exceeding five pounds.

Scale of charges for water.

90. The charges for delivering water shall be as follow:—Not exceeding a quarter of a mile, 6d.; for every quarter of a mile or fraction of a quarter of a mile, 3d.—for every load of not less than fifty gallons.

Rates may be remitted.

91. In the event of any premises being wholly or partially destroyed by fire or other accident, the Council shall have power to accept an equitable proportion of or to remit the assessed rates of such premises for the remainder of any municipal year.

By-laws enforcing public decency.

Bathing within prohibited hours.

92. Any person who shall bathe near to or within view of any inhabited house, street, road, or place of public resort within the Municipality, between the hours of six o'clock in the morning and eight o'clock in the evening, and not being provided with and wearing a proper and decent bathing-dress when so bathing as aforesaid, shall on conviction, forfeit and pay a sum not exceeding one pound for every such offence.

Indecent exposure.

93. Any individual who shall offend against decency by the exposure of his or her person in any street or public place within the said Municipality, or in view thereof, shall, on conviction, forfeit and pay for every such offence a sum not exceeding five pounds.

By-laws for the care and management of the public roads, streets, thoroughfares, &c.

Plans and sections of cuttings and levels.

94. In any street or road, where it may be deemed necessary to cut or fill up to a greater depth than three feet, the Council shall cause a plan and section, showing the proposed cuttings and fillings, to be exhibited at the Council Chambers for seven days, for the information and inspection of ratepayers, and notify the same in the local newspapers; and no objections thereto shall be entertained by the Council, unless made within twenty-one days after such notice shall have been given.

Encroachments.

95. No person shall encroach beyond the building-line in any street or lane, by the erection of houses, verandahs, door-steps, fences, or any other obstructions whatsoever, without consent of the Council.

Damage by vehicles and otherwise

96. No driver, carter, or other person shall wilfully or negligently do or suffer, or cause to be done, any damage or injury to the culverts, kerbstones, gutters, or pathways of any street or roadway, but shall, upon conviction, pay a penalty not exceeding two pounds over and above the damage occasioned thereby.

Lines, cords, &c. across thoroughfares.

97. Any person who shall place any line, cord, or pole across any street, lane, or right-of-way, or hang or place clothes thereon, to the danger or annoyance of any person or persons, shall be liable to a penalty not exceeding one pound.

Animals on the footwalks.

98. Any person whosoever who shall wilfully drive, lead, or ride any horse or cattle, or any other animal, along any pathway (except in crossing such pathway to or from any premises adjoining the same), or shall permit any horse or cattle to stand upon any pathway, or any part thereof, within the Municipality, shall forfeit and pay a penalty not exceeding two pounds.

Injuring or destroying roads or footwalks.

99. No person shall be allowed to alter, cut up, or destroy the pathways or roads, or to remove stone, loam, sand, gravel, or any other substance whatsoever, from any of the roads, grounds, or streets of the Municipality without the authority of the Council. Any person so offending shall be liable to a fine not exceeding five pounds.

Obstructing roads.—Water-holes and excavations.—Lights to be provided.

100. No person shall be allowed to obstruct any road, street, or public thoroughfare within the Municipality, by building materials, drays, carts, or anything calculated to obstruct and hinder free passage, without the sanction of the Council in writing; and no person shall be allowed to leave waterholes, or excavations for cellars or other purposes, unfenced, or in such a manner as to be dangerous to passers-by; and at all places where buildings are being carried on, or where any obstruction to the danger of passers-by exists, the person causing such obstructions shall be required to provide lights on either side, and keep the same lighted from sunset to sunrise. Any person so offending against this by-law shall be liable to a penalty not exceeding five pounds.

Regulations as to removal of night-soil, &c.

101. If any person or persons shall drive, or cause to be driven, any cart or other vehicle with any night-soil, or shall take away or remove any noisome matter in any cart or other vehicle, through or in any of the streets, roads, or public places within the said Municipality, between the hours of five o'clock in the morning and ten at night; or shall fill any cart or other carriage so as wilfully to turn over or cast any night-soil, or other offensive matter, in or upon, or near, any of the said streets or public places; or shall deposit or cast out the night-soil hereinbefore described, from such carts as aforesaid, nearer to any road, street, or dwelling-place than shall be directed by the said Council—he shall for every such offence

forfeit and pay a penalty of not less than one pound and not more than ten pounds. And in case the person so offending cannot be apprehended, then the owner of such cart or other vehicle, in which such night-soil or offensive matter shall be put or placed, and also the employer of the person offending, shall be liable to pay and forfeit such penalty as aforesaid.

Vehicles to be under due control of drivers and not to obstruct free passage

102. If the driver of any waggon, dray, or vehicle of any kind, shall ride upon the same in any street, road, or thoroughfare, not have some person on foot to guide the animals drawing the same (such vehicles as are drawn by horses driven or guided by reins only excepted), or if the driver of any vehicle whatsoever shall wilfully be at such a distance from such vehicle, or in such a situation whilst it shall be passing upon such street, road, or thoroughfare that he cannot have the direction or government of the horse or horses or cattle drawing the same, or if the driver of any waggon, cart, dray, coach, carriage, or other vehicle, shall not drive on the left or near side of any such road, street, or thoroughfare; or if any person shall in any manner wilfully prevent any other person or persons from passing him or her on any vehicle under his or her care upon such street, road, or thoroughfare, or by negligence or misbehaviour prevent, hinder, or interrupt, the free passage of any person or vehicle or carriage in or upon the same, every such driver or person so offending shall forfeit and pay for every such offence any sum not exceeding forty shillings.

Making drains, removing soil, &c., or damaging streets, &c., without leave.

103. Any person who shall form, dig, or open any drain or sewer in any part of the lanes, roads, streets, or thoroughfares within the Municipality; or shall move, or cause to be moved, any turf, clay, sand, soil, gravel, stone, or other material, without leave first had and obtained from the Council, or persons having lawful charge of such lanes, roads, streets, or thoroughfares respectively; or who shall wantonly break up or otherwise damage any part of the said lanes, roads, streets, or thoroughfares, shall, on conviction, forfeit and pay for every such offence a penalty not exceeding five pounds.

Furious riding or driving.

104. Any person who shall ride or drive through any lane, road, street, or public place, negligently, carelessly, or furiously, to the common danger of the public, or any person who, not being a duly qualified medical man, nor a police officer in the execution of his duty, shall ride or drive around a street corner at a faster pace than a walk, shall, upon conviction, pay a sum not exceeding five pounds.

Damaging marks, notice-boards, &c.

105. Any person pulling down or pulling up, destroying, or injuring any alignment or other boundary marks or stones, notice-boards, public notices, or other erection on any reserve, public place, or road, without the authority of the Council, shall forfeit and pay an amount not exceeding ten pounds.

Offensive premises.

106. Upon representation by any respectable householder that the house, premises, yard, closet, or drains of the adjoining premises, are a nuisance or offensive, the Mayor or any two Aldermen shall cause an inspection to be made of the premises complained of; and if any such premises shall be found to be a nuisance, or otherwise offensive, notice in writing shall be given to the proprietors, or resident of such premises, that if within fourteen days after such notice the nuisance shall not be removed, the proprietor or tenant of the aforesaid premises shall be liable to a penalty not exceeding five pounds.

Waterfowl not to frequent rivers, &c.

107. No person being the owner or person in charge of such birds shall permit any ducks, geese, or other water-fowl, to swim upon or frequent any public watercourse, sewer, waterhole, tank, river, creek, or canal, within the Municipality, without permission, to be obtained annually from the Council. Any such person offending against this by-law shall forfeit and pay a sum not exceeding two pounds, and a further sum of five shillings for every day during which the offence may continue after conviction.

Pigeons to be destroyed.

108. No person being the owner or person in charge of such birds shall permit any pigeon or pigeons to be at large within the Municipality and any person duly authorized by the Council may destroy such birds without being responsible to any person claiming ownership in them.

Placards, &c., not to be affixed.

109. It shall not be lawful for any person to paste or otherwise affix any placard or other paper upon any wall, fence, house, or building, or to deface any such wall, fence, house, or building by chalk, paint, or in any other manner, unless with the consent of the owner thereof. Any person who shall be guilty of any such offence shall forfeit and pay a sum not exceeding forty shillings.

Houses of ill-fame to be suppressed.

110. Upon representation by any two respectable householders that the house or premises adjacent is one of ill-fame, it shall be lawful for the Mayor or any two Aldermen to cause the resident of such house to furnish the Council a list of the names, sex, birthplace, and occupation of all the inmates of the said house, and upon non-compliance with the request, or if, upon consideration, the Mayor or other two Aldermen still consider the house to be one of ill-fame, the Mayor shall cause a notice in writing to be served on such householder or resident to discontinue and abate the said house of ill-fame within forty-eight hours after the receipt of such notice, otherwise to be liable to a penalty not exceeding one pound for every day or part of a day which such house of ill-fame shall remain unabated within the Municipality.

Casting filth, &c., into public water.

111. Any person who shall cast any filth, rubbish, or any dead animal, or any animal with intent of drowning, into any public watercourse, sewer, waterhole, or river, or creek, or canal, or shall obstruct or direct from its channel any such sewer, canal, or watercourse, shall forfeit and pay a sum not exceeding five pounds, and shall pay the costs of removing such filth or obstructions, or of restoring such watercourse or canal to its proper channel, at a cost not exceeding fifty pounds in the whole.

Washing offensive matter in river, &c.

112. Any person who shall wash or cause to be washed any wool, hides, skins, or any other offensive matter, in any river, creek, or watercourse within the Municipality, shall forfeit and pay a penalty not exceeding ten pounds: Provided always that the Council may grant permission for such purposes from year to year, where it may appear to them unobjectionable.

Bathing within prohibited places.

113. No person shall be permitted to bathe in any portion of the Queanbeyan River within the Municipality except below the cemeteries, under a penalty not exceeding two pounds.

Animals not to stray or be tethered.

114. It shall not be lawful for any person whomsoever to suffer any kind of swine, or any horse, ass, mule, sheep, goat, or cattle belonging to him, or under his or her charge, to stray, to go about, or to be tethered or depastured in any lane or street within the populous portion of the said Municipality; and any person who shall so offend shall forfeit and pay in respect of every such animal a sum not less than two shillings and sixpence nor more than two pounds. Provided that the Council, or any officer or officers appointed by them, may impound any swine, horse, ass, mule, sheep, goat, or cattle found straying or going about, or depasturing in any lane or street within the Municipality.

Drawing timber, &c.

115. If any person shall haul or draw, or cause to be hauled or drawn, upon any part of the streets, roads, or public places, any timber, stone, or other thing otherwise than upon wheeled carriages, or shall suffer any timber, stone, or other thing which shall be carried principally, or in part, upon wheeled carriages, to drag or trail upon any part of such street or public place, to the injury thereof, every such person so offending shall forfeit and pay for every such offence a sum not less than five shillings nor more than two pounds, over and above the damages occasioned thereby; and it shall be lawful for any constable or any other person to lay an information against any person whom he shall find in the act of committing any such offence.

Regulating the driving of stock.

116. No horses, cattle, sheep, goats, swine, mules, or other stock, shall be driven through any populous part of the borough between the hours of 9 a.m. and 11 p.m.: Provided that in flood time, when the ordinary crossings are impassable, any sheep or other stock that may be driven without endangering life and limb of the public, may, upon the written authority of the Mayor or any Alderman, be permitted to pass over any bridges or culverts, and over any streets through which it may be necessary to pass in order to obtain access to and from such bridges and culverts. Any person violating this By-law shall be liable to a penalty not exceeding five pounds.

Polluting water or casting offensive matter on roads, &c.

117. If any person shall in any street, road, watercourse, public well, or tank, throw, cast, or lay, or shall permit or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal, blood, or other filth, or annoyance, or any matter or thing in or upon the carriageway or footway of any street or road, or shall kill, slaughter, dress, scald, or cut up any beast, swine, calf, sheep, lamb, or other cattle in or so near to any of the streets or thoroughfares as that any blood or filth shall run or flow upon or over, or to be on any such carriage or footway, shall forfeit and pay a sum not exceeding forty shillings.

Driving with reins and lights.

118. Any person who shall drive any cart or carriage or other vehicle through streets without reins, or after dark, any vehicle driven at a faster pace than a walk, without carrying lights on any nights except the three nearest the full moon, shall be liable to a penalty not exceeding two pounds.

Filthy premises.

119. If, upon the certificate of any one or more duly qualified medical practitioner or practitioners, it shall appear to the Council that any premises or part thereof within the limits of the Borough is in such a filthy or unwholesome state that the health of any person is or may be liable to be affected or endangered thereby, or that the whitewashing, cleansing, or purifying of any house or premises, or any part thereof, would tend to prevent or check infections or contagions, the said Council shall give notice in writing to the owner or occupier of such premises to whitewash, cleanse, or purify the same as the case may require; and if the said owner or occupier, to whom notice is so given, shall fail to comply therewith within such time as shall be specified on the said notice, he shall be liable to a penalty not exceeding ten shillings for every day during which he continues to make default. And the said Council shall, if they think fit, cause such premises to be whitewashed, cleansed, or purified, and for such purpose the officers, servants, and workmen of the said Council shall have power to enter the same, and the expense incurred by the Council shall be paid by the owner or occupier.

Officers may enter on premises.

120. It shall be lawful for any officer or officers when appointed and instructed by the Council from time to time, as often as the Council shall see fit, to visit, enter upon, or inspect any house, premises, slaughter-yards, tanneries, fellmongering or boiling-down establishments within the Municipality, and to give such directions concerning the cleansing of the same, both within and without, as to him or them may seem needful; and any owner or occupier of the same who shall neglect to comply with such directions within a reasonable time shall forfeit and pay a sum not exceeding ten pounds.

Butchers' meat to be covered

121. Any person who shall carry or convey or cause to be carried or conveyed, in or through any public place or street the carcase or any part of the carcase of any slaughtered animal, without a sufficient and proper covering to conceal the same from public view, or who shall carry about butchers' meat for sale, without properly covering the same as aforesaid, shall, on conviction, forfeit and pay a sum not exceeding two pounds.

Savage dogs, &c.

122. Every person who shall be the keeper of, or have on his premises any dog or other animal which shall attack or endanger the life or limb of any person who may have the right-of-way or use of any private yard, alley, lane, or street, or any other place within the said Municipality, shall on conviction forfeit and pay a penalty not exceeding two pounds.

Injuring lamps, &c.

123. Any person who shall wantonly or maliciously break or injure any lamp or lamp-post set up for public convenience, or shall extinguish such lamp, shall, over and above the expense of repairing the injury committed, forfeit and pay for every such offence a penalty not more than five pounds.

Damaging public buildings, &c.

124. Any person who shall damage any public building, tollgate, wall, fence, gate, parapet, sluice, culvert, sewer, watercourse, post, bridge, pump, or any other public property within the said Municipality, shall pay the costs of repairing the same; and if such damage be wilfully done shall forfeit and pay a sum not exceeding twenty pounds.

Damaging trees.

125. Any person who shall wilfully, and without the authority of the Council, cut, break, bark, root up, or otherwise destroy or damage the whole or any part of any tree, sapling, shrub, underwood, or plant of any kind growing in or upon any street or place under the management or care of the Council, shall forfeit a sum not exceeding ten pounds.

Rain-water from roofs, &c.

126. Every owner or occupier of any dwelling-house, shop, or other building, who shall permit rain-water to fall from any roof, balcony, or other projection, upon any street, road, lane, or footway, or shall cause or permit any such roof or rain-water to be discharged by any pipe upon any such street, road, lane, or footway, shall, if such nuisance be not abated within fourteen days after notice to abate the same shall have been given by the Council, forfeit and pay for every such offence a sum not exceeding five pounds nor less than one pound.

Surface drains.

127. No surface drain shall be made in any footpath, nor any pipes laid under or across the same without the authority of the Council; and no such pipe or drain shall be used for the discharge into any street or roadway of any offensive liquid or matter of any kind whatsoever; and any person who shall so offend shall forfeit and pay a sum not exceeding five pounds nor less than ten shillings.

Information may be laid.

128. It shall be lawful for any ratepayer, or any other person residing within the bounds of the Municipality, to give such information as may be necessary for the conviction of any person offending against any of these By-laws.

Penalties.

129. Every person committing a breach of any of these By-laws shall, when no specific penalty shall have been provided by such By-laws, be liable to a penalty not exceeding two pounds.

Penalties– how appropriated.

130. All penalties under any of these By-laws shall be paid over to the Treasurer of the Municipality, subject to appropriation as provided in the Municipalities Act of 1867.

Construction of By-laws.

131. In all cases where the word "Mayor" is used in these By-laws it shall, unless the context indicate a contrary meaning, be construed also to include and signify any Alderman lawfully acting for the time being for such Mayor; and the word "Municipality" shall be understood to signify the Municipality of Queanbeyan; and the word "Council" shal signify the Council for the Borough of Queanbeyan.

Meanings attached to words.

132. In the By-laws of this Municipality any words in the singular number shall be taken to include and import the plural number, and any words in the masculine gender shall be taken to in like manner include the feminine gender, and *vice versa*, unless the same shall be repugnant to the sense and construction thereof.

Obstructing or interfering with Officers of Council.

133. Any person who shall resist, or obstruct, or interfere with any officer of the Council, or any other person doing or performing any duty or act under any of the By-laws of the said Municipality, shall forfeit and pay for every such offence a sum not exceeding five pounds.

APPENDIX.

SCHEDULE A.

Form of Distress Warrant.

I (A.B.), Mayor of the Municipality of Queanbeyan, do hereby authorize you (C.D.), Bailiff of the said Municipality, to distrain the goods and chattels in the dwelling-house or upon the land and premises of (E.F.), situate in (G.) street, Queanbeyan (or otherwise as the case may be), for (£ s. d.), being the amount of rates due to the said Municipality to the , 188 , for the said dwelling-house (or land or premises), and to proceed thereon for the recovery of the said rates according to law.

Dated this day of

(A.B.), Mayor.

SCHEDULE B.

Form of Inventory.

I have this day, in virtue of warrant under the hand of the Mayor of the Municipality of Queanbeyan, dated , 188 , distrained the following goods and chattels in the dwelling-house (or in and upon the land and premises) of (E.J.), situate at within the said Municipality for being the amount of rates due to the said Municipality to the day of

Dated this day of

(C.D.), Bailiff.

Made and passed by the Council of the Borough of Queanbeyan, this twenty-seventh day of August, in the year of our Lord one thousand eight hundred and eighty-five.

(L.S.) J. J. WRIGHT,
Mayor.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF YASS—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 29th October, 1885.

MUNICIPAL DISTRICT OF YASS—BY-LAWS.

THE following additional By-laws, made by the Council of the Municipal District of Yass, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

P. A. JENNINGS.

MUNICIPAL DISTRICT OF YASS.

ADDITIONAL By-laws made and adopted by the Council of the Municipal District of Yass, under the 153rd section of the "Municipalities Act of 1867."

1. No person driving or riding within the Municipality shall allow his horse or horses to go out of a walking pace whilst turning any of the street corners, nor whilst passing over crossings at the intersections of streets, nor whilst passing to and from any entrance to premises intersecting the footpaths within the said Municipality.

2. Persons riding on horseback and the drivers of vehicles shall keep their left hand side of any street along which they are proceeding, keeping to the left of horsemen and vehicles passing in the contrary direction, and to the right of horsemen and vehicles proceeding in the same direction as themselves.

3. All vehicles licensed to carry passengers shall be provided with suitable lamps to burn candles, one to be fixed on each side of the driver's box, and a third one inside of all omnibuses and closed coaches, and the same shall be lighted not later than one hour after sundown and kept burning while the vehicle is on the stand or running the streets either with or without passengers.

4. All vehicles whilst travelling along any of the streets within the town boundaries shall carry at least two sufficient and properly furnished lamps on either side, and such lamps shall be kept continuously lit between sunset and sunrise whilst such vehicle is being used for the purpose of travelling.

5. No driver of any vehicle shall be or remain at such a distance from his vehicle, anywhere within the said Municipality, so as not to have immediate and full control over the same, unless he shall have previously locked the wheels thereof.

6. All persons conducting or taking horses along any street, thoroughfare, or public place within the Municipality shall keep them secured by means of halters or bridles, and shall lead them; and no person shall run or drive, or cause to be run or driven, any horse or horses loose through any such street, thoroughfare, or public place as aforesaid: Provided, nevertheless, that horses being taken to the Public Pound and afterwards impounded therein, or mobs of horses being driven to or from market shall not be within the meaning of this By-law.

7. No person shall keep, breed, or feed any swine within the distance of forty yards from any public building, place of worship, school-room, dwelling-house, public pathway, road, or street, public park, or recreation ground, or other public place within the said Municipality.

8. The owner or occupier of any house, building, passage, yard, or premises within this Municipality shall cause the yard and ground adjoining or belonging thereto, as well as all drains in connection therewith, to be kept in a cleanly condition, and so as not to be a nuisance or injurious to health.

9. All persons standing or loitering upon any of the streets, footways, crossings, or other public places in the Municipality of Yass, to the inconvenience of passers by, or in any way interrupting the traffic, shall discontinue to do so on being required by any officer or servant of the Municipal Council of the District of Yass, or any Police officer.

10. The Inspector of Nuisances, so far as relates to the By-laws hereof, and in all other cases, the said Inspector of Nuisances or any other officer duly appointed by the Council shall be the person to see the foregoing By-laws carried into effect, and to institute and prosecute all legal proceedings thereunder.

11. Any person offending against the provisions of any of the foregoing By-laws by any act of omission or commission shall upon conviction thereof, where no other punishment is specially provided, be liable to forfeit and pay a sum not more than twenty pounds nor less than ten shillings; and all fines, penalties, and forfeitures under the said By-laws shall be recovered as provided by the Municipalities Act of 1867.

The foregoing By-laws were adopted by the Council of the Municipal District of Yass, at a meeting held on the 28th day of July, 1885.

(L.S.) ALLAN WOOD,
Mayor.

CHAS. W. JENKINS,
Council Clerk.

1885-6.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF DUBBO.—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 7th November, 1885.

MUNICIPAL DISTRICT OF DUBBO—BY-LAWS.

THE following By-laws, made by the Council of the Municipal District of Dubbo for regulating and licensing Public Carriers' Carts, and Public Vehicles, Omnibuses, Cars, Hackney-carriages, Cabs, Drays, Carts, or Vans, and the Drivers and Conductors of passenger-carrying vehicles, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

P. A. JENNINGS.

MUNICIPAL DISTRICT OF DUBBO.

BY-LAWS for the regulation and licensing of Public Carriers, Carts, and Public Vehicles, Omnibuses, Cars, Hackney-carriages, Cabs, Drays, Carts, or Vans, and the drivers and conductors of passenger-carrying vehicles, and in accordance with sec. 129 of the "Municipalities Act of 1867."

All vehicles to be licensed.

1. No vehicle shall ply or be used for hire within the Municipality unless the same be duly licensed in the manner herein described.

Requisition to be made for license.

2. Before any license for plying a vehicle, or to drive or to conduct the same shall be granted, the party requiring such license shall obtain from the Council Clerk, free of charge, a requisition in the form of the Schedule A hereto, or to the like effect, and duly fill up and sign the same, and deliver it to the Council Clerk, and in the case of drivers or conductors shall also obtain a certificate from two respectable householders to the effect that the applicant is of good character and competent to act as such driver or conductor as the case may be.

Condition under which licenses to be granted.

3. No license shall be granted in respect of any vehicle which in the opinion of three Aldermen who shall be appointed by a resolution of the Council of the said Municipality, is unsafe, or in bad repair, or otherwise unfit for the accommodation and conveyance of passengers therein, nor until the number of such vehicle be painted thereon on a plate or plates affixed thereon outside on the panel of each door of such vehicle, or on such other place or places, and in such manner as the said three Aldermen may direct.

Licenses, and how to be issued

4. Licenses for proprietors, drivers, and conductors of vehicles shall be in the form contained in the schedule hereunto annexed, marked with the letter B, or the like effect; and any person plying, driving, or conducting any vehicle for hire with passengers without such license shall be deemed guilty of a breach of these By-laws.

Licenses to be under Corporate Seal.

5. Every license granted under these By-laws shall be under the common seal of the Council and signed by the Mayor and countersigned by the Council Clerk, upon production of a certificate signed by the Aldermen, who shall be appointed as aforesaid, and shall be in force from the date of such license until the 31st day of December next ensuing, subject to the conditions in by-law 10; and no such license shall include more than one vehicle: Provided that where the licensed vehicle shall be under repair, if the proprietor shall so desire, he may be permitted to substitute another for a period to be then specified and endorsed on the license signed by the Mayor and countersigned as aforesaid.

Age of drivers.

6. No license shall be granted to any person to drive any passenger-carrying vehicle who shall be under the age of 18 years.

Licenses to be made out by the Council Clerk.

7. All licenses shall be made out by the Council Clerk, and numbered consecutively.

Owner of vehicle.

8. The person in whose name a license shall appear to have been obtained shall be *prima facie* deemed to be the owner of the vehicle in respect of which the same shall have been taken out.

Inspector of vehicles.

9. The three Aldermen aforesaid shall as often as they may deem it necessary, cause an inspection to be made of all or any licensed vehicle, and of the harness, horse, or horses; and if any such vehicles, harness, horse, or horses, shall at any time be found by the said Aldermen to be unfit for use, the Mayor may cancel the license of such vehicle on the written report of the said Aldermen.

Number of license to be painted on vehicle.

10. The number of the license granted to every omnibus or car in figures not less than 4 inches in height, and for every hackney carriage or cab, in figures not less than 2 inches in height, of proportionate breadth, white upon a ground o

black, shall be painted outside on the panel of the door or doors of such vehicle, or on such other part or parts thereof as the Aldermen aforesaid shall direct, and such numbers shall be kept legible and undefaced during all the time such vehicle shall ply or be used for hire.

Table of fares, &c., to be fixed to vehicle.

11. The number of license of every hackney carriage or cab on a card or plate, 6 inches by 3 inches, painted or printed in clear legible figures, and the table of fares fixed by the Council, shall be affixed at the upper part of the front panel, for in such other place or places inside of such carriage or cab as the three Aldermen aforesaid may direct; and such card or plate shall be kept so affixed and legible, and undefaced, during all the time the carriage or cab shall ply or be used for hire.

Term applied to vehicles.

12. So far as concerns fares in these By-laws any vehicle of whatever form or construction for which a hackney-carriage license has been taken out, if drawn upon four wheels, shall be deemed a hackney-carriage, and if drawn upon two wheels a cab.

Water-carts.

13. The Council shall from time to time license to ply within the Municipality such carts for the sale and carrying of water as shall upon inspection be found fit for that purpose. Every such cart shall be or shall contain or carry a vessel or tank capable of containing not less than 50 gallons, and shall have the name of the owner, and the words "licensed water-cart," painted on each cart in legible letters.

Water licenses, how obtained.

14. Every such license shall be issued on the written application of the owner thereof, in which application shall be set forth the name and surname and place of abode of the applicant; and for every such license there shall be paid to the Council the sum of 2s. 6d.; and every such license shall be in force until the 31st day of December next ensuing, after the granting of the said license.

Hawking Water—Penalty.

15. Any person hawking or carrying water for sale or hire otherwise than in a licensed water-cart as aforesaid, shall upon conviction be liable to a penalty not exceeding £1.

Name and place of abode to be painted on licensed cart, &c.

16. The name and place of abode, number of license, and the words "licensed cart, dray, or van," as the case may be, are to be painted in letters 1 inch long upon the right or off side of such cart, dray, or van.

Vehicles to carry lights.

17. All vehicles licensed to carry passengers shall be provided with suitable carriage-lamps, to burn candles, one to be fixed to each side of the driver's box, and a third one inside of all omnibuses and closed coaches; and the same shall be lighted not later than one hour after sundown, and be kept burning while the vehicles are on the stand or running in the streets, either with or without passengers.

Number of passengers to be carried.

18. When any carriage is submitted for inspection by the owner or other applicant, with a view to obtain a license, the Alderman appointed by the Council for that duty shall then determine upon the number of passengers the vehicle shall be permitted to carry, and give a certificate to that effect, such number to be mentioned in the license.

Legal fare, &c., to be painted on vehicle.

19. The number of passengers the vehicle is licensed to carry and the legal fare shall be painted or printed in legible characters and affixed within and without the vehicle in such places as the inspecting Aldermen shall direct.

Penalty for breaking By-laws.

20. For every offence against the provisions of these By-laws the offender shall, upon conviction, forfeit and pay a penalty of not more than twenty pounds nor less than ten shillings.

Vehicle not to be drawn faster than a walk past place of worship on Sunday.

21. No licensed vehicle shall be drawn by any animal or animals past a place of public worship on Sundays, during Divine service, at a faster pace than a walk, and no bugle, horn, or whistle, or other instrument shall be used on that day for the purpose of attracting passengers.

Description of persons not allowed to travel in vehicle.

22. No person suffering from an infectious or contagious disease shall ride in or upon any licensed vehicle, and no driver or conductor shall knowingly carry or permit to be carried any such person or (except to some police office or watch-house) any corpse, or any person in a state of intoxication, or who is so noisily or violently conducting himself, or otherwise so misbehaving as to occasion any annoyance, or to disturb the public peace; and no passenger shall carry inside any vehicle, except a dray, any animal or any substance of an offensive character, or that might soil or damage the vehicle or the apparel of other passengers; and no driver or conductor shall sleep in or upon any licensed vehicle nor use the same for eating his meals therein.

Vehicle not to carry greater number of passengers than licensed for.

23. No driver or conductor shall admit to the inside or allow on the outside of any omnibus at one time, a greater number of passengers than the number it shall be licensed to carry inside or outside as the case may be; and no omnibus shall be licensed for more passengers than the same will accommodate upon fit seats, properly cushioned, allowing for each passenger a space of 18 inches, measuring in a straight line, lengthwise on the front of each seat, nor shall any vehicle be taken off the line of road for which it shall be licensed: Provided that no child under five years of age, sitting on the lap, shall be deemed a passenger within the meaning of these By-laws. No passenger to carry more than one child.

Fare not to be increased until 10 p.m. Driver, &c., not to refuse to carry passengers.

24. No owner, driver, or conductor of any omnibus shall demand, receive, or take from any passenger a larger fare than shall be shown in large immovable figures in some conspicuous place inside and outside the omnibus, as the fare for which such omnibus plies: Provided that no fare shall be increased, except between the hours of 10 o clock at night and 5 o'clock in the morning. And no driver or conductor of an omnibus shall neglect or refuse to admit and carry any person for whom there is room and to whom no reasonable objection can be made under these By-laws; nor except in cases of accident or other unavoidable cause shall any driver or conductor stop such vehicle upon any place where foot passengers usually cross the carriage way.

Fare to be paid upon taking seats.—Driver and conductor to be provided.

25. Any person having taken his seat in or upon an omnibus shall pay the fare when demanded after the commencement of his journey. The owner of every omnibus plying for hire shall provide the same with a licensed driver and a licensed conductor.

Property found in vehicles to be delivered at Council Clerk's Office.

26. The driver of any carriage and conductor of every omnibus shall carefully examine his vehicle immediately after setting down his fare, and in every case of property having been left in any vehicle by any person having used or hired the same, such property if found by another passenger or person shall be delivered to the driver or conductor, who shall deliver the same, with any other property found by him, within eighteen hours after such finding to the Council Clerk's office, and shall there deposit it; and no owner shall detain any property delivered to him by any driver or conductor in his employment longer than the time before-mentioned, but shall deposit it at the office at the Council Chamber with the Council Clerk or his assistant.

License Fees to be paid to Council Clerk

27. For every license issued under the By-laws in force for the time being in that behalf within the said Municipality there shall be paid to the Council of the said Municipality, by delivering the same to the Council Clerk, or other person authorized to receive the same, the several sums mentioned or set forth in Schedule C to these By-laws for the general purposes of the said Borough.

Terms to be applied to licensed vehicles.

28. Whenever the word "vehicle" shall be used in these By-laws the same shall be construed to extend and apply to any omnibus, car, hackney-carriage, or cab.

The word "omnibus" shall extend and apply to any vehicle upon four wheels drawn by two or more horses, having seat accommodation for more than ten passengers and a driver. The word "car" shall extend and apply to any vehicle upon two or four wheels drawn by one or more horses, having seat accommodation for not more than ten or less than five passengers and a driver.

The word "hackney-carriage" shall extend and apply to any vehicle upon four wheels drawn by two or more horses, and having seat accommodation for not more than five passengers and a driver, and in respect of which a hackney-carriage license within the said Municipality shall have been obtained. The word "cab" shall extend and apply to any vehicle upon two wheels having seat accommodation for not more than two passengers and a driver, in respect of which a cab license within the said Municipality shall have been obtained. The word "cart" shall extend and apply to any cart, dray, van, or waggon, drawn by one or more horses or other animals, used wholly and for the carriage of goods and parcels. The word "water-cart" shall extend and apply to any cart used for the carriage of water within the said Municipality in respect of which a water-cart license shall have been obtained.

Fares to be charged.

29. No proprietor or driver of any hackney-carriage or cab in the said Municipality shall demand, receive, or take more than the several fares or sums mentioned or set forth in the Schedule D to these By-laws, or such other sums as the Council of the said Municipality shall from time to time determine or appoint in substitution therefore as hereinafter provided; and every proprietor, driver, or conductor failing to comply with this By-law shall for every such offence forfeit and pay a penalty or sum not exceeding five pounds nor less than five shillings.

Power of Council to amend Scale of Fares, &c.

30. The Council of the said Municipality may from time to time, by resolution passed in that behalf, alter and vary or amend the said Schedule D and the respective sums chargeable thereunder, or any of them, and such alterations, variations, or amendments shall become of full force and effect so soon as the same shall have been publicly notified by advertisement in the New South Wales *Government Gazette*, and at least one newspaper circulating in the said Municipality, and the Council of the Municipality shall not be responsible for any loss which such alterations or amendments may have or may be alleged to have occasioned to the holders of licenses for the time being, or any of them.

Tolls to be paid by hirer.

31. All tolls to be paid by the hirer of any hackney-carriage or cab in addition to the ordinary fare.

Passengers to be taken up, &c.

32. No driver of any hackney-carriage or cab shall refuse to take up any passenger or passengers unless already engaged for hire, nor refuse to convey such passenger or passengers to such place or places within the said Municipality as he, she, or they may reasonably desire; and every person failing to comply with this by-law shall forfeit and pay a penalty or sum not exceeding five pounds for every such offence.

Cab Stands, &c.

33. The Council may by resolution, to be publicly notified as in by-law 30 of this part, from time to time appoint any place or places within the said Municipality as stands for licensed hackney-carriages and cabs within the said Municipality.

34. No vehicle shall be allowed to stand or remain stationary on any street within the said Municipality, except on the duly appointed cab-stand for the time being for a longer period than the time reasonably necessary to take up or set down any passenger or passengers for the time being, requiring or using the same, or for loading or unloading or receiving or delivering the goods or parcels which the driver of such vehicle shall have been employed to carry; and any driver or proprietor of any such vehicle remaining stationary contrary to this by-law shall for every such offence forfeit and pay a penalty or sum not exceeding five pounds nor less than five shillings.

Driver not to leave his horse or horses.

35. No driver of any licensed vehicle shall be or remain at such distance from his horse or horses, while attached to his vehicle, anywhere within the said Municipality as not to have immediate and full control over the same; and every person so doing shall for every such offence forfeit and pay a penalty or sum not exceeding five pounds nor less than five shillings.'

Speed at which to travel.

36. Al hackney-carriages and cabs carrying passengers shall (except when turning street corners) proceed at a speed of not less than six miles per hour unless when attending funerals or when otherwise ordered by the hirer; and every driver of any such carriage or cab failing to comply with this by-law shall forfeit and pay a sum not exceeding forty shillings nor less than five shillings.

Copies of Schedule D to be printed and fixed at cab stand.

37. Copies of said Schedule D hereto shall be printed or written in legible characters and exhibited on boards placed in conspicuous positions—one at each cab-stand within the Municipality and one at the Railway Station in such place as the Commissioner for Railways may approve.

Copies of By-Laws to be given with License.

38. Copies of these and of all other By-laws passed by the Council of the said Municipality for the regulation of licensed vehicles and still remaining in force shall be delivered with each license issued unless the person shall have previously received copies thereof.

Penalty to be enforced for breach of By-laws.

39. All proprietors and drivers of licensed vehicles shall at all times be amenable to and observe and comply with the By-laws for the time being in force for the care and management of the public roads, public streets, and public thoroughfares within the said Municipality, and for every breach thereof shall incur the same penalties as other persons.

40. Any person offending against any of these By-laws shall, except when otherwise expressly provided, forfeit and pay a sum not exceeding two pounds nor less than five shillings.

SCHEDULE A.

A Requisition for License.

To the Municipal Council of the Municipal District of

I, residing at street, within the Municipality of Dubbo, do hereby request that a license may be granted to me to within the limits of the said Municipality.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF LEICHHARDT—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 26th October, 1885.

MUNICIPAL DISTRICT OF LEICHHARDT.—BY-LAWS.

THE following By-laws, made by the Council of the Municipal District of Leichhardt, repealing section 16 of Part 1, of the By-laws of the Municipal District, and according the Mayor of the Municipality the privilege of moving or seconding motions and of speaking once on any motion or amendment before the Council respectively, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

P. A. JENNINGS.

THAT clause 16 of Part 1 of existing By-laws be and the same is hereby rescinded.

The additional By-law as follows:—

That the Mayor or Chairman of the Council of this Municipal District shall have the right of either moving or seconding any motion and have the privilege of speaking once on any subject or amendment introduced. The Mayor or Chairman shall rise when so speaking (unless prevented by some bodily infirmity from so doing), but shall be considered as still presiding.

Made and passed by the Municipal Council of the Municipal District of Leichhardt, in Council assembled, this twenty-fourth day of August, 1885.

By order of the Council,

(L.S.) JOHN YOUNG,
Mayor.

WALTER BEAMES,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF MANLY—AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 23rd November, 1885.

MUNICIPAL DISTRICT OF MANLY—AMENDED BY-LAWS.

THE following amended By-laws made by the Council of the Municipal District of Manly, having been confirmed by His Excellency the Lieutenant-Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

ALEX. STUART.

BY-LAWS OF THE MUNICIPALITY OF MANLY.

By-laws repealed.

THE following By-laws of the said Council of the Municipality of Manly, dated January 9th, 1878, and published in the Government Gazette of the 9th January, 1878, No. 14, are hereby repealed, viz.:—

Part 4, No. 21—"Damaging trees."
Part 6, No. 5—"Erection of houses, &c."
Part 3, No. 7—"Placards not to be affixed on walls, &c."

Persons obstructing Overseer, &c.

1. Any person who shall wilfully obstruct or interfere with the Surveyor or other Officers of the Council, or any person acting for or under him or them, in the exercise of any of the duties or powers by these By-laws imposed, shall on conviction forfeit and pay a penalty of not less than two pounds nor more than twenty pounds.

Allowing filth to flow from premises

2. Any person or persons allowing any filth or offensive matter to flow or come from his or her premises, shall be liable to a penalty of not less than forty shillings nor more than twenty pounds.

Loitering in streets, &c.

3. Any person or persons remaining or loitering in or obstructing any road, street, footway, or other public place within the Municipality, to the inconvenience of the passers-by, or in any way interrupting the traffic, shall discontinue to do so on being required by any officer or servant of the Municipal Council or any Police Officer, and failing to comply with such request, shall be liable to a penalty of not less than ten shillings nor more than ten pounds; and for any subsequent conviction shall be liable to a penalty of not less than two pounds nor more than twenty pounds.

51—

Affixing placards on walls, and painting thereon.

4. It shall not be lawful for any person to paste or otherwise affix any placard or other paper or notice upon any wall, fence, post, stone, pillar, railing, house, or building; nor to deface or mark any such wall, fence, post, pillar, rocks, railing, house, or building by chalk or paint or in any other manner, unless with the consent of the owner thereof; and any person who shall be guilty of any such offence, shall forfeit and pay a sum not less than ten shillings nor more than ten pounds.

Recreation Grounds.

5. Parks or places of a like nature for the purpose of public recreation may be established by the Council, either within the boundaries of the said Municipality or in any public reserve adjacent thereto, which, or the use of which, may be granted to the Council for the purpose of public recreation, upon such terms as the Council shall by resolution approve; and the Council may make rules and regulations for the management and maintenance of such places of recreation, and any person breaking any of such rules and regulations shall be liable to a penalty not exceeding twenty pounds nor less than one pound.

No balcony, &c., to project.

6. With regard to buildings hereafter to be built or rebuilt, it shall not be lawful for any awning, verandah, portico, balcony, or window, forming part of or attached to any external wall, to project beyond the building line of any street or road, except with the consent of the Council first obtained; nor shall any balcony, or any other external projection as aforesaid, which may hereafter be added to any existing building, be allowed to project as aforesaid, under a penalty not exceeding twenty pounds nor less than five pounds, except with the consent of the Council first obtained. Provided that no such awning, verandah, portico, or balcony, shall be permitted to be erected in any street less than feet wide; provided also that any person desiring to erect any such structure shall first submit a plan for the approval of the Council.

Notices not to be painted on pavement.

7. Any person who shall stamp, stain, paint, write, or post any advertisement or notice upon any footway or kerbstone within this Municipality, shall be liable to a penalty not exceeding two pounds nor less than ten shillings.

Trees in streets.

8. The Council shall have power to plant trees, shrubs, and plants in the streets, reserves, and public ways of this Municipality, and any person wilfully injuring or destroying any of such trees, or any railing, fence, or thing protecting the same, shall on conviction forfeit and pay a penalty of not more than ten pounds nor less than two pounds, in addition to the value of the trees, railing, fence, or thing so injured.

Erection of houses, &c.—Fee for permission.

9. No person shall be permitted to erect any house, shop, or other building or fence in any street, lane, or place within the Municipality without having first served notice in writing to the Mayor or Council Clerk before commencing the same, stating his intention and describing the proposed situation of the building or erection, and shall, at the time the said notice is given as aforesaid, pay to the Council Clerk a fee of five shillings for permission to erect any such fence, house, shop, or building in any street, lane, or other place within the said Municipality, and every owner thereof, and every contractor for such house, shop, or building, or any part thereof, commencing to build or work thereon without such notice having been given, shall forfeit and pay for every such offence any sum not exceeding two pounds nor less than five shillings.

No private sewers to be made to communicate with the public sewers without notice.

10. It shall not be lawful for any person, without notice to the Council or otherwise than according to such plans and directions as such Council make and give, to make or branch any private drain or sewer into any of the public drains or sewers, or into any drain or sewer communicating therewith; and in case any person or persons shall make or branch any private drain or sewer communicating or to communicate therewith without such notice, or otherwise than as aforesaid, every person so offending shall for every such offence forfeit and pay any sum not exceeding fifty pounds, and shall, at his own expense, make good all roads, streets, kerbing, &c., which shall have been injured by or through any such work; and all such repairs shall be performed to the satisfaction of such Officer as the Council shall appoint to superintend such work; and any person who shall do or perform anything contrary to this clause, or shall neglect to make good all such damage as aforesaid, shall on conviction thereof forfeit and pay a sum not exceeding fifty pounds nor less than one pound.

Passed by the Municipal Council of Manly, this 26th day of March, 1885.

(L.S.) CHARLES R. AUSTIN,
Acting Mayor.

JAS. JONES,
Council Clerk.

Sydney: Thomas Richards, Government Printer.—1885.

[3d.]

1885-6.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF SOUTH SINGLETON.—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 10th December, 1885.

MUNICIPAL DISTRICT OF SOUTH SINGLETON.—BY-LAWS.

THE following By-laws made by the Council of the Municipal District of South Singleton, having been confirmed by His Excellency the Lieutenant-Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

P. A. JENNINGS.

BY-LAWS OF THE MUNICIPAL DISTRICT OF SOUTH SINGLETON. PROCEEDINGS of the Council and Committees; preservation of order at Council Meetings; duties of officers and servants, &c.; prevention and extinguishing of fires; care and management of public roads; suppression of nuisances and houses of ill-fame, &c.; and for the general good rule and government of the Municipal District.

Standing orders.

1. The meetings of the Council shall be held monthly on Tuesdays at the hour of 8 o'clock p.m., except as provided under clause 103 of the Municipalities Act of 1867.

2. The Mayor or Chairman shall preserve order, and when required, or called upon, to decide a point of order or practice, he is to state the rule, custom, or precedent, applicable to the case, without argument or comment.

3. The Mayor or Chairman may take part in all the proceedings of the Council.

4. All questions duly proposed shall be put by the Mayor or Chairman, and the sense of the Council thereon shall be declared by him.

5. Every question shall be put in the affirmative, and then in the negative; and this may be done as often as the Mayor or Chairman shall deem necessary for enabling him to determine which side has the majority.

6. No member, having taken his seat, shall be allowed to withdraw, without asking the permission of the Chairman.

7. If two or more members rise to speak at the same time, the Mayor or Chairman shall decide which of them is entitled to pre-audience.

8. The Mayor or Chairman may without waiting for the interposition of any member of the Council, call to order any member proceeding to speak a second time on the same question, except in explanation.

Order of business.

9. The business of each ordinary meeting of the Council shall be transacted in the following order, viz.:—

(*a.*) The reading and confirmation of the minutes of the previous meeting.
(*b.*) The reading of official correspondence.
(*c.*) The presentation of petitions.
(*d.*) Reports brought up from Committees.
(*e.*) Miscellaneous business.
(*f.*) Motions of which notice has been given.
(*g.*) Notices of motion.
(*h.*) Consideration of Tenders.
(*i.*) Orders of the day.

10. The question for confirming the minutes of the previous meeting shall be proposed by the Mayor or Chairman immediately upon their being read, and shall be to the effect that the minutes now read are a correct record of the proceedings, and no discussion shall be allowed thereon, except on the point of accuracy.

Rules of debate.

11. Every member shall stand when speaking, and shall address the Chair.

12. Except in Committee no member shall speak more than once on the same question, unless in explanation, when misrepresented or misunderstood; provided, however, that the mover of the question shall be allowed the liberty of reply; and provided further that every member shall be at liberty to speak once on any amendment as well as on the original motion; but the right of reply shall not extend to the mover of an amendment.

13. No member shall speak upon any motion or amendment for a longer time than fifteen minutes, unless by permission of the Council.

14. No member shall digress from the matter under discussion, nor make personal reflections on members, nor impute motives.

15. When any member shall use any expression which the Mayor or Chairman, or any alderman shall think capable of being offensively applied to any other member, the member so offending shall be required by the Mayor or Chairman to withdraw the expression, and to make a satisfactory apology to the Council.

16. No alderman, when discussing any matter, shall be interrupted, unless by a call to order when he shall sit down. The alderman calling to order shall then be heard, and the question of order decided before the debate or any other business is resumed.

17. Any member may require the question under discussion to be read for his information at any time during a debate, but not so as to interrupt any other member when speaking.

18. A debate may be adjourned to a later hour of the evening, or to another evening specified, and the member on whose motion a debate is adjourned, shall be entitled to pre-audience on resumption of the debate.

Divisions.

19. It shall be competent for any member to divide the Council upon any question put from the Chair, either in full Council or Committee of the Council; and upon such division those who are on the affirmative shall place themselves on the Mayor's or Chairman's right hand, and those who are on the negative shall place themselves on his left hand; and no member shall leave his place until the names of all the members present have been taken down by the Council Clerk, or person officiating for him.

20. All divisions of the Council shall be entered on the minutes of the proceedings.

Motions.

21. Motions shall take precedence of Orders of the Day, and be moved or postponed in the order in which they stand on the Notice Paper, or lapse.

22. No motion shall be put unless it be seconded.

23. When a motion has been proposed and seconded, it shall be the property of the Council, and shall not be withdrawn without the consent of the Council.

24. Any number of amendments may be proposed on a motion before the Council; and when more than one amendment is moved and seconded, the question shall first be put on the last amendment, and then on the one next to the last, and so on, in the inverse order to that in which they have been moved; provided, however, that when such motion or amendment shall relate to the fixing of salaries, rates, or other matters of finance, the lowest sum shall be put first, then the next lowest, and so on to the highest.

25. Any motion for adjournment, if seconded, shall be put immediately, without discussion, but if such motion be negatived, it shall not be competent for any member to make a similar motion until at least half an hour shall have elapsed from the period of moving the one that has been negatived.

26. No motion, the effect of which, if carried, would be to rescind, or be repugnant to any resolution which has been passed by the Council shall be entertained within three months, unless a call of the whole Council has been duly made for that purpose; and no such motion, if negatived by the Council, shall be again entertained during a period of three months.

27. Matters of extreme urgency may, with the consent of the Council, be brought under consideration without notice being previously given.

28. A book, to be called a "motion book," shall be provided by the Council, for the purpose of immediate reference, in which the Council Clerk shall enter all motions duly made, and amendments thereon, if any, specifying the manner in which such motions or amendments have been dealt with.

Petitions.

29. It shall be incumbent on any member presenting a petition to acquaint himself with the contents thereof, and to report to the Council that it does not contain any disrespectful language.

30. On the presentation of a petition no debate shall take place, and the only question that can then be entertained by the Council shall be, that the petition be received, or that it be referred to a Committee; provided, however, that any petition that has been received by the Council may be taken into consideration upon notice of motion being given in the usual way.

31. Every petition received by the Council shall be received only as the petition of the party or parties whose signature or signatures it bears; and no petition shall be received unless at least one signature be upon the sheet containing the petition.

Committees.

32. In a Committee of the Whole Council the general rules of the Council shall be observed, except the rule limiting the number of times of speaking.

33. Every report of a Committee shall be signed by the Chairman thereof.

34. When the report of a Committee is brought up and presented to the Council, the question as to its reception may be moved and put at once; but it shall not be adopted, or taken into consideration, without notice in the usual way.

35. There shall be three Standing Committees, to be called respectively—the Committee of Finance (of which the Mayor shall be Chairman), the Improvement Committee, and the General Committee; and the members of all such described Committees shall be chosen by ballot.

36. The Standing Committees shall be appointed for the municipal year at the first meeting of the Council after the election of the Mayor of the Municipality; and any vacancies occurring therein during the year shall be filled up by the Council.

37. All reports of Committees shall be fairly written on foolscap paper for the convenience of filing or binding.

Finance Committee.

38. No matters of account shall be disposed of by the Council until they have been examined and reported upon by the Committee of Finance.

39. The Chairman may, however, with the assent of two members of Committee, under signature, authorize the expenditure of any sum not exceeding ten pounds, during any recess; and such expenditure shall be reported to the Council at its next meeting, and the usual draft obtained for payment thereof.

40. All drafts upon the funds shall be signed by the Mayor of the Municipality and one member of the Finance Committee, and be countersigned by the Council Clerk.

41. The Mayor of the Municipality shall, in all cases, give the necessary information to the bankers, whose signatures are necessary to constitute a genuine draft.

42. No accounts of any kind whatsoever, except those otherwise specially provided for, shall be paid, except at the usual meetings of the Council, or until such accounts shall have been first passed by the Finance Committee, and be then allowed by the Council.

43. No contract shall be paid for until such contract shall have been fully completed to the satisfaction of the Committee under whose authority the contract was entered into, nor by it, unless in the form prescribed for other payments.

Improvement Committee

44. No public work of any character shall be undertaken (except as in Rule 42 of Finance Committee By-laws) until the nature thereof and estimate of probable cost be first brought before the Council for consideration and approval.

45. All accounts against the Corporation, relating to works, shall be examined by the Improvement Committee, and, if found correct, shall be passed to the Finance Committee for payment in the usual manner.

General Committee.

46. All matters which the Council shall think fit to refer to a Committee, and which do not fall within the province of any other Standing Committee, shall be referred to the General Committee; provided, however, that the Council may, at any time, refer such matters to a Committee to be appointed for that special business.

Making By-laws.

47. Before any proposed by-law is discussed in Council a copy thereof shall be open for public inspection, in the office of the Corporation, not less than seven days.

48. No By-law shall be passed until it has been reported upon by a Committee of the Whole Council nor until it has been twice read in Council on different days.

49. All By-laws, when confirmed and published as the Municipalities Act of 1867 directs, shall be fairly transcribed into a book to be kept for that purpose, signed by the Mayor, and countersigned by the Council Clerk; and the said book shall, at all reasonable times, be open to public inspection.

Miscellaneous.

50. Works undertaken by the Council and estimated to cost over £20 (twenty pounds) shall be let by tender, and no tender shall be entertained unless it be accompanied by an agreement, signed by one or more respectable parties, as sureties for due performance of the contract.

51. Any member may record his protest against any decision of the Council, provided that the protest be handed to the Council Clerk not later than the next Council meeting; and provided, also, that notice of his intention to protest be given immediately on the passing of the resolution to which the protest refers.

52. The common seal shall not be affixed to any document without the express authority of the Council; and every impression thereof, so authorized, shall be verified by the signatures of the Mayor and Council Clerk, or in case of illness or absence of the Mayor by two aldermen, and countersigned by the Council Clerk.

53. No officer of the Corporation shall be at liberty to show, lay open, or expose, any of the books, papers, or records of the Corporation to any person other than an Alderman, without leave from the Council, except as otherwise provided for by section 108 of Municipalities Act of 1867.

54. In cases where security is required by clause 151 of the Municipalities Act of 1867, no sureties shall be accepted, otherwise than by a vote of the Council; and it shall not be competent for the Council to accept, as sureties, any of its own members, nor any person holding office in the Corporation.

55. Any one or more of the Standing Orders may be suspended *pro tempore* in a case of emergency, if a majority of the Council then present shall deem such suspension necessary.

56. All books, deeds, memorials, letters, documents, and other records of the Council, except as hereinafter mentioned, shall be kept at the Council Chambers, in the custody and care of the Council Clerk, who shall be responsible for the safe custody of the same: but the Mayor may for any special purpose authorize their removal.

The Bailiff and his duties.

57. The bailiff shall be appointed by a resolution of the Council, and may be at any time removed in a similar way.

58. The bailiff shall make all levies and distresses for the recovery of rates under warrant, in the form of the schedule hereto annexed and marked with the letter A, under the hand of the Mayor or any person who may for the time being be duly authorized to perform the duties of that office.

59. At the time of making a distress the bailiff shall forthwith make out a written inventory, in the form or to the effect of the schedule annexed hereto, and marked with the letter B, which inventory shall be delivered to the occupant of the land or premises, or the owner of the goods so distrained, or to some person on his or her behalf, resident at the place where the distress has been made; and in case there shall be no person at such place, with whom such inventory can be left as aforesaid, then such inventory shall be posted on some conspicuous part of the land or premises on which the distress has been made, and the bailiff shall give a copy of the inventory to the ratepayer, on demand, at any time within one month after the making of such distress.

60. The bailiff, in making a distress as aforesaid, may impound or otherwise secure the distress so made, of what nature or kind soever it may be, in such places or in such part of the land or premises chargeable with the rate, as shall be most fit and convenient for this purpose; and it shall be lawful for any person, whatsoever, after the expiration of the five days hereinbefore mentioned, to come and go to and from such place or part of the said land or premises where any distress shall be impounded and secured as aforesaid, in order to view and buy, and in order to carry off and remove, the same on account of the purchaser thereof.

61. The owner of any goods so distrained upon may, at his or her option, direct and specify the order in which they shall be successively sold; and the goods and chattels shall, in such case, be put up for sale according to such direction.

62. The bailiff shall hand over to the Council Clerk all proceeds of such distresses within forty-eight hours after having received the same.

63. The bailiff, with the sanction of the Mayor of the Borough, may authorize any person to act temporarily as his deputy; and the person thus authorized shall have and exercise for the time being, all the powers of the bailiff himself; but the bailiff and his sureties shall, in every case, be held responsible for the acts of such deputy.

64. The bailiff shall be paid for every levy made under these By-laws, according to the schedule hereunto annexed, marked C.

65. The bailiff, and such assistants as he may take with him, shall enter into any part of the land, building, or tenement in respect of which a warrant has been issued for the recovery of any rate or rates as aforesaid, and to distrain the goods therein or thereon, and to remain in such building, tenement, or other property in charge thereof; and if the sum for which such distress shall have been made or taken shall not be paid on or before the expiration of two days, it shall be lawful for the bailiff to sell the goods so distrained, or a sufficient portion thereof; and if the party distrained upon shall so require, by public auction, either in the premises or at such other place within the Borough as the bailiff may think proper to remove thereto, such party consenting in writing to pay the charges of the auctioneer, if so sold; and the surplus, if any remain after deducting the amount distrained for, together with the expenses attendant upon such distress and sale, shall be paid over to the owner of the goods so sold: Provided that nothing herein contained shall apply to the sale of any produce whatever which may be growing upon the land at the time of making the distress: Provided always, that no distress shall be made on the goods of any casual visitor, or on the goods of any lodger in any house or apartment ordinarily let or used as a lodging-house or apartment.

SCHEDULE A.

Warrant of Distress.

I, the Mayor of the Municipal District of South Singleton, do hereby authorize you, bailiff of the said Municipal District, to distrain the goods and chattels in the dwelling-house, or in and upon the land and premises of situate at for the sum of being the amount of Municipal rates due to the Municipal District, to the day of for the said dwelling-house, land, or premises (as the case may be), and to proceed thereon for the recovery of the said rates, according to law.

Dated this day of 18 .

Mayor.

SCHEDULE B.

Inventory.

I have this day, in virtue of a warrant, under the name of the Mayor of the Municipal District of South Singleton, dated distrained the following goods and chattels in the dwelling-house, or in and upon the land and premises of situate at , within the Municipal District of South Singleton, for the sum of , being the amount of rates due to the said Municipal District to the day of 18 .

Dated this day of 18 .

Bailiff.

SCHEDULE C.

Fees to bailiff.

For making entry and inventory, five shillings; if in possession more than five hours, five shillings additional; and for every subsequent day whilst in possession, five shillings; and five shillings per cent. on the net amount of sale.

Prevention and extinguishing of fires.

66. It shall not be lawful for any persons to burn any shavings, or other matters or things in any street, road, or public place within the Municipality.

67. No householder shall place, or knowingly permit to be placed, in any house, yard, workshop, out-houses, or other premises, fire, powder, or combustible materials of any kind, in such a manner as to endanger contiguous buildings.

68. The Mayor upon the representation of any two householders, that fire is being used to the danger of contiguous buildings, shall cause three days' notice in writing (unless the urgency of the case requires that it should be removed at once) to be given to such householder, to show cause why the same should not be removed or remedied, and an opportunity thereupon given to show such cause.

69. For every offence against the provisions of these By-laws the offender shall be liable to a penalty not exceeding ten pounds, to be recovered in a summary manner before any Justice, as provided by the Municipalities Act of 1867, section 193.

70. Every owner and driver of a licensed water-cart shall keep such cart loaded with water during all times after sunset and before sunrise, and shall, if any building, premises, or property shall be on fire within the Borough, attend at the place of such fire with such cart loaded with water, and shall continue to cart water by full loads to such place, and shall deliver such water in such manner as may be required by the Mayor, or by any alderman or person duly authorized by the Council in that behalf, and then present for extinguishing such fire; and every such owner or driver who shall without reasonable excuse fail to comply with the provisions of this section shall forfeit a sum not exceeding ten pounds, nor less than two pounds.

71. There shall be paid out of the Borough funds to the owner of every licensed water-cart who shall have attended with any water at the place of any fire as herein provided, and delivered the same as required for extinguishing such fire, such reasonable compensation as the Council shall, by resolution, have appointed in that behalf, and also to such owners of such carts as shall have first and second in order attended with loads of water, such further sums by way of reward as the Council may by similar resolution have fixed.

Care and management of the public roads and streets and public thoroughfares of the Borough.

72. The surveyor of the Municipality, duly appointed by the Council thereof, or any person acting for him, shall be the proper person for marking out, when necessary, any roads, streets, or thoroughfares, in actual public use as such within the Borough; in marking out such roads, streets, or thoroughfares recourse shall be had, when practicable, to the plans under which lands, with frontage to the road, street, or thoroughfare in question shall have been sold; and it shall be the duty of the surveyor, or any person acting for him, to place posts at the corners or intersections of any roads, streets, lanes, or thoroughfares, wherever the same may be considered necessary or desirable by the Municipal Council, so as to give a width of forty-two feet, at least for the carriageway, and twelve feet at least for the footway on each side when the street shall be sixty-six feet wide; and in proportion, and in the discretion of the said surveyor, or person acting for him, in any public roads, streets, lanes, or thoroughfares of other width than sixty-six feet.

73. Whenever any road, street, or lane has been marked out in the manner herein provided, no house, shop, fence, or other structure shall be erected or allowed to project or encroach on any part thereof.

74. Whenever any footways shall have been marked out, the surveyor or person acting for him, may, with the sanction of the Council, cause the same to be levelled and made, as nearly as practicable, of equal height and breadth, and with an equal slope and inclination, and for this purpose may remove any flagging, steps, or other matter or thing that may injure or obstruct the said footway, or render unequal or inconvenient, and which now is, or may hereafter be, erected or placed on the space marked out for any of the said footways.

Obstructions and encroachments.

75. The surveyor may at any time, or the person acting as such, on the order of the Council, and upon due notice of ten days, direct the removal of any fence, building, or other obstruction or encroachment which shall be made in and upon any road, street, lane, or thoroughfare, under the charge of the Council; notice shall in this case be served, either personally, or at the usual or last known place of abode of the person to whom such obstructive or encroaching structure belongs, or who has erected the same, or caused it to be erected, or who may be in charge of the same.

76. In any case where after the service of notice for the removal of any obstruction or encroachment as aforesaid, the person causing the same shall not remove it within a reasonable time, it shall be lawful for the Council to direct the removal of the same, under the superintendence of its own proper officer, and at the cost of the owner or of the person thus offending, or of the person who may be in charge thereof: Provided that the expenses thereby incurred shall in no case exceed the sum of ten pounds, to be recovered summarily in manner provided for the recovery of penalties under these By-laws.

77. In case where the obstruction or encroachment cannot be removed, unless at a greater cost than ten pounds, it shall be open for the Council to direct such removal, and to pay all costs thereof, above ten pounds, from the Municipal funds, or to proceed by action of trespass against the person causing such obstruction or encroachment, or who may be in charge thereof.

78. The foregoing provisions shall be equally applicable to all obstructions by digging or excavation.

79. The surveyor, or person acting for him, may, at any time, by order of the Council, cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same, or for any necessary purpose; and any person or persons offending against this By-law, either by travelling on or by removing or destroying any obstruction that may be placed thereon, for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds for every such offence.

80. No person shall be allowed to obstruct any pathway, road, street, or public thoroughfare, within the Municipality, by building materials, drays, carts, goods, merchandise, or anything whatsoever calculated to obstruct or hinder free passage, without the sanction of the Mayor in writing; and no person shall be allowed to leave waterholes or excavations for cellars or other purposes unfenced, or in such a manner as to be dangerous to passers-by; and at all places where buildings are being carried on, or where any obstruction to the danger of passers-by exists, the person causing such obstruction shall be required to provide lights on either side, and keep the same lighted from sunset to sunrise. Any person so offending shall forfeit and pay for the first offence a sum not exceeding two pounds; for the second offence a sum not exceeding five pounds; and for the third offence a sum not exceeding ten pounds.

Trespasses and removal of nuisances.

81. Any person who shall cast any filth, rubbish, or any dead animal, or any animal, with intent of drowning, into any public watercourse, sewer, waterhole, river, creek, or canal, or who shall suffer slops, suds, or filth of any kind to flow from his or her premises into any such watercourse, sewer, waterhole, river, creek, or canal, or who shall permit or suffer any such slops, suds, or filth to flow from his or her premises over any of the footways or streets of the Municipality, or shall permit or cause, by means of pipes, shoots, channels, or other contrivances, filth of any kind whatsoever to flow into any public watercourse, sewer, waterhole, river, creek, or canal, or shall obstruct or divert from its channel any such sewer or watercourse, shall forfeit any sum not exceeding fifty pounds, nor less than forty shillings, and ten shillings for every day of continuation, such penalty to be recovered summarily in the manner provided for the recovery of penalties under these By-laws.

82. No person shall form, dig, or open any drain or sewer, in any public road or street, lane, or thoroughfare, or shall cut up the surface of any such road, street, lane, or thoroughfare, upon any pretence whatever, without leave in writing from the Mayor.

83. No person shall be allowed to throw rubbish, sweepings, or deposits of any kind, whatsoever, on the streets, pathways, or gutters of the Borough.

84. Any driver, carter, or other person who shall wilfully or negligently do, or suffer or cause to be done, any damage or injury to the kerbstones, gutters, or pathways of any street or roadway, or who shall drive a wheeled vehicle of any kind, or ride or drive, lead or stand, or permit to stand, any animal (other than dogs), on the pathway within the Municipality shall, upon conviction, forfeit and pay a sum not exceeding forty shillings, nor less than five shillings.

85. Any person who shall damage any public building, wall, parapet, bridge, road, street, sewer, watercourse, sluice, pump, fountain cock, waterpipe, shoot, embankment, or other public property in possession of the Council, shall be dealt with, as provided by the Municipalties Act of 1867.

86. Any person who shall wantonly or maliciously break or injure any lamp or lamp-post, or extinguish any lamp set up for public convenience in the said Municipality, shall, over and above the necessary expense of repairing the same or injury committed, forfeit and pay for every such offence any sum not less than one pound nor more than five pounds.

Throwing filth on carriage or foot ways.—Driving barrows and carriages on foot ways.

87. If any person shall, in any street or road, throw, cast, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animals, blood, or any other filth or annoyance, or any matter or thing, in or upon the carriage-way or foot way of any such street or road, or shall kill, slaughter, dress, scald, or cut up, any beast, swine, calf, sheep, lamb, or other cattle, in or so near to any of the said streets or roads, as that any blood or filth shall run or flow upon or over, or to be on any such carriage-way or foot way, or shall run, roll, drive, draw, place, or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any of the footways of any street or road, any waggon, cart, dray, sledge, or other carriage, or any wheelbarrow, or any truck or cask, or shall wilfully lead, or stand, or drive, or ride any horse or other beast, upon any of the footways aforesaid, every person so offending, upon conviction, shall forfeit and pay a sum not exceeding forty shillings, nor less than five shillings, for every such offence.

88. Nothing in these By-laws contained shall be deemed to prevent any person from placing an awning in front of his or her house or shop: Provided, however, that such awning be not less than seven feet above the height of the foot way in front of such house or shop, and that the posts be placed close up to the kerbstones or outer edge of such footway.

Suppression of nuisances and houses of ill-fame.

89. No householder or resident shall be permitted, under a penalty of any sum not exceeding ten pounds, to allow his or her premises, yards, closets, or drains, to be offensive or a nuisance to the neighbouring householders or residents.

90. No noisome or offensive trade shall be permitted, under a penalty of any sum not exceeding ten pounds, to be carried on in any premises, to the inconvenience or annoyance of the residents of neighbouring or adjoining houses or premises.

91. Upon representation by any respectable householder, that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance, the Inspector of Nuisances, or any other person appointed by the Council, shall make an inspection of the premises complained of, and the officer of the Council shall have full power, without any other authority than this By-law, to go upon such premises for the aforesaid purpose, and if any such premises be found to be a nuisance, notice in writing shall be given to the proprietor or resident of such premises, that if, within seven days after the service of such notice, the nuisance shall not be removed, the proprietor, tenant, or occupant of the aforesaid premises shall, upon conviction, be liable to any penalty not exceeding twenty pounds.

92. For preserving the cleanliness of the said Borough, and the health of the inhabitants thereof, it shall be lawful for the Inspector of Nuisances, from time to time, and when as often as he or the Council shall see occasion to visit and inspect the butchers' shambles and slaughter-houses, and to give such directions concerning the cleansing of such shambles and slaughter-houses, both within and without, as to him or the said Council shall seem needful; and any butcher, and the owner or occupier of any such shambles or slaughter-houses, who shall obstruct or molest any such officer in the inspection thereof, or who shall refuse or neglect to comply with such directions within a reasonable time, shall, on conviction, on the complaint of any such officer, forfeit and pay any sum not exceeding forty shillings nor less than five shillings.

Swine, Horses, Goats, &c., not suffered to wander about the streets.

93. It shall not be lawful for any person whatsoever to suffer any kind of swine, or any horse, ass, mule, sheep, or goat, or other cattle belonging to him or her, or under his or her charge, to stray or go about, or to be tethered or depastured in any road, street, or public place; and any person who shall so offend shall forfeit and pay, in respect of every such animal, a sum not exceeding forty shillings.

Hog-styes and nuisances not removed on complaint.

94. In case any privy, hog-stye, boiling-down, or any other matter or thing (which shall, at any time or times hereafter be in any place within the said Municipality), shall be or become a nuisance, it shall be lawful for the said Council, upon any complaint thereof to them made by any of the inhabitants, and after due investigation of such complaint, by notice in writing, to order that such privy, hog-stye, boiling-down, or other matter or thing, being a nuisance, shall be remedied and removed within seven days after such notice shall have been given to the owner or occupant of the said premises wherein such nuisance shall exist, or shall have been left for such owner or occupier at his or her last or usual place of abode, or on the said premises; and every such owner or occupier neglecting to remedy or remove such nuisance, pursuant to such notice and to the satisfaction of the Council, shall, on conviction, forfeit and pay the sum of ten pounds for every such neglect or disobedience.

Swine not to be kept.

95. It shall not be lawful for any person whomsoever to breed, feed, or keep any kind of swine, in any house, building, yard, garden, or other hereditaments, situate and being in or within forty yards of any street or public place in the Municipality; and any person who shall so offend, shall, on conviction, forfeit and pay for every such offence any sum not exceeding forty shillings, nor less than five shillings.

Drawing or trailing timber.

96. If any person shall haul or draw, or cause to be hauled or drawn, upon any part of the streets, roads, or public places, any timber, stone, or other thing, otherwise than upon wheeled carriages, or shall suffer any timber, stone, or other thing, which shall be carried principally or in part upon wheeled carriages, to drag or trail upon any part of such streets or public places, to the injury thereof, every such person so offending shall, upon conviction, forfeit and pay for every such offence a sum not exceeding five pounds.

Wells to be covered over, &c.

97. Every person who shall have a well situated between his dwelling-house or the appurtenances thereof, and any road, street, or footway within the limits of the said Municipality, or at the side thereof, or in any yard or place open or exposed to such road, street, or footway, shall cause such well to be securely and permanently covered over; and if any person having such well as aforesaid, shall fail to cover and secure the same within twenty-four hours after notice in writing shall have been given to him or her by any officer of the said Council, or shall have been left for such person at his or her usual or last known place of abode, or on the said premises, shall, on conviction, forfeit and pay the sum of two shillings and sixpence for every such offence.

Enclosures around scaffolding.

98. If any person shall dig or make, or cause to be dug or made, any hole, or leave or cause to be left, any hole in or adjoining to any street, road, or public place, for the purpose of making any vault or vaults, or the foundation or foundations to any house or other building, or for any other purposes whatsoever, and shall not forthwith enclose the same in a good and sufficient manner, or shall keep up or cause to be kept up and continued, any such enclosure for any time which shall be longer than shall be reasonably required, or shall not, when thereunto required by the said Council or its officer, well and sufficiently fence or enclose any such hole within twenty-four hours after he shall be required to do so by the said Council or officer, and in the manner, and with such materials as they or he shall direct, and to their and his satisfaction, and shall not place a light upon the said enclosure, and keep the same constantly burning from sunset to sunrise during the continuance of such enclosure, or shall fail to place or erect a fence, rail, or boarding around any scaffolding or ladder that may be required during the repairs or erection of any building (such fence, rail, or boarding, not to extend beyond the footway of any street), or fail to keep, during the existence of such fence, rail, or boarding, a light burning from sunset to sunrise, at each corner of the same; then and in every case the person so offending shall, on conviction, forfeit and pay for every such offence, and for every such refusal or neglect, any sum not exceeding five pounds, nor less than forty shillings.

Erections, &c., in front of public streets, roads, &c.

99. No person shall build, erect, put up, or remove, or cause to be built, erected, put up, or removed, any building, house, shop, warehouse, wall, or fence, fronting any public street, road, or thoroughfare, unless he shall have previously given seven days' notice of his intention to commence such works, to the Mayor or the Council Clerk of the Municipality; and any person so offending shall, upon conviction, pay for every such offence any sum not less than ten shillings, nor more than forty shillings.

Interrupting free passage, &c., driving on wrong side of road, &c.

100. If the driver of any waggon, wain, cart, or dray of any kind, shall ride upon any such carriage in any street as aforesaid, not having some person on foot to guide the same (such carts as are drawn by one horse, and driven or guided with reins only, excepted), or if the driver of any carriage whatsoever, shall wilfully be at such distance from such carriage, or in such a situation whilst it shall be passing upon such street, that he cannot have the direction and government of the horse or horses, or cattle drawing the same; or if the driver of any waggon, cart, dray, or coach, or other carriage whatsoever, meeting any other carriage, shall not keep his waggon, cart, dray, or coach, or other carriage on the left or near side of the road, street, or thoroughfare; or if any person shall, in any manner, wilfully prevent any other person or persons from passing him or her, or any carriage under his or her care, upon such street, or, by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any carriage or person in or upon the same, every such driver or person so offending, shall, upon conviction, forfeit and pay any sum not exceeding forty shillings, nor less than ten shillings.

Furious or careless driving, &c.

101. Any person who shall ride or drive through or upon any road, street, or public place, negligently, carelessly, or furiously, so as to endanger the life or limb of any person, or to the common danger of the passengers, shall, on conviction, forfeit and pay any sum not exceeding ten pounds, nor less than two pounds.

Affixing placards on walls, and chalking thereon.

102. It shall not be lawful for any person to paste, or otherwise affix any placard or other paper upon any wall, house, or building, by chalk or paint, or in any other manner, unless with the consent of the owner thereof; and any person who shall be guilty of any such offence, shall, on conviction, forfeit and pay a sum not exceeding ten shillings, nor less than two shillings and sixpence.

Carrying carcases of newly slaughtered meat.

103. Every person who shall carry or convey, or cause to be carried or conveyed, in any street or public place, the carcase, or any part of the carcase of any newly slaughtered animal, without a sufficient and proper cloth covering the same, for the concealment from public view, shall be liable, on conviction, to a penalty of any sum not exceeding forty shillings for every such offence.

Rain not to be carried on footways.

104. It shall not be lawful for any person whomsoever to carry by means of pipes, gutters, or other contrivances, any rain-water from the roof of his or her premises or house, nor permit nor suffer any rain-water to drop from the roof of his or her premises or houses upon any part of the footways of any street or public place within the Municipality; and any owner or occupier of any such house or premises, who shall neglect or refuse to remedy or remove any such pipes, gutters, or contrivances, when required to do so by any Municipal officer, shall, on conviction, forfeit and pay any sum not exceeding ten shillings, and a like sum for every day or part of a day that the same shall not be remedied or removed: prorovided that the owner or occupier of any such house or premises may convey any such rain-water by means of pipes laid under the surface of any such footways into the gutter adjoining the same; and provided also, that all such pipes shall be laid down to the satisfaction of, and under the superintendance of the Town Surveyor, or any other person appointed by the Council.

Breaking horses, &c.

105. It shall not be lawful for any person or persons in any street or public place within the Municipality, to drive any carriage or carriages for the purpose of breaking, exercising, or trying horses, or to ride, drive, or lead any horse, mare, or gelding, for the purposes of airing, exercising, trying breaking, showing, or exposing for sale, any such horse, mare, or gelding, otherwise than by passing quietly through such streets or public places: Provided further, that no person or persons shall be allowed within the said Municipality to furiously or carelessly drive any horse, mare, or gelding, to or from any public watering-place, creek, or river; and the person or persons in charge thereof, and who shall be *primâ facie* presumed to be the owner of the said animal or animals, and shall be liable accordingly; and every person so offending, upon conviction, shall forfeit and pay for every such offence any sum not exceeding forty shillings, nor less than five shillings.

Lights to be placed on vehicles.

106. Every person driving any vehicle within the Borough between sunset and sunrise shall carry a light on such vehicle in a conspicuous place. Any one offending against this By-law shall be liable to a penalty not exceeding ten shillings, nor less than two shillings and sixpence.

Names of owners on drays, &c.

107. The owner of every wain, waggon, van, cart, or dray plying for hire within, into, through, or from the Municipal District of South Singleton, shall have his name and place of abode painted in full length on the off side legibly, at least two inches high and proportionately broad, in white letters on black ground. Any one offending against the provisions of this By-law shall be liable to a penalty not exceeding ten shillings, nor less than two shillings and six-pence for each offence.

Hours for driving cattle.

108. Any person who shall drive or cause to be driven through any street, road, reserve, or public thoroughfare, or place of the said Municipality, any live stock, between the hours of 7 o'clock in the morning and 6 o'clock in the evening, except calves and foals under the age of one year, quiet milch cows, horses or cattle broken to saddle or draught, and pigs, sheep (not exceeding in number one hundred), and goats, shall forfeit and pay any sum not exceeding five pounds, nor less than one pound for every such offence, provided that this By-law shall not apply to any horses, cattle, sheep, or swine being driven the nearest route to the public pound, for the purpose of being impounded therein, or to the nearest public watering-place.

Driving and riding round street corners.

109. Any person who shall ride or drive round the corners of any street within the Municipality at a pace faster than a walk, shall, on conviction, forfeit and pay any sum not more than ten shillings, nor less than two shillings and sixpence.

Extirpation of noxious weeds.

110. Any owner or occupier of land within the said Municipal District who shall permit or suffer to grow, or remain on the said lands, the weeds known as the Bathurst Burr and Scotch Thistle, or other noisome weeds, and who shall fail to extirpate, remove, or destroy the same within ten days after the receipt of a notice in writing by post or otherwise from the Council so to do, shall for every such offence forfeit and pay a sum not exceeding five pounds, nor less than twenty shillings.

Bathing prohibited within certain limits.

111. Any person who shall bathe near to or within view from any inhabited house, or from any public bridge, street, road, or other place of public resort, within the limits of the said Municipal District between the hours of 6 o'clock in the morning and 8 o'clock in the evening, shall, on conviction, forfeit and pay for every such offence a sum not exceeding twenty shillings, unless in proper bathing costume.

Licensing public vehicles.

112. All water-carters, firewood carters, and owners of vehicles plying or carrying passengers, goods, or other materials for hire, shall be licensed by the Council, and the owners shall have their names painted in legible letters with the word "licensed" on some conspicuous part of such vehicles respectively. The license fee shall be at the rate of ten shillings per annum, and all such licenses shall be issued for a period of twelve months terminable on the thirty-first day of December in each year, and every owner who shall omit, or fail to comply with the provisions of this By-law, shall forfeit a sum not exceeding twenty shillings, nor less than five shillings.

Interpretation of Mayor and Municipality.

Whenever in any of these By-laws the word "Mayor" is made use of, unless the context shall indicate a contrary intention, it shall be construed also to signify and include any alderman lawfully acting for the time being in the place or stead of the Mayor; and whenever the words "Municipal District," or "Municipality" is made use of in the said By-laws, it shall be understood to signify the "Municipal District of South Singleton."

Passed by the Council of the Municipal District of South Singleton, this 14th day of July, 1885.

F. KING,
Mayor.

HARRY PINCHIN, Council Clerk.

[6d.] Sydney: Thomas Richards, Government Printer.—1886.

1885-6.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF GRANVILLE—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 5th January, 1886.

BOROUGH OF GRANVILLE.—BY-LAWS.

THE following By-laws made by the Council of the Borough of Granville, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

BOROUGH OF GRANVILLE.

By-laws made by the Council of the Borough of Granville, under the Municipalities Act of 1867.

PART I.

Ordinary Meeting of Council.

1. Unless otherwise ordered, the Council shall meet for despatch of business on every alternate Wednesday, at the hour of 8 p.m., unless such day shall happen to be a public holiday. In the latter case the meeting shall be held on such day as the Mayor may appoint.

Election of Chairman in absence of Mayor.

2. If at any meeting of the Council the Mayor be absent at the expiration of fifteen minutes after the time appointed for holding such meeting, the Aldermen then present shall proceed to elect from among themselves a Chairman for such meeting.

Adjournment for want of quorum.

3. In the event of a quorum not being present at any meeting of the Council within half-an-hour after the time appointed for the holding of such meeting, the names of the Aldermen then present shall be entered in the minute-book by the Council Clerk, and the meeting shall lapse. Should it appear at any time during the holding of any meeting that there is not a quorum of members present, the Mayor shall have power to adjourn such meeting, or intended meeting, to some other time.

Order of Business.

4. The following shall be the order of business at all meetings of the Council other than special meetings:—

First. The minutes of the last preceding meeting to be read, corrected if erroneous, and signed by the Mayor or other Chairman. No discussion to be permitted on such minutes, except as to whether they are correct.

Second. Reports from Committees and minutes from the Mayor (if any) to be presented and orders made thereon.

Third. Correspondence to be read and orders made thereon if expedient.

Fourth. Petitions (if any) to be read and dealt with.

Fifth. Questions as to any matters under the jurisdiction or within the official cognizance of the Council to be put and replied to, and statements as to any facts, matters, or circumstances requiring attention by the Council, or any of the Committees or officers to be made, or any other special business, but shall not be debated.

Sixth. Orders of the day.

Seventh. Motions of which notice has been given to be dealt with in the order in which they stand on the business paper.

Special Meetings.

Business at special meetings.

5. At special meetings of the Council the business after the minutes shall have been read and confirmed shall be taken in such order as the Mayor or Aldermen at whose instance the special meeting shall be called may have directed.

Minutes, how confirmed.

6. The question for confirming the minutes shall be proposed and seconded immediately upon their being read, and shall be to the effect that the minutes now read be confirmed as a correct record of the proceedings, and no discussion shall be allowed thereon, except on the point of accuracy. Minutes of previous meetings to be read and verified at special meetings as at ordinary meetings.

Answers to questions.

7. It shall not be compulsory for the Mayor to give official replies to questions put to him, unless he shall have had twenty-four hours' notice thereof.

Business Paper, how prepared.

8. The business paper for every meeting of the Council shall be made up by the Council Clerk and delivered to the Mayor and Aldermen, or left at their respective residences, at least twenty-four hours before the time appointed for such meeting. The Council Clerk shall enter on such business paper a copy or the substance of every notice of motion and of every order referring to business proposed to be entertained at such meeting.

Notices of motion, &c., to be numbered as received and preserved until matter disposed of.

9. All notices of motion, &c., for consideration at general meetings shall be delivered to the Council Clerk at least four days before such meeting, in writing, and shall be numbered by him as they are received, and entered on the business paper according to their number, and each notice shall be preserved by such clerk until after the matter to which it relates shall have been disposed of: Provided, however, that the person giving or forwarding any such notice of motion, &c., shall be at liberty to withdraw the same at any time before the making up of the business paper.

Motion, &c., withdrawn or altered.

10. No notice of motion, &c., shall be withdrawn from the business paper, altered, or amended without leave having been first obtained from the Council.

Motion to rescind by call of Council.

11. No motion, the effect of which, if carried, would be to rescind any motion which has already passed the Council during the preceding twelve months shall be entertained unless a "Call of the whole Council" has been duly made and granted for that purpose, and no such motion shall be discussed until the previous resolution be rescinded.

How Business Paper is to be disposed of.

12. The business paper for each meeting of the Council shall, at such meeting, be laid before the Mayor or Chairman, who shall make a note upon such business paper of the mode in which each matter entered thereon has been dealt with. And such business paper so noted shall be a record of the Council.

Motions, how to be moved.

13. Except by leave of the Council, motions shall be moved in the order in which they stand in the business paper, and if not so moved or postponed shall be struck from such business paper and be considered to have lapsed.

Absence of proposed mover.

14. No motion, of which notice shall have been entered on the business paper, shall be proceeded with in the absence of the Alderman by whom such notice shall have been given, unless by some other Alderman producing a written authority for that purpose from such first-named Alderman.

Motions to be seconded.

15. No motion in Council shall be discussed unless and until it be seconded.

Members speaking.

16. No member shall speak on any motion or amendment longer than five minutes without the consent of the Council

Motion may be divided.

17. The Mayor shall have power to order a complicated question to be divided and put to the meeting separately.

Amount of vote to be included on Business Paper.

18. All notices of motion and orders of the day must include the amount proposed to be expended. No amendment shall propose to incur a greater expenditure than the original motion of which due notice has been given to the Aldermen, nor shall there be entertained any vote incidentally involving an expenditure without such notice.

Motion for adjournment.

19. No discussion shall be permitted on any motion for adjournment of the Council; and if, upon the question being put on any such motion, the same be negatived, the subject then under consideration, or the next in order on the business paper, or any other on such paper that may be allowed precedence, shall be disposed of before any subsequent motion for adjournment shall be in order.

Of what Orders of the Day shall consist.

20. The orders of the day shall consist of any matters (other than notices of motion) which the Council shall at a previous meeting thereof have directed to be taken into consideration, or which shall necessarily arise out of the proceedings of a former meeting, or which the Mayor or any Committee of the Council shall have directed to be entered on the business paper for consideration.

Amendment may be moved.

21. When a motion has been proposed and seconded, any Alderman shall be at liberty to move an amendment thereon, in writing, but no such amendment shall be discussed until it be seconded.

Amendments to be in writing.

22. All amendments must be in writing, signed by the mover and delivered to the clerk, who shall add thereto the name of the seconder. Any member, excepting the mover and seconder, having previously spoken to the original motion, shall not at this stage speak, but may do so on the amendment becoming the question before the Council.

Amendments, how disposed of.

23. Whenever an amendment is moved upon an original proposition, no second amendment shall be taken into consideration until the first amendment has been disposed of. If the first amendment be carried it shall displace the original question, and become itself the question, subject to any further amendment. If the first amendment be negatived, then a second amendment may be moved upon the original question under consideration; but only one amendment shall be submitted to the Council for discussion at one time.

Petitions.

Petitions to be respectfully worded.

24. It shall be incumbent on every Alderman presenting a petition, to acquaint himself with the contents thereof, and to ascertain that it does not contain language disrespectful to the Council. The nature and prayer of every such petition shall be stated to the Council by the Alderman presenting the same; and all petitions shall be received only as the petitions of the parties signing the same.

How Petitions are to be dealt with.

25. No motion shall, unless as hereinafter provided, be permissible on the presentation of a petition, except that the same be received, or that it be received and referred to a Committee; or that it be received, and that its consideration stand an order of the day for some future meeting: Provided, however, that if any Alderman shall have given due notice of motion in reference to any petition, and such petition shall have been presented before such Alderman shall have been called upon to move such motion, the said motion shall, if otherwise unobjectionable, be considered in order.

Reports from Committees.

Form of Report.

26. All reports from Committees shall be in writing, and signed by the Chairman of such Committee.

Mayor's minutes.

27. The Mayor shall have the right of directing the attention of the Council to any matter or subject within its jurisdiction, or official cognizance, by a minute in writing signed by himself.

How Reports, &c., are to be dealt with.

28. No motion shall be permissible on the presentation of a report from a Committee or a minute from the Mayor, except that the same be received, or that it be received, and that its consideration stand an order of the day for some future meeting: Provided, however, that if any Alderman shall have given due notice in reference to any such report or minute, or if an order for the consideration of such report or minute shall have been entered among the orders of the day, such motion or order may be moved or considered in due course.

Order of debate.

Mode of addressing the Council, &c.

29. Every Alderman who shall propose or second any motion, or shall propose or second any amendment, or shall take any part in any debate or discussion, or shall put or reply to any question, or shall make any statement, or shall in any other way, or for any other purpose, address observations to the Council, shall, while so doing, stand up in his customary place (unless he shall be prevented from so doing by reason of some bodily infirmity), and shall address himself to the Mayor or other Chairman then presiding: Provided that in the case of a question, such question may by permission of such Mayor or Chairman be put directly to the Alderman or officer to be questioned, and may be replied to in like manner; but in every such case the question so put and the answer thereto shall be subject to every legal objection on the ground of disorder or irrelevancy. And all members of the Council shall, on all occasions when in such Council, address and speak of each other by their official designations, as Mayor, Chairman, or Alderman, as the case may be.

Speaker not to be interrupted if in order.

30. No Alderman shall be interrupted while thus speaking, unless for the purpose of calling him to order, as hereinafter provided.

Speaker not to digress, &c.

31 No Alderman shall digress from the subject under discussion, or shall make personal reflections on, nor impute improper motives to, any other Alderman.

Mayor to decide as to pre-ordinance.

32. If two or more Aldermen rise to speak at the same time, the Mayor or Chairman shall decide which of such Aldermen shall be first heard.

Alderman may require question to be stated, &c., under certain restrictions.

33. Any Alderman may request the subject matter under discussion to be read or stated for his information, or may require the production of any records of the Council bearing upon such matter which are readily accessible: Provided, however, that no such request shall be so made as to interrupt any other Alderman when speaking or materially to interrupt the discussion: Provided also, that if any such request shall appear to the Mayor not to have been made *bonâ fide* it shall not be complied with.

Lapsed Business.

34. Whenever the consideration of any motion or matter of busines, shall have been interrupted by reason of a quorum not having been present, the consideration of such question shall in such case, be resumed at the point where it was so interrupted as aforesaid, at the next fortnightly meeting.

Previous Question.

35. On the previous question being moved and seconded, no debate shall be permited.

Questions of Order.

Mayor or Chairman to decide Points of Order.

36. The Mayor or Chairman shall preserve order, and his decision on disputed points of order or practice shall be final in that particular case; and the Mayor or Chairman may, without the interposition of any other member of the Council, call any Alderman to order, whenever, in the opinion of such Mayor or Chairman, there shall be a necessity for so doing; and every member of the Council shall have the right of calling the attention of the Mayor or Chairman to any motion, amendment, statement, argument, or observation moved, used, or made by any other member which such first-named member may consider out of order. And the Mayor or Chairman, when called upon to decide points of order or practice, shall state the provision, rule, or practice which he shall deem applicable to the case, without discussing or commenting upon the same.

Penalties for persisting in disorderly conduct.

37. Any member of the Council, either in Council or Committee, who shall have been called to order by the Mayor or Chairman, and who shall still persist in any line of conduct or argument which shall have been decided as aforesaid to be disorderly, and shall refuse to make such explanation retraction, or apology, as a majority of the Aldermen then present shall consider satisfactory, shall be liable on conviction for each offence, to a penalty of not less than one pound nor more than ten pounds.

Mode of Voting.

How Questions are to be put.

38. The Mayor or Chairman shall put to the Council all questions on which it shall be necessary that a vote be taken, and shall declare the sense of such Council thereon; and he shall be at liberty to put any such question as often as may be necessary to enable him to form and declare his opinion as to the decision of the majority of members present.

Division penalty for refusing to vote.

39. Any Alderman shall be at liberty to call for a division; in such case the question shall be put first in the affirmative and then in the negative, and the Aldermen shall vote by show of hands, and the names and votes of the Aldermen present shall be recorded. Any alderman present when a division is called for, and in any way refusing to vote on such division, shall be liable for every such offence to a penalty of not less than one pound nor more than five pounds.

Protests.

Mode of Protesting. Protest to be recorded.

40. Every member of the Council (the Mayor included) may protest against any resolution or vote by the Council; notice of the intention so to protest must however be given at the meeting when such resolution is passed or such vote is arrived at, and the protest itself must be handed or sent to the Council Clerk not later than seven days after such notice.

Special Powers of Mayor.

41. The Mayor shall exercise a general supervision over all officers and servants of the Corporation, and may order the preparation of any return or statement, or the giving of any explanation or information by any such officer or servant in connection with his duties as he may think necessary.

Usage of House of Parliament to be observed unless other provision made.

42. In all cases not herein provided for, resort shall be had to the rules, forms, and practice of the New South Wales Parliament, which shall be followed as far as they can be applied to the proceedings of this Council.

Calls of the Council.

How call may be made.

43. A call of the Council may be ordered by any resolution of which due notice shall have been given, for the consideration of any motion or matter of business before such Council.

Mode of proceeding.

44. The call shall be made immediately before the motion or business for which such call has been ordered shall be moved or considered. Such call shall be made as follows:—The Council Clerk shall call the names of all the members in their alphabetical order; each member present shall answer to his name so called; and if any members are absent, a record shall be made of such absence; but if leave of absence to any such member shall have previously been granted, or if such an excuse in writing shall have been forwarded to the Mayor or Council Clerk as a majority of the Council then present shall consider satisfactory, such absent member shall stand excused, and a record shall be made of such excuse, and of the reasons for the same.

Penalty for absence without legal excuse—Further call when question adjourned.

45. Any member of the Council who, having had notice of such call of the Council, shall not answer to his name as aforesaid, or who being absent shall not be legally excused as aforesaid, or who, if absent, and not so excused, shall fail to show that by reason of extreme illness or any other sufficient cause he has been unable to send an excuse in writing as aforesaid, or who having answered to his name as aforesaid, shall not be present when a vote is taken on the motion or business as to which such call has been made as aforesaid, shall, for every such offence, be liable to a penalty of not less than one pound nor more than five pounds: Provided that if the consideration of every such motion or matter of business be adjourned to a future day, there shall be a further call on the resumption of such consideration; and the provisions herein as to penalties for absence shall have reference to such further call: And if there shall be more than one adjournment, this proviso shall be taken to extend to the resumption of the consideration of such motion or matter of business after every such adjournment.

Standing and Special Committees.

Standing Committees.

46. There shall be seven Standing Committees, viz., Works or Improvement, Finance, By-laws, Lighting, Park, River, and General Purpose Committee. These Committees shall be re-appointed every year at the first meeting of the Council which shall be held after the election of the Mayor, and shall hold office until their successors are appointed.

Works or Improvement Committee.

47. The Works Committee shall consist of the whole Council, three to form a quorum, and shall have the general direction of all works ordered or sanctioned by the Council, and the general inspection of all streets, roads, ways, bridges, public reserves, and other public places under the care and management of the Council. They shall also inquire and report from time to time as to such improvements or repairs as they may think necessary, or as they may be directed by resolution of the Council to enquire into and report upon.

Finance Committee.

48. The Finance Committee shall consist of three Aldermen and the Mayor, two to form a quorum, and shall examine and check all accounts, and shall watch generally over the collection and expenditure of the Municipal Revenues. They shall enquire and report from time to time as to all matters which they may consider to affect, or to be likely to affect, the finances of the borough; and as to such matters or subjects of the like nature as they may be directed by resolution of the Council, to enquire into and report upon.

By-law Committee.

49. The By-law Committee shall consist of three Aldermen and the Mayor, two to form a quorum. It shall be their duty to prepare for the consideration of the Council drafts of all such by-laws as may be required. It shall be the duty of the By-law Committee to inspect the records from time to time to ascertain that the same are properly kept as aforesaid, and to report at once to the Council any act of neglect or appearance of inefficiency which they may discover in the keeping of such records. They shall also consider and report in due course upon any matter referred to them by the Council.

Lighting Committee.

50. The Lighting Committee shall consist of four Aldermen, two to form a quorum. It shall be their duty to carefully consider all matters referred to them by the Council from time to time in connection with or appertaining to the lighting of the borough, the supply of gas or otherwise under control, and such committee shall, without delay, report to the Council in writing with such recommendations as they may deem necessary.

Park Committee.

51. The Park Committee shall consist of four Aldermen, two to form a quorum. It shall be their duty to consider and report to the Council upon all matters in connection with the Parks, Reserves, or Recreation Grounds within this borough.

River Committee.

52. The River Committee shall consist of four Aldermen, two to form a quorum. It shall be their duty to consider and report upon all matters referred to them by the Council from time to time in connection with, or appertaining to, the Parramatta and Duck Rivers where they respectively adjoin the boundaries of this borough.

General Purposes Committee.

53. The General Purposes Committee shall consist of four Aldermen, two to form a quorum. It shall be their duty to take cognizance of every matter, subject, or question within the jurisdiction of the Council not coming within the province of one or other of the before-mentioned Standing Committees as they may be directed by resolution of the Council to enquire into and report upon.

Special Committees.

54. Special Committees may consist of any number of members, and may be appointed for the performance of any duty which may be lawfully entrusted to a Committee, and for which, in the opinion of the Council, a Special Committee ought to be appointed. And no Standing Committee shall interfere with the performance of any duty which may for the time being have been entrusted to any such Special Committee. The appointment of every such Special Committee shall be made by resolution, after due notice, and it shall be incumbent on the mover of such resolution to embody therein a statement of the duties proposed to be entrusted to such Special Committee. The mover of any such resolution may name therein such members as, in his opinion, ought to constitute such Committee, or he may propose that such Committee consist of a certain number of members.

Chairman of Committee.

55. Every Committee of which the Mayor shall not be a member shall elect a permanent Chairman of such Committee within seven days after their appointment.

Term of Service in Committee.

56. The appointment of every Special Committee shall be considered to endure until the duties for which such Committee have been appointed shall have been fully performed: Provided, however, that nothing herein contained shall be held to effect in any way the right of such Committee to remove any Chairman of such Committee, or to appoint another such Chairman in his stead.

Committee Meeting, how called.

57. The Council Clerk shall call a meeting of any Committee when requested so to do by the Chairman or any two members of such Committee, or the Chairman thereof may call a meeting if he shall think fit.

Records of transactions in Committee.

58. The Chairman of each Standing Committee shall make or cause to be made, in a book to be kept by him for that purpose, memoranda of all the transactions of such Committee, which book he shall, on ceasing to be such Chairman, hand over to his successor.

Reports to be recorded.

59. All reports of proceedings in Committee of the Whole Council shall be recorded in the minute-book.

60. No person, except a member of a Committee, shall be admitted at any meeting of such Committee, without the consent of the Chairman and the approval of the majority of members present.

Expenditure.

Except in emergent matters, cost of all works to be estimated before undertaken.

61. With the exception of emergent matters hereinafter specially provided for, no work affecting the funds of the borough shall be undertaken until the probable expense thereof shall have been first ascertained by the Council.

Emergent matters and necessary current expenses. Expenses authorized to be reported. Outlay to be in accord with orders of the Council.

62. For emergent matters and for necessary current expenses during the intervals which may elapse between the meetings of the Council, outlays to the following extent may be incurred:—

1. By order of the Works Committee, or of the Mayor and one member of such Committee,—for repairs or emergent works in one place to the extent of five pounds.
2. By order of the Mayor,—for necessary current expenses, the extent of two pounds.

Provided in every case a detailed report in writing of every such outlay shall be laid before the Council at its next meeting, such report to be signed by the Chairman of the Works Committee or the Mayor by whom such outlay shall have been authorized. Also, that such outlay shall only be permissible in reference to matters coming strictly within the jurisdiction or functions of the Council, and that no outlay involving a disobedience or evasion of any order or resolution of such Council shall on any pretence be thus authorized.

Estimate of expenditure.

63. No resolution, motion, or report involving the expenditure of Municipal funds exceeding in amount the sum of twenty-five pounds shall be adopted by the Council, unless an estimate of cost of the same shall have been previously made and submitted to the Council or a Committee by some responsible officer of the Council or other competent person, in either case duly appointed for that purpose.

All claims to be examined and reported upon by Finance Committee.

64. All accounts and demands of money against or from the Council shall be examined and reported on by the Special Committee for that purpose before any order shall be made for payment of such accounts or demands.

Certificate required with each claim.

65. No payment shall be ordered unless there shall be a certificate or memorandum from the Committee, Mayor, or officer of the Council to whom the direction or guardianship of such expenditure properly belongs, showing that the demand is a legitimate one, and has been duly authorized or inquired into. It shall be the imperative duty of the Finance Committee to see that this requirement is fulfilled before recommending payment: Provided that in cases of special expenditure under section 62 of this part of these by-laws, the report directed by that section to be laid before the Council shall, if the outlay shall have been lawfully incurred, be deemed a sufficient certificate.

Common Seal and Records of the Council.

Common Seal.

66. The common seal shall be in the custody and care of the Council Clerk, and shall not be attached to any document without an express order of the Council. In every case when such common seal has been ordered to be attached to any document, such document shall also be signed by the Mayor, or, in case of the absence or illness of such Mayor, by two Aldermen, and countersigned by the Council Clerk.

Records of the Council defined.

67. The minute-book, letter-book, and all rate and assessment books, books of account, records, statements and memoranda of receipts and expenditure, electoral rolls, and other records relating to elections, business papers, reports from Committees, minutes from the Mayor, petitions, letters on municipal business addressed to the Council, or to the Mayor, or to any officer or servant of the Council, orders, reports, returns, and memoranda relating to municipal business, drawings, maps, plans, contracts, specifications, agreements, and all other books and papers connected with the business of the Council, shall be deemed records of the Council.

Records not to be removed, &c.—Penalties.—Exceptional circumstances.—Receipt to be given in every case before document received.—Proviso as to use of records as matters of evidence.

68. Any person removing any book or other record of the Council as aforesaid from the Council Chamber, without leave for such removal having been first obtained from such Council, or without other lawful cause for such removal as hereinafter provided, shall for every such offence be liable to a penalty of not less than one pound nor more than ten pounds. And nothing herein contained shall be held to affect the further liability of any person who shall have removed such book or other record as aforesaid to prosecution for stealing such book or record, or to an action at law for detention of the same: Provided that leave for temporary removal of a book or other record may be granted to the Council Clerk or the Treasurer by the Mayor, in order that such Clerk or Treasurer may post up entries or perform any other duty which it may be necessary that he should perform; also that the Mayor, or the Chairman of any Committee, or any Alderman acting for any such Chairman, may temporarily remove any record necessary for the preparation of a minute or a report, or for the purposes of any prosecution or suit at law, by, against, or at the instance of the Council; but in all such cases such Clerk, Treasurer, Mayor, Chairman, or Alderman, as the case may be, shall give a receipt under his hand for every document so removed, and every such receipt shall be preserved among the records until the book or other record to which it refers shall have been returned; when such receipt shall be destroyed. And provided also that the Mayor, Council Clerk, or other officer of the Council, who may be subpœnaed to produce any book or other record of the Council in a Court of Law, shall have the right to remove such book or other record for the purpose of obeying such summons, but shall return such book or record as speedily as possible; and every such person so removing any book or other record of the Council as aforesaid shall be legally responsible for the safe keeping and return of the same.

Penalty for defacing or destroying record.

69. Any person destroying, defacing, or altering any record of the Council, shall, for every such offence, be liable to a penalty of not less than five shillings nor more than fifty pounds.

Officers and Servants.

Bonds for good conduct.

70. All bonds of officers or servants of the Council for the faithful performance of their duties, shall be deposited as the Council may order; and no officer or servant of the Council shall be received as surety for any other officer or servant.

Duties of Council Clerk.

71. The Council Clerk, in compliance with the Municipalities Act of 1867, or by the present or any other by-laws made thereunder, shall perform the following duties, viz.:—

1. Attend all Council Meetings.
2. Attend all Committee Meetings.
3. Attend all Courts of Revision and Appeal.
4. Summon the Members of the Council to all Council or Committee Meetings.
5. Take notes of all Minutes and prepare Reports of all Committees.
6. Conduct all Correspondence ordered by the Council, or under the direction of the Mayor, and give all other officers instructions as directed by the Minutes.
7. To see that the Accounts are audited and the balance sheet duly submitted twice a year within the times specified by law.
8. To see to the gazetting of all by-laws and necessary advertisements.
9. To see that the Assessment Books, and the Municipal Lists and Rolls are duly prepared; examine proofs of latter, and arrange for distribution of copies on payment, to electors, prior to the elections.
10. Make all necessary arrangements for the elections, preparing all papers, &c., for Presiding Officers and Poll Clerks.
11. Prepare all bonds of officers; see that the guarantees are given and agreements duly signed, &c., and report same to the Council.
12. Advise with the officers from time to time as to their duties and the mode of carrying them out.
13. See that all levels and names of streets have been duly advertised as provided for by law, and authenticated by the Mayor's signature.
14. To bring under the notice of the Mayor any matter or thing requiring his prompt attention.
15. He shall likewise have charge of all the records of the Council except such books or documents as may be entrusted to any other officer of the Council; and shall be responsible for the safe keeping of such records. He shall generally assist the Mayor in carrying out the orders of the Council.
16. He shall enter into a Guarantee Society's Security for an amount fixed by the Council from time to time for not less than £200 for the faithful performance of his duties.

Complaints against Officers, &c., how dealt with.

72. All complaints against officers or servants of the Corporation must be in writing, and must in every case be signed by the person or persons complaining; and no notice whatever shall be taken of any complaint which is not in writing or is anonymous. All such complaints may be addressed to the Mayor, who, immediately upon the receipt of any such complaint, and without laying the same before the Council, shall have power to investigate the same, and report thereon at the next meeting; or he may, if necessary, suspend such officer or servant till the Council shall have dealt with the charge.

Miscellaneous.

Leave of absence.

73. No leave of absence shall be granted to the Mayor or to any Alderman otherwise than by a resolution of the Council adopted after due notice.

Mode of calling for tenders.

74. Whenever it is decided that any work shall be executed or any materials supplied by contract, tenders for the execution of such work or the supply of such materials shall be called for by public notice.

How notices are to be published.

75. In all cases where public notice is or shall be required to be given by any by-law, such notice shall be given and published by advertising the same in some newspaper circulating in the borough.

Part II.

Collection and enforcement of rates.

Times and modes of collection.—Rates to be collected yearly.

1. All rates levied or imposed by the Council under the provisions of the Municipalities Act of 1867 and its amendments shall be levied and collected for the year and be due and payable on and after such days as the Council shall by resolution appoint at the time of making or imposing such rates.

Rates on damaged premises.

2. In the event of any premises being wholly or partially destroyed by fire or other accident, the Council shall have power to accept an equitable proportion of the assessed rates of such premises for the remainder of any municipal year.

Rates to be paid at office of Council Clerk.

3. All persons liable to pay any rates as aforesaid shall pay the amount thereof, within the time prescribed by the said resolution, into the office of the Council Clerk, during the office hours appointed by the Council.

Defaulters.

4. It shall be the duty of the Council Clerk to furnish the Mayor with a list of the names of all persons whose rates are unpaid at the expiration of the times fixed for payment of the same as aforesaid.

Mayor to enforce payment.

5. The Mayor shall issue distress warrants against all such persons, and cause such warrants to be enforced, or cause such defaulters to be sued for the amount of such rates in a Court of competent jurisdiction.

Enforcement by Distress.

Bailiff.

6. A Bailiff shall, when found necessary, be appointed by the Council, and the said Bailiff shall find two sureties to the satisfaction of the Council, to the extent of not less than twenty pounds each, for the faithful performance of his duties; and it shall be the duty of the Bailiff to make all levies, by distress, for the recovery of rates, in the manner hereinafter provided.

Warrant of Distress.

7. All levies and distresses shall be made under warrant in the form of Schedule A hereto, under the hand of the Mayor or any Alderman who may for the time being be duly authorized to perform the duties of that office.

Distress and sale, &c.

8. If the sum for which any such distress shall have been made shall not be paid with costs, as hereinafter provided, on or before the expiration of five days, the Bailiff shall cause to be sold the goods so distrained, or a sufficient portion thereof, by public auction, either on the premises or at such other place within the said borough as the Bailiff may think proper to remove them to for such purpose, and shall pay over the surplus (if any) that may remain after deducting the amount of the sum distrained for, and costs, as hereinafter provided, to the owner of the goods so sold, on demand of such surplus by such owner.

Inventory.

9. At the time of making a distress the Bailiff shall make out a written inventory in the form of Schedule B hereto, which inventory shall be delivered to the occupant of the land or premises, or the owner of the goods so distrained, or to some person on his or her behalf resident at the place where the distress shall be made; and in case there shall be no person at such place with whom such inventory can be left as aforesaid, then such inventory shall be posted on some conspicuous part of the land or premises on which the distress is made; and the Bailiff shall give a copy of the inventory to such person, on demand, at any time within one month after making such distress.

Goods may be impounded.

10. The Bailiff, on making a distress, as aforesaid, may impound or otherwise secure the goods or chattels so distrained, of what nature or kind soever, in such place or places, or in such part of the land or premises chargeable with rates as shall be most fit and convenient for this purpose; and it shall be lawful for any person whomsoever, after the expiration of five days, as hereinbefore mentioned, to come and go to and from such place or part of the said land or premises where such goods or chattels shall be impounded and secured as aforesaid, in order to view and buy, and in order to carry off and remove the same, on account of the purchaser thereof

Owner to direct order of sale.

11. The owner of any goods or chattels so distrained upon may at his or her option, direct and specify the order in which they shall be successively sold, and the said goods or chattels shall, in such case, be put up for sale according to such direction.

Proceeds of Distress.

12. The Bailiff shall hand over to the Council Clerk all proceeds of every such distress within forty-eight hours after having received the same.

Costs.

13. There shall be payable to the Bailiff, for the use of the Council, for every levy and distress made under these by-laws the costs and charges in the Schedule hereunto annexed marked C.

SCHEDULE A.

Warrant of Distress.

I, , Mayor of the Borough of Granville, do hereby authorize you, , the Bailiff of the said borough, to distrain the goods and chattels in the dwelling-house (*or in and upon the land and premises*) of , situate at , for , being the amount of rates due to the said borough to the day of , for the said dwelling-house (*or land or premises, as the case may be*), and to proceed thereon for the recovery of the said rates according to law.

Dated this day of , 18

Mayor.

SCHEDULE B.

Inventory.

I have this day, in virtue of the warrant under the hand of the Mayor of the Borough of Granville, dated , distrained the following goods and chattels in the dwelling-house (*or in and upon the land and premises*) of , situate at , within the said borough for , being the amount of rates due to the said borough to the day of

Dated this day of , 18

Bailiff.

SCHEDULE C.

Costs.

	s.	d.
For every warrant of distress	2	0
For serving every warrant and making levy	2	0
For making and furnishing copy of inventory	1	0
If in possession more than five hours, additional	5	0
And for every subsequent day, or part of a day, whilst in possession.....	5	0
For sale, commission, and delivery of goods, per pound on proceeds of the sale.....	1	0

PART III.

Preventing and extinguishing fires.

Fire or combustible materials, &c.

1. Every person who shall place, or knowingly permit to be placed, in any house, yard, or workshop, out-offices, or other premises, fire, gunpowder, or combustible, or inflammable material of any kind, in such a manner as to endanger contiguous buildings, shall, on conviction, for every such offence forfeit and pay a penalty of not more than five pounds; and shall forthwith remove such fire, gunpowder, or combustible, or inflammable materials. And every such person who shall suffer any such fire, gunpowder, or combustible, or inflammable materials to remain as aforesaid for twenty-four hours after any such conviction, shall be deemed guilty of a further offence against this By-law.

Inflammable fences, &c.

2. Every person who shall erect any fence of brushwood, bushes, or other inflammable material, or shall make or place any stack of hay, corn, straw, or other produce, or place as or for the covering of any such stack any inflammable material, so as to endanger contiguous buildings or properties, or any trees, shrubs, or other produce of such properties, or any chattels in or upon such buildings or properties, shall forfeit on conviction, for every such offence, a penalty of not more than five pounds, and also shall remove such fence, stack, or covering within a reasonable time after such conviction. And any person failing to remove such fence, stack, or covering within a reasonable time after any such conviction as aforesaid, shall be deemed guilty of a further offence against this by-law.

Discharging fireworks, firearms, &c.

3. Every person who shall light any bonfire, tar-barrel, combustible matter, or firework, or shall discharge any firearms upon or within sixty yards of any public or private street, or any public place, shall forfeit a sum not exceeding five pounds.

Wilfully setting fire to chimneys.

4. Every person who wilfully sets or causes to be set on fire any chimney flue, smoke-vent, or stove-pipe herein called in common a "chimney," shall forfeit a sum not exceeding five pounds.

PART IV.

Streets and public places—public health and decency, &c., streets, &c.

Plans of proposed new road, &c., to be deposited.

1. Whenever any proprietor or proprietors of land within the said borough shall open any road, street, way, park, or other place for public use or recreation, through or upon such land, and shall be desirous that the Council shall undertake the care and management of such road, street, way, or park, &c., he or they shall furnish the Council with a plan or plans, signed by himself or themselves, in the presence of a Magistrate, showing clearly the position and extent of such road, street, way, or park, and if the Council shall determine to take charge of any such road, way, or other place as aforesaid, the plan or plans so signed as aforesaid shall be preserved as a record or records of the Council, and the proprietor or proprietors aforesaid shall execute such further instrument dedicating such road, way, or other place to public use as may be considered necessary by the Council, and such further instrument of dedication shall also be preserved as a record of the Council; but the Council shall not be compelled to take charge of, or spend moneys on, or vote money for any new street, road, lane, or thoroughfare that is not forty feet wide, including pathway, and unless such street, road, lane, thoroughfare, or other place is first proclaimed and properly formed and completed to the satisfaction of the Council, at the expense of the owner or owners of the land through which such road, street, lane, thoroughfare, or other place is carried.

Sub-division of lands.

2. Any person or persons being desirous of sub-dividing any land into allotments, shall submit a plan to the Council for their approval, showing the extent of each such proposed sub-division and the provision for drainage, one month prior to disposal of the same being made. For neglecting to do so they shall be liable to a penalty of not less than £10 nor more than £50.

Erection of houses, &c.

3. No person shall be permitted to erect any fence, house, shop, or other building in any street, lane, or place within this borough, without first serving notice in writing on the Mayor or Council Clerk, stating such intention, and describing the proposed situation of the building or erection, and at the time the said notice is given pay to the Council Clerk a fee of five shillings (for permission to erect any house, fence, shop, or other building), and without having received an authority from the Mayor or Council Clerk. No person shall be at liberty to encroach beyond the building-line in any street or lane, by the erection of verandahs, overhanging balconies, doorsteps, fences, or any other obstruction whatever. Any person offending against this by-law shall be liable to a fine of ten shillings; and in the case of an encroachment, shall be liable to a further fine of not less than five shillings nor more than two pounds for every day that the same shall remain unremoved or unaltered, after receiving seven days' notice to that effect.

Works Committee to fix street levels, &c.

5. The Works Committee, or any officer or person acting under the supervision of such Committee shall, subject to such orders as shall from time to time be made by the Council in that behalf, fix and lay out the levels of all public roads, streets, and ways within the borough, and the carriage and footways thereof: Provided that there shall be no change of level in any such public road, street, or way, until the same shall have been submitted to, and adopted by, the Council, as hereinafter directed.

Change of street levels.

5. Whenever it may be deemed necessary to alter the level of any such public road, street, or way as aforesaid, the Works Committee shall cause a plan and section, showing the proposed alterations, to be exhibited at the Council Chambers for fourteen days, for the information and inspection of ratepayers, and shall notify, by advertisement in some newspaper circulating in the borough, that such plan is open to inspection. At a subsequent meeting of the Council the said plan and section shall, if adopted, be signed by the Mayor or Chairman, and countersigned by the Council Clerk. And such plan and section so signed and countersigned shall be a record of the Council.

Changes of street names.

6. The Council shall have power from time to time as they may deem expedient to alter the name of any street, road, lane, avenue, or other public place, situate within the borough, and so soon thereafter as may be convenient, shall cause a notification thereof to be inserted in the Government Gazette and one or more daily newspapers circulating within the Municipality.

No private sewers to be made to communicate with the public sewers without notice.

7. It shall not be lawful for any person, without permission from the Council, to make or branch any private drain or sewer into any of the public drains or sewers, or into any drain or sewer communicating therewith; and in case any person or persons shall make or branch any private drain or sewer into any of the said public drains or sewers, or into any drain or sewer communicating or to communicate therewith, without such notice, or otherwise than as aforesaid, every person so offending shall for every such offence on conviction forfeit and pay any sum not exceeding five pounds, and shall close such private drain under a further penalty of two pounds per week or part of a week so long as such private drain remains after such conviction.

Proprietors of private sewers, &c., to repair, cleanse same.

8. All drains or sewers communicating with any public drain or sewer shall from time to time be repaired and cleansed under the inspection and direction of the Council, at the costs and charges of the occupiers of the houses, buildings, lands, and premises to which the said private sewers or drains shall respectively belong; and in case any person shall neglect to repair and cleanse, or cause any such private drain or sewer to be repaired and cleansed, according to the direction of the said Council, he shall forfeit and pay for every such offence any sum not exceeding five pounds.

Drains for discharge of surface water from land.

9. Every owner or occupier of land in, adjoining to, or near any street, if such land shall be so situated that surface or storm water from or upon the same shall overflow or shall tend naturally, if not otherwise discharged, to overflow any footway of such street, shall within seven days next after the service of notice from the Council for that purpose, construct and lay a covered drain from such point upon such land being near to the footway, as shall be specified in such notice by plan appended or otherwise, and higher in level than the bottom of the channel at the outer edge of the footway to the said channel, and through, under, and transversely to the footway, and keep in good condition such covered drain, as and subject to the inspection of the Council or its proper officers; and in default of compliance with any such notice within the period aforesaid or with the provisions of this by-law, such owner or occupier shall forfeit any sum not exceeding five pounds nor less than ten shillings. And if after such conviction, such drain shall not be constructed as herein specified, or kept in good condition, such owner or occupier shall forfeit any sum not less than five shillings nor more than two pounds per day for each and every day after such conviction.

Houses, &c., to be spouted.

10. All proprietors of houses within the Municipality having a frontage to any street, shall be bound to have the same sufficiently spouted with down pipe, to be carried under the surface of the footpath into the gutter, under a penalty of ten shillings on conviction; and if not remedied at the expiration of seven days after such conviction, the offender shall be again liable to a like conviction and penalty also for every succeeding seven days.

No turf, gravel, &c., to be removed from streets without permission.

11. Any person who shall form, dig, or open any drain or sewer, or remove or cause to be removed any turf, clay, sand, soil, gravel, stone, or other material, in or from any part of the carriage or footway of any street, or other public place within the said borough, without leave first had and obtained from the Council, or who shall wantonly break up or otherwise damage any such carriage or footway, shall, on conviction, forfeit and pay for every such offence any sum not exceeding five pounds nor less than ten shillings.

Holes to be enclosed.

12. Any person or persons who shall dig or make, or cause to be dug or made any hole, or leave, or cause to be left, any hole, adjoining or near to any street or public place within the said borough, for the purpose of making any vault or the foundation to any house or other building, or for a well or any other purpose whatsoever, and shall not forthwith enclose the same and keep the same enclosed in a good and sufficient manner to the satisfaction of the Committee for Works of the said borough, on conviction shall forfeit and pay for every such refusal or neglect any sum not exceeding five pounds nor less than ten shillings.

Lights on obstructions, hoardings, &c.

13. Any person who shall have caused building materials, or hoarding enclosing such building materials, or any obstruction whatever to be placed on any portion of the footway or roadway in any street or streets of this borough, without having first obtained permission from the Council, and paid a fee of five shillings, and shall also keep the same properly lighted from sunset to sunrise, shall be liable to a penalty not exceeding five pounds nor less than one pound.

Temporary stoppage of traffic for repairs, &c.

14. The Committee for Works, or any officer or person acting under the authority of such Committee, may at any time cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same, or for any necessary purpose; and any person or persons offending against this by-law, either by travelling on such street, lane, or thoroughfare, or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds for every such offence.

Drawing or trailing timber, &c.

15. Any person who shall haul or draw, or cause to be hauled or drawn, upon any part of any street or public place within the said borough, any timber, stone, or other thing, otherwise than upon wheeled vehicles, or to drag or to trail upon any part of such street or public place, to the injury thereof, shall, upon conviction, forfeit and pay for every such offence a sum of not more than forty shillings nor less than five shillings over and above the damages occasioned thereby.

Throwing filth, &c., on footways, &c., killing animals.

16. Any person who shall throw, cast, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal, blood, slops, suds, or other filth or annoyance, or any matter or thing, in or upon the carriageway, footway, or water table of any street, lane or other public place in the said borough,—or shall kill any beast, swine, calf, sheep, lamb, or other animal, for the purpose of sale upon any premises, shall, on conviction, forfeit and pay a fine not less than forty shillings nor more than five pounds, and shall in addition to any such forfeiture pay the cost of removing such filth or obstruction or of restoring such water-course or canal into its proper channel.

Driving carriages, &c., on footways.

17. Any person who shall run, drive, draw, or cause, permit, or suffer to be run, driven, or drawn, upon any of the said footways of any such street or public place, any waggon, cart, dray, sledge, or other carriage, or any wheelbarrow, handbarrow, or truck, or any hogshead, cask, or barrel,—or shall wilfully lead, drive, or ride any horse, ass, mule, or other beast upon any such footway,—shall, upon conviction, forfeit and pay for the first offence a sum not exceeding forty shillings nor less than ten shillings, for the second offence a sum not exceeding five pounds nor less than one pound, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than two pounds for each such offence.

Placing carriages, goods, &c., on footways, &c.—Not removing when required.—Replacing the same after removal.

18. Any person who shall set or place, or cause or permit to be set or placed, any stall-board, chopping-block, show-board (on hinges or otherwise), basket, wares, merchandise, casks, or goods of any kind whatsoever, in or upon or over any carriage or footway in any street or public place within the said borough—or shall place, or cause to be placed, any coach, cart, waggon, dray, wheelbarrow, handbarrow, sledge, truck, or other carriage upon any such carriageway or footway, except for the necessary time of loading or unloading, or taking up or setting down any fare, or waiting for passengers when actually hired, or harnessing or unharnessing the horses or other animals,—or if any person shall set or place, or cause to be placed, in or upon or over any such carriage or footway any timber, stones, bricks, lime, or other materials or things whatsoever,—or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal, or other thing or matter whatsoever, from any house or other building or premises, over any part of any such footway or carriageway, or over any area of any house or other building or premises,—and shall not immediately and permanently remove all or any such matters or things, being thereto required by the Inspector of Nuisances or other proper officer of the Council,—shall, upon conviction for every such offence, forfeit and pay for the first offence a sum not exceeding forty shillings nor less than ten shillings, for the second offence a sum not exceeding five pounds nor less than one pound, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than two pounds.

Obstructing public pathways.

19. If the owner or occupier of any land situate on the side of any street or road in this borough shall permit any tree, shrub, or plant, kept for ornament or otherwise, to overhang any footpath or footway on the side of any such street or road, and on demand made by the Council shall not cut, lop, or cause to be lopped, all such trees, shrubs, or plants to the height of eight feet at the least, the said Council, by their servants, labourers, and workmen, may cut or cause to be cut or lopped, at the expense of such owner or occupier, all such overhanging trees, plants, or shrubs, and to remove or burn any such trees, plants, or shrubs so cut or lopped, without being deemed a trespasser or trespassers; and in case any person or persons shall resist or in any manner forcibly oppose the said Council or their servants, labourers, or workmen in the due execution of the powers given in this behalf by virtue of the Municipalities Act of 1867, every person so offending shall, on conviction for every such offence, forfeit and pay any sum not exceeding ten pounds nor less than one pound.

Notices not to be painted on pavement.

20. Any person who shall stamp, stain, paint, write, or post any advertisement or notice upon any footway or kerbstone within this borough, shall be liable to a penalty not exceeding forty shillings.

Offensive or indecent placards.

21. Any person who shall in any street or place within this borough, post, expose to view, or distribute any placard, handbill, or other document whatever of an offensive or indecent character, shall be liable to a penalty not exceeding forty shillings.

Placards not to be fixed on walls, &c., without consent.

22. It shall not be lawful for any person to paste or otherwise affix any placard or other paper upon any wall, house, fence, or other erection, nor deface any such wall, house, fence, or erection, by chalk or paint, or in any other manner, unless with the consent of the owner thereof; and every person who shall be guilty of any such offence shall forfeit and pay a sum not exceeding twenty shillings nor less than ten shillings.

No rock to be blasted without notice to the Council Clerk.

23. Any person who shall be desirous of blasting any rock or earth, within fifty yards of any road, street, public place, or dwelling, shall give notice in writing twenty-four hours previously to the Council Clerk, who shall appoint a time when the same may take place, and give such other directions as he may deem necessary for the public safety, on payment of a fee of five shillings; and if any person shall blast, or cause to be blasted, any rock or earth within the limits aforesaid, without giving such notice, or shall not conform to the directions given to him by the Council Clerk, he shall on conviction forfeit and pay for every such offence any sum not less than one pound nor more than ten pounds.

Slop, night-soil, &c., to be conveyed away only at certain hours.

24. Any person or persons who shall drive, or cause to be driven, any cart or other carriage with any night-soil therein, through or in any street or public place within the said borough, between the hours of five o'clock in the morning and ten o'clock at night,—or shall fill any cart or other carriage so as to turn over or cast any night-soil, slop, mire, or channel-dirt, or filth, in or upon any such street or public place,—or shall deposit, or cause to be deposited, any night-soil or other offensive matter nearer to any street, road, or dwelling-house than shall be directed by the said Council or by the Inspector of Nuisances,—or shall remove night-soil or other offensive matter otherwise than in properly covered and water-tight carts or other vehicles,—or shall cause any vehicle used for this purpose to stand on any premises nearer to any road, street, or dwelling-house than shall be directed by the said Council or the said Inspector of Nuisances,—shall for every such offence forfeit and pay any sum not exceeding five pounds nor less than one pound; and in case the person so offending shall not be known to the said Council or Inspector, then the owner of such cart or carriage in which such night-soil or other offensive matter shall be put or placed, and also the employer of the person so offending shall be liable to and forfeit and pay such penalty as aforesaid.

Riding on drays, careless driving, &c.

25. If the driver of any vehicle whatsoever shall wilfully be at such a distance from such a vehicle, or in such a situation whilst it shall be passing upon any street or road that he cannot have the direction and government of the horse or horses, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any other vehicle or person in or upon the said thoroughfare,—every such driver or person so offending shall, upon conviction, forfeit and pay any sum not exceeding forty shillings nor less than ten shillings.

Riding or driving furiously, &c.

26. Any person who shall ride or drive through or upon any street or public place within the said borough so negligently, carelessly, or furiously that the safety of any other person shall or may be endangered, shall, on conviction, forfeit and pay a sum not exceeding ten pounds nor less than one pound.

Injuring or extinguishing lamps.

27. Any person who shall wantonly or maliciously break or injure any lamp or lamp-post, or extinguish any lamp set up for public convenience in the said borough, shall, over and above the necessary expense of repairing the injury committed, forfeit and pay for every such offence any sum not less than one pound nor more than five pounds.

As to damaging buildings.

28. Any person who shall damage any public building, toll-gate, toll-bar, toll-board, wall, parapet, fence, sluice, bridge, culvert, sewer, watercourse or other public property within the said borough, shall pay the costs of repairing the same; and if such damage be wilfully done, shall forfeit and pay a sum not exceeding twenty pounds, nor less than one pound.

Persons not to stand or loiter in streets.

29. All persons standing or loitering upon any of the footways or other public places in this borough to the inconvenience of the passers by, or in any way interrupting the traffic, and shall not discontinue to do so on being requested by any officer or servant of the Municipal Council of this borough, or any police officer, shall, upon conviction, forfeit and pay a penalty not exceeding five pounds nor less than one pound.

Rubbish.

30. No kind of rubbish or offensive matter shall be thrown upon any public or private property within the borough without permission first obtained from the Municipal Council or the owner or owners of such property. Persons found guilty of a breach of this by-law shall forfeit and pay for every such offence any sum not exceeding two pounds nor less than ten shillings.

Nuisances.

Dead animals, &c., not to be thrown into any public watercourse, &c.

31. Any person who shall cast any filth, rubbish, or any dead animal, or any animal with intent of drowning, into any public watercourse, sewer, or waterhole—or who shall suffer slops, suds, or filth of any kind to flow from his or her premises into any such watercourse, sewer, or waterhole—or who shall permit or suffer any such slops, suds, or filth to flow from his or her premises over any of the footways or streets of the borough,—or shall permit or cause, by means of pipes, shoots, channels, or other contrivances, filth of any kind, whatsoever to flow into any public watercourse, gutter, or waterhole,—or shall obstruct or divert from its channel any sewer, watercourse, or creek,—shall, on conviction, forfeit any sum not exceeding five pounds nor less than one pound.

Swine not to be kept.

32. Any person who shall breed, feed, or keep any kind of swine in any house, building, yard, garden, or other hereditament situate and being in or within forty yards of any street or public place or any dwelling-house in the said borough, shall, on conviction, forfeit and pay for every such offence a sum not exceeding forty shillings nor less than ten shillings.

Cattle, &c., straying in the streets.

33. Any person who shall suffer any kind of swine, or any horse, ass, mule, sheep, goat, or other cattle belonging to him or her, or under his or her charge, to stray or go about, or to be tethered or depastured in any such street or public place, shall, on conviction, forfeit and pay for every such offence a sum not exceeding forty shillings nor less than ten shillings.

Stables, cow-sheds, and pig-styes.

34. The occupier of any land within this borough on which there shall be erected any stable, cow-yard, cattle-shed, or pig-sty, shall cause such premises to be kept in such a state, in respect to cleanliness, as not to be a nuisance or injurious to health, and shall cause all dung, soil, or manure produced or accumulated thereon to be collected in a place (to be approved of by the Inspector of Nuisances) in the yard of such premises, and there to be in an inoffensive condition, and so as not to be productive of any nuisance; and shall cause such dung, soil, or other manure to be, from time to time, removed from such premises, as often as the quantity so collected shall amount to two cubic yards. And if at any time the owner or occupier of any such premises shall neglect or fail to have such dung, soil, or other manure removed therefrom as aforesaid, the same shall be removed by the Inspector of Nuisances, at the expense of such occupier. For an offence against this by-law, any person shall be liable to a penalty of not less than one pound nor more than five pounds.

As to private avenues, &c.

35. Any owner occupier of any house, place, or land or within the borough, who shall neglect to keep clean all private avenues, passages, yards, and ways within the said premises, so as by such neglect to cause a nuisance by offensive smell or otherwise, or who shall allow stagnant water to become a nuisance on his land shall, on conviction, forfeit and pay a sum not exceeding forty shillings nor less than ten shillings for every such offence; and upon the reasonable complaint of any householder that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances, or any person appointed by the Council, shall make an inspection of the premises complained of; and the officer of the Council shall have full power, without any other authority than this by-law, to go upon such premises for the aforesaid purpose.

Cleansing butchers' shambles, slaughter-houses, &c.

36. It shall be lawful for the Inspector of Nuisances, or for any other officer or officers appointed by the Council, as often as he shall see occasion, to visit and inspect the butchers' shambles, slaughter-houses, boiling-down establishments, tanneries, and fellmongering establishments or manufactories, in the borough, and to give such directions concerning the

cleansing the said shambles, slaughter-houses, tanneries, and establishments, both within and without, as to him shall seem needful; and any owner or occupier of any such shamble, slaughter-house, tannery, or establishment, who shall refuse or neglect to comply with such directions within a reasonable time, shall forfeit and pay a sum not exceeding ten pounds nor less than one pound.

Placing dead animals on premises.

37. Any person who shall place, or shall cause or suffer to be placed, upon any land or premises within the borough any dead animal, blood, offal, night-soil, or any other offensive matter so as to become a nuisance to the inhabitants thereof, shall, on conviction, suffer and pay a penalty not exceeding five pounds nor less than one pound for every such offence.

Deposit of rubbish, manure, &c.

38. No person shall deposit, or cause or suffer to be deposited in or by the side of, or on any road, street, right-of-way, lane passage, water-channel, or gutter, or in any creek, or in any other public place within the borough, any dust, mud, ashes, rubbish, filth, offal, manure, liquid manure, dung, or soil, and no person shall deposit, or cause or suffer to be deposited on any land, field, or garden within the borough, any night-soil, blood, offal, or other offensive matter or thing without the written consent of the Mayor or Council, and any such offensive matter or thing which shall with such consent of the said Mayor or Council be so deposited, shall be immediately on the deposit thereof covered over by the person depositing the same with such a quantity of earth as will at once prevent the escape of any noxious or offensive effluvium from any such manure, soil, or other offensive matter before mentioned: Provided that nothing contained in this by-law shall be construed or taken to prevent the use as manure, for any garden or land, of the contents of any earth-closet, or any other privy or closet where such contents are deposited on any such field or land in a perfectly deodorised state, and so as not to cause nuisance or offence, either at the time of the deposit of such contents or afterwards.

39. The Council shall have power to plant trees in the streets and public ways of this borough, and any person wilfully injuring or destroying any of such trees, or any railing or fence protecting the same, shall, on conviction, forfeit and pay a penalty of not more than ten pounds nor less than two pounds, in addition to the value of the tree, railing, or fence so injured or destroyed.

Damaging trees.

40. Any person who shall wilfully and without the authority of the Council, cut, break, bark, root up, or otherwise destroy or damage the whole or any part of any tree, sapling, shrub, or underwood, growing in or upon any street or place under the management of the Council, shall forfeit any sum not exceeding ten pounds nor less than one pound.

Allowing dead animals to remain on premises.

41. Any owner or occupier of any land or premises who shall suffer or permit any dead animal, blood, offal, night-soil, or any other offensive matter to remain upon the said land or premises after notice shall have been given to remove the same, shall be subject to a penalty not exceeding two pounds nor less than ten shillings for every day that the same shall so remain.

Various obstructions and annoyances.

42. Every person who, in any street or other public place or passage within the borough, to the obstruction, annoyance, or danger of the residents or passengers, shall commit any of the following offences, shall, on conviction, for any and every such offence, forfeit and pay a penalty of not more than two pounds nor less than ten shillings:—

(1.) Every person who shall hoist or cause to be hoisted or lower or cause to be lowered, goods of any description from any opening in any house, fronting any street or public place, and close to the footway thereof, without sufficient and proper ropes and tackling.

(2.) Every person who shall place any line, cord, or pole, across any street, lane, or passage, or hang or place clothes thereon to the danger or annoyance of any person.

(3.) Every person who shall place any flower-pot, box, or other thing in any upper window, near to any street or public place, without sufficiently guarding the same from being thrown out.

(4.) Every person who shall throw or cast from the roof or any part of any house or other building, any slate, brick, part of a brick, wood, rubbish or other material or thing (unless within a hoard or enclosure) when any house or building is being erected, pulled down, or repaired.

(5.) Every person who shall, within the distance of one hundred yards from any dwelling-house burn any rags, bones, cork, or any other offensive substance, to the annoyance of any inhabitant.

(6.) Every person who shall carry goods or any frame to the annoyance of any person upon the footway of any street or other public footway.

(7.) Every person who shall be the keeper of, or have any dog or other animal which shall attack or endanger the life or limb of any person who may have the right-of-way or use of any private yard, alley, street, or any other place within the borough.

Offences against public decency.

Bathing prohibited within certain limits.

43. Any person who shall bathe near to or within view of any inhabited house, or of any bridge, street, road, or other place of public resort within the limits of the borough, between the hours of six o'clock in the morning and eight in the evening, shall, on conviction, forfeit and pay a sum not exceeding one pound nor less than ten shillings for every such offence.

Part V.

Noisome and Offensive Trades.

No noisome or offensive trades to be carried on to injury of any inhabitants.

1. No person shall carry on any manufacture or trade, in the conducting or carrying on of which, or from the premises where the same is carried on, any gas, vapour, or effluvia, or any large quantities of smoke shall be evolved or discharged, which shall be calculated to injure animal or vegetable life, or in any other way to injure or be a nuisance to the inhabitants of the borough; and upon complaint in writing by any householder that any offensive trade is being so conducted or carried on in the vicinity of his or her residence or property as to injure his or her health, or the health of any member of his or her family, or be a nuisance to such householder,—the Inspector of Nuisances, or any other person or persons appointed by the Council, shall make an inspection of the premises where such trade is alleged to be so conducted or carried on as aforesaid, and of the premises or property of the complainant, and shall inquire into the grounds for such complaint, and shall report thereon to the Council. And if the Council shall, on the consideration of such report, or after any such further inquiry as may be deemed necessary, be of opinion that the said complaint is well founded, notice shall be given to the person or persons conducting, following, or carrying on such trade to cease and discontinue the same within such reasonable time as the Council may direct. And if such trade shall not be discontinued as aforesaid, or shall not be so conducted as that it shall wholly cease to be offensive within the time named in such notice as aforesaid, any person conducting or carrying on such trade as aforesaid shall, for the first offence, forfeit and pay a sum of not less than twenty shillings nor more than five pounds, for a second offence a sum of not less than two pounds nor more than twenty pounds, and for the third and every subsequent offence a sum of not less than five pounds nor more than fifty pounds.

Mode of proceeding when noisome and offensive trade is about to be commenced.

2. The like proceedings shall be taken as aforesaid whenever there shall be a complaint as aforesaid that any manufacture, trade, or operation is about to be commenced or entered upon, which is likely to prove offensive within the meaning of these by-laws save and except the notice to be given as aforesaid shall be given to the person or persons about to commence or enter upon such manufacture, trade, or operation, and shall require him, her, or them, not to commence or enter upon the same, or to take such measures as shall effectually and permanently prevent the same from becoming offensive, within the meaning of these by-laws, to any resident within the borough. And any person who shall in any such case commence, enter upon, or continue, any such manufacture, trade, or operation, so that the same shall be in any way offensive within the meaning of these by-laws, shall, for every such offence, forfeit and pay a sum of not less than two pounds nor more than twenty pounds.

Service of No-liabilities.

3. Service of any such notice as aforesaid upon the occupier or owner of any premises or land wherein or whereon any such manufacture, trade, or calling is being carried on, or is about to be commenced or entered upon, or at the last-known place of abode of such occupier or owner, or upon any person on the said premises or land, shall be a good and sufficient service of such notice for all the purposes of these by-laws. And every person who shall be actually engaged in superintending, directing, or managing, or who shall be in any other way actually engaged or employed in any such manufacture, trade, or operation as aforesaid, shall be liable to be regarded and treated as a person conducting, following, or carrying on such manufacture, trade, or operation, within the meaning and for all the purposes of these by-laws.

Damming up without consent.

4. Whosoever shall, without the consent in writing of the Council, construct or place any dam or embankment in or across any creek or natural watercourse, shall forfeit and pay any sum not less than one pound nor more than twenty pounds, and shall remove such dam or embankment within a reasonable time after such conviction, or shall forfeit and pay any sum not less than five pounds nor more than fifty pounds. And if after such second conviction such person shall fail to remove such dam or embankment within a further reasonable time, he shall forfeit and pay a sum of not less than twenty pounds nor more than fifty pounds; and if within a reasonable time after a third or any further conviction he shall still fail to remove such dam or embankment, he shall for every such offence forfeit and pay a sum of fifty pounds.

Disposal of sewage, &c.

5. The Council shall have power from time to time to enforce the adoption or alteration of any system, which to them may appear necessary, for the better regulation, disposal, or treatment of night-soil, sewerage, or other drainage, and may suspend the use or further extension of any system which to them may seem detrimental to public health. Any person refusing to comply with any requisition made under this by-law after receiving notice from the Council or an officer under them, shall forfeit a sum not exceeding five pounds nor less than one pound for each offence.

Making By-laws.

6. No by-law shall be passed until it has been reported upon by the By-law Committee.

Made and passed by the Municipal Council of the Borough of Granville, this 27th day of May, A.D. 1885.

(L.S.) JOHN NOBBS,
Mayor.

JOHN S. BEACH,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES.

(BOROUGH OF NARRANDERA—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.

Colonial Secretary's Office,
Sydney, 23rd December, 1885.

BOROUGH OF NARRANDERA.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Narrandera, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the Municipalities Act of 1867.

JOHN ROBERTSON.

BY-LAWS OF THE BOROUGH OF NARRANDERA.

THE following By-laws, made by the Borough Council of Narrandera, for regulating the proceedings of the Council, and the duties of the officers and the servants of such Council; for preserving order at meetings of said Council; for determining the times and modes of collecting and enforcing payment of rates; for preventing and extinguishing fires; for suppression of nuisances and houses of ill-fame; for preventing or regulating and licensing exhibitions held or kept for hire or profit, bowling or skittle-alleys and other places of amusement; compelling residents to keep their premises free from offensive or unwholesome matters; opening new public roads, streets, ways, and reserves; for protection of public fountains and water-courses; aligning and cleansing roads and streets; for regulating the supply and distribution of water, sewerage, and drainage; for regulating the blasting of any rock or rocks, preventing trees from overhanging public pathways, and preserving trees, shrubs, and other public property, to extirpate weeds; for preventing or regulating the bathing or washing the person in any public water near a public thoroughfare; for preserving public decency; for providing for the health of the Municipality, and for the prevention of contagious or infectious diseases; for restraining noisome trades; and generally for maintaining the good rule and government of the said Municipality.

PART I.

Meetings of the Council.

Ordinary Meetings.

1. The Council shall meet for the despatch of business at the hour of 7·30 p.m. every alternate Wednesday, unless such day shall happen to be a public holiday. In the latter case the meeting shall be held on such other day as the Mayor or the Council may appoint.

Election of Chairman in absence of Mayor. Adjournment for want of a quorum.

2. If at any meeting of the Council the Mayor be absent at the expiration of fifteen minutes after the time appointed for holding such meeting, the Aldermen then present shall proceed to elect from among themselves a Chairman for such meeting, to give place to the Mayor if he should arrive at any later hour during the meeting. Whenever there shall be an adjournment of any such meeting for want of a quorum the names of the members present shall be taken down, and shall be recorded in the Minute-book.

Order of Business.

Business of Ordinary Meetings.

3. The following shall be the order of business at all meetings of the Council other than special meetings:—

1. The minutes of the last preceding meeting to be read, corrected if erroneous, and verified by the signature of the Mayor or other Chairman. No discussion to be permitted on such minutes except as to whether they are correct.
2. Correspondence to be read, and, if necessary, ordered upon.
3. Petitions (if any) to be presented and dealt with.
4. Reports from Committees, and minutes from the Mayor (if any) to be presented and ordered upon.
5. Questions as to any matters under the jurisdiction or within the official cognizance of the Council to be put and replied to; and statements as to any facts, matters, or circumstances requiring attention by the Council or any of its Committees or officers, to be made.
6. Motions of which notices have been given to be dealt with in the order in which they stand on the business-paper.
7. Orders of the day to be disposed of as they stand on the business-paper; but it shall be competent to the Council at any time, by resolution without notice, to entertain any particular motion, or to deal with any particular matter of business out of its regular order on the business-paper without any formal suspension of this section; also, in like manner to direct that any particular motion or matter of business shall have precedence at a future meeting.

Business at Special Meetings.

4. At special meetings of the Council the business, after the minutes have been read and verified, which shall be done in the same manner as at an ordinary meeting, shall be taken in such order as the Mayor or the Aldermen, at whose instance such special meeting shall have been called, may have directed.

Business-paper for Ordinary Meetings.

5. The business-paper for every meeting of the Council, other than a special meeting, shall be made up by the Town Clerk or other person acting as his substitute, not less than forty-eight hours, and not more than three days before the day appointed for such meeting; he shall enter upon such business-paper a copy or the substance of every notice of motion, and of every requisition or order as to the business proposed to be transacted at such meeting which he shall have received or shall have been required or directed so to enter in due course of law and as hereinafter provided; every such entry shall be made subject to the provisions of section 3 of this Part of these By-laws in the same order as such notice, requisition, or direction shall have been received.

Business-paper for Special Meetings.

6. The business-paper for each special meeting shall contain only such matters as shall have been specially ordered to be entered thereon by the Mayor or Aldermen calling such meeting.

Summons to members.

7. The summons to members of the Council, of every meeting thereof, shall be prepared from the business-paper for such meeting, and shall embody the substance of such business-paper.

How business-paper is to be disposed of.

8. The business-paper for each meeting of the Council, shall at such meeting be laid before the Mayor or Chairman, who shall cause a note to be made upon such business-paper of the mode in which each matter entered thereon has been dealt with, and such business-paper so noted shall be a record of the Council.

All notices of motion to be numbered.

9. All notices of motion, and all requisitions from Aldermen, and directions from the Mayor, as to the entry of any particular matter of business for the consideration of the Council, at its then next or any further meeting, shall be numbered by the Council Clerk as they are received; and each such notice, requisition, and direction shall be preserved by such Clerk until after the matter to which it relates shall have been disposed of, and the record in the minute-book of the manner in which such matter has been so disposed of shall have been duly verified, as required by section 3 of this Part of these By-laws; provided, however, that the person giving or forwarding any such notice of motion, requisition, or direction to the Council Clerk, shall be at liberty to withdraw the same at any time before the making up of the business-paper.

After business-paper made up, all notices, &c., to be the property of the Council.

10. After the business-paper shall have been made up, as aforesaid, all the said notices of motion, requisitions, and directions as to which entries have been made thereon, shall be property of the Council, and shall not be withdrawn, altered, or amended without leave having been first obtained from the Council for such withdrawal, alteration, or amendment.

Motions and Amendments.

Motions—how to be moved.

11. Except by leave of the Council, motions shall be moved in the order in which they stand on the business-paper, and if not so moved or postponed shall be struck from such business-paper, and be considered to have lapsed.

Absence of proposed mover.

12. No motion of which notice shall have been entered on the business-paper shall, except as hereinafter provided, be proceeded with in the absence of the Alderman by whom such notice shall have been given, unless by some other Alderman producing a written authority for that purpose from such first-named Alderman.

Motion to be seconded.

13. No motion in Council shall be discussed unless and until it be seconded.

Amendments may be moved.

14. When a motion in Council shall have been made and seconded any Alderman shall be at liberty to move an amendment thereon, but no such amendment shall be discussed until it shall have been seconded.

Motions and amendments to be in writing.

15. No motion or amendment shall be discussed until it shall have been reduced into writing.

Only one amendment at a time.

16. No second or subsequent amendment shall be taken into consideration until the previous amendment or amendments shall have been disposed of.

Amended question—further amendment may be moved thereon.

17. If any amendment be carried, the question as amended thereby shall itself become the question before the Council, whereupon any further amendment upon such question may be moved.

How subsequent amendments may be moved.

18. If any amendment either upon an original question, or upon any question amended as aforesaid, shall be negatived, then a further amendment may be moved to the question to which such first-mentioned amendment was moved, and so on; provided that not more than one question and one proposed amendment thereof shall be before the Council at any one time.

Motions for adjournment.

19. No discussion shall be permitted on any motion for adjournment of the Council, and if upon the question being put on any such motion, the same being negatived, the subject then under consideration, or the next in order on the business-paper, or any other on such paper, they may be allowed precedence, shall be discussed before any subsequent motion for adjournment shall be receivable.

Requisitions from Aldermen, how to be dealt with.

20. Every requisition by an Alderman that any particular matter of business be brought before the Council, shall be regarded and treated as a notice of motion by such Alderman that such business be taken into consideration by the Council, and he shall be called upon in due order to move that such business be so considered, or to make any other motion which he may think fit in reference thereto which shall be consistent with the notice of such business and with good order; and if such Alderman be absent, or if being present, and so called upon, he shall make no such motion, then it shall be open for any other Alderman to make such motion; and when any such motion shall have been made, it shall be dealt with in precisely the same manner as if notice thereof had been given, subject, however, to any objection which may exist as to its not being in accordance with the notice actually given of such business or with good order. And if no motion shall be made in reference to such business, the entry relating thereto shall be struck from the business-paper.

Orders of the day—of what they shall consist.

21. The orders of the day shall consist of any matters other than motions on notice which the Council shall at a previous meeting thereof have directed to be taken into consideration, or which the Mayor or any Committee of the Council shall have directed to be entered on the business-paper for consideration.

How they are to be dealt with.

22. Section 20 of this Part of these By-laws shall be considered applicable to orders of the day; and the Alderman who has the usual charge of, or who has previously moved in reference to the particular business to which any such order of the day relates, shall be the person called upon to move; provided that as to any order of the day entered as aforesaid by direction of the Mayor or Chairman, such Mayor may arrange with any Alderman to move, and may in such case call upon the Alderman with whom he has so arranged.

Petitions—to be respectfully worded.

23. It shall be incumbent upon every Alderman presenting a petition to acquaint himself with the contents thereof, and to ascertain that it does not contain language disrespectful to the Council; the nature and prayer of every such petition shall be stated to the Council by the Alderman presenting the same.

Petitions—how received.

24. All petitions shall be received only as the petitions of the parties signing the same.

How Petitions are to be dealt with.

25. No motion shall, unless as hereinafter provided, be permissible on the presentation of a petition except that the same be received, or that it be received and referred to one of the Permanent Committees hereinafter mentioned, or that it be received and that its consideration stand an order of the day for some future meeting: Provided, however, that if any Alderman shall have given due notice of a motion in reference to any petition, and such petition shall have been presented before such Alderman shall have been called upon to move such motion, the said motion shall, if otherwise unobjectionable, be considered in order.

Correspondence.

Duties of Mayor as to correspondence.

26. The Mayor shall have the same duty in reference to letters addressed to the Council, before directing the same to be read, as by section 25 of this Part of these By-Laws is imposed upon Aldermen presenting petitions; the Mayor shall

direct as to order in which all correspondence shall be read, and no letter addressed to the Council shall be presented or read by any Alderman If the Mayor be absent and shall not have examined any such letters addressed to the Council, or have given any such directions as aforesaid, then the duties imposed by this section shall devolve upon the presiding Alderman.

Section 25 to apply to letters.

27. Section 25 of this Part of these By-Laws shall be considered as fully applicable to letters addressed to the Council as to petitions.

Letters sent not to be discussed, but every letter may be subject of motion.

28. No discussion shall be permitted in reference to any letters which may have been written and sent by the Mayor or by any Officer of the Council, and copies of which may be read to such Council. Provided, however, that any notice of motion consistent with good order may be entertained with reference to any such letters whether read or not, or with reference to any letters addressed to the Council which the Mayor or presiding Alderman may not have ordered to be read as aforesaid.

Reports from Committees and Minutes from the Mayor.

Form of Report

29. All reports from Committees shall be written on foolscap paper, with a margin of at least one-fourth of the width of such paper, and shall be signed by the Chairman of such Committee, or in his absence by some other member of the same.

Mayor's Minute

30. The Mayor shall have the right of directing the attention of the Council to any matter or subject within its jurisdiction or official cognizance, by a minute in writing. Every such minute shall be written on paper of the same kind and with the same margin as a report from a Committee, and shall be signed by such Mayor.

How Reports, &c., are to be dealt with; duties of Chairman, &c., in certain cases.

31. No motion shall (unless as hereinafter provided) be permissible on the presentation of a report from a Committee, or a minute from the Mayor, except that the same be received, or that it be received, and that its consideration stand an order of the day for some future meeting; provided, however, that if any Alderman shall have given due notice in reference to any such report or minute, or if an order for the consideration of such report or minute shall have been entered among the orders of the day, such motion or order may, if otherwise unobjectionable, be moved or considered in due course; and whenever any such report or minute embodies any recommendation which cannot legally be carried out without any due notice, and it is nevertheless desirable that such report or minute shall be definitely ordered upon during the meeting of the Council at which such report or minute is presented, it shall be the duty of the Chairman or member of such Committee signing such report, or of such Mayor, as the case may be, to give or transmit to the Council Clerk such a notice of motion, requisition, or direction as aforesaid as will enable such Council Clerk to make the necessary entry on the business-paper and to give such due notice.

Questions and Statements.

Limitations as to Questions and Statements.

32. No question or statement shall be allowed to be put or made which is inconsistent with good order or is not in strict accordance with the requirements of section 3 of this Part of these By-laws.

Notice to be given.

33. Sufficient notice of every question shall be given to the person who is expected to reply thereto to allow for the consideration of such reply, and, if necessary, for a reference to other persons or to documents.

Answer not compulsory.

34. It shall not be compulsory upon any person questioned as aforesaid to answer the question so put to him.

Questions to be put without argument, &c.

35. Every such question must be put categorically without any argument or statement or fact.

Similar provision as to statements.

36. Every such statement must be made without argument.

No discussion on questions, &c.—Rights of objection and of subsequent motion reserved.

37. No discussion shall be permitted as to any such questions, or as to any reply or refusal to reply thereto, or as to any such statement, at the time when such question is put or such reply or refusal to reply is given or such statement is made. Provided, however, that nothing herein contained shall prevent the taking of any objection as to any question or statement being out of order, or shall prevent the discussion, as due notice as hereinbefore provided of any matters properly arising out of or relating to any such question or reply, or refusal to reply, or any such statement as aforesaid.

Order of Debate.

Mode of addressing the Council, &c.

38. Every Alderman who shall make or second any motion, or shall propose or second any amendment, or shall take any part in any debate or discussion, or shall put or reply to any question, or shall make any statement, or shall in any other way or for any other purpose address observations to the Council, shall, while so doing, stand up in his customary place (unless he shall be prevented from so doing by reason of some bodily infirmity) and shall address himself to the Mayor or other Chairman then presiding. Provided that in the case of a question such question may by permission of such Mayor or Chairman be put directly to the Alderman or officer to be questioned, and may be replied to in like manner; but in every such case the question so put and the reply thereto shall be subject to every legal objection on the ground of disorder or irrelevancy; and all members of the Council shall on all occasions, when in such Council, address and speak of each other by their official designations, as Mayor, Chairman, or Alderman as the case may be.

Speaker not to be interrupted if in order.

39. No Alderman shall be interrupted while thus speaking unless for the purpose of calling him to order as hereinafter provided, and any Alderman using, whilst in the Council, any offensive or insulting language, the same to be written down, and on being asked to withdraw, and if any Alderman shall refuse to withdraw such language and apologise he shall be deemed guilty of misconduct, and be liable to a fine of not less than twenty shillings nor more than five pounds.

Limitation as to number of speeches, &c.

40. Every mover of an original motion shall have a right of general reply to all observations which may have been made in reference to such motion and to any amendments moved thereon, as well as a right to speak upon every such amendment. Every Alderman, other than the mover of such original motion, shall have a right to speak once upon such motion and on every amendment thereon; no Alderman shall speak oftener than once upon any question other than a question of order, unless when misrepresented or misunderstood, in which case he shall be permitted to explain without adding any further observations than may be necessary for the purposes of such explanation.

Mover and seconder.

41. An Alderman who has moved any motion or amendment shall be considered to have spoken thereon, but an Alderman who shall have seconded any such motion or amendment without any further observation than that he seconded the same shall be at liberty to speak on such motion or amendment.

Speaker not to digress, &c.

42. No Alderman shall digress upon the subject under discussion, or shall make personal reflections on or impute improper motives to any other Alderman.

Adjournment of debate,

43. A debate may be adjourned to a later hour of the day, or to any other day specified, and the Alderman upon whose motion such debate shall have been so adjourned shall be entitled to pre-audience on the resumption of the same.

Mayor to decide as to pre-audience.

44. If two or more Aldermen rise to speak at the one time, the Mayor or Chairman shall decide which of such Aldermen shall be heard first.

Alderman may require questions to be stated, &c., under certain restrictions.

45. Any Alderman may request the question or matter under discussion to be read or stated for his information, or may require the production of any records of the Council bearing upon such question or matter which are readily accessible, provided however that no such request or requisition shall be so made as to interrupt any other Alderman when speaking, or materially to interrupt the discussion; also, that if any such request or requisition shall appear to the Mayor or Chairman not to have been made *bona fide*, it shall not be complied with.

Mayor or Chairman not to move or second motion, &c., but may address Council thereon.

46. The Mayor or Chairman shall not move or second any motion or amendment, or put any questions, as provided for by section 4 of this Part of these By-laws, except as is further provided for by the section 38 of the same; but such Mayor or Chairman shall have the same right as any other Alderman to speak once upon every such subject or amendment. The Mayor or Chairman shall rise when so speaking (unless prevented by some bodily infirmity from so doing), but shall be considered as still presiding.

Questions of Order.

Mayor or Chairman to decide points of order.

47. The Mayor or Chairman shall preserve order, and his decision on disputed points of order or practice shall be final, except in so far as the same may be questioned as in the manner hereinafter provided.

Acts of disorder.

48. Every member of the Council who shall commit a breach of any section of this Part of these By-laws, or who shall move or attempt to move any motion of amendment embodying any matter as to which the Council has no legal jurisdiction, or who shall in any way raise or attempt any question, or shall address or attempt to address the Council upon any subject which the said Council has no legal right to entertain or to discuss, or who shall use any other language which according to the common usage of gentlemen would be held disorderly, or who shall say or do anything calculated to bring the Council into contempt, shall be out of order.

Mayor, &c, may call member to order.

49. The Mayor or Chairman may, without the interposition of any other member of the Council, call any Alderman to order whenever, in the opinion of such Mayor or Chairman, there shall be a necessity for so doing.

Any member may raise question of order.

50. Every member of the Council shall have the right of calling the attention of the Mayor or Chairman to any motion, amendment, statement, argument, or observation moved, used, or made by any other member, which such first-mentioned member may consider out of order.

Mode of proceeding thereon.

51. A member called to order shall withdraw while the question of order is being discussed and decided upon, unless specially permitted to offer an explanation, retraction, or apology; but on obtaining such special permission, such member may explain, retract, or apologise for the matter or remark alleged to have been out of order; and if such explanation, retraction, or apology be deemed satisfactory, no further discussion on the question of order shall be permitted. If any member, on being called to order, shall ask such permission to explain, retract, or apologise as aforesaid, the Mayor or Chairman may, of his own authority, grant or refuse such permission as he may think fit, unless any member shall require the sense of the Council to be taken on this question; in such case it shall be the duty of the Mayor or Chairman to take the sense of the Council at once, and without discussion, as to whether such permission shall be granted; and when any such explanation, retraction, or apology is considered sufficient, if such permission be refused, or if such explanation, retraction, or apology be deemed insufficient, the question of order shall be considered and decided before any further business is decided upon: Provided that if such Mayor or Chairman shall have decided the question of order before any member shall have required the sense of the Council to be taken in reference thereto, such question of order shall not be reopened; and provided further that nothing herein contained shall be held to affect the right of such Mayor or Chairman to decide finally, as hereinbefore provided, upon any such point of order after the same shall have been discussed.

Decision of points of order.

52. The Mayor or Chairman when called upon to decide points of order or practice, shall state the provision, rule, or practice which he shall deem applicable to the case, without discussing or commenting upon the same.

Motions out of order to be rejected—Members to explain, retract, or apologise, &c.

53. Whenever it shall have been decided as aforesaid that any motion, amendment, or other matter before the Council is out of order, the same shall be directed; and whenever anything said or done in Council by any Alderman shall be similarly decided to be out of order, such Alderman shall be called upon by the Mayor or Chairman to make such explanation, retraction, or apology as the case may require.

Penalties for persisting in disorderly conduct.

54. Any member of the Council who shall have been called to order, and who, after having been twice directed to withdraw as aforesaid, shall refuse to do so, or who shall persist in any line of conduct or argument, or of observations which shall have been decided as aforesaid to be disorderly, or who shall refuse to make such explanation, retraction, or apology as aforesaid when required to do so, or who shall be guilty of any other act of disorder as defined in section 48 of this Part of these By-laws, and shall refuse to make such explanation, retraction, or apology as a majority of the Aldermen then present shall consider satisfactory, shall be liable on conviction for the first offence to a penalty of not less than ten shillings nor more than five pounds; and on a second conviction for the like offence, he shall be liable to a penalty of not less than one pound nor more than ten pounds; and on the third conviction and for every further conviction for the like offence, he shall be liable to a penalty of not less than two pounds nor more than twenty pounds.

Power of Council as to laying down general rules, &c.

55. Any Alderman who is dissatisfied with the decision of the Mayor or Chairman on any such question of order or of practice may, by motion of notice, respectfully worded, invite the Council to lay down a different rule or principle for the determination of any similar questions of order or practice which may thereafter arise; any rule or principle thus laid down shall be binding upon all parties unless and until it be rescinded, but shall have no retroactive operation: Provided however, that nothing herein contained shall be held to bind any Mayor or Chairman to put any motion to the Council which in his opinion is contrary to law.

Mode of Voting.

How questions are to be put.

56. The Mayor or Chairman shall put to the Council all questions on which it shall be necessary that a vote be taken, and shall declare the sense of such question thereon; and he shall be at liberty to put any such question as often as may be necessary to enable him to form and declare his opinion as to the opinion of the majority.

Divisions—Penalty for refusing to vote.

57. Any Aldermen shall be at liberty to call for a division in such case the question shall be first put in the affirmative and then in the negative; and the Aldermen shall vote by a show of hands, and the names and votes of the Aldermen present when a division is called for shall be recorded, any Alderman who shall be present when a division is called for and shall not vote on such division (not being disabled by law from so voting), shall be liable for every such offence to a penalty of not less than ten shillings nor more than five pounds.

Protests.

Mode of protesting; protest to be recorded, but may under certain circumstances be expunged.

58. Every member of the Council (the Mayor included) may protest against any resolution or vote by the Council; notice in writing of the intention so to protest must however be given at the meeting when such resolution is passed or such vote is arrived at, and the protest itself must be handed or sent to the Council Clerk not later than seven days after such notice; the Council Clerk shall enter every such protest in the minute-book, but if in the opinion of the Council it be inconsistent with the truth or disrespectfully worded it may (by resolution on notice) be ordered to be expunged; in such case the expunction shall be made by drawing a perpendicular line with the pen through the entry of such protest with reference in the margin to the resolution ordering such expunction.

Committees of the Whole Council.

Rules applicable to business in Committee.

59. The following sections of this Part of these By-laws shall, (except as herein excepted) be taken to apply to the conduct of business in Committee of the whole Council, namely, sections 14 (except that it shall not be necessary that any motion or amendment in Committee shall be seconded), 15, 16, 17, 18, 38, 39, 42, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 56, and 57.

Disorderly conduct in Committee.—Refusal to vote.

60. Whenever any member of the Council shall, while the Council is in Committee of the Whole, be considered guilty of an offence against good order within the meaning of section 54 of this Part of these By-laws, it shall be competent to any Alderman to move that the Council resume its sitting and that such matter be reported; and if such motion be carried such matter shall be reported accordingly, and an entry of such report shall be made in the minute-book; and whenever any Alderman shall have refused to vote on any occasion in Committee of the whole Council, as required by section 56 of this Part of these By-laws, the facts shall be reported to the Council, and such report on such facts shall be duly recorded in the minute-book: Provided that in the case of an Alderman failing to vote as aforesaid no special motion that the Council resume its sitting shall be necessary, but it shall be the duty of the Chairman of such Committee of the Whole, in making his report of the proceedings in such Committee, whenever such report may be made, to include in such report a statement of such failure to vote as aforesaid, and of the question as to which such Alderman has so failed to vote.

Decisions in Committee on points of order may be reported.

61. Whenever a decision upon any question of order shall have been given by the Chairman of a Committee of the Whole Council under the provision of section 47 of this Part of these By-laws, any Alderman may move that such decision be embodied in the report to the Council of the proceedings in such Committee, and if such motion be carried such decision shall be so embodied in such report whenever the same shall be made.

How progress may be reported, &c.

62. Any Alderman may at any time during the sitting of a Committee of the whole Council move that the Chairman report progress (or no progress, as the case may be), and that leave be asked to sit again at a later period of the same day, or on any further day, or that no leave be asked to sit again; and if any such motion be carried the Council shall resume its sittings and a report be made accordingly, but no discussion shall be permitted on any such motion, and if the same be negatived the subject then under consideration shall be discussed before another motion shall be receivable.

Report of proceedings in Committee.—Want of quorum in Committee.

63. All reports of proceedings in Committee of the whole Council shall be made to the Council *viva voce* by the Chairman of such Committee, and the report of such proceedings shall be made in every case except when it will be found on counting the number of members during the sitting of any such Council that there is not a quorum present. In the latter case the sitting of the Council shall be resumed without any motion for that purpose, and the proceedings in Committee shall be considered to have lapsed: Provided that in making of any such report as aforesaid it shall not be necessary to report any such proceedings *in extenso*, but only to state the results, general effect, or substance of such proceedings.

How reports are to be dealt with.

64. Any such report of proceedings in Committee of the whole Council shall be recorded in the minute-book, but except as hereinafter mentioned no such report shall be considered as adopted by the Council, nor shall any such application as aforesaid for leave to sit again be considered to have been granted by such Council until a motion shall have been made and passed for such adoption or for the granting of such leave. And every such motion for the adoption of a report or for the granting of such leave as aforesaid, and the order of debate on such motion, shall be subject to all the same rules as other motions in Council and the order of debate on such motions: Provided, however, that where a report shall have been made under section 59 of this Part of these By-laws of disorderly conduct in Committee, under section 57 of this Part of these By-laws, of failure to vote on division, or of any division in Committee upon any question of order, such report shall, so far as it relates to such facts, be regarded and recorded as a statement thereof, and to that extent shall not, unless for the correction of a manifest error, be interfered with upon any pretext whatever.

Calls of the Council.

How calls may be ordered.

65. A call of the Council may be ordered by any resolution of which due notice shall have been given for the consideration of any motion or matter of business before such Council.

Such call compulsory in certain cases.

66. There shall, without any special order to that effect, be a call of the Council for the consideration of every motion which may be made under section 55 of this Part of these By-laws and of every motion for the rescission of any resolution, order, or decision of such Council.

Mode of proceeding.

67. The call shall be made immediately before the motion or business for which such call has been ordered or is required to be made by the last preceding section shall be moved or considered. Such call shall be made as follows:—The Council Clerk shall call the names of all the members in their alphabetical order; each member present shall answer to his name as so called, and if any members are absent a record shall be made of such absence; but if leave of absence to any such member shall have been previously granted, or if such an excuse in writing shall have been forwarded to the Mayor or Council Clerk as a majority of the Council then present shall consider satisfactory, such absent member shall stand excused, and a record of such excuse shall be made and of the reasons for the same.

Penalty for absence without legal excuse.

Further call when question adjourned.

68. Any member of the Council who, having had notice of such call of the Council, shall not answer to his name as aforesaid, or who, being absent, shall not be legally excused as aforesaid, or who, if absent and not so excused, shall fail to show that, by reason of extreme illness or any other sufficient reason, he has been unable to send an excuse in writing as aforesaid, or who, having answered to his name as aforesaid, shall not be present when a vote is taken on the motion or business as to which such call has been made as aforesaid, shall for every such offence be liable to a penalty of not less than five shillings nor more than one pound: Provided that if the consideration of every such motion or matter of business be adjourned to a future day, there shall be a further call on the resumption of such consideration, and the provisions herein as to penalties for absence shall have reference to such further call; and if there shall be more than one adjournment, this proviso shall be taken to extend to the resumption of the consideration of such motion or matter of business after every such adjournment.

Standing and Special Committees.

Standing Committees

69. There shall be three Standing Committees, namely, a By-law Committee, a Committee for Works, and a Finance Committee; these committees shall be re-appointed every year at the first meeting of the Council which shall be holden after the election of Mayor.

70. Each Standing Committee shall consist of three members.

Mode of re-appointing Standing Committees.

71. The re-appointment of the three Standing Committees may, on resolution of the Council, be made by ballot; in such case a list or lists of the members shall be handed to each then present, who shall mark against the name of each such member the title of the committee to which in his opinion such member ought to belong; and the Mayor or Chairman shall thereupon examine such lists so marked, and shall declare the result; and if there shall be an equal number of votes for the appointment of any two or more members to any one of such committees such Mayor or Chairman shall decide which of such members shall be appointed.

By-law Committee.

72. The By-law Committee shall prepare for the consideration of the Council drafts of all such by-laws as may be required for the good government of the Borough; they shall also watch over the administration of the By-laws and of any statute of which the operation has been or may be extended to the Borough; and shall take such steps as may be necessary for the prevention or punishment of offences against such by-laws or statutes, and for the preservation of public health, order, and decency.

Committee of Works.

73. The Committee of Works shall have the general directions of all works ordered or sanctioned by the Council, and the general inspection of all streets, roads, ways, bridges, public reserves, and other public places under the control and management of the Council; they shall also inquire and report from time to time as to such improvements and repairs as they may think necessary, or as they may be directed by resolution of the Council to inquire and report upon.

Finance Committee.

74. The Finance Committee shall examine and check all accounts, and shall watch generally over the collection and expenditure of municipal revenues; they shall inquire and report from time to time as to all matters which they may consider to affect, or to be likely to affect, the finances of the Borough, and as to such matters or subjects of the like nature as they may be directed by resolution of the Council to inquire and report upon.

Special Committees.

75. Special Committees may consist of any number of members, and may be appointed for the performance of any duties which may be lawfully entrusted to a committee, and for which, in the opinion of the Council, a Special Committee ought to be appointed; and no Standing Committee shall interfere with the performance of any duty which may for the time being have been entrusted to any such Special Committee. The appointment of every such Special Committee shall be made by resolution after due notice, and it shall be incumbent on the mover of such resolution to embody therein a statement of the duties proposed to be entrusted to such Special Committee. The mover of any such resolution may name therein such members as in his opinion ought to constitute such committee, or he may propose that such committee consist of a certain number of members to be appointed by ballot; and in the latter case, or if an amendment to the effect that such Special Committee be appointed by ballot be carried, each member then present shall receive a list of all the members of the Council, from which list he shall strike out all names but those of the persons of whom in his opinion such Special Committee ought to be composed; and the Mayor or Chairman shall examine such list and shall declare the result; and in the event of its becoming necessary, through an equality of votes, to decide as to which of two or more aldermen shall serve on such committee such Mayor or Chairman shall so decide.

Chairman of Committees.

76. Every Committee of which the Mayor shall not be a member shall elect a permanent Chairman of such committee within seven days after their appointment.

Term of service in Committee.

77. Appointments to the By-law Committee, the Committee of Works, and the Finance Committee shall be for the whole municipal year; the Chairman of these three Committees, as appointed to or removed from the Chairmanship of the same, shall be thereby and without any further order regarded as having been appointed to or removed from the Committee for

General Purposes. The appointment of every Special Committee shall be considered to endure until the duties for which such Committee has been appointed shall have been fully performed; provided however that nothing herein contained shall be held to affect in any way the right of such Committee to remove any Chairman of such Committee, or to appoint another such Chairman in his stead, or to militate against the general provisions as to Committees in sections 109 and 110 of the Municipalities Act of 1867, and that so much of this By-law as relates to the appointment, powers, and duties of Committees shall be read and interpreted in connection with such last-mentioned general provisions.

Committee meeting—how called.

78. The Council Clerk shall call a meeting of any Committee when requested to do so by the Chairman or any two members of such Committee.

Records of transactions in Committee.

79. The Chairman of each Standing Committee shall make or cause to be made in a book to be kept by him for that purpose memoranda of all the transactions of such Committee, which book he shall, on ceasing to be such Chairman, hand over to his successor.

Expenditure.

Except in urgent matters, cost of all work to be estimated before undertaken.

80. With the exception of urgent matters, hereinafter specially provided for, no work affecting the funds of the Borough shall be undertaken until the probable expense thereof shall have first been ascertained by the Council.

Urgent matters and necessary current expenses: Expenses authorized to be reported; Outlay to be in accordance with orders of the Council.

81. For urgent matters and for necessary current expenses during the intervals which may elapse between the meetings of the Council outlays to the following extent may be incurred:—

(1.) By order of the Committee for Works, or of the Mayor and one member of such Committee, for repairs or emergent works, to the extent of £5.

(2.) By order of the Mayor and any two aldermen, or without the Mayor, of any four aldermen, for any urgent purpose, to the extent of £5.

(3.) By order of the Mayor for necessary current expenses, to the extent of £2.

Provided that in every case a detailed report in writing of every such outlay shall be laid before the Council at its next meeting, such report to be signed by the Chairman of the Committee of Works or the Mayor, or the Mayor and aldermen, or the aldermen without the Mayor, as the case may be, by whom such outlay shall have been authorized; also that such outlay shall only be permissible in reference to matters coming strictly within the jurisdiction or functions of the Council; and that no outlay involving a disobedience or evasion of any order or resolution of such Council shall on any pretence be thus authorized.

All claims to be examined and reported upon by the Finance Committee.

82. All accounts and demands of money against or from the Council shall be examined and reported on by the Finance Committee before any order shall be made for payment of such accounts or demands.

Certificate required with each claim—Salaries and wages to be payable on Mayor's order—Certificates to be attached to reports.

83. No payment shall be ordered unless there shall be a certificate or memorandum from the Committee, from the Mayor, or from the officer of the Council to whom the direction or guardianship of such expenditure properly belongs, showing that the demand is a legitimate one, and has been duly authorized or inquired into; it shall be the imperative duty of the Finance Committee to see that this requirement is fulfilled, or to report specially as to the reason of its non-fulfilment, before recommending payment; provided also that in cases of special expenditure under section 80 of this Part of these By-laws the report directed by that section to be laid before the Council shall, if the outlay shall have been lawfully incurred, be deemed a sufficient certificate; and provided further that in regard to salaries and wages of labour for officers, servants, and labourers employed at fixed rates of payment, by order of the Council, the certificate of the Mayor of the amounts due to any such officer, servant, or labourer, and the order of such Mayor for the payment of such amount, will be a sufficient authorization for such payment; and such certificates, memoranda, and authorizations shall be attached respectively to the reports from the Finance Committee on the payments or outlays to which such certificates, memoranda, or authorizations have reference.

Common Seal and Records of Council.

Common seal and press, how secured; care of same.

84. The common seal and the press to which the same is attached shall be secured by a cover or box, which, except when such seal and press are in use, shall be kept locked. There shall be duplicate keys to the lock of this cover or box, of which keys one shall be kept by the Mayor and the other by the Council Clerk.

How and when common seal to be used.

85. The common seal shall not be attached to any document without an express order from the Council; in every case when such common seal has been ordered to be attached to any document such document shall also be signed by the Mayor, or, in case of the absence or illness of such Mayor, by two aldermen, and countersigned by the Council Clerk.

How books of accounts are to be kept and inspected.

86. The Treasurer shall keep such books of account and such records, statements, and memoranda of receipts and expenditure in such manner and form as the Council may from time to time direct; it shall be the duty of the Finance Committee to inspect all such books of account, records, statements, and memoranda from time to time, to ascertain that the same are properly kept, and to report at once to the Council any act of neglect or appearance of inefficiency which they may have discovered in the keeping of the same; also to report to the Council from time to time any changes which such Committee may think advisable in the mode of keeping the accounts.

Records of the Council defined—Provisions for proper keeping of same.

87. The minute-book, letter-book, and all rate and assessment books, books of accounts, records, statements, and memoranda of receipt and expenditure, electoral rolls and other records relating to elections, business papers, reports from Committees, minutes from the Mayor, petitions, letters on municipal business addressed to the Council or to the Mayor, or to any officer or servant of the Council, orders, reports, returns, and memoranda relating to municipal business, drawings, maps, plans, contracts, specifications, agreements, and all other books and papers connected with the business of the Council shall be deemed records of the Council; all such records other than the minute-book and other books, and other than electoral rolls and other records relating to elections, shall be numbered and filed in due order, and shall be duly registered by the Council Clerk in a book to be kept by him for that purpose. Upon the face of every document thus registered to which there is any reference in the minute-book there shall be a note of the page wherein it is so referred to; and when any order has been made by the Council, or a report has been brought up by any Committee thereof in reference to any document so registered as aforesaid, a note of such order or report shall be made upon the document. It shall be the duty of the By-law Committee to inspect the records from time to time to ascertain that the same are properly kept as aforesaid, and to report at once to the Council any act of neglect or appearance of inefficiency which they may discover in the keeping of such records.

Impression of seal not to be taken, &c., without leave of the Council—penalties.

88. No member or officer of the Council shall be at liberty to take an impression of the corporate seal, or to show, lay open, or expose any of the books or records of the Council to any person other than a member of the same, without leave from such Council, except as otherwise provided by law. Any member or officer of the Council who shall be guilty of a breach of this section shall be liable, on conviction, for the first offence to a penalty of not less than 5s. nor more than £2; for the second offence to a penalty of not less than £1 nor more than £10; and for a third and every subsequent offence to a penalty of not less than £5 more than £25.

Records not to be moved, &c.; penalties, exceptional circumstances—Receipt to be given in every case before document received—Proviso as to use of records as matters of evidence.

89. Any person removing any such book or other record of the Council as aforesaid from the Council Chamber or the place where by direction of the Council such book or other records is usually kept, without leave for such removal having been first obtained by such Council, or without other lawful cause for such removal as hereinafter provided, shall for every such offence be liable to a penalty of not less than 10s. nor more than £10. And nothing herein contained shall be held to affect the further liability of any person who shall have removed such book or other record as aforesaid, and shall not have returned same, to prosecution for stealing such book or record, or to an action at law for detention of same, as the circumstances of the case may warrant: Provided that leave for temporary removal of a book or other record may be granted to the Town Clerk or the Treasurer by the Mayor, in order that such Clerk or Treasurer may post up entries, prepare returns, or perform any other duty which it may be necessary that he or they should perform; also, that the Mayor or Chairman of any committee, or any alderman acting for such Chairman, may temporarily remove any record necessary for the preparation of a minute or a report, or for the purpose of any prosecution or suit at law, by, against, or at the instance of the Council; but in all cases such Clerk, Treasurer, Mayor, Chairman, or Alderman, as the case may be, shall give a receipt under his hand for every document so removed, and every such receipt shall be carefully preserved among the records until the book or other record to which it refers shall have been returned, when such receipt shall be destroyed; and provided also that the Mayor, Town Clerk, or other officer of the Council who may be subpœnaed to produce any book or other record of

the Council in a court of law shall have the right to remove such book or other record for the purpose of obeying such summons, but shall return such book or record as speedily as may be, and shall before removing the same leave at the Council Chamber a receipt for such book or other record of the Council as aforesaid, shall be legally responsible for the safe keeping and return of the same.

Penalty for defacing or destroying record.

90. Any person destroying, defacing, or altering any record of the Council shall for every such offence be liable to a penalty of not less than £5 nor more than £50.

Officers and Servants—notice to Candidates.

91. No appointment to any permanent office at the disposal of the Council shall take place until notice shall have been given as hereinafter provided, inviting applications from qualified candidates for the same. The salary or allowance attached to the office shall in every case be fixed before such advertisement is published, and shall be stated in such advertisement.

Mode of appointment.

92. Every such appointment shall be made by ballot, in such mode as may at the time be determined upon, whenever there is more than one candidate for such permanent office.

Exceptional cases.

93. Nothing herein contained shall be held to prevent the employment, as may from time to time be found necessary and as may be ordered by the Council, of any workmen or labourers on the public works of the Borough.

Bonds of good conduct.

94. All bonds given by officers or servants of the Council for the faithful performance of their duties shall be deposited with the Attorney or the Bankers of the Corporation, as the Council may order; and no officer or servant of the Council or any member of the Council shall be received as surety for any other such officer or servant.

Duties of Town Clerk.

95. The Town Clerk, in addition to the duties which by the Municipalities Act of 1867, or by the present or any other by-law thereunder, he may be required to perform, shall be the Clerk of all Revision Courts held in the Borough under the provisions of the said Municipalities Act; he shall also, under the direction of the Mayor, conduct all correspondence which may be necessary on the part of the Council; he shall likewise have charge of all the records of such Council, except such books or documents as may as hereinafter provided be entrusted to any other office, and shall be responsible for the safe keeping of such records; he shall generally assist the Mayor in carrying out the orders of the Council and the duties of such Mayor; he shall be required to give security in the sum of £400.

Duties of Treasurer,

96. The Treasurer shall have charge of such books of account and other records of the Council as are mentioned in section 86 of these By-laws, and shall be responsible for the safe keeping of such records.

Duties of other officers and servants.

97. The duties of all officers and servants of the Corporation shall be defined by such regulations as may from time to time and in accordance with law be made, as follows, viz.: As to the duties of the Town Clerk and his assistants, by the Mayor; as to the Treasurer and all collectors of rates, bailiffs, bailiff's assistants, and other officers and servants employed in and about the collection of revenue, whose superintendence is not herein specially entrusted to any other committee, by the Finance Committee; as to all surveyors, architects, clerks of works, overseers, inspectors of water supply, sewerage or drainage thereof, whose superintendence herein is not specially entrusted to any other committee, by the Committee of Works; as to the attorney for the corporation, inspector of nuisances, and other officers and servants employed in and about the carrying out and employment of the general provisions of the Municipalities Act of 1867, and of any other statute of which the operation has been extended to the Borough, and of the by-laws for the general good government of such Borough whose superintendence is not herein specially entrusted to any other committee, by the By-law Committee; and as to librarians, managers of public institutions or reserves under the charge of the Council, and all other officers and servants employed in and about any matter over which the Council has control, and whose superintendence is not herein specially entrusted to any other committee by the Mayor, by the Works Committee: Provided that all such regulations shall be in writing, and shall be in all cases laid before the Council at the first meeting thereof which shall be holden after the making of any such regulations, and shall be in strict accordance with any such orders or directions as may have been at any time given by such Council touching the matters to which any such regulation may have reference.

pecial power of Mayor.

98. The Mayor shall exercise a general supervision over all officers and servants of the Council, and may order the preparation of any such return or statement or the giving of any such explanation or information by any such officer or servant as he may think necessary, unless such return or statement shall have been already prepared, or such explanation or information already given, and such return, statement, explanation, or information is on record as hereinbefore provided; or unless the Council shall have expressly forbidden or dispensed with the preparation of such return or statement, or the giving of such explanation or information. All such returns or statements as aforesaid shall be in writing, and shall be recorded; all such explanation or information may, except as hereinafter provided, be either rendered *viva voce*, or put into writing, as the Mayor may direct.

How complaints against officers, &c., are to be dealt with.

99. All complaints against officers or servants of the Corporation must be in writing, and must in every case be signed by the person or persons complaining, and no notice whatever will be taken of any complaint which is not in writing or is anonymous; all such complaints may be addressed to the Mayor, who immediately upon the receipt of any such complaint, and without laying the same before the Council, shall have power to investigate the same; and if any such complaint be made to the Council or to any member or officer thereof, it shall be referred to and investigated by the Mayor before it shall be in any way (other than by such reference) ordered upon or dealt with by such Council: Provided that every report, explanation, and information which may be made or rendered in reference to every such complaint shall be in writing, and such Mayor shall state in writing the result of every such investigation, and his opinion as to what order (if any) ought to be made in connection therewith: and the Mayor's statement as aforesaid thereon shall be laid before the Council at the next meeting thereof which shall be holden after the Mayor shall have made such statement, and shall be duly recorded: Provided further that nothing herein contained shall be held to affect in any way the special power conferred on the Mayor by section 152 of the Municipalities Act of 1867, or any other special power which now is or hereafter may be conferred by statute upon such Mayor.

MISCELLANEOUS.

Leave of absence.

100. No leave of absence shall be granted to the Mayor or to any Alderman otherwise than by a resolution of the Council adopted after due notice.

By-laws, draft of, to lie in office seven days, &c.

101. A draft of every intended by-law shall lie in the office of the Council for at least seven days before such draft is taken into consideration by the Council, and shall be open to the inspection of every ratepayer who may desire to inspect the same; and public notice shall be given as hereinafter provided that such draft is so lying for inspection.

Motions for recission of previous orders.

102. Whenever a motion for the rescission of any order, resolution, or vote of the Council shall have been negatived, no other motion to the same effect shall be permissible until a period of three months shall have elapsed from the time of negativing such first-mentioned motion: Provided that nothing herein contained shall be held to prohibit the reconsideration and amendment of any proposed by-law which may have been submitted to the Governor for confirmation, and may have been remitted to the Council, with suggested amendments of the same, or the passage after due notice as hereinbefore provided, and in due course of law of any by-law for the repeal or amendment of any other by-law.

Lapsed Business.

103. Whenever the consideration of any motion or matter of business shall have been interrupted by reason of a quorum not having been present the resumption of such consideration may be ordered by resolution of the Council after due notice, and such consideration shall in such case be resumed at the point where it was so interrupted as aforesaid.

Suits and prosecutions for penalties.

104. Such suits or information for the enforcement of penalties for or in respect of breach of the Municipalities Act of 1867, or of any by-law made thereunder, or of any statute the operation of which may have been extended to the Borough as may have been directed by the Council, or by the By-law Committee, or by the Mayor, to be commenced or laid, shall be so commenced or laid as follows, namely:—When against a member of the Council, or an Auditor, or any officer of the Council, by the Town Clerk, unless he shall be the officer to be proceeded against, and in such case by any other officer named by the Council for that purpose; when against any other person, by the officer to whom the carrying out of the statutory provision or by-law imposing the penalty sought

to be enforced has been entrusted; and if there shall be no such officer, then by any such officer or person as shall be appointed for that purpose by the Council, or by the By-law Committee, or by the Mayor, as the case may be, on directing such suit or information as aforesaid; and no such suit shall be brought or information laid as aforesaid against any member of the Council or Auditor except by order of such Council, nor shall any similar proceeding be taken against any officer of the Council except by order of such Council or of the Mayor, nor against any other person except upon the order of the Council, or of the Mayor, or of the By-law Committee; and no such suit shall be directed to be brought, nor shall any such information be directed to be laid as aforesaid, except on express resolution of the Council, in any case where the bringing of such suit or the laying of such information will be adverse to any previous direction by such Council, or where on the trial or hearing of any such suit or information may on the order of the Council be entrusted to an attorney.

Mode of proceeding in cases not provided for.

105. In all cases not herein provided for resort shall be had to the rules, forms, and usages of the Legislative Assembly of New South Wales, so far as the same are applicable to the proceedings of the Council.

Power to suspend temporarily any portion of these By-laws.

106. Any of the foregoing By-laws which relate to or affect the proceedings at meetings of the Council may be suspended *pro tempore* without notice in cases of emergency, if all the members of the Council then present shall deem such suspension necessary.

Part II.

Collection and Enforcement of Rates.

Rates when due and payable.

1. All rates levied and imposed by the Council shall be held to be due and payable on and after such day or days as the Council shall by resolution from time to time appoint.

Time and place of payment.

2. All such rates shall be paid at the Council Chambers during the hours appointed by the Council for that purpose.

Special rates.

3. All rates levied or imposed by the Council under sections 165, 166, and 167 of the Municipalties Act of 1867, and for the purposes mentioned in the said sections, or under the provisions of any of the said sections, or for any of the purposes mentioned in the said sections, shall be collected in such manner and shall be held to be due and payable on and after such day or days as the Council may by resolution at the time of making or imposing such rates, or any of them, have appointed.

Mayor to enforce payment.

4. It shall be the duty of the Mayor to take proceedings to enforce the payment of all rates in default, either by action at law or by issuing warrants of distress upon the goods and chattels of the defaulter.

Bailiff—how appointed.

5. The bailiff of the Municipality shall be appointed by the Council, and may from time to time be removed by the said Council.

Enforcement by distress bailiff.

6. A bailiff shall, when found necessary, be appointed by the Mayor.

Bailiff's sureties.

7. The bailiff shall find two sureties to the satisfaction of the Mayor, to the extent of £25 each, for the faithful performance of his duties.

Duty of bailiff.

8. It shall be the duty of the bailiff to make all levies by distress for the recovery of rates in the manner hereinafter provided.

Warrant of distress.

9. All levies and distresses shall be made under warrant in the form of Schedule A hereto, under the hand of the Mayor or any Alderman who for the time being may be duly authorized to perform the duties of that office.

Distress and sale, &c.

10. It shall be lawful for the bailiff or his deputy, and such assistants as he or they may take with them, to enter into any part of the land, building, tenement, or other property in respect of which such rate or rates shall have been made as aforesaid, and to distrain therein or thereon, and to remain in such building or other property in charge thereof. And if the sum for which any distress shall have been made or taken, together with the costs of such restraint, shall not have been paid on or before the expiration of three clear days, the bailiff or his deputy may, between the hours of 11 in the morning and 2 in the afternoon on the next day thereafter cause the goods so distrained or a sufficient portion thereof to be sold by public auction, either on the premises or at such other place within the Municipality as the bailiff may think proper to remove them for such purpose, and shall pay over the surplus (if any) that may remain, after deducting the amount of the sum distrained for and the cost of such distraint, to the owner of such goods so sold, on demand by such owner.

Inventory of goods seized to be delivered to ratepayer.

11. At the time of making a distress the bailiff shall make out a written inventory in the form of Schedule B hereto, which inventory shall be delivered to the occupant of the land or premises, or the owners of the goods so distrained, or to some person on his or her behalf resident at the place where the distress shall be made; and in case there shall be no person at such place with whom such inventory can be left as aforesaid, then such inventory shall be posted on some conspicuous part of the land or premises on which the distress is made, and the bailiff shall give a copy of the inventory to the ratepayer on demand at any time within one month after making such distress.

Goods may be impounded.

12. The bailiff on making a distress as aforesaid may impound or otherwise secure the goods or chattels so distrained, of what nature or kind whatever, in such place or places or in such part of the land or premises chargeable with rates as shall be most fit and convenient for this purpose; and it shall be lawful for any person whomsoever, after the expiration of three days, to come and go to and from such place or part of the said land or premises where such goods or chattels shall be impounded and secured as aforesaid, in order to view and buy, and in order to carry off and remove the same on account of the purchaser thereof.

Owner to direct order of sale.

13. The owner of any goods or chattels so distrained upon may, at his or her option, direct and specify the order in which they shall be successively sold, and the said goods or chattels shall in such case be put up for sale according to such direction.

Proceeds of Distress.

14. The bailiff shall hand over to the Town Clerk all proceeds of every such distress within twenty-four hours after having received the same.

Bailiff's Fees.

15. There shall be payable to the bailiff for the use of the Council for every levy and distress made under this By-law the costs and charges in the Schedule hereunto annexed, marked C.

Schedule A.

Warrant of Distress.

I, Mayor of the Municipal Borough of Narrandera, do hereby authorize you, , the Bailiff of said Municipality, to distrain the goods and chattels in the dwelling-house (or in and upon the land and premises) of situate at for being the amount of rates due to the said Municipality to the day of for the said dwelling-house, or land or premises, as the case may be, and to proceed for the recovery of the said rates according to law.

Dated this day of , 188 .

Mayor

Schedule B.

I have this day, in virtue of the warrant under the hand of the Mayor of the Municipal Borough of Narrandera, dated distrained the following goods and chattels in the dwelling-house (or in and upon the land and premises) of situate at within the said Municipality, for , being the amount of rates due to the said Municipality to the day of 188 .

Dated this day of , 188 .

Bailiff.

Schedule C.

Costs.

	s.	d.
For every warrant of distress	2	0
For every warrant and making levy where the sum is not more than £20	2	0
Above that sum in addition to every £1	0	1
For making and furnishing copy of inventory	2	0
For man in possession each day or part of day	5	0
For sale, delivery, and commission of goods per £ on proceeds of sale	1	0

Part III.

Preventing and Extinguishing Fires.

Fire or combustible materials, &c.

1. Every person who shall place or knowingly permit to be placed in any house, yard, workshop, out-offices, or other premises, fire, gunpowder, or other combustible or inflammable materials of any kind, in such a manner as to endanger any buildings, shall on conviction for every such offence forfeit and pay a penalty of not more than £10, and shall forthwith remove such fire, gunpowder, or combustible or inflammable materials; and every such person who shall suffer any such fire, gunpowder, or inflammable materials to remain as aforesaid for a period of twelve hours after any such conviction shall be deemed guilty of a further offence against this By-law.

Inflammable fences, &c.

2. Every person who shall erect any fence of brushwood, bushes, or other inflammable material, or shall make or place any stack of hay, corn, straw, or other produce, or place as for the covering of any such stack any inflammable material, so as to endanger any buildings or properties, or any trees, shrubs, or other produce of such properties, or any chattels in or upon such buildings or properties, shall forfeit on conviction for every such offence a penalty of not more than £5, and shall also remove such fence, stack, or covering within a reasonable time after any such conviction as aforesaid; and any person failing to remove such fence, stack, or covering within a reasonable time after any such conviction as aforesaid shall be deemed guilty of a further offence against this By-law.

Setting on fire wilfully any inflammable matter.

3. Every person who shall wilfully set fire to any inflammable matter whatsoever in the open air, without having given notice in writing to the occupiers of the land adjoining to the land upon which such matter shall be located, and also inform the Town Clerk of his or her intention so to do, and receive written permission from him so to do, and the occupant of the said adjoining land, shall forfeit a sum not exceeding £5.

Lighting bonfires.

4. Any person who shall light any bonfire, tar-barrel, or firework upon or within sixty yards, or shall discharge any firearms within one hundred yards, of any public or private street or any public place, or shall sell gunpowder, squibs, rockets, or other combustible matter by gas, candle, or artificial light, shall forfeit a sum of not exceeding £5.

Setting on fire chimney flues.

5. Every person who wilfully sets or causes to be set on fire any chimney flue, smoke vent, or stove pipe, shall forfeit a sum not exceeding £5.

Chimneys catching fire by neglect.

6. If any chimney catch fire through the neglect of any person occupying or using any premises in which such chimney is situated shall forfeit a sum not exceeding £2: Provided always that such forfeiture shall not be enforced if such person prove to the satisfaction of the Justices before whom the case is heard that such fire was in no way owing to the neglect or carelessness, whether with respect to cleansing such chimney or otherwise, of himself or his servant.

Extinguishing fires.

7. For the extinguishing fires, the occupier of every dwelling house, warehouse, or shop, or other building, shall at all times keep therein or upon the land appertaining thereto, in some fit reservoir, butt, or tank, clean water in quantity not less than fifty gallons, or possess a well with good supply of clean water within one chain from said premises, or being within the same distance from any creek or river shall have access to a similar supply of good water for the purposes aforesaid; and every such occupier who shall make default contrary to this section shall forfeit a sum not exceeding £1; and every such occupier shall for every day of such default be deemed guilty of an offence against this By-law.

Water-carts.

Licensing of.

8. The Council shall from time to time license to ply within the Municipality such carts for the carrying of and sale of water and extinguishing fires as shall on inspection be found fit for that purpose; every such cart or vessel for the holding of water for the purposes aforesaid shall be capable of containing not less than fifty gallons, and shall have the name of the owner and the words "Licensed water-cart" painted on such cart in legible letters.

How water-cart licenses are to be obtained.

9. Every such license shall be issued on the written application of the owner thereof, in which application shall set forth the name and surname and place of abode of the applicant, and for every such license there shall be paid to the Council the sum of 2s. 6d; and every such license shall be in force until the 31st day of December in each and every year after the granting of said license.

Penalty for hawking or carrying water for sale without license.

10. Any person hawking or carrying water for sale or hire within the Municipality otherwise than in a licensed water-cart as aforesaid shall upon conviction be liable to a penalty not exceeding £1.

Licensed water-carriers to carry vessels loaded with water.

11. Every driver and owner of a licensed water-cart shall keep such cart loaded with water during all times after sunset and before sunrise, and shall if any premises or property shall be on fire within the Borough attend at the place of such fire with such cart so loaded as aforesaid with water, and shall continue to cart water by full loads to such place, and shall deliver such water in such manner as may be required by the Mayor or by any Alderman or officer, or person duly authorized by the Council in that behalf, and then present for the purpose of extinguishing such fire; and every such owner or driver who shall without reasonable excuse fail to comply with the provisions of this section shall forfeit a sum not exceeding £10.

Fees to be paid to the owners of licensed water-carts.

12. There shall be paid out of the funds of the Borough to the owner of every licensed water-cart who shall have attended with as sufficient water within his power or capability at the place of any fire as herein provided, and delivered the same as required for the purpose of extinguishing such fire, such reasonable compensation as the Council shall by resolution have appointed in that behalf; and also, to such owners of such carts as shall have first and second in order attended with loads of water such further sums of money by way of reward as the Council, by similar resolution, shall have fixed upon.

Part IV.

Streets and Public Places—Public Health and Decency, &c.

New roads to be reported on.

1. No new public road, street, way, reserve, or other place proposed to be dedicated to the public shall be taken under the care and management of the Council until after such road, street, way, or reserve shall have been examined by the Committee for Works, and reported upon to the Council by such Committee.

Plans of proposed new roads to be delivered to the Council.

2. When any proprietor or proprietors of land within the Borough shall open any road, street, or way, or lay out any park or other place for public use or recreation, through or upon such land, and shall be desirous that the Council shall undertake the care and management of such road, street, way, reserve, or other place, he or they shall furnish the Council with a plan or plans, signed by himself or themselves, showing clearly the position and extent of such road, street, way, reserve, or other place as aforesaid.

Dedication of new roads.

3. If the Council determine to take charge of any such road, way, or other place as aforesaid, the plan or plans so signed as aforesaid shall be preserved as a record or records of the Council; and the proprietors or proprietor aforesaid shall execute such further instrument dedicating such road, way, reserve, or other place to public use or recreation as aforesaid, as may be considered necessary by the Committee for Works, and such instrument of dedication shall also be preserved as a record of the Council.

Committee for Works to fix street levels.

4. The Committee for Works, or any officer or person acting under the supervision of such Committee, shall, subject to such orders as shall from time to time be made by the Council in that behalf, fix and lay out the levels of all public roads, streets, and ways within the Borough, and the carriage and foot ways thereof; and it shall be the duty of such committee, officer, or person to place posts at the corners of intersections of any such public roads and streets whenever the same may be considered necessary or desirable by the Council. Provided that there shall be no change of level in any public road, street, or way until the same shall have been submitted to and adopted by the Council as hereinafter directed.

Change of street levels.

5. Whenever it may be deemed necessary to alter the level of any public road, street, or way as aforesaid, the Committee for Works shall cause a plan and section showing the proposed cutting to be exhibited at the Council Chamber for seven days, for the information and inspection of ratepayers, and shall notify by advertisement in some newspaper circulating in the Borough that such plan is so open for inspection: and no objection thereto shall be entertained by the Council unless made within twenty-one days after such notice shall have been given; at a subsequent meeting of the Council the said plan and section, if adopted, shall be signed by the Mayor or Chairman and the proposer and seconder of the motion for such adoption, and countersigned by the Town Clerk, and such plan and section so signed and countersigned shall be a record of the Council.

Noxious weeds.

6. Any person appointed by the Council may enter upon any land within the said Borough, and for that purpose may break open gates, or take down or remove fences, to extirpate the weed known as the Bathurst burr, or Scotch thistle, or other noxious weeds: Provided always that if any gate be broken or fences removed the same shall, immediately after the work then required to be done, be restored to their former condition as nearly as may be, and the expense of extirpating such weeds and restoring such fences may be recovered as an ordinary debt from the owner or occupier of such lands; any person hindering or obstructing any person so appointed as aforesaid shall for every such offence be liable to a penalty of £2; all owners or occupiers of property within this Borough shall remove and burn all kinds of thistles, Bathurst burr, or other noxious weeds upon lands owned, rented, or occupied by them; and any owner, tenant, or occupier neglecting to comply with this By-law after fourteen days' notice from any officer of the said Borough requiring him to remove and burn such weeds as aforesaid shall be liable to a penalty of not less than £1 and not exceeding £5.

No turf, gravel, &c., to be removed from streets without permission.

7. Any person who shall form, dig, or open any drain or sewer, or remove, or cause to be removed, any turf, clay, sand, soil, gravel, stone, or other material, or any road scrapings or sweepings, in or from any part of the carriage or foot ways of any street or any other public place within the Borough, without leave first had and obtained for that purpose from the Borough, or who shall wantonly break up or otherwise damage any such carriage or foot way, shall, on conviction, pay and forfeit for every such such offence any sum not exceeding £5, nor less than £1; and every person who shall have or make any cellar or any opening, door, or window, in or beneath the surface of the footway, or any street, or public place within the said Borough, without the consent of the Council, shall, on conviction, forfeit and pay the sum of £5, over and above the expenses of filling up, remedying, or removing such cellar, opening, door, or window.

Holes to be enclosed.

8. Any person or persons who shall dig or make or cause to be made or dug any hole, or leave or cause to be left any hole adjoining or near to any street or public place within the said Borough for the purpose of making any vault or vaults, or the foundation or foundations to any house or buildings, or for any other purpose whatever, or shall erect or pull down any building, and shall not forthwith enclose the same, and keep the same enclosed in a good and sufficient manner to the satisfaction of the Committee for Works of the said Borough, or shall keep up or cause to be kept up and continued any such enclosure for any time which shall be longer than shall be absolutely necessary, in the opinion of such committee, and shall not place lights upon each side of the said enclosure, and keep the same continually burning, from sunset to sunrise during the continued existence of such enclosure, shall forfeit and pay for every such refusal or neglect any sum not being less than £2 nor exceeding £5.

Open spaces and steps adjoining footways to be enclosed under a penalty.

9. Every owner or occupier of any house, building, or premises or land within the said Municipality having any entrance, area, garden, or other open space, or any vacant building-lot, water-hole, or excavated space adjoining the footway of any street or public place in such Borough, shall protect and guard the same by good and sufficient rails, fences, or other enclosures, to be previously approved of by the Works Committee or any officer whose special duty it shall be to attend to such work, so as to prevent danger to persons passing and repassing; and every such owner or occupier of any such house, building, or premises or land having any steps adjoining the footway or any such street or public place shall in like manner protect and guard the same by fences, rails, or other enclosure, so as to prevent the like danger to persons passing and repassing; and on failure thereof every such owner or occupier shall, as often as he or she shall be convicted of such offence, forfeit and pay a sum not less than £2 nor more than £5; and every such owner or occupier as aforesaid who shall fail to erect such fences or other enclosures as aforesaid, after fourteen days' notice from the Council or any duly qualified officer, shall be deemed guilty of a further offence against this By-law.

Penalty for not covering over wells.

10. Every person who shall have a well situated between his or her dwelling house or the appurtenances thereof and any road, street, or footway within the limits of the said Borough, shall cause such well to be securely and permanently covered over; and if any person having such well as aforesaid shall fail to cover over and secure the same within twenty-four hours after notice shall have been given in writing to him or her by any officer of the said Council, or shall have been left for any such person at his or her usual or last known place of abode, or on the said premises, shall, on conviction, forfeit and pay a sum of 10s. and for every day after such notice that such well shall remain so uncovered, contrary to the provisions hereinbefore made and provided, such person shall be deemed guilty of a separate offence against this By-law.

Temporary stoppage of traffic for repairs.

11. The Committee for Works, or any officer or person acting under the authority of such Committee or of the Council, may at any time cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same or for any necessary purpose; and any person or persons offending against this By-law, either by travelling on street, lane, or thoroughfare, or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding £5 for every such offence.

Drawing or trailing timber, &c., &c.

12. Any person who shall haul or draw timber, or cause to be hauled or drawn upon any part of any street or public place within the said Borough, any timber, stone, or other thing otherwise than upon wheeled vehicles or barrows, or shall suffer any timber, stone, or other thing which shall be carried principally or in part upon any wheeled vehicle or barrow to drag or trail upon any part of such street or public place to the injury thereof, or to hang over any part of any such vehicle or barrow so as to obstruct or occupy the street beyond the breadth of the said vehicle or barrow, shall, upon conviction, forfeit and pay for every such offence a sum not more than £2 nor less than 5s. over and above the damage occasioned thereby.

Driving on footpaths and throwing filth thereon.

13. Any person who shall cast, throw, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid or to remain, any ashes, rubbish, offal, dung, soil, dead animals, blood, or other filth and annoyance, or any matter or thing in or upon the carriage-way or footway of any street or public place in the said Borough, or shall kill, slaughter, dress, scald, or cut up any beast, swine, calf, sheep, or other animal, in or so near to any street or public place as that any blood or filth shall run or flow upon or cover or be on any or either of any such carriage or foot ways, or shall run, roll, drive, draw, place, or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any of the said footways of any such street or public place any waggon, cart, dray, sledge, or other carriage, or any wheelbarrow, handbarrow, or truck, or any hogshead, cask, or barrel, or shall wilfully drive, ride, or lead any horse, ass, mule or other beast upon any such footway, shall, upon conviction thereof, forfeit and pay for the first offence a sum not exceeding £2 nor less than 5s., for the second offence a sum not exceeding £5 nor less than 10s., and for a third and every subsequent offence a sum not exceeding £10 nor less than £1, for each such offence.

Placing goods, carriages, &c., on footways, not removing same when required—replacing same after removal—awnings to be excepted.

14. Any person who shall set or place, or cause or permit to be set or placed, any stall, board, chopping-block, show-board (on hinges or otherwise), basket, wares, merchandise, casks, or goods of any kind whatsoever, or shall hoop, place, wash, or cleanse, or shall cause to be hooped, placed washed, or cleansed any pipe, barrel, cask, or vessel, in or upon or over any carriage or footway in any street or public place within the said borough, or shall set out, lay, or place, or shall cause or procure, permit, or suffer to be set out, laid, or placed, any coach, cart, wain, waggon, dray, wheelbarrow, handbarrow, sledge, truck, or other carriage, upon any such carriage-way except for the necessary time of loading and unloading such cart, wain, waggon, dray, sledge, truck, or other carriage, or taking up or setting down any fare, or waiting for passengers when actually hired, or harnessing or unharnessing the horses or other animals from such coach, cart, wain, waggon, dray, sledge, truck, or other carriage—or if any person who shall set or place, or caused to be set or placed, in or upon or over any such carriage or footway any timber, stone, bricks, lime, or other material or things for building whatsoever (unless the same shall be enclosed as herein directed), or any other matters or things whatsoever, or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal, or other thing or matter whatever, from any house or other building or premises, or any other matter or thing, from and on the outside of the front or any other part of any other house or other buildings or premises over or next unto any such street or public place, and shall not immediately remove all or any such matters or things being thereto required by the Inspector of Nuisances or other proper officer of the Council; or if any person who, having in pursuance of any such requisition as aforesaid remove, or cause to be removed, any such stall-board, show-board, chopping-block, basket, wares, merchandise, casks, goods, coach, cart, wain, waggon, dray, wheelbarrow, handbarrow, sledge, meat, offal, or other things or matters whatsoever (save and except as aforesaid) in, upon, or over such carriage or footway, of or next unto any such street or public place as aforesaid, shall, upon conviction for every such offence, forfeit any pay for the first

offence a sum not exceeding 40s. nor less than 5s.; for the second offence a sum not exceeding £5 nor less than 10s.; and for a third and every subsequent offence a sum not exceeding £10 nor less than £1: provided that nothing herein contained shall be deemed to prevent any person from placing an awning in front of his or her shop or house, in such manner as that such awning shall be at least 7 feet high above the height of the footway, and that the posts be placed close to the kerbstone or outer edge of such footway, and a plan of such awning submitted to the Council prior to its erection and approved of by such Council or any officer duly appointed for the purpose.

Riding on drays, careless driving, &c.

15. If the driver of any waggon, wain, cart, or dray of any kind, shall ride upon any such carriage in any street as aforesaid, not having some person on foot to guide the same (such carts as are drawn by one horse or driver or guided with reins only excepted), or if the driver of any carriage whatsoever shall wilfully be at such a distance from such carriage, or in such a situation whilst it shall be passing upon such street that he cannot have the direction and government of the horse or horses, or cattle drawing the same, or if the driver of any waggon, cart, dray, coach, or other carriage whatsoever meeting any other carriage, shall not keep his waggon, cart, dray, coach, or other carriage on the left or near side of the road, street, or thoroughfare, or if any person shall in any manner wilfully prevent any other person or persons from passing him or her, or any carriage under his or her care, upon such street, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any carriage or person in or upon the same, every driver or person so offending shall, upon conviction, forfeit and pay any sum not exceeding £2.

Part V.

Nuisances.

Dead animals, &c., not to be thrown into any public watercourse, &c.

1. Any person who shall cast any filth, rubbish, or any dead animal, or any animal with intent of drowning, into any public watercourse, sewer, waterhole, river, creek, road, or pathway, or who shall suffer slops, suds, filth of any kind to flow from his or her premises into any such watercourse, waterhole, river, creek, or canal, or who shall permit or suffer any such slops, suds, or filth to flow from his or her premises over any of the footways or streets of the borough, or shall permit or cause, by means of pipes, shoots, channels, or other contrivances, filth of any kind whatsoever to flow into any public watercourse, waterhole, river, creek, or canal, shall forfeit any sum not exceeding £5 nor less than £2.

Dead animals—mode of removal.

2. If any animal shall die in any part of the said borough, and the owner of such animal or occupier of the place, if private property, where such animal shall have died, shall not cause such animal to be immediately destroyed by fire, or so effectually removed and disposed of that nuisance can possibly result therefrom in any part of the borough, he shall for every such offence forfeit and pay any sum not exceeding £50 nor less than £2.

Dead animals on road or street, &c

3 If any animal shall die on any road, street, or public place within the said borough, or within half-a-mile of any road, street, or public place, or any dwelling-house, and the owner of such animal, or the occupier of the place, if private property, where such animal shall have died, shall not immediately cause such animal to be effectually removed and destroyed as aforesaid, or removed as aforesaid, on the spot where it shall have died, if a quarter of a mile from any dwelling-house; or if such spot shall not be a quarter of a mile from any dwelling-house, or if such owner or occupier shall not immediately cause such animal to be effectually removed as aforesaid, or to be removed to some place not less than a quarter of a mile from any dwelling-house, and there destroyed as aforesaid, every such owner or occupier shall, for every such offence, forfeit and pay any sum not exceeding £10 nor less than £2.

Power of Inspector as to dead animals on private premises.

4. The Inspector of Nuisances or any other officer appointed by the Council of the said borough with his assistant may, at any hour, enter upon any premises or place within the said borough where any animal has died, and require the owner or occupier of such premises or place immediately to destroy such animal by fire, and if necessary to remove the same for that purpose, as such Inspector of Nuisances or other officer appointed by the said Council shall direct, or otherwise forthwith effectually to remove and dispose of the same as afore-said, in default of which it shall be lawful for any one or more of such officers to cause such animal to be removed for that purpose; and every owner or occupier of such premises or place failing, neglecting, or refusing to comply with such requisition shall forfeit and pay any sum not exceeding £30 or less than £3.

Dead animals in certain cases to be removed at cost of the municipality

5. If any animal should die in any public place or street within the said municipality, and the owner or any person having charge of such animal cannot at the time be found or ascertained, it shall immediately be removed by the Inspector of Nuisances or other officer appointed by the said Council and destroyed in manner aforesaid at the cost of the municipality.

Drains.

6. All drains whatsoever and the water-closets, earth-closets privies, cesspools, and ashpits within the borough of Narrandera shall be constructed so as not to be a nuisance or injurious to health, and so that there shall be no overflow, soakage, or leakage therefrom; and every cesspool within the said borough which shall be formed or made below the surface of the ground shall be also so constructed so as that the watertight walls or sides thereof shall project on all sides at least 6 inches above the surface of the ground in which such cesspools shall be formed or made.

Cleansing of privies and cesspits.

7. The occupier of any house, building, or tenement within the borough of Narrandera shall cause every privy, cesspool therein to be emptied and cleansed from time to time as soon as any portion of the contents of such cesspool shall have so accumulated therein as to be within a distance of 1 foot from the top of the wall, sides, or lining of such cesspool: provided that the contents of such privy shall not be removed or discharged therefrom except between the hours of 11 p.m. and 5 a.m.; and provided also that the contents of any privy or cesspool shall not be removed or discharged therefrom until such contents shall have been mixed therewith a quantity of chloride of lime, zinc, carbolic acid, common salt, or some other efficient deodorizer sufficient to effectually deodorize and disinfect the same.

Where cesspools are not provided.

8. The occupier of every house, building, or other tenement on or in which the privy or closet belonging thereto shall not be provided with a cesspool constructed in accordance with provisions of the preceding by-law, shall at all times cause to be kept in such privy or closet a supply of dry powdered earth or other deodorizing material as aforesaid, sufficient to thoroughly and effectually deodorize the contents of such bucket, pan, or other receptacle.

Erection of new closets.

9. Every person about to erect a closet or form a cesspit, shall before commencing any such work give to the Town Clerk seven days' notice in writing of his intention and of the proposed position of such closet or cesspit, and in default thereof, or in case of his commencing such work without such notice, he shall be liable to a penalty of not less than £1 or more than £5; and no such closet shall be erected or cesspit formed except in such position as shall be approved by the Inspector of Nuisances or other officer appointed by the Council, and any person being guilty of a breach of this by-law shall be liable to a penalty of not less than £1 nor more than £5.

Every tenement to have closet.

10. A separate closet shall be provided for every tenement. Any breach of this By-law shall render the person so offending liable to a penalty of not less than £1 nor more than £5.

Objectionable closets to be altered

11. If any alteration shall be required, in the opinion of the Inspector of Nuisances or any officer of the Council appointed in that behalf for preserving public health or decency, in the case of any existing cesspit or closet, the Inspector of Nuisances or other officer of the Council shall report the same to the Council, and if the Council shall adjudge such cesspit or closet to be injurious to health or opposed to decency, the same shall be altered by the occupier or owner of the premises upon which such cesspit or closet exists, after due notice has been served upon such owner or occupier; and should such owner or occupier neglect or refuse to alter the same, the Inspector of Nuisances or other officer appointed by the Council shall forthwith make the necessary alterations, and the cost of the same shall be paid by the owner or occupier of the premises wherein the same shall be.

The disposition of night-soil.

12. The place of deposit of night-soil shall be in such locality as may from time to time be determined by the Council and until otherwise provided by the Council, shall be disposed of as authorized by the Inspector of Nuisances.

Power to inspect any premises by Inspector of Nuisances.

13. The inspector or other officer appointed by the Council may visit and inspect any premises, or do any work authorized by the Nuisances Prevention Act, 1875, therein on all days except Sundays and public holidays, between the hours of 10 in the morning and 4 o'clock in the evening.

Prohibition of use of night-soil.

14. No person shall be at liberty without the permission of the Council or the Inspector of Nuisances or other officer of the Council appointed on that behalf, to use on his own premises any night-soil brought from elsewhere; and any person committing a breach of this By-law shall be liable to a penalty of not less than £2 nor more than £10.

Burial of night-soil.

15. Every person shall be at liberty to use on his own premises all night-soil collected thereon by burying the same at least 2 feet in the earth; but if any nuisance shall arise therefrom he shall be liable to a penalty of not less than £1 and not more than £5.

Inspector of Nuisances Report.

16. It shall be the duty of the Inspector of Nuisances to furnish the Council with a report, every three months, containing a list of persons proceeded against for nuisances within this borough, specifying the dates, and giving particulars of each case.

Cost of emptying cesspits, &c

17. The Council may, after due application, recover such sums for the emptying of cesspits or attendance on earth-closets at such rates as may from time to time be decided upon and fixed by the Council to be charged in respect of such services.

Maximum and minimum penalties where not otherwise provided for.

18. In any case where no special penalty is fixed in these By-laws for any breach of the same, the maximum penalty for any such breach shall be £20 and the minimum £1, unless otherwise provided for by the Nuisances Prevention Act, 1875.

Cleansing butchers' shambles, &c.

19. For preserving the cleanliness of the said borough and the health of the inhabitants thereof, it shall be lawful for the Inspector of Nuisances or any other officer or officers appointed by the Council from time to time, and when and as often as he or either of them shall see occasion to visit and inspect the butchers' shambles, slaughtering-houses, boiling-down establishments, tanneries, fellmongeries, and soap works in the said borough, and to give such directions concerning the cleansing of said shambles, slaughter-houses, tanneries, soap works, and establishments, both within and without as to him shall seem needful; and any butcher, or the owner or occupier of any such shamble, slaughter-house, tannery, soap works, or establishment, who shall refuse or neglect to comply with such directions within a reasonable time, shall forfeit and pay a sum not exceeding £10 nor less than 10s.

Complaints respecting dirty premises, &c.

20. Upon the complaint of any householder that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances or any other officer appointed by the Council, shall make an inspection of the premises complained of, and the officer of the said Council shall have the full power without any other authority than this By-law to go upon such premises for the aforesaid purpose; and any person who shall personally, or by any person in his employment or under his control, suffer any waste or stagnant water, or any muck, filth, soil, or other offensive matter in any cellar or place within any dwelling-house or premises within the said Borough, or shall in like manner suffer the contents of any water-closet, privy, or cesspool to overflow or soak therefrom, shall for every such offence forfeit and pay a sum not exceeding £5 nor less than £1.

Various obstructions and annoyances.

21. Every person who in any street or public place or passage within the said borough to the obstruction, annoyance, or danger of the residents or passengers, shall commit any of the following offences shall, on conviction for any and every such offence, forfeit and pay a penalty of not more than £2.

(1.) Every person who shall hoist or cause to be hoisted, or lower or cause to be lowered, goods of any description from an opening in any house fronting any street or public place, and close to the footway thereof, without sufficient and proper ropes and tackling.

(2.) Every person who shall carry or convey, or cause to be carried or conveyed, in any street or public place, the carcass or any part of the carcass of any newly slaughtered animal, without a sufficient and proper cloth covering the same for the concealment from public view, or shall hawk or carry about butchers' meat for sale without covering the same as aforesaid.

(3.) Every person who shall place any line, cord, or pole across any street, lane, or passage, or hang or place clothes thereon, or allow any tree or shrub overhanging the footpath to the danger or annoyance of any person.

(4.) Every person who shall place any flower-pot in any upper window near to any street or public place without sufficiently guarding the same from being thrown down.

(5.) Every person who shall throw or cast from the roof or any part of any house or other building, any slate, brick, part of a brick, wood, rubbish, or other material or thing (unless within a hoard or enclosure) when any house or building is being erected, pulled down, or repaired.

(6.) Every blacksmith, whitesmith, anchor-smith, nail-maker, metal-founder, lime-burner, brickmaker, potter, or other person using a forge, furnace, or kiln, and having a door, window, or aperture fronting or opening into or towards any street, lane, or passage, and not enclosing such door, or not fastening the shutters or other fastenings of such window and closing such aperture, or placing a screen before the same every evening within one hour after sunset, so as effectually to prevent the light from showing through the doorway, window, or aperture next or upon such street, lane, or passage.

(7.) Every person who shall within the distance of 100 yards from any dwelling-house burn any rags, bones, cork, or other offensive substance, to the annoyance of any inhabitant.

(8.) Every person who shall carry goods or any frame to the annoyance of any person upon the footway of any street or other public footway.

(9.) Every person who shall be the keeper of or have any dog or other animal, which shall attack or endanger life or limb of any person who may have the right-of-way or use of any private yard, alley, street, or any other place within the said borough.

(10.) Any person who shall breed, feed, or keep any kind of swine in any house, yard, or enclosure, situate and being in or within 40 yards of any street or public place within the borough, or shall suffer any kind of swine, or any horse, ass, cattle, mule, sheep, goat or any other animal of the like nature, belonging to him or her, or under his or her charge, to stray or go about, or to be tethered or depastured in any street or public place within the borough, shall forfeit and pay for every such offence a sum not exceeding £2, and to be made liable for damages.

No rock &c., to be blasted without notice and permit.

(11.) Any person who shall be desirous of blasting any rock or other similar substance within 100 yards of any street or public place or dwelling-house in the said borough, shall give notice in writing twenty-four hours previously to the Council Clerk, who shall appoint a time when the said blasting shall take place, and the said officer shall give such other directions as he may deem necessary for the public safety; and if any person shall blast or cause to be blasted any rock within the limits aforesaid without giving such notice, or shall not conform to the directions given him by the said Town Clerk or other duly appointed officer by the Council, he or she shall, on conviction, forfeit and pay for every such offence any sum not less than £1 nor more than £5.

Premises in state to endanger public health.

House to be purified on certificate of two medical practitioners.

22. If upon the certificate of any two duly qualified medical practitioners it appear to the Council that any house or part thereof, or the premises occupied in connection therewith within the limits of the said borough, is in such a filthy state or unwholesome condition, that the health of any person is, or may be liable to be affected or endangered thereby, and that the white-washing, cleansing, or purifying of any house or part thereof, or the premises occupied in connection therewith would tend to prevent or check infectious or contagious disease, the said Council would give notice in writing to the owner or occupier of such house or part thereof, or the premises occupied in connection therewith, to whitewash, cleanse, or purify the same, as the case may require; and if the person to whom the notice is so given shall fail to comply therewith within such time as will be specified in the said notice, he shall be liable to a penalty not exceeding 10s. for every day during which he continues to make default: provided that no such penalties shall collectively amount to any greater sum than £20.

Offences against public decency.

Bathing prohibited within certain limits.

23. Any person who shall bathe near to or within view of any inhabited house, or of any public wharf, bridge, street, road, or other place of public resort within the limits of the said borough, between the hours of 6 in the morning and 8 in the evening, shall, on conviction, forfeit and pay a sum not exceeding £1 for every such offence.

Penalty on indecent exposure of the person.

24. Any individual who shall offend against decency by exposure of his or her person in any street or public place within the said borough, or in the view thereof, shall, on conviction, forfeit and pay for every such offence a sum not exceeding £10 nor less than £1.

Houses of ill-fame.

25. Upon representation of any respectable ratepayer that any house or premises within the borough and near to the residence of such ratepayer, is of ill-fame, it shall be lawful for the By-law Committee to cause the residents of such house or premises to furnish to the Council a list of names, ages, sexes, and occupations of all the inmates of the said house or premises; and upon non-compliance with such request, or, if upon consideration, the said Committee consider the house to be of ill-fame, they shall, with the sanction of the Council, declare the same to be a nuisance, and shall cause a notice in writing to be served upon the holder of such house or premises, or any person resident or being therein, to discontinue or abate the said nuisance within forty-eight hours after the receipt of such notice; and if such nuisance be not abated the holder of such house or premises or other person residing or being therein and acting as such holder, shall be liable to be proceeded against for such nuisance, and shall, on conviction thereof, forfeit and pay any sum not less than £2 nor more than £20; and if such nuisance shall not be abated within forty-eight hours after such conviction, such holder of such house, or such other person residing or being therein as aforesaid, shall forfeit and pay for such second offence a sum not less than £5 nor more than £50; and if a further period of forty-eight hours shall elapse after such second conviction without the abatement of such nuisance, such holder of such house, or other person residing or being therein as aforesaid, shall for such third offence forfeit and pay a sum not less than £10 nor more than £50.

Noisome and offensive trades.

No noisome or offensive trade to be carried on to the injury of any inhabitants.

26. No person shall carry on any noisome or offensive trade within the said borough so as to injure or to be a nuisance as hereinafter stated, to the inhabitants thereof.

Definition of "noisome and offensive trades."

27. Any manufacture, trade, calling, or operation in the conducting, following, or carrying on of which, or in consequence of, or in connection wherewith, or from the premises where the same is conducted, followed or carried on, any gas, vapour, effluvia, or smoke, shall be calculated to injure animal or vegetable life, or in any other way to injure or to be a nuisance to the inhabitants of the said borough, shall be considered a noisome and offensive trade within the meaning of these By-laws.

Complaint, injury and report—Order of Council taken thereon—Notice to discontinue, &c.—Penalty.

28. Upon complaint in writing by any householder that any noisome or offensive trade is being so followed, conducted, or carried on in the vicinity of his or her residence or property, so as to injure his or her health, or the health of any member of his or her family, or to be a nuisance to such householder and to his or her family, the Inspector of Nuisances or any other person or persons appointed by the Council shall make an inspection of the premises where such trade is alleged to be so conducted, followed, or carried on as aforesaid, and of the premises or property of the complainant, and shall inquire into the grounds for such complaint and shall report thereon to the Council; and if the said Council shall, on consideration of such report, or after any such further inquiry as may be deemed necessary, be of the opinion that the said complaint is well founded, and that any manufacture, trade, calling or operation so complained of and so being conducted, followed or carried on as aforesaid is a "noisome and offensive trade" within the meaning of these By-laws, notice shall be given to the person or persons conducting, following, or carrying on such trade, to cease and discontinue the same within such reasonable time, not being less than thirty days nor more than sixty days as the said Council may direct; or so to conduct, follow, or carry on his, her, or their manufacture, trade, calling, or operation as that within such reasonable time as aforesaid, the same shall wholly and permanently cease to be noisome and offensive within the meaning of these By-laws, either to the said complainant or to any other resident within the borough; and if such trade be not discontinued as aforesaid, or shall not be so conducted as that it shall wholly cease to be noisome and offensive as aforesaid, within the time named in such notice as aforesaid, any person conducting, following, or carrying on such trade as aforesaid, shall, for the first offence, forfeit and pay a sum not less than £2 or more than £5; for a second offence a sum of not less than £5 nor more than £20; and for the third and every subsequent offence a sum not less than £10 nor more than £50.

Mode of proceeding when noisome and offensive trade is about to be commenced—penalty.

29. The like proceedings shall be taken as aforesaid, whenever there shall be a complaint as aforesaid that any manufacture, trade, calling, or profession, is about to be commenced or entered upon which is likely to prove noisome and offensive within the meaning of these By-laws, save and except the notice to be given as aforesaid shall be given to the person or persons about to commence or enter upon such manufacture, trade, calling, or profession, and shall require him, her, or them not to commence or enter upon the same, or to take such measures as shall effectually and permanently prevent the same from becoming noisome or offensive within the meaning of these By-laws, to any resident within the borough; and any person who shall in any case commence, enter upon, or continue any such manufacture, trade, calling, or operation, so that the same shall be in any way noisome or offensive within the meaning of these By-laws, shall, for every such offence, forfeit and pay a sum of not less than £10 nor more than £50.

Service of notice—liabilities.

30. Service of any such notice as aforesaid upon the owner or occupier of any premises or land, wherein or whereupon any such manufacture, trade, calling, or operation is being conducted, followed, or carried on, or is about to be commenced or entered upon, or at the last-named place of abode of such owner or occupier, or upon any person of the said premises or land, shall be a good and sufficient service of such notice for all the purposes of these By-laws; and every person who shall be actually engaged in superintending, directing, or managing, or who shall be in any other way actually engaged or employed in any such manufacture, trade, calling, or operation as aforesaid, shall be liable to be regarded and treated as a person conducting, following, or carrying on such manufacture, trade, calling, or operation within the meaning, and for all the purposes of these By-laws.

Part VI.

Public Exhibitions.

Exhibitions, &c., to be licensed.

1. No exhibition, other than exhibitions licensed by the Colonial Secretary, under the provisions of the Act 14th Victoria No. 23, or exhibitions of a temporary character hereinafter specially provided for, shall be held or kept for hire, or profit within the said borough; nor shall any bowling alley, dancing saloon, or other place of public amusement, other than a place licensed as aforesaid, or a place of temporary amusement hereinafter specially provided for to be used as such for hire or profit within the said borough, unless, and until the same shall be duly registered, as hereinafter prescribed.

Temporary license by Mayor—penalty for exhibiting, &c., without license.

2. It shall be lawful for the Mayor, by writing under his hand, and without charge to permit any such exhibition as aforesaid (other than an exhibition requiring to be licensed by the Colonial Secretary under the said Act) and which shall not be held or kept for more than one week, and in like manner to allow any place within the said borough to be used for purposes of public amusement other than entertainments requiring to be licensed as aforesaid for not more than one week; provided that it shall be incumbent on such Mayor to inquire strictly as to the nature of such proposed exhibition or amusement before granting permission, and to refuse such permission if it shall appear that such proposed exhibition or amusement is of such a nature as to require to be licensed by the Colonial Secretary as aforesaid, or if there shall be reasonable cause for believing that such exhibition or amusement will be likely to entail any violation of public decency, to endanger the public place, or to be a nuisance to any inhabitant of the borough; every person holding or keeping any such exhibition, or using any place within the said borough for public amusement as aforesaid, or causing or permitting any place to be so used without such permission of such Mayor, shall forfeit and pay a sum not less than 5s. or more than £2 for every day that such exhibition shall be so held or kept, or such place shall be so used for public amusement as aforesaid.

Public buildings, &c., to be registered.

3. Every occupier of any building or ground in which any exhibition is held or kept, or any public amusement conducted as aforesaid, shall in each year register at the office of the Council, such building or ground, together with the situation and description thereof, and of the exhibition proposed to be held or kept, or the public amusement proposed to be conducted as aforesaid, in or upon such building or ground, and the name of such occupier; and every person who causes every occupier of any such building or ground, who permits any such exhibition to be held or kept, or any public amusement to be conducted for a longer period than one week, in or on any such building or land, not being registered for the purpose, or without such certificate of registration as hereinafter mentioned having been obtained for the same, shall forfeit for every such offence any sum not less than £1 or more than £20.

Certificates of registration.

4. The Council, upon the written application of any such occupier as aforesaid, stating the particulars as aforesaid; and if upon inspection by the proper officer, the building or land shall have been found to be secure and proper for the purpose stated; and if the proposed exhibition or amusement shall not be such as to require a license from the Colonial Secretary as aforesaid, and shall not be thought likely to entail any violation

of public decency, or to endanger the public peace, or to be a nuisance to any inhabitant of the said borough; the said Council shall cause the aforesaid premises to be registered in a registry book to be kept for that purpose, and shall thereupon grant to the applicant a certificate of such registration of such premises; and the said Council may at any time, and for any of the causes hereafter mentioned, suspend for a stated period the effect of or cause of any such registration, and shall forthwith give notice of such suspension or cancellation to the occupier of the registered building or land, and during such suspension, and after such cancellation of such premises shall be deemed to be unregistered in respect to the purpose mentioned in the certificate of registration, and such certificate shall be of no force or virtue.

Inspection.

5. The proper officer of the Council may at all reasonable times enter into or upon and inspect any such registered building or land.

No exhibition, &c., on Sundays, &c.

6. No such exhibition or place of public amusement as aforesaid shall be held or kept open or used for the purposes of such public amusements, on Sunday, Christmas Day, or Good Friday; and every person offending against this By-law in this behalf, shall, on conviction, forfeit and pay a sum not exceeding £5 nor less than £2 for every such offence.

Registration fee.

Time for which registration shall be in force.

7. For every such registration as aforesaid, the occupier of the building or land so registered shall pay to the Council Clerk, for the benefit of the said borough, a fee of £1; and every such registration, whenever the same may be made, shall be in force until the 31st day of December then next ensuing and no longer.

Certificate of registration to operate as license for exhibition, &c, named therein, and no other.

8. The certificate of registration aforesaid shall be regarded as a license from the Council for the holding or the keeping of the exhibition, or for carrying on of the public amusements therein mentioned, but for none other; any occupier of such building or land who shall hold or keep therein or thereon any exhibition, or shall use any building or land for any public amusement other than such exhibition or amusement mentioned in such certificate or license; shall for every such offence forfeit and pay a sum not less than 10s. nor more than £10.

Unlawful games and exhibitions.

9. No license shall be granted as aforesaid to or for any building or land wherein or whereon any games with dice or other games of chance for money, or any bull-baiting, dog-fighting, cock-fighting, or other exhibitions or amusements opposed to public morality or involving cruelty to animals or likely to cause any breach of the peace are proposed to be had or carried on; and the occupier of any building or land so registered as aforesaid who shall permit any such game of chance, or exhibition or amusement as are in the section beforementioned to be had, held, or carried on, in, or upon such building, shall, for every such offence, forfeit and pay a sum not less than 10s. nor more than £10.

Suspension or revocation of license.

Notice to be given and licensee to be allowed to show cause.

10. The effect of any such registration as aforesaid may be suspended, or such registration may be cancelled, as the Council may think fit, for any of the following causes, namely —Whenever the occupier of the registered building or land, or the manager of any such exhibition or amusement as aforesaid, held, kept, conducted, or carried on, in, or upon such building or land shall have been twice convicted of offences against these By-laws within a period of twelve months, or whenever it shall be shown to the satisfaction of the said Council that the superintendent, manager, director, or other person in charge of any such exhibition or amusement is a confirmed drunkard, or that such exhibition or amusement is being conducted in such a manner as to violate public decency, to endanger the public peace, or to become a nuisance to any inhabitant of the said borough: provided that before any such suspension or cancellation as aforesaid the occupier of such registered building or land shall have notice of the fact that the said Council is about to consider whether there shall be any such suspension or cancellation, and of the causes of this proceeding, and shall be allowed to show cause against such suspension or cancellation before the same shall be ordered.

Construction of term "occupier"—change in occupancy—false statement.

11. Any person who shall superintend, direct, or manage, or shall be otherwise in charge of any such exhibition or public amusement as aforesaid, in or upon any such building or land as aforesaid, or who shall reside in or upon any such building or land, wherein or whereon any such exhibition or public amusement shall be held, kept, or carried on, or who, being the owner, lessee, or tenant of any such building or land, shall permit the same to be used for the purposes of any such exhibition or public amusement, shall be deemed the occupier of such building or land for all the purposes of these By-laws; and the said By-laws shall be held to be as applicable in every case to any number of such occupiers as to any single occupier; and every such occupier whose name shall have been so registered as aforesaid shall be deemed and taken to be, and continue to be such occupier for all the purposes of these By-laws: provided that in the event of any change in the occupancy of any such building or ground as aforesaid, it shall be competent for the parties concerned to notify the same by writing under their hand to the said Council Clerk, who shall lay such notification before the Council at its next sitting; and if after such inquiry as such Council may deem necessary, there shall seem to be no valid objection to such change of occupancy, a corresponding entry shall be made in the registry aforesaid, and a new certificate shall be issued, which shall be in force until the next ensuing 31st day of December and no longer; and for every such new certificate a fee of 5s shall be paid to the said Council Clerk for the benefit of the said borough; and any person who shall make any false statement in any such application or notice as aforesaid, as to any of the facts or particulars required by these By-laws, to be stated in such application or notice, shall for every such offence forfeit and pay any sum not less than £1 nor more than £20.

Wilful trespass.

12. Every person who shall wilfully let in or knowingly suffer to enter upon the reserves or public recreation ground any animals without due authority, shall be deemed guilty of wilful trespass, and shall be liable for every such offence to a penalty not exceeding £20 nor less than £2.

Penalty for destroying boundary-marks.

13. Any person pulling down, defacing, or injuring any marks, or any fence or other erection without the authority of the Council, shall forfeit and pay any sum not exceeding £10 nor less than £1

Part VII.

Public and private property.

Erection of houses, &c.

1. No person shall be permitted to erect any house, shop, or other building in any street, lane, or place in the borough without first serving notice in writing on the Mayor or Council Clerk, on any lawful day between the hours of 8 o'clock a.m. and 8 o'clock p.m., stating such intention, and describing the proposed situation of the building or erection, and without having received an authority from the Mayor or Council Clerk, who shall give the required level and alignment if in a proclaimed street, on a payment of a fee of 5s. No person shall be at liberty to encroach beyond the building-line in any street or lane by the erection of houses, verandahs, doorsteps, fences, or any other obstruction whatever.

Houses, &c., to be spouted.

2. All proprietors of houses within the Municipality having a frontage to any main thoroughfare shall be bound to have the same sufficiently spouted with down-pipe, to be carried under the surface of the footpath into the gutter, under a penalty of 10s. on conviction; and if not remedied at the expiration of seven days after such conviction, the offender shall be again liable to a like conviction and penalty also for every succeeding seven days.

Using bark for building in the main thoroughfare.

3. No person shall erect any building of bark, nor roofed with that material or with calico, within the populous parts of the town, except by express permission of the Council, and then for a temporary purpose only; any person so offending shall on conviction, be liable to a penalty not exceeding £10, to be recovered in a summary way, and shall be bound to remove the aforesaid building within such period as the Council may determine.

Injuring or extinguishing lamps.

4. Any person who shall wantonly or maliciously break or injure any lamp or lamp-post, or extinguish any lamp set up for public convenience in the said borough shall, over and above the necessary expense of repairing the injury committed forfeit and pay for every such offence any sum not less than £1 nor more than £5.

As to damaging buildings.

5. Any person who shall damage any public building, toll-gate, toll-bar, toll-board, wall, parapet, fence, sluice, bridge, culvert, sewer, watercourse, or other public property within the said borough, shall pay the cost of repairing the same, and if such damage be wilfully done shall forfeit and pay a sum not exceeding £20 nor less than £5.

Affixing placards on walls, &c.

6. If any person or persons shall paste, or cause to be pasted, or otherwise affix any placard or other paper, or chalk or paint upon any wall, fence, culvert, kerbstone, footway, handrail, or any other property of the Council, shall forfeit and pay for every such separate offence a sum not exceeding £5 nor less than £1.

Damaging trees.

7. Upon any ratepayer applying to the Council to have trees planted opposite his or her property, on any street or road within the borough, and such ratepayer paying to the Council the sum of 10s. for each tree, the Council may direct the Works Committee to have such trees planted at the cost of the Council.

Obstructing public pathways.

8. That the owner or occupier of any land situate on the side of any street or road in this borough, who shall permit any tree, shrub, or plant, kept for ornament or otherwise, to overhang any path or footway on the side of any such street or road, so as to obstruct the passage thereof, and who on demand made by the Council, or their overseer or inspector, shall not cut, or cause to be cut, lopped, or cause to be lopped, all such trees, shrubs, plants, to the height of 8 feet at least; the said Council and their servants, labourers, and workmen, may cut or cause to be cut or lopped all such overhanging trees, plants, shrubs, and to remove or burn any portion of such trees, plants, shrubs, so cut or lopped without being deemed a trespasser or trespassers, and in case any person or persons shall resist, or in any way forcibly oppose the said Council or their servants, labourers, or workmen, in the due execution of the powers given in this behalf by virtue of the Municipalities Act of 1867. Every person so offending shall, on conviction for every such offence, forfeit and pay any sum not exceeding £10.

Neglecting to keep clean private avenues.

10. Any owner or occupier of any house or place within the said borough who shall neglect to keep clean all private avenues, passages, yards, and ways within the said premises, so as by such neglect to cause a nuisance by offensive smell or otherwise, shall, on conviction, forfeit and pay a sum not exceeding £2 nor less than 10s. for every such offence.

Part VIII.

By-laws for the regulation of public vehicles; for the regulation and licensing of public carriers, waterdrawers, and public vehicles, omnibuses, cars, cabs, hackney carriages, water-carts, drays, carts, or vans, and the drivers and conductors of passenger carrying vehicles.

Vehicles to be licensed.

1. No vehicle shall ply or be used for hire within the borough of Narrandera, unless the same be duly licensed in the manner herein described.

Requisition to be made for license.

2. Before any license for plying a vehicle, or to drive or to conduct the same shall be granted, the party requiring such license shall obtain from the Council Clerk, free of charge, a requisition in the form of the Schedule hereunto annexed, marked with the letter A, or to the like effect, and duly fill up and sign the same and deliver it to the Council Clerk, and in the case of drivers or conductors shall also obtain a certificate from two respectable householders to the effect that the applicant is of good character, and competent to act as such driver or conductor, as the case may be.

Condition under which licenses to be granted.

3. No license shall be granted in respect of any vehicles which, in the opinion of three Aldermen, who shall be appointed by a resolution of the Council of the said borough, is unsafe, or in bad repair, or otherwise unfit for the accommodation and conveyance of passengers therein, nor until the number of such vehicle be painted thereon on a plate or plates affixed thereon, outside on the panel of each door of such vehicle, or on such other place or places, and in such manner as the said three Aldermen may direct.

Licenses, and how to be issued.

4. Licenses for proprietors, drivers, and conductors of vehicles shall be in the form contained in the Schedule hereunto annexed, marked with the letter B, or the like effect; and any person plying, driving, or conducting any vehicle for hire with passengers without such license shall be deemed guilty of a breach of these by-laws.

Licenses to be under Corporate Seal.

5. Every license granted under these by-laws shall be under the common seal of the Borough Council of Narrandera, and signed by the Mayor, and countersigned by the Council Clerk, upon the production of a certificate signed by the Aldermen who shall be appointed as aforesaid, and shall be in force from the date of such license until the 31st day of December next ensuing, subject to the conditions in section 10, and no such license shall include more than one vehicle; provided that where the licensed vehicle shall be under repair, if the proprietor shall so desire, he may be permitted to substitute another for a period to be then specified, and endorsed on the license signed by the Mayor, and countersigned as aforesaid.

Age of drivers.

6. No license shall be granted to any person to drive any passenger-carrying vehicle who shall be under the age of 18 years.

Vehicles, &c., plying for hire to be licensed.

7. All water-carters, firewood-carters, and owners of vehicles plying or carrying passengers, goods, or other materials for hire shall be licensed by the Council, and the owners shall have their names painted in legible letters, with the words "licensed" on some conspicuous part of such vehicles respectively; the license fee shall be at the rate of 10s. per week per annum, and all such licenses shall be issued for a period of twelve months, terminable on the 30th day of June in each year and every owner who shall omit or fail to comply with the provisions of this by-law, shall forfeit a sum not exceeding £2 nor less than 10s.

Legal proceedings against offenders.

8. The Inspector of Nuisances or other person appointed by the Council may take legal proceedings against any person or persons committing any offence against any of the by-laws of the said borough.

Licenses not to transfer.

9. No proprietor shall be at liberty to part with or lend his license, nor to part with his licensed vehicle to any person without the knowledge and approval of the Mayor, and the registry of the same of the purchaser in the books of the Town Clerk, and on the license granted for such vehicle, and any proprietor who shall part with his vehicle without such approval and registry, shall be deemed the proprietor thereof, and subject as such to all the provisions of this by-law as fully as if no change of ownership had taken place, and the purchaser of such vehicle who shall allow the same to be used or to ply for hire without such approval and registry shall be subject to the same penalty as is imposed by this by-law on a person plying without a license.

Licensee to be deemed owner.

10. The person or persons in whose name or names a license shall appear to have been obtained shall be deemed the owner of the vehicle in respect of which the same shall have been taken out.

Revocation of license.

11. The license of the proprietor, driver, or conductor of any vehicle may be revoked or suspended by the Mayor as he shall deem right, after three days' notice in writing, given to such proprietor, driver, or conductor, to show cause why the same should not be revoked or suspended, and opportunity thereupon given to show such cause in case either the proprietor, driver, or conductor shall have been convicted of two offences against this part of these by-laws, committed within a period of eight months next proceeding.

Driver not to part with license.

12. No driver or conductor of a licensed vehicle shall lend or part with his license, nor shall the proprietor of any such vehicle employ any unlicensed person as the driver or conductor thereof.

By-law Committee to have power to inspect all licensed vehicles.

13. The By-law Committee shall, as often as they may deem it necessary, cause an inspection to be made of all licensed vehicles, or of any such vehicles, and of the harness and horses used in drawing same, and if any such vehicle, horse or horses or harness, should at any time be found by them unfit for public use, notice in writing of the same shall be given to the proprietor of such vehicle, and if after such notice he shall let or hire such vehicle, or suffer the same to be used or hired until the same, as the case may require, be in a condition for public use, the said Committee may suspend for such time as they may think proper the license of such vehicle; and in case any person shall neglect or refuse to attend with his licensed vehicle before the said Committee when called upon for that purpose so to do (viz., the inspection of their licensed vehicle), the said Committee may suspend the license of such vehicle.

Number of license to be painted on vehicles.

14. The number of any license granted for any omnibus or car shall be painted outside on the panel of the door or doors, or on a plate or plates affixed thereto, in figures not less than 4 inches in height, and for every hackney carriage or cab, in figures not less than 2 inches in height, and of proportionate breadth, and also shall paint such number upon each lamp

used in or upon such vehicle as the By-law Committee may direct, and such numbers shall be kept legible and undefaced during all the time such vehicle shall ply or be used for hire.

Penalty for refusing to pay hire of licensed vehicles.

15. No proprietor or driver of any licensed hackney carriage, having agreed to take any fare at any time from or to any place, shall delay or neglect or refuse to do so, and failing so to do will render himself liable to a penalty of £1; or any person having hired a licensed hackney carriage and not paying the legal fare when demanded, shall, on conviction, forfeit and pay the owner or driver of such carriage such fare, together with such further sum for damages, costs, and expenses for loss of time or otherwise, as the convicting Justices shall, in their discretion, think proper.

Drivers of public vehicles on "stand" compelled to take fare.

16. Every proprietor or driver of a hackney carriage or cab standing or plying for hire at any public stand appointed by the Council, shall be deemed disengaged, and be bound accordingly to take immediately any fare, notwithstanding any previous engagement: provided, however, that no such proprietor or driver shall be bound to take such fares unless the person requiring the same shall, upon demand, tender and pay the legal fare there and then.

Names of proprietors and destination of omnibuses to be painted thereon.

17. No omnibus shall be used or employed within the Municipality unless there shall be painted in words at length and in legible and conspicuous letters, 2 inches at the least in height and proportionate breadth, and in a colour opposite and different to the colour of the ground on which such letters shall be painted upon some conspicuous part of such omnibus, and clear of the wheel or wheels thereof, so that the same shall be at all times plainly and distinctly visible, the christian and surname of the proprietor of such omnibus or car, and also the names of the extreme places from which and to which such omnibus or car shall be licensed to travel or go and these only; and no person shall use or employ for hire any omnibus upon which any of such particulars are obliterated or placed.

Number of persons, &c., licensed to be carried to be painted on vehicle.

18. No omnibus shall ply for hire within the said borough unless there shall be painted the number of the license of such vehicle and the number of persons such vehicle is licensed to carry according to these by-laws in words at length, in the following form, that is to say, "licensed to carry" inside and outside, together with the length of time of the journey is to be performed in from stand to stand, as shall be determined from time to time by resolution of the Council, published and required by the by-laws of the said borough, the same to be painted in legible letters, white upon a ground of black, at least 2 inches in length and of proportionate breadth on the outside, and on a plate 6 inches by 3 in clear legible letters on the front panel inside, or in such other places as the By-law Committee may direct; and no driver or conductor of any such omnibus or car shall carry in or upon such omnibus or car a greater number of persons than the number so painted thereon, nor ply from or to any other stand than those aforesaid painted on such vehicle, to and from which they are licensed to travel or go; nor shall such driver or conductor permit or suffer any person except the conductor to be on the footsteps at the back of such omnibus: provided that when any omnibus shall be altered in size or colour, or line of road, it shall be brought for inspection to the Council Chambers, and the alteration shall be made by indorsement on the license, signed by the Mayor and countersigned by the Council Clerk.

Regulation as to number to be carried in omnibus, &c.

19. No omnibus shall be allowed to carry at one time a greater number of passengers in the whole, or in the inside, or on the outside thereof, than the same will contain at one time upon fit and proper seats provided therein or thereupon for that purpose, allowing for every passenger on an average upon each and every seat a space convenient for sitting thereon of 18 inches, measuring in a straight line lengthwise on the front of each seat, and each such inside seat shall be 2 feet apart from the outer edge thereof: provided no child under 5 years of age sitting on the lap shall be deemed to be a passenger in the meaning of these by-laws.

Misconduct of drivers, &c.

20. No driver or conductor of any licensed vehicle shall, whilst driving, loading, or unloading, or attending any vehicle, wilfully or negligently do or cause to be done any damage to the person or property of any person, or be guilty of intoxication, or of any breach of the peace, misconduct, misbehaviour, or make use of any threatening, obscene, blasphemous, abusive, or insulting language, sign, or gesticulation.

Mode of setting down passengers.

21. Every driver, whilst engaged in taking up or setting down any passenger, shall, during such taking up or setting down, place his vehicle as near as conveniently may be to that side of the street, and at a line with the kerbstone or edge of the footpath at which the taking up or setting down is required.

Pace which all public vehicles to be drawn.

22. No licensed vehicle shall be drawn at a pace faster than that commonly known as trotting; and in the event of a conviction of any driver for a breach of this by-law his license may be cancelled by the Mayor.

Persons suffering from contagious diseases not to ride in public vehicles

23. No person suffering from any infectious or contagious disease shall ride in or upon any licensed vehicle, and no driver or conductor shall knowingly carry or permit to be carried any such person, or (except to some police-office or watchhouse) any corpse, or any person in a state of intoxication, or who is so noisily or violently conducting himself or otherwise so misbehaving as to occasion any annoyance or to disturb the public peace; and no passenger shall carry inside of any licensed vehicle any noxious animal, or any substance of an offensive character, or anything that might soil or damage the vehicle or the apparel of other passengers; and no conductor or driver shall sleep in or upon any licensed vehicle, or use the same for eating his meals therein.

Lamps.

24. Every licensed vehicle shall be provided with a lamp on each side of the same outside, and the driver of such vehicle when plying for hire between sunset and sunrise shall light and keep such lamps lighted, and also keep a properly lighted lamp in the inside of every such vehicle during the time aforesaid, and in such a position as the Inspector or any other qualified officer of the Council may direct; and every lamp used on the outside of such vehicles as aforesaid shall be such and so placed as to appear white on the front and outsides and red behind.

Vehicles and fittings to be kept in good condition.

25. The proprietor of every licensed vehicle shall at all times when plying or employed for hire have the same in good order, with the harness perfect and in good order, and the glasses and frames of such vehicle whole, and the leathers attached to the frames of sufficient length, and the inside of the vehicle clean and wholesome and in good and substantial repair, and the whole ready and sufficient for duty, with driver and conductor, and horses competent to travel in due and reasonable time.

Smoking by driver, &c., not permitted.

26. No driver or conductor shall smoke any pipe or cigar whilst driving or conducting any licensed vehicle engaged in any fare, nor shall any passenger smoke inside or on any vehicle without the permission of the driver or against the wish of any passenger.

Property left in any public vehicle—disposition of.

27. All property left by any passenger in any licensed vehicle shall be given up to the conductor of such vehicle, if there be no conductor to the driver thereof, upon pain of a penalty not exceeding £20, to be paid by any person refusing or neglecting to give up such property belonging to another person; and such conductor or driver of any such vehicle who respectively shall find in a carriage any property so left shall within one day next after the same shall have been so given up or found carry such property in the state in which the same shall have come to his hand to the office of the Council, and deposit and leave such property with the Town Clerk; and every conductor or driver offending against this section shall forfeit a sum not exceeding £20.

Record to be kept of all property found in vehicles.

28. The Town Clerk with whom any such property shall be deposited shall forthwith enter in a book to be kept by him at the said office for that purpose the description of such property, and the name and address of the conductor or driver who shall have brought the same, and the day on which it shall have been brought; and the property so entered shall be returned to the person who shall prove to the satisfaction of the Council that the same belonged to him, such person previously paying all expenses incurred, together with any reasonable sum to such conductor or driver as with reference to the value of the property in question the Council shall award: provided that if such property shall not be claimed by and proved to belong to some person within one year of the same shall have been so deposited, the same shall be advertised in such manner as the Council may direct, such property shall be delivered up to the conductor or driver who deposited the same, provided that he shall apply for the same within one month after the expiration of one year; and in default of such application the Council shall cause such property to be sold, and the proceeds thereof shall be carried to the credit of the borough funds.

Private vehicles for hire exempt from provisions of by-laws.

29. No vehicle which shall be let for hire by special agreement only, or when bespoken at the stables or residence of its owner, and which shall never publicly take its place on any stand, or ply for hire off the premises of its owners, shall be deemed a licensed vehicle within the meaning of this part of these by-laws, nor shall the owner, driver, or conductor of such vehicle be subject to the provisions thereof in any respect whatsoever.

Interpretation of the word "Vehicle."

30. Whenever the word vehicle shall be used in this part of these by-laws, the same shall be understood to apply to either an omnibus, omnibus car, hackney carriage, or cab, and an omnibus shall be meant to be a vehicle upon four wheels, drawn by two or more horses; an omnibus car, a vehicle upon four wheels, drawn by one horse; and a car, a vehicle upon four wheels, drawn by two or more horses; and a cab, a vehicle upon two wheels, for which a "hackney carriage" license has been taken out.

No vehicle to be withdrawn without the permission of the Mayor.

31. No proprietor of any hackney carriage or omnibus shall withdraw the same from hire, without leave from the Mayor or the By-law Committee, so to do; provided that proprietor may withdraw his vehicle on giving six days' notice of his intention so to do to the Council Clerk.

SCHEDULE A.

A requisition for license to

To the Municipal Council of the borough of Narrandera.

I, , residing in street, do hereby request that a license may be granted to me No. , within the said borough.

Dated 18 .

SCHEDULE B.

License.

THIS is to certify that is hereby licensed to a certain No. , within the borough of Narrandera, from the date hereof to the 30th day of June next, subject nevertheless to all and every the by-laws, rules, and regulations in force relating thereto.

Given under the Common Seal of the Municipal Council of the borough of Narrandera, this day of 18 .

Mayor.

Council Clerk.

PART IX.

Carters.

License for carts.

1. The Council shall, from time to time, license to ply for hire within the borough such carts as respectively after inspection by the By-laws Committee shall be found fit for public use, and also such carts to be used within the said borough in hawking wood or water for sale respectively, or both wood and water, and also such carts to be used and ply for hire, or to be employed as night-carts within the said borough, as shall after the like inspection be found fit for such purposes respectively, and for every such license, there shall be paid to the Council such sum as with respect to each kind of cart aforesaid is set out in Schedule A hereto.

Applications for licenses.

2. Every such license shall be granted on the written application for the same, of the owner, or if there be more owners than one of some, one owner of the cart to be licensed, and in every such application shall be set forth truly the name and surname, and place of abode of the applicant, and the like shall be set forth in the license when granted, which would be in the form of Schedule B hereto, or to the like effect; and any person who shall wilfully omit from any such application any particulars hereby required to be stated therein, or who shall wilfully state anything falsely touching any such particular shall forfeit a sum not exceeding £10.

Numbering, &c., of licenses and carts.

3. Every such license shall be numbered and registered by the Town Clerk, and shall be in force for one year only from the date thereof, or until the 31st day of December next ensuing, and the owner named in any such license shall cause to be painted or marked, and to be kept so painted or marked on some conspicuous part on the right or off side of the cart thereby licensed, the name of the borough with the number of such license in legible letters and figures, 1 inch in length, and of a proportionate breadth, and the words "licensed cart," in the like letters, and every such owner who shall omit or fail to comply with the provisions of this section, shall forfeit and pay a sum not exceeding £2.

License for cart may be extended to hawking of wood and water.

4. The Town Clerk shall, from time to time, upon application by the owner named in any license for any such cart (not being a night-cart), made and sign with his name, without fee or reward, an endorsement on such license being still in force authorizing during the currency of such license, or for such less time as may be stated in such endorsement, the use of such cart for the hawking for sale within the borough of wood or of water or of both wood and water, and forthwith upon making such endorsement, shall make an entry thereof in the registry against the entry of such license, and every authority so endorsed upon any such license, shall, while the same shall be in force, have the effect of, and be deemed for, all purposes to be a license of the like tenor.

Plying for hire, &c., without license, &c.

5. If any owner of any cart permit the same to stand or ply for hire, or to be used as a wood-cart, or as a water-cart, or to ply for hire, or to be used as a night-cart within the borough without having a license in force for such cart, licensing or authorizing such standing, plying for hire or use respectively within such borough, or if any person be found within such borough standing or plying for hire with any cart, or using any wood-cart or water-cart, for plying for hire with, or using any night-cart for which respectively no license is in force, or without having the name of the borough and the number of such license, and the words "licensed cart," displayed upon such cart openly and in manner herein provided, every such person so offending shall forfeit a sum not exceeding £2.

Driver to hold and produce license.

6. The driver of every licensed cart shall hold the license for such cart, and shall when required by the Inspector of Licensed Vehicles or by any person wishing to hire or having hired such cart, if licensed to stand and ply for hire, produce for the inspection of the person so requiring such license, and also a copy of the table of rates and charges appointed by Schedule C hereto (which copy shall be furnished free of charge to such driver by the Town Clerk), and every such driver who shall on being so required refuse or neglect so to produce such license or copy, shall forfeit a sum not exceeding £2.

Owner to cause driver's name to be written on license.

7. Every owner of a cart licensed as aforesaid who shall employ any other person to drive the same shall cause to be truly written on the license for such cart, the name of the person so employed, and shall keep such name so written while such person remains so employed, and thereafter forthwith shall erase or deface such writing; and if any such owner shall wilfully make default in causing such writing to be made or to be erased or defaced respectively when and as herein required, or if any person so employed as aforesaid, shall without reasonable excuse neglect or refuse when required by such owner to produce or return to such owner such license, every person so offending shall forfeit a sum not exceeding £2.

Omission to carry when required—exacting excessive fares—plying elsewhere than on stand.

8. Every owner or driver of any cart licensed to stand or ply for hire, which shall stand upon any standing appointed for the purpose by resolution of the Council published as required by the by-laws of the borough, who, when required by any person, who after sunrise and before sunset any day wishes to hire or has hired such cart, refuses or neglects without reasonable excuse to carry for a single load such weight as shall have been appointed as provided by a like resolution or any less weight to any place within the borough, and every such driver or owner who demands and takes for the hire of such cart a greater sum than that appointed as aforesaid, or who without reasonable excuse neglects or refuses to load or unload such cart when hired so far as he can without assistance, or who shall stand or ply for hire with such cart elsewhere than at some standing or place appointed by a like resolution, shall, for every such offence, forfeit and pay a sum not exceeding £2.

Abusive language by driver.

9. Every owner or driver of any cart who shall use any abusive or insulting language to any person who wishes to hire or has hired such cart, or if the same be then employed as a wood-cart or water-cart, who shall deal with such owner or driver for the purchase of or have immediately before purchased of him, any wood or water of the loading of such cart respectively, shall forfeit a sum not exceeding £2.

Leaving carts unattended.

10. If the driver of any cart shall leave the same unattended in any street, whether public or private, or shall go for a distance of more than 2 yards from the side of such cart being in any such street without passing through the near wheel or wheels thereof a suitable chain or chains, so as effectually to prevent the rotation of such wheel or wheels, whether in any case such cart be hired or not, such driver shall, in every case, forfeit a sum not exceeding £2.

Feeding horses in street—muzzles.

11. No driver of any cart in any street, whether public or private, or in any other public place shall feed any horse attached to such cart, save by means and out of a nosebag containing the forage, and attached to the head of such horse, or shall remove the winkers of any such horse; and every driver of any cart to which any vicious horse shall be attached shall keep such horse while standing on any stand, or in any such street or place as aforesaid properly muzzled; and every driver offending against this section, shall forfeit a sum not exceeding £2.

Wood or water cart standing at improper places.

12. Every owner or driver of any licensed wood-cart or water-cart for the time being employed as such respectively, who shall stand with such cart, save for such reasonable time as may be necessary for loading or unloading the same, elsewhere than at some standing appointed by resolution of the Council published as aforesaid, for wood-carts or water-carts (as the case may be), shall forfeit a sum not exceeding £2.

Water cart to have name of premises marked.

13. Every owner of a licensed water-cart shall cause his name and the words "licensed water-cart" to be painted or marked and kept painted or marked in legible letters 1 inch in length and of proportionate breadth, in white on black ground in a conspicuous place outside the premises where such cart is kept, and if any such owner shall fail to comply with the provisions of this section he shall forfeit a sum not exceeding £2.

Suspension or revocation of license.

14. The By-law Committee may at any time, if it shall be proved to their satisfaction that the owner of the cart thereby licensed has been convicted of two offences against this part of these by-laws or of any offence in respect of any property entrusted to him as such owner suspend for any stated time or revoke as seems to them fit such license, and no license while suspended under this section or otherwise shall be deemed to be of any force or virtue hereunder.

Lights for carts.

15. The driver of every cart, buggy, and every other vehicle which shall during the hours after sunset of any day, and before sunrise of the following day, be in any public place or street within the said borough, shall keep a light attached to or suspended from the off or right side of such cart so as to be plainly visible to the driver of any carriage proceeding along or through such place or street in a contrary direction to that in which such first-mentioned cart shall be directed, and in the case of a night-cart only such light shall be such and be so disposed as to appear white in front and red at the outer side, and every driver who shall fail to comply with this section shall forfeit a sum not exceeding £2.

Interpretation.

16. The word "cart" shall for the purpose of this part of these by-laws include every waggon, dray, or other such carriage whatever be its construction, drawn by horses or other animals, used wholly or chiefly for the carriage of burthens or heavy goods; the word "wood-cart" shall mean a cart used in hawking firewood for sale; the word "water-cart" shall mean a cart used in hawking of water for sale; and the word "night-cart" shall mean a cart used in the carrying or removing of night-soil, offal, or other offensive refuse.

SCHEDULE A.

Table of charges for carters' licenses.

The license fee for all carters shall be at the rate of 10s. per wheel per annum, and all such licenses shall be issued for a period of twelve months, terminable on the 30th day of June in each year.

SCHEDULE B.

Form of license.

This is to certify that a certain cart, No. of which of is the owner, hereby licensed to ply for hire as a within the borough of Narrandera from the date hereof to the 31st day of December next; subject, nevertheless, to all the by-laws, rules, and regulations in force relating thereto.

(L.S.)

Council Clerk. Mayor.

SCHEDULE C.

For all vehicles used for carrying passengers.

For each adult passenger, 6d.; for children under twelve years, 3d.

For vehicles with four wheels drawn by one horse, 2s. per hour or fractional part of an hour.

For vehicles with four wheels, drawn by two or more horses, 3s. per hour or fractional part of an hour.

Carts with two wheels with one or more horses, 2s. per hour or fractional part of an hour.

Waggon, van, or lorry, four wheels, drawn by two or more horses, 3s. per hour or fractional part of an hour.

I hereby certify that the by-laws on this and the preceding ninety-five sheets are by-laws passed by a resolution of the Council of the borough of Narrandera, on Wednesday, the 15th day of July, A.D. 1885.

(BOROUGH OF ALEXANDRIA—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 138.

Colonial Secretary's Office,
Sydney, 25th February, 1886.

BOROUGH OF ALEXANDRIA.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Alexandria, for the regulation of Places of Amusement within the Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

JOHN ROBERTSON.

BOROUGH OF ALEXANDRIA.—BY-LAWS.

Amusements.—Unlawful games.

1. No games with dice, or other games of chance for money, prize-fighting, cock-fighting, dog-fighting, or other entertainment opposed to public morality, or involving cruelty to animals, or likely to cause a breach of the peace, shall be established, held, or given within the Borough; and any person or persons who shall establish, hold, give, or cause to be established, held, or given, any such game, exhibition, or entertainment, shall, for every such offence, forfeit and pay a sum not exceeding ten pounds nor less than five pounds.

Places of amusement to be licensed.

2. No dancing saloon, bowling or skittle alley, shooting gallery, or similar place of amusement (other than entertainments requiring to be licensed by law) shall exist or be established within the Borough, unless and until such place of amusement shall have been licensed by the Council as hereinafter provided; and in the event of any such licensed place of amusement being improperly conducted or becoming a nuisance or an annoyance to any inhabitant, or violating public decency, or endangering the public peace, the Mayor shall, on representation to that effect being made, forthwith suspend the said license, and the Council at its next meeting shall, by resolution, cause the said license to be cancelled or otherwise, as may appear necessary or desirable; and any person or persons having already established such places of amusement as aforesaid, who shall not, within thirty days after these By-laws come into operation, apply for such license, or any person or persons who shall open, establish, or maintain any such place of amusement as aforesaid, without having obtained such license, shall forfeit and pay a sum not exceeding thirty pounds nor less than ten pounds for every such offence.

Mode of granting licenses

3. Applications for licenses as aforesaid must be in writing, addressed to the Mayor and Aldermen, and must be endorsed by two householders, testifying to the respectability of the applicant. The application must describe clearly the nature of the entertainment for which the license is sought and the premises in which it is to be held.

License fees.

4. Licenses shall be granted by resolution of the Council, upon payment of license fees, as follows:—For every license granted between the first day of January and the thirty-first day of December, one pound one shilling (£1 1s.) All licenses shall expire on the thirty-first day of December in each year, and may be renewed by resolution of the Council, upon written application fourteen days previous to the expiry of such license, and on payment of the annual fee of one pound one shilling (£1 1s.)

MUNICIPALITIES.

(BOROUGH OF VICTORIA—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 14th April, 1886.

BOROUGH OF VICTORIA.—BY-LAWS.

THE following amended By-laws, made by the Council of the Borough of Victoria, for the regulation, control, and management of the Wharf at the foot of Walker-street, Lavender Bay, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the "Municipalities Act of 1867."

GEORGE R. DIBBS.

BOROUGH OF VICTORIA.

BY-LAW the better to enable the Municipal Council of the Borough of Victoria to regulate, control, and manage the Wharf at the foot of Walker-street, Lavender Bay, to repeal and amend existing By-law in relation to the same, and to provide for the leasing of a portion of the said Wharf. It is hereby ordered by the Municipal Council of the Borough of Victoria :—

Repeal of existing By-law.

1. The By-law made and passed by the Council on the 5th day of September, 1877, and published in a Supplement to the Government Gazette, No. 318, bearing date 11th October, 1878, is hereby repealed.

Division of Wharf.

2. The Wharf shall be divided into two lots. Lot No. 1 shall consist of 12 feet frontage to the bay, and lot No. 2 shall consist of the remainder of the frontage to the bay, lot No. 1 commencing at the eastern side of the Wharf.

Uses of the respective Lots.

3. Lot No. 1 shall be reserved and appropriated for the purpose of loading and unloading merchandise, and for the landing or taking off passengers by boatmen conveying passengers for hire, or by passengers in their own boats; and lot No. 2 shall be reserved and appropriated for the purpose of landing or taking off passengers by steam ferry boats.

Leasing Portion.

4. The Council may lease lot No. 2 for a period of one or more years, open to public competition, and upon conditions hereunto appended.

Vessels not to make fast to Wharf, &c.

5. No ship, steamboat, or other vessel shall be allowed to make fast to or remain alongside the Wharf except while actually loading or unloading cargo, or landing or taking off passengers; and no owner or master of any such ship, steamboat, or other vessel shall suffer or allow any such vessel to remain alongside the Wharf longer than may be necessary to load or unload cargo, or to land or take off passengers.

Goods not to be left on Wharf.

6. No goods, merchandise, produce, or butcher's meat for shipment shall be allowed on the Wharf until a vessel is ready to receive the same, and all goods, merchandise, produce, or butcher's meat landed from any vessel shall be so placed as not to interfere with the general use of the Wharf, and shall in all cases be immediately removed therefrom by the owner, or in default by the Council, and all expenses attending such removal by the said Council, shall become a charge upon the goods so removed.

Penalties.

7. Every person who shall commit any breach of or offend against any section or part of this By-law shall, for every such breach or offence, forfeit and pay any sum not exceeding five pounds, to be recovered by summary jurisdiction before any two Justices of the Peace.

APPENDIX.

CONDITIONS for leasing a portion of the Wharf at foot of Walker-street, Lavender Bay.

GENERAL CONDITIONS.

1. The lot proposed to be leased shall be advertised for tender or for sale by public auction in the "Sydney Morning Herald," the local journals, and by a notice posted in a conspicuous place on the Wharf.

2. The highest tenderer or bidder at public auction shall be the lessee provided he himself and the securities offered are approved of by the Council.

3. The lessee or lessees and his or their sureties, of whom there shall be two, shall enter into a bond for a sum equal to double the amount of one year's rent, as a security for the regular payment of the rent, and for the due observance of all the conditions herein contained.

4. The rent to be paid quarterly in advance to the Council Clerk.

5. The Council reserves to itself the right of resuming any portions of the lot for any alterations or repairs that may be found necessary, allowing a proportionate amount in the rent during the time occupied in such repairs or alterations in the same ratio as the part resumed bears to the whole.

6. The lessee to keep the lot in good repair during tenancy reasonable wear and tear only excepted.

7. The lessee shall not assign or sublet except with the consent in writing of the Council.

8. The lessees will not be allowed to erect any buildings except with the consent in writing of the Council.

SPECIAL CONDITIONS.

1. The Lessees to run a steamboat to and from Lavender Bay and Sydney daily throughout the year, leaving Lavender Bay at 5·30 a.m. from September 30th to March 31st, and at 6 a.m. from April 1st to September 30th, and continue running every twenty minutes until 11·45 p.m. from Lavender Bay, last boat to leave Sydney at midnight. Sundays, first boat from Lavender Bay at 8 a.m., and last boat from Sydney at 10·30 p.m. Fares not to exceed two pence for each adult passenger.

2. In the event of the lessees or any of their servants being found guilty of any gross misconduct, the Council may cancel the lease at any time without further notice than proof of alleged misconduct, to be determined by any two Justices in Court of Petty Sessions.

Made and passed by the Municipal Council of the Borough of Victoria, this first day of February, 1886.

(L.S.) M. M'MAHON,
Mayor.

WALTER G. WILLINGTON,
Council Clerk.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF NOWRA—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 14th June, 1886.

MUNICIPAL DISTRICT OF NOWRA.—BY-LAWS.

THE following By-laws, made by the Council of the Municipal District of Nowra, under the "Municipalities Act of 1867," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

GEORGE R. DIBBS.

BY-LAWS to regulate the erection of Balconies, Awnings, &c., on and over the roads and footways of the Municipality within the town of Nowra.

1. That application for the erection of a balcony, awning, posts for bearing lamps, or for any other purpose, on the roads or on and over the footways of the Municipality within the town of Nowra, must be made to the Council; that if the Council is satisfied that the public traffic will suffer no inconvenience thereby, such applications will be allowed subject to the approval of the Council; that the specifications for such erections accompanying same are safe and substantial, and that the applicant indemnifies the Council against any or all accidents occurring therefrom. And in respect to balconies, that they be open from end to end, and not used for any other purpose except an open promenade. Any infraction of this By-law relating to balconies shall subject the occupier of said premises to a penalty not exceeding ten pounds and not less than one pound for every day or portion of a day any part of the said balcony is enclosed or used contrary to this By-law.

2. Any person acting contrary to the said By-laws by erecting posts for awnings, or any other purpose, on the roads or footways of the Municipality within the town of Nowra, without authority from the Council, shall be liable to a penalty not exceeding ten pounds and not less than one pound, together with the expenses of removing said obstruction; and in the case of erecting a balcony without authority from the Council, the parties so offending to be liable to a penalty not exceeding twenty pounds and not less than two pounds, and to a penalty of one pound per day for every day such balcony or portion of a balcony is not removed after due notice from the Mayor to remove the same within three days.

3. That the Council is fully authorized at any time to remove all awnings or other erections on the footways or roadways of the Municipality within the town of Nowra they may consider desirable, whether such awnings are now or hereafter erected, provided they consider the removal of same is desirable for the safety and convenience of the public traffic.

By virtue of the powers and authority of the "Municipalities Act of 1867," the Council of the Municipal District of Nowra passed the foregoing By-laws on the twenty-eighth (28th) day of July, 1885.

THOMAS EDWARDS, Council Clerk. (L.S.) HENRY MOSS, Mayor.

BY-LAWS to regulate Crossings over Public Water-tables and Footways.

1. That all crossings within the town of Nowra be constructed of stone or earthenware pipes.

2. That application for said crossings be made to the Council stating full particulars of site and proposed construction, and that such work be not commenced until the said application is approved of and a certificate to that effect signed by the Mayor.

3. That if said crossings are not made or erected in accordance with the application, the Mayor has full authority to remove the same as an obstruction, at the expense of the owner or applicant requiring same, such owner or party erecting such obstruction to be liable to a penalty not exceeding five pounds and not less than five shillings, besides the cost of removal of said obstruction: Provided that on the offending party being served with a written notice, signed by the Mayor, to remove said obstruction, that the said party removes the same within three days and repairs all damage sustained in connection therewith, then the above penalty to be null and void. Should the said crossing at any time prevent the flow of water along the proper water-table, the owner of the premises having the benefit of said crossing to repair the same without delay on receiving notice from the Council or authorized appointed officer; and, failing to do so, the Mayor is hereby empowered and authorized to repair the same at the expense of the said owner.

4. Any person interrupting the Council or duly appointed officer and workmen in repairing and replacing any crossing or any other Municipal work within the Nowra Municipality to be liable to a penalty not exceeding twenty pounds and not less than one pound, together with costs of Court.

By virtue of the powers and authority of the "Municipalities Act of 1867," the Council of the Municipal District of Nowra passed the foregoing By-laws on the 2nd day of July, 1885.

(L.S.) HENRY MOSS, Mayor.
THOMAS EDWARDS, Council Clerk.

USING Bark for Building in the Main Streets of the Town of Nowra.

No person shall erect any building of bark, nor roofed with that material or with calico, within the populous parts of the town, except by express permission of the Council, and then for a temporary purpose only. Any person so offending shall on conviction, be liable to a penalty not exceeding ten pounds nor less than one pound, and shall be bound to remove the aforesaid building within such period as the Council may determine.

By virtue of the powers and authority of the "Municipalities Act of 1867," the Council of the Municipal District of Nowra passed the foregoing By-law on the 28th day of July, 1885.

(L.S.) HENRY MOSS,
Mayor.

THOMAS EDWARDS,
Council Clerk.

DRAINS in Footpaths in the Town of Nowra.

No surface drain shall be made in any footpath, and no pipe or drain to be laid under or across the same within the town of Nowra without the authority of the Council; and no such pipe or drain shall be used for the discharge into any street or roadway of any offensive liquid or matter of any kind whatsoever; and any person who shall offend against this By-law shall forfeit and pay any sum not exceeding fifty pounds nor less than one pound.

By virtue of the powers and authority of the "Municipalities Act of 1867," the Council of the Municipal District of Nowra passed the foregoing By-law on the twenty-eighth day of July, 1885.

(L.S.) HY. MOSS,
Mayor.

THOMAS EDWARDS,
Council Clerk.

MUNICIPAL DISTRICT OF NOWRA.—BY-LAWS.

THE following By-laws, made by the Council of the Municipal District of Nowra, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

GEORGE R. DIBBS.

BY-LAWS.

WILFUL TRESPASS.

EVERY person who shall wilfully let in or knowingly suffer to enter upon the Public Common or Recreation Ground under the control of the Council any animals without due authority, shall be deemed guilty of wilful trespass, and shall be liable, for every such offence, to a penalty not exceeding ten pounds, nor less than two pounds.

TO REGULATE THE NOWRA COMMON AND RECREATION.

ALL persons found guilty of the undermentioned offences, to be liable to a penalty for each offence not exceeding ten pounds, and not less than five shillings, together with the amount of damage incurred :—

Removing timber, stone, gravel, or any other material.
Trespassing on said Common with firearms; and felling, or attempting to fell, any trees thereon.
Wilfully breaking and opening, or attempting to open, and injure or injuring the boundary fence of the said Common, or any of the gates attached thereto.
Driving, or placing bulls and stallions on said Common for agistment, without reporting same to person in charge,

All charges for agistment of stock on said Common be fixed from time to time by resolution of Council, and that a monthly return of same be made by the person in charge to the Council, under a penalty not exceeding five pounds, and not less than ten shillings, such monthly returns, on being exhibited to the first ensuing Meeting of Council, to be signed by the Mayor and copied by the Council Clerk as a public record of the receipts from the said Common, for the information of all interested.

By virtue of the powers and authority of the "Municipalities Act of 1867," the Council of the Municipal District of Nowra passed the foregoing By-laws on the 28th day of July, 1885.

(BOROUGH OF WEST MAITLAND—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.

Colonial Secretary's Office,
Sydney, 15th July, 1886.

BOROUGH OF WEST MAITLAND—BY-LAWS.

THE following By-laws made by the Council of the Borough of West Maitland, for regulating and licensing omnibuses, waggonettes, cars, and hackney carriages, and hansom cabs and buggies respectively, plying for hire within the Borough, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

GEORGE R. DIBBS.

BOROUGH OF WEST MAITLAND.

BY-LAWS for regulating and licensing omnibuses, waggonettes, cars, and hackney carriages, plying for hire within the Borough of West Maitland.

THE Council of the Borough of West Maitland do, by virtue of the power and authority vested in such Council by the Municipalities Act of 1867, hereby make the following By-laws for regulating and licensing omnibuses, waggonettes, cars, and hackney carriages, plying for hire within the said Borough of West Maitland, and declare that the same shall stand in the place of and instead of all By-laws heretofore in force relating thereto, which By-laws heretofore made are hereby repealed.

1. In the construction of these By-laws unless the context shall otherwise indicate, the following terms in inverted commas shall bear the meaning and include the things hereinafter severally assigned or set against them.

"Council."—The Borough Council of West Maitland.

"Inspector."—The Inspector or Sub-inspector of Vehicles, now or hereafter to be appointed by the said Borough Council.

"Proprietor."—Every person who alone or in partnership with any other person, shall keep any vehicle for which a license shall or may be obtained by or transferred to him under these By-laws.

"Driver."—Every person engaged or employed in driving any licensed vehicle.

"Conductor."—Every person other than the driver engaged or employed in attending upon passengers in or upon any omnibus, waggonette, car, or hackney carriage.

"Passenger."—Every person carried in or upon any vehicle other than the driver or conductor.

"Horse."—Horse, mare, gelding.

The word "vehicle" in these By-laws shall include and apply to every omnibus, waggonette, car, or hackney carriage. An omnibus shall mean a vehicle upon four wheels drawn by one or more horses, a waggonette shall mean a vehicle upon four wheels, drawn by one or more horses, and a car shall mean a vehicle upon two wheels, for which omnibus licenses have been taken out, and a hackney carriage shall mean a vehicle upon four wheels drawn by two or more horses, plying for hire within the Borough of West Maitland, and in the construction of these By-laws any word importing the singular number shall be understood to include several persons or things as well as one person or thing, and any word importing the plural number, shall be applied to one person or thing, and every word importing the masculine gender shall extend and be applied to a female as well as a male.

2. No person shall ply a vehicle for hire nor shall any person act as driver or conductor of any such vehicle within the said Borough of West Maitland, until and unless licensed for such purpose in the manner hereinafter mentioned, nor during the suspension or after cancellation of such license as hereinafter provided.

3. Before any license for plying any such vehicle, or for driving or conducting the same shall be granted the party requiring such license shall obtain from the Council Clerk free of charge, a requisition in the form of Schedule A hereto, or to the like effect, and shall duly fill up and sign the same and deliver it to the Council Clerk. And in the case of drivers and conductors shall obtain a certificate from two respectable ratepayers to the effect that the applicant is of good character, and competent to act as such driver or conductor as the case may be, and shall also obtain from the Inspector a certificate that the vehicle for which a license is applied for is fit for the accommodation and conveyance of passengers, and that the applicant is of good character, and competent to act as such driver or conductor as the case may be.

4. The Mayor of the said Borough for the time being shall be and is hereby authorized to issue all such licenses in the name and on behalf of the said Borough Council. Provided that if such certificate as aforesaid be refused by the Inspector, the matter shall be referred to and decided by the Council upon such evidence as may be adduced before them by the parties interested therein.

5. Licenses for proprietors, drivers, or conductors of vehicle, shall be in the form of Schedule B hereto or to the like effect, and shall be made out, numbered, and registered by the Council Clerk.

6 Every license granted by the Mayor shall bear the impression of the Seal of the said Borough Council, and shall be signed by the Mayor and countersigned by the Council Clerk, and shall be in force until the thirty-first day of December next ensuing the date thereof unless cancelled, and no such license shall include more than one vehicle, and shall state the number of passengers such vehicle shall be permitted to carry.

7. For every vehicle license and for every renewal thereof there shall be paid to the said Borough Council the sum of two pounds annually if the license be granted on or after the first day of January, and on or before the thirty-first day of March in every year; and if after that date then the following proportions:—If on or before the thirtieth day of June, the sum of thirty (30) shillings, if on or before the thirtieth day of September, the sum of twenty (20) shillings, and if after that date the sum of ten (10) shillings.

8. For every conductor's or driver's license and for every renewal thereof there shall be paid to the said Borough Council the sum of five shillings.

9. The person or persons in whose name or names a vehicle license shall have been obtained shall be deemed the proprietor of the vehicle in respect of which such license shall have been taken out.

10. No license shall be granted to any person to drive any vehicle unless he be above seventeen years of age, nor to act as conductor unless he be fourteen years of age.

11. Every driver or conductor licensed under these By-laws shall whilst driving or conducting any vehicle wear a badge on the left breast outside his clothing, such badge to be furnished free of charge at the time of the issue of the license, and the said driver or conductor shall keep the same clean and in good order.

12. No proprietor shall be at liberty to part with or lend his license, and any proprietor transferring or selling his licensed vehicle shall immediately give notice thereof to the Council Clerk, and the transferree or purchaser shall thereupon apply to have the license transferred to him, and shall sign his name in the books of the said Borough Council and on the license, and until this By-law shall have been complied with the transferror or seller shall remain liable as owner for breach of any of these By-laws, and no transferree or purchaser shall use such vehicle or allow it to ply for hire until this By-law shall have been complied with, neither shall any such driver or conductor drive or conduct any licensed vehicle other than that for which he shall have been so licensed.

13. No driver or conductor of any licensed vehicle shall drive any licensed vehicle other than that having the same number as on his license, nor shall any licensed conductor conduct any licensed vehicle other than that having the number on his license, nor lend or part with his license, nor shall the proprietor of any such vehicle employ an unlicensed person as the driver or conductor thereof.

14 Every proprietor, driver, or conductor of any licensed vehicle, and every vehicle, shall be deemed to be licensed under these By-laws on the production by the Inspector of the License Register Book containing a copy of any such license.

15. Every person or persons and all and every vehicle shall be deemed to be unlicensed unless it appears, on the production of the License Register Book by the Inspector, that a license had been duly issued.

16. The license of the proprietor, driver, or conductor of any licensed vehicle may be cancelled or suspended by the Council (after three days notice in writing signed by the Council Clerk and served upon such proprietor, driver, or conductor, or left at his usual place of abode, calling upon him to show cause why such license should not be cancelled or suspended, and opportunity given such proprietor, driver, or conductor to show such cause), in case either such proprietor, driver, or conductor shall have been convicted of two offences against these By-laws committed within a period of six months next preceding, or in case such proprietor, driver, or conductor shall have twice neglected or refused within a period of one month next preceding to comply with all or any of the By-laws, rules, and regulations for the time being in force within the said Borough relating to such licensed vehicles.

17. Such person or persons as may from time to time be appointed by the said Borough Council shall be the Inspector or Sub-Inspectors of all licensed vehicles plying for hire within the said Borough, and such Inspector or Sub-Inspectors shall as often as he or they may deem necessary inspect all licensed vehicles, and also the harness and horse or horses or other animal or animals used in drawing the same; and if such vehicles, horse or horses, animal or animals, shall in his or their opinion be unfit for public use, he shall report the same in writing to the Mayor, who shall have power to suspend the license of such vehicle until such vehicle, harness, horse or horses, or other animal or animals used in or drawing the same shall be in a fit state for public use; and it shall be the special duty of such Inspector at all times to see that as far as possible these By-laws are duly observed and enforced.

18. No proprietor, driver, or conductor of any licensed vehicle, nor any other person, shall hinder or obstruct such Inspector or Sub-Inspectors in the execution of any of his or their duties.

19. The number of the license granted for every omnibus, waggonette or car, in figures not less than 4 inches in height, and for every hackney carriage in figures not less than 2 inches in height and of proportionate breadth, white upon a ground of black shall be printed or painted outside on the panel of the door or doors of such vehicles, or on a plate or plates fixed thereon, and also upon each lamp used upon such vehicle and the number in figures 2 inches long and of proportionate breadth on the outsides of glasses of lamps as the Inspector may direct, and the proprietor or driver of such omnibus or car, hackney carriage, shall keep such number on such panel of the door or doors, or on such place or places and glasses as aforesaid legible and undefaced during all the time such vehicle shall ply or be used for hire, and the licensed driver of a licensed vehicle shall be deemed to be plying for hire as soon as he shall drive his said vehicle drawn by a horse or horses into any part of any street of the Borough of West Maitland, and it shall not be necessary to prove that such driver had a passenger or passengers in or upon his said vehicle, or for the Inspector to prove payment of any fare.

20. The number of the license of every omnibus, waggonette, car, or hackney carriage on a card or plate 6 inches by 3 inches printed or painted in clear legible figures, and the table of fares so endorsed by the Mayor upon such license as aforesaid, shall be affixed at the upper part of the front panel, or in such other place inside of such omnibus, waggonette, car or hackney carriage, as the Inspector may direct, and the proprietor or driver of such omnibus, waggonette, car or hackney carriage, shall keep such card or plate so affixed and legible and undefaced during all the time such omnibus, waggonette, car, or hackney carriage, shall ply or be used for hire.

21 No proprietor, driver, or conductor of any licensed vehicle shall demand more than the several fares set out in Schedule C. hereto or such other fares as may be at any time substituted therefor by the Council and endorsed on the license of such vehicle.

22. The places specified in Schedule D hereto annexed are hereby respectively appointed public stands for licensed vehicles, provided that the Council may from time to time as they shall see fit, add to, abolish, or alter the number and situation of such stands.

23. The proprietor or driver of any licensed vehicle shall not permit the same to stand for hire except at or from an appointed stand.

24. The driver of any omnibus, waggonette, car, or hackney carriage specially licensed to ply for hire at the public stands at High-street and Church-street Railway Stations shall not so ply at any time other than twenty minutes before the arrival of any passenger train and fifteen minutes after its departure, and no driver of any such omnibus, waggonette, car, or hackney carriage so specially licensed, shall be allowed to ply for hire except to and from such stands.

25. No driver or conductor of any licensed vehicle whilst standing at his proper stand or driving through the streets of the Borough shall endeavour to attract notice by shouting, ringing of bells, blowing of horns, or other noise, nor shall deceive any person in respect of the route or destination of such vehicle by word or sign.

26. The driver of the first omnibus, waggonette, car, or hackney carriage that arrives at any public stand shall be the first to start therefrom with his vehicle, and the others in due rotation in the order in which they arrive at such stands at intervals of no less than five minutes nor remain more than seven minutes on such stand.

27. At every second vehicle on every stand there shall be left a space of at least ten feet, for passengers on foot to pass through.

28. Any licensed driver of any licensed omnibus, waggonette, car, or hackney carriage not specially licensed to ply for hire to and from the Railway Stations of the said Borough having started with such omnibus, waggonette, car, or hackney carriage drawn by one or more horses from either of the public stands at Regent-street or Victoria Bridge, within the said Borough, shall complete the journey to the other of such public stands without turning round or leaving High-street at a pace faster than a walk—that is to say, at an ordinary trot; and no such driver, under any pretence whatsoever, shall permit either horse, should two horses be attached to such omnibus, waggonette, car, or hackney carriage, to canter during such journey or portion thereof; and every such driver shall perform the journey with his said vehicle so drawn as aforesaid from the public stand situate at Regent-street, within the Borough, to the corner of High and Bulwer Streets, within the said Borough, in not less than ten minutes nor more than fifteen minutes; from the corner of High and Bulwer Streets to large lamp at Hunter-street, in said Borough, in not less than five minutes nor more than seven minutes; from the large lamp at Hunter-street, in said Borough, to the Railway Crossing in High-street, in said Borough, in not less than five minutes, nor more than seven minutes, from the Railway Crossing in High-street, within the Borough, to the public stand at Victoria Bridge, within this Borough, in not less than seven minutes nor more than ten minutes; making the whole journey from the public stand at Regent-street to the public stand at the Victoria Bridge in not

less than twenty-seven minutes nor more than than thirty-nine, in due rotation in the order in which each driver shall have started from the said stand at Regent-street. And the foregoing periods of time shall be observed on the return journey from the said public stand at the Victoria Bridge to the said stand at Regent-street, except in the case of the driver of any such licensed vehicle returning with such vehicle from the stand at the Victoria Bridge, who shall be at liberty to go on to the stand at High-street Railway Crossing, to meet the 11 a.m. train from Newcastle, on all days when sales of live stock are to take place at the sale-yards at Campbell's Hill; but no such driver shall on any occasion remain on such Railway Crossing stand for more than ten minutes after the departure of such train, and he shall then proceed on his journey with his vehicle to said sale-yards with his passengers, and at once return to the public stand at Regent-street and take up his position at the rear of the last vehicle on the said stand.

29. The driver of every licensed vehicle, on arrival at any public stand within the said Borough, shall draw up at the end of and be the last of the rank of any vehicles that may be there on such stand. All such vehicles shall be arranged in single rank only.

30. No driver of any licensed vehicle shall suffer the same to stand or loiter in any street or alongside any other vehicle, nor obstruct the driver or conductor of any other licensed vehicle in taking up or setting down any person, or wilfully or wrongfully or forcibly prevent or endeavour to prevent the driver or conductor of any other licensed vehicle from taking a passenger or fare.

31. No driver or conductor of any licensed vehicle shall, when standing on a public stand or plying for hire be at such a distance from the horse or horses attached thereto, as to prevent his having control over the same.

32. The driver of any licensed vehicle taking up or setting down passengers at any place of public worship or public amusement or at any public meeting within the said Borough of West Maitland, or who is waiting for any of those purposes, shall obey the directions of the Inspector as to taking up or setting down, or waiting for passengers, and as to the order and place in which any vehicle shall stand, and every driver shall perform his duty in a careful and quiet manner, and shall not push into or get out of the line or position fixed for the vehicles so as to endeavour to arrive at his place of destination before any other licensed vehicle the driver whereof from its position would have a prior right to take up or set down passengers.

33. No driver or conductor of any licensed vehicle shall, whilst driving, loading, or unloading, or attending any such vehicle, or whilst on any public stand wilfully or negligently do or cause or suffer to be done any damage to the person or property of any one, or be guilty of any breach of the peace, misconduct, or ill-behaviour, or be intoxicated, or make use of threatening, obscene, indecent, profane, abusive, or insulting language, sign, or gesticulation, but shall at all times be sober and careful in the discharge of his duties.

34. Every licensed driver whilst engaged in taking up or setting down any passenger, shall during such taking up or setting down place his vehicle as near as conveniently may be to that side of the street (and at a line with the kerbstone or edge of the footpath) at which such taking up or setting down is required.

35. No licensed driver shall, except when standing on an appointed stand, permit his licensed vehicle, with or without a horse or horses, to stand in any part of the said Borough longer than may be absolutely necessary for loading or unloading, or for taking up or setting down passengers, nor shall he cause any obstruction in any part of the said Borough.

36. Every driver of any licensed vehicle shall keep the same on the left or near side of the road, and shall permit any other vehicle to pass, having the right to do so, and when about to stop such driver shall raise his whip straight up so as to warn the driver of any other vehicle that may be behind.

37. The driver of every licensed vehicle in turning the corner of any street within the said Borough, shall bring the horse or horses drawing such vehicle to a walking pace.

38. No licensed driver of a licensed vehicle shall pass any other licensed omnibus, waggonette, car or hackney carriage, which shall be proceeding in the same direction if the driver of the latter be proceeding on his journey at a pace known as a trot.

39. No licensed driver shall permit his licensed omnibus, waggonette, car, or hackney carriage to be drawn at a pace other than a trot in any street within the Borough of West Maitland.

40. The proprietor of every licensed vehicle shall at all times when the same is plying or employed for hire, make and keep it clean, strong, and in good order in all respects, and if with windows they shall be sound and unbroken, with the leathers or lifts suitable attached to the frame. The horse or horses shall be able and sufficient for their work, free from disease, and properly broken into harness; the harness for each horse shall be perfect, good, and sufficient for the purpose; and every licensed driver or conductor shall be clean in his person, and wear a good hat and other clean and respectable clothes, and conduct himself in a proper and decorous manner.

41. No person suffering from any infectious or contagious disease shall ride in or upon any licensed vehicle, and no licensed driver or conductor shall knowingly carry, or permit to be carried, any such person or (except to some police office, watch-house, hospital, or public house) any corpse, or any person in the state of intoxication, or who is so noisily or violently conducting himself, or otherwise so misbehaving as to occasion any annoyance, or to disturb the public peace. And no passenger shall carry inside any such vehicle any animal or any substance of an offensive character, or that might soil or damage such vehicle, or the apparel of other passengers; and no such driver or conductor shall sleep in or upon any such licensed vehicle, or use the same for eating his meals therein.

42. No driver of any licensed vehicle shall carry more passengers than such vehicle is licensed to carry, nor shall the driver or conductor of any licensed omnibus, waggonette, car, or hackney carriage permit or suffer any person, except the licensed conductor thereof, to be on the footsteps at the back of any such omnibus, waggonette, car, or hackney carriage.

43. No licensed driver or conductor shall smoke tobacco, cigars, or other thing whilst driving or conducting any licensed vehicle engaged on any fare, nor shall any passenger smoke inside or on any such vehicle without the permission of the driver or against the wish of any passenger.

44. The driver and conductor of every licensed vehicle (if such vehicle has a conductor) shall be constantly attendant upon the same, whenever standing, or whilst plying, or engaged for hire.

45. Every licensed vehicle shall be provided with a lamp on each side of the same outside, and the driver of such vehicle when plying for hire thereof between sunset and sunrise, shall light and keep such lamps lighted.

46. The driver of every licensed omnibus, waggonette, car, or hackney carriage shall provide and keep a lamp properly lighted in such a position inside of every such licensed vehicle as the Inspector may direct, whenever such vehicle be plying for hire or engaged at any time between sunset and sunrise.

47. The licensed proprietor or driver of every licensed omnibus, waggonette, car, or hackney carriage shall keep a lamp on each side thereof and on the outside thereof, which shall be such and so placed as to appear white on the front and outsides and red behind.

48. Any licensed proprietor of any one or more licensed vehicles may have a distinguishing light attached to each of such licensed vehicles, and a description thereof shall be inserted in his license; and no proprietor or driver of any other licensed vehicle shall use a similar distinguishing light.

49. Every omnibus, waggonette, car, or hackney carriage for which license shall hereafter be applied for shall be of the dimensions herein directed, and shall be provided with the fittings and furniture detailed and described as follows:—From floor to roof, in line with front of each seat, not less than five feet; from top of seat of cushion to roof, not less than three feet six inches; each seat shall not be less than fourteen inches wide; space from seat to seat, between the inside seats, not less than two feet; the outside seats, when not of the rustic pattern, and all inside seats shall be furnished with good cushions, and sitting space of eighteen inches for each passenger; springs shall be provided to all window frames of an approved pattern effective to prevent noise; a bell or check string to warn the driver to stop when required; two lamps outside, one on each side such omnibus, waggonette, car, or hackney carriage, and one lamp inside, of the colour prescribed by these By-laws.

50. When an application is made for a license for any other omnibus, waggonette, car, or hackney carriage than those in use at the time of the passing of these By-laws, it shall be the duty of the Inspector to see that the fittings and furniture are complete, as detailed and provided for in the last preceding By-law, and are properly affixed to such omnibus, waggonette, car, or hackney carriage, unless it shall be of the dimensions set out in such By-law.

51. Any person having engaged any licensed omnibus, waggonette, car, or hackney carriage and not paying the charge so endorsed as aforesaid upon the license of such vehicle when demanded, shall on conviction thereof forfeit and pay the proprietor or driver of such vehicle such charge, together with such further sum for damages, costs, and expenses for loss of time, or otherwise, as the convicting Justices shall in their discretion think proper.

52. No vehicle which shall be let to hire by special agreement only, or only bespoken at the stables or residence of its owner, and which shall never publicly ply for hire off the premises of its owner, shall be deemed a licensed vehicle within the meaning of these By-laws; nor shall the proprietor, driver, or conductor of such vehicle be subject to the provisions thereof in any respect whatever.

53. Every prosecution under these by-laws may be laid by the Inspector appointed by the Council or by any Sub-Inspector so appointed or by any member of the Police Force of New South Wales (without being so appointed) or by any person or persons whomsoever feeling aggrieved.

54. For every offence against the provisions of any of these By-laws the offender shall be liable to and shall pay a penalty not exceeding ten pounds nor less than ten shillings, and such penalty shall be recoverable before any two Justices of the Peace sitting in Petty Sessions according to the provisions of the Act or Acts for the time being regulating summary proceedings before Justices.

BOROUGH OF WEST MAITLAND.

BY-LAWS for regulating and licensing Hansom Cabs and Buggies plying for hire within the Borough of West Maitland.

THE Council of the Borough of West Maitland do, by virtue of the power and authority vested in such Council by the Municipalities Act of 1867, hereby make the following By-laws for regulating and licensing hansom cabs and buggies plying for hire within the said Borough of West Maitland, and declare that the same shall stand in the place of and instead of all By-laws heretofore in force, relating thereto which By-laws heretofore made are hereby repealed.

1. In the construction of these By-laws, unless the context shall otherwise indicate the following terms in inverted commas, shall bear the meanings and include the things hereinafter severally assigned or set against them:—

"Council."—The Borough Council of West Maitland.

"Inspector."—The Inspector or Sub-inspector of Vehicles now or hereafter to be appointed by the said Borough Council.

"Proprietor."—Every person who alone or in partnership with any other person shall keep any vehicle for which a license shall or may be obtained by or transferred to him under these By-laws.

"Driver."—Every person engaged or employed in driving any licensed vehicle.

"Passenger."—Every person carried in or upon any vehicle other than the driver.

"Horse."—Horse, mare, gelding.

The word "vehicle" in these By-laws shall include and apply to every hansom cab or buggy. A hansom cab shall mean a vehicle upon two wheels drawn by one horse, and a buggy shall mean a vehicle upon four wheels, drawn by one or more horses, plying for hire within the Borough of West Maitland; and in the construction of these By-laws any word importing the singular number shall be understood to include several persons or things as well as one person or thing, and any word importing the plural number shall be applied to one person or thing, and every word importing the masculine gender shall extend and be applied to a female as well as a male.

2. No person shall ply a vehicle for hire nor shall any person act as driver of any such vehicle within the Borough of West Maitland, unless licensed in the manner hereinafter mentioned, nor during the suspension or after cancellation of such license as hereinafter provided.

3. Before any license shall be granted to the owner or driver of any vehicle, the person requiring such license shall obtain from the Council Clerk, free of charge, a requisition in the form of the schedule hereunto annexed, marked A, or to the like effect, and shall duly fill up and sign the same and deliver it, together with a certificate from two respectable persons, stating that he is of good character, of the required age, and competent for the position under license applied for, to the Inspector, at least twenty-four hours previous thereto.

4. Every proprietor or driver shall, on receipt of a notice to the effect in the Schedule E hereto, produce his vehicle for the purpose of being examined by the Inspector. No license for any vehicle shall be granted or renewed unless the vehicle, horse, or horses, and harness shall have been examined by the Inspector and certified by him in writing to be in a fit state to be licensed. Provided, however, that any party aggrieved by the refusal of the Inspector to grant such certificate may refer the matter to the Council, who shall then decide the same.

5. Licenses for owners or drivers shall be in form provided in Schedule B for each such license respectively, or to the like effect.

6. Every license granted under these by-laws shall be under the common seal of the Council, signed by the Mayor thereof on behalf of the Council, and countersigned by the Council Clerk; and shall be, unless cancelled or suspended as hereinafter provided, in force from the date of such license up to and including the 31st day of December then next ensuing; and no such license shall include more than one vehicle: Provided that if by accident any vehicle shall become unfit for use, it shall be lawful for the owner thereof, during such reasonable time as it shall be undergoing repair, to use another vehicle as substitute; but the substitute shall in all respects, except as to a license, be subject to these by-laws in the same manner as if a license had been granted for it, and the owner using it shall be liable for any non-compliance with these By-laws in respect thereof as if it had been licensed. In order to entitle an owner to the benefit of the above provision, he shall within twelve hours after commencing to use such substitute give notice of his doing so in writing to the Inspector, stating the true cause of his being compelled to use such substitute, and the period during which it will be necessary to do so; and no such substitute shall be used until it shall have been inspected and approved of by the Inspector; or for a longer period than fixed by a certificate to be signed by the Inspector and delivered to the owner.

7. Licenses shall be made out in duplicate by the Council Clerk, or his assistant and numbered in such order as the Mayor shall from time to time direct.

8. For every such license and for every renewal thereof there shall be paid to the said Borough Council the sum of two pounds annually if the license be granted on or after the first day of January, and on or before the thirty-first day of March in every year; and if after that date then the following proportions:—If on or before the thirtieth day of June, the sum of thirty (30) shillings, if on or before the thirtieth day of September, the sum of twenty (20) shillings, and if after that date the sum of ten (10) shillings.

9. The person or persons in whose name or names a vehicle license shall have been obtained shall be deemed the proprietor of the vehicle in respect of which such license shall have been taken out.

10. No license shall be granted to any person to drive any vehicle unless he be above seventeen years of age.

11. Every driver licensed under these By-laws shall whilst driving any vehicle, wear a badge on the left breast outside his clothing, such badge to be furnished free of charge at the time of the issue of the license, and the said driver shall keep the same clean and in good order.

12. No proprietor or driver shall be at liberty to part with or lend his license, and any proprietor transferring or selling his licensed vehicle shall immediately give notice thereof to the Council Clerk, and the transferee or purchaser shall thereupon apply to have the license transferred to him, and shall sign his name in the license book of the said Borough Council and on the license, and until this By-law shall have been complied with the transferor or seller shall remain liable as owner for breach of any of these By-laws, and no transferee or purchaser shall use such vehicle or allow it to ply or shall solicit for hire thereof until this By-law shall have been complied with, neither shall any such driver drive any licensed vehicle other than that for which he shall have been so licensed.

13. No driver of any licensed vehicle shall drive any licensed vehicle other than that having the same number as on his license, nor lend or part with his license, nor shall the proprietor of any such vehicle employ any unlicensed person as the driver thereof.

14. No driver of any licensed vehicle whilst standing at his proper stand or whilst driving through the streets of the Borough shall endeavour to attract notice by shouting, ringing of bells, blowing of horns, cracking of whips, or other noise, nor shall deceive any person in respect of the route or destination of such vehicle by word or sign.

15. At every second vehicle on every stand there shall be left a space of at least five feet, for passengers on foot to pass through.

16. The driver of every licensed vehicle on arrival at any public stand within the said Borough shall draw up at the end of and be the last of the rank of any vehicles that may be there on such stand. All such vehicles shall be arranged in single rank only.

17. No driver of any licensed vehicle shall suffer the same to stand or loiter in any street within the Borough of West Maitland or alongside any other vehicle, nor obstruct the driver of any other licensed vehicle in taking up or setting down any person, or wilfully or wrongfully or forcibly prevent or endeavour to prevent the driver of any other licensed vehicle from taking a passenger or fare.

18. No driver of any licensed vehicle shall, when standing on a public stand or plying for hire thereof, be at such a distance from the horse or horses attached thereto as to prevent his having control over the same.

19. The driver of any licensed vehicle taking up or setting down passengers at any place of public worship or public amusement or at any public meeting within the said Borough of West Maitland, or who is waiting for any of those purposes, shall obey the directions of the Inspector as to taking up or setting down, or waiting for passengers, and as to the order and place in which any vehicle shall stand, and every driver shall perform his duty in a careful and quiet manner, and shall not push into or get out of the line or position fixed for the vehicles so as to endeavour to arrive at his place of destination before any other licensed vehicle the driver whereof, from its position, would have prior right to take up or set down passengers.

20. No driver of any licensed vehicle shall, whilst driving, loading, or unloading, or attending any such vehicle, or whilst on any public stand, wilfully or negligently do, or cause, or suffer to be done, any damage to the person or property of any one, or be guilty of any breach of the peace, misconduct, or ill-behaviour, or be intoxicated, or make use of threatening, obscene, indecent, profane, abusive, or insulting language, sign, or gesticulation, but shall at all times be sober and careful in the discharge of his duties.

21. Every licensed driver whilst engaged in taking up or setting down any passenger, shall during such taking up or setting down place his vehicle as near as conveniently may be to that side of the street (and at a line with the kerbstone or edge of the footpath) at which such taking up or setting down is required.

22. No driver shall, except when standing on an appointed stand, permit his licensed vehicle, with or without a horse or horses, to stand in any part of the said Borough longer than may be absolutely necessary for loading or unloading, or for taking up or setting down passengers, nor shall he cause any obstruction in any part of the said Borough.

23. Every driver of any licensed vehicle shall keep the same on the left or near side of the road, and shall permit any other vehicle to pass, having the right to do so; and when about to stop, such driver shall raise his whip straight up so as to warn the driver of any vehicle that may be behind.

24. The driver of every licensed vehicle, in turning the corner of any street within the said Borough, shall bring the horse or horses drawing such vehicle to a walking pace.

25. No licensed driver shall permit his licensed vehicle to be drawn at a pace other than a trot in any street within the Borough of West Maitland.

26. The proprietor of every licensed vehicle shall at all times when the same is plying or employed for hire make and keep it clean, strong, and in good order in all respects, and if with windows, they shall be sound and unbroken, with the leathers or lifts suitably attached to the frame. The horse or horses shall be able and sufficient for their work, free from disease, and properly broken into harness; the harness for each horse shall be perfect, good, and sufficient for the purpose; and every licensed driver shall be clean in his person, and wear a good hat and other clean and respectable clothes, and conduct himself in a proper and decorous manner.

27. No person suffering from any infectious or contagious disease shall ride in or upon any licensed vehicle, and no licensed driver shall knowingly carry, or permit to be carried, any such person or (except to some Police Office, watch-house, hospital, or public-house) any corpse, or any person in the state of intoxication, or who is so noisily or violently conducting himself, or otherwise so misbehaving as to occasion any annoyance, or to disturb the public peace. And no passenger shall carry inside any such vehicle any animal or any substance of an offensive character, or that might soil or damage such vehicle or the apparel of other passengers; and no such driver shall sleep in or upon any such licensed vehicle.

28. Every proprietor or driver of any licensed vehicle and every vehicle shall be deemed to be licensed under these By-laws on the production by the Inspector of the Licensed Register Book containing a copy of any such license.

29. Every person or persons and all and every vehicle shall be deemed to be unlicensed unless it appears, on the production of the Licensed Register Book by the Inspector, that a license had been duly issued.

30. The license of the proprietor or driver of any licensed vehicle may be cancelled or suspended by the Council (after three days notice in writing, signed by the Council Clerk and served upon such proprietor or driver, or left at his usual place of abode, calling upon him to show cause why such license should not be cancelled or suspended, and opportunity given such proprietor or driver to show such cause), in case either such proprietor or driver, shall have been convicted of two offences against these By-laws committed within a period of six months next preceding, or in case such proprietor or driver shall have twice neglected or refused within a period of one month next preceding to comply with all or any of the By-laws and regulations for the time being in force within the said Borough relating to such licensed vehicles.

31. Such person or persons as may from time to time be appointed by the said Borough Council shall be the Inspector or Sub-Inspector of all licensed vehicles plying for hire within the said Borough, and such Inspector or Sub-Inspector shall, as often as he or they may deem necessary, inspect all licensed vehicles, and also the harness and horse or horses or other animal or animals used in drawing the same; and if such vehicle or vehicles, horse or horses, animal or animals, shall in his or their opinion be unfit for public use, he shall report the same in writing to the Mayor, who shall have power to suspend the license of any such vehicle until such vehicle, harness, horse or horses, or other animal or animals used in drawing the same shall be in a fit state for public use; and it shall be the special duty of such Inspector at all times to see that as far as possible these By-laws are duly observed and enforced.

32. No proprietor or driver of any licensed vehicle, nor any other person, shall hinder or obstruct such Inspector or Sub-Inspectors in the execution of any of his or their duties.

33. The number of the license granted for every licensed vehicle in figures not less than two inches in height and of proportionate breadth, white upon ground of black, shall be printed or painted outside on the panel of such vehicle, or on the boot of such cab, or on a plate or plates fixed thereon, and also upon each lamp used upon such vehicle as the Inspector may direct, and the proprietor or driver of such vehicle shall keep such number on such panel or boot, or on such place or places as aforesaid, legible and undefaced during all the time such vehicle shall ply or be used for hire, and the driver of a vehicle shall be deemed to be plying for hire as soon as he shall drive his said vehicle, drawn by a horse or horses, into any part of any street of the Borough of West Maitland, and it shall not be necessary to prove that such driver had a passenger or passengers in or upon his said vehicle, or for the Inspector to prove payment of any fare to such driver.

34. The number of the license of every vehicle on a card or plate six inches by three inches, printed or painted in clear legible figures, and the table of fares so endorsed by the Mayor upon such license as aforesaid, shall be affixed at the upper part of the front panel, or in such other place inside of such vehicle as the Inspector may direct, and the proprietor or driver of such vehicle shall keep such card or plate so affixed and legible and undefaced during all the time such vehicle shall ply for hire.

35. No proprietor or driver of any licensed vehicle shall demand more than the several fares set out in Schedule C hereto or such other fares as may be at any time substituted therefor by the Council and endorsed on the license of such vehicle.

36. The places specified in Schedule D hereto annexed are hereby respectively appointed public stands for licensed cabs and buggies, provided that the Council may from time to time, as they shall see fit, add to, abolish, or alter the number and situation of such stands.

37. The proprietor or driver of any licensed vehicle shall not permit the same to stand for hire except at or from an appointed stand.

38. No license shall be hereafter granted for any vehicle to be used as a hansom cab unless the said vehicle shall be of the following dimensions:—Height inside, from bottom of floor thereof to roof (in front of seat), four feet ten inches; height inside, from top of seat to roof, three feet six inches; width of seat room, three feet; depth of seat, one foot two inches; space from front of seat to inside of door, eleven inches width; outside, immediately over door, not less than three feet seven inches. Every cab and buggy shall be supplied with proper fittings, and with good and suitable cushions.

39. No licensed driver shall smoke tobacco, cigars, or other thing, whilst driving any licensed vehicle engaged on any fare.

40. The driver of every licensed vehicle shall be constantly attendant upon the same whenever standing, or whilst plying or engaged for hire thereof.

41. Every licensed vehicle shall be provided with a lamp on each side of the same, outside, with the number of the vehicle on the side glasses, two inches long and of proportionate breadth, and kept legible by the driver thereof, and the driver of such vehicle when plying for hire thereof between sunset and sunrise, shall light and keep such lamps lighted.

42. The licensed proprietor or driver of every licensed hansom, cab, or buggy shall keep a lamp on each side thereof, and on the outside thereof, which shall be such and so placed as to appear white on the front and outsides, and red behind.

43. Any licensed proprietor of any one or more licensed vehicles may have a distinguishing light attached to each of such licensed vehicles, and a description thereof shall be inserted in his license, and no proprietor or driver of any other licensed vehicle shall use a similar distinguishing light.

44. Any person having engaged any licensed vehicle and not paying the charge so endorsed as aforesaid upon the license of such vehicle when demanded, shall, on conviction thereof, forfeit and pay the proprietor or driver of such vehicle such charge, together with such further sum for damages, costs, and expenses for loss of time or otherwise, as the convicting Justices shall in their discretion think proper.

45. No vehicle which shall be let to hire by special agreement only, or only bespoken at the stables or residence of its owner, and which shall never publicly ply for hire off the premises of its owner, shall be deemed a licensed vehicle within the meaning of these By-laws; nor shall the proprietor or driver of such vehicle be subject to the provisions thereof in any respect whatever.

46. For every offence against the provisions of these By-laws the offender shall be liable to and shall pay a penalty not exceeding ten pounds nor less than five shillings; and such penalty shall be recoverable before any two Justices in Petty Sessions, according to the provisions of the Act fourteen Victoria number forty-three and the Acts therein adopted.

SCHEDULE A.

A Requisition for License.

To the Borough Council of West Maitland.

I , residing in street, do hereby request that a license may be granted to me to within the said Borough.

Dated this day of , 188 .

SCHEDULE B.

License.

This to certify that is hereby licensed to a certain number , within the Borough of West Maitland, from the day of the date hereof to the thirty-first day of December next, subject nevertheless to all and every the By-laws, rules, and regulations of the said Borough in force relating to such licensed vehicle.

Given under the Common Seal of the Borough Council of West Maitland, this day of , 188 .

Mayor.

SCHEDULE C.

Rates and fares to be paid for any hansom cab or buggy in the Borough of West Maitland.

	s.	d.
For any time not exceeding one quarter of an hour, to carry two passengers if required by hirer	1	0
For every subsequent quarter of an hour or part thereof	1	0
But if engaged for more than one hour, then to be paid at the rate of ninepence for every additional quarter of an hour or part thereof.		

Vehicles to travel at a speed of not less than six miles an hour except when otherwise ordered by the hirer.

The drivers of such vehicles respectively shall be bound to take, if required, exclusive of the driver, two persons inside a hansom cab or buggy. The driver shall not be obliged to take any luggage exceeding fifty pounds in weight, being clean, and of such a description as may be placed inside or outside the vehicle without injuring the same, and the driver shall be entitled to claim one shilling for every additional fifty pounds weight, or portion thereof so carried; but the person hiring such vehicle shall be allowed *eighty-four pounds weight* of luggage when the number of persons is short of the number aforesaid. Whenever the number of persons carried shall exceed that named for each vehicle respectively, the driver shall be entitled to charge by time or distance, as the hiring may be, one-third more for each adult, or two children over five and under fifteen years of age.

Tolls to be paid by the hirer.

Half-fare, in addition to the ordinary fare after 10 p.m. and before 5 a.m.

SCHEDULE D.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF STRATHFIELD—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 11th August, 1886.

MUNICIPAL DISTRICT OF STRATHFIELD—BY-LAWS.

THE following By-laws, made by the Council of the Municipal District of Strathfield, under the "Municipalities Act of 1867," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

GEORGE R. DIBBS.

MUNICIPAL DISTRICT OF STRATHFIELD.—BY-LAWS.

1. That the following be and are hereby confirmed as the By-laws of the Council of the Municipal District of Strathfield.

Meetings of the Council.

Ordinary Meetings.

2. Unless otherwise ordered, the Council shall meet for the despatch of business on every alternate Tuesday, at the hour of 7·30 p.m., unless such day shall happen to be a public holiday; in the latter case the meeting shall be held on such day as the Mayor may appoint.

Election of Chairman in absence of Mayor.—Adjournment for want of quorum.

3. If at any meeting of the Council the Mayor be absent at the expiration of fifteen minutes after the time appointed for holding such meeting, the Aldermen then present shall proceed to elect from among themselves a Chairman for such meeting. Whenever there shall be an adjournment of any such meeting for want of a quorum, the names of the members present shall be taken down and recorded in the minute book.

Course of procedure.

4. The following shall be the course of procedure at such meetings, viz.:—

1. Confirmation of the minutes.
2. Reading and consideration of correspondence.
3. Presentation of petitions.
4. Reports from Committees.
5. Questions.
6. Special matters requiring immediate attention which may be brought under notice by the Mayor.
7. Consideration of tenders.

Business at Special Meetings.

5. At special meetings of the Council, the business, after the minutes shall have been read and verified, which shall be done in the same manner as at an ordinary meeting, shall be taken in such order as the Mayor or Alderman at whose instance the special meeting shall have been called may have directed.

Absence of proposed mover.

6. No motion of which notice shall have been entered on the business paper shall be proceeded with in the absence of the Alderman by whom such notice shall have been given, unless by some other Alderman producing a written authority for that purpose from such first-named Alderman.

Motion to be seconded.

7. No motion shall be discussed unless and until it be seconded.

Motion to be in writing, and not withdrawn without leave.

8. Every motion, notice of which has been given, shall be in writing, shall be signed by the mover; and no motion when seconded shall be withdrawn without leave of the Council.

Amendments may be moved.

9. When a motion shall have been moved and seconded, any Alderman shall be at liberty to move an amendment thereon; but no such amendment shall be discussed unless and until it be seconded.

Only one amendment at the time.

10. No second or subsequent amendment shall be taken into consideration until the previous amendment shall have been disposed of.

Petitions.

11. The Council may at any meeting resolve, without previous notice, that any petition be received, and that the same or any correspondence read be referred to a Committee for report, or that the requests contained therein be granted.

Mayor to preserve order.

12. The Mayor shall preserve order, and may at any time call to order any Alderman who may appear to him to be out of order.

Calls to order.

13. Any Alderman may at any time call the attention of the Mayor to any Alderman being out of order, or to any point of order.

Mayor's decision on points of order final.

14. Every point of order shall be taken into consideration immediately upon its arising, and the decision of the Mayor thereon shall be conclusive, except as hereinafter provided.

Power of Council as to laying down general rules, &c.

15. Any Alderman who is dissatisfied with the decision of the Mayor or Chairman on any such question of order or of practice may, by motion, on notice respectively worded, invite the Council to lay down a different rule or principle for the determination of any similar question of order or of practice which may hereafter arise. Any rule or principle thus laid down shall be binding upon all parties unless and until it be rescinded, but shall have no retrospective operation.

Mayor may take part in proceedings.

16. The Mayor may take part in all the proceedings of the Council or Committees thereof.

Questions put by Mayor.

17. The Mayor shall put all questions first in the affirmative and then in the negative (provided that where an amendment is moved to any motion the amendment shall be put first), and may do so as often as may be necessary to enable him to determine the sense of the Council thereon, and thereupon he shall declare his decision, which shall be final, unless a division be called for.

Mayor to decide as to pre-audience of Aldermen.

18. If two or more Aldermen rise to speak at the same time, the Mayor shall decide which of them shall be entitled to pre-audience.

No Alderman to speak twice on the same question or amendment, except in Committee.

19. No Alderman shall speak twice on the same question, unless in Committee or in explanation, where he shall have been misrepresented or misunderstood: Provided that any Alderman, although having previously spoken, may speak once on every amendment, and that the mover of every question shall always have a right of final reply.

No Alderman to make personal reflections.

20. No Alderman shall digress from the matter under discussion, or make personal reflections on, or impute motives to, any other Alderman.

No Alderman to speak more than fifteen minutes.

21. No Alderman shall speak on any motion or amendment for a longer period than fifteen minutes without the consent of the Council; and every Alderman shall stand when speaking and address the Chair.

Aldermen using offensive expressions to apologize.

22. When any member of the Council shall make use of any language or expression offensive or capable of being applied offensively to any Alderman, the member so offending shall be required to withdraw such language or expression and to make an apology satisfactory to the Council.

Debate may be adjourned.

23. A debate may be adjourned to a later hour the same day, or to another day.

Alderman adjourning debate entitled to precedence on resumption.

24. The Alderman upon whose motion any debate shall be adjourned shall be entitled to precedence on the resumption of the debate.

Adjournments.

25. Any motion for adjournment of the Council, if seconded, shall be immediately put without discussion; but if such motion be negatived it shall not be competent for any Alderman to make a similar motion until thirty minutes shall have elapsed.

Any Alderman may divide Council.

26. It shall be competent for any Alderman to divide the Council on any question, both in full Council and in Committee of the whole Council; and no Alderman shall leave his seat or place till the names of the Aldermen, and how voting, shall have been taken down by the Council Clerk or person officiating for him.

Divisions to be entered on minutes.

27. All divisions of the Council shall be entered on the minutes of the proceedings.

Questions to be read when required.

28. Any Alderman may require the question or matter under discussion to be read once for his information, and upon such request the question or matter under discussion shall be read.

Suspension of By-laws.

29. Any of these By-laws relating to or affecting proceedings at meetings of the Council may be suspended pro tempore, in cases of emergency, by resolution of the Council.

Rescinding motion already passed.

30. No motion to rescind any decision of the Council shall be entertained, except at a Council of the whole specially called for the purpose.

Standing and Special Committees.

Standing Committees.

31. There shall be a Committee of Works and Finance Committee. These Committees shall be re-appointed every year at the first meeting of the Council which shall be holden after the election of Mayor.

Committee of Works.

32. The Committee of Works shall have the general direction of all works ordered or sanctioned by the Council, and the general inspection of all streets, roads, ways, bridges, public reserves, and other places under the management of the Council. They shall also inquire and report from time to time upon such improvements, repairs, or other matters as they may think necessary, or as they may be directed by resolution of the Council to inquire and report upon.

Finance Committee.

33. The Finance Committee shall examine and check all accounts, and shall watch generally over the collection and expenditure of the Municipal revenues; they shall inquire and report from time to time as to all matters which they may consider to affect the finances of the Municipal District, and as to such matters or subjects of the like nature as they may be directed by resolution of the Council to inquire and report upon.

Rules to be observed in Committee.

34. The rules of the Council shall be observed in a Committee of the whole Council, except the rule limiting the number of times of speaking.

Report of Committee to be signed.

35. Every report of a Committee shall be signed by the Chairman thereof.

Protection of Funds and Records.

Member or officer of Council not to be surety.

36. In cases where surety is required by the Municipalities Act, it shall not be competent for the Council to accept as surety any of their members, or any person holding office under the Council.

Custody of records, seal, &c.

37. The common seal, and all charters, deeds, muniments, books, papers, and records of the Council shall be kept in the Council Chambers or office of the Council, in the custody of the Council Clerk, unless the Council shall otherwise order for any purpose; and the common seal shall not be used except with the signature of the Mayor and authority of the Council.

Records, &c., not to be defaced or altered.

38. Any person who shall deface, alter, or destroy, or attempt to deface, alter, or destroy any such common seal, charter, deed, muniment, book, paper, or record shall on conviction thereof forfeit and pay for the first offence a penalty not exceeding fifty pounds nor less than five pounds, and upon every subsequent conviction a penalty of not less than twenty pounds.

Nor removed.

39. Any person who shall remove or attempt to remove (except for the purpose of any legal proceedings) any seal, charter, deed, muniment, book, paper, or record from the Council Chamber, without leave from the Council first had and obtained, shall on conviction thereof forfeit and pay a penalty of not more than twenty pounds nor less than two pounds, and for every subsequent offence a penalty of not less than five pounds.

Expense of proposed works to be first ascertained.—Accounts to be examined by Finance Committee.

40. No work shall be undertaken until the probable expense thereof shall have been ascertained by the Council; and all accounts to be paid by the Council shall be examined by the Finance Committee and reported on by them before any warrant shall be issued for the payment thereof.

Outlay in urgent cases.

41. In cases of emergency arising between meetings of the Council, it shall be lawful for necessary works to be ordered without vote of the Council, viz.:—By the Mayor to the extent of five pounds; and with the consent of three Aldermen, any sum not exceeding twenty pounds.

Levying Rates, &c.

Due dates for rates.—Defaulters.

42. The rates and taxes levied by the Council shall be held to be due and payable on such day or days as the Council shall by resolution from time to time appoint. Every person not paying his or her rates or taxes at the office of the Council, or to the Council Clerk or other proper officer of the Council, within thirty days after any of the days so appointed for payment thereof, shall be deemed a defaulter: Provided that due notice of such rate shall have been given in manner as required by the Municipalities Act of 1867.

Council Clerk to furnish list of defaulters.

43. It shall be the duty of the Council Clerk to furnish the Mayor and Council, or any Committee as directed, with lists of all persons so in default.

Mayor to enforce payment.

44. It shall be the duty of the Mayor to cause such defaulters to be sued for the amount of such rates in any court of competent jurisdiction, or to issue distress warrants against all such persons, and to cause such warrants to be enforced.

Rates on damaged premises.

45. In the event of any premises being wholly or partially destroyed by fire or other accident, the Council shall have power to accept an equitable proportion of the assessed rates of such premises for the remainder of any Municipal year.

Streets and Public Places, &c.

New roads to be reported upon.

46. No new public road, street, way, park, or other place proposed to be dedicated to the public shall be taken under the charge and management of the Council until after such road, street, way, or park shall have been examined by a Committee of Works and reported upon to the Council by such Committee.

Plans of proposed new road, &c., to be deposited.

47. Whenever any proprietor or proprietors of land within the said Municipal District shall open any road, street, or way, or lay out any park or other place for public use or recreation, through or upon such land, and shall be desirous that the Council shall undertake the care and management of such road, street, way, park, or other place, he or they shall furnish the Council with a plan or plans, signed by himself or themselves, showing clearly the position and extent of such road, street, way, park, or other place as aforesaid; and he or they shall execute any instrument dedicating such road, street, way, park, or other place, as the Council may consider necessary.

Temporary stoppage of traffic for repairs, &c.

48. The Council may at any time cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same, or for any necessary purpose; and any person or persons offending against this by-law, either by travelling on such street, lane, or thoroughfare, or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds for every such offence.

No encroachment allowed on streets, &c.

49. Whenever any road, street, lane, or thoroughfare has been marked out, no house, shop, fence, or other structure shall be allowed (except as hereinafter mentioned) to project or encroach on any part thereof; and in order that the due alignment of the roads, streets, lanes, or thoroughfares within the said Municipal District shall be observed, and that no encroachment shall be made thereon, it shall not be lawful for any person, unless for any temporary or other purposes permitted by the Council, to erect or put up any building, erection, obstruction, fence, or enclosure, or make any excavation or hole on, under, or near such road, street, lane, or thoroughfare, unless due notice of the same shall have been given to the Clerk of the Council at least one week before any such building, erection, obstruction, fence or enclosure, excavation or hole as aforesaid shall be commenced to be erected, or put up, or made, and the assent of the Council first obtained; and in default of the same the person so offending shall forfeit and pay for every such offence a sum not exceeding five pounds nor less than forty shillings, and on every successive conviction for a similar offence shall forfeit and pay a penalty of not less than three pounds.

Obstructing public pathways.

50. If the owner or occupier of any land situate on the side of any street or road in this Municipal District shall permit any tree, shrub, or plant, kept for ornament or otherwise, to overhang any footpath or footway on the side of any such street or road, so as to obstruct the passage thereof, and on demand made by the Council shall not cut, lop, or cause to be lopped, all such trees, shrubs, or plants to the height of eight feet at the least, the said Council, by their servants, labourers, and workmen, may cut, or cause to be cut or lopped, all such overhanging trees, plants, and shrubs, and to remove or burn any portion of such trees, plants, or shrubs so cut or lopped, without being deemed a trespasser or trespassers; and in case any person or persons shall resist, or in any manner forcibly oppose the said Council, or their servants, labourers, or workmen, in the due execution of the powers given in this behalf by virtue of the Municipalities Act of 1867, every person so offending shall on conviction for every such offence forfeit and pay any sum not exceeding ten pounds.

Erection of awnings.

51. No person shall erect an awning in front of any house or shop without first making application to the Council; and any person so doing without authority shall be liable to a fine not exceeding five pounds, and have such awning removed.

Encroachments must be removed on notice.

52. The Inspector of Nuisances or other such officer or person may at any time, on the order of the Council, and upon due notice of thirty days, direct the removal of any building, fence, or other obstruction or encroachment in and upon any road, street, lane, or thoroughfare under the charge of the Council. Notice shall in this case be served either personally or at the usual or last known place of abode of the person to whom such obstruction or encroaching structure belongs, or who has erected the same or caused it to be erected.

Council may remove encroachments.

53. In any case where, after service of notice for the removal of any obstruction or encroachment, the person causing the same shall not remove it within a reasonable time, it shall be lawful for the Council to direct the removal of the same under the superintendence of its own proper officer, and at the cost of the person so offending, provided that the expenses thereby incurred shall in no case exceed the sum of ten pounds, or at the Council's option to proceed against the offender for breach of by-law, the penalty not to exceed twenty-five pounds nor be less than one pound, and in case of every successive offence the penalty, on conviction, not to be less than five pounds.

Or may proceed by action.

54. In every case where the obstruction or encroachment cannot be removed unless at a greater cost than ten pounds, it shall be open to the Council either to direct such removal and to pay all the costs thereof above ten pounds from the funds of the Council, or to proceed by action for trespass against the person causing such obstruction or encroachment, or to proceed as for a breach of such By-laws as aforesaid.

To apply also to obstructions by digging, &c.

55. The foregoing provisions shall be equally applicable to all obstructions by digging or excavation; and any person who shall wilfully obstruct or interfere with the Inspector of Nuisances, or other officer as aforesaid, or any person acting for or under him or either of them, in the exercise of any of the duties or powers by these By-laws imposed or cast on the said Inspector or officer, shall on conviction forfeit and pay a penalty of not less than two pounds nor more than twenty pounds.

Offences.—Nuisances.—General good Order of the Municipal District.

Damaging public buildings, &c.

56. Any person who shall damage any public building, wall, parapet, sluice, bridge, road, street, sewer, watercourse, or other property of the Municipal District, shall pay the cost of repairing the same; and if the same be wilfully done, shall also forfeit and pay a sum not exceeding twenty pounds nor less than five pounds.

Injuring or extinguishing lamps.

57. Any person who shall wantonly or maliciously break or injure any lamp or lamp-post, or extinguish any lamp set up for public convenience in the said Municipal District, shall, over and above the necessary expense of repairing the injury committed, forfeit and pay for such offence any sum not less than one pound nor more than five pounds.

Damaging trees.

58. Any person who shall wilfully and without the authority of the Council cut, break, bark, root up, or otherwise destroy or damage the whole or any part of any tree, sapling, shrub, or underwood growing in or upon any street or place under the management of the Council shall forfeit any sum not exceeding five pounds nor less than one pound.

Throwing dead animals, &c., into any watercourse, &c.

59. Any person who shall throw or cast any filth, rubbish, or any dead animal, or any animal with the intent to drown the same, into any watercourse, river, creek, or canal, or who shall permit or suffer slop, suds, night-soil, sewerage matter, or any filth of any kind to flow or be cast from his or her premises into any such watercourse, waterhole, river, creek, or canal, or who shall permit or suffer any such slop, suds, or filth to flow from his or her premises over any of the footways or streets of the Municipal District, or shall permit or cause, by means of pipes, shoots, channels, or other contrivances, night-soil, sewerage matter, slops, suds, or filth of any kind whatsoever to flow or be cast into any watercourse, waterhole, river, creek, or canal, or shall obstruct or divert from its channel any sewer or watercourse, river, creek, or canal, shall forfeit any sum not exceeding five pounds nor less than one pound, and shall, in addition to any such forfeiture, pay the cost of removing such filth or obstruction, or of restoring such watercourse or canal into its proper channel.

Noisome and offensive trades.

60. No person shall carry on any noisome or offensive trade within the said Municipal District so as to injure or be a nuisance, as hereinafter stated, to the inhabitants thereof.

Gas, vapour, smoke, &c.

61. Any manufacture, trade, calling, or operation in the conducting, following, or carrying on of which, or in consequence of, or in connection therewith, or from the premises where the same is conducted, followed, or carried on, any gas, vapour, or effluvia, or any large quantities of smoke shall be evolved or discharged, which gas, vapour, effluvia, or smoke shall be calculated to injure animal or vegetable life, or in any other way to injure or be a nuisance to the inhabitants of the said Municipal District, shall be considered a noisome and offensive trade within the meaning of these By-laws.

Inspector of Nuisances to inspect and report.

62. Upon complaint in writing by any householder that any noisome or offensive trade is being so followed, conducted, or carried on in the vicinity of his or her residence or property as to injure his or her health, or the health of any member of his or her family, or to be a nuisance to such householder and to his or her family, the Inspector of Nuisances, or any other person or persons appointed by the Council, shall make an inspection of the premises where such trade is alleged to be so conducted, followed, or carried on as aforesaid, and of the premises or property of the complainant, and shall inquire into the grounds of such complaint, and shall report thereon to the said Council; and if the said Council shall, on the consideration of such report, or after any such further inquiry as may be deemed necessary, be of opinion that the said complaint is well founded, and that any manufacture, trade, calling, or operation so complained of, and so being conducted, followed, or carried on as aforesaid, is a noisome or offensive trade within the meaning of these By-laws, notice shall be given to the person or persons conducting, following, or carrying on such trade to cease and discontinue the same within such reasonable time, not being less than two days nor more than seven days, as the said Council may direct, or so to conduct, follow, or carry on his, her, or their manufacture, trade, calling, or operation, as that within such reasonable time as aforesaid the same shall wholly or permanently cease to be noisome and offensive within the meaning of these By-laws, either to the said complainant or to any other resident within the said Municipal District; and if such trade shall not be discontinued as aforesaid, or shall not be so conducted as that it shall wholly cease to be noisome and offensive as aforesaid within the time named in such notice as aforesaid, any person conducting, following, or carrying on such trade as aforesaid shall for every such offence forfeit and pay a sum of not less than ten pounds nor more than fifty pounds.

Like proceedings to apply to any noisome trade about to be commenced.

63. The like proceedings shall be taken as aforesaid whenever there shall be a complaint as aforesaid that any manufacture, trade, calling, or operation is about to be commenced or entered upon which is likely to prove noisome and offensive within the meaning of these By-laws, save and except that the notice to be given as aforesaid shall be given to the person or persons about to commence or enter upon such manufacture, trade, calling, or operation, and shall require him, her, or them not to commence or enter upon the same, or to take such measures as shall effectually and permanently prevent the same from becoming noisome or offensive within the meaning of these By-laws to any resident within the Municipal District. And any person who shall in any case commence, enter upon, or continue any such manufacture, trade, calling, or operation, so as that the same shall be in any way noisome and offensive within the meaning of these By-laws, shall for every such offence forfeit and pay a sum of not less than ten pounds nor more than fifty pounds.

Service of aforesaid notice.

64. Service of such notice as aforesaid upon the occupier or owner of any premises or land wherein or whereon any such manufacture, trade, calling, or operation is being conducted, followed, or carried on, or is about to be commenced or entered upon, or at the last known place of abode of such occupier or owner, or upon any person on the said premises or land, shall be a good and sufficient service of such notice for all purposes of these By-laws; and every person who shall be actually engaged in superintending, directing, or managing, or who shall be in any other way actually engaged or employed in any such manufacture, trade, calling, or operation as aforesaid, shall be liable to be regarded and treated as a person conducting, following, or carrying on such manufacture, trade, calling, or operation within the meaning and for all the purposes of these By-laws.

Throwing filth on roadway, &c.

65. If any person shall in any street, road, lane, or public place throw, cast, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid, any ashes, rubbish, offal, dung, soil, dead animal, blood, or other filth, or shall kill slaughter, dress, scald, or cut up any beast, swine, calf, sheep, lamb, or other animal, in or so near to any of the said streets or roads as that any blood or filth shall run or flow upon or over, or be on any carriage or foot way, or shall run, roll, drive, draw, place, or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any footway, any waggon, cart, dray, sledge, or other carriage, or any wheelbarrow or truck, or any cask, or shall wilfully lead, drive, or ride any horse, or other beast upon any footway aforesaid, shall forfeit and pay a sum not exceeding five pounds nor less than one pound.

Damaging or pulling up alignment marks or posts.

66. Any person pulling down or pulling up, destroying, or injuring any alignment or other boundary marks or stones, notice-boards, public notices, or other erection on any reserve, public place, or road, without the authority of the Council, shall forfeit and pay any amount not exceeding ten pounds.

Placing goods, &c., on roadways, &c.

67. If any person shall set or place, or cause or permit to be set or placed, any stall, show-board, basket, or goods of any kind whatsoever, or shall hoop, place, wash, or cleanse, or cause to be hooped, placed, washed, or cleansed, any cask or vessels in or upon or over any road, footway, or public place within the said Municipal District, or shall set out, lay, or place, or shall cause or procure, permit, or suffer to be set out, laid, or placed, any coach, cart, dray, barrow, truck, or other carriage upon any footway, or if any person shall set or place, or cause to be set or placed in, upon, or over any of the said carriage or foot ways any timber, stone, bricks, lime, or other materials or things for building whatsoever (unless the same shall be enclosed as hereinafter directed), or any other matters or things whatsoever, or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal, or other things or matter whatsoever, from any house or premises over any part of such footways or carriage ways, or over any area of any house or premises, or any other matter or thing, from and on the outside or any part of any house or premises over or next to any such street or road, and shall not immediately remove all or any such matters or things, being thereto required by the Council or any officer thereof, and shall not continue and keep the same so removed, or if any person having, in pursuance of any such requisition as aforesaid, removed or caused to be removed, any such stalls, show-board, basket, goods, coach, cart, dray, barrow, truck, carriage, timber, stone, brick, lime, meat, offal, or other matters or things, and shall at any time thereinafter again set, lay, or place, expose, or cause, procure, permit, or suffer to be set, laid, placed, or exposed, the same or any of them, or any other article or thing whatsoever (save and except as aforesaid) in, upon, or over any of the carriage or foot ways of or next unto any streets or roads as aforesaid, in every such case every person so offending shall forfeit and pay a sum not exceeding forty shillings nor less than ten shillings.

Drawing or trailing timber, &c.

68. If any person shall haul or draw, or cause to be hauled or drawn, upon any part of any street, road, or public place, any timber, stone, or other thing otherwise than upon wheeled carriages, or shall suffer any timber, stone, or other thing which shall be carried principally or in part upon wheeled carriages to drag or trail upon any part of such street or public place to the injury thereof, or to hang over any part of such carriage so as to occupy or obstruct the street or road beyond the breadth of the said carriage, every such person so offending shall forfeit and pay for every such offence the sum of forty shillings over and above the damage occasioned thereby: Provided that such penalty and damages shall not together exceed the sum of ten pounds.

No turf, gravel, &c., to be removed from streets without leave, &c.

69. Any person who from any part of the road, street, thoroughfares, or public places shall remove or cause to be removed, any turf, clay, sand, soil, gravel, stone, or other material, without leave first had and obtained from the officers or persons having lawful charge of such roads, streets, thoroughfares, or public places, or who shall wantonly break up or otherwise damage any part of the said roads, streets, thoroughfares, or public places, shall on conviction forfeit and pay for every such offence any sum not exceeding five pounds nor less than five shillings, and for every subsequent offence shall forfeit and pay a sum of not less than one pound.

No driver to ride on vehicle without a person to guide his beasts (vehicle with reins excepted), or to go a distance from his vehicle, or drive on wrong side, &c.

70. If the driver of any waggon, dray, or vehicle of any kind shall ride upon the same in any street, road, or thoroughfare, not having some person on foot to guide the animals drawing the same (such vehicles as are drawn by horses driven or guided by reins only excepted), or if the driver of any vehicle whatsoever shall wilfully be at such a distance from such vehicle or in such a situation whilst it shall be passing upon such street, road, or thoroughfare that he cannot have the direction or government of the horse or horses or cattle drawing the same, or if the driver of any waggon, cart, dray, coach, carriage, or other vehicle shall not drive on the left or near side of any such road, street, or thoroughfare, or if any

person shall in any manner wilfully prevent any other person or persons from passing him or her on any vehicle under his or her care upon such street, road, or thoroughfare, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any person, or vehicle, or carriage in or upon the same, every such driver or person so offending shall forfeit and pay for every such offence any sum not exceeding forty shillings nor less than ten shillings.

As to driving or riding improperly through streets.

71. Any person who shall ride or drive through any road, street, or public place negligently, carelessly, or furiously, or so as to endanger the life or limb of any person, or to the common danger of the passengers, or who shall not carry a light upon any vehicle after an hour after sundown to daylight, shall forfeit and pay a sum not exceeding five pounds.

Affixing placards on walls, and chalking thereon.

72. It shall not be lawful for any person to paste or otherwise affix any placard or other paper upon any wall, fence, house, or building, nor to deface any such wall, fence, house, or building by chalk, paint, or in any other manner, unless with the consent of the owner thereof. Any person who shall be guilty of any such offence shall forfeit and pay a sum not exceeding forty shillings.

Cattle, &c., not to wander about streets, &c.

73. It shall not be lawful for any person to suffer any kind of cattle, horse, ass, mule, sheep, swine, or goat belonging to him or under his charge to stray or go about, or to be depastured in any road, street, or public place in this Municipal District; and any person who shall so offend shall forfeit and pay in respect of every such offence a sum not exceeding forty shillings nor less than five shillings.

As to private avenues.

74. Any owner or occupier of any house, place, or land within the said Municipal District who shall neglect to keep clean all private avenues, passages, yards, and ways within the said premises, so as by such neglect to cause a nuisance by offensive smell or otherwise, or who shall allow stagnant water to become a nuisance on his land, shall on conviction forfeit and pay a sum not exceeding forty shillings for every such offence; and upon the reasonable complaint of any householder that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances, or any other person appointed by the Council, shall make an inspection of the premises complained of, and the officer of the Council shall have full power, without any other authority than this by-law, to go upon such premises for the aforesaid purpose.

Placing dead animals on premises.

75. Any person who shall place, or cause or suffer to be placed, upon any land or premises within the Municipal District, any dead animal, blood, offal, night-soil, or any other offensive matter, so as to become a nuisance to the inhabitants thereof, shall on conviction suffer and pay a penalty not exceeding five pounds nor less than ten shillings for every such offence.

Allowing dead animals to remain on premises

76. Any occupier or owner of any land or premises who shall suffer or permit any dead animal, blood, offal, night-soil, or any other offensive matter to remain upon the said land or premises after notice shall have been given to remove the same, shall be subject to a penalty not exceeding two pounds nor less than ten shillings for every day that the same shall so remain.

No open closet or cesspit to exist after expiration of three months

77. After the expiration of three months from the date of the passing of these By-laws, no person or persons shall be permitted to have on his, her, or their premises any open closet or cesspit for the deposit of fœcal matter; and any person or persons allowing any such closet or cesspit to remain, after receiving twenty-eight days' notice to remove the same, shall forfeit a sum not exceeding five pounds nor less than one pound; and after such conviction, if such open closet or cesspit be not removed within a further period of fourteen days, shall upon conviction forfeit a further sum not less than five shillings nor more than two pounds for every day that the same shall remain unaltered or unremoved.

Pans for closets.

78. All closets shall be supplied with one or more iron pans with two side handles or one over handle, and shall not be more than fourteen inches in depth and not more than fourteen inches in diameter, and shall be kept in good order to the satisfaction of the Inspector of Nuisances. Breach of this By-law to carry a penalty of not less than ten shillings and not more than forty shillings.

Closets to be approved of by Council's officer

79. No person shall erect, or commence to erect, any closet, or to form, excavate, or make any cesspit, except in such place or position as shall be approved of by the Inspector of Nuisances or other officer of the Council, and the plans and dimensions of same submitted to the Council for approval.

Removal of night-soil.

80. It shall not be lawful for any person or persons to drive, or cause to be driven, any cart or carriage of any kind with any night-soil, ammoniacal liquor, slop, urine, or channel dirt, or filth, in or upon or near to any of the said streets, roads, or other public places; and in order to prevent nuisances it shall not be lawful for any person to deposit night-soil, ammoniacal liquor, or other offensive matter nearer to any street, road, or dwelling-house than shall be directed by the said Council or its officer; and all night-soil and other offensive matter shall be removed within the hours hereinafter prescribed, in properly covered and water-tight carts or other vehicles; and no vehicles used for this purpose shall be allowed to stand on any premises nearer to any street, road, or dwelling-house than shall be directed by the said Council or its officer; and every person offending against this by-law shall, for every such offence, forfeit and pay a sum not exceeding five pounds nor less than ten shillings.

Hours for removing night-soil, &c.

81. If any person shall take away night-soil from any house or premises within the said Municipal District, or shall come with carts or carriages for that purpose, except within the hours of ten at night and five in the morning, or if any person or persons shall cast or permit to leak or slop out of any cart or tub, or otherwise, any night-soil in or near any of the streets or public places, he shall forfeit and pay a penalty of five pounds for every such offence; and in case the person or persons so offending cannot be found, then the owner or owners of such cart, carriage, or other vehicle employed in and about emptying and removing such night-soil, and also the employer or employers of the persons so offending, shall be liable to and forfeit such penalty as aforesaid.

Discharging fire arms, &c.

82 Any person who shall discharge any firearms without lawful cause, or let off any fireworks or any other explosive matter in or near to any road or street, shall forfeit and pay a sum not exceeding five pounds nor less than five shillings.

No rock to be blasted without notice to the Council, &c.

83. Any person who shall be desirous of blasting any rock within the distance of one hundred feet of any dwelling-house, street, road, or other public place shall give forty-eight hours' notice to the Council or any Alderman thereof, who shall appoint a time when the same may take place, and give such other directions as they or he may deem necessary for the public safety; and if any person shall blast, or cause to be blasted, any rock within the limits aforesaid, without giving such notice, or shall not conform to the directions given to him by the said Council, he shall forfeit and pay for every such offence a sum not exceeding five pounds nor less than five shillings.

Cellars or openings beneath footpaths prohibited.

84. It shall not be lawful for any person to make any cellar, or any opening, door, or window, in or beneath the surface of the footway of any road, street, or public place within the said Municipal District except by permission of the Council; and if any person shall so offend he shall forfeit and pay any sum not exceeding five pounds over and above the expense of remedying or removing any such cellar, opening, door, or window, such expense to be assessed and allowed by the convicting Justice or Justices: Provided that such expense and penalty shall not exceed fifty pounds.

Wells to be covered over, &c.

85. Every person who shall have a well between his dwelling-house or the appurtenances thereof and any public place, road, street, or footway within the limits of the said Municipal District, or at the side of such public place, road, street, or footway, or in any yard or place open and exposed to such public place, road, or footway, shall cause such well to be securely and permanently covered over; and if any person having such a well as aforesaid shall fail to cover and secure the same within forty-eight hours after notice in writing shall have been given him or her by any officer of the said Council, or shall have been left at such person's usual or last known abode, or at the said premises, in the manner and with such materials as the Council or its officer shall direct, and to their satisfaction, such person shall forfeit and pay a sum not exceeding five shillings for every day that such well shall remain open or uncovered contrary to the provisions hereof: Provided that, with respect to wells or underground tanks open at the time when this By-law shall come into operation, such penalty shall not be recoverable if the same be properly covered in one month thereafter.

Various obstructions and annoyances.

86. Every person who, in any street, or other place or passage within the said Municipal District, shall commit any of the following offences shall on conviction for any and every such offence forfeit and pay a penalty of not more than two pounds:—

Every person who shall hoist, or cause to be hoisted, or lower, or cause to be lowered, goods of any description from any opening in any house fronting any street or public place, and close to the footway thereof, without sufficient and proper ropes and tackling.

Every person who shall carry or convey, or cause to be carried or conveyed, in any street or public place, the carcass or any part of the carcass of any newly-slaughtered animal, without a sufficient and proper cloth covering the same for the concealment of public view, or shall hawk or carry about butcher's meat for sale without covering the same as aforesaid.

Every person who shall place any line, cord, or pole across any street, lane, or passage, or hang or place clothes thereon to the danger or annoyance of any person.

Every person who shall, within the distance of one hundred yards from any dwelling-house, burn any rags, bones, or cork, or other offensive substance (garden refuse excepted), to the annoyance of any inhabitant.

Every person who shall be the keeper of or have any dog or other animal which shall attack or endanger the life or limb of any person in any street or other public place within the said Municipal District.

Every person or persons who shall persist in playing in a public place any musical instrument or instruments to the annoyance of any ratepayer who may object to it.

Water from roofs.

87. Every owner or occupier of any dwelling-house, shop, or other building who shall permit rain-water to fall from any roof, balcony, or other projection upon any street, road, lane, or footway, or shall cause or permit any such roof or rain-water to be discharged by any pipe upon any such street, road, lane, or footway shall, if such nuisance be not abated within seven days after notice to abate the same shall have been given by the Council, forfeit and pay for every such offence a sum not exceeding five pounds nor less than one pound.

Drains to footpaths.

88. No surface drain shall be made in any footpath, nor any pipes laid under or across the same, without the authority of the Council; and no such pipe or drain shall be used for the discharge into any street or roadway of any offensive liquid or matter of any kind whatsoever; and any person who shall so offend shall forfeit and pay a sum not exceeding five pounds nor less than ten shillings.

Drains for discharge of surface-water from land.

89. Every owner or occupier of land so situated that surface or storm water from or upon the same shall overflow, or shall tend naturally, if not otherwise discharged, to overflow any road, lane, or footway shall, within seven days next after the service of notice by the Council, abate such nuisance where possible; and in default of compliance with any such notice within the period aforesaid, such owner or occupier shall forfeit any sum not exceeding five pounds.

Natural watercourses.

90. Any person who shall close or intercept any natural watercourse, by building or otherwise, shall provide another outlet for the surface-water with pipes or sewers of a size and in a manner to be approved by the Council; and any person failing to comply with the provisions of this By-law shall forfeit and pay a sum not exceeding twenty-pounds nor less than one pound.

Preventing and extinguishing Fires.

Fires or combustible material, &c.

91. Every person who shall place, or knowingly permit to be placed, in any house, yard, workshop, out-offices, or other premises, fire, gunpowder, or combustible or inflammable article of any kind, in such a manner as to endanger contiguous buildings (except with the consent of the owners and occupiers thereof), shall on conviction of every such offence forfeit and pay a penalty of not more than five pounds nor less than one pound, and shall forthwith remove such fire, gunpowder, or combustible or inflammable article; and every such person who shall suffer any such fire, gunpowder, or combustible or inflammable article to remain as aforesaid for forty-eight hours after any such conviction shall be deemed guilty of a further offence against this By-law.

Water Supply.

Polluting water, reservoirs, &c.

92. Whosoever shall bathe in any stream, reservoir, conduit, aqueduct, or other waterworks belonging to or under the management of the Council, or shall wash, cleanse, throw or cause to enter therein any animal, whether alive or dead, or any rubbish, filth, or thing of any kind whatsoever, or shall cause, or permit, or suffer to run or to be brought therein, the water of any sink, sewer, drain, engine, or boiler, or other filthy, unwholesome, or improper liquid, or shall wash any clothes at any public fountain or pump, or in any such stream, reservoir, conduit, or other waterworks as aforesaid, or shall do anything whatsoever whereby any water or waterworks belonging to the said Council, or under their management or control, shall be fouled, obstructed, or damaged, shall, for the first offence, forfeit and pay any sum not exceeding five pounds; for a second offence any sum not less than one pound, nor more than ten pounds for a third and every subsequent offence any sum not less than five pounds nor more than twenty pounds.

Damming-up water without consent.

93. Whosoever shall, without the consent in writing of the Council, construct or place any dam or embankment in or across any river, creek, or natural watercourse shall forfeit and pay any sum not less than one pound nor more twenty pounds, and shall remove such dam or embankment within a reasonable time after such conviction, or shall forfeit and pay any sum not less than five pounds nor more than fifty pounds; and if, after such second conviction, such person shall fail to remove such dam or embankment within a further reasonable time, he shall forfeit and pay a sum of not less than twenty pounds nor more than fifty pounds; and if, within a reasonable time after a third or any further conviction, he shall fail to remove any such dam or embankment, he shall for every such offence forfeit and pay a sum of fifty pounds.

Supply of water in time of drought.

94. In time of drought or scarcity of water the Council may, by resolution to that effect, cause water to be supplied to the inhabitants of the Municipal District by water-carts or otherwise, and shall, by such resolution as aforesaid, fix a price to be charged for water so supplied.

Conduct of Business.

Motions for rescission of previous orders, &c.

95. Whenever a motion for the rescission of any order, resolution, or vote of the Council shall have been negatived, no other motion to the same effect shall be permissible until a period of three months shall have elapsed from the time of negativing such first-mentioned motion: Provided that nothing herein contained shall be held to prohibit the reconsideration and amendment of any proposed By-law which may have been submitted to the Governor for confirmation, and may have been remitted to the Council with suggested amendments of the same, or the passage, after due notice, as hereinafter provided, and in due course of law, of any By-law for the repeal or amendment of any other By-law.

Mode of proceeding in cases not provided for.

96. In all cases not herein provided for, resort shall be had to the rules, forms, and usages of the Legislative Assembly of New South Wales, so far as the same are applicable to the proceedings of the Council.

PART 2.

Collection and enforcement of Rates.—Rates under section 164 of the 31st Victoria No. 12 to be collected half-yearly.

Times and modes of collection.

1. All rates levied or imposed by the Council under the provisions of section 164 of the Municipalities Act of 1867, and for the purpose mentioned in the said section, shall be collected by half-yearly instalments. Each such instalment shall, as to every such rate and every such instalment thereof, be held to be due and payable on and after such days as the Council shall by resolution appoint at the time of making or imposing such rate.

Special Rates.

2. All rates levied or imposed by the Council under sections 165, 166, and 167 of the Municipalities Act of 1867, and for the purposes mentioned in the sections, or under the provisions of any of the said sections, or for any of the purposes mentioned therein, shall be collected in such manner, and shall be held to be due and payable on and after such day or days as the Council may by resolution at the time of making or imposing of such rates, or any of them, have appointed.

Office hours.

3. All rates shall be paid at the Council Chambers during the hours appointed by the Council for that purpose.

Defaulters.

4. It shall be the duty of the Council Clerk to furnish the Mayor with a list of the names of all persons whose rates are unpaid at the expiration of the time fixed for the payment of the same as aforesaid.

Mayor to enforce payment.

5. It shall be the duty of the Mayor to issue distress warrants against all such persons, and to cause such warrants to be enforced, or to cause such defaulters to be sued for the amount of such rates in a Court of Petty Sessions for Small Debts or District Court.

Bailiff.

6. A Bailiff shall, when found necessary, be appointed by the Mayor.

Bailiff's sureties.

7. The Bailiff shall find two sureties to the satisfaction of the Mayor to the extent of twenty-five pounds each for the faithful performance of his duty.

Duty of Bailiff.

8. It shall be the duty of the Bailiff to make all levies by distress for the recovery of rates, in the manner hereinafter provided.

Warrant of distress.

9. All levies and distresses shall be made under warrant, in the form of Schedule A hereto, under the hand of the Mayor or any Alderman who may for the time being be duly authorized to perform the duties of that office.

Distress and sale, &c.

10. If the sum for which any such distress shall have been made shall not be paid, with costs, as hereinafter provided, on or before the expiration of five days, the Bailiff shall sell the goods as distrained, or a sufficient portion thereof, by public auction, either on the premises or at such other place within the said Municipal District as the Bailiff may think proper to remove them to for such purpose, and shall pay over the surplus (if any) that may remain after deducting the amount of the sum distrained for and costs, as hereinafter provided, to the owner of the goods so sold, on demand of such surplus by such owner.

Inventory.

11. At the time of making a distress the Bailiff shall make out a written inventory in the form of Schedule B hereto, which inventory shall be delivered to the occupant of the land or premises, or the owner of the goods so distrained, or to some person on his or her behalf resident at the place where the distress shall be made; and in case there shall be no person at such place with whom such inventory can be left as aforesaid, then such inventory shall be posted on some conspicuous part of the land or premises on which the distress is made; and the Bailiff shall give a copy of the inventory to the ratepayer, on demand, at any time within one month after such distress.

Goods may be impounded.

12. The Bailiff, on making a distress as aforesaid, may impound or secure the goods or chattels so distrained, of what nature or kind soever, in such place or places or in such part of the land or premises chargeable with rates as shall be most fit and convenient for this purpose; and it shall be lawful for any person whomsoever, after the expiration of the five days as hereinbefore mentioned, to come and go to and from such place or part of the said land or premises where such goods or chattels shall be impounded and secured as aforesaid, in order to view and buy and in order to carry off and remove the same on account of the purchaser thereof.

Owner to direct order of sale.

13. The owner of any goods or chattels so distrained upon may, at his or her option, direct and specify the order in which they shall be successively sold; and the said goods or chattels shall in such case be put up for sale according to such direction.

Proceeds of distress.

14. The Bailiff shall hand over to the Council Clerk all proceeds of every distress within forty-eight hours after having received the same.

Costs.

15. There shall be payable to the Bailiff for the use of the Council, for every levy and distress made under this By-law, the costs and charges in the schedule hereunto annexed marked C.

SCHEDULE A.

Warrant of distress.

I, , Mayor of the Municipal District of Strathfield, do hereby authorize you, , Bailiff of the said Municipal District, to distrain the goods and chattels in the dwelling-house (or in and upon the land and premises) of , situated at , for , being the amount of rates due to the said Municipal District to the day of , for the said dwelling-house (or land and premises as the case may be) and to proceed thereon for the recovery of the said rates according to law.

Dated this day of , 188 .

Mayor.

SCHEDULE B.

Inventory.

I have this day, in virtue of the warrant under the hand of the Mayor of the Municipal District of Strathfield, dated , distrained the following goods and chattels in the dwelling-house (or in and upon the land and premises) of , situate at , within the said Municipal District, for , being the amount of rates due to the said Municipal District to the day of , 188 .

Dated this day of , 188 .

Bailiff.

SCHEDULE C.

Costs.	£.	d.
For every warrant of distress	2	0
For serving every warrant and making levy where the sum is not more than £20.....	2	0
Above that sum in addition for every £1	0	1
For making and furnishing copy of inventory	2	0
For man in possession, each day or part of day.....	5	0
For sale, in commission and delivery of goods, per £ on proceeds of the sale	1	0

The foregoing By-laws were passed at a Meeting of the Strathfield Municipal Council, held on the first day of December, one thousand eight hundred and eighty-five.

(L.S.) GEO. HARDIE,
Mayor.

F. G. BENNETT,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF HAY—BY-LAW.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 20th September, 1886.

MUNICIPAL DISTRICT OF HAY.—BY-LAW.

THE following By-law, made by the Council of the Municipal District of Hay, for regulating driving round corners of streets, roads, and lanes within the Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the "Municipalities Act of 1867."

GEORGE R DIBBS.

BY-LAW TO REGULATE DRIVING ROUND CORNERS—MUNICIPAL DISTRICT OF HAY.

THE driver of every cart, carriage, dray, wagon, coach, or any other vehicle, whether licensed, public, or private, shall cause the animal or animals drawing the same to proceed at a walking pace around the corners of any streets, roads, or lanes for a distance equal to twenty feet from the corner of such street, road, or lane to a distance of twenty feet past such corner, and on or across any footway. Every person guilty of a breach of this By-law shall be liable to a penalty of not more than £5 nor less than 5s.

Made and passed by the Council of the Municipal District of Hay, under the "Municipalities Act of 1867," at its ordinary meeting held on Thursday, 24th June, 1886.

MUNICIPALITIES.

(BOROUGH OF SINGLETON—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 1st October, 1886.

BOROUGH OF SINGLETON.—BY-LAWS.

THE following By-laws made by the Council of the Borough of Singleton, under the "Municipalities Act of 1867," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

GEORGE R. DIBBS.

BOROUGH OF SINGLETON.

AMENDED BY-LAWS of the Borough of Singleton, under the provisions of the "Municipalities Act of 1867."

By-laws repealed.

By-laws numbered 105, 120, 132, and 133, in the code of By-laws made and passed by the Municipal Council of Singleton, on the 9th June, 1880, are hereby repealed.

Lights to be placed on vehicles.

140. Every person driving any vehicle within the Borough, between sunset and sunrise, shall carry two lights, one on each side of the outside of such vehicle, in a conspicuous place; and every person riding on a bicycle or tricycle as aforesaid shall carry a conspicuous light attached thereto. Any one offending against this By-law shall be liable to a penalty not exceeding one pound nor less than two shillings and sixpence.

Driving and riding round street corners.

141. Any person who shall ride on horseback or on any bicycle or tricycle or drive in a vehicle round the corners of any street within the Borough at a pace faster than a walk shall on conviction forfeit and pay any sum not more than one pound nor less than two shillings and sixpence.

Loitering &c. on streets.

142. All persons standing, laying down, kneeling down, or loitering upon any of the footways, carriageways, or other public places in the Borough, to the inconvenience of the passers-by, or in any way either singly or collectively interrupting the traffic, who shall not discontinue to do so on being required by any officer of the Council of the Borough or by any police constable, shall be liable to a penalty not exceeding two pounds no less than five shillings.

Licensing vehicles, carts, and timber carriages.

143. All owners of vehicles plying or carrying passengers, goods, or other materials for hire, all water, firewood, and coal carters, and all owners of vehicles used for selling or hawking vegetables and fruit in the Borough shall be licensed by the Council, and the license fee shall be at the rate of seven shillings and sixpence per wheel per annum.

144. The owner of every timber-carriage or vehicle used for that purpose, or dray attached as a substitute for the conveyance of timber, using the streets of the Borough with such timber-carriage, vehicle, or dray as aforesaid, for the conveyance of timber in logs or otherwise, shall be licensed by the Council, and the license fee shall be at the rate of ten shillings per wheel per annum.

145. The owners of all vehicles, carts, water-carts, and timber-carriages licensed under the foregoing By-laws numbered 143 and 144 respectively shall have their names and places of abode painted in legible letters at least two inches high and proportionately broad, in white letters on a black ground, on the off side of each such vehicle, cart, water-cart, and timber-carriage respectively. All such licenses shall be issued for a period of twelve months terminable on the 30th June, in each year; and every owner who shall omit or fail to comply with the provisions of this or any of the foregoing By-laws numbered 143 and 144 respectively shall forfeit a sum not exceeding five pounds nor less than two pounds.

146. The word "vehicle" in any of the foregoing By-laws shall mean and apply to any omnibus or other conveyances carrying passengers, cart, van, wain, waggon, or dray used for any of the purposes mentioned therein.

Parks and Recreation Grounds.

147. No person shall climb any of the trees or climb or jump over the seats or fences, or shall lie or stand on any of the seats therein.

148. No person shall cut, break, or deface any of the trees, shrubs, plants, seats, gates, posts, or fences, or write thereon, or shall affix any bill or stencil mark to any tree, seat, gate, post, fence, wall, pillar, or to any building or other erection or on any pavement or footway therein

149 No person shall walk on the grass edging bordering any path therein.

150. No person unless authorized by the Borough Council shall offer or expose any article for sale therein.

151. No person shall engage in or train for any race or game, or throw any stone or other missile, or deposit therein any bottle, broken glass, fruit skins, bones, paper, cast off clothing, or litter of any kind; and no person shall light fires therein or annoy visitors.

152. No person in a state of intoxication or of reputed bad character shall enter or remain therein, and no person shall behave in a disorderly or offensive manner, or use any bad language, or commmit any act of indecency therein.

153 No person shall depasture any horses, cattle, sheep, or stock of any kind therein without proper authority; and no dogs shall be admitted therein.

154. All goats or poultry found therein may be destroyed by any officer of the Council or police constable.

155. No public meeting or assemblage for any purpose shall be permitted therein without the consent of the Singleton Borough Council, in writing, having been obtained previously, and all persons taking part in any such meeting or assemblage without such written consent as aforesaid being first had and obtained may be at once removed therefrom by any officer of the Council or police constable, and shall further be liable to the penalty hereinafter mentioned.

156. The foregoing By-laws numbered 147, 148, 149 150, 151, 152, 153, 154, and 155 shall be applicable to all Parks and Recreation Grounds under the control and management of the Singleton Borough Council; and every person committing of breach of the aforesaid By-laws shall be liable to a penalty a five pounds nor less than two pounds.

Made and passed by the Municipal Council of Singleton, this tenth day of June, in the year one thousand eight hundred and eighty-six.

C. POPPENHAGEN, Council Clerk. (L.S.) F. KING, Mayor.

1885-6.

NEW SOUTH WALES.

MUNICIPALITIES.

(MUNICIPAL DISTRICT OF TAREE—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 158.

Colonial Secretary's Office,
Sydney, 14th October, 1886.

MUNICIPAL DISTRICT OF TAREE.—BY-LAWS.

THE following By-laws, made by the Council of the Municipal District of Taree, under the "Municipalities Act of 1867," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

GEORGE R. DIBBS.

BY-LAWS FOR THE MUNICIPAL DISTRICT OF TAREE, 1885.

BY-LAWS made and passed by the Municipal Council of Taree for regulating the proceedings of the Council, the duties of their officers and servants, for compelling residents to keep their premises clean, and generally for the proper government of the Municipality, in accordance with the requirements of "Municipalities Act of 1867."

1. The Council shall meet for the despatch of business at the hour of 7 p.m. on every alternate Wednesday, unless such day shall happen to be a public holiday; in the latter case, the meeting shall be held on such other day as the Mayor may appoint.

2. If the Mayor shall be absent at the expiration of twenty minutes after the time appointed for the holding of any meeting, the Aldermen present shall choose a Chairman: Provided always that if the Mayor shall afterwards attend such Alderman shall leave the chair to be taken by the Mayor.

3. Whenever any meeting shall lapse, or be adjourned for want of a quorum, the names of the members present shall be recorded by the Council Clerk.

4. The business of each ordinary meeting shall be transacted in the following manner, viz.:—

1. Reading and confirming minutes of previous meeting or meetings.
2. Petitions (if any) to be presented and dealt with.
3. Correspondence to be read and dealt with.
4. Reports from Committees and minutes from the Mayor to be presented and ordered upon.
5. Questions as to matters under the jurisdiction or within the official cognizance of the Council to be put and replied to.

Motions on notice to be dealt with in their respective order.

Orders of the day, which shall comprise all business set down for the day by order of any previous meeting or necessarily arising out of the proceedings of a former meeting. The Council may, by resolution, take any particular matter out of the regular order on the business paper.

Power to suspend By-laws.

5. The Council shall have power to suspend, pro tem., one or more of the By-laws: Provided that no such suspension shall be allowed for the purpose of voting money, and that two-thirds of the members present consent.

Postponement of debate on motion.

6. Any debate or order of the day when called on may be postponed to another time to be duly specified: Provided that no discussion shall be allowed upon such motion for adjournment, and the Alderman upon whose motion any debate shall be adjourned shall be entitled to open the debate on resumption.

Notices of motion, &c., to be numbered as received, and preserved until matter disposed of.

7. All notices of motion, &c., for consideration at general meetings shall be delivered to the Council Clerk at least four days before such meeting, in writing, and shall be numbered by him as they are received, and entered on the business paper according to their number; and each notice shall be preserved by such Clerk until after the matter to which it relates shall have been disposed of: Provided, however, that the person giving or forwarding any such notice of motion, &c., shall be at liberty to withdraw the same at any time before the making-up of the business paper.

Motions to be in writing and seconded.

8. All resolutions proposed and all amendments shall be submitted in writing, and no motion or amendment shall be discussed unless and until it be seconded.

Motions not to be withdrawn.

9. No motion, of which notice has been given, shall be withdrawn if any Alderman object; and if any Alderman who has given notice of motion fail or decline to move it, the Mayor or any other Alderman may move the same.

Questions may be put.

10. No question shall be put to the Mayor when in Council requiring the production of papers, or which cannot be replied to without reference to books or papers, unless twenty-four hours notice in writing shall have been given thereof to the Council Clerk.

Amendments, and order of.

11. When any motion of Council shall have been made and seconded, any Alderman may move an amendment thereon; and if an amendment be carried, the question as amended thereby becomes itself the question before the Council, whereupon any further amendment upon such question may be moved. If any amendment shall be negatived, then a further amendment may be moved to the question which such first-mentioned amendment was moved, and so on: Provided that not more than one question and one proposed amendment thereof shall be before the Council at any one time.

Fixing salaries.

12. When any motion or amendment relates to the fixing of salaries or rates or other matters of finance, the lowest sum shall be put first, then the next lowest, and so on to the highest.

Motions for adjournment.

13. Any motion for adjournment shall be put immediately without discussion. If such motion be negatived, the business then under consideration or the next in order on the business paper shall be discussed before any notice for adjournment may be moved.

Divisions.

14. Any Alderman may call for a division; in such case the question shall be put first in the affirmative and then in the negative, and the Aldermen shall vote by show of hands, and the names and votes of the Aldermen present shall be recorded; and any Alderman present when a division is called for who shall not vote (not being disabled by law for so doing) shall be liable for every such offence to a penalty of ten shillings.

Motions that would rescind.

15. No motion, the effect of which if carried would be to rescind any resolution passed by the Council during the current Municipal year, shall be entertained unless at a special meeting of the Council called for that purpose; and no such motion, if negatived by the Council at such special meeting, shall be again entertained during the same Municipal year.

Aldermen not to speak more than ten minutes.

16. No Alderman shall speak twice on any motion or amendment without the consent of the Council, except when in Committee or in explanation, where he shall have been misrepresented or misunderstood. The mover of every question shall have the right of reply: Provided that no Alderman shall speak upon any motion or amendment for a longer period than ten minutes.

To stand when speaking.

17. Every Alderman shall stand when speaking, unless prevented by bodily infirmity, and shall address the chair.

Privilege of Mayor or Chairman.

18. The Mayor or Chairman shall have the same privilege as any other Alderman in making or seconding a motion, and have the right of speaking on any subject or amendment introduced. The Mayor or Chairman shall rise when so speaking, but shall be considered as still presiding.

Offensive personal statements.

19. No Alderman shall make offensive personal reflections upon, or impute discreditable motives to, any other Alderman. Any Alderman so offending shall immediately, upon being thereto required by the Mayor or presiding Alderman, withdraw the offensive expressions and retract any such imputation of motive, and make an apology satisfactory to the Council. Any Alderman declining so to apologize and to withdraw the offensive expressions or to retract the imputation of motive shall be liable on conviction to a fine or penalty of not less than one pound nor more than five pounds for the first offence, and on a second conviction for a like offence he shall be liable to a fine or penalty of not less than two pounds. Any Alderman may move without notice that the offensive words be taken down, and when this has been done it shall be prima facie evidence of such words having been used.

Committee of the Council.

20. The rules of the Council shall be observed in Committee of the Whole, except the rule as to standing and that limiting the number of times of speaking. It shall be competent for any Alderman to move that any subject matter, motion, or order of the day be considered in committee, and should the Council so decide that such business be considered in Committee, the Council as may thereupon be decided, may go into Committee or otherwise.

Points of order.

21. Any Alderman may at any time call the attention of the Mayor or Chairman to any Alderman being out of order, and every point of order shall be taken into consideration immediately upon its arising, and the decision of the Mayor or Chairman thereon shall be conclusive.

Speaking.

22. Any Alderman who has moved any motion or amendment shall be considered to have spoken thereon, but no Alderman who shall have seconded any such motion or amendment without any further observation than that he seconded the same shall be at liberty to speak on such motion or amendment.

Petitions.

23. Any Alderman presenting a petition shall satisfy himself that the wording thereof is respectful and in order. All petitions shall be received only as the petitions of the persons signing the same; and no debate shall take place upon the presentation of a petition until notice has been given in the usual manner.

Committees.

24. There shall be three Standing Committees—the Finance, Improvement or Works, and By-law Committees; and each such Committee shall consist of three Aldermen, and may be called together at any time by direction of any one member of such Committee.

Reports from Committees.

25. All reports upon Standing Committees to be presented in writing and signed by the chairman or any two members of such Committee. The Mayor shall have the right of directing the attention of the Council to any matter or subject within its jurisdiction by a minute in writing.

Works and tenders.

26. Works undertaken by the Council and estimated to cost over ten pounds to be let by tender. Estimates of the cost of all works determined upon shall be laid before the Council, on the report of the Works Committee, before the contract is entered into for such works.

Urgent works may be ordered.

27. The Mayor, or in his absence any two Aldermen of Works Committee, may order any sum not exceeding ten pounds to be expended in repairing any public work under the control of the Council which may be suddenly damaged, and such order shall be reported at the next meeting of Council.

Payment, how made.

28. No money shall be paid by the Council until the account for the same shall have been examined by the Finance Committee and approved of by the Council.

Common seal, &c.

29. All charters, deeds, muniments, and records of the Municipality shall be kept in the office thereof, in the custody of the Council Clerk, unless the Council shall otherwise order. All papers, deeds, contracts, and agreements requiring to be sealed with the common seal shall be witnessed by the Mayor and the Council Clerk. For the purpose of authenticating documents the common seal may be attached thereto, witnessed by the Mayor and Council Clerk, for which a fee of five shillings shall be paid.

Rates to be paid.

30. The rates of the Municipality shall be collected half-yearly, and shall be due and payable on such days as the Council shall determine at the time of making the assessment, or in such other day as the Council may direct. All persons liable to pay rates or assessments shall pay the same to the Council Clerk, or such other officer as may be appointed for that purpose, at the Municipal Council Chambers during office hours, on such days as may from time to time be appointed by the Council.

Council Clerk.

31. The Council Clerk shall be required to enter into an approved bond into double the amount of his salary for the faithful performance of his duties.

Bailiff.

32. The Bailiff shall make all levies and distress under warrant signed by the Mayor in the form of schedule marked A hereunto annexed, and shall be paid for every such entry and levy made under these By-laws the fees as per Schedule B annexed herewith. He shall enter into a bond for the due performance of his duties.

Distress and inventory.

33. At the time of making a distress the Bailiff shall make out a written inventory in the form of the schedule hereto annexed and marked C, which inventory shall be delivered to the occupant of the premises, or the owner of the goods so distrained, or to some person for his or her behalf resident at the place where the distress has been made.

Preventing and extinguishing fires.

Fire or combustible materials, &c.

34. Every person who shall place or knowingly permit to be placed in any house, yard, or workshop, out-offices, or other premises, fire, gunpowder, or combustible, or inflammable materials of any kind, in such a manner as to endanger any buildings, shall on conviction for every such offence forfeit and

pay a penalty of not more than ten pounds, and shall forthwith remove such fire, gunpowder, or combustible or inflammable materials. And every such person who shall suffer any such fire, gunpowder, or inflammable materials to remain as aforesaid for a period of twelve hours after any such conviction shall be deemed guilty of a further offence against against this by-law.

Lighting bonfires.

35. Any person who shall light any bonfire, tar-barrel, or fireworks upon or within twenty yards, or shall discharge any firearms within sixty yards, of any public or private street or any public place, or shall sell fireworks, squibs, or rockets by gas, candle, or artificial light, shall forfeit a sum not exceeding five pounds.

Setting on fire chimney-flues.

36. Every person who wilfully sets or causes to be set on fire any chimney-flue, smoke-vent, or stove-pipe shall forfeit a sum not exceeding five pounds.

Chimneys catching fire by neglect.

37. If any chimney catch fire through the wilful neglect of any person occupying or using any premises in which such chimney is situated, he shall forfeit a sum not exceeding forty shillings: Provided always that such forfeiture shall not be enforced if such person prove to the satisfaction of the Justices before whom the case is heard that such fire was in nowise owing to the neglect or carelessness, whether with respect to cleansing such chimney or otherwise, of himself or his servant.

Water-carts, licensing of

38. The Council shall from time to time license to ply within the Municipality such carts, for the carrying and sale of water and extinguishing fires, as shall on inspection be found fit for that purpose. Every such cart or vessel for the holding of water for the purposes aforesaid shall be capable of containing not less than fifty gallons, and shall have the name of the owner and the words "Licensed Water Cart" painted on such cart in legible letters.

Vehicles, &c., plying for hire to be licensed.

39. All water-carters, firewood-carters, and owners of vehicles plying or carrying passengers, goods, or other materials for hire shall be licensed by the Council, and the owners shall have their names painted in legible letters, with the word "Licensed" on some conspicuous part of such vehicles respectively. The license fee shall be at the rate of ten shillings per wheel per annum. And all such licenses shall be issued for a period of twelve months, terminable on the 30th day of June in each year. And every owner who shall omit or fail to comply with the provisions of this By-law shall forfeit a sum not exceeding forty shillings nor less than ten shillings.

Penalty for hawking or carrying water for sale without a license.

40. Any person hawking or carrying water for sale or hire within the Municipality, otherwise than in a licensed water-cart as aforesaid, shall upon conviction be liable to a penalty not exceeding one pound.

Streets and public places.—Public health and decency, &c.

New roads to be reported on.

41. No new public road, street, way, reserve, or other place proposed to be dedicated to the public shall be taken under the charge and management of the Council until after such road, street, way, or reserve shall have been examined by the Committee for Works, and reported upon to the Council by such Committee.

Plans of proposed new roads to be delivered to the Council.

42. When any proprietor or proprietors of land within the said Municipality shall open any road, street, or way, or lay out any park or other place for public use or recreation through or upon such land, and shall be desirous that the Council shall undertake the care and management of such road, street, way, reserve, or other place, he or they shall furnish the Council with a plan or plans, signed by himself or themselves, showing clearly the position and extent of such road, street, way, reserve, or other place as aforesaid.

Dedications of new roads, &c.

43. If the Council determine to take charge of any such road, way, or other place as aforesaid, the plan or plans so signed as aforesaid shall be preserved as a record or records of the Council; and the proprietor or proprietors aforesaid shall execute such further instrument dedicating such road, way, reserve, or other place to public use or recreation as aforesaid as may be considered necessary by the Committee for Works; and such instrument of dedication shall also be preserved as a record of the Council.

Committee for Works to fix street levels.

44. The Committee for Works, or any officer or person acting under the supervision of such Committee, shall, subject to such orders as shall from time to time be made by the Council in that behalf, fix and lay out the levels of all public roads, streets, and ways within the Municipality, and the carriage and foot ways thereof. And it shall be the duty of such Committee, officer, or person to place posts at the corners of intersections of any such public roads and streets wherever the same may be considered necessary or desirable by the the Council: Provided that there shall be no change of level in any such public road, street, or way until the same shall have been submitted to and adopted by the Council as hereinafter directed. Whenever it may be deemed necessary to alter the level of any such public road, street, or way as aforesaid, the Committee for Works shall cause a plan and section showing the proposed cutting to be exhibited at the Council Chambers for seven days, for the information and inspection of ratepayers, and shall notify by advertisement in some newspaper circulating in the Municipality that such plan is so open to inspection; and no objections thereto shall be entertained by the Council unless made within twenty-one days after such notice shall have been given at a subsequent meeting of the Council. The said plan and section shall, if adopted, be signed by the Mayor or Chairman and the proposer and seconder of the motion for such adoption, and countersigned by the Town Clerk; and such plan and section so signed and countersigned shall be a record of the Council.

No turf, gravel, &c, to be removed from streets without permission.

45. Any person who shall form, dig, or open any drain or sewer, or remove or cause to be removed any turf, clay, sand, soil, gravel, stone, or other material, or any road scrapings or sweepings, in or from any part of the carriage or foot ways of any street or any other public place within the said Municipality, without leave first had and obtained for that purpose from the Council, or who shall wantonly break up or otherwise damage any such carriage or foot way shall on conviction forfeit and pay for every such offence any sum not exceeding five pounds nor less than one pound. And any person who shall have or make any cellar or any opening, door, or window in or beneath the surface of the foot-way or any street or public place within the said Municipality, without the consent of the Council, shall on conviction forfeit and pay the sum of five pounds over and above the expense of filling up, remedying, or removing such cellar, opening, door, or window.

Holes to be enclosed.

46. Any person or persons who shall dig or make, or cause to be dug or made, any hole, or leave, or cause to be left, any hole adjoining or near to any street or public place within the said Municipality for the purpose of making any vault or vaults, or the foundation or foundations to any house or building, or for any other purpose whatsoever, or shall erect or pull down any building, and shall not forthwith enclose the same and keep the same enclosed in a good and sufficient manner, to the satisfaction of the Committee of Works of the said Municipality, or shall keep up or cause to be kept up and continued any such enclosure for any time which shall be longer than shall be absolutely necessary in the opinion of said Committee, and shall not place lights upon each side of the said enclosure and keep the same constantly burning from sunset to sunrise during the continued existence of such enclosure, shall forfeit and pay for every such refusal or neglect any sum not being less than forty shillings nor exceeding five pounds.

Open spaces and steps adjoining footways to be enclosed, under a penalty.

47. Every owner or occupier of any house, building, or premises, or land within the said Municipality, having any entrance, area, garden, or other open space, or any vacant building lot, waterhole, or excavated space adjoining the footway of any street or public place in such Municipality, shall protect and guard the same by good and sufficient rails, fences or other enclosures, to be previously approved of by the Work Committee or any officer whose special duty it shall be to attend to such work, so as to prevent danger to persons passing and repassing; and every such owner or occupier of any such house building, premises, or land having any steps adjoining the foot way of any such street or public place, shall in like manner protect and guard the same by fences, rails, or other enclosure so as to prevent the like danger to persons passing and repassing; and on failure thereof every such owner or occupier shall as often as he or she shall be convicted of such offence forfeit and pay a sum not being less than forty shillings nor more than five pounds; and every such owner or occupier as aforesaid, who shall fail to erect such fences or other enclosures as aforesaid after fourteen days notice from the Council or any duly qualified officer, shall be deemed guilty of a further offence against this By-law.

Penalty for not covering over wells.

48. Every person who shall have a well or excavation situated between his or her dwelling-house or the appurtenances thereof, and every road, street, or footway within the limits of the said Municipality shall cause such well to be securely and permanently covered over; and if any person having such well as aforesaid shall fail to cover over and secure the same within twenty-four hours after notice in writing shall have been given to him or her by any officer of the said Council, or shall have been left for any such person at his or her usual or last known place of abode, or on the said premises, shall on conviction

forfeit and pay a sum of ten shillings, and for every day after such notice that such well shall remain so uncovered, contrary to the provisions hereinbefore made and provided, such person shall be deemed guilty of a separate offence against this By-law.

Temporary stoppage to traffic for repairs.

49. The Committee for Works, or any officer or person acting under the authority of such Committee of the Council, may at any time cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same, or for any necessary purpose; and any person or persons offending against this By-law, either by travelling on such street, lane, thoroughfare, or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending the traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds for every such offence.

Drawing or trailing timber, &c.

50. Any person who shall haul or draw timber, or cause to be hauled or drawn, upon any part of any street or public place within the said Municipality, any timber, stone, or other thing otherwise than upon wheeled vehicles or barrows, or shall suffer any timber, stone, or other thing which shall be carried principally or in part upon any wheeled vehicle or barrow to drag or trail upon any part of such street or public place, to the injury thereof, shall upon conviction forfeit and pay for every such offence a sum not more than forty shillings nor less than five shillings over and above the damage occasioned thereby.

Driving on footpaths and throwing filth thereon.

51. Any person who shall throw, cast, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal, blood, or other filth or annoyance, or any matter or thing in or upon the carriage-way or foot-way of any street or public place in the said Municipality, or shall kill, slaughter, dress, scald, or cut up any beast, swine, calf, sheep, lamb, or other animal in or so near to any such street or public place as that any blood or filth shall run or flow upon or over, or be on any or either of any such carriage or foot way, or shall run, roll, drive, draw, place, or cause, permit, or suffer to be run, rolled, driven, drawn, or placed upon any of the said foot-ways of any such street or public place, any waggon, cart, dray, sledge, or other carriage, or any wheelbarrow, handbarrow, or truck, or any hogshead, cask, or barrel, or shall wilfully lead, drive, or ride any horse, ass, mule, or other beast upon any such foot-way shall upon conviction thereof forfeit and pay for the first offence a sum not exceeding forty shillings nor less than five shillings, for the second offence a sum not exceeding five pounds nor less than ten shillings, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than one pound for each such offence.

Lights to be placed on vehicles.

52. Every person driving any vehicles within the Municipal District between sunset and sunrise shall carry a light on such vehicle in a conspicuous place; any one offending against this by-law shall be liable to a penalty not exceeding two pounds nor less than ten shillings.

Destroying kerbstone, gutters, pathways, &c.

53. No driver, carter, or other person shall wilfully or negligently do or suffer, or cause to be done, any damage or injury to the kerbstones, gutters, or pathways of any street or roadway; and no person shall be at liberty to drive a wheeled vehicle of any kind, or ride or drive, lead or stand, or permit to stand, any horse or horses, or other animals, on the pathways within the Municipal District; and every person so offending shall for such offence forfeit and pay a fine or sum not exceeding one pound nor less than five shillings in excess of any damages done.

Licensing timber carriages.

54. No timber carriage or vehicle used for that purpose, or dray attached as a substitute for the conveyance of timber or other material will be allowed to ply or work within or through the Municipal District unless the same be licensed. This clause only to apply to timber carriages and other vehicles attached as aforesaid working for hire or drawing timber to railway station or for shipment. The owners of any such timber carriage as aforesaid shall have their names painted in legible letters with the word "Licensed," on some conspicuous part of such timber carriage respectively. The license fee shall be at the rate of ten shillings per wheel per annum, and all such licenses shall be issued for a period of twelve months, terminable on the 30th June in each year. And every owner who shall omit or fail to comply with the provisions of this By-law shall forfeit a sum not exceeding five pounds nor less than two pounds.

Placing goods, carriages, &c., on the footways.—Not removing the same when required.—Replacing same after removal.—Awnings to be excepted

55. Any person who shall set or place, or cause or permit to be set or placed, any stall, board, chopping block, show board (on hinges or otherwise), basket, wares, merchandise, casks, or goods of any kind whatsoever, or shall hoop, place, wash, or cleanse, or shall cause to be hooped, placed, washed, or cleansed, any pipe, barrel, cask, or vessel in or upon or over any carriage or foot way in any street or public place within the said Municipality, or shall set out, lay, or place, or shall cause or procure, permit, or suffer to be set out, laid, or placed, any coach, cart, wain, waggon, dray, wheelbarrow, handbarrow, sledge, truck, or other carriage upon any such carriage way, except for the necessary time of loading and unloading such cart, wain, waggon, dray, sledge, truck, or other carriage, or taking up or setting down any fare, or waiting for passengers when actually hired, or harnessing or unharnessing the horses or other animals from such coach, cart, wain, waggon, dray, sledge, truck, or other carriage; or if any person who shall set or place or cause to be set or placed in or upon or over any such carriage or foot way, any timber, stone, bricks, lime, or other material or things for building whatsoever (unless the same shall be enclosed as herein directed), or any other matters or things whatsoever; or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal or other thing or matter whatsoever from any house or other buildings or premises, or any other matter or thing from and on the outside of the front or any other part of any house or other buildings or premises over or next unto any such street or public place, and shall not immediately remove all or any such matters or things, being thereto required by the Inspector of Nuisances or other proper officer of the Council, shall upon conviction for every such offence forfeit and pay for the first offence a sum not exceeding forty shillings nor less than five shillings, for the second offence a sum not exceeding five pounds nor less than ten shillings, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than one pound: Provided that nothing herein contained shall be deemed to prevent any person from placing an awning in front of his or her shop or house in such manner as that such awning shall be at least seven feet high above the height of the footway, and that the posts be placed close to the kerbstone or outer edge of such foot way, and a plan of such awning submitted to the Council prior to its erection and approval of by said Council or any officer duly appointed for the purpose.

Riding on drays, careless driving, &c.

56. If the driver of any waggon, wain, cart, or dray of any kind shall ride upon any such carriage in any street as aforesaid, not having some person on foot to guide the same (such carts as are drawn by one horse or driver or guider with reins only excepted); or if the driver of any carriage whatsoever shall wilfully be at such a distance from such carriage, or in such a situation whilst it shall be passing upon such street that he cannot have the directions and government of the horse or horses or cattle drawing the same, or if the driver of any waggon, cart, dray, or coach or other carriage whatsoever meeting any other carriage shall not keep his waggon, cart, dray, or coach, or other carriage on the left or near side of the road, street, or thoroughfare; or if any person shall in any manner wilfully prevent any other person or persons from passing him or her or any carriage under his or her care upon such street, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any carriage or person in or upon the same, every driver or person so offending shall upon conviction forfeit and pay any sum not exceeding forty shillings.

Nuisance.

Dead animals, &c. not to be thrown into any public watercourse, &c.

57. Any person who shall cast any filth, rubbish, or any dead animal, or any animal with intent of drowning, into any public watercourse, sewer, waterhole, road, or pathway, or who shall suffer slops, suds, or filth of any kind to flow from his or her premises into any such watercourse, waterhole, or who shall permit, or suffer any such slops, suds, or filth to flow from his or her premises over any of the foot-ways or streets of the Municipality, or shall permit, or cause by means of pipes, shoots, channels, or other contrivances, filth of any kind whatsoever to flow into any public watercourse, waterhole, or shall obstruct or divert from its channel any sewer or watercourse, shall forfeit any sum not exceeding five pounds nor less than ten shillings.

Dead animals—mode of removal.

58. If any animal shall die in any part of the said Municipality, and the owner of such animal, or the occupier of the place, if private property, where such animal shall have died shall not cause such animal to be immediately removed and destroyed by fire, or so effectually disposed of that no nuisance can possibly result therefrom in any part of the Municipality, he shall for every such offence forfeit and pay any sum not exceeding twenty pounds nor less than one pound.

Power of Inspector as to dead animals on private premises.

59. The Inspector of Nuisances, or any officer appointed by the Council of the said Municipality, with his assistant, may, at any hour, enter upon any premises or place within the said Municipality where any animal has died, and require the owner or occupier of such premises or place immediately to destroy such animal by fire, and if necessary to remove the same for that purpose as such Inspector of Nuisances or other officer

appointed by the said Council shall direct, or otherwise forthwith effectually to remove and dispose of the same as aforesaid in default of which it shall be lawful for any one or more of such officers to cause such animal to be removed for that purpose, and every owner or occupier of such premises or place failing, neglecting, or refusing to comply with such requisition shall forfeit and pay any sum not exceeding twenty pounds nor less than one pound.

Dead animals in certain cases to be removed at cost of Municipality.

60. If any animal shall die in any public place or street within the said Municipality, and the owner or any person having charge of such animal cannot at the time be found or ascertained, it shall be immediately removed by the Inspector of Nuisances, or other officer appointed by the said Council, and destroyed in manner aforesaid at the cost of the Municipality.

Drains.

61. All drains whatsoever, and the water-closets, earth-closets, privies, cesspools, and ashpits within the Municipality of Taree shall be constructed so as not to be a nuisance or injurious to health, and so that there shall be no overflow, soakage, leakage therefrom.

Cleansing of privies and cesspits.

62. The occupier of any house, building, or tenement within the Municipality of Taree shall cause every privy, cesspool thereon to be emptied and cleaned from time to time as soon as any portion of the contents of such cesspool shall have so accumulated therein as to be within a distance of one foot from the top of the wall, sides, or lining of such cesspool: Provided that the contents of any privy shall not be removed or discharged therefrom except between the hours of eleven p.m. and five a.m.; and provided also that the contents of any privy or cesspool shall not be removed or discharged therefrom until such contents shall have had mixed therewith a quantity of chloride of lime, zinc, carbolic acid, or some other efficient deodorizer sufficient to effectually deodorize and disinfect the same.

Objectionable closets to be altered.

63. If any alteration shall be required, in the opinion of the Inspector of Nuisances or any officer of the Council appointed in that behalf, for preserving public health or decency in the case of any existing cesspit or closet, the Inspector of Nuisances or other officer of the Council shall report the same to the Council, and if the Council shall adjudge such cesspit or closet to be injurious to health or opposed to decency the same shall be altered by the occupier or owner of the premises upon which such cesspit or closet exists, after due notice has been served upon such occupier or owner; and should such occupier or owner neglect or refuse to alter the same, the Inspector of Nuisances or other officer appointed by the Council shall forthwith make the necessary alterations, and the costs of the same shall be paid by the owner or occupier of the premises wherein the same shall be.

Earth-closets.

64. That after 31st of March, 1886, where it is considered by this Council, on report from the Inspector of Nuisances, that any water-closet or cesspit within the Municipal District is offensive or injurious to public health, such water-closet or cesspit shall be converted into an earth-closet, according to plans to be provided by this Council: Provided that no person shall be permitted to cover up, or cause to be covered up, any existing closet or cesspit with earth or other material unless and until the same shall be properly emptied. Any owner or occupier upon whose premises such water-closet or cesspit exists who shall fail after fourteen days shall upon conviction be liable to a fine not exceeding five pounds nor less than one pound.

The disposition of night-soil.

65. The place of deposit of night-soil shall be in such locality as may from time to time be determined by the Council, and until otherwise provided by the Council shall be disposed of as authorized by the Inspector of Nuisances.

Prohibition of use of night-soil.

66. No person shall be at liberty, without the permission of the Council, or of the Inspector of Nuisances, or other officer of the Council appointed in that behalf, to use on his own premises any night-soil. And any person committing a breach of this by-law shall be liable to a penalty of not less than two pounds nor more than ten pounds.

Cost of emptying cesspits, &c.

67. The Council may, after due application, recover such sums for the emptying of cesspits or attendance on earth-closets at such rates as may from time to time be decided upon and fixed by the Council to be charged in respect of such services.

Inspector of Nuisances' report.

68. It shall be the duty of the Inspector of Nuisances to furnish the Council with a report every month, containing a list of persons proceeded against for nuisances within this Municipality, specifying the dates and giving particulars of each case.

Maximum and minimum penalties where not otherwise provided for.

69. In any case where no special penalty is fixed in these By-laws for any breach of the same, the maximum penalty for any such breach shall be twenty pounds and the minimum one pound.

Cleansing butchers' shambles, &c.

70. For preserving the cleanliness of the said Municipality and the health of the inhabitants thereof, it shall be lawful for the Inspector of Nuisances, or for any other officer or officers appointed by the Council from time to time, and when and as often as he or either of them shall see occasion, to visit and inspect the butchers' shambles, slaughter-houses, boiling-down establishments, tanneries, fellmongering establishments, and soap-works in the said Municipality, and to give such directions concerning the cleansing the said shambles, slaughter-houses, tanneries, soap-works, and establishments, both within and without, as to him shall seem needful; and any butcher or the owner or occupier of any such shamble, slaughter-house, tannery, soap-works, or establishments who shall refuse or neglect to comply with such directions within a reasonable time shall forfeit and pay a sum not exceeding ten pounds nor less than ten shillings.

Complaints respecting dirty premises, &c.

71. Upon the complaint of any householder that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances or any officer appointed by the said Council shall make an inspection of the premises complained of, and the officer of the said Council shall have the full power without any other authority than this By-law to go upon such premises for the aforesaid purpose; and any person who shall personally or by any person in his employment or under his control suffer any waste or stagnant water, or any muck, filth, soil, or other offensive matter in any cellar or place within any dwelling-house or premises within the said Municipality, or shall in like manner suffer the contents of any water-closets, privy, or cesspool to overflow or soak therefrom shall for every such offence forfeit and pay a sum not exceeding five pounds nor less than one pound.

Premises in such state to endanger public health.—House to be purified on certificate of one medical practitioner.

72. If upon the certificate of any one duly qualified medical practitioner it appear to the Council that any house or part thereof, or the premises occupied in connection therewith, within the limits of the said Municipality, is in such a filthy state or unwholesome condition that the health of any person is or may be liable to be affected or endangered thereby, and that the whitewashing, cleansing, or purifying of any house or part thereof, or the premises occupied in connection therewith, would tend to prevent or check infectious or contagious disease, the said Council shall give notice in writing to the owner or occupier of such house or part thereof, or the premises occupied in connection therewith, to whitewash, cleanse, or purify the same as the case may require; and if the person to whom the notice is so given shall fail to comply therewith within such time as shall be specified in the said notice, he shall be liable to a penalty not exceeding ten shillings for every day during which he continues to make default, provided that no such penalties shall collectively amount to any greater sum than twenty pounds.

Various obstructions and annoyances.

73. Every person who, in any street or other public place or passage within the said Municipality, to the obstruction, annoyance, or danger of the residents or passengers, shall commit any of the following offences shall on conviction for any and every such offence forfeit and pay a penalty of not more than two pounds:—

1. Every person who shall hoist or cause to be hoisted, or lower or cause to be lowered, goods of any description from any opening in any house fronting any street or public place, and close to the footway thereof, without sufficient and proper ropes and tackling.
2. Every person who shall carry or convey, or cause to be carried or conveyed, in any street or public place, the carcase or any part of the carcase of any newly-slaughtered animal without a sufficient and proper cloth covering the same for the concealment from public view, or shall hawk or carry about butchers' meat for sale without covering the same as aforesaid.
3. Every person who shall place any line, cord, or pol across any street, lane, or passage, or hang or place clothes thereon, or allow any tree or shrub overhanging the footpath, to the danger or annoyance of any person.
4. Every person who shall place any flower-pot in any upper window near to any street or public place without sufficiently guarding the same from being thrown down.

5. Every person who shall throw or cast from the roof or any part of any house or other building any slate, brick, part of a brick, wood, rubbish, or other material or thing (unless within a board enclosure) when any house or building is being erected, pulled down, or repaired.
6. Every person who shall, within the distance of twenty yards from any dwelling-house, burn any rags, bones, cork, or other offensive substance to the annoyance of any inhabitant.
7. Every person who shall be the keeper of or have any dog or other animal which shall attack or endanger the life or limb of any person who may have the right of way or use of any private yard, alley, street, or any other place within the said Municipality.

Persons not to stand or loiter in streets.

74. Any person or persons standing or loitering upon any of the footways or other public place in this Municipality, to the inconvenience or annoyance of the inhabitants or passers-by, or in any way interrupting the traffic, and shall not discontinue to do so on being requested by any officer or servant of the Municipal Council of this Municipality, or any Police Officer, shall upon conviction forfeit and pay a penalty not exceeding two pounds nor less than ten shillings.

Swine not to wander about the streets.

75. Any person who shall breed, feed, or keep any kind of swine in any house, yard, or enclosure situate and being in or within sixty feet of any street in the Municipality, or shall suffer any kind of swine, or any horse, ass, cattle, mule, sheep, goat, or any other animal of the like nature belonging to him or her, or under his or her charge, to stray or go about, or to be tethered or depastured in any street, road, or public place within the said Municipality, shall forfeit and pay for every such offence a sum not exceeding forty shillings, and to be made liable for damages.

No rock, &c. to be blasted without notice and permit.

76. Any person who shall be desirous of blasting any rock or other similar substance within one hundred yards of any street or public place or dwelling-house in the said Municipality shall give notice in writing, twenty-four hours previously, to the Town Clerk, who shall appoint a time when the said blasting shall take place; and the said officer shall give such other directions as he may deem necessary for the public safety; and if any person shall blast, or cause to be blasted, any rock within the limits aforesaid without giving such notice, or shall not conform to the directions given to him by the said Town Clerk or other duly appointed officer of the Council, he or she shall on conviction forfeit and pay for every such offence any sum not less than one pound nor more than five pounds.

Bathing prohibited within certain limits.

77. Any person who shall bathe near to or within view of any inhabited house, or of any public wharf, quay, bridge, street, road, or other place of public resort within the limits of the said Municipality, between the hours of six o'clock in the morning and eight in the evening, shall on conviction forfeit and pay a sum not exceeding one pound for every such offence.

Penalty on indecent exposure of the person.

78. Any individual who shall offend against decency by exposure of his or her person in any street or public place within the said Municipality, or in the view thereof, shall on conviction forfeit and pay for every such offence a sum not exceeding ten pounds nor less than one pound.

Houses of ill-fame.

79. Upon representation of any respectable ratepayer that any house or premises within the Municipality, and near to the residence of such ratepayer, is of ill-fame, it shall be lawful for the By-law Committee to cause the residents of such house or premises to furnish to the Council a list of names, ages, sexes, and occupations of all the inmates of the said house or premises; and upon non-compliance with such request, or if, upon consideration, the said Committee consider the house to be one of ill-fame, they shall, with the sanction of the Council, declare the same to be a nuisance, and shall cause a notice in writing to be served upon the holder of such house or premises, or any person resident or being therein, to discontinue or abate the said nuisance within forty-eight hours after the receipt of such notice; and if such nuisance be not so abated the holder of such house or premises, or other person residing or being therein and acting as such holder, shall be liable to be proceeded against for such nuisance, and shall on conviction thereof forfeit and pay any sum not less than two pounds nor more than twenty pounds. And if such nuisance shall not be abated within forty-eight hours after such conviction, such holder of such house, or such other person residing or being therein as aforesaid, shall forfeit and pay for such second offence a sum of not less than five pounds nor more than fifty pounds. And if a further period of forty-eight hours shall elapse after such second conviction without the abatement of such nuisance, such holder of such house, or other person residing or being therein as aforesaid, shall for such third offence forfeit and pay any sum not less than ten pounds nor more than fifty pounds.

No noisome or offensive trades to be carried on to the injury of any inhabitants.

80. No person shall carry on any noisome or offensive trade within the said Municipality, so as to injure or be a nuisance, as hereinafter stated, to the inhabitants thereof.

Definition of noisome and offensive trades.

81. Any manufacture, trades, calling, or operation in the conducting, following, or carrying on of which or in consequence of or in connection therewith, or from the premises where the same is conducted, followed, or carried on, which shall be a nuisance to the inhabitants of the said Municipality shall be considered a noisome and offensive trade within the meaning of these By-laws. And if such trade shall not be discontinued or shall not be so conducted as that it shall wholly cease to be noisome and offensive as aforesaid within twenty days after notice, any person conducting, following, or carrying on such trade as aforesaid shall for the first offence forfeit and pay a sum not less than forty shillings nor more than five pounds, for a second offence a sum of not less than five pounds nor more than twenty pounds, and for the third and every subsequent offence a sum not less than ten pounds nor more than fifty pounds.

Exhibitions, &c., to be licensed.

82. No exhibitions other than exhibitions licensed by the Colonial Secretary, under the provisions of the Act 14 Victoria No. 23 or exhibitions of a temporary character hereinafter specially provided for, shall be held or kept for hire or profit within the said Municipality, nor shall any bowling alley, dancing saloon, or other place of public amusement other than a place licensed as aforesaid or a place for temporary amusement hereinafter specially provided for to be used as such for hire or profit within the said Municipality unless and until the same shall be duly registered as hereinafter prescribed.

Temporary license by Mayor.—Penalty for exhibiting, &c., without license

83. It shall be lawful for the Mayor, by writing under his hand, and without charge, to permit any such exhibition as aforesaid (other than an exhibition requiring to be licensed by the Colonial Secretary under the said Act), and which shall not be held or kept for more than one week, and in like manner to allow any place within the said Municipality to be used for purposes of public amusement other than entertainments requiring to be licensed as aforesaid for not more than one week: Provided that it shall be incumbent upon such Mayor to inquire strictly as to the nature of such proposed exhibition or amusement before granting such permission, and to refuse such permission if it shall appear that such proposed exhibition or amusement is of such a nature as to require to be licensed by the Colonial Secretary as aforesaid, or if there shall be reasonable cause for believing that such exhibition or amusement will be likely to entail any violation of public decency, to endanger the public peace, or to be a nuisance to any inhabitant of the Municipality. Every person holding or keeping any such exhibition, or using any place within the said Municipality for public amusement as aforesaid, or causing or permitting any place to be so used, without such permission of such Mayor, shall forfeit and pay a sum not less than five shillings or more than forty shillings for every day that such exhibition shall be so held or kept or such place shall be so used for public amusement as aforesaid.

Registration fee—Time for which registration shall be in force.

84. For every such registration as aforesaid the occupier of the building or land so registered shall pay to the Council Clerk, for the benefit of the said Municipality, a fee of one pound; and every such registration, whenever the same may be made, shall be in force until the thirty-first day of December then next ensuing and no longer.

No exhibition, &c., on Sundays, &c.

85. No such exhibition or place of public amusement as aforesaid shall be held or kept open or used for the purposes of such public amusement on Sundays, Christmas Day, or Good Friday; and every person offending against this By-law in this behalf shall on conviction forfeit and pay a sum not exceeding five pounds nor less than two pounds for every such offence.

Unlawful games and exhibitions.

86. No license shall be granted as aforesaid to or for any building or land wherein or whereon any games with dice, or other games of chance for money, or any bull-baiting, dog-fighting, cock-fighting, or other exhibitions or amusements opposed to public morality or involving cruelty to animals or likely to cause any breach of the peace are proposed to be had or carried on; and the occupier of any building or land so registered as aforesaid who shall permit any such game of chance or exhibition or amusement as are in the section before mentioned to be had, held, or carried on, in, or upon such building shall for every such offence forfeit and pay a sum of nor less than ten shillings nor more than ten pounds.

Wilful trespass.

87. Every person who shall wilfully let in or knowingly suffer to enter upon the reserves or public recreation ground any animals without due authority shall be deemed guilty of wilful trespass, and shall be liable for every such offence to a penalty not exceeding twenty pounds nor less than two pounds.

Penalty for destroying boundary marks.

88. Any person pulling down, defacing, or injuring any marks or any fence or other erection without the authority of the Council shall forfeit and pay any sum not exceeding ten pounds nor less than one pound.

Public and private property.—Erection of houses, &c.

89. No person shall be permitted to erect any house, shop, or other building, in any street, lane, or place in the Municipality without first serving notice in writing on the Mayor or Council Clerk, on any lawful day between the hours of eight o'clock a.m. and eight o'clock p.m., stating such intention and describing the proposed situation of the building or erection, and without having received an authority from the Mayor or Council Clerk, who will give the required level and alignment if in a proclaimed street, on a payment of a fee of five shillings. No person shall be at liberty to encroach beyond the building line in any street or lane by the erection of houses, verandahs, doorsteps, fences, or any other obstruction whatever.

Houses to be spouted.

90. All proprietors of houses within the Municipality having a frontage to any main thoroughfare shall be bound to have the same sufficiently spouted with down pipe, to be carried under the surface of the footpath into the gutter, under a penalty of ten shillings on conviction; and if not remedied at the expiration of seven days after such conviction, the offender shall be again liable to a like conviction and penalty, also for every succeeding seven days.

Using bark for building in the main thoroughfare.

91. No person shall erect any building of bark, nor roofed with that material, or with calico, within the populous part of the town, except by express permission of the Council, and then for a temporary purpose only. Any person so offending shall on conviction be liable to a penalty not exceeding ten pounds, to be recovered in a summary way, and shall be bound to remove the aforesaid building within such period as the Council may determine.

Injuring or extinguishing lamps.

92. Any person who shall wantonly or maliciously break or injure any lamp or lamp-post, or extinguish any lamp set up for public convenience in the said Municipality, shall, over and above the necessary expense of repairing the injury committed, forfeit and pay for every such offence any sum not less than one pound nor more than five pounds.

As to damaging buildings.

93. Any person who shall damage any public building, wall, parapet, fence, sluice, bridge, culvert, sewer, watercourse, tree-guard, or other public property within the said Municipality, shall pay the costs of repairing the same; and if such damage be wilfully done, shall forfeit and pay a sum not exceeding five pounds nor less than one pound.

Affixing placards on walls, &c.

94. If any person or persons shall paste, or cause to be pasted, or otherwise affix any placard or other paper, or chalk or paint upon any wall, fence, culvert, kerbstone, pathway, hand-rail, or any other property of the Council, shall forfeit and pay for every such separate offence a sum not exceeding five pounds nor less than one pound.

Damaging trees.

95. Any person who shall wilfully and without the authority of the Council cut, break, bark, root up, or otherwise destroy or damage the whole or any part of any tree, sapling, shrub, or underwood growing in or upon any street or place under the management of the Council shall forfeit any sum not exceeding ten pounds nor less than one pound.

Obstructing public pathways.

96. That the owner or occupier of any land situate on the side of any street or road in this Municipality who shall permit any tree, shrub, or plant kept for ornaments or otherwise, to overhang any path or footway on the side of any such street or road so as to obstruct the passage thereof, and who, on demand made by the Council or their overseer or inspector, shall not cut, or cause to be cut, lopped, or to be lopped, all such trees, shrubs, or plants to the height of eight feet at least, the said Council and their servants, labourers, and workmen may cut, or cause to be cut, or lopped, all such overhanging trees, plants, and shrubs, and to remove or burn any portion of such trees, plants, or shrubs so cut or lopped without being deemed a trespasser or trespassers; and in case any person or persons shall resist or in any manner forcibly oppose the said Council or their servants, labourers, or workmen in the due execution of the powers given in this behalf by virtue of the "Municipalities Act of 1867," every person so offending shall on conviction for every such offence forfeit and pay any sum not exceeding ten pounds.

Neglecting to keep clean private avenues.

97. Any owner or occupier of any house or place within the said Municipality who shall neglect to keep clean all private avenues, passages, yards, and ways within the said premises, so as by such neglect to cause a nuisance by offensive smell or otherwise, shall on conviction forfeit and pay a sum not exceeding forty shillings nor less than ten shillings for every such offence.

Legal proceedings against offenders.

98. The Inspector of Nuisances or other person appointed by the Council may take legal proceedings against any person or persons committing any offence or offences against any of the By-laws of the said Municipality.

SCHEDULE A.

I, , Mayor of the Municipality of Taree, do hereby authorize you, , the Bailiff of the said Municipality, to distrain the goods and chattels in the dwelling-house (or in and upon the land and premises) of , situate at street, for , being the amount of rates due to the said Municipality to the day of for the said premises, and to proceed thereon for the recovery of the said rates according to law.

Dated this day of , 188 .

Mayor.

SCHEDULE B.

	£.	d.
1. For making entry into or upon the premises in executing a warrant with or without inventory...	2	6
2. If more than one hour in possession	2	6
3. For every day or part of a day in possession.....	2	6
4. Five per cent. on the net proceeds of any sale.

MUNICIPALITIES.

(COBAR FREE PUBLIC LIBRARY—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.

Department of Public Instruction,
Sydney, 30th October, 1885.

MUNICIPALITY OF COBAR.

THE following By-laws for the regulation of the Cobar Free Public Library, which have been made by the Municipal Council of Cobar, and confirmed by His Excellency the Governor in Council, are published in accordance with the requirements of the Municipalities Act of 1867.

W. J. TRICKETT.

BY-LAWS made and passed by the Municipal Council of Cobar, for regulating and managing the Free Public Library now established by this Council:—

1. The Library shall be open to the public on every lawful day during four hours at least.

2. Every person who shall enter the Library shall write his or her name in a book to be kept for that purpose, and to be called the "Visitors' Book," and no person who shall refuse to comply with this regulation shall be permitted to enter or remain in such Library.

3. Every person who shall, being intoxicated, enter or remain in the Library, or who shall use therein any abusive or improper language, or who shall by unnecessary loud talking, or any unnecessary noise, or otherwise disturb or annoy the persons using or being within the Library shall on conviction before any Bench of Magistrates, pay a fine of not less than ten shillings.

4. No person shall remove any book or other publication from the said Library.

5. Any person who shall wilfully damage any book or other publication shall for every such offence forfeit and pay any sum not exceeding five pounds.

6. A record shall be made of every donation to this Library, and the book containing the same shall be open to the inspection of all persons visiting this Library.

The foregoing By-laws were made and passed at a meeting of the Municipal Council of Cobar, held this fourth day of September, 1885.

(L.S.) ANTHONY BROUGH,
Mayor.

Witness—

THOMAS BLAKEY,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES.

(COOTAMUNDRA FREE PUBLIC LIBRARY—BY-LAWS)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.

Department of Public Instruction,
Sydney, 22nd October, 1885.

THE following By-laws for the regulation of the Cootamundra Free Public Library, which have been made by the Municipal Council of Cootamundra, and confirmed by His Excellency the Governor in Council, are published in accordance with the Municipalities Act of 1867.

W. J. TRICKETT.

BY-LAWS for the regulation of the Free Public Library, Cootamundra.

1. The Library shall be open every Monday, Thursday, Friday, and Saturday, from 7 p.m. to 8.30 p.m., and every Tuesday and Wednesday from 10 a.m. to 12 noon, except public holidays.

2. Every person who shall enter the Library shall, immediately on entering the same, write his or her name and address in a book to be kept for such purpose at such Library, and to be called the "Visitors' Book;" and if such person shall be unable to write, then such name and address may be so written by any other person, or shall be so written by the proper officer of the Council at such Library, at the request of such person; and no person who shall refuse to comply with this regulation shall be permitted to remain in such Library, and it shall be the duty of the officer of such Library to enforce this by-law.

3. Any person who, being intoxicated, shall enter such Library shall be at once removed from the premises; any person who shall use therein any abusive, improper, or unbecoming language, or who shall, by unnecessarily loud talking, or by any noise, or otherwise, disturb or annoy the persons using or resorting to such Library, or who shall without lawful excuse, but without felonious or larcenous intent, remove any property from such Library, shall forfeit and pay any sum not less than ten shillings nor more than ten pounds; and any such person may be forthwith removed by any officer of the Council in charge of such Library.

4. Any society or class for mutual improvement or instruction or for study or experiments may, with the consent of the Council, be formed in connection with, or may hold its meetings, or carry on its studies or experiments at, the said Library, provided that the general free access to and the use of the said Library by persons who are not members of such society or class be not thereby interfered with; provided however, that no rule made by the members of any such society or class for the management of the same shall conflict in any way with these Regulations made by the said Council hereunder.

5. Any person who shall wilfully damage any visitors book, catalogue, copy of regulations, or other book or record kept at the Library for the general use thereof, shall for every such offence forfeit and pay any sum not less than ten shillings nor more than ten pounds.

6. It shall be the duty of the Librarian to report at every meeting of the Library Committee any infraction of the rules or any injury to the books.

7. The foregoing rules shall be printed, framed, and suspended in the Library room for the information of visitors.

8. Any ratepayer may propose books for addition to the Library, on entering the titles, price, and other particulars in a book to be kept for that purpose.

9. The Library shall be closed annually from 1st to 15th November inclusive.

10. Newspapers shall not be detained more than a quarter of an hour nor periodicals more than half an hour, if required by another visitor, he having intimated his wish to the person reading the same.

Passed by the Municipal Council of the Borough of Cootamundra, on the 6th day of August, A.D. 1885.

(L.S.) THOMAS M'BEATH,
Mayor.

A. J. M'CARTHY, Council Clerk.

MUNICIPALITIES ACT OF 1867.

(LISMORE FREE PUBLIC LIBRARY—BY-LAWS.)

Presented to Parliament, pursuant to Act 31 Vic. No. 12, sec. 153.

Department of Public Instruction,
Sydney, 2nd September, 1886.

MUNICIPALITY OF LISMORE.

THE following By-laws for the regulation of the Lismore Free Public Library, which have been made by the Municipal Council of Lismore, and confirmed by His Excellency the Governor in Council, are published in accordance with the requirements of the "Municipalities Act of 1867."

ARTHUR RENWICK.

BY-LAWS FOR REGULATING THE LISMORE FREE PUBLIC LIBRARY.

1. The Library and Reading Room shall be open every Tuesday, Wednesday, Thursday, Friday, and Saturday, from 7 to 10 p.m., and on Saturdays from 2 to 6 p.m. and from 7 to 10 p.m.

2. Every person who shall enter the Library or Reading Room shall, immediately on entering the same, write his or her name and address in a book to be kept for such purpose at such Library or Reading Room, and to be called the Visitors' Book; and if such person shall be unable to write, then such name and address may be written by any other person, or shall be so written by the proper officer of the Council at such Library or Reading Room, at the request of such person, and no person who shall refuse to comply with this regulation shall be permitted to remain in such Library or Reading Room; and it shall be the duty of the officer of such Library or Reading Room to enforce this By-law.

3. Any person who, being intoxicated, shall enter such Library or Reading Room shall be at once removed from the premises. Any person who shall use therein any abusive, improper, or unbecoming language, or who shall by unnecessarily loud talking, or by any noise, or otherwise, disturb or annoy the persons using or resorting to such Library or Reading Room, or who shall without lawful excuse, but without felonious intent, remove any property from such Library or Reading Room shall forfeit and pay any sum not less than ten shillings nor more than ten pounds; and any such person may be forthwith removed by any officer of the Council in charge of such Library and Reading Room.

4. Any society or class for mutual improvement or instruction, or for study or experiments, may, with the consent of the Council, be formed in connection with, or may hold its meetings or carry on its studies or experiments at, the said Library or Reading Room, provided that the general free access to and use of the said Library or Reading Room by persons who are not members of such society or class be not thereby interfered with: Provided, however, that no rule made by the members of any such society or class for the management of the same shall conflict in any way with the Regulations made by the said Council hereinunder.

5. Any person who shall wilfully damage any Visitors' Book, catalogue, copy of Regulations, or other book or record kept at the Library or Reading Room, for the general use thereof, shall for every such offence forfeit and pay any sum not less than ten shillings nor more than ten pounds.

6. It shall be the duty of the Librarian to report at every meeting of the Library Committee any infraction of the rules or any injury to the books.

7. A copy of these By-laws shall be suspended in the Library for the information of visitors.

8. Any ratepayer may propose books for addition to the Library, on entering the titles, price, and other particulars in a book to be kept for that purpose.

9. Any person in a state of intoxication applying for a book shall not be entitled to receive one.

10. All fines, penalties, and forfeitures imposed and recovered as aforesaid shall be paid into the corporate fund of the Municipality.

The foregoing By-laws were finally passed by the Municipal Council of the Municipal District of Lismore, at a meeting held on Monday, the 9th day of August, 1886.

(L.S.) LUDWIK BERNSTEIN,
Mayor.

ST. HELIER PEARD,
Council Clerk.

NEW SOUTH WALES.

NUISANCES PREVENTION ACT, 1875.

(MUNICIPAL DISTRICT OF DUBBO.—AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 30th January, 1886.

MUNICIPAL DISTRICT OF DUBBO—AMENDED BY-LAWS.

THE following Amended By-laws, made by the Council of the Municipal District of Dubbo for carrying into effect the provisions of the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor with the advice of the Executive Council, are published in accordance with the requirements of the above Act.

JOHN ROBERTSON.

MUNICIPAL DISTRICT OF DUBBO.

BY-LAWS made and passed by the Municipal District Council of Dubbo for carrying out the provisions of the Nuisances Prevention Act, 1875.

1. The existing By-laws of this district made under the provisions of the Nuisances Prevention Act, and published in the supplement to the Government Gazette, number 394, of Tuesday, 3rd October, 1882, are hereby repealed.

2. That the dry earth-closet system be adopted throughout this Municipal District, and in accordance with the following By-laws :—

3. There shall not be formed, dug, or excavated any earth below the surface for the purpose of making any cesspit, cesspool, or other opening for the receptacle of night soil or urine except as hereinafter provided by By-law number 20.

4. All closets made or constructed after these By-laws becoming law shall be made or fitted with a movable receptacle or pan, and such as are usually known as earth closet pans, and as hereinafter described.

5. Every person about to erect a closet shall, before commencing any such work, give to the Town Clerk seven days notice in writing of his intention and of the proposed position of such closet, and in default thereof, or in case of his commencing such work without such notice, he shall be liable to a penalty not exceeding ten pounds.

6. No closet shall be erected or formed except in such position as shall be approved of by the Council or by the Inspector of Nuisances or other officer appointed by the Council.

7. Every closet shall be built with walls seven (7) feet high, and shall be not less than three feet six inches (3ft. 6in.) wide, internal measurement, and not less than four feet six inches (4ft. 6in.) long, internal measurement, shall be ventilated and provided with a door or doors capable of being fastened inside, and shall have a water-tight roof.

8. When two or more closets adjoin, there shall be a dividing wall constructed from floor to roof, so as to effect a complete separation and complete privacy.

9. Every closet shall be provided with a water-tight box made of galvanized iron 26 gauge, having suitable handles, the measurement of which box shall not be less than one cubic foot and shall not exceed two cubic feet.

10. The Council on receipt of any written application, stating special reasons, may permit the use of a larger box.

11. The closet-pan in all cases shall be easy of access and removal from the closet, and stops and guides shall be provided for placing the box in proper position.

12. The occupier of every house, building, or other tenement, or in which the dry-earth closet is adopted, shall at all times cause to be kept in such privy or closet a supply of dry powdered earth, ashes, charcoal, lime, or some other material efficient and sufficient for deodorizing the night-soil deposited therein, and shall cause all such night-soil which may be deposited in any pan or receptacle in such privy or closet to be immediately, on the deposit thereof, covered with a sufficient quantity of dry powdered earth, or such other deodorizing material as aforesaid, and sufficient to thoroughly and effectually deodorize the contents of such pan or receptacle.

13. A separate closet shall be provided for every tenement, and a breach of this By-law shall make the owners or occupiers of any premises, upon which there shall be a joint closet, liable to a penalty not exceeding five pounds.

14. In dwelling-houses where the number of persons who shall ordinarily sleep therein shall exceed twelve, a separate closet shall be provided for every twelve persons or fraction of twelve.

15. In schools, or in factories, or other places of business where a number of persons exceeding twelve shall reside or be occupied or employed, one closet shall be provided for every twenty persons, and separate closets shall be provided for each sex.

16. When any existing closet, cesspit, cesspool, or similar appliance of any kind shall, in the opinion of the Council or their duly appointed officer, be injurious to public health, or be or become a nuisance or opposed to common decency, the owner or owners, or occupiers thereof shall, upon receiving seven (7) days notice from the said Council, or from their duly appointed officer for that purpose, make such alterations as may be ordered by the said Council, or by such officer, within the time prescribed by such notice. In the case of any owner or occupier neglecting or refusing to comply with the terms of such notice, the Council shall and may have the required alterations carried out at the cost and expense of the said owners or occupiers thereof, and in case of neglect or

refusal to pay such expense after demand, the same shall and may be recovered in the manner provided by the Nuisances Prevention Act, 1875.

17. Any person or persons desirous of substituting earth or pan closets for or in lieu of any existing cesspit, cesspool, or privy, shall be at liberty so to do on giving notice to the Council, who may give permission in writing for such substitution, no existing cesspit, cesspool, or other receptacle shall be covered over, filled up, or otherwise abandoned without the consent in writing of the Council.

18. Existing cess-pits shall when abandoned, or when condemned by the Council, on the report of the Inspector of Nuisances, be emptied and cleansed with lime and the pits filled up with dry earth, and the closet converted into dry earth closet, in accordance with these By-laws.

19. No cess-pit, cess-pool, or privy, shall have connected therewith, or attached thereto, any pipe or other appliance capable of being used for the purpose of discharging or removing the contents of such cess-pit, cess-pool, or privy, upon or under the surface of any adjoining ground, or into any drain, or sewer, or into any other place or places whatsoever. Any person or persons wilfully violating this part of the By-laws in any respect shall be liable to and forfeit and pay a penalty of not less than ten shillings nor more than ten pounds.

20. Each hotel, boarding-house, having twelve (12) or more boarders, or school, shall be provided with one or more urinals, constructed as follows :—

The trough of each urinal shall be two (2) feet from the floor at the front or outer edge thereof, and not less than nine inches wide in the clear, six inches deep in the centre, and water-tight; each urinal or compartment thereof shall be not less than two feet six inches long in the clear; the compartments (if any) shall be divided closely from each other above the trough to the height of five feet six inches (5 ft. 6 in.) from the floor; every hotel urinal shall have not less than two (2) such compartments, the backs and ends of each urinal shall be seven (7) feet high, and the ends shall extend three (3) in. beyond the front of the trough; a water-tight pipe shall lead to a galvanised iron vessel for the reception of urine in a pit outside the urinal and screen hereafter provided for; the pit shall be built bottom and sides of brick, floored and lined with cement and covered with a substantial trap-door giving easy access thereto; every pit shall contain a vessel as aforesaid, water-tight, having a suitable handle and made of strong galvanized iron, the measurement of which vessel shall not be less than one cubic foot, and shall not exceed one and a half cubic feet; each urinal shall be provided with a close screen seven (7) feet high placed two (2) feet distant from the front of trough, the back of which screen shall project one (1) foot beyond each end of urinal; two wings seven (7) feet high and two feet six inches (2 ft. 6 in.) long shall be attached to the ends of the back aforesaid, the extreme end of each wing being two feet distant from end of urinal. Provided always, that where a urinal shall be placed at right angles to and against any out building or close fence not less than seven (7) feet high, the back of the screen shall be required to project, and a wing shall be attached at one (1) end only; the back ends, divisions, and trough, shall be constructed either of brick or of galvanized iron; if they are of brick the trough must be lined with cement throughout; the back ends and divisions must be lined with cement to a height of three (3) feet above floor; if they are of galvanized iron they must be so constructed that leakage cannot take place between the trough and back or ends of the urinal; the screen shall be constructed of bricks, of wood, or of iron. Any person or persons who intend to construct any urinal shall give notice in writing to the Council of their intention to do so. The Inspector of Nuisances shall, within forty-eight (48) hours, inspect the premises on which the urinal is intended to be constructed. If it be in accordance with these By-laws and the Nuisances Prevention Act, he shall give the necessary permission for the construction of the urinal, provided that, where practicable, it shall not be situated within twenty-five (25) feet from any dwelling, or fifty (50) feet from any well.

21. The place of deposit for nightsoil, urine, or other fœcal matter, shall be in such locality as may be from time to time determined upon by the Council, and no nightsoil, urine, or other fœcal matter shall be deposited in any other locality except as allowed by By-law No. 22.

22. Every person shall be at liberty, after obtaining the consent of the Council, to use on his own premises all nightsoil, urine, or other fœcal matter collected therefrom; but if any nuisance shall arise therefrom, or if he shall fail to efficiently deodorize the same before using, he shall be liable to a penalty of five pounds, and the permission to use shall be withdrawn.

23. Until otherwise provided by the Council, the contents of all cess-pits, cess-pools, privies, pans, urinals, or other receptacles for nightsoil, urine, or other fœcal matter or waste, shall be removed only by the servants of or contractors with the Council, and in water-tight covered vehicles, between the hours of 11 o'clock p.m. and 5 o'clock a.m.

24. The Council is hereby empowered to enter into any contract or contracts with any person or persons for the due performance of any or all matters concerned or connected with the removal and disposal of nightsoil, urine, or other fœcal matter or waste, and may make regulations from time to time as to them may seem necessary respecting such contract or contracts, and may also, by like regulations, determine the price which the owner or owners or occupants of any premises shall pay or be liable to pay the said Council for emptying and cleansing, or causing to be emptied and cleansed and disposed of, the contents of their cess-pits, cess-pools, privies, pans, or other receptacles for nightsoil, urine, or other fœcal matter or waste as aforesaid; and the said Council may sue for and recover from the owner or occupiers of such premises as aforesaid such charges as may have been fixed by the said Council duly assembled by resolution or otherwise.

25. The Inspector of Nuisances or other officer appointed by the Council may visit and inspect any premises or do any work authorised by these By-laws and the Nuisance Prevention Act, 1875, on all days except Sundays and public holidays between the hours of 10 a.m. and 4 p.m., and 11 p.m. and 5 a.m.

26. Any person allowing nightsoil, urine, or other fœcal matter or waste to fall into any street, right of way, water-channel, gutter, creek, river, or reservoir, or in any public or private place (except as herein provided for) shall forfeit and pay a penalty not exceeding £20 nor less than £2 for every such offence.

27. All earth closets, cess-pits, pans, ash-pits, or receptacles wherein nightsoil, urine, or other fœcal matter or yard sweepings, or house refuse, or waste may be deposited, shall be kept in such a state of cleanliness so as not to be a nuisance, or injurious to health, and no householder, or owner, or resident shall allow or permit any such premises to be a nuisance, or offensive to neighbouring householders or residents under a penalty of not less than one pound for each offence. The owner or occupier of any house, building, passage, yard, cess-pit, or premises within the Municipality shall cause the same and every part thereof to be kept in a cleanly condition, and so as not to be a nuisance or injurious to health.

28. The owner or occupier of any premises within the Municipality, or any other person who shall have or erect upon his premises any closet otherwise than in accordance with these By-laws, or who shall refuse or neglect to comply with the provision of any of the preceding By-laws, or who shall commit any breach thereof, shall in cases where no special penalty is provided forfeit and pay a penalty not exceeding £5, and any person not being duly authorised by the Council who shall remove any nightsoil or empty any cess-pit or earth closet pan, or other receptacle for fœcal matter or house waste, except as provided for by these By-laws, shall be liable to a penalty not exceeding for the first offence £5, and for every subsequent offence £10.

Made and passed by the Municipal Council of Dubbo, this 23rd day of November, in the year of our Lord one thousand eight hundred and eighty-five.

(L.S.) ROBT. BOOTH,
Mayor.

Sydney, 16th December, 1885.

BOROUGH OF GRANVILLE.—BY-LAWS UNDER "NUISANCES PREVENTION ACT."

THE following By-laws, made by the Council of the Borough of Granville, under the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

P. A. JENNINGS.

BY-LAWS made by the Borough Council of Granville, in accordance with the provisions of the "Nuisances Prevention Act, 1875."

1. On and after the 1st day of September, in the year of our Lord one thousand eight hundred and eighty-six, no person or persons shall be permitted to have on their premises any open closet or cesspit for the deposit of fœcal matter; any person or persons allowing any such closet or cesspit to remain after receiving seven days' notice to remove the same shall forfeit a sum not exceeding five pounds nor less than one pound, and after such conviction, if not removed within a further period of seven days, shall forfeit a further sum of not less than five shillings nor more than two pounds for every day that the same shall remain unaltered or unremoved.

2. No person shall be permitted to cover up or cause to be covered up any existing cesspit, with earth or other material, unless and until the same shall be properly emptied by the Council's contractors. Any person offending against this By-law shall be liable to a penalty not exceeding five pounds nor less than one pound.

3. A separate closet shall be provided for every tenement. In schools or factories, where a number of persons shall be employed, separate closets shall be provided for each sex, with a door to fasten on the inside; where two or more closets adjoin each other there shall be a dividing wall between each to effect complete separation; and any person offending against the provisions of this By-law shall incur a penalty not exceeding ten pounds nor less than two pounds.

4. If in the opinion of the Inspector of Nuisances any alteration is required in existing cesspits or closets, he shall report the same to the Council, who shall determine what alteration is necessary for the preservation of health or decency; and such alteration shall forthwith be made by the owner of the premises after receiving seven days' notice to that effect, under a penalty for every week's neglect or delay in effecting such alteration not exceeding five pounds nor less than two pounds.

5. No pan or bucket used as a receptacle in a dry earth closet shall exceed in measurement more than one and a half cubic feet.

6. Any person desirous of having the Council's contractor to attend to their premises for the removal of refuse from a dry earth closet must provide a galvanized iron pan or bucket to hold such refuse, with a handle across the top, and not of a larger capacity than to hold one and a half cubic feet.

7. The night-soil shall be removed by contract in properly constructed water-tight carts between such hours as the Council may determine; and the contractor will be held responsible for the careful conveyance of the night-soil to the appointed depôt, and shall dispose of the same by burying in the earth a sufficient distance and covering with earth so as to prevent any nuisance arising therefrom, under a penalty for neglect not exceeding twenty pounds nor less than five pounds.

8. If the night-soil or any portion thereof shall be sold or given away by the Council, the person removing the same shall do so only at such times and in such manner as the Council may direct, and shall dispose of the same so as not to cause a public nuisance; and the person purchasing or obtaining it shall be held responsible for the same, under a penalty not exceeding ten pounds nor less than two pounds.

9. The Inspector of Nuisances shall have power to visit and inspect any premises on any lawful day between the hours of ten a.m. and four p.m., and any person refusing admittance or obstructing or hindering the officer in the discharge of his duty shall incur a penalty not exceeding five pounds nor less than one pound.

10. The Council shall from time to time fix the charges to be made for emptying and removing night-soil from closets, which shall be emptied as often as may be necessary in the opinion of the Inspector of Nuisances.

11. No closet shall be erected, or commence to be erected, except in such place or position as shall be approved of by the Council or the Inspector of Nuisances, and any person being guilty of a breach of this By-law shall be liable to a penalty of not less than one pound nor more than five pounds.

12. When any new building is about to be constructed the builder or builders thereof shall first erect or cause to be erected on the premises a temporary closet not less than three feet by two feet six inches for the use of workmen employed in the construction of the new building, and any person neglecting to conform to this By-law shall be liable to a penalty not exceeding five pounds nor less than one pound.

13. No person shall be permitted to connect any closet with any drain, water-course, or sewer, without the sanction of the Council; any person so offending shall be liable to a penalty not exceeding twenty pounds nor less than five pounds.

14. Persons requiring their closets emptied shall send written notice to the Council or the Inspector of Nuisances; and any person wishing to use the refuse from dry earth closets shall be at liberty to do so by making proper provision for emptying the same to the satisfaction of the Inspector of Nuisances; and any person causing a nuisance from the careless use of such closet shall be liable to a penalty not exceeding five pounds nor less than one pound.

15. Written notice must be given to the Council or the Inspector of Nuisances by all persons about to construct new or alter existing closets, to enable the Inspector to visit and report on the same, under a penalty for neglect not exceeding five pounds nor less than one pound; and closets constructed without such notice being given must be removed or altered if judged necessary by the Council, under a further penalty not exceeding two pounds nor less than five shillings for each and every day they may remain unremoved or unaltered after due notice to that effect.

16. The maximum penalty for a breach of any of these By-laws shall in each case be ten pounds, and the minimum penalty one pound, unless otherwise provided for.

Made and passed by the Municipal Council of the Borough of Granville, this sixteenth day of September, one thousand eight hundred and eighty-five.

(L.S.) JOHN NOBBS,
Mayor.

JOHN T. BEACH,
Council Clerk.

1885-6.

NEW SOUTH WALES.

NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF YOUNG—BY-LAWS.)

Presented to Parliament, pursuant to Act 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 9th February, 1886.

BOROUGH OF YOUNG.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Young, under the "Nuisances Prevention Act 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

JOHN ROBERTSON.

BOROUGH OF YOUNG.—BY-LAWS UNDER THE NUISANCES PREVENTION ACT, 1875.

1. That the dry-earth closet system be adopted in the town proper of the Borough of Young.

2. That from and after the 3rd day of September, A.D. 1885, no person or persons shall be permitted to excavate, erect, or build any cesspool or cesspit for the purpose of being used for closets or privies within the boundaries of the town of Young. And all closets or privies from and after the said date shall be constructed and made on the dry-earth system.

3. Every closet shall be built in such a position that the same may be emptied without the contents being carried through any dwelling house, and any person having or building a closet contrary to this By-law shall be liable to a penalty of not less than £2, and not more than £10.

4. If any alteration shall be requisite in the opinion of the Inspector of Nuisances, or any other officer appointed by the Council in that behalf, for preserving public health or decency in case of any existing cesspit or closet, and such Council shall adjudge such cesspit or closet to be injurious to the health or opposed to decency by exposure or otherwise, and the owner or occupier shall not make the necessary alterations after receiving 14 days' notice so to do from the Council Clerk, it shall be lawful for the Inspector of Nuisances, or other officer appointed by the Council, to make the necessary alterations, and the costs of such alterations shall be paid by the owners or occupiers of the premises whereon the same shall be.

5. Until otherwise provided by the Council all nightsoil shall be removed from cesspits by contract, in water-tight covered vehicles, between the hours of 11 o'clock in the evening and 5 o'clock in the morning; and if any person shall remove from any cesspit any nightsoil in any other manner or at any other time than as provided by this By-law he shall forfeit and pay a penalty of not less than £1, nor more than £5.

6. Any person desirous of erecting an earth closet must deliver to the Council Clerk seven days previous notice in writing of his intention so to do.

7. The Inspector of Nuisances or other officer appointed by the Council may visit and inspect any premises or do any work authorised by the Nuisances Prevention Act, 1875 therein, on all days except Sundays and holidays, and any person who shall hinder or obstruct any Inspector of Nuisances or other officer as aforesaid, upon any such visitation or inspection, or in the doing or performing of any work, shall forfeit and pay a penalty of not less than ten shillings nor more than forty shillings.

8. The Inspector of Nuisances shall furnish the Council with a monthly return, showing the number of cesspits emptied and earth closets attended to, the amount due and payable for each cesspit and earth closet attended upon, and the amount of arrears due for emptying cesspits and attending on earth closets. He shall collect the amounts so due and payable and account therefor to the Council at the least once in every month, or as may be determined upon by such Council.

9. Any person or persons requiring their cesspits emptied shall send written notice to the Council or the Inspector of Nuisances. And any person or persons emptying or causing to be emptied any closet without the sanction of the Council or Inspector of Nuisances shall be liable to a penalty not exceeding £10 nor less than £1.

10. The Council may charge such sum for the emptying of cesspits or attendance upon earth closets, as may be decided upon from time to time by resolution of the Council, and the Council or the Inspector of Nuisances on their behalf may at any time after seven days previous notice of their or his intention so to do shall have been left upon the premises, in respect of which such sums are payable, sue for and recover the same.

11. Every earth closet hereafter to be built shall be provided with a galvanised iron pail of the following dimensions, namely, fifteen inches in diameter and sixteen inches in depth, such pails to be provided by the Council and sold at cost price.

12. Every earth closet, whether already built or hereafter to be built, shall be provided with a box or earth compartment, such box or earth compartment to be without lid, and provided with a pint scoop for each occupant to throw in a pint of the stored dry earth or dry ashes through the seat into the galvanised iron pail.

13. The Inspector of Nuisances shall not take any legal proceedings under these By-laws without informing the Mayor of his intention so to do.

Passed by the Council of the Borough of Young, on Thursday, 3rd September, 1885.

(L.S.) WILLIAM SHARP,
Mayor.

A. W. HONOTR, Town Clerk.

1885-6.

NEW SOUTH WALES.

NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF WAGGA WAGGA—BY-LAWS.)

Presented to Parliament, pursuant to Act 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 25th February, 1886.

BOROUGH OF WAGGA WAGGA.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Wagga Wagga, for carrying out the provisions of the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

JOHN ROBERTSON.

THE NUISANCES PREVENTION ACT.

THE following By-laws have been made by the Borough Council of Wagga Wagga for carrying out the provisions of "The Nuisances Prevention Act, 1875" :—

1. Every person about to erect a closet or form an earth-closet shall, before he shall commence any such work, give to the Town Clerk seven days' notice in writing of his intention, and of the proposed position of such earth-closet; and in default thereof, or in case of his commencing such work without such notice, he shall be liable to a penalty not exceeding £10.

2. No closet shall be erected or earth-closet formed except in such position as shall be approved of by the Council or by the Inspector of Nuisances or other officer appointed by the Council.

3. Every closet shall be built with walls 7 feet high, and shall not be less than 3 feet 6 inches wide, and 4 feet 6 inches long, and shall be provided with a door capable of being fastened from the inside, and shall have ventilating holes 4½ inches wide.

4. When two or more closets adjoin each other, there shall be a brick or stone dividing wall of not less than 9 inches in thickness between every two closets; and such wall shall extend from the bottom of the earth-closet through the roof of the closet, so as to effect a complete separation.

5. A separate closet shall be provided for every tenement, and a breach of this By-law shall make the owner or occupier of any premises upon which there shall be a joint closet liable to a penalty not exceeding £5.

6. In dwelling-houses where the number of persons who shall ordinarily sleep therein shall exceed twelve, the capacity of the earth-closet shall be increased by 4 cubic feet for every person beyond the number of twelve, or else a separate closet shall be provided for every twelve persons or fraction of twelve.

7. In schools or factories or other places of business where a number of persons exceeding twelve shall reside or be occupied or employed, one closet shall be provided for every twenty persons, with a pan of a capacity of not less than four pans, and separate closets shall be provided for each sex.

8. If any alteration shall be requisite, in the opinion of the Inspector of Nuisances or any other officer appointed by the Council in that behalf, for preserving public health or decency, in the case of any existing earth-closet, the owner or occupier of such premises shall receive fourteen days' notice to remove or alter the same; and if he fail to do so, the Inspector or other officer shall report the same to the Council, and if the Council shall adjudge such earth-closet or closet to be injurious to the health or opposed to decency by exposure or otherwise, the same shall be altered by such Inspector of Nuisances or other officer, and the cost of such alteration shall be paid by the owner or occupier of the premises wherein the same shall be situated.

9. The place of deposit for night-soil shall be in such locality as may from time to time be determined upon by the Council; and no night-soil shall be deposited in any other locality within the Municipality, except as allowed by By-law 16 hereinafter following.

10. Until otherwise provided by the Council, all night-soil shall be removed from earth-closets in water-tight covered vehicles, between the hours of eleven o'clock in the evening and five in the morning; such vehicles to be subject to inspection by the Council or officer appointed by them, and to be subject to a license fee of £1 per annum, payable on the first of January in each year.

11. Until and unless otherwise provided by the Council, all night-soil shall be disposed of by burying it in the earth 2 feet deep.

12. In case the Council shall sell or give away any night-soil, the same shall be removed in the same manner as above provided, and on being removed from the vehicles in which it is carried it shall be deodorized by chemicals or in some other manners or covered with earth, so as to prevent any offensive smell arising therefrom.

13. The Inspector of Nuisances or other officer appointed by the Council may visit and inspect any premises, or do any work authorized by the Nuisances Prevention Act, 1875, on all day, except Sundays and public holidays, between the hours of ten o'clock in the morning and four in the afternoon.

14. Any person desirous of erecting an earth-closet shall be at liberty to do so after giving notice of his intention to do so to the Inspector of Nuisances or other officer appointed by the Council; but all night-soil shall be removed therefrom once in four days, or oftener, and shall be buried in the earth 2 feet deep; and this By-law shall apply to earth-closets already in use, as far as practicable.

15. The contents of cesspools, cesspits, privies, earth-closets, or other receptacles for night-soil shall be removed by contract in properly constructed water-tight carts; and the said Council is hereby empowered to enter into any contract or contracts with any person or persons for the due performance of any or all matters connected with the removal and deposit of night-soil, and may make regulations from time to time as to them may seem necessary respecting such contract or contracts; and may also by like regulations determine the price which the owner or owners or occupants of any premises shall pay or be liable to pay the said Council for emptying or cleansing or causing to be emptied and cleansed their cesspools, cesspits, privies, or earth-closets aforesaid; and the said Council may recover such charges as have been fixed by the said Council duly assembled by resolution or otherwise.

16. No person shall be at liberty, without the permission of the Council, or of the Inspector of Nuisances, or other officer appointed on their behalf, to use on his premises any night-soil brought from elsewhere.

17. The owner or occupier of any house, building, or passage, yard, earth-closet, or premises within this Municipality shall cause the same and any part thereof to be kept in a cleanly condition, and so as not to be a nuisance or injurious to health.

18. Any person allowing night-soil to fall or escape into any street, right-of-way, water-channel, gutter, creek, river, or reservoir, or any other public or private place, except as herein provided for, shall forfeit and pay a penalty not exceeding £20 nor less than £2.

19. If at any time the earth-closet in any premises shall overflow or become a nuisance, the owner or occupier shall be liable to a penalty not exceeding £10.

20. The Council may recover from, and the owners or occupiers of the premises shall pay, such sums for the emptying of earth-closets as may be decided upon from time to time by resolution of the Council.

21. The owner or occupier of any premises within the Municipality, or any other person who shall have or erect upon his premises any closet or earth-closet, otherwise than in accordance with these By-laws, or who shall refuse or neglect to comply with the provisions of the preceding By-laws, or who shall commit any breach thereof, shall, in cases where no special penalty is provided, forfeit and pay a penalty not exceeding £5; and any person not being duly licensed or authorized by the Council who shall remove any night-soil or empty any earth-closet shall be liable to a penalty not exceeding, for the first offence, £5, and for every subsequent offence £10.

22. All words occurring in these By-laws, and which also occur in the Nuisances Prevention Act, 1875, shall have the like meanings assigned to them as are provided in the 4th section of the said Act.

23. Any person or persons requiring their cesspools, cesspits, closets, or earth-closets emptied shall leave a written notice at the said Council Chambers, addressed to the Inspector of Nuisances, who shall forthwith, or as early as practicable, apprise the night-soil contractor of the work for which such notice has been given and received. Any person or persons emptying or causing to be emptied any receptacle for the deposit of night-soil, or not delivering such notice as aforesaid, shall be liable to a fine or penalty not exceeding £20.

24. Any person or persons wilfully obstructing the Council or their duly appointed officers or contractors, or any or either of them, in the execution of their duty in any way or manner shall be liable to a fine or penalty not exceeding £5.

Borough Council Chambers,
Wagga Wagga, 23rd November, 1885.

We certify that the foregoing By-laws under the Nuisances Prevention Act were duly passed at a regular meeting of the Borough Council of Wagga Wagga, held on Thursday, the 5th of November instant.

(L.S.) JAMES GORMLY,
Mayor.

J. HAWKES,
Council Clerk.

Sydney: Thomas Richards, Government Printer.—1886.

1885–6.

NEW SOUTH WALES.

NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF WALLSEND—BY-LAWS.)

Presented to Parliament, pursuant to Act 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 15th April, 1886.

BOROUGH OF WALLSEND.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Wallsend, for carrying into effect the provisions of the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

GEORGE R. DIBBS.

MUNICIPAL DISTRICT OF WALLSEND.—BY-LAWS.

BY-LAWS made by the Council of the Municipal District of Wallsend, for carrying into effect the provisions of the "Nuisances Prevention Act, 1875."

1. All closets, earth-closets, privies, cesspools, and cesspits, within the Municipal District of Wallsend, shall be constructed and kept so as not to be a nuisance or injurious to health, and so that there shall be no overflow or soakage therefrom; in no case where practicable shall a cesspit or cesspool be situated within twenty-five feet from any dwelling or thirty feet from any well.

2. There shall not be formed, dug, or excavated, any earth below the surface for the purpose of making any cesspit, cesspool, or other opening for the receptacle of night-soil, unless by and with the permission of the said Council; all closets made or constructed after this By-law becoming law shall be made or fitted with a moveable receptacle or pan, and such as are usually known as earth-closets, unless the consent of the said Council be given to construct other than an earth-closet.

3. No cesspit, cesspool, or other receptacle for night-soil shall be of greater depth than five feet, four feet six inches in length, and three feet six inches in width, nine inch brick-work set in cement, and cemented inside, so that no soakage can escape therefrom, and that the contents thereof may be readily removed.

4. A separate closet shall be provided for every dwelling-house, and when two or more closets adjoin each other there shall be a properly constructed dividing wall between each closet, commencing at the floor and terminating at the roof; each hotel shall be provided with at least one public closet, and one or more properly constructed urinals, which shall be erected in such situations as the said Council or their officers shall decide upon.

5. The contents of cesspools, cesspits, privies, earth-closets, or other receptacles for night-soil may be removed by contract in properly constructed watertight carts, and the said Council is hereby empowered to enter into any contract or contracts with any person or persons for the due performance of any or all matters connected with the removal and deposit of night-soil, and may make regulations from time to time as to them may seem necessary respecting such contract or contracts, and may also by like regulations determine the price which the owner or owners of or occupants of any premises shall pay or be liable to pay the said Council, for emptying and cleansing, or causing to be emptied or cleansed, their cesspools, cesspits, privies, or earth-closets aforesaid, and the said Council may recover such charges as have been fixed by the said Council duly assembled by resolution or otherwise.

6. When any existing closet, cesspool, cesspit, or similar appliance of any kind shall in the opinion of the said Council, or their duly appointed officer or officers, be injurious to public health, or be or become a nuisance or opposed to common decency, the owner or owners thereof shall upon receiving seven (7) days notice from the said Council, or from their duly appointed officer for that purpose, make such alterations as may be ordered by the said Council or by such officer within the time prescribed by such notice; any owner or occupier neglecting or refusing to comply with the terms of such notice, the said Council shall and may have the required alterations carried out at the costs and expenses of the said owner or occupier thereof; and in the case of neglect or refusal to pay such expense after demand, the same shall and may be recovered in the manner provided by section No. 14 of the "Nuisances Prevention Act, 1875."

7. Any owner or owners of existing closets or soilpits, may be required to alter and improve them in such manner as may be deemed necessary by the said Council, in order to bring them into conformity in all respects with these By-laws, on notice being given by the said Council or by their duly appointed officer for that purpose to that effect; owners or occupiers failing to make such alterations or improvements, within one month after the receipt of such notice, shall be liable to a penalty of not less than one pound nor exceeding the sum of three pounds for each and every week or portion of a week during which they shall fail to comply with the terms of the notice aforesaid.

8. The said Council may from time to time, by regulation or regulations, appoint depôts within the said Municipal District wherein the contents of the closets, cesspools, cesspits, and other offensive matter shall be deposited, and may use, or cause

to be used, such disinfectants as may appear necessary so that the existing matter shall not be a nuisance or injurious to health: Provided also that nothing herein contained shall prevent the said Council from making arrangements to deposit night-soil and other manures on private lands, or disposing of such by sale or otherwise, in accordance with the general provisions of these By-laws; but no person shall be allowed to deposit night-soil, sewerage, or other offensive matter on private lands within the said Municipality without the consent of the Council or their duly appointed officer.

9. The contents of cesspools, cesspits, privies, earth-closets, or other receptacles for night-soil shall be removed in properly constructed watertight carts, approved of by the Council, by persons who have been duly authorized and licensed for the performance of such work by the said Council; and no person shall be allowed to perform such duties of nightman without having first obtained a license from the said Council; and any person infringing this part of the By-laws, shall, on conviction thereof, be subject to a penalty for every such offence of not less than ten shillings nor more than five pounds.

10. All privies, earth-closets, or other receptacles wherein night-soil may be deposited shall be kept in such a state of cleanliness so as not to be a nuisance or injurious to health, and no householder or resident shall allow or permit any such premises to be a nuisance or offensive to neighbouring householders or residents under a penalty of not less than one pound.

11. The occupier of every house, building, or tenement, within the said Municipal District shall cause every cesspit, cesspool, or privy therein, to be emptied and cleansed from time to time, as soon as any portion of the contents of such shall have so accumulated therein as to be within a distance of six inches from the top of such receptacle or cesspit or sooner, on complaint being made and notice given by the said Council's duly appointed officer for the removal of such night-soil: Provided that the contents of any cesspool, cesspit, privy, or closet-pan shall not be removed or discharged therefrom except by some nightman or nightmen duly authorized or licensed as such by the aforesaid Council, and only between the hours of 10 o'clock p.m. and 5 o'clock a.m. No cesspool, cesspit, or privy shall have connected therewith or attached thereto any pipe or other appliances capable of being used for the purpose of discharging or removing the contents of such cesspool, cesspit, or privy, upon or under the surface of any adjoining ground, or into any drain or sewer, or into any other place or places whatsoever. Any person or persons wilfully violating this part of the By-laws in any respect shall be liable to and forfeit and pay a penalty of not less than ten shillings nor more than ten pounds.

12. The occupier of every house, building, or other tenement on or in which the privy or closet belonging thereto shall not be provided with a cesspit shall at all times cause to be kept in such privy or closet a supply of dry powdered earth, ashes, charcoal, lime, or some other material efficient and sufficient for deodorizing the night-soil deposited therein, and shall cause all such night-soil which may be deposited therein in a box, pan, bucket, or other receptacle in such privy or closet, to be immediately, on the deposit thereof, covered with a quantity of dry powdered earth, or such other deodorizing material as aforesaid, sufficient to thoroughly and effectively deodorize the contents of such bucket, pan, or other receptacle.

13. Licensed nightmen for the removal of night-soil shall, under the direction of the Inspector of Nuisances for the time being, or their officer or officers appointed by the said Council, make a trench on the depôts fixed upon by the said Council for the purpose of depositing therein all night-soil that shall from time to time be taken thereto, and the whole of such night-soil shall, as deposited, be covered with earth and disinfectants so as to prevent any nuisance to arise therefrom; and any nightman or other person who shall deposit night-soil either on the appointed depôt, or any other land within the said Municipal District, without covering or otherwise deodorizing the same shall be liable to a penalty of not less than ten shillings nor more than ten pounds.

14. Every cesspool, cesspit, or earth-closet shall be in such a position that the same may be emptied without the contents thereof being carried through any part of any dwelling-house; and any person or persons having or building any cesspool or cesspit contrary to this part of the By-laws shall be liable to a penalty of not less than ten shillings nor more than five pounds.

15. Any person or persons desirous of substituting earth or pan closets for or in lieu of any existing cesspit, cesspool, or privy shall be at liberty so to do on giving notice to the Inspector of Nuisances or other duly appointed officer, who shall, under his hand, give permission in writing for such substitution; no existing cesspit, cesspool, or other receptacle shall be covered over, filled up, or otherwise abandoned without the consent in writing of the Inspector of Nuisances.

16. Any person or persons who intend to construct any privy or closet shall give notice in writing to the Inspector of Nuisances for the time being of their intention so to do, and the said Inspector shall, within forty-eight (48) hours, inspect the premises on which such is intended to be constructed, and if in accordance with these By-laws and the Nuisances Prevention Act shall give the necessary permission for the construction of such closet, any person constructing a closet or other receptacle for the deposit of night-soil without giving such notice and receiving such permission shall, upon conviction, be liable to a penalty of not less than ten shillings nor more than ten pounds.

17. Any person or persons obstructing the said Council or their appointed officers or servants, or any or either of them, in the execution of their duty in any way or manner shall be liable to a penalty not exceeding ten pounds, in accordance with the provisions and powers contained in the "Nuisances Prevention Act, 1875."

18. There shall be paid to the Municipal Council the sum of twenty shillings per annum for a license or permission to act as a nightman; and every person owning two or more night-carts shall pay the sum of ten shillings per annum for each and every cart he may have so employed or engaged in such work.

19. Every person guilty of a breach of any of the provisions of the foregoing By-laws shall be liable for every such offence, when not otherwise expressly provided for, to a fine or penalty not exceeding twenty pounds nor less than ten shillings.

(L.S.) ROBERT WALKER, Mayor.

ELIJAH ABELL, junior, Council Clerk.

Wallsend, February 2nd, 1886.

1885-6.

NEW SOUTH WALES.

NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF QUEANBEYAN—BY-LAWS.)

Presented to Parliament, pursuant to Act 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 14th April, 1886.

BOROUGH OF QUEANBEYAN.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Queanbeyan, for carrying into effect the provisions of the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

GEORGE R. DIBBS.

BOROUGH OF QUEANBEYAN.

BY-LAWS for the carrying into effect the provisions of the "Nuisances Prevention Act, 1875."

Notice required previous to erection of closets.

134. Every person about to erect a closet or form a cesspit, shall, before he commence any such work, give to the Town Clerk seven days' notice in writing of his intention and of the proposed position of such closet or cesspit, and in default thereof, or in case of his commencing such work without such notice, he shall be liable to a penalty not exceeding £2.

Situation of closet to be approved.

135. No closet shall be erected or cesspit formed, except in such position as shall be approved of by the Council or by the Inspector of Nuisances or other officer appointed by the Council.

Situation and dimensions of cesspits and earth closets.

136. No cesspit shall be built under any dwelling-house, nor at a less distance than 20 feet therefrom, except in case of earth closets, nor in such position that the same cannot be emptied without the contents thereof being carried through any dwelling-house; and no cesspit shall be less than 4 feet long by 3 feet wide, internal measurement, nor of a less depth than 4 feet nor greater than 5 feet below the ground surface, and the walls and floor of every cesspit shall be built of brick or stone, the floor to slope at least 12 inches towards the manhole, and the top of every cesspit shall be not less than 6 inches higher than the highest part of the ground immediately adjoining it.

Size of closets.

137. Every closet shall be built with walls 6 feet high, and shall not be less than 3 feet wide and 4 feet long, internal measurement, and shall be provided with a door capable of being fastened from the inside, and shall have ventilating holes 4½ inches wide.

Double closets to be effectively separated.

138. When two or more closets adjoin each other there shall be a brick or stone dividing wall of not less than 4½ inches in thickness between every two closets, and each wall shall extend from the bottom of the cesspit through the roof of the closet so as to effect a complete separation.

Separate closets for each tenancy.

139. A separate closet shall be provided for every tenement, and a breach of this By-law shall make the owners or occupiers of any premises upon which there shall be a joint closet liable to a penalty not exceeding £5.

Separate closet.

140. In dwelling-houses where the number of persons who shall ordinarily sleep therein shall exceed twelve, a separate closet shall be provided for every twelve persons or fraction of twelve.

Closets for schools and factories.

141. In schools or in factories, or other places of buisness where a number of persons exceeding twelve shall reside or be occupied or employed, one closet shall be provided for every twenty persons, with a cesspit of a capacity of not less than 80 cubic feet, and separate closets shall be provided for each sex.

Notice to be served when alteration necessary.

142. If any alteration shall be requisite in the opinion of the Inspector of Nuisances or any other officer appointed by the Council in that behalf, for preserving public health or decency in the case of any existing cesspit or closet, the owner or occupier of such premises shall receive twenty-one days' notice to remove or alter the same, and if he fail to do so and the Council shall adjudge such cesspit to be either injurious to the health or opposed to decency by exposure or otherwise, the same shall be altered by such Inspector of Nuisances or other officer, and the cost of such alteration shall be paid by the owner or occupier of the premises wherein the same shall be.

Night-soil—place of deposit for.

143. The place of deposit for night-soil shall be in such locality as may be from time to time determined upon by the Council, and no night-soil shall be deposited in any other locality within the Municipality except as allowed by By-laws 149 and 150.

Night-soil—Council's servants to remove.

144. Until otherwise provided by the Council, all night-soil shall be removed from cesspits by servants of, or contractors with, the Council, in water-tight covered vehicles, between the hours of 10 o'clock in the evening and 5 o'clock in the morning

Night-soil—how disposed of.

145. Until and unless otherwise provided by the Council, all night-soil shall be disposed of by burying in and mixing with the earth.

Night-soil to be deodorised or otherwise treated.

146. In case the Council shall sell or give away any night-soil, the same shall be removed in the same manner as above provided, and on being removed from the vehicles in which it is carried, it shall be deodorised by chemicals, or in some other manner, or covered and mixed with earth so as to prevent any offensive smell arising therefrom.

Hours of visit of Inspector of Nuisances.

147. The Inspector of Nuisances or other officer appointed by the Council may visit or inspect any premises or do any work authorised by the Nuisances Prevention Act of 1875, on all days, except Sundays and public holidays, between the hours of 10 o'clock in the morning and 4 o'clock in the evening.

Earth closets—notice to be given of intention to erect.

148. Any person desirous of erecting an earth closet shall be at liberty to do so after giving notice of his intention to do so to the Inspector of Nuisances or other officer appointed by the Council, but all night-soil shall be removed therefrom once in four days, and if such closet shall be within any dwelling once within twenty-four hours or oftener, and buried in the earth.

Night-soil from earth closets—how disposed of.

149. Every person shall be at liberty to use on his own premises all night-soil collected therefrom, but if any nuisance shall arise therefrom he shall be liable to a penalty not exceeding £5.

Restrictions regarding use of night-soil.

150. No person shall be at liberty without the permission of the Council or of the Inspector of Nuisances or other officer appointed on that behalf, to use on his premises any night-soil brought from elsewhere.

Yards and drains to be kept clean.

151. The owner or occupier of any house, building, passage, yard, or premises within this Municipality shall cause the yard ground adjoining or belonging thereto, as well as all drains in connection therewith, to be kept in a cleanly condition, and so as not to be a nuisance or injurious to health.

Night-soil or other offensive matter not to flow from premises, &c.

152. Any person allowing night-soil from any closet to fall into any street, right-of-way, water channel, gutter, creek, river, or reservoir, or in any other public place, or wilfully allowing filth of any kind or accumulation thereof, or any substance or substances from which noxious effluvia arise, to remain upon his premises or flow therefrom, shall forfeit and pay a sum not exceeding £20 nor less than £2.

Notice to be given in case of overflowing of cesspits.

153. If at any time the cesspit in any premises shall overflow, the owner or occupier shall, within 24 hours, give notice to the Inspector of Nuisances, otherwise such owner or occupier shall be liable to a penalty not exceeding £10.

Council may recover costs for emptying.

154. The Council may recover, and the owner or occupier of the premises shall pay such sums for the emptying of cesspits as may be decided upon from time to time by resolution of the Council.

Penalties

155. The owner or occupier of any premises within the Municipality, or any other person who shall have or erect upon his premises any closet or cesspit otherwise than in accordance with these By-laws, or who shall refuse or neglect to comply with the provisions of any of the preceding By-laws, or who shall commit any breach thereof shall (in cases where no special penalty is provided) forfeit and pay a penalty not exceeding £5.

Interpretations.

156. All words occurring in these By-laws, and which also occur in the "Nuisances Prevention Act of 1875" shall have the like meanings assigned to them as are provided in the fourth section of the same Act.

Made and passed by the Council of the Borough of Queanbeyan, this 25th day of January, 1886.

(L.S.) J. J. WRIGHT,
Mayor.

WM. H. NICHOLLS, Council Clerk.

NUISANCES PREVENTION ACT, 1875.

(MUNICIPAL DISTRICT OF HAMILTON—AMENDED BY-LAW.)

Presented to Parliament, pursuant to Act, 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 5th August, 1886.

MUNICIPAL DISTRICT OF HAMILTON—AMENDED BY-LAW.

THE following Amended By-law made by the Council of the Municipal District of Hamilton, for carrying into effect the provisions of the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the above-cited Act.

GEORGE R. DIBBS.

MUNICIPAL DISTRICT OF HAMILTON.—AMENDED BY-LAW.

THE following Amended By-law has been made by the Municipal Council of Hamilton for the better carrying out of the provisions of the "Nuisances Prevention Act, 1875," within the Municipal District of Hamilton.

By-law number 3 of the By-laws published in the Government Gazette of 23rd October, 1884, is hereby repealed, and in lieu thereof the following By-law shall stand as No. 3 of the aforesaid By-laws:—

3. No cesspit, cesspool, or other receptacle for night-soil shall be of greater depth than five feet, four feet six inches in length, and three feet six inches in width, and shall be built of nine (9) inch brickwork, set in cement, and rendered half-an-inch thick with cement, mixed in the proportion of one of cement to three of clean sharp sand, so that no soakage can escape therefrom, and that the contents thereof may be readily removed; and any person violating the provisions of this By-law shall be liable to a penalty not exceeding £10, nor less than £2.

Made and passed by the Municipal Council of the Municipal District of Hamilton, this nineteenth day of May, in the year of our Lord one thousand eight hundred and eighty-six.

(L.S.) SAMUEL DONN,
Mayor.

JAMES RAY,
Council Clerk.

NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF ALBURY—REPEAL OF BY-LAW.)

Presented to Parliament, pursuant to Act 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 18th August, 1886.

BOROUGH OF ALBURY—REPEAL OF BY-LAW.

THE following By-law made by the Council of the Borough of Albury, repealing No. 16 of the By-laws for carrying into effect the provisions of the "Nuisances Prevention Act, 1875," in that Municipality, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the abovecited Act.

GEORGE R. DIBBS.

By a resolution passed by the Borough Council of Albury at a meeting held on the 28th day of April, 1886, the following clause, No. 16 of the By-laws made under the "Nuisances Prevention Act, 1875," is hereby repealed, viz.:—

No. 16. Every person shall be at liberty to use on his own premises all night-soil collected thereon; but if any nuisance shall arise therefrom he shall be liable to a penalty not exceeding £5.

The seal of the Municipality of Albury was herewith attached.

NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF ALEXANDRIA—BY-LAWS.)

Presented to Parliament, pursuant to Act 39 Vic., No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 7th September, 1886.

BOROUGH OF ALEXANDRIA—BY-LAWS.

THE following By-laws made by the Council of the Borough of Alexandria, under the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

GEORGE R. DIBBS.

BY-LAWS of the Borough of Alexandria, made under and for carrying into effect the provisions of the "Nuisances Prevention Act."

1. Every person who shall be about to erect a closet, or form, excavate or make a cesspit, shall, before he shall commence to erect such closet, or to form, excavate, or make any such cesspit, deliver to the Council Clerk of the Borough of Alexandria notice in writing of the intention of such person to erect such closet, or form, excavate, or make such cesspit, and of the place or position in which it is intended that such closet shall be erected, or such cesspit formed, excavated, or made; and if any person shall commence to erect any closet, or to form excavate, or make any cesspit within the said Borough without having given such notice in writing as aforesaid, and before the expiration of seven days after the delivery of such notice (except by written authority of the Inspector of Nuisances for the said Borough, or other officer for the time being appointed by the Council of the said Borough in that behalf), he shall forfeit and pay a penalty of not more than five pounds nor less than one pound.

2. No person shall erect or commence to erect any closet, or to form, excavate, or make any cesspit except in such place or position as shall be approved by the Inspector of Nuisances or other officer as aforesaid; and any person who shall erect or commence to erect, any closet, or to form, excavate, or make any such cesspit without having obtained the approval of the said Inspector or other officer, or in any place or position other than the place or position approved of by the said Inspector or other officer as aforesaid, shall forfeit and pay a penalty of not less than ten shillings nor more than forty shillings; but any person who shall feel aggrieved by the decision of such Inspector or other officer may appeal against the same to the Council.

3. Every cesspit to be constructed within the Borough shall be built of 9-inch brickwork set in cement, and the top of such cesspit shall be at least 6 inches higher than the highest part of the surface of the ground immediately adjoining such cesspit, and no cesspit shall be formed, excavated, or made under any dwelling-house, nor at a less distance than 20 feet therefrom, area permitting. If any person shall so form, excavate, or make any cesspit which shall not be in accordance with the provisions of this By-law, or shall form, excavate, or make any cesspit under any dwelling-house, or at a less distance than 20 feet, area permitting, shall forfeit and pay a penalty of not more than five pounds, nor less than two pounds.

4. For houses containing not more than four rooms and out-offices, the cesspit shall not be less than 3 feet by 4 feet and 5 feet deep, inside measurement; for houses containing more than four rooms and out-offices, the cesspit shall not be less than 3 feet 6 inches by 4 feet and 5 feet deep, inside measurement.

5. Every closet shall be built with walls 7 feet high, and shall not be less than 3 feet 6 inches wide and 4 feet 6 inches long, and shall be provided with a door capable of being fastened inside and with a man-hole not less than 2 feet square, clear internal measurement, to be covered with a trap-door; and every person who shall build or erect any closet which shall not be in accordance with this By-law shall forfeit and pay a penalty of not more than two pounds nor less than ten shillings.

6. Where two or more closets adjoin each other there shall be a sufficient dividing wall not less than 9 inches in thickness between every two closets, and such wall shall extend from the bottom of the cesspit up to the roof of the closet, so as to effect a complete separation; and if any person shall erect any two or more closets adjoining each other, and not in accordance with this By-law, he shall forfeit and pay a penalty of not more than two pounds nor less than ten shillings.

7. A separate closet shall be provided for each tenement, and any person offending against the provisions of this By-law shall forfeit and pay a penalty of not more than five pounds nor less than two pounds.

8. In schools, factories, or other places of business where a number of persons exceeding twelve shall ordinarily reside or be occupied or employed, one closet shall be provided for every twenty persons, with a cesspit of a capacity of not less than 80 cubic feet, and separate closets shall be provided for each sex; and every owner, occupier, or tenant of such school, factory, or other place of business, and every other person who shall offend against this By-law or fail to provide the number of closets and of the capacity in this By-law mentioned, shall forfeit and pay a penalty of not more than five pounds nor less than one pound.

9. If any alterations shall be requisite, in the opinion of the Inspector of Nuisances or other officer appointed by the Council in their behalf, for preserving public health or decency in case of any existing cesspit or closet, and the Council shall adjudge such cesspit or closet to be injurious to the health or opposed to decency by exposure or otherwise, and the owner or occupier shall not make the necessary alterations after receiving fourteen days notice from the Council Clerk, it shall be lawful for the Inspector of Nuisances or other officer appointed by the Council to remove the said nuisance, and any expense incurred thereby may be sued for and recovered in a summary way before any two or more Justices of the Peace.

10. Owners of existing closets and soilpits may be required to alter or improve them in such manner as may be necessary in order to bring them into conformity with these regulations, on notice being given by the Inspector of Nuisances to that effect; persons failing to make such alterations or improvements within one month after the receipt of such notice shall be liable to a penalty of not less than one pound nor exceeding the sum of three pounds for each and every week or portion of a week during which they shall fail to comply with the terms of the said notice.

11. The night-soil shall be removed by contract in properly constructed water-tight covered vehicles, between the hours of 10 p.m. and 5 a.m., from the first day of October to the last day of March, and between the hours of 10 p.m. and 6 a.m., from the first day of April to the last day of September.

12. Persons desirous of using earth closets may be permitted to do so on making written application to the Council, and intimating the arrangements to be made for their construction and management, provided that such arrangements shall be approved by the Council.

13. The Inspector of Nuisances or other officer appointed by the Council may visit and inspect any premises, or do any work authorized by the Nuisances Prevention Act of 1875 thereon, on all days except Sundays and holidays, and any person who shall hinder or obstruct any Inspector of Nuisances or other officer as aforesaid upon any such visitation or inspection, or in the doing or performing of any work, shall forfeit and pay a penalty of not more than two pounds nor less than ten shillings.

The Inspector of Nuisances shall furnish the Council with a monthly return showing the number of cesspits emptied, the amount due and payable for each cesspit, and the amount of arrears due for emptying cesspits. He shall collect the amounts so due and payable, and account therefor to the Council at least once a month, or as may be determined upon by the Council.

(L.S.) C. JESSON, Mayor.

KELSON VAUGHAN, Council Clerk.

NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF BURWOOD—BY-LAW.)

Presented to Parliament, pursuant to Act 39 Vic., No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 20th September, 1886.

BOROUGH OF BURWOOD.—BY-LAW.

THE following By-Law made by the Council of the Borough of Burwood under the "Nuisances Prevention Act, 1875," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, is published in accordance with the requirements of the above cited Act.

GEORGE R. DIBBS.

BY-LAW UNDER THE NUISANCES PREVENTION ACT, 1875.

Every closet shall be supplied with a box or other receptacle for dry earth, sand, or ashes, of which a quantity, sufficient to deodorise the excreta therein, shall be deposited in the closet-pan daily.

Any person committing a breach of this By-Law shall, on conviction, forfeit and pay a penalty of for the first offence ten shillings; and for the second or any subsequent offence, not less than ten shillings nor more than forty shillings.

Passed at a meeting of the Burwood Council held on Monday, the 14th June, 1886.

(L.S.) J. F. WILSHIRE,
Mayor.

W. REDFEARN, Council Clerk.

1885-6.

NEW SOUTH WALES.

MUNICIPALITIES ACT OF 1867, AND NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF ALBURY—BY-LAWS.)

Presented to Parliament, pursuant to Acts 31 Vic. No. 12, sec. 158, and 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 16th December, 1885.

BOROUGH OF ALBURY.—BY-LAWS.

THE following By-laws, made by the Council of the Borough of Albury, under the "Municipalities Act of 1867" and the "Nuisances Prevention Act, 1875," respectively, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the abovecited Acts.

P. A. JENNINGS.

BY-LAWS.

PUBLIC GARDENS.

Hours.

1. The gardens and other public places of recreation under the management or control of the Council, and herein called "The Gardens," shall be open every day.

Injury to things in gardens.

2. No person shall pluck any of the flowers, or walk on the beds or borders, or climb upon or get over the fences, or remove any of the tallies, or disturb, damage, or destroy any property or thing in the gardens.

Shooting, &c.

3. No person shall carry firearms through the gardens, or shoot, snare, or destroy any wild fowl either in the gardens or in or on any water adjacent thereto, or bathe in any such water.

Driving carts.

4. No cart or other vehicle used for the conveyance of goods, shall, without the authority of the proper officer of the Council, be driven through the gardens.

Supplying plants, &c.

5. Such plants, seeds, or cuttings as are commonly purchasable at nurseries in New South Wales shall not be supplied from the gardens to any person, unless in exchange, or for public institutions, or for benevolent purposes.

Behaviour, &c.

6. No visitor shall interrupt the gardeners or labourers by conversation or otherwise, or shall use any abusive, improper, or unbecoming language to any person in such gardens, or otherwise annoy any such person; or behave in an indecent, improper, or unbecoming manner in such gardens; or sit or lie on the borders or walks except on seats provided by the Council.

Children.

7. Children under the age of ten years, not being under the control of some competent person, shall be removed from the gardens.

Dogs.

8. All dogs and goats and all poultry found within the gardens shall be destroyed, and the owner shall make compensation for any damage done; and no visitor shall be permitted to bring any dog into the gardens otherwise than under proper control of chain or cord, and any person permitting any dog to follow him or her into the gardens who shall refuse to immediately remove such dog, or to place such dog under control of chain or cord when requested so to do by the proper officer of the Council, or gardener, or labourers employed in such gardens, shall have offended against this By-law.

Penalties.

9. Any person offending against this By-law shall, for the first offence, forfeit and pay any sum not exceeding five pounds; for a second offence, any sum not less than ten shillings nor more than ten pounds; and for a third and every subsequent offence, any sum not less than one pound nor more than twenty pounds. And any person may, on committing any such offence, be forthwith removed from the gardens by the proper officer of the Council, or by any of the gardeners or labourers employed in such gardens, without affecting the liability of such person so offending to be subsequently prosecuted for such offence.

ADDITIONAL BY-LAWS FOR THE PREVENTION OF NUISANCES.

Dead animals—mode of removal.

1. If any animal shall die in any part of the said Municipality and the owner of such animal or the occupier of the place, if private property, where such animal shall have died shall not cause such animal to be immediately destroyed by fire, or so effectually removed and disposed of that no nuisance can possibly result therefrom in any part of the Municipality, he shall for every such offence forfeit and pay any sum not exceeding fifty pounds nor less than two pounds.

Dead animals on road or street, &c.

2. If any animal shall die on any road, street, or public place within the said Municipality, or within half-a-mile of any road, street, or public place, or of any dwelling house, and the owner or any person in charge of such animal or the occupier of the place, if private property where such animal shall have died, shall not immediately cause such animal to be effectually removed and destroyed as aforesaid or removed as aforesaid, on the spot where it shall have died, if a quarter of a mile from any dwelling-house, or if such spot shall not be a quarter of a mile from any dwelling-house, or if such owner or person in charge or occupier shall not immediately cause such animal to be effectually removed as aforesaid or to be removed to some place not less than a quarter of a mile from any dwelling-house and there destroyed as aforesaid, every such owner or person in charge or occupier shall for every such offence forfeit and pay any sum not exceeding ten pounds nor less than two pounds.

Power of Inspector as to dead animals on private premises.

3. The Inspector of Nuisances, or any other officer appointed by the Council of the said Municipality, with his assistant, may at any hour enter upon any premises or place within the said Municipality where any animal has died, and require the owner or occupier of such premises or place immediately to destroy such animal by fire and, if necessary, to remove the same for that purpose, as such Inspector of Nuisances or other officer appointed by the said Council shall direct, or otherwise forthwith effectually to remove and dispose of the same as aforesaid, in default of which it shall be lawful for any one or more of such officers to cause such animal to be removed for that purpose; and every owner or occupier of such premises or place failing, neglecting, or refusing to comply with such requisition shall forfeit and pay any sum not exceeding thirty pounds nor less than three pounds.

Dead animals in certain cases to be removed at cost of Municipality.

4 If any animal shall die in any public place or street within the said Municipality and the owner or any person having charge of such animal cannot at the time be found or ascertained, it shall be immediately removed by the Inspector of Nuisances or other officer appointed by the said Council and destroyed in manner aforesaid at the cost of the Municipality.

Passed by the Borough Council of Albury, this thirteenth day of May, in the year of our Lord, one thousand eight hundred and eighty-five.

(L.S.) G. H. BILLSON,
Mayor.

JNO. H. PAINE,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES ACT OF 1867, AND NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF BURWOOD—BY-LAWS.)

Presented to Parliament, pursuant to Acts 31 Vic. No. 12, sec. 158, and 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 30th January, 1886.

BOROUGH OF BURWOOD.—BY-LAWS.

THE following additional and amended By-laws, under the Municipalities Act of 1867, and By-laws for carrying into effect the provisions of the "Nuisances Prevention Act, 1875," made by the Council of the Borough of Burwood, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the abovecited Acts.

JOHN ROBERTSON.

ADDITIONAL and amended By-laws adopted at the meeting of the Council held on the 7th May, 1885, under the provisions of the Municipalities Act, 1867.

Days of ordinary Meeting.

Amended Part I, No. 1.

The Council shall meet every alternate Monday at the hour of half-past 7 in the evening, or on such other day and at such hour as may by resolution of the Council be from time to time appointed.

Rates to be paid at the Council Chambers.

Amended Part II, No. 3.

All persons liable to pay any rates as aforesaid, shall pay the amount thereof within the time prescribed by the said Act into the Council Chambers during office hours, that is to say, from 4 to 5·30 p.m. daily, except Saturday and every second and fourth Wednesday in each month from 7 to 9 p.m.

Noisome Weeds.

Additional to follow Sec 6, Part III.

That every owner or occupier, upon whose land or premises are found growing any weeds known as the Bathurst burr, Scotch thistle, sweet briar, or other noisome weeds, shall, on being required by the Inspector of Nuisances, or any other officer of the Council, cause the same to be destroyed, failing which shall be liable to a penalty not exceeding £2 nor less than 10s.

Slops, nightsoil, &c., to be conveyed away only at certain hours.

Amended No. 14, Part III.

Any person or persons who shall drive or cause to be driven any cart or other carriage with any nightsoil or ammoniacal liquor therein, through or in any street or public place within the said borough between the hours of 5 o'clock in the morning and 10 o'clock at night, or shall fill any cart or other carriage so as to turn over or cast any night-soil, ammoniacal liquor, slops, mire, or channel dirt, or filth, in or upon any such street or public place, or shall deposit night-soil, ammoniacal liquor, or other offensive matter, nearer to any street, road, or dwelling-house, than 20 feet, or shall remove night-soil or other offensive matter otherwise than in properly covered and watertight carts or other vehicles, or shall cause any vehicle used for this purpose to stand on any premises nearer to any road, street, or dwelling-house than shall be directed by the said Council, or the said Inspector of Nuisances, shall for every such offence forfeit and pay any sum not exceeding five pounds; and in case the person so offending shall not be known to the said Council or Inspector, then the owner of such cart or carriage in which such night-soil or other offensive matter shall be put or placed, and also the employer of the person so offending, shall be liable to forfeit and pay such penalty as aforesaid.

Dead animals, &c., not to be thrown into any public watercourse, street, or thoroughfare.

Amended No. 19, Part III.

Any person who shall cast any filth, rubbish, or any dead animal, or any animal with intent of drowning, into any public watercourse, sewer, waterhole, river, creek, or canal, or who shall permit or suffer slops, suds, or filth, to flow from his or her premises over any of the footways, or into or upon any public street or thoroughfare of the Borough, or shall by means of pipes, shoots, channels, or other contrivances permit or cause water from his or her premises to flow over such pathways, or shall obstruct or divert from its channel any sewer or watercourse, river, creek, or canal, shall forfeit any sum not exceeding five pounds.

Cleansing Butchers' Shambles, Slaughter-houses, &c.

Amended No. 23, Part III.

It shall not be lawful for any person to prosecute his or her trade by slaughtering any cattle, sheep, or pigs within the limits of the Borough: and the Inspector of Nuisances, or any other person appointed by the Council, shall have full power, without any other authority than this By-law, to go upon any premises for the purpose of ascertaining whether a breach of this By-law has been committed; and any person who shall be guilty of such offence shall, upon conviction, forfeit and pay any sum not exceeding twenty pounds.

Amended No. 24, Part III.

Upon the representation of any householder that the house, premises, yards, closets, drains, ashpits, or hogstyes of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances, or any other person appointed by the Council, shall make an inspection of the premises complained of; and the officer of the Council shall have full power, without any other authority than this By-law, to go upon such premises for the aforesaid purpose; and if any such premises shall be found to be a nuisance or otherwise offensive, notice in writing shall be given to the proprietor or resident of such premises that if, within forty-eight hours after the service of such notice, the nuisance shall not be removed, the Council may, by their Inspector, cause the same to be removed, the proprietor, tenant, or occupant of the aforesaid premises shall, upon conviction, be liable to any penalty not exceeding twenty pounds, in addition to the cost of such removal where it shall have been done by the Council.

Placing Carriages, Goods, &c., on Footways, &c.—Not removing when required—Replacing the same after removal.

Additional to follow Clause 1, No. 25, Part III.

Any person who shall set or place, or cause or permit to be set or placed, any stall-board, chopping-block, show-board (on hinges or otherwise), basket wares, merchandise, casks, or goods of any kind whatsoever, in or upon or over any carriage or foot way in any street or public place within the said Borough, or shall place, or cause to be placed, any coach, cart, waggon, dray, wheelbarrow, handbarrow, sledge, truck, or other carriage upon any such carriage-way or foot-way, except for the necessary time of loading and unloading, or taking up or setting down any fare, or waiting for passengers when actually hired, or harnessing or unharnessing the horses or other animals; or if any person shall set or place, or cause to be placed, in or upon or over any such carriage or foot way any timber, stones, bricks, lime, or other materials or things whatsoever, or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal, or other thing or matter whatsoever, from any house or other building or premises, over any part of any such foot-way or carriage-way, or over any area of any house or other building or premises, and shall not immediately and permanently remove all or any such matters or things, being thereto required by the Inspector of Nuisances or other proper officer of the Council, shall, upon conviction, for every such offence forfeit and pay for the first offence a sum not exceeding forty shillings nor less than ten shillings, for the second offence a sum not exceedings five pounds nor less than one pound, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than two pounds.

Additional.

All persons standing or loitering upon any of the carriage-ways, foot-ways, or other public places in the Borough of Burwood, to the inconvenience of passers-by, or in any way interrupting the traffic, who shall not discontinue to do so on being required by any officer or servant of the Council of the said Borough, or by any police officer, shall be liable to a penalty not exceeding two pounds nor less than ten shillings.

Amended No. 29, Part III.

No person shall be permitted to drive horses, sheep, or cattle (other than milch cows) on any part of the Borough, except Driver's Road; and any one infringing this By-law shall, upon conviction, forfeit and pay a penalty of not exceeding five pounds for every offence.

Additional to follow Sec. 18, Part III.

The owner or occupier of any property having an entrance for vehicles across the foot-way into his premises shall, at his own cost, put down cube-sets or other substantial material on such crossing, to the satisfaction of the Council; and where such owner or occupier shall fail to put down such cube-sets or other material within one month after receiving notice so to do from the Overseer of Works, the Council may have the work done at his cost, and recover the same in the usual way.

(L.S.) E. SANDERS,
Mayor.

W. REDFEARN,
Council Clerk.

By-laws of the Borough of Burwood, made under and for carrying into effect the provisions of the Nuisances Prevention Act, 1875.

1. After the expiration of three months from the date of the passing of these By-laws no person or persons shall be permitted to have on their premises any open closet or cesspit for the deposit of fœcal matter, and any person or persons allowing any such closet or cesspit to remain after receiving twenty-eight days' notice to remove the same, shall forfeit a sum not exceeding five pounds nor less than one pound, and after such conviction, if not removed within a further period of fourteen days, shall upon conviction forfeit a further sum not exceeding five shillings nor more than two pounds for ever day that the same shall remain unaltered or unremoved.

2. All closets shall be supplied with one or more iron pans with two side handles or one over handle, and shall be not more than fourteen inches in depth, and not more than fourteen inches in diameter, and shall be kept in good order to the satisfaction of the Inspector of Nuisances. Breach of this By-law to carry a penalty not less than ten shillings and not more than forty shillings.

3. No person shall be permitted to cover up or cause to be covered up any existing cesspit with earth or other material prior to giving notice to the Inspector of Nuisances, until the same shall have been properly emptied by the Council's contractor. Any person offending against this By-law shall be liable to a penalty not exceeding five pounds nor less than one pound.

4. A separate closet shall be provided for every tenement. In schools or factories, where a number of persons shall be employed, separate closets shall be provided for each sex; with a door to fasten on the inside. Where two or more closets adjoin each other, there shall be a dividing wall between each to effect a complete separation; and any person offending against the provisions of this By-law shall incur a penalty not exceeding ten pounds nor less than two pounds.

5. If in the opinion of the Inspector of Nuisances any alteration is required in existing cesspits, or closets, he shall report the same to the Council, who shall determine what alteration is necessary for the preservation of health and decency; and such alteration shall forthwith be made by the owner of the premises after receiving seven days' notice to that effect under a penalty for each weeks' neglect or delay in effecting such alteration not exceeding five pounds nor less than two pounds.

6. The nightsoil shall be removed by contract in properly constructed watertight carts, between such hours as the Council may determine; and the contractor shall be held responsible for the careful conveyance of the nightsoil outside the limits of the Borough under a penalty for neglect not exceeding twenty pounds nor less than five pounds.

7. The Inspector of Nuisances shall have power to visit and inspect any premises on any lawful day between the hours of 10 a.m. and 4 p.m.; and any person refusing admittance or obstructing or hindering the officer in the discharge of his duty, shall incur a penalty not exceeding five pounds nor less than one pound.

8. The Council shall from time to time fix the charges to be made for emptying and removing nightsoil from closets, which shall be emptied as often as may be necessary in the opinion of the Inspector of Nuisances.

9. No closet shall be erected or commenced to be erected except in such place or position as shall be approved of by the Council, and any person being guilty of a breach of the By-law shall be liable to a penalty of not less than one pound nor more than five pounds.

10. When any new building is about to be constructed, the builder or builders thereof shall first erect, or cause to be erected on the premises, a temporary closet not less than three feet by two feet six inches, for the use of the workmen employed in the construction of the new building; and any person neglecting to conform to this By-law shall be liable to a penalty not exceeding five pounds nor less than one pound.

11. No person shall be permitted to connect any closet with any drain, water-course, or sewer, without the sanction of the Council. Any person so offending shall be liable to a penalty not exceeding twenty pounds nor less than five pounds.

12. Persons requiring their closets emptied shall send written notice to the Council or the Inspector of Nuisances; and any person wishing to use the refuse from dry earth closets shall be at liberty to do so by making proper provision for emptying the same to the satisfaction of the Inspector of Nuisances; and any person causing a nuisance from the careless use of such closet, shall be liable to a penalty not exceeding five pounds nor less than one pound.

Adopted at a meeting of the Burwood Council held on the 28th May, 1885.

W. REDFEARN,
Council Clerk.

NEW SOUTH WALES.

MUNICIPALITIES ACT OF 1867 AND NUISANCES PREVENTION ACT, 1875.

(BOROUGH OF DARLINGTON—BY-LAWS.)

Presented to Parliament, pursuant to Acts 31 Vic. No. 12, sec. 158, and 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 9th August, 1886.

BOROUGH OF DARLINGTON—BY-LAWS.

THE following By-Laws made by the Council of the Borough of Darlington, under the "Municipalities Act of 1867" and the "Nuisances Prevention Act, 1875," respectively, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above cited Acts.

GEORGE R. DIBBS.

SEWERAGE By-Laws of the Borough of Darlington, made under the Municipalities Act of 1867 and the Nuisances Prevention Act, 1875, respectively.

1. It shall not be lawful for any person, without notice to the Council or otherwise than according to directions as such Council may make and give, to make or branch any private drain or sewer into any of the public drains, sewers, or channels, or into any drain or sewer communicating therewith.

And in case any person or persons shall make or branch any private drain or sewer into any of the said public drains or sewers, or into any drain or sewer communicating or to communicate therewith, without such notice, or otherwise than as aforesaid, shall for every such offence forfeit and pay any sum not exceeding five pounds.

2. In all cases where it is intended to connect a pipe to the drain or sewer of any other premises, a written premission from from the owner or agent of such premises must be sent to the Council Chambers before the authority to connect will be granted, and where the same is not done the drainer shall be liable to a penalty not exceeding three pounds and not less than one pound.

3. Drains or sewers communicating with any public drain or sewer shall from time to time be repaired and cleansed under inspection and by the directions of the Council. And in case any person shall neglect to repair and cleanse or cause any such private drain or sewer to be repaired and cleansed, according to the direction of the said Council, he shall forfeit and pay for every such offence any sum not exceeding two pounds.

4. All drain pipes must be laid at least three feet below the surface of the roadway and gutters, and must be well and fully luted with strong, clean, well-tempered clay free from sand, dirt, or rubbish, both inside and outside the premises.

5. Connecting drains shall be six inches in internal diameter, and laid at a uniform gradient of not less than one foot in sixty feet, unless otherwise authorised, and as far as practicable in straight lines. Where several drains converge, a brick pit must be built, and the drains connected therewith by stoneware flap junctions or other stench traps as the Council's Overseer may direct.

6. All drains shall remain uncovered until inspected by the Overseer of Works, and approved by him. Any work covered over before inspection shall be re-opened for that purpose, and any drainer refusing to open the trenches will be liable to a penalty not exceeding two pounds, and shall further be liable at the discretion of the Council to be deemed ineligible to do any such work in the Borough.

7. The drainer will be held liable for all accidents arising from neglect on his part in providing night lights and proper hoarding for any trenches he may require to make or for want of proper scaffolding or other timbering.

8. The drainer shall take care that the portion of the streets and footpaths opened by him shall be left in the same state of repair as he found them, by the street being properly made up, and the trench being well rammed and filled in, the ballast must be hand packed, and the metal evenly spread over it; and where kerbing, guttering, or asphalting may be disturbed, the same must be carefully and substantially relaid to the satisfaction of the Overseer of Works. And if the same is not done satisfactorily at the request of the overseer, the contractor shall then forfeit and pay for the offence a sum not less than two pounds nor more than five pounds.

9 Accidents to water, sewer, or gas-pipes must be at once reported to the proper authorities, and immediate steps taken to have repairs effected under a penalty of a sum not exceeding two pounds.

10. Privy cesspits will not be allowed to exist on premises where sewer passes property, and which may be capable of being connected.

Proper sinks and cesspools, shall be constructed to receive the kitchen and house slops and drained to sewer.

All yards, gullies, sinks, cesspools, or other openings are to be stench trapped.

All connections with brick main sewers shall be provided with approved traps, as authorised, and stoneware pipes shall be used for all drains.

Existing drains may be made use of subject to the approval of the overseer.

Any violation of the provisions of this By-law shall entail a penalty not exceeding ten pounds nor less than two pounds.

11. The water from roofs of houses, or water falling into yards, must be discharged by separate pipes into the gutter in either street or lane, or as directed by the Council's overseer. And any owner or occupier failing to carry out this provision shall be liable to a sum not exceeding two pounds for every day after fourteen days' notice (in writing) shall have been given by the Council's overseer to remedy the same.

12. No connection from a water pipe direct to the pan of a closet will be allowed.

All water closets shall have cisterns attached with two compartments with ball cock and valve, so arranged that no more than two gallons of water can be used for flushing at any one time.

13. All drains, extensions, alterations, or enlargements to the sewers of the Borough must be executed by licensed drainers only, and they shall pay, on application for sewerage purposes, a fee of two shillings and sixpence for each house.

14. Where no penalty is mentioned, every person committing a breach of any of these By-laws, shall, for every such offence, be liable to a penalty of a sum not exceeding ten pounds; and any person obstructing any officer in the discharge of any duty imposed, or in the exercise of any privilege conferred, by any of these By-laws, shall be liable to a penalty of a sum not exceeding five pounds.

Made and passed by the Borough Council of Darlington at a meeting held on the fourth day of May, in the year one thousand eight hundred and eighty-six.

(L.S.) WILLIAM CRISPIN, Mayor.
JOHN WHITEHEAD, Council Clerk.

1885–6.

NEW SOUTH WALES

MUNICIPALITIES ACT OF 1867 AND NUISANCES PREVENTION ACT, 1875.

(MUNICIPAL DISTRICT OF CANTERBURY—AMENDED AND ADDITIONAL BY-LAWS.)

Presented to Parliament, pursuant to Acts 31 Vic. No. 12, sec. 158, and 39 Vic. No. 14, sec. 18.

Colonial Secretary's Office,
Sydney, 27th September, 1886.

MUNICIPAL DISTRICT OF CANTERBURY.—BY-LAWS.

THE following amended and additional By-laws, under the "Municipalities Act of 1867" and the "Nuisances Prevention Act, 1875" respectively, made by the Council of the Municipal District of Canterbury, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Acts.

GEORGE R. DIBBS.

PART IV.

Streets and public places.—Public health and decency, &c.—Streets, &c.—Plans of proposed new road, &c., to be deposited.

1. Whenever any proprietor or proprietors of land within the said Municipal District shall open any road, street, way, park, or other place for public use or recreation, through or upon such land, and shall be desirous that the Council shall undertake the care and management of such road, street, way, or park, &c., he or they shall furnish the Council with a plan or plans signed by himself or themselves, showing clearly the position and extent of such road, street, way, or park, and if the Council shall determine to take charge of any such road, way, or other place as aforesaid, the plan or plans so signed as aforesaid shall be preserved as a record or records of the Council, and the proprietor or proprietors aforesaid shall execute such further instrument, dedicating such road, way, or other place to public use, as may be considered necessary by the Council, and such further instrument of dedication shall also be preserved as a record of the Council; but the Council shall not be compelled to take charge of, or spend money on, or vote money for, any new street, road, lane, or thoroughfare that is not forty feet wide including pathway, and unless such street, road, lane, thoroughfare, or other place is first proclaimed and properly formed and completed to the satisfaction of the Council, at the expense of the owner or owners of the land through which such road, street, lane, thoroughfare, or other place is carried.

Erection of houses, &c.

2. No person shall be permitted to erect any fence, house, shop, or other building in any street, lane, or place within the Municipal District, without first serving notice in writing on the Mayor or Council Clerk, stating such intention, and describing the proposed situation of the building or erection, and at the time the said notice is given, pay to the Council Clerk a fee of five shillings (for permission to erect any such house, fence, shop, or other building) and without having received an authority from the Mayor or Council Clerk. No person shall be at liberty to encroach beyond the building line in any street or lane, by the erection of verandahs, overhanging balconies, doorsteps, fences, or any other obstruction whatever. Any person offending against this By-law shall be liable to a fine of ten shillings; and in the case of an encroachment shall be liable to a further fine of not less than five shillings nor more than two pounds for every day that the same shall remain unremoved or unaltered, after receiving seven days' notice to that effect.

Committee of Works to fix street levels, &c.

3. The Committee for Works, or any officer or person acting under the supervision of such Committee, shall, subject to such orders as shall from time to time be made by the Council on that behalf, fix and lay out the levels of all public roads, streets, and ways within the Municipal District, and the carriage and foot-ways thereof, and it shall be the duty of such Committee, officer, or person, to place posts at the corners or intersections of any such public roads and streets, and of the carriage-ways and footways of such roads and streets, wherever the same may be considered necessary or desirable by the Council: Provided that there shall be no change of level in any such public road, street, or way until the same shall have been submitted to and adopted by the Council as hereinafter directed.

Change of street levels.

4. Whenever it may be deemed necessary to alter the level of any such public road, street, or way as aforesaid, the Committee for Works shall cause a plan and section showing the proposed cuttings to be exhibited at the Council Chamber for fourteen days, for the information and inspection of ratepayers, and shall notify by advertisement in some newspaper circulating in the Municipal District that such plan is so open to inspection. At a subsequent meeting of the Council the said plan and section shall, if adopted, be signed by the Mayor or Chairman, and countersigned by the Council Clerk; and such plan and section so signed and countersigned shall be a record of the Council.

Lights on obstructions, hoardings, &c

5. Any person who shall have caused building materials, or hoarding enclosing such building materials, or any obstruction whatever to be placed on any portion of the footway or roadway in any street or streets of this Municipal District, without having first obtained permission from the Council, and paid a fee of five shillings, shall for every day during which such materials, hoarding, or obstruction remains so placed, be liable to a penalty not exceeding five pounds nor less than one pound.

6. Any person in the last By-law mentioned who shall not cause such materials, hoarding, or obstructions, to be well and properly lighted with lamps burning from sunset to sunrise shall be liable to a penalty not exceeding five pounds nor less than one pound.

Lights on vehicles.

7. Every person whilst driving, leading, or riding upon any cart, carriage, wain, waggon, buggy, or other vehicle whatsoever, drawn by any horse. ass, mule, or other animal through any part of the Municipality between the hours of sunset and sunrise, shall carry a lighted lamp affixed in a conspicuous place on the off side of such cart, wain, waggon, buggy, or other vehicle, under a penalty of ten shillings for the first offence, and for every subsequent offence not less than one pound nor exceeding ten pounds.

No private sewers to be made to communicate with the public sewers without notice.

8. It shall not be lawful for any person, without notice to the Council, or otherwise than according to such plans and directions as such Council may make and give, to make or branch any private drain or sewer into any of the public drains or sewers, or into any drain or sewer communicating therewith; and in case any person or persons shall make or branch any private drain or sewer into any of the said public drains or sewers, or into any drain or sewer communicating or to communicate therewith, without such notice or otherwise than as aforesaid, every person so offending shall, for every such offence, on conviction forfeit and pay any sum not exceeding five pounds, and shall close such private drain under a further penalty of two pounds per week so long as such private drain remains.

Proprietors of private sewers, &c., to repair and cleanse same.

9. All drains or sewers communicating with any public drain or sewer shall, from time to time, be repaired and cleansed, under the inspection and direction of the Council, at the costs and charges of the occupiers of the houses, buildings, lands, and premises to which the said private sewers or drains shall respectively belong; and in case any person shall neglect to repair and cleanse or cause any such private drain or sewer to be repaired and cleansed, according to the direction of the said Council, he shall forfeit and pay for every such offence any sum not exceeding five pounds.

Drains for discharge of surface water from land.

10. Every owner or occupier of land in or adjoining to or near any street, if such land shall be so situated that surface or storm water from or upon the same shall overflow or shall tend naturally, if not otherwise discharged, to overflow any footway of such street, shall, within seven days next after the service of notice by the Council for that purpose, construct and lay from such point, upon such land being near to the footway, as shall be specified in such notice, by plan appended or otherwise, and higher in level than the bottom of the channel at the outer edge of the footway to the said channel, and through, under, and transversely to the footway, and keep in good condition such covered drain or trunk, as and subject to the inspection of the Council or its proper officers; and in default of compliance with any such notice within the period aforesaid, or with the provisions of this section, such owner or occupier shall forfeit any payment not exceeding five pounds. And if, within seven days after such conviction, such owner or occupier shall still have failed to comply with such notice, or be otherwise in default as aforesaid, he shall forfeit and pay any sum not less than one pound nor more than ten pounds, and for every such further offence he shall forfeit and pay any sum not less than two pounds nor more than twenty pounds; and every such owner or occupier who shall still have made default as aforesaid for more than seven days after such second or any future conviction shall be held guilty of a further offence within the meaning of this section.

Houses, &c., to be spouted.

11. All proprietors of houses within the Municipality having a frontage to any main thoroughfare shall be bound to have the same sufficiently spouted with down pipe, to be carried under the surface of the footpath into the gutter, under a penalty of ten shillings on conviction, and if not remedied at the expiration of seven days after such conviction, the offender shall be again liable to a like conviction and penalty also for every succeeding seven days.

No turf, gravel, &c., to be removed from streets without permission

12. Any person who shall form, dig, or open any drain or sewer, or remove, or cause to be removed, any turf, clay, sand, soil, gravel, stone, or other material in or from any part of the carriage or foot way of any street or other public place within the said Municipal District, without leave first had and obtained from the Council, or who shall wantonly break up or otherwise damage any such carriage or foot way, shall on conviction forfeit and pay for every such offence a sum not exceeding five pounds.

Holes to be enclosed.

13. Any person or persons who shall dig or make, or cause to be dug or made, any hole, or leave or cause to be left any hole adjoining or near to any street or public place within the said Municipal District, for the purpose of making any vault or the foundation of any house or other building, or for a well, or any other purpose whatsoever, and shall not forthwith enclose the same and keep the same enclosed in a good and sufficient manner to the satisfaction of the Committee of Works of the said Municipal District, on conviction shall forfeit and pay for every such refusal or neglect any sum not exceeding five pounds nor less than ten shillings.

Temporary stoppage of traffic for repairs, &c.

14. The Committee for Works, or any officer or person acting under the authority of such Committee, may at any time cause the traffic of any street, lane, or thoroughfare, or any portion thereof, to be stopped for the purpose of repairing the same or for any necessary purpose; and any person or persons offending against this By-law either by travelling on such street, lane, or thoroughfare, or by removing or destroying any obstruction that may be placed thereon for the purpose of suspending such traffic, shall forfeit and pay a penalty of any sum not exceeding five pounds nor less than ten shillings for every such offence.

Drawing or trailing timber, &c.

15. Any person who shall haul or draw, or cause to be hauled or drawn, upon any part of any street or public place within the said Municipal District, any timber, stone, or other thing otherwise than upon wheeled vehicles, or to drag or trail upon any part of such street or public place to the injury thereof, shall upon conviction forfeit and pay for every such offence a sum of not less than five shillings nor more than forty shillings over and above the damages occasioned thereby.

Throwing filth, &c , on footways, &c. -Killing animals.

16. Any person who shall throw, cast, or lay, or shall cause, permit, or suffer to be thrown, cast, or laid, or to remain, any ashes, rubbish, offal, dung, soil, dead animal, blood, or other filth or annoyance. or any matter or thing, in or upon the carriage way, footway, or water-table of any street, lane, or other public place in the said Municipal District, or shall kill any beast, swine, calf, sheep, lamb, or other animal, for the purpose of sale upon any premises other than licensed premises, shall on conviction forfeit and pay a fine not less than forty shillings nor more than five pounds.

Driving carriages, &c., on footways.

17. Any person who shall run, drive, draw, or cause, permit, or suffer to be run, driven, or drawn, upon any of the said footways of any such street or public place, any waggon, cart, dray, sledge, or other carriage, or any wheelbarrow, truck, or handbarrow, or any hogshead, cask, or barrel, or shall wilfully lead, drive. or ride, any horse, ass, mule, or other beast upon any such footway, shall upon conviction forfeit any pay for the first offence a sum not exceeding forty shillings nor less than ten shillings, for the second offence a sum not exceeding five pounds nor less than one pound, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than two pounds for each such offence.

Placing carriages, goods. &c , on footways, &c.—Not removing when required.—Replacing the same after removal.—Not to prevent awnings being erected in front of shops.

18. Any person who shall set or place, or cause or permit to be set or placed, any stall-board, chopping-block, show-board (on hinges or otherwise) basketware, merchandise, casks, or goods of any kind whatsoever, in or upon or over any carriage or foot way in any street or public place within the said Municipal District, or shall place or cause to be placed any coach, cart, wain, waggon, dray, wheelbarrow, handbarrow, sledge, truck, or other carriage upon any carriage-way except for the necessary time of loading or unloading or taking up or setting down any fare, or waiting for passengers when actually hired, or harnessing or unharnessing the horse or other animals, or if any person shall set or place or cause to be placed on or upon or over any such carriage or foot way any timber, stones, bricks, lime, or other materials or things whatsoever, or shall hang out or expose, or shall cause or permit to be hung out or exposed, any meat or offal or other thing or matter whatsoever from any house or other building or premises over any part of any such footway or carriage way, or over any area of any house or other building or premises and shall not immediately and permanently remove all or any such matters or things being thereto required by the

Inspector of Nuisances or other proper officer of the Council, shall upon conviction for every such offence forfeit and pay for the first offence a sum not exceeding forty shillings nor less than five shillings, for the second offence a sum not exceeding five pounds nor less than ten shillings, and for a third and every subsequent offence a sum not exceeding ten pounds nor less than one pound.

Placards not to be affixed on walls, &c., without consent.

19. It shall not be lawful for any person to paste or otherwise affix any placard or other paper upon any wall, house, fence, or other erection, nor deface any such wall, house, fence, or erection, by chalk or paint, or in any other manner, unless with the consent of the owner thereof; and every person who shall be guilty of any such offence shall forfeit and pay a sum not exceeding twenty shillings nor less than five shillings.

Notices not to be painted on pavement.

20 Any person who shall stamp, stain, paint, write, or post any advertisement or notice upon any footway or kerb within this Municipal District shall be liable to a penalty not exceeding forty shillings.

Indecent placards.

21. Any person who shall in any street or place within this Municipal District, post, expose to view, distribute any placard, handbill, or other document whatever of an indecent character, shall be liable to a penalty not exceeding forty shillings.

Obstructing public pathways.

22. If the owner or occupier of any land situate on the side of any street or road in this Municipal District shall permit any tree, shrub, or plant kept for ornament or otherwise, to overhang any footpath or footway on the side of any such street or road, and on demand made by the Council shall not cut, lop, or cause to be lopped, all such trees, shrubs, or plants, to the height of eight feet at the least, the said Council, by their servants, labourers, and workmen, may cut or cause to be cut or lopped, at the expense of such owner or occupier, all such overhanging trees, plants, or shrubs, and to remove or burn any such trees, plants, or shrubs so cut or lopped without being deemed a trespasser or trespassers; and in case any person or persons shall resist or in any manner forcibly oppose the said Council or their servants, labourers, or workmen in the due execution of the powers given in this behalf by virtue of the "Municipalities Act of 1867," every person so offending shall on conviction, for every such offence forfeit and pay any sum not exceeding ten pounds not less than one pound.

Persons not to stand or loiter in streets.

23. All persons standing or loitering upon any of the footways or other public places in this Municipal District to the inconvenience of the passers-by, or in any way interrupting the traffic upon any of the said footways or places, and shall not discontinue to do so, on being requested by any officer or servant of the Council of this Municipal District, or any police officer, shall upon conviction forfeit and pay a penalty not exceeding five pounds nor less than one pound.

No rock to be blasted without notice to the Council Clerk.

24. Any person who shall be desirous of blasting any rock or earth within fifty yards of any road, street, public place, or dwelling shall give notice in writing twenty-four hours previously to the Council Clerk, who shall appoint a time when the same may take place, and give such other directions as he may deem necessary for the public safety on payment of a fee of five shillings; and if any person shall blast or cause to be blasted any rock or earth within the limits aforesaid without giving such notice, or shall not conform to the directions given to him by the Council Clerk, he shall on conviction forfeit and pay for every such offence any sum not less than one pound nor more than ten pounds.

Slop, night-soil, &c., to be conveyed away only at certain hours.

25. Any person or persons who shall drive or cause to be driven any cart or other carriage with any night-soil therein through or in any street or public place within the said Municipal District between the hours of five o'clock in the morning and ten o'clock at night; or shall fill any cart or other carriage so as to turn over or cast any night-soil, slop, mire, or channel dirt, or filth in or upon any such street or public place; or shall deposit night-soil or other offensive matter upon any street, road, or lane, or nearer to any street, road, or dwelling-house than shall be directed by the said Council or by the Inspector of Nuisances; or shall remove night-soil or other offensive matter otherwise than in properly covered and water-tight carts or other vehicles; or shall cause any cart or other carriage to convey or cart any night-soil or other filth within the said Municipal District, unless by permission of the said Council, or said Inspector of Nuisances; or shall cause any vehicle used for this purpose to stand on any premises nearer to any road, street, or dwelling-house than shall be directed by the said Council or the said Inspector of Nuisances, shall forfeit and pay for every such offence any sum not exceeding five pounds and in case the person so offending shall not be known to the said Council or Inspector, then the owner of such cart or carriage in which such night-soil or other offensive matter shall be put or placed, and also the employer of the person so offending, shall be liable to and forfeit and pay such penalty as aforesaid.

Riding on drays, careless driving, &c.

26. If the driver of any waggon, wain, cart, or dray of any kind shall ride upon any such carriage in any street as aforesaid, not having some person on foot to guide the same with reins, or if the driver of any carriage whatsoever shall wilfully be at such a distance from such a carriage, or in such a situation whilst it shall be passing upon such street that he cannot have the direction and government of the horse or horses, or by negligence or misbehaviour prevent, hinder, or interrupt the free passage of any carriage or person in or upon the said thoroughfare, every such driver or person so offending shall upon conviction forfeit and pay any sum not exceeding forty shillings.

Riding or driving furiously, &c.

27. Any person who shall ride or drive through or upon any street or public place within the said Municipal District so negligently, carelessly, or furiously that the safety of any other person shall or may be endangered, shall on conviction forfeit and pay a sum not exceeding ten pounds nor less than ten shillings.

Injuring or extinguishing lamps.

28. Any person who shall wantonly or maliciously break or injure any lamp or lamp-post, or extinguish any lamp set up for public convenience in the said Municipal District, shall, over and above the necessary expenses of repairing the injury committed, forfeit and pay for every such offence any sum not less than ten shillings nor more than five pounds.

As to damaging buildings.

29. Any person who shall damage any public building, toll-gate, toll-bar, toll-board, wall, parapet, fence, sluice, bridge, culvert, sewer, water course, or other public property within the said Municipal District, shall pay the cost of repairing the same, and if such damage be wilfully done shall forfeit and pay a sum not exceeding twenty pounds nor less than one pound.

Damaging trees.

30. Any person who shall wilfully and without the authority of the Council cut, break, bark, root-up, or otherwise destroy or damage the whole or any part of any tree, sapling, shrub, or underwood growing in or upon any street or place under the management of the Council shall on conviction forfeit and pay any sum not exceeding ten pounds nor less than one pound.

31. The Council shall have power to plant trees in the streets and public ways of this Municipal District, and any person wilfully injuring or destroying any of such trees, or any railing or fence protecting the same, shall on conviction forfeit and pay a penalty of not more than ten pounds nor less than two pounds, in addition to the value of the tree, railing, or fence, so injured or destroyed.

32. If any animal shall die in any part of the said Municipality and the owner of any such animal or the occupier of the place, if private property where such animal shall have died, shall not cause such animal to be immediately destroyed by fire, or so effectually removed and disposed of that no nuisance can possibly result therefrom in any part of the said Municipality, such owner or occupier shall for every such offence forfeit and pay any sum not exceeding two pounds nor less than ten shillings.

Indecent exposure of person.

33. Any individual who shall offend against decency by exposure of his or her person, in any street or public place within the said Municipality, or in the view thereof, shall on conviction forfeit and pay for every such offence any sum not exceeding ten pounds nor less than one pound.

Nuisances.

Dead animals not to be thrown into any public watercourse, &c.

34. Any person who shall cast any filth, rubbish, or any dead animal, or any animal with intent of drowning, into any public watercourse, sewer, or waterhole, or who shall suffer slops, suds, or filth of any kind to flow from his or her premises into any such watercourse or waterhole, or who shall permit or suffer any such slops, suds, or filth to flow from his or her premises over any of the footways or streets of the Municipal District, or who shall permit or cause, by means of pipes, shoots, channels, or other contrivances, filth of any kind whatsoever, to flow into any public watercourse, gutter, or waterhole, or who shall obstruct or divert from its channel and sewer, watercourse and creek, shall on conviction forfeit any sum not exceeding five pounds.

35. No kind of rubbish or offensive matter shall be thrown upon any public or private property within the Municipal District without permission first obtained from the Municipal Council, or in the case of private property from the owner or owners of such private property. Any person found guilty of a breach of this By-law shall forfeit and pay for every such offence any sum not exceeding two pounds nor less than ten shillings.

Swine not to be kept.

36. Any person who shall breed, feed, or keep any kind of swine in any house, building, yard, garden, or other hereditament situate and being in or within forty yards of any street or public place or any dwelling-house in the said Municipal District, shall on conviction forfeit and pay for every such offence a sum not exceeding forty shillings nor less than five shillings.

Stables, cow-sheds, and pigsties.

37. The occupier of any land within this Municipal District on which there shall be erected any stable, cow-yard, cattle-shed, or pigsty, shall cause such premises to be kept in such a state in respect of cleanliness as not to be a nuisance or injurious to health, and shall cause all dung, soil, or manure produced or accumulated thereon to be collected in a place (to be approved of by the Inspector of Nuisances) in the yard of such premises, and to be there in an inoffensive condition, and so as not to be productive of any nuisance, and shall cause such dung, soil, or other manure to be from time to time removed from such premises as often as the quantity of the same so collected or accumulated shall amount to two cubic yards; and if at any time the owner or occupier of any such premises shall neglect or fail to have such dung, soil, or other manure removed therefrom as aforesaid, the same may be removed by the Inspector of Nuisances at the expense of such occupier. Any person offending against any provision of this By-law shall for each offence be liable to a penalty of not less than one pound nor more than five pounds.

Deposit of rubbish, manure, &c.

38. No person shall deposit or cause or suffer to be deposited in or by the side of or on any road, street, right-of-way, lane, passage, water-channel, or gutter, or in any creek, or in any other public place within the Borough, any dust, mud, ashes, rubbish, filth, offal, manure, liquid manure, dung, soil, or other offensive matter; and no person shall deposit or cause or suffer to be deposited on any land, field, or garden, within the Municipal District, any night-soil, blood, offal, or other offensive matter or thing, without the written consent of the Mayor or Council; and any such offensive matter or thing which shall with such consent of the said Mayor or Council be so deposited shall be immediately, on the deposit thereof, covered over by the person depositing the same with such a quantity of earth as will at once prevent the escape of any noxious or offensive effluvium from any such manure, soil, blood, offal, or other offensive matter before mentioned: Provided that nothing contained in this By-law shall be so construed or taken to prevent the use as manure for any garden or land of the contents of any earth-closet or any other privy or closet where such contents are deposited on any such field or lane in a perfectly deodorized state and so as not to cause nuisance or offence either at the time of the deposit of such contents or afterwards. Any person offending against any of the provisions of this By-law shall be liable to a penalty of not less than two pounds nor more than ten pounds.

Cattle, &c., straying in the streets.

39. Any person who shall suffer any kind of swine, or any horse, ass, mule, sheep, goat, or other cattle belonging to him or her, or under his or her charge, to stray or go about or to be tethered or depastured in any such street or public place, shall on conviction forfeit and pay for every such offence a sum not exceeding forty shillings nor less than five shillings.

Privies, &c.

40. Any person who shall dig, form, or make any privy within fifteen feet of any dwelling-house, or within thirty feet of any well used for supplying any dwelling-house with water, shall on conviction forfeit and pay any sum not exceeding two pounds, nor less than five shillings, and if not removed within forty-eight hours after such conviction it shall be dealt with as a fresh offence.

As to private avenues, &c.

41. Any owner or occupier of any house, place, or land within the said Borough who shall neglect to keep clean all private avenues, passages, yards, and ways within the said premises, so as by such neglect to cause a nuisance by offensive smell or otherwise, or who shall allow stagnant water to become a nuisance on his land, shall on conviction forfeit and pay a sum not exceeding forty shillings for every such offence; and upon the reasonable complaint of any householder that the house, premises, yards, closets, or drains of the neighbouring or adjoining premises are a nuisance or offensive, the Inspector of Nuisances or any other person appointed by the Council shall make an inspection of the premises complained of, and the officer of the Council shall have full power, without any other authority than this By-law, to go upon such premises for the aforesaid purpose.

Cleansing butchers' shambles, slaughter-houses, &c.

42. It shall be lawful for the Inspector of Nuisances, or for any other officer or officers appointed by the Council, as often as he shall see occasion, to visit and inspect the butchers' shambles, slaughter-houses, boiling-down establishments, tanneries, and fellmongering establishments in the said Municipal District, and to give such directions concerning the cleansing the said shambles, slaughter-houses, tanneries, and establishments both within and without, as to him shall seem needful; and any owner or occupier of any such shamble, slaughter-house, tannery, or establishment who shall refuse or neglect to comply with such directions within a reasonable time shall forfeit and pay a sum not exceeding ten pounds nor less than one pound.

Placing dead animals on premises.

43. Any person who shall place or shall cause or suffer to be placed upon any land or premises within the Municipal District, any dead animal, blood, offal, night-soil, or any other offensive matter, so as to become a nuisance to the inhabitants thereof, shall on conviction suffer and pay a penalty not exceeding five pounds nor less than ten shillings for every such offence.

Allowing dead animals to remain on premises.

44. Any owner or occupier of any land or premises who shall suffer or permit any dead animal, blood, offal, night-soil, or any other offensive matter to remain upon the said land or premises after notice shall have been given to remove the same shall be subject to a penalty not exceeding two pounds nor less than ten shillings for every such offence for every day that the same shall so remain.

Bathing prohibited within certain limits.

45. Any person who shall bathe near to or within view of any inhabited house or of any bridge, street, road, or other place of public resort within the limits of the said Borough, between the hours of six o'clock in the morning and eight in the evening, shall on conviction forfeit and pay a sum not exceeding one pound for every such offence.

Various obstructions and annoyances.

46. Every person who in any street or other public place or passage within the said Municipal District, to the obstruction, annoyance, or danger of the residents or passengers, shall commit any of the following offences shall on conviction for any and every such offence forfeit and pay a penalty of not more than two pounds:—

Every person who shall hoist or cause to be hoisted or lower or cause to be lowered, goods of any description from any opening in any house fronting any street or public place and close to the footway thereof without sufficient and proper ropes and tackling.

Every person who shall erect, or allow to be erected, any flagstaff, sign-post, or pole of any kind, without having it at once attached to some other post or building so as to prevent its being blown down when it becomes decayed.

Every person who shall place any line or cord or pole across any street, lane, or passage, or hang or place clothes thereon to the danger or annoyance of any person.

Every person who shall place any flower-pot, box, or other thing in any upper window near to any street or public place without sufficiently guarding the same from being thrown down.

Every person who shall throw or cast from any roof or any part of any house or other building, any slate, brick, part of a brick, wood, rubbish, or other material or thing (unless within a hoard or enclosure, when any house or building is being erected, pulled down, or repaired).

Every person who shall, within the distance of one hundred yards from any dwelling-house, burn any rags, bones, cork, or any other offensive substance to the annoyance of any inhabitant.

Every person who shall carry goods or any frame, to the annoyance of any person, upon the footway of any street or other public footway.

Every person who shall be the keeper of or have any dog or other animal which shall attack or endanger the life or limb of any person who may have the right of way or use of any private yard, alley, street, or any other place within the said Municipal District.

Part V.

Noisome and offensive trades.

No noisome or offensive trade to be carried on to injury of any inhabitants.

1. No person shall carry on any manufacture or trade, in the conducting or carrying on of which, or from the premises where the same is carried on, any gas, vapour, or effluvia, or any large quantities of smoke shall be evolved or discharged, which shall be calculated to injure animal or vegetable life or in any other way to injure or be a nuisance to the inhabitants of the said Municipal District, and upon complaint in writing by any householder that any offensive trade is being so conducted or carried on in the vicinity of his or her residence or property as to injure his or her health or the health of any member of his or her family or to be a nuisance to such householder, the Inspector of Nuisances, or any other person or persons appointed by the Council, shall make an inspection of the premises where such trade is alleged to be so conducted or carried on as aforesaid and of the premises or property of the complainant, and shall inquire into the grounds for such complaint, and shall report thereon to the said Council. And if the said Council shall, on the consideration of such report or after any such further inquiry as may be deemed

necessary, be of opinion that the said complaint is well founded, notice shall be given to the person or persons conducting, following, or carrying on such trade to cease and discontinue the same within such reasonable time as the Council may direct. And if such trade shall not be discontinued as aforesaid or shall not be so conducted as that it shall wholly cease to be offensive within the time named in such notice as aforesaid, any person conducting or carrying on such trade as aforesaid, shall for the first offence forfeit and pay a sum not less than twenty shillings nor more than five pounds, for the second offence a sum of not less than two pounds nor more than twenty pounds, and for the third and every subsequent offence a sum of not less than five pounds nor more than fifty pounds.

Mode of proceeding when noisome and offensive trade is about to be commenced.—Penalty.

2. The like proceeding shall be taken as aforesaid whenever there shall be a complaint as aforesaid that any manufacture, trade, or operation is about to be commenced or entered upon which is likely to prove offensive within the meaning of these By-laws, save and except the notice to be given as aforesaid, shall be given to the person or persons about to commence or enter upon such manufacture, trade, or operation, and shall require him or her or them not to commence or enter upon the same, or to take such measures as shall effectually and permanently prevent the same from becoming offensive within the meaning of these By-laws to any resident within the said Borough. And any person who shall in any such case commence, enter upon, or continue any such manufacture, trade, or operation so that the same shall be in any way offensive within the meaning of these By-laws shall for every such offence forfeit and pay a sum of not less than two pounds nor more than twenty pounds.

Serving of notice.—Liabilities.

3. Service of any such notice as aforesaid upon the occupier or owner of any premises or land wherein or whereon any such manufacture, trade, or calling is being carried on or is about to be commenced or entered upon, or at the last known place of abode of such occupier or owner, or upon any person on the said premises or land, shall be a good and sufficient service of such notice for all the purposes of these By-laws. And every person who shall be actually engaged in superintending, directing, or managing, or who shall be in any other way actually engaged or employed in any such manufacture, trade, or operation as aforesaid, shall be liable to be regarded and treated as a person conducting, following, or carrying on such manufacture, trade, or operation within the meaning and for all the purposes of these By-laws.

Damming up water without consent.

4. Whosoever shall, without the consent in writing of the Council, construct or place any dam or embankment in or across any creek or natural watercourse shall forfeit and pay any sum not less than one pound nor more than twenty pounds, and shall remove such dam or embankment within a reasonable time after such conviction, or shall forfeit and pay any sum not less than five pounds nor more than fifty pounds. And if after such second conviction such person shall fail to remove such dam or embankment within a further reasonable time, he shall forfeit and pay a sum of not less than twenty pounds nor more than fifty pounds, and if within a reasonable time, after a third or any further conviction he shall still fail to remove such dam or embankment he shall for every such offence forfeit and pay a sum of fifty pounds.

Disposal of sewage, &c.

5. The Council shall have power from time to time to enforce the adoption or alteration of any system which to them may appear necessary for the better regulation, disposal, or treatment of night-soil, sewerage, or other drainage, and may suspend the use or further extension of any system which may to them seem detrimental to public health. Any person refusing or neglecting to comply with any requisition made under this By-law, after receiving notice from the Council or an officer under them, shall forfeit a sum not exceeding five pounds nor less than one pound for each offence, and also for every week during which such requisition shall remain uncomplied with.

Premises in a state to endanger public health.

Houses to be purified on the certificate of two medical practitioners.

6. If upon the certificate of any two duly qualified medical practitioners it appears to the Council that any house or part thereof or the premises occupied in connection therewith, within the limits of the said Municipal District, is in such a filthy or unwholesome condition that the health of any person is or may be liable to be affected or endangered thereby, and that the whitewashing, cleansing, or the purifying of any house or part thereof or the premises occupied in connection therewith would tend to prevent or check infectious or contagious disease, the said Council shall give notice in writing to the owner or occupier of such house or part thereof or the premises occupied in connection therewith to whitewash, cleanse, or purify the same as the case may require; and if the person to whom notice is so given shall fail to comply therewith within such time as shall be specified in the said notice, he shall be liable to a penalty not exceeding ten shillings for every day during which he continues to make default: Provided that no such penalties shall collectively amount to any greater sum than twenty pounds.

Making By-laws.

7. No By-law shall be passed until it has been reported upon by the By-law Committee.

Fines.

8. For every offence against the provisions of these By-laws, except as otherwise provided, the offender shall be liable to and shall pay a fine not exceeding five pounds nor less than five shillings, to be recovered as provided in the "Municipalities Act of 1867." And all other fines imposed by these By-laws, except as otherwise provided, shall also be recoverable as provided in the "Municipalities Act of 1867."

Amended By-laws.

Made by the Municipal Council of Canterbury, in accordance with the provisions of the "Nuisances Prevention Act of 1875."

1. On and after the first day of January, one thousand eight hundred and eighty-seven, no person or persons shall dig, make, or construct, or cause or permit to be dug, made, or constructed on any premises within the Municipality, any open closet or cesspit for the deposit of fœcal matter; and any person or persons offending against any of the provisions of this By-law shall be liable to a penalty not exceeding five pounds nor less than one pound.

2. No person shall cover up or cause or permit to be covered or filled up any existing cesspit with earth or other material unless and until the same shall be properly emptied and also inspected by the Inspector of Nuisances. Any person offending against this By-law shall be liable to a penalty not exceeding five pounds nor less than one pound.

3. A separate closet shall be provided for every tenement. In schools or factories where a number of person shall attend or be employed, separate closets with a door to fasten on the inside shall be provided for each sex, and a separate closet shall be provided for every twenty persons so attending or employed; where two or more closets adjoin each other there shall be a dividing wall between each to effect a complete separation; and any person offending against any of the provisions of this By-law shall incur a penalty not exceeding ten pounds nor less than two pounds for every week during which such provision shall not be complied with.

4. If in the opinion of the Inspector of Nuisances any alteration is required in existing cesspits or closets, he shall report the same to the Council, which shall determine what alteration is necessary for the preservation of health or decency, and such alteration shall forthwith be made by the owner of the premises, after receiving seven days' notice to that effect, under a penalty for every week's neglect or delay in effecting such alteration of not exceeding five pounds nor less than two pounds.

5. The owner or occupier of any house, building or passage, yard, earth-closet, or premises within this Municipality shall cause the same and every part thereof to be kept in a cleanly condition and so as not to be a nuisance or injurious to health.

6. If at any time the earth-closet in any premises shall overflow or become a nuisance, the owner or occupier shall be liable to a penalty not exceeding ten pounds.

7. No pan or bucket used as a receptacle in a dry earth-closet shall exceed in measurement more than one and a half cubic feet.

8. Any person desirous of having the Council's contractor to attend to their premises for the removal of refuse from a dry earth-closet must provide a galvanized iron pan or bucket to hold such refuse, with a handle across the top, and not of a larger capacity than to hold one and a half cubic feet.

9. The night-soil shall be removed by contract in properly constructed water-tight carts between such hours as the Council may determine, and the contractor will be held responsible for the careful conveyance of the night-soil to the appointed depôt, and shall dispose of the same by burying it in the earth at a sufficient depth, and covering the same with earth so as to prevent any nuisance arising therefrom, under a penalty for neglect not exceeding twenty pounds nor less than five pounds.

10. If the night-soil or any portion thereof shall be sold or given away by the Council, the person removing the same shall do so only at such times and in such manner as the Council may direct, and shall dispose of the same so as not to cause a public nuisance; and the person purchasing or obtaining it and so dealing with or disposing of it as to cause a nuisance shall be liable to a penalty not exceeding ten pounds nor less than two pounds.

11. The Inspector of Nuisances shall have power to visit and inspect any premises on any lawful day between the hours of 10 a.m. and 4 p.m., and any person refusing admittance or obstructing or hindering such inspector in the discharge of his duty shall incur a penalty not exceeding five pounds nor less than one pound.

12. The Council shall from time to time fix the charges to be made for emptying and removing night-soil from closets, which shall be emptied as often as may be necessary in the opinion of the Inspector of Nuisances.

13. No closet shall be erected or commence to be erected except in such place or position as shall be approved of by the Council or the Inspector of Nuisances; and any person being guilty of a breach of this By-law shall be liable to a penalty of not less than one pound nor more than five pounds for every day during which such erection shall remain.

14. When any new building is about to be constructed the builder or builders thereof shall first erect or cause to be erected on the premises a temporary closet not less than three feet by two feet six inches, for the use of workmen employed in the construction of the new building; and any person neglecting to conform to this By-law shall be liable to a penalty not exceeding five pounds nor less than one pound.

15. No person shall be permitted to connect any closet with any drain, watercourse, or sewer without the sanction of the Council. Any person so offending shall be liable to a penalty not exceeding twenty pounds nor less than five pounds.

16. Persons requiring their closets emptied shall send written notice to the Council or the Inspector of Nuisances; and any person wishing to use the refuse from dry earth-closets shall be at liberty to do so by making proper provision for emptying the same to the satisfaction of the Inspector of Nuisances; and any person causing a nuisance from the careless use of such closet or its contents shall be liable to a penalty not exceeding five pounds nor less than one pound.

17. No person shall use nor permit to be used, on the premises occupied or used by him or her, any night-soil which shall have been brought from any other premises unless written permission so to do shall have been first obtained from the Municipal Council or the Inspector of Nuisances of the Municipality; and any person offending against any of the provisions of this By-law shall be liable on conviction to a penalty of not less than two pounds nor more than five pounds.

18. The Inspector of Nuisances or other properly appointed officer of the Council shall have power to visit at all times all nightsoil depôts or places at which night-soil may be deposited, for the purpose of inspecting the same; and any person or persons interfering with, obstructing, or resisting the above-named officer in the execution of his duty shall be liable to a penalty not exceeding two pounds.

19. Written notice must be given to the Council or the Inspector of Nuisances by all persons about to construct new or alter existing closets, to enable the Inspector to visit and report on the same, under a penalty for neglect not exceeding five pounds nor less than one pound; and closets constructed without such notice being given must be removed or altered if judged necessary by the Council under a further penalty not exceeding two pounds nor less than five shillings for each and every day they may remain unremoved or unaltered after due notice to that effect.

20. The maximum penalty for a breach of any of these By-laws shall in each case be ten pounds and the minimum penalty one pound unless otherwise provided for.

Made and passed by the Council of the Municipal District of Canterbury, this twenty-third day of June, A.D, 1886.

(L.S.) JAMES SLOCOMBE,
Mayor.

H. M. INNES,
Council Clerk.

NEW SOUTH WALES.

PUBLIC VEHICLES REGULATION ACT OF 1873.

(AMENDED BY-LAWS.)

Presented to Parliament, pursuant to Act 36 Vic. No. 14, sec. 15.

Colonial Secretary's Office,
Sydney, 6th October, 1885.

METROPOLITAN TRANSIT COMMISSIONERS' AMENDED BY-LAWS.

THE following Amended By-Laws, made by the Metropolitan Transit Commissioners, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the provisions of the "Public Vehicles Regulation Act of 1873."

ALEX. STUART.

WHEREAS it is desirable to amend the By-Laws now in force for the regulating of Public Vehicles within the City and Police District of Sydney, the Board of Metropolitan Transit Commissioners do, under the authority vested in them by the "Public Vehicles Regulation Act of 1873," hereby make and establish the following By-Laws in lieu of By-Laws Nos. 7 and 15 now in force, and such By-Laws are hereby repealed.

Licenses shall be made out by the Registrar or his Assistants and numbered in such order as the Commissioners shall from time to time direct.

Every driver or conductor licensed under the said Act shall at the time of being employed by the owner of any licensed vehicle produce to such owner his license, and the owner of such vehicle at the time of employing every such driver or conductor shall demand the production of his license, such driver or conductor shall not lend or otherwise part with such license on any pretence whatsoever. No owner of any such vehicle shall employ an unlicensed person as the driver or conductor thereof.

Passed by the Board of Metropolitan Transit Commissioners this sixteenth day of September, in the year of our Lord one thousand eight hundred and eighty-five.

NEW SOUTH WALES.

ROYAL COMMISSION—CONSERVATION OF WATER.

FIRST REPORT OF THE COMMISSIONERS.

To His Excellency the Right Honorable Charles Robert, Baron Carrington, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, &c., &c., &c.

May it please your Excellency,—

We, your Commissioners, appointed on the 10th day of May, 1884, "to make a diligent and full inquiry into the best method of conserving the rainfall, and of searching for and developing the underground reservoirs supposed to exist in the interior of this Colony, and also into the practicability, by a general system of water conservation and distribution, of averting the disastrous consequences of the periodical droughts to which the Colony is from time to time subject," have the honor to submit this our First Report:—

Meetings.

We have held ninety-nine meetings, and examined 137 witnesses, minutes of whose evidence are appended.

Experience of other countries.

At the outset of our inquiry we caused letters to be sent to the Chief Secretaries of the Australian Colonies, the Governors of some of the Western States in the American Union, and, by the courtesy of your Excellency's predecessor, Lord Augustus Loftus, and the Foreign Office of the Imperial Government, to the Departments of European countries and the Presidencies of India in which works for the conservation and distribution of water have been carried out; and those communications have in a large measure placed at the service of this Colony a knowledge of the methods employed by other countries for the conservation and distribution of water and the experience which has been gained in respect to them. Much of this information is necessarily of a technical nature, having reference to constructive details; but many of the plans and other particulars with which we have been supplied will be found to be extremely valuable when similar works are entered upon in New South Wales.

Information from pastoralists and surveyors.

We have also sent circulars with skeleton county and parish maps to the whole of the Government surveyors, and to all the principal land-holders and other persons resident in different parts of the Colony from whom we had reason to hope information might be obtained respecting the watersheds of the districts in which they reside, the general fall of the surface, the flow of underground water, the number, position, and character of the wells, tanks, and dams, the amount of rainfall

and evaporation, irrigation where practised, and other information of the like nature. The number of circulars already issued is 560, and they have been accompanied by 5,040 maps. 108 answers have been received, and, as a great number of others are expected to come in, it is not possible to embody this information in the present Report. It is expected to be voluminous and important, and the information is being carefully compiled as it is received, and we anticipate that when the whole of the replies are received and tabulated, the accumulated experience and knowledge of pastoralists and others, scattered over a wide area, who have expended large sums in sinking wells and conserving water will be of great value in aiding future efforts for the discovery of underground supplies of water, and in indicating localities most suitable for the construction of storage works and distributing channels.

Engineer.

By the smallness of the appropriations made by Parliament for the purposes of the Commission, taken in connection with the fact that the services of surveyors and engineers employed under Government have not been available to the Commissioners, we have been precluded from undertaking an instrumental examination of the different catchment areas of the Colony, so essential for the proper consideration of water conservation and distribution to the best advantage; but it was nevertheless necessary that, in the prosecution of our inquiries, we should have the assistance of an Engineer, for the purpose of making flying surveys and reporting on particular points, and we accordingly selected a gentleman for that office.

Levels, gauges, river sections, and discharges.

Information as to the levels of different parts of the Colony existed in some of the Government offices, particularly in that of the Engineer-in-Chief for Railways; and it was one of the earliest duties of the Engineer to compile all known levels and to connect them with the river systems of the Colony. This has been so far completed as to give a fairly accurate idea of the slope of different parts of the Colony, and to show the directions in which canals or other distributaries may be practicable. He has also devoted attention to the ascertainment of accurate sections and discharges of the rivers Murray, Murrumbidgee, Macquarie, and Darling; the localities selected for the purpose being Albury, Dora Dora, Gundagai, Dubbo, Warren, Bourke, Brewarrina, and Walgett. Gauges have been fixed at all these places, and (with the exception of those at Dora Dora and Warren) they have been connected with the railway levels. The gauges are, therefore, now connected with sea level, and the foundation has been laid for the compilation upon uniform data of the discharges of the principal rivers—information which it is essentially necessary to procure before any large works for the storage and distribution of water can be safely entered upon.

Visits of the Commission to the country.

For the purpose of inspecting localities of proposed or possible works for water conservation, as well as to make ourselves better acquainted with the interior of the Colony, and to suit the convenience of important witnesses whose evidence we could not otherwise have obtained, we made the following tours:—

1st. To the Yanko and Colombo Creeks, taking evidence at Narrandera and Jerilderie on subjects specially referred to us by the Honorable the Colonial Secretary.

2nd. To Tamworth, Gunnedah, Narrabri, Walgett, Brewarrina, Bourke, Goonery Springs, Nyngan, and Dubbo, holding meetings and taking evidence at all these places in the order mentioned.

3rd. To Hay, Corrong Station, and Tupra Station.

In addition to these tours made by the Commission, we, on two occasions, deputed one of our number (Mr. F. B. Gipps, C.E.) to report on proposed sites of works for water conservation. The first of these visits of inspection was to the Namoi River, and the second to the Upper Murray. The reports of these inspections will be found in the Appendix.

Diversion of Snowy River into Murrumbidgee.

At an early sitting of the Commissioners, the Surveyor-General of this Colony stated in his evidence that he believed a large supply of water could be diverted from the Snowy River to supplement the discharge of the Murrumbidgee, and evidence was also obtained that water could probably be stored on the Upper Murrumbidgee

Murrumbidgee on an extensive scale, sufficient to assist materially in equalizing the flow in that river. In consequence of these opinions, we deputed a Surveyor to make an instrumental examination of the Tantangara basin on the Upper Murrumbidgee, and also to level from the Snowy River to the watershed between it and the Murrumbidgee. The Surveyor's report on the Tantangara basin, with our Engineer's remarks thereon, are included in the Appendix. The report on the levels in the Snowy River basin has not yet come to hand. Tantangara basin.

In this our First Report we have dealt with the questions submitted to us so far as the time and means at our disposal have permitted; but connected directly with the subject of our inquiry there are several very important points which we have not yet had an opportunity of investigating. Foremost among these are the terms on which an equitable settlement of intercolonial rights in the waters of the Murray River can be made. The Government of Victoria has for many years been collecting valuable statistics regarding the Murray and its tributaries in that Colony; but, excepting the records of the height of the Murray maintained by Mr. Russell, Government Astronomer, no corresponding information is available in New South Wales. It is highly desirable that a definite understanding on this subject should be arrived at as soon as possible, and with that end in view we propose to obtain the necessary data on which to base a satisfactory intercolonial agreement. To prepare the way for such an agreement we have arranged to confer with the Royal Commission on Water Supply in Victoria. Other points which merit full and careful inquiry, and to which we propose to devote our attention, are:— Subjects for future examination.

(*a*) The examination of the northern tributaries of the Darling, with special reference to the storage of flood-water in the upper portions of their basins, and to irrigation in the plains.

(*b*) A similar examination of the basins of our coastal rivers.

(*c*) The practicability of storing flood-water, on an extensive scale, in lakes and in all depressions of large capacity on the western plains, and in particular in the lakes near the Lower Darling and in Lakes Cargelligo and Urana.

(*d*) The problem of the underground supplies of water, especially as to their sources, direction of flow, and extent.

In addition to pursuing our inquiries on these subjects, we are prepared to deal promptly with the works for which surveys are herein recommended, provided the necessary funds are placed at our disposal.

For the systematic consideration of the subjects which have been included within the scope of our inquiry up to the present, as well as for the purpose of furnishing a comprehensive abstract of the evidence obtained, we have classed the various questions under the following heads:— Scope of present inquiry.

Under

Under the first head the general characteristics of the Colony are dealt with, and particularly those having an influence on the rainfall and on the available supply of water; while in the second, third, and fourth divisions, the amount of the rainfall and the proportion of it lost by evaporation and percolation are discussed.

In Parts 5 to 8 inclusive, the methods which have been, or can be, adopted for utilizing the available supply of water are described, and reference is made to the practice of other countries, especially in regard to irrigation.

The question of navigation is dealt with in Part 9, and its position and importance relatively to irrigation are briefly referred to.

Under the 10th heading we have divided the Colony into principal drainage basins and groups of drainage areas, and have calculated the area and the mean rainfall of each basin or group of basins. This arrangement enables us to place the information bearing on water conservation and supply, and especially that portion of the subject bearing on the rainfall, in a clear light and in a condensed form. With the aid of the rainfall returns of the Government Astronomer, the county and parish maps prepared by the Survey Department, and the evidence we have taken, the information regarding both the rainfall and the drainage area has been made as complete as possible, and is the closest approximation at present obtainable.

In the 11th division we have discussed the question of riparian rights, and have submitted a draft of the legislation which we recommend. This question is one of pressing importance, and one which must be dealt with before any national system of water conservation can be properly initiated. It will be seen that the main features of the proposed administrative machinery for developing water conservation and supply are—

(*a*) A permanent Board, acting directly under a Minister who will be able to devote a large portion of his attention to this and cognate questions; and

(*b*) The establishment of a system of local Trusts, which will generally construct and manage works for water conservation and supply.

Under the 12th heading, the conclusions arrived at by the Commission on subjects other than legislation are embodied in a series of recommendations.

(1.) PHYSICAL FEATURES.

Great Dividing Range.

The Great Dividing Range, trending, roughly speaking, almost parallel with the coast, forms the principal watershed of the Colony; and, with the spurs which run out from its eastern and western slopes, determines the direction of surface flow. The Muniong and the Snowy Ranges, in the southern portion of the Colony, are the only mountains upon which snow rests for any considerable time; and although snow-storms occasionally visit Ben Lomond and the higher altitudes of the range, they are not of sufficient frequency and the quantity of snow precipitated is not large enough to form any very important factor in estimating the sources of water supply. The Murray, the Murrumbidgee, and the Snowy River are the only streams whose volume is augmented to any considerable extent by the melting of the snow, and these all take their rise in the Snowy Mountains. The loftiest peaks in Australia occur in this part of the country, and their summits are more than 7,000 feet above sea-level, and double the height of the Great Dividing Range viewed as a whole.

Coast rivers.

The rain-clouds which come from the Pacific Ocean with the east and south-east winds strike the shoulders of the eastern slopes of the Dividing Range, when the rain is precipitated and often flows down their steep slopes in torrents, and is carried to the sea by the Moruya, Clyde, Shoalhaven, Hawkesbury, Hunter, Manning, Hastings, Macleay, Clarence, Richmond, and other rivers. The coast district, embracing an area of 50,000 square miles, whose western boundary is the summit of the mountains, and running back from the sea to distances varying from 30 to

150 miles, has a heavier and more regular rainfall than that of the country west of the Dividing Range.

Western waters.

The spurs which run out upon the western face of the main range, although not so precipitous as on its eastern declivity, are nevertheless sufficiently bold to direct the flow of water into well-defined channels for short distances from their base; nearly all, with the exception of the Lachlan (whose general course resembles that of the Darling), trending for a long distance of their flow in a north-westerly direction until they unite with the Barwon or the Darling, whose sluggish and tortuous course south-westerly and south lies through wide-reaching plains of level and for the most part rich country. The principal tributaries of the Darling are the Macintyre, the Gwydir, the Namoi, the Castlereagh, the Macquarie, and the Bogan, each in its turn being fed by numerous creeks and the whole outflow of the western watershed (including the Murrumbidgee and the Murray) converges upon Wentworth, whence it flows west and south to the sea near Adelaide. The area and principal facts respecting the different basins, in so far as information has been available, will be referred to further on when we come to consider the characteristics and capabilities of particular districts for water storage.

Transcontinental range.

Mr. C. S. Wilkinson (the Geological Surveyor) and other geologists are of opinion that at some earlier epoch there existed a dividing range of primary rocks running nearly at right angles with the coast range, and he has traced it across from the Flinders Range in South Australia to Wilcannia, curving round to Cobar, Parkes, and Orange, so that it forms the watershed between this portion of the Darling and Lachlan basins. The rocks forming the roots of this range may be traced near the surface, and Mount Murchison is regarded as portion of the range which, by denudation, has in the lapse of ages now almost wholly disappeared.

Cretaceous basin.

The country to the north of this lost range, on to the Gulf of Carpentaria and perhaps Port Darwin, is supposed by geologists to have been submerged by the sea at one time as a deep basin, and that its present condition is due partially to upheaval and partially to the enormous denudation of the mountain chains of Australia. From these premises deductions have been drawn having an important bearing upon the probable existence of underground water which will call for further reference.

Lakes.

If we except lakes which are estuaries of the sea, such as Lake Macquarie, the principal lakes of New South Wales are shallow, and are also untrustworthy in regard to the permanency of their supply. In many cases they are merely large depressions connected with rivers, and depending for their supply on occasional floods in those rivers. Lake George, situated on the eastern side of the dividing range, and at an elevation of about 2,200 feet above the sea, is the best known, and one of the most important of the lakes of the Colony. In dimensions it is about 19 miles by 6, and is supplied from several intermittent creeks, but has no outlet. As might be expected under these circumstances, the water in the lake is strongly impregnated with salts. Lake George has been known to fail entirely, as also has Lake Bathurst, ordinarily about 15 miles in circumference, situate in the same district, and its bed to be dry for considerable periods; but these lakes have never been known to overflow. Of the other lakes of the Colony the most important are Yantara, Cobham, and Salt Lakes, near the extreme north-west of the Colony; Poopelloe, Pamamaroo, Menindie, Cawndilla, and Tandou Lakes, along the course of the Darling; Lake Victoria, near the Lower Murray, Cowal Lake and Lake Cargelligo, which are fed from the Lachlan, and the Narran Lake, in which the river of the same name is lost. There are many other lakes of less importance but similar in their description to those mentioned. Of the lakes situated near the course of the Lower Darling there are three having each an area of more than 60 square miles. The great capacity of these lakes is evidenced by the fact that when rapid falls in the Darling occur, it is estimated by the captains of the river steamers that the outflow from the lakes to the Darling keeps that river navigable for ten days or a fortnight longer than it otherwise would be. This is an important point, especially when it is considered that the outlets from the Darling to the lakes are in their natural state, and that, with few exceptions, no attempt has been made either to increase the supply flowing into the lakes or to regulate the outflow. In the case of the lakes east of the Darling, in the

county

county of Livingstone, an almost permanent supply is maintained, through the construction of a dam across the Tallywalka Creek. This was done by the lessees at their own expense, the cost amounting to £3,000 or £4,000; and, as stated by Mr. Mair, "the effect of that dam was to throw the water into a series of lakes extending north and south a distance of 80 miles, and I should think giving several hundred miles of almost permanent water frontage." The figures stated by Mr. Mair show at a glance the remarkably profitable character of the dam referred to. "Several hundred miles of almost permanent water frontage," acquired at an expense of "£3,000 or £4,000," is a statement which requires no comment.

Cowal Lake. Lake Cargelligo.

Cowal Lake and Lake Cargelligo occupy with regard to the Lachlan a position similar to that occupied by the Menindie and other lakes with reference to the Darling; Lake Cargelligo, with its area of 11½ square miles, presenting unusual facilities for storing large supplies of flood-water. Special surveys to ascertain what can be done in this respect have been made under the direction of Mr. Adams, Surveyor-General, and with most encouraging results. The question has not escaped the notice of the lessees of the land surrounding the lake, as they have constructed a dam on the creek leading from the lake to the river Lachlan, and by that means they retain a large portion of the flood-water. The improvement of this dam, and the construction of sluice-gates in it, as suggested by Mr. Moriarty, Engineer-in-Chief for Harbours and Rivers, would produce very beneficial effects at a very moderate expense.

Lake Urana.

Cowal Lake and Lake Urana, though large in point of area, scarcely deserve the name of lakes, as they are merely shallow depressions, which obtain an uncertain supply from occasional floods. Surveys may, however, show that they are capable of being very much improved.

Lake Yantara. Cobham Lake.

The lakes in the extreme north-west of the Colony, Lake Yantara and Cobham Lake in particular, have large catchment areas; and from their position, in a very dry district, remote from any permanent river, must be looked on as possessed of very considerable importance. Before the heavy rain of January last Cobham Lake was almost, if not quite, dry, but after the flood of that month there was a sheet of water 8 miles in length, and in some places as much as 27 feet in depth.

Facilities for canals.

The general configuration of the country, as exemplified in its mountain system, is so well known that a detailed description of the great barrier, whose elevation varies from 2,000 to upwards of 7,000 feet, seems unnecessary; but the rise and fall of the country westward is not, perhaps, so commonly understood. The levels of the country lying between the Murray and the Murrumbidgee show that it is singularly well adapted for the construction of canals, and the capabilities of its soil for agricultural production can hardly be surpassed. Over a large portion of the area there is a gentle inclination north-west from the Murray, and south-west from the Murrumbidgee, and our investigations justify the expectation that water from these rivers can be led over a large portion of its surface. The country between the Lachlan and the Murrumbidgee is more irregular; but the enormous area lying between the Lachlan and the Darling, which appears as a blank in the general maps of the Colony, has been ascertained to possess some well-defined features. So level is the southern portion of this area that there is every reason to believe water may be conducted through the whole of it, in fact in high floods the waters of the Lachlan and the Darling—ordinarily separated by an interval of 200 miles—have spread out to within a distance of about 30 miles of each other. North of the Willandra Billabong there are depressions wherein there is reason to hope considerable bodies of water may be stored in this arid region; but the information available, which at present is very limited in extent, does not disclose any specially favourable features in the contour of the country for distributing channels. North of the Bogan, and west of the Great Dividing Range, the country is irregular until it leaves the spurs from the range; but the fall thence to the Darling is remarkably uniform, and offers great facilities for the distribution of water through artificial channels.

Levels: Newcastle to Walgett.

Starting at only 2 feet above high-water-mark at Newcastle, the Great Northern Railway runs up the valley of the Hunter, and is carried over the Liverpool Range,

Range, at an elevation of 2,070 feet; it then descends at the rate of 85 feet per mile for 8 miles, and at the rate of nearly 40 feet per mile until Werris Creek is reached, at an elevation of 1,245 feet. Taking a north-westerly course across the basin of one of the principal tributaries of the Namoi, the level falls 371 feet in the first 41 miles, the elevation at Gunnedah being 874 feet, and 177 feet in the 46 miles to Narrabri, where it is 697 feet. From Breeza to a point 70 miles north-west of Narrabri, following the line of railway survey, the fall of the country, with few and unimportant exceptions, is 3 feet per mile, the distance being 152 miles; thence to Walgett, 43 miles, at the junction of the Namoi and the Barwon, the fall is scarcely 15 inches per mile.

Sydney to Bourke.

The configuration of the country between Sydney and Bourke is seen from an examination of the railway levels between those termini. Starting at Sydney at 64 feet above the sea the Great Western Line crosses the Valley of the Nepean at about 90 feet, and reaches the summit of the Main Range at the Clarence siding, at an elevation of 3,658 feet. Descending the spurs of the western slope into the valley of the Macquarie, Bathurst is passed at an elevation of 2,153 feet, and in the next 40 miles it ascends nearly 700 feet to a point near Orange, from which locality the descent to the western plains begins. Dubbo, 278 miles from Sydney, is situate on the eastern margin of the plains, and its elevation is 865 feet. Beyond Dubbo there are some low ridges and slight undulations, which influence the grades considerably over short lengths, but for the whole distance (225 miles) to Bourke the fall is remarkably steady, averaging about $2\frac{1}{4}$ feet per mile. The valley of the Macquarie is first crossed at 145 miles from Sydney, the watershed dividing the Macquarie from the Lachlan at 186 miles, the valley of the Macquarie again at distances of 248 and 278 miles, and the Bogan, at Nyngan, at 377 miles. Between Dubbo and Nyngan there is a mean fall of about 3 feet per mile. The first of the low ridges which occur beyond Nyngan is at 397 miles, and its elevation at the place crossed is 622 feet, the lowest ground between that point and Nyngan being at 546 feet above sea-level. Girilambone, at 405 miles, is situate on the next ridge, its elevation being 639 feet; and of the series of ridges which follow, the highest is 781 feet, at 414 miles. Cobar Road, 424 miles, marks another ridge of 747 feet, and in the next 8 miles there is a fall of 170 feet, or more than 21 feet per mile; the next 23 miles shows a fall at the rate of 4 feet per mile, and the next 46 miles about 18 inches per mile. The black-soil country begins near this point, and the surface is very level on to Bourke, but with a slight fall-away from the river, the elevation at 491 miles being 343 feet, while that at Bourke (503 miles) is 346 feet.

Bourke to Mount Brown.

No levels by an instrumental examination of the country beyond the Darling have been obtained, but a section prepared by the Superintendent of Drills goes to show that there is an undulating rise from the Darling to the Mount Brown Range. This range is shown as having an elevation of more than 1,000 feet above sea-level, becoming gradually lower and less defined as it extends south. The range appears to trend west of south until it passes into South Australia. The fall of the country north-west of the Darling to that river is so slight that no water except in times of heavy rain would reach it.

Wallerawang to Walgett.

The country along the route of the railway proposed to be constructed from Mudgee to Walgett (428 feet) resembles in its general character that along the line to Bourke. The railway line from Wallerawang to Mudgee follows as far as Ilford the course of the Dividing Range, which here recedes further from the coast than at almost any other point. The respective elevations at Wallerawang, Ilford, and Mudgee are 2,928, 2,450, and 1,635 feet. The levels of the survey between Mudgee and Walgett show to within 40 miles of Coonamble an undulating country, whose average elevation ranges between 1,100 and 1,200 feet. The ridge between the Talbragar and the Castlereagh would be crossed at an elevation of 1,660 feet, and another ridge 41 miles to the northward at 1,560 feet. The plain country begins at a point distant from Sydney 293 miles and to the south of Coonamble 40 miles. It falls with gentle undulations for 10 miles to a level of 918 feet, and the fall for the next 30 miles to Coonamble is a fairly regular one of 11 feet per mile. The fall for the first 15 miles beyond Coonamble is at the rate of about $3\frac{1}{2}$ feet per mile, and thence on to Walgett (66 miles) it is slightly over 1 foot per mile.

The

Dubbo to Coonamble.

The surveys made between Dubbo and Coonamble show that the country is higher and more ridgy than on the opposite side of the Macquarie. While at Dubbo the elevation is 865 feet, at 28 miles from Dubbo in the direction of Coonamble it is 1,100 feet; 9 miles of undulating country brings the level down at Marthaguy Creek to the same as Dubbo, and from the creek to Coonamble there is a fairly regular fall of a little more than 6 feet per mile.

Between Bourke and Walgett.

Comparing the line from Dubbo to Bourke with the surveys from Dubbo to Walgett and Coonamble, it will be seen that while on the former the plains begin at or slightly to the west of Dubbo, on the last-named route the undulating country goes to about 39 miles north of Dubbo. The levels also go to show that while the fall of the rivers is towards the north-west, there is also in this part of the Colony a fall in the land towards the south-west.

Nyngan to Cobar.

Nyngan is situate on the east bank of the Bogan, at an elevation of only a few feet above the flood-level of that river. 58 miles to the west the railway surveys show that the line to Cobar will have to be taken across a ridge at an elevation of 1,045 feet above sea-level, or 473 feet above Nyngan and 255 feet above Cobar. The position of this ridge corresponds with that of the mountain chain described by the Government Geologist as one which probably formed the southern coast-line of the ocean whose waters in the cretaceous period covered most of the area now lying northwards to the Gulf of Carpentaria and Port Darwin. Comparing the levels at Cobar with those of the portion of the survey which has been made between Condoblin and Wilcannia, it is found that the former are about 450 feet higher than the latter. Cobar appears to be on the side of the range referred to, while the line from Condoblin follows the low undulating country about 130 miles to the south and south-west.

Forbes to Wilcannia.

The Forbes to Wilcannia route, from Condoblin to the north-west, shows an irregular succession of undulations until the top of the Guagong Range is reached, the pass through which is lower than Condoblin, the respective heights being 660 feet and 618 feet. In the county of Blaxland the country continues ridgy, but there is still a fall in a southerly and in a westerly direction. Booberoy Creek which, like the Willandra Billabong, is an effluent from the Lachlan, is crossed at 36 miles from Condoblin, and at an elevation of 530 feet. Passing beyond the branches of the creek there is a gradual ascent to the top of a ridge which is crossed at an elevation of 654 feet, and at a distance of 70 miles from Condoblin. The route for the next 164 miles is through an undulating incline to the north-west, the height above sea-level at that point (234 miles beyond Condobolin) being 264 feet, and for the remaining distance (35 miles) to Wilcannia the surveyed line extends through plains country. Along the first 234 miles from Condoblin to Wilcannia many extensive depressions are met with, several of which appear to become marshes or lakes after heavy rains, and some of which could probably be utilized for the storage of large supplies of water. After passing the Guagong Range, 28 miles from Condoblin, there is every reason to believe that in the undulating country extending from that place to within 35 miles of the Darling, no portion of the rainfall ever reaches either that river or the Lachlan. A large proportion of the plains country is subject to inundation, particularly after crossing the first ana-branch of the Darling, at a distance of 22 miles from Wilcannia.

Liverpool to Wentworth.

Skirting the valley of George's River and crossing that of the Nepean, the Great Southern Line ascends the Dividing Range to Mittagong from which place to Breadalbane it traverses the table-land, whose elevation varies from 2,000 to 2,300 feet above the sea. This plateau constitutes an important portion of the gathering ground for the Shoalhaven River and its tributaries in the south, and for the Wollondilly and its tributaries on the north. Beyond Bredalbane there is a descent through hilly country, and in the catchment area of the Lachlan till the basin of the Murrumbidgee is reached near Yass, where the country is still hilly, the elevation at Yass being 1,657 feet. Beyond this point the gathering ground of the Murrumbidgee is traversed, but at only a short distance from the watershed between that river and the Lachlan. At Junee the elevation is 985 feet, and thence to the Murrumbidgee at Narrandera the country may be classed as undulating, but with a fall of nearly 7 feet

per

per mile. From Narrandera to Hay the course of the river is followed along open plains having a mean fall of 2½ feet per mile. The height above sea-level at Hay is 305 feet, while that at the junction of the Murrumbidgee with the Murray is about 190 feet, which gives a fall in a direct line of about 15 inches per mile. From the junction of the Murray and Murrumbidgee to Wentworth the fall is only 70 feet, while the direct distance is about 85 miles.

(2.) RAINFALL.

Causes of abnormal rainfall.

The quantity of rain which falls in any given locality depends on many circumstances, chief among which are temperature, distance from the ocean, configuration of the country, and position relatively to prevailing winds. Concurrence of several favouring causes produce abnormally high rainfall, while concurrent absence of such causes will have the reverse effect. Thus, at Cherra Pungi, on the Lower Himalayas, the mean annual rainfall during the years 1859 and 1860 reached the enormous amount of 615 inches. There the vapour-laden clouds carried by the south-west monsoons from the Bay of Bengal strike the mountains at an elevation of 4,500 feet and discharge their contents in torrents of rain. On the other hand, in that portion of Central Asia extending along the northern side of the Himalayas rain is almost unknown. For the week ending 18th June, 1885, the rain-gauge at Yowai (33 miles due east of Cherra Pungi) registered a fall of 64·79 inches, of which 51½ inches fell in forty-eight hours. Although 40 inches in twenty-four hours have been measured at Cherra Pungi, it is believed that 50 inches in two days is higher than any previous rainfall on record. In one of the islands of the Hawaiian group rain is said to fall every day on one side of the mountain, while it is alleged that rain has never been known to fall on the other.

Rain records.

Parliament made provision for the establishment of the Observatory in the year 1856, but, although meteorological science has a most important bearing on the prosperity of the Colony, it was not until the appointment of Mr. H. C. Russell, B.A., to the office of Government Astronomer, in 1870, that any systematic effort was made to collect information of the rainfall of New South Wales, and its great progress since then is mainly due to his labours. Finding only five observing stations in existence, he at once took steps to add others—with what success may be seen from the fact that the number of observers who sent in statistics of rain measures during 1884 was 496. Notwithstanding the importance which is now attached to the subject, a map of Australia would show nearly one-half of its area a total blank (if the overland telegraph line be excepted), so far as meteorology is concerned; and data based upon observations made over a much wider field than that which has yet been occupied will have to be accumulated before the course of storms can be accurately traced, or generalizations affecting the rainfall of the continent can be safely made.

Decrease of annual mean.

The fact that the Astronomer's records of rainfall came from only five observers in 1870, and that until 1878 Mr. Russell had very great difficulty in enlisting co-operation of others in this department of his work, seems to justify the opinion that the average of recorded rainfall for those years would be extremely fallacious if taken as the average of the rainfall of the Colony for the same period, or if looked upon as anything more than the most approximately accurate mean obtainable of that of the coast district. Indeed, the only method of obtaining useful practical results from the rainfall observations, as far as water conservation is concerned, is to ascertain the mean rainfall as nearly as possible in each river basin. This has now been done, and the results are stated in connection with the various drainage areas.

Cause of apparent decrease of rainfall.

With the exception of the years 1878 and 1879, the latter of which was phenomenally wet, the averages of the years since 1874 disclose an almost uniformly regular decrease in the rainfall. This is no doubt partly attributable to the series of very dry years which have proved so disastrous to the principal producing interests of the Colony.

Colony. A diminished rainfall of 50 per cent. has at times desolated particular districts, but the records of the Astronomer have proved that droughts are not of equal severity throughout the Colony—that while one part of the country suffers from a diminished rainfall other parts have an average supply, and others again may be favoured with an abundant fall. As the "dry" districts occupy a far larger area than those which may be regarded as humid, and as the quantity of rainfall there is of more pressing importance, it is not surprising that the number of observing stations in the former is much greater than that in the latter. A glance at the rainfall map of 1878—the first year in which it was published—shows that observing stations were then few, and widely separated throughout the Colony, to the west of the Main Range; while in that for the year 1884, that portion of the Colony, in common with the coast districts, was thickly studded with collectors of meteorological statistics. Rain from thunder-storms is often extremely local. It was found on a single run, where six rain-gauges were kept in various parts of it, that the record of the rainfall ranged from 19·81 inches to 27·75 inches.

Coast districts. An idea of the rainfall along the coast may be formed from the records of the following observing stations, the first column showing the mean rainfall for each year during which records have been kept, the second showing the average number of rainy days, and the third the number of years of which the preceding columns are the average :—

	Mean rainfall. Inches.	Wet days.	Years in mean.
Eden	35·78	115	14
Sydney	49·61	163	14
Port Macquarie	60·59	131	14
Clarence Heads	45·06	87	8
Antony	63·85	155	4

Table-land. The like information applicable to the following stations on the table-land is :—

	Mean rainfall. Inches.	Wet days.	Years in mean.
Tenterfield	29·99	72	14
Armidale	29·76	78	14
Tamworth	25·64	69	7
Mount Victoria	36·65	89	12
Goulburn	25·84	87	14
Cooma	18·38	78	14
Kiandra	61·16	103	6

Darling. Records from the following stations on the Darling show these results :—

	Mean rainfall. Inches.	Wet days.	Years in mean.
Walgett	15·76	40	5
Brewarrina	20·04	...	12
Bourke	16·01	42	10
Louth	11·40	30	4
Menindie	7·37	33	4
Wentworth	11·14	70	14

Rain sections. Commencing on the coast, and following as nearly as possible the parallels of latitude, there is, as a rule, a steady decrease in the rainfall. This is exemplified in the case of the three lines passing in this manner from the coast towards the western boundary of the Colony through the following stations :—

A.

Name of Station.	Approximate distance from the coast.	Mean annual rainfall.	Mean number of rainy days.	Number of years reckoned.	Remarks
	miles	inches			
Clarence Heads	0	45·06	87	8	
Grafton...	20	33·57	81	13

New South Wales compared with other countries

The rainfall of New South Wales as compared with some other countries does not support the idea of those who regard this Colony as peculiarly arid; and it could be shown that droughts, which are the great scourge of the country, are common to almost every part of the habitable globe. It is true that the diminished rainfall is not so disastrous in its consequences in more temperate climates as it is in Australia; but the meteorological records of England show that during the period between 1740 and 1750 there was only 71 per cent. of the average rainfall. In some parts of Europe—Sweden, and Russia—the rainfall is as low as 15 inches per annum; the average for twenty-years at Marseilles was 12·8 inches, and at Alicante the total for the year has fallen as low as 7·1 inches. In so exceptionally favoured a country as Great Britain the distribution in different parts is very unequal, the average falling as low as 20 to 28 inches on the east, and running up to 75 inches in the Lake districts. The precipitation of rain is in many countries more immediately caused by the existence of mountain ranges which intercept the rain-clouds as they are swept up from the sea. The rain-bearing winds from the Bay of Bengal pass over the wide tract of swampy plains, and striking the Himalayas near Darjiling discharge their contents in torrents along the face of the mountains, while the south-west monsoon deluges the Western Ghats with from 100 to 250 inches in a year, the fall in each case becoming less inland as the clouds are exhausted of their moisture. Cape Colony, whose climate and physical features greatly resemble that of New South Wales, has a heavy rainfall precipitated on its eastern slopes by the winds which blow from the Indian Ocean; and, while the rainfall of the Colony as a whole is reported to be 24 inches, the average declines to about 12 inches in the western districts. This is much the same as that which occurs in the more remote interior of New South Wales and Queensland and in the northern areas of Victoria, the rain clouds in each Colony being largely intercepted by the mountain ranges. The mean rainfall in the southern portion of South Australia, where there are no high coast ranges to arrest the drift of the clouds, is as low as 20 inches at Adelaide, and 8 inches at Port Augusta at the head of Spencer's Gulf. California is a country which for the larger portion of its area is extremely arid and its rainfall intermittent, periods of heavy flood and extreme drought alternating with each other. During the interval from 1850 to 1872, the yearly rainfall at San Francisco ranged from 7·4 inches to 49·27. On the coast to the north of San Francisco the rainfall becomes heavy, while to the south, at San Diego, it diminishes to 10 inches, and at Fort Yuma it is little more than 3 inches. In some districts, however, abundant supplies of artesian water have been discovered; and on the summits of the Sierra Nevada they have a snow-field to draw upon, of which the only approach to a counterpart in New South Wales is the Snowy Mountains.

The

Rain-winds.

The rainfall of the Colony is brought chiefly by the winds which come from the south-east and east. Much of the rain with which they are charged is precipitated in the coast district or on the eastern slopes of the main range. The moisture which remains in the clouds after they have passed the summits of the mountains falls in quantities which diminish almost in direct proportion to the distance from the range. This rule is, however, correct only within certain limits, which can be plainly traced in Mr. Russell's rainfall map. On referring to this map, it will be observed that in passing towards the north-west of the Colony the rainfall diminishes, till the district bordering on the Darling is reached, and that not only does the diminution cease there, but there seems to be a slight increase towards the Queensland border. This is due to the fact that the heaviest rains in that part of the Colony come from the north-west, and that they diminish in their south-easterly course, till the supply of moisture finally becomes exhausted. The cause of the great rain-storms which traverse a large portion of the Colony from north-west to south-east is not well understood, owing to the want of a sufficient number of observing stations in Queensland and in South Australia.

Influence of forests on rainfall.

An opinion which has obtained some acceptance is that the rainfall of different parts of the globe is to a great extent modified and determined by the forests; and a large body of facts has been collected in reference to India, Spain, the Mauritius, and elsewhere, to show that the denudation of the forests has diminished the rainfall, and caused in large measure the sterility of certain tracts of country. This generalization appears to have had its origin in a deduction by Humboldt, who, when travelling in South America, observed that in a district where trees had been cut down the waters of the lake dried up, and that after the growth of the semi-tropical vegetation indigenous to the region the bed of the lake again became filled with water. Mr. Russell, however, brings indisputable evidence to show that the waters of Lake George, which, when moderately full, is 20 miles long and 7 miles wide, was dry in 1836, and was for a short time used as a cattle and sheep run, and that the drying up of the immense body of water which it had before contained could not by any possibility be attributed to the cutting down of trees. The reason in each case was a decrease in the rainfall affecting the whole world. He regards the trees as the result of the rain, and not rain as the result of the trees. On the other hand, the Government Astronomer of this Colony points to the rain records of England from 1726 to 1882, to those of France, extending back to 1688—to those of the United States of America, for a period of sixty-six years—and to those of this Colony for forty-three years—all of which show an increase, not a decrease, in the rainfall, notwithstanding the enormous amount of forest destruction which has taken place. And American observations show that the magnificent forests which extend from Minnesota to Maine have a rainfall identical with that of the nearly treeless plains which extend westward of Chicago.

Effect of ring-barking on surface flow.

While the information regarding the effect of forests on rainfall is as a rule indefinite and contradictory, the question of the effect of eucalyptus forests on surface drainage seems to be practically settled. In a paper read before the Royal Society of New South Wales, by Mr. W. E. Abbott, in 1880, the result of ring-barking forests of eucalyptus in the Hunter River district was shown to afford conclusive evidence that such forests in their natural state have a remarkable effect in stopping the flow of surface water. In the instances quoted by Mr. Abbott, three creeks which before the ring-barking was done were dry excepting after unusual rainfall, became permanent running streams. As pointed out in the paper referred to, the eucalyptus has obtained the reputation of being possessed of exceptional capabilities for absorbing water, and it has in consequence been successfully used as a means of draining swampy ground. These capabilities for absorbing moisture are strikingly shown by the gaugings which Mr. Abbott made of the supply in the creeks mentioned. After the trees had been killed, the supply flowing at ordinary times was found to be 26½ gallons per minute, while after heavy rains the quantity was too great to admit of its being gauged by the means available. In the same paper attention is called to a report by Mr. Draper, of the New York Observatory, in which it is maintained that

" neither

"neither the rainfall nor the temperature of the Atlantic States of America has altered in any appreciable degree within the last century," though "these are the States in which, during the last century, a larger amount of deforestation has been done than in any other part of the world." Mr. Draper also investigated the records of the rainfall of Paris for a period of 190 years, and "found on examining them that during that time there had been a slight increase in the rainfall, not steadily, but in oscillations extending over long periods."

Effect of forests on temperature.

While there appears ample proof that forests have no appreciable effect on the rainfall, it is beyond question that they have a moderating effect on the temperature. This has been well illustrated in the case of two places in the Punjab Plains, situated at a distance of 18 miles apart, one in open country and the other in a dense forest. It is found that in the hot season the temperature at the latter is generally 6° or 8° lower than at the former.

Use of forests in preserving soil from erosion.

An important use of trees and shrubs is in preventing the erosion of the soil in hilly places by floods. The pernicious effect of completely clearing the ground of trees in hilly country when the soil is deep can be studied in the Colony at no great distance from Sydney, and in some countries the absence of trees is in this manner a source of great national loss. Moncrieff says that in Spain "the whole country is furrowed by rivers running in deep beds and fed by natural drainage lines scored over its surface, and generally dry. The slopes, entirely devoid of vegetation, can offer no resistance to the eroding action of the water, and possess no means of retaining the moisture. So, the rain-storm over, the torrents run for a few days in flood and return to their extreme dryness." The wholesale denudation of forests in mountainous country will almost inevitably be followed by the washing down of the surface soil wherever it is broken up for cultivation, and the propriety of imposing restrictions upon ring-barking on lands so situate may well engage the attention of the Government.

Other uses of forests.

The effect of forests upon rainfall is totally distinct from the question of their immense importance to the health of communities, their great value in preserving the soil of mountainous country from denudation, and their uses in the industrial arts.

Influence of conserved water upon rainfall.

It was expected that the construction of large works for the storage and distribution of water in Italy would have had an appreciable effect in increasing the humidity of the atmosphere, but experience has not confirmed that view. The impression appears to be general that the climate of the interior may be ameliorated by evaporation from an extensive water surface, and it is thought that in the course of years the rainfall may be sensibly increased by the enlargement of water storage from year to year. Several observers have noticed that thunder-storms appear to be deflected by creeks, even in such perfectly level country as the Darling, and that the rain which falls along the course of such depressions is greater than that in other parts of the district.

(3.) EVAPORATION.

Experiments by the Government Astronomer.

From the systematic observations which the Government Astronomer has initiated, it may be expected that the amount of evaporation in different parts of the Colony will be ascertained with a close approximation to accuracy, but in the present state of knowledge upon the subject opinions vary considerably. Thus, many pastoralists have written to the Astronomer to say that in the hottest months of the summer evaporation goes on at the rate of 1 foot per month for three or four months, while others do not think that it amounts to more than 3 or 4 feet for the whole year. The Assistant Engineer for Roads, who is charged with the construction of tanks, thinks that from a tank containing 18 feet of water evaporation would not exceed 4 or 5 feet (Q. 1571). It has been stated in our inquiries that at Gurley, in the Gwydir

Gwydir district, 2,000 sheep were watered for considerably more than a year from a tank 10 feet deep, and there was water in it then, although none had run in the whole time. One witness, speaking of a swamp near the north-western boundary of the Colony, into which the water brought down from Queensland by the Bulla River flows, says that the average depth of the lake was 4 feet, and that the water lasted fifteen months, when it disappeared from evaporation and soakage. (Q. 3087.) The conditions upon which observations are made, though in the main similar as to temperature and permeability of soil over large areas in the western districts, are nevertheless sufficiently dissimilar in different localities to account for any discrepancy in estimates of evaporation of the whole of the north-western districts based upon observations applicable to a particular spot or to a very limited area. Hot winds, which are of comparatively rare occurrence in the coast districts (being generally underlain by the sea breeze), and which range in temperature at Sydney from 80° to 106°, are more frequent on the western plains, where the thermometer sometimes records 130°, and for days together stands at 110° to 116°. It would be a mistake, however, to attribute this condition of wind to long periods, for the wind records show that, as compared with the coast districts, those beyond the Main Dividing Range have a comparatively tranquil atmosphere.

Evaporation under ordinary conditions.

In the course of the Government Astronomer's experiments he found that the evaporation from grass was from one and a half to two and a half times greater than that from water, and that the evaporation from soil destitute of vegetation was from two to three and a half times greater than from water. The evaporation from a water surface at Albury was at an average rate of more than 4 inches per month for the six months October to March, and nearly 7 inches a month for the two months of December and January.

Circumstances on which evaporation depends.

The amount of evaporation depends on several circumstances, prominent among which are the temperature, the winds, and the nature of the surface from which the evaporation takes place. It has been found that evaporation is affected in an important degree by the temperature of the water acted upon, as well as by the temperature of the atmosphere. Thus, for example, in the case of the Ganges Canal, which is fed largely by snow-water, the evaporation at Roorkee, 18 miles from the head works, was found to be only one-tenth of an inch per diem, while at a distance of 52½ miles from the head works it was more than one-seventh of an inch per diem. With a hot wind blowing incessantly, the maximum evaporation from still water at Roorkee was found to be half an inch in twenty-four hours. In the Madras Presidency it was found by Major Mayne, R.E., that the mean evaporation from a reservoir 1,375 acres in extent was 0·165 of an inch in twenty-four hours, or 60 inches per annum. In the Bombay Presidency the evaporation has been ascertained to be 72 inches per annum.

Testing arrangements made by Mr. Russell.

We proposed, soon after the inception of our inquiry, to establish a series of observing stations, with a view to ascertain the amount of evaporation in different districts, but we found that the Government Astronomer was making arrangements for the same purpose, and we did not therefore deem it expedient to proceed further in the matter. Mr. Russell wrote:—

> Parliament having voted money for me to make experiments upon evaporation, I had arranged to carry out these at places where I have observers, viz., Bourke, Menindie, Wentworth, Hay, Albury, Young, Euabalong, Dubbo, and Lake George, and at such of the public tanks as have caretakers of sufficient intelligence to make the observations. The tanks I proposed to use are generally similar to the one in use for so many years here, viz., 4 feet diameter and 3 feet deep, made of galvanized iron, and provided with a screw gauge showing loss of water in thousandths of an inch. I desired to include Cobar, Wilcannia, and Milparinka, if observers could be obtained. As the money is only recently available, I have only taken preliminary steps in this matter, and should be willing to modify the proposals as far as possible to meet the wishes of the Commission. I would like to point out that it must take some years to get data from these experiments such as will be useful in computation, and perhaps what has been already done may serve for present use. Mr. Todd, in the dry climate of Adelaide, finds the evaporation from a tank 4 feet over, and sunk in the ground 66 inches per annum. (Rainfall 21 inches, not much more than Bourke). In Melbourne (rainfall 25 inches) under similar circumstances it is found to be 48 inches, and in Sydney 32 inches.

Since

Since writing the above Mr. Russell has had evaporation tanks placed at a number of the stations mentioned, and has obtained the following returns:— Tank evaporation.

Evaporation Table—Result of Observations with the Tank Evaporation.

October	7·559	.....	.....	

Mr. W. E. Abbott estimates the area of Narran Lake or, more correctly speaking, of the two lakes which constitute what is commonly known as Narran Water, at 35,000 acres. This appears to be the area when the lake is full or nearly so. Assuming that the average area of the surface from which evaporation would take place during the whole year would be about 20,000 acres, it is an important question what quantity of water would pass off by evaporation alone. Supposing that the evaporation would be at the rate of 6 feet per annum, the quantity which would during the year be evaporated from every acre of the exposed surface would be 261,360 cubic feet. This would be equivalent to a rate of nearly half a cubic foot per minute per acre, or to nearly 166 cubic feet per second over the entire area. If it be assumed that the Narran flows only three months in the year, it would require to give a supply of 664 cubic feet per second during that period to make up the amount which would pass off by evaporation. Mr. Abbott mentions that for some distance before it reaches the lake the Narran has a width of about 40 yards. Assuming this width, it appears that, merely to supply the estimated amount evaporated, the river at the inlet with a mean velocity of 1½ feet a second must have a mean depth of 3 feet 9 inches if flowing for three months in the year. The Narran is very irregular in its flow, and it seems highly improbable that such a large supply as 489 cubic feet per second would pass down to the lake for three months continuously. If the assumed period of flow be shortened, a greater depth and a larger volume of water would be required in the river to meet the call of evaporation. With regard to the large supply which is said to flow into the Narran in times of flood, the great capacity of the lake affords a ready explanation for the fact that no water flows out again. Taking the total area of the lake as stated by Mr. Abbott, namely, 35,000 acres, and supposing a flood to occur when the lake is empty, or nearly so, a very simple calculation shows that if the mean depth of the lake be 10 feet, it will require a flow of 4,000 cubic feet per second for forty-four days to fill the lake. This would be equal to a river 120 feet wide and nearly 17 feet deep, flowing with a velocity of 2 feet per second. It will thus be seen that, after allowing for evaporation, there can be comparatively very little water left to be accounted for by soakage to the underground strata. The Narran is a type of several other intermittent streams, particularly those flowing southwards from Queensland. Narran Lakes.

Evaporation from a broad, shallow depression such as the Narran Lake is much greater in proportion to the water surface exposed than from tanks such as are commonly excavated for stock purposes. This is due to three causes. In the first place the larger surface affords greater scope for the action of the wind. The second cause is the extent to which the temperature of shallow water is affected by the sun's rays. The third cause is due to the action of capillary attraction in maintaining a strip of land around the lake in a state of saturation. This last is a point which is frequently overlooked, though it is one of great importance, especially when it is considered in the light of Mr. Russell's experiments already referred to on the relative rates of evaporation from a water surface and from earth. Evaporation from shallow depressions.

Early

Lake George.

Early in the present year the Government Astronomer had a self-registering evaporation gauge placed in Lake George. The primary object in fixing the gauge there was to ascertain the evaporation from such a large body of water, the conditions at that lake being very favourable for such an investigation. The following tabular statement is a summary of the results obtained:—

Date.	Evaporation.		Rainfall.	Total loss by Evaporation.	
	Reading of gauge.	Loss.			
1885.	inches.	inches.	inches.	Months of	
March 1	2·8	.....	.....	.....	
April 1	6·8	4·0	0·44	4·44	March.
May 1	7·7	0·9	1·54	2·44	April.
June 1	8·8	1·1	1·92	3·03	May (very windy).
July 1	6·7	2·1 gain.	3·42	1·32	June.
August 1...	5·0	1·7 loss.	1·82	0·12	July.
September 1	5·4	0·4	1·06	1·46	August.
October 1	7·9	2·5	1·15	3·65	September.
October 31	10·7	2·8	1·74	4.54	October.
8 months	.....	7·9	13·09	20·99	

In connection with this table the Government Astronomer adds the following explanatory note:—

It will be observed that I have added only the rain which fell on the lake, taking the mean of two rain gauges, one at each end. That is, I have assumed that no water runs from the hills into the lake, but I have done so because the gauge shows the rise in the lake when the heaviest rain fell to be only equal to the measured rainfall. For instance, on the 12th June the rain measured was 1·02, and the lake rose just 1 inch. I have no record of the state of the creeks leading to the lake, but it may be stated that the rains have been very light and the season dry, so that it is not likely much, if any, would run after an inch rainfall in one day—the heaviest record.

Mr. Russell also writes:—

During the last fourteen years the lake has lost by evaporation 12 feet, and in May, 1878, the railway survey carried down the western side showed that the lake was then 6 feet below its 1871 level, or 2,225 feet above the sea. It appears, therefore, that in seven years, 1871 to 1878, the lake lost 6 feet; and again, from May, 1878, to February, 1885, say seven years, the lake again lost 6 feet by evaporation; and this of course in addition to all the rain which fell during that period. Taking the records at Goulburn and Gungahleen, near the lake, the average rainfall for the first seven years was 27·95 inches, and during the next seven years 23·68 inches. One would expect to find more evaporation during the dry years, but this is not borne out by observations. From the rainfall and recorded evaporation, the lake therefore lost by evaporation at least 3 feet per annum. I say at least, because some rain-water must have run into the lake in addition to that which fell into it directly, but its amount cannot be determined. In future the recording-gauge will determine this, and perhaps then we may apply the experience gained to estimating how much ran in during the last fourteen years. That the gauge will serve this purpose is proved by what it has already done. On March 11th a strong northerly wind came on, and in three days the lake lost by evaporation 1½ inch. On April 14th and 15th 1·10 inch rain fell, with a strong wind, and by the 17th the lake had lost all the rain by evaporation, and was at the same level as on the 13th. On the other hand, in calm or almost calm weather three and even four days pass without any loss by evaporation. It should be stated that the rain on 14th and 15th April, though 1·70 inch fell at Douglass, only 0·77 fell at the north end of the lake, and the rise in the water due to it was 1½ inch, so that it would appear but little of that rain-water came down the hills into the lake.

The evaporation on the lake on a windy day shows to what extent the wind affects it. No doubt its effect on a large body of water is much greater than on a small one, because on the lake in calm weather the lower air must get to a certain extent saturated with moisture, and there being no wind to carry it away, evaporation practically ceases; but where small quantities of water are placed to test evaporation, there are abundant means for the evaporated water to get away in the surrounding air which is not saturated. Evidence is accumulating that the evaporation from large tanks is not so great as has been supposed. The heat is no doubt very great, but the total absence of wind in the interior for considerable periods is obviously, from what has been shown, an important condition for the saving of water. At Bourke recently I was very much struck with the absence of wind, especially on the surface of the ground, and the self-registering anemometer which I erected there in March last bears important and measurable testimony on this point. The recording parts are so easily moved that they work satisfactorily with a velocity of 1 mile per hour. Taking the total number of miles of wind recorded at Bourke by an anemometer placed 25 feet above the ground during thirty days, I find it is 2,350 miles, or about 78 miles a day only. The strongest wind

wind in that period shows 50 miles of wind in 5½ hours, and the smallest record for a day is 25 miles, little more than a mile per hour. In Sydney during the same period 7,050 miles of wind were recorded, and it is not uncommon to record in Sydney in three days as much wind as was recorded in Bourke in thirty days.

(4.) SUBTERRANEAN WATER.

Flow from surface.

The quantity of rain-water which will flow off the surface into the rivers depends upon the extent of the rainfall and the slope and character of the surface; and as these vary in different localities and at different seasons, it is obvious that no general rule can be applicable. It may be stated generally that the proportion varies from 0 to 75 per cent. It has been found that in the upper portion of the river Garonne the proportion is 65 per cent., and in the case of the Po, 75 per cent. The discharge of the Seine is equal to only 23½ per cent. of the rainfall, while in the case of other rivers it is only from 10 to 15 per cent. The proportion which is drained off by the streams in the San Joaquin Valley is about one-third. A large proportion of the heavy rain which is precipitated upon the steep declivities and impermeable strata of the Great Dividing Range may be expected to flow into the rivers, while very little of that which falls upon the porous surface soil of the plains which extend on either side of the Darling would drain off the level land. The flooded land in that district has been known to extend for a distance of 70 miles across, and there are parts so flat that when the whole ground is covered by water it is often impossible to detect any current. Where the trampling of sheep takes place in lines which follow the general fall of the country, it will be found that the water will collect into channels and be conducted to the rivers. When it is borne in mind that the average quantity of rain at Bourke during eleven years has been only 16·18 inches per annum, and that the average number of days in each year upon which rain fell was forty-two, it will probably be apparent that much of the rain comes in such very fine showers as would be insufficient to create any flow, and that when, after the lapse of long intervals of dry weather, heavy rain does fall, the numerous gaping fissures which traverse the plains absorb a large proportion of it. A case is mentioned (*Evidence*, p. 85) where a torrent, such as a horse could not safely cross, descended from the Wanarang Mountains for forty-eight hours, and was nearly all absorbed by the open ground. Similar facts have been noticed in various parts of the Colony. Little more than 9½ inches (9·67) of rain is recorded to have fallen at Bourke during 1884, and this small quantity was distributed over thirty-six days. The heaviest fall for any month was 1·43 inches, and the only months in which the rainfall exceeded 1 inch were April (1·10), May (1·30), June (1·43), September (1·12), and December (1·37). It must be apparent that the discharge into the Darling in the locality of Bourke must have been so small as not to be measurable. A contrast to this condition of circumstances may be found in the measured discharge of the Nepean and Cataract Rivers, which is found to be about 44 per cent. of the total rainfall. Mr. Russell computes the discharge of the Murray for 1883 at 36 per cent., and for 1884 at 25 per cent.

Subterranean flow.

Refering to the supplies of water which have been struck by miners beneath the basalt at Cope's Creek and other mining centres, the Principal Government Geologist states that these deep leads are old river channels, which have been filled up by sand, clays, and basalt, and that they carry the underground drainage of the country. Their course is westerly, and they must continue right to the plains. He has seen evidence of these subterranean river beds all along the flanks of the Dividing Range. At irregular intervals great tracts of basalt are to be found. The lava has flowed down and filled up some of the old valleys, and now forms the floor of portion of the plains, so that we cannot indicate exactly under the plains where the leads occur. All that is known is, that the old drainage system which was in existence prior to the basaltic outbursts has been covered up by lava in some places. He also states that the western limit of the basaltic outbursts may be described approximately by a line drawn from Albury to where the 149th meridian crosses the Macintyre River. He is therefore of opinion that much of the water which falls between the

western summits of the Dividing Range and that line flows under the surface. The evidence given before us in reference to the Namoi, the Macquarie, and other rivers, also corroborates the theory that there is a considerable amount of percolation. We defer more specific reference to other facts bearing upon this part of the subject until we come to direct attention to the drainage areas of the different rivers and the more salient facts which have come to our knowledge respecting them.

Supposed outlet to the sea.

Supposing the amount of percolation to be as great as he estimates from the data at his command, Mr. Russell is of opinion that the underground drainage must flow to the sea; for, on the assumption that there was no outlet to the ocean, no extent of subterranean storage for water which is conceivable as existing could hold the vast accumulations which it is supposed has for ages been flowing downwards. In whichever direction the subterranean water may be supposed to flow, it must percolate through several hundred miles of strata. The mud springs found in some places in the west of this Colony tend to show that such underground flow exists; but the evidence furnished by these mud springs, and also by wells and borings, though both interesting and valuable, is too fragmentary in its character to enable us to arrive at definite conclusions regarding the source or the extent of the underground supplies. The base of the denuded range extending from Orange to South Australia, through or near Cobar and Wilcannia, would naturally have the effect of diverting the course of underground streams from the north, and to some extent those from the north-east.

Underground flow near Mount Gambier.

At Question 963 the Government Geologist expresses the opinion that the miocene formation of which he was speaking collects the underground drainage of the Barrier Range, and that it is quite possible that it extends to the coast of Victoria and South Australia. "We cannot," he says, "tell how far it does really extend to the south, but I have no doubt that the underground water escapes into the ocean. That is proved by the underground channels which exist in the Mount Gambier district, where the water at some places is said to run at the rate of 4 or 5 miles per hour. This being limestone formation, it is easily dissolved by the underground currents, and thus channels have been formed." Subsequently he states his opinion that the underground rivers near Mount Gambier, flowing in the direction of the ocean, which is not far distant, drain an immense area of country south of the Barrier Range.

Lakes in South Australia.

By the courtesy of the South Australian Water Conservation Department, we have obtained the report of the Government Geologist of that Colony on the lakes of the Mount Gambier district. The Blue Lake, whose average diameter is about half a mile, is enclosed within steep banks of 150 to 300 feet. Its surface level is about 70 feet below the town of Mount Gambier; the average depth of the lake is from 200 to 250 feet, and the bed of the lake about 190 feet below sea-level. Other lakes to the westward of Blue Lake appear to be connected with it. The Government Geologist (Mr. H. Y. L. Brown) states in this report that the low temperature of the water in the Mount Gambier lakes is against the theory of its being derived from any deep-seated source in connection with volcanoes. "Their principal supply is doubtless derived from the same source as the other underground water wherewith the tertiary beds of the south-east are charged, namely, from the watershed of the Murray, Darling, &c." It appears to us, however, that the available information is insufficient to show that the underground channels near Mount Gambier derive their supplies, or any considerable portion of them, from rain falling in this Colony.

Flow from Gawler Ranges.

Mr. Russell Barton, M.P., mentions that in South Australia, between the coast and the Gawler Ranges, people can tell exactly the depth at which an inexhaustible supply of water can be found. "To my knowledge," he states, "if you sink a well at a time of heavy rain in this country the water will rush down it, bringing with it all sorts of rubbish and débris, and within ten minutes of the stoppage of that rush the water becomes perfectly clear, and remains exactly at the same height in the well. Endeavours have been made to reduce the depth of the water by means of pumps and other appliances, but it cannot be lowered a quarter of an inch. These wells may be found at intervals for a distance of 300 or 400 miles down the coast."

The

The same may be said of a remarkable well at Sale, in Victoria. When water was first struck in that well it came up quite black with leaves, rubbish, and dead timber, showing that it must have entered the soil through openings on the surface sufficiently large to allow a great deal of water to pass into the earth otherwise than by percolation, or else that the strata in which the water was tapped contained great quantities of trees and other vegetable remains. The flow of water in that condition to the surface continued for several days, and an enormous quantity of rubbish was brought up from the well. Sale is in the immediate neighbourhood of two deep and constantly flowing rivers (the Thomson and the Latrobe), and within sight of the Australian Alps, which have a rainfall of not less than 50 inches per annum. Artesian flow at Sale, Victoria.

We have very briefly referred to the opinions which the Geological Surveyor in charge has formed of the strata of the north-western districts; but the important bearing which they have upon the question of underground water storage demands more than a passing allusion. The denuded mountain range whose outcrop has been traced from Orange to Cobar, Wilcannia, thence westerly into South Australia, marks the southern shore of what is considered to have been a portion of an ocean, which at the same period probably covered the entire northern portion of Australia. By a process of oscillation the bed of the ocean was gradually upheaved, and the southern portion of the continent at a late period depressed. By the upheaval of the ocean's bed on the northern portion of Australia the cretaceous formation which occurs in this Colony north and west of Cobar was brought nearer to the surface; and the miocene marine deposits extending southwards from the Barrier Ranges to the sea were lifted up at a later period. Bearing of geological formation on theory of underground flow.

The cretaceous formations of this Colony, so far as they have been explored, are estimated to cover an area of about 40,000 square miles, and are generally overlaid by beds of clay formed by the compression of soil washed down from the mountains. The rocks and gravel brought down by the mountain torrents would by reason of their greater specific gravity settle for the most part along the flanks of the ranges, and in the course of strong currents, while the finer particles of soil held in solution would be carried further out. Water in cretaceous formation.

The tendency of watercourses flowing through deltas is to silt up. It is no uncommon thing for the banks and sometimes even the beds of rivers flowing through deltas to be higher than the adjacent plains; and in consequence of obstructions to their flow to cut new channels for themselves. These phenomena, so familiar to all who are acquainted with the rivers of Australia, which have their course through flat country, show what has been going on for ages; and hence, no doubt, it is that the lines of drift and gravel which remain to show the course of the drainage in former periods are found at various depths. Silting up of watercourses.

The series of lakes which appear upon the maps of South Australia are situated on the margin of the cretaceous basin. In the N.E. Lakes, Frome, Blanche, Gregory, and others, the dry beds are generally incrusted with salt. There has been a period, long passed, when the flood-waters of the Cooper flowed into them down the Strzelecki Valley. It seems probable, however, that a slight upheaval in the vicinity of the lakes has altered the respective levels, and now, perhaps only once in five years, the Cooper overflows into the Strzelecki, and these waters flowing for about a month seldom reach beyond the south end of Lake Blanche, when they become salt and quickly dry up. South Australian lakes.

The dip of the cretaceous basin is northwards; but, if it were otherwise, the only outlet for the drainage would be the break in the transcontinental range which occurs near Wilcannia, known as the Darling Gap. The Government Geologist says that the break in the formations is only 5 miles across, and he is of opinion that the depression there is very shallow. (Q. 944.) The strata to the south of this gap is, moreover, impermeable. While therefore it is probable that this gap may have served to drain off some of the water from the northern sea after the upheaval of its bed, and before the miocene beds to the south of it were lifted up, it is also probable that if there Darling Gap.

there were now any underground flow through the Darling Gap, the fact would be made apparent by springs or flowing water on the surface in the locality, where after passing through the Gap its further progress southward would be arrested by the impermeable strata.

Water discovered below sea-level.

Water has been found at Tarkanina, in South Australia, 150 miles from the western boundary of this Colony in latitude 29° at a depth of 1,220 feet, or 1,040 feet below the sea-level, and it rose 20 feet above the surface; while at Hergott Springs, also in South Australia, the water was struck at a depth of 339 feet, or 193 feet below sea-level. It flows over the tubes at a height of 65 feet above the surface, and will probably rise higher if tubed. In the former case the bore was put down in the centre of the cretaceous basin, while in the latter it was near the edge and not far removed from the watershed. Mr. Jones, Conservator of Water to the South Australian Government, writes us that the flow from the first-named bore does not now exceed 400 gallons per diem. The bore is only 3 inches in diameter at bottom, and the flow of water has been impeded by obstructions in it. The cretaceous clays have been found to continue below the band in which the water was struck, and it is confidently anticipated that on going a little deeper a very large supply will be met with in a pebble deposit forming the floor of the formation. The diameter of the bore at Hergott Springs is 6 inches, and the flow of water 5,000 gallons per diem. The water is of good quality, fit for domestic use, and its temperature at the bottom of the bore is 82° Far. At Dunlop Station, 80 miles west of Bourke, wells have been sunk, the facts in regard to which are both interesting and important. In one a supply of fresh water was obtained at a depth of 488 feet, which rose to within 90 feet of the surface. Another well on the same station yielded an abundant supply from a depth of 573 feet, the water rising to within 15 feet of the surface. At a depth of 240 feet petrified wood, water-worn pebbles, dead fish, and marine shells were found. At 300 feet a tree 18 inches in diameter was found, and at a lower level of 143 feet a second tree was cut through. At 550 feet there were 5 feet of sandstone rock, and when the water was struck the auger dropped 2 inches into fine sand drift. The trees found resemble those growing on the surface, that at the higher level having its branches lying to the west. No particular significance, however, can be attached to this latter circumstance, even if it can be taken as an indication of the flow of the current at the particular time when it was deposited. It is clear that the lowest level at which water was struck in these wells was considerably below the level of the sea; and that the height to which the water rose in all or both of them was above the level of the Darling Gap at Wilcannia,—the elevations of Bourke and Wilcannia above sea-level having been ascertained by the railway surveys to be 346 feet and 260 feet respectively.

Employment of boring machinery.

It may be premature to accept these considerations as forming a conclusive argument against the theory of an underground river-flow to the ocean, but whatever inference may be drawn from the limited range of information at present available, the numerous facts adduced in evidence before us establish a strong presumption that there is a large quantity of water under the dry north-west country; and there is reason to hope that by the employment of boring machinery an abundant supply of good water can be made available for the use of stock.

Mud-springs.

Almost the only surface indication of the presence of water underground is to be found in the numerous mud-springs which occur to the north-west of the Darling, more particularly in the Paroo and Warrego districts, also in the southern part of Queensland. That remarkable spring at Gilgoin near Brewarrina is thought to be of this character. The proprietor of the station observing that his cattle became bogged in a slight depression, which is now the site of the spring, fenced it in and made excavations for a well. The bones of bullocks were dug out and at lower depths were found the fossil remains of kangaroos, and bones of what are supposed to have been the diprotodon and other extinct species of animals which, in bygone ages, resorted to this treacherous ground to quench their thirst. At a depth of 28 feet the water rose in sufficient quantity to drive the men out of the well, and the supply in the shaft has always been abundant. In the case of most excavations on the site of mud-springs the muddy overflow proves so unmanageable as to be a

bar

bar to sinking by pick and shovel. The temperature of the water in the mud-springs shows that it comes from a considerable depth, and the great thickness of the overlying clay-beds through which the water is forced upwards implies strong pressure from below. Professor Stephens is of opinion that these circumstances point with certainty to the eastern ranges as the source from which this water has its origin. Mr. H. Y. L. Brown, Government Geologist, thus describes the mud-springs in his report upon artesian water:—

> There is little doubt that the mud-springs are due to water at a pressure trying to come to the surface through a bed of clay which puddles it back, the result being that the water and clay mix and come to the surface in the form of mud. Where there is a strong body of water and a large amount of pressure, it clears a passage for itself and continues flowing without any admixture of mud, the passage through the clay gradually becoming lined with fragments of sandstones, &c., from below. All the mud-springs are in the same position geologically, the water coming from below the cretaceous clay marl and shale deposit which occupies so large a portion of the country. From a comparison of the different springs and wells, and an examination of the material raised therefrom, the conclusion is that there are three geological positions in which water is found in the area under notice.
>
> 1st. Near the surface in the sand, limestone, and clay deposits of the river flats, dry lakes, old watercourses, &c., of pleistocene age. In this case the water which falls on the sandhills and porous clay or silt flats, soaks into the ground until it meets an impervious bed of clay or other material, where it accumulates. Whether it is salt or fresh water depends upon the nature of the soil and rock in which it lies. As a rule the water found under these conditions contains a great quantity of salt.
>
> 2nd. Between the quartzite conglomerate beds and the cretaceous marl. Water falling on the quartzite conglomerite ranges, and being absorbed by them, would collect in the hollows of the cretaceous formation, and break out as springs at the lower levels of the former.
>
> 3rd. Beneath the cretaceous deposit and on the Devonian formation below. This is the main source of water supply indicated by the mud-springs and deep wells. The newer deposits on the flanks of the Devonian sandstones, grits, and conglomerates throughout the district receive a large quantity of the rain falling on them in the joints and cracks of the rocks, and in holes and cavities in the ground, by which means the strata become charged with water, which is conducted through the cretaceous strata, and is stored there until such time as the force of gravitation, pressure of superincumbent rocks or of gas, causes it to force its way to the surface.
>
> The cretaceous rocks being formed of horizontal beds of clay, marl, mudstone, shale, and limestone, and being overlaid by hard beds of conglomerate, are liable to settle down in places by the shifting of the strata through being softened with water, or removal of limestone by dissolution. Thus the water below and the pressure above acting together would cause the forcing up of the water through any available crack or borehole, and the forming of an artesian well. The cane-swamps, so-called, are depressions of this kind which seem to have been formed by a sinking of the ground. On many of them, where there are no native mud-springs, mounds may be seen which bear all the appearance of being the remains of extinct mud-springs. Pebbles and boulders of quartzite, sandstone, &c., are often found lying about on their surfaces, which may have been forced up at the same time in a similar manner to those seen at the present time at the active mud-springs.
>
> The existence of local subterranean channels containing flowing water at a moderate depth, particularly in limestone country, is very probable. In the case of the water found below the cretaceous formation, the evidence is in favour of its lying in the form of lakes in the porous strata, as it is found at different depths.

Cretaceous basin likely to afford artesian water.

There is a general concensus of opinion among geologists in this Colony whose views we have had an opportunity of learning, that the cretaceous basin will afford a supply of artesian water of good quality throughout its area; and the Government Geologist states the maximum depth at which borings may have to be made at 700 feet. Experiments made with the boring-rods are so far confirmatory of this view not only in New South Wales, but, as we have seen, in South Australia also. This expectation of obtaining artesian water from the cretaceous basin has been entertained for some time past by the Department of Water Conservation in South Australia, and has been supported by the fact that on the south and south-west flank of the formation a very remarkable and extensive series of mud springs exist with unlimited supplies of fairly good water, all of them however containing salts and lime in some degree. In the ranges 20 miles west of Lake Frome, there are numerous springs of fresh water, the temperature of the water in one of the springs being 130° Far. In the Siccus Valley, south of Lake Frome several artesian wells with good water have been obtained at a comparatively shallow depth.

Water in miocene formation.

The later marine formation which underlies the alluvial deposits south of the Darling at Menindie, and which extends under a large portion of the Murray, Murrumbidgee, and the Lachlan basins, occupying in this Colony an estimated area of

of 22,000 square miles, is also pointed to by the Government Geologist as containing abundance of fresh water at depths varying from 200 to 500 feet. As, however, the overlying fluviatile deposits of this region are generally porous, it is not to be anticipated that water from the miocene beds will rise to the surface.

Palæozoic strata.

The map which the Government Geologist has prepared, to show approximately the extent of the different water-bearing formations, allots an area of about 22,000 square miles—chiefly along the eastern slope of the Main Dividing Range, and including the Range itself—to the palæozoic rocks, in which the occurrence of a large supply of good water is exceptional; and an area of 118,000 square miles to the older alluvial deposits which form the surface of the vast plains of the Darling and the Lachlan, and which overlie the cretaceous, miocene, and palæozoic strata. In these salt water is of most frequent occurrence, but where continuous pumping is possible, thereby inducing a current, it is questionable, after experience both in this Colony and in Queensland, whether the supply would not be fresh.

Recent alluvial deposits.

Percolation.

Absorption.

Another important water-bearing formation is that of the recent alluvial deposits which occurs along the course of the main rivers and creeks, although rarely at the heads of watercourses. The water passes from the beds of many of the rivers by percolation and absorption. By the former is meant the flow among the particles which constitute the subsoil; and by the latter, the capability possessed by all earths and even rocks of taking up and holding a certain proportion of water in the same manner as a sponge. To a certain extent absorption and percolation stand to one another in the relation of cause and effect. Their action is curiously illustrated by the fact that the loss from streams flowing within embankments is less than the loss from similar streams flowing in cuttings, as was proved by Mr. Beresford, Executive Engineer in the Irrigation Department of India. With regard to the rate of percolation, Mr. B. Baker ascertained that the water from the Nile flows underground in a direction at right angles to the river at the rate of 1 mile per week. The amount of loss by percolation and absorption differs widely in different cases. The mean of two experiments made on the Macquarie between Dubbo and Warren by our Engineer, Mr. H. G. M'Kinney, showed that the loss in that river between those points from these causes is about $\frac{1}{2}$ inch in depth over the wetted surface in twenty-four hours.

Percolation from the Nile.

(5.) STORAGE OF WATER.

General remarks.

Having briefly reviewed some of the principal facts relating to the rainfall of the Colony, and the theory which has been formed to account for its rapid disappearance from the face of the country, it remains that we should consider what means can be adopted to utilize the rain-water to the fullest extent. It is almost superfluous to point to the fact that much of the rain which falls is almost tropical in its character, and the benefit derived from it is partial and temporary in comparison with the advantages which might be expected to follow had we the means of storing the floods of one season to supply the comparative drought of another. A fall of 1 inch in a day would be considered very heavy in Great Britain, where the rain is much lighter and more frequent; but here the Government Astronomer has preserved records of storms in which 10·610 inches of rain fell at Newcastle in two and a half hours, and at South Head, in which rain fell for upwards of twenty hours at the rate of 1 inch per hour. The amount of the rainfall is sometimes of less consequence than the period at which it comes; and a fall of 9 inches in the year over the north-western districts, divided into three falls of 3 inches each, occurring in spring, mid-summer, and autumn would, in its effect upon vegetation, be vastly more beneficial than a very much larger aggregate quantity dissipated in thin showers throughout the year, or falling at a time less favourable for the growth of herbage.

Necessity for systematic provision to avert loss to pastoral, agricultural,

Any attempt to accurately estimate the value of rainfall by a pecuniary standard must of course be illusory, although doubtless there are many who will agree with the Government Astronomer in thinking that there is good reason for the assertion that, "an inch of rain over the whole Colony at the right time is worth a million

million of money," is not an exaggeration of the pecuniary loss which might be averted by a timely rainfall, to say nothing of the unutterable anguish of many thousands of animals, which in a period of drought perish by slow degrees from hunger and thirst. Although fully aware that the loss which results to the Colony from droughts cannot be stated with arithmetical accuracy—in the case of the husbandman it is sometimes the complete frustration of his year's toil, and in that of the pastoralist the annihilation of a large part of his capital—still an attempt (even though the data should be held in some respects to be erroneous) to form a definite idea of the measure of loss from droughts is not without value. If we put the low price of 6s. 8d. per head as the value of a sheep, including wool and carcass, we see reason to suppose that the loss of the Colony from the droughts of 1881, 1882, and 1883, in sheep alone, amounted to upwards of £2,000,000 per annum. The data from which this deduction is drawn will be found in the following figures, which have been compiled by the Chief Inspector of Stock from his Official Reports:— and mining interests, and to promote health.

Number of sheep on 1st January, 1881, as per report	35,300,000
Natural increase, say 12 %	4,236,000
Total at 31st December, 1881	39,536,000
Number of sheep on 1st January, 1882, as per report	36,500,000
Loss to 1881	3,036,000
Number of sheep at 31st December, 1881	39,536,000
Natural increase, say 12 %	4,744,320
Total at 31st December, 1882	44,280,320
Number of sheep on 1st January, 1883, as per report	36,100,000
Loss to 1882	8,180,320
Number of sheep at 31st December, 1882	44,280,320
Natural increase, say 12 %	5,313,638
Total at 31st December, 1883	49,593,958
Number of sheep on 1st January, 1884, as per report	37,900,000
Loss to 1883	11,693,958
Number of sheep at 31st December, 1883	49,593,958
Natural increase, say 12 %	5,951,274
Total at 31st December, 1884	55,545,232
Number of sheep on 1st January, 1885, as per report	31,600,000
Total loss in these 4 years	23,945,232

23,945,232 sheep @ 6s. 8d. per head = £7,981,744 loss.

This calculation assumes that the Colony is capable of depasturing 55,000,000 of sheep if efforts were made to conserve and utilize the rainfall; and we cannot suppose that this will be regarded as a too flattering estimate of our grazing resources. Each drought which afflicts the Colony may be said to be more injurious in its consequences than any of its predecessors, for the reason that there are more stock in the country to suffer. One witness states that fully one-half of the horned cattle in the Gwydir district must have died during the last four years, and a great many sheep; but that a system of water conservation would reduce the deaths to a small percentage annually (Q. 3972). Another thinks that in the late droughts the deaths of animals have been as 3 and 4 to 1 in comparison with the mortality in previous droughts (Q. 4840). Taking a radius of 100 miles from Walgett, it is given in evidence that during the last five years, taking all the runs in the district into consideration, we have lost about 60 per cent. (Q. 4971 and 5141.) Loss of stock through droughts.

The pastoral and agricultural interests being, in their present stage of development, wholly at the mercy of the vicissitudes of the weather, suffer more directly and severely than any other interests of the Colony from the sharp alternations of General losses through droughts.

wet

wet and extremely dry years; but inasmuch as each interest in the Colony is interwoven with every other, it is not too much to affirm that every class of the community participates in the privation and suffering which are born of adverse seasons, quite as much as in the comfort and wealth which result from bountiful harvests and the increase of flocks and herds. It would be easy to multiply instances of the loss which has overtaken mining industry, and the time when work upon the tin-mines of the northern districts, the gold-fields of Temora, the copper-mines of Cobar, and the argentiferous lodes of Silverton, had almost to be abandoned for the want of water, not simply for industrial purposes, but even for human consumption, must be still fresh in the recollection of most colonists. The greater prevalence of typhoid throughout the country during the late dry years seems to imply that the health and comfort of large numbers of the community, more particularly of those resident in the outlying districts, must have been very seriously injured by the scarcity of water—scarcity in many cases for even domestic use. The industries of the country, which are more immediately dependent on the soil, have about reached their maximum development under present conditions; and it will probably be admitted that if scope is to be given for the prosperous settlement of a larger rural population than that which now exists—if the stock-carrying capabilities of the country are to be increased—if agricultural activity is to be extended and made permanent—if the railways, which Government has constructed at a cost of many millions to the State, are to be made remunerative, and to accomplish the important ends for which they have been established—it will be necessary to make the largest and most systematic provision for the conservation of water, as the one element needed to give vitality to all the other possibilities of production.

Reservoirs at head waters.

The possibility of forming storage reservoirs at the head waters of the tributaries of the principal rivers is a question which appears to have hitherto received little or no attention, but, from the partial examination of the country by the Commission, they entertain no doubt that an instrumental survey of the different river basins will demonstrate that there are numerous sites for conserving reservoirs of very large capacity, and that by this means the easement of floods would be to some extent accomplished, and the streams of the rivers themselves controlled. As an instance of the construction of reservoirs at the heads of rivers, we may cite the dam at Campbelltown, Tasmania, which holds back 6,048 million gallons, and was constructed at a cost of £7,600.

Weirs upon effluent creeks.

Of the various methods of conserving the rainfall, that which commends itself to our judgment as producing the largest results for the smallest outlay of capital is one which Nature itself has strongly impressed upon much of the flat, dry country of the western and south-western plains. A prominent characteristic of streams subject to flood flowing through long reaches of flat country is to choke up their channels and to deposit banks of alluvium upon their edges, so that, paradoxical as it may appear, their banks are often higher than the general level of the delta through which they run. The ordinary channel not being sufficient to carry off the floods discharged upon it in times of heavy rain, the water has in many districts cut subsidiary drains through the soft soil; and the result is that there have been formed many hundreds of miles (we believe we should be within the bounds of accuracy were we to say many thousands of miles) of canals into which the waters are backed up, until such time as, upon the subsidence of the inundation, they recede into the river at the point of outflow or run into it again at some lower part of its course. These effluent creeks, cowals, warrambools, tallywalkas, billabongs, or anabranches, as they are variously called in different districts of the Colony, often communicate with large natural depressions capable of being formed into permanent lakes. The works required to retain the flood-waters in these creeks and lakes would in most cases be few, simple, and inexpensive, so far as impounding the higher flood-waters are concerned; and all that would be necessary, besides improving and defining the channel, to keep them permanently supplied, would be to place movable weirs across the rivers at the points of off-take, and sluice-gates in the creeks to prevent the return of the water to the main stream.

Natural depressions to be used as lakes.

Weirs across rivers.

A glance at the map of that portion of the Colony lying between the Murray and the Murrumbidgee, both of which are to some extent fed by snow-waters after the rains have ceased, will show from one to two thousand miles of natural channels such as those to which we refer, which it is quite within the resources of those rich districts to make available. Judging merely from the map, this part of the Colony is extremely well watered; but, for the want of systematic effort on the part of the inhabitants and of proper legal provision on the part of the State, the numerous creeks and rivers which intersect that area are nearly always dry, and the productive powers of the soil often paralyzed, while almost every year water sufficient to supply every demand for human and stock consumption and all other industrial purposes, including to a limited extent that of irrigation, is allowed to drain off to the ocean unused. Effluent creeks: Murray and Murrumbidgee.

The Government of Victoria and the residents of the Swan Hill Shire in that Colony have recognized what may be done in this direction, by the enlargement of the outflow of the Murray into Gunbower Creek (a work to which this Commission has taken exception); and making provision for draining off water at the higher flood-levels into the bed of the Loddon, and thence into a numerous chain of swamps and lakes to the north-west. (Vide Appendix, Secretary's Report.) It is satisfactory to observe that the fall of the country on the New South Wales side of the Murray is specially favourable for the distribution of its water in the district between that river and the Billabong, as is exhibited by the numerous effluent creeks which carry the Murray flood-waters, beginning at a point near Tocumwall, and flowing north-west in the direction of Deniliquin, Baratta, on to near the junction of the Murrumbidgee. Water conservation in Victoria.

The works which Mr. Tyson has carried out near Oxley on the Lachlan River may be cited as a good illustration of the manner in which favourable conditions of surface level can be turned to practical account by even individual effort. Mr. Tyson says (Q. 2834):—"I have made several cuttings from the back waters which have filled up a number of lakes, in some of which I have a supply of water for years to come. In one of these lakes the water is 50 feet deep. This cutting is from 1 to 6 miles long. I am making another cutting from Waljeers which will be about 20 miles in length. I make use of the natural depressions so far as they follow the course which the cutting is to take, and I excavate a canal in the ground between the depressions. Where I am making the cutting it is 30 feet wide, and from 4 to 7 feet in depth. I made another cutting between Lake Bonarey and the Merowie Creek. The lake was filled and the water lasted for seven years, but during the last three years there has been no water in it. I only wish to intercept the flood-water." As a consequence of these improvements, from 40,000 to 50,000 sheep are depastured where not more than 20,000 could have been fed before. Conservation of flood-water by private enterprise.

We are not disposed to ignore or make light of the constructive difficulties which would have to be overcome in any scheme which involved the placing of weirs across such rivers as the Darling, the Lachlan, the Murray, and the Murrumbidgee; but much of the conservation to which we have called attention could in periods of high floods be accomplished without making weirs, movable or otherwise, in the main streams below the points of off-take. In the absence of details such as can only be obtained after the preparation of plans and specifications, it would be unwise to say that the Colony is not populous enough or rich enough to place weirs across the Darling or the Murrumbidgee. That such works, placed in properly selected positions, and carried out under proper professional supervision, could be constructed there is no reason to doubt. In the absence of any special examination and study of the question by the engineers in the service of the Government, it may not be out of place to refer to the opinions of non-professional witnesses, of whom Mr. R. C. Webb may be taken as an example. He says that if a weir were well constructed on the Darling there would be nothing to prevent its standing, as there is no heavy rush of water in the river; and that even such rough and cheaply constructed dams as have been placed by private individuals across the Lachlan stand well enough until they are cut away when water is wanted (Q. 2696). The dams which have been made by private individuals Weirs on rivers. Constructive difficulties.

in different parts of the Colony, particularly the overshot dams in the Culgoa and Birie, and weirs such as those which have been successfully constructed by the Victorian Water Trusts over the Loddon and other rivers, may be taken as a clear indication of what may be safely attempted on a somewhat larger scale, with special caution as to the accumulation of silt. This, however, is a class of work in regard to which we should proceed tentatively and with great caution; and, above all, it is of the utmost importance that no weir should be constructed in any river until after such surveys have been made and levels taken as will fully determine the effect which such weir would have on the river and on the adjacent country. The sites for weirs will require to be selected with great care. The rocky bars which are frequently found in the western rivers, and particularly in the Darling, will probably afford the best sites for weirs in those rivers. Hence, before removing or interfering with any bar, the possibility of its being required for a weir site should be well considered.

Rocky bars in rivers.

Some of the peculiar circumstances with which we have to deal are extremely favourable. Thus, for an example, in many districts the fall in the creeks is so small that for every foot in vertical height the water would be held back nearly a mile. The subsoil of the country throughout nearly the whole of the Darling basin consists of impermeable clay, and no better holding-ground for water could be desired. A similar remark applies to a great portion of the country between the Murray and the Murrumbidgee. In the case of newly excavated dams, from which the water is found to soak away rapidly, pastoralists find that they can be easily puddled by the trampling of sheep, and in the second year form perfectly good holding-ground. Once the creeks of the district were thoroughly well saturated the loss of water by percolation would not be excessive. It is in cases where their beds become dry and cracked by long exposure to the sun that the loss of water is so great; and it is one of the heavy drawbacks which accompany the present intermittent system of flooding that the enormous amount of absorption from the bed of the channels until saturation point is reached prevents the waters from the rivers when in moderate flood from flowing more than half the distance which they would otherwise run; and hence it happens that the settlers who live at distances of from 50 to 100 miles from the point of off-take receive no benefit from moderate floods in such rivers as the Murrumbidgee, more particularly when the flood is of short duration. Irrespective of the great body of experience which has been obtained on this point, the opinion of the Government Geologist is assuring. He states (Q. 1027) that if canals were made on the lower part of the Darling, the soil is sufficiently impermeable to allow of the carrying of water through the country by means of canals. "For a year or so perhaps the water might percolate through, but after that the sides of the canal would become puddled; then the water would not soak away." And again (Q. 1029), "I have known races to be cut through sandy soil, and after the water has been flowing through it for a year they have become practically impermeable. In the Riverina country the water soaks away from some of the banks and dams during the first season. I think that a scheme of canalization is perfectly practicable."

Levels suitable. Soil impervious.

Not only is the soil from its nature well adapted for the storage of water in the beds of creeks and other natural depressions, but it is extremely favourable, also, as to general surface level, for the formation of canals and subsidiary channels for the distribution of water over the plains. Throughout hundreds of miles of country the occurrence of rock or stones is phenomenal, so that the excavation necessary for this purpose can be done at a cheap rate. Excavations made by Mr. James Tyson, junr., on his stations in the Lachlan District, by means of bullocks and scoops, have been done at a cost on an average of about one shilling per yard.

Distributing channels.

(6.) TANKS AND DAMS.

During the last fifteen years great waterless districts to the west and north of the Darling have been reclaimed from their normal condition, in which neither man nor beast could live, except immediately after rain, and have been made

Important results from tanks and dams.

to

to contribute to the pastoral production of the Colony. The principal means by which this important extension of the habitable boundaries of New South Wales has been accomplished has been by the excavation of tanks and the construction of dams, wherever the configuration of the Colony admitted of the latter means of storage, as on the Culgoa, Warrego, and Paroo.

Dams. The construction of dams in the older settled and more thickly peopled districts to the south-west has, owing to the want of proper legislation, been to a large extent prevented by the risk of having them destroyed. One case may serve as an illustration of many. We quote from a communication made to us by the Hon. W. A. Brodribb (*Evidence*, p. 84.)

> About the early part of 1858 a party of men went up the creek in the middle of the night and destroyed the Corec Dam, the property of Messrs. F. and G. Desailly, who repaired it, and for weeks kept armed men to prevent it being destroyed again. However, a party of twelve men went up the creek and destroyed about twenty-three dams, under the impression that their runs would be supplied with water. This destruction of property was perpetrated by men who had neglected to secure water by construction of dams when the creek flowed through to the Edward River for weeks, but they were doomed to disappointment, for, having cut the dams, they found the water did not run more than two or three miles below each dam. They came to my house on the 17th November, 1858, and told me they had burnt my upper dam by fire, there being no water in the dam at the time. They went to my house dam and cut away two panels, but there was very little water in the dam at the time. I prosecuted them before the Deniliquin Court of Petty Sessions, and three of them were committed to take their trial at the Goulburn Quarter Sessions to be holden on the 10th January, 1859. I had to go by Melbourne, thence by water to Sydney, and on by mail-coach to Goulburn, and, after all, the men were acquitted, and afterwards brought an action for damages against the Magistrates for committing them, and I had to attend at the Supreme Court in Sydney at a great deal of inconvenience. The case went on for sixteen days, when the men withdrew it, and they had to pay all costs. I repaired the dam after it was cut. This dam had been constructed twenty-eight years back, and has never been empty since, and has supplied the Wanganella township with water, besides having supplied the stations on each side with water.

Tanks. The excavation of tanks has been a work of enormous difficulty and cost, owing to the necessity of having to cart water, as well as other supplies, from the last frontier line of settlement at which the rain had been conserved. In selecting sites for tanks care has had to be taken to fix upon localities having a catchment area sufficient to supply the number of sheep to be watered at them, and where, from the slope of the surface, by means of shallow drains extending for long distances, even the smallest amount of running water might be conducted into the tank. None but those having at command a considerable capital could undertake works of the magnitude required to store water sufficient to supply the requirements of their stock for a period of from one to two years.

Capacity. It is probable that there is no part of the Colony which is absolutely without rain for so long a time as two years, but the contingency which has to be provided against in some localities of the interior is practically of that nature, as the rains which fall are generally so small in quantity as to be at once absorbed by the arid surface. In 1876 it was stated, on what the Government Astronomer considered to be good authority, that on one station on the Bogan no rain had fallen for thirty months; and Mr. Licensed Surveyor Donaldson, writing from 80 miles above Gongolgan, said that "in the five years, 1864 to 1868, thirty-seven months have been absolutely without rain, unless for five or ten minutes; eleven months have been distinguished by only one or two good showers, or perhaps a day or two of light rain, leaving only twelve months in which there was good rain. The Bogan has only run through to the Darling five times in five years; and two very slight freshes have only gone part of the way down." Under such untoward conditions, tanks of small holding capacity would altogether fail; and it may be that one of the causes why so many selectors have been starved off their holdings is their inability to provide themselves with large and deep storage for water. In droughts such as those immediately referred to tanks would require to have a capacity of from 15,000 to 20,000 cubic yards, and a depth of about 20 feet.

Construction. In the most approved form of construction the water flows through a small silt-pit previous to entering the tank. The material excavated from the tank is deposited all round the edges, where it quickly consolidates and greatly enlarges the capacity of the tank, while at the same time the banks serve to shelter the water

water from the play of dry winds which sweep away the moisture as quickly a it is evaporated over the water surface, and which, in tanks not so sheltered, cause sufficient movement upon the water surface as to sensibly affect the amount of soakage from splashing against the banks. In tanks of this description, where the slope of the surface does not permit their being filled by flumes, horse-pumps, stationary engines, and windmills have been found very useful for the purpose of pumping water over the embankment, and so filling the higher levels. Where tanks are constructed in this way the quantity of silt brought into them is reduced to a minimum, and provision is made by pumping appliances for watering at troughs, thereby preventing silting and damage to the banks, and the pollution and waste of water in fleeces of sheep where the animals are allowed to drink direct from the tanks. Mr. Doyle, Stock Inspector, is of opinion that a tank having a capacity of 10,000 yards will give a supply for a longer time with pumping than one of 20,000 to which the sheep are allowed to go direct, as they carry in silt and carry out water in their fleeces. In some cases tanks 18 feet deep to which sheep have had direct access have been silted up in five years, hence the necessity of the newer mode of construction.

Number of tanks.

The conservation of water in tanks in this Colony has been more extensively carried on than that by any other means. It is applicable to a much larger area of country than that upon which dams can be made, and experience seems to have convinced pastoralists that it is far more certain and economical than the sinking of wells. If, however, the search which has been made for underground water had been made in the light of the information supplied by the Government Geologist as to the strata in which water might be expected in different parts of the Colony, it is probable that much of the enormous loss of capital which has taken place in well-sinking would have been avoided. We observe that, in the report of the Chief Inspector of Stock for 1884, that officer, from the information supplied to him, estimates that the total number of tanks excavated in the Colony was 17,071, and that the expenditure upon them has been £3,960,472, or an average cost for each of £232. He puts down the number of dams at 8,579, and their total cost at £835,838.

Stock routes.

Of late years Parliament has made annual appropriations for providing water on the stock routes in the remote dry districts of the Colony, and upwards of £200,000 has been expended upon that object. At the beginning of this year there had been handed by the Roads Department (which constructs works for water supply to stock in localities indicated upon the recommendation of the Inspector of Public Tanks and Wells) to the Department of Mines seven wells, four dams, ten springs, and thirty-five tanks, the aggregate of the tanks being 73,500,000 gallons, or an average of 2,450,000 each. There were twenty-one others almost ready to transfer, having a capacity of 69,000,000 gallons, or an average of 3,250,000 gallons per tank. It is expected that at the end of 1885 there will be a total of 134 watering-places in charge of the Inspector of Tanks and Wells, and taking the average standard distance apart as 15 miles, this represents provision for something like 2,000 miles of road (Q. 3427). When the tanks are not leased they are placed in charge of caretakers, who report, through the Stock Inspector of the district, weekly, to the head of the department in Sydney. Charges are made for supplying water to stock, but the revenue derived (about £400 per annum) is less than one-tenth of the cost of supervision, so that construction and maintenance are wholly defrayed from the public revenue. The extremely dry weather during the last year or two has made it exceedingly difficult to obtain contractors for works of this description in the remote districts, and hence it is that larger provision has not been possible. In the event of a system of local Trusts for purposes of water supply being called into existence, it may be expected that the Government will be in a position to hand over the tanks already made to the care of the local bodies, and so save a large proportion of the outlay for supervision and maintenance which has now to be incurred; and that the annual appropriations made for watering stock routes will be available as subsidy to induce local bodies to make provision for supplying water to travelling stock where necessary as part of the general scheme to meet the requirements of their districts.

In

In Queensland the railway embankments have been used as a subsidiary means of storing water, more particularly at Rocky Creek, Tolmies Range, Wallaroo, and the 191st mile on the Central Railway, with the most satisfactory results, and the Engineer for Central Queensland, Mr. R. Ballard, states that he considers that, since the Queensland railways generally run east and west, and the flow of the water is generally north and south, the system is one which should be largely adopted. There may be circumstances in which embankments may be made to serve the double purpose of railway traffic and water storage, but they are probably exceptional, and engineers generally incline to the opinion that the danger to the stability of the road would outweigh any advantage likely to be gained by such shallow storage as would be practicable. Railway embankments.

(7.) WELLS.

The pioneers of settlement have not been slow to recognize the great value of a permanent supply of water from wells, where it is stored under conditions of temperature and shelter which protect it from waste by evaporation. It is quite within the range of probability that tanks may silt up, or in the course of a long drought may have their contents exhausted by evaporation; but the supply from a good well is practically independent of the vicissitudes of the seasons. Of the total number of wells which have been sunk, a large proportion have yielded water so salt as to be unfit for use, or no water at all. Mr. James Tyson states that he has sunk a great many wells on the Lachlan to a depth of 80 feet, and that the water in all of them was perfectly salt. Out of from 150 to 200 wells sunk by Mr. R. C. Webb, of Kilfera, only two contained water which stock would drink, but not sufficiently good for human consumption. If feed be abundant, sheep will drink water which contains as much as 800 grains of salt per gallon; but in many cases the water struck contained as much as 1,200 grains per gallon. Of forty wells sunk by Mr. Fartiere, on Marfield, the water of only two could be used. Mr. F. Y. Wolseley put down thirteen bores, and the analysis proved that the water obtained contained more salt than that in the sea. Instances in which the search for pure well-water have been similarly disappointing could be multiplied almost indefinitely. There are localities in which the existence of underground water has been discovered and turned to account by means of wells; but it has happened in many cases that, of two wells sunk within a few yards of each other, one, and the deeper of the two, has been perfectly dry, while the other has passed into a water-bearing drift. Similarly, the water from one well has been found to be as salt as the sea, while that in a well a quarter of a mile distant from it has been perfectly fresh. If all the experience which has been gained by well-sinkers throughout the Colony could be plotted upon a map, deductions could be drawn which would be of great assistance to those who may hereafter sink wells; but in the absence of that information, and of anything like determinate surface indications, the sinking of wells has been found in most cases to be a very costly, and in many an almost ruinous undertaking. There are no doubt portions of the country which form an exception to the general experience; but even there it should be recollected that, in addition to the serviceable wells, there have been a large number of failures whose history and existence quickly pass into oblivion. Over a considerable area of country along the Murrumbidgee an abundant supply of fresh water may be obtained at a depth of from 120 to 200 feet. A supply in less quantity, and generally somewhat brackish, is often obtainable at a depth of from 70 to 80 feet. The water which is found at the lower depth is always found in the same description of drift; and, although when struck it rushes into the well in such volume as to compel the workmen to retreat with the utmost speed—in one case rising 110 feet in three minutes—it never rises to a higher level than the first water-bearing strata, not even where tubing is used. In one well about 40 feet from the river-bank the water rose to within 80 feet of the surface, and although the flat was covered with flood-water the height of the water in the well was not increased; neither does the height of the water vary appreciably winter or summer. A witness, examined at Jerilderie (Mr. J. D. Rankin), also stated that it was very rare indeed to hear of a well being sunk on the

Value of wells.

Risk of obtaining salt water.

Murrumbidgee.

the plains near that place without water being obtained. In the Macquarie, near Dubbo, and the Castlereagh, the water from the river premeates underlying strata for a considerable area; and an abundance of good water is to be obtained in wells of moderate depth. Mr. T. K. Abbott, S.M., has contributed valuable information respecting wells in the Liverpool Plains district, extending over an area of about 100 square miles. It seems probable that a large number of the wells, of the position, depth, strata, and water of which he has obtained particulars, situate in the basins of the Cox and the Mooki, derive their supply from the soakage out of those streams, but there are several which appear to be fed by an underground flow from the spurs of the Main Dividing Range. Of eighty-nine wells in the basin of Cox's Creek and the Mooki, seventy-three bottomed in sand or gravel with an abundance of fresh water, six in clay with brackish or salt water, eight in rock with water hard to brackish, one in sand with water bitter, and one in rock with water good. The depths and situation of the wells justify the inference that water may be obtained at a moderate depth in sand or gravel almost anywhere in the county of Pottinger. Among the more remarkable wells described by Mr. Abbott is that at Bando, situate in basaltic country, near the foot of a range having an elevation of 1,600 feet higher than the well itself, which is on a slope about 150 feet above the plain. The well is 90 feet deep, and the supply, which is artesian, is at the rate of 20 gallons a minute, although, prior to the timber being sapped in the locality, it was with difficulty that a team of bullocks could be watered there. With respect to two other wells, Mr. Abbott wrote:—

Liverpool Plains.

> To the north-west of Bando there is a most remarkable spring at Garrawilla head station, and upon a recent visit I availed myself of the opportunity to measure the outflow. I found that this spring yielded the enormous quantity of 9,600 gallons per hour. I rode over the spring where it makes its first appearance, and was surprised to find the ground quite hollow for a space of upwards of 100 acres, and upon listening attentively one could hear the sound of rushing water under foot. In many places there happened to be large fissures or holes in the ground, and the water could be seen rushing along on its subterranean course at a depth of about 3 or 4 feet from the surface. A large dam has been erected below this spring, and one of the most extensive sheep-washing establishments of the Colony is supplied with water by powerful engines from this dam. The whole area of the valley in which the spring arises does not exceed 2,000 acres, and the yield per annum at the rate quoted amounts to nearly eighty-five millions of gallons of water. There can be no doubt whatever that the source of this spring is far removed from the drainage area of the valley in which it occurs.
>
> On Moredevil Station, near the source of Cox's Creek, many years ago, a well was sunk to a considerable depth. The exact depth I have been unable to ascertain, but believe it was about 80 feet. No sign of water was obtained before this level was reached, when, as the workmen broke through some hard rock, the water rushed in so rapidly that they were compelled to abandon their tools and make good their escape by means of a rope and windlass. In a few hours the well was filled to within 10 feet of the surface. Some years ago, as the well just described exhibited symptoms of caving in, another well was sunk about 80 yards easterly from the first. This well is 100 feet deep, and is situated higher on the slope by 4 or 5 feet than the first well. When the bottom was reached the water came as rapidly as on the first, and rose to within 4 feet of the surface, and on the following morning the first well had overflown, and a strong stream amounting to upwards of 300 gallons per hour was flowing from it. This has continued ever since, through all varieties of seasons, without cessation.

Underground supplies of water in old drifts.

The Government Geologist, in his evidence, refers to the large supplies of water underground with which the tin-miners of Emmaville and Cope's Creek have had to contend, and the copious flow of water which the gold-miners have had to encounter in the deep leads of Gulgong, chiefly in old river drifts underlying basaltic rock; while Mr. Henderson, the Superintendent of Drills, describes similar experience, and tells us that, in a comparatively small area at Ballarat, from seven mines there is pumped twenty million gallons of water per diem, and that one of them has been pumped for upwards of two years and a half with little or no signs of decrease.

Upper Darling basin.

The Government Geologist regards the cretaceous formation of the Upper Darling basin as one of great importance, and he anticipates that if bores be put down to a sufficient depth, it will be found to contain water enough to supply the whole of that part of the country (Q. 1001.) It is his opinion that this supply is not derived from the local rainfall, which is evaporated from the surface or finds its way into saucer-like depressions. It is from these stagnant underground reservoirs nearest to the surface that the salt water found in such a vast number of instances throughout the alluvial plains of the interior is drawn. The abundant supply expected from the cretaceous formation is artesian. We may mention some of the facts which exemplify this

this theory. On the Killara Station west of the Darling, two bores have yielded an artesian supply. One known as Weewatta, discharging from a pipe 144 feet deep, delivers from 7,000 to 8,000 gallons per diem 3 feet above the surface; the other (Mullyco, 15 miles to the north-west), 44 feet deep, supplying from 12,000 to 13,000 gallons per diem 4 feet above the surface. At Dunlop Station, supplies of fresh water have been obtained from wells from 500 to 600 feet deep. At the Government bore at Goonery, 54 miles west of Bourke, water flowing at the rate of from 600 to 270 gallons, at a height of 20 feet above the surface, has been found; and at another Government bore, 7 miles further west, a supply of 106 gallons an hour, rising more than 6 feet above the surface, was obtained from a depth of 464 feet. Comparing the depth of the two bores, the Superintendent comes to the conclusion that there is a dip in the cretaceous basin in this locality at the rate of 60 feet per mile.

Presence of salt water near surface not a discouragement.

In almost every case in which fresh water has been discovered, salt water has been struck at higher levels, and often near the surface; and therefore the prevalence of salt water near the surface should not act as a discouragement to deeper exploration. The Government Geologist, however, says that the clay-beds in which water is confined, but through which it does not circulate, do not usually extend far in any direction. Where the well is tubed, it is an easy matter to shut out the salt water; but as the great majority of wells are sunk by pick and shovel, if the in-flow of salt water is very strong, there is the utmost difficulty in puddling it back, more particularly when clay suitable for the purpose has had to be carted 30 and in some cases 60 miles.

Presence of salt water explained.

The prevalence of salt water in all the alluvial formations is explained by the Government Geologist as being caused by their fresh-water origin. The débris washed from the ranges has been deposited quickly, and the decomposition of mineral constituents arising from the moisture has converted the fresh water into salt. Sulphate of alumina, lime, and magnesia have been formed, and salts have been chemically produced. In the marine formations the soluble parts of the minerals have been washed out by the long-continued action of the sea-water. Wherever the water flows underground it is fresh, and wherever it is stationary, as it may be in clay-beds a few yards away from the current, it will be salt. The saline nature of the soil has given rise to well-marked peculiarities in the herbage, such as in the salt-bush.

Diminution of saltness of water.

It has been found that after wells have been freely worked for some time the water in them becomes much less salt by reason of the exhaustion of the mineral salt contained in the soil through which the water drains into the wells (Q. 2,870). Mr. H. A. Gilliat, the Inspector of Tanks and Wells, speaking of the brackish wells between the Lachlan and the Darling, says:

> There is an ample under-ground supply, and my belief is that the water gets its saline properties form the strata in which the wells are sunk. The strata are heavily charged with salts. In 1879 I tasted water from the Holybox well; up to that time it was so salt that no animal would drink it. I collected from 20 to 30 lb. of clean crystals of salt which had formed around the service tank and troughing. I recommended that the well be condemned, and forwarded the statements of people who had resided in the locality from the time the well was sunk; they all agreed that from the very first the water had been undrinkable. At the end of 1883 a tank was being constructed in the locality, and the contractor not having any supply of water for his horses tried that in the well, and found that the animals would drink it; on making further inquiries, I found that there was much more water in the well than there was in 1879; this I attributed to surface drainage. The water was baled out of the well, and that which came in afterwards found to be good enough for stock. There are several other wells in which the quality of the water has improved in the same way.

Bore at Goonery Springs.

Considering that there has been an enormous fruitless expenditure upon wells, it cannot be expected that pastoralists will continue to invest their capital in well-sinking—however much a good well is to be preferred to tanks—until the boring rods shall have given better assurance than any which now exists (except in certain localities on Liverpool Plains, the Murrumbidgee, the Lower Lachlan, and the Macquarie) of the probability of striking the underground channels through which the fresh water circulates. The value of the bores west of Bourke is very much lessened from the fact that there was already an abundant supply of water from the Goonery Springs before the bore was put down; and the great cost of the boring operations conducted.

conducted by the Government is not calculated to lead pastoralists to view the enterprise with much favour.

Drilling plant.

Should Mr. Wilkinson's anticipation that fresh water, in abundant quantity, is to be found all over the cretaceous basin, within a maximum depth of 700 feet, be realized, we may hope that engineers, having their own boring plant, and trained men to work it, will find a large field for employment in the north-western districts. With the certainty of finding water there can be little doubt that boring appliances, adapted to the special work required of them, would be forthcoming, and that tube wells would be sunk with an amount of economy and despatch which has not hitherto been attained. Reference to the evidence of Mr. Darley (Q. 1674 and sequel) shows that, in California, where wages are as high as in New South Wales, and the strata similar, the owners of drilling plants eagerly compete with each other in the business of well-sinking; they accept all risks arising from breakages to plant and if they do not find water it is a condition of the contract that they are not paid.

Use of metal tubing.

The secret of getting the water to rise to the surface lies in the use of metal tubes, for, no matter what the pressure might be from below, it is hardly likely that water would rise higher in the well than to the permeable strata. Without the casing the water when it rose to a certain height would disperse with the upper drainage. The same conditions no doubt exist in many of the wells of this colony in which the height of the water cannot be increased by any inflow from the surface, nor its depth reduced more than temporarily by any amount of pumping it has been possible to apply to them.

Influence of atmosphere on flow of springs.

It has been observed that the flow of water from some springs in different localities is very sensitive to the pressure of the atmosphere; and the Government Astronomer offers the following explanation of these interesting phenomena:—

> In several places, notably on the Kallara Run, there are wells where the supply of water varies with the state of the atmosphere. That has been noticed in a number of places in the Colony; that is to say, the differing states of the atmosphere affected the quantity of water discharged. There has been a marked instance of this effect on a station to the south of Cooma—Babandarra Run. The water there in a certain creek stops running, and when it commences to run again the circumstance is regarded as a sign of rain. The explanation of this is to be found in the variation of the barometer; when the barometer falls the pressure is removed, the air inside expands and forces the water out. When a barometric depression has passed over the country water has been known to commence running in many places. There are wells in the Murrumbidgee in which the quantity of water varies with the state of the atmosphere. There is another instance on the Gundare Run, close to Coolah.

(8.) IRRIGATION.

Erroneous views on irrigation.

The first use to which water saved in the country districts will be put will be for domestic and stock purposes; and after these demands have been satisfied there is no better service on which water can be employed than that of irrigation. An erroneous impression which we have found to prevail among some witnesses is that the advocates of irrigation think it practicable to irrigate the whole of the western plains. It is not a matter for surprise, therefore, that the notion of irrigation should be scouted by those who are painfully familiar with the sparse and irregular character of the rainfall in that part of the Colony. In no part of the world, not excepting countries the most favourably situated for the purpose, can any large proportion of the soil be brought under wet cultivation.

Spain.

It should be borne in mind that as a general rule the countries in which the land most requires artificial watering are those in which the rainfall is most limited. For instance, Spain, which is a dry country with an uncertain rainfall, is in a great measure dependent on irrigation for agricultural produce of all kinds; and although irrigation has been practised there for many hundreds of years, it is estimated that the land so treated constitutes only 5 per cent. of the total area of the country. This small proportion includes irrigation of every kind, and is the amount estimated in the Spanish Government returns; but Moncrieff, after inspection of the agriculture in all the provinces, concluded that this estimate is greatly in excess of the actual area. In

Lombardy

Lombardy circumstances favour irrigation to a degree scarcely approached elsewhere. Remarkable fertility of the soil, a supply of water far in excess of the requirements of the entire country, regularity in the slope of the land, beneficial legislation, and an industrious peasantry, combine to make Lombardy, as it is, the best irrigated country in the world. Yet even here the irrigated land is only one-sixth of the whole area, or one-fifth of the productive area. Lombardy.

In the preparation of estimates for canals in India it is generally assumed that of the land actually irrigable from a canal not more than one-third will ever be under irrigation at the same time. The most highly irrigated of the large territorial divisions of that country is the one included under the name of "the North-west Provinces and Oudh." The Upper and Lower Ganges canal system far exceeds in magnitude and importance any other irrigation work in the world, and, in addition to these, there are in that part of India similar works of the first rank. Yet here the total irrigation from canals is scarcely 5,000,000 acres, out of a total area of nearly 68,000,000 acres. It must, however, be added that in these provinces wells for irrigation are reckoned by the thousand, though no records of the areas so cultivated are available. Still it is improbable that the total irrigated area exceeds one-tenth of the area of this province. The total area included within the territory now known as the Punjab is about the same as that of the North-west Provinces and Oudh, being slightly over 68,000,000 acres. The area irrigated in 1877–78 was 1,320,000 acres; but as the Great Sirhind Canal, designed to irrigate three-quarters of a million acres, has been in operation for the past three years, the area now irrigated from canals is probably not less than two million acres annually. In this province also well irrigation is carried on very extensively; but on a much smaller scale than in the North-west Provinces and Oudh. Still it is improbable that the irrigated area amounts to more than 5 per cent. of the whole country. In the Bombay Presidency, of a total area of nearly 79½ millions of acres, only about three-quarters of a million acres are irrigable from Government works; but here also there is irrigation on an extensive scale from private works, particularly from reservoirs. Altogether the irrigated area cannot exceed 1½ or 2 per cent. of the Presidency, and even this approximate estimate is based on the assumption that the works under construction in 1882 are now in operation. Of a total area of 89½ million acres in the Madras Presidency, only 2,620,000 acres, or less than 3 per cent., was irrigated from public works in 1878, and though irrigation from private tanks and wells is very extensively practised, it would in all likelihood be safe to assume that the area irrigated from all sources does not exceed 5 per cent. of the total area of the Presidency. India. Proportion of irrigated land in India.

According to Mr. Deakin's Report on Irrigation in America, the great arid tract comprised in the south-western portion of the United States is one million square miles in extent, and of this not more than 3 or 4 per cent. can be irrigated at any price. The probable area irrigated during the year is estimated by Mr. Deakin at 2½ million acres, which is less than the two hundred and fiftieth part—or in other words two-fifths per cent.—of the area in which irrigation is required. Proportion of irrigated land in America.

Summarizing these facts, we find that in countries where irrigation has been practised for centuries, and in which the results of irrigation are considered to be of great national importance, the actual area irrigated in an average season is from 1 to 5 per cent. of the total area, while in the United States it is not nearly the one-thousandth part of the whole country, and only about the two hundred and fiftieth part of the area requiring an artificial supply of water for raising crops. Such facts as these should be borne in mind by those who are disposed to underrate the value of irrigation in New South Wales. Proportion of irrigated land in different countries.

When considered in its relation to possible famines land in Upper India is generally classed as "irrigated," "protected," or "unprotected." The "protected" areas are those which though not irrigated are so near to the irrigated districts as to place the people and the stock beyond the reach of famine. In the North West Provinces and Oudh the system of irrigation is so complete that the whole country may be classed as irrigated or protected. On the other hand, even the best portion of the Punjab, that is the part lying between the Indus and the Jumna, is irrigated Protected areas.

 and

and protected to only one-third of its extent. In New South Wales, although private enterprise has in a few cases initiated arrangements for providing against drought by irrigation, the great national importance of a comprehensive system of protected areas is not sufficiently understood or appreciated.

Irrigation experiments in New South Wales.

The few pastoralists who have irrigated land in this Colony, for the purpose of growing lucerne and other fodder plants, have obtained heavy crops, but the experience which has been gained in different districts has not been made the subject of close observation and record; and hence there is no means of accurately exhibiting in figures the crops obtained, the quantity of water applied, and other conditions under which the cultivation has been carried on. Mr. George Mair has irrigated on a small scale at Groongal for the last four or five years, throwing the water over the land by means of pumps, which draw their supply from the Murrumbidgee. Without preparing the land for irrigation he has been able to obtain crops of hay, wheat, oats, maize, and English grass, but has made no calculation as to the profitableness or otherwise of irrigation. Without irrigation he could not be sure of getting any crop, unless in a season exceptionally good, but with irrigation he is sure of a crop. This year he has a fairly good crop on 40 acres of irrigated land, while the seed sown at the same time on land which was not irrigated has not produced any crop whatever (Q. 2065).

Irrigation at Hay.

Another instance of irrigation of a different character, in the same district, is given by Mr. John Andrew, of Hay. Mr. Andrew says that nearly every householder in Hay irrigates to a small extent, and now there are beautiful gardens full of flowers where before nothing would grow. The streets have been planted with shade trees, the growth made by some of which has been very rapid, owing to the town water supply, and now some of the trees are large enough to allow 100 men to stand under the shade of a single tree (Q. 2350). Of still more importance, however, is the information supplied by a gentleman owning extensive property in the neighbourhood of Hay, and who has visited some of the irrigated districts in Spain. This witness (Qs. 9776 and 9810), speaking from his own experience, states that the successful irrigation of fruit trees, and particularly olive trees, in the Hay district has been placed beyond question, and that the yield of one of his olive trees was four times the average yield of the trees which he saw in Southern Europe.

Irrigation from the Namoi.

Turning to the north-west we find another instance of irrigation at Gunnible, 5 miles from Gunnedah, where, upon the banks of the Namoi, Mr. T. P. Wills-Allen erected in 1876 a 30-h.p. stationary engine, primarily for the purpose of sheep-washing. After it had served the purpose of sheep-washing the water was allowed to flow over the land, but the soil was not specially levelled for irrigation. Last year Mr. Wills-Allen obtained 80 tons of wheaten hay from 25 acres of land. He also irrigated a crop of lucerne, and between November, 1884, and the date of his examination before us (11 May, 1885) he had obtained five cuttings, each cutting averaging about 1 ton per acre. After the crop of wheat was removed the land was planted with maize, in January this year, and the result has been a crop estimated at fully 40 bushels to the acre, in addition to a luxuriant growth of pumpkins grown among the corn. The land was not selected for the purpose of cultivation, but was used because of its nearness to the wool-washing plant, and in point of fertility is rather below the average of the district. There was not £50 expended in preparing or clearing the land for irrigation. Without irrigation, Mr. Wills-Allen is perfectly sure that in the season through which we have just passed the land would not have returned the seed. He further says: "My success has been assured within the past six months. I have been practically irrigating for only six or eight months, and the result has been so thoroughly satisfactory that I have not the smallest doubt as to the issue." He is of opinion that each separate irrigation of the soil for agriculture is worth from 5s. to 10s. per acre. He is preparing to extend the area under irrigation, and hopes to be able to preserve 2,000 tons of hay, which he believes will place him beyond the danger of drought (*Evidence*, pp. 161,164). The proprietors of Burburgate, a pastoral holding of about 300,000 acres, about 7 miles from Gunnedah, are making preparations for the irrigation of

170 acres, upon a systematic plan, and they purpose to include an area of 2,000 acres within the scope of their operation (Q. 4337, 4339).

Importance and value of irrigation.

We attach the greatest possible importance to the results of operations such as these, as indicating the commencement of a new era of pastoral and agricultural prosperity. The fact that in the dry districts of Victoria some capitalists are preparing to irrigate to the extent of from 2,000 to 10,000 acres for pastoral purposes shows that irrigation has already passed beyond the stage of mere experiment in these Colonies; and we anticipate that the public will soon become sufficiently alive to the importance of the subject to insist upon the conservation of all the water which can be spared for the purpose. The fact that twenty-one farmers near Kerang have, by voluntary association, brought water sufficient for the irrigation of 3,000 acres for a distance of 13 miles also affords an illustration of what might be accomplished in numerous parts of the Colony by small communities of farmers settled on the banks of creeks and rivers capable of affording the requisite amount of water storage. There is ample evidence to show that water for irrigation would be well worth £1 per acre per annum for farming purposes; and that, in such districts as Gunnedah and Narrabri, those who have attempted cultivation, and now lead a nomadic sort of life as wool-carters and sheep-shearers, must, without irrigation, be starved off the land. Mr. Dewhurst and other witnesses say that all the farms along the Cockburn could be irrigated to some extent, that the value of the land would be threefold (Q. 3,828), while Mr. A. Rogers says that some land which is now worth £2 per acre would, if irrigated, be worth £30 or £40 per acre. (Q. 3934.) In the present state of information and experience we are not disposed to accept statements of the value of water as being arithmetically accurate, but as proof of its great importance they are beyond dispute.

Lucerne.

Lucerne is no doubt the most valuable fodder crop which can be grown in this Colony. Mr. H. B. Wright, writing from Winbar, near Louth, on the Darling, says:—"We have about 7 acres here irrigated, 6 under lucerne. I sowed it on the 4th of May, 1884, and have watered it six times, giving it about equal to 6 inches of rain each time, and have cut five good crops of it during the twelve months. I have also tried sorghum, oats, and prairie grass, but the lucerne is by far the most profitable." In this connection it may not be amiss to turn to the experience of America, under conditions of soil and climate similar to, although perhaps less favourable than, those which obtain on many of the rich alluvial river-flats of New South Wales. Mr. Deakin, in his report already referred to, says:—

A prevailing misconception as to irrigation is that it is employed only for small areas under high culture. The fact that great stock-growers in California, such as Messrs. Haggin and Carr, or Messrs. Miller and Lux, irrigate thousands of acres for stock purposes appears to be lost sight of. Much Mexican irrigation is carried on upon the same plan. Where the great landowners have their immense estates, one can see not hundreds but thousands of acres artificially watered; and where smaller proprietors enjoy a share of the coveted irrigable area they cultivate so closely to each others borders that the fenceless area as far as the eye can reach appears one gigantic irrigated field. * * * * On the great cattle and sheep ranches of New Mexico the proprietors, some of them Australians, are enlisting the same invaluable ally in order to protect themselves against the occasional ravages made in their flocks and herds by bad seasons. It pays, as a rule, to irrigate natural grasses, for by this means the carrying capacity of land is increased 33 per cent. The Chowchilla Canal, in Fresno County, Cal., 30 miles long, 30 feet wide at its mouth, and 2½ feet deep, is used almost solely for this purpose, and there are 20,000 acres of natural grass land irrigated in one property in Kern County.

Alfalfa.

But the mainstay of the American stock farmer, large and small, is lucerne, there styled alfalfa, which, though unsuccessful in England, is highly prized in France. In every western State this is grown to profusion. There are 35,000 acres of it grown by irrigation at Bakersfield. In Yolo county, Cal., almost the whole of the 13,000 acres watered from the Woodland Canal is under lucerne; it is to be found upon almost every colony plot in Southern California, and is the surest source of revenue in Utah and New Mexico. The area planted with this crop is increasing with marvellous rapidity. It is said to carry ten sheep or even twenty sheep to the acre, if it be cut for them. It is not a new growth in Victoria, but without irrigation its marvellous qualities have only partially developed themselves. At Dookie, with only the natural rainfall, it can be cut but once a year, yielding about three-quarters of a ton to the acre; while at Bacchus Marsh, with irrigation, or water within reach of its roots, it can be cut five or six times, yields seven or eight tons, and lasts fifteen to twenty years There are some 300 acres of it in this locality, thriving upon a natural seepage, and though rather delicate in its earlier stages, owing to the lack of irrigation, when once firmly rooted it raises the value of the land to from £50

£50 to £75 per acre. It is sown broadcast and freely, with a little wheat, oats, or barley mixed in it; it is rarely manured, though better for an occasional scarifying and top-dressing; is never fed down, but cut early and often, and found to possess splendid fattening qualities. It has succeeded just as well, but upon a much larger area, on stations south of Ballarat. It is said that it has been grown on the flats of the Hunter, N.S.W., for many years without replanting, yielding a regular and heavy crop, and that in parts of Queensland it is employed for fattening store stock with excellent success. This latter practice has been reduced to a system at Watrous, N. Mex., where not only are the cattle sustained upon it during the few times in the year when the ground is covered with snow, but store stock are fattened for market at any season by stall-feeding them with 40 or 45 lbs. of lucerne per diem, the average gain in weight per beast being set down at 3 lbs. per day. It pays well, therefore, to buy stores at from £4 to £6 apiece, and sell them again in three months at £14 or £15. Under irrigation, lucerne seems to flourish everywhere, particularly in sandy loam, and in a warm climate free from frost, and, though the yields given vary, they are all great. Three cuttings are sometimes obtained in the first year, making a total crop of 4 tons to the acre, but the general thing is, as in Utah, to obtain only one crop in this period. After this 6 tons is expected in the second year, and 8 to 12 tons in the third year. There are poor soils where it is cut only twice or three times, and other soils on which its quality does not keep pace with the quantity, but on those that most resemble our own plains the cutting is rarely less than four times, and the yield generally over 10 tons per acre in the course of the year. It can be sold, at 28s. a ton, at a profit of from £5 to £10 per acre per annum. Much higher profits than this have been made from lucerne in Victoria, but even under competition the net returns should be at least as high. The lucerne field is said to be green a week after it is cut, and knee-deep five weeks later. The crop presses well, and improves by keeping, lasting for three years, though losing a large percentage of its weight when turned into hay. One of its advantages is that it thoroughly cleanses and restores exhausted soils without manure, and thus is of special value as a rotation crop. Some authorities in America consider it difficult of eradication, while others maintain that with a thorough cutting of the roots about 3 inches below the surface it can be entirely destroyed. In some districts it is considered judicious to plough it in about every seven years. It can absorb a large amount of water, and will send its roots many feet in search of moisture. In Utah it is found best to sow as much as 30 lbs. of seed to the acre, but the average is from 8 lbs. to 16 lbs. elsewhere. At present there is an excellent market for it on every hand, as many farmers consider one acre of it better than any two acres of the best blue-grass land of the famed Ohio Valley. It is claimed for irrigated lucerne that it will carry one or even two beasts to the acre on land which, without the water, would not carry a beast to 20 acres, and that with fertilization its capacity is doubled. It stands first in the popular esteem, but is not by any means the only grass irrigated, red top, timothy, and clover giving excellent results as well, while, in the opinion of some, Arabian millet surpasses all. A natural grass known as alfileria (Spanish alfilerilla) is so very highly prized for its nutritious and drought-resisting qualities that a supply of the seed is being secured for the Experimental Farm, in order to admit of its acclimatization upon our own arid lands, on which artificial waterings cannot be looked for. It should lend an impetus to the great stock interests of Australia to be reminded that their rivals in America are making almost as much use of irrigation as the agriculturalists.

Artificial feeding.

It has been ascertained beyond all doubt that 1 lb. of hay per diem will keep a sheep in fair condition during the summer months if near water and not compelled to walk any great distance. We think we have good reason to assume that the produce of an acre of land under irrigation would yield five crops in the year, and, making allowance for shrinkage into hay, we put the produce of each cutting of lucerne at 20 cwt., or a total yield from one acre per annum of 11,200 lbs. Putting the worst case possible—that there was no natural herbage of any kind available—it would appear from this calculation that the produce of 321 acres of land under lucerne, properly irrigated, would be sufficient to supply 10,000 sheep with food, at the rate of 1 lb. per diem for a period of six months. We believe, however, that we have under-estimated the produce of the land under the conditions referred to; and that we are justified in concluding that the terrible mortality in stock which now periodically afflicts the country can be averted by a wise and prudent use of the water at our disposal. In the report of the Victorian Royal Commission on Water Supply it is stated that "at Bacchus Marsh lucerne, with irrigation, or water within reach of its roots, can be cut five or six times, yields seven or eight tons, and lasts fifteen to twenty years."

Ensilage.

The system of preserving fodder in a green state, known as ensilage, is one which promises to confer important advantages on the stockowners of the Colony; and although it has no necessary connection with the growth of crops by means of irrigation, it nevertheless would be a most valuable supplement to any such attempt to make provision for the feeding of cattle against the exigencies of an irregular climate. It sometimes happens, following a copious rainfall, more particularly after a year of flood, that the natural grasses grow so luxuriantly as to form extensive meadows which, if mown and stored in pits from which the air and moisture are excluded, would retain their nutritious properties in a greater degree than if converted into hay, and for a considerable period—there is reason to believe for many years. Almost every description of fodder plant has been successfully preserved in this manner,

manner, either whole, or, in the case of thick-stemmed plants, cut into chaff before being thrown into the silo. The longest period of which we have any information of ensilage having been preserved is four years, but, in the absence of experiment to test the point, there is no reason whatever to place that as the extreme limit at which green fodder so stored will retain its nutritive properties. All descriptions of graminiverous animals will eat ensilage as readily as hay; and the rapid extension of the system adopted by M. Goffart (who preserved 250 tons of green maize by means of pits in 1874,) throughout France and the United States of America, is proof of its value. The simplicity and economy of the means to be adopted should form a strong recommendation of it in a country where labour is often scarce and dear, and presumably the dryness of our climate furnishes a special reason why ensilage pits or silos should be availed of by agriculturists and pastoralists here. Mr. Walter Lamb, of Woodstock, Rooty Hill, who has given considerable attention to the subject, and who has enjoyed the advantage of inspecting the silo constructed by the Viscount Arthur de Chezelles of Chateau Boulleaume, Liancourt, St. Pierre, Oise, France, regards that as the largest and perhaps the most perfect of its kind.

Mr. Lamb's experiences.

Mr. Lamb, on his return to the Colony in 1883, proceeded to construct a pit, and the experience which he has gained in so dealing with the harvest of 1884 was so satisfactory that he has been encouraged to extend his operations, and he strongly recommends the adoption of ensilage pits to the farmers and pastoralists of the Colony. From the want of opportunity we have not been yet able to procure Mr. Lamb's evidence on the subject, but, in response to our inquiry, that gentleman has obligingly placed some notes at our disposal from which we quote the following:—

"When commencing to construct the Woodstock silos a mistake was made in adopting the European system of lining, experience having proved the same to be unnecessary in this dry climate. Even if a slight penetration of moisture occurs, the damage is trifling compared with the heavy expense of lining. My present plan is to select, if possible, the top of a hill, cut right through from one side to the other, so that the road into the silo at either end is slightly lower than the bottom of the silo. As the earth is excavated it is placed on the top of the banks, thus raising the sides about the same height as depth of excavation. In this way it will be found a 5 feet excavation will form a silo 10 feet deep.

"The silo being thus constructed with a fall at either end, internal drainage is provided for. It is, however, necessary to form a drain outside to remove any soakage that would otherwise find its way into the silo. A narrow surface drain 6 inches lower than the bottom of the silo will answer the purpose.

"The excavation work at Woodstock is all done with plough and scoop, worked by a team of ten bullocks, consequently the cost is reduced so low that I can find hardly any record of silos costing so little per ton of ensilage; thus, a silo to hold 100 tons can be constructed as under particularized:—

	£	s.	d.
Excavating 50 ft. × 12 ft. × 5 ft., which will make a silo 50 ft. × 12 ft. × 10 ft. = 111 yards, @ 6d. per yard	2	15	6
Double paling fence at each end	2	8	0
50 sheets of galvanized iron, to cover (say) ⅔ of a ton, at £22, or 4s. per ton	14	13	4
	£19	16	10

"If bark be used instead of iron the cost can be reduced to £10, or 2s. per ton.

"The silo being ready, the fodder is cut in the most economical manner, none more so than with the ordinary horse mower. It is thrown into the silo either whole or cut into chaff. With grasses the former plan is recommended, but when dealing with maize, sorghum, or other thick-stemmed fodder, chaffing is considered necessary. As thrown into the silo the fodder should be laid evenly, and when the accumulation has reached the thickness of 18 inches or thereabouts horses or cattle should be driven round and round, or rather up and down the silo, until the hitherto loose mass becomes almost solid, special care being taken that more pressure or treading be given to the sides close into the wall than to the other parts. Where there exists difficulty in getting animals into the silo, men must be substituted—on no account must the trampling be neglected.

"Excepting for economy's sake, there is no necessity to fill the silo rapidly; on the contrary, delay is recommended to allow the mass to settle down. Although it is customary in many cases to place first a layer of straw, then planks, afterwards earth, then again weights on the top of all, I have found the method successfully adopted by Viscount de Chezelles quite sufficient for all purposes. I simply throw on top of the fodder 2 feet of dry earth or less, where I have heavy produce or material requiring storage room in the same shed. This simple process of covering, excluding air, and pressing, all with the same material, overcomes difficulties which appear to be causing some trouble in England.

"My method of closing the ends is simply to erect a double paling or slab fence. Two strong posts are let into the ground at bottom of the silo; slabs the exact width are placed inside horizontally, not necessarily fastened, because the pressure of the fodder keeps them in their place; outside the posts slabs are nailed. Thus a cavity is formed, which is filled with earth and the air effectually excluded.

"All the covering required to keep out rain-water consists of sheets of iron or bark, simply placed on top of the earth, with stones or logs of wood to prevent their blowing off. Over my Woodstock silos, large sheds, used for hay, &c., answer this purpose, but at Merilong (Liverpool Plains) the former less expensive method will be adopted. "My

"My experience extends only to maize, sorghum, barley, and oats, but from all accounts, lucerne, clover, vetches, rye, trefoil, and all sorts of grasess are suitable.

"The best condition for ensilaging all sorts of fodder is during the flowering stage, when they possess the most nourishment. They should come away from the field as quickly as they are cut. In case of rain there need be no apprehension of damage.

"Salt, although sometimes used, is unnecessary for the purpose of preservation, nevertheless a slight sprinkling over coarse inferior grass may prove beneficial."

Vegetable production.

The conditions of climate and soil in this Colony favour the cultivation of all the vegetable productions of temperate and semi-tropical countries, if only water can be had at the right time and in sufficient quantity. Were there room for doubt on this point, we need only point to the luxuriant gardens which the Chinese have established in every part of the Colony. A little reflection upon the great range of our agricultural and horticultural industries will show how vast are the capabilities of the Colony, for the production of wine, dried fruits, tobacco, and other high-priced commodities which are in demand in all parts of the globe, as well as for maize, wheat, and other grains, which being less valuable in proportion to bulk, do not afford so large a margin for profit, owing to the cost of transportation. Our agricultural and fruit-growing industry falls far short of meeting the demand for our own consumption, as may be seen by the excess of imports over exports, and there is ample room for the employment of a very large population to meet the present food requirements of the Colony.

Excess of imports over exports.

The subjoined Statement of the Imports and Exports of Breadstuffs, Feeding Grains, Fruit, &c., for the five years ending 31st December, 1883, shows an excess of imports over exports to the value of £4,939,888 for five years, or a yearly mean of £987,977·6 :—

Future agriculture.

When the element of risk is eliminated from farming, as it may be to a great extent, by irrigation, and the husbandman is assured of the fruits of his labour with almost as much certainty as an artisan receives the wage for which he hires, we may expect that agriculture will be undertaken upon system and with success. The copious rainfall over the coast districts and the large amount of rich alluvial soil along the courses of the rivers seem to invite co-operation on the part of an agricultural population to bring about as great an improvement as that which is obviously possible.

Irrigation will probably be resorted to slowly in the first instance, but once its great advantages are made known by experience in any locality it may be expected that the demand for water will exceed the power of supply. After the construction of an irrigation work, it must be expected that some time will elapse before its capabilities are availed of to their full extent. At first the direct returns from irrigation works will probably be unremunerative, as they have been in almost every other country; but, as the management of water and its advantages become better understood, the revenue will here as elsewhere increase, and the ultimate profit of properly designed works of this description will be assured. It should however be clearly borne in mind that the direct returns from irrigation works are sometimes of much less importance than the indirect returns. The latter are due to the increase in national wealth caused by the increase of production, and their immediate consequences are apparent in enhanced value of the land, increase in railway traffic, and promotion of settlement. In India, where one of the most important taxes is that on land, this indirect return is more easily estimated than it could be here. Cultivators there readily pay double or treble the ordinary land revenue in addition to the water rate when water for irrigation is supplied. It is, however, perhaps not expedient that we should anticipate difficulties or a condition of things which has not yet arisen, further than to say that, in the apportionment of water for irrigation, consideration must be had for the fact that it will sometimes happen that the rainfall for a period of three or four years in succession may fall below the average. Provision must be made for that contingency, and care must be taken that the abundant water storage of one year shall, to the extent available for irrigation, be spread over a reasonably long period, such as experience would soon indicate.

Profits from irrigation progressive.

The perpetual snows of India and of Northern Italy constitute immense storage reservoirs which provide a liberal supply of water during the hottest part of the year. The absence of perpetual snows in New South Wales involves the necessity of conserving water on the largest practicable scale, so as in some measure to equalize the supply and provide for droughts.

Irrigation from storage reservoirs.

Southern India, Ceylon, and Spain are countries in which the circumstances in this respect correspond with those of New South Wales, and in each of which storage reservoirs have been resorted to to a large extent. An official return prepared for the Ceylon Government in 1867 showed that in that country there were then 4,900 irrigation tanks and reservoirs. In the Bombay Presidency the capacity of the reservoirs constructed by Government before the year 1882 was 10,269 millions of cubic feet, and the area irrigable from them was 143,000 acres. If the reservoirs then under construction be included the total capacity was 26,416 millions of cubic feet, and the total irrigable area 782,000 acres. This takes no account of the works constructed and maintained by the landowners. In the Madras Presidency the number of irrigation reservoirs is enormous, and the capacity of some of them is very great. One of these reservoirs, or tanks as they are there called, contains 3,000 millions of cubic feet of water, and has an area of 9½ square miles. In Mysore the number of irrigation tanks is over 20,000.

Storage reservoirs in various countries.

The irrigation done from a reservoir may seem small, but the proper and practical view of their results is that every reservoir represents a protected area. In Madras, where the principal crop irrigated is rice, which requires a very high supply of water, it is reckoned that every cubic yard of capacity in a tank represents a square yard of highly cultivated land. The quantity of water required for one crop of rice in Madras would be ample for three crops of lucerne in New South Wales. Private enterprise has already done much in providing water for stock throughout the interior of the Colony; but the storing of water on an extensive scale for equalizing the flow in our rivers, for the combined purposes of stock and irrigation, has still to be initiated. Mining enterprise has shown at Kiandra what can be done by a private company in storing water for mining purposes, and though in many places very complete provision of drinking-water for stock has been made by the owners and lessees of land (as, for instance, by a firm on the Gwydir, who, by pumping water through 30 miles of channels, are

Considerations of the importance of reservoirs.

are able to stock country otherwise waterless) the storage of water for irrigation purposes can scarcely be said to have commenced. The most economical works of this description are in those cases where large bodies of water can be conserved by dams of moderate length, and where large holding capacity is combined with great depth of water. That these conditions are not wanting in this Colony has been shown in regard to the upper portions of the Murray, Murrumbidgee, and Namoi. Favourable sites for great storage reservoirs are said to be found on the Upper Macquarie; and they probably exist on those portions of the other rivers which lie in a hilly country. The creeks and ana-branches of the rivers, while in many cases capable of extensive use for holding supplies of water for stock, are in only a few cases of sufficient depth and capacity to admit of their use for irrigation purposes. Their functions, as a rule, in connection with irrigation will be as inundation canals.

Facility for storing flood-water.

We have seen that along the course of the Darling remarkable facilities are afforded for storing flood-water. Ana-branches and creeks capable of holding large supplies abound on both sides of the river, and numerous lakes of great holding capacity are found in the neighbourhood of the river, especially from Louth to the junction with the Murray. Arrangements for filling these lakes and maintaining a supply in them can in many cases be carried out at a very moderate cost. This has in fact, in some cases, been done already by private enterprise and with most beneficial results. As a rule water stored in this way will probably be used more for stock purposes than for irrigation, but by acting on the principle that all the water not required for the former purpose should be utilized for the latter, much can be done to provide for the exigencies of bad seasons. It will seldom happen that irrigation done under such circumstances can be conducted by gravitation alone. Pumping will be required; but the lifts will as a rule be much less than in those cases where irrigation is now being done by pumping on the Murrumbidgee and other rivers, and the quantity of water raised with the same power will be greater in a corresponding degree. As irrigation with the higher lifts is remunerative, the advantage of irrigation under the circumstances described will be apparent.

Quantity of water used for irrigation.

The irrigation now being carried on in the Colony by means of pumping is, as a general rule, conducted in a very primitive manner so far as regards the distribution of the water, and without any preparation or levelling of the soil. The immediate result of this is that the quantity of water used is out of all proportion to actual requirements. In Colorado, where, as in Australia, irrigation is in its infancy, it has been found that as much water is frequently used for one watering as would be equal to a depth of 12 inches over the entire area irrigated. In the few cases in which irrigation has been done by gravitation in this Colony similar waste has occurred. As a general rule, the irrigation practised in New South Wales has consisted in pumping water from the rivers and using it in fruit or vegetable gardens, or for wheat, and other cereals, and for lucerne. It is natural to suppose that water made available under such circumstances would be used economically; still the waste of water in this Colony wherever irrigation is practised is very great, and is due entirely to disregard of first principles in the management of the distribution. In the proceedings of the Royal Society of New South Wales for 1883 there is a paper by Mr. H. G. McKinney, C.E., on the subject of irrigation in Upper India, in which a concise description is given of the system of distribution adopted there. Briefly stated, this system is to have distributing channels proceeding from the main and branch canals, and to fix the outlets for the smaller water-courses at such places in either side of these distributaries as may be deemed advisable. The small water-courses leading from the distributaries to the field have to be constructed and maintained in an approved manner by the cultivators. To ensure regularity in the times of irrigating various crops, an irrigating period is arranged for different lengths of each distributary or for the whole distributary. The irrigating period on one distributary or portion of a distributary corresponds with the non-irrigating period of another distributary or portion of a distributary, and in this way is utilized the supply flowing in the canal. The practical results obtained by care in the distribution of the water are shown by the duty in acres obtained from a flow of 1 cubic foot per second.

Economical distribution of water for irrigation.

second. The following are the results obtained in various countries, reckoning in this manner :— Results.

India—Ganges Canal	240 acres
India—Eastern Jumna Canal	250 „
France—Marseilles Canal	70 „
Spain	140 „
Italy	84 „
Colorado	50 „

Duty of water for irrigation.

The conditions as to rainfall, nature of crops irrigated, temperature, and length of irrigating season all influence the area which one cubic foot per second will irrigate. It may therefore give a more definite comparison if the quantity required for one watering is stated. While, as already mentioned, as much as 12 inches in depth has been given in Colorado at one watering, 3 inches is considered an ample depth in Spain and Egypt, and from 3 to 5 inches in India, the latter quantity being allowed as a maximum at the first watering of dry ground. These figures agree closely with the quantities of rainfall required to saturate the ground on the plains in the interior of this Colony. It is frequently reckoned that in late spring or summer a fall of less than 3 inches is insufficient to reach the roots of the grass or produce a good crop. The rainfall in the interior of this Colony is meagre and uncertain, even when compared with that of countries where irrigation is most extensively practised.

Rainfall in irrigated countries.

Among countries whose climatic conditions bear more or less resemblance to those of New South Wales the most interesting in connection with questions relating to rainfall and irrigation are Spain, Italy, Southern France, India, California, and Colorado. In Valencia the main rainfall is about 16 inches, and this appears to be about the average for the greater part of Spain. It is owing to the fact that but a small proportion of this rainfall takes place in the seven irrigating months from March to September that irrigation in that country is so necessary. Under the most favourable circumstances not more than one crop in two years is obtained from unirrigated land, while from irrigated land two or three crops in one year are reaped. In New South Wales five and six crops of lucerne could be grown in the year. In regard to Italy, although the mean rainfall in Piedmont is 37 inches, the period of fall is so unseasonable that extensive irrigation works have been carried out.

South of France.

In the south of France the rainfall varies from about 12 inches to 27 inches in the irrigated districts. As in Spain and Italy, this amount of rain does not give a correct idea of the necessity for irrigation. In the irrigated districts in France it frequently happens that during the hottest months, namely, June, July, and August, there is not one good shower of rain, and the rains in Spain are even more uncertain and more unseasonable.

India.

In India the great extent of the country, and the different causes which affect the rainfall in different parts of it, naturally produce very considerable differences in the quantity of the rainfall and in the seasons in which it takes place. In the North-west Provinces and the Punjab the rainfall for some distance from the Himalayas is so regular and so plentiful that irrigation is unnecessary; but the amount of rain rapidly diminishes in the latter according to distance from the mountains. Thus, at Kangra, on the slopes of the mountains north of the Punjab, the mean annual fall is 115 inches, while at Gurdaspur, about 30 miles from the foot of the mountains, it is only about 31 inches, and the diminution is further shown by the respective falls at Amritsar, Lahore, and Multan, which amount to 20 inches, 15 inches, and 6 inches, the respective distances from the foot of the mountains being about 70, 100, and 350 miles. In the irrigated districts of the Punjab the mean annual rainfall varies from 6 to 30 inches, and in the North-west Provinces from about 15 to 40 inches, except in the Dehra Doon Valley, where irrigation is carried on with advantage, although the average annual rainfall is 88 inches.

Colorado.

The mean annual rainfall in the irrigating districts of Colorado is about 14 inches, while in California, according to Mr. Deakin's Report, the amount varies in different parts of the State from 4 to 40 inches; the latter being obtained in the

California. mountainous parts of Northern California, and the former in the arid districts in the southern part of the State.

New South Wales. Comparing these figures with the rainfall in New South Wales, we find that in this Colony the mean annual rainfall in the basin of the Darling, excluding the hilly portion, is only 12·81 inches. In the plain country between the Lachlan and the Murrumbidgee the rainfall is 16·33 inches, and in the corresponding district between the Murrumbidgee and the Murray, 14·56 inches. These amounts of rainfall would be sufficient for the production of ordinary crops of cereals if the rain occurred at the times when it is required; unfortunately the rule is that rain comes in such small quantities as to be of little or no benefit to vegetation. Evaporation from earth under ordinary circumstances is double that from water, and it has been found in India that with a hot wind blowing as much as half an inch has been evaporated from a water surface in twenty-four hours. Bearing these points in mind, what effect could be expected from an inch of rain falling on the heated plains of the west?

Rainfall and evaporation in regard to necessity for irrigation.

Methods of irrigation practicable. Private enterprise has already proved that in New South Wales two methods of irrigation are practicable. The first is by pumping from the rivers, and the second by making cuts from the rivers to flood the land by gravitation when the rivers are high. Works of the latter class are termed inundation canals. On all the important rivers of the Colony there are great facilities for the construction of works of this description. In the alluvial plains the slope of the ground is generally from the rivers, the highest ground being the river bank. The immediate result of this feature is that creeks leading from the rivers are numerous, so that when the floods rise these creeks act as distributory channels in carrying off the flood-waters. Notable instances of this are found on the Murray at and near Tocumwal, on the Murrumbidgee near Narrandera, on the Lachlan in the case of the Willandra Billabong, and on the Darling in the case of the Cato, Tarrion, and many other creeks. In the year 1877-78 the inundation canals of the Punjab irrigated over 537,000 acres. The outlay on these canals was small in proportion to the benefits conferred by them. They are seldom provided with permanent head works, and there are no dams across the rivers which feed them. The silt deposits are cleared out every year, and the supply depends solely upon the natural rise of the floods at the beginning of summer. The floods in New South Wales are irregular in their occurrence, and it cannot be expected that crops of cereals will be irrigated by means of inundation canals as in the Punjab; but the practicability of irrigating grass-paddocks by taking advantage of flood-water has been most successfully proved by Mr. James Tyson, junr., on his stations on the Lower Lachlan, and corroborated by others who have followed his example. Mr. J. L. Gwydir, who flooded two large paddocks with water from the Lachlan, found as the result that whereas these paddocks had failed to carry 4,000 sheep in the season before the flooding, in the succeeding season they successfully carried 12,000 sheep, 120 cattle, and over 200 horses.

Permanent canals. The highest class of irrigation is that practised on a regular system from permanent canals. Unfortunately, the only rivers beyond the Dividing Range from which canals of this description can be constructed are the Murray and the Murrumbidgee. Permanent irrigation canals from some at least of the rivers flowing into the Pacific on the eastern coast are quite practicable; but as the rainfall is greater and more regular than in the interior of the Colony the want has not yet begun to be so much felt. There is no doubt, however, that even on the coast district the question of irrigation will demand attention as population increases.

Canals from the Murray and Murrumbidgee. The practicability of constructing permanent canals from both the Murray and the Murrumbidgee is beyond question. In a report of the Engineer to the Commission it is pointed out that at a short distance west of Albury the hills cease and only open plains are met with; that there is a regular fall in these plains towards the west and north-west; and that the minimum discharge in the river is ample to guarantee a permanent supply for a large irrigation canal. It was also pointed out that if the water of the Murray were made available for irrigation its

its letting value might be reckoned at £200 for every cubic foot per second of discharge. With a canal discharging 1,000 cubic feet per second as proposed, the gross income from the water would be £200,000 per annum. The crop generally irrigated would probably be fodder, and considering that it has been stated by a witness before the Lands Inquiry Commission that 100 acres of hay will sustain 5,000 sheep for three months in a bad season, the enormous benefit conferred by such a canal is at once evident. The idea of constructing a canal from the Upper Murray to divert a supply into the Billabong Creek was suggested twenty years ago by Mr. W. C. Bennett, Chief Engineer for Roads. (In this connection, vide reports by Mr. F. B. Gipps, C.E., and Mr. H. G. McKinney, M.I.C.E., in Appendix.) The question is important, and can be settled only by levels and a survey of the intervening district. The question of utilizing the supply in the Murray by Victoria has been brought to public notice in that Colony.

Comparison between the Murrumbidgee and Murray.

As a source for a permanent irrigation canal the Murrumbidgee is inferior to the Murray, on account of its smaller discharge; but on the other hand, in the case of the Murrumbidgee, there are no intercolonial difficulties involved. From the levels which have been taken by the Railway and the Harbours and Rivers Departments, it is evident that the nature of the doab or district between the Billabong Creek and the Murrumbidgee is as favourable for the construction of canals as that between the Billabong and the Murray. There is a regular fall towards the west and south-west, there are no engineering or other difficulties as far as can be judged from the preliminary examination made, the soil is of excellent quality, and there is a good supply of water.

Storing flood-water on the Murray and Murrumbidgee.

Tantangara Basin.

Diversion of Snowy River.

The supply in both the Murray and the Murrumbidgee can be made more uniform by storing up water in the mountainous country near their sources and allowing it to flow into the rivers when the supply in them is low. A preliminary examination of the Upper Murray was made at our request, and it was reported that water can be stored there on an extensive scale; but this requires confirmation by a fuller examination. The facilities for storing water in the Upper Murrumbidgee appear more favourable. The Tantangara Basin, of which a survey was made under our instructions, is capable of containing on a low estimate 15,120 million gallons, a quantity which would supply 200 cubic feet per second for 140 days continuously to increase the summer discharge of the river. This basin is well worthy of further examination. There is also a proposal, originally due to Mr. P. F. Adams, Surveyor-General, to divert a portion of the water from the Snowy River to increase the supply in the Murrumbidgee. The Snowy River rises in New South Wales, and has in this Colony a catchment area of 3,360 square miles. The water from this area, which is all mountainous, is now entirely lost to the Colony, so that it is highly desirable that it should if practicable be utilized in the manner proposed. A survey of the country through which a supply would have to be carried from the Snowy River to the Upper Murrumbidgee was ordered by us, but it has not yet been completed.

Inundation canals.

Inundation canals are practicable on almost every important river in the interior of this Colony. As in the case of the inundation canals from the Punjab Rivers, the flood-water can in many places be drawn from the rivers without the expense of damming them. In a number of instances the natural channels from the rivers can be utilized as inundation canals, and under such circumstances the cost will be trifling compared with the advantages gained. In connection with the damming of rivers for the purpose of diverting the flood-waters, the Darling probably affords better facilities than any of the other rivers. The rocky bars found in it at frequent intervals would afford good foundations for dams, and the creeks and ana-branches would in some cases serve to a greater or less degree as canals. We are of opinion that the rocky bar forming the rapids at Brewarrina may be regarded as a proof that dams can be erected across the Barwon without silting taking place.

(9.) NAVIGATION.

Snagging.

The sum of £170,000 has been expended in improving the Murray, Murrumbidgee, and the Darling. The cost of "snagging" the Darling is about £45 per mile, while in the more thickly timbered country it amounts to from £45 to £60; on the former river about 12 miles per month are cleared; on the latter, about 5 miles. Vessels can now go up the rivers with from 3 to 4 feet less water than formerly, and can also travel at night. (Q. 1144.) Mr. Moriarty points out that the first step to improve the rivers is to remove the dead timber which has been accumulating for ages, and this cannot be done if the height of the river was raised. Operations on the Murray have ceased, and snagging is now confined to the Murrumbidgee and Darling.

Use of rivers.

The attention which the Engineer-in-Chief for Harbours and Rivers has been able to devote to the rivers of the Colony appears to have been wholly confined to the removal of obstructions to navigation; but now that railways have been extended at great cost to the Murray, Murrumbidgee and the Darling, and that subsidiary lines have been projected having their termini at points other than Bourke on the Darling, it may be well to consider whether the rivers should not, as the Commissioner for Roads puts it (Q. 1241), "be used in producing something to transport rather than in transporting it."

Locks.

To open the Murrumbidgee between Hay and Wagga, and the Darling between Wentworth and Walgett, for navigation by vessels establishing communication with Melbourne by way of Echuca, and with Adelaide by way of Blanche Town, it will be necessary to construct locks as well as weirs, and the cost of establishing through communication would be increased by the additional works required. If, however, the rivers are to be primarily considered as sources for water supply and navigation is to be regarded as an adjunct to the railways, the locking of the rivers would not be needed to the same extent, if needed at all, for a comparatively few weirs would create many miles of water-way which station-holders along the banks of the rivers could take advantage of for the carriage of their wool and return supplies to the nearest railway terminus. For this purpose vessels having a draught of from 2 to 3 feet would be built, as was done in the attempt which was made to keep open navigation to Walgett (Q. 5285.)

Traffic on the Darling.

The Census returns of population appear to include the whole of the population on the Darling in the registry districts of Bourke and Wentworth; and from these it will be seen that the population of the former district (into the heart of which the railway has already been taken) is one person to six square miles, while that of the latter (whose boundaries extend so far south as to include Euston on the Murray) is only one person to ten square miles. From the Report of the Collector of Customs for 1884 we observe that the Darling at Bourke has not been navigable for any but short periods since 1879. In 1880 it was "navigable for a short period"; in 1881, for a "very short time"; in 1882 the river "rose twice during the season"; in 1882 it was "unnavigable nearly the whole season"; and in 1884 it was "navigable twice, but of very short duration." The total value of the imports at Wentworth, upon which all the Darling trade is concentrated, during the five years ending December, 1884, was £1,872,439, and of the exports, £4,534,068, the annual mean value being £374,487 and £906,813 respectively.

Traffic on the Murrumbidgee.

This may be taken as representing the aggregate value of the trade of all the ports on the Darling with South Australia, the Victorian share of it being inconsiderable. Victoria, on the other hand, appears to enjoy almost a monopoly of the the river-borne traffic of the Murrumbidgee, which, for Customs purposes, centres at Hay. Mr. J. C. Bowden states (Q. 2959) that the depth of water in the shallowest places at ordinary summer level is from 1 foot to 1 foot 6 inches, and he has seen it year after year as low as that in numerous places. The river remains at summer level from January till the end of May at Balranald, and probably two months longer at Hay, so that navigation to Balranald is practicable for five or six months, and to Hay for four or five months. The aggregate value of the imports at Hay for the same period of five years was £71,267, and of the exports, £2,462,506, the mean annual value being £14,253 and £492,501. The railway was opened to Hay on the

the 4th July, 1882, and it will be seen from the following figures that there has been a steady and marked decline in the river-borne traffic to and from Hay since then:—

Year.	Imports.	Exports.
1882	£32,762	£489,081
1883	13,395	293,689
1884	6,591	160,386

Railway to Bourke.

The effect of the railway to Bourke upon the river-borne traffic of the Darling will, in all probability, be much more rapid and decisive than that upon the steamer traffic with Hay. The natural result of the present condition of things would be to extinguish the trade with South Australia, and transfer it to Sydney by way of Bourke. It will be of as much consequence to pastoralists to get their wool rapidly into the market, as it will be to merchants to reduce the amount of their unproductive capital. Vessels of a smaller draught than those which are anchored in the river, sometimes for nearly a twelvemonth, will probably be brought into requisition, to distribute the river trade to and from Bourke, or any other railway terminus on the river which may hereafter be created; and, in this way, there is reason to expect that communication, hitherto by an annual or semi-annual voyage to Adelaide, will be cheap, quick, and regular by rail with Sydney.

River traffic intermittent.

Navigation, as it has hitherto been practicable between the points named, has been very risky and intermittent. At intervals of years a steamer from Adelaide will arrive at Walgett, while almost the same may be said of Brewarrina. Under ordinary conditions it has been no uncommon thing for pastoralists to have had two or three seasons' clips of wool upon their hands, awaiting the arrival of the river barges to carry it to Melbourne or Adelaide. With the railway actually opened to Bourke, and the probability of other lines being constructed to points on the Darling to the south of it, it seems certain that railway traffic will wholly supersede the intercolonial river-borne traffic of the Darling, as the railway to Hay has to a great extent superseded that on the Murrumbidgee, where navigation is practicable for longer and more regular periods.

Railways preferable to water carriage.

In regarding the rivers as sources of water supply for stock and agricultural purposes we discover in them the means of bringing fertility to large tracts of rich but now unproductive soil along their course, and of vitalizing all the industrial capabilities of the districts through which they flow. Viewing them simply as highways for traffic, we anticipate that after a vast expenditure of public money the country adjacent to them will remain in pretty much the same condition as it is at present, with even its pastoral capabilities only partially developed, and that the sole result of that expenditure will be the transportation of what little wool a mere handful of people are able to produce, to colonies which contribute nothing towards the cost of the carrying facilities by which they are benefited. From the consideration which we have been able to give to the question, we are of opinion that railways will give all the facilities for carriage which are requisite, and that public expenditure upon the rivers of the southern and western portions of the Colony should be made with a view to increasing the means of conserving and distributing water over the dry districts through which they flow. The only exceptions which we should make to this rule would be that, if in any case it should be found that navigation can be adopted at a moderate expense as a means of feeding our railways without interfering with the interests of water supply, the works carried out on the rivers should be designed to suit both purposes.

(10.) PRINCIPAL RIVER BASINS AND OTHER DRAINAGE AREAS.

GENERAL REMARKS AND EXPLANATIONS.

In defining the outlines of the different river basins of the Colony, it has been found necessary to depart in several important instances from the ideas generally accepted as to what constitutes their drainage areas. In the first place, the fact has to be recognized that on the lower portions of the western rivers the bank on one

one side (sometimes on both) frequently constitutes the boundary of the river basin. Another point which has not hitherto been sufficiently recognized is that a large portion of the Colony is without a defined river system. Throughout that part of the Colony lying to the north of the Murrumbidgee and Lower Murray and to the west of the 148th parallel of longitude, not only is the proportion of the rainfall which reaches the river infinitesimally small, but there are important catchment areas entirely independent of the recognized river basins. The general description applicable to this part of the Colony is that it consists chiefly of immense plains more or less timbered, and varied with occasional sand ridges, but partly also of an irregular series of low ranges of hills, the course of what was probably important mountain ranges. In both cases the tendency of the natural features of the country is to prevent drainage into creeks or rivers; and when to this is added the fact that the rainfall generally varies from $8\frac{1}{2}$ to 15 inches, and that the temperature in the shade during seven months in the year probably averages a very high range, it is not surprising to find that there are immense areas which contribute absolutely nothing to the discharge of the rivers. Under these circumstances, the boundaries of drainage areas in the western portion of the Colony can only be fixed approximately. The boundaries of these drainage areas, though necessarily approximate, are sufficiently accurate for all practical purposes, for the instances in which most difficulty is experienced in fixing them are those where the rainfall and the surface drainage are smallest.

Small proportion of rainfall reaching the rivers.

Indefiniteness of western drainage areas.

Blue Mountains.

Closely connected with the question of river basins is the physical structure of the Colony. The Blue Mountains or Australian Alps, extending in an irregular line approximately parallel to the coast and with their highest ridge at a mean distance of about 75 miles from it, constitute a continuous divide between the coast districts and the rest of the Colony, the area of the latter division being about five times that of the former. The strip of low-lying land between the Dividing Range and the coast varies in quality according to the nature of the formations from which the soil has been derived, and the manner in which it has been formed and deposited, —the poor sandstone soil near Sydney reaching one extreme, while the rich basaltic soil near Kiama and the deep alluvial deposits on the banks of the Clarence, Manning, and Hunter Rivers representing the other.

Varieties of soil in the coast districts.

The western plains.

Their origin and formation.

On the western side of the Dividing Range there are extensive tracts of high table-land, with a gradual descent to the great plains, the latter constituting about two-thirds of the area of the Colony. With respect to the origin and formation of the western plains, the theory of Mr. Tenison-Woods and others qualified to express an opinion is that the red and yellow clays of the western districts were frequently formed by the weathering of the surface of granite, and in particular by the decomposition of the felspar and mica contained in it, while the quartz crystals, set free in the same process, were the origin of the sand ridges so frequently met with. The numerous isolated hills and low ridges of granite are described by him as the outcrops of the basis of the country. It is agreed by that gentleman and the Government Geologist that a mountain range extended across New South Wales from the vicinity of Orange in the direction of Cobar and Wilcannia, thence to South Australia, and that to the north and north-west of this range there existed a sea in which the water-bearing strata of the cretaceous period were deposited. Mr. Tenison-Woods is of opinion that at that period the country south of that range was a desert, the character of which was, in a subsequent geological epoch, altered by the outpouring of volcanic rock.

Old mountain range.

Change in the drainage system.

Beyond doubt the drainage system of the country has materially altered; but though in wells old river-beds have in some cases been met with, very little information has been obtained regarding the direction of underground currents or of percolation. The stream of all rivers flowing through the alluvial formation of our western plains represents only a portion of the discharge of the river valley, the balance, after allowing for evaporation, filtering through the soil beneath and on both sides of the rivers. The wells sunk in these alluvials tracts are affected more or less quickly by the rise and fall of the rivers according to the greater or less porosity of the subsoil; but in other cases, owing to the intervention of impervious strata, the

the wells remain unaffected by changes in the water level in the river. A number of witnesses, and particularly some of those who were examined at Narrandera and Jerilderie, stated that throughout a large extent of the district bordering on the Murrumbidgee, and lying between that river and the Billabong Creek, there is a remarkable uniformity in the nature of the wells. A small supply of water, generally brackish, is struck at depths of from 70 to 80 feet, and at depths varying from 120 to 200 feet, an apparently inexhaustible supply of good fresh water is met with. This fresh water rises rapidly in the wells till its surface is at the level at which the brackish water is met with, and it remains at that level whatever may be the height of the water in the river. The conclusion is that the source of this underground supply is in the higher parts of the Murrumbidgee basin, and that the intervention of impervious deposits near the river maintains for it the character of an independent flow.

True mean of rainfall in the Colony.

In his last annual report on the rainfall, the Government Astronomer, after giving the mean rainfall of the Colony as obtained from all the stations, adds the remark—"It must, however, be clearly understood that the average spoken of is simply the arithmetical mean of the rainfall at all stations, for at present it is impossible to obtain the exact average." As there are now 496 observing stations distributed over the Colony, and every large drainage area is well represented, a fair approximation to the mean rainfall in every basin can be obtained by using the results from only such stations as have observations for at least three years. We have in this manner calculated the mean rainfall for every principal drainage area. *The averages so obtained have placed us in a position to deduce the mean rainfall of the entire Colony, by using each average in proportion to the area it represents. The mean rainfall as obtained in this manner is* 18·66 *inches.* More extended observations and an increased number of stations will probably give a slightly different result, but we do not anticipate that the difference will be of any great importance.

Field for further investigation.

Before proceeding to a detailed account of the principal river basins it may be remarked that, while valuable service has been done for this Colony by geologists in connection with the question of underground supplies of water, there is still a very rich field for investigation and much new ground to be examined.

Catchment areas which are not drainage systems.

In dealing with these extensive tracts of country which do not belong, except in times of high flood, to any of the recognized river basins, it has been found convenient to consider them as catchment areas. It must however be understood that, owing to the small rainfall, the absence of well-defined natural features, the absorbent nature of the soil, and the high temperature, these areas are not possessed of any well-defined drainage system. Each of them, in fact, comprises a number of catchment areas. The tracts of country which come under this description are seven in number, namely:—

1. The basins of the Mirool, the Bland, and other creeks;
2. The Manara County District, lying between the Lachlan and the Darling;
3. The Yantara County and Bulloo District, in the north-west and north of the Colony;
4. The Tara County District, in the west and south-west of the Colony;
5. The Paroo;
6. The Big Warrambool;
7. The Narran.

Flow of rivers intermittent.

The basins of the Paroo, the Big Warrambool, and the Narran are of an intermediate type between the catchment areas mentioned and the permanent rivers. It is, however, an unfortunate circumstance that the flow of every river in the interior of the Colony, with the exception of the Murray and the Murrumbidgee, is intermittent. The great importance, therefore, of conserving water permanently is at once apparent, and an important function for future canals in this Colony is clearly

clearly indicated. This function is the filling of dams and storage reservoirs. In all the western basins the supply of water available is so small in proportion to the area requiring it that a thoroughly economical system of distribution is of the first importance.

THE COAST RIVER BASINS.

Area.

The most important river basins of the coast district are those of the Hawkesbury, Hunter, and Clarence, each of which has an area of more than 8,000 square miles. After these come the Macleay, the Shoalhaven, the Richmond, and others, the first of which has a catchment area of over 4,000 square miles, while those of the second and third are respectively about 2,800 square miles and 2,650 square miles.

Natural advantages of the coast district.

The most plentiful and most regular rainfall in the Colony, the most valuable deposits of coal, and some of the most fertile tracts of alluvial soil, combine with its geographical position to make the coast district more capable of supporting a dense population than any other part of New South Wales. Comparing the coast district with Northern Italy, it is found that while the mean temperature of the latter is 55° that of the former is about 63°; and while the mean annual rainfall in Northern Italy is about 37 inches, that of our coast district is only 35½ inches.

Irrigation more needed than in Italy.

It therefore appears that, judging from both temperature and rainfall, the necessity for irrigation in our coast districts is greater than in the part of Italy where irrigation is practised on a very extensive scale. There can be no doubt that the adoption of systems of irrigation in the basins of our coast rivers is only a question of time; hence, wherever possible sites for storage reservoirs have not yet been alienated they should be permanently reserved, and in all works undertaken in connection with the eastern rivers future irrigation works should be kept in view, and nothing should be done which would interfere with their success. Nor is the time distant when the question of irrigation in the coast districts will come prominently forward. This part of the Colony was the first settled, and is divided into the smallest holdings, the latter being an important circumstance in favour of the successful adoption of a system of irrigation; also, as already shown, a comparison of the temperature and rainfall with those of other countries points to the conclusion that irrigation can be resorted to with advantage. This is made clearer by a closer consideration of the following points:—

Variations in the climate.

Along a coast-line extending over 9 degrees of latitude there are naturally important differences in the climate. While on the whole the temperature of the coast district may be compared with that of Italy, the range of temperature throughout the year in the latter country is considerably greater.

Foreign comparisons.

As a mean of the whole of this part of New South Wales, it may be stated that we have the winter of Southern Italy combined with the summer of Northern France. While the variation of mean temperature in summer from the extreme north to the extreme south of the coast-line is about 8°—from 76° to 68°—the difference of rainfall is much more important. At Antony, situated at the mouth of the Tweed, the mean annual rainfall is about 64 inches, while that at some places in the basins of the Hunter and Hawkesbury is only about 19 inches.

Mean rainfall: Clarence, Hunter, and Hawkesbury Rivers.

The following table, which shows the mean rainfall in the basins of the Clarence, Hunter, and Hawkesbury during the hottest months of the year, furnishes useful data for estimating the agricultural capabilities of these districts:—

Basin.	October.		November.		December.		January.		February.		March.		Remarks.
	Rainfall	Rainy days.	Rainfall	Rainy days.	Rainfall	Rainy days.	Rainfall	Rainy days.	Rainfall	Rainy days.	Rainfall	Rainy days.	
Clarence	3·25	8	2·64	7	1·72	6	4·89	7	4·63	11	3·36	10	These figures are averages of five years.
Hunter	2·78	7½	2·39	7	1·22	4	1·68	4½	2·65	6	1·25	4½	
Hawkesbury	4·01	12	2·20	10	1·21	7	2·30	9½	3·30	10	2·15	10	

The

The conditions above shown are more favourable than are obtained in the irrigated districts of Spain and Southern France, but less favourable than those of Northern Italy.

Fertilizing nature of silt.

The fertilizing character of the silt carried down by the Hunter and the consequent beneficial effects of floods are well known. Irrigation from the Hunter would therefore have this important point in its favour, that to a certain extent it would supply manure as well as moisture to the soil. The valley of the Hunter is already widely known for its great yield of lucerne, which yield could be greatly increased by irrigation.

THE SNOWY RIVER BASIN.

Area.

The basin of the Snowy River, that is so much of it as falls within the Colony of New South Wales, may for all practical purposes be considered as including the whole area of the counties of Wallace and Wellesley, on the border of Victoria. The area of this basin is 3,360 square miles, and it has on its boundaries the highest mountains in Australia. On the eastern side of the basin is the Snowy Range, the summit of which, near Mount Kosciusko, widens out so as to form a table-land which extends for a length of over 20 miles, and which maintains an average height of 5,000 feet. Around this strip of table-land, which has an area of about 160 square miles, several peaks attain an elevation of more than 7,000 feet, the most important among them being Mount Kosciusko and Mount Townsend, whose heights are 7,171 and 7,256 feet respectively.

Height of peaks.

Rainfall at Kiandra.

The number of observing stations within the Snowy River basin is insufficient for forming an estimate of the mean annual rainfall throughout its area. The annual fall at Kiandra is estimated at 61 inches, while at two stations in the valley it is only 23½ and 18½ inches respectively. It seems highly probable that if there were an observing station on the eastern slope of the range, near Kosciusko, where the vapour-laden clouds from the Pacific strike on the hills, a much higher rate of fall would be registered than even that at Kiandra. The remarkable difference between the rainfall at Kiandra and that in the valleys below is in all probability due to the physical features of the basin. The centre of the basin is a deep valley, which is sheltered from the rain-clouds by the ranges on each side.

Snow-fall.

An important feature of this basin, and one which greatly enhances its value as a catchment area, is the fact that snow not only falls in large quantities in winter, but also at all times of the year at an elevation of over 5,500 feet. The snow melts in all exposed places as the summer advances, but occasionally, on the south-eastern slopes of the mountains, where it has been drifted in large quantity by the wind, it lasts throughout the year.

Effect of the snow-fall.

Discharge of river into Victoria.

The effect of the accumulation of snow in winter is to reduce the discharge of the river at that season and increase it in summer, thereby maintaining a more uniform flow throughout the year. The mean rainfall at the three observing stations, Kiandra, Bukelong, and Jindabyne West, is 34·41 inches; but bearing in mind that this is probably much below the actual average, and that from such a mountainous country a very high proportion of the rainfall runs off, there is little doubt that it would be safe to assume that 14 inches per annum over the entire catchment area flow off in the river. Under this hypothesis, the mean discharge throughout the year which flows across the frontier into Victoria is 3,700 cubic feet per second.

Comparison of temperature.

The mean temperature at Kiandra is only 45° Fahr., which is slightly lower than that of Dunfermline, in Scotland, and 2½° lower than that of Edinburgh; so that with a high rate of rainfall and a cloudy sky the rate of evaporation is necessarily low, and is probably balanced, or nearly so, by the heavy dews which prevail. Under these conditions, drainage, and not water conservation, is required for the development of the capabilities of the land. The diversion of a supply from the Snowy River to the Murrumbidgee would therefore be an

an actual advantage to the Snowy River basin, as well as an enormous benefit to the country depending on the Murrumbidgee. Having as its source the streams which flow down the eastern slopes of Mount Kosciusko, the Snowy River, though a rapid torrent in the upper part of its course, does not fall to an elevation of 3,000 feet above sea-level till it reaches the junction with the Crackenback Creek.

Diversion of Snowy River water into the Murrumbidgee.

The practicability of diverting a supply of water from this part of the Snowy River into the basin of the Murrumbidgee was first suggested by the Surveyor-General, Mr. Adams; and though positive proof has not yet been obtained, the balance of evidence available goes to show that such a work is at all events possible. While the total area of this basin from which the water flows to waste through Victoria to the ocean is considerably over 3,000 square miles, the portion from which Mr. Adams proposed to divert the surface drainage into the Murrumbidgee basin was only 258 square miles. These figures show at a glance the insufficient grounds for the objections raised in Victoria to the proposed diversion of the waters of the Snowy River. The quantity proposed to be diverted was a mere fraction of that flowing to waste from its gathering ground in this Colony, through comparatively worthless land in Victoria, where it cannot possibly be utilized. To comprehend this question properly, the case of the Snowy River should be compared with that of the Goulburn, Campaspe, and other tributaries of the Murray, to the waters of which New South Wales has as strong a claim as Victoria has to the waters of the upper portions of the Snowy River.

Necessity for intercolonial agreement.

The necessity for an intercolonial agreement is strongly shown by the proposal for the appropriation of the water in the Victorian tributaries of the Murray, without reference to the undoubted rights of New South Wales and South Australia.

Geological features.

The main geological features of the Snowy River basin are the presence of immense masses of granite forming the cores and the summits of the hills, while the slopes consist chiefly of stratified rock of the earliest geological period. The soil, as in all granite districts, is less productive than in places where trap and basalt are abundant, and, owing to the severity of the climate and the mountainous character of the whole basin, the land as a whole is unsuited for agriculture. On the other hand, abundant rains, a moist atmosphere, and the presence of perennial streams, combine to make this part of the country valuable for grazing purposes. It is, therefore, not surprising that considerably over one-third of the land in this basin has been alienated.

Metals.

Gold, copper, tin, and iron have all been found within the drainage area of the Snowy River. The situation of the principal gold-field near the head and along the course of the Eucumbene affords facilities for hydraulic sluicing such as are probably not to be found in any other part of the Colony. The mountain valleys afford favourable sites for storage reservoirs at a great elevation, while the heavy rainfall provides an exceptionally large supply of water to replenish them.

BASIN OF THE BILLABONG CREEK AND EDWARD RIVER.

Although the Billabong Creek and its continuation, the Edward River, carry a much smaller and more uncertain supply of water than either the Murray or the Murrumbidgee, still the lower portions of their channels exist under more stable conditions than either of the last-mentioned rivers.

The Billabong an independent drainage line.

The course of the Lower Billabong is in the bottom of a basin, along the margins of which flow the Murray and the Murrumbidgee; hence these rivers constitute to a great extent the boundaries of the catchment area of the Billabong. It must, however, be understood that the Billabong is an independent main drainage line only in the upper portion of its course, and that after emerging on the plain country it becomes a subsidiary channel for the discharge of flood-water from the Murrumbidgee and also (according to a witness, Q. 2027) from the Murray.

Tuppal Creek. Yanko Creek.

The Tuppal Creek, proceeding from the latter river, and the Yanko Creek from the former, are examples of the channels which assist in relieving excessive floods in the Murray and Murrumbidgee, by discharging part of the flood-water into the Edward River and the Billabong Creek. The latter, as mentioned above, is a true main drainage line throughout the upper part of its course, but the Edward River, into which it flows, is merely one of a

Edward River.

series

series of ana-branches of the Murray, which depend almost entirely on the flood-water of that river for their supply, and which, after uniting, flow again into it at about 15 miles from its junction with the Murrumbidgee.

Fall towards the Billabong.

The direction of flow of the creeks shows that there is a fall in the country towards the Billabong from both the Murray and the Murrumbidgee. Of the total area of this basin, only about 1,300 square miles can be considered as hilly or mountainous, while fully 15,200 square miles consist of immense plains, generally of great fertility, but destitute of any permanent natural supply of water. In the hilly portion of the basin the mean annual rainfall is nearly 25 inches, while in the plains it is only about 14½ inches. In ordinary seasons surface water flows only from the hilly portion of the basin, and the stream thus produced is diminished by evaporation, percolation, and absorption, till it finally disappears altogether. This generally takes place either before the stream leaves the hills or at no great distance from them. The Billabong flows into the Edward only during or immediately after periods of abnormal rainfall.

Area of basin.

Mr. W. C. Bennett's opinion.

Possibility of irrigation.

Levels.

Fall to Jerilderie.

Fall to Colombo Creek.

More than twenty years ago, in his evidence before a Railway Commission at Deniliquin, Mr. W. C. Bennett, Commissioner for Roads and Bridges, gave the opinion that irrigation could be carried out successfully here on an extensive scale. Since then levels and surveys of the Murray and Murrumbidgee and of the Yanko Creek have been made, under the direction of the Engineer-in-Chief for Harbours and Rivers, several lines of levels have been taken by the Railway Department, and levels and surveys have also been carried out by the Deniliquin and Moama Railway Company. These levels have been collected and summarized by direction of the Commission, and the results are highly encouraging, confirming Mr. Bennett's opinion regarding the practicability of canals. In the Engineer's report on the Murray River it is pointed out that, from the place where the Jindera Hills meet that river, about 10 miles below Albury, to Jerilderie, there is a total fall, in that distance, of 119 feet, being equal to a fall of about 18 inches per mile, while from the same point on the Murray to Deniliquin the fall is at the rate of about 21 inches per mile. Again, he reports that the fall from the Murrumbidgee at the gap in the Malebo Range, about 6 miles below Wagga to the point where the Colombo Creek leaves the Yanko—a distance of 56 miles—averages about 2 feet per mile.

Creeks and ana-branches.

In addition to the facilities afforded for the construction of canals by the regularity and favourable slope of the ground, the creeks and ana-branches may in some cases be considered as ready-made inundation canals, which only require to be surveyed and levelled and brought to a fairly uniform slope. The most important instance of this is the Yanko Creek, a project for the improvement of which was inquired into by the Commission.

Lake Urana.

Capacity of lake.

Its flow into the Billabong.

Lake Urana, situated within the drainage area of the Billabong Creek, has already been referred to as an extensive shallow depression. The extreme area of the lake, as shown in the county map prepared by the Survey Department, is about 21¼ square miles. The greatest depth of the lake is stated to be 10 feet (Q. 2035). It is fair to assume from these data that a mean depth of 6 feet might be stored over an area of about 20 square miles. This gives a storage capacity of over 3,345 millions of cubic feet, or nearly 20,909 millions of gallons. If a sufficient supply of water could be added from time to time to balance the loss by evaporation, percolation, and absorption, the quantity of water mentioned above would afford a continuous supply of 53 cubic feet per second for a period of two years. The state of affairs here assumed was in reality closely approached in 1870 and the succeeding years. We have been informed by Mr. S. M'Caughey that the flood of 1870 filled Lake Urana to such an extent that a stream flowed from it to the Billabong for several years afterwards. It must, however, be explained that Lake Urana is fed by the Urana and Coonong Creeks, the former of which draws its supply chiefly from hilly country. So that, on the occasion here mentioned, the water which flowed to the Billabong Creek consisted partly of flood-water which had been stored in the lake, and partly of supplies flowing into the lake from the Urana and Coonong Creeks.

Throughout

Excellence of land for grazing.

Wheat.

Canal from Hay to Deniliquin.

National system.

Throughout the plain country in this basin the land ranks among the best in the Colony for grazing purposes, whether for fattening stock or for the production of a high class of wool. In addition to this, extensive areas are known to be well suited for the cultivation of wheat and other cereals. It is therefore not surprising that in several of the included counties over 75 per cent. of the total area is alienated. The offer made by the owners of land in the vicinity of Yanko Creek to bear half the cost of the work required to improve that creek showed that they were fully alive to the importance of an increased water supply. A similar question has been raised in connection with the Lower Billabong, and a proposal has been made for the construction of a canal from Hay to Deniliquin. Private enterprise has already done much for water conservation and supply in this part of the Colony, by the construction of dams, tanks, and wells; but the field for work on a large scale is so promising, and the results likely to be obtained so important, that we think the survey, design, and construction of the works should be done under a well organized national system.

BASIN OF THE MURRAY.

Source of the Murray.

The Murray has its source in the perennial streams of the Snowy Range, and as in the case of the Snowy River, it flows within this Colony throughout only a portion of its length. From its source to the boundary of South Australia the Murray flows within New South Wales territory, but for purposes of navigation the Colony of Victoria has an equal right to the Murray waters.

Fall of country.

The basin of the Murray is hilly from the source of the river to about Howlong, beyond which place its course is through plain country. Although large alluvial deposits are met with on one or both sides of the river, even before it emerges from the hills, the great alluvial plains, properly so-called, do not commence till Mulwala is passed. Beyond Mulwala the general fall in the district along the New South Wales side of the river is north-westerly, that is, from the Murray towards the Billabong Creek and the Edward River. Thoughout this portion of its course the Murray overflows its banks in high flood, and the water takes the direction mentioned; in other words, the catchment area is here limited to the narrow tract of low-lying land between the bank proper and the river.

Area.

Rainfall.

Mean flow.

Dams on Upper Murray.

Discharge at Albury.

The mountainous or hilly portion of the Murray basin includes an area of about 2,400 square miles. The only meteorological observing station in it is Albury, which has a mean rainfall of 26·17 inches. The country on the Upper Murray is mountainous throughout, the river flows in a deep and generally narrow valley, and the conditions altogether are favourable to the discharge of a high proportion of the rainfall. Under these circumstances, it seems safe to assume that the quantity of surface water which flows off in the Murray from the hilly portion of its basin is equal to a depth of 15 inches over that area. This would give a mean flow for the year of 2,652 cubic feet per second proceeding from the elevated catchment area within this Colony. The discharge of the river is highest in spring, when the water is most required, and Mr. Gipps, who was deputed to report on the possible storage of flood-water on the Upper Murray, believes that much may be done towards this object by the construction of dams. The Engineer to the Commission, in his report on the river Murray, after mentioning that at a time when that river was most unusually low he had found the discharge at Albury to be 1,200 cubic feet per second, suggested the practicability of constructing a canal with a discharge of 1,000 cubic feet per second from the river at the foot of the Jindera Hills, which would be readily obtainable if the storage capacity above referred to were availed of. The importance of such a work can scarcely be over-rated, and the evidences of its practicability are more than sufficient to warrant the cost of the surveys required.

Utilization of flood-waters of the Murray.

As already mentioned in the description of the basin of the Billabong Creek and Edward River, the facilities for utilizing the flood-waters of the Murray throughout the lower portion of that basin are unusually great. It might be supposed that the utilization of those flood-waters is a point which, owing to their abundance, can give rise to no misunderstanding; but this is a mistake. Before the junction of the Murray with the Murrumbidgee is reached, the extent of land in this Colony which can be benefited by the flood-waters of the Murray through inundation canals is little if at all less than 3,500 square miles. On this area it would be quite possible to utilize the whole available supply in an ordinary flood if the means of distribution were provided. The action of the neighbouring Colony of Victoria, in having already arranged for the appropriation of a portion of the flood-water in the Murray, is one more reason for hastening the conclusion of an equitable agreement between the Colonies.

Area of land which might be benefited.

BASIN OF THE MURRUMBIDGEE.

Physical features.

Next to the Murray, the Murrumbidgee is the most important of the western rivers in the quantity and regularity of its discharge. At and near its source its basin adjoins that of the Eucumbene, one of the most important tributaries of the Snowy River. Although in the catchment area of the Murrumbidgee, except near the head of the Tumut River, there are no mountains whose heights approach the peaks of the Snowy Range, still the extent of mountainous country is great, snow is frequent in winter, and the rainfall is in many places exceptionally high.

Area.

The catchment area of the Murrumbidgee, computed from the most recent maps, so far as the junction of that river with the Lachlan, comprises 11,800 square miles of hilly country and 3,600 square miles of plain.

Rainfall.

The mean annual rainfall taken from fifteen stations throughout the former area is 21½ inches, while that in the latter is 14½ inches taken from eight stations.

Strata.

In the higher parts of the basin the strata met with belong to the oldest geological periods, and are frequently broken and intersected by intrusive masses of granite. The soil varies much in quality, but it is as a rule excellent for grazing purposes, while on the high table-land and in the valleys it is highly suitable for agriculture.

Climate.

With a height above the sea varying from 1,000 to 6,000 feet, the climate of the basin of the Upper Murrumbidgee leaves little to be desired. The following comparison of the meteorological features at two places in it—Cooma and Queanbeyan—with those of Dublin, London, Paris, and New York, indicates the temperate character of the climate of this part of New South Wales:—

Foreign comparisons.

Place.	Latitude.	Mean temperature	Mean summer temperature	Mean winter temperature.	Highest reading of thermometer.	Lowest reading of thermometer.	Mean rainfall.	Remarks.
	° ′	°	°	°	°	°		
Cooma.....	36 12 (S)	52·2	64·6	41·6	107·5	15·0	18·4	
Dublin	53 21 (N)	50·0	61·1	40·7	.....	25·0	30·0	
London	51 32 (N)	50·8	62·9	39·5	95·0	5·0	24·0	
Paris	48 50 (N)	51·3	64·7	37·8	104·0	—10·3*	22·9	* 10° below zero.
New York	41 6 (N)	53·2	70·9	30·1	97·0	2·0	46·5	
Queanbeyan	35 20 (S)	53·6	67·2	41·9	109·0	20·0	23·7	

Mildness of the climate.

These figures are from the valuable returns of Mr. H. C. Russell, Government Astronomer, and, as will be seen, they show at a glance the superiority of the climate of Queanbeyan and Cooma over that of Paris and New York. While the mean temperatures for the year are nearly the same, it will be observed that New York is on an average hotter in summer and much colder in winter than Cooma or Queanbeyan. In its mean summer temperature Paris occupies a position between these places; but its mean winter temperature is lower than that of either of them, and its mean range of temperature for the year is greater. The mildness of the climate of the basin of the Upper Murrumbidgee is very striking when its latitude is compared with that of Dublin or London.

Geological formation.

It has been mentioned that granite outbursts are frequently met with, and it may be added that, near or in conjunction with them, dykes or reefs of quartz are often found. Gold is widely distributed in these quartz-reefs, and is found in many places in alluvial deposits, the most important gold-fields in this part of the Colony being those in the neighbourhood of Gundagai, Adelong, and Tumut. Silver and lead have also been found in this basin, and promising deposits of slate have been opened out at Gundagai.

Metals.

Necessity for water conservation.

The necessity for water conservation in this district, both for agricultural and mining purposes, is rapidly becoming more pressing. The practicability of storing flood-water on an extensive scale on the Upper Murrumbidgee and its tributaries has been suggested, and its importance is beyond question; but in only one case, namely, that of the Tantangara Basin, on the Upper Murrumbidgee, has any investigation of even an approximate description been made. In this case, by order of the Commission, a rough survey of the Tantangara Basin was made, and the plan was reported on by the Engineer to the Commission, who pointed out that, according to the information obtained, a dam of 84 feet in height, and of a mean length of 300 feet, would throw back the water to a distance of 6½ miles. This reservoir would contain a sufficient quantity of flood-water to afford a supply of 200 cubic feet per second for 140 days, at a time when the Murrumbidgee is low. We concur in the opinion expressed in that report, that this basin is well worthy of a more complete examination.

Tantangara Basin.

Contents of reservoir.

The Murrumbidgee as a source of canals.

The suitability of the Murrumbidgee as a source for canals has already been referred to in the description of the basin of the Billabong Creek and Edward River, and the practicability of a permanent canal, with its head at or near the place where the Murrumbidgee emerges on the open plains, was suggested. A canal of this description would necessitate the construction of a weir across the river. This weir should, in our opinion, be movable, so that when open there would be no contraction of the waterway, and no obstacle to the passage of flood-water. The remarkably high range of floods in our rivers renders it necessary that, in any works which are carried out for their improvement or for the utilization of their waters, the utmost care should be exercised to avoid raising the flood-level. Under these circumstances it may be laid down as a general rule, that where weirs are to be constructed to raise the surface level in any of our rivers, such weirs should be movable. The importance of works of this description has long been recognized on the Continent of Europe and in India, but till lately it received very little attention in England. In admitting this fact, in a recent address, the President of the Institution of Civil Engineers, Sir F. J. Bramwell, said :—" I think there is good reason to believe that, by the adoption of movable weirs, rivers in ordinary times may be dammed up to retain sufficient water for the mills on their banks, while in time of flood they shall allow channels as efficient for relief as if every weir had been swept away."

Necessity for a weir.

Movable weirs.

Discharge of Murrumbidgee.

Regarded as a source of supply for canals, the Murrumbidgee is inferior to the Murray, in the quantity and regularity of its supply; but it has the advantage of being in New South Wales territory throughout its whole length. When the river was unusually low, in March last, its discharge was found to be 630 cubic feet per second. This discharge, as already suggested, may be materially augmented by the adoption of a system of storage reservoirs in the higher reaches of the Murrumbidgee and its tributaries, and possibly also by the diversion of a supply from the Snowy River. A suggestion has also been made by the Surveyor-General that there is a possibility of supplementing the supply in the Murrumbidgee by the diversion of a portion of the discharge of the Tooma. Even without the prospect of any such increase, the present supply, as well as the favourable nature of the district, warrants the prosecution of a survey for a permanent canal. There is strong evidence that the water flowing in the Murrumbidgee represents only an important portion of the quantity which flows from the higher parts of the catchment area, the remainder passing off by underground percolation. This being so, it is probable that the abstraction of a large proportion of the supply in the river will not affect the discharge lower down to the extent which might be popularly anticipated.

Diversion of portion of the Tooma River.

DRAINAGE AREAS OF THE MIROOL AND OTHER CREEKS.

Between the Murrumbidgee River and the Lachlan is an extensive tract of country consisting chiefly of open plains, but including (chiefly in its upper portion) numerous low ranges of hills. Within this area, which amounts to over 14,000 square miles, are situated the Bullock, the Bland, the Mirool, and several other large creeks, besides many of less importance. These creeks as a rule are dry, except during and immediately after exceptional floods. On such occasions water flows in the creeks to a greater or less distance according to the depth of the rainfall, and in most cases disappears in a swamp or lake. A portion of the water probably passes to feed an underground supply; but, as in the case of the Narran already referred to, evaporation would account for the great part of the loss. Throughout an area of from 2,000 to 3,000 square miles in the extreme eastern portion of this tract of country the mean annual rainfall is 19½ inches, and the mean number of rainy days sixty-seven. These results are obtained from three observing stations, and the mean number of years is seven. In the great portion remaining the mean annual rainfall is under 16½ inches, and the number of rainy days fifty-five, these results being obtained from thirteen stations for a mean period of four and a half years. As the series of basins which constitute the whole tract extend over a length of about 200 miles, it seldom happens that exceptionally heavy rains occur over the whole area simultaneously. In its usual parched condition the ground will readily absorb 3 inches of rain; and as a fall of this quantity in one day is a very rare occurrence, it may, under the circumstances of this district, be inferred that it is not natural to expect any flow whatever in the creeks. Examination of the rainfall in each month makes this point more clear. Within the great portion of this series of basins to the west of the 148th parallel of longitude, the two meteorological stations which show the best average rainfall are Combaning and Bynya, the respective amounts being 18·80 and 18·48 inches. During the year 1884, in only one month did the rainfall exceed 3 inches, namely June, and in that case the total fall, which amounted to 4·54 inches, was spread over a period of twelve days. At Bynya the rainfall during the same month in 1884 was 2·33 inches, and this was the greatest during that year for any one month. In 1883 the rainfall exceeded 3 inches in only one month at each of these places, the month being October, and the respective quantities at Combaning and Bynya 4·17 and 3·24 inches. The fall occurred during seven days at each place.

Area.

Dry creeks.

Disappearance of water underground.

The clearing of the country from scrub and useless timber, and the consolidation of the ground by the trampling of stock, tend to increase the flow of surface water. The result of this will be to increase the supply available for storage in dams and tanks. So far as can be judged at present, such increased storage, together with the development of the use of the underground supply, are the only practicable objects to be aimed at in this district in connection with the conservation and supply of water.

Benefits of clearing scrub.

Trampling of stock.

BASIN OF THE LACHLAN.

The basin of the Upper Lachlan lies between the basins of the Murrumbidgee and the Macquarie, and is separated by the Main Dividing Range from that of the Hawkesbury. The total area of the Lachlan basin is about 13,500 square miles, of which 7,200 square miles consists of hilly country and 6,300 square miles of plain. In the former portion, the mean annual rainfall as reckoned from six observing stations is 20·33 inches, and the mean number of rainy days sixty-six, the mean number of years being five. In the latter the corresponding results, reckoned from ten observing stations, were 13·41 inches of rainfall and forty-one days on which rain was registered. The length of the Lachlan may be taken at 700 miles. It appears from the above figures that the catchment area of the Lachlan is inferior to that of the Murrumbidgee in its extent, and still more inferior in its nature, and that in addition, the rainfall in the basin of the Lachlan is considerably less. As might naturally be inferred, the Lachlan is much smaller in its discharge and more uncertain in its flow than the Murrumbidgee.

Area.

Although

Further survey justified.

Although we have not had an opportunity of obtaining information excepting of a general nature in regard to the Lachlan and its tributaries, the Abercrombie and the Fish Rivers, we have ascertained beyond doubt that much can be done to improve the resources of the Lachlan basin by conserving the flood-waters, and that the prospects of work for this purpose are so assured as to justify a much more extended examination than we have up till the present been able to make.

Lake Cargelligo.

Storage capacity.

Private dam.

Lake Cargelligo is a great natural reservoir of about 10 square miles in area, and with an average depth of about 11 feet when full. (Q. 3279.) This is equivalent to a storage capacity of 2,300 million cubic feet, or 14,375 million gallons. The lake derives its supply from the Lachlan in high floods, being connected with that river by a creek, known as Lake Creek. When the lake has been filled and the river begins to fall, the water tends to flow back to the river. To prevent this, a dam has been constructed by private enterprise in the Lake Creek, but both the nature of the dam and the extent of the storage capacity are capable of much improvement. The plans and sections of Lake Cargelligo referred to in the answer to Q. 3347 will be found in Appendices to the Evidence T 2 and T 3.

Insignificance of the hills.

Rainfall.

The tract of country bounded by the basins of the Darling, Bogan, and Lachlan, and possessed of no river system, is about 34,000 square miles in extent. Though hills are met with in isolated conical peaks and low ranges, their dimensions are so insignificant when compared with the area of the district, and their effect on the meteorological conditions are so inappreciable that the whole of this drainage area may be classed as plain country. Throughout its whole extent the mean annual rainfall, as reckoned from twenty-nine observing stations, is 12·83 inches, and the mean number of days on which rain is registered is forty-one. The rainfall varies in an important degree in different places. It attains a maximum along the watershed line between the Manara drainage area and the basin of the Upper Bogan, and in particular at the place where these two catchments meet that of the Lachlan. In this neighbourhood the mean annual rainfall is about 20 inches, while in the lower parts of this drainage area, near the district in which the basins of the Lachlan, Lower Murray, and Darling meet, the rainfall does not exceed 11 inches.

Nature of country.

The general description of the land is that it is gently undulating, and abounds in pine and mallee scrub. Frequent patches of low ground are met with where local surface drainage collects, and is lost chiefly by evaporation. Low ridges of schistose rocks or of granite are numerous, and occasionally the granite is found with its surface at the ground level. Besides the great areas covered with dense and worthless scrub, there are immense plains timbered with yarran, belar, and box.

Trial railway survey, Condobolin to Wilcannia.

Levels.

The remarkable absence of well-defined natural features in the Manara drainage area is strikingly illustrated in the section along the trial line surveyed for a railway from Condobolin to Wilcannia. The length of this line is 270 miles. The average elevation of the country traversed in the first 70 miles from Condobolin is 570 feet above the sea, in the next 100 miles 370 feet, and from the end of that length to Wilcannia 270 feet. The difference of level between Condobolin and Wilcannia would give a fall of slightly over 2 feet per mile from the former place to the latter; but in the last 70 miles, ending at Wilcannia, there is practically no fall, the ground being very gently undulating, and having the lower parts of the undulations below flood-level.

Shallow depressions.

Beneficial effect of wells and tanks.

There is no difficulty here in accounting for the disappearance of the rainfall. While the small rainfall and the features of the country are sufficient guarantees that the surface water will not run except on extraordinary occasions, the great dry shallow depressions which are frequently found with creeks leading to them clearly indicate the ultimate destination of the surface-flow. Before the construction of wells and tanks the Manara drainage area was uninhabitable, even by the aborigines; now, through the construction of numerous wells and tanks, an almost permanent supply of water is assured.

So

So far as water conservation and distribution is concerned, the most important feature in this drainage area is its slope towards the Darling. As a natural result of this slope, when high floods are passing down the Lachlan, the flood-water escapes in large quantities in the Booberoy, Willandra, Merrowie, and other creeks, and flows in a westerly direction towards the Darling. It is stated in evidence (Q. 3006) that in a high flood the Willandra Creek carried a supply to within a distance of 30 to 40 miles from Reed's Lake, which is filled by the flood-water from the Darling. It appears, however, that within this intervening space there is a high sand ridge running approximately parallel to the course of the Darling, and that this effectually prevents the flood-water of the one river from mingling with that of the other at this point. No surveys have been made or levels taken of the three creeks mentioned—at least none which would show their capabilities as distributing channels. In the case of the Willandra Creek, however, water flows from the Lachlan to a distance of about 200 miles, and the course of the creek can be traced in a southerly direction beyond even that distance. Considering that the Willandra, though practically in its natural state, has done excellent service as an inundation canal, and that a regular supply so obtained would raise the adjacent land in value to the extent of 400 or 500 per cent., it is sufficiently evident that the improvement of the Willandra and the construction of a weir in the Lachlan to give it a supply in ordinary floods are questions of great practical importance.

Improvement of the Willandra.

The Booberoy and Merrowie Creeks are similar in their nature to the Willandra, but are on a smaller scale; still they must be considered as channels which might be made to play an important part in contributing to the supply of the dry country between the Lower Lachlan and the Lower Darling. It is improbable that the supply which could be made available would be sufficient for irrigation purposes except on a very small scale, but it would afford a plentiful supply to tanks and dams, and the importance of that alone is clearly shown by a witness (Q. 3079), who stated that if wells could be constructed in the Manara drainage area at a cost of £1,000 per well they would be very remunerative. On the whole, the evidence all tends to show that there is an area of at least 10,000 square miles through which the flood-water of the Lachlan can be conducted by gravitation. The part of the country thus situated has a rainfall of only about 11 inches, and the difficulties connected with obtaining supplies from wells are unusually great. In this district then, we find that there is a pressing demand for water, while there are also unusual facilities for, in a great measure, meeting it. The evidence of several witnesses has shown how the Willandra Billabong has already been utilized extensively, and suggests the greatly increased value it would have if dealt with systematically as a whole. In regard to the Merrowie Creek, it has been stated that flood-water has been conveyed a distance of 50 or 60 miles along that channel (Q. 2885). That it is not only desirable but practicable to divert the flood-water from the Lachlan along a series of dry creeks into the district here included under the Manara drainage area is confidently asserted (Q. 2867 and 2868).

BASIN OF THE DARLING.

On account of the immense extent of its basin, the fertility of the districts through which it flows, and the great highway it affords for commerce, the river Darling, notwithstanding the comparative insignificance of its average discharge, is in some respects the most important river in New South Wales. The portion of the catchment area of the Darling lying within the Colony of Queensland is 103,650 square miles in extent, but of this only 15,000 square miles belong to that part of the river above Walgett. In New South Wales the area of the basin, as far as the junction with the Namoi at Walgett, is nearly 20,000 square miles. The total drainage area as far as Walgett, and not including that of the Namoi, may therefore be taken as 35,000 square miles. Bearing in mind that below Walgett the river flows a distance of 2,345 miles before it reaches the ocean, its importance can be better appreciated when it is considered that the above-mentioned catchment area at Walgett is nearly seven times the entire basin of the Thames. As the ordinary discharge at Walgett is a mere fraction of even that of the Thames, it is not surprising that

Importance of the river.

Area.

Whatbecomes of the rainfall?

that the question, "What becomes of the rainfall?" has given rise to much discussion. This question presents little difficulty when the nature of the catchment area, and the amount of rain and the time and manner in which it falls, are taken into account. In treating of other basins, it has already been pointed out that in the west of this Colony not only does the plain country contribute almost nothing to the rivers, but that evaporation and the growth of vegetation are sufficient to account for almost the entire rainfall. While rain is actually falling, the basin of the Darling may be considered as consisting of two classes of country—the contributing and the non-contributing area. In dry periods the river depends almost entirely on percolation from the hilly parts of its basin. At such times the basin may be divided under two principal heads, which may be termed respectively the contributing area and the reducing area. As rain seldom falls simultaneously over the entire extent of the Upper Darling basin, and as evaporation is continuous, there is at all times a greater or less extent of reducing area. It may therefore be broadly stated that the basin consists of contributing, non-contributing, and reducing areas, which are all constantly varying in extent. The hilly portion of the basin represents, except in extraordinary floods, the maximum extent of the first-mentioned area.

The contributing area of the Darling and the non-contributing.

Catchment area at Walgett.

It has been mentioned that the catchment area of the Darling or Barwon at Walgett is about 35,000 square miles, of which 15,000 square miles are situated in Queensland. Of the latter area, approximately 8,000 square miles may be classed as plain country, and therefore non-contributing, leaving in Queensland an effective catchment area of 7,000 square miles. The catchment area in this Colony above Walgett may be taken as comprising 10,400 square miles of hilly and 9,300 square miles of plain country. The proportion of the basin from which surface water can, under favourable circumstances, be expected to reach the Darling is thus reduced to 17,400 square miles. Even of this diminished area a large proportion is intermittent and irregular in the supply it yields. Add to this that the mean temperature in the shade throughout this part of the country is probably not less than 70°, that hot winds are of frequent occurrence, and that the drainage from the contributing area has to flow in a tortuous course and with a very low velocity through the non-contributing area. All these points have an important effect in preventing surface water from reaching the river, and in diminishing the volume of water flowing in the river. There is, in addition, another point of the highest importance in its influence on the discharge of surface drainage; namely, the manner and the season in which the rainfall occurs. Taking Myall Creek as an instance by which to judge the contributing area, we find that in 1884 the rainfall was only 20 inches, and that in not one month did the quantity registered reach 3 inches. The number of rainy days was seventy-four. It is sufficiently evident from these figures that the neighbourhood of Myall Creek cannot during 1884 have contributed more than a merely nominal proportion of the rainfall to the supply of the river. In 1883 the rainfall at the same station amounted to 26·89 inches, of which 14·58 inches fell on thirty-six days during the months of November, December, January, and February. The quantity exceeded 2 inches per month only during five months, and the highest falls were in January and February, the hottest months of the year—the period when the loss by evaporation and absorption would be the greatest. As the streams which feed the Upper Darling are numerous, and many of them flow long distances through plain country before they reach that river, the loss of water from the causes above mentioned must be exceptionally high. In the case of a river 1,000 miles in length, and with a mean width at the water of 100 feet, a loss of one quarter of an inch per day from evaporation would be equal to a constant discharge of nearly 130 cubic feet per second. The tributaries of the Darling and that river itself as far as Walgett would have a much greater surface than such a river as that supposed. Bearing in mind that a river loses by evaporation not only from the water surface, but also from the surface of the banks, which are more or less saturated by capillary attraction, the loss here mentioned must be considerably within the actual amount. Again, in the case of rivers such as the Darling, flowing in alluvial soil, a loss of half a cubic foot per second per mile by absorption would be by no means remarkable.

Temperature.

Causes of rainfall not reaching the river.

Rainfall.

Losses through evaporation.

Rate of absorption.

From the foregoing considerations, it is evident that the quantity of water which passes to underground currents cannot be nearly so great as is sometimes supposed. There can be little doubt that little or no surface water passes off to feed the underground supplies, excepting from the mountainous portions of the basin. The line along which the greatest loss by underground percolation is likely to occur is at the place where the granite and the silurian strata end and the great alluvial plains begin. The data at present available are not sufficient to enable an accurate estimate to be formed of the proportion of the rainfall thus disposed of. In any case it would be a difficult point to determine. In the hilly portion of a catchment area the surface water reaches the main stream through many small channels, but, in addition, the crevices in the rock and the interstices in the ground become innumerable passages through which the water percolates by gravitation till it reaches the river at a lower elevation among the hills, or else passes on to feed underground supplies in the plains. The fact that at least 3 inches of rainfall is required as a rule to saturate the plains sufficiently for one irrigation, and that such saturation is a rare occurrence, precludes the idea that any portion of the rainfall in the plains is, under ordinary circumstances, lost by percolation. As an apparent exception to this rule, when the supply in the Darling is low, there is percolation into it throughout a great portion of the length between Walgett and Bourke. On the other hand, when the river is high, there can be no doubt that there is percolation from the river for a short distance from its banks; so that it is not improbable that the subsoil, which becomes saturated from the river in times of flood, yields the water of saturation again when the river is low. Under the circumstances, this explanation, so far as that part of the river is concerned, seems more likely than that the percolation comes from a great distance.

Quantity of water reaching underground supplies insignificant.

Percolation into the river.

Below Walgett, the principal tributaries of the Darling are the Castlereagh, the Macquarie, the Narran, the Bokhara, the Culgoa, the Bogan, the Warrego, and the Paroo. These rivers are all intermittent. The only well-authenticated instance in which the Paroo flowed into the Darling occurred in January last, and this was due to a fall of rain which was altogether unprecedented in that neighbourhood. Near Wilcannia, 9 inches to 10 inches of rain fell within three days; and, in some parts of the basin of the Paroo the fall in the same time was as much as 12 inches. Within this Colony the area of the basin of the Paroo is over 15,700 square miles, while in Queensland there is a further area of 13,400 square miles. As heavy rain fell throughout the greater part of this immense area, the fact that the flood in the Paroo rose to an unprecedented height is not surprising. When it is considered that the mean annual rainfall throughout the basin of the Paroo is only 10·77 inches and the mean number of rainy days thirty-two, and that the basin consists chiefly of plain country, it is but natural that in ordinary seasons the Paroo is a river only in name.

Tributaries of the Darling below Walgett.

Flow from Paroo into Darling.

Area of Paroo basin.

Rainfall.

The Narran has already been referred to under the head of "Evaporation" (p. 15.) Between that river and the Darling or Barwon there is a large creek known as "The Big Warrambool," which is in reality a "river" of the same class as the Narran, although of less importance, and with a catchment area of more than 3,100 square miles, in this Colony alone. It is in fact more deserving of the name than is the Narran, for the latter, and also the Bokhara, Birce, and Culgoa, are only branches into which the Balonne River divides. All these are of the same type, that is to say, water flows in them to the Darling only in times of flood, or in exceptionally rainy seasons.

The Narran.

The Big Warrambool. Its area.

The drainage area of the Darling as far as Walgett has been considered separately, because the most reliable portion of the contributing area lies above that place. The total drainage area of the Darling at its junction with the Murray, including the basins of its intermittent tributaries, is 231,000 square miles. At Wilcannia the area is 201,600 square miles, and at Bourke, 148,000 square miles.

Drainage area of the Darling.

The mean annual rainfall, as calculated from forty-six stations in the plain or non-contributing portion of the drainage area of the Darling proper, is 12·81 inches, and the mean number of rainy days, thirty-five. The corresponding figures in connection with some of the tributaries show better results. On the Upper Bogan the rainfall

Mean rainfall.

rainfall is 18¼ inches, and on the Lower Bogan 14⅓ inches, and the corresponding figures for the Upper and Lower Castlereagh are 19 and 17⅓ inches respectively. The most favourable rainfall returns for any portion of the Darling basin are those for the mountainous country at and near the sources of the M'Intyre, in the mountains of New England. There the average annual rainfall as reckoned from eleven observing stations is 28·17 inches, and the average number of days in the year on which rain is registered, 76.

Non-contributing area.

Of the total area of the basin as far as Bourke, at least 100,000 square miles must be classed as non-contributing. The mean distance of Bourke from the contributing area cannot be less than 450 miles; the fall in the intervening country is very slight and the velocity in the river correspondingly low, and the river banks consist of alluvial deposits, covered with an abundant growth of varieties of eucalyptus trees, which appear to absorb more moisture from the ground than those of almost any other species. Under these circumstances, it is obvious that the loss of water from the river must necessarily bear an exceptionally high ratio to the discharge. Also while the maximum contributing area above Bourke is about 48,000 square miles, it is evident that, judging from the high temperature and the low rate of monthly rainfall, as well as from the unfavourable nature of much of the basin, the actual contributing area is generally only a small proportion of that mentioned. The information obtained by actual gauging is altogether insufficient to lead to a conclusion as to the actual proportion of the rainfall which flows off in the river. In January last

Discharge of river at Bourke.

the discharge at Bourke was found by our Engineer to be only 376 cubic feet per second; and in May last, when the river was considerably lower, he found the dis-

Discharge at Walgett.

charge at Walgett to be scarcely 15 cubic feet per second. When the latter gauging was taken the discharge at Brewarrina and Bourke was higher than at Walgett. This was attributed partly to the percolation into the river, and partly to the interception of the underground flow by the bar at Brewarrina.

Proportion of rainfall discharged.

While no exact conclusion can be arrived at regarding the proportion of the rainfall discharged, there is sufficient information to account for the fact that this proportion is very low. Australia is not by any means the only country in which rivers beyond certain points in their courses gradually diminish in volume till they finally disappear, but it is probable that the instances of this feature which are found in this country are more striking and on a more extensive scale than are found elsewhere.

Permanent canals impracticable.

From the foregoing description of the Darling, it is evident that the discharge is too small and too uncertain to provide for permanent irrigation canals under present conditions. On the other hand, the immense volume which passes down in floods

Utilization of flood waters.

might in many places be utilized with advantage and at a moderate cost. This could be best done in the majority of cases by diverting the water into lakes, lagoons, anabranches, and other great natural depressions, and storing it there for the use of stock or for irrigation. There are, however, cases in which the water could be used for flooding the land, and thereby greatly increasing the yield of grass. That this system can be carried out with excellent results has been practically demonstrated on the Lower Lachlan, and there is no reason why it should not be successful on an extensive

Weirs.

scale on the Darling. To facilitate the utilization of the flood-waters, weirs should

Value of the rocky bars as weir sites.

be erected in suitable places, and for this purpose the rocky bars which cross the bed of the river in many places will afford favourable sites. The erection of weirs, besides aiding in the diversion of a supply from the river, will maintain the water at a high level in times of drought, and will thereby greatly add to the facilities for obtaining supplies by pumping for irrigation and for the use of stock. Great encouragement

Absence of silt at the Brewarrina Falls.

to the construction of weirs is furnished by the fact that no silting up of the river has occurred on the upstream side of the Falls near Brewarrina, but that on the contrary deep water extends to a distance of several miles. Our Engineer reports that, with a low supply in the river, the difference in level between the water above and that below the Falls was 10 feet 9 inches. At that time the depth of water near the centre of the river to a distance of 6 miles above this barrier was in all places over 10 feet, and was stated to be as much as 30 feet in some places near Brewarrina.

Prospects of irrigation.

The work already done in the Darling basin towards water conservation clearly shows, first, that the land is eminently suited for irrigation; second, that irrigation

irrigation is remunerative; and third, that legislation which will define and secure the national right in the water supply, and will at the same time encourage local and private enterprise, is urgently called for. On the Gwydir and other tributaries of the Darling, as well as on that river itself, pumping machinery, in some instances of a very powerful description, has been erected and brought into use. While enterprise of this character deserves to be commended and encouraged, grave misunderstandings are certain to arise if legislation of the nature referred to above is not soon provided. The pressing importance of this point is made clear by the fact that the pumping machinery on the Gwydir for filling natural channels for stock purposes, here referred to, is capable of raising a supply of water far in excess of the entire discharge which was gauged in the Darling at Walgett, in May last.

Pumping on the Gwydir.

Legislation necessary.

So far as the evidence obtained enables us to state, the most favourable places, in addition to the bed of the Darling itself, for intercepting water during high floods and storing it for future use, are to be found in the Culgoa and other tributaries of the Darling, in the Cato and Tarrion Creeks, and in the lakes and other great natural depressions which are found at intervals on both sides of the river from Wilcannia to its junction with the Murray. On the whole, the natural facilities afforded for the storage of flood-water are very extensive, and the future development of the Darling basin will depend on the extent to which these facilities are employed.

Culgoa River.

Cato Creek.

Tarrion Creek.

BASINS OF THE BOGAN, MACQUARIE, AND CASTLEREAGH.

With its sources on the western slopes and among the high table-lands of the Dividing Range, and having in its catchment area a large proportion of hilly country, the Macquarie would naturally be expected to rank among the most important tributaries of the Darling. The area of the basin of the Macquarie is about 15,440 square miles, of which 9,830 square miles may be classed as hilly, and 5,610 square miles as plain. The mean annual rainfall, calculated from eleven observing stations in the hilly portion of the basin, is 23·17 inches, and the mean number of rainy days sixty-six; in the plain portion of the basin, the mean annual rainfall as calculated from three observing stations is 15·67 inches, and the mean number of rainy days forty-six. The length of the Macquarie is estimated at 750 miles. In the upper parts of its basin, gravel ridges, deep deposits of disintegrated granite, and extensive areas of permeable soil are met with; these conditions, together with the comparatively low monthly rainfall, limit the proportion of the surface water which reaches the river. The fall of the river here is considerable, so that the water which reaches it flows off freely. As the river reaches the plains and passes in a tortuous course towards the Darling the rate of fall diminishes, and the channel decreases in size till it reaches the Macquarie Marshes, where it divides into a number of creeks; with a low discharge in the upper parts of the river the water disappears before it reaches these Marshes. In ordinary floods the diminished section of the channel obstructs the passage of the flood-water and forces a potrion of it over the left or lower bank; the remainder of the flood-water passes on to the Marshes, where it spreads out in a thin sheet over immense reed-beds, and is there retained till it disappears by evaporation and absorption. In extraordinary floods only does the Macquarie water reach the Darling; on such occasions the floods escape over the left bank of the Macquarie in many places, the first being at Narromine, and flow in a series of creeks to the Bogan and thence to the Darling. In addition, the Marra Creek carries a portion of the discharge from the Macquarie to the Darling direct.

Area of the Macquarie basin.

Rainfall.

Nature of country.

Macquarie Marshes.

Flow from the Macquarie to the Darling.

Marra Creek.

From the place where it leaves the hills, the course of the Macquarie lies almost entirely through alluvial deposits. In the hilly country the valley occasionally opens out into rich alluvial flats bounded by rocky ridges, through which the river seems to have cut a passage. Mr. James Samuels, jun., of Dubbo, in an interesting paper communicated to us, suggests that there was at one time a series of lakes along the course of the Macquarie between Wellington and Narromine, and that these became filled up with gravel and shingle. The presence of very

Geological formation..

very deep deposits of this description at intervals throughout the portion of the river here mentioned gives considerable weight to this theory.

Discharge of the Macquarie.

The discharge of the Macquarie was gauged by our Engineer in February last, and again in April. On the first occasion it was found that, while the discharge at Dubbo was 114½ cubic feet per second, that at Warren was only 52 cubic feet per second; and it was shown that, of the proportion lost, not more than 16½ per cent. could be accounted for by evaporation. On the second occasion the discharge at Dubbo was only 20 cubic feet per second, while at 18 miles up stream from Warren the flow entirely ceased. Owing to altered conditions, evaporation would in this case account for 38 per cent. of the loss, leaving the remaining 62 per cent. to be accounted for by absorption and percolation. The latter division of the loss in February was equivalent to about two-thirds of an inch per day over the wetted surface, or to half a cubic foot per second for every mile of the river. In the case of the smaller discharge, the loss due to percolation and absorption was about equal to a quarter of an inch per day over the wetted surface. These rates of loss by absorption and percolation are by no means remarkable or exceptional. In Mr. Russell's Rainfall Report for 1882, it is mentioned that experiments made in connection with European forests have shown that a moderate-sized tree will absorb from the ground 16 gallons of water per day. The eucalypti absorb an exceptionally large quantity of moisture, so that it would probably be safe to assume that an average tree on the banks of the Macquarie absorbs 18¾ gallons or 3 cubic feet per day. On this hypothesis, and taking the number of trees at 2,000 per mile of river, the quantity of water required for these trees alone on a length of 180 miles would be equal to a constant flow of nearly 12½ cubic feet per second. When the discharge at Dubbo was about 20 cubic feet per second, the loss by evaporation between that place and the point at which the flow ceased was about 7½ cubic feet per second. It appears therefore that the requirements of 2,000 trees per mile of river would have accounted for the entire loss by absorption. It is not intended to be conveyed that this is the precise manner in which the entire loss was accounted for. These points are brought forward to show that, as already stated, there is nothing abnormal in the proportion of loss from the Macquarie.

Absorption by trees.

Percolation in the hills.

Mr. Samuels has observed that a flood in the higher reaches of the Macquarie has only a slight effect at Dubbo, and that a high flood at the latter place generally occurs when the upper parts of the basin have been saturated by a preceding flood. This fact, together with the very large supply obtainable from wells at and near Dubbo, shows the extensive scale on which percolation takes place in the hilly part of the basin.

The Castlereagh and the Bogan.

In high floods the waters of the Lower Castlereagh unite with those of the Lower Macquarie; and at the same periods, the floods in the Macquarie are relieved by various outflows to the Bogan, chiefly from places between Narromine and Warren. On this account, to obtain a comprehensive view of the question of water conservation in this part of the country, it is necessary to consider the basins of the Castlereagh and the Bogan in conjunction with that of the Macquarie.

Area of Castlereagh basin.

Rainfall.

The area of the basin of the Castlereagh is about 6,750 square miles, of which 3,890 may be classed as plain, and 2,860 as hilly. The mean annual rainfall in the plain, as reckoned from ten observing stations, is 17·43 inches, and the mean number of rainy days forty-three. In the hilly portion of the basin the mean annual rainfall at two stations is 19·10 inches, and the mean number of days on which rain falls fifty-two. The basin of the Castlereagh does not extend to the Dividing Range. The hills amongst which that river and its tributaries have their sources are of very moderate height, and exercise comparatively little influence on the flow of surface-water; and the course of the river, which has a length of about 300 miles, lies chiefly through arid plain country. These conditions, together with the scanty and irregular rainfall, combine to constitute the Castlereagh an inefficient escape channel for wide-spreading floods, while its normal condition is that of a dry receptacle for drifting sand.

Almost

Almost midway between the Lower Macquarie and the Castlereagh, and at the junction of the counties of Clyde and Gregory with the county of Leichhardt, there is a remarkable sand ridge, commonly known as "The Monkey." Good water, but in limited quantities, is found everywhere in this sand ridge, at depths generally varying from 15 to 25 feet from the surface. The source from which the supply in this ridge is obtained, and the possibility of augmenting or conserving it by sub-soil dams or otherwise, are questions well worthy of further consideration. "The Monkey" sand ridge.

The catchment area of the Bogan, like that of the Castlereagh, is unsatisfactory so far as its capability of delivering surface water is concerned. Of a total area of about 13,150 square miles, 9,750 is plain country and only 3,400 square miles hilly. The mean annual rainfall reckoned from eight stations in the former area is 14·51 inches, and the mean of two stations in the latter is 18·23 inches. The corresponding numbers of rainy days are 40 and 50. The length of the Bogan is 450 miles. These conditions show that the description already given of the Castlereagh applies in almost every particular to the Bogan; but the latter, owing to the greater area of the hilly portion of its basin, runs more frequently than the former. Area of Bogan basin. Rainfall.

In the description of the general configuration of the country it has been mentioned that, while the Castlereagh, Macquarie, and Bogan flow in a northerly direction, there is also a fall almost at right angles with these rivers in a westerly direction. The consequence of this is that in floods the Castlereagh overflows into the Merri Merri Creek, and the flood-water unites with that of the Macquarie. The latter river also overflows in many places, and flood-water from it passes to the Bogan in the Beleringa, Duck, Gunningbar and other creeks. Nature has therefore already demonstrated that the flood-water from the Castlereagh can be distributed through an extensive tract of country lying between that river and the Macquarie, and also that the flood-water of the latter river can not only be distributed throughout a great portion of the district between the Macquarie and the Bogan, but can also be used to supplement the supply in the latter river. Already private enterprise has done valuable work for the conservation of flood-water in this part of the Colony, particularly on the Bogan and on the creeks leading towards it. As an instance the Muddall dam on the Bogan may be referred to which holds back a permanent supply of water to a distance of 10 miles. It is, however, evident from the circumstances of the case that the lower portions of these three rivers—the Castlereagh, the Macquarie, and the Bogan—together with the intervening creeks, might be advantageously considered and dealt with conjointly. Works carried out by private enterprise are naturally intended only for the use and convenience of the persons at whose cost they are constructed, but all such works should be in harmony with a comprehensive system under which the available supply of water should be made to benefit the greatest possible area. Fall of country. Various creeks. Muddall dam. Necessity for a national system.

BASIN OF THE NAMOI AND PEEL.

In the length of its course and the extent of its catchment area the Namoi is one of the most important of the tributaries of the Darling. The basin of the Namoi has an area of about 16,250 square miles, of which 11,800 square miles is plain country and 4,450 square miles hilly. The mean annual rainfall in the former portion, as reckoned from eight observing stations, is 19·20 inches, and the number of days on which rain is registered fifty-five. In the hilly part of the drainage area the mean annual rainfall, as obtained from seventeen observing stations, is 22·37 inches, and the mean number of rainy days fifty-eight. The mean temperature of the basin may be taken at 63° or 64°. Area of Namoi basin. Rainfall.

The contributing portion of the catchment area of the Namoi is small compared with the whole area of the basin, and on this river is irregular in its flow, and frequently ceases to run for months together. The methods which suggest themselves as remedies for these disadvantages are, first, to construct a series of weirs in the river, and second, to store the flood-water in the higher parts Necessity for weirs.

of

of the basin and allow it to escape by degrees when the river is low. So far as we have been able to ascertain, both these methods of conserving and utilizing the available supply can be adopted. On the subject of weirs, a witness who has given much attention to the question of water supply in the Namoi basin has informed us (Q. 1756) that in his opinion weirs could not be adopted on the Namoi below Narrabri, on account of the friable nature of the soil; but he also states that above Narrabri there are good sites for weirs in the river, and that there are also places suited for storage reservoirs both in the Namoi and its tributaries. The evidence regarding probable sites for storage reservoirs was so definite and encouraging that in order to obtain further information on the subject we deputed Mr. Gipps to inspect and report on these sites. The result of this examination was to convince him that at a place on the Namoi, about 7 miles above its junction with the Peel, a dam 75 feet in height would hold the water back to a distance of 13½ miles, and would secure the storage of 10,000 million gallons of water. The foundation and flanks of this dam would be in rock, and its length at the top and base respectively would be only 812 feet and 115 feet. Other favourable sites were found, and on the whole the investigations made were sufficient to warrant a further examination of the Namoi and its tributaries.

Weirs impossible below Narrabri.

Mr. Gipps' survey.

Site for dam.

Capacity of reservoir.

Source of underground water.

The information which we have elicited tends to show that, as a rule, the source from which underground supplies of water are derived is in the hilly portions of the river basins. In the case of the basin of the Namoi and Peel the reasons in favour of this conclusion are exceptionally strong. In the higher parts of this catchment area, springs yielding remarkably large supplies of water are found. Some of these springs have already been referred to, under the heading of "Wells" (p. 29), and need not be further described here. Going towards the west the underground supply becomes smaller and more precarious, and salt water is more frequently met with. The most reasonable explanation of this is that the rain falling on the tertiary and other more or less permeable strata among the hills percolates into them and passes under the plains, spreading over a wider area as it flows westward. Under this hypothesis, the strong springs near the hills would be accounted for by the underground flow being confined within narrow spaces, while being at the same time under the direct influence of a considerable "head." In the plains, as the underground water spreads over a wide area its rate of flow becomes diminished, the quantity available at any one place is more restricted, and with the approach to stagnancy the proportion of salts in solution increases. While this may be taken as a general rule, exceptions and modifications caused by irregularities in the underground strata are frequent. The improbability of the occurrence of percolation, except on a very small scale, in the plain country, has been discussed in connection with other river basins—particularly that of the Darling—and the reasons there given apply with almost equal force to the basin of the Namoi.

Insignificance of percolation.

Fertility of the district.

This basin includes extensive tracts of land which are unsurpassed in fertility in any portion of the Colony west of the Dividing Range. Its remarkable productiveness when irrigated has been practically demonstrated in several instances, while, on the other hand, the liability of the plains of the Namoi to be devastated by droughts, and the uncertainty of obtaining crops of any kind, even in fairly good seasons, show that water conservation is an absolute necessity. To provide this we require, first of all, legislation to direct and foster private and local enterprise, to protect individual and public rights, and to provide means for initiating and carrying out such works as are beyond the capabilities of local effort.

Water conservation imperative.

Legal protection.

YANTARA DRAINAGE AREAS.

Absence of a river system.

The entire portion of the Colony lying to the west of the basin of the Paroo is destitute of any large river system. It comprises a number of separate and independent drainage areas, but these are included here under one designation, and are considered together for the sake of convenience. The united area of these catchment basins is about 22,100 square miles. The mean rainfall reckoned from twelve observing stations is 8·56 inches, and this being obtained from an average period of six years, may

Area of catchment basins.

may be relied on as a close approximation to the average fall over the whole area. The mean number of days during which rain is registered in the course of a year is 26. Rainfall.

As in the Manara drainage area, low ranges of hills are common in the north-western district, but here also the hills are of little effect either on the quantity of the rainfall or in influencing the flow of surface water. The Kooningberry and the Mount Brown Ranges are two of the most important, and the heights of these above the surrounding plains were found by Mr. H. Y. L. Brown, Geological Surveyor, to be only 700 and 400 feet respectively. Still there is a fairly defined watershed line extending south from the Queensland frontier, and maintaining generally a distance of 40 to 50 miles from the boundary of South Australia. This watershed line passes into South Australia, near Silverton. Thence in the tract of country north of Silverton and west of the watershed described the course of surface drainage is towards South Australia. Kooningberry Range. Mount Brown Range. Watershed line.

There is in Queensland an extensive and important natural drainage line, which is finally lost in the Yantara Drainage Area. This is the Bulloo River, which in times of flood empties itself into a large clay-pan or swamp which has a length of from 40 to 50 miles, a breadth of about 12 miles, and a depth of 12 to 15 feet (Q. 3024). The extreme dimensions here given would be equivalent to an area of 600 square miles; but, assuming that the area is 200 square miles, a river with a discharge of 1,344 cubic feet per second would be required to replenish the loss by evaporation alone, taking the rate of this loss at a quarter of an inch in twenty-four hours. It is, under these circumstances, quite natural both that the water should disappear rapidly and also that, with such extensive evaporation, salts should be deposited in the soil constituting the bed of the swamp. Again, taking the area of the swamp as above at 200 square miles, and its mean depth throughout that area as 10 feet, the quantity of water required to fill the swamp, and allowing for evaporation, would be equal to a flow of more than 8,000 cubic feet per second for 100 days. The practicability of utilizing the water of the Bulloo by cutting a channel from this swamp to the Yantara Lake has been suggested by a witness who has had extensive experience in this part of the country (Q. 3024). Bulloo River. Area of swamp. Channel to Yantara Lake.

The Yantara, Cobham, and Salt Lakes are the receptacles for the surface drainage of an extensive area. The available information regarding these lakes is meagre; but the first has been favourably mentioned as a place in which flood water can be stored, and from which it can be distributed. In a published report to the Commissioner for Roads by one of his officers, Cobham Lake is described as being at the time of report "a grand sheet of fresh water;" but details regarding its dimensions are not supplied. The Yantara and Cobham Lakes are fed by several intermittent creeks, but the supply is irregular and precarious, so that if it can be supplemented from the Bulloo, a good permanent store of water in these lakes will be available. Yantara, Cobham, and Salt Lakes.

The scanty and uncertain rainfall, the value of the gold and other mineral deposits, and the general absence of permanent natural supplies of water, render the construction of tanks or reservoirs for water conservation of the utmost importance for the development of this part of the Colony. To make these works permanent, it is necessary to provide in them for a depth of at least from 18 to 20 feet of water. From his experience of such works, the Commissioner for Roads and Bridges has adopted a standard depth of 18 feet, and a capacity of from 12,000 to 20,000 cubic yards—that is, 2,000,000 to 3,400,000 gallons, exclusive of any conservation above the ground level. Necessity for water conservation in this district. Standard depth of Government tanks.

TARA COUNTY DRAINAGE AREA.

In the south-west corner of New South Wales there is an area of over 6,000 square miles of plain country which contributes practically nothing to either the Darling or the Murray, and which on this account is here classed as the Tara Drainage Area. The range of hills which has been referred to as crossing from Wilcannia into South Australia forms the northern boundary of this tract of country. Very few Area.

Rainfall.

few rainfall returns are received from it, but from those published by the Government Astronomer it would appear that the mean annual rainfall is about 9 inches. The information which we have up till the present been able to obtain regarding this part of the Colony is insufficient to enable us to form an opinion regarding it.

LAKE GEORGE BASIN.

Area.

The basin of Lake George includes an area of nearly 490 square miles. The lake itself is at an elevation of about 2,200 feet above the sea-level, and may be regarded as a shallow depression in the table-land near the summit of the Dividing Range. The mean annual rainfall at Gundaroo, which is in the vicinity of the lake, is 22 inches. The question of evaporation and of the nature of the water has already been referred to at length, in an extract from a communication received from the Government Astronomer. The information available shows that before Lake George can hold an important place in connection with any large scheme for water conservation and supply two points require to be established—first, that it is practicable to conduct a supply by gravitation into the lake from one or more streams situated outside its basin; and, secondly, that it is practicable to tap the lake in order to distribute the supply so obtained. To prove that such works can be done plans and a report were submitted by Mr. Gipps, and from examination of these we concluded that a further survey is desirable to place the matter beyond question.

Rainfall.

Evaporation.

Necessity for further survey.

(11.) RIPARIAN RIGHTS AND PROPOSED LEGISLATION.

Reservations for water supply.

In the administration of the public estate Governments have had some regard to the future requirements of the Colony by reserving land from sale for the purposes of water supply. The Surveyor-General has instructed his staff that in the subdivision of land for sale the surveyor should in view of future settlement exercise judgment in selecting, and recommending for reservation for public use permanent waterholes, springs, and parts of rivers desirable for water supply, which in this arid climate might be beneficial for the occupation of surrounding country; and to the extent to which the survey staff have exercised intelligently the important discretion vested in them, facilities have been provided for the conservation of water. Although many valuable reservations have been made, it is greatly to be feared that the public interests have not always been sufficiently protected. In view of the different degrees of importance which so large a number of officers might be expected to attach to an instruction of this kind, and to the circumstances under which the alienation of the public lands have taken place, it would be strange if some errors were not committed; and perhaps on the whole there is reason for gratulation that even so much prudence and forethought have been exercised. The Surveyor-General, recognizing that certain indefinite riparian rights would be conferred by the alienation of Crown Lands with frontage to lagoons, swamps, and lakes, has embodied in the regulations for the guidance of licensed surveyors, a direction that the contour of such swamps and lakes should not be treated as a boundary, but that the land to be alienated should be defined by right lines, and the instruction is apparently designed to avoid giving a right to their beds as far as possible without direct legislation. Throughout the Colony, more particularly along the navigable streams of the Murray and Murrumbidgee, a large quantity of land has been sold of which the rivers form part of the boundaries, and thus riparian rights, whatever they may be worth, have been alienated. In the administration of the law, so far, dams have always been recognized by the Government as improvements, in virtue of which special concessions have been made to the pastoral lessee. This departmental encouragement, however, to private individuals to conserve water has no legal validity as against the rights of other owners whose land has frontage to the watercourse. Many such dams have been cut away in reliance upon the riparian doctrine which entitles all who have frontage to a stream

to the undiminished flow of its waters, subject only to the limitation of reasonable use. The sense of insecurity which prevails in regard to the legality of dams has operated very powerfully to discourage the construction of such works, although in many localities they form the best means available of storing surface water. The antagonism which has been shown to the erection of dams has doubtless been intensified by the absence of any regulation as to their height and other details of construction, and there has been an impression, in many cases well founded, that the dams which have been constructed have been designed so as to divert the water from its natural channel, thereby causing a waste over the plains.

We are of opinion that the doctrine of riparian rights which obtains under the common law of England is not applicable to the conditions of Australia, and that it is calculated to be a very serious obstacle to the progress of this Colony, in so far as that progress depends upon the conservation of water. In Victoria no such rights can accrue, because the frontages to all rivers are reserved from sale; but, inasmuch as a different policy has been pursued here, and alienations have taken place which involve the legal right of ownership to the middle of the bed of a stream, it seemed desirable that we should obtain a clear definition of what riparian rights are. In addition to valuable suggestions on the subject of riparian rights, we have been favoured with the following memorandum on the subject from Mr. Alex. Oliver, M.A., Parliamentary Draftsman:—

English law inapplicable to Australia.

Memorandum by Mr. Alex. Oliver.

Riparian rights as existing by the Common Law of England, are rights which are annexed to the ownership of land through or past which a river runs; and derivatively to all persons having a right of access to such a river.

Riparian rights do not attach quoad the bed or alveus, but only quoad the bank of a river.

Two kinds of rivers are known to the Common Law: 1. Public navigable rivers in which the tide ebbs and flows, and of which the ownership of the bed is *prima facie* in the Crown. 2. Private rivers or streams beyond the ebb and flow of the tide, which by use or statute have in many cases become subject to public rights of navigation, fishing, &c.

If such a river runs through the land of a private individual he is at common law *prima facie* the owner of that river's bed; if it separates the properties of two persons each is *prima facie*, the owner of the bed of the river to the central line of the stream, or, as it is termed, *ad medium filum aquæ*.

When the Crown assumed sovereign rights over the Australian Colonies, then known collectively as New Holland, the beds of all the rivers, navigable or not, became vested in the Crown in the same way as the *terra firma* itself. And the Crown at this day is the absolute owner of the beds of all rivers (which in England would be considered *prima facie* the property of the frontage proprietors *ad medium filum*) so long as the ownership of the frontages to those rivers remains in the Crown. But it is probably settled law, since the decision in Lord v. the Commissioner of the City of Sydney, a case which went home afterwards on appeal to the Privy Council, that upon the alienation in fee of frontages to rivers which are not navigable, and in which the tide does not ebb and flow, the ownership of the beds of such rivers passes to the *alienee ad medium filum*.

It is apprehended that derivative riparian rights can be claimed by a Lessee of Crown Lands or by any person deriving title through alienee of riparian land.

It is also apprehended that no riparian rights in the proper sense of the expression attach to ownership of the frontage to a lake, pond, or other stagnant water.

In England if a private river is subject to the right of public navigation (a very common case) the owners of the bed may, as against the public, do what they like with the water and the bed of the river, provided they do not obstruct the navigation.

That is a case which I do not think can occur in this Colony.

In this Colony a large number of rivers are navigable only at certain seasons of the year, and some are only navigable after floods or exceptionally wet seasons.

Nevertheless, I think it would be held by our Courts that a river once navigable remains always a navigable river, and that in that case the Crown does not part with its estate in the bed of such a river. What, however, would be considered to constitute navigability in regard to the draught of water of the navigating vessel, it is difficult to say. The point has never arisen, and indeed very few cases have come before our Courts in which riparian rights have come up for consideration or determination, or in which the public or private character of our rivers, streams, and watercourses has been considered and defined.

The following extracts from decisions of high authority comprise nearly all the common law doctrine in respect of riparian rights to the use of flowing waters which are likely to be of any practical use to the Commission:—

In *Tyler* v. *Wilkinson* (4 Masons U.S. Reports 397), Mr. Justice Story laid it down that "*prima facie* (*i.e.*, the law presumes) every proprietor upon each bank of a river is entitled to the land covered with water in front of this bank to the middle thread of the stream, or, as it is commonly expressed, *ad medium filum aquæ*. In virtue of his ownership he has a right to the use of the water flowing over it in its natural current, without diminution or obstruction."

In *Embrey* v. *Owen* (6 Exch. Rep. 369) a Judge of the greatest eminence, Baron Parke, stated it as a clear proposition of law that the right to have the stream to flow in its natural state without diminution or alteration is an incident to the property in the land through which it passes; but flowing water is *publici juris*,

juris, not in the sense that it is a *bonum vacans* to which the first occupant may acquire an exclusive right, but that it is public and common in the sense only that all may reasonably use it who have a right of access to it; that none can have any property in the water itself, except in the particular portion which he may choose to abstract from the stream and take into his possession, and that during the time of his possession; but each proprietor of the adjacent land has the right to the usufruct of the stream which flows through it.

The logical consequences following from the principle that no riparian proprietor has any *property* in the water, but only the user of it as it passes along, are thus expanded by Mr. Justice Story, in the leading case of *Tyler* v. *Wilkinson* cited above:—

"The consequence of this principle is, that no proprietor has a right to use the water to the prejudice of another. It is wholly immaterial whether the party be a proprietor above or below in the course of the river, the right being common to all the proprietors on the river; no one has a right to diminish the quantity which will, according to the natural current, flow to a proprietor below, or to throw it back upon a proprietor above. This is the necessary result of the perfect equality of right among all the proprietors of that which is common to all. The natural stream, existing by the bounty of Providence for the benefit of the land through which it flows, is an incident annexed, by operation of law, to the land itself. When I speak of this common right, I do not mean to be understood as holding the doctrine that there can be no diminution whatsoever, and no obstruction or impediment whatsoever, by a riparian proprietor in the use of the water as it flows, for that would be to deny any valuable use of it. There may be, and there must be allowed to all, a reasonable use. The true test of the principle and extent of the use is—whether it is to the injury of the other proprietors or not. There may be a diminution in quantity, or a retardation or acceleration of the natural current indispensable for the general and valuable use of the water, perfectly consistent with the common right. The diminution, retardation, or acceleration, not positively and sensibly injurious, by diminishing the value of the common right, is an implied element in the right of using the stream at all. The law here, as in many other cases, acts with a reasonable reference to public convenience and general good, and is not betrayed into a narrow strictness, subversive of common sense, which would destroy public rights. The maxim is applied, *sic utere tuo ut alienum non ludas.*"

As to the extent and nature of a riparian proprietor's right to the flow of water, the following extract from the judgment of the Privy Council in *Miner* v. *Gilmour*, a Canadian case, 12 Moore P.C. 156, may be useful:—

"By the general law applicable to running streams, every riparian proprietor has a right to what may be called the ordinary use of the water flowing past his land; for instance, for the reasonable use of the water for his domestic purposes and for his cattle, and this without regard to the effect which such use may have in case of a deficiency upon proprietors lower down the stream. But further, he has a right to the use of it for any purpose, or what may be deemed the extraordinary use of it, provided that he does not thereby interfere with the rights of other proprietors either above or below him. Subject to this condition, he may dam up the stream for the purpose of a mill, or divert the water for the purpose of irrigation; but he has no right to interrupt the regular flow of the stream if he thereby interferes with the lawful use of the water by other proprietors, and inflicts upon them a sensible injury."

Difference in English and Australian conditions.

The doctrine of riparian rights as enunciated above appears better adapted to England, where the people are more concerned to drain off the water as quickly as possible than to New South Wales, where the all-important question is how best to retain it. The unwritten law may be appealed to by a riparian proprietor to restrain the action of those who construct works which have the effect of depriving him of participation in the advantages of a flowing stream, or who makes such a diversion of the water as would inundate his land; but the position with which we have to deal is not so much with flowing water as with dry channels through which water flows only at long and irregular intervals. It is required that these watercourses should be made to hold water—to be in effect converted into inundation canals; but this would not be possible under the present state of the law, by which any litigious person could if so minded interpose a bar to the erection of weirs or other works. We believe there is a large amount of uncertainty as to what the application of the common law of England would be in cases which might be brought before the Courts, inasmuch as those cases would be founded upon circumstances entirely novel, and to which no analogy could probably be discovered in causes tried elsewhere. A few out of many cases which could be supposed have been stated by Mr. Oliver (*Vide University Review*, July, 1882), in support of the view that special legislation is urgently needed "to define rights and prevent wrongs."

Cases like the following occur repeatedly: A constructs a dam, say half a mile long, across a shallow watercourse. This dam prevents any average rainfall from benefiting the lower runs of B, C, and D. Can B, C, and D cut that dam and remove the obstruction? Or suppose a heavy rainfall, and flood-water escaping at the extremities of the dam, converts the runs of B, C, and D into a swamp, without re-entering the line of the watercourse. What redress has B, C, or D? These are cases likely to recur no many runs in the district under consideration. Again, is a lessee entitled to construct a weir in a permanent or any other watercourse, in order to divert flood-water over his run? And if so, under what conditions? There is no power, express or implied, given to a lessee to cut a channel through ever so narrow a strip of his neighbour's run, in order to take water from a river to a billabong or watercourse, and so to perhaps a score or more waterless back runs. Can he exercise the power, even if the strip is made part of a reserve?

Further,

Further, suppose that A excavates the site of a large dam or tank, and that before rain comes B and some other employés, having had a quarrel with A, free-select the site. Or suppose the same thing happens in case of a well sunk for artesian water, a few hundred feet, but without tapping water. In either case, it is said, is a dam, tank, or well without water considered an improvement capable of barring selection. What is A's remedy? Has he any at all in the first case? And in the second, is it to take up a 40-acre mineral conditional purchase at 40s. per acre, or apply for a special lease at (say) £10 per annum for five years? Or suppose this same A constructs a large dam, and a series of wells and tanks, sufficient to serve five or six blocks of 25 square miles each; no rain comes to fill them; he however applies for an extension of his lease under that 15th section of the Occupation Act already noticed, is he entitled to the extension?

Retention of rights by Victoria.

The sister Colony of Victoria has not parted with this riparian right, except, perhaps, in the case of a few old grants made before the Colony enacted its own legislation on the subject. We are not aware of the extent to which riparian rights have been alienated in this Colony, but we apprehend that there ought to be no difficulty in superseding the presumption of the English Common Law by a clear enactment of State ownership; for the common law, as we understand it, only gives a riparian owner power to use so much of the water of a river as he requires for his own consumption and that of his stock, while the object and effect of the principle of State-ownership would be to increase the supply of water which now often wholly fails, and to make it permanent. We do not imagine that the rights of riparian owners, when water is provided for their requirements, can give any claim to compensation. If, however, we had reason to think otherwise, we should still be of opinion that State-ownership to all rivers and watercourses is so essential to any widely beneficial scheme for providing and supplying water as to make it desirable that the Government should resume the title to ownership by giving compensation. Public policy hitherto has jealously asserted the right of the State, or of municipal bodies delegated by the State to all the main arteries of communication such as roads and streets, and has kept in the hands of the Government the sole right to construct and manage railways (with few immaterial exceptions), and telegraphs; and when the value of the water-courses of the country come to be properly estimated it will be seen that the policy which is designed to protect the interests of the community as a whole against the exactions of private monopolies should be applied to water conservation as it has been to roads, railways, and telegraphs, to which it is quite as applicable, if not indeed far more so.

Private enterprise.

By the above provision for State ownership over all rivers and watercourses we do not propose to prohibit private enterprise by capitalized companies or syndicates for the purpose of undertaking works for the irrigation of land, for the water supply of towns, and for the promotion of the mining and manufacturing industries. On the contrary, we recommend that certain concessions and privileges, with regard to diverting water from any stream or river, and as to the use of such water supply, should be granted to such companies or syndicates: Provided always that the works necessary for any such enterprise do not interfere with any general system of irrigation, and shall be of public utility, that the purpose of such enterprise shall be first submitted to Parliament in the shape of a Private Bill, and that such privileges shall only be granted for a limited period, according to the cost and character of the enterprise.

LEGISLATION FOR THE CONSERVATION AND UTILIZATION OF WATER IN NEW SOUTH WALES.

In considering the subject of Legislation on Water Conservation we have examined the enactments which have been passed on the subject of water conservation and supply in the various countries which seem most likely to furnish examples worth imitation, and have drawn conclusions therefrom which are embraced in the form of a rough draft of a Bill.

Though we suggest the provisions herein mentioned as only the most important points in the outline of required legislation, still, in preparing even a rough draft of an Act, it seemed best to follow the phraseology adopted in legal enactments.

Reasons in favour of the majority of the clauses are given in the notes after the various chapters. In the cases in which no explanations are given it was deemed that none were required.

For convenience and system of arrangement, we have divided the subject under parts or chapters as follows :—

PART I.—*Preliminary.*
PART II.—*Definition of Water-rights.*
PART III.—*National Administration—Board.*
PART IV.—*District Administration—Local Water Trusts.*
PART V.—*Loans—how sanctioned, incurred, and repaid.*
PART VI.—*Drainage Works.*
PART VII.—*Navigation.*
PART VIII.—*Offences and Penalties.*

NEW SOUTH WALES.

An Act to provide for the Conservation and Utilization of Water for Irrigation and other purposes.

Preamble.

WHEREAS it is expedient to define the public right in all rivers and streams flowing in natural courses, and in all lakes or other natural collections of still water, and to establish a system for the conservation and distribution of the water flowing or contained in such rivers, streams, and lakes, whether above or beneath the surface of the ground: Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales, in Parliament assembled, and by the authority of the same, as follows, that is to say :—

PART I.—PRELIMINARY.

Title of Act.

1. This Act may be called "The Water Conservation and Utilization Act," and it shall come into force on receiving the sanction of the Governor.

Repeal of portions of Act at variance with this.

2. So much of the "Municipalities Act of 1867," and of "The Country Towns Water and Sewerage Act of 1880," as is repugnant to the provisions of this Act in respect of the construction or maintenance of work, or the storage, distribution, or supply of water, or in respect of the borrowing of money, the valuation of property, and the fixing and levying of rates, is hereby repealed, but only so far as the said enactment might be construed to control or limit the provisions of this Act.

NOTES AND EXPLANATIONS.

Notes and Explanations regarding PART I.

In the preamble of the Bill we have adopted the same style as in the Country Towns Water and Sewerage Act of New South Wales, but the wording of the important part of it follows closely the preamble of the Northern India Canal and Drainage Act. The name proposed for the Bill is suggested as being both brief and comprehensive. **Preamble and name**

2. The Acts mentioned in section 2 would, in some respects, interfere with the administration of this Act. The method of dealing with these Acts is precisely that adopted under similar circumstances in section 2 of the "Country Towns Water and Sewerage Act of 1880." **Repeal of certain clauses in Acts.**

Repeal of parts of Mining Act of 1874.

3. Section II, paragraph 15, of the "Mining Act of 1874," is hereby repealed absolutely, and all other portions of the same Act which are at variance with this Act are also hereby repealed, but only so far as the said Mining Act might be construed to control or limit the provisions of this Act.

Definitions.

4. In this Act, unless there be something repugnant in the subject or context, the following terms in inverted commas shall have the respective meanings hereby assigned to them :—

"Government"—The Governor, with the advice of the Executive Council.

"Minister"—The Colonial Secretary for the time being, or other member of the Government acting on his behalf.

"Board" or "Central Board"—The Central Board for Water Conservation and Utilization as constituted under this Act.

"Trust" or Water Trust"—Any Local Council appointed under the terms of this Act to design, construct, administer, or maintain local works for water conservation and utilization, or for drainage.

"Trust District"—The portion of the Colony included within the jurisdiction of a Trust as constituted by this Act.

"Water rights"—The right, title, and interest to a supply of water from any source, whether above or beneath the ground.

"River"—Any stream of water, whether perennial or intermittent, flowing in a natural bed or course, either above or beneath the surface of the ground.

"Lake"—Any lagoon, swamp, lake, or other collection of still water, whether this supply of still water be permanent or temporary, and whether it is found above or beneath the surface of the ground.

"Domestic use"—When employed with reference to water supply, includes use for drinking, culinary operations, baths, and washing; but does not include use for irrigation of gardens, or for watering or washing stock.

"Stock"—Cattle, horses, sheep, and all other domestic animals.

"Watercourse"—Any stream of water of smaller dimensions and discharge than would entitle it to the name of "river" as this term is generally understood, whether such stream of water be permanent or intermittent, and whether its flow be above or beneath the ground, or partly above and partly beneath.

PART II.—Definition of Water Rights.

5. To the Crown belong—subject to the provisions of section 6 of this Act :—

State rights.

(*a*) The water flowing or contained in every river, stream, creek, or watercourse, whether the said river, stream, creek, or watercourse be permanent or intermittent, and whether the whole or only portion of the land through, under, or adjacent to which such flow takes place belongs to the Crown.

State property in lakes.

(*b*) The water contained in every lake, swamp, lagoon, or other collection of still water, situated wholly or partially within or under Crown Lands, whether the supply of water in such lake, swamp, lagoon, or other collection of still water be permanent or intermittent.

State property in lakes.

(*c*) The water contained in every lake, swamp, lagoon, or other collection of water supplied wholly or partially by a river, stream, or creek, belonging to the Crown, whether such lake, swamp, lagoon, or other collection of water be situated on, within, or under Crown Lands or private lands, or lands belonging partly to the Crown and partly to private individuals.

NOTES AND EXPLANATIONS.

3. This paragraph regarding miners' rights is required to prevent confusion, and to bring the administration of the water supply under one complete system. It is believed that, under the arrangements now proposed, namely, the constitution of Water Trusts, the supply of water for mining purposes and for the domestic use of miners will be placed on a much more satisfactory footing, and in a more favourable position for the development of private enterprise. Miners' rights.

Notes and Explanations regarding PART II.

5. This section and the next are among the most important in the Bill, and must be accepted as the basis of legislation. In California and Colorado the future prospects of remunerative irrigation are seriously imperilled, either by a want of a clear definition of the State rights, or by neglect to maintain those rights, or by pernicious legislation, through which permanent right to rivers has been wholly or partially transferred to private individuals. In Italy, France, Spain, and India, questions regarding water rights and the conservation and distribution of the water supply have been practically set at rest by successful and beneficial legislation. In Article 420 of the Italian Civil Code, the following rule is stated regarding the rights of the State:—"The rivers and torrents, and generally all those portions of the territory of the State which cannot become private property, are considered as dependencies of the royal domain." Article 33 of the Spanish Law of Waters is as follows:—"There pertain to the public or public property

(i) The waters which spring perennially or intermittently within the public lands.
(ii) Those of the rivers.
(iii) Those, whether perennial or intermittent, of the springs and torrents which flow through their natural channels."

Similar regulations prevail in France. In India the preamble of the Northern India Canal and Drainage Act begins with the words—"Whereas throughout the territories to which this Act extends the Government is entitled to use and control for public purposes the water of all rivers and streams flowing in natural channels and of all lakes and other natural collections of still water," thus assuming the Government right as a starting-point for legislation. The declaration of the rights of the Crown in a river or lake bed is necessary, though we have not found it clearly enunciated in any legal enactment. It is, however, mentioned by Mr. W. H. Hall in his work on "Problems of Irrigation," that in France "the tendency of decisions and administrative rulings is towards a declaration of ownership by the nation of the beds of streams, so long as they are occupied by the waters." Definition of State rights.

State right to springs.

(*d*) All springs situated within Crown Lands, and all springs whether situated in Crown Lands or in private property which have overflowed into or contributed water to any river, creek, stream, or lake, belonging to the Crown.

Right of Crown to bed of rivers and lakes.

(*e*) The right to control for the purposes of this Act the land covered either permanently or intermittently by the water of any river, creek, stream, or lake.

6. The owner, lessee, or occupier of any land shall in virtue of such ownership, occupation, or right of possession, have a right to the use of water as follows, that is to say :—

General limit to private ownership of water.

(*a*) The whole of the rain which falls on such land, with the exceptions or additions described in section 7.

Riparian rights limited.

(*b*) So much of the water of any river, stream, creek, lagoon, or lake adjoining such land as is required by the said owner, lessee, or occupier, for domestic use and for the watering of stock, provided always that no owner, lessee, or occupier of such land shall have a right to a larger supply of water than at the rate of 2,000 gallons per day for every mile of river, or lake frontage.

Rights already acquired.

(*c*) Any rights, whether permanent or temporary, which have been acquired under the Mining Act of 1874 or under any other Act or regulation in force prior to the passing of this Act.

Right to springs.

(*d*) The exclusive right to the use of any spring of water rising or situated in such land, if neither any other person or persons, nor any corporation, nor the Government has acquired a right to such spring or to a portion of the water from it by uninterrupted use for a period of not less than twenty years.

Right of landowner to underground supply.

(*e*) All the water found under the surface of such land, and the said owner, lessee, or occupier may make any lawful use of such underground supply ; but no owner, lessee, or occupier of land has a right to use the underground supply in such manner or to such extent as to affect injuriously the supply in any well or boring previously existing in any adjoining property.

Acquisition of water-rights.

7. Whenever the owner, lessee, or occupier of any land has been for a period of not less than twenty years allowed the use free of charge or hindrance of a supply of water, whether permanent or intermittent, running from or through or situated in any other land, such owner, lessee, or occupier shall have a permanent right to the use of such supply of water; but the water to which a right may in this manner be acquired may be used only for domestic purposes and for watering stock.

Limitation of acquired rights.

8. Wherever a right has been established to a supply of water from or through any land not owned, occupied or leased by the person or persons by whom such right has been acquired, the owner, lessee, or occupier of such land may appeal to a Water Trust or to the Board for a limitation of such right, and when making such appeal shall send a copy thereof to the person who has established the said right. After the service of such notice of appeal, the person who has established the said right will have no power or authority to take from the same source any water in excess of the quantity which he has already been in the habit of obtaining, unless and until the Board or the Local Trust having jurisdiction in the district in which such supply is situated shall otherwise order or permit.

Compensation for interference with water-rights.

9. Any person who has under this Act a right to a supply of water from a river, creek, stream, lagoon, or lake, or from any spring, or from any underground source, may claim and obtain compensation if such supply be prejudicially interfered with by the construction of any canal, channel, cutting, well, or boring, or by the erection and working of any machine, or by any other means whereby such supply of water has been diminished in quantity or rendered less useful than it was previous to the construction, erection, or bringing into operation of any such means of interfering with the supply; but on the person

NOTES AND EXPLANATIONS.

Individual rights to water.

6. The rights of private individuals are dealt with in this section, and the statement of ownership to water is on the lines of the Spanish Law of Waters, in which Article 30 is as follows :—"There belongs to the owner of an estate the rain water which falls or is collected on it while passing through it ; he may, in consequence, within his own property, construct cisterns, tanks, ponds, or reservoirs to preserve it, always providing it does not injure the public or third parties." The definition of the extent of riparian rights is based partly on Article 166 of the Spanish Law of Waters, which lays down the rule that "while waters run through their natural and public channels all may use them for drinking, washing clothes, vessels, or any other kind of object, for bathing, or watering or washing horses and cattle, subject to the rules and restrictions of municipal police." Regarding the limit to the quantity allowed to a riparian owner or occupier, we have assumed that 2,000 gallons per day is the maximum quantity which a riparian owner or occupier would require for domestic use and for the stock, which could receive a supply direct from the river or lake, under the terms of this Act. As already explained in the notes on Part I, this Act is intended to provide for the conservation and distribution of water for all purposes, and the Trusts constituted under it may be Trusts for irrigation or for pastoral or mining purposes. After the passing of this Act, water rights can be obtained only in accordance with its provisions ; but it is necessary to recognize existing rights of miners and of others who have acquired water rights in a legal manner, and clause (*c*) of this section is intended to meet such cases. Clauses (*d*) and (*e*) of this section on the subject of rights to springs and underground supplies are in accordance with Article 33 of the Spanish Law of Waters, which has already been quoted, and also in accordance with Article 540 of the Italian Civil Code, which is as follows :—"Whoever has a spring on his estate may use it at his pleasure, saving the right which the owner of a lower estate may have acquired by title or prescription."

Acquisition and limitation of water rights.

7. and 8. These sections, dealing with the acquisition of right to water and the limitation of those rights, are in accordance with principles of equity, and in harmony with the spirit of this Act.

Onus of proof.

Principles on which compensation can be granted.

9. Section 9, throwing the onus of proof on claimants for damages in cases concerning water rights, and defining the principles on which compensation can be obtained, is based to some extent on the Indian Canal Act.

Onus of proof of claims.

making any such claim for compensation will rest the onus of proof that actual damage has been done to him, and no compensation shall be allowed unless the said claimant shall prove that he is unable to obtain as much water of useful quality as he was in the habit of obtaining prior to the abstraction of the supply on account of which compensation is claimed.

Restrictions as to conveying water to a distance from source of supply.

10. Wherever the owner, lessee, or occupier of land adjoining a river or lake has already arranged or wishes to arrange for the abstraction or diversion of a supply of water for domestic use, or for the use of stock, and for the conveyance of such supply whether in natural or artificial channels to a distance of more than 1 mile from such river or lake, a license for the abstraction or diversion of such supply must be obtained from the Board or from the Water Trust having jurisdiction in such case. Wherever supplies for domestic use or for stock are now being conveyed or diverted from any river or lake to distances exceeding 1 mile from such river or lake, the owner, lessee, manager, or user of such arrangement or appliance must, within three months after the passing of this Act, obtain a license for the further use of such arrangement or appliance.

Frontage, how measured.

11. Frontage to a river or lake, as referred to in section 6 or elsewhere in this Act, shall be taken to be the length measured along the edge of the water in a river or lake at the time of abstraction or diversion of the supply.

Limitation of water-rights.

12. No owner, lessee, or occupier of land adjoining a river or lake has any right, power, or authority to interfere in any way with the flow or the supply of water in such river or lake except to the extent and for the purposes detailed in this Act.

Waste of water prohibited.

13. No owner, lessee, or occupier of land adjoining a river or lake has a right to abstract or divert from such river or lake for domestic use or for stock a larger supply of water than he requires. Any breach of this regulation or any loss of water through defective channels or other causes shall render the defaulter in such case liable to the penalties fixed under this Act for waste of water.

Rights of Municipality not to be interfered with.

14. Wherever any arrangements have been made, or are in progress, or have been officially proposed, in connection with the drainage or the water supply of any Municipality or union of Municipalities, such arrangement or proposed arrangement shall not be in any way intefered with by the Board or by any Water Trust except by agreement with such Municipality or union of Municipalities.

Right of riparian owners to use of beds of rivers and lakes.

15. Where water ceases to flow or to be stored over the whole or a portion of the bed of a river, creek, stream, or lake belonging to the Crown, the owners, lessees, or occupiers of the adjoining land have a right to the use of the land thus left clear of water; provided always that the bed of such river, stream, or lake shall not be used in such manner as to alter, diminish, or retard the flow of water in any river or stream, or diminish the holding capability or capacity of any lake.

Present trespass on Crown rights.

16. Wherever in contravention of Crown rights a supply of water has been drawn from any river, creek, stream, lagoon, or lake, whether by pumping or other lifting machinery, or by artificially raising the water level, or by canals, drains, or pipes, or by any combination or modification of these means, the works so done and the machinery or appliances so used shall, after the passing of this Act, be inspected and reported on by an officer acting for or empowered by the Board; and if the continued operation of such works, machinery, or appliances be not detrimental to public interests a license shall be granted to the owner, lessee, or manager of such works under such conditions as the Board may deem necessary in the interests of the Government, and such license must be renewed at least once in every five years.

Limit of time for application for license.

17. If in any case after such inspection of works, machinery, or appliances as described in section 15, which have been used, or are intended to be used, for the purpose of obtaining a supply of water from a river, creek, stream, or lake, the owner, lessee, or manager of such works, machinery, or appliances neglect to apply for a license

NOTES AND EXPLANATIONS.

License required for conveying a supply of water more than 1 mile.

10. This regulation that a license should be obtained for permission to carry water from a river or lake to a distance of more than 1 mile from such river or lake is suggested chiefly in order that the arrangements for the conveyance of the water should be more directly under the control of the proposed Board. It need scarcely be pointed out that it would be easy to convey water in such a manner as to irrigate a strip of land by means of the water escaping by percolation or otherwise from the channel conveying it. This would be an evasion of the regulation that water used for irrigation must be paid for; any such evasion would be prevented by a license which could be cancelled if its terms were not strictly attended to.

Definition and limitation of riparian rights.

11 and 12. These sections are necessary corollaries to 6 in regard to the limitation of water rights.

Prohibition of waste

13. The prohibition of waste is a useful point, and one which has been found necessary in all cases where anything like complete legislation on the subject of water conservation has been carried out. The Italian rule on this point is that "irrigators who have legitimate titles to water their lands possess no right to the surplus waters, which shall be allowed to flow freely to the rivers, for the benefit of proprietors below." "The Northern India Canal and Drainage Act" orders a penalty for waste of water under any circumstances where proper precautions have not been taken.

Exemption of Municipalities.

14. This paragraph is intended to exempt from the operation of this Act all towns and municipalities which have already acquired vested interests in any river or stream, or in any catchment area.

Private rights to beds of rivers and creeks.

15. The right of riparian owners or occupiers to the use of the beds of rivers or lakes appears to be generally understood; but we have not found it clearly enunciated in any recent legislation. There is no question of the necessity for a clear statement of the law on this subject.

Trespass on Crown rights.

16. It is well known that in a number of cases water has been and is now being taken from rivers and lakes for irrigation and other purposes. These works are the result of private enterprise, and the owners of them should be dealt with in a liberal spirit. Still such works must be carried out and maintained only under Government sanction, and as those in existence have been carried out without any legal right or sanction no time should be lost in putting these matters on a proper footing. That their owners understand that the works of this kind which are in existence have been carried out and maintained under sufferance only was shown by the evidence of at least one important witness examined by the Commission. This gentleman, who has pumping machinery erected on the Murrumbidgee, stated that he was quite prepared for the contingency of being required by the owners of property further down the river to suspend or stop his pumping operations.

Limit of period for application for license.

17. This section is a necessary sequel to the last.

within ten days after the notification of the result of such inspection the said owner, lessee, or manager shall be liable to the penalty fixed by this Act for illegally using water.

PART III.—National Administration—Board.

Appointment of Board.

18. For the management under this Act of all rivers, streams, creeks, lakes, springs, and underground supplies of water in the Colony of New South Wales, it is hereby ordered that a Board for Water Conservation and Utilization shall be appointed without delay after the passing of this Act.

Constitution of Board.

19. The Board shall consist of a Chairman or President and members. The Chairman of the Board shall be a permanent Government officer specially appointed for the purpose of the administration of this Act, and shall devote the whole of his time to the duties of this office. The members of the Board shall also be appointed by Government, and shall hold office permanently, but their duties shall extend only to attendance at meetings of the Board and the despatch of business brought before such meetings.

Duties of Engineer to the Board.

20. The Government shall appoint an Engineer, whose duty it will be to examine into and report on the propriety, practicability, and probable results of work proposed by Trusts, and to carry out works undertaken by the Government.

Establishment, permanent and temporary.

21. The Government shall have power to appoint any further permanent or temporary staff necessary for the administration of this Act.

Powers of the Board

22. Subject to the sanction of Government, the Board shall have authority to fix the boundaries of districts to be administered by Local Trusts, and to alter, enlarge, diminish, unite, or separate such Trusts and Trust Districts, and to alter the name of any Trust or Trust District.

Works for water conservation to be inquired into and sanctioned by the Board.

23. The Board shall inquire into and decide on the propriety of sanctioning any work for water conservation and utilization, or for drainage, proposed by any owners, lessees, or occupiers of land, or by a local Trust. If such works appear to the Board to be of a proper and useful description, and if no loan be required by the Trust for the carrying out of such works, the Board may sanction the commencement and prosecution of such works by the said owners, lessees, or occupiers of land, or by the said Trust.

Projects for which loans are applied for by Trusts.

24. When a Trust proposes to carry out works for the purpose of the conservation and utilization of water, or for drainage, and applies for a loan guaranteed by Government to enable it to complete such works, the Board shall examine the plans and estimates of such works, and shall require the aforesaid Trust to supply any further information which may appear necessary. The Board may also, through its officers, carry out such levels, surveys, measurements, and investigations as may be required to furnish a satisfactory check on the surveys, designs, and estimates for the proposed works. The Board shall then report to Government on the propriety, feasibility, and cost of the proposed works, and on the profit likely to be obtained from the construction of the said works, and shall make such recommendations to the Government as it may deem just and necessary in regard to the propriety of granting the whole or a portion of the loan applied for.

Works carried out by Trusts to be subject to approval of Board.

25. No work, whether for water conservation and utilization, or for drainage, which affects in any way the rights of the Crown, as described in section 5 of this Act, shall be undertaken without the sanction of the Board; and every such work, whether carried out by a Trust, or by the owner, lessee, or occupier of land, shall, both as to construction and maintenance, be subject to the inspection and approval of the Board or its officers.

Tenders to be called for publicly.

26. Tenders for works for water conservation and utilization, or for drainage, whether such works are to be carried out under the direct management of the Board or under Trusts, must be called for by public

NOTES AND EXPLANATIONS.

Notes and Explanations regarding PART III.

It may be remarked here at the outset that the necessity for a Board was in a large measure suggested by the defects in Victorian legislation, as pointed out by the Secretary to the Commission in his Report on the Conservation of Water in Victoria.

Appointment of Board.

18. The appointment of a Board, as proposed in this section, will ensure the administration of water conservation and supply on a complete and uniform system, while the organization of Water Trusts will provide for attention to local wants and the economical treatment of details and maintenance. It appears to us that, by the appointment of the Board here proposed, the weak points in the Victorian legislation, which have been remarked on in the Secretary's Report already referred to, will be provided against. An attempt is now being made in India to place the maintenance and management of irrigation distributaries under the charge of the village communities benefiting by them. The system there aimed at is almost an exact parallel to that now proposed. The Board would have powers similar to those possessed by the Irrigation Department, while the village communities would be in the position of Local Water Trusts. In the south of France the irrigation works, with the exception of the Marseilles Canal, which is only partially intended for irrigation purposes, are carried out and managed under a system almost identical with that now suggested. There the Public Works Department of France occupies almost the same position as that of the Board, while the Associations of Landholders correspond very closely with the Water Trusts.

Power of Board to define Trust Districts.

22. The power of the Board to settle the boundaries of Trust Districts, subject to the sanction of Government, is similar to that reserved to the Government of Victoria, in Act 778 of 1883.

Duties and powers of Trusts.

23 to 28. These sections are specially intended to provide against the defects pointed out by the Secretary of this Commission, in his Report to the President regarding Victorian water conservation.

advertisement in the same manner as in the case of Government contracts. If the tenders have been advertised for by a Trust, and if the proposed works are intended to be constructed wholly or partially by money lent or guaranteed by Government, such Trust shall examine the tenders and shall forward them to the Board, with a report stating the opinions of the said Trust regarding the tenders. The Board shall then decide which tender shall be accepted, and shall direct the local Trust accordingly.

Acceptance of tenders for works to be carried out by loans.

Loan works to be carried out by contract.

27. When works are carried out by Trusts, with the aid of funds lent or guaranteed by Government, only contract work shall be engaged, and the terms of every such contract, and the nature and amount of security required, must be approved by the Board before tenders are invited.

Accounts of Trusts to be open to inspection.

28. The certificates and vouchers for all payments for work done by Trusts, with the aid of loans obtained from or guaranteed by Government, must be countersigned by the Chairman and Engineer of the Board, and all accounts in connection with such works shall at all times be accessible for inspection by the Board and its officers.

Powers to make surveys and carry out works.

29. Subject to the sanction of the Government, the Board, through its own officers, aided, if necessary, by a temporary staff, may carry on surveys and prepare designs and estimates for work. It may also, subject to the same provision, call for tenders and carry out works for water conservation and utilization, or for drainage.

Local works to be managed by Local Trusts.

30. On the completion of works carried out under the immediate directions of the Board, the charge of the maintenance and administration of such works shall, as soon as can be arranged, be transferred by the Board to one or more Water Trusts.

Powers of Board.

31. For the purposes of this Act the Board shall have power, by itself or its officers, or by Water Trusts or their officers, to enter on any land, remove any obstruction, close, open, or alter in any way any channel, stream, creek, or river, take levels, make surveys and measurements, and do any excavation or construct any works, or do anything that may appear necessary or expedient in connection with any works, whether such works be done or are in progress, or proposed to be done. The Board may also resume, purchase, or lease any water privileges which may have been acquired previous to the passing of this Act.

Compensation to be paid for damage done under this Act.

32. Whenever any person employed in pursuance of this Act shall, while in the execution of his duties, cause injury to land or fences or other property, or shall cause loss or damage to any owner or occupier of land or other property, the Trust or other authority under which such person is employed shall be liable for all such injury, loss, or damage.

Limitation of time within which claims will be admitted.

33. Claims for compensation on account of injury, loss, or damage caused to persons or property by any person employed under this Act, must be made within one month after such injury, loss, or damage is sustained; and no claims of such description made after the lapse of more than one month from the date of occurrence of such injury, loss, or damage, shall be valid, unless satisfactory reason be shown for the delay in preferring such claims.

Compensation may be settled by arbitration.

34. When any person claims compensation from a Trust on account of injury, loss, or damage sustained, and such claim is disputed by the said Trust, the settlement of the amount of compensation (if any) may, with the joint consent of such Trust and such claimant, be submitted to arbitration. In such case one arbitrator shall be appointed by the said Trust and one by the said claimant; and should such arbitrators fail to agree as to compensation they shall appoint an umpire, whose opinion as touching the question or questions in dispute shall be final. If the amount awarded by such arbitrators be not at least two-thirds of the amount claimed as compensation, the said claimant shall pay all the costs and expenses of such arbitrators.

Power to obtain water-rights from Municipalities.

35. The Board shall, for the purposes of this Act, and with the sanction of Government, have the power to obtain from any Municipality, or combination of Municipalities, by agreement with the said

NOTES AND EXPLANATIONS.

29 and 31. In these sections the general powers of the Board are stated; the powers provided being similar to those secured to Government in India, in New South Wales, and in Victoria, in cases relating to the construction and management of public works. Powers of Board.

30. In this section the management of works for water conservation and supply is ordered to be placed in charge of those directly interested. This is the general practice in France, Italy, and Spain, and it is the practice aimed at in India, New Zealand, and Victoria. Management of water supply by Local Trusts.

Sections 32 to 34 inclusive, relating to the responsibility incurred through entering on land or interfering with property, declare the right of the owner of such land or property to compensation for actual damage done by such entry. These sections are based on legislation already in force in New South Wales, Victoria, and India. Claims and compensation.

35. This section is intended to provide for cases in which a portion of a supply is required for a town, while the remainder is available for irrigation and other purposes. Power of Board to make agreements with Municipalities.

Municipality or Municipalities, the whole or a portion of the water-rights possessed by the said Municipality or Municipalities, and referred to in section 14 of this Act.

Power to acquire or sell land.

36. The Board may also, for the purposes and subject to the provisions of this Act, acquire, purchase, or take on lease any land required for any work, and may sell, exchange, or let on lease any such land whenever it ceases to be necessary.

Procedure in the acquisition of land.

37. Before proceeding with the construction of any permanent works the Board shall publish, at least once in each of three consecutive weeks, in some newspaper circulating in the district in which the proposed works are situated, a notice stating the names of the owners or reputed owners of the land required, the situation of the land, and the acreage required from each of the various holdings. The notice shall also specify the place and hours at which a plan of the required land can be seen.

Notice of intended resumption of land

38. The Board shall serve a notice on every owner or reputed owner, lessee or reputed lessee, and occupier of such land, and shall define in the notice in each case the position and area of the particular land intended to be resumed, and requiring a reply stating the amount which the said owner, lessee, or occupier is willing to accept in settlement of compensation for the said land.

Amount of compensation, how arrived at.

39. In estimating the amount due as compensation to any owner, lessee, or occupier, the Board shall deduct from the value of the land resumed, and the damage done, the amount by which the remaining land of the said owner, lessee, or manager shall have increased in value through the sanction of the proposed work; provided always that such increase in value does not exceed the cost of the land resumed and the damage done. In no case shall the owner, lessee, or manager have a right to claim for resumed land the increased value due to proposed works.

Action in case of absence of owner or occupier of land.

40. If, through absence of the owner, lessee, or occupier of land proposed to be resumed, or from any other cause, the owner, lessee, or occupier fail to forward a statement of his claims within two months after the last date of publication of the notice by the Board no interest on the amount of compensation shall be allowed, and the increase in value of the remaining property of the said owner, lessee, or occupier up till the date of receipt of the said claims by the Board shall be reckoned, as in section 40 of this Act, in diminution of the compensation to be awarded.

Resumption of water rights.

41. The regulations ordered in the last two sections shall also, so far as they are applicable, be acted on in the purchase, resumption, or lease of water-rights.

Power of the Board to fix rates.

42. Wherever works have been carried out under the provisions of this Act with the aid of loans the Board or Trust will have power to fix rates and charges for water supplied from any source by means of the said works, and it shall also have power to prescribe or sanction methods and units for the measurement of such water.

Right of Board to inspect works.

43. The Board may at any time cause inspection to be made of any works for water conservation and utilization, or for drainage, which are under the management of a Trust; and may also, wherever Crown rights are affected, or believed to be affected, cause similar inspection to be made of such works which are under the management of the owners, lessees, or occupiers of land, and if the maintenance and management of such works be found so unsatisfactory as to cause waste of water the Board shall require such Trust or such owners, lessees, or occupiers of land to improve the maintenance and management of such works.

Power of the Board to cancel constitution of Trusts.

44. In any case where, as described in section 43, the members of a Trust, or the owners, lessees, or occupiers of land, manage or maintain works for water supply, or for drainage, in an unsatisfactory or discreditable manner, the Government may, on the report of the Board, withdraw all or any of such works from the control of the said Trust, or of the said owners, lessees, or occupiers of land, and may

NOTES AND EXPLANATIONS.

Powers to acquire or sell land.

36 and 37. The procedure here proposed is similar to that prescribed in the New South Wales Country Towns Water and Sewerage Act.

Compensation for land, &c.

38, 39, 40, and 41. It is assumed that on the sanction of the construction of a canal, reservoir, or other work for water conservation, or of any cutting for water supply or for drainage, an immediate rise in the value of adjoining land will take place. We have ventured to propose that, in estimating the compensation to be paid, this rise in the value of property should be taken into account to lessen the amount which an owner or occupier should receive. This course is not without precedent, and we think that the justice of it is manifest. The proposal seems reasonable, and in some cases this regulation might have an important bearing on the remunerativeness or otherwise of useful works. Section 39 is specially intended for dealing with cases in which miners' rights to water have been acquired, and with cases in which it would be advantageous to the public to obtain by resumption or otherwise water rights possessed by individual landowners, lessees, or companies.

Powers to fix rates for water, and methods and units of measurement.

42. The necessity for the portion of this paragraph bearing on the fixing of rates is at once obvious; but wherever there is no reason to the contrary, the rates for water should be fixed by the Local Trusts, subject merely to the sanction of the Board. With regard to the power of the Board to prescribe or sanction units and methods of measurement of water, it appears to be a better arrangement to give this general authority than to prescribe any method or unit in the Act. In no country has it been found practicable to follow one system or method of measuring water. Different modules for the measurement of water for irrigation and other purposes have been adopted in Italy, France, and Spain, and not only so, but several methods of measuring the water are adopted in each of these countries. For the purposes of an irrigation outlet, or for any small supply required from a canal or distributary, the module adopted on the Marseilles Canal appears least open to objection. In India, water supplied for irrigation is paid for according to the nature of the crop and the area irrigated, while that supplied for grain mills is charged for by the number and size of the millstones used; but it is not an uncommon practice for Government to build the mills and let them by public competition, on certain fixed terms regarding the quantity and regularity of the water supply.

Mismanagement by Trusts—how dealt with.
